In his presidential speech at the annual general meeting of the Indian Hemp Association in Calcutta last Wednesday, Mr. G. S. Poddar said that exports of sann hemp during the July 1960-June 1961 season amounted to only 15,818 bales, against 62,300 bales in the previous season. The offtake of all countries during the past three years or so has been on a reduced scale, although the U.K. still remains the largest single market for Indian hemp. Shipments to the U.K. account for 29 percent of India's total exports, while France, Germany, Canada and the U.S.A. are the other major consumers. In 1960, the total crop of Banaras hemp amounted to about 40,000 bales and that of green hemp to about 18,000 bales. Mr. Poddar said that the slight improvement in prices led to the sowing of a larger crop, so it is expected that the new crop will yield about 65,000 bales of Banaras and 14,000 bales of green hemp. The fall in the world demand for Indian hemp is mainly due to competition from substitutes like Russian and Chinese flax and tow. World supply of the latter is not large during the current season. India may, therefore, be

able to meet the competition from substitutes, provided prices are reduced. But the cost of production of Indian hemp has increased due to the "high expenses" incurred by the trade in fulfilling formalities connected with Agmark labelling, enhancement of freight rates, port charges, and the levy of sales tax.

Calcutta Flour Output Falls

Speaking at the annual general meeting of the Calcutta Flour Mills Association in Calcutta recently, Mr. G. E. Howitt, chairman, said that as a result of the removal of the quota system as well as the restrictions on inter-district and inter-State movement of wheat products, flour mills in West Bengal worked in comparative freedom in 1961. In spite of this, however, production declined to 202,815 metric tonnes in 1961 from 234,264 metric tonnes in 1960. The fall in output, the chairman said, is due to three factors—the power shortage, labour trouble and a decline in flour prices in the latter part of the year. Due to the stoppage of production by the principal mills in West Bengal, the State Government encouraged the import of flour from other States. The imported flour continued to be available even after the resumption of work by the five major mills, creating a surplus problem. Mr. Howitt said that the existing mills in Calcutta can easily cater to the requirements of eastern India; yet the Government of India has been issuing licences for setting up new flour mills in this area. While flour mills in Calcutta are receiving as much wheat as they can consume, their market has been gradually whittled down by the coming up of new mills in Bihar, Assam and Orissa. With the persistence of difficulties in wagon movement to the districts of West Bengal, the remaining markets have been unable to absorb the normal production of the Calcutta mills.

To check the fall in prices as a result of over-production, the Association tried the dual method of planned curtailment of production and the fixing of minimum selling prices. The Government of India is contemplating the fixing of uniform ceiling prices for wheat products on an all-India basis at a level lower than the maximum prices prevailing in West Bengal. The representatives of the industry have, however, pointed out that conditions in West Bengal do not warrant a reduction in the ceiling prices of wheat products. Operating costs of flour mills in the State are higher than those in other States, and have been further increased by the recent omnibus tribunal award. Mills in West Bengal are required to pack products in new gunny bags while in other States packing in old bags is permitted. Besides, mills in other States receive wheat from the Government at Rs. 14 a maund, while Calcutta mills have to take delivery from distant depôts, involving additional transport charges.

IMPROVING CALCUTTA

IT is a very long time since a Commission sat upon the question of the improvement of Calcutta; the President, Mr. Justice Trevelyan, has retired and is almost forgotten. We may, therefore, assume that it was intended to fall under Lord Curzon's category of a commission to shelve and not to solve the problem of the improvement of Calcutta! We would ask Lord Curzon, is this thing to be? Is no honest attempt to be made to remove the reproach from Calcutta to make her, as she ought to be, the queen of the Eastern Seas? There is no difficulty in the way. The money can easily be found, and a small committee of good business men entrusted with full powers would soon have the work in hand. We want no one who is a dilettante or inclined to be a shirker. —we want hard headed business men. Lord Curzon we see is "a disciple of the wise man who said that words are women, but deeds are men." We have been treated to nothing but words, brave and noble words, from Sir John Woodburn, so we know where to place him; but what we want to know now is what place is Lord Curzon himself going to fill. Deeds or words?

A Ditcher's Diary

AT THIS TIME OF THE YEAR, OF COURSE, IT IS NOT the damp but the heat. That fact has been turning my thoughts during suffocating moments to such pleasant, although impracticable, ideas as piping iced water, or installing large fans at each end of all main streets, or simply covering the whole city with one gigantic parasol. The question of shade is a very real one at this season, and for once I have no serious criticism to level against the State Government on this score. Recent efforts at tree planting may have been belated, but they have certainly been enthusiastic to the point of stupidity in some cases, as for instance where a tree has been planted on a suburban pavement not more than three feet wide. I was talking to a Dutch engineer the other day who told me that it was not such projects as the draining of the salt marshes which was affecting Calcutta's climate so much as the gradual destruction of vegetation in the Sundarbans. I am not suggesting that it is possible to restore the balance by planting trees in Calcutta, but that would certainly help. What distresses me, however, even in this heat, is the avenue which has been planted across the Maidan between the Red Road and the Birla Planetarium. This surely is just the quickest way of making another road for handcarts, buffalo carts and pedestrians. I can appreciate the idea behind it, but I suspect we shall all survive to deplore the results.

IF CALCUTTA UNIVERSITY'S CONVOCATION OVER THE week-end was a rather livelier affair than one has come to expect of such occasions, I would not for a moment suppose that anybody was the worse for it. Professor Satyendranath Bose set the ball rolling with a speech which was as brilliant for its oratory as it was questionable for its logic—the need for using the provincial language as the medium of instruction in universities. To Professor Bose's credit, it must be said that he refrained from confining himself to the series of well-meant homilies which seem nowadays to be the current coin of convocation addresses in India. It may not, however, have been altogether unfortunate for the large and impressionable audience present that his case for—well, to put it bluntly—forcing Bengali as the medium of instruction in Calcutta University was soon neatly and completely demolished, first by Mrs. Vijayalakshmi Pandit and then by Mr. S. Lahiri, the University's new vice-chancellor. I see Professor Bose's point that a student has a better chance of understanding a subject if it is taught through his mother tongue. But it remains to be discovered which of the regional languages in India—Bengali, Hindi, Tamil?—has

yet developed the words and the terminology which must be an essential part of the graduate's mental equipment. Professor Bose cannot be unaware that, by opting for Bengali, Calcutta University would be isolating itself from many of the stimulating influences it draws from other States through their professors and students; so would Delhi if it chose Hindi, or Bombay if it chose Marathi. All those who cant about national integration apart, would this be healthy for the cause of education itself? And what would happen to the "son of the soil" of Bengal or Delhi or Maharashtra who, having imbibed great learning in his native language, later found himself compelled to work in another State where that language was not spoken at all? It is easy to denounce English as the legacy of imperialism; but Mr. Lahiri gave the short answer to such nonsense by pointing out that it is not necessary to "forget English in order to be Indians." Students of Indian universities, if I may say so, are not provincialist fodder; they would have the time to learn more languages properly, of which one, I hope, will always be English.

THREE ACCIDENTS INSIDE 18 HOURS, WITHIN FOUR days of the presentation of the Railway Budget to Parliament, would have been too much for any average Railway Minister, but Mr. Jagjivan Ram seems to take such trifling matters in his stride. His predecessor, Mr. Lal Bahadur Shastri, was not, of course, setting a precedent when he resigned following a train disaster and this was not his intention. The second general election was then just round the corner and it was considered good politics for him to give up office dramatically. Besides, it only requires a Minister to demit office over some blunder or other for him to earn Mr. Nehru's undying loyalty and support. With the third election safely out of the way, there has probably been no such Party pressure on Mr. Ram. He was, of course, lucky that such a row of mishaps occurred in March instead of in January. He has now ruled over the railways for long enough, or so I am told, to aspire for bigger things and we may see him move on in the next Cabinet. But his record at the Railway Ministry will be unbeatable for quite some time, both in the total number of accidents recorded and in the average for a single year. It is to be hoped Mr. Nehru will not transfer him back to Transport and Communications; he may be keen on establishing communications in the air and on the high seas. I parable records in the air and on the high seas. I am wondering if the country can afford such experiments. Works, Housing and Supply might be a better haven for one with Mr. Ram's bad luck;

it is unlikely he can make things much worse than they are already in that department. I have been pondering the problem which Mr. Nehru must be facing at the moment in finding the right men for the jobs he is going to have to fill. What frightens me is that I cannot visualise a single new face in any of them. There is something essentially decadent about the Congress Party at the moment in so far as it seems incapable of reproducing the talent with which it set up shop in 1947. I am glad I do not have Mr. Nehru's difficulties to face, although I have a suspicion somewhere that many of them might in fact be of the Prime Minister's own making.

I SEE THAT INDIA IS SLOWLY GETTING ON TO THE tourist map. Last year, there were 139,804 visitors from abroad, compared to 123,095 in 1960. This is a good rise from the figure of 80,544 in 1957. But it is only too obvious that a great deal more can be done. A reliable estimate places tourist earnings lost by this country during 1961 through lack of amenities and other deficiencies at Rs. 2.5 crores. The loss will probably be a recurring one; and the reports carried home by disappointed tourists are not good for business. Nor is India doing in this line anywhere near as well as the million tourists Paris attracts and the three million and more that annually flock to Rome. This country, I can understand, cannot appeal to the same type of tourist, and there is no reason why it should attempt to. There are many countries nearer home whose nationals would like to visit India in greater numbers, but they cannot spend as "expense account" travellers can. There are many more in the West too who would venture as far as India if, once here, they could travel and board cheaply. While trying to cater to the impressive requirements of our official and business visitors, the Tourist Department of the Central Government should also devise plans for the other type of tourist. It is this type that throngs Paris, Rome, Athens and many other centres of attraction in Europe, and who could make India a real tourist attraction by the tales they carry home. Talking of tourists reminds me of the Indian Customs who still consider every visitor a scheming smuggler. I suggest that some of these officials be sent to Europe, preferably Switzerland or France, to see how the Customs operate there. Just watching the way these countries organise and conduct baggage inspections, if indeed they bother with them at all, could vastly improve knowledge of how to deal with people here—that is if there is any willingness to learn.

IT WAS RATHER NAUGHTY OF MR. C. RAJAGOPALACHARI to suggest that some of the women who voted Congress in the election were influenced by Mr. Nehru's good looks; and it showed a lack of appreciation of feminine psychology of which I would

"SCCO"

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other rough scaling, propellers and rough castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

WHY TAKE CHANCES?

In what you do every day, you are taking many chances. For example, take the things that you buy in the market. Are you always sure of their quality? Do you get good value for the money you spend?

And yet, you can be sure if you know that the goods you buy have been made to a given standard. Standardization benefits not only you, the consumer, but also the producer, the distributor and indeed, the country as a whole.

The Indian Standards Institution has prescribed standards for industrial as well as consumer goods. To manufacturers producing to relevant standards, ISI grants licences to apply on their goods its certification mark which is the guarantee of quality. The next time you buy anything, don't take a chance; look for the ISI mark.

not have suspected him, that he should have been surprised at the reaction he caused. I would respectfully remind C.R. that only men joke about these matters; women take them seriously. Mr. Nehru has good reason to feel flattered, but it is not the first time he has had this kind of compliment. I remember some years ago that a Hollywood actress newly arrived in London so far forgot the dictates of good taste as to be prevailed upon to name the world's ten most kissable men: Mr. Nehru was one of them. But if the Prime Minister's good looks did in fact influence some impressionable women to vote Congress, I am sure that one glance at the motley bunch he was to sweep into office with him would have made them hesitate, because, so far as personal or collective beauty is concerned, it would be difficult to imagine a less attractive looking turnout. There is, of course, a good deal in this business of being good looking. Not only is it necessary for film stars, ambassadors and vacuum-cleaner salesmen these days, but in modern democracies, which are generally dominated by women voters anyway, it is becoming increasingly important for politicians as well. I am not entirely against this, having never numbered myself among those who considered the indispensable badge of the dedicated politician to be long hair, threadbare clothes and dirt under the finger nails. If the natural susceptibilities of the female sex eventually lead to a smarter appearance among India's rulers, then I for one will not be broken-hearted. And I should like to point out to those aspiring politicians who are inclined to pooh-pooh the idea, that the standards of personal beauty required will be even higher when Indian elections are dominated by television, as eventually they are bound to be. So politicians should start right away by cultivating good looks. Then, even if they are not useful, at least they will be decorative.

ABOUT THIS TIME EVERY YEAR CLIVE STREET SEES A number of changes among its senior personnel, and it has always been among my more regretful practices to record many of them. It may be my imagination, but this year the total seems to be larger than usual, but there may be personal reasons for that. One figure who will certainly be missed, and who I believe is already on his way home, is Mr. Nicol Stenhouse, chairman of Andrew Yules since 1959 and last year's President of Association. Mr. Stenhouse came to India in 1937 at the comparatively late age, for a merchant, of 26. His subsequent rise, however, has been rapid, and from what I gather his career is not yet by any means at an end. At various times he has served on an impressive list of committees both business and social, and as President of the Bengal Chamber was a Governor of La Martiniere and a Trustee of the Victoria Memorial. As one of the younger of Calcutta's top business men he is making all too early an exit from Clive Street circles. Both he and his charming wife were also extremely popular socially and have left here with the good wishes of a host of friends.

It was a matter of some pride with Patrick Parish that he could claim to be the only chairman of a Calcutta managing agency who was a direct descendant of its founder. This was indeed a distinction, because Gillanders Arbuthnot was founded by Sir John Gladstone as long ago as 1819 and Mr. Parish, his great great grandson, became chairman in 1957. Originally trained for the army, Mr. Parish came to India to join Gillanders in 1934, but did his war service in north-west Europe with the Welsh Guards. His record of extra-office activities is a long and creditable one. He was a Member of the Bengal Legislative Assembly, 1943-47, and at various times vice-chairman and chairman of the East India Charitable Trust, a member of the Bengal Chamber committee, a steward of the Calcutta Turf Club and a Governor of St. Paul's School, Darjeeling. He was awarded the O.B.E. in 1960. Mrs. Parish, too, leaves Calcutta in her debt having at various times been chairman of the Fendall Home, chairman of the Women's Friendly Society, and founder-chairman of the U.K.C.A. Ladies Section, afterwards the British Women's Club. These activities earned for her the M.B.E. in 1962. Both Mr. and Mrs. Parish were well-known figures in Calcutta's social life and will be widely missed.

THE DITCHER

THE INDIAN MINING ASSOCIATION

CHAIRMAN, MR. PRAN PRASHAD'S ADDRESS

Speech delivered by Mr. Pran Prashad, Chairman of the Indian Mining Association at the Annual General Meeting of the Association held in Calcutta on 23rd March, 1962, at the Bengal Chamber of Commerce and Industry. Gentlemen.

With your permission I suggest that we take the notice convening this, our Seventieth Annual General Meeting as read. On your behalf and mine, I extend a most cordial welcome to our distinguished guests from the Government, the Steel Plants, the Coal Board, the Mines Department and the Welfare and other organisations.

I would like to assure you that if in the course of my Address this morning I may occasionally sound a discordant note and bring up some of the difficulties which the Coal Industry faces to-day, it is only to bring these problems to the notice of the authorities. I am sure you will all agree that a frank and constructive discussion of problems will be helpful in looking for remedies to overcome them.

We miss on this occasion the former Coal Controller and Chairman of the Coal Board, Mr. Zaman, who relinquished his office earlier this year. There were times when we agreed to disagree, but we recognised nevertheless that he brought a balanced approach to bear on the many problems with which the Industry was faced. On your behalf and mine, Gentlemen, I welcome the new Coal Controller, Mr. Talwar and we all assure him of our continued help and co-operation in the difficult tasks that lie ahead.

My predecessors set a pattern whereby the Chairman of this Association reviews on this occasion the events of the previous twelve months and offers an assessment of future prospects. I see no reason to deviate from the time-honoured convention.

World Bank Loan

I may fairly claim that we have some outstanding achievements to our credit since we last met, offset unfortunately by our share of disappointments. For the first time, in many years, we have available to us through the World Bank Loan, although not physically as yet, adequate foreign exchange to take care of our requirements of plant, equipment and spare parts until the middle of 1963. Again, for the first time, we embarked on a new approach to labour-management relations when we commenced direct negotiations between the principal Employers' and Workers' Organisations in the Coal Industry. These bi-partite negotiations proved, as I must regretfully admit, unfruitful in so far as revision of wages was concerned. They paved the way nevertheless to a bi-partite agreement on the vexatious question of employment of labour by or through contractors. Settlement of outstanding issues through bi-partite negotiations, without the necessity of State intervention, should indeed be the pattern and we hope to make further progress in that direction.

In the year since we last met we have been primarily concerned with detailed planning to fulfil the requirements of the World Bank Loan Agreement. My predecessor last year dwelt at some length on the negotiations which were then taking place between the Government and representatives of the International Bank for Reconstruction and Development. Throughout these negotiations, we in the Industry were kept informed at all times. We could, with some justice, claim that the successful outcome of a loan of 35 million dollars from the Bank to Government was, in a great measure, due to the excellent staff work put in by this Association and the Joint Working Committee to assist Government in the deliberations with the Bank. I should also like to understand of, and sympathy with, the problems of the Private Sector of the Coal Industry.

The confidence and close co-operation that were established between Government and the Industry during the negotiations for this loan was indeed most

welcome. We should like to see these extended to other spheres also where confidence will, we feel sure, be equally rewarding.

Detailed Project Reports

The terms of the agreement with the World Bank called for the submission of detailed project reports from each expanding unit in the Private Sector indicating grade-wise and seam-wise production programmes phased over the loan period; reserves of coal available; a break-down of the requirements of machinery and plant into both foreign exchange and rupee currency; particulars of funds available for expansion and the balance required to supplement internal resources. Government was required to set up separate Screening Committees to examine expansion projects for both technical and financial soundness before recommending them to Washington for approval. The burden of co-ordinating the work of the Screening Committees fell on the Industry. The Industry's association with these Committees helped considerably, if I may say so, in getting this stupendous task of scrutinising some 200 projects completed in a matter of weeks by the end of November, 1961.

Again, for the first time, the Coal Industry is now represented on the Screening Committee set up in terms of the World Bank Loan Agreement to examine applications for import licences. While there have been many procedural delays, I am sure that once the cycle gets under way, licences will quickly issue, whether they are for maintenance, replacement or expansion.

We require a total of Rs. 28 crores in foreign exchange during the five years of the Third Plan. Against this we have been allocated a sum of 35 million dollars or approximately Rs. 17 million dollars or approximately Rs. 17 million dollars or approximately Rs. 17 million dollars. Foreign exchange requirements for certain new mines for the entire Third Plan period are, fortunately, covered by the loan but what we require for expansion, replacement and spares is taken care of, as I said, only up to the middle of 1963. To meet our needs beyond that date, we must have a further Rs. 11 crores. Government's assurances that exchange of this order will be available is most welcome. Having regard, however, to the delays of last year, concrete steps should be taken now to arrange this foreign exchange so that the Industry may proceed with the numerous formalities to be complied with, before actual import of equipment becomes necessary.

Certain complementary measures are necessary if producers are to take full advantage of the facilities made available through the World Bank Loan. This Association has often pointed out, with tireless persistence perhaps, that the Industry has been working for several years on an inadequate profit margin. Many units whose reserves are low find it difficult to raise the necessary funds to implement their expansion programmes. Without these funds, they can obtain little benefit from the foreign exchange made available by the Bank. This problem is, as I most thankfully record, receiving attention in official quarters. I take this opportunity to draw attention to a cognate problem: the obstacle that colliery companies face in raising funds from bankers and other credit institutions because of the restrictions on transfer or mortgage of coal leases under the Mineral Concession Rules, as applied to pre-1949 leases. Our viewpoint in this matter has been placed before Government, and I hope that suitable action will soon be taken. The special section recently created in the Coal Controller's office will help materially to co-ordinate requests from producers for matching rupee finance. It will, I trust, see to it that implementation of approved individual expansion programmes is not delayed due to lack of resources.

Total Production

From the point of view of production the Industry's achievements may seem disappointing. All-India coal production for the calendar year 1961 amounted to only 56.11 million tonnes. The overall output in 1961 was therefore less than two million tonnes over that

attained in 1960. Out of the total production of 56 million tonnes, about 46 million tonnes were contributed by private collieries. The Private Sector could, therefore, claim that it has, despite many handicaps, fulfilled its share of the Second Plan target of 60 million tonnes. As my predecessors have, however, pointed out, we, in this Association, refuse to view national targets in this sectarian manner. Any shortfall in one sector must, in the country's interests, be made good by the other.

In the context of the colossal increases in coal production required in the years that lie ahead there is ample scope for both the Public and Private Sectors not only to co-exist but also expand to the full extent of their respective capacities. When production is a crying need a broad pragmatic approach, admittedly within the framework of the Industrial Policy Resolution, is essential.

Looking at production in terms of the Plan Year, the total production up to December, the first nine months of the Third Plan, aggregates 40.43 million tonnes. Even allowing for raisings of 15 million tonnes in the remaining three months, the total production can hardly be much more than 55 million tonnes. 5 million tonnes below the Second Plan target. This, to say the least, represents an extremely poor start to the Third Plan in the course of which production is scheduled to go up by as much as 76 per cent over the actuals for 1960-61. Notwithstanding this disappointing beginning, there is some talk of the target for 1965-66 being raised to 110 million tonnes. Perhaps the logic is that we should plan on the basis of 110 million tonnes to achieve an actual production of 97 million tonnes. The mere scaling up of the target will not produce 97 million tonnes, a fact that seems to be overlooked in this approach.

During the twelve months up to March 1963, the Industry is required to produce over 68 million tonnes according to the phased production programme recently drawn up by the Coal Controller. This means an increase of 13 million tonnes in the next twelve months or an increase at the rate of over one million tonnes per month. I am sure, Gentlemen, we all realise that in conditions as they exist today such an achievement is in fact beyond us, more so since the power and transport needed to produce and move this tonnage will not be available.

Pithead Stocks

Throughout the history of the Coal Industry, its production capacity has been governed by transport availability. Our production in 1961 may seem disappointing, but it is pertinent to ask what would have happened if we had raised an extra one or two million tons. For nine months in the year, pithead stocks were at levels very much higher than those obtaining at the start of the Second Plan; so much so that large sections of the Industry were obliged to effect severe production cuts. In fact, at one time, stocks rose to 5.57 million tonnes, resulting in the blocking of almost Rs. 10 crores, an all-time record. No Industry, I submit, can bear such a burden without repercussions on its viability.

In the last ten years rail traffic increased by only 69 per cent. Because of the lengthening lead of traffic, however, the ton miles achieved by the Railways, have been doubled in the last decade. In the last four years, the average daily supply of wagons for coal loading in Bengal and Bihar increased by nearly 30 per cent, from 3,670 in 1957 to 4,768 in 1961. One cannot but express genuine appreciation of the magnificent performance of the Railways, which have no doubt been working under severe strain. The basic fact remains, however, that the country is desperately short of transport capacity, and consumers all over India have perforce

had to accustom themselves to hand-to-mouth allotments.

Assuming that the Third Plan production target stands at 97 million tonnes, roughly 72.5 million tonnes have to come from the Bengal and Bihar coalfields and the remaining 24.5 million tonnes from the outlying fields. The target for coal movement by rail has been set at 87.5 million tonnes. This will require an allotment of over 12,000 wagons per day as against the present availability of slightly under 6,000 wagons. Of these 12,000, 9,000 will be required in the Bengal and Bihar coalfields and the balance in the outlying fields. Movement to the steel plants, including dual movement to and from the Central Washeries, will alone absorb over 4,000 wagons per day, as compared with about 1,400 wagons at present. The Railways, therefore, face a stupendous task in the fulfilment of their obligations. It has only recently been appreciated that development of transport should be so planned as to be ahead of industrial expansion, thus ensuring that carrying capacity will be available both for speedy implementation of new projects and to meet their transport needs when they are in operation. Without adequate transport facilities, unutilised industrial capacity is, unfortunately inevitable.

Supply of Wagons

No indication has been given to us of the phasing of rail transport capacity for coal movement during the Third Plan period. All we know is that the Railways will endeavour to maintain during 1962 an average daily supply of 6,925 wagons for loading coal. This includes about 300 wagons which will be required for dual movement of coal to and from the Dugda Washery, leaving an average of 6,625 wagons daily for effective coal transport. Even assuming that each wagon will carry 23 tonnes, and that 6,625 wagons will be loaded throughout each of the 365 days of the current year, this level of wagon availability will permit movement by rail of only about 55 million tonnes. Adding to this 2 million tonnes which can effectively be moved by road, and allowing an equal quantity for consumption at collieries, the 6,925 wagons that the Railways offer will suffice for a gross production of 59 million tonnes—a 9 million tonnes deficit against the phased target fixed for 1962-63. These figures will, I trust, convey some idea of the utter impossibility of meeting the country's expanding demand for coal given this level of wagon availability.

It is possible to contend that my analysis of the situation is pessimistic. In indicating a daily average availability of 6,925 wagons, the Railways have, I must add, provided a cushion of 5 per cent over and above this figure. Against this, I must reluctantly point out that the average daily supply in the first two months of the current year has, I believe, been only 5,976 wagons or 849 wagons per day short of what has been promised.

Another aspect of rail facilities which requires very careful attention is the increase of the Pilot and Depot capacities on the basis of individual expansion plans. Only too frequently wagons are in abundance at certain points where coal is not offering but are woefully scarce in other areas. A new Committee to go into the question of increasing the Pilot and Depot capacities in the Third Plan was constituted over fifteen months ago but no substantial progress has yet been made. They are unable to proceed with enlarging capacity without detailed information relating to collieries' expansion projects. These details, as I have said, are already available with the Coal Controller in the Project Reports submitted by collieries. There seems to be no reason for any further delays in this matter which now appears to be one of co-ordination between the Railways and the Coal Controller. I might recall that a similar committee was set up at the start of the Second Plan but it did not finalise its deliberations until very nearly the end of that Plan. We had hoped that such delay, with all its attendant repercussions, could be avoided in the Third Plan but the progress made so far belies this hope.

Lack of Funds

In analysing the causes of the present transport deficiency, it becomes clear

I propose to deal, very briefly, with one or two aspects of the preliminary report made by this committee. In spite of the absence of detailed statistics, it is clear that the existing pattern of Railway administration requires drastic overhaul. There should be a much greater measure of decentralisation since many failures of administration can be attributed to its lack. Railway managements are denied the flexibility and freedom without which they can hardly be expected to manage their operations successfully. Some degree of control from the Centre is desirable but this control should be restricted to co-ordination and standardisation to the extent necessary in the national interest.

Last year, it will be recalled, enhanced levies on coal despatches were introduced to subsidize movement of coal by coastal ships to consumers in Southern and Western India. It was envisaged that at least two million tonnes of coal would move in this manner but this target has not yet been achieved. It transpired that not only

Central Runways

While on the subject of transport, I should refer to the Coal Conference convened by Government in New Delhi last September. Among the many proposals mooted at the Conference was one from the Railways to extend the black rake system to consumers other than brick-

Apart from the current transport deficiency, we also face an even graver shortage of power, jeopardising the achievement of our production targets. To the Private Sector, this is a matter of very survival as we are largely confined to vertical expansion. Deeper workings involve longer hauls and winds more pumping and increased ventilation, electrification and mechanisation, all of which call for additional power. In an extractive Industry like Coal, consumption of electric power must also increase even for maintenance of output quite apart from the needs of increased production.

The total additional power available from the D.V.C. in the Bengal and Bihar coalfields, on the assumption that all their sets will work at full installed capacity without any breakdowns for 365 days in the year, has been estimated at 21mW. The Coal Industry alone requires in the current year an additional 24 mW of power. It has been suggested that because of D.V.C.'s other contractual obligations, the Coal Industry cannot expect any additional power until the middle of 1964.

A belated realisation of the seriousness of the situation led to the appointment of a Working Group to assess the Industry's power requirements for the whole of the Third Plan period. Although it seems highly improbable that our requirements can be met in full, I do hope that the Working Group, on which unfortunately neither the Coal Industry nor the power distributing agencies are represented, will be able to devise short-term measures to ensure that our demands are met to a much greater extent than can be envisaged at present. May I repeat that the shortage of power needed by the Coal Industry can only create a vicious circle; a shortfall in coal output will hamper generation of electric power aggravating an already bad situation.

I would also urge that power cuts should not be imposed on the Coal Industry during the monsoon period when our need is greatest. In this period, when many of our older mines face the danger of inundation, the accumulation of water must be pumped out, but at precisely this time power cuts have been most frequent. This results in valuable faces and mining equipment being rendered unworkable for a period.

The periodic shortage of explosives occurring in the last 12 months has also affected coal production. Supply has been most erratic during several periods collieries' demands have not been met in full. We have hitherto relied on imports from the Sterling Area to supplement the production of the Gomia factory. Supplies from both these sources have fallen short of the country's overall requirements. A proposal is now under consideration for the import of explosives from non-Sterling sources but the use of such supplies will have to wait until certain tests are successfully carried out to the satisfaction of both the Chief Inspector of Explosives and the Chief Inspector of Mines. The Industry has urged that these tests should be expedited. At the same time, the assessment of demand for the remaining years of the Third Plan should be quickly completed, as agreed steps taken to co-ordinate the production and supply of explosives to obviate future shortages.

Apart from these factors directly impinging on our production capacity in the previous 12 months, other disincentives should also be noted. Repeated reference has been made to the issue of prices generally and to our specific

claims for neutralisation of enhanced working costs as envisaged in the Report of the Coal Price Revision Committee. This official Committee, whose report was accepted by Government in its entirety, recommended that any increase in cost on account of increased wages and amenities to labour should be neutralised in full. Our costs of production, however, show a constant upward trend. A price level which may have been considered adequate on the basis of certain hypotheses has become wholly unrealistic today. Numerous memoranda were submitted to Government for making good cost increases but no real response has so far been forthcoming from New Delhi. On the basis of Government's own data, our case is

market. The Industry will find it difficult either to borrow or to attract new investment unless the price structure is substantially revised. The margins on which it has been operating leave no scope to provide for the payment of interest on loans; the repayment of borrowing at a subsequent date according to a phased programme acceptable to lenders; a level of dividend which will render investment in coal mining as attractive as in other industries, and finally the large increase in depreciation which will result from the additional capital investment envisaged. Only a realistic approach to price policy can instil in the Industry the confidence needed to perform the task allotted to it.

Much publicity has been given in recent months to the deterioration in the quality of coal supplied to the Railways, the steel plants and other consumers. Before I offer my comments, may I remind our consumers that we as producers can only raise coal of the quality that exists in the mines? We can also beneficiate manually but this has obvious limitations.

While on the subject of neutralisation, I should also point out that stowing costs are still not fully compensated. The Coal Board has recently put forward the suggestion that stowing should be bifurcated into surface and underground costs. The sub-division of the overall cost of stowing into such watertight compartments would inevitably result, in many instances, in a reduction in the total amount of assistance receivable. I might call attention here to the recommendation of the Coal Price Revision Committee that voluntary stowing should be subsidised to 100 per cent of actual cost. We submitted our own proposals for disbursement of assistance to stowing collieries on a more realistic basis, particularly in regard to those distant cost sources of sand supplied where costs are not neutralised to the extent necessary. These proposals were submitted to the Board in November last and we still await the Board's decision.

The report of a study Group was circulated to the Industry last June. After very detailed consideration, was submitted separate proposals in regard to coking and non-coking coals. It was obvious that any proposals for the fixation of decided on coking coal on the basis of calorific values would not only be unsuitable but would also fail to meet the requirements of the steel industry. The steel works assess that a rise of one per cent in the ash content of coal increases the cost of pig iron by Rs. 37 per tonne. A committee under the chairmanship of the Chief Mining Engi-

The question of grading brings me to another controversial issue, namely, the sampling and analysis of coal for the fixation of grades. The Indian Standards Institution has already circulated a very comprehensive and detailed specification relating to sampling and analysis. We have, in the course of the year, received numerous appeals from the Institution itself and from Government for the adoption of Indian Standards in replacement of foreign standards. While we in the Coal Industry are fully prepared to fall in line, I am disappointed that the Coal Board has not seen it fit to adopt the ISI specifications. We appreciate that

These agreed proposals related to the supply of both coking and blendable coals having an ash range of between 14 and 20 per cent. When the matter came up for discussion at the meeting of the Standing Committee on Raw Materials held last August the Coal Industry made it perfectly clear that its acceptance of this principle of payments on results of analysis was based on the distinct understanding that the agreed proposals would be accepted in full and that they would apply only to supplies made to steel plants and coke ovens. We were amazed when the agreed proposals were substantially modified to our disadvantage without consultation with us and also made applicable to

supplies to all consumers of coking coal. The result of these adverse changes is that the Industry found itself quite unable to agree to analysis at destination as the basis of payment in the case of Steel Plants, since it would be impossible for it to resist the claims of other consumers desiring a similar arrangement. Gentlemen, you can imagine the chaos which would result if thousands of customers throughout the country were to ask for joint sampling at destination. The average price for coking coals, particularly in the lower grades, is actually less than the prices which obtained for these grades previously, this at a time when Government was fully aware of the Industry's decreased profitability. I venture to suggest that the innumerable practical difficulties which arise from the new price scheme could have been obviated had we been taken into confidence before the proposals were announced. The result of imposing such an unsuitable and anomalous price structure on the Industry which does not provide any incentive for improving quality will be that the steel plants will hardly obtain any reduction in ash content. Furthermore, there being an actual disincentive to the production of Grade I and Grade II coals, an increase in output may have been rendered more difficult. If the coals are so unsuitable and their unavailability will affect the operation of the Central Washeries which have been erected at considerable expense to the Exchequer.

No price increase was sanctioned for blendable coals, the production of which is below demand, and which is just as important for the Steel Industry as is Coking Coal. In fact, production figures carefully estimated in project reports prepared for assessing foreign exchange needs clearly establish this shortage. It is all the more necessary, therefore, that the price structure for blendable coals used for coke making should be urgently amended.

The position with regard to non-coking coal is somewhat more complicated. It did not prove possible to submit agreed proposals to Government, but the Industry submitted a memorandum to the Coal Board suggesting 8 grades for non-coking coal over a BTU's range from 5,700 to 12,000. The suggestion had, I am glad to say, the full support of our Public Sector counterparts. The Board decided to recommend to Government that while the calorific range indicated by the Industry might be accepted, the number of grades should be increased to 14. This proposal has been referred to a further Committee constituted earlier this year to examine the support on the Board's grading procedures. A decision on the price structure in the case of producers of non-coking coals will, therefore, be deferred for some time to come. I can only hope that producers of non-coking coal will be spared the bitter disappointment that has resulted from the new coking coal prices.

The question of grading brings me to another controversial issue, namely, the sampling and analysis of coal for the fixation of grades. The Indian Standards Institution has already circulated a very comprehensive and detailed specification relating to sampling and analysis. We have, in the course of the year, received numerous appeals from the Institution itself and from Government for the adoption of Indian Standards in replacement of foreign standards. While we in the Coal Industry are fully prepared to fall in line, I am disappointed that the Coal Board has not seen it fit to adopt the ISI specifications. We appreciate that the Board is not yet fully equipped to do so but this does not justify the changing of a grade on the basis of three or four ad hoc wagon samples which are neither representative of the collieries' production nor despatches. Incidentally, despite repeated objections against the unscientific system of adoption of several million tonnes of production have been downgraded in the past year with consequential damaging results. The entire economy of a colliery depends on the grade allotted to it—on it depends the income and profit that a unit can expect. In the planning of new mines producers face avoidable uncertainty because of the frequent changes in grading that

take place based on no scientific or established principles.

Numerous representations have resulted in the constitution of a committee charged with the task of devising a proper method for sampling and analysis necessary for fixation and verification of grades. I do hope that the deliberations of this committee will not be protracted and that we shall very soon have a reasonable solution acceptable to all.

For some time past the State Governments of West Bengal and Bihar have been pressing the Central Government to enhance the rates of royalty payable on pre-1949 coal leases. We suggested that before any changes were effected a conference between the State Governments, the Union Government and the Industry should be held to clarify issues relating to the acquisition of royalty receiving rights of lessees and sub-lessees which have not yet vested in the State. The terms of the Coal and the West Bengal Land Revenue Acquisition Act or the Bihar Land Reforms Act. We received no reply to our representation but a decision was suddenly announced in January increasing the rates of royalty in respect of all pre-1949 coal leases to $2\frac{1}{2}$ per cent of the f.o.r. price of coal and sanctioning a compensatory price increase to the Industry of 0.24 nP. per tonne. We felt this price increase was inadequate and would not be sufficient to meet the new fixed by Government on the basis of data furnished by the Industry in January 1958. This ignores the simple fact that royalty liabilities calculated as a proportion of the price of coal have gone up with the price increases of the last four years. Collieries which were already paying royalty on a percentage basis were also allowed this increase of 0.24 nP allegedly to compensate them for the extra royalty they had had to pay on account of price increases in the past. May be we incurred to point out that the extra cost incurred by such units amounted to 0.39 nP per tonne on a weighted average basis, leaving 0.15 nP per tonne uncompensated, which these collieries must continue to bear.

A connected matter is the question of compensation to Royalty Receivers who have received income through old established arrangements whereby royalty receiving rights had been purchased or otherwise acquired. Under a Constitutional provision, no rights to property or income may be abrogated or removed without payment of full compensation. As a consequence of the Notification altering Royalty rates, the whole position of Royalty Receivers compared with individuals appear to have been deprived of a major part of their income without any compensation.

Our relations with labour in the past year have been cordial although we still suffer from stray cases of assault. A large part of the credit for this improvement must be given to the Code of Discipline. We are now considering, at the Labour Ministry's instance, a Code of Efficiency and Welfare, but as I would point out the successful implementation of such measures depends to a large extent on the re-education of and the re-thinking on the part of both labour and management. I would go further and say that management personnel, who are supposed to have a broader perspective in these matters, must lead the way in good decisions, re-education among our management personnel is necessary to this end and I trust enlightened employers will see an example.

Our unions have been pressing for an early review of the wage structure. Their request for the setting up of a Wage Board for the Coal Industry was considered at the Eighth Session of the Industrial Committee on Coal Mining held in April last year when it was decided that the principal Workers' and Employers' Organisations should jointly explore the possibility of granting increased wages or incentives within the framework of the Industry's existing price structure. This was a new approach in keeping with Smti Gulzarila Nanda's welcome emphasis on direct settlements. While bi-partite meetings were held, our negotiations could not proceed since employers found it in-

E DAY BREAKS IGHTER TOMORROW

PLAY BECOMES HAPPY SERVICE
Today's service. Today's effort. Continuous, successive.
Work-laden, face shining with a smile.
Tomorrow... a little less of care, a little more of joy.
And for HINDUSTAN LEVER, too, tomorrow begins today.
In the research laboratory, in the factory and office.
Work, patience, care
to serve tomorrow's homes and the nation's needs
with products that grow better and better.

TODAY AND TOMORROW...HINDUSTAN LEVER SERVES THE HOME

possible to absorb any increase in wage costs within the framework of existing prices. In this context I might recall the statement made in the Lok Sabha by Shri Nanda who acknowledged that in the Ministers of Fuel and Labour appreciated our difficulty in agreeing any revision of wages without neutralisation of the resultant increase costs. Both workers and employers then suggested a tripartite meeting which took place two weeks ago, after the threat of a strike by INTUC unions in Bihar made it impossible to delay the matter any longer. While we are as a matter of sympathy with the demand for an upward revision of wages, we are unable to offer any concrete views on the quantum by which wages might, in equity, be enhanced. This will depend entirely on the extent to which the economy can bear an increase in coal prices. With the decision to refer the matter to a Wage Board, the entire question will, I hope, be expertly and authoritatively examined, bearing in mind the unanimously accepted recommendations of the Coal Price Revision Committee with regard to full neutralisation of increased labour costs.

Our great achievement in the sphere of labour-management relations in the past 12 months has been the bi-partite agreement on the vexed question of contract labour in the Coal Industry to

which I referred earlier. This issue has been pending since 1956 and there were strong feelings on both sides. Even so, an agreed solution, I am happy to say, was found. Government appointed a Court of Inquiry to examine this matter, and it is gratifying that our agreement was approved by the Court. I would appeal most fervently to all employers to ensure that the terms of this agreement are complied with so that when we meet our labour friends in September next, we will be in a position to say that we, on our part, have fully endeavoured to meet our obligations.

Minimum Wages

While on the subject, I should like to draw attention to the recent notification published by Government enhancing very considerably the minimum wages payable to labour employed at collieries on contract for building, road repair, clearance of jungles and the like. The implementation of this notification will increase very substantially capital expenditure at collieries for construction work and will also seriously affect the cost of miners' houses both under the subsidized and cheap housing schemes. When these proposed minimum rates of pay are enforced by the Labour Ministry, I hope it will take this into account and increase correspondingly the subsidies payable under both housing schemes.

In the field of welfare, substantial progress may legitimately be claimed. The fact that applications for construction under the cheap housing scheme were in excess of the allocations agreed upon for 1961 is an index of the keen sense of urgency felt by employers to resolve the acute problem of housing. I submit that this problem can only be tackled with goodwill, co-operation and assistance of all concerned. Invoking the compulsive provisions of the Mining Settlements Acts cannot provide a solution.

In regard to safety, we continue to receive instructions from the Chief Inspector of Mines in the form of numerous circulars and directives aimed at rendering working conditions safer. We fully appreciate the importance and value of safety but it must at the same time be realised that safety measures cost money. A co-ordination committee between the Ministry of Steel, Mines & Fuel and the Ministry of Labour & Employment has been in existence for some time. I trust it has been applying its mind to this cost aspect. Standards for lighting and ventilation are proposed to be laid down by the Chief Inspector which, if implemented, will enhance production costs substantially. Within the straight jacket of fixed selling prices, it becomes difficult, if not virtually impossible, to implement fully these measures which no one denies

are necessary. I am sure you will agree with me, Gentlemen, that merely laying down standards or prosecuting management for default cannot provide a satisfactory or lasting solution to the problems connected with safety unless the necessary resources are made available to the industry.

Trained Personnel

Another aspect of this matter may also be noted. We are now required to employ an increasing number of trained personnel to ensure safety. The Coal Council's Committee on Production and Preparation assessed that by 1965-66 the Mining Industry would require an additional 3,750 Mine Managers, 2,000 electrical engineers, 2,000 mechanical engineers, 950 supervisors, 7,000 overmen and 30,000 shotfirers and sirdars. Mining engineers in the Private Sector, who went into this matter in some considerable detail, estimated that our requirements would be substantial, though considerably less than those assessed by the Coal Council. We have previously suggested and now feel it to be all the more urgent, that a conference of all concerned be called so that these and the many other problems connected with training can be gone into, and a sound and consolidated programme drawn up to ensure that sufficient trained personnel will be available.

The Minerals Industry other than Coal also continues to expand and, I am glad to say, is keeping pace satisfactorily with the progressively increasing demand. Commendable production targets have been achieved in respect of various minerals, particularly iron ore, limestone and dolomite which constitute essential raw materials for the growing Steel Industry, and we can confidently look forward to higher targets being attained in keeping with the needs of the Third Five Year Plan. Unfortunately, the position concerning manganese ore is not happy as exports have been much lower than envisaged owing to the highly competitive world market and the inadequate wagon supply for movement of ore to the Ports. As things are, the future, I am sorry to say, does not seem to hold out much promise unless radical measures are taken resulting in a substantial reduction in the F.O.B. export value of this ore.

The deliberations of the Second Session of the Industrial Committee on Mines other than Coal led to the introduction of The Iron Ore Mines Welfare Cess Act, 1961, whereby it is sought to create a Statutory Welfare Fund for the benefit of the workers employed in Iron Ore Mines on the lines of the Coal Mines Labour Welfare Fund.

Code of Discipline

In the same Session of the Committee it was also decided that instead of declaring Iron Ore Mines as an essential service, workers and employers should abide by the Code of Discipline and give 14 days' notice before any strike or lockout is resorted to in the Iron Ore Mines.

The Metalliferous Mines Regulations, 1961, were enforced in March 1961 and in this connection I am pleased to say that the Mines Department have been most considerate in enforcing this legislation by showing due consideration to genuine hardships in complying with the provisions, some of which in actual practice have been found to be unnecessarily stringent.

Gentlemen, I have taken up considerable time in dealing with the problems that face the Coal Industry. If I have sounded somewhat despondent, I repeat that my intention was only to bring these problems to the notice of the authorities concerned. This is so particularly because the whole success of the Third Five Year Plan hinges on the successful fulfilment of our coal targets. While expansion in the last few years has been appreciable, it is dwarfed by the tremendous potential of the future. No doubt, we have many and varied problems to contend with, and we are weighed down by multifarious restrictions. The tasks that lie ahead constitute not only a challenge but an opportunity; it will be our endeavour to prove equal to the challenge.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE ALKALI & CHEMICAL CORPORATION OF INDIA LTD.

A YEAR OF ACHIEVEMENT

THE PROBLEM OF EXPORTS

Speech delivered by the Chairman, Mr. A. R. Foster, at the 25th Annual General Meeting held at Calcutta on Thursday, the 22nd March, 1962.

Ladies and Gentlemen,

The audited accounts and Directors' Report have been in your hands for some time and with your permission I shall take them as read.

An examination of the accounts will show that the year just passed has been a record one for the Company. Compared to the previous year, there has been a further substantial improvement in turnover and profits, with important contributions from polythene and paints.

Production

You may recall that in the previous year the polythene plant achieved a production of 4000 tons against the designed capacity of 3500 tons. The performance of the plant in the year under review was even better and a total of about 4700 tons was produced, the increase being due largely to enthusiasm on the part of the technical staff at the plant and continued application of work study methods. Paints production also continued to rise, and would have been even higher, were not production hampered by a shortage of raw materials, which was aggravated by a reduction of import quotas. To overcome the problem, we are increasing our efforts to obtain raw materials from indigenous and rupee sources; whilst a measure of success has been achieved, supply difficulties still hamper production from time to time.

The other plants at Rishra have also contributed their share to the Company's prosperity and a reference to their performance has been made in the Directors' Report.

Sales

Our sales over the year have reached the record figure of Rs. 6.6 crores as against Rs. 5.4 crores in the previous year. This substantial increase in the volume of our sales would not have been possible without the strenuous efforts of our Selling Agents, Imperial Chemical Industries (India) Private Limited, and the technical services provided by them, and I wish to record our appreciation of their splendid achievement.

Wherever possible, although the cost of wages and raw materials has risen appreciably, we have reduced our prices in order to pass on the benefits flowing from the increased scale of manufacture to customers. As an example, we reduced the selling price of polythene three times in 1961, making a total of five reductions since the plant started production in 1959.

Our returns on caustic soda and chlorine, however, continue to be low, partly due to the price ceiling imposed by the Government and partly on account of the rise in the cost of salt, coal and power.

During the year, excise duties were levied for the first time on polythene and caustic soda and existing excise duties on most of our paint lines were increased. The excise bill for the year shows a rise of nearly 30 lacs over the previous year. It has not been possible for the Company to absorb all of this substantial increase in manufacturing expenses and a part has had to be passed on to customers.

Exports

During the year goods worth several lacs of rupees were exported to neighbouring countries. This is a beginning and we are hopeful of improving our export performance. We are fully alive to the magnitude of the country's foreign exchange problem and of the urgent need for greater exports. It is your Company's intention to do its best to help in Government's export drive. I must point out, however, that the capacity of the relatively young and

small chemical industry in this country to play a major part in exports is limited. The chemical industry is essentially one in which large units are needed to achieve low priced production. Our industry is developing well, but its units are still small by world standards, and we are a long way short of the size necessary to enable us to compete in world markets.

India must indeed increase her exports, and it is encouraging that Government are considering experimenting with various methods of providing incentives. But we must not overlook that other countries are doing likewise, and there is a danger of a race beginning as to who can provide the best incentives. Long term, I am convinced that it is in India's best interests to concentrate on increasing her exports of those products for which she has natural advantages, and these are the traditional ones supplemented to an increasing extent by iron ore, steel etc. These are the industries where the biggest expansion of exports can be expected, and they must be given every encouragement to operate at maximum efficiency and productivity.

Appropriations

As you will have seen from the Accounts our profit before tax has increased by Rs. 12 lacs to Rs. 141 lacs. Tax on the current year's profit is Rs. 52.5 lacs, a considerable increase over last year's figures because in that year the Company enjoyed substantial tax relief in respect of the Development Rebate allowances relating to the polythene plant.

The amount available for appropriation is Rs. 90 lacs and in the light of these satisfactory results, your Board considers it is justified in recommending that the Dividend on the Ordinary Shares be increased to Rs. 1/50 per share.

In its efforts to maintain a progressive but consistent Dividend policy, the Board has allocated Rs. 26.5 lacs to Dividend Equalisation Reserve, bringing the total on that Account to Rs. 46.5 lacs. I am sure you will agree that it is essential to safeguard in this manner the maintenance of your future Dividends.

Rs. 14 lacs has been transferred to General Reserve. This is a further provision towards retaining in the business funds with which to assist in financing of the projected expansion programme of the Company, with which I shall now deal.

Major Expansion Plans

With the increasing demands for our products both in the industrial and consumer fields, we have been giving close attention to the question of securing a fair share of the growing markets by expanding output from existing units and establishing new ones.

Construction on the site for the Rubber Chemicals Project is proceeding at a satisfactory rate and it is expected that the plant will go into production within the next 12 months.

The Company's Paints Plant has for some time been operating at high capacity and an application is now pending with the Government for permission to expand capacity. In view of Government's desire that expansion be achieved without sterling finances, we are investigating the possibility of obtaining raw materials and machinery from rupee sources and of getting more plant fabricated in India.

Construction work in connection with the Intermediate Density Polythene Plant, which it is proposed to set up at Rishra to increase production of polythene has been held up due to delay in obtaining the Capital Goods Licence from the Government. I am glad to say this licence has now been received so

that arrangements for design and procurement of plant can now proceed.

In all these projects and expansions, we are grateful for the encouragement and technical assistance provided by our associates in the U.K., Imperial Chemical Industries Limited.

Staff and Workers

In view of the rapid progress in technology in other developed countries, it is necessary that our technicians are up-to-date in their knowledge of skills and standards elsewhere. To achieve this, selected members of our staff have been sent overseas for training with our associated companies in the United Kingdom and Australia, whose help to us in this respect has been most valuable.

Throughout the year your Board's efforts were directed towards improving communication and consultation with our employees in order to maintain our good relations with them, and there now appears to be a greater awareness and appreciation amongst increasing numbers of our workmen that their prosperity is intimately tied up with that of the Company and that to achieve this, effective and willing co-operation is indispensable.

Following the expiry of the last long-term agreement, we were able to reach, shortly after the end of the year under review, a 5-year Agreement with the recognised Employees' Union in consultation proceedings before the Labour Commissioner, West Bengal. This is the first time that a 5-year Agreement has been reached in the area and your Board hopes that this will usher in an atmosphere of mutual confidence and understanding, which are so essential for the healthy growth of the Company.

We are supporting the Workers' Education Scheme organised by the Government of India and our workers have for some time past been receiving training under this Scheme.

We have also continued to promote the recreational activities of our workmen and to provide them with amenities for their welfare.

Directors

Before turning to the business on the agenda, I must refer to the sad death

last year of Mr. J. M. Lall, the late Chairman of the Company. Mr. Lall had presided over the affairs of the Company for only 3 years, but in that short time he made his presence felt and played a commanding part in all the activities of the Company. With his untimely death, the Company, and indeed, the Country sustained a very great loss.

Another loss suffered by the Company was in the death last November of Sir B. P. Singh Roy, who had been a Director since 1949. His guidance and wise counsel will be sorely missed by his colleagues on the Board.

Mr. F. G. Lamont, who retires by rotation at this meeting, is not seeking re-appointment. Throughout the period of five years that he has been a Director of the Company, his advice and assistance, particularly on technical matters, has been of very great value to his colleagues on the Board, and it is my pleasant duty to record our thanks for all that he has done.

Mr. C. E. J. Crawford resigned last year from the Board after having served as a Director for nearly 15 years, and I would like to express the Board's appreciation of the valuable services he rendered during that period.

Mr. B. R. Goodfellow and Dr. S. B. Cormack have also retired as Directors after many years on the Board and my colleagues and I wish to thank them for the great help they have given in dealing with the problems that have arisen over the years.

Mr. C. A. Pitts and Dr. E. C. Fairhead retire by rotation and their re-appointment is recommended.

Auditors

The Company's Auditors, Lovelock & Lewes, retire and have expressed their willingness to be re-appointed at the same remuneration as last year, namely, Rs. 16,000/- plus out-of-pocket expenses.

Silver Jubilee

The Silver Jubilee of the Company's incorporation will take place on 8th December 1962, and it is your Board's intention to celebrate the occasion in a fitting manner. It is interesting to recall that the Company commenced production on 4th April 1940, when its Caustic Soda/Chlorine Plant went into operation, and our profit in the following year was just over Rs. 2 lacs.

We have come a long way since then and we look forward to the future with confidence and resolution.

And now, before I invite questions from you, I want to thank all of you who have found the time to be present here today.

Note: This does not purport to be a record of the proceedings.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for the establishment of a new expanded manufacturing unit at Vallabh Vidyanagar, Gujarat in addition to the existing manufacturing unit at Bombay of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not undertake any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A Copy of the Prospectus together with the copies of the documents specified therein as required under section 60(2) of the Companies Act, 1956, has been filed with the Registrar of Companies, State of Gujarat, Ahmedabad, for registration.

Application will be made to the Bombay and/or Ahmedabad Stock Exchanges for permission to deal in and for official quotations of the shares of the Company.

The subscription list will open at the commencement of Banking hours on 2nd April, 1962 and will close at the close of Banking hours on 7th April, 1962 or earlier at the discretion of the Directors as soon as the subscription to the amount issued to the public have been received, but not earlier than the close of Banking hours on 4th April 1962.

ELECON ENGINEERING COMPANY LIMITED

Incorporated as a "Private Company" on 11th January, 1960, and converted into a "Public Company" by a Resolution of the Company passed on 26th September, 1961.

AUTHORISED CAPITAL

1,00,000 Equity Shares of Rs. 100 each ... Rs. 1,00,00,000

PRODUCTION PLANS AND MARKET PROSPECTS

In view of the rapid industrialization of our country and the formation of several giant projects, the demand for the mechanical handling equipments is increasing tremendously offering good scope for the products of the company. In these days of keen competition among the various manufacturers, the reduction of manufacturing cost is a major factor for the success of any industry. As the element of the labour cost is one of the most important factors in the cost of production, it has become very essential for all the industries in general and the larger ones in particular to reduce this element of cost as much as possible. Many new projects like steel plants, Fertilizer Projects, Chemical Plants, Oil Refineries, Coal Mines, Lignite and Ore mines, Heavy Engineering Plants, etc. must necessarily depend on the Conveyors for the handling and movement of the material while the other major industries like jute mills, Tea, Textile, Sugar, etc., are also changing over to Mechanical Handling, so as to enable them to compete with the selling prices of the competitors from the industrially advanced countries in the export market. It is proposed not only to increase the productive capacity of the products manufactured at present but also to expand the range of production by under- taking the manufacture of other allied lines like Reduction Gears, Troughing Idlers, etc.

FOREIGN COLLABORATION

**MANUFACTURE OF WORM REDUC-
TION GEAR UNITS.** The Company has
entered into a Technical Collaboration
Agreement with Messrs. Alfred Wiseman
& Co. Limited of Birmingham, England
for the manufacture of "WISEMAN"
Worm Reduction Gear Units upto 10½"
size. The Company is licensed to use
the patents of the Wiseman Company
and to use the name "WISEMAN" on
the Reduction Gears Units manufactured

by it. WISEMAN has also agreed to
supply up-to-date patterns, drawings and
information to train Engineers at their
works and also to send their own Engi-
neer to help in the erection and com-
missioning of the plant. The Company
has also been given the right to export
the product to other countries. In con-
sideration for the said technical colla-
boration, the company will pay to
Wiseman free of Indian taxation, a lump-
sum, payment of ₹14,000/-; Patterns
supplied by Wiseman will have to be
paid for separately at cost. Further the
Company has also entered into a finan-
cial agreement with Wiseman by which
the latter has agreed to subscribe for
fully paid up Equity shares of the value
to Rupees 2,40,000 and pay for the same
in cash.

**MANUFACTURE OF TROUGHING
(CONVEYOR) IDLERS.** The Company
has entered into an Agreement with
Messrs. Spencer (Melksham) Limited of
Melksham in the county of Wiltshire,
England, whereby "Spencer" has agreed
to sell to the company "Spencer's good-
will" in India together with the exclusive
right to use the name "Spencer".
Spencer has agreed to supply up-to-date
patterns, drawings and information, to
train Engineers at their Works and also
to send their own Engineer and commis-
sioning of the plant. The company has
been given the right to export the product
to other countries. The Company has
agreed to pay to Spencer as considera-
tion money a sum of ₹10,000/- of which
a sum of ₹5,000/- has already been paid.

MANUFACTURE OF CONVEYORS
The company has been manufacturing
since last ten years, Mechanical Handling
Equipments, such as Belt Conveyors,
Bucket Elevators, Slat Conveyors, Screw
Conveyors, Gravity Roller Conveyors,
etc. The Company will expand consider-
ably the manufacturing capacity of
Mechanical Handling Equipments.

PROFITS

Subject to unforeseen contingencies
the Directors are of the opinion that the
Company should be able to pay a reason-
able dividend from the financial year
1962.

INDUSTRIAL LICENCES

Industrial Licences Nos. L/8C(2)/12/
MEI/61 dated 6th March, 1961 and
L/8B(2)/12/MEI/61 dated 4th March,
1961 have been issued by the Central
Government for the establishment of
the new expanded unit at Vallabh Vidya-
nagar for the manufacture of Worm Re-
duction Gears and mechanical handling
equipments respectively.

FACTORY PREMISES, CONSTRUCTION OF FACTORY, ETC.

The Company's existing factory premi-
ses are situated at I. B. Patel Estate,
Goregaon, Bombay. The total area of
the land comprises of about 8,540 square
yards with structures and other buildings
covering thereon an area of 2,040 square
yards.

The Company has taken possession of
land at Vallabh Vidyanagar, Anand, in
the State of Gujarat comprising of an
area of 15 acres for the construction of
the new unit.

The construction of three of the five
sheds has already been completed and
the production of Mechanical Handling
Equipments has already commenced.

The construction of the remaining two
sheds is expected to be completed by
April/May, 1962. The production of Re-
duction Gears is expected to commence
by July/August, 1962. The Company has
made arrangements for the Purchase of
an area in aggregate of 100 acres at
Vallabh Vidyanagar, Anand, Gujarat,
which an area of 50 acres is to be utilis-
ed for factory buildings and the remain-
ing 50 acres for the construction of a
housing colony for the staff and labour-
ers of the factory.

CONTRACTS AND AGREEMENTS

Shri Shantilal I. Patel and Shri
Chandrakant H. Amin have been ap-
pointed as Managing Director & Resident
Director respectively, subject to the ap-
proval of the Central Government and
will be paid a monthly remuneration of
Rs. 2,000/- each or a commensurate
valent to 5% each of the annual net profit
of the Company, whichever is higher.

MINIMUM SUBSCRIPTION AND CAPITAL OUTLAY

The total financial requirements of the
Company for the expansion programme
are estimated as follows:—

Land, Plant and machi- nery and other assets, including the purchase of technical know-how, etc. (exclusive of the sums already spent on the new project) ..	Rs. 44,00,000
Expenses of this issue ..	Rs. 2,00,000
Repayment of moneys borrowed by the Com- pany (including a sum of Rs. 7,00,000/- spent approximately on the new project) ..	Rs. 8,00,000
Buildings for factory and office ..	Rs. 14,50,000
Working Capital ..	Rs. 31,50,000
	Rs. 1,00,00,000

It is proposed to meet the above Capital
expenditure from the following
sources:—

Present issue of shares ..	Rs. 50,00,000
Loan from Industrial Credit & Investment Corporation of India Limited ..	Rs. 20,00,000
Medium term loan from The Bank of India Ltd. Deposits against orders From a Bank in the usual course of busi- ness on hypothecation of raw materials work- in-process, goods, etc. ..	Rs. 10,00,000 Rs. 5,00,000 Rs. 15,00,000
	Rs. 1,00,00,000

SALES AND SALES PROSPECTS

The demand for the products of the
Company is growing rapidly as mention-
ed hereinbefore and after implementing
the expansion programme, it is antici-
pated that the sales figures on a very
conservative estimate of various pro-
ducts will be as follows:—

Conveyors .. Rs. 35 lakhs)	Vallabh
Troughing .. Rs. 25 lakhs)	Vidyanagar
Idlers .. Rs. 25 lakhs)	Unit
Worm Reduc- .. Rs. 35 lakhs)	Existing
tion Gears .. Rs. 25 lakhs)	Bombay
Conveyors .. Rs. 25 lakhs)	Unit.

Total Rs. One crore & Twenty
lakhs.

The present minimum needs of the
company of Conveyors and Reduction
Gear Units are estimated to be very high
which is bound to increase still further
in direct relation to the industrial de-
velopment of the country. The Company
has in hand major contracts for the
supply of conveying equipments of the
value of Rs. 45 lakhs.
contract of value of Rs. 25,00,000 is
also being finalised.

Almost all the products of the Com-
pany like Conveyors, Troughing Idlers
and Reduction Gears are largely being
imported at present. When completed
and commissioned, this will be the big-
gest plant in India for the manufacture
of Mechanical Handling Equipments. In
the light of these favourable factors,
having due consideration to the demand
and supply of the products, the sales
prospects are very bright.

LOAN CAPITAL

The Industrial Credit and Investment
Corporation of India Ltd., have agreed in
principle to lend to the Company an
amount in foreign currencies equivalent
in the aggregate to U.S. \$2,52,000 (about
Rupees Twelve Lakhs) as determined by
the International Bank for Reconstruc-
tion and Development and a sum of
Rs. 8,00,000/- (Rupees Eight Lakhs) to
meet a part of the capital cost of setting
up an industrial unit at Vallabh Vidya-
nagar, Anand Gujarat State, for the
production of certain mechanical hand-
ling equipment. The loan in foreign
currencies will bear interest at 7½% per
annum and is repayable in
half-yearly instalments spread over a
period between November, 1963, and
November, 1970. The above loans will
be secured by a legal mortgage pari
passu with the mortgage in favour of
The Bank of India Ltd., Bombay, who
have agreed in principle to grant to the
company a loan of Rs. 10,00,000 (Rupees
Ten lakhs), of all present and future
moveable and immoveable properties of

the Company, subject to the hypotheca-
tion of such of the moveables in favour
of the Company's bankers as may be
required for cash credit and overdraft
facilities.

The Bank of India Ltd., Bombay, have
also agreed in principle to lend to the
Company a medium term loan of
Rs. 10,00,000 (Rupees Ten lakhs only)
repayable in yearly instalments spread
over a period between 1964 and 1970, and
the loan facilities for the working capital
to the tune of Rs. 15 lakhs on pledge and
hypothecation of raw materials, work-in-
process, goods, etc., at the unit at
Vallabh Vidyanagar. The loan will
carry interest at 3% over Bank rate, with
a minimum of 7% per annum. The
medium term loan will be secured by a
mortgage of assets as stated above.

The Promoters have agreed to secure
for the Company, at the appropriate time
and on terms acceptable to the Board
of Directors, loan finance to the extent
necessary to meet any shortfall between
the actual capital outlay on the project
on the one hand and the amount of the
issue and the amount of loan from
I.C.I. Ltd., and from the Bank of
India Ltd., as indicated above on the
other, as also to the extent of the amount
required for the working capital.

UNDERWRITING COMMISSION

The Underwriters to this issue will be
paid an underwriting commission of 2½%
on the face value of shares underwritten
by them respectively.

RESERVES AND DIVIDENDS

The Company has transferred in the
first year of its working a sum of
Rs. 9,02,22/- to development reserve and a
sum of Rs. 441/- is being carried forward
to next year after declaring a dividend
of 12%. It can be seen from the account-
ing results of the first year and also the
results of the firm taken over by the
Company that the returns have been
attractive.

BROKERAGE

Brokerage will be paid to members of
recognized Stock Exchanges in India and
to the Bankers at the rate of 1% on the
nominal value of Shares allotted in
respect of applications bearing their
stamps. Brokerage on the same basis
will be paid to the underwriters in
addition to the underwriting commission
on all allotments made in respect of
applications bearing their stamps.

APPLICATION FOR SHARES

Applications for Shares must be for a
minimum of five Shares or multiples of
five shares and must be made on the form
accompanying the prospectus or printed
form thereof which can be had from the
company's Bankers and Brokers to the
issue.

Application forms duly completed to-
gether with the cheques or drafts at the
rate of Rs. 25/- per share applied for
must be lodged before the closing of the
subscription list with the office of the
underwriters or official Brokers or at
the office of the company or with any
of the Bankers to this issue at their head
office or any of their principal branches at
the following places, namely AHMEDA-
BAD, ANAND, BANGALORE, BARODA,
BOMBAY, CALCUTTA, CAMBAY,
COCHIN, COIMBATORE, DELHI,
GUALIOR, HYDERABAD, INDORE,
KANPUR, MADRAS, MADURAI,
NADIAD, NAVSARI, NEW DELHI,
POONA, RAJKOT, SURAT AND
TRIVANDRUM.

Cheque or Draft accompanying each
application must be in favour of
"ELECON ENGINEERING COMPANY
LTD." Cheques or Drafts must be drawn
on a bank in the city in which the
application is tendered. No cheques or
drafts drawn on banks in other towns
will be accepted and the application will
be refused.

TAX BENEFITS

According to present tax laws, the
Company shall be entitled to benefits in
respect of Development Rebate, and shall
enjoy tax holiday for five years in re-
spect of profits upto 8% on the capital
employed under Section 84 of the In-
come Tax Act, 1961.

The Shareholders shall also be exempt
from tax on dividend paid from the
Company's profit exempt under Section
84 and from Wealth Tax on their hold-
ings for five years under Section 5(1),
(xx) of the Wealth Tax Act, 1957.

Shareholders which are companies
shall also be exempt under Section 80(1)
(iv) of the Income Tax Act, 1961 from
payment of super tax on dividends
received from the Company, on the
working of Vidyanagar unit.

THE BANK OF BARODA LIMITED

(Registered Office: Mandvi, Baroda)

Directors' Report

The Directors have pleasure in submitting this Fifty-Third Annual Report together with the Audited Statement of Accounts for the year ended 31st December, 1961.

	This Year Rupees	Previous Year Rupees
The net profit for the year 1961, after providing for taxes, including Rs. 1,09,357.81 brought forward and after taking Rs. 8,80,143.87 towards depreciation on buildings and furniture amounts to	58,72,553.37	41,68,551.98

An ad-interim dividend at the rate of 14% per annum, subject to deduction of income-tax at the appropriate rates was paid for the half-year ended 30th June, 1961, which absorbed

Amount transferred to Reserve Fund	20,00,000.00	Nil
Provision for Bonus to Staff	20,20,000.00	17,10,000.00
	50,70,000.00	25,85,000.00

The Directors now recommend—

- (a) payment of a final dividend at the rate of 20% per annum per equity share (i.e. Rs. 5 per share) subject to deduction of tax at the appropriate rates for the half-year ended 31st December, 1961 making in all 17% per annum for the year amounting to
- (b) and carry forward to the next year's account of the balance amounting to

2. The business of the Bank during the year under review continued to be satisfactory

3. Under the Scheme of Amalgamation sanctioned by the Government of India, the New Citizen Bank of India Ltd. was amalgamated with our Bank with effect from 29th April, 1961. As a result after due examination and valuation our Bank took over the readily realisable assets of the New Citizen Bank of India Ltd. of the value of Rs. 1,69,19,139.11 nP including immovable properties situated at Filton Road Crawford Market, Bombay, and at Kalyan (non-banking asset). As laid down in the Scheme, after providing in full for its outside liabilities, every depositor of that Bank was, in the first place given credit to the extent of Rs. 250/- or the balance in the account whichever was less; and in the next place to those whose balances were above Rs. 250/-, the pro rata share calculated at Re. 0.66 nP in a rupee in respect of the balance of his account as diminished after the credit of Rs. 250/- was given. The Board wishes to record its appreciation of the co-operation and assistance received from the Reserve Bank of India in connection with the amalgamation.

4. As a result of the amalgamation of the former New Citizen Bank of India Ltd., all its 44 offices started functioning as our branches. Of these, the branches at Bruce Street (Bombay), Jalgaon (Mahaji Bazar) and Nampur were closed down as they were found to be unremunerative.

5. Because of their nearness to each other, the Bank's branches in Calcutta at Pargayaputty and Cross Street were amalgamated and shifted to new commodious premises at Mahatma Gandhi Road, Calcutta.

6. During the period under review, the Bank put up its own building in East Africa at Kampala (Uganda) at a cost of about Rs. 18,24,000/- to house its branch office and a safe deposit vault. This is in addition to the Bank's own building at Nairobi (Kenya) which was put up earlier. The Bank has also started a mobile banking service under the control of its Kisumu (Kenya) branch for the benefit of six surrounding villages.

7. The Bank has applied for and has been granted an exemption from audit under Section 228 of the Companies Act, 1956, in respect of 104 branches in India for the year 1961 and the exemption orders in this regard will be read out to you hereafter. This number includes 13 branches audited by Chartered Accountants in the employ of the Bank who were entrusted with the audit work in consultation with the Bank's Statutory Auditors. The remaining branches in India have been either audited by the Bank's Statutory Auditors or by firms of Chartered Accountants entrusted with the audit in consultation with the Statutory Auditors. All the Bank's branches outside India have been audited by Chartered Accountants who have been competent to act as Company Auditors under the Acts of the respective countries and who have been approved by the Bank's Statutory Auditors.

8. The Bank has opened branches during the year at Chandigarh, Indore (Siyaganj), Jullundur, Ahmedabad (Ellis Bridge), Bombay (Bandra), Calcutta (Bhowanipore), Delhi (Sadar Bazar), Baroda (Industrial Estate) and at Suva in Fiji Islands. A temporary branch was also opened on the grounds of the Indian Industries Fair held in New Delhi in November, 1961. Branches at Godhra, Dehgam and Bareilly will be opened shortly.

9. Shri Tulsidas Kilachand, the Chairman, was out of India for over three months from 16th May, 1961. In accordance with the Article 151(1) of the Articles of Association, the Board had appointed Shri Ramdas Kilachand as an Alternate Director in place of Shri Tulsidas Kilachand. The Board appreciated and placed on record the valuable services rendered by Shri Ramdas Kilachand during the period in which he acted as an Alternate Director.

10. In accordance with Article 145, four Directors, Shri Tulsidas Kilachand, Lt. Col. H. H. The Maharaja Fatehsingh Gaekwad of Baroda, Shri K. P. Goenka, Shri Narsing Dass Bangur retire by rotation and being eligible, offer themselves for re-election.

11. Shareholders are requested to appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting and to fix their remuneration.

For and on behalf of the Board,

TULSIDAS KILACHAND,

Chairman.

Bombay, 8th February, 1962.

REPORT OF THE AUDITORS TO THE SHAREHOLDERS

We have audited the foregoing Balance Sheet of The Bank of Baroda Ltd., as at 31st December, 1961, and also the foregoing Profit and Loss Account of the Bank for the year ended upon that date, in which are incorporated the returns from 25 Branches audited by Branch Auditors and unaudited returns from 104 Branches for which exemption from the provisions of Section 228 of Companies Act, 1956 has been obtained from the Central Government under Rule 4 clauses (a) and (b) of the Companies (Branch Audit Exemption) Rules, 1961.

We report that:

- We have obtained all the information and explanations which to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account as required by law have been kept by the Bank, so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank not visited by us;
- the Bank's Balance Sheet and Profit and Loss Account dealt with by this report are in agreement with the books of account and the returns;
- the reports on the accounts of the Branches audited by Branch Auditors have been forwarded to us and the same have been considered by us in preparing our report;
- in our opinion and to the best of our information and according to the explanations given to us, the said accounts, together with the notes thereon, give the information required by the Companies Act, 1956 in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

UNITED BANK OF INDIA LIMITED

CHAIRMAN, DR. N. N. LAWS REVIEW

Speech delivered by Dr. N. N. Law, Chairman, United Bank of India Limited, at the Annual General Meeting of the shareholders of the Bank held on March 26, 1962.

Bank's Working

The results for the year 1961 speak for themselves. Deposits have grown by 13.8% over the last year and compares favourably with the rise of 5.2% for all scheduled banks and 10.7% for scheduled banks excluding the State Bank of India. The rise has been well distributed throughout the year, enabling the Bank to add to its investments portfolio and to meet the significant demand for advances without strain. In addition, as in the previous years, your Bank remained a free lender in the Call Money Market in Calcutta, almost throughout the year.

The average ratio of advances to deposits was 68.6% as against 65.9% in 1960. Of the total advances 62% was to industries and 28% to Trade and Commerce: the comparative figures for 1960 were 66% and 26% respectively. Our advances to industries include those to the small scale industrial units, aggregating about Rs. 2 crores. You would recall that in 1960 I informed you about our decision to establish a special section for handling such posals from small scale units as could not be entertained in the normal course by our Advances Department. I am glad to mention here that the section has since been organised and is doing good work in assisting such of the small scale industrial units as need special attention.

You have, no doubt, been pleased to note the change in the Bank's dividend trend, made possible by the results of our past years' working. It is recognised that you had to wait for ten years before the turn could take place. But, I hope, you will appreciate that a period of ten years is rather short even in the life of an altogether new bank. This is more so in the matter of consolidating the amalgamation of rather old banks. Amongst various factors, the weight of large overheads, with all its complications, hung on us as a dead load. It was only through extraordinary efforts that the position could be stabilised, and the Bank is thankful to its patrons for enabling it to make these efforts, which, I am happy to say, have further strengthened the Bank's position.

Rate of Interest on Deposits

In the general sphere of banking business the obsession of banks with rate of interest on deposits has already raised complications. Higher rates are now being offered on deposits which more rightly should be classified as 'demand'. Facilities for withdrawal on demand (or at a very short notice) and a high rate of interest go ill together. There is an urgent need that the nomenclatures of different categories of deposits should be precise and adhered to.

The unrealistic emphasis on rate of interest has brought about a situation in which the Inter-Bank Agreement, on the rate of interest on deposits, recently came under severe strain. Some of the banks considered it to be inequitable for them to be bracketed with larger banks as far as the rate of interest is concerned. Fortunately, however, I am told, the impasse is now over and a settlement has been reached. What, however, is most important to remember in this connection, is that as long as the banks continue to over-emphasise the importance of the rate of interest, such situations are bound to occur now and again. It is time that we realised the danger of trying to perpetuate such an unrealistic approach towards developing deposits.

There may be stray individual cases where growth of deposits might have followed a rise in interest rate but if the position is thoroughly analysed, it will, I am sure, be found that such growth has been by way of diversion from other banks rather than by at-

tracting fresh deposits from outside the banking system. When every bank is in a position to compete with another such gain for an individual bank will ultimately be found to be of only a temporary nature. In such a scramble, however, the net result is added to the already high operating costs of banks, with no corresponding benefit either to the banks themselves or to the economy at large. I would, therefore, urge on the experienced bankers of the country to give this matter a closer thought.

Interest rate has only a limited significance in the overall growth of deposits in the banking system as a whole. More important are the quality and efficiency of service and availability of banking facilities. Bank deposit is not to be equated with investment. There is hardly any real outside competition for deposit money.

Deposit Insurance

During the past year, banking authorities have taken two very significant steps in the field of banking. A scheme for insuring bank deposits has been initiated and steps have been taken to strengthen the capital base of banks. Both these measures give us satisfaction inasmuch as the ideas were categorically sponsored and supported by us. I dealt at some length with Deposit Insurance in the past, and you will recall, last year I also emphasised the need for strengthening the capital base of banks. The measures, however, have significant limitations calling for further study.

When the Deposit Insurance Bill was introduced in the Parliament, state-ments sponsoring the bill seem to have visualised a scope much wider than what would actually result from the implementation of the Act. While the interest of the depositors has been safeguarded, no scheme appears to have been devised to ensure that the small banks in the country 'an develop and continue to render uninterrupted service. This is very important. Bank borrowers are engaged in genuine production of wealth in one form or another and create employment. It is thus essential in the interest of these economy that the business of these borrowers is not hampered on account of any strain that may be felt by their banks. Unless develop and to work be assisted to even in the days of strain, the economy will continue to suffer from uncertainty with which the borrowers of these banks will be faced.

Capital Structure

Coming to the convention that has been established with regard to the capital base of banks in relation to their individual deposits, I welcome the stand taken by the Reserve Bank in this matter. A target has been indicated and a minimum accretion to owned funds has been ensured. I, however, feel that the scheme has been rather inadequate, not to speak of its being self-sufficient.

Liquidity

Linked with the subject of capital structure of the banks is the question of liquidity. I raise the issue, as I did also last year, not so much to emphasise the formal liquidity as to draw attention to the need for an overall liquidity in the banking system as well as the liquid character of the bank's assets. The need for maintaining a reasonable liquidity becomes particularly important in a developing economy, which inheres in various contingencies, that cannot always be forecast with certainty.

If the required liquidity has to be preserved, this applies both to the individual banks and to the banking system as a whole. It is necessary that the income differential of banks must go up without unduly making bank money dearer to the producers of goods and services. While maintaining a reasonably liquid position the need for using the cushion available may arise either in consequence of depreciation of

of gear. In such a state the lender also gets involved and is put to severe strain.

Secondly, in order to ensure profitable functioning, the industry must be able to modify or expand the project even at an early stage. Also, in view of the quick technological progress being achieved in different parts of the world, every industry must be prepared to be able to modernise their capital equipments at short intervals. With an adequate initial capital base, it should not be difficult for an industrial undertaking to seek credit facility at these stages of expansion or modernisation. But here also the approach should be to obtain credit as a bridge-over to serve the intermediate stage only, before further capital is raised from the market.

Bonds Market

Since the state of liquidity in the banks' assets, to a large measure, is dependent upon the state of the Bonds Market and the pattern of financial management in the corporate sector, a treatment of these two aspects is relevant at this stage. The market for Government Bonds still continues to be rather limited. On many occasions we have raised this point and a detailed discussion was made in our Banking Plan. We consider it necessary to formulate a scheme, under which banks could work as distributors of Government Bonds. As long as subscription to the Government Bonds by the public reduces bank deposits, the banks cannot be expected to take initiative in dispersing the loans far and wide. On the other hand, the object can be achieved by making specified commercial banks (and such of the Co-operative banks as are not sustained by Treasury loans) the exclusive bankers to the Union and State governments, with an arrangement that collector by way of sale of Bonds or of tax money through them will remain in deposit with the concerned banks.

Corporate Financing

Shiftability, or extinguishment in due course, of a bank credit will depend on the overall effective liquidity in the economy. Such overall liquidity, again, is dependent, amongst others, on the capital base of the corporate enterprises and their profitable functioning. The capital base of these corporations thus need be adequately broadened.

Last year I drew your attention to what was said by the Chairman of the ICICI and the then Governor of the Reserve Bank about the propensity to depend too much on borrowed capital right from the beginning of an industrial venture. Such an approach is fraught with grave dangers. Firstly, despite all plans and programmes many contingencies do remain unobserved when a project is launched. The capital base should be adequate to take care of such contingencies as and when they occur, so that the technological and operational expectations can smoothly be fulfilled. Too much dependence on borrowed capital at this stage, may put the entire project out

Term Financing

This brings me to the question of term lending by banks. It is a matter of satisfaction that the age old abhorrence to mixed banking is fast diminishing and that the banks are making a beginning in the matter of advancing loans to industries on 'term' basis. But in view of the present state of corporate financing, which I have just now discussed, I think a word of caution is necessary.

A progressive outlook is required and is welcome. At the same time, it is also necessary that the limit is noted and the danger of overstepping the same is realised. I consider that in allowing term loans, the commercial banks must, first of all, satisfy themselves that the concerned industrial unit has an adequate capital base. Secondly, they must not try to provide more than medium term finance. It must be recognised that the longer term financing agencies and the Issue (or Investment) Houses must ultimately undertake to bear the long term risks. The basically short term agencies can come into the field only for tidying over the period of transition.

Association Activity

I have always held the view that it is only through co-ordinate and concerted efforts on right lines that the banks can fulfil their obligations towards development of the economy. On the threshold of the Third Plan and with the complex problems before us, I consider that the need for such actions have never been more urgently felt as now. We are in need of a strong and progressive Banks' Association. Such an association is necessary both for a co-ordinated action on the part of the banks, and for generating and guiding a healthy competition amongst themselves. I, therefore, urge that the existing Association should consider formation of a strong Central Federation with residuary authority reminding with the local and sectional organisations of banks.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

PREFABRICATED TUBULAR ROOFING STRUCTURES

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions.

Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Single Span	Bay Lengths
SLS/20	20 ft.	10 ft.
SLS/30	30 ft.	10 ft. and 13 ft. 4 in.
SLS/44	44 ft.	10 ft. 1 1/8 in. and 13 ft. 4 1/8 in.

BRITISH RULERS: A NEW SURVEY

British Statesmen in India. By V. B. Kulkarni. (Published by Orient Longmans Limited, Nicol Road, Ballard Estate, Bombay 1. Price Rs. 20, pages 550.)

This book embodies a considerable amount of research and study by an author who already has to his credit a number of works of an historical or semi-historical nature. It is a long book, but the quality of the writing and the standard of the English used both distract attention from that fact. There is no denying that the personal characters of some of the men whom the British sent to govern their Indian empire have had a distinct impact on the history of this country. Mr. Kulkarni has attempted, by means of a study of the personality and works of 15 of the most important of these pro-consuls, to present a dispassionate picture of the rise and termination of British rule in India. In this he has been singularly successful. His analyses are both detailed and balanced, and there can be no quarrel with the fairness of his judgments. The only serious complaint against this book is the quality of the paper on which it is printed. It might have been expected that such a weighty work would have warranted a better presentation. No doubt this would have increased the price, but it would probably have been well worth it.

SMALL INDUSTRY

Managers for Small Industry. By Joseph E. Stepanek. (Published by

Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 15, pages 256.)

This book explores where potential managers are likely to be found; how they may be given appropriate opportunities for development and preparatory training; what specific managerial training they can have either singly or in groups. The points are illustrated with reference to experiences of newly industrialising countries, in many of which the author has had first-hand experience in launching small companies and planning for the development of small industry. Written by a qualified American engineer and research scholar with all the vast resources of the Ford Foundation and the Stanford Research Centre, the book has all the attributes of a valuable research work. But the present reviewer differs from some of the conclusions. Mr. Stepanek says that "good management is even more important for the development of small industry than are efficient and appropriate production technologies". Finance—obtainable readily and cheap—appears to be an equally important factor in India.

Secondly, the author says that "no number of enthusiastic Government planners...can compensate for a lack of individuals eager and able to seize opportunity to develop". But it is a waste to train Government officials or planners as long as the methods of work in a Government office remain not modern but archaic, with Parkinson's Law operating in every department. Many Govern-

ment of India extension centres, planned by foreign consultants and lavishly endowed by the T.C.M., Ford Foundation, etcetera, are remaining idle. In one extension centre, machine tools worth Rs. 4 lakhs are still in their original packing cases, although five years had already passed. Thirdly, by treating the training courses for small industry in India and the U.S.A. on par, the author has committed an error. The business management training courses conducted by Government agencies are a flop. It is not the "captains" of small industry but clerks and unemployed who flock to these courses in the hope of getting a certificate.

BANKING PRACTICE

Law and Practice of Banking. By R. M. Mitra. (Published by Suneja Book Centre, 24/90 Connaught Circus, New Delhi. Price Rs. 10, pages 359.)

Bank deposits have substantially contributed to the total money supply in India. With the growing monetisation of the economy, it is necessary that banking be organised more efficiently. Mr. Mitra's book contains many topical features. The characteristics of negotiable instruments, techniques of bank lending, and banker-customer relations, have been dealt with elaborately. The book contains useful information about the law and practice of banking. Although it is probably intended for use by students, it is likely to be no less useful to bank employees and the public. The author has given an interesting historical background to the growth of banking.

COMPANIES ACT

Company Administration under the New Company Law as Amended

by the Companies (Amendment) Act, 1960. By Tanubhai D. Desai and Indulal H. Shah. (Published by N. M. Tripathi Private Ltd, Princes Street, Bombay 2. Price Rs. 6, pages 105.)

Following the amendment of the Companies Act in 1960, many new books on the subject have been published, and some of the previous books, like the present one, revised. The book under notice is not an usual, sectionwise and lengthy annotation of the subject. It is a short, partial, but very well-integrated, study of this branch of law, confined to the provisions of the statute (without any case law) and to the problems which arise in the day-to-day running of a company. The need for an integrated study of a self-contained statute like the Companies Act, consisting of more than 600 sections, cannot be over-emphasised. The authors deal with an existing company and its functioning. As such, the pre-incorporation and post-liquidation problems are left out. But others may wonder why the scope of this work should not be extended to assist those who want to start a new company and those who have failed to run one after its formation.

The language is plain and simple and avoids legal jargon to the advantage of the layman and the student, and can profitably be used by professional people as well. The appendices are of great use. For example, Appendix "C," giving the list of registers to be maintained by a company, will remind executives of their duties in relation to them, and if borne in mind, help to avoid the necessity of frequent applications under Section 75 or Section 633 of the Companies Act. An index (without which no book on legal subject is complete) and some important case laws would have added greatly to the usefulness of the publication.

THE CALCUTTA MONEY MARKET GROWTH IN ADVANCES RESUMED

Wednesday, 28th March.

THE seasonal increase in advances have been resumed in the Calcutta money market. During the past week, the requirements of the sugar industry showed a sharp increase. There has, however, been a fairly marked fall in the requirements of the engineering and iron and steel industries, and call for advances from the cotton and jute mills and on account of foodgrains and seeds storage all show fractional declines. In the interbank market, call money continues extremely tight at the unchanged rate of 5½ percent.

The exchange market has been extremely active due to a large increase in the supply of both tea and gunny bills. Remittance has been keen throughout. Following the reduction in the U.K. Bank rate to 5 percent, the pound declined in the London exchange market against all major Continental currencies.

BULLION WAS STEADY IN THE PAST week as supplies were short. Silver advanced to Rs. 256.25, quoted today for ready delivery. The London and New York silver prices were 85d and 101.50 cents.

Gold rose in sympathy with silver, the price being quoted at Rs. 144.50. The sovereign was taken at Rs. 99.25.

DURING THE WEEK ENDED 23RD MARCH, Government of India Treasury bills for Rs. 75,26,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 27th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.340 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.640 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 2nd April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 28th March to the 31st March at Rs. 99.356 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 21st March to 24th March, amounted to Rs. 5 lakhs only.

ACTIVE NOTES DECLINED BY RS. 4.13 crores to Rs. 2,068.89 crores, according to the return of the Reserve Bank of India for the week ended 23rd March, 1962. The total note issue was Rs. 45 lakhs smaller at Rs. 2,094.56 crores. Notes held in the Banking Department consequently rose by Rs. 4.63 crores to Rs. 26.12 crores. Deposits of the Government of India fell by Rs. 34.25 crores to Rs. 51.79 crores, while those of other Governments increased by Rs. 25.74 crores to Rs. 31.21 crores due to inter-transfer of funds between the Central and State Governments. Balances of commercial banks at Rs. 77.19 crores showed a fall of Rs. 30 lakhs. Balances held abroad again declined by Rs. 31 lakhs to Rs. 9.88 crores. Investments rose by Rs. 2.64 crores to Rs. 177.81 crores. Other loans and advances declined from

Rs. 193.77 crores to Rs. 184.71 crores, of which advances to scheduled banks against usance bills amounted to Rs. 43.18 crores (Rs. 47.84 crores). Ways and means advances were Rs. 68.89 crores, against Rs. 84.44 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 16th March, 1962, shows a drop of Rs. 2.71 crores to Rs. 554.70 crores in total deposits. Investments in Government securities are up by Rs. 6.21 crores to Rs. 244.08 crores, while other investments are down by Rs. 13 lakhs to Rs. 9.05 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have decreased by Rs. 41 lakhs to Rs. 284.96 crores. Cash and balances are, in consequence, shown at Rs. 23.66 crores, or Rs. 4.66 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 16th March, 1961, shows Demand and Time liabilities at Rs. 867.20 crores (Rs. 14.74 crores on account of borrowings from banks) and Rs. 1,168.54 crores (Rs. 15.90 crores) compared with Rs. 868.10 crores (Rs. 15.46 crores) and Rs. 1,178.62 crores (Rs. 16.29 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 79 lakhs and Rs. 1.39 crores. There is a rise of Rs. 5.92 crores. Advances and bills discounted are up by Rs. 595.62 crores in investment-crores to Rs. 1,400.01 crores. The ratios crease of Rs. 13.21 percent. The ratios of total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 68.8 percent, against 6.3 percent and 67.7 percent.

AT THE ANNUAL GENERAL MEETING OF shareholders of the Nederlandsche Handel-Maatschappij, N.V. (Netherlands Trading Society), bankers, the dividend for the year ended December 1961, it is proposed, will be fixed at 14 percent, against 12½ percent for 1960.

TREASURY BILL MATURITIES

THE HONGKONG AND SHANGHAI BANKING CORPORATION—Cont'd.

AUDITORS' REPORT ON THE INDIAN BRANCHES OF THE HONGKONG AND SHANGHAI BANKING CORPORATION UNDER SECTION 30 OF THE BANKING COMPANIES ACT 1919

We have audited the above Balance Sheet and the annexed Profit and Loss Account of the Indian Branches of The Hongkong and Shanghai Banking Corporation with the books and accounts of the Calcutta Branch and with certified returns from Bombay Branch.

In accordance with the provisions of Section 29 of the Banking Companies Act 1949, the Balance Sheet and Profit and Loss Account are not required to be and are not drawn up in accordance with Schedule VI of the Companies Act 1956, but are in conformity with Forms A and B of the third Schedule of the Banking Companies Act 1949.

We report that:—

(a) We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for our audit.

(b) In our opinion proper books of account as required by law have been kept by the Calcutta Branch so far as appears from our examination of those books and proper returns adequate for our audit have been received from Bombay which was not visited by us.

(c) The above-mentioned Balance Sheet and Profit and Loss Account are in agreement with the books of account and certified returns.

(d) In our opinion and to the best of our information and according to the explanations given to us such Balance Sheet and Profit and Loss Account give the information required by the Companies Act 1956, in the manner required for Banking Companies, and on such basis and subject to the same remarks, give respectively a true and fair view of the state of affairs of the Indian Branches as at 31st December 1961 and their results for the year ended on that date.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to June 1961. Compared with the preceding month, there were decreases in sugar 158.62 points, jute 16.99 points, cement 21.37 points, coal 13.97 points, pig iron 10.81 points, paper 16.81 points, motor-cars 21.03 points, bicycles 22.58 points, electricity 2.36 points and railway ton-miles 16.99 points, while increases occurred in tea 63.17 points, yarn 6.14 points, cloth 1.37 points, finished steel 19.53 points and tyres 33.75 points.

Combining all the factors, the Capital Index of Indian Industrial Activity declined by 5.5 points during June 1961.

GOOD COMPANY REPORTS LIFT EQUITIES

Wednesday Evening.

THE Calcutta stock market has had a short session today because members have been busy with the general meeting of the Stock Exchange Association. The clearing has passed off smoothly, but the *budhi* will be fixed tomorrow. The carry-forward charges are unlikely to be very different from those of the past settlement. Early in past week, share prices declined heavily on nervous bull liquidation and aggressive short-selling. Various rumours contributed to the weakness. Reports of further tension over the Sino-Indian border encouraged bears to sell heavily. But the market has improved since Monday. Lyons Range has been encouraged by the speech of the Prime Minister, Mr. Nehru, at the meeting of the Federation of Indian Chambers of Commerce and Industry in New Delhi. The Prime Minister talked of the large scope for the expansion of the private sector.

An important factor contributing to the improvement of sentiment is that some companies have issued excellent reports. Dunlop Rubber has declared a taxable ordinary dividend of 20 percent on the increased capital, following the issue of bonus shares in the proportion of one for two. Although there has been a token cut, the dividend is considered entirely satisfactory. Jessop has produced a very good report, showing that the various expansion schemes are making satisfactory progress. The chairman's address at the annual general meeting of the Alkali and Chemical Corporation of India Ltd indicates that excellent progress is being made with the Company's expansion schemes. Some companies have also decided to issue rights shares to finance expansion and modernisation.

Considering that the corporate sector has been working satisfactorily in spite of various difficulties such as the shortage of transport, power and coal, investors are inclined to be fairly optimistic. Indications are that the Government is now taking a more pragmatic view of the growing difficulties of industry. It is, therefore, hoped that vigorous steps will be taken to relieve the shortage of transport, power and coal.

There is considerable optimism about the possibility of the Government taking immediate steps to implement the recommendations of the Ramaswami Mudaliar Committee for promoting exports. The Committee has stressed the importance of allocating sufficient foreign exchange to ensure adequate maintenance imports. It is a serious waste if any portion of the installed capacity remains unused due to the lack of imports.

Lyons Range is enthusiastic over the news that the Indian Iron and Steel Co. Ltd will collaborate with the Stanton Iron Works Co. Ltd for setting up a new Company called I.I.S.C.O.-Stanton Pipe and Foundry Co. Ltd. Indian Iron will subscribe to the shares of the new Company, which proposes to manufacture spun pipes. In order to obtain the sanction of the shareholders to invest in the new Company, a general meeting of the Indian Iron and Steel Co. has been called for 25th April.

Nevertheless, it will be difficult for the trend to improve very much in

the near future due to two factors. The first is the uncertainty over the composition of the new Central Cabinet. The second is the growing shortage of credit. Substantial funds are being mopped up by new issues. A further reduction in the U.K. Bank rate to 5 percent has had little effect, because the move may not encourage the diversion of funds from the U.K. to this country in any significant amounts.

Indian Iron have closed at Rs. 24.95. Among engineering shares, Jessop and Braithwaite have gained. Burn have enjoyed support due to talk of a bonus issue. Texmaco have reacted after an earlier improvement.

Although prices of selected miscellaneous shares have improved, the highest levels have not been maintained at the close due to profit-taking. Dunlop Rubber and Alkali Chemical have slipped back. Hindustan Motors have become hesitant on the prospect that the public sector may start the small-car project. British India Corporation have been steady on paying a higher dividend. Among new shares, India Carbon have improved on sustained buying. The recent offer of shares by Indian Tack and Nail has been over-subscribed almost ten times. Allotment letters are expected to be sent soon. The shares are already being quoted at a substantial premium in kerb trading.

Paper shares have become steadier and Orient have improved on expansion hopes. India Paper Pulp have hardened. Interest is being taken in Ballarpur because the Company has decided to sub-divide the scrip into shares of Rs. 10 each.

There has been strong support for selected jute shares on the view that mills are making satisfactory profits. Birla, Bally, Nuddea, Anglo-India, Kankarrah, Kelvin and Northbrook have met with support.

In the cotton mill section, Bowreah have gained on the news of a rights issue. The Company has also doubled the ordinary dividend. Dunlop have been steady on maintaining the dividend. J. K. Rayon, Jay Shree Textiles and Cawnpore Textiles have been maintained.

There is little support for coal shares but small business has been transacted in Burrakur, Bengal, New Beerbhoom, South Karanpura and Central India. Fluctuations on the whole have been narrow.

Bank shares have been steady and support has been forthcoming for United Commercial, United Bank and Punjab National.

Among sugar shares, Ramnugger have hardened on declaring a higher dividend. Dyer Meakin Breweries have been firm on prospects of a bonus issue. Carew, Belsund and S.K.G. have been easier.

Reports of a decline in the price of common teas induced selling in tea shares. Brooke Bond, Grob, Sungma, Bishnauth, Hantapara and Tezpora have declined.

Government securities have been dull with turnover limited. Prices of dated loans are slightly higher due to official support. The 3 percent

Conversion loan 1986 has improved to Rs. 71.05.

Bombay Market

PRICES STEADIER ON SHORT-COVERING

SPEECH FROM MR. NEHRU CHEERS OPERATORS

Wednesday Evening.

THE Bombay stock market closed in a steadier mood after an easier spell early in the past week. At first, share prices declined, due to rumours concerning the composition of the new Central Cabinet. Later, there was a modest recovery following short-covering and renewed support. The speech of the Prime Minister, Mr. Nehru, at the meeting of the Federation of Indian Chambers of Commerce and Industry held in New Delhi, had an encouraging effect. Mr. Nehru had complimented the private sector on its performance during the past few years. The decision of the U.S.A. to give a substantial portion of P.L. 480 counterpart funds for investment in India's development encouraged the hope that India would obtain sufficient foreign aid for the third plan.

Support was also induced by the flow of good corporate news. Some companies propose to issue bonus shares by capitalising reserves. Many others have decided to issue rights shares to finance the expansion and diversification of activities. Wide fluctuations were prevented by the decision of the authorities to impose automatic margins on bulls and bears. Bulls were forced to pay margins on India United deferred shares, and bears had to pay margins on Edward Textiles.

Support from Lyons Range helped lift the prices of Tata Steel to Rs. 139.50 and of Indian Iron to Rs. 24.95. Among engineering shares, Alcock Ashdown improved to Rs. 337 on paying a higher dividend. T. Maneklal were in demand on the news that the shareholders of this Company would be given firm rights to subscribe for the shares of S.L.M.-Maneklal Industries Ltd. a new Company. Tata Locomotive came to hand at Rs. 348.50 and Premier Construction at Rs. 174. Mukand Iron were transacted at Rs. 27.65 and Larsen and Toubro at Rs. 40.75. New Standard Engineering rose to Rs. 247. Motor-vehicle shares were quietly steady. Business passed in Hindustan Motors at Rs. 19.88 and in Premier Automobiles at Rs. 131.

Cotton mill shares improved at the close after an earlier decline. Kohinoor were wanted at Rs. 311.50 and Century were done at Rs. 614. Bombay Dyeing came to hand at Rs. 69.30 and India United ordinary were bought up to Rs. 23.12. Morarjee were done at Rs. 425 and Standard at Rs. 1,040. Simplex were sold at Rs. 176 and Apollo at Rs. 254. Finlay were steady at Rs. 355 and Gokak at Rs. 232.50. On receipt of the news that the Maharashtra Government had decided to form a Corporation to take over the surplus land from sugar mills under the Land Ceilings Act, Belapur declined to Rs. 232 and

Phalton to Rs. 112. Walchandnagar Industries were sold at Rs. 162.50. Mining shares were quiet, and Shivrajpur Syndicate were available at Rs. 42. Steamship company shares were steady on hopes of an increase in coastal freights. Scindia Steam were transacted at Rs. 12.60 and Great Eastern Shipping at Rs. 12.76. Cement shares were steady in the hope of an increase in retention prices. Associated Cement improved to Rs. 157 and Digvijay to Rs. 205. Bombay Burmah recovered to Rs. 651. Rayon shares recovered at the close, and National Rayon were done at Rs. 542. Gwalior Rayon rose to Rs. 56 and Baroda Rayon were done at Rs. 146. Chemical shares were steady, and Tata Chemical improved to Rs. 17.80. Synthetics and Chemicals rose to Rs. 230 on the news that the Company had been permitted to issue rights ordinary shares at a premium of Rs. 20 a share. Polychem were done at Rs. 217.50 and Colour-Chem at Rs. 477.50. Ceat Tyre were done at Rs. 200, but Hindustan Lever were firm at Rs. 71 on issuing bonus shares. Voltas were bought at Rs. 284.50 and Tata Oil at Rs. 82.

Bank shares were steady, and Bank of India came to hand at Rs. 124. Central Bank were done at Rs. 67.50 and Bank of Baroda at Rs. 120.50. Among insurance shares, New India Assurance were firm at Rs. 67 on prospects of a bonus issue.

There was scattered support for electric company shares, and Tata Power were taken at Rs. 1,118.75. Tata Hydro were done at Rs. 1.14 and Ahmedabad Electric at Rs. 93.80. Bombay Suburban were placed at Rs. 103.

Madras Market

SELLING PRESSURE DECREASES

GOOD DIVIDENDS RAISE TEXTILE SHARES

Tuesday Evening.

DULL conditions prevailed in the Madras stock market during the past week, although sentiment improved at the close due to modest support. Higher advices from Calcutta and Bombay helped induce replacement buying. The decision of some cotton mills to pay higher dividends, combined with the possibility of rights issues by some miscellaneous companies, helped reduce the selling pressure. Investors were nevertheless cautious in view of the coming Central Budget. It was feared that there might be more taxation to finance the plan.

Government securities were dull, and routine business was transacted. Bank shares were about steady, but interest was limited. Good electric company shares met with support on yield considerations. Sugar shares showed mixed trends. Tea, coffee and rubber shares were transacted cautiously. A further decline in the price of common teas had a dampening effect. Selected cotton mill shares were bought on the announcement of good dividends. In the miscellaneous section, attention was concentrated on cement and chemical shares due to good corporate news.

In the banking section, Andhra were done at Rs. 100 on declaring a taxable dividend of 8 percent. Indian Overseas came to hand at Rs. 181.50 on paying a taxable dividend of 14 percent. Indian were steady at Rs. 180 and Canara at Rs. 86. Among electric company shares, interest was taken in Cochin at Rs. 12 and in Ellore at Rs. 22. Salem-Erode were done at Rs. 15 and West Coast at Rs. 15.75.

Among sugar shares, E.I.D. hardened to Rs. 38.62, but Deccan were easier at Rs. 9.95. India were transacted at Rs. 10.30 and Kothari at Rs. 7. Business passed in Mysore at Rs. 53.40 and in United Breweries at Rs. 82.25.

In the planting section, Blue Mountain weakened to Rs. 2.62 and Chembra to Rs. 3.40. Cochin Malabar were placed at Rs. 7 on declaring a taxable ordinary interim dividend of 9 percent. Coffee Lands were freely available at Rs. 14.60 and Consolidated Coffee at Rs. 17.80. Gokul were bought at Rs. 2.10 on paying a taxable ordinary dividend of 10 percent, but Emerald Valley were weaker at Rs. 5.25 on the news that the Company was finding it difficult to sell its tea estates. Kil Kotagiri were indicated at Rs. 5.13 and Lucky Valley at Rs. 10.12. Mysore Coffee were sold at Rs. 5 and Nilgiri at Rs. 8.30. Osoor were transacted at Rs. 2.60 and Nonsuch at Rs. 22.75. Ouchterlony were taken at Rs. 3.94 on declaring a taxable ordinary dividend of 12 percent. Parkside were steady at Rs. 23, but Peermade were sold down to Rs. 19.75. Periakaramalai were available at Rs. 3.35 and Rajagiri at Rs. 19.25. Thirumbadi were sold at Rs. 1.71 and United Nilgiri at Rs. 20.84.

Among textile shares, Buckingham hardened to Rs. 290 and Bangalore Woollen to Rs. 245 on paying higher dividends. Both the Companies declared final ordinary dividends of 12 percent. Anglo-French were placed at Rs. 145 and Cambodia at Rs. 13.50. Kannapiran were done at Rs. 12.50 on declaring a taxable ordinary dividend of 12 percent. Kothari were steady at Rs. 13.15, but Lakshmi reacted to Rs. 167.50. Madura were steady at Rs. 39.75 and Mettur at Rs. 398. Pankaja were indicated at Rs. 93.50 and Rajalakshmi at Rs. 107. Travancore Rayon declined to Rs. 44.20 on maintaining a taxable ordinary dividend of 20 percent. Vasanta rose to Rs. 309 on declaring a taxable ordinary dividend of 25 percent.

Among miscellaneous share, Aluminium Industries were steady at Rs. 23.68 and Mettur Chemical at Rs. 13.10 on issuing 600,000 ordinary shares of Rs. 10 each at a premium of 50p a share. Aspinwall were bought at Rs. 6.25 on paying a taxable ordinary dividend of 9 percent. Binny were steady at Rs. 314 on declaring a taxable final ordinary dividend of 14.50 percent. Ashok Leyland were easier at Rs. 8.82, but Dalmia Cement were steady at Rs. 13.35. F.A.C.T. were transacted at Rs. 8.10 and Enfield at Rs. 12.05. India Cement met with support at Rs. 5.83 and Kiroloskar Electric at Rs. 19.30. Madras Rubber improved to Rs. 21 and Ogale Glass to Rs. 6.50. Central Scientific were bought at Rs. 7.25 and Seshasayee Paper at Rs. 8.40. Business was done in Spencer at Rs. 24.35 and in Standard Motors at Rs. 16.70. Textool were dealt in at Rs. 126 and Tube Investment were transacted at Rs. 290.

THE WEEK'S TRANSACTIONS

WORKER PARTICIPATION IN MANAGEMENT

By B. N. Mehrotra

THE scheme of workers' participation in management in its present form was introduced in Indian industry in 1958. Some of the joint management councils have now been in existence for more than three years. It is, therefore, high time that an objective and impartial evaluation of the working of the scheme is made. This has become particularly necessary because the Central Government is very keen on extending the scheme to other units. The Central Ministry of Labour is in touch with over 100 industrial establishments both in the public and in the private sectors in connection with the setting up of joint councils. The third five year plan has gone so far as to recommend that, "wherever a representative union exists, a council should come into being as a matter of course."

The Labour Ministry is reported to have completed a study of the functioning of 14 joint councils. The reports have not been made public, as "they are meant for official use only." This veil of secrecy appears to confirm the widespread feeling that all is not well with this new experiment in labour-management relations. However, on the occasion of the last Republic Day, the Press Information Bureau of the Central Government released a Press communiqué on labour-management co-operation, reviewing the progress of the scheme of worker participation. This review tries to convey the impression that the scheme has made satisfactory progress and concrete results have been achieved in undertakings where joint councils are functioning. The reports on the actual working of the joint councils do not justify the contentions.

At the end of January 1962, 27 joint councils—ten in the public sector and seven in the private sector—were reported to be functioning. That even after three and a half years of experimentation, and in spite of the Government's enthusiasm and the personal interest taken by the Central Labour Minister, the number of councils in the whole country should be only 27, is in itself very disappointing. However, the actual performance has been even less satisfactory.

Lack of Interest

Practically all these councils were set up by 1959. After the first flush of enthusiasm was over, neither the employers nor the trade unions have shown much interest in them. Instead of more units coming forward to try the experiment, the working of some of the councils had to be suspended for some reason or other. Important among the units that have dropped out of the scheme are Hindustan Machine Tools, Kerala State Transport and Kankannur Co. Ltd. With this, the number of joint councils should have declined. But the latest review has artificially boosted up the number to 27, as against 23 a year ago. It is not difficult to explain this anomaly. Joint councils in some State undertakings in Kerala State were set up in 1958, but for some inexplicable reason they were not included in the list of joint councils till recently. They have now been included, and six out of the 27 councils belong to this category. Similarly, the Simpson group was so far listed as one unit, though there were actually nine joint management councils functioning in the various industrial units comprised in the group. Four of these units—India Pistons,

Associated Printers, Addisons Paints and Chemicals, and Higginbothams—have now been separately included.

Record of Public Sector

The public sector, which has to set an example to the private sector, cannot congratulate itself on its performance in this sphere. There are only ten joint councils in the public sector, of which six are in Kerala State. Other State Governments seem to be indifferent to the scheme. Moreover, all these ten units are small undertakings, one of them employing only 40 workers. The public sector has in its fold today some of the biggest undertakings in the country. How is it that none of the big units, like Hindustan Steel, Heavy Electricals, Nangal Fertilisers, Heavy Engineering Corporation, Neyveli Lignite, Bharat Electronics, etcetera, have shown any inclination to try the experiment? This omission becomes all the more significant when one remembers that, in selecting very small units for worker participation, the Government even ignored one of the criteria of selection laid down by the first seminar on labour-management co-operation, viz., that the undertaking should employ at least 500 workers. In August last, it was announced that joint councils would be set up in 11 State undertakings such as Ashoka Hotels, Hindustan Housing Factory, etcetera. At the same time, the Madhya Pradesh Labour Minister stated that the Bhilai steel project and the State Road Transport were among the public undertakings selected for introduction of the scheme. More than seven months have elapsed, but nothing has been done so far. It will not be unreasonable to conclude that other Ministries are unwilling to co-operate with the Labour Ministry in experimenting with the scheme.

It is claimed that "one remarkable result of setting up joint councils has been a closer understanding between the managements and the workers in regard to several aspects of their day-to-day relationship. Both managements and workers now have better appreciation of the difficulties and problems of one another." It is true that cases of work stoppages in undertakings where joint councils are functioning have been negligible. But this does not mean much because, with the exception of one or two concerns, the others had a good record of industrial relations even before the introduction of the scheme and had had no work stoppages for many years prior to the setting up of the councils. Moreover, absence of strikes or lockouts is not by itself a good index of harmonious relations.

Instances of Deterioration

There have also been instances of a definite deterioration in labour-management relations. Tata had the worst industrial unrest in its history after the signing of the 1956 agreement providing for joint consultation. A difference of opinion on the question of sharing information between the workers' and employers' representatives on the joint council led to the breakdown of joint consultation in the Simpson group. The union president described the attitude of management as "autocratic and dictatorial". In Kankannur jute mills relations between management and labour became so strained that in December 1960 there was a strike involving loss of more than 130,000 man-days. In Hindustan Machine Tools, the management and the union clashed

on the question of wages and production norms, and the joint council has been in abeyance for more than two years. The Punjab Government Printing Press Labour Union was highly critical of the "high-handed and unfair treatment of the workmen." These examples do not reflect "a closer understanding between the management and the workers". In a leading article, the *Indian Worker* the official organ of the I.N.T.U.C., expressed disappointment over the attitude of employers and observed: "We are sure the Government would not allow the employers to sabotage the whole scheme of workers' participation in industry."

The Press Information Bureau's review claims several other benefits, such as increase in production and productivity, decline in industrial accidents and labour turnover, and rise in profits. In some cases, the joint council has helped in the effective utilisation of material, avoidance of waste, reduction of losses in the canteen or on transport and in checking late-coming. In many undertakings, production and productivity have also increased, but what precise contribution the joint councils have made in these improvements cannot be ascertained. The reason is that similar improvements have occurred in many other concerns in the same industry and in the same region. There are no indications that undertakings with joint councils have done better than those without them. During the last few years, there has been a countrywide drive for higher productivity. Improvements in plant and machinery, techniques of production and the quality of management, have all combined to increase efficiency and enhance productivity. As a consequence, in many undertakings the trend towards higher productivity was noticeable even before the introduction of joint councils. Managements have generally reported that there has been no change in the workers' attitude to work.

Labour Turnover

The data about accidents and labour turnover are insufficient to warrant any definite conclusion. In a textile mill, a joint council was set up in November 1959, but the rate of labour turnover had already declined from 2.1 percent in 1955 to 1.3 percent in 1959. In 1961 it was 1.0 percent. In a jute mill, during the first year of the joint council, the rate declined from 10.3 percent to 6.5 percent; but in the very next year it increased to 9.3 percent. Similarly in Kankannur Jute Mill, in the first year the rate declined from 13.9 percent to 6.9 percent, but next year it went up to 8.9 percent. The figures for the Belur Works were 1.4 percent in 1955, 0.5 percent in 1956 and 1957, 1.1 percent in 1958, and 0.3 percent in 1959.

The number of accidents in Kankannur increased from 37 in 1956 to 79 in 1959. In T.I.S.C.O., the accident rate for the three months ended January 1960 was 23.9 for every 1,000 workers, as against 19.2 for the same period a year before. In Bally Jute Mills, the number of accidents increased from 114 in 1957 to 156 in 1959. As for absenteeism it is officially admitted that, generally speaking, it has increased. At a meeting of the Committee on Labour-Management Co-operation in May 1961, Dr. G. S. Molkote suggested that "it would be useful to undertake a study about absenteeism in order to find out whether increase in absenteeism was

CAPITAL, 29th March, 1962.

due to the workers taking more leisure in undertakings where councils have been formed." The Labour Minister agreed to consider the proposal.

The Central Labour Ministry cannot be the sole judge of the success or failure of the scheme. The opinions of the participating employers and labour unions are equally important. In most of the undertakings where joint councils have been set up, the representative union is affiliated to the I.N.T.U.C. The I.N.T.U.C.'s assessment of the situation is this: "Workers' participation in management is only in name. While the workers were associated with the management of unimportant aspects of industrial functioning they were cleverly prevented from sharing real managerial powers. The result was that it had not produced the desired results.....Unless the employers adopt a more positive attitude it will remain only a paper scheme." (*Indian Worker*, 8th May, 1961). The views of the A.I.T.U.C. can be summed up in one sentence: "About workers' participation in management, the less said the better."

Employers' disappointment is evident from the fact that no new councils have been set up during the last two-and-a-half years. If the joint councils had some positive achievements to their credit and the employers as a class were convinced that they were rendering useful service, many more would have come forward to try the experiment. The Central Minister of Commerce and Industry, Mr. K. C. Reddy, whose opinion should carry considerable weight since most of the units in the public sector which have set up joint councils belong to his Ministry, stated last January that "the scheme had not proved a success in units in which it had been introduced." Finally, presiding over the last All-India Labour Economics Conference, Dr. Gyan Chand observed: "Scrappy information about the working of the scheme in 14 relatively small undertakings provides a very slender basis for judgment. In all major respects, even this assessment points to the results being anything but reassuring. They are not even a beginning of a new chapter in industrial relations from the conservative standpoint, what to speak of creation of a new community with a newly awakened sense of mutual obligations.....The phrase appears to have been used as a concession to a socialist tradition.....There is no indication at all of any earnest thinking on this fundamental point."

In conclusion, though the results achieved so far are not very heartening, there is no cause for despair, the facts should be boldly faced, shortfalls in the scheme recognised, and a determined effort made to remove them and create the conditions in which the joint councils can function efficiently and realise their purposes. A sound policy measure should not degenerate into a slogan.

NAMES AND DATES

Mr. E. Thalmann, at present manager of the Calcutta branch of Voltas Ltd. is going to Bombay as deputy general manager (staff). Mr. K. G. Menon will take over as branch manager of Voltas in Calcutta with effect from 2nd April, 1962.

The British India Steam Navigation Company Ltd has announced that Mr. E. J. Pakes will retire from the chairmanship on 31st March, and the board has elected Mr. K. M. Campbell to succeed him. The Earl of Incheape will retire from the office of deputy chairman on 31st March, but will remain on the board. Mr. W. Dalgarno, having retired from the board of the P. and O. Company on account of ill health, will retire from the board of the British India Steam Navigation Co. Ltd, also, on 31st March.

CAPITAL, 29th March, 1962.

New Delhi

F.I.C.C.I. Wants Rules for Foreign Investment Simplified

(FROM OUR NEW DELHI CORRESPONDENT)

THE latest annual session of the Federation of Indian Chambers of Commerce and Industry, held last week-end, was opened by the Prime Minister. Mr. Nehru delivered his customary sermon on social justice, punctuating the theme with references to the Geneva conference on disarmament, the cease-fire in Algeria, a condemnation of all military pacts, and the overall necessity for "peace on earth and goodwill among men."

During his election tours, he said, he had found that people by and large were better fed and better clothed. This did not, however, mean that poverty had disappeared. There was still a good deal of it in India. It was rapid industrialisation married to social justice, which could eradicate poverty and unemployment, he said. Political democracy should be linked to economic democracy. Mr. Nehru saw good points in free enterprise, although he disapproved of monopolies. He saw some good points in communism also, but he was not completely in favour of either. Forces had been let loose in India which could not be stopped and would inevitably lead to socialism. He was confident that panchayat raj and co-operation were going to be the main agencies for bringing about economic democracy in India.

The outgoing president, Mr. K. C. Thapar, in his speech said that "our industry has become democratic". In support of his theme, he cited a study made by the Reserve Bank which showed that industrial shares were being increasingly taken up by people having small incomes. The observations of the president on exports and trade blocs are also worth mentioning. He said that "we must export at any cost." Such a resolve would be gratifying if exports are promoted, but not at the cost of the consumer or the taxpayer.

He said that some of India's exports would not only be more expensive in Britain, but also less competitive, compared with those from non-Commonwealth countries unless safeguards are provided if Britain joins the European Common Market.

Mr. Thapar also said that "the developing countries cannot, from considerations of rapid development and particular conditions of production, reduce their tariffs. In other words, reduction of tariffs cannot be reciprocal." He did not favour a common market of the under-developed countries, which, he said, could have only "areas of preferential treatment for certain commodities."

Economic Policy

Five resolutions figured on the order paper of the Federation. They related to economic policy, impediments to industrial production and expansion, production and movement of coal, the State Trading Corporation, and price policy. The resolution on economic policy makes the following recommendations:

"The administrative machinery must be streamlined at various levels in order to remove procedural difficulties, expedite decisions and co-ordinate policies against the background that there is considerable

scope for industrial expansion and development and that business men are willing and capable of shouldering additional responsibilities. The Government must concentrate its full attention on augmenting rail transport capacity, power and services such as telephones and telegraphs instead of dissipating its limited resources of personnel on a wider front.

"Greater allocation for import of machines and equipment must be made which will help produce the raw materials and components for different industries. Since the only way to industrialise the country speedily is through the production of capital goods of all kinds, every encouragement must be given for the manufacture of such capital goods.

"To check cost-inflation in industry, the greatest possible emphasis should be placed on the need to promote productivity in industry as well as agriculture, so as to ensure the most economic utilisation of the country's resources and productive capacity. The need for giving incentives in full measure in the promotion of exports should be firmly recognised.

"There is also a need for appropriate Central machinery for intimate consultation and exchange of ideas and experience at the highest level between the administration and the organised bodies of Indian business men."

Industrial Structure

In another resolution, the Federation views with concern the general industrial picture which is one of imbalance combined with rigidities. In certain industries, the supply in relation to demand is excessive; in others there are shortages. There is a tendency on the part of the authorities to impart rigidity to the targets of the various industries envisaged in the plan programmes. Moreover, even after an industrial establishment is put up after going through the sieve of Government controls and regulations, there is no certainty that either coal will be available or the various industries envisaged in the plan programmes. The Federation considers it essential that, since the primary need of the country is increased production, there should be a reappraisal of the existing industrial policy without ideological considerations coming in, so as to allow private collieries to develop adjacent, contiguous or new areas.

The Federation has expressed the view that industrial consumers should be free to choose their collieries and coal agents according to quotas allotted to them. After meeting the requirements of high-grade coal, according to the priorities of consumers, an endeavour should be made to rationalise the limited transport capacity through the haulage of coal with a lower ash content to distant consumers. Also, the coal washeries programme in the public sector must be expedited and the private sector allowed and assisted in the establishment of washeries. Further, the subsidy for the supply of coal through the rail-cum-sea route must be made more comprehensive and payments expedited. Although the scope for diversion of traffic by the sea route is limited, it is necessary to formulate a long-term programme in this matter so that the steamer tonnage could be augmented. Steps must also be taken to develop and strengthen roads and bridges, especially in and around collieries, to assist the carriage of coal by employing heavy vehicles with a suitable

(1) Imports of machine tools, which are not manufactured in the country or in sufficient numbers, should be liberalised.

(2) The requirements of various industries must be properly assessed by the authorities according to a time schedule.

(3) If foreign collaborators are prepared to export risk capital to India, and entrepreneurs in India are willing to invest capital after ensuring that such investment is productive, procedural regulations on the Government side should not interfere

with the inflow of such foreign capital.

(4) Licensing regulations should be simplified so as to encourage the flotation of new ventures or expansion of existing ones.

(5) The Government's policy for earmarking the development of certain industries in the public sector must be suitably revised, because this has tended to perpetuate imports and the outflow of foreign exchange, instead of speedily developing the resources because of the delay in the implementation of public sector projects.

(6) Industry should be encouraged to implement programmes which will increase productivity and reduce costs and prices.

Coal Supplies

The Federation holds that the gap between the demand for coal and its actual movement by the railways, which is much below the required level, has, on the one hand, starved industrial consumers of their coal requirements and, on the other, increased the cost of coal production. Accumulation of stocks at the pit-heads, with the consequent deterioration in quality and the inevitable blockage of finance, has impeded coal production. The position is further aggravated by the uneconomic price structure, meagre capital available to collieries, the return on investments being unattractive, and the restrictions on the hypothecation of coal stocks.

The Federation, therefore, urges that the price structure be made more remunerative and adequate financial assistance be provided to collieries for their expansion programmes and for augmenting output. Besides, adequate and timely supplies of power and explosives should be programmed. The Federation considers it essential that, since the primary need of the country is increased production, there should be a reappraisal of the existing industrial policy without ideological considerations coming in, so as to allow private collieries to develop adjacent, contiguous or new areas.

The Federation has expressed the view that industrial consumers should be free to choose their collieries and coal agents according to quotas allotted to them. After meeting the requirements of high-grade coal, according to the priorities of consumers, an endeavour should be made to rationalise the limited transport capacity through the haulage of coal with a lower ash content to distant consumers. Also, the coal washeries programme in the public sector must be expedited and the private sector allowed and assisted in the establishment of washeries. Further, the subsidy for the supply of coal through the rail-cum-sea route must be made more comprehensive and payments expedited. Although the scope for diversion of traffic by the sea route is limited, it is necessary to formulate a long-term programme in this matter so that the steamer tonnage could be augmented. Steps must also be taken to develop and strengthen roads and bridges, especially in and around collieries, to assist the carriage of coal by employing heavy vehicles with a suitable

combination of trailers and semi-trailers.

Activities of S.T.C.

The Federation is perturbed by the encroachments of the State Trading Corporation into the field of trade. Its resolution said: "Although the Corporation was set up in 1956, primarily with the objective of conducting trade with certain countries on Government-to-Government level, it has taken over trade which legitimately belongs to private enterprise. And this takeover, apart from replacing the established trade channels, has either resulted in or generated adverse consequences to the country's trade—actual and potential. Moreover, the Corporation has not fulfilled its original functions, such as exploring new markets, encouraging exports of non-traditional items, dealing with difficult markets and generally functioning as an instrument to supplement the normal trade channels. The handling of exports by the Corporation has in some cases resulted in their decline, and the costs of distribution have also gone up. Also, India's exports have met with resistance from many countries not inclined to trade with monopolistic organisations, such as the State Trading Corporation. On the import side, the intervention of the Corporation has resulted in distorting prices of essential raw materials like caustic soda, soda ash, rayon yarn and mercury, and purchases made by the State Trading Corporation abroad and released within the country have neither been timely, nor at prices most advantageous to the consumers and in certain cases detrimental to indigenous industry.

"The Federation is also concerned over the barter and link deals and rupee payment agreements entered into by the State Trading Corporation, whether directly or as an instrument of Government. The Federation realises that trade with rupee payment countries has a definite place in our newly emerging foreign trade pattern; at the same time, the Federation is constrained to point out that the arrangements entered into have not always resulted in a net increase in total trade. On the other hand, these arrangements have distorted the normal functioning of trade, have established privileged parties, and have also upset the demand for Indian goods, both traditional and non-traditional, in the markets of our older trading partners.

"In this context, the Federation strongly urges the Government of India to constitute a high-powered committee, consisting of both officials and non-officials to review and assess the activities of the State Trading Corporation, to consider whether the Corporation should continue to operate at all and if so, in what manner without upsetting India's competitive strength in trade which can be increased mainly through the efforts of a large number of traders."

Price Policy

As for price policy, "the Federation feels that the Government and the Tariff Commission in their anxiety to maintain the general price level are having unrealistic prices fixed which result in scarcity in some cases, causing hardship to the consumer both in matters of availability and prices of such commodities. Such price fixing without covering the full element of cost, the prevalent rate of return on investment and savings to meet the cost of additional capacity, will not help the achievement of the common objective of larger supplies and gradual downward adjustment of the price structure. It will also not attract capital for development, the absence of

which will bring in conditions of scarcity, price rise, and in turn inflationary pressures. When in the light of such experience of scarcity in some cases, the Tariff Commission tried to adopt a realistic formula, ad hoc and haphazard decisions taken by the Government have led to scarcity and inefficiency in industry. Fundamentally, prices can be held only by larger production and technological progress.

"The Federation, therefore, feels that it is imperative that for commodities essential to the life of the community, the prices fixed should be realistic, so that industry may be left with adequate savings and attract capital to carry on expansion in order to meet the increasing needs of society. The Federation urges the authorities clearly to recognise the need for helping industrial growth through a flexible price policy supplemented by positive assistance towards re-equipment of industry with essential imports of machinery and a steadier flow of raw materials. The industrial licensing policy, both as for location and the size of new plants, should be such that the cost of production of these units does not become so high as to push up the level of prices. Higher productivity and technological skill and larger production at lower costs, will gradually bring down the price level in the country helping both the consumer in the country and exports."

Coal Transport by Sea

In the second year of the third five year plan, the problem of coal transport continues to defy solution. The thirteenth meeting of the Central Advisory Council of Industries, held on 27th March, had two highly informative notes in its agenda paper. One paper reproduced the Government's pious intention to move an additional 1 million tons of coal by sea and over short distances by road.

Another paper outlined the difficulties of transport of coal by sea. It said: "The number of coastal ships at present available for the movement of coal from Calcutta to the various south Indian and west Indian ports and for the return cargo of salt from Saurashtra ports and Tuticorin is only 31. As against this, the barest minimum requirement for the carriage of 2 million tons of coal a year (namely, 167,000 tons a month) and the return cargo of salt, is 43 ships. Accordingly, it has become necessary to divert some overseas ships temporarily to the coal trade and also to charter foreign ships. With the help of these measures, during the ten months from May 1961 to February 1962, it has been possible to transport by sea a total of about 1.24 million tons, which works out to a monthly average of 124,000 tons, namely, about 74.5 percent of the monthly target of 167,000 tons.

"There will be a further shortfall of 12 vessels in the next four years due to the scrapping of old ones. The total shortage will thus be of the order of 24 ships, against which sanction for the acquisition of two vessels has already been given leaving a balance of 22 ships to be acquired during the remaining four years of the plan period. The basic difficulty in the acquisition of coastal ships is foreign exchange. In the case of overseas ships, the difficulty has been partly met by arranging for deferred payment terms, namely, down payment in cash of about 15 percent to 30 percent of the price and the balance together with interest over a period of years out of the foreign exchange earnings of the vessels themselves. This method is, however, not available for the purchase of coastal ships because they do not earn any foreign exchange, so that there is no point in deferring the payment and thereby inflating

the price of the ship by payment of interest. Accordingly, it is necessary to pay the entire price of coastal vessels in foreign exchange at the time of purchase itself. This means that, for any given amount of foreign exchange, it would be possible to acquire only a much smaller number of coastal ships than overseas ships.

Coastal Tonnage

"Another difficulty in the acquisition of coastal ships is that the ship-owners are reluctant to acquire more coastal tonnage unless (i) the coastal freight is increased; and (ii) an assurance is given by the Government that the movement of coal by sea of the order of 2 million tons a year would be more or less a permanent measure.

"As far as the coastal freight is concerned, the matter has been examined by the Government director on the board of the Indian shipping companies, and his report is at present being examined by the Government. As for (ii), the working group on the production and transport of coal which looked into this aspect, has come to the conclusion that while it would not be possible to give a guarantee that the coastal movement of coal of the order of 2 million tons will continue permanently, it can be reasonably stated that it is unlikely that the railways will be able to take over this traffic for a long time to come, and at least not during the next ten to 15 years. It should, therefore, be possible to persuade the shipowners to acquire additional tonnage.

"A solution that suggests itself is that the coastal ships suitable for the coal trade should be built at the Hindustan Shipyard Ltd, Visakhapatnam, so as to avoid foreign exchange expenditure on their acquisition from abroad. But the capacity of H.S.L. is already fully booked up to the end of the third plan period with orders for overseas vessels. It cannot, therefore, take any orders for coastal ships except by cancelling the orders for overseas ships already placed. Moreover, H.S.L. at present prefers producing ships of standard designs and specifications as repeat orders. It is not possible for it to produce, without some delay and difficulties, specially designed low-draft vessels suitable for the Hooghly river. The only alternative left is to find some foreign credit exclusively for acquisition of coastal vessels, which is not easy to get. However, the possibilities are being explored. "In the circumstances explained above, the maximum quantity of coal that could be transported from Calcutta by sea would in no case be more than 2 million tons a year and that, too, with the assistance of chartered vessels till foreign exchange is made available to develop the coastal fleet."

In moving the resolution on coal at the annual session of the Federation, Mr. Babubhai Chinai said that coastal shipping rates were increased by 15 percent a few years ago, but since then operating costs have gone up. The main point is to recognise that unless the operation becomes economic, the chances of replacement or expansion are adversely affected, he said. This is not to oppose the legitimate increase in the coastal freight rates, but if operating costs have gone up for the coastal trade, so have they for overseas trade. Why the demand of the Conference lines, which include Indian shipping companies, to step up their rates by 10 percent was opposed, remains to be explained.

Report on Import and Export

The report of the Import and Export Policy Committee appointed by

the Centre under the chairmanship of Sir A. Ramaswami Mudaliar to review the import policy and procedure and recommend measures for export promotion, was laid last week in both Houses of Parliament. Calling for the creation of an export climate, the Committee has observed that the task of export promotion as visualised in the third plan would demand the willing and enthusiastic co-operation of every sector of the economy. "The whole nation would have to crusade for export markets, not only in the traditional lines, but along the entire line of exportable products." It is the business community that would have to shoulder the main burden of responsibility of augmenting the country's export trade. At the same time, it would be the Government's responsibility to compensate the trade for its export effort through selective concessions, fiscal reliefs and other incentives to make the business worth while.

The Committee adds that it would be necessary to have co-ordinating machinery, sufficiently powerful to be able to cut through the tangles of conflicting inter-departmental interests, reorient the thinking of State Governments and reconcile their standpoints to the national objective of export promotion. It has stressed the need for a much more adventurous policy of aid and incentives to encourage the export trade. One of the most effective aids would be to permit an increased allocation of raw materials to industry. It is highly important that the existing export-oriented industries should be ensured prompt and adequate supplies of essential raw materials at international prices.

Revolving Fund

The Committee has observed that it may also be possible to finance the import of these additional raw materials through the media of a revolving fund which may be created for this purpose. In its view, there is reason to believe that groups of international banks may agree to supply credit for the import of raw materials to be used by approved exporters who can be relied on to fulfil undertakings on exports. It would be imperative to ensure that the foreign exchange so lent would be translated into export earnings to form the basis of what may be termed as the "Import-Export Stabilisation Fund", which could be used for raw material imports for export industries.

In order to ensure high priority to these activities, the Committee has suggested the setting up of an autonomous body under the name of "Export Stabilisation Board" as soon as possible. The board would have control over export earnings, and would also possess statutory authority to negotiate credit for the import of raw materials to be translated into export earnings. When the revolving fund has attained the desired level, any surplus foreign exchange that may accrue would revert to the Government. It has been suggested that it might be necessary to make available a sum of about Rs. 25 crores or Rs. 30 crores as the revolving fund.

The Committee has suggested a three-fold system of income tax remission, namely, a tax remission of 74 percent on profits on "basic" exports, (ii) a tax rebate of 5 percent on all export earnings to enable the exporters to build an export development reserve, and (iii) a special tax remission of 10 percent on earnings on additional exports, namely, exports over the basic norm.

Referring to the "currency retention" incentive tried in many countries, the Committee has observed that it is not necessary to let the Indian exporters have a free hold on any percentage of their export earn-

ings. Instead, the scope of the present export promotion schemes should be widened to cover the whole range of items in export markets. The exporters' choice of imports should not be limited to one or two items, as at present. A general rebate by the railways of about 25 percent on all goods put on board has also been recommended.

The Committee has stressed the importance of tackling the specific difficulties confronting export industries such as the supply of fertiliser to the tea estates at reasonable prices. The decontrol of tea exports has been recommended, as also examination of the possibility of stabilising coffee export quotas through the creation of a buffer stock.

The removal of certain disincentives for obtaining the drawback of import and excise duties has been suggested by the Committee. It has also suggested that the Central Government should assume the responsibility for the remission of sales tax entering into export costs. The method of tax remission in this matter should be a simple one. A uniform rebate of, say, 2 percent would help exports.

"The Committee has observed that 'promises' of exports should be carefully appraised before they are accepted. The setting up of a special section in the Directorate of Export Promotion to watch the performance of the assisted industries and ensure the observance of the export obligations has been recommended.

It has expressed the view that, instead of resorting to compulsory exports, a campaign of public education should be undertaken to restrain consumption and awaken the mercantile community to their responsibilities to shoulder the burden of export promotion. The Committee has further suggested that trade associations must organise their own inspectorate to effect quality control and pre-shipment inspection. A code of self-discipline has been suggested. The Committee has suggested the levy of a small voluntary cess by industry and trade on domestic sales, as in the case of the bicycle industry, to promote exports.

State Trading

The Committee has observed that much of the criticism against the State Trading Corporation stems from a misconception of its role and functions. The State Trading Corporation has been created as an additional organ of trade to give effect to some of the economic policies of the Government. The Corporation's role was not intended to be confined to trade merely with the State trading countries, although in the very nature of things, trading with State organisations would have to remain its principal activity. There is, on the whole, a field in which the State Trading Corporation can co-exist with private enterprise.

The Committee has observed that if the Government issues its directives to the State Trading Corporation after planning ahead its import and export programmes, and if the services of the trade are used more fully, many of the complaints against the Corporation would disappear. The Corporation should make greater use of chambers of commerce and associations in the distribution trade and also notify the ceiling prices fixed by it for the information of the public.

Referring to the rupee payment arrangements, the Committee has observed that, while there may have been an element of diversion of some exports, the rupee payment countries, on the whole, have offered a worthwhile outlet as well as a new source of supply for essential materials at a time when foreign exchange has been particularly scarce. However,

the fullest care should be taken to ensure that imports from rupee payment countries are limited to essential goods. The Committee has also suggested the setting up of a study unit to compare the prices of products imported from rupee sources with those from other centres of supply.

Barter Trade

The Committee has observed that, in the conditions prevailing in the world today, barter trade often becomes a necessary method of exchanging products and augmenting trade. There need, therefore, be no wholesale condemnation of the system, if more trade and fair prices could be assured. The Committee has suggested that the Export Risks Insurance Corporation should be authorised to guarantee export risks up to five years. The setting up of an independent body, largely representing the chief exporting interests, to take up the work of participation in international fairs has been recommended.

The Committee has observed that the present controversy about maintenance versus development imports is due to a misconception. Maintenance and development of the economy are two facets of the same phenomenon and there can be no hard and fast dividing line between them. A balance has to be struck between competing claims on scarce resources and the approach has to be pragmatic and selective, designed to stimulate economic growth in consonance with plan objectives.

The Committee has suggested that the present stringent import restrictions and rigid exchange allocations may continue for products destined for domestic markets. But, where exports can be really ensured, the Government should have no hesitation in making available such raw materials and balancing equipment as are required. The Committee has recommended that the Development Wing should constantly review the problem of under-utilisation of industrial capacity and recommend remedial measures. The results of such reviews should be published annually. The Development Wing should also bring out every year a comprehensive register indicating the availability of raw materials, components, plant and machinery produced within the country. It has also recommended that the question of "import substitution" should be closely studied with the help of the national laboratories.

Licensing Procedure

Certain measures have been suggested for simplifying import licensing procedure. The Committee has recommended that all import licensing should, in future, be done on an annual basis. If possible, exchange budgeting should also be done on the same basis. The validity period of import licences should be one year in the case of established importers and actual user licences and two years for C.G. and H.E.P. licences, except in special cases. The decentralisation of licensing work for certain items, including newsprint, has been recommended. It has also recommended that established importers may be permitted to effect their imports through agents on the basis of "letters of authority", which may be given freely to allow "clubbing" of small value licences in order to prevent wasteful expenditure of foreign exchange.

The Committee has observed that it has confined its attention to commercial imports and exports and that it has not been possible for it to reflect on the import requirements of defence industries and their export possibilities. It has the general impression that a good deal could, perhaps, be done to conserve—and

earn—foreign exchange through an integrated policy for the whole economy. The Committee has suggested that a high-powered committee may be appointed to enquire into the matter.

Coalmining Machinery Plant

The following is the list of machinery items to be produced in the coal-mining machinery plant in Durgapur:

Description of Items	Total weight in metric tons	
	30,000 tons	45,000 tons
Coal cutters	1,182	1,775
Loaders	242	1,771
Conveyors	14,991.5	22,500
Trolley and battery type electric mine locomotives	1,300	1,300
Haulages	2,174.6	3,816
Electric winders	466.9	1,167
Main axial fans	821	1,170
Booster fans	20	60
Pumps	754.3	945
Ball mills	324.5	72
Sand pumps	11.7	
Automatic gauge kept for use in vertical shafts	115.5	
Safety detachings	...	2,000
Hooks	...	
Light drill rigs for exploration drilling	...	25
Spare parts	7,655.5	25 percent of the total weight of articles

Iron Ore Exports

The following statement shows the grades and quality of iron ore negotiated for sale to the Japanese steel mills:

Grade	Period of supply		Quantity in tons
	December 1960—March 1962		
65 to 62 percent	December 1960—March 1962		1,750,000
	April 1962—March 1963		2,600,000
	April 1963—March 1964		2,250,000
	April 1964—March 1968		9,000,000
at the rate of 2,250,000 tons a year			
62 to 60 percent Fe.	September 1960—15th April, 1964		450,000
63 to 65 percent Fe.	April 1961—December 1962		300,000

These quantities are in addition to the quantities the Japanese steel mills will be purchasing from Rourkela and Bailadilla under the long-term agreement. From Rourkela, Japan has agreed to take 2 million tons a year from 1964 for a period of ten years, and from the Bailadilla project 4 million tons a year from 1966 for a period of 15 years.

Kathara Washery

The National Coal Development Corporation has decided to increase the output of coking coal from the Kathara colliery in Bihar to 3 million tons a year, it is learnt. The lion tons a year, it is learnt. The present capacity of the quarry is 1.5 million tons a year. The decision has been necessitated by the input requirement of the washery being set up in Kathara with Russian collaboration. The washery, it is expected, will attain its full capacity of 3 million tons by March 1965.

The site for the Kathara washery has been selected by the Russian team of experts now in Ranchi, and work on engineering geology has already started. The project report and the working drawings for the washery will be prepared by the Mine Planning Institute in Leningrad. The Kathara washery will be the biggest single unit washery in the country, and will feed the steel plant to be set up in Bokaro, about 15 miles from the washery site.

Nuclear Power Station

French and U.S. firms are competing keenly to secure the Indian contract for building a nuclear station in Tarapur, near Bombay. It will be a 300 MV capacity station and will be expected to go into production by 1966. The estimated cost is Rs. 51 crores. There were seven tenders, including at least one from the U.K. The best British tender is said to be on the high side. Another

comment heard here is that Britain is trying to palm off its out-of-date equipment on India. There is a third snag also. The financing of the nuclear power station would have to be from outside the aid to which Britain is already committed.

Following the World Bank report, the U.S.A. at one stage declined to finance this project. Opinion has presumably changed since then. The French are also anxious to secure the tender, primarily because they too would like to claim a specific project in India's development. Its financing will be outside the aid France has so far promised to give to India as a member of the Aid-India Club. Negotiations with both the U.S.A. and France, it is expected, will start early in April in order to finalise the deal.

Newsprint Manufacture

The chairman of the Anglo-Newfoundland Development Company, Mr. E. M. Little, has been here to study the newsprint market in this country and the possibility of Canada setting up a newsprint mill or mills in India. He is convinced that the Canadian newsprint industry should come to India in a big way. The coming months may show how far he is able to persuade his colleagues in Canada to invest in the newsprint industry in India.

Furnace Oil for Coal

The controversy over the use of furnace oil for industries in Gujarat

and Maharashtra continues without any definite decision. Industry in these States would like to replace coal by furnace oil at competitive fuel costs. The Government, on the one side, wants to retain the existing excise duties, and on the other, does not want to encourage a bigger offtake of furnace oil as that would mean a higher foreign exchange bill. Within these limits, all are agreed that in the interests of industrial production, a switch-over from coal to furnace oil is necessary.

State Cement Factory

An application under the Industries (Development and Regulation) Act has been received from the Orissa Government for permission to set up a cement factory in Sambalpur district. The application is now being examined in consultation with all the departments concerned. The cement factory, it is proposed, will be set up by the Orissa Industrial Development Corporation Ltd, a Company to be formed by the State Government to promote and assist industrial development in the State. The capital structure and other details of this Corporation have not yet been finalised.

Teacalemit (India)

Teacalemit (India) Ltd, Calcutta, which is a subsidiary of the U.K. Company, applied for registration under the Industries (Development and Regulation) Act, for the manufacture of garage equipment for motor-vehicles and for industrial purposes. It was already assembling and supplying most of the items. It is proposed to change its present capital structure from sterling to a rupee company and manufacture the items locally. It has been issued a licence under the Industries Act. The firm's final proposal on the formation of a rupee company and the extent of foreign and Indian partici-

pation in the share capital, is awaited.

Drugs and Pharmaceuticals

It is estimated that the total value of finished pharmaceuticals and drugs produced in the country will increase from about Rs. 85 crores in 1961 to about Rs. 175 crores by 1966, with the implementation of the targets fixed under the third plan. The total capital investment for this increase in production is roughly Rs. 100 crores.

Foreign Collaboration

The total number of foreign collaboration cases, involving both technical and financial participation, approved during 1960, 1961 and the first two months of 1962, were 380, 402 and 82, respectively, it is learnt.

Cement for Tea Estates

Against a demand of 136,054 tons of cement in 1961, a quantity of 40,612 tons was allotted to the tea industry.

Exchange Control

The Indian Investment Centre, New Delhi, has published a brochure on *Exchange Control*. Of special importance to foreign investors is the chapter dealing with questions which have been received by the Centre from overseas firms interested in participating in Indian ventures and their answers. These cover aspects of foreign investment in India, including the definition of residents and non-residents, the formalities necessary for investment in Government securities by residents abroad, requirements for approval of a foreign currency loan, repatriation of capital, remittances to India, transfer of earnings abroad by foreign personnel and the holding of foreign exchange and securities.

being well maintained by Pakistan in spite of the paucity of business. Those who are offering at the cheapest prices on the Dundee market are transacting little business, since spinners are keeping out of the market and are buying only small quantities. Better-class jute above Mill Lightnings is still more or less nominal here. Spinners of good quality yarns are having great difficulty in securing fibre, but there are few buyers of fine yarns these days. Formerly, a large volume of business was done in such yarns as J.C.2.R. and 3R, also the 4's, and 5 lbs yarn. Ordinary yarns are now much better than they used to be as a result of improvements in spinning machinery; better weaving machinery is also helping the production of improved cloth and bags.

Mills Firsts are nominal at £145. Mill Lightnings at from £116 to £120.

SLIGHT FALL IN WHOLESALE PRICE INDEX

THE official wholesale price index (base: year ended March 1953=100) worked out to 124.2 during the week ended 3rd March, 1962, but was lower by 2.4 percent than against 124.3 (revised) for the earlier week. It stood almost at the same level as that prevailing in the corresponding week of the previous month but was lower by 2.4 percent than that of a year ago.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups have now been brought up to February 1962. As compared with January, the February Index for Food shows a drop of 6

points, while that for Miscellaneous reveals a rise of 1 point. The Indices for Fuel and Lighting and Clothing remain unchanged at 291 and 588 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 3 points during February 1962.

KERALA SALES TAX TO BE SINGLE-POINT LEVY

(BY A SOUTH INDIAN CORRESPONDENT)

THE Kerala Government proposes to amend its sales tax law to make it less cumbersome. The most important feature of the amending Bill, which has been introduced in the Legislature, is that it favours a single-point levy as against the multi-point tax. It is stated in the objects and reasons that the high-level Sales Tax Committee appointed by the State Government some time ago has recommended that a system of tax under which selected commodities are subjected to a single-point levy at comparatively high rates may be adopted, after considering the merits of the single-point and multi-point imposts. The Committee has suggested certain additional commodities on which single-point sales tax is to be levied. The Government wants to give immediate effect to this recommendation. The idea is to enforce the new rates from 1st April, 1962. Meanwhile, a comprehensive Sales Tax Bill to replace the existing law has been submitted to the Centre for the latter's approval. It may take some time for this Bill to be introduced in the State Legislature for enactment.

According to the amending Bill, the number of commodities which will benefit from a single-point levy has been raised from 49 to 80. The highest rate of tax is on foreign liquor at 40 percent. As far as cash crops are concerned, tea and coffee will continue to pay sales tax at the rate of 5 percent, and the levy will be at the point of first sale in the State by a dealer. Only manufactured tea will be subjected to this tax. The levy on cashewnut, including kernel, will remain at 4 percent, but the taxable point will be the last purchase. The tax rate on rubber has been enhanced from 2 to 4 percent, and that on pepper, ginger, lemongrass oil, turmeric, arecanut and nux vomica from 4 to 5 percent. In all these cases, the tax will be at the last purchase point. Coconut, including copra, will have to pay sales tax at the rate of 2 percent.

It is worth recalling that anomalies in the sales tax legislation of Kerala have been responsible for trade dislocation and discord between the merchant community and the State Government. The latter's claim is that, with the passing into law of the proposed Sales Tax Bill, many difficulties will be solved.

Complaint of Rubber Growers

The rubber growers of Kerala complain that the State Government is arbitrarily disallowing the cost of replanting when taxes are assessed. The reason for this is hard to understand, as they are allowed by the tax authorities in other States, as well as for Union taxes. It is generally accepted that a rubber tree is a wasting asset with a maximum economic productive life of around 30 years. It is, therefore, equitable that a planting company should be permitted to accrue during the useful life of the rubber tree the cost of its ultimate replacement, and this fact is acknowledged in the structure of statutory rubber prices in India. As producers are not allowed an annual charge for depreciation of planted areas for tax purposes, they should be permitted to charge the cost of replacement.

The Rubber Board will recommend the import of about 50,000 tons of natural and synthetic rubber during

1962-63. The import advisory sub-committee of the Board has taken a decision to this effect recently. Production of natural rubber in India during 1962-63 is estimated at 31,000 tons, against a demand of 80,000 tons. Production in 1961 was 26,992 tons, and consumption totalled 48,319 tons. Natural rubber imports during 1961 were slightly lower at 21,693 tons. Synthetic rubber imports were 8,992 tons. The carryover to 1962 is placed at 16,172 tons, both natural and synthetic.

Monopolising Rubber Imports

The Estimates Committee of the Lok Sabha in its report on the Rubber Board's working, has favoured the Board becoming the sole importer of rubber for distribution to manufacturers in the country. The present arrangement is for each individual manufacturer to import according to his need, subject to such import control as is exercised by the Centre. The Estimates Committee's report, if adopted, would mean the Board making all purchases of rubber abroad and then distributing to manufacturers scattered over the country. The advantages of such diversion of the trade into official hands have not been stated. One possible reason is that the small grower finds it difficult to obtain the statutory price even now. But this is due to the manner in which he produces his rubber and markets it. It might also be due to his reluctance to join any kind of organisation or to conform to standards which are maintained by large planters. This defect could be corrected by action at a different level. Instead, to suggest that the manufacturers should be deprived of their right to import their own requirements and that an official body, which the Estimates Committee itself has strongly censured as being incapable of performing its responsibilities, should be asked to take over new responsibilities of a more complicated nature, is neither appropriate nor sensible.

Another factor to be taken into account when considering this problem, is that India is an exporter of rubber products. The competitive capacity of rubber manufactures in overseas markets are already weakened. Exporters are already complaining that the competitive capacity of their products has been adversely affected by the increasing burden of taxes and duties. Among the taxes and duties listed in a trade journal, are the cess at 30nP a kilo-journal, the Customs duty on oil extender, the Customs duty on oil extender, the duty on imported natural and synthetic rubber is fixed at 10 percent. The impact of these burdens may not appear very heavy if considered individually, but together they make up a heavy burden, especially because of the increased wage bill and the ever-increasing cost of raw materials, the journal says.

BIGGER TEA OUTPUT IN PAKISTAN

(FROM A CORRESPONDENT IN PAKISTAN)

THE last tea sale of the current Pakistani season for internal consumption was held in Chittagong on 21st March. In spite of the end-of-season character of the offerings,

there was a very strong demand, and prices of all types rose. The manner in which the prices were bid up was surprising.

The total quantity of tea produced from April 1961 to end-February 1962, is about 58.17 million lbs, against 41.53 million lbs during the corresponding period of the last season. The total quantity sold at internal auctions from April 1961 to February 1962, is 43,515,572 lbs, against 36,634,452 lbs last season. The average price obtained at internal sales was Rs. 2.35 a lb. The total of teas sold at the export auctions this season is 10,679,925 lbs, against last season's 490,517 lbs. The average price realised at these auctions has been Rs. 1.23.

LABOUR COSTS RISING IN TEA ESTATES

INTERIM INCREASE IN WAGES OPPOSED

(BY A SPECIAL CORRESPONDENT)

CONSIDERING the proposals for interim additions to the pay of tea and rubber estate workers, the Indian Tea Association may have noted that the European Economic Community has focussed attention in recent months on the problem of labour costs. There is also considerable controversy on whether welfare schemes should be private or Government. Labour costs involve a great deal more than wages and include such costs as pensions, holidays, social security, provident funds, housing and now family planning on tea estates. An enquiry recently carried out in Britain among over 200 establishments employing about one million people (the same number as are employed on tea gardens in north-east India) showed that the total extra cost of "benefits" varied from 10 percent in the shipbuilding industry to 20 percent in mining. The Institute of Economic Affairs found the cost of welfare benefits to be around 6½ percent of the total payroll, but this did not include paid holidays or insurance schemes (provident funds, etcetera) which raised the cost to about 14 percent. An approximate international comparison based on these and other studies is shown in the following table:

AVERAGE HOURLY WAGE COSTS IN MANUFACTURING INDUSTRY: APRIL 1959

	Basic	Social	Hourly
	wage	charges	percent cost
U.S.A.	83	17	2.68
Sweden	87	13	1.08
West Germany	69	31	0.78
Switzerland	87	13	0.77
United Kingdom	88	12	0.77
Belgium	76	24	0.77
France	66	34	0.71
Italy	57	43	0.61
Netherlands	77	23	0.57

Source: French National Institute of Statistics and Economic Studies

The employers' representative on the Wage Board for the Tea Industry, Mr. B. C. Ghose, said recently: "Towards the end of 1959 when the decision to form Wage Boards for the tea industry was taken, wage increases were granted in West Bengal and Assam, while no such increase was given in south Indian estates which were then under wage freeze agreements. The Wage Board has recommended unanimously an interim wage increase for south India which brought up the wage level to about the same as prevailing in Assam and the Doorgas, and thus the increase already given in the past in north-east India is now being granted in the south after two years. The non-employer members of the Wage Board recommended a further wage

increase for north-east India, apparently on the grounds of expediency and not on the basis of an increase in the cost of living, which alone could justify an interim wage increase pending the examination of the whole question by the Wage Board". So an interim wage increase seems premature.

Rise in Output

All the major producing countries have been thinking that the increase in production in 1961 was "surplus". Even buyers in the U.K. and many other areas appear to have been unaware that the increased output was being absorbed. In mid-March, the U. N. Food and Agriculture Organisation is reported to have said that world production in 1961 increased by 7 percent whereas world consumption was up by 8 percent. There is, therefore, no surplus.

As far as north India is concerned, the extra crop has already been sold, some of it at poor prices. No one seems to know what has happened to the 113 million lbs of extra tea made this season, but Calcutta will not carry any surplus into the new season. Meanwhile, London is making enquiries about the extra output. Calcutta tea brokers are likely to deal with this matter in their annual reports. There seems to be little doubt, however, that tea consumption is increasing in India. The Tata-James Finlay enterprise formed to packet and market tea for internal consumption indicates that old blenders will face more competition in the retail trade.

Consumption Rising

A comparison of the increase in production and consumption in India is interesting. India's production in 1938 amounted to 452 million lbs, rising to 771 million lbs in 1961, or an improvement of 70 percent. Consumption during the same period jumped from, say, 93 million lbs to 300 million lbs (estimated), or an increase of 222 percent or, say, an average of 9 percent a year over the period. On the basis of 300 million lbs consumed this year, a 10 percent increase will be 30 million lbs. At "compound interest", the additional demand for internal consumption would make it over 400 million lbs before the end of the third plan. The production target for the third plan is 900 million lbs, namely, 130 million lbs more by 1965, the bulk of which could easily go into Indian consumption. Some Calcutta experts suggest that the north Indian crop will advance by about 20 million lbs in 1962, in which case there will certainly not be too much tea. To some extent, the position depends on how much cheap tea has been taken into stocks. But, in view of the high cost of finance, large stocks do not appear probable.

Speaking at the Darjeeling branch of the Indian Tea Association, Mr. T. Hardingham, president, said recently that in this competitive world, the partners in commerce—the Government, labour and management—could achieve more effective results if they worked together. He urged the rationalisation of the tax structure as well as wages of tea plantation labour. Mr. Hardingham had two interesting comments to make. He said: "As tea was a commodity usually retailed in a blended form, perhaps an international effort with larger resources could achieve more in competition with other beverages". His second point was that "many experienced planters were of the opinion that while the output could be raised with an increased application of nitrogen, there was considerable risk of a falling off in the characteristic Darjeeling flavour." Since plantations which can produce quality teas are already limited—even in the Darjeeling district—quantity at the expense of quality will be suicidal.

B.O.A.C. TO HAVE BOEINGS ON ALL GLOBAL SERVICES

(FROM OUR NEW DELHI CORRESPONDENT)

THE B.O.A.C.'s round-the-world services will be shortly operated entirely with Boeing 707s. This is indicated in the advance summer schedules of the airline. This service is at present operated partly with Boeings and partly with Comets. The former aircraft operate from London to New York, San Francisco and across the Pacific to Tokyo and Hongkong, where Comets take over on the westbound flight via India and the Middle East to Europe and London. Under the summer programme, the Hongkong-London-Hongkong service will also be taken over by Boeings, thus making it an all-Boeing round-the-world service, which will pass through Delhi twice weekly in each direction. Delhi will continue to have four Comet services passing through it each week in each direction, two serving Tokyo via Hongkong and two going to Australia via Singapore.

B.O.A.C.'s Australian associate, Qantas Empire Airways, will also increase the frequency of its Boeing service through Delhi to two flights each week in each direction. The two airlines will thus have a total of eight services through the Indian capital. Between them they will serve Rome (six times weekly); Frankfurt, Bangkok, Hongkong and Singapore (four times weekly); Cairo, Beirut, Teheran, Rangoon, Djakarta and Darwin (three times weekly); Istanbul and Tokyo (twice weekly); Baghdad, Abadan and Bahrain (once weekly). This is also the first time that the oil-rich Sheikdom of Kuwait has been included in the Comet route from London to Australia. With the increase in frequency and the introduction of bigger aircraft on some of the routes, greater carrying capacity for both passengers and cargo will become available. Considerable cargo space will also be provided by an all-freighter DC-7F operating between Delhi and London, with intermediate halts at Beirut and Düsseldorf.

Flights from Calcutta

From Calcutta there will be nine B.O.A.C. and three Qantas jet services for Europe and London each week under the summer schedule. Of these, eight will originate and terminate in Australia and four in Tokyo. Of the latter, two services will operate via Manila and Singapore and two via Hongkong. One of the Hongkong services will fly direct to Calcutta, the other landing at Bangkok also. In the reverse direction from London, 11 services will call at Calcutta, seven going on to Australia and four to Tokyo. Two of the Tokyo services will operate via Singapore and Manila and two via Hongkong (only one making an intermediate landing at Rangoon).

Bombay will have four Comet services passing through it each week, both eastbound and westbound. Two of the services from London will terminate in Australia and two in Hongkong, all operating via Colombo and Singapore. One of the Australian services will terminate at Melbourne and the other at Sydney.

A B.O.A.C. Comet with the markings of "Air-India" will be in service from 1st April on three routes. They are: (1) Bombay to Kuwait via Karachi and Bahrain; (2) Madras-Singapore-Djakarta; and (3) Madras-Singapore. The Comet will continue to operate until March

1963, by which time, it is expected, Madras airport will be fit for Boeings.

Pan American Jet Flights

A study of preliminary schedules of all airlines shows that Pan American will offer more than twice as many jet flights weekly across the Atlantic this summer as any other carrier. Providing 200,000 seats in each direction, Pan American will have 184 jet flights weekly to and from Europe and the Middle East this summer. From New York, the summer schedule includes 14 non-stop flights each week to London, 14 non-stop to Paris, 18 flights to Rome, 14 to Frankfurt five to Lisbon, seven non-stop to Amsterdam, seven non-stop to Shannon and seven to Brussels. Pan American will also have flights between New York and Nice, Barcelona, Vienna, Munich, Düsseldorf, Copenhagen, Helsinki, Stockholm, Oslo, Hamburg, round-the-world, and to the Middle East and the Orient. Boston and Chicago will have a daily non-stop service to London, and Detroit will have a daily service to London via Boston. The polar route service between London and the west coast of the United States will include a daily service in each direction for San Francisco, five flights for Los Angeles and two for Seattle and Portland.

Pan American has also stepped up its Pacific services, and this summer will offer 94 jet flights weekly between the U.S. west coast and Honolulu, 20 flights a week between the west coast and Tokyo plus services to Sydney, Nandi, Bangkok, Singapore, Saigon, Manila and Guam. On flights from London to Los Angeles the new Super Intercontinental will complete the 5,607 miles non-stop in 11 hours and 25 minutes—two and a half hours faster than the present schedule. Passengers will leave London at noon, local time, and will arrive in Los Angeles at 3:35 p.m., local time.

K.L.M. Summer Schedule

K.L.M.'s summer schedules for 1962 will be virtually the same as those for 1961, except for the extension of the Amsterdam-Khartoum service to Dar-es-Salaam, pending the successful outcome of negotiations with Tanganyika. The airline has taken delivery of the last of 12 DC-8s so that capacity will be increased by about 6 percent.

T.W.A. Transatlantic Schedule

T.W.A.'s summer transatlantic schedule involves an increase of weekly flights from 42 at the beginning of May to 46 at the beginning of June. New flights include a non-stop service between Chicago and London, a polar service from the U.S. west coast to Tel Aviv and Athens, a daily service from New York to Lisbon and Madrid. T.W.A.'s transatlantic schedules, 100 percent jet since last year, will be served by 12 jets this summer, against nine last year.

P.I.A. Acquires Boeing

Pakistan International Airlines recently took delivery of its first Boeing 720 jet airliner; two more, on order, will follow shortly. The aircraft has been introduced into the carrier's international network, which is extended to include the important West German city of Frankfurt.

Calcutta Markets

STRONG DEMAND AT TEA EXPORT SALE

IRREGULAR TREND IN DUSTS

AT Sale No. 41, held on 26th and 28th March, a total of 51,586 packages was on offer, at the Export auction. A large proportion were of an end-of-season description. There was a strong general demand, with prices very irregular. Any bright liquoring teas with clean leaf sold well. Whole leaf was strong. No quotations are given.

At the Internal Sale, there was a good demand for the 29,897 packages of Dusts on offer. Clean leafed medium C.T.C. Dust were irregular with the bright liquoring lines firm to dearer. Fibrous secondary descriptions came to a poor market and declined in price. Good C.T.C. varieties were keenly competed for and were quoted fully firm. There was a selective demand for the plain orthodox Dusts and prices were lower, particularly for the poorer kinds. The bright liquoring Assams opened on a strong note but declined slightly towards the close. Fibrous Legg-cut types were considerably easier but, where leaf was clean, the teas were well supported.

Quotations	
	1962
	Rs. a kilo
Plain Orthodox Dust	3.45 to 4.00
Medium Assam Dust	3.90 to 4.60
Legg-cut Dust	3.80 to 4.70
Medium Assam C.T.C. Dust	5.30 to 5.70
Good Assam C.T.C. Dust	6.30 to 7.00

(Quotations are inclusive of excise duty.)

The 494 packages of Leaf teas on offer in the internal sale were absorbed at irregular rates.

LINSEED EASIER

The market was easier during the past week, and prices declined further. Upcountry sellers were keen for early deliveries to clear their holding of old crop seeds as the new crop has started arriving. Millers were interested in later delivery at lower prices, but sellers were reserved. Activity in the oil market was limited in sympathy with seeds, and other oil markets and prices were easier. Millers were not much interested in doing forward business at lower rates. The oilcake market was dull with little interest from buyers. Sellers were generally reserved at lower prices and offtake was small. The latest quotation is as follows: ready March Rs. 68.32 a quintal.

HIDES AND SKINS QUIET

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales
(Between 20th March and 26th March, 1962)

Cowhides: Wet salted (Slaughtered) 25,700 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

COCHIN TEA SALES

At Sale No. 13, 390,000 kilograms of tea were on offer. There was a good general demand. Low medium and medium brokens were firm while similar fannings were easier. Good mediums met with a strong enquiry at dearer rates. Best high-grown were strong and others were easier with quality. Whole leaf grades met with a keen demand. The unorthodox grades were fully firm.

COAL COMPANIES

O., Po., F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

FREER TRADE ACROSS THE ATLANTIC

THE Kennedy Administration's campaign in favour of freer trade between the U.S.A. and western Europe is being developed *con brio*, and a day scarcely passes without the President or a member of his Cabinet unfolding before a business assembly or a Congressional committee the advantages of the scheme. When foreigners raise their eyebrows at some of the arguments used, they are apt to be assured that this oratory is primarily for domestic consumption: any carrot is good enough if it persuades a naturally protectionist Congress to grant the President wide powers when the Trade Agreements Act is renewed in June. The reply has its validity, and indeed before it was heard, the hypothesis was exposed here (15th February) that Washington's aim is to shake U.S. enterprise from its lethargy by using "the Common Market threat" as a bogey. Yet, nothing that a U.S. President and his Cabinet members say can ever be considered as only for domestic audiences. It is inevitable that foreigners should take their remarks seriously, and feel some apprehensions if those remarks indicate a dangerously one-sided view of international trade. How could west Europeans not feel apprehensive when the Administration is saying to the American people: "We want reciprocal tariff reductions with Europe because that will mean large unilateral profits for us". Stripped of all the details, that is the crux of the Kennedy argument: Europe's recovery gives the United States the chance to earn a bigger trade surplus and thus correct its payments imbalance. The method suggested is always an "exchange" of tariff concessions, but no secret is made of the hope that this will be a fool's exchange for the Europeans, who will lose more than they will gain.

British opinion has not so far been struck by the curious mentality behind this policy, because the U.K. herself is a suppliant at the Common Market court. She too is demanding concessions in Brussels, and does not find it inconvenient that authoritative voices should proclaim that the Common Market owes outsiders plenty. Yet Britain's approach is quite different from the U.S.A.'s. London is asking for concessions, but she is ready to match them with concessions of her own—in the first place, acceptance of all the obligations of the Rome Treaty, common external tariff, joint agricultural policy and the rest. The bargain Britain is seeking in Brussels is indeed a very complicated one, but it is not a fool's bargain. London has not asked the Six to run a trade deficit for Britain's benefit. The arrangement she is suggesting is meant to produce a situation where Britain, the present Six and all their commercial allies will be able to balance their trade and develop their economies harmoniously. In the process, Britain hopes to cure her chronically recurrent trade deficit but not at others' expense so much as at the price of giving British industry the stimulants and the benefits of free trade in the enlarged Common Market.

It is important for British opinion to grasp the difference between this approach and the one-sided U.S. presentation of "Atlantic liberalism"—not just to give Britons a good conscience but

because the American argument will be directed at them once they have secured entry into the Common Market. Indeed, at that moment, if and when it comes, U.S. claims on western Europe's beneficence will be pleaded with redoubled vigour. The American people are being told that the Six owe them the right to a permanent and substantial surplus in trans-Atlantic trade, and this right is supported with reference to the vast sums of dollars the United States pumped into the Continent after the war. With Britain in the Common Market, and her Commonwealth friends and European camp-followers protected by some reasonable arrangement with that association, many Americans are likely to conclude that they will have a right to a much bigger surplus—and they will be able to refer to the much greater volume of dollars the United States provided to Britain after the war. (Counting Britain, who got the biggest share, U.S. aid to western Europe comes to the tidy sum of \$40,000 million since 1945.)

So it is none too early for Britons to take a close look, as close as the Continentals are now taking, at the U.S. argument that because you save a man from drowning, you have the right to receive a pension from him. Rather, one would have expected your noble action gave you the right to expect similar succour in equally dangerous circumstances. There is no doubt that all Europeans recognise that obligation: the collapse of the U.S. economy or a serious decline in the prestige of the dollar would be as dangerous for them as the prostration of western Europe was for the Americans in 1945. But that is not the U.S. position today—or anything like it. The U.S. economy is expanding more slowly than one might wish perhaps, but its various deficiencies have nothing to do with its foreign trade. On the contrary, it is in its foreign trade that it asserts its vigour most obviously. U.S. exports last year were worth \$20,000 million and imports only \$15,000 million. Leaving an immense surplus of \$5,000 million. There is no comparison here with the crippled trading position of Europe after the war.

Nor is there any equivalent of the dollar shortage of those years. Of the large U.S. trade surplus last year, about one-third was in trade with the Common Market Six—more if one includes Britain and a few others in the enlarged Common Market. Last year, U.S. sales to the Common Market were worth \$3,645 million and her imports from that region only \$2,046 million leaving the useful surplus of approximately \$1,600 million.

The Editorship of "Capital"

After this issue Mr. George Barrell relinquishes the editorship of "Capital". Mr. Barrell joined the paper in 1954 as Assistant Editor and was appointed Editor in 1955.

Mr. Dinesh Bahl, who joined "Capital" as Editorial Assistant in 1952 and became Assistant Editor in 1956, has been appointed to succeed Mr. Barrell.

For Washington to say that the solution of the dollar's troubles is to increase that surplus seems quite arbitrary, and in any event would be unacceptable to the Europeans, because they cannot afford to run a much larger deficit with the United States. There are many other entries in the U.S. payments accounts besides trade with the Common Market, or more generally with western Europe. In seeking a remedy to the unbalance of those accounts, there is no reason to single out this one entry. It is not "ungrateful" on the part of Continentals (and eventually of Britons) to object to being singled out in this way. U.S. aid came generously when Europe was ruined and threatened by Russia, but whenever a prosperous and secure country has been involved in payments troubles because of political choices, that country has received judicious homilies from Washington (often via the I.M.F.) on the unwisdom of those choices. No doubt the same would be true tomorrow, if any one of them sought to live as far beyond its means as the United States is now doing.

If the Kennedy plan were really to put both U.S. and European industry on their toes by letting them compete, it would not be unwelcome to Europeans—although many would ask if competition could be equal between 185 million Americans with a gross national product of \$521,000 million and 179 million Common Market Europeans with a total national product of only \$190,000 million. The basic conception of the Rome Treaty is that competition between such unequal partners always leads to the annihilation of the smaller (as when Lancashire "competed freely" with the Dacca weavers), so that tariff disarmament must be accompanied by harmonisation of the conditions of competition. Thus, in asking the Europeans to reduce many tariffs to zero, and the rest by 50 percent, Washington is ignoring the basic principle of European economic integration. Worse, it is evident from the U.S. Administration's own internal propaganda that it knows what would result from freer trans-Atlantic trade in those conditions. It is telling Congress and business men that the gains would be mostly the U.S.A.'s. So the object is not to stimulate both U.S. and European industry, but to secure gains for the former at the expense of the latter.

There is no arrogance or presumption in the U.S. assurance that its industry would be the bigger gainer in the event of "mutual" concessions on tariffs. Europeans are suspicious that the concessions would never be really mutual. They have long experience of how the U.S. Customs manage to shut out goods on which the duties are, on paper, very low, and they have ample precedents for fearing that what a liberal President concedes can be withdrawn by a ferociously protectionist Congress. But even if one party gave as much as the other in tariff negotiations, U.S. industry would be the gainer once duties began to get at all low. The reason is clear. The rising standard of life in Europe has initiated a process of Americanisation—using the word in a perfectly neutral sense—and if Europeans are exposed to the right sort of advertising, they will no doubt want just the things the Americans have today. It happens that gigantic U.S. corporations have long experience of making those things, they are finding that they cannot sell much more of them in a near-saturated home market, and they have excess installed capacity. It would be ever so much easier for them to swamp the European market—suffering some loss at first, if necessary, to wipe out smaller European competitors—than to seek new products

for American consumers or to explore the needs of markets, such as those of the developing or communist countries, that have not begun to be Americanised. As Mr. George Ball, Under-Secretary of State, truthfully said in March: "The primordial objective of the Bill on the expansion of trade that the President has just sent to Congress is, as you know, to help American industry and agriculture to get access to this new Common Market, because it is the type of market that just suits American production".

Whether or not the Europeans want to be further Americanised is their own look-out; one suspects that if planning of the sort contemplated in Britain comes to play a larger rôle in allocating resources than does consumer demand dominated by Americanised advertising, they will not be such "suckers" for surplus American gadgets as Mr. Ball imagines. But if they want to be Americanised right up to the back teeth (if we may Americanise our language for a moment), it is certain that they would want to do the job with their own capital, their own factories, their own

THE IMPORT-EXPORT GROOVE

THE new import policy announced by the Government of India last Saturday contains only one moderately encouraging feature. It shows that the Government has been unusually prompt in accepting some of the subsidiary recommendations of the Import and Export Policy Committee headed by Sir A. Ramaswami Mudaliar; the decisions on the more important recommendations involving fiscal reliefs are expected later this month, along with the Central Budget. The work of import licensing is to be decentralised to a certain extent. A move is being made towards the system of annual rather than half-yearly licensing, although it seems the Government is not prepared to go as far as the Mudaliar Committee would have liked. For the rest, the import policy remains extremely restrictive. The quotas of established importers have been cut, in some cases drastically; and the total saving on this account is estimated at Rs. 1 crore. The quantities licensed for actual users will not be known for a few more weeks because the Government does not have a precise idea of the foreign aid it will get. But in this case also it seems the restrictions might outweigh the concessions, and a shrinkage in imports could result. The pious hope has been expressed that overall supplies should not decrease because the import cuts are concentrated on items the domestic production of which is increasing. But many of the commodity markets affected by the import cuts have reacted bullishly, suggesting that the hope is likely to be falsified. The reduction in the quotas for certain industrial raw materials and components, in particular, will be widely regretted.

Against the wider background of the Mudaliar Committee's report, however, the new import policy is of no great significance. It trots out the usual phrases about keeping a balance between "maintenance" and "development" imports. This is a subject on which the Mudaliar Committee itself indulged in regrettable equivocation, one of its main conclusions being that no clear-cut distinction could be drawn between these two types of imports. The difficulties in drawing a neat distinction have of course long been obvious. But many feel that there was nothing to stop the Committee from investigating a few specific examples, and seeing how far in these cases "maintenance" has been sacrificed at the altar of "development". It is well known that much of the foreign aid India gets is "tied" to specific projects in the "development" category, and hence cannot be diverted for importing the materials which established industries need. It is also well known that a number of new projects are import-saving in nature, and are thus likely to serve the ends of "maintenance" in the long run. The Mudaliar Committee, however, evaded its responsibility by not pointing out a few projects at least which are being implemented even though they are in no sense essential, and even though they will not save any foreign exchange.

The evasion is the more serious considering that the Committee otherwise had a fairly clear

workers, and not by entering into a co-prosperity sphere where "mutual" tariff reductions disguise an invasion of American products. President Kennedy's ambitious tariff-cutting scheme is being presented inside the United States as the means to such an invasion. It is never laid before an audience of business men and politicians without it being emphasised that U.S. industry will gain, except for a small sector that will be subsidised to reconvert. Yet, in Europe, it is presented as an "exchange" of mutual, equivalent and reciprocal benefits. There is no duplicity in this, and in particular the President's good faith is beyond question: it is simultaneously true that tariffs could be cut equally between Europe and the United States, and that in that event the bigger gains would be the U.S.A.'s—in a market where she is already scoring a persistent and substantial trade surplus. The treasures of persuasion that the President has to lavish on Congress to convince it that the United States can gain by liberalism may have been meant for internal consumption, but it is having the effect of opening European eyes to what is involved in Atlantic liberalism.

idea of the harm being done by the inadequacy of raw materials, spare parts and components. One sympathises with its conclusion that because the statistics are not available, it is hard to assess precisely how much capacity in Indian industry is idle. But the implication that the proportion of idle capacity may be less than is generally thought, because the "effective" capacity is often smaller than the "installed" capacity, is meaningless. The Committee approves of Sir Donald MacDougall's estimate that importing another Rs. 100 crores worth of industrial requirements each year could increase the output of industry by 15 percent or 20 percent. That in itself should have been enough to show how serious the incidence of idle capacity is, and should have made terminological quibbles about development versus maintenance imports, or about effective versus installed capacity, quite valueless. The Government's decision on the question of setting up an "Import-Export Stabilisation Fund", as recommended by the Committee, will be keenly awaited. Although the idea has been condemned as a "gimmick" by some, there is no reason to assume straightaway that it is impracticable. The Committee rightly stresses that a start could be made with a revolving fund of about Rs. 25 crores or Rs. 30 crores to finance imports for industries which would later replenish the fund by increasing their exports. Sceptics need to be reminded that something of the sort has already been tried in a limited way by linking the import entitlements of certain enterprises to their export performance. But the fund promises to be an improvement: instead of telling industries to export first and then qualify for imports, it would enable

them to get their imports first and then oblige them to export.

The fuller use of existing industrial capacity is in many ways central to the whole problem of increasing exports. The major handicap which Indian products face in foreign markets is that they cost too much. An increase in production would bring down unit costs and release larger quantities for sale abroad. It would also enable industry to spend more time thinking about exports than about the import licences for industrial raw materials which the Government may or may not give. But the whole effort has to be reinforced by measures to make industry more export-minded. This cannot be done merely by penalising its domestic sales; fiscal incentives have to be given so as to ensure that it is more profitable to sell abroad than it is to sell at home. The Mudaliar Committee has outlined an interesting scheme for giving income tax relief on export earnings, and it is to be hoped that when the Central Budget is presented later this month, the need for such relief will be appreciated. The Committee indulges in a masterly understatement when it says that the export incentives "so far given have been only moderate and, indeed, often ineffective." The intricate schemes framed for duty rebates and drawbacks on exports have, almost without exception, been a monumental failure, because they have all got tied up with more bureaucratic red tape than industry can cope with.

In this context, one of the chief merits of the Mudaliar Committee's report is its powerful plea for simplifying procedures and policies. To what extent the subsidiary details of its recommendations are accepted or altered may not matter very much. What is important is that the Government first has to be prepared for a bold policy decision about the magnitude and the nature of the export incentives it is prepared to give. Thereafter, it has to see to it that those incentives genuinely operate in actual practice, instead of merely existing on paper. It is no consolation to an Indian exporter who finds his cloth out-priced by Re 1 a yard in foreign markets to know that he can get a rebate of 5p a yard provided he fills 100 forms and answers 500 questions. If the rebate is to be given, it has to be given simply and quickly; and it has to be large enough to encourage the exporter to sell his cloth abroad. It is arguable that, under a simplified scheme of concessions, some exporters may get more than they deserve by exploiting loopholes. But it is equally arguable that, without simplification, the concessions will be meaningless and exporters will suffer, as indeed has been the case so far. The latter is a possibility which the country cannot afford any longer. The vicious circle where stagnating exports are forcing import cuts, and the import cuts in turn are harming exports, has to be broken. To break it is partly the responsibility of business and industry, but to a large extent it is also the responsibility of the Government. The Mudaliar Committee has suggested some excellent ways in which the responsibility can be shared. The time has come when action, not verbosity, is necessary.

ASIAN DEVELOPMENT BANKS

THE Regional Conference of Development Banks in Asia, which concluded its three-day session in Bombay last Saturday, provided a forum for frank and stimulating discussions on the various problems of development banks in the region and their contribution to the progress of the national economies. The conference—the first of its kind—was attended by delegates from 13 Asian countries and international credit institutions. In under-developed countries, there is a great need for short and long-term capital. The money market is not well organised and cannot provide enough of even short-term finance. The capital market to mobilise funds for longer-term investment is usually very small. In such circumstances, the need for specialised development institutions, whether Government or semi-public corporations, has been imperative. Although development banking is a comparatively new form of activity, it has come to be accepted as a chosen instrument both for initiating new development as well as for providing capital and skill. Conditions are not the same in all the Asian countries but their development

banks have the common objective of fostering healthy industrial progress.

In his welcome address, Mr. G. L. Mehta, chairman of the Industrial Credit and Investment Corporation of India, which convened the conference, said that the main object of the discussions was to promote better understanding of the working of the development banks through an interchange of ideas on common problems and also to form valuable contacts, personal and institutional. Mr. Mehta pointed out that a development bank does not merely provide finance. It seeks to inculcate discipline in company promoters and, by insisting on higher standards, brings into being projects which are sound financially. Inaugurating the meeting last Thursday, the Reserve Bank Governor, Mr. P. C. Bhattacharyya, said that the conference represented a further step in the process of facilitating mutual discussion of the problems of development banks. Four years ago, the World Bank took the initiative in convening a conference of development banks in Washington. Mr. Bhattacharyya said that all development banks in Asia,

with the notable exception of Japan, have to operate in the more or less similar environment of under-developed economies. He made a pointed reference to the appraisal of term loan applications, which involves an assessment of managerial competence, economic prospects for the borrowers' products, technical feasibility of the project and its financial soundness. The relative weightage to be accorded to each of these elements is a matter for the judgment of the lending institutions. The tendency among development banks in under-developed countries is to give greater emphasis to the types and value of security available for loans than to an assessment of the earning potential of a project. The other problem concerning appraisal, to which he drew attention, relates to the balance between the development criterion on the one hand, and the criterion of commercial profitability on the other.

The conference discussed at length various problems, such as the promotion of entrepreneurship, the development of capital markets, the identification of industries for development, the technical aspects of appraising a project, security versus profitability, the spread between banks' borrowing and lending rates, and tax treatment. The discussions were frank, lively and informed. They revealed a considerable diversity in the functions and organisation of development banks. Most of the banks are comparatively young and a few of them are still in their infancy. The Industrial Development Bank of Burma, for instance, is hardly six months old. While the supply of long-term finance is the main function, it is by no means the only important one. The Industrial Bank of Iraq also stores machinery, tools and raw materials and offers administrative, vocational and other services to industrial enterprises. The Development Bank of Lebanon handles finance for the development of industry as well as agriculture and real estate. Most banks provide expert technical advice and also help in finding suitable men for management.

The lack of resources and skilled personnel is common to all development banks in the under-developed countries. The institutions are, therefore, very keen to build the local capital market so as to facilitate their own working and to broaden the sources of funds for industries. In order to do this, many development banks have either directly subscribed to the shares of industrial companies or have underwritten share issues. Sometimes, as a condition of financing, they have also asked the applicants to convert themselves from private to public limited companies or to offer shares to the public. Most development banks in Asian countries have had to depend on official initiative and support in the initial stages and the Government has nursed them until they have attained financial viability. It is for this reason that Mr. G. L. Mehta's view that development banks should be autonomous—free from Government control—was not supported by many delegates attending the conference. The Government, they felt, has to exercise some influence so as to ensure that the institutions channel their funds into sectors of productive activity in accordance with accepted priorities.

All the development banks have evolved their own techniques and procedures for appraising individual projects. Some of them employ industrial consultants and qualified accountants on their staff for the purpose of advising and actively helping enterprises in their formative stages. But in the case of others, the area of operation is too small to permit the employment of highly qualified technical staff. There was no agreement on the question whether a development bank should make a technical appraisal of the project or whether it should depend on broad judgments for providing financial assistance. Discussions at the conference revealed that the rates of interest charged by international lending agencies for the under-developed countries are lower than the rates prevailing in the home countries of the lending institutions. The foreign agencies prefer to canalise their funds through development banks because of the problems involved in operating from long distances. The rates of interest charged by the development banks vary widely, from 4 percent to 9 percent. The margin between borrowing and lending rates also varies widely, from a mere 1 percent to 4 percent. On this margin depends the profitability of a development bank, but it was generally felt that in

view of the promotional rôle it plays, it has to offer finance on reasonable terms even though that might restrict its profitability.

It was in this context that the delegates discussed the taxation practices in different countries. The Pakistani method was said to be the most favourable, since there 10 percent of the total earnings of development banks are exempt from tax. In India, such exemption is granted only on 10 percent of the taxable profit transferred to reserves. The conference made a case for tax relief for development banks. It pointed out that while such institutions have to maintain attractive rates of interest on loans and keep the margin requirements for security at a low level, their operational costs are higher than those of ordinary banks because of the projects prepared, processed and examined by them are not finally put through. The equity-debt ratio of development banks varies widely from 1:3 to 1:12. After a good deal of discussion on this issue, the conference took the view that it is not possible to prescribe any particular equity-debt ratio for development banks because

of the different conditions under which they operate in various countries.

Mr. S. G. Barve, the Finance Minister of Maharashtra, who addressed the final session of the conference, emphasised the need for international finance since savings in most Asian countries are low and capital formation is inadequate to match the required rate of economic growth. But in all fairness to the industrially advanced countries, it should be conceded that they, along with the international financing institutions, have been showing growing awareness of the needs of the under-developed countries. The first Regional Conference of Development Banks in Asia has been a success in that, apart from the exchange of ideas on common problems, it has made possible personal and institutional contacts which will promote the cause of development banking. Representatives of international financing institutions have been able to get a close view of the various problems facing development bankers in different countries. The better appreciation of their needs should encourage the flow of funds to the under-developed countries.

Current News and Comment

No Rights Yet from Indian Iron

The speculative support for Indian Iron shares has declined somewhat during the past couple of days. This is because, in a recent circular letter issued to shareholders, the directors of the Company say that there is no immediate prospect of pany issue in connection with the setting up of a rights issue called the IISCO-Stanton Pipe and Foundry Co. Ltd. The circular letter states that the Indian Iron and Steel Company is already manufacturing spun iron pipes in Kulti under licence from the Stanton Ironworks Co. Ltd of the U.K. There is a shortage of capacity for making spun iron pipes in India. The shortage appears likely to continue for some years. The directors think that it is advantageous to set up an additional manufacturing organisation. Discussions have taken place between the representatives of the two Companies with this object in view, and a scheme of collaboration has been prepared. This scheme provides that the imported part of the capital equipment needed will be contributed by the Stanton Ironworks Co. Ltd. A new company will be formed, to be known as IISCO-Stanton Pipe and Foundry Co. Ltd, with an initial issued share capital of Rs. 3 crores. Two-thirds of the capital will be held by I.I.S.C.O. and one-third by the U.K. company. The Central Government has issued the industrial licences, and has signified its

general approval of the collaboration arrangements.

To take advantage of the growing market in western India and to save on railway freight, the new factory will be located in Madhya Pradesh. Consulting engineers to supervise and co-ordinate the entire project will be appointed. Indian Iron will be responsible for finding a suitable factory site, and for procuring the design and construction of all buildings and services, and all plant obtainable in India. The Stanton Company will design and procure the supply of specialist and other machinery which has to be obtained from abroad, and will assist the consulting engineers in supervising its installation.

The scheme is additional to, and will in no way interfere with, I.I.S.C.O.'s spun iron pipe making facilities in Kulti. It visualises close co-operation between Indian Iron and the Stanton Company. All the principal aspects of the manufacture of the new Company's products and the organisation of its business are to be regulated by a series of ancillary agreements between the parties. The designing and fabrication of all plant and buildings will take approximately two years. Therefore, Indian Iron will not be in immediate need of funds for subscribing for shares in the new Company. However, it will be necessary to make an issue of rights shares at the appropriate time

on such terms and conditions as may be agreed upon with the Controller of Capital Issues. It is not possible to specify at this stage what these will be. In view of the profitability of the similar operations at present carried on in the Kulti works, the directors confidently recommend the adoption of this project. As the investment proposed by Indian Iron in the shares of the new Company will exceed 10 percent of the subscribed capital of the latter, the sanction of shareholders in general meeting and the approval of the Central Government are necessary. A general meeting of I.I.S.C.O. will be held on 25th April, 1962, for the purpose.

Goodyear India Disappoints

The decision of Goodyear India Ltd to pass the ordinary dividend for the year ended December 1961 has greatly disappointed its shareholders. They feel that there is hardly any justification for the decision considering that the Company has made a profit of Rs. 28.06 lakhs (against Rs. 27.44 lakhs), after transferring Rs. 10.87 lakhs (against Rs. 4.95 lakhs) to depreciation. Sales rose from Rs. 7.91 crores to Rs. 8.27 crores. It is also pointed out that when 400,000 ordinary shares were issued to the public for subscription at a substantial premium some time ago, investors took up the shares with great interest. They did this in the belief that a going concern like Goodyear India would reward them by paying at least a moderate dividend. It was thought that the Controller of Capital Issues had imposed a high premium on the public issue mainly because the Company had paid handsome dividends worth Rs. 10 lakhs for 1960. Goodyear India Ltd was the public company formed in March 1961 out of the former Goodyear Tyre and Rubber Co. of India Private Ltd, which had an ordinary capital of 1,500 shares of Rs. 10 each. The ordinary capital was raised to 1,601,500 ordinary shares of Rs. 10 each, fully paid-up and allotted at par to the Goodyear Tyre and Rubber Co. of the U.S.A., which is the ultimate holding company. Then 400,000 ordinary shares of Rs. 10 each were issued to the public for subscription at a premium of Rs. 7 a share.

The disappointment is the greater because the new factory in Ballabgarh, near Delhi, has started producing tyres and other rubber manufactures. The directors say that they do not want to pay a dividend in view of the heavy expenditure following the commencement of production and because the new plant might be expanded further in the near future. But shareholders wonder how a modest dividend could have interfered with the expansion programme. Development rebate reserve is allocated Rs. 24 lakhs and general reserve Rs. 1 crore, after transferring Rs. 1.48 crores from the surplus of the previous year and Rs. 30,000 from the 1959 development rebate reserve. The carry-forward is Rs. 51.86 lakhs, against Rs. 1.48 crores brought in.

Dunlop Rubber Profit Up

The ordinary shares of the Dunlop Rubber Co. Ltd have improved to Rs. 44.25 due to the satisfactory results for the year ended December 1961. Sales rose by Rs. 2.39 crores to Rs. 32.86 crores, compared to 1960. The percentage of profits to sales has improved from 4.1 to 5 following a larger turnover. The profit has risen by Rs. 82 lakhs to Rs. 2.88 crores, after providing Rs. 61.39 lakhs (against Rs. 58.71 lakhs) for depreciation. A taxable ordinary dividend of 20 percent has been declared on the share capital, which has recently been increased to Rs. 4.50 crores by issuing bonus shares in the proportion of one share for every two held. The dividend is covered more than twice and offers a yield of 4.5 percent at the present price. The taxable ordinary dividend was 21.50 percent for 1960. Taxation is allocated Rs. 1.23 crores (against Rs. 81.37 lakhs), development rebate reserve Rs. 7.50 lakhs (against Rs. 17 lakhs) and general reserve Rs. 62.50 lakhs (against Rs. 37.50 lakhs). The carry-forward is Rs. 25.39 lakhs, against Rs. 25.13 lakhs brought in. The balance-sheet figures are impressive. Against the ordinary share capital, reserves are more than Rs. 5.08 crores, and fixed assets exceed Rs. 6.31 crores. Dunlop Rubber has increased the production of various rubber pro-

ducts in addition to tyres and tubes. Sales of conveyor belt have risen. Dunlopillo has become popular, the directors say.

Bombay Dyeing Does Well

The shareholders of Bombay Dyeing and Manufacturing Co. Ltd, who were disappointed by the directors' decision to maintain the dividend for 1961 at Rs. 3.50 a share, less tax, can derive some comfort from the Company's working results which show a satisfactory improvement over the previous year's performance. Production, sales and profit have all recorded a rise. There has been an improvement in the profit margin—as measured by the ratio of sales to gross profit—from 11.4 percent to 12.2 percent. Sales rose by about Rs. 2 crores to Rs. 12.89 crores and the gross profit increased from Rs. 1.24 crores to Rs. 1.59 crores. The net profit, however, shows an increase of only Rs. 7.54 lakhs from Rs. 50.47 lakhs to Rs. 58.01 lakhs, due to the larger provision for taxation and depreciation. Provision for depreciation has been raised from Rs. 63.25 lakhs to Rs. 80.52 lakhs. Taxation accounts for Rs. 14.20 lakhs, against Rs. 4.50 lakhs in 1960. Out of the net profit, the directors have set aside Rs. 24.83 lakhs (against Rs. 29.50 lakhs) for development rebate. The balance left is not sufficient to pay the proposed dividend which absorbs Rs. 35.13 lakhs. The directors have, therefore, drawn Rs. 2 lakhs (against Rs. 14 lakhs) from dividend equalisation reserve. After making various allocations, there remains Rs. 69,000 to be carried forward, against Rs. 65,000 brought in.

The directors state that the substantial improvement in sales is largely due to the increase in the production of cloth by 3.2 million yards on account of working more spindles and looms and running a partial third shift from April 1961. New lines of manufacture have also contributed to the increase. Bombay Dyeing continues to retain its position, which it has been enjoying for 20 years, as the largest single exporter of cloth in the country, accounting for 12 percent of total exports in 1961. In line with the general trend of cloth exports from India, the Company's exports, however, declined from 59.6 million yards valued at Rs. 6.25 crores in 1960 to 51.9 million yards valued at Rs. 5.54 crores in 1961. This reduction was largely due to Bombay Dyeing's exports to Australia (its best overseas market) dropping by nearly Rs. 1 crore after the credit squeeze there. Sales to Europe and other export markets were developed during the year.

The directors feel that the acute cotton shortage during the current season will adversely affect cloth exports. Bombay Dyeing is, however, trying to put on the market new varieties of cloth in order to keep up consumer demand. It has recently introduced crease-resistant fabrics. New qualities manufactured from combed yarns are being produced. Experiments are being conducted for manufacturing mixed fabrics of cotton and synthetic fibres such as nylon and terylene, and the first samples have been produced recently. In 1960, Bombay Dyeing installed machinery of the value of Rs. 1.68 crores; in 1961, it made further additions of the value of Rs. 1.25 crores. The Company placed orders during the year for a new Schreiner calendar, a yarn mercerising machine, engraving and pantographic machines and a small composite cheese dyeing plant. The gross block valued at Rs. 12.21 crores has been written down to Rs. 6.04 crores. Against a paid-up capital of Rs. 2.51 crores, Bombay Dyeing has reserves and surplus amounting to Rs. 3.80 crores. The quotation for the Company's shares (Rs. 25 paid) improved from Rs. 69.70 to Rs. 70.70 following the release of the annual report on 31st March. The shares recorded a high of Rs. 72.20 in February.

Progress of Indian Aluminium

Presenting their report for the year ended December 1961, the directors of the Indian Aluminium Co. Ltd point to the progress of various expansion schemes. The project to double the capacity of the Hirakud plant to 20,000 tons a year has been completed. The plant is expected to go into full production soon. The additional extrusion press has been installed in Alupuram, raising the capacity from 1,500 tons to 3,700 tons a year.

CAPITAL, 5th April, 1962.

The expansion of alumina production facilities in Muri has progressed satisfactorily; this will increase the output from 18,000 tons to 54,000 tons a year. The expansion of sheet-rolling facilities in Belur is expected to be completed in July 1962. Indian Aluminium has obtained licences from the Government for expanding the ingot capacity of the Alupuram plant by 5,730 tons a year and for establishing a foil mill in Kalwa with an annual capacity of 2,500 tons of aluminium foils. The financing terms for these projects await the approval of the Government.

The profit of Indian Aluminium amounts to Rs. 2.10 crores for 1961, compared with Rs. 2.22 crores for 1960. A taxable ordinary dividend of 15 percent has been declared. It is covered more than thrice and offers a yield of 3.8 percent at the present price of Rs. 39.75 a share. Development rebate reserve is allocated Rs. 45.50 lakhs (against Rs. 2.63 lakhs). Taxation absorbs Rs. 53 lakhs (against Rs. 99 lakhs) and general reserve Rs. 50 lakhs (the same). The carry-forward is Rs. 62.32 lakhs, against Rs. 49.91 lakhs brought in. The dividend is proposed to be paid, to the extent possible, out of the undistributed profits exempt from tax under Section 15C of the Indian Income Tax Act.

Sales rose from Rs. 8.01 crores to Rs. 8.39 crores. As the agency agreement with Venesta Foils Ltd was terminated on 20th June, 1961, sales of agency products declined from Rs. 3.2 crores to Rs. 1.7 crores. Indian Aluminium has started exporting its products. It is investigating the possibility of exporting extruded products and aluminium paste, in addition to aluminium circles and sheets which are being sold abroad. The Company has been trying to develop new uses of aluminium fabricated products. Meanwhile, the demand for its products exceeds its output. The production of the Hirakud plant was 9,837 tons of metal, against 9,931 tons. The production of the Alupuram factory rose from 5,967 tons to 6,072 tons. In the Belur factory, the output rose from 10,952 tons to 11,156 tons. The production of extruded products in Alupuram has increased. New facilities have been added to the Kalwa plant producing pyro-technic powder.

Central Bank Profit Up

The Central Bank of India Ltd has produced excellent results for the year ended December 1961. A taxable ordinary dividend of Rs. 5 a share, including a final of Rs. 2.60, has been declared. The dividend yield is 7.4 percent at the present price of Rs. 68 a share. (Fuller details appear on a later page in this week's *Capital*.) A taxable dividend of Rs. 4.60 a share was paid for 1960, but a jubilee bonus of 50p a share was also paid. The profit has increased from Rs. 1.33 crores to Rs. 1.83 crores. The reserve fund is allocated Rs. 45 lakhs, the staff gratuity fund Rs. 10 lakhs (the same) and bonus to staff Rs. 60 lakhs (against Rs. 51 lakhs). The carry-forward is Rs. 23.37 lakhs, against Rs. 18.61 lakhs brought in.

The Central Bank completed 50 years of existence on 21st December, 1961. It has been expanding its activities by opening new branches. Deposits have risen from Rs. 199.52 crores to Rs. 220.19 crores. Cash has increased from Rs. 1.65 crores to Rs. 5.58 crores. Investments are up from Rs. 56.60 crores to Rs. 58.80 crores and advances from Rs. 150.78 crores to Rs. 161 crores.

Modernisation of Madura Mills

In his chairman's statement at the annual general meeting of the Madura Mills Co. Ltd in Madurai last week, Dr. Rajah Sir M. A. Muthiah Chettiar takes a cautious view of the outlook for the current year due to the growing raw cotton shortage. (The details of the speech appear on a later page in this week's issue of *Capital*.) The domestic crop for the current year is estimated at only 4.3 million bales. In 1960-61, the crop was about 5.41 million bales.

Although the profit of Madura Mills for the year ended December 1961 is slightly lower than that for 1960, this is due to the fact that depreciation and development rebate have been increased by Rs. 11.3 lakhs. Part of the decline in yarn prices has been recouped by improved efficiency resulting from modernisation. The good effect of

CAPITAL, 5th April, 1962.

the expansion schemes has begun to show. The Serampore factory has started producing at full capacity. Madura Mills has obtained a licence for the installation of 450 automatic looms and ancillary equipment in order to diversify production. Although the export performance improved in 1961, the current year's prospects are doubtful in view of high cotton prices and the decline in demand from Lancashire. The chairman said that the loan from the National Industrial Development Corporation has been finalised and Rs. 48 lakhs has already been drawn. The directors are thinking of making a debenture issue during the current year in order to finance the capital expenditure. Sir Muthiah Chettiar has stressed the need for a conservative dividend policy because large investments will have to be made for development.

Sen-Raleigh to Diversify

Presiding at the annual general meeting of Sen-Raleigh Industries Ltd in Calcutta last Thursday, Mr. Abhijit Sen referred to the Company's increased sales. (A fuller version of the speech is printed on a later page in this week's *Capital*.) The profit has declined slightly due to various factors. Indigenous suppliers failed to deliver the goods in time, so inventories had to be accumulated by paying higher financing charges. Due to the changes in import policy, many items had to be bought from untested sources. Besides, higher prices had to be paid for many imported goods. Unit costs also rose because the total turnover was less than planned. Although bicycle output declined due to the shortage of components and accessories, the turnover of components made by Sen-Raleigh Industries increased substantially. Mr. Sen said that it is not possible to divert materials for making components to the production of bicycles because they are specifically meant for producing components.

Mr. Sen, nevertheless, took a fairly optimistic view of the outlook. Recent changes in the organisational set-up are expected to improve operational efficiency. Besides, almost all categories of steel required by the bicycle industry are now being produced in India. In spite of the increased competition, the demand for Sen-Raleigh products has been good. The chairman said that the Controller of Capital Issues has sanctioned the issue of fresh capital by Sen-Raleigh to finance the expansion of bicycle and chain production and the manufacture of dynamo lamp and house service meters. Since the implementation of these schemes will involve the expenditure of considerable foreign exchange, the directors are exploring the possibility of increased capital participation in Sen-Raleigh Industries by Raleigh Industries Ltd of the U.K.

Premier Tyres to Expand

Premier Tyres Ltd, Bombay, which is expected to go into production shortly, has signed a fresh technical assistance agreement with the United States Rubber Company, New York. Under the agreement, the United States Rubber Company will provide technical assistance to Premier Tyres for manufacturing tyres, tubes, conveyor and power transmission belts. The agreement has been concluded after discussions with the Dayton Rubber Company (now Dayco Corporation), Dayton, U.S.A.—Premier Tyres' earlier collaborators. The need for a fresh technical assistance agreement arose because Dayco Corporation sold out its tyre plant in the U.S.A. last year, and it was thought desirable to have the technical collaboration of a firm actually engaged in manufacturing tyres and tubes so as to have the benefit of new techniques resulting from continued research in the field. Dayton Rubber has helped Premier Tyres in erecting plant and machinery. The former's shareholding in the latter, valued at Rs. 10 lakhs, will be transferred to the United States Rubber Company. The terms of the new agreement, which has been approved by the Government of India, are said to be reasonable. Premier Tyres has one of India's eight tyre plants, five of which are already producing and three are being constructed. The installed capacity of the Company's plant is 300,000 tyres and 300,000 tubes a year. Premier Tyres hopes to get the Government's permission for increasing the

capacity of the plant after the existing plant has gone into operation. It proposes to double its capacity. The capital outlay on the expansion scheme is estimated at around Rs. 1 crore. The Company has received licences for manufacturing V-belts, industrial and conveyor belts. The Rs. 100-paid share of the Company is currently quoted around Rs. 158. The management hopes to be able to declare a maiden dividend for 1963.

Finlay Textile Results Disappoint

In a year when the cotton textile industry generally has done fairly well, the working of the Finlay group of mills has not been satisfactory. Of the three mills in the group—Finlay, Swan and Gold Mohur—only Finlay Mills has earned a slightly higher profit. But the increase in the gross profit is much too small in relation to the substantial improvement in sales. The profit of Swan Mills is down by about 35 percent, although sales have been more or less maintained. In the case of Gold Mohur, both sales and profit are down; the profit is almost halved while sales have declined only by about 7 percent. Finlay and Gold Mohur have maintained the taxable dividend at 23 percent and 21.5 percent, respectively. The dividend of Swan Mills has been reduced from 36 percent to 21.60 percent, but this has not affected the total distribution to shareholders because the dividend for 1961 is on the increased capital. In his statement circulated to shareholders along with the directors' reports, Mr. C. H. Campbell, chairman, complains that the higher prices of Sudan and Egyptian cotton and the increase in the wage bill have affected the working of the group. Unless the Government imports a reasonable quantity of long-staple cotton soon, the mills may be forced to reduce production in the not-too-distant future. In order to earn more foreign exchange under the export incentive scheme, the group tried to increase its exports in 1961, but met with only moderate success.

Mr. Campbell says that in the case of Swan Mills, the results were also affected because the tyre cord department did not work to full capacity during the year. Besides, there was a stock write-up of Rs. 6.50 lakhs in 1960 which needs to be taken into account when comparing the Company's results with the previous year. An order has been placed for a further 15 ring-frames in addition to the 20 ring-frames already on order, but the progress of the rehabilitation programme has been slow due to the foreign exchange shortage. Finlay Mills has placed orders for a further 15 ring-frames in addition to the 23 ring-frames already on order. Gold Mohur has also placed orders for 15 ring-frames in addition to the 36 already ordered. It has asked for the Government's permission to install an additional 15,000 spindles in order to balance the mills. Referring to the outlook for the current year, Mr. Campbell has expressed the view that both Swan and Gold Mohur Mills should show some improvement. Finlay Mills would repeat its performance provided the prices of long-staple cotton remain at the present levels and if the group is able to secure all its requirements of foreign cotton.

Sales of cloth, yarn and waste by Finlay Mills increased by about 18.7 percent from Rs. 2.53 crores to Rs. 3.01 crores. Closing stocks fell from Rs. 63.14 lakhs to Rs. 46.22 lakhs. The income from bleaching, mercerising, dyeing and printing charges was almost unchanged at Rs. 41.17 lakhs, against Rs. 41.06 lakhs in 1960. In spite of the substantially larger sales, the gross profit rose by only Rs. 2.06 lakhs from Rs. 42.58 lakhs to Rs. 44.64 lakhs. After providing Rs. 10.11 lakhs (against Rs. 9 lakhs) for depreciation, Rs. 46,000 (against Rs. 94,000) for development rebate and Rs. 14.35 lakhs (against Rs. 12.76 lakhs) for taxation, the net profit amounts to Rs. 16.28 lakhs, against Rs. 16.88 lakhs in the previous year. From this, the directors have set aside Rs. 1.88 lakhs on account of salaries, wages and bonus, etcetera, in relation to previous years. A sum of Rs. 3 lakhs (against Rs. 11.93 lakhs) has been transferred to general reserve No. 1. After providing for the proposed dividend of 23 percent, taxable, absorbing Rs. 11.50 lakhs, Rs. 26,984 is carried forward, against Rs. 37,155 brought in. The directors state that the Alexander and Finlay Thread Company, in which Finlay Mills has 50 percent share, earned a profit of Rs. 1 lakh, after providing Rs. 50,000 towards depreciation. The Rs.

100-paid share is quoted around Rs. 355 offering a gross yield of nearly 7 percent.

Sales of Swan Mills were maintained at Rs. 2.17 crores, but the gross profit declined by 35 percent from Rs. 51.48 lakhs to Rs. 34.51 lakhs. After providing Rs. 11.92 lakhs (against Rs. 12.52 lakhs) for depreciation, Rs. 23,000 (against Rs. 3.48 lakhs) for development rebate and Rs. 9.35 lakhs (against Rs. 13.55 lakhs) for taxation, the net profit amounts to Rs. 10.77 lakhs, against Rs. 18.23 lakhs in 1960. Out of this, Rs. 1.16 lakhs has been deducted on account of salaries, wages and bonus, etcetera, in relation to previous years. A sum of Rs. 3.20 lakhs has been transferred from general reserve for paying the proposed dividend of 21.60 percent (against 36 percent) which absorbs Rs. 12.95 lakhs, leaving Rs. 10,399 to be carried forward, against Rs. 26,032 brought in. The capital of the Company was increased in 1961 from Rs. 36 lakhs to Rs. 60 lakhs. The Rs. 100-paid share of Swan Mills is quoted around Rs. 390 cum dividend, offering a gross yield of 5.86 percent.

Sales of Gold Mohur Mills declined from Rs. 2.42 crores to Rs. 2.25 crores, but the gross profit was almost halved from Rs. 41.38 lakhs to Rs. 20.81 lakhs. After providing Rs. 3.95 lakhs (against Rs. 3.77 lakhs) for depreciation, Rs. 3,300 (against Rs. 1,700) for development rebate reserve and Rs. 7.07 lakhs (against Rs. 14.70 lakhs) for taxation, the net profit amounts to Rs. 8.09 lakhs, against Rs. 19.26 lakhs in 1960. An amount of Rs. 88,000 has been deducted on account of salaries, wages and bonus, etcetera, in relation to previous years. The directors have drawn Rs. 3.50 lakhs from general reserve No. 1 in order to pay the proposed dividend of Rs. 21.50 a share which absorbs Rs. 10.75 lakhs, leaving Rs. 6,662 to be carried forward, against Rs. 10,233 brought in. At its current price of Rs. 396 the share of Gold Mohur Mills offers a gross return of 7.8 percent.

Prospects for E.I. Distilleries

The chairman of the East India Distilleries and Sugar Factories Ltd, Mr. G. N. Noel-Tod, reviewed the present position of the sugar industry at the annual general meeting in Madras last week. (A fuller version of the speech appears on a later page in this week's issue of *Capital*.) Mr. Noel-Tod feared a further enforced cut in sugar production, since stocks are unlikely to decline substantially by the beginning of the next sugar season. On the question of exports, the chairman observed that exporting the current surplus appears to be the only alternative to dumping it in the sea. The long-term future of the industry should not be linked with exports unless there is a sharp rise in the world price, since India now incurs a huge loss by exporting the commodity. In the short-term, the chairman urged the Government to bear a temporary loss of revenue by reducing the excise duty on sugar. This will stimulate internal consumption and help absorb the excess stock. Mr. Noel-Tod suggested the restoration of the basic excise duty to the pre-1937 level, that is, Rs. 111 a tonne, against the present rate of Rs. 222 a tonne. As for the cane price, he urged the immediate introduction of a sliding scale according to quality. This will help lower the cost of production.

While appreciating the Government's policy in not issuing licences for the establishment of new sugar mills or the extension of old ones, Mr. Noel-Tod said that the Government should withdraw licences already issued for new factories where active steps for their establishment have not yet been taken. Even so, production in south India is likely to rise sharply since six new factories will go into production during the 1962-63 season; at least six more factories are likely to be commissioned within the next two years. Considering the smaller production allowed and the probability that a certain part of the output will have to be exported without any profit and possibly at a loss, the chairman anticipated a fall in the E.I. Distilleries, profits from sugar. He, however, hoped that it would be possible to give the shareholders a more reassuring view of the Company's outlook a year later.

E. I. Distilleries' profits from general merchandising have increased substantially as a result of the re-organisation of this business over the past two years. The Ennore fertiliser factory will

contribute in full measure to the group's profits in 1962-63. The production of ammonium phosphate in this factory should facilitate a substantial improvement in fertiliser sales in future. The confidence of the board in this side of the business is illustrated by the fact that E. I. Distilleries has already applied to the Government of India for permission to double the capacity of the Ennore factory. If the Company obtains permission for this expansion, possibly in 1962-63, it will be necessary to raise further capital.

Mahindra and Mahindra to Expand

Mahindra and Mahindra Ltd did exceedingly well during the year ended October 1961. While sales rose by about 13.3 percent from Rs. 13.63 crores to Rs. 15.42 crores, the gross profit recorded an increase of about 65.6 percent from Rs. 66.76 lakhs to Rs. 1.11 crores indicating an impressive improvement in the profit margin. Although the dividend has been maintained at Rs. 1.25 a share (Rs. 10-paid), subject to deduction of tax, shareholders received an additional 25nP a share by way of bonus. The directors' full report, which has now been made available, holds out the promise of still better times ahead because of various expansion schemes the Company has on hand. The production of jeeps and other allied vehicles in 1960-61 increased by 23 percent. Sales of these vehicles rose from 6,499 to 8,133, or by over 25 percent. Moreover, all the functional components of the jeep are now being produced in India and continuous studies are being made to analyse various operations for improving performance and increasing productivity. Mahindra and Mahindra plans to purchase 137 acres of land in Kandivli (Bombay) to centralise the jeep manufacturing operations in one area. Sales of jeeps in the first quarter of 1961-62 are placed at 1,939. On this basis, the production this year is expected to be maintained around the previous year's level. The Company has obtained the Government's permission to double the jeep manufacturing capacity to 10,000 units a year.

The overall reduction in steel imports has to some extent affected the performance of the steel division: the carryover of unexecuted orders at the end of October 1961 was not as large as in the previous year. The directors consider a further cut in steel imports to be inevitable, but they seem to be hopeful that an improvement in sales from the Company's controlled stockyards covering internal distribution will cushion the decline in the import business. The alloy steel project, for which a licence has been obtained, is expected to improve the working of the steel division. Negotiations for technical collaboration with a foreign firm have proceeded satisfactorily, and the Company is exploring the possibilities of financial assistance from both indigenous and foreign sources. The project is likely to take final shape this year. The machine tool division has been active.

Mahindra and Mahindra proposes to float a new enterprise to undertake the manufacture of tractors in collaboration with the International Harvester Export Co. of Chicago and its subsidiary in Britain. The project has been approved by the Government of India. The U.S. collaborators will—in addition to investment—furnish a substantial loan on a long-term basis to cover the cost of imported plant and equipment. The directors state that the Industrial Credit and Investment Corporation of India and the Life Insurance Corporation will provide substantial funds to finance the doubling of jeep manufacturing capacity. In addition, the Company is raising further capital by issuing 660,000 equity shares of Rs. 10 each at a premium of Rs. 2.50 a share in the ratio of one share for every two held. The Rs. 10-paid share of the Company is currently quoted around Rs. 18.24.

Outlook for Kamani Engineering

Kamani Engineering Corporation Ltd did well during the year ended September 1961, with production, sales and profit recording a satisfactory improvement over the previous year. This has enabled the directors to raise the dividend from 8 percent to 9 percent. The outlook for the current year seems to be even more promising because of the rise in production. Mr. R. H. Kamani, chair-

man, told shareholders at the annual general meeting in Bombay last Friday that the level of production during the first six months of the current year has, on average, been about 50 percent higher than in the previous year. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) In spite of the difficulties in getting certain types of steel required for the transmission line tower industry, the output in December reached a record high of 2,107 metric tons. Kamani Engineering's department for erecting transmission lines has been built up as one of the largest units of its kind in India. Many new tools and tackles have been designed, tested and put into operation to ensure greater efficiency. The Company completed during the year the construction of the land route of the 220kV Koyna-Bombay transmission line, which is the first 220kV line in India using one of the largest sized conductors ever used. Similar work is now being done in other parts of the country.

Railway electrification work which involves complicated design work and operations, is making satisfactory progress. Kamani Engineering has successfully launched the production of the tract-amt road roller. The research and testing department is developing new and important types of tower designs. Referring to exports, the chairman said that the Company's efforts have started showing good results. But Kamani Engineering has to face severe competition in the overseas market from well-established international manufacturers which it finds difficult to overcome without adequate facilities and support from the Government. Mr. Kamani said that the Company has secured the business from the Kandla thermal power-station valued at above Rs. 1 crore. Tenders for power plants of an additional value of Rs. 1 crore are being negotiated. During the six months since September, production is placed at 9,000 tons of towers and 18 Mark 111 model Tractamount road rollers. Replying to shareholders' questions, the chairman said that the directors are considering the possibility of diversifying the Company's activities. The board will also consider at a suitable time the suggestion for raising the distribution to preference shareholders.

Bright Outlook for Asian Cables

The Rs. 100-paid shares of Asian Cables Corporation Ltd have improved from Rs. 102 to Rs. 114 over the past two weeks on sustained investment support based on an optimistic assessment of the Company's prospects. Considering what Mr. G. B. Kotak, chairman, said at the annual general meeting last week, the market's optimism about the outlook for Asian Cables appears to be more than justified. The Company's first cable plant has gone into production according to schedule. The cables turned out by the factory are of very good quality. More than 14 million core metres of cables have been manufactured up to now. Production is progressively increasing as more and more skill is acquired by the operative trainees working on the machines. At the present rate of progress, Mr. Kotak expects the output to be of the value of Rs. 40 lakhs or Rs. 50 lakhs during the current year—the first year of production. Apart from popular sizes, the Company has also started the production of special cables like welding and trailing cables. Asian Cables has complete testing facilities. The chairman is confident that the Company's cables can stand all the vigorous tests called for by various standard specifications.

Whatever Asian Cables has already produced has passed the factory test and the goods are being despatched against orders already received. With the Company's project No. 1 making encouraging progress, it has launched project No. 2 for manufacturing 1,000 miles of power cables and 360 tons of enamelled copper wires. This project covers the manufacture of power cables up to 33 kV which no other unit in the country is manufacturing at present. Asian Cables is being helped in this project by Phelps Dodge Copper Products International Corporation of the U.S.A. and Enfield Cables Ltd of the U.K. Drawings, designs and lay-out for the project are now ready, so the Company is applying to the Government for a licence to import machinery for power cables and enamelled wires. Referring to the recent rights issue of Rs. 1 crore, the chairman said that shares worth Rs. 85 lakhs

have already been subscribed. The balance will be taken up by the banks as part of their underwriting agreement.

Ahmedabad Cotton Pays More

The directors of Ahmedabad Cotton Manufacturing Co. Ltd have decided to raise the dividend for the year ended December 1961 from Rs. 30 to Rs. 32 a share, subject to deduction of tax. This follows the improvement in working results. According to the preliminary figures released along with the dividend announcement, sales have risen from Rs. 2.30 crores to Rs. 2.65 crores, and the gross profit has increased from Rs. 29.45 lakhs to Rs. 31.82 lakhs. After providing Rs. 10.54 lakhs (against Rs. 13.42 lakhs) for depreciation, Rs. 63,000 (against Rs. 1.41 lakhs) for development rebate reserve and Rs. 4.50 lakhs (against nil) for taxation, the net profit amounts to Rs. 13.70 lakhs. The proposed dividend will absorb Rs. 4.80 lakhs, and Rs. 8 lakhs has been transferred to reserves. At the current price of Rs. 550, the share of Ahmedabad Cotton yields nearly 6 percent.

Atul Products Profit Down

Although Atul Products has maintained the dividend at 12 percent subject to deduction of tax, the preliminary figures about the working results for the year ended December 1961, show that the Company has not fared well. In spite of a substantial increase in sales from Rs. 4.18 crores to Rs. 4.74 crores, the gross profit is down from Rs. 1.50 crores to Rs. 1.32 crores. But few had expected Atul Products to repeat its previous year's performance in the face of partial closure of the plant during the year due to the shortage of coal and raw materials and the additional burden it has had to bear on account of the enhanced excise levy. The loss in production resulting from the closure of certain departments is estimated at Rs. 40 lakhs or Rs. 50 lakhs. Allocations include depreciation Rs. 22.15 lakhs (against Rs. 19.94 lakhs), development rebate reserve Rs. 6 lakhs (against Rs. 4.50 lakhs), taxation Rs. 33.50 lakhs (against Rs. 49 lakhs) and general reserve Rs. 40 lakhs (against Rs. 20 lakhs). No provision has been made for depreciation reserve which received Rs. 14 lakhs in 1960. The proposed dividend absorbs Rs. 26.99 lakhs, leaving Rs. 2.38 lakhs to be carried forward, against Rs. 4.15 lakhs brought in. The Company's shares, which were quietly steady around Rs. 500 for some time, were marked down to Rs. 484—the lowest rate for several weeks—on 28th March, following the announcement of the dividend and the unsatisfactory working results. Earlier in the year, the shares recorded a high of Rs. 536.50. The latest quotation is up again around Rs. 498.

Anil Starch Earns Less

The directors of Anil Starch Products Ltd, Ahmedabad, have maintained the distribution to equity shareholders at 30 percent, made up of a dividend of 20 percent and a bonus of 10 percent, for the year ended December 1961. A proportionate dividend has been declared on the new shares. Sales and other receipts increased from Rs. 2.37 crores to Rs. 2.82 crores, but the gross profit was slightly down from Rs. 45.10 lakhs to Rs. 44.22 lakhs, which is attributed mainly to the provision of Rs. 4.30 lakhs for bonus to employees for the years 1954 to 1961 in the accounts for the year. Appropriations include Rs. 10.67 lakhs (against Rs. 8.87 lakhs) for depreciation, Rs. 5.95 lakhs (against Rs. 1.17 lakhs) for development rebate reserve and Rs. 13.33 lakhs (against Rs. 13.53 lakhs) for taxation. After providing for the proposed dividends, both ordinary and preference, which absorb Rs. 10.29 lakhs (against Rs. 9.31 lakhs), Rs. 51.617 is being carried forward, against Rs. 42.183 brought in. At its current quotation of Rs. 785, the share of Anil Starch (Rs. 100-paid) offers a gross return of about 4 percent. The Company is going ahead with its expansion schemes. The dextrose plant was commissioned during the year. Anil Starch has received a licence for manufacturing 22,000 tons of superphosphate a year for which machinery has already been ordered. The sulphuric acid plant is expected to start full production in the current

CAPITAL, 5th April, 1962.

year. The Company has also received licences for manufacturing monosodium glutamate and manure mixture.

Nil from Marshall, Sons

The ordinary shares of Marshall, Sons and Co. (India) Ltd, have declined to Rs. 3.81 because the dividend for the year ended June 1961 has been passed. The Company has made a trading profit of Rs. 3.26 lakhs, against a loss of Rs. 9.35 lakhs in 1960. Depreciation is allocated Rs. 1.01 lakhs (against Rs. 1 lakh), leaving a debit balance of Rs. 5.64 lakhs to be carried forward. The directors say that various economy measures have been adopted to reduce expenses. The Company has been trying to build a good order-book, and it hopes for an improvement in the future.

More from Bharat Commerce

The preliminary results of Bharat Commerce and Industries Ltd for the year ended December 1961, show a profit of Rs. 55.79 lakhs (against Rs. 26.42 lakhs) in 1961, after providing Rs. 7.93 lakhs (against Rs. 9.68 lakhs) for depreciation. The taxable ordinary dividend has been raised from 5 percent to 15 percent, absorbing Rs. 7.50 lakhs. The dividend yield is 5.2 percent at the present price of Rs. 28.31 a share. Development rebate reserve is allocated Rs. 4.37 lakhs (against Rs. 3.02 lakhs), taxation Rs. 8.17 lakhs and general reserve Rs. 30 lakhs. The carry-forward is Rs. 1.46 lakhs, against Rs. 94,375 brought in.

Higher Profit for Brushware

Brushware Ltd has made a profit of Rs. 30,054 for the year ended November 1961, compared with Rs. 22,505 in the previous year, after providing Rs. 894 for depreciation. A taxable ordinary dividend of 80nP a share has been paid, absorbing Rs. 8,000. Taxation is allocated Rs. 14,000 (against Rs. 9,000) and rehabilitation reserve Rs. 9,500 (against Rs. 10,000), leaving a carry-forward of Rs. 3,407, against Rs. 5,353 brought in.

More from Industrial Investment

A slight improvement in the working of Industrial Investment Trust Ltd for 1961 has encouraged the directors to raise the dividend from Rs. 6.20 to Rs. 6.50 a share, subject to deduction of tax. The gross dividend income in 1961 at Rs. 11.37 lakhs shows an increase of Rs. 58,000 over the 1960 figure of Rs. 10.79 lakhs. After providing Rs. 2.20 lakhs (against Rs. 2.70 lakhs) for taxation, the net profit amounts to Rs. 6.77 lakhs, against Rs. 6.55 lakhs in 1960. The proposed dividend of Rs. 6.50 a share absorbs Rs. 6.50 lakhs (against Rs. 6.20 lakhs), leaving Rs. 30,418 to be carried forward, against Rs. 3,840 brought in. The Rs. 100-paid share of Industrial Investment Trust is quoted around Rs. 79, offering a gross return of about 9 percent.

Law for Sole Selling Agents

The Companies Act, 1956, as amended in 1960, contains elaborate provisions to regulate the activities of companies. Although the Act gives the Government extensive powers, the successful enforcement of many provisions depends on the knowledge of the shareholding public. If shareholders are not broadly acquainted with the provisions of the Act, they cannot help in enforcing them, especially in cases where they alone have the power to do so. Unfortunately, some of the provisions are so complicated and technical that most shareholders do not understand what they mean. In the circumstances, the efforts of the Company Law Administration Department to explain the provisions of the Act in simple language to shareholders, through bulletins and brochures, constitute a step in the right direction. But the value of these publications is undermined by the fact that, in explaining the Act, they invariably produce reasons justifying the provisions

but make no critical analysis. In a bid to safeguard the interests of shareholders, the Act has been made so restrictive that it has started to do considerable harm. The initiative of the Department would be appreciated more if it gave an unbiased view of the various provisions. It could say boldly whether or not many of the provisions have hampered the *bona fide* activities of companies. One such staff paper, relating to the statutory provisions concerning the sole selling arrangements of companies, has recently been written by Mr. S. M. Dugar and circulated by the Research and Statistics Division of the Department.

Mr. Dugar points out that, during and immediately after the second World War, sole selling agents with attractive remuneration were appointed by some companies. Such appointments were hardly justified at a time when there was an acute shortage of almost every commodity. During those days, a company had little difficulty in selling its products, but sole selling agents were generally appointed. This practice of appointing sole selling agents became more widespread when the Companies Act, 1956, was passed, placing severe restrictions on the activities and remuneration of managing agents. Mr. Dugar says that, since then, some managing agents have found that their offices are not worth holding. They have, therefore, resigned as managing agents and become instead the sole selling agents of the same companies. He stresses the point that to curb this malpractice, the Companies (Amendment) Act, 1960, contained stringent provisions concerning the sole selling agents of companies.

This Act provides that the sole selling agents shall not be appointed for more than five years at a time. Also, reappointment or an extension of their term of office shall not exceed five years on each occasion. The appointment shall be terminated if the shareholders of a company do not approve it at the next general meeting following the appointment. The appointment as the sole selling agents of managing agents who resigned their managing agencies after the commencement of the 1956 Act stood terminated, unless the Government approved the appointment. A person or a body relinquishing the managing agency of a company is debarred from being appointed as the sole selling agent of the company within three years of such relinquishment, except with the approval of the Government. Mr. Dugar points out that the Act gives the Government the power to call for all relevant information about the terms and conditions of any sole selling agency arrangement entered into by a company. The Government has the right to change the terms and conditions of sole selling agency arrangements if they are considered prejudicial to the interests of the company. When a company has more than one selling agent in any area or areas, the Government can enquire into the terms and conditions of the appointment of all selling agents and determine whether any of those selling agents is in fact a sole selling agent. The Government is also competent to order suitable variations in the terms and conditions relating to the appointment of the selling agent in order to safeguard the interests of the company.

At first sight, these provisions may give a misleading impression about the institution of sole selling agents. It must be borne in mind that such agents play an important rôle in modern business. By undertaking to sell the goods of manufacturers and storing them when required, they ensure the smooth working of industry. Because malpractices have cropped up in some selling agency arrangements, it would be a "dog in the manger policy" if attempts are made to place restrictions on selling agents in general. The provisions of the Companies Act should be implemented in such a manner that genuine selling agents are permitted to work smoothly. In view of the wide powers vested in the executive to enforce the elaborate provisions relating to selling agents, it is doubtful whether selling agents can work without harassment. The Company Law Administration does not appear to have gained knowledge and experience necessary to administer the Act; its doctrinaire attitude towards corporate problems has so far been a major impediment. It is nevertheless hoped that, in implementing the provisions relat-

ing to selling agents, the Department will take a pragmatic view.

Bengal Deshi Export Quota

The Government of India has released for export a further quantity of 70,000 bales of Bengal Deshi cotton. This brings the total quantity allowed for export during this season to 270,000 bales. The terms and conditions of the export quota are more or less the same as those of the previous one announced on 5th January. The shipment period is valid up to 31st August and, as usual, 5 percent of the export quota has been earmarked for distribution among co-operative societies situated in areas growing such cotton. The export quota announcement has been welcomed because of the substantial exportable surplus of Deshi cotton which had been weighing heavily on the market and had caused a price decline of about Rs. 50 a candy over the past few weeks. The fact that Bengal Deshi cotton should be quoted substantially below the ceiling rate when all other varieties have been enjoying huge premiums ranging up to Rs. 150 a candy is a clear indication of the extremely comfortable supply position of Deshi cotton. The trade thinks that the Government could have easily permitted a larger quantity for export and that the export quota should have been announced much earlier. A more timely announcement could have earned for India larger foreign exchange because, apart from the slack demand at present, overseas prices have declined by about 3d a lb over the past two months. Japan—India's chief customer for Deshi cotton—is reported to have purchased sufficient quantities of Deshi cotton from elsewhere to meet her requirements and is unlikely to show any keen interest in Indian cotton in the immediate future.

The trade, however, hopes to dispose of the present quota before the end of August. According to market reports, shippers have already negotiated business for about 20,000 bales, subject to quota. Along with the announcement of the export quota, the Government of India has announced that the foreign exchange earned through the export of Bengal Deshi will be used for importing 43,000 bales of cotton stapling 1½ inches and above but below 1½ inches from any area. On the basis of prevailing overseas prices, the export of 70,000 bales of Bengal Deshi is expected to fetch about Rs. 2.5 crores to Rs. 3 crores. The bulk of the cotton allowed for import is likely to come from the Sudan, but importers feel that the foreign exchange earned by exporting Deshi cotton may not be sufficient to pay for the import of 43,000 bales. Mills have reason to feel happy that the export of Deshi has been linked with the import of foreign cotton, although the imported stuff is unlikely to relieve the present acute shortage, as actual imports will take time to materialise.

Industries Advisory Council

The Central Advisory Council of Industries heard last week in New Delhi an encouraging speech from Mr. K. C. Reddy, Central Minister of Commerce and Industry, reiterating the Government's determination to tackle the shortage of raw materials, coal and power. But his speech disclosed no fresh plans to deal with these problems. In fact, Mr. Reddy proceeded to emphasise that the consumer should get his requirements at reasonable prices. In the next breath, he urged industry to export even if it meant some sacrifice. Exports cannot increase unless prices come down; but if prices fall, domestic consumption will rise, and exports might suffer. The remedy is to permit a substantial expansion of production which can cater to both export and home markets on a rising scale. This was evidently what Mr. J. R. D. Tata had in mind when he said that new industrial licences should not be issued unless the supply of raw materials, coal and power could be secured. It was good to hear the Minister praise the enthusiasm of the private sector in venturing into new fields. During 1961-62, the Central Government issued 1,042 licences for new units or for the substantial expansion of capacity in existing units. But there is little point in setting up fresh capacity by spending a considerable

ONE OF THE THINGS THE NEW LOK SABHA MUST address itself to before long is defining its privileges and revising its archaic rules about contempt of Parliament. The last Lok Sabha was exceedingly touchy; and I have no reason to think that the new one will be less so. If some new member is looking for somebody to flog for contempt of the House, I suggest he has an excellent target in the Lok Sabha secretariat itself. One of its publications, the 158th report of the Estimates Committee on the Ministry of Information and Broadcasting, is before me; and as I open it I find the corrigenda consisting of 25 items. This in a publication of 79 pages; and the secretariat thought nothing of

placing the effort on the table of the House. If this is not contempt of the House, what is? I am increasingly impatient with the tolerant view that incompetence is somehow excusable while anything smacking of impertinence is not. The third Lok Sabha owes it to itself, before it gets annoyed about criticism in the Press, to give itself an efficient secretariat. I read about an exhibition depicting the achievements of the second Lok Sabha. I hope the exhibit of the parliamentary wing of the Government of India press in New Delhi was not the abominable publication that is on my table and soon will be in my spacious waste paper basket.

THOSE WHO HURRIEDLY CONGRATULATED PRESIDENT Nasser on his great restraint when Syria broke away from the United Arab Republic may now be wondering whether it was not more indecision than calculated self-discipline. The recent coup in Syria is not yet clear in its implications; and the army itself seems divided. Whether the pro-Nasser faction received any material encouragement and assistance from Egypt I do not know; it is quite possible that most Egyptians have had enough of the Syrians and *vice versa*. The internal political weaknesses which drove Syria into Egypt's arms in the first instance are all there still; and the elimination of a few individuals does nothing to alter the picture. I had expected, after the Syrian secession, that President Nasser would be a somewhat chastened man; but I have just received from the U.A.R. consulate in Bombay some excerpts from Mr. Nasser's "historical address" on the fourth anniversary of the "Union".

Some people are asking... why are we celebrating the day of the Union? We saw what happened in Syria... we must understand that our Arabism is not subject to changing circumstances. It is a constant reality. We have no choice, we are Arabs... We should also realise that Arab unity shall remain our objective.

It seems useless pointing out that what claims to be a constant reality has no need to be an objective. This piece of illogicality apart, being an Arab seems no greater a unifier than being, say, an Asian or a European.

THE PUNJABI COMMUNITY HAS NEVER BEEN KNOWN as a begetter of large-scale industrialists. But it was a measure of the man that Mr Karam Chand Thapar, who died in Delhi last Thursday, was not only an exception to the rule; he was in many ways one of the most outstanding leaders of Indian industry in his generation. Mr Thapar's success, to my mind, was built on an unusual combination of attributes. He had a tremendous capacity for hard work and an altogether remarkable fortitude; reinforcing both was a shrewd sense of business opportunities together with a deep insight into human character. Perhaps few would have imagined, when he launched on his business career in his native Ludhiana at the age of 22, that he would in the short space of two or three decades grow to be the architect of one of India's larger industrial empires. Critics have been known to say that his business methods were slightly unorthodox, and that some of his enterprises were at times too enterprising. But about the magnitude of his final achievement there can be no doubt the impressive array of coal, sugar and paper companies, and the host of other smaller concerns, remain as monuments to what was, if I may say so, essentially an individual success. The recognition he received as a leader of Indian industry was confirmed by his election as president of the Federation of Indian Chambers of Commerce and Industry last year and his speech at the annual session of the Federation less than a fortnight ago, a mere five days before his death, was widely regarded as among the finest examples of tactful criticism heard from that platform for many years. Mr. Thapar was unable to preside over the session in person, since ill-health struck him down for what unfortunately proved to be the last time. But there need be no doubt that the influence of his thinking will shape the policies of Indian industry for many years to come. The flesh may die, but the spirit lingers on; perhaps therein lies the best tribute to the power Mr. Thapar was until his last days.

THE DITCHER.

CAPITAL, 5th April, 1962.

THE EAST INDIA DISTILLERIES & SUGAR FACTORIES LIMITED

CHAIRMAN, MR. G. N. NOEL-TOD'S ADDRESS

Presiding over the Sixty-fourth Annual General Meeting of the shareholders of the East India Distilleries and Sugar Factories Limited held at Madras on Wednesday, 28th March, 1962, Mr. G. N. Noel-Tod, Chairman, said:

"Gentlemen,

I extend to you a warm welcome to this, the Sixty-fourth Annual General Meeting of the shareholders of this Company. The Accounts for the year ended 30th September 1961, together with the Directors' Report thereon, have been in your hands for the statutory period and, with your permission, I will take them as read. The sad events which have led to my presiding at this Meeting have been recorded in the Directors' Report, and it only remains for me to place on record here our profound gratitude to the late Mr. Wonfor and the late Mr. Srinivasan for their outstanding services to the Group over a long period. Mr. Srinivasan in his speech at last year's Meeting covered extensively the development of the Group since the war, and I am indeed glad that there exists this record of the progress that was achieved under his Chairmanship and, before him, that of Mr. Wonfor.

You will have observed from the Accounts that the net profit before tax and the net profit after tax have declined slightly compared with the figures of the previous year. This largely comes about through a sharp increase in interest paid, by reason of the loans it has been necessary to raise to finance the construction of our Compound Fertiliser Factory at Ennore, which increase was forecast in last year's speech, and a decline in profits on sugar, on which I will comment later. On the other hand, I am glad to say that the profits from general merchandising have increased substantially. We are accordingly reaping the benefits not only of the reorganisation of our merchandising business, which has been effected over the past two years, but also of your Board's consistent policy of retaining diversification in our operations so that if circumstances are such that one particular side of our business is adversely affected, there remains the opportunity to make good a setback in one direction by an advance in another. You will also have noted that the ratio of total dividend paid to total net profits after tax is less favourable than it was last year, arising in part from the additional amount of dividend payable by reason of the increase in the equity capital which took place in 1960. Considering, however, that our Fertiliser Factory at Ennore was under construction during the whole of the period under review and therefore no profits accrued therefrom, I do not think that there is any cause for apprehension over the long term prospects of the Group. In the shorter term, I expect the results for 1961/62 to be generally comparable with those of the year under review even though little income may be expected during this year from our Ennore Fertiliser Factory. We are, however, confident that this factory will be contributing in full measure to the Group's profits in 1962/63, which means, in fact, that I have confidence that our contractors, Messrs. Simon-Carves, will "deliver the goods".

Problems of Sugar Industry

Let me now say something on the subject of sugar. The problems facing the sugar industry have received considerable prominence in the press for some time now and you must all be aware of the grave situation with which the industry is faced. For the past two years my predecessor has referred to the mounting surplus of stocks. The position today is that we are only now clearing stocks manufactured during the 1960/61 season which finished in June last year, despite having exported 9,000 tonnes to America in September last year. The whole of our production during the current season to date is lying unsold in our godowns,

to a total value, at cost of Rs. 1.5 crores. You will appreciate what a heavy burden this means for the Company, especially at a time when we are engaged in commissioning our new fertiliser factory at Ennore.

Time and time again the attention of the authorities has been drawn to the fact, by official representations and in speeches of my predecessor, that cane is planted one year before it is crushed and it is more than desirable that both the grower and the factory should know at the time of planting what will be the amount of cane available and what price will have to be paid for it. For the current season the Government of India have imposed a 10% cut on production throughout the country, but by reason of the exclusion of new factories and small factories from the scope of the Ordinance, only a few of the factories in Madras State will fully be affected during this sugar year. Nellikuppam's quota is 30,705 tonnes against 34,117 tonnes actually produced last year. We have pointed out clearly to the Government of India, with the support of the Government of Madras, that, as is our usual custom, we have entered into forward contracts with our growers. As things stand at the moment there may be 60,000 to 70,000 tonnes of cane left standing at the end of the season for which the growers will have no means of disposal for the manufacture of jaggery. It is practically unknown in the Nellikuppam factory area. I am, however, hopeful that some way out of this impasse will be found, which will be fair both to the growers and to the factory. The Government of India are seized of the position and early orders are awaited.

Meanwhile, we still await an announcement of the cane prices for the 1962/63 season and also the quantity of sugar to be produced by individual factories. I fear that a further cut in production next year is inevitable.

As regards the All-India position, you know that the current sugar year started with stocks in hand at all factories in the country amounting to 12 lakh tonnes, rather more than half the normal yearly offtake. Despite the cut of 10%, production this year is likely to amount to between 28 and 30 lakh tonnes. Again, despite the relaxation of control on internal sales of sugar, it seems unlikely that internal consumption will rise to beyond 23 to 24 lakh tonnes, unless Government decide to slash the excise duty. The prospects of exporting more than 5 lakh tonnes

of sugar this year are not good. Assuming, however, that 5 lakh tonnes are exported, still the surplus stocks of sugar at the beginning of the next year will be not less than they are at present, which justifies my apprehension of a further enforced cut in production.

To export the current surplus appears to be the only alternative to dumping the sugar in the sea. The type of sugar made in India is a factory white, as opposed to a refined sugar, and it will not keep indefinitely. In view of the high rate of loss per tonne of sugar exported I suggest that the long term future of this industry should not be linked with any idea of exports, unless and until there is a radical rise in world price. Until then, and for at least the next few years, there seems to be no alternative to Government facing up to a temporary loss of revenue by reducing the excise duty on sugar in order to stimulate internal consumption, and so use up the present unproductive excess stock, and by reason of the higher internal consumption gradually restore the quantum of revenue to something approaching its present figure. The present per capita annual consumption of sugar in India is 5.5 kilos, as compared with 55 kilos in the U.K. An increase of only 1.2 kilos per capita in India will represent an additional consumption of 5 lakh tonnes of sugar. My suggestion in this regard is that, at least as a first step, the basic excise duty may be restored to the pre 1957 level, i.e. Rs. 111 per tonne compared with the present rate of Rs. 222 per tonne.

Radical Change

There are other steps which should be taken to remedy the situation. These would involve a radical change in Government's attitude to the industry. One cannot escape from the fact that conditions for the manufacture of sugar at competitive rates are vastly different in different parts of the country, and the present policy of maintaining a high minimum price for sugarcane, this price being paid per tonne dead weight, without regard to quality, is subsidising uneconomic areas at the expense of those more fortunately placed.

Surely there can be no other agricultural commodity in the world which is paid for irrespective of quality. At last, however, there are indications that the Government of India is being converted to the view that we have

propagated for so long that the cane price must be linked to quality. I hope they may go even further than this and appreciate that the best method of getting the right amount of cane grown to give the quantity of sugar the country needs, will be to remove controls both from cane price and from sugar price. Factories are dependent for their profit on having adequate supplies of cane and I suggest that their judgement can be relied upon to ensure that enough, but not too much, is paid to secure this end. A natural consequence would, of course, be that in some areas the cultivation of the cash crop of cane would give way to the cultivation of food crops, which would be most desirable. If Government cannot, for political reasons, go as far as this, at least the immediate introduction of a sliding scale price, according to quality, will go a long way towards achieving the desired and of lowering the cost of sugar and relating production more closely to consumption.

While Government have gone so far as to announce that no further licences will be granted for the establishment of new sugar factories or the extension of old ones, I would like to see this policy taken one step further forward, by the withdrawal of licences for new factories in respect of which active steps towards their establishment have not yet been taken. Even so, production in South India is likely to rise steeply in as much as six new factories will go into production in the 1962/63 season and at least an equal number appear to have taken active steps towards commissioning units within the next two years.

Although our relations with the Government of Madras have been generally most amicable, and we have received the fullest support from them in most of our difficulties I must enter a protest against their refusing to refund the cane cess on sugar exported in the last three years. They have claimed that they see no necessity for this refund on the grounds that the Company has received a refund of excise duty. This is so, but, even so, the Company incurred a loss of Rs. 7,67,000 on sugar exported last year. Refund of cess would have amounted to Rs. 79,500. Further, there is an established precedent in that the Government of Madras did refund cane cess on sugar exported in the year 1958, and the Government of India has requested all State Governments to sanction this refund in the interests of helping to solve the superabundance of stocks with which the industry is at present burdened. I do hope, therefore, that our Government here will be able to fall in line with this policy and refund cane cess on exports, past and future.

Price Linking Formula

Reference was made last year to a contingent liability for the Company to make some further payment on cane crushed since November 1958 under

Pipework installations by

S&L

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers and draughtsmen, many of them trained abroad, now provides.

- fabrication of all types of pressure pipework,
- fabrication of bent boiler tube, superheater elements and coils for all purposes,
- the installation of piping system for all pressure and temperature conditions.

STEWARTS AND LLOYDS
OF INDIA, PRIVATE LIMITED

Phone: 44-5224 (7 lines), 44-1461, 44-4592

the Price Linking Formula announced by Government, but not yet implemented. Since this Price Linking Formula was first announced, there has been a complete reversal in the fortunes of the industry, and I cannot see how the industry would find it possible to find the cash to pay anything extra in respect of past seasons. It is to be hoped that Government will soon clear the air by announcing what action, if any, they propose taking on the Price Linking Scheme.

We are still reasonably fortunately situated in the South in that we can sell whatever sugar is released without much difficulty within the period allowed for its sale. Prices, however, are still below those obtaining during the control period. Having regard to the smaller production allowed per factory and the probability that a certain part of the output will have to be exported, without any profit and possibly a loss, there can only be a contraction in the Company's profits arising from sugar. It would be wrong to gloss over the seriousness of the situation, and I can but hope that it will be possible to give you a more reassuring view of the outlook a year hence.

Fertilisers—Further Expansion

The picture as regards Fertilisers is more encouraging and the progress made during the year under review has been referred to in the Directors' Report. For the future, the addition of Ammonium Phosphate from our Ennore Factory to the range of fertilisers that we can market should result in a further substantial improvement. The confidence of your Board in the value of this side of our business is illustrated by the fact that we have already applied to the Government of India for permission to double, in due course, the capacity of our Ennore Factory. Assuming we obtain the necessary permission, the actual expansion will take place after we have gained some experience in manufacture and marketing of this fertiliser, and when that time comes, possibly in 1962/63, it will be necessary for your Board to give consideration to ways and means of raising the additional capital required.

Last year, reference was also made to the issue of a licence by the Government of India to a consortium of two well known American Companies and this Company to erect a fertiliser factory at Visakhapatnam to produce about 350,000 tons of fertilisers per year. Progress on this project has not been quite as much as might have been hoped for, the main stumbling block having been the finding of a suitable site at Visakhapatnam. I believe, however, that with the co-operation of the Government of India, this problem will soon be solved. The participation of this Company in the capital of the new Visakhapatnam Company will be small compared to the contribution of our two American partners, and it is they who have the major responsibility for the integration of the new factory, receiving of course from us all the assistance we can give by way of experience of local conditions, and contacts with the Governments concerned. I would like to take this opportunity of expressing my appreciation of the vigour which our American partners are displaying in overcoming initial difficulties, and I can assure them of our continued full support. When the Visakhapatnam factory comes into production, this Company will have an even more important part to play, namely in the distribution of the product. The distribution of fertilisers is a specialised trade, but I believe that we have the necessary organisation and experience to ensure that the very large production to be expected from Visakhapatnam moves without undue delay into the hands of farmers and so into the soil.

Ceramics—Foreign Collaboration

As regards Ceramics, you will have noted from the report that last year, owing to the necessity to overhaul the Thrift Kiln, which occurs from time to time, production was reduced. We are still able to sell without any difficulty our total output and during the year substantial progress has been made towards finalising a collaboration Agreement with the well known U.K. manufacturers of Ceramic ware, Messrs. Doulton & Co. Ltd. This

Agreement places at our disposal technical advice of the highest quality from Doulton, and with this advice we propose to instal a third kiln at Ranipet and to improve the quality of our output generally. There have been protracted negotiations with the Government of India as to the exact terms of this Agreement, but I am glad to say that these negotiations have now reached the final stage. I would also like to make a special reference to the fact that during the year under review, even though Government's final approval to the Agreement was still awaited, (and is still awaited) our friends, Messrs. Doulton, have without stint given us the most valuable expert advice on various problems.

I am glad to be able to report that labour relations have, in general, continued to be satisfactory during the year under review. The Sugar Wage Board recommendations have been the subject of detailed negotiations with staff and labour, and it is hoped that we shall shortly be able to conclude a satisfactory settlement with the Unions concerned. I am further glad to be able to record my sincere appreciation of the contribution to the maintenance and development of the Group's interests given by all members of the staff and the Directors of your Company. In particular, I should like to take this opportunity of placing on record your Board's gratitude to Mr. P. Hadfield, who relinquishes his appointment of Managing Director on the 31st of this month, for his services to the Group over more than 30 years.

Mr. Hadfield recently left Madras to take up the appointment of Managing Director of our London subsidiary, Parry Murray & Co. Ltd. He remains a member of this Board, so that his vast experience and wise counsel will remain at our disposal.

Finally, you may have noticed in the announcement of my appointment as Chairman of this Company that I myself am nearing the end of my service in India. I am very happy to be able to tell you that Mr. H. V. R. Lengar, lately Governor of the Reserve Bank, has agreed to join the Board of this Company and, later in the year, to take up the appointment of Chairman and Managing Director. Your Directors will therefore co-opt him to the Board, and an announcement regarding the date of his becoming Chairman will be made in due course. On this coming about, it is the intention that I shall revert to my previous appointment of Vice-Chairman and Managing Director, until I leave India. Mr. Lengar needs no introduction to you and, for my part, I am very happy to feel that I shall be placing the direction of the Group affairs into such competent hands.

I would also like to take this opportunity of announcing the following appointments which will be effective from 1st April, 1962:

- Mr. M. J. Edwards will retire from the Board of Parry & Co. Limited, of which he is Chairman, to take up the appointment of Deputy Managing Director of this Company.
- Mr. John K. John, Vice-Chairman of Parry & Co. Limited, will be appointed Chairman vice Mr. M. J. Edwards, and
- Mr. N. G. Bowen, Director of Parry & Co. Limited, will be appointed Vice-Chairman vice Mr. John K. John.

I now formally move the adoption of the Directors' Report for the year ended 30th September, 1961."

The Directors' Report and the Accounts for the year ended 30th September, 1961 were adopted and a final dividend on the ordinary share capital of the Company at the rate of 14.37 per cent subject to deduction of Indian Tax, was declared for the year ended 30th September, 1961 payable on 29th March, 1962.

Mr. V. Ramakrishna and Mr. R. Venkataswamy Naidu were re-elected to the Board and the Auditors, Messrs. Lovelock and Lewes, were re-appointed.

N.B.—This does not purport to be a report of the proceedings of the general meeting.

SEN-RALEIGH INDUSTRIES OF INDIA LTD

CHAIRMAN, MR. A. SEN'S REVIEW

The 12th Annual General Meeting of Sen-Raleigh Industries of India Ltd. was held in Calcutta on the 29th March, 1962. Below are extracts from the statement of Mr. Abhilit Sen, Chairman of the Company.

In the year under review the Company's overall sales increased by 11%, but profits declined. Though bicycle sales dropped slightly owing to production bottlenecks, a greater production of components and accessories helped to realise the larger turnover. In the main, two factors affected bicycle production—a cut in import licence ceilings, and the failure of some indigenous manufacturers to meet commitments for supply of semi-finished components that could no longer be imported. The reduction in profit can be ascribed to:—

- The failure of individual indigenous suppliers to meet commitments, which resulted in a disbalance of stocks and in turn led to higher inventories with consequent higher financing charges,
- Poorer material utilisation, than had been anticipated, as, in many cases, as a result of changing import policies, materials had to be obtained from unknown and untested sources both within the country or abroad,
- High rectification costs where these non-standard materials had to be consumed,
- The higher cost of materials where indigenous or DLF buying from America replaced buying from usual sources in Europe,
- And lastly, the impact of unabsorbed overheads on a turnover much smaller than planned.

Most of the factors which adversely affected our operating results in the past year were of a nature where solution was a matter of time and of adjustment to changing patterns of operation—as indeed our activities in the intervening period have tended to show. Indigenous supplies in general have improved remarkably both in respect of quality and in the honouring of commitments.

Import Problems

Import problems still remain a factor to contend with as the pace of development of ancillary and feeder industries has yet to catch up with the faster developing requirements of the consuming industries. The only predictable features of import policy would seem to be a reduction in ceilings from period to period and a change in sources from which the limited imports could take place, and all production planning now has to start from these premises.

Whilst we accept this situation as unavoidable, and have taken whatever steps are within our powers to meet it, there are two aspects of import licensing which we find it difficult to face with equanimity. The first is the fact that the bicycle industry appears to be the only one to have had cuts in import licence ceilings linked with export performance. We wonder why this industry should have been singled out for this distinction. The second is that in many cases the policy makers too readily agree to deletion of items from the import list even when indigenous manufacture is very much in the air, leading at a later stage to licensing policies having to be reversed, with its consequent delays, added paper work and very often production failures—when a more careful check on the progress of the industries could have made for smoother sailing all round.

A redeeming feature of the past few months has been the remarkable progress achieved by the steel producing industries and one can now safely assert that almost all categories of rolled or

CAPITAL, 5th April, 1962.

drawn steel required for the bicycle industry are being produced within the country. The bicycle industry is still however far from obtaining all its supplies of steels from local sources in such quantities as would allow utilisation of capacities to maximum advantage but the future of the bicycle industry appears to be more assured than in the immediate past.

Keen Competition

The bicycle industry has now left the easy sellers market to enter an era of closer competition. Your Company has been lucky that there has been no slackening in demand for its products, and particularly in its major line—bicycles, it enjoys the reputation of marketing the fastest selling brands. In specific components, there is now a tapering off of sales which can be ascribed, in the main, to the unfortunate Government decision of allowing imports of friction parts in very large quantities for Small Scale assemblers.

A question that might arise in this context is why the Company should persist with a large production of components, when the same resources used for making more bicycles in preference to components would have fetched it better returns. The answer lies in the fact that releases of materials are very often earmarked for production of specific components, and so a smaller production of these would not necessarily lead to any increase in bicycle production. We have to accept the fact that in the larger interests of a planned economy operational decisions cannot always be taken on the basis of profitability alone.

A sanction has been received for a further issue of capital. The Company's future plans envisage expansion of bicycle and chain production and diversification into the manufacture of Dynamo Lamps and House Service Meters. The successful implementation of these schemes depends largely on the availability of foreign exchange for import of plant through further foreign participation in the capital of the Company. Realising this, your Directors have been active in exploring the possibility of increased capital participation in the Company by Raleigh Industries Ltd.

At our invitation, a Raleigh Consultants team visited our factories in November last—mainly for discussions on expansion schemes. Valuable contributions were made by it to our plans for the future. Raleigh have in the recent past developed new techniques and processes which would lead to more effective use of materials. As a result of the visit, it is proposed to incorporate a number of these new processes into our future scheme of operations.

Radical Changes

For sometime, changes in the Company's methods of operation over the past few years had been high-lighting the need for radical changes in the Company's organizational structure to improve efficiency and tighten controls. Very recently changes in the organizational set-up were introduced to meet these changing conditions and whilst it is too early yet to comment on the long-term benefits of this move, the working of the factories in the months following the change has certainly shown marked improvement.

If the operating results for the year have been disappointing to our shareholders, they have been disheartening for our staff and workers, whose sincere efforts have so often foundered on rocks of frustration. I would close on a note of thanks to all staff and workers for the effort they have put in and the understanding they have extended to the Company in a year of difficult operations, and share with them the hope of better operations in the future.

N.B.—This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 5th April, 1962.

KAMANI ENGINEERING CORPORATION LTD.

CHAIRMAN, MR. R. H. KAMANI'S REVIEW

Summary of the speech of Mr. R. H. Kamani, Chairman, Kamani Engineering Corporation Ltd., at the 16th Annual Meeting of the Shareholders on 30th March, 1962, at the Office of the Company in Bombay.

Extending a cordial welcome to the Shareholders of the Company Shri R. H. Kamani, Chairman of Kamani Engineering Corporation Ltd., Bombay, presented the Directors' Report, Audited Profit & Loss Account and the Balance Sheet and proposed them adopted.

Accounts

Referring to the working of the Company as per the Balance Sheet and Profit & Loss Account, he said that the results for the year under review were good, with profits before providing for depreciation and Managing Agents' remuneration showing a substantial increase over the previous year. Sales increased to Rs. 2,68,68,131 from 2,36,89,673.

Enumerating the allocations Shri Kamani stated that the allocations included Rs. 1.60 lakhs for Managing Agents' remuneration as against previous year's figure of 1.62 lakhs and Rs. 5.85 lakhs for depreciation as against 4.89 lakhs for the previous year. The provision for taxation had been increased from Rs. 6.70 lakhs to Rs. 9.25 lakhs and the development reserve from Rs. 0.23 lakh to Rs. 0.40 lakh. The general reserve and gratuity absorbed Rs. 1 lakh and Rs. 0.10 lakh against no absorption in the previous year.

He announced that the Directors have recommended a dividend of 9% (subject to deduction of tax at source) on ordinary shares as against previous year's 8% (subject to deduction at source). They had also recommended dividend on Preference Shares. After providing Rs. 4.78 lakhs for the proposed dividend, a sum of Rs. 5,162 has been carried forward against Rs. 3,381 brought in.

Production

The production tempo had further accelerated during the year under review, the production having registered a slight increase over previous year's production, he told the meeting. Referring to the availability of Steel, Shri Kamani stated that although the position had somewhat eased, certain lighter sections required for Transmission Line Tower Industry continued to be difficult, in spite of which, however, record of 2,107 metric tons for December, 1961. The production level maintained at present was on an average 50% higher over the year under review.

Shri Kamani observed that the requirements of Transmission Lines be about 15,000 miles. This will require, according to Shri Kamani, about 200,000 tons of towers for the Third Plan period, during which the generation of electric power will be raised from 5.8 million kilo-watts to 11.3 targets. To achieve these the lighter sections required by the Tower Industry be made easier, Shri Kamani added. He informed the Shareholders that the Government have already appointed a Study-Group to assess among other things, the capacity in the Transmission Line Tower Industry and their development programme and to examine the

difficulties experienced by them and he hoped for a good outcome.

Erection

Referring to the Erection activities, Shri Kamani stated that the Erection Dept. had been further strengthened and expanded and now it was one of the largest units of its kind in the country. New tools and tackles have been designed, tested and put to operation to ensure greater efficiency. During the year under review, the Chairman said, the construction of land route of the 220 kV Koyana-Bombay Transmission Line was completed. This was the first 220 kV line in the country to use one of the largest size conductor ever used and the terrain namely Western Ghats was one of the most difficult ones. He also informed that at present construction is going on in various parts of the country, viz: Behrampur, Burdwan, Chakradharpur, Chittaranjan, Daltan-gunj, Jammu, Nadiad and Villupuram.

Railway Electrification

Shri Kamani was glad to inform the Shareholders that satisfactory progress was being maintained in the execution of this pioneering work and that the most complicated out to the of wiring was being carried out to the satisfaction of the authorities without the help of any foreign experts. There were only ten firms in the world today who could undertake such a complicated job and he was glad their firm was one of them.

"Tractamout" Road Roller

Shri Kamani referred to the successful launching of the production of the completely new and improved Model MARK II "TRACTAMOUNT" ROLLER, as a result of experience gained on earlier models already in use in the country, with the active collaboration of M/s. E. V. Trowse (Mfg.) Ltd., England.

Export

It was a matter of gratification to note that the active efforts put in by the Company since about two years had started showing some good results. However the Company had to face severe competition in the export market from well established international manufacturers which was becoming increasingly difficult in the absence of adequate facilities and active support of the Government. Shri Kamani said that the measures suggested by the Mudaliar Committee are under active consideration of the Government. He felt that it was important that these recommendations and various other progressive measures are implemented by the Government at an early date in order to encourage additional exports of specialised engineering goods like Transmission Line Towers.

Agency Business

Shri Kamani referred to the Agency Business as satisfactory and found ample scope for business with the increased tempo of the Third Five-Year Plan, as was evident from the fact that the Company had recently secured business for Kandla Thermal Power Station in Gujarat valued above Rs. one crore. He thanked all the workers and the staff for their good efforts and co-operation and the Shareholders for the continued encouragement for the present achievements and bright future.

THE CENTRAL BANK OF INDIA LIMITED

SIXTY-SEVENTH REPORT OF THE BOARD OF DIRECTORS

Gentlemen,

The Directors beg to place before the Shareholders the Balance Sheet and Profit and Loss Account for the year ended 31st December, 1961.

The Net Profit for the year, including the sum of Rs. 18,61,470.96 brought forward from the previous year's account, amounts to Rs. 2,01,36,733.88. The following appropriations have been made:—

An ad-interim Dividend was paid for the half-year ended 30th June, 1961 at the rate of Rs. 2.40 per share subject to tax on 12.60,000 shares ... 36,24,000 00
Amount transferred to Reserve Fund ... 45,00,000 00
Amount transferred to Staff Gratuity Fund ... 10,00,000 00
Amount provided for Bonus to Staff ... 60,00,000 10
1,45,24,000 00

The balance of Rs. 56,12,733.88 the Directors propose to recommend to the Shareholders to dispose of as follows:—

To pay a final Dividend for the half-year ended 31st December, 1961 at the rate of Rs. 2.60 per share subject to tax on 12,60,000 shares (making in all 14% net for the whole year) ... 32,78,000 00
To carry forward to next year's account ... 23,36,733 88
2,01,36,733 88

The Bank's business during the year under review showed very satisfactory progress. During the year 4 Branches, 7 Sub-Branches and 4 Pay Offices were opened at various centres and one Pay Office had to be closed down as it was found to be unremunerative. In addition thereto, one Branch, 9 Sub-Branches and 2 Pay Offices were taken over from the Jodhpur Commercial Bank under the Amalgamation Scheme formulated by the Reserve Bank of India.

The Bank completed 50 years of its existence on 21st December, 1961, and celebrations were held at Bombay and at various important centres. The Directors acknowledge with thanks and place on record their appreciation for the innumerable messages of good wishes received from the shareholders. The depositors and the clientele of the Bank.

The Directors record with deep regret the death which took place on the 16th day of July, 1961, of their colleague His Highness Sir Jiwajirao Madhavrao Scindia. They place on record their appreciation of the valuable services he rendered to the Bank.

One of your Directors Mr. C. P. Wadia, resumed his seat on the Board on 14th March, 1962. Mr. Wadia had been a Director of the Company since 1949. The Board place on record their appreciation of the very valuable services rendered by him during the time he was a Director of the Bank.

Mr. Nani A. Palkhivala and Nawab Prince Mukarram Jah Bahadur were invited to join the Board as Directors in place of the late Mr. Framroze J. Guzdar and His Highness the late Sir Jiwajirao Madhavrao Scindia respectively. Under Article 84 of the Articles of Association they hold office only upto the date of this Annual General Meeting, but are eligible and offer themselves for re-appointment.

Mr. Nityanand M. Wagle was invited to join the Board as additional Director. Under Article 84 of the Articles of Association, he holds office only upto the date of this Annual General Meeting but is eligible and offers himself for re-appointment.

Mr. Nariman K. Karanjia was invited to join the Board as additional Director and was also appointed as Managing Director of the Company. He holds office only upto the date of this Annual General Meeting, but is eligible and offers himself for re-appointment.

Four of your Directors, Sir Homi Mody, Mr. Chimanlal B. Parikh, Mr. Jaykrishna Hanvilabdas and Mr. Shrivast S. Khambata retire under Article 82 of the Articles of Association, read with Section 256 of the Companies Act, 1956, and are eligible and offer themselves for re-appointment.

Shareholders are requested to appoint the Auditors for the ensuing year and to fix their remuneration.

The attention of the Shareholders is once again drawn to the Directors' Report of the previous year regarding the dissolution of the Bank's Subsidiary, the Depositors' Benefit Insurance Co., Ltd. The necessary Certificate from the Ministry of Finance, Government of India, allowing the dissolution of the Subsidiary Company has not yet been received.

H. P. MODY,

Chairman

Bombay, 14th March, 1962.

Statement Pursuant to Section 212 of the Companies Act, 1956.

(a) The Bank's interest in its Subsidiary, The Central Bank Executor & Trustee Company, Limited, as at 31st December, 1961, comprised 2000 shares of the face value of Rs. 1,000/- on each of which Rs. 500/- per share has been paid up.

(b) The undistributed balance of profit of the Subsidiary Company as at 31st December, 1961, after a transfer of Rs. 15,000/- to General Reserve, amounted to Rs. 15,889.57 which has been carried forward in the accounts of the Subsidiary.

(c) The net aggregate amount of Rs. 11,76,322.50 received as dividends from the Subsidiary Company for its previous financial years since its inception as a Subsidiary Company, have been dealt with in the Profit and Loss Account of the Bank in the relevant years.

Finlay were done at Rs. 345. Support was forthcoming for India United ordinary at Rs. 23.44, but Apollo were offered freely down to Rs. 2.56.

In the miscellaneous section, sugar shares showed mixed trends. Belapur met with influential buying around Rs. 244, but Walchandnagar Industries were sold freely down to Rs. 262.25. Phalton were transacted at Rs. 113. Cement shares were steady, and business passed in Associated Cement at Rs. 162. Digvijay were transacted at Rs. 209. Mining shares were quiet, and Shivrampur Syndicate were available at Rs. 39. Steamship company shares were steady on hopes of a rise in coastal freights. Scindia Steam came to hand at Rs. 13.24 and Great Eastern Shipping at Rs. 14.24. National Rayon met with support at Rs. 550.50 on a good report. The Company's tyre cord plant will start production soon, and the project to manufacture rayon grade pulp has made progress. Bombay Burmah improved to Rs. 662 on rumours of a bonus issue. Gwalior Rayon rose to Rs. 59 on prospects of expansion in capacity. Baroda Rayon were transacted at Rs. 146.50. Chemical shares were steady, and business was done in Tata Chemical at Rs. 17.87. Colour-Chem rose to Rs. 485 and Polychem to Rs. 217.50. Indian Dyestuff came to hand at Rs. 526.25. Synthetics and Chemicals met with support on prospects of a rights issue at a modest premium. Voltas were wanted at Rs. 288.50 and Tata Oil at Rs. 83.50. Ceat Tyre were quiet at Rs. 197.50, but Permanent Magnets were supported at Rs. 260 on a report that satisfactory progress has been made in setting up the factory.

Bank shares were quietly steady, and Central Bank were done at Rs. 67. Bank of Baroda were taken at Rs. 115.50 and Bank of India were placed at Rs. 123. Among insurance shares, New India Assurance were supported up to Rs. 66.80.

Scattered interest was taken in selected electric company shares. Ahmedabad were dealt in at Rs. 94.20 and Bombay Suburban at Rs. 102.25. Tata Power came to hand at Rs. 1.120 and Tata Hydro were indicated at Rs. 113.

Madras Market

STEADY TREND DUE TO GOOD COMPANY NEWS

SELECTIVE BUYING IN TEXTILES

Tuesday Evening.

THE Madras stock market was steady during the past week, although limited business was transacted. Selling pressure was negligible because of good corporate reports. The decision of some companies to issue rights shares to finance the expansion of activities had a bullish effect. Operators were nevertheless restrained by the growing shortage of credit and by the uncertainty over the composition of the new Central Cabinet. The coming Central Budget also induced caution because of the prospect of higher taxation.

Business in Government securities was small and fluctuations were narrow. Bank shares were quiet due to profit-taking. Support was extended to selected electric company shares. Sugar shares were transacted cautiously because the outlook for the commodity was considered uncertain. The planting section was generally quiet, and tea shares were sold at lower prices because of reports of a decline in the price of the

commodity. Interest was taken in selected coffee shares due to an improvement in exports. Rubber shares turned quiet on the news of a decline in the international price of the commodity. Textile shares were bought selectively due to good dividends. In the miscellaneous section, interest was concentrated on cement shares, mainly due to hopes of expansion.

Among banks, Andhra were done at Rs. 100 on declaring a taxable dividend of 8 percent. Indian were dealt in at Rs. 181 on payment of a final taxable dividend of 7½ percent. Indian Overseas were done at Rs. 180 and State Bank of Mysore at Rs. 153. Among electric company shares, Salem-Erode were transacted at Rs. 15 and Vellore at Rs. 15.35. West Coast were placed at Rs. 15.75 and Cochin at Rs. 12.

In the sugar section, E.I.D. hardened to Rs. 39 and Deccan to Rs. 9.95. K.C.P. were done at Rs. 22.95 and Mysore met with support at Rs. 53.40. United Breweries were placed at Rs. 82.25 and India at Rs. 10.35.

In the planting section, Blue Mountain were taken at Rs. 2.63 on reports of progress in fertiliser production. Consolidated Coffee were done at Rs. 18.12 and Cochin Malabar were transacted at Rs. 7.05 on declaring a taxable interim ordinary dividend of 9 percent. Coonoor were sold at Rs. 23.22 and Lucky Valley at Rs. 10.12 on paying a taxable ordinary dividend of 10 percent. Savamalai came to hand at Rs. 2.85 on paying a taxable ordinary dividend of 16 percent. Parkside were dealt in at Rs. 23 on declaring a taxable interim ordinary dividend of 7½ percent. Gokul were transacted at Rs. 2.10 on paying a taxable ordinary dividend of 10 percent and Manimala were sold down to Rs. 8.75. Business passed in Oucherlony at Rs. 3.93 on the payment of a taxable ordinary dividend of 12 percent. Periakaramalai weakened to Rs. 3.33 and Peermade to Rs. 19.75. Nilgiri were quietly steady at Rs. 8.40 and Nonsuch at Rs. 22.75.

Among textile shares, Bangalore Woollen were steady at Rs. 267 and Buckingham at Rs. 290. Cambodia were bought at Rs. 13.50 on declaring a taxable ordinary dividend of 12 percent. Kannapiran were dealt in at Rs. 12.50 on declaring a taxable ordinary dividend of 12 percent. Palani Andavar showed little change at Rs. 232.50 in spite of declaring a taxable ordinary dividend of 50 percent. Business passed in Lakshmi at Rs. 166.50, but Madura turned quiet at Rs. 40.40 due to a cautious assessment of the outlook by the chairman of the Company. Rajalakshmi were taken at Rs. 107 on declaring a taxable ordinary dividend of 20 percent and Sivan-andha came to hand at Rs. 26.25 on paying a taxable ordinary dividend of 26 percent. Travancore Rayon reacted to Rs. 43.60 on declaring a taxable ordinary dividend of 20 percent, but Trichinopoly were supported at Rs. 13.75 on the announcement of a taxable ordinary dividend of 15 percent.

In the miscellaneous section, Aluminium Industries were steady at Rs. 23.72. But Ashok Leyland were quiet at Rs. 8.85. Aspinwall were bought at Rs. 6.45 on declaring a taxable ordinary dividend of 9 percent. Binny improved to Rs. 3.75 on paying a taxable final ordinary dividend of 14½ percent. Dalmia Cement met with support at Rs. 14 and India Cement at Rs. 5.93. F.A.C.T. improved to Rs. 8.08 on outside support and Enfield were placed at Rs. 12.05. Kirloskar Electric hardened to Rs. 20 and Madras Rubber to Rs. 21.62. Standard Motors were placed at Rs. 16.75 and Textool at Rs. 180. Tube Investment were done at Rs. 290 and Parry's Confectionery at Rs. 4.55.

Seshasayee Paper were taken at Rs. 8.45 and Mysore Lamp at Rs. 32.20.

PROBLEMS IN COMMUNITY DEVELOPMENT WORK

(BY A SPECIAL CORRESPONDENT)

ANXIETY is growing about the very slow progress which the community development blocks are making in increasing farm output and in bringing about a change in the attitudes of villagers to the application of science in production and living. Many of the development programmes currently being undertaken in the agricultural sector have met with varying degrees of success in different parts of India. This is because social patterns and conditions differ from region to region. However, far more concerted attempts will have to be made to improve the pace of reorganising the structure of village societies. Although progressive trends are evident in some rural areas today, the changes in a few sectors have not brought forth the desired results. The approach to rural development through community projects and the national extension service, *sarvodaya*, the formation of co-operatives, etcetera, indicates that people are aware of the need for a better understanding of village problems at the social, economic and cultural levels.

Community development has often been referred to as the method, and the national extension service as the agency, for effecting the desired transformation in the villages. Current evaluation, however, shows that community development and extension service workers have not succeeded in overcoming local apathy and indifference to the extent expected by the end of the second plan. Basically, simple changes in the present rural machinery as well as a re-orientation in the order of priorities assigned to different development projects, depending on the circumstances and local conditions pertaining to each village, would go a long way in making the work in rural areas more effective. Further, the *gram sevaks* and village level worker must be allowed to cover intensively a smaller area as against the extensive region now allotted to them. At present, they also have far too many functions to perform and are not able to give to their activities the detailed attention they should. Moreover, the duties of the *gram sevaks* often clash with those of

agricultural supervisors, extension specialists, and block development officers. There is also frequently an absence of proper co-ordination of the different technical personnel.

In many cases it has been found that the village level workers and their wives, working as a combined field unit as *gram sevaks* and *gram sevikas*, have shown better performance than single workers. For the selection of workers at the village level in future, therefore, preference should be given to married couples. The existing rigid approach to village problems is wholly impracticable, and there is need for greater flexibility in the multifarious programmes of community development work. Problems confronting villages vary from district to district. Where there is surplus agricultural population, for example, it would be wrong to place emphasis on projects dealing with agriculture, animal husbandry, literacy or home economics. The obvious approach here should be to provide greater employment through the establishment of cottage industries.

Importance of Literacy

As long as agricultural operations are carried out along traditional lines, there is very little incentive for cultivators to acquire literacy. The thirst for knowledge begins only when there is a basic changeover from customary agriculture to scientific cultivation and crop husbandry—higher literacy rates being both the cause and the effect of the trend towards improved agriculture. Literacy, therefore, must play a dominant rôle in any extension programme to help the communication of new ideas and skills. Mexico's fundamental education programme is a good example of the importance of raising literacy standards in extension areas. Venezuela and Egypt have based their programmes on the improvement of the rural home and family. In Puerto Rico, priority among extension projects is based entirely on the immediate needs of the local communities.

The slow rate of development in the villages in India is frequently ascribed to a stubborn disregard by cultivators of new methods, techniques and programmes. But this is not actually the case. In most instances, cultivators lack confidence in the official machinery and in the many diverse programmes under way. Most of the students who join agricultural colleges or the extension training centres do so principally because they are unable to gain admittance into other technical colleges. The result is that the person who usually takes up agriculture does so as a last resort to gain "higher education". Such men are urban-minded from the start, and go through their agricultural education and extension training without really imbibing either a love for farming or a genuine desire to serve rural development.

The recent attempt to develop political democracy in the villages with the establishment of the village *panchayat*, with an elected *mukhia* and cabinet, has, in addition, brought into play new forces. In numerous cases, those returned to power in local elections seek special privileges from their development centres. Block development officers, village level workers and other rural officials sometimes find it to their advantage to "co-operate" with local groups

CAPITAL, 5th April, 1962.

wielding political power in the villages. There are few private bodies of cultivators to take any active part in counteracting the activities of powerful *panchayat* leaders.

Service Co-operatives

The formation of service co-operatives in the villages is a step in the right direction, for these can do much to alleviate existing problems where individual efforts fail. But they can succeed only if they are run by efficient and honest individuals who have the confidence of the local community. Failures in the past have frequently been due to defective organisation, shortcomings on the part of individual members, and the powerful opposition of caste councils, which have till recently dominated the rural scene. With a major part of agricultural lands fragmented into uneconomic holdings, basic service co-operatives are necessary for credit, marketing, and supplies. The All-India Rural Credit Survey Committee has correctly pointed out that rural indebtedness and the failure to supply adequate credit to villagers have been due to an attempt to combine the very weak in competition with the very strong. The problem today is not so much the reorganisation of rural credit, as one of creating new conditions in which it can operate effectively for the benefit of the weaker elements. Next in importance to credit is co-operative marketing. Co-operative marketing societies form the most important group among agricultural non-credit societies. But their success has been somewhat limited since they have usually worked as mere commission agents, without properly linking marketing with credit.

While much remains to be done in the field of community development, the progress in certain States has been encouraging. But, measured against the overall expenditure incurred by the nation, within the framework of the first two five year plans, the results leave a great deal to be desired. The villages are gradually moving towards economic freedom and stability. The machinery required to accelerate the change is there, and new progressive trends and the desire for advancement are quite evident among the agricultural masses. With the importance given to the agricultural sector in the third five year plan, it remains to be seen whether or not a new and energetic approach on the part of block development officials, extension workers and village administrators will bring about the agrarian changes so vital to the expanding economy of the country.

New Delhi

Britain Invites Commonwealth Premiers to Discuss E.C.M. Entry

(FROM OUR NEW DELHI CORRESPONDENT)

THE British Prime Minister has written personal letters to the Commonwealth Prime Ministers, asking whether 10th September would suit them for a conference in London to discuss the implications of Britain's entry into the European Common Market. It has been suggested that the Prime Ministers should bring their Finance Ministers with them. Suggestions have also been invited about setting up consultative machinery during the U.K.'s negotiations with the E.C.M.

Esso Standard Eastern

The name of the Company so far known as the Standard-Vacuum Oil Co. has been changed to Esso Standard Eastern Inc. from 1st April. The other partner of Esso in Standard Vacuum, namely, the Socony Mobil Oil Company, is not barred from trading in India, provided the Government grants it permission to do so. It will have to build up from scratch, though.

Esso Standard Eastern will now carry on negotiations with the Government of India for a lubricating plant and a petro-chemical plant. According to its proposal, the lubricating plant will be a joint Government of India-Esso venture, each party having equal holding in the equity capital and the management, more or less on the pattern of Oil India Ltd.

The petro-chemical project will also be undertaken by a rupee company, the Indian public having a 40 percent share in the equity capital. Esso will hold the remaining 60 percent and will be responsible for the entire foreign exchange outlay, either through its share in the equity capital or from a loan from a finance organisation in the U.S.A. The Company had originally applied for licence for a plant of 100,000 tons capacity, but subsequently proposed an increase in the capacity to 200,000 tons. The Government of India has already approved an industrial licence for a capacity of 100,000 tons, and the present negotiations are to raise the initial capacity to 200,000 tons. The project will cost \$15 million. The Company's negotiations for exploration in Rajasthan broke down last year. The new set-up, however, hopes to resume negotiations for exploration in some other areas.

Unused Industrial Licences

The Central Ministry of Commerce and Industry has decided to issue "show cause" notices to all holders of industrial licences, who have taken no tangible steps towards commissioning the project licensed during the last 12 months. It is felt that a number of people have taken licences, without either the means or the aptitude to commission the project. They are shutting out genuine entrepreneurs because the target capacity for a particular item may have been taken up by licences issued to them. The "show cause" notice should lead either to the commissioning of the project or to the surrender of the licence, thus enabling the Government to consider other applications.

New Import Policy

The import policy for the year April 1962-March 1963 has been announced. The Red Book lays down the policy for the whole year, and

all applications for import, licences should be made on an annual basis. Annual licences will be issued, subject to the availability of foreign exchange, and will cover mainly the essential requirements of actual users in both the scheduled and non-scheduled sectors. A separate announcement will be made indicating the exact scope of annual licensing. Annual licences, where granted, will be subject to the condition that only half the value of the annual licence can be used in the first six months. Subject to such changes in value and conditions as may be decided upon, the other half will be endorsed for use in the second half of the year. In other cases, licences will be issued for six months as the first instalment. Subject to such cuts as may be decided upon in view of the foreign exchange availability and other factors, supplementary licences covering the next half-yearly requirement will be issued in the latter half of the year. The system of annual licensing will provide relief to the importers since, instead of making two half-yearly applications, they will submit the application for an annual licence only once. This will also reduce the pressure of work on the staff of the import control organisation to some extent, and should lead to the expeditious disposal of applications.

Reduced Quotas

The import policy continues to be restrictive. In view of the progress made by indigenous industries, the import stock position, etcetera, the import quotas have been reduced for items like oil line pipes and tubes, flexible pipes and tubes for passing gas or fluid, iron and steel screws, steel balls above 1/2 in. diameter, milling cutters, gear cutters, etcetera, electric insulations, thermocouples, electric motor starters, flexible metallic tubes, electric carbons, chemicals like hydrosulphite of soda, cation active finishing agents, textile preservatives, ultra-marine blue and chemicals not otherwise specified, coal tar dyes, drugs and medicines, including chloramphenicol, oxytetracycline, tetracycline, glycerol phosphates excluding cline, preparations thereof, vitamin C, printing materials like brass rules, radio parts, electric horns fuel injection equipment and component parts thereof, piston rings and piston assemblies, fishing hooks, farinaceous and patent foods, parts of tape and wire recorders, roller composition, weighing machines, microscope and accessories, laboratory balances and weights, electro-medical apparatus and vulcanised fibre in sheets, rods and tubes, etcetera. Items like yeast, cartridges, argon gas, polyvinyl acetate resin powder and P.V.C. compositions have been banned.

For the first time, provision has been made to grant actual user import licences for motor vehicle parts to co-operative societies with individual operators as members and having a fleet of 25 vehicles or more. Supplementary licences will also be granted to established importers of books for the import of books in sheet form only.

New Income Tax Rules

Simultaneous with the Income Tax Act, 1961, the rules framed under it came into force with effect from 1st

April, 1962. There are 119 rules, one appendix and 51 forms in the new set. The new rules attempt to consolidate, rationalise and simplify the old ones. The old rules were interspersed over six sets. They had been amended from time to time, and suffered as a result from a comparative lack of coherence and logical arrangement. The new rules have been arranged in 15 parts, each dealing with a particular subject. The schedule showing rates of depreciation has been arranged alphabetically to enable speedy reference to find out the rate of depreciation applicable to any item of machinery. The substance of the rules has also been simplified and the language amended, wherever necessary, to bring it in line with the new Act.

Some of the more important points relating to the new rules are briefly listed below:

Return of income: A simplified return for persons whose income consists solely of salaries, interest on securities or income from other sources, has been added.

Assessment from: A single form showing details of income and tax liability has been devised. This will be sent to the assessee and will also be used for departmental purposes. It eliminates duplication of work involved in compiling the same data twice, under the old rules.

Registration of firms: So far, there was a great deal of uncertainty about some aspects of the law relating to registration of firms. To reduce this uncertainty and avoidable litigation, the new rules set out comprehensively the requirements to be complied with by tax-payers under different circumstances. Separate forms are provided for cases where there is no change in the constitution of the firm, and where there is a change. The instruments of partnership to be submitted along with the application for registration have been specified.

Tax Returns

Returns on salaries paid and tax deducted: The old rules required an employer to furnish, in addition to an annual return, a monthly return giving almost the same details as the annual return. The monthly return has now been greatly simplified, and only broad information will have to be furnished. Full details have been left over for the annual return.

Appeals to Appellate Assistant Commissioners: The diversity of 14 forms, which sometimes inconvenienced the appellants, has been replaced by a single form. This has been devised to meet the requirements of all circumstances.

Lump-sum royalties, etcetera, for literary or artistic work: It is proposed that wherever the time taken for the completion of a literary work or an artistic work exceeds 12 months, receipts received by authors and artists should be spread over three years. This will increase the scope of the present concession by making the three-year spreadover applicable to cases where the time taken is more than 12 months but less than 24 months. Difficulties experienced in ascertaining the exact time spent in the completion of the work are reduced. It is also provided that in

the first year, tax on two-thirds of the royalty, etcetera, will be recovered at the rate applicable to one-third of such royalty. Credit for such tax will be given in the next two assessments.

Dividends paid by new industrial undertakings: A new rule has been made laying down the manner in which the exempt portion of a dividend paid by a new industrial undertaking to any shareholder should be determined. The dividend paid by a company will be considered as having been paid in the first instance out of, and to the extent of, the profits which are exempt in the hands of the company under the scheme of tax holiday. The corresponding portion of the dividend will be exempt from tax in the hands of shareholders.

Life insurance premia paid by authors and artists: Broadly speaking, it is proposed to increase the rebate on life insurance premia paid by authors, artists, etcetera, to 33 1/3 percent of the professional income or Rs. 12,000, whichever is less.

Income tax practitioners: The procedure to be followed by the Commissioner of Income Tax before disqualifying any income tax practitioner who is found guilty of misconduct in connection with any income tax proceeding is prescribed. Provision has also been made for the maintenance by each Commissioner of Income Tax of a register of income tax practitioners who have been practising in his area for more than a year. The scheme of registration is, however, optional.

Superannuation funds: The new Income Tax Act provides for rules to be made for various purposes connected with the approval of superannuation funds. The 16 rules which deal with this subject are based on the existing practice.

Gratuity funds: The 14 rules on this subject follow broadly the same pattern as those relating to approved superannuation funds. The contribution an employer may make to such a fund is restricted to 84 percent of the employee's salary for each year of service. In other words, the annual contribution should not exceed one month's pay.

Coal-mining by the States

The Central Minister of Steel Mines and Fuel, Sardar Swarat Singh, has made the following statement in Parliament: "It is seen from the copy of the proceedings of the inter-State conference on coal mining that the main decisions taken at the said conference, in so far as they concern the Government of India, related to the demand for an increase in the rate of royalty on coal which is payable to the State Governments, the State Government being permitted to open coal mines independently, their being given representation on the Coal Board and the Coal Council of India, and the States' opposition to industrial unit located near the coalfields taking an appreciable percentage of their supplies of coal by road. None of these demands are new, and the Government of India have already considered them in the past. The rate of royalty on pre-1949 leases has already been increased to 2 1/2 percent of the f.o.r. price... So far as representation on the Coal Board and the Coal Council is concerned, the Government of India has already made known to the States its view on the subject, namely, that there were wider forums on which the problems of the State Governments pertaining to coal could be discussed, such as the National Development Council and periodical coal conferences, and that the Coal Board and the Coal Council had better be left as small, compact bodies. As for the movement of coal

Hindustan Steel Ltd had planned to set up four coal washeries in Durgapur, Dugda, Bhojudih and Patherdih. The washeries in Durgapur and Dugda have already been commissioned. The Bhojudih washery is likely to be completed by June 1962, and Patherdih by about the third quarter of 1963. The capacity of the washeries in Dugda and Bhojudih will be expanded further. Tender enquiries for a second plant in Dugda have also been issued. The contract

The N. C. D. C. is also planning two purely non-coking coal washeries in Anuppur and Singrauli. The washability characteristics of the coals from the Corporation's collieries in the Anuppur region are being deter-

The Corporation has on hand two plans for increasing the output of coal from its Talcher colliery in Orissa. One plan is immediate and relates to the reorganisation of the colliery. The other relates to the opening of a pilot mine, the benefits of which will flow some years later.

The National Mineral Development Corporation Ltd. to which the Government has assigned the execution of the Panna diamond mining project, has prepared two project reports for exploiting the diamond deposits in the Ramkheriya and Mahgawan areas in Panna, Madhya Pradesh. Under these schemes, the Ramkheriya diamond mines will require an investment of Rs. 46.2 lakhs; the production target is 12,500 carats a year. The Mahgawan diamond mines will call for an investment of Rs. 96 lakhs; the production target will be 30,000 carats a year. Production is expected to commence during 1963. Both schemes have been approved by the Government.

The third plan visualises a minimum annual production of 10,000 tons of electrolytic copper in Khetri. The project report recently submitted by the consultants proposes a plant with a capacity of 21,000 metric tons of

electrolytic copper a year. According to the time schedule given in the project report, the plant is likely to go into full production early in 1965. The project report is being considered.

The Planning Commission has approved, in principle, the development of iron ore mines in Orissa to produce 2 million tons of iron ore a year subject to (a) the State Government accommodating the scheme within the State's overall ceiling, (b) the ability of the railways to move the surplus production from this area—surplus to what can be handled through Paradip port—to Calcutta or Visakhapatnam as the case may be and (c) the availability of Rs. 1,330 crores of foreign exchange required for implementing the mining project.

Negotiations are in progress with Russia for importing four 100 megawatt generators. Three units are proposed to be installed in Pathratu, Bihar, and the fourth in Neyveli, Madras. Discussions with the Russian authorities on the technical suitability and delivery of these units are in progress.

The U.S. Government has authorised a third loan of \$100 million to the Government of India to finance imports of critically needed industrial and agricultural commodities. Three loans, totalling \$220 million, will thus be used by India to finance "maintenance imports" which will serve both to maintain and expand the capacity of India's industrial sector, and to permit higher rates of utilisation of presently installed capacity.

The first of the three non-project U.S. loans was signed on 26th October, 1961, and covered non-ferrous metals worth \$20 million. The second non-project loan of \$1 million was to finance the import of raw materials, components and machinery, including the following: non-ferrous metals, steel, fertilisers, synthetic tyre cords, yarn, sulphur, carbon black, wood pulp, lubricants, synthetic rubber, other chemical materials, motor-car components and spare parts, machine tools, rollers for steel plants, and other general purpose components.

Two contracts were signed here last week between Indian Drugs and Pharmaceuticals Ltd., a Government of India undertaking, and Technoexport of Russia for establishing the antibiotics plant in Rishikesh and the surgical instruments project in Madras. The Rishikesh project, which will be the biggest of its kind in Asia, is estimated to cost Rs. 21 crores. Its capacity will be 300 tons a year of various types of antibiotics including penicillin, streptomycin, tetracycline and nistatine. The surgical instruments project is estimated to cost Rs. 4.5 crores. Its capacity will be 2.5 million pieces of surgical instruments of 180 varieties. Both factories are likely to go into production in about three years' time.

Letters have been exchanged here extending the validity of the trade arrangement between India and Greece up to 31st December, 1962. Three items—aluminium and copper sheets, copper wires and exposed cinematograph films—have been added to the list of commodities for export from Greece to India. The list of Indian commodities for export to Greece remains unchanged.

London

(FROM OUR LONDON CORRESPONDENT)

TWO moderately encouraging inferences may be drawn from the balance of payments White Paper, the first, of the three pre-Budget documents—the Economic Survey and a review of “below-the-line” spending are the other two—issued by the Treasury. In 1960, the visible and invisible trade accounts were in deficit to the extent of £288 million. Adding a deficit of £202 million on capital account, the overall deficit for 1960 was apparently a huge £490 million. This basic weakness explains why there was such a tremendous run on sterling in the early summer of last year and the consequent need for drastic safety measures. The 1961 figures show a big improvement. The visible and invisible trade accounts showed a deficit of only £70 million, the figures improving with each quarter. Thanks to an exceptional and perhaps never-to-be-repeated turnaround in the capital account from a deficit of £202 million to a surplus of £8 million, the overall deficit dropped to £62 million. It is more than possible that this deficit is due to statistical shortcomings: that, in fact, the balance of payments balanced in 1961, or even showed a small surplus.

Most of this turn for the better developed in the second half of last year. Britain was then "in the red" on current external transactions by only £10 million. In ordinary trading, her position improved in 1981 as a result of a drop in imports by £100 million to £3,998 million, and a rise in exports of £156 million to £3,863 million. The U.K.'s surplus on "invisible" transactions in shipping.

For the seventh successive month, Britain's terms of trade remained unchanged in February, with the Board of Trade's index (1954 equals 100) at 85. On the import side, the index held steady at 96. Slightly higher prices for food, beverages and tobacco were offset by falls in the manufactured goods index. Although the export prices index was unchanged at 113, metal export prices were slightly higher, but this was counterbalanced by a small reduction in the index for other manufactures. The index for exports of engineering products showed no change at 123 and has now fluctuated within limits of three points for the past 14 months.

Tentative indications in the February statements of the clearing banks that advances have begun to move up after the severe contraction in the final quarter of last year are strengthened by the picture presented in the latest quarterly analysis from the British Bankers Association. This shows that between November 1961 and February 1962, bank loans rose by £159 million to £3,850 million. Most of the increases were on accounts of lending to industrial borrowers. Loans to the engineering industries rose by £33 million to a new record of £522 million. Retail trade advances jumped by £26 million to £381 million, and advances to iron and steel companies by £15 million to £107 million. Other channels in which the banks have been lending more are wool, building and contracting. Rather surprisingly, in view of the pressures of the tax season, bank loans in the personal and professional category have increased during the quarter by only £8 million, and lending to finance houses has been reduced by £11 million to £105 million.

New orders for engineering and electrical goods, locomotives and railway track equipment, carriages and wagons, heavy commercial vehicles and wheeled tractors were 16 percent lower in January compared with January last year, according to figures just issued by the Board of Trade. New home orders, which have been falling since last April, were 16 percent lower than in January last year, but export orders were 10 percent higher. Home deliveries

The further drop in "engineering" orders seems to bear out the dismal forecasts made by many industrialists during the past six months. The fall in new orders from the home market has become quite steep, although the effect on production is still limited. With export orders slightly up on the year, production in the whole group of engineering and electrical goods industries is still a little up on the year. On the whole, home demand for machine tools and other industrial plant and equipment is only now beginning to tail off, while export demand seems to be at least maintained. But with both steel and motor industries approaching the end of a long phase of rapid expansion, if not over-expansion, it would not be surprising if orders for plant and equipment from those two sources had begun to fall off.

Car production in February reached the highest weekly rate since the second quarter of 1960, the industry's record year. Average weekly output was 25,630, with a goal for the month of 102,518, compared with 60,425 in February last year, the Board of Trade says. This was a continuation of the upward trend in production which began in the closing months of 1961. Exports for the month, at 45,789, were nearly 4,000 lower than in January. The considerable rise in production for the home market has been caused by bigger orders from dealers. There have been forecasts in the trade of a 10 percent increase in home sales this year, and a possible shortage of some new models in the spring.

Lord Cromer, the Governor of the Bank of England, speaking in Manchester the other night, did something to correct the impression given recently by the chairman of the Stock Exchange, Lord Ritchie, that the City's willingness to co-operate with the Government had reached the "breaking point." Speaking of the export drive, the Governor said: "I am sure that the financial community is eager to play its full part. There need be no doubt of its readiness to support to the best of its ability governmental and national efforts to strengthen our international position." But Lord Cromer clearly did not think that the Government was doing enough. There could be few in business or banking who had not "had their fill" over the last 25 years of exhortations about increasing exports. There might indeed be "not a few" who felt that a little tangible assistance would achieve more results.

Unemployment declined by 12,000 between 12th February and 12th March, the Ministry of Labour states, but this is a good deal less than the normal seasonal fall. There were 441,790 persons registered as out of work on 12th March, of whom 411,140

were wholly unemployed. Over 80 percent of those who lost their jobs in the four-week period are described as "temporarily stopped." Excluding school-leavers, the number wholly unemployed rose by 247 to 408,138, the normal seasonal trend being a decrease of about 18,000. Unemployment as a proportion of the estimated labour force was 2 percent on 12th March, the same as a month earlier, compared with 1.6 percent in March 1961. There are now more than two men seeking work for every job registered as vacant. The number of unfilled vacancies on 7th March was 218,288; this was 4,736 more than in February, but normally there is an increase of some 18,000 in vacancies between February and March. This was the first rise in notified vacancies for some months.

Millions of hours of unnecessary overtime are worked each week, according to Mr. Hugh Clegg, Fellow of Nuffield College and a specialist in industrial relations. When the working week is further reduced from 42 hours to 40 hours, employers would be well advised to take a new look at the overtime system. Otherwise, Mr. Clegg warns them in a pamphlet published by the British Institute of Management, the reduction will simply be a 5 percent inflationary wage increase in disguise. Mr. Clegg is convinced that a lot of overtime working "is used by workers and their employers to produce a weekly wage packet which is regarded as tolerable to both parties." He has found that the lower the average hourly earnings in an industry, the greater the tendency to work overtime. The standard working week is now 42 hours, but the average number of hours actually worked is more than 48.

Mr. Clegg argues: "If it is true that millions of hours are included in working time each week which have no other purpose but to bring the wage packet of those concerned up to an acceptable amount, then large sections of British workers are taught by their system of payment to waste time at work." To prevent the coming of the 40-hour week from adding further expensive overtime working to employers' cost, Mr. Clegg suggests "negotiation, industry by industry and firm by firm, to eradicate unproductive overtime in return for the payment of a fair wage for hours required for productive work." He also advocates more shift working so as to make economic use of expensive capital plant and a new attack on loss of production through tea breaks and late starting and early stopping.

When Mr. Frederic Erroll, President of the Board of Trade, arrives in Tokyo on 25th April for a 10-day visit to discuss ways of expanding Anglo-Japanese trade, he should find the ground well prepared in advance. For the 14-man British trade mission headed by Lord Kilmarnock, president of the London Chamber of Commerce will already have spent a fortnight in the country. The trade mission includes representatives of car manufacturers, passenger transport, engineering and electrical equipment, woollen textiles, plastics and technical products, banking and insurance. This twin assault on the Japanese market indicates the determination of both Government and industry to build up trade between the two countries.

Much progress has been made in the past five years. U.K. exports to Japan, which have fluctuated widely with changes in their balance of payments, last year made a great leap forward from £27.7 million to £41.1 million—nearly 50 percent above the 1937 level.

Plantation Topics

RUBBER PLANTERS WORRIED BY WAGE RISE

(FROM OUR SOUTH INDIAN CORRESPONDENT)

PLANTING circles here are disappointed that the Central Government has rejected the Rubber Wage Board's recommendation for an increase in the statutory price of rubber to compensate for the wage rise it recommended for rubber plantation workers. They say that their representatives on the Wage Board agreed to the interim relief in the belief that the Central Government would accept the Board's unanimous recommendation on rubber

prices. They feel that the rubber grower will find himself in difficulties now.

The Central Government's resolution embodying its decisions on the recommendations of the Wage Boards for the tea and rubber planting industries were laid on the table of the Rajya Sabha on 30th March. Referring to the Rubber Wage Board's recommendation for an increase in the price of raw rubber consequent on the recommendation for interim

relief to the workers, the resolution said: "The existing prices of raw rubber, fixed in consultation with the Tariff Commission in 1960, allow sufficient margin to meet the incidence of the Wage Board's recommendations".

The Rubber Wage Board had recommended interim relief ranging from 8nP to 15nP in the daily wages of workers in Kerala and Madras, while clerical employees in estates in Kerala, Madras and Mysore were given an interim increase of Rs.10 a month. The Tea Wage Board had recommended interim relief from 8nP to 15nP in the daily wages of workers in the tea gardens in Kerala and Madras and Rs.10 a month for clerical staff. There was no recommendation about Mysore in view of the 1960 agreement between the employers and workers in that State. The recommendations are to take

CAPITAL, 5th April, 1962.

effect as from 1st December, 1961. The Government of India has accepted the recommendations of the Wage Boards for interim relief to workers and is requesting the employers to implement them as early as possible.

Rubber planting circles also complain about the Kerala Government's unwillingness to allow for replanting charges at the time of tax collection. Since Kerala produces almost 95 percent of India's rubber, the State Government's unsympathetic attitude is a matter of serious concern. Unless sufficient incentive is given to the growers, efforts to make the country self-sufficient in rubber will be frustrated, it is pointed out.

Higher Sales Tax on Pepper

Pepper, dry ginger, turmeric and lemongrass oil will have to pay 1 percent more as sales tax in Kerala from April 1962. The revised rate is 5 percent. Coffee and manufactured tea—green tea is exempted—will continue to pay 5 percent, rubber, cardamom and copra 2 percent and cashew 4 percent. The tax rates have been revised with effect from 1st April, 1962. All these commodities will pay sales tax at only one point—some at the last purchase point and others at the point of first sale.

When the amending Bill was considered in the State legislature, several members, irrespective of party affiliations, pleaded for concessions to these agricultural products, many of which figure in India's export trade. It was argued that the State Government's move to enhance the sales tax is against the national policy of providing incentives to exporters. The Government was warned that it is encouraging the diversion of trade to the neighbouring States where the tax burden is less.

Kerala levies several taxes on the producers of these cash crops, like the plantation tax, land tax, agricultural income tax and sales tax, which together amount to a high figure. According to one member, a progressive agriculturist in Kerala has to pay about Rs.500 an acre as tax. The Finance Minister turned down the requests for concessions on the plea that the financial position of the State Government does not permit them. He said the question of relief could be examined when a comprehensive Bill on sales tax is introduced by the Government in the next session of the Assembly. The draft Bill is ready and is being examined by the Central Government, he added.

The Central Government has not agreed to the Kerala Government's proposal to set up a State Trading Corporation to deal in the State's cash crops. The purpose of setting up this corporation, according to the State Government, was to arrest the deterioration in the prices of the crops and to secure for the producers the best prices possible. The Centre has advised the State Government to defer this scheme until the results of the working of the Spices Export Promotion Council, which was constituted some time ago, are known.

WORLD DEMAND FOR TEA RISES

EXTRA OUTPUT OF PAST YEAR ABSORBED

(BY A SPECIAL CORRESPONDENT)

IN the 1961 season there was an extra production of 114 million lbs in the major tea producing countries of the world, but so fast has demand developed that the quantity has been absorbed. According to the Food and Agriculture Organisation, the U.K. imported metric tons more tea in 1961 than in 1960, an increase of around 45 million lbs; yet in the U.K., including exports, stood at 166 million lbs in March, or about 30 million

CAPITAL, 5th April, 1962.

than a year ago. Of the 114 million lbs of extra output in the world, India produced 74 million lbs, but almost all of it has already been disposed of at the auctions.

Sources of Consumption

Demand appears to be rapidly growing in the Near and Middle East. Expanding populations plus improving living standards will keep the demand alive. Meantime, producing countries are themselves consuming more tea. Of this Mr. L. E. Gray, late senior director of Brooke Bond Ltd. London, is reported to have said as follows:

"Between 1950 and 1960, there appears to have been an increase in world consumption of 350 million lbs, or 30 percent. If this growth continues at the same rate another 450 million lbs will be required by 1970. When one looks at the teeming millions of India and Pakistan and appreciates, as we do, their love of tea and their wish to drink more of it as soon as their purses will allow, we distributors become concerned whether, in the course of a few years, there will be any tea at all to export from these countries".

The Government of India considers that the tea surplus is "likely to be absorbed". On 27th March, Mr. Nityanand Kanungo, Minister of Commerce, told the Lok Sabha that the Government had examined the F.A.O. report forecasting a world tea surplus by 1965, but did not agree with it about the magnitude of the surplus. He added, in a written answer, that judging from the trends of consumption in west Asian countries and also in the tea-producing countries themselves, the expected surplus was likely to be absorbed. The Government of India was, however, continuing to exercise a close watch on tea prices.

World Tea Consumption

World consumption of tea in 1959 was 1,677½ million lbs. It fell to 1,613 million lbs in 1960, partly because of the short crop from north India. The F.A.O. states that there was a rise of 8 percent in consumption in 1961 over the previous year. Therefore, the 1961 consumption comes to 1,741 million lbs. If the F.A.O. calculation is correct and the 8 percent rate of increase continues during 1962, prices at the auctions should be good.

From 1958 to 1960, the major producing countries together manufactured approximately the same amount each year, namely, 1,375.3 million lbs, 1,374.7 million lbs and 1,376.8 million lbs. The output in 1961 was 1,464.2 million lbs. On these estimates, another 100 million lbs or more will be required during 1962, but these calculations do not include tea from South America or other new areas of production.

Export Duty

On 27th March in New Delhi, at the meeting of the Industries Advisory Council, Mr. K. C. Reddy, Central Minister of Commerce and Industry, stated that the Government would consider the abolition of the export duty on tea if the industry would ensure that it would result in a considerable increase in exports.

Instant Tea

The agreement between the Government of Ceylon and a West German organisation to produce instant tea appears to have run into hot water. It is understood that India has lodged a protest against the arrangement whereby Ceylon and West Germany propose to collaborate in producing some form of instant tea. The next move will be awaited with interest, but it must be realised that tea is an expanding industry. Nothing can stop developments in Africa and South America.

COMPANY AND PUBLIC NOTICES

MARTIN BURN LIMITED

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 10th April to 13th April, 1962, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 31st March, 1962 on or after the 19th April, 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 12th April, 1962 or to their mandatories.

THE BOMBAY DYEING & MANUFACTURING COMPANY LIMITED

NOTICE

THE Eightythird Annual General Meeting of The Bombay Dyeing and Manufacturing Company Limited will be held at the Registered Office of the Company, Neville House, Ballard Estate, Bombay 1, on Thursday, the 26th April, 1962, at 4-30 P.M. to transact the following business:—

1. To adopt the Directors' Report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st December 1961.
2. To sanction the declaration of a Dividend.
3. To appoint a Director in the place of Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation, and being eligible, offers himself for re-appointment, and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company from some members, and is hereby given to the members, such re-appointment being deemed to be in the interests of the Company:—
"RESOLVED that pursuant to the provisions of Section 261 and other applicable provisions (if any) of the Companies Act, 1956, Sir Jamsetjee Jejeebhoy, Bart., who retires by rotation and is eligible for re-appointment, and who is an Executive and Officer of Messrs. Nowrosjee Wadia & Sons (Private) Limited, the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."
4. To appoint a Director in the place of Mr. H. R. Bativala, who retires by rotation, and being eligible offers himself for re-appointment; and to consider, and if thought fit, to pass the following Resolution as a Special Resolution in respect of which Special Notice, as required by Section 261 of the Companies Act, 1956, has been received by the Company from some members, and is hereby given to the members, such re-appointment being deemed to be in the interests of the Company:—
"RESOLVED that pursuant to the provisions of Section

261 and other applicable provisions (if any) of the Companies Act, 1956, Mr. H. R. Bativala, who retires by rotation and is eligible for re-appointment, and who is a Director and Member of Messrs. Nowrosjee Wadia & Sons (Private) Limited, the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

5. To appoint Auditors to hold office from the conclusion of this Meeting until the conclusion of the next Annual General Meeting, and to fix their remuneration.

Special Business

6. AND for the purpose of considering, and if thought fit to pass (with or without amendment as may be permissible), the Resolutions set out below as Ordinary or Special as specified below:—

(a) Ordinary Resolution No. I.

"RESOLVED that, as authorised by Section 238 of the Companies Act, 1956, the number of Directors of the Company be and it is hereby increased from nine to the maximum of ten permissible under Article 97 of the Company's Articles of Association."

(b) Special Resolution No. II.

Special notice of the following Resolution for the appointment of Mr. J. N. Guzder as a Director has been received by the Company from some members, and is hereby given to the members, the appointment being deemed to be in the interests of the Company.

"RESOLVED that pursuant to the provisions of Section 261, and other applicable provisions (if any) of the Companies Act, 1956, Mr. Jamshed Nusserwanji Guzder, who is a Director and member of Messrs. N. S. Guzder & Company Private Limited (who have been and are shipping, clearing and forwarding the goods of the Company, as well as of the Company's subsidiary, Messrs. Nowrosjee Wadia Ginning & Pressing Company Limited, and who have been and are cotton muddams for the Company, and who also purchase cotton and kapas for the Company in certain areas in India on which they receive commission from the Company, and who may, therefore, be deemed to be holding an office or place of profit under the Company and its subsidiary), be and is hereby appointed a Director of the Company."

(c) Special Resolution No. III.

"RESOLVED that pursuant to the provisions of Section 314 and other applicable provisions (if any) of the Companies Act, 1956, the consent of the Company be and is hereby accorded to Messrs. N. S. Guzder & Company Private Limited, holding an office of profit under the Company and under its subsidiary Messrs. Nowrosjee Wadia Ginning & Pressing Company Limited for a period of five years in res-

(d) Special Resolution No. IV.

"RESOLVED that, pursuant to the provisions of Section 369 of the Companies Act, 1956, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting, and for the sake of identification initialled by the Chairman, purporting to be between the Company of the one part and Messrs. Eastern Cotton Company, Bombay (who are or may be deemed to be "associates" of the Managing Agents of the Company), to be operative as from the 26th day of May, 1962, until determined by three months' notice given by either side to the other, in respect of purchases from them of cotton and kapas and such other goods in which they trade or do business or may trade or do business, as well as in respect of the sale or supply to them of any property or any article produced, dealt in or owned by the Company, subject to the conditions, that the prices of such cotton and kapas and such other goods as aforesaid shall be such as are reasonable and/or are approved of by the Directors, and that all payments to be made to the Company by Messrs. Eastern Cotton Company shall be made within one month from the date of the sale or supply of any property or any article by the Company to Messrs. Eastern Cotton Company."

(e) Special Resolution No. V.

"RESOLVED that, pursuant to the provisions of Section 360 of the Companies Act, 1956, and subject to the approval of the Central Government being obtained, the approval of the Company be and it is hereby accorded to a contract being entered into in terms of the draft placed before the Meeting and for the sake of identification initialled by the Chairman, purporting to be between the Company of the one part and Messrs. Shapoorji Pallonji & Company Private Limited, Bombay (who are or may be deemed to be "associates" of the Managing Agents of the Company), (subject to any amendments as may be suggested by the Central Government and accepted by the Board and by Messrs. Shapoorji Pallonji & Company Private Limited), —to be operative as from the 26th May, 1962, until determined by three months' notice given by either side to the other, in respect of any building, or construction work and any work of repairs and in respect of supply of building materials and such goods in which they trade or do business or may trade or do business, as well as in respect of sales to them by the Company of any property or any article produced, dealt in or owned by the Company and in respect of the supply or rendering of any service by either to the other, subject

TATA-JOHNSON

NEW RESOURCES FOR THE INDIAN PULP & PAPER INDUSTRY

TATA-KMW
Pulp & Paper Machinery
MADE IN INDIA

You can now obtain your pulp and paper machinery here in India—with a high indigenous content and incorporating the latest developments in the field.

Tata-Johnson produce pulp and paper machinery for large scale mills. Technical know-how is provided by Sweden's AB Karlstad Mekaniska Werkstad, KMW, century-old experts, ABKamyr, and AB Rosenblads Patenter, as well as the Cellulose Development Corporation (Celdecor), pioneers in modern methods of pulping bagasse and agricultural residue.

Machinery designed by these leading firms is manufactured at TELCO's well-equipped Jamshedpur works.

Tata-Johnson have on their staff pulp and paper specialists with international experience who now work in very close co-operation with the TELCO works engineers.

THE DUNLOP RUBBER CO. (INDIA) LTD.

NOTICE

NOTICE is hereby given that the 36th Annual General Meeting of the Company will be held at the Registered Office, Dunlop House, 57-B, Free School Street, Calcutta, on Tuesday, the 24th day of April, 1962 at 11 a.m. for the following purposes:

- To consider the Profit and Loss Account for the year ended 31st December, 1961, the Balance Sheet as at that date and the Reports of the Directors and Auditors of the Company.
- To declare dividends.
- To appoint Directors in the place of those who retire by rotation.
- To appoint Auditors and fix their remuneration.

Special Business

To consider and if thought fit to pass, with or without modification, the following resolutions of which number 5 will be proposed as a special resolution and number 6 as an ordinary resolution:

- (As a special resolution): "That this meeting consents to Mr. Jatish Chandra Sen Gupta who has been in the employment of the Company since 1936, a relative, namely a brother-in-law of Mr. Phani Bhusan Sen Gupta, a Director and Deputy Managing Director (Administration) of the Company, holding and continuing to hold with effect from 1st January, 1962 an office or place of profit, namely, as an official of the Company at a salary of Rs. 1,025 per mensem and on such terms and conditions as to dearness allowance, increment and other benefits as are applicable to the Company's officials."
- (As an ordinary resolution): "That notwithstanding anything contained in the resolution passed at the General Meeting of the Company held on 24th April, 1951 and the Agreement of the same date between the Company of the one part and Angus Wallace Gillespie on behalf of the Ordinary Shareholders of the other part concerning the Bonus Issue of Ordinary Shares made by the Company in 1951, the Directors of the Company be and are hereby authorised to advertise a notice in The Statesman, Calcutta and Delhi, The Times of India, Bombay and The Hindu, Madras calling upon the holders of 375 fractional certificates representing 75 fully paid Ordinary Shares of Rs. 10 each which were issued in connection with the said Bonus Issue and are outstanding and have not been converted into fully paid Ordinary Shares in accordance with the said Agreement, to present to the Company five such certificates or such number thereof in multiples of five within 31st December, 1962 and on such presentation the Directors of the Company be and are hereby authorised to allot to such holders one fully paid Ordinary Share of Rs. 10 in the capital of the Company for five such certificates presented to the Company and that on the expiration of 31st December, 1962 all rights of holders of the said fractional certificates issued in 1951 which have not been converted into fully paid Ordinary Shares on 31st December,

1962 be extinguished and any of the 75 Ordinary Shares represented by 375 fractional certificates as aforesaid not converted on 31st December, 1962 be allotted by the Directors free to such person, Company or other body corporate as they may think fit."

By Order of the Board,
P. B. SEN GUPTA
Director & Secretary.

Dunlop House,
57-B, Free School Street,
Calcutta
29th March, 1962.

Note:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

In terms of Article 4 of the Company's Articles of Association no Preference Shareholder as such is entitled to attend the meeting. A Debenture Stockholder as such is also not entitled to attend the meeting.

The Registers of Members in respect of the Ordinary and Second Preference Shares of the Company will be closed from 11th April to 24th April, 1962, both days inclusive. As any dividends that may be declared will be paid only to shareholders registered in the Company's Registers of Members, those holding shares on blank transfers are advised to register the transfers prior to 11th April, 1962.

An Explanatory Statement pursuant to Section 173 of The Companies Act, 1956 has been annexed to the Notice issued to the members of the Company.

RAZA BULAND SUGAR COMPANY LTD.

THE Twenty seventh Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company at Raza Buland Office, Rampur, U.P. on Monday, the 30th April, 1

BANKS

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES—Contd.

O., P., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve & other Funds	Accrue under Tea	Outturn and Average Price per Kg./lb. realised for crop				Estimate	NAMES	Accounts closed	Mg. 74th YEAR OF ISSUE

CALCUTTA, 12th APRIL, 1962.

Vol. CXXXXVIII No. 3705

IMPROVING THE EARNINGS OF BANKS

THE steady rise in bank shares which started towards the end of last year seems to have slowed down in recent weeks. There are three main reasons for this. One is that the time for the Central Budget is approaching, and investors are waiting to see whether it brings anything by way of fiscal concessions for the banks. The second is that most banks have by now announced their dividends for 1961, and many have announced rights issues; the reaction to these events has, therefore, been completed. And the third reason is that doubts are growing about whether the profits of the past year can be improved, or even maintained. Bankers in general appear to be moderately optimistic about the future, but they are firm on the point that energetic action has to be taken if the banking system is to acquire the strength necessary for playing an active rôle under the five year plans. Three particularly important speeches have been made in the recent past—by Mr. Tulsidas Kilachand, chairman of the Indian Banks Association, by Dr. N. N. Law, chairman of the United Bank of India, and by Mr. G. D. Birla, chairman of the United Commercial Bank. (Extracts from Dr. Law's speech were published in *Capital* on 29th March, and Mr. Birla's speech is printed on a later page of this issue.) The background to what the three chairmen have said is provided by the fact that the banks' prosperity last year may to some extent have been fortuitous in nature. It has been due largely to: (1) the holding down of deposit rates under the inter-bank agreement; (2) an increase in advance rates; and (3) the rise in the advance-deposit ratio, which means that the banks' resources have been used more fully. Although they may not say so specifically, the worries of the bank chairmen and their shareholders centre on the fact that all three measures may by now have reached the limits of their efficacy.

The biggest worry of all for the bankers at present is that the concerted effort to hold down deposit rates may fail. A number of medium banks have already threatened to break away from the inter-bank agreement. Mr. Kilachand chides them gently by reminding them of the need for unity. Dr. Law goes further and says that, by paying higher deposit rates, the banks will only be harming themselves since they will raise their operating costs. He perhaps takes an extreme view when he says that "bank deposit is not to be equated with investment", presumably implying that depositors do not care for the returns they get. This is hardly true of small depositors; and even the big ones know that fractional changes in interest rates can make a difference of thousands of rupees to their earnings. None of the bankers has yet seriously answered the point why depositors alone should be penalised by not being allowed the interest rates they would get in a free market. The exigencies of the banking situation are admitted, in the sense that the banks need to increase their profits. But as an individual depositor sees it, this is not his problem: it is the banks' and there is no reason why he should be penalised.

Dr. Law makes an interesting observation when he says that, instead of raising deposit rates, the

banks should improve the quality and the efficiency of their service, and should provide more facilities. But Mr. Kilachand's speech comes as a disappointing reminder that this is precisely what many banks are reluctant to do. Protests have already been heard against the few banks which have offered their customers free transfer facilities. Mr. Kilachand now amplifies these protests by criticising banks which provide certain services free or for a very small charge. He, therefore, thinks that some uniformity in service charges is necessary. But, once again, outsiders will find it hard to appreciate why one bank should object if another provides better service at lower cost: one would have thought that this is the essence of the competition which bankers talk about. If deposit rates, services and service charges were all to be more or less uniform, it would be interesting to know which sectors of activity would be left where the banks could really compete. They should hesitate before they move to a stage of preoccupation with trivia.

All this, however, is not intended to play down the fact that the banks need to make a determined effort to increase their profits if they are to be as strong as they should be. As Mr. Kilachand points out, their establishment costs will go on rising, not only because of the National Banking Tribunal award but also because they will be opening more branches and recruiting more employees. The paid-up capital and published reserves have to be increased in accordance with the convention prescribed by the Reserve Bank. The inner reserves have to be strengthened in order to reinforce confidence in the banking system as a whole. Finally, large investments will be required if branch extension programmes are to be implemented on

an ambitious scale. Mr. Kilachand mentions that, to complement the ceiling on deposit rates, a scheme is being evolved in order to fix a floor for advance rates. The need for the latter is not very clear. Many people would say that, with the advance-deposit ratio hovering near 70 percent, the demand for advances is strong enough to enable a bank individually to raise its advance rates if it so wishes. A concerted move by the Indian Banks Association seems unnecessary in the circumstances. All that the Association might succeed in doing is to penalise the best and most reliable borrowers who get credit relatively cheaply at present; the advance rates paid by the less reliable ones may not rise at all.

Bankers nowadays appear to feel quite free in discussing what can be done with depositors and borrowers in the private sector. But it is disappointing that they do not seem to feel equally free in discussing their problems in relation to the Government and the public sector. In their speeches this year, they have shyly skirted round the fact that they will soon have to invest more and more money in Government securities, but the returns the latter provide will be very low. Mr. Kilachand describes the three-tiered structure of interest rates as "ingenious", which is rather flattering. But he does not mention the huge sums of money the banks are losing by getting, say, 3½ percent or 4 percent on their gilt-edged holdings when they could get 7 percent, 8 percent or even 10 percent through commercial advances. Dr. Law, too, has been rather shy in dealing with the prickly question of Bank rate policy. But he has at least outlined a rather controversial proposal for using the banks to widen the market for Government bonds.

His view is that when the Government floats loans, public subscriptions to the loans come out of bank deposits; in the process, the banks suffer, and that is why they "cannot be expected to take initiative in dispersing the loans far and wide." Instead, he suggests, specified commercial banks

can be made "the exclusive bankers to the Union and State Governments, with an arrangement that collection by way of sale of bonds or of tax money through them will remain in deposit with the concerned banks." Many, however, would say that if the public does not support the gilt-edged market, it is not because the banks are reluctant to push sales, but because the returns on Government securities are unattractive. This is the problem which has to be dealt with first; only then

can the administrative feasibility of the Government leaving its money with a large number of banks be considered. It might have been more useful if the bankers could have plainly said that India's Bank rate policy, however "ingenious", has got into a mess; and the mess is hitting the banks. If the policy cannot be revised early enough to conform to the realities of the capital market, the least the Government can do in return is to give fiscal incentives for increasing the banks' reserves.

WEST GERMAN AID POLICY

DISCUSSING the evolution of West German aid to developing countries in *Capital* on 25th January, we forecast that the final reckoning of aid grants in 1961 would be disappointingly far below the projected figure of 3,219 million DM. In reality, the total for last year was only 1,600 million DM. The hope was expressed that sums allocated in 1961 but not spent would be carried over to 1962, so that the annual average for the two years would reach the figure of 2,500 million DM, which Bonn has set as "cruising speed" for development assistance. However, it now appears that 1962 aid will not exceed 2,000 million DM, and the "cruising speed" will not be attained until 1963. Quite obviously, West Germany's long-promised assistance programme is having as much trouble reaching the point of "take-off" as are the economies it is supposed to assist. This cannot possibly be due to organisational difficulties; nations less gifted from that aspect than the Germans have set aid programmes on foot in less time. On the other hand, it is not due either to ill-will or lack of desire to help: West Germany's conversion to the aid philosophy is slow but undeniable. The most that one could say is that long-established scepticism about the very principle of aid for developing countries is retarding the implementation of lending plans, at a time when the West German economy is losing momentum; the various economic factors disinclining Germans from ambitious efforts in capital exportation were listed in the article referred to.

The new Minister for Co-operation, Herr Scheel, who is to co-ordinate the country's assistance programmes, is still without offices and staff, but he has made a number of public statements indicating the course German aid will take. Apart from organising the Inter-Ministerial Committee on Development Policy, of which he will be president, and planning the take-over by his Ministry of the German Institute for Underdeveloped Countries, which is in West Berlin, Herr Scheel has outlined the doctrines that will inspire his work. He has said that West Germany must have its own ideas on the subject and must apply an "original" development policy, which is a way of saying that Bonn proposes to keep its aid on a bilateral basis, and one that avoids the errors made by the U.S.A. in this field. He gave a hint as to what "originality" would mean when he dwelt on "procedures to guarantee the efficacy" of loans and gifts. In other words, Bonn means to keep a much closer check on the use made of her marks by beneficiaries than has been the practice of other donors. Here, one finds again the old German scepticism about development aid, the suspicion that much assistance is just money poured down the drain. Examples of waste, and unwise spending, are too familiar to allow people to question the need for caution, but it is evident that Bonn approaches the matter in a very different spirit from that of Britain, France and the U.S.A.

The anxiety about misuse of funds found concrete expression in Herr Scheel's proposal for a system of "continuous observation" of the economic policies of beneficiaries. Specifically, he suggested that all the nations that give development aid should set up a sort of institute capable of carrying on "economic, sociological and political enquiries into the perspectives over the long term of beneficiaries of assistance". This, he insisted, was "a necessary basis for collaboration between industrialised nations and developing nations". However well-intentioned the German Minister's suggestion may be, it shows a complete lack of understanding of the mentality of newly independent nations. The World Bank already carries out economic enquiries in developing countries, of which the published results are freely available to

donor countries. Although these enquiries are mostly conducted at the request of the recipient country, or at least with its full co-operation (for it is a member of the World Bank), it is no secret that the investigations of impartial foreign experts often cause suspicion and resentment. Many in India will remember a tart exchange between New Delhi and the World Bank about the exact connection between the grant of aid and foreign judgments on India's economic policies. In other words, recipients of aid are chronically touchy, under the best of conditions, about occasional enquiries by an international organisation to which they belong. It is quite unlikely that they would consent to submit to "continuous observation" by the emissaries of a club of donors who were plainly on the look-out for cases of misapplication of aid funds. It is also nothing short of a blunder for a European politician to include "political" assessments in the scope of such enquiries. The idea that foreign views about domestic politics in developing nations were part of the "necessary basis for collaboration" will be very coolly received in New Delhi, let alone in more umbrageous capitals like Cairo.

Herr Scheel was on surer ground when he suggested the establishment of an international

PROGRESS WITH METRIC SYSTEM

THERE has been no uniformity in the weights and measures used in different parts of India for as long as one can recall from history. The diversity has hindered the development of trade, as the weights and measures of one State, and sometimes of one district, have not been understood in the neighbouring State, or district. With rapid industrial and commercial progress, particularly since the second World War, the need for uniformity has been increasingly felt. In 1955, the Central Government opted for the metric system because of its inherent simplicity. The various systems in use in different areas of the country involved complicated calculations, and none of them was understood widely enough to deserve any decided preference. Also, outside the United States, Britain and some Commonwealth countries, the metric system is almost universally in use.

A beginning was made with decimal coinage. The Indian Coinage (Amendment) Act was passed in 1955, dividing the rupee into 100 naye paise and abolishing the annas and pies. By now, at least in the big cities, decimal coins have almost completely replaced the old coins, although prices in many markets still continue to be quoted in the old units. However, this practice survives only through force of habit and should be gradually eliminated. By 30th June, 1961, 4,391 million decimal coins and 4,480 million old coins were in circulation. Of the latter, 1,148 million were quarter-rupee and half-rupee coins. No attempt has so far been made to withdraw these, since they are exactly equal to 25n and 50n, respectively.

Meanwhile, Parliament passed the Standard of Weights and Measures Act in 1956. The Act prescribed that the changeover to the metric system should be completed by December 1966. A booklet issued by the Central Ministry of Commerce and Industry reviews the progress made in the last five years. Even at the outset, it was recognised that the change would call for a great deal of preparatory work. The Act, therefore, left it to the Government to introduce the system in convenient stages. It was visualised that after the introduction of the new system in an area or

"equalisation fund", open to all countries concerned whether as donors or as recipients, to study the balance-of-payments problems posed by repayment of foreign loans. Unfortunately, he gave no details about his ideas on how it should work, except to say that its aim would be to ease the burden of repayment, and that its decisions should be taken "on a multilateral basis". In other words, while sticking to the principle that aid should be given bilaterally for the most part, the West German Minister admitted that its repayment requires multilateral treatment. Some may wonder if this position is logical. Many developing countries will soon find themselves at the stage where the servicing and reduction of foreign debt will place great strain on their already threatened balance of payments, and it is evident that this problem will have to be treated multilaterally—for otherwise developing nations will be borrowing from Peter to repay Paul. If the movements of development capital have in the end to be treated multilaterally, might it not be better to put them on a multilateral footing from the start? So far was Herr Scheel from admitting this, that he warned that West German loans would not continue to be "untied" indefinitely. Most German aid is, at present, "untied", i.e., there is no formal obligation on the recipient to use it to buy West German goods. But Herr Scheel announced that "this is not a permanent principle with us, and the economic situation of one branch of industry or another might very well lead the authorities to attach to loans to developing countries 'strings' requiring purchase by those countries of West German goods. The appropriateness of 'tying', or not, a loan must be examined in each particular case." Since the U.S.A., which long gave untied aid, is now "tying" its loans with a vengeance, developing countries will reflect ruefully that West German development policy is not as "original" as might have been hoped.

industry or trade, the use of the old system would be allowed for up to three years. At the end of the specified period, the new system would be made compulsory. The Central Government also wisely decided to retain the international names for units, without attempting to coin hybrid words to satisfy the jingoists.

Under the Constitution, the authority to make laws for the enforcement of weights and measures rests with the State legislatures. This created a slight complication. It was surmounted by the Centre drafting a Model Weights and Measures (Enforcement) Bill in consultation with the States. All the States have passed this Bill into law. The Rajasthan Act has been adopted for the Union territories. A committee appointed by the Indian Standards Institution has drawn up the specifications for weights, measures and instruments. The commercial production and sale of these articles, and their verification, certification and inspection, have had to be organised. There were roughly 42 million weighing pieces in use in 1957, according to a survey conducted by the National Sample Survey. Domestic production capacity is about two million pieces a month. Since quick adoption of the metric system depends on the easy availability of the units, production has had to be encouraged. About 42,700 weighing machines in use in industry have also had to be converted to the new system. To prevent a failure of the reform due to lack of administrative organisation, enforcement agencies were set up before the law was brought into force. Departments of Weights and Measures have been established in all the States and Union territories. On a rough estimate, the number of inspectors needed for the whole country is 1,000, but at present there are only 700 of them. The inspectors have to be equipped with extremely sensitive and accurate standards and balances. The production of these has been entrusted to the Mints.

By now, almost all Government departments and undertakings have switched over to the metric system. Quite a large number of industries—particularly the major ones like cotton textiles, jute, iron and steel, cement, refractories, paper,

engineering, heavy chemicals, non-ferrous metals, rubber, sugar, vanaspathi, fertilisers, soap, tea, petroleum and tobacco—have adopted the metric system for all or a major part of their buying and selling operations. The progress area-wise has also been satisfactory. But public adoption, particularly in trade, has not been as widespread as it ought to be. For instance, metric weights were to have become compulsory from 1st October, 1960, in certain areas, including the cities of Bombay, Calcutta, Delhi and Madras. But traders' response has been poor, and they have not bought many of the new weights, partly because supplies have been inadequate. Enforcement, therefore, has had to be deferred. Metric weights have become compulsory throughout India from 1st April, 1962. But even today in some Calcutta markets the old weights continue to be used. Metric length measures will become compulsory from 1st October, 1962, and capacity measures from 1st April, 1963.

The complete removal of the old weights has not been easy. Very often customers themselves demand the use of the old weights, since the prices quoted for metric quantities are either unfavourable or are not understood. There is a widespread feeling among the public that both decimal coinage and the metric system have provided handy excuses for traders to put up prices. This, of course, is true over a short period of a few months, but

such price rises cannot be maintained in the face of competition. The trouble is that a few months may see a further price rise on account of the general inflationary situation, and this may also be attributed by the ignorant buyer to the metric system. Meanwhile, the trader will make an unwarranted profit in the process of conversion. This, however, should not present a very difficult problem. Once the consumer finds that he has to buy in metric units, he will reconcile himself to the change. Time is required to provide the new measures in adequate quantities and to remove the old ones.

The products of many industries will, however, continue to be designed in inches and pounds, although the metric equivalents may be used in transactions. The industries will perhaps ultimately have to begin designing their equipment and their products on the basis of the new system. The Government recognises that the task is complicated and will take time. Productive equipment cannot be scrapped just to effect the change-over. A plan has to be drawn up for the adoption of the metric system in building and construction. Only some of the simpler instruments have been standardised according to the new system so far. Many more remain to be standardised. Last but not least, the metric system has to be introduced in schools, where, for some inexplicable reason, the old local systems continue to be taught.

Current News and Comment

Prospects for Bengal Coal

The Bengal Coal Co. Ltd raised and sold more coal during the year ended October 1961 than in 1959-60. Raisings increased from 3 million tons to 3.2 million tons and despatches from 3.2 million tons to 3.4 million tons. Sales were higher at Rs. 7.50 crores, against Rs. 6.89 crores. The profit has, nevertheless, declined due to increased production costs. After increasing depreciation from Rs. 23 lakhs to Rs. 24.88 lakhs, the profit has amounted to Rs. 86.69 lakhs, against Rs. 88.97 lakhs. A taxable ordinary dividend of Rs. 21 a share has been declared, out of which the final dividend amounts to Rs. 13 a share. The dividend is covered more than three times and offers a yield of 6.2 percent at the present price of Rs. 339 a share. The taxable ordinary dividend was Rs. 25 a share for 1959-60, but the share capital has, meanwhile, been increased from Rs. 1 crore to Rs. 1.20 crores. The present dividend has been declared on the increased capital. Taxation is allocated Rs. 44.40 lakhs (against Rs. 41.50 lakhs), the debenture sinking fund Rs. 4 lakhs, capital reserve Rs. 22,545, general reserve Rs. 6 lakhs (against Rs. 14 lakhs) and development rebate reserve Rs. 7.55 lakhs (against Rs. 7.37 lakhs). The carry-forward is Rs. 10.42 lakhs, against Rs. 10.51 lakhs brought in.

In his chairman's statement circulated to shareholders, Mr. A. D. Ogilvie says that the dividend represents a gross return of less than 6.6 percent on the total capital employed. (The full text of the statement is printed on a later page in this week's issue of *Capital*). Commenting on increased raisings, he points out that production would have been higher but for the shortages of power, transport, spare parts and explosives. But the World Bank loan recently given to the industry may help in overcoming the shortage of spare parts. Although efforts are being made to move as much coal as possible by road transport, Mr. Ogilvie thinks that transport and power supply should be improved if the industry is to achieve the production target of 97 million tons a year at the end of the third plan.

Bengal Coal has plans to increase its annual production to at least 4 million tons at the end of 1966. This is to be achieved by expanding the output of existing collieries and by developing new ones. Steps have been taken to develop the Murulidih property and new developments are taking place at the Kunustoria mine. These two projects may cost more than Rs. 1 crore. Bengal Coal has paid attention to sandstowing underground in order to conserve coal and ensure greater safety, but it has not been reimbursed fully for

sandstowing costs. During the year, Bengal Coal incurred a net loss of more than Rs. 13 lakhs on this account. Mr. Ogilvie says that the recent rise in production costs has not been fully neutralised by *ad hoc* increases in the price. The present price of coal is not economic because it does not permit the industry to plough back funds for financing expansion. It is difficult to attract new investment because the return is not attractive. Under the circumstances, the price of coal should be raised.

Rights from United Commercial Bank

The United Commercial Bank Ltd has produced satisfactory results for the year ended December 1961. In order to increase the ratio of paid-up capital and reserves to deposits, the directors have decided to offer 200,000 rights shares to the existing shareholders at a premium of Rs. 25 a share. In the first instance, half the nominal share. In the first instance, half the nominal amount on these shares of Rs. 100 each, together with the premium, will be called up. An application for this purpose has been made to the Controller of Capital Issues.

The profit has increased from Rs. 67.43 lakhs in 1960 to Rs. 72.61 lakhs in 1961. The income from interest and discount has improved from Rs. 3.79 crores to Rs. 4.10 crores. Interest paid on deposits and borrowings amounts to Rs. 2.61 crores (against Rs. 2.52 crores). A taxable dividend of 12 percent has been maintained, absorbing Rs. 24 lakhs. The yield works out to 6.1 percent at the present price of Rs. 98 a share. The reserve fund is allocated Rs. 30 lakhs (the same), the gratuity trust fund Rs. 4 lakhs and bonus to staff Rs. 14 lakhs (against Rs. 13 lakhs). The carry-forward is Rs. 2.07 lakhs, against Rs. 1.47 lakhs brought in.

The Bank has expanded its activities by opening new branches. Deposits rose by Rs. 9.96 crores to Rs. 98.90 crores. Cash was Rs. 91 lakhs lower at Rs. 8.66 crores. Investments increased by Rs. 2.09 crores to Rs. 35.97 crores and advances by Rs. 2.82 crores to Rs. 64.21 crores. (Details of this balance-sheet are printed on a later page in this week's issue of *Capital*.)

National and Grindlays Bank

The profit of the Indian branches of the National and Grindlays Bank Ltd has increased from Rs. 40.47 lakhs in 1960 to Rs. 60.99 lakhs in 1961. The income from interest and discount rose from Rs. 3.10 crores to Rs. 6.08 crores. Interest paid on deposits

and borrowings increased from Rs. 1.48 crores to Rs. 2.54 crores. Deposits were up by Rs. 56.44 crores to Rs. 120.87 crores. Cash was Rs. 4.23 crores larger at Rs. 9.98 crores. Investments increased by Rs. 8.38 crores to Rs. 18.46 crores and advances by Rs. 47.20 crores to Rs. 106.67 crores. The substantial increase in the balance-sheet figures reflects the effect of the acquisition of the eastern business and branches of Lloyds Bank Ltd in India on 1st January, 1961. (Details of the balance-sheet are printed on a later page in this week's issue of *Capital*.)

Buckingham and Carnatic Pays More

The working of the Buckingham and Carnatic Co. Ltd for the year ended December 1961, shows that sales at over Rs. 12.35 crores established a new record and exceeded those of the previous year by 9.5 percent. Exports, totalling about Rs. 2.02 crores, were also higher. Costs under most heads, however, rose. Buckingham and Carnatic's production was maintained at a satisfactory level throughout the year. The profit for the year amounts to Rs. 1.07 crores, after providing Rs. 45.14 lakhs for depreciation. This compares with the previous year's profit of Rs. 97.53 lakhs, after providing Rs. 41.88 lakhs for depreciation. With Rs. 2.17 lakhs brought forward from the previous year, the total available surplus is Rs. 1.09 crores. Out of this, the directors have provided Rs. 46.60 lakhs (against Rs. 39.25 lakhs) for taxation. The transfer to the debenture redemption fund is Rs. 6.50 lakhs (against Rs. 5 lakhs). Development rebate reserve accounts for Rs. 6.52 lakhs (against Rs. 8 lakhs) and general reserve Rs. 12.80 lakhs (against Rs. 17.85 lakhs). The preference dividend on the 7½ percent cumulative preference shares (Rs. 9.75 a share, subject to deduction of tax) accounts for Rs. 2.08 lakhs. The interim dividend of Rs. 6 a share, subject to deduction of tax, on ordinary shares absorbed Rs. 10.71 lakhs. The proposed final dividend of Rs. 12 a share, subject to deduction of tax, will absorb Rs. 21.42 lakhs. The total dividend for the year thus amounts to 18 percent, against 10 percent in the previous year. The balance of Rs. 2.15 lakhs is carried forward. General reserve stands at Rs. 1.08 crores, against the equity paid-up capital of over Rs. 1.78 crores. Dividend equalisation reserve is placed at Rs. 10 lakhs.

Higher Dividend from Binny

The increased turnover has led to an impressive rise in the profits of Binny and Co. Ltd for the year ended December 1961. The profit amounts to Rs. 65.86 lakhs, after providing Rs. 20,696 for depreciation. The previous year's profit was Rs. 34.36 lakhs. With Rs. 3.64 lakhs brought forward from the previous year, the total available for appropriation is Rs. 69.50 lakhs. Out of this, taxation provision is allocated Rs. 16.80 lakhs (against Rs. 9.80 lakhs). Property reserve gets Rs. 24.24 lakhs and general reserve Rs. 2.50 lakhs. The interim dividend of Rs. 8 a share, subject to deduction of tax, accounts for Rs. 8 lakhs. The proposed final dividend of Rs. 14.50 a share, subject to deduction of tax, will absorb Rs. 14.50 lakhs. The total dividend for the year is 22½ percent, against 12½ percent in the previous year. A sum of Rs. 3.46 lakhs is carried forward.

Binny's new subsidiary, Giovanola-Binny Ltd, formed in collaboration with Giovanola Freres S.A. of Monthey, Switzerland, which will have a 40 percent interest in the new venture, was incorporated on 29th May, 1961. The directors' report says that, with one or two minor exceptions, all assets which were to be disposed of under the group reorganisation scheme have now been sold. From the proceeds of the sale, Rs. 12.50 lakhs was used for repaying part of the unsecured loan raised for purchasing additional shares in the Buckingham and Carnatic Co. Ltd and the Bangalore Woolen, Cotton and Silk Mills Co. Ltd. The balance of Rs. 30 lakhs outstanding has since been repaid. There was a setback in the profits from the shipping department; so the Company has decided to close down the Visakhapatnam branch with effect from 30th April, 1962. The directors say that the prospect of improved results from trading, a higher return from investments in

Binny's subsidiaries and a reduction in costs resulting from the group's reorganisation should compensate in the future for the loss of the managing agency commission. The report says that during 1961, Binny invested Rs. 12 lakhs representing 50 percent of the proposed total investment in the new subsidiary, Giovanola-Binny Ltd.

Modernisation of B.I.C.

The British India Corporation Ltd has produced satisfactory results for the year ended December 1961. The profit has risen from Rs. 91.54 lakhs to Rs. 1.07 crores, after providing Rs. 8.50 lakhs (against Rs. 7.40 lakhs) for depreciation. The taxable ordinary dividend has been raised from 4 percent to 7 percent. It is covered more than four-and-a-half times and offers a yield of 3.3 percent at the present price of Rs. 10.75 a share. Development rebate reserve absorbs Rs. 1.29 lakhs (against Rs. 60.376) and taxation Rs. 48 lakhs (against Rs. 46 lakhs). Rehabilitation reserve is allocated Rs. 26 lakhs (against Rs. 20 lakhs), leaving Rs. 3.92 lakhs to be carried forward, against Rs. 3.34 lakhs brought in.

The results of B.I.C.'s woollen branches have been satisfactory. In spite of the shortage of imported wool, production has been higher than in 1960. The directors are considering modernising the woollen branches. They are trying to obtain import licences from the Government for equipment. Steps have been taken to improve the operational efficiency of the Cooper Allen branch, but its working has not been up to expectations. Begg, Sutherland and Co. Ltd, a subsidiary, has been amalgamated with B.I.C.

Bangalore Woollen Profit Up

The working of the Bangalore Woollen, Cotton and Silk Mills Co. Ltd for the year ended December 1961, shows a profit of Rs. 59 lakhs, after providing Rs. 15.79 lakhs for depreciation. The profit for the previous year amounted to Rs. 43.30 lakhs, after providing Rs. 15.80 lakhs for depreciation. With Rs. 2.49 lakhs brought forward from the previous year, the surplus available for appropriation is Rs. 61.49 lakhs. Taxation provision amounts to Rs. 27 lakhs (against Rs. 19.80 lakhs). Development rebate reserve gets Rs. 1.90 lakhs (against Rs. 3.37 lakhs). The dividend on the 6 percent cumulative preference shares (Rs. 7.80 a share, subject to deduction of tax) accounts for Rs. 46,800. The interim dividend of Rs. 6 a share, subject to deduction of tax, on ordinary shares, absorbed Rs. 7.29 lakhs. The proposed final dividend of Rs. 12 a share, subject to deduction of tax, will absorb Rs. 14.58 lakhs. The balance of Rs. 2.25 lakhs is carried forward.

The directors say in their report that the production of cotton cloth continued at a high level. The output of the silk department was greater due to larger raw material supplies. The production of Cotswol and Angola was maintained. The woollen mill in Hebbal finally ceased working in June when raw material stocks were exhausted. The demand for Bangalore Woollen's products exceeded its output, and closing stocks of finished goods were much less than even one month's production. Prices of raw materials, stores and machinery parts—many of which are obtained from indigenous sources—continued to rise, but the Company's prudent purchasing policy contributed to the improved results, the directors say. Sales during the year amounted to Rs. 619 crores, against Rs. 5.73 crores in the previous year.

Indian Bank Repeats

The Indian Bank Ltd, Madras, has maintained the taxable dividend at 15 percent, absorbing Rs. 12.45 lakhs, for the year ended December 1961. At the present price of Rs. 181 a share, the dividend yield is 8.3 percent. Out of the total dividend, a final of 5 percent and a bonus of 2½ percent, subject to deduction of tax, have been declared. The profit has amounted to Rs. 40.37 lakhs (against Rs. 40.32 lakhs). The income from interest and discount is Rs. 2.33 crores (against Rs. 2.30 crores). Interest paid on deposits and borrowings has amounted to Rs. 1.13 crores (against Rs. 1.15

crores). The sinking fund is allocated Rs. 3 lakhs, taxation Rs. 18.25 lakhs (against Rs. 23 lakhs), the gratuity fund Rs. 1.25 lakhs and the building account Rs. 30,000. The carry-forward is Rs. 1.49 lakhs, against Rs. 1.36 lakhs brought in. The Rayalaseema Bank Ltd was amalgamated with the Indian Bank on 1st September, 1961. (Details of the balance-sheet are published elsewhere in this issue of *Capital*.)

Madras Rubber Results Impress

The first annual report of the Madras Rubber Factory Ltd for 1961 fully justifies the investors' confidence which has lifted the Company's Rs. 10-paid share to around Rs. 21.50 within a few months. The Company took over the business of manufacturing tread rubber and repair materials from Madras Rubber Factory Private Ltd for which it paid Rs. 25 lakhs. The business has yielded in 1961 a profit of Rs. 23.51 lakhs. After providing Rs. 4.58 lakhs for depreciation and Rs. 9 lakhs for taxation, the net profit amounts to Rs. 9.30 lakhs. The directors have recommended a dividend of 6 percent, subject to deduction of tax, absorbing Rs. 4.60 lakhs. A sum of Rs. 14,294 has been transferred to development rebate reserve, leaving Rs. 4.56 lakhs to be carried forward. The directors state that out of a pre-tax profit of Rs. 18.30 lakhs, Rs. 5.30 lakhs was earned by the old Company before the new public Company was formed on 1st April, 1961. Madras Rubber has been able to install and commission the pilot plant and start trial production of tyres within three months of the grant of the import licence. At present, 825×20 size lorry tyres are being produced in the pilot plant and production is being systematically raised. The commercial production of tyres and tubes of all varieties will begin later this year. Madras Rubber has been sanctioned a loan of Rs. 1 crore by the Industrial Finance Corporation and Rs. 25 lakhs by the U.S. Export-Import Bank. The Company has been successful in competing with overseas manufacturers of tyre compounds. At present, the latter are being exported to more than 14 countries in the Middle East, the Far East and East Africa. The export organisation is being strengthened to handle tyres when the new factory goes into commercial production. Factory buildings are being completed and the erection of machinery is said to be proceeding fast. The licensed capacity of the existing factory is 300,000 tyres and tubes a year. An application has already been made to the Government of India for further expansion.

Rubber Chemicals from Bayer Agrochem

Bayer Agrochem Ltd, Bombay, which had recently been licensed for manufacturing pharmaceutical and plant protection products in Thana, now proposes to undertake the manufacture of rubber chemicals. Reliable reports indicate that the Government of India has approved Bayer Agrochem's scheme for manufacturing 1,900 tons of rubber chemicals a year on a three-shift basis. These include 1,000 tons of antioxidants and 773 tons of accelerators. The Company will make rubber chemicals now being sold under the trade names of Bayer and Monsanto, which have a substantial share of the Indian market, that is, about 75 percent of total imports of such chemicals. The current demand is estimated around 2,000 tons a year. This is expected to increase to around 4,000 tons by 1965-66. Alkali and Chemical Corporation of India, Rishra, is the only unit which has so far been licensed to manufacture 2,250 tons of rubber chemicals a year. The cost of capital equipment for the proposed plant of Bayer Agrochem is estimated around Rs. 1.30 crores, of which about Rs. 83 lakhs will have to be spent on imported equipment. Farbenfabriken Bayer, Leverkusen, Germany, which is collaborating in the venture, will provide the foreign exchange required for importing machinery. In addition to plant and machinery, the Company will have to spend about Rs. 44 lakhs a year on imported raw materials. But, on the basis of estimated production, Bayer Agrochem is expected to effect a net saving of Rs. 1.17 crores in foreign exchange by manufacturing rubber chemicals which are now being imported. The Company is likely to issue

CAPITAL, 12th April, 1962.

fresh capital of about Rs. 1.30 crores to meet the cost of the new project.

S.L.M.-Maneklal Share Offer

S. L. M.-Maneklal Industries Ltd will shortly enter the capital market to raise Rs. 24.30 lakhs in equity shares of Rs. 100 each to finance its project for manufacturing diesel engines of 163 to 655 horse-power for power generation, water-ring pumps and Roots blowers. The issue consists of 80,000 equity shares, of which 10,000 shares have been reserved for allotment at par for cash to the foreign collaborators—Swiss Locomotive and Machine Works of Switzerland—to cover the cost of imported components. The promoters, directors and their friends are taking up 45,700 shares, of which about 20,000 shares will be offered to the shareholders of T. Maneklal Manufacturing Company which has sponsored the project. The remaining 24,300 equity shares will be offered for public subscription.

The Company's plant will be located near Ahmedabad. Land has been acquired and the construction work is expected to start in May. The factory is expected to go into production in the latter half of 1963. The production programme will be implemented in two phases, each of one and a half years. In the first phase, the Company will import 60 percent of the components; this will be gradually reduced to 14 percent by the end of three years. S. L. M.-Maneklal Industries also proposes to undertake the manufacture of compressors and vacuum pumps at a later stage. The total capital outlay on the project is estimated at around Rs. 80 lakhs.

Southern Structurals Makes Profit

The Southern Structurals Ltd, Madras, has reported considerable improvement in its working results for the year ended December 1961. Receipts from wagons delivered to the Southern Railway recorded a substantial increase from Rs. 29.42 lakhs to Rs. 89.21 lakhs. The income from structural jobs was also higher at Rs. 5.92 lakhs, against Rs. 2.11 lakhs in the previous year. After providing Rs. 3.07 lakhs (against Rs. 2.07 lakhs) for depreciation and Rs. 77.685 (against Rs. 53,300) for development rebate reserve, Southern Structurals has made a net profit of Rs. 3.84 lakhs, against a loss of Rs. 3.35 lakhs in 1960. The year's profit has been adjusted against the accumulated loss of Rs. 11.26 lakhs which now stands at Rs. 7.42 lakhs.

The directors say that since about the middle of December, the production of wagons has been maintained around 100 units a month. The Railway Board has placed orders worth Rs. 2.41 crores for broad-gauge and meter-gauge wagons. The orders have to be completed before July 1963. These are in addition to the earlier orders of the value of Rs. 1.65 crores to be executed during the current year. Southern Structurals has asked for the Government's permission to raise the structural capacity from 2,400 tons to 5,000 tons a year. Steel supplies are said to be better, although the Company continues to depend on imports for certain sections. Southern Structurals has entered into a collaboration agreement with Metropolitan-Cammell Carriage and Wagon Co. Ltd of the U.K., under which the British firm will make available technical know-how and, on a royalty basis, give designs and specifications for railway rolling stock not produced under designs evolved by the Research, Design and Standards Organisation of the Indian Railways.

Travancore Rayons Profit Down

The working of the Travancore Rayons Ltd in 1961 was adversely affected by a fall in the production of rayon yarn, partial closure of the cellulose film plant, rising costs of manufacture and the enhanced burden of excise duty. But considering that prices of the Company's products were maintained at the previous year's level, its performance in 1961 seems satisfactory. Sales declined from Rs. 3.77 crores to Rs. 3.66 crores. The gross profit fell from Rs. 1.23 crores to Rs. 1.11 crores. The excise duty paid by Travancore Rayons amounted

CAPITAL, 12th April, 1962.

to Rs. 32.79 lakhs, against Rs. 23.95 lakhs in 1960. After providing Rs. 40.13 lakhs (against Rs. 36.47 lakhs) for depreciation, Rs. 2.75 lakhs (against Rs. 15.70 lakhs) for development rebate reserve, and Rs. 30.60 lakhs (against Rs. 27.30 lakhs) for taxation, the net profit amounts to Rs. 31.33 lakhs, against Rs. 34.31 lakhs in 1960. The proposed ordinary and preference dividends absorb Rs. 23.25 lakhs. No provision has been made for general reserve which received Rs. 10 lakhs in 1960, but the directors have set aside Rs. 8 lakhs (against nil) for dividend equalisation reserve. There remains Rs. 2.69 lakhs to be carried forward, against Rs. 2.61 lakhs brought in.

The directors state that when the expansion programmes are completed, Travancore Rayons will be claiming development rebate, in which case the available surplus in coming years may not be adequate for dividend purposes. So they have thought it necessary to create a dividend equalisation reserve this year. The production of plain cellulose film showed an increase which would have been more marked but for the partial closure of the plant during the latter part of the year due to slackness in demand. The production of M.S.T. cellulose film increased by about 50 percent due to the commissioning of the second plant. The rayon yarn output declined mainly due to lower production in the older machines which had been working since 1950. But, with the commissioning of new machines which are on order, production will rise. Travancore Rayons has received permission to install six more Butterworth spinning machines, and the import licence for these is awaited. Formalities in connection with the expansion of rayon production by 5 tons a day are almost complete. Orders for plant and machinery will be placed shortly when the import licence is received. The installed capacity of the cellulose film plant has been increased by about 2 tons, raising the total capacity to 13 tons a day.

The electrical carbon bisulphide plant with a capacity of 5 tons a day is scheduled to start production by about the middle of April. The erection of the cotton linter plant is making satisfactory progress, and the production of rayon-grade pulp is expected to commence by August-September this year. In his statement to shareholders, Mr. A. R. Ramanathan, chairman, strikes an optimistic note about the future. He says that "this year we will be able to increase the sales and benefit by full production." Travancore Rayons has started exporting its cellulose film to the Far East. Its scheme for expanding rayon yarn production is specially designed for making finer deniers of yarn. The Company will perhaps be the pioneers in India for manufacturing 45 deniers of special yarn. The production of pulp from cotton linters and waste in Travancore Rayons' factory will greatly reduce the import of wood pulp and save foreign exchange. The Rs. 10-paid share of the Company is currently quoted around Rs. 44.

Ochterlony Valley Cuts Dividend

The working of the Ochterlony Valley Estates Ltd for the year ended October 1961, shows a net profit of Rs. 3.14 lakhs, after providing Rs. 3.14 lakhs for taxation. The net profit for the previous year was Rs. 3.63 lakhs, after providing Rs. 3.47 lakhs for taxation. With Rs. 7,007 brought forward from the previous year and Rs. 86,734 being the refund of agricultural income tax for 1955-56, the total available for appropriation is Rs. 4.08 lakhs. Out of this, the directors have transferred Rs. 1.60 lakhs to dividend equalisation reserve and Rs. 4,314 to development rebate reserve. The proposed dividend of 12 percent, subject to deduction of tax (against 13 percent), will absorb Rs. 2.34 lakhs. The balance of Rs. 10,333 is carried forward.

The tea crop harvested during the year amounted to 577,573 kilograms, against 603,325 kilograms in the previous year. The all-in cost of production was Rs. 4.34 a kilogram, against Rs. 4.07 a kilogram. The average price realised was Rs. 4.84 a crop for the year amounted to 862 tonnes against 683 tonnes. In spite of the increased crop, the Company has to value it at only Rs. 1.90 a point. In his speech, the chairman refers to the difficulties of the coffee industry and the low return to growers. He observes that the Company is doing its best to reduce expenditure, particularly on coffee cultivation.

The Company has now embarked on a rehabilitation programme to increase the tea yield. Estimates for the 1961-62 crop have been made on the basis of 674,000 kilograms—a 17 percent increase on the previous year. Although the average price realised for the Company's teas sold up to the end of February 1962, was Rs. 4.27 a kilogram, compared with Rs. 4.63 a kilogram at the end of February 1961, in view of the present improvement in tea prices, the directors hope that the average for the whole year will not be lower than that of the previous year. The chairman says that according to latest indications, the 1961-62 coffee crop may amount to only 208 tonnes. In view of the poor crop prospects, the current year's working may result in a substantial loss. But with reasonable blossom showers, the 1962-63 coffee crop is expected to be about 750 tonnes or 800 tonnes.

Electrical Instruments Share Offer

Electrical Instruments Manufacturing Co. Ltd will shortly offer 20,000 equity shares of Rs. 100 each at par to the public. The Company has an authorised capital of Rs. 1 crore—all in equity shares—and the issued capital is Rs. 35 lakhs. Of this, the directors, their friends and associates have taken up 13,500 shares, and 1,500 shares have been allotted to the Electrical Instruments Manufacturing Company in part payment of the purchase price of its business, including a goodwill of Rs. 40,000. The remaining 20,000 equity shares will be offered to the public. The Company has acquired the business of the Electrical Instruments Manufacturing Company—which was manufacturing electric switchgears in Bombay. The new electric switchgears in Naroda, Company proposes to set up a factory in Naroda, near Ahmedabad, for manufacturing house service electric switchgears, distribution boards and com-bined switch and fuse units. It has secured the technical collaboration of Messrs Valmet Oy of Finland. Commercial production of meters is expected early in 1963. The Company also proposes to manufacture water meters, gas meters, air-break switches, etcetera. Negotiations are being carried on for technical know-how from Germany. The entire project is estimated to cost about Rs. 65 lakhs. This is proposed to be met by the issue of share capital for Rs. 35 lakhs, a loan of Rs. 10 lakhs from the Industrial Credit and Investment Corporation of India Ltd, another loan of Rs. 10 lakhs from the Gujarat State Financial Corporation, and bank borrowings.

Bonus from Commercial Mills

The Commercial Ahmedabad Mills Co. Ltd has reported encouraging results for the year ended December 1961. Sales increased by about 20 percent from Rs. 1.72 crores to Rs. 2.07 crores. The cent from Rs. 22.15 lakhs to Rs. 34.25 lakhs. The directors have decided to skip the dividend. Instead, they are issuing bonus shares in the proportion of one share of Rs. 250 for every six already held. In 1960, Commercial Ahmedabad Mills paid a dividend of Rs. 50 a share (Rs. 250 paid), subject to deduction of tax. Appropriations include Rs. 8.25 lakhs (against Rs. 6.04 lakhs) for depreciation, Rs. 39,000 (against Rs. 2.56 lakhs) for development rebate reserve, Rs. 12.20 lakhs (against Rs. 4.90 lakhs) for taxation, Rs. 13,000 (against nil) for development and rehabilitation reserve, Rs. 6.33 lakhs (against Rs. 1.25 lakhs) for general reserve, Rs. 2 lakhs (against nil) for the dividend equalisation fund, and Rs. 2 lakhs (against nil) for investment reserve. The Company has ordered machinery worth Rs. 15 lakhs. The Rs. 250-paid share of Commercial Ahmedabad Mills is currently quoted around Rs. 707.50.

Cambodia Mills Pays More

The directors of Cambodia Mills Ltd, Coimbatore, have raised the dividend for 1961 from 9 percent to 12 percent, subject to deduction of tax. The Company has, however, no tax liability, since the losses incurred from 1957 to 1959 have not yet been completely offset by the trading profits. The working results for 1961 show a small improve-

ment over the previous year's performance, with sales up from Rs. 1.19 crores to Rs. 1.33 crores and the gross profit from Rs. 9.89 lakhs to Rs. 10.66 lakhs. After providing Rs. 1.83 lakhs (against Rs. 1.88 lakhs) for depreciation and Rs. 16,233 (against Rs. 12,906) for development rebate reserve, the net profit amounts to Rs. 8.17 lakhs, against Rs. 7.56 lakhs in 1960. With Rs. 42,421 brought forward, the disposable surplus amounts to Rs. 8.59 lakhs. From this, the directors have set aside Rs. 2.25 lakhs towards depreciation for 1959, Rs. 2 lakhs for machinery replacement reserve and Rs. 1.80 lakhs for general reserve. The preference dividend accounts for Rs. 9,100. The proposed ordinary dividend absorbs Rs. 2.40 lakhs, leaving Rs. 5,247 to be carried forward.

The directors state that the working results for 1961 would have been much better but for the fact that, while the ceiling prices for yarn were reduced during the year, cotton prices did not show a corresponding decline, so the profit margin was affected. The blow-room machinery is expected to arrive by about the end of the current year. Arrangements have been made for replacing the drafting materials for 16,000 spindles and for replacing 12,000 plain-bearing spindles by roller-bearing ones. This scheme is expected to cost about Rs. 6.72 lakhs. The directors hope that Cambodia Mills will be able to show better results after replacing machinery. The Rs. 10-paid share of the Company is currently quoted around Rs. 13.50 cum dividend.

Raza Buland Sugar Pays Less

There has been a sharp decline in the profit of the Raza Buland Sugar Co. Ltd from Rs. 30.68 lakhs in 1959-60 to Rs. 3.91 lakhs for the year ended October 1961, after providing Rs. 3.27 lakhs (against Rs. 2.75 lakhs) for depreciation and transferring Rs. 97,000 (against Rs. 27,000) to development rebate reserve. A sum of Rs. 450 lakhs has been transferred from dividend equalisation reserve and Rs. 9.88 lakhs from taxation provision. A taxable ordinary dividend of 10 percent (against 12.5 percent) has been declared, absorbing Rs. 6.57 lakhs. The dividend offers a yield of 9.6 percent at the present price of Rs. 10.37 a share. Taxation is allocated Rs. 2.10 lakhs and gratuity reserve Rs. 10 lakhs. The carry-forward is Rs. 34,557, against Rs. 65,217 brought in. The directors say that the profit of Raza Buland has declined mainly because stocks have been valued at cost or at the market value, whichever is lower. Production costs have increased due to implementation of the Wage Board's recommendations and higher interest charges paid on overdrafts. The cane crushed was 4.3 million quintals (against 4.1 million quintals). Raza Buland has been given a licence for increasing the crushing capacity of each of its two factories to 1,500 tons of sugarcane a day. The directors have decided to proceed with the expansion scheme.

Alcock, Ashdown Does Well

The working of Alcock, Ashdown and Co Ltd for the year ended December 1961, justifies the proposed increase in the dividend from Rs. 17 to Rs. 22.50 a share, subject to deduction of tax, on the increased capital following the two-for-seven rights issue made in December 1960. The directors' report holds out the promise of an equally good, if not better, performance during the current year. Realisations from sales and work done in 1961 recorded an increase of about 42 percent from Rs. 1.08 crores to Rs. 1.54 crores. The gross profit rose by about 54 percent from Rs. 14.96 lakhs to Rs. 23.16 lakhs. The ratio of gross profit to turnover works out to 14.9 percent, against 13.8 percent in 1960. After providing Rs. 1.37 lakhs (against Rs. 1.12 lakhs) for depreciation and Rs. 7.18 lakhs (against Rs. 3.65 lakhs) for taxation, the net profit amounts to Rs. 12.71 lakhs, against Rs. 9.13 lakhs in the previous year. With Rs. 46,100 brought forward and after making some minor adjustments, the disposable surplus amounts to Rs. 13.50 lakhs. The directors have provided Rs. 1.38 lakhs (against Rs. 1.50 lakhs) for rehabilitation and replacement reserve, Rs. 44,684 (against Rs. 22,902) for development rebate reserve and Rs. 1.69 lakhs (against Rs. 1.30 lakhs) for exempted profits reserve under Section 15C. The proposed dividend absorbs Rs.

9.65 lakhs (against Rs. 5.68 lakhs), leaving Rs. 24,806 to be carried forward. As in the previous year, a portion of the proposed dividend, Rs. 3.90 a share, is exempted from taxation under Section 15C of the Income Tax Act; this has been earned from the Company's Bhavnagar works. Such exempted income for 1961 is estimated at Rs. 1.69 lakhs, which has been taken to a separate reserve account, out of which Rs. 1.67 lakhs is being drawn to pay the tax-free portion of the dividend.

With the order-book continuing to be full, the directors consider the outlook for the current year to be reasonably good. The tower shop for fabricating transmission line towers in Bombay commenced full production in December. This is expected not only to increase the rate of production but also to add to the overall productivity of structural shops. Orders for transmission line towers have been booked, and these will keep the tower and galvanising shops, both in Bombay and Ahmednagar, fully engaged till the end of 1964. The work of rehabilitation and replacement of machinery and buildings is in progress. The Bhavnagar unit continued to be engaged in building barges for the Gujarat Government, and orders in hand will keep the boat-building shop there busy for the rest of the year. The construction of the tower and galvanising shops in Bhavnagar is nearly complete and they will go into production shortly. The remaining structural and general engineering shops will be completed shortly. The cost of erection and equipment of various structural and general engineering shops is expected to exceed the original estimate by Rs. 5 lakhs. In order to meet partially the cost of the Bhavnagar project and the Company's expanding activities, it is proposed to issue further 9,536 equity shares of Rs. 100 each at par to the existing shareholders in the ratio of two new shares for every nine held. The Rs. 100-paid share of the Company is currently quoted around Rs. 336 cum dividend, offering a tax-free yield of about 5.3 percent.

More from Ramnugger Cane

The Ramnugger Cane and Sugar Co. Ltd has produced satisfactory results for the year ended August 1961 due to the higher cane crush and recovery. The sugar factory has made a profit of Rs. 15.66 lakhs (against Rs. 10.83 lakhs), after transferring Rs. 3.46 lakhs (against Rs. 2.65 lakhs) to depreciation. Taxation is allocated Rs. 7.20 lakhs (against Rs. 4.45 lakhs) and development rebate reserve Rs. 8.570 (against Rs. 49,689). The profit amounts to Rs. 7.32 lakhs (against Rs. 8.67 lakhs), after providing Rs. 47,269 (against Rs. 50,897) for depreciation. Taxation absorbs Rs. 2.70 lakhs (against Rs. 3.75 lakhs). The consolidated profit of Ramnugger Cane and Sugar is, therefore, Rs. 3.48 lakhs higher at Rs. 22.98 lakhs. The taxable ordinary dividend has been raised from 30 percent to 35 percent. It is covered more than three times and offers a yield of 11 percent at the present price of Rs. 31.75 a share. Reserve for replacement and expansion is allocated Rs. 1.50 lakhs (against Rs. 5 lakhs) and general reserve Rs. 5 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 61,005, against Rs. 13,908 brought in. The cane crush was a record at 3.6 million maunds (against 2.6 million maunds) with a recovery of 9.62 percent (against 9.08 percent). The cane crush during the 1961-62 season has so far amounted to 3.1 million maunds with a recovery of 10.37 percent. The directors say that production has been lower because the Government has asked the factory to cut its output by 10 percent, compared with 1960-61. They have expressed concern over the accumulation of stocks. The 1961-62 season started with a carry-over of more than 1 million tons of sugar. Since domestic consumption is rising only slowly and export prospects are uncertain, the outlook is causing worry.

Vasanta Mills Earns Less

Although the dividend of Vasanta Mills Ltd has been raised from 20 percent to 25 percent, subject to deduction of tax, the working results show a substantial setback, since the gross profit has declined from Rs. 23.30 lakhs in 1960 to Rs. 20.40 lakhs in 1961. After providing Rs. 6.56 lakhs (against Rs. 4.76 lakhs) for depreciation, Rs. 1.50 lakhs (against Rs. 3.09 lakhs) for development

rebate and Rs. 5.20 lakhs (against 6.20 lakhs) for taxation, the net profit amounts to Rs. 5.81 lakhs, against Rs. 7.41 lakhs in 1960. With Rs. 91,696 brought forward, the disposable surplus amounts to Rs. 6.73 lakhs. From this, the directors have transferred Rs. 50,000 (against nil) to general reserve, but no provision has been made for dividend equalisation reserve which received Rs. 2 lakhs in the previous year. The proposed dividends, both preference and ordinary, absorb Rs. 5.62 lakhs, leaving Rs. 60,469 to be carried forward.

The directors state that in 1961, Vasanta Mills was able to meet its requirements of Indian cotton at or below the ceiling prices. This enabled it to earn a reasonable profit in spite of an all-round increase in expenses on account of wages, stores, etcetera. But the Company may not be permitted to purchase locally more than 85 percent of the previous year's consumption of indigenous cotton which will necessitate the purchase of high-priced foreign cotton. Vasanta Mills has, however, carried out the modernisation of its plant and machinery and except for ten ring-frames, all the old spinning machines have been changed to the high draft system. The Rs. 100-paid share of the Company is currently quoted around Rs. 309.

Nil from Cawnpore Sugar

The Cawnpore Sugar Works Ltd has again passed the dividend for the year ended October 1961. After providing Rs. 6.80 lakhs (against Rs. 6.70 lakhs) for depreciation, there is a small profit of Rs. 22,072 (against Rs. 13,37 lakhs). After making various adjustments, a debit balance of Rs. 3.70 lakhs has been carried forward, against a debit balance of Rs. 4.18 lakhs brought in. The cane crush was higher. The Marhowrah factory crushed 3.2 million maunds (against 2.2 million maunds) with a recovery of 9.67 percent (against 10.13 percent). The Gauri factory crushed 3.4 million maunds (against 2.7 million maunds) with a recovery of 10.16 percent (against 10.37 percent). The crush of the Padrauna factory was 4 million maunds with a recovery of 9.51 percent. Although the factory crushed the same amount of sugarcane in 1959-60, the recovery was lower at 9.11 percent. The Kathkuiyan factory crushed 3.1 million maunds with a recovery of 9.34 percent. In 1959-60, the crush was about the same and the recovery was 9.40 percent.

The directors say the unsatisfactory results of Cawnpore Sugar are mainly due to export losses of Rs. 10.84 lakhs. Wages have had to be increased according to the recommendations of the wage board. Besides, Cawnpore Sugar has had to pay more interest on overdrafts due to the accumulation of heavy stocks. The directors are trying to improve operational efficiency, especially of the Padrauna and Kathkuiyan factories. Difficulty is being felt in storing sugar as large stocks have accumulated. Since the Government has controlled the price of industrial alcohol, the profit has declined.

Asian Refractories

To take advantage of the existing and growing market for refractories in India, Asian Refractories Ltd is being formed to manufacture 24,000 tons of firebricks and 6,000 tons of silica-bricks annually. The Company, which will have a total issued capital of Rs. 40 lakhs in preference and equity shares, will soon be entering the market. The factory will be located in the district of Hazaribagh, Bihar. The technical collaborators are Cekop, the Polish State Foreign Trade Organisation, which will provide the machinery, plant, design, technical data and personnel as well as advise on the erection of the plant. The Industrial Finance Corporation has sanctioned a long-term loan of Rs. 35 lakhs and has also agreed to underwrite Rs. 5 lakhs in equity capital.

Bharat Forge: A New Venture

A new enterprise known as Bharat Forge Company Ltd has been registered in Maharashtra to undertake the manufacture of heavy forgings of 450 lbs a piece with facilities to machine forgings

into finished components. It has been licensed to manufacture 6,000 tons of steel forgings a year on a single-shift basis. Bharat Forge will also be equipped to supply finished forgings to its customers, particularly crankshafts required by motor-car and engine manufacturers. The factory will be located near Poona in the Chinchwad-Pimpri area. The Maharashtra Government has sanctioned 6,600 kW of power supply for the Company's plant. It has also agreed to supply water from its water stations in Pimpri and Chinchwad. Bharat Forge will have an authorised capital of Rs. 3 crores, made up of Rs. 2 crores in equity shares and Rs. 1 crore in preference shares. Details of the capital offer have not yet been worked out. The Government of India has approved the technical collaboration agreement with the Steel Improvement and Forge Company of Cleveland, U.S.A. The Government has also permitted the Company in principle to negotiate directly a D.L.F. loan of Rs. 1.55 crores to cover the foreign exchange required for the project. Allison L. Bayles and Associates of the U.S.A. have been appointed consulting engineers.

Gokul Rubber Maintains

During the year ended December 1961, Gokul Rubber and Tea Plantations Ltd has earned a net profit of Rs. 95,031, against Rs. 80,723 in the previous year. Out of this, taxation provision gets Rs. 50,000 (against Rs. 35,000). The proposed dividend of 10 percent, subject to deduction of tax (the same), will absorb Rs. 45,000. The balance of Rs. 2,727 is carried forward. The rubber crop amounted to 98,092 lbs, against 102,215 lbs.

JUTE GROWING ABROAD

Rex writes under "Current Coin":
"I OBSERVE that some one in Mexico is advertising in the Calcutta papers for a man who thoroughly understands jute cultivation to go to that country and give his services in promotion of a similar agricultural industry in that region. If the promoter of the project is merely wants jute to grow in Mexico for his own amusement, regardless of what it may cost him to raise the article, well and good. But if he wishes to cultivate the crop commercially, he had better ask the man he engages to take the seed, the soil, the cultivators, and the climate of Bengal along with him, for he will require the whole combination. There will be no difficulty in growing the jute (I have seen it growing in hot houses in Scotland); the difficulty in Mexico will be to grow it at \$11-2-6 per ton for first marks. A little more than 20 years ago, the Dundee spinners were invited to subscribe money to start the cultivation of the plant in Egypt, so that they might thereby have two strings to their bow, and make them less dependent on the Bengal monopoly. It was said there was plenty of suitable land and plenty of cheap labour in Egypt (where is the cheap labour in Mexico?), and that with such a near source of supply to the manufacturing centres in Europe, and cheaper freights, Bengal would be by and by have a formidable competitor in an article of which she had the practical monopoly. Well, the scheme got a fair trial, and the first experiment yielded a crop of about 250 bales, which were taken to Dundee and parcelled out amongst the subscribing spinners. The fibre was harsh and strong and partook of the nature of Dowrah quality. That one experiment sufficed to convince the spinners that they had better stick to Calcutta. There can be no harm in Mexico going through the same kind of experience, but it requires no gift of prophecy to declare now that Bengal is in no danger so far as her jute monopoly is concerned from any experiments that may be undertaken anywhere else on the plant. It may turn out that Africa (for instance) may eventually develop a big trade in some indigenous fibre, but for quantity, and for cheapness, and for ease in its manufacturing manipulation, it will be hard to find a rival anywhere for the Bengal fibre."

FROM
CAPITAL
17th April, 1962

CORRECTION

Commenting on the reports of the Samnugger, Titagur and Victoria Jute Companies in the issue of Capital dated 22nd March, 1962, it was wrongly stated that various amounts were transferred to reserves. They were in fact transferred from reserves.

A Ditcher's Diary

GEORGE BARRELL, who relinquished the editorship of Capital last week on his retirement from India, had spent a little over eight years in the country, six-and-a-half as editor of this newspaper. The period was altogether too brief for one so young; but it is a tribute to the power and versatility of his journalism, and to his personal qualities as a man, that his achievements will be long remembered by readers, colleagues and friends alike. When he came to India in 1954, Capital was a rather different newspaper from what it is now; and the smooth transition to suit the rapidly changing circumstances of these eventful years has been essentially his personal success. George Barrell's adaptability to his environment and his professional responsibilities was quite remarkable; coming from the atmosphere of the sledge-hammer journalism practised by the Daily Express, he led here with distinction a paper of rather different tastes and attitudes. His work in this country provided the stimulation and the opportunities to be expected of a developing economy, whose problems and dilemmas he had studied so carefully under Professor W. Arthur Lewis at Manchester University. Theory, however, was one thing; it was in the interpretation of the practical realities of Indian economic life that George Barrell was at his best. And that was so not only because of the shrewdness of his judgment, but also because of the forthrightness and the independence with which he expressed his views. It would be idle to deny that the latter qualities, at times, lost him friends among those who ought to have known better. But, as one surveys the years, one cannot escape the conviction that it was these very qualities which lay at the root of his professional success. That the success will continue during the many long years of fruitful activity ahead of him, no one who has worked with him can ever possibly doubt. To him and his wife, Jennie, a model of sympathy, wit and charm, go the warmest personal wishes of the many friends they have left behind, among whom old colleagues on Capital can sincerely claim to be the fondest.

Nobody, least of all General de Gaulle himself, could ever have doubted the result of the French referendum. A massive Oui was the only possible verdict even if the communists had not come in with their "Yes, but". Why does General de Gaulle hold these referendums; and he has threatened to hold more? One possible reason, apart from the obvious ones such as his personal vanity and all that, is that he remembers the manner in which he came to power in 1958. A man

who fancies himself as the greatest Frenchman born requires what the French call political legitimacy, the one thing he did not take with himself to the Elysee Palace. One theory, plausibly argued by the very perceptive Paris correspondent of a Calcutta daily, is that General de Gaulle did not after all want so big a crop of "Yes" votes. As the demonstrations in Paris after that shooting of the conscripts showed, the President is indeed anxious to dissociate himself from some of his supporters on the Left—and on the Right. But the referendum is what I might call a public-relations effort. Its result alters none of the objective facts of the situation confronting General de Gaulle and France. The Organisation of the Secret Army never deluded itself, not in recent months at any rate, that it commanded much popular support. By threats of terrorism it has extracted some reluctant loyalty from a section of the army and civil service in Algeria, especially in towns like Algiers and Oran; and it has on its side a band of desperadoes who see in Algerian independence the end of their unearned privileges. That is about all. In metropolitan France the people are tired of a war which they know they could never win. Against the background of the relentless seven-year conflict, General de Gaulle has signed an agreement more favourable to France, and to the Europeans in Algeria, than any one had a right to expect. It is too early to be throwing hats in the air, but the record of the F.L.N. has, I think, been rather impressive so far. The discipline it has shown to be able to impose on its followers, in face of reckless provocations from the O.A.S. suggests that, independence won, it will rule Algeria with a fair sense of responsibility.

NOT MANY, I EXPECT, WILL BE GREATLY SURPRISED over Mr. Nehru's choices for the new Central Cabinet. The Congress Party having been returned to power by a comfortable majority, it is understandable that the Prime Minister should have taken this as a vote for continuity in the Government's policies, and retained eleven of his former Cabinet colleagues. I am not so sure, however, that either the size of the new Cabinet or the way in which the portfolios have been allocated does much credit to the Party in power. A Cabinet of seventeen seems altogether too unwieldy for a top policy-making body; and I cannot subscribe to the view that the promotions of the relatively junior Ministers have, without exception, been well earned. It is easy to argue, as some have done, that Education, or Information, or Health, are important portfolios, and therefore the Educa-

tion Minister, or the Information Minister, or the Health Minister should be in the Cabinet. But I am inclined to believe that this is precisely the sort of indiscriminate logic to which there is no limit; it ends up in the sands of absurdity where nearly every subject is so important that anybody handling it ought to be sitting in the Cabinet. I am not unaware of the dilemma with which the Prime Minister was faced; having decided to promote a couple of junior Ministers, he was presented with the claims of several more—of whom only Mr. Manubhai Shah has taken himself seriously. It must nevertheless sadden one's heart to think that even so powerful a personality as Mr. Nehru, refreshed by electioneering speeches about the selflessness of Congressmen, about national integration and so on, has found himself unable to resist personal and provincial pressures in choosing his closest colleagues. The Prime Minister has also often allowed himself the exhilarating thought that the future of the country lies in the hands of its youth; but the average age of the Cabinet he has chosen gives a rather different impression.

I DO NOT KNOW WHOM TO CONGRATULATE ON THE early ending of the Calcutta Port crisis. Perhaps none. The Hooghly pilots are a hard-working lot, who are very proud of themselves with a great deal to be proud of. They do a hazardous job and they are well paid. To see such aristocrats as trade unionists refusing duty and threatening to strike was not edifying; less so was their cultivation of the Press. Yet, who am I to blame them if they have been driven to these tactics by the Government's dilatoriness? One of the oddest aspects of the recent conflict was that while the pilots' spokesmen said their say to their hearts' content, from the Government of India there was next to nothing by way of explanation of its own side of the case. That argument about the N. M. Ayyar document must have seemed something of a mystery to the public; and why should I have to point out that it is not a Government's business to entertain the public with suspense and mystery? The Port of Calcutta is not among the most popular in the world today; and New Delhi needs to wake up to the need for its improvement. It will not do to say that a decision on this occasion was difficult because the Central Government was in the process of being reborn or because the Port had just had a new Chairman. As far as I can remember, the dispute is several years old. Quite apart from these complexities, which I have not the time to unravel, what distresses me most is that a proud band of officers were obliged to feel hurt that their integrity had been questioned. Monetary rewards are important; but that is not all in bringing the best out of officers. The Hooghly Pilot Service has a long tradition; and the new entrants should inherit its sense of pride, for with that comes an additional sense of responsibility without which one does just so much work and no more for so much money. The Indian Civil

AIRCON

Evaporative Climate Conditioners
FOR YOUR INDUSTRY

The initial cost of an AIRCON Evaporative Climate Conditioner is 1/3rd to 1/10th that of an equivalent refrigerant air-conditioner! And comparative running costs? Even less—1/6th the costs of a refrigerant air-conditioner!

And that's not the end of it: hundreds of industries have found that *productivity of workers increases substantially* with AIRCON climate conditioning. So much so that AIRCON installations have paid for themselves within a year!

It's AIRCON for *your* industry! No renovated construction needed, no impractical sealing of rooms needed. Please write to us for more information.

CLIMATE IS OUR BUSINESS

Aircon Industries Private Limited
Lakshmi Woollen Mills Estate
Off Haines Road, Bombay-11

Mark XII 'Air Marshal' is specially designed for industrial sheds, big establishments, canteens and mines. All parts are triply protected against rust. 4-way, 180° directional control. Guaranteed for one year.

Service and similar covenanted cadres could frequently be stupidly arrogant; but I will not say that the gradual decline of officer-like *brahminism*, not necessarily a flowering of the democratic spirit, has improved the general standard of officers in India. I have met officers who seemed clerks in a pair of trousers.

WEST BENGAL'S COMMUNISTS, I FIND, ARE engaged in analysing the election results which were below expectations; and, in the process, they are betraying what I have called the inner contradictions of the Party. It is quite impossible to measure just how much damage was caused by the slogan of an alternative government, although I have been told by people who ought to know that many ordinarily apathetic voters exercised their franchise for the first time because the prospect scared them. Whatever the truth of the matter, I am quite certain that the argument is being used as a weapon by one faction against another, the aim of either being to remain in or ascend to power within the Party. One of the greatest merits of Robert Conquest's recent book on power and politics in Russia was its insistence on the very limited relevance of ideology in the many deadly clashes the Kremlin has witnessed in the past 40 years or so. The Kirov and various other trials were all used by Stalin for the enhancement of his personal power; and yesterday's ally against enemy A was often today's enemy B. In West Bengal and elsewhere some of the comrades are unreconstructed Stalinists; and they have no time for flirtation with Mr. Nehru such as is currently dictated by the national interests of the Soviet Union. I will tell the Indian communists why their electoral showing is not better: their organisation was born not to fight elections but to bring about a revolution by force. The militants of the Party have no heart in election campaigns because they know that that road to power is excruciatingly long, and quick results are what they are after. Insurrections are nothing more than revolutions that have failed; but the communist militants are not dismayed by memories of Telengana. They do not think they failed because the idea was bad; they failed because the Party did not pursue the policy long enough. Even in communist countries, the majority of the people are not Party members, the Parties are composed of a handful of militants. For contesting elections, you need a Party that has many members. In India, the C.P.I. has tried to be a bit of both: a mass Party as well as an activist organisation. On both fronts, therefore, success is small.

WHEN THE INDIAN PARLIAMENT REASSEMBLES with a new Lok Sabha next week, many familiar faces will be missing. But one of the saddest losses will be the Rajya Sabha's. Pandit Kunzru, a hero among parliamentarians, may not be there any more. The Lok Sabha too will be without a number of its finest personalities, following the defeat of Mr. Asoka Mehta, Acharya Kripalani, Dr. A. Krishnaswami, Professor N. G. Ranga and many other stalwarts who helped to make Indian democracy something of a living reality. The Congress machine has got the better of them all. Only a man of Pandit Kunzru's or Mr. Asoka Mehta's intellectual honesty, for example, could have known how difficult it is to be truly independent and defend the public interest against autocracy and inefficiency in the Government. Less able men find it worth while to remain silent or to muffle their criticism. It is not just a question of official favours denied. The temptations of other, more lucrative choices—practising law, for instance—have to be resisted too. Men like Pandit Kunzru belong to an earlier generation, for whom neither money nor Party affiliation has a charm. They gave the Congress what it said it always wanted—constructive criticism, in the best sense of that much-abused phrase. They combined independence of judgment with a power of expression which time and again put tumbling Ministers to shame. And that, I submit, is the true rôle of Opposition members at their best: not just to stand up and be counted among the "ayes" and "noes" but to symbolise for the country the eternal vigilance which is the price of liberty.

THE DITCHES

THE BENGAL COAL COMPANY, LIMITED

CHAIRMAN, MR. A. D. OGILVIE'S STATEMENT

The following is the statement issued by Mr. A. D. Ogilvie, Chairman of the Bengal Coal Company, Limited, to all Shareholders.

I have pleasure in reporting to the members of The Bengal Coal Company, Ltd., on the operations of their Company during the year ended 31st October, 1961.

The Year's Results

Although sales of coal have shown a substantial increase of Rs. 61 lakhs to Rs. 7½ crores, ever increasing costs have resulted in reduced profits; and this is a problem which of course affects the entire Coal Industry. The gross profit of the Company for the year would in fact have been considerably lower had it not been for the financial assistance receivable in respect of the operation of deep, gassy and difficult mines; this assistance was sanctioned by Government in February, 1960, to take effect as from 1st September of that year, and in the Accounts under review full credit has been taken for the subsidy due for the 14 months period to 31st October, 1961. However, we are only now receiving actual payments in respect of the first quarter of 1961, and I trust that these payments will be accelerated in accordance with recent assurances received from Government.

The Board are recommending a final dividend of Rs. 13 per share less tax on the Ordinary Shares, making Rs. 21 per share less tax for the year. This represents a gross return of less than 6.6% per annum on the capital employed in the Company. The total distribution now recommended on the Ordinary capital as increased by last year's rights issue is approximately the same as that made in the previous two years on the smaller capital.

Production

3,188,700 tonnes of coal were raised during the year—an increase of 92,196 tonnes; but this increase could have been much more substantial had it not been for the general shortage of power experienced in the coalfields and the insufficiency of rail transport. In addition, raisings have been hampered by the lack of essential spare parts for machinery and the shortage of explosives. The difficulty arising out of the shortage of spares should be removed when the full benefit of the World Bank assistance is received; but our anxieties regarding explosives can only be lessened when import licences are issued regularly so that supplies are available in good time before the existing stocks are dangerously depleted. In regard to transport and power, the gravity of the present position is well known, and I can only stress the vital necessity of overcoming these two problems if the country is to increase its annual coal production from the current level of under 60 million tonnes to the required figure of at least 97 million tonnes by the end of the Third Plan.

Transport

Whilst our coal stocks at the end of October, 1961, had decreased to a certain extent, stocks again rose in the early months of the current year and this affected production at certain mines. Nevertheless, the position would have been far more serious had not we and consumers taken full advantage of road transport. The lorry weightbridge at Poidih colliery referred to last year has been well utilised, and consideration is being given to the necessity for installing additional weighbridges. It is, however, the contention of the Industry and of consumers that planning must be on the basis of all coal being transported by rail, with road transport only supplementing the capacity during peak periods.

The alterations and extensions to the Parbelia siding have been completed, and I would like to acknowledge the co-operation which we have received from the Eastern and South Eastern Railways during the year in attending to such matters at our collieries.

Power Supply

In my predecessor's Review last year considerable reference was made to the

necessity for forward planning to assess and meet the demands for power supply. The serious concern which was expressed twelve months ago has unfortunately been fully substantiated by our actual experience since then.

With generating plant in the coalfields being inadequate to meet demand, there have been during the year a number of restrictions in power supply which have affected coal production.

I need hardly stress the critical position from the point of view of safety which might arise as a result of such restrictions when electrically operated ventilation fans and winding engines cannot be worked.

The fact has to be faced that electrical energy is not available for the new motors and machines which we intended to install. So serious is the position that we have decided to install steam winders and fans for certain of our new shafts, even though such steam operated plant is considered outmoded in other parts of the world; this decision has, however, been forced upon us as a practical necessity, since there is little use in our continuing to obtain large electric motors for which there is no power available.

Sandstowing

The quantum of sand stowed at our collieries was increased still further to over 1,200,000 tonnes during the year under review. It has always been the Company's policy to give every attention to sandstowing underground, in the interests of both conservation and safety; we now have sandstowing installations at six collieries, and during the current year it is hoped to bring into use two new installations. It is, however, most disappointing that in spite of assurances received to the effect that full reimbursement of sandstowing costs will be given as far as possible, the current year it is hoped to bring into use two new installations. It is, however, most disappointing that in spite of assurances received to the effect that full reimbursement of sandstowing costs will be given as far as possible, the current year it is hoped to bring into use two new installations. It is, however, most disappointing that in spite of assurances received to the effect that full reimbursement of sandstowing costs will be given as far as possible, the current year it is hoped to bring into use two new installations.

Prices

Representatives of the Coal Industry have referred in recent weeks at considerable length to the debilitating effect which the present restrictive price policy is having on the health of the Industry. Detailed figures, establishing the extent to which enhanced operating costs still remain to be neutralised, have been made available to Government. In addition to these specific claims for neutralisation, the broad price policy still denies to the Industry the ability to plough back adequate funds for to capital expenditure, to attract new investment, and generally to instil into its

economy the vitality which is so necessary if it is to discharge the heavy responsibility for production placed upon it in the Third Plan.

Both the importance and the urgency of the price question are manifest, and it is hoped that a re-orientation of policy on more realistic lines will soon be forthcoming so as to afford some real relief to the Industry.

The Third Plan

Private enterprise in the Coal Industry has been given the task of increasing its level of raisings by at least 17 million tonnes during the course of the Third Plan. Within this framework your Company's plans have been drawn up on the basis of attaining by the end of the Plan an annual production of at least 4 million tonnes, representing an increase of more than 33% over the level of raisings at the commencement of the Plan. In considering this target it must be remembered that this expansion represents the nett increase after absorbing any fall in raisings at individual collieries. For instance, one of our largest mines, Banksimula 11 & 12 pits colliery, will have exhausted two of its seams during the next 12 months or so, and the resultant loss in production amounting to at least 250,000 tonnes per annum will have to be made good from other workings before we continue on the way of attaining our new targets. Our eagerness to subscribe fully to the great expansion envisaged in the Third Plan is reflected in our plans to avail very substantially of the assistance being furnished initially by the World Bank for the import of plant and machinery.

We have plans for stepping up production to a great extent at our existing collieries, particularly at Parbelia, Chinakuri and at Girimint, all of which are producing the much required selected grades of coal; and the completion of the new sandstowing ropeway at Chanch colliery will result in greater output of high grade coking coal.

New Developments

In the Murulidih property which has been worked for many years, deep shafts are now being sunk to increase substantially the output of coal from this area. Whilst the full benefit of this new project will not be felt until after the end of the current Plan, it is anticipated that a fair level of production of coking coal will be attained by 1965. Our second new development is at Kunustoria, where some shallow workings were undertaken some years ago. Here we are sinking new shafts through which we hope to start raising coal during the course of the next year.

Over Rs 1 crore is being spent on these two large projects, and this is a measure of the faith we have in the

future, notwithstanding the many existing problems.

Labour and Welfare

I am glad to be able to report continued satisfactory relations with our labour. For the Coal Industry as a whole, however, a Wage Board has been set up and is expected to commence its deliberations shortly.

The construction of new quarters, the installation of water supply schemes and our programmes for welfare measures have proceeded, even though the actual rate of progress has not been quite as satisfactory as we might have wished; the various shortages of materials, particularly cement, have impeded our efforts to a great extent. However, during the year work was completed on a new Sports Stadium which will be of considerable value to our labour force in the Poniat area, who will be using this for athletics, football matches and other sport. In February of this year I attended the All-India Coalfields Sports which were held at our Stadium in the presence of the Governor of West Bengal; it was a stimulating occasion and the large crowd of many thousands of spectators bore adequate testimony to our employees' enjoyment of these recreational activities.

It is of interest to note that, in addition to the very large labour force employed at our collieries directly for mining and despatching coal, we also provide permanent work for about 2,400 people who are engaged in operating and maintaining the various departments covering medical, welfare, water supply, road maintenance etc.

Staff

I would like to thank the staff in our coalfields organisation for their support to the Company during the past year. Quite apart from the increased complexity of mining problems, our staff at all levels have to deal with exacting matters relating to labour, legal and other affairs connected with the Company's operations. I wish to express to Mr. F. G. Massmann, our Chief Mining Engineer, and to all other members of the coalfields staff, our deep appreciation of their fine work.

Note: This does not purport to be the record of the proceedings of the Annual General Meeting.

THE UNITED COMMERCIAL BANK LIMITED

CHAIRMAN, MR. G. D. BIRLA'S REVIEW

Statement of Mr. G. D. Birla, Chairman, circulated to the Members at the Nineteenth Annual General Meeting held on Wednesday, the 11th April, 1962.

Gentlemen,

You will notice from the Directors' Report and the accounts of the Bank for the past year now before you that the all-round progress of the Bank has been maintained and our deposits have improved after the slight set back of the previous year.

Deposits

The deposits at the end of 1961 stood at Rs. 98.90 crores and showed a rise of Rs. 9.96 crores on the previous year's figure of Rs. 88.94 crores. This increase of 11.2% compares with 8.5% by which, after making allowance for the transfer of Rs. 72 crores of PL480 funds from the State Bank of India to the Reserve Bank of India, the deposits of the public with scheduled banks as a whole rose during the same period.

Cash & Securities

Cash on hand and with banks and money at call and short notice were Rs. 8.66 crores and represented 8.8% of the deposit liability. The additional deposit resources which accrued to the Bank during the year were utilised primarily to improve the liquid position of the Bank through a considerable reduction of the borrowings from the Reserve Bank of India and the addition of a little over Rs. 2 crores to

our holdings of Government Securities and secondarily to increase our advances by the moderate amount of Rs. 2.82 crores. As a result of this policy our quick assets consisting of cash on hand and with bank, money at call and short notice and free government securities amounting to Rs. 43.31 crores formed 43.78% of our total deposits. The corresponding figures for the previous year were Rs. 35 crores and 39.4%.

Profit and Loss Account

Though the profits for the year have risen from Rs. 67.43 lacs to Rs. 72.61 lacs the extent of the increase would have been greater if we had observed a lower liquidity ratio. In disposing of the profit the Board have followed the same pattern as last year and transferred Rs. 30 lacs to the Reserve Fund, raising it to Rs. 2.35 crores, and added Rs. 4 lacs to the Gratuity Trust Fund which was newly set up with an initial contribution of Rs. 10,000/-. After allocating Rs. 14 lacs for bonus to staff the Directors have repeated the dividend of 12% less tax.

Capital Deposits Ratio

The subject of the ratio of paid-up capital and reserves of the banks to their deposits received the attention of the Reserve Bank of India and a proposal was put forward that this ratio should be gradually increased to 73% and the views of banks were invited. After discussion with the Indian Banks' Association the Reserve Bank of India

finally agreed that the matter should be regulated by a convention rather than by legislation and banks were required to transfer substantial amounts out of profits to published reserves and to supplement this action by increase of capital so as to bring the capital deposit ratio upto 6% within a reasonable period of time.

Our Bank has transferred every year substantial amounts to the Reserve Fund and you will notice from the Ten-year record of the Bank's progress annexed to the balance sheet that the Reserve Fund has grown from Rs. 67.50 lacs to Rs. 235 lacs over a period of ten years. But in spite of such substantial transfers to the Reserve Fund the ratio of paid-up capital and Reserve Fund to deposits has declined from 9.04% to 4.39% by reason of the steep increase in deposits. It was in the year 1945 that the Bank increased its subscribed capital from Rs. 2 crores to Rs. 4 crores and paid-up capital from Rs. 1 crore to Rs. 2 crores and the Directors feel that it is now expedient further to strengthen the capital structure of the Bank. With this object in view the Directors propose to increase the paid-up capital by the issue of 200,000 ordinary shares at a premium of Rs. 25 per share and when the issue is completed the capital funds of the Bank will improve by Rs. 1½ crores. This proposal can be given effect to only after obtaining the consent of the Controller of Capital Issues for which an application has already been made. You will be advised as soon as possible after the sanction of the Controller is

CAPITAL, 12th April, 1962

received of the steps which the Directors propose to take to implement the scheme.

It is a matter of gratification that deposits of the banking system have risen during the year under review contrast with the stagnation which characterised the previous year. The rate of growth of 8.5% was, however, not the same as in the first four years of the Second Plan period when deposits recorded a growth of 11.2%. It is in important that steps should be taken to attract more deposits to the banking system in order that the overvalued position disclosed by the scheduled bank return may be corrected and the bank may be enabled to meet the additional demands for finance that would inevitably arise with the progressive implementation of the Third Plan. The introduction of the Deposit Insurance Scheme, despite the fact that the amount of individual insured deposit is only Rs. 1,500, has already infused confidence in the stability of the banking system in rural and non-metropolitan areas where it had received a setback some time ago and the confidence will be reflected in due course in the speedy growth of deposits of individuals with the banks.

Inter-Bank Agreement on Rates of Interest on Deposits

A stable structure of reasonable interest rates on deposits is worthy of defence against attacks. In my statements for the last two years I had referred to the healthy influence of the inter-bank agreement on deposit rates. It is a matter of regret that some banks gave notice last year to resign from the agreement. While there may be room for a modest revision, it would be undesirable to permit a material departure from the structure of interest rates and permit more and more banks to quote higher rates of

CAPITAL, 12th April, 1962.

Interest. Almost all banks have a large network of branches operating all over India and they have attained more or less equal status because of the Deposit Insurance Scheme, the supervision of Reserve Bank of India and the proposed capital/deposit ratio. It is not understandable how a few banks can be given a preferential treatment for the purpose of quoting higher rates of interest on deposits simply because their deposits are, for the time being, less than those of some other banks. It must be remembered that the history of Indian Banking is full of instances of small and medium sized banks which have grown into large banks without any weightage in preferential rates of interest inter-se. The proposed differentiation in rates of interest on deposits for three types of banks goes against the spirit and foundation of inter-bank agreement. A scramble for deposits through the offer of higher rates of interest would create stresses which might lead to the abandonment of the agreement and reduction in the profit margin to the point of imperilling the building up of capital funds of banks to anything like the extent to which the banks are committed by the convention agreed to with the Reserve Bank of India. It is only through competitive development and extension of banking services and in the environment of stable interest rates and not in the atmosphere of a rate war that new deposits can be attracted. The non-nationalised banking sector should conduct its affairs in such a manner as to leave no room for further official control and regulation over its basic function of inculcating and spreading the banking habit and gathering the surplus funds of the public.

Mobilisation of Internal Resources

The Third Five-Year Plan is a challenge to the banks to meet the demands for finance which its implementation would generate. The Plan envisages a bigger programme of industrial development than its predecessor. At the end of the Third Plan industrial production is expected to increase by about 70% over the level at the end of the Second Plan. The general index of industrial production is expected to reach 329 (1950-51=100) in 1965-66 against 194 estimated for 1960-61. Estimates of the additional bank credit which industrial enterprises might require vary from Rs. 650 crores to Rs. 750 crores and the mean of the two figures may be taken as the probable requirement of industries in the private sector. Currency in circulation is also bound to expand during the Third Plan period and we may estimate the rise in circulation to be of the order of Rs. 1,000 crores. As the level of bank deposits at present is on a par with currency in circulation it could be reasonably assumed that during the Third Plan period bank deposits would also increase by Rs. 1,000 crores. In the United Kingdom the ratio of deposits to currency in circulation is 3.1.

To divert bank credit and currency in circulation into banking channels to an extent which would increase the proportion of bank deposits in relation to circulation should be the objective of banks so that the banks would not only be in a position to meet the demands of industry but also to play their traditional role of subscribing to Government borrowings in substantial manner. There must, therefore, be a drive to increase deposits by increasing banking service and branches of banks both in big cities and in rural areas. The recent trend in banking is to employ accretions to deposits in financing the increasing demand from industry and trade and partly because of absence of ready market for Government securities. The banks have to build up the portfolio of Government securities so as to improve the liquidity of the banking system. In addition they are also subscribing to capital and debenture issues of various financial institutions and providing long-term finance to industry.

The Third Five-Year Plan envisages more and more borrowing by Government and public bodies and to make these borrowings successful, attempts should be directed towards making Government securities freely marketable and the position of Reserve Bank and Life Insurance Corporation should

be used more towards making securities market really active.

Third Five-Year Plan

Turning to the prospective development in the Indian Economy, the Third Plan, which nominally at least has been launched, visualises an increase in the national income from Rs. 14,500 crores at the end of the Second Plan to Rs. 19,000 crores at the end of the Third Plan. For achieving this, the Plan visualises a total investment of Rs. 10,400 crores of which Rs. 6,300 crores is in the public sector and Rs. 4,100 crores in the private sector. The ratio of net investment to national income which is 11% at present is proposed to be raised to 14 to 15% at the end of the Third Plan. Though the Plan is a modest one I must confess to a feeling of diffidence about its successful fulfilment. The Plan itself appears from every test to be more like a list of programmes and cohesive than a properly laid out and coherent chart for progress. What really matters, however, are the targets of agricultural and industrial production. It is not easy to make a correct estimate or for that matter, any kind of estimate of total production, especially in the measure in a reasonable manner the economic credit of the nation as a whole. If, for instance, the targets for important items like food, agricultural raw materials, fertilisers, cloth, steel, petroleum, power, road and rail transport, coal and capital goods could be put over at the end of the Plan and measured they would give a clear idea of the measure of the increased prosperity of the people.

Preponderant Reliance on Foreign Aid

The circumstances in which the first year of the Third Plan has elapsed have been favourable enough, in that record agricultural production (buttermilk) under Public Law 480 and sustained increase in industrial production (though the rate of growth was somewhat lower than in the previous year) both ensured that. But the situation was under control. But the Plan's reliance on foreign assistance in preponderant, and the experience in the first year has clearly been that the finance and earlier assurances that we have obtained. We should be realistic enough to assume that we are unlikely to receive a blank foreign exchange cheque, and also that there will always be a gap between promises and performance in the matter of foreign aid. In the final analysis it is increased export earnings which will assure the country of continued progress achieved through planning. We cannot surely, for long, sustain increase in production, if our reserves do not even permit the import of industrial raw materials for feeding already existing and involuntarily idle units of production. Every incentive should be provided to the Indian entrepreneur to be a producer of industrial raw materials. Appropriate concessions will undoubtedly pay off in the form of enlarged exports.

Need to Step Up Exports

Foreign exchange plays an important role in the development plan because we have to import the "know-how", industries, and equipment for many. A careful assessment of the prospects of securing foreign exchange is primary to a correct assessment of the success of the Plan targets. Laudable efforts are being made to earn foreign exchange by exports and although there has been expansion of our exports in this regard at such vigorous rate as to justify full reliance on them. Moreover, there is even a limit to what India can afford to export. To permit exports at the cost of the home consumer, i.e., by starving the Indian people, cannot improve the prosperity of the country or the standard of life, however. Increase in the exports is, however, inescapable at present. More attention should, therefore, be directed towards finding out ways and means of reducing cost of production of exportable commodities to a competitive level and the factors that account for increase in the cost of such commodities should be

investigated and remedied at an early date.

Foreign Aid and Investments

The second source of foreign exchange is loans and aids which we were receiving from friendly countries during the Second Plan period and which we can hope to receive in an increasing measure for the Third Plan. The third source, and the most important and durable one, is foreign investments which are coming only in dribbels.

The total requirement of foreign exchange is likely to exceed the Plan figure and in my view might go up to Rs. 3,700 crores in place of Rs. 3,200 crores assumed in the Plan. This is a problem of the utmost gravity and should be solved. The answer is not to cut this or that item of the plan but to create an atmosphere to earn it. In my view it is not impossible to earn foreign exchange to the extent I estimate provided we create an atmosphere to earn it. Aids and loans will be major contributory factors for a long time to come but we must make a special effort to attract private foreign investment and we should also try to raise loans not merely on Government to Government level but also in the financial markets of the world. At present the conditions are not favourable but an atmosphere must be created in which it would be possible to raise loans in the course of time.

Problems of Fuel, Power and Transport

Apart from foreign exchange, there are other hurdles to the achievement of the targets. The chief of these are, coal, power and transport, all of which are in short supply thereby hindering the growth of the economy. I feel that there should be no ceiling for power production but that more power should be produced than is adequate to meet the existing demand completely so as to leave a great surplus of supply awaiting the growth of demands from potential consumers. Every concern that needs power for its own consumption should be freely allowed to set up its own plant can arrange for foreign finance on suitable terms for production of power he should be allowed to do so. Transport bottlenecks are in a way responsible for fall in production and increased inventory resulting in lock up of funds, which we can ill-afford today. Railways are not able to cope with the increased demands for transport and as such the development of road transport should be encouraged to further supplement the transport needs of the industry at reasonable rates. This alone would give impetus to progress, production and prosperity.

Administrative delays should also be eliminated and lengthy procedures in granting industrial licences should be very much simplified.

My diffidence also slightly increases in the matter of internal resources for the Third Plan. It is no secret that the tax effort, was, in the end, originally estimated, but not all the projects could be put through, and one of the reasons was inadequacy of internal resources. The fact is that non-plan expenditure has been allowed steadily to rise. For obvious reasons and in this case inevitably too, the cost of Defence Services rose to Rs. 302 crores in the Revised Estimates for 1961-62 as against the Budget expectation of Rs. 283 crores; and the figure for 1961-62 in the Budget, was itself some

Rs. 35 crores more than the actuals for 1960-61. It is all very well to term such non-developmental expenditure as essential to the security of this country. We have, however, to recognise the possibility of further drafts on our Budgetary resources for "contingencies" and administration charges. What, then, is the solution?

Always, the easiest way for Government is to raise fresh taxes. But there is a limit to the forms of taxation that can be introduced and to the rates that can be fixed. As it is, there is an estimate that new taxes introduced in the first year of the Third Plan constitute fully one-third of the target for the quinquennium. The caretaker Budget for 1962-63 has made clear the prospect of additional imposts. No doubt, the tax targets for the Third Plan will be fulfilled. But there is considerable doubt whether additional resources raised by taxes will be available for developmental projects. I strongly suggest that tax enforcement laws are made stricter so that collections can be tightened up; and the addition to revenues should, I fancy, be surprisingly large. Secondly, greater care than ever before needs to be taken to ensure that there is strict control over non-developmental expenditure, whether it be costs of civil administration or even, if I may be permitted to suggest, defence.

Let me add that the holding of the third general elections in this country is of portentous significance. The return of Congress to power will have assured our foreign friends that India has a political stability and maturity that is comparable to conditions in countries in which democratic practices have been prevalent much longer. It is, I may remark, stability, both political and economic, which is one of the prerequisites for luring foreign participation in the industrialisation of this or any other country. At the same time the emergence of the Swatantra Party as the largest body of opposition in the country will have brought home the truth to our foreign friends that democracy is effectively at work in India, in that there is perceptible evidence of the growth of an Opposition. Thus, proof of Indian democracy as attested to by the third general elections may conceivably result in greater inflow of foreign assistance, not only on a governmental level, but I hope on the private sector level as well. The Plan must be fulfilled at all costs.

Note: This does not purport to be a record of the proceedings at the Annual General Meeting.

REPORT OF THE AUDITORS

TO THE MEMBERS OF THE UNITED COMMERCIAL BANK, LIMITED.

We have audited the attached Balance-sheet of The United Commercial Bank, Limited, as at 31st December, 1961, and the Profit and Loss Account of the Bank for the year ended upon that date, annexed thereto, in which are incorporated the Branches audited by the Statutory or other Auditors. The reports on the accounts of the Branches audited by other Auditors have been forwarded to us and dealt with in preparing our report in the manner considered necessary by us.

We report that:

- we have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory;
- the transactions of the Bank which have come to our notice have been within the powers of the Bank;
- in our opinion, proper books of account, as required by law, have been kept by the Bank to far as appears from our examination of those books, and proper returns adequate for the purpose of our audit have been received from the Branches of the Bank;
- the Bank's Balance-sheet and Profit and Loss Account, dealt with by this report, are in agreement with the books of account and the returns;
- in our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956, in the manner so required for banking companies and, on such basis, the said Balance-sheet gives a true and fair view of the state of the affairs of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit for the year ended upon that date.

(To be submitted to the Shareholders of the Bank at the Fifty Fifth Annual General Meeting to be held at the Registered Office of the Bank, on Wednesday the 25th April, 1962, at 4 P.M.)

ONE HUNDRED AND NINTH REPORT

The Directors have the pleasure to submit the Balance Sheet and the Profit and Loss Account of the Bank for the year ended 31st December 1961. The Auditors' Report is also annexed.

2. The Net Profit of the Bank for the year amounts to Rs. 40,37,400.18 and together with the sum of Rs. 1,36,235.61 carried from the previous year's account, makes a total of Rs. 41,73,635.79.

3. Out of this sum, the Directors have made the following interim appropriations:—

	Rs.	nP.
An ad-interim dividend at the rate of 5% and a Bonus of 2% (subject to deduction of tax at the prescribed rates) was paid which absorbed	6,22,500	00
Transferred to Sinking Fund	3,00,000	00
The Directors now recommend that the following further appropriations may be made:		
To pay a final dividend of 5% and a Bonus of 2% (subject to deduction of tax at the prescribed rates) thereby making the dividend and bonus for the year amount to 15%	6,22,500	00
To transfer to the Reserve Fund other than under Sec. 17 of the Banking Companies Act, 1949	3,00,000	00
To provision for taxes	18,25,000	00
To transfer to Gratuity Fund	1,25,000	00
To transfer to buildings account	30,000	00
To carry forward	1,48,635	25
	41,73,635	25

4. The Bank rate remained unchanged at 4%.

5. An Office of the Bank was opened at Jamshedpur (Bihar) during the year.

6. By Order of the Central Government under Section 45 of the Banking Companies Act, the Rayalaseema Bank Ltd., was amalgamated with the Bank as from the 1st September, 1961. From that date, the branches of the Rayalaseema Bank Ltd., at Anantapur and Bellary are functioning as branches of the Bank.

7. In accordance with Articles 92 and 93 of the Articles of Association of the Bank read with Sec. 256 of the Companies Act, 1956, Directors, Dr. Rajah Sir M. A. Muthiah Chettiar of Chettinad, Sri O. M. SP. L. M. Meyyappa Chettiar, Sri Ramdoss Purushotham-doss and Sri T. Chengalvarayan retire this year by rotation and they being eligible, offer themselves for re-election.

8. Sri T. Chengalvarayan resigned his seat on the Board on 3rd November, 1961. In his place Dr. P. V. Rajamannar, D. Litt., LL.D., Chief Justice of Madras (Retired) was co-opted as a Director. Sri C. Ramasubban resigned his seat on the Board on 15th December, 1961. In his place Sri T. Chengalvarayan was co-opted as a Director.

9. The Directors regret to report the sad demise of Rao Sahib E. M. Muthappa Chettiar, Director of the Bank, on 31st December, 1961. Sri A. Nagappa Chettiar, Industrialist & Exporter, was co-opted in his place.

10. The Directors desire to record their high appreciation of the valuable services rendered by Sri C. Ramasubban and Rao Sahib E. M. Muthappa Chettiar to the Bank as Directors.

MONETARY POLICY: DEFECTS ANALYSED

Problems of Monetary Policy in an Underdeveloped Country. By J. D. Sethi. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 15, pages 336.)

The main reason why monetary policy in India has not achieved the same degree of success as fiscal policy is the doctrinaire adherence of the central banking authorities to the traditional weapons of control. Although many Reserve Bank governors have come and gone, there has been little rethinking on whether the basic policies of the Bank need to be modified according to changes in the economic situation. The mistakes in the official policy can be better appreciated and analysed by one who has expert knowledge of the subject, but does not serve in an official capacity in the Reserve Bank of India. The present reviewer recalls in this context the publication of a couple of monographs on monetary policy in India by some responsible officials of the Bank which, as far as their analysis was concerned, were not even a tactful and convincing defence of the official policy. In Dr. Sethi's book, which was submitted as a doctoral dissertation to London University, one gets not only an expert analysis of the limitations and usefulness of monetary controls in an underdeveloped economy like India, but also the reflections of a lively and inquisitive mind.

The author is not so convincing when he deals with the Keynesian analysis of the liquidity preference theory. After all, Lord Keynes did not want to make it a self-sufficient

monetary theory, but wanted to integrate it with his broader cyclical analysis. This apart, the discussion of the subject in an appraisal of India's monetary policy is remote, if not totally irrelevant. But it is when the author discusses the changes in monetary policy in postwar years that he shows his real insight into the subject. Dr. Sethi says that the importance of monetary policy will be less during the third plan due to the reduction in deficit financing as well as the supply of large foreign aid which will make monetary management less difficult than hitherto. The success of monetary policy in that case will be due not so much to the conscious direction of quantitative, qualitative or even selective methods of control, but purely to adventitious factors.

TRADE UNIONS

Trade Unions in a Free Society. By B. C. Roberts. (Published for the Institute of Economic Affairs by Hutchinson and Co. (Publishers) Ltd, 178-202, Great Portland Street, London W.1. Price 30s, pages 206.)

In this study of trade unions in the United Kingdom and the United States, Professor Roberts rejects the view that the faster rise in money incomes than in output, which has been a marked feature of many economies since the second World War, has been caused by the power of trade unions to force up wages. He contends that with full employment, it is competition among employers for scarce labour which

raises wages, or which—even if standard wage rates are pegged—forces up actual earnings. He points to some non-unionised occupations where earnings have risen faster than those in which unions are strong. Professor Roberts believes that the blame for the postwar inflation cannot be laid at the door of the unions. In the United States, where the history, organisation and outlook of trade unions are different from those in Britain, the problems are also dissimilar. There the need is for a better check on the almost unlimited powers of senior officers of unions, a much greater regard for scrupulousness or even morality in their methods, and above all the removal of the atmosphere of bitter hostility in which negotiations between employers and unions often take place. Professor Roberts, however, puts his hopes in a gradual amelioration of the militant attitude of American trade unions and a change in their outlook to something nearer that of Britain. The book is written in a lucid style, and even difficult arguments are pleasant to read.

COMPANIES ACT

Index to the Companies Act, 1956. By L. K. Sen Chowdhury. (Published by Queen Stationery Stores Private Ltd, 63E Radha Bazar Street, Calcutta 1. Price Rs. 5, pages 83.)

Although not original in itself, this work—as the author himself says in the preface—is the first of its kind published in India. In this country, many good legal books lose their value for want of an index, let alone a good index. The need for the latter with cross-reference to various sections of the Companies Act, containing more than 600 sections, has been felt for long by all those who have had occasion to deal with this statute, and particularly by members of the legal profession. Mr. Chowdhury's work fills that gap.

Further additions and corrections have been made in the four pages of addenda. The excellent get-up, good printing and the reasonable price may make this work popular.

INDUSTRIAL ESTATES

Industrial Estates. By William Bredo. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 15.50, pages 270.)

In Dr. Bredo's study, the industrial estate is treated as an institutional technique potentially useful to any major industrialisation programme. To provide guidance to the economic planner and administrator, the principles involved in developing industrial estates are illustrated with reference to actual case experiences. The approach is from an economic rather than a technical point of view. While a positive rôle can be played by industrial estates in the industrialisation of the newly developed countries, careful advance planning is needed to ensure that the estates are properly located, that manufacturers are prepared to use the facilities offered by them and that the costs of establishing them are not unduly high. There may often be a temptation to overbuild and to make the scope of the estates more comprehensive than an economy in the early stages of development can afford.

But one may ask: why does the Guindy (Madras) industrial estate contain so many excellent and ornate flower beds? Why is there such a scramble for a shop in the industrial estate in Thana? In the Kerala Legislature, a practical-minded member asked the other day: "Since most of the shops in our industrial estate are empty, why not the Government lease them out for tapioca cultivation?"

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Wednesday, 11th April.

THE general level of advances in the Calcutta money market has shown a fairly substantial increase during the past week. The main rise has been in the accommodation given to the iron and steel industry. But cotton, sugar and jute credit has also gone up slightly. Advances for food grains and seeds show a minor rise. In the interbank market, conditions have eased further and the call rate has fallen to 4½ percent, with occasional transactions reported at as low as 4 percent.

The exchange market generally has been quiet, with hardly any tea bills passing. Gunny bills too were scarce in the beginning, but some large ones have arrived towards the close. The demand for remittance has been strong. Sterling is well maintained in relation to the dollar and the Continental currencies.

BULLION WAS STEADY DURING THE past week. Bulls bought on hopes of an improvement in demand. Silver rose from the previous week's level of Rs. 257.50 to Rs. 260.50, quoted today for ready delivery. The rate for forward delivery was quoted at Rs. 217.75. The London and New York prices were 84½ and 101 cents. Gold increased in sympathy with silver. The price was quoted at Rs. 144.25, against Rs. 142.75. The sovereign at Rs. 99.25 showed a gain of 25n.p.

DURING THE WEEK ENDED 6TH APRIL, Government of India Treasury bills for Rs. 71,51,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 10th April. The total amount offered was Rs. 2,07,00,000. Tenders at Rs. 99.340 percent were allotted approximately 97 percent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.640 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to 11 a.m. on 16th April.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 11th April to 14th April at Rs. 99.356 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 4th April to 7th April amounted to Rs. 1 lakh only.

THERE WERE RISES OF RS. 56.86 crores to Rs. 2,152.53 crores in the total note issue and of Rs. 62.75 crores to Rs. 2,133.05 crores in active notes, according to the return of the Reserve Bank of India for the week ended 6th April, 1962. The currency expansion was adjusted by raising rupee securities of the paper currency reserve by Rs. 55 crores to Rs. 1,802.14 crores. In the Banking Department, deposits of the Central Government rose by Rs. 2.31 crores to Rs. 73.61 crores while other Government accounts fell by Rs. 9.09 crores to Rs. 6.80 crores.

Balances of commercial banks at Rs. 86.18 crores showed a rise of Rs. 13.45 crores. Balances held abroad again declined by Rs. 4.51 crores to Rs. 11.33 crores. Investments rose by Rs. 4.40 crores to Rs. 167.83 crores. Other loans and advances fell from Rs. 177.69 crores to Rs. 152.41 crores, of which advances to scheduled banks against advance bills amounted to Rs. 24.74 crores. Ways and means advances stood at Rs. 95.53 crores, against Rs. 80.89 crores.

THE STATE BANK OF INDIA for the week ended 30th March, 1962, showed a rise of Rs. 12.33 crores to Rs. 572.28 crores in total deposits. Investments in Government securities are up by Rs. 11.64 crores to Rs. 254.28 crores, while other investments are down by Rs. 2 lakhs to Rs. 9.06 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 3.84 crores to Rs. 286.84 crores. Cash and balances are, in consequence, shown at Rs. 18.95 crores, or Rs. 6.16 crores less.

THE STATEMENT OF THE POSITION of scheduled banks for the week ended 30th March, 1962, shows Demand and Time liabilities at Rs. 907.92 crores (Rs. 19.14 crores on Rs. 907.92 crores (Rs. 19.14 crores on Rs. 1,070.90 crores (Rs. 13.29 crores), compared with Rs. 881.28 crores (Rs. 16.40 crores) and Rs. 1,169.43 crores (Rs. 15.65 crores), respectively, in the previous week. Cash has declined by Rs. 2.53 crores to Rs. 48.80 crores, while balances with the Reserve Bank have increased by Rs. 2.29 crores to Rs. 74.32 crores. There is a rise of Rs. 10.28 crores to Rs. 601.46 crores in investments. Advances and bills discounted, at Rs. 1,418.31 crores, show an increase of Rs. 13.28 crores. The increase of Rs. 13.28 crores in cash and ratios to total liabilities of cash and balances, are, in consequence, shown counts, are, in consequence, shown against 5.9 percent and 68.2 percent, against 6.1 percent and 68.5 percent.

THE INDIAN BANK LIMITED, MADRAS—Cont'd.

AUDITORS' REPORT

We have audited the above Balance Sheet of The Indian Bank Limited as at 31st December 1961 and also the above Profit and Loss Account of the Bank for the year ended on that date with the books of account of the Head Office and Branches other than those in Malaya and Singapore, the accounts of which were audited by auditors qualified under the laws of those countries. We report that:—

- We have obtained all the information and explanations which to the best of our knowledge and belief were necessary for the purpose of our audit.
- Such information and explanations have been found to be satisfactory.
- The reports on the accounts of the branches in Malaya and Singapore audited by the other Auditors have been taken into consideration in making this report.
- The transactions of the Bank as have come to our notice have been, in our opinion, within the powers of the Bank.
- In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956 in the manner so required subject to the note appended to the Balance Sheet.
- In our opinion,
 - The Balance Sheet gives a true and fair view of the state of the Bank's affairs as at 31st December 1961.
 - The Profit and Loss Account gives a true and fair view of the Profit and Loss for the year ended that date, and shows a true balance of profit for the period covered by the audit.
 - Proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and
- The Bank's Balance Sheet and the Profit and Loss Account dealt with by the Report are in agreement with the books of account and returns.

3,

PRICES DROP: MARKET EXPECTS MORE TAXES IN THE BUDGET

Wednesday Evening.

SHARE prices have been marked lower at today's settlement in the Calcutta stock market, because operators are anxious to reduce commitments before the Central Budget which will soon be presented to Parliament. The carry-forward charges are slightly higher as bank credit has become tighter due to the busy season demand.

Earlier in the past week, sentiment improved as enquiries broadened. The higher production and despatch figures of the Indian Iron and Steel Company for March were welcomed. At first, hopes of a rights share issue by Indian Iron helped to lift prices, but the possibility of such an issue in the near future has been ruled out in a circular letter of the Company to its shareholders. The enthusiasm of operators has also been chilled by a Press report that the announcement of the new steel retention prices will be delayed.

At the close, sentiment has weakened and share prices have fallen. The announcement of the new Central Cabinet has had virtually no effect. Although the stock market is pleased about the continuation of Mr. Morarji Desai as the Finance Minister, support has declined to a trickle. As the new Central Cabinet consists largely of members of the former Cabinet, it is thought that there will be little change in official economic policy. In the circumstances, the long-term trend is expected to be upwards.

For the time being, there has been substantial bull liquidation because operators want to reduce commitments as far as possible before the Central Budget. It is generally agreed that the Budget will have to raise a substantial amount of revenue by imposing fresh taxes. The stock market is not sure whether new direct taxes will be avoided.

A redeeming feature is that there is little selling pressure. But, in the absence of support, even small sales have reduced prices sharply. Investors are inclined to take a fairly optimistic view of the long-term trend. Recent company reports show that in spite of various difficulties, turnover and profits have improved. Considering that India is likely to obtain more foreign aid when the Aid-India Club meets at the end of next month, the outlook for the corporate sector is considered satisfactory. Domestic industry will meanwhile enjoy the benefit of a sheltered internal market due to the restriction on imports.

The steady support for jute shares during the past couple of months is a helpful factor for the stock market. Large investments have been made in this industry. Hence an improvement in the prices of jute shares is likely to promote confidence in the Calcutta stock market as a whole.

Indian Iron have closed at Rs. 24.90. Among engineering shares, Guest, Keen, Williams have fallen sharply due to the cut in the ordinary dividend. Jessop, Britannia Engineering, Kumardhubi and Texmaco have declined. Braithwaite have been steady on prospects of a bonus issue. Burn and Indian Standard Wagon have reacted due to profit-taking.

Turnover in miscellaneous industries has declined, and prices have fallen. Indian Copper, Indian Aluminium, Indian Cable, Dunlop Rubber and Hindustan Motors have

declined. In spite of a good report, Orissa Cement are being offered freely at lower prices. Kesoram Industries and Rohtas have weakened. Union Carbide and Goodyear India have declined. Scattered support has been forthcoming for India Carbon. Dr. Paul Lohmann and S. S. Duncan. The listing of Indian Tack and Nail has been greeted by substantial support for the shares.

The support for selected jute shares has been maintained as the prices of gunnies have been steady. The decision of the Indian Jute Mills Association to permit full-capacity working up to the end of May has had a good effect. Interest is being taken in Fort Gloster, Northbrook, Barnagore, Bally, Nuddea, Kankannarah, Kamartaty, Reliance and Union. Birla have reacted on profit-taking.

Coal shares lack interest and prices generally have fallen. The chairman of the Bengal Coal Company has pointed out how the working of collieries is being hampered by the shortage of transport, power, spare parts and explosives. Burrakur, East Indian, Central India and Pench Valley have slipped back. Ranee-gunje have been steady on interested support. New Beerboom have declined after paying a smaller dividend on the increased capital.

Prices of cotton mill shares have fallen due to the predominance of sellers. J. K. Rayon, Bharat Commerce, Dunbar, Bowreah and Elgin are being sold freely.

Bank shares have been steady with turnover restricted. United Commercial Bank are being supported on producing good results. United Bank of India and Punjab National have been steady.

In the sugar section, Dyer Meakin Breweries are being taken on rumours of a bonus issue. Prices of other sugar shares have declined in the absence of support. Ramnugger Cane, Belsund and Carew have weakened. Cawnpore Sugar are being sold on passing the dividend.

The earlier steadiness in paper shares has not been maintained at the close. Orient, Titagur, Ballarpur, Shree Gopal and Sirpur have declined.

Reports of dry weather in the tea districts have induced selling in tea shares. Prices of Doars and Darjeeling gardens have fallen sharply. Hasimara, Hantapara, Huldibari and Bishnauth are being sold at lower prices.

Business in Government securities has been limited, but prices are being maintained, especially by official support. Scattered interest has been taken in short and medium-dated stocks. The 3 percent Conversion loan 1986 is being quoted around Rs. 71.

The recent issue of shares worth Rs. 29.50 lakhs by the Elecon Engineering Co. Ltd has been over-subscribed.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate total production of iron and steel at the steel works in Jamshedpur during March 1962 was: iron 1,647,800 tons; steel ingots 1,643,400 tons; semi-finished

steel for sale 393,200 tons; and finished steel 924,500 tons.

Bombay Market

NARROW FLUCTUATIONS IN EQUITY VALUES

CABINET ANNOUNCEMENT WELL RECEIVED

Wednesday Evening.

THE Bombay stock market was quiet during the past week. Turnover declined considerably and fluctuations were narrow. Although the market was satisfied with the composition of the new Central Cabinet, there was virtually no reaction. Operators were not inclined to extend commitments since the Central Budget was only a few days ahead. Although the retention of Mr. Morarji Desai as the Central Finance Minister was welcomed, it was taken for granted that there would be more taxation.

There was, nevertheless, no selling pressure. Any small selling appeared to reduce prices out of proportion to its significance. Bears were cautious in view of the good corporate news. Many cotton mills published satisfactory reports for the year ended December 1961, showing that production rose and profits improved. Some companies also paid higher dividends.

Tata Steel were maintained at Rs. 140.75 because production and despatches of the Company were higher in March than in February. Indian Iron were subbed at Rs. 25.05 on selling from Lyons Range. Among engineering shares, Alcock Ashdown were supported on reports of good working. Tata Locomotive were done at Rs. 350 and Premier Construction at Rs. 174. Mahindra and Mahindra were steady at Rs. 18.12 on expansion prospects and Mukand Iron were bought at Rs. 28 by informed parties. Motor-vehicle shares were quiet, and Hindustan Motors declined to Rs. 20.04. Business was done in Premier Automobiles at Rs. 130.

Cotton mill shares showed mixed trends. Century were supported at Rs. 633 on producing good results by maintaining the ordinary dividend on the increased share capital. Kohinoor were bought at Rs. 311 and Gokak at Rs. 230 because the two Companies paid higher dividends for 1961. Simplex came to hand at Rs. 175.50 and Tata Mills were dealt in at Rs. 81.70. Finlay were transacted at Rs. 342 and Morarjee were done at Rs. 422. Standard were sold at Rs. 1,056 but Svadeshi were wanted at Rs. 295. India United ordinary met with support up to Rs. 23.36, but Apollo were sold freely down to Rs. 2.56.

In the miscellaneous section, sugar shares declined on selling pressure. Belapur fell to Rs. 237.50 and Phalton to Rs. 112.25. Walchandnagar Industries were available at Rs. 163. Steamship company shares were quietly steady on hopes of an increase in coastal freights. Scindia Steam were bought at Rs. 13.20 and Great Eastern Shipping were transacted at Rs. 14.12. Mining shares were quiet, and Shivrajpur Syndicate were available at Rs. 39. Cement shares were dull, and Associated Cement were wanted up to Rs. 159.50. Business passed in Digvijay at Rs. 208. Bombay Burmah were steady at Rs. 658.50 on rumours of a bonus issue. Rayon shares

Designed to suit your special needs!

Designing and engineering are the very core of Voltas organisation and service. Voltas have six independent, self-sufficient Engineering divisions—electrical, mechanical, agricultural and construction equipment, textile and paper machinery, machine tools and air conditioning and refrigeration. Activities include the import, distribution, designing, manufacture, erection and servicing of internationally famous machinery and equipment. Manning the various divisions is a powerful force of trained and experienced personnel—expert engineers, designers, technicians, mechanics, servicemen—mobilised to answer your particular needs in the best tradition of Voltas service.

When expert engineering is required **VOLTAS IS THERE**

VOLTAS

VOLTAS LIMITED, Head Office: Bombay 1

Calcutta • Madras • New Delhi • Bangalore • Cochin • Ahmedabad • Secunderabad • Kanpur
Jaipur • Nagpur • Bhopal • Patna • Lucknow • Coimbatore • Madurai • Vijayanagar

Briefly, Voltas' activities comprise:

Marketing and Distribution of goods:

Representing leading manufacturers, both foreign and Indian, Voltas supply a wide range of goods—Electrical, and Mechanical, Air conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.

Manufacture and Development:

Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!

Service:

Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation

turned quiet at the close due to profit-taking. National Rayon were indicated at Rs. 558 and Baroda Rayon at Rs. 147.50. Gwalior Rayon were firm at Rs. 57 on prospects of expansion. Voltas came to hand at Rs. 287 and Tata Oil were steady at Rs. 85.50. Chemical shares were quietly steady, and Tata Chemical were in demand at Rs. 17.52. Polychem were firm at Rs. 212.50 and Colour-Chem at Rs. 17.48. Indian Dyestuff were done at Rs. 513.75. Synthetics and Chemicals were bought at Rs. 225 on prospects of a rights issue. Ceat Tyre weakened to Rs. 197.50, but Hindustan Lever were firm at Rs. 73.30 on issuing bonus shares. Permanent Magnets were placed at Rs. 255 on a report that the construction of the factory was making good progress.

Bank shares were slightly quiet due to profit-taking. Bank of India were done at Rs. 120 and Central Bank at Rs. 67. Bank of Baroda were indicated at Rs. 115 and Dena Bank were steady at Rs. 70.30 on proposing to issue rights shares at a modest premium. Among insurance shares, New India Assurance were steady at Rs. 67.

There was scattered interest in selected electric company shares. Ahmedabad were placed at Rs. 93.80 and Bombay Suburban were dealt in at Rs. 102.25. Tata Power came to hand at Rs. 1.115 and Tata Hydro at Rs. 112.75.

Madras Market

OPERATORS REDUCE COMMITMENTS GROWING SHORTAGE OF FUNDS

Tuesday Evening.

THERE was an appreciable decline in turnover in the Madras stock market during the past week. The general inclination was to wait until the Budget uncertainties were over. Prospects of heavier taxation induced caution. There was also evidence of a growing shortage of funds, because substantial amounts had been diverted to rights issues.

Business in Government securities was small, although fluctuations were narrow. Bank shares were quiet, but support was forthcoming for good electric company shares. Sugar shares were bought selectively and interest was taken in Deccan and E.I.D. Planting shares were generally quiet. Tea shares were sold due to the decline in the price of the commodity. Coffee and rubber shares were not fancied because the marketing outlook for the commodities was considered uncertain. Textile shares were dealt in cautiously due to the growing shortage of cotton. In the miscellaneous section, attention was concentrated on selected cement and chemical shares due to hopes of expansion.

Among banks, Andhra came to hand at Rs. 100 and Indian Bank were done at Rs. 180 on maintaining the dividend. Business passed in Indian Overseas at Rs. 179 and in Punjab National at Rs. 21.87. Among electric company shares, South Madras met with support at Rs. 10.15 and West Coast at Rs. 16.12. Ellore were placed at Rs. 22 and Negapatnam at Rs. 12.10.

In the sugar section, E.I.D. improved to Rs. 40.25 on expansion plans and Deccan were bought at Rs. 10.08. United Breweries were steady at Rs. 82.25 and Mysore at Rs. 53.40. India were placed at Rs. 10.35 and Travancore at Rs. 6.93.

Among planting shares, Blue Mountain were transacted at Rs. 2.62 on reports about the diversification of activity. Cochin Malabar were quiet at Rs. 7.10 and Consolidated Coffee at

Rs. 18.06. Udayagiri were placed at Rs. 19.50 on a report that its Ashley estates were being sold for Rs. 8.10 lakhs. Oucherlony weakened to Rs. 3.93 and Periakaramalai to Rs. 3.33. Peermade were easier at Rs. 19.25 and Peninsular at Rs. 22.10. Teekoy were steady at Rs. 5.45 and Thirumbadi at Rs. 1.63. United Nilgiri were dealt in at Rs. 20.25 and Coonoor at Rs. 23. Emerald Valley were transacted at Rs. 5.25 and Kil Kotagiri at Rs. 5.03. Lucky Valley declined to Rs. 10.50 and Mysore Coffee to Rs. 5. Nilgiri were quietly steady at Rs. 8.40 and Nonsuch at Rs. 22.37. Coffec Lands were weaker at Rs. 14.50 and Badra at Rs. 3.15.

Among textile shares, Anglo-French were steady at Rs. 147 on paying a taxable ordinary dividend of 16 percent. Cannanore were bought at Rs. 133 on hopes of a satisfactory dividend. Bangalore Woollen were dealt in at Rs. 267 and Buckingham at Rs. 264. Tirupati came to hand at Rs. 14.85 because the Company proposes to issue rights shares for Rs. 10 lakhs. Lakshmi were quoted at Rs. 166.50 and Madura at Rs. 40.15. Rayal-assemma were wanted at Rs. 175 and Ramakrishna at Rs. 250. Travancore Rayon were easier at Rs. 43, but South India Viscose attracted support at Rs. 185.50. Vijayalakshmi were steady at Rs. 111 on declaring a taxable ordinary dividend of 12 percent. Kothari were bought at Rs. 13.15 on paying a taxable dividend of 8 percent. Kadri were placed at Rs. 140 and K. Rajendra at Rs. 79.50. Mettur were dealt in at Rs. 398 and Premier at Rs. 330.

In the miscellaneous section, Aluminium Industries were steady at Rs. 23.65 and Ashok Leyland at Rs. 8.93. Binny were bought at Rs. 375 and Canara Workshop at Rs. 30. Dalmia Cement met with support at Rs. 13.75, but F.A.C.T. were easier at Rs. 8.10. Enfield were quoted at Rs. 12.05 and India Cement were wanted at Rs. 5.92. Kiroloskar Electric hardened to Rs. 20 and Madras Rubber to Rs. 21.50. Mettur Chemical were steady at Rs. 13.05 and Ogale Glass at Rs. 6.50. Parry's Confectionery were indicated at Rs. 4.48 and Seshasayee Paper at Rs. 8.45. Spencer were dealt in at Rs. 24 and business passed in Standard Motors at Rs. 16.75. Tube Investment were bought at Rs. 289 and Textool were quoted at Rs. 184. Madras Cement were done at Rs. 92 and Madras Lamp at Rs. 32.20.

WYMAN GORDON INDIA LIMITED

also
Heavy duty grey iron (Meehanite) precision castings for all types of equipment; specific parts include cylinder heads and liners, oil valves and cylinders, stationary engines & textile machinery parts, as also machine tool bodies, brake drums, gears, journal housings, pulleys, etc.

We are equipped to manufacture precision and complex forgings upto 150 lbs. and castings of 3 tons each.

The requirements of the customers for heavier and complex forgings can be met through our collaborators, Messrs Wyman-Gordon of U.S.A.

We welcome enquiries for forging and casting requirements, and our technical staff will gladly advise on any problems connected with Closed Die forgings and precision castings.

London Market

PRICES ADVANCE AS OUTLOOK IMPROVES

BUDGET ENCOURAGES INVESTORS

London, 11th April.

THERE was a marked improvement in the stock market in the past week, and substantial gains were recorded in the domestic equity sections. Following the long period of generally dull and uninteresting conditions, buyers returned to the market a few days before the Budget on the view that it would not be as bad as previously feared. This view was induced by the optimistic statements by Government spokesmen on the export outlook, the excellent gold reserve figures, and the persistent strength of sterling in foreign exchanges. In the event, this view proved correct. The Budget as a whole was favourably received in the Stock Exchange, and even the long-awaited capital gains tax turned out to be as reasonable as could have been expected in the circumstances. The Budget brought no rush of business and no runaway in prices—the capital gains tax was responsible for this—but the advance which had started in the middle of the previous week continued, at least for a while. By mid-morning, on the day after the Budget, however, prices appeared to be reacting in places and some of the post-Budget gains were lost. Nevertheless, compared with the previous week's levels, a broad and striking advance was recorded in domestic industrial, banking, insurance and property shares. The purchase tax reductions announced in the Budget brought a further advance in such shares as motors, radios, television and domestic appliances, which added to their pre-Budget gains, while tobacco, brewery, and wine shares responded to the absence of any further imposition. Soft drink, ice-cream and sweets shares were marked down sharply at first on the tax proposals, but subsequently rallied in places. There was nothing in the Budget to help gilt-edged securities, which had been quiet prior to the Chancellor's statement and drifted lower afterwards. Mining shares were quiet throughout and prices were inclined to ease. Oils were inclined to be higher, helped by the absence of any increase in taxes, but rubbers and teas attracted little attention and showed little change, on balance.

New Delhi

High-level Official Team to Prepare Development Plan for Goa

(FROM OUR NEW DELHI CORRESPONDENT)

A HIGH-LEVEL mission representing the Central Ministries of Finance, Commerce and Industry, Heavy Industries and Steel, Mines and Fuel, Transport and the Planning Commission, will shortly leave for Goa to prepare a five year plan for that enclave. This plan, when finalised, will form part of India's third five year plan. Goa's prosperity has been based on the import of consumer goods, which by and large used to be smuggled into India, and on iron and manganese ore exports to Japan, West Germany and Italy. In 1961, for example, the former rulers earned 110 million deutschmarks from West Germany, exporting iron ore worth 130 million deutschmarks and importing largely consumer goods worth 20 million deutschmarks from that country. In 1960, Goa exported 5.5 million tons of iron ore, including 2.6 million tons to Japan, 2.1 million tons to West Germany and 500,000 tons to Italy. In 1961, iron ore exports stood at 6.5 million tons, including 3.5 million tons to Japan, 1.9 million tons to West Germany and 700,000 tons to Italy. Goa's share was 2 percent of the total West German iron ore imports. The 1961 price of the ore was 35s a ton.

Apart from the planned exploitation of Goa's mineral resources, the establishment of a steel plant there is also visualised. The plant will be based on imported coal. Goa's iron ore needs blending, for which arrangements will have to be made. It has one of the best natural harbours on the western coast. It could be developed into a major port, but it has first to be linked by road to the hinterland.

French Technical Mission

The chairman of the Compagnie Francaise pour la Diffusion des Techniques, M. Antoine Pinay, visited New Delhi last week. He led a mission consisting of: Mr. Krivitzky, secretary-general, Sofremines (mining); Mr. Porchez, chairman and director general, Sofrerail (railways); Mr. Gruet, delegate of Sofrelec (power); Mr. Amsler, chief engineer, Sofregaz (gas and natural gas); and Sofre Transport Urbain (urban transport).

M. Pinay's Company is a consortium of consulting firms. The mission came to India to offer services for preparing project reports, advise on the suitability of equipment required and assist in the running of projects in the initial stages. M. Pinay was hopeful of arranging credit if his Company is entrusted with the preparation of any project report.

Making More Lorry Chassis

The Central Government has approved the expansion schemes for the manufacture of lorry chassis, from 6,000 to 15,000 a year, for Hindustan Motors and from 7,000 to 12,250 a year for Premier Automobiles. The former, it will be recalled, manufactures Bedford lorries and the latter Dodge-Fargo lorries. The expansion has been approved to meet the growing demand for transporting goods by road.

Aluminium in Public Sector

The Central Government has accepted in principle the project of

the Industrial Development Corporation, New Delhi, to set up a plant in the public sector for the manufacture of 100,000 tons of alumina and 25,000 tons of aluminium ingots. The project will be located in Madhya Pradesh, and will have Hungarian collaboration and credit. It will be based on the power to be produced at the proposed thermal station near Korba.

Broad Looms for Jute Mills

The Government has approved the scheme to license over 250 broad looms for the jute mills, provided the foreign exchange involved in the imports comes from export earnings.

Manganese Metal and Dioxide

The Central Government has approved a number of schemes for the manufacture of manganese metal and manganese dioxide. A committee was recently set up by the Ministry of Commerce and Industry with its Joint Secretary, Mr. R. V. Raman, as chairman, to examine various schemes and make recommendations. This committee pointed out that India was short of most non-ferrous metal ore reserves, except aluminium. There were, however, large deposits of manganese ore which could replace other scarce non-ferrous metals, such as nickel. Electrolytic manganese is used in the manufacture of nickel-free stainless steel, headfields manganese steel and coinage.

Moving Coal by Road

The Working Group on Coal Production and Transport, set up by the Planning Commission, has made some valuable suggestions for moving coal by road and sea, and for linking industrialisation with coal production and transport. After considering the possibility of moving more coal by road from the Bengal-Bihar coalfields to relieve the pressure on the railways, it says: "The Coal Controller was requested at the first meeting of the Working Group held on 20th September, 1961, to give a list of the consumers located within 25, 50, 100 and 150 miles of the within 25, 50, 100 and 150 miles of the coalfields. The Ministry of Transport and Communications (Roads Wing) later examined the possibility of supplying the coal requirements of these consumers by road. The of these consumers by road. The present annual requirements of consumers within distances up to 150 miles of the coalfields are estimated as follows:

0 to 25 miles	... 3 million tons;
25 to 50 miles	... 4 million tons;
50 to 100 miles	... negligible;
100 to 150 miles	... 7 million tons;

"Of the total quantity of about 14 million tons of coal moving up to distances of 150 miles from the Bengal-Bihar coalfields, about 3 million tons move by road—consisting of 2 million tons moving a distance of 25 miles or less and 1 million tons, moving between 100 and 150 miles, namely, from the coalfields to Calcutta. The remaining 11 million tons move by rail. The Working Group considers that, on the whole, after the necessary road capacity has been developed, it should be possible to move an additional 2 million tons

of coal by road from the Bengal-Bihar fields over and above the present road movement of 3 million tons. There may, in addition, be some possibility of road movement from the coalfields in the direction of Uttar Pradesh, but the Working Group has not been able to make any detailed study of it.

Freight Rates Compared

"The Working Group examined the relative economics of rail and road haulage of coal within distances of up to 150 miles. The actual freights charged by road and rail at present are reported to be as follows:

Distance (miles)	Rs. a ton	
	Rail	Road
25	5.25	5.00
50	5.63	10.00
75	6.07	15.00
100	7.11	20.00
150	9.63	30.00
Raniganj to Calcutta 120	8.10	24.00

"The rail costs indicated above, however, do not indicate the terminal costs of loading and unloading and of local transport from railway stations to the sites, etcetera. It is, therefore, felt that the factories which do not have railway sidings and the other small consumers may find it to their advantage to get coal by road within distances of up to 50 or even 75 miles. As for the movement to users in Calcutta city and its suburbs, the cost of transport by road could be reduced substantially if the movement took place by 11-ton truck-trailer combinations. The cost of hauling coal by such combinations is estimated at 8p a ton-mile for a 100 percent load factor or 16p a ton-mile for a 50 percent load factor in the event of no return traffic being available. Over a distance of 120 miles between the Raniganj coalfield and Calcutta, the cost of moving coal by road at 50 percent load factor will come to Rs. 19.20 a ton. To the extent that a return load for these trailers is available, this figure will be reduced. The difference between the rail freight of Rs. 8 a ton and about Rs. 19 a ton by road will be reduced to the extent that rail movement would involve the additional cost of loading and unloading at terminal points and the cost of local transport by road.

Planning Railway Capacity

"While the Working Group has no doubt that with the improvements suggested, the quantity of coal moving by road will increase, has considered it advisable not to allow for this in assessing the requirements for rail transport of coal for the third plan period. This will avoid the risk of any under-planning of railway capacity, and the additional capacity which may be available in this region could, in any case, be used for other traffic.

"No detailed examination has been so far made about the possibility of road movements from the outlying fields. The total short-distance movements from these fields for the last year of the third plan are estimated at 4.3 million tons. These include movement of coal by rail to the power houses in Satpura, Obra,

Talcher and Khaperkheda. For the Korba power house, coal is transported by rail, but the rolling stock for the purpose is provided by the Madhya Pradesh Electricity Board. As for the coal requirements of the Satpura, Obra, Talcher and Khaperkheda power houses, the possibility of supplying them by road will need detailed examination.

Movement from Dumps

"There is yet another field in which road transport will have an important part to play, and that is in moving coal from the dumps to the ultimate points of destination. The entire scheme of rail movement of coal for State-controlled priorities is based on the movement of full rakes of box wagons from the collieries to the dumps to be located at appropriate places. The movement from these dumps to the ultimate points of destination will have to depend largely on road transport. The actual volume of road movement that may have to be organised will be known only after the results of the studies about the location of dumps are available.

"According to the decision of the Cabinet, 2 million tons of coal a year are required to be moved by sea from Calcutta to south Indian and west Indian ports. To move this quantity, about 30 sailings a month are required, of which 19 sailings are required for south Indian ports and 11 for west Indian ports. On this basis, the minimum number of ships required, as calculated by the Coastal Conference of Shipowners, comes to 43. The Central Transport Ministry, in fact, thinks that the requirements, after allowing for such factors as delays in the turn-round of ships, detentions at ports, etcetera, will be 50 ships.

Purchase of Ships

"As for the purchase of ships, the main difficulty so far has been the non-availability of foreign exchange. The entire requirements of coastal ships have to be met by imports because the capacity of the Hindustan Shipyard is fully booked up to the end of the third five year plan period for vessels intended for overseas operations, and the yard cannot easily undertake the building of coastal vessels which will have a different design. The early completion of the second shipyard in Cochin assumes added urgency in this context. Even if all the ships are to be acquired second-hand, the requirement of foreign exchange for 22 ships at the rate of Rs. 60 lakhs a ship would be Rs. 132 crores. Although a sum of \$10 million from the Yugoslav credit has been allotted for the acquisition of ships, so far it has not been possible to use this sum except for one new construction. The reason for the non-utilisation of this credit is that suitable second-hand ships are not available. As for new construction, Indian shipowners are reluctant to go to Yugoslavia because they have had no experience of that country's shipyards, and, secondly, the prices quoted by Yugoslav shipyards are not competitive.

"The Working Group is, therefore, strongly of the view that the foreign exchange required for the acquisition of additional tonnage of the order mentioned above, should be released and, if necessary, free foreign exchange should be made available for this purpose. It is very important to achieve the target of 2 million tons of coastal movement of coal, if industries in western India particularly are not to be starved of coal, and hence the additional ships should be acquired as early as possible. If private shipping companies cannot be persuaded to purchase all the additional ships required on the coast, the Working Group would recommend that the Government Corporation

should acquire coastal ships so as to make the total tonnage adequate for the movement of 2 million tons of coal a year.

Transport by Canal

"The Working Group has also considered the possibility of coal movement in the Calcutta direction by the Durgapur canal in the third plan period. At one stage, the Damodar Valley Corporation authorities had estimated that about 2 million tons of coal a year could be moved by this canal. The arrangements for using the canal for the movement of coal, however, have not so far been considered in detail. The Planning Commission is understood to have recently asked the Ministries of Transport and Communications and of Irrigation and Power to consider the arrangements. One of the questions which requires to be considered in detail is how and at what cost coal can be moved from the coalfield to the canal before it is transhipped to the barges. Until this is known, it will be difficult to suggest what

quantities of coal could be moved by this route.

Location of Industries

"The Working Group wishes to draw attention to an important matter of policy which has a bearing on the future pattern of movement of coal in the country. This pertains to the location of industries based largely on coal. The Group feels that serious consideration should be given, in deciding the location of industries, to the coal haulage involved. In formulating the fourth and subsequent plans, it would be eminently desirable that industries which consume large quantities of coal grow up near coalfields, while industries which do not require much coal should be encouraged in places far away from the coalfields. Planning in this direction is essential to avoid undue strain on the transport system in the fourth plan period.

"In this context, it will also be desirable to examine the feasibility of conversion of coal into gases which could be easily sent through pipelines

and of increased generation of thermal power in the coalfields and its transmission through inter-State grids. Moreover, a relatively higher priority may have to be given to the production of hydro-electric or nuclear energy in regions distant from coalfields. It may also be necessary to revise the existing railway freight structure so as to discourage long-distance, uneconomic haulage of coal. Any such adjustments in the railway rate structure could only be made over a period of time, in order to avoid dislocation of the existing industrial cost-price structure. It will be an advantage, however, to consider the location of new industries having regard to the true costs of hauling coal by rail and not merely the existing freight rates which are heavily subsidised. The general objective of the studies should be to minimise the haulage of coal over long distances which requires huge investments and yet exploit the coal resources to the utmost.

"It would be desirable if the programmes concerning the develop-

CAPITAL, 12th April, 1962.

ment of coal-consuming industries and the transport requirements of coal are drawn up in two parts, namely, (a) for the first two years of the fourth plan period, and (b) for the end of the fourth plan period. In drawing up this programme, the various considerations influencing the location of industries mentioned above and the desirability of avoiding needless transport strains, should be borne in mind."

Wheat from Australia

An agreement was signed here between the Government of India and the Australian Wheat Board for the purchase of 270,000 tons of Australian wheat by India. This forms part of the commercial purchases of wheat India has to make during the current year.

Fertiliser Plant

At fertiliser plant is to be built in India by the Power-Gas Corporation of Stockton-on-Tees, U.K. Contracts worth between £1 million and £1.5 million have been awarded to the Corporation by Fertilisers and Chemicals (Travancore) Ltd. for major extensions to its factory in Alwaye, Kerala. The contracts include the supply of plant for producing synthesis gas from oil by partial oxidation, ammonia synthesis plant—the first in India of British design, with a capacity of 150 tons a day, and an ammonium sulphate plant, which will use as its raw material gypsum produced as a by-product of phosphoric acid manufacture in Alwaye. The sulphate plant extensions will raise the factory's output of ammonium sulphate from 220 tons a day to 660 tons a day.

U.S. Purchase of Sugar

The United States has increased by 149,000 tons the quantity of non-quota sugar authorised for purchase and import during the first six months of 1962. India gets an allotment of 50,000 tons. An additional 25,105 tons still remains to be allocated.

New Power Schemes

Since the publication of the third plan, the Government of India has sanctioned three power schemes, with a total installed capacity of 180,000 kW, in the private sector. These are for the generation of 125,000 kW of thermal power by Tatas in Bombay, 50,000 kW by the Calcutta Electric Supply Corporation, and 5,000 kW by the Dishergarh Electric Supply Company in Dishergarh in the coalmining area in Bihar.

Six other schemes added to the third plan in the public sector will generate 210,000 kW of power. In Bihar, the installed capacity of two units under the Barauni extensions scheme has been stepped up from 30,000 kW to 50,000 kW. In Jammu and Kashmir, the Kalakote thermal station's capacity will be increased by 10,000 kW to 20,000 kW. In Kanpur, Uttar Pradesh, the thermal station will be augmented by 60,000 kW, because it is felt that only two of the five units at the Singrauli thermal station can be commissioned by the end of third plan. In West Bengal, a third 75,000 kW unit will be added to the Durgapur coke oven power station. In addition, there will be six package power plants of 1,500 kW each, to be installed at various places in West Bengal. A 15,000 kW thermal plant will be installed in Delhi.

In Maharashtra, the Koyna Dam power house, with an installed capacity of 40,000 kW, has been included under the second stage of the Koyna project. Two more schemes—Vairata and Sahaskund—with installed capacities of 40,000 kW and 50,000 kW, respectively, have been included in the Maharashtra plan. The benefits from these schemes will, however, accrue only during the fourth plan.

London

U.K. Economic Survey Forecasts Rise in Production and Incomes

(FROM OUR LONDON CORRESPONDENT)

PRODUCTION and incomes will "probably" rise in 1962, says Mr. Selwyn Lloyd in his *Economic Survey*, presented to Parliament as a background paper to the latest U.K. Budget. Personal spending is likely to be supported by an increase in hire-purchase borrowing. The Government and local authorities expect to spend 3 percent more than last year. Investment in fixed assets will rise, although not much. Stocks are high and may not rise much for some time. The upshot of these predictions is that the demand should expand somewhat as the year goes on. But the *Economic Survey* is extremely cautious at this point: "The growth of production over the year must largely depend on the timing and scale of the rise in exports. If this matches the opportunities available, production should expand at a rate that may be relatively slow at the beginning but a good deal more rapid at the end of the year."

The main emphasis in the Government's policy is on the export drive. The *Survey* insists that world conditions will provide scope this year for "a great expansion of British exports." The Government still believes that it must keep down the home demand in order to allow production for export to expand if and when the time comes. "In two important aspects, the Government can help (to promote exports). They can regulate the strength of the total home demand which will otherwise compete with the export demand for the use of skilled labour and other scarce resources. They can also influence the level of income and, therefore, the cost of production." The theme of restraint recurs even more sharply in a discussion of the labour market. "Thus, at the end of this period of nearly two years, the pressure of demand was apparently higher than at the beginning, without there having been any increase in output a head during the period."

Wage-price Spiral

In describing the effect of the restrictions imposed in July, the *Survey* points out that confidence in sterling was restored, the balance of payments began to improve, and the pressure of home demand slackened. Personal spending fell off, and the increase in personal incomes slowed down. These and other changes caused total production "to fall a little", while the number of unemployed was "slightly greater". The wage-price spiral has slowed down. Hourly wage rates rose by 2½ percent between July 1961 and February 1962, compared with 4½ percent in the corresponding period a year earlier. There are "signs that prices have recently been rising less quickly." Profits in the second half of 1961 were 5½ percent lower than a year earlier, and 12½ percent lower than in the first half of 1960. Industrial share prices have fallen. So, on the one hand, the Government says that expansion has already begun, and it will be dangerous to let demand rise too fast; on the other, it claims that last July's measures have taken the edge off the inflationary danger.

Taken together with a confident prediction that the balance of payments is likely to improve further in 1962, the *Survey* seems at least consistent with some tax reliefs in the

Budget. That hope could also be based on the striking difference in tone between this *Survey* and that of last year, which was full of warnings that the economy was being overstrained, and that incomes and prices were rising too fast. Those warnings culminated in the credit squeeze, the Little Budget, and the 7 percent Bank rate of last July. This year's picture is one of reasonably balanced economic forces. In a section on "aims of economic policy," the *Survey* lays stress on the vital need to keep down costs and prices. The Government's policy on incomes is once again underlined. "If this is policy is applied, and the rate of increase of money incomes in 1962 is kept within reasonable limits, our competitive strength will increase, and the nation as a whole will benefit from a more stable cost of living." "Faster growth" is to be achieved only in conjunction with a satisfactory balance of payments. It must be based on the aim "to increase the resilience of the economy, its productive capacity, and the efficiency of its performance."

Urges to Save

People earned more, spent more, and saved more in 1961. The native addiction to saving is the outstanding fact to emerge from the welter of figures in the White Paper on National Income and Expenditure. About half the rise of 7½ percent in personal incomes, before tax, last year was saved. After tax and National Insurance contributions had been paid—these took about a fifth of the increase—more than one-tenth of incomes (10½ percent) was saved. The urge to save has increased markedly since 1956, when 6½ percent of the net income was saved. In 1960, the proportion was about 8½ percent.

Consumer spending last year went up by 4½ percent—a little less than the 1960 increase—but much of the extra money laid out went to cover increases in prices. Spending was only 1½ percent higher if account is taken of the higher prices for goods and services bought. The total consumer spending last year was £17,302 million: £4,989 million was on food (3½ percent more than in 1960); £2,269 million on smoking and drinking (8½ percent more); £2,392 million on housing, fuel and light (6 percent more); £1,286 million on durable goods (5 percent less); and £1,687 million on clothing (3½ percent more).

Company profits, which increased by 7½ percent in 1960, fell by 5½ percent last year. Dividends and interest payments, however, went on the rise, although at a slower rate. The rising, although at a slower rate, increase last year was 9½ percent, against 18½ percent in 1960. The drop in company profits, coupled with higher dividend and interest payments, meant that companies ploughed back much less of their earnings last year. In 1961, personal savings accounted for much in the total of retained profits for much less than in any year since the second World War.

Year-end Finances

The Government's revenue in the 1961-62 tax year was higher than expected at £6,645 million. So, too, was its spending, which amounted to £6,235 million, against an estimated £6,002 million. In the event, the Chancellor of the Exchequer had a

surplus of £410 million for the year, whereas he originally budgeted for a surplus of £506 million. Moreover, this surplus, which appears "above the line" in the Exchequer accounts, was converted into an overall deficit of £211 million by net expenditures of £621 million of "below the line". A year ago, Mr. Selwyn Lloyd budgeted for a deficit of £575 million below the line and thus an overall deficit of only £69 million. Higher farm subsidies, defence spending, interest payments and loans to nationalised industries, are mainly responsible for putting his calculations out. The Government has already confessed that it could not keep expenditure within bounds last year, and it cannot keep it down during the current financial year. Government spending in 1962-63 has been put at £6,426.7 million, which is about £192 million larger than the total spent in 1961-62 and about 7 percent more than what the Government first estimated it would spend in 1961-62. An increase in spending of £192 million, tacked on to the £211 million overall deficit thrown up by the 1961-62 figures, would indicate an overall deficit of more than £400 million. A deficit of this order would be taken care of by the "natural buoyancy" of revenue.

Gold Reserves Rise

Another large rise in the sterling area's gold and convertible currency reserves has been announced by the U.K. Treasury. During March, the reserves rose by £10 million, after Australia had repaid £62 million to the International Monetary Fund. The true inflow of money into London during March was, therefore, £72 million, and it followed gains of £80 million in February and £43 million in January. In the first three months of the year, about £200 million of foreign currency has thus been gained. Nearly all the money which was withdrawn in the first half of last year has now come back to London. Taking February and March together, the increase in gold reserves was a record. Gold has been flowing in, as a reflection of the continued influx of funds from abroad to earn the relatively high interest rates ruling in London.

Hire-purchase Debt

A further fall of £11 million occurred in Britain's hire-purchase debt in February, reducing it to £899 million from £910 million on 31st January. As usual, the greater part of the reduction, £8 million, was in the amount owing to finance houses. Allowing for the normal seasonal increase, new credit advanced by finance houses was again slightly higher in February. This reflects mainly the improved demand for motor-cars.

Retail Trade Buoyant

Retail trade was well maintained in February, according to figures released by the U.K. Board of Trade. The adjusted index of total sales rose by one point to 118—the same record level as in December last year. "Month-to-month changes of this magnitude are not usually significant," the Board says. Rising prices accounted for most of the increase between January and February and the "sales by volume" index was unchanged at 111. Compared with a

year earlier, sales in February were 5 percent higher, a slightly larger increase than in January.

Seasonally adjusted, sales by clothing and footwear shops rose by a point to 118, but for January and February together the level was not very different from the second half of last year. Compared with a year earlier, sales were only 1 percent higher against a 3-percent improvement in January. Prices of clothing and footwear in February were about 2 percent higher than a year earlier. Sales by durable goods shops, which recovered sharply in the previous two months, were little more than maintained, and the adjusted index moved up one point to 114. Furniture shops showed a larger increase in January—6 percent, compared with 2 percent—but other durable goods shops showed no change on a year earlier, against a 2 percent increase. Prices were about 3 percent higher than a year earlier. Sales by food shops were higher, and the index moved up by two points to 117. Higher prices accounted for the whole of the increase, however, and the volume index remained at 108—two points lower than in the fourth quarter of last year. Compared with last year, the rise in February was slightly larger than in January (6 percent, against 5 percent).

Rise in Bank Loans

The March statements of London clearing banks show another increase in advances. Between 21st February and 21st March, there was a rise—excluding transit items—of £37.9 million to £3,513,414,000. Following the £113 million net increase in the five weeks ended 21st February, the latest figures suggest that the main impact of the tax gathering season had been felt before this month. The £37.9-million rise is the smallest in the March period for some years and was spread widely among all categories of borrowers. Since bank borrowings of nationalised industries, at £65 million, fell by £81 million, lending to the private sector must have risen by £46 million. Investments show no change at £1,096 million, but liquidity ratios have fallen slightly. For the 11 banks, the average ratio on 21st March was 32.60 percent, compared with 33.21 percent in February. In March last year, the average was only 30.43 percent.

Export Finance

The first board meeting of the Insurance Export Finance Company was held last week. This replaces a temporary agency for channelling up to £100 million of insurance company funds into export credit finance. Shareholders of the new Company are 60 members of the British Insurance Association, whose participation is based on the rate at which their assets have grown in recent years. They will contribute funds to Insurance Export Finance according to the size of their shareholding. The chairman of the new Company is Mr. J. A. Pollen, General Manager of London Assurance, and the two deputy chairmen are Mr. Leslie Brown of Prudential and Mr. F. F. P. Sandilands of Commercial Union. Mr. W. Bottomley is the manager.

The 60 Companies participating (all have assets of more than £5 million) may be joined by smaller insurance firms and also by Commonwealth insurance Companies operating in Britain. Moreover, the new arrangements have been designed to let in pension funds as an additional source of finance for export credits. Exporters requiring long-term export credit are expected first to seek the help of their bank or merchant bank. The latter will decide whether the finance required falls within the scheme operated together by the banks and Insurance Export Finance.

PURCHASING TELLS MANAGEMENT

The CALTEX "Stop-loss" Programme helps cut plant-wide maintenance costs as much as 15%

"Stop-loss" organises lubrication throughout the plant—from purchasing on through actual application. By specifying multi-purpose lubricants and by eliminating duplication, a "Stop-loss" Programme can reduce the number of lubricants needed by as much as 50%. By streamlining purchasing procedures the programme can cut the number of purchase orders.

Best of all—by assuring proper lubrication to every piece of equipment in the plant, a "Stop-loss" Programme helps extend equipment life. Result—plant-wide maintenance savings upto 15%. Ask your Caltex Sales Engineer for information.

Company executives can obtain a free copy of this booklet by writing on their official letter-head to their nearest Caltex office.

IMPACT OF BRITISH ENTRY INTO COMMON MARKET

By Ela Sen

BRITAIN faces a serious dilemma—how to reconcile the Common Market with the Commonwealth. Economic experts there speak of shrinking Commonwealth markets and of Commonwealth countries forming their own economic alliances at terms more suitable to themselves. It is felt that, for survival in the world beyond 1962, it is better to be economically integrated into western Europe rather than be isolated. Britain shorn of her empire and clinging to an amorphous mass which is the Commonwealth—a term which in the last 15 years has vastly changed its meaning with the emergence of new independent territories and the departure of South Africa.

Politically, the economic integration of western Europe, including Britain, is of the utmost importance to the western Powers. The U.S.A. stands firmly behind this idea and has used considerable pressure on Britain to gear her economy to that of the Common Market Six. The Treaty of Rome also provides for the "association" of any European country with the Common Market and extends it to the dependencies of the full member-countries. It has been argued that this "association" should be extended only to the underdeveloped dependencies, thus making the international financing of development projects easier, but should not include the "developed" or "developing" countries.

Indian Position

In any case, India has indicated that she does not wish for an "association". But where in all this does she stand? Her position as seen by her economists is important to her future. In 1939, Britain concluded an economic treaty with the then Government of India. There was a great deal of agitation in India against this, as it seemed to be entirely in favour of the United Kingdom. Nevertheless, a few civil service pundits, looking into the future, advised that one day India would be in a privileged position, for, by this treaty, which has no date of expiry, Britain could import raw materials from India on favourable terms, but all of India's manufactured goods would have free entry into British markets. After 23 years, as

India can see the prospect of reaping the fruits of this treaty, she is faced with the entry of Britain into the Common Market, making the treaty of 1939 just so much waste paper.

In considering Indian economic interests in world markets, it is necessary to see not what protection one can get for one's exports of primary products, but to look forward to the day when Indian manufactured goods will be ready to enter world markets when jute goods and tea will not be her most valuable exports. Instead, there will be cameras, watches, refrigerators, bicycles, boots and shoes for which Indian industry will seek foreign markets. Therefore, it is frustrating to see the treaty of 1939 vanishing before the pay-off has begun to materialise.

In deciding to enter the Common Market four years later than the others, Britain has to fight every inch of her way both in Europe and internally. The negotiations fall roughly into three categories—raw materials, agricultural produce and manufactured goods. In the case of raw materials, the erstwhile dependencies of the European countries will be able to export at favourable rates to all the countries in the Common Market. Britain will no longer get favoured trading treatment from her "colonies", and her "colonies" will have to compete with, for instance, the French dependencies for their market. Trying to ensure that there should be no discrimination is another of Britain's difficult tasks, especially where the British colonies are in direct competition as raw material producers with the dependencies of other countries (the latter are already associated with the Common Market). It is also not known whether African or Asian countries with British connections would wish for an association with the Common Market, particularly those that have attained independence and those on their way to it.

Agricultural Integration

The question of agricultural integration is a tricky one because it involves the economic future of the temperate Commonwealth countries—Canada, Australia and New Zealand. So far, the Six are not pre-

pared to relax their attitude towards ensuring some protected market for the produce of those countries. The latter are in direct competition with the Common Market for agricultural produce. Even British farmers are going to be hard hit when subsidies in agriculture are discontinued and competition from the Continent begins to be felt. Industrialists who have always grudgingly the subsidies since these came out of taxation are delighted at the prospect of lower direct taxation and see no reason why the housewife should not pay that extra penny or two on her groceries. It will mean a substantial rise in the weekly household budget.

Dairy produce and cereals from the Commonwealth will obviously turn to other markets. It is also being argued that twice the price should be offered for half the quantity, thus ensuring that the balance of payments is maintained. But what happens to the surpluses which can create internal problems? New Zealand and Australia can turn to Japan and get in return manufactured goods like cameras, resulting in the inevitable fall in the import of British goods. Canada is already enjoying a good market for her wheat in China. Apart from this, Canada might turn more and more to the dollar area for her needs, and Britain as a focal point of the sterling area will gradually cease to be of importance. It could mean the beginning of the disintegration of the Commonwealth.

The Case of Tea

In the sphere of manufactured goods, India has a quota of 195 million square yards for cotton textiles and is being treated on the same level as Japan by the Common Market countries. Tea comes under a separate heading and Britain hopes to obtain a low tariff for it, but certainly some tariff will be imposed. Britain thinks that, if this beverage is popularised on the Continent, this will even up the score. Coffee and cocoa are very different things, since the former British dependencies in the former French dependencies in Africa come into direct conflict with French, Belgian and Dutch interests. Britain is trying to get her African interests the same treatment as the dependencies of the other countries, but as she is four years behind the others, the task is not easy. It is certainly not being made easier for her by the Six, particularly France. India has been advised to ensure adequate quotas for her products.

Britain has put forward the plea that she should be given some time to gear her Commonwealth economy to the change which her entry into the Common Market will entail. She is seeking the four-and-a-half years that the Six have already had, but in their opinion it is something that cannot be made available since it was Britain who hesitated to enter the Common Market at the same time as the other Six, and it is a loss that she will have to bear. There is, of course, a possibility that there may be a change of heart in future negotiations, as the Dutch and the Belgians are very keen that Britain should be a member of the Community.

Commonwealth Kept Informed

In the meantime, Commonwealth representatives are kept fully in-

CAPITAL, 12th April, 1962.

formed about the various stages of negotiations by the British representatives in Brussels. The machinery for liaison operated by the Commonwealth Relations Office and the Colonial Office functions efficiently. Inter-governmental consultations at the Cabinet level are also on the programme wherever they become necessary. It can be said truthfully that the Commonwealth knows the reasons why Britain must enter the Common Market, what steps Britain is taking to ensure safeguards for the Commonwealth, and what the obstacles are. It is, however, apparent that the whole pattern of Commonwealth trade will change within the short space of the next seven years, by which time it is expected that there will be full integration within the European Common Market.

It is aimed to make this newly organised body into a closely-knit economic entity, without impinging on the sovereignty of any of the countries within this federation. How "closely" knit it can be in spite of its traditional rivalries and fissiparous tendencies is not easy to estimate now, as France, for instance, would prefer the relationship to be rather "loosely" knit. In matters of trade, it will work in competition with the communist bloc, as one body, much as N.A.T.O. works as a military organisation with the backing of the U.S.A.

Party Attitudes

Within Britain, the attitude of the two major Parties is baffling until one breaks it down to its component parts. Why, for instance, should the Labour Party advocate entry into the Common Market when the burden of rural subsidies coming out of the taxation of the rich will now be transferred to the man-in-the-street? Why is the Conservative Party so loath to remove this subsidy even though it comes out of taxing valuable members of the Party? Is there a class interest, or is there not? In fact, it is not as complicated as it looks. The Conservative Party depends for its majority on the rural and agricultural population. Faced with the general elections in about 18 months' time, the Tories will find it difficult to placate their rural voters for having thrown them into competition with European farmers. The farmers in Britain have been feather-bedded for so long that they will resent it. The Labour Party, therefore, hopes to increase its strength out of the disgruntled farming community, hence its interest in Britain's entry into the Common Market. The industrialists are happy to get the taxation for farm subsidies off their backs and are, therefore, keen to enter the European market. The motor-car industry, for one, hopes to rejuvenate itself as soon as it can enter Europe on the same terms as its rivals.

There are dissenting Tories—those with rural constituencies. There are dissenting Labour Party members—those on the Left who are perfectly aware that this alliance is primarily an anti-communist alliance and who do not wish the burden of the subsidies to fall on the general public. But they are in the minority, the majority are for European economic integration. Britain's economists have crusaded for it. Only Lord Beaverbrook lifts his voice against the Common Market. To the rest the dissolution of the Commonwealth in its old form has already set in, and it can no longer in its far-flung and multi-racial composition give the same service and security to Britain as a federation of European States geared for peace and prosperity would. So the Commonwealth countries must look more and more outwards to other spheres of interest.

Jute

SHORTAGE OF READY GOODS KEEPS GUNNY PRICES HIGH

DURING the past few months, it is remarkable how the increased output of the Indian mills has been absorbed by consumers all over the world. The I.J.M.A. jute goods stock figures for March provide further evidence of the soundness of the position. In spite of the high level of production continuing, stocks at the end of March were 61,500 tons, or 300 tons lower than at the end of February 1962. A study of the current figures shows why there is such an acute shortage of ready goods. The production of heavy goods has not increased in proportion to the increase in working hours. The reduction in stocks, however small, is clear proof that the increase in production is not sufficient to keep pace with the increase in consumption. If these conditions continue, sacking will not only be steady; the looms which have been employed for the manufacture of narrow hessian may have to be transferred back to sacking.

To demonstrate this, the production for the months of July 1961 (133 working hours) and February 1962 (192 working hours) can be compared. The proportion of sacking manufactured was 46.7 percent in July 1961, and 46.2 percent in February 1962. On the other hand, the proportion of hessian rose from 34.9 percent to 41 percent. But, in spite of the increase in hessian production, stocks of hessian have fallen from 33 percent in July 1961 to 26.3 percent in February 1962. The current high prices are really a direct result of the shortage of ready goods in both sections, and it is on this basis that prices have been maintained.

Overseas Enquiries Small

It would be wrong, however, to look upon the present position with too much optimism, as current enquiries from overseas are small, and the demand for shipment goods is mainly against previous contracts. U.S. stocks are generally expected to increase. So it is unlikely that the U.S.A. will buy more than she needs at the present high prices. Her demand may, therefore, slacken. Considering all the factors, it appears that the production of manufactured goods has increased greatly, and yet all of it is being consumed. In the meantime, increased working hours mean larger wages. The opinion has often been expressed that the ideal to be aimed at is the profitable full-time employment of all the machinery to the advantage of employers and employed alike. Can it not be said, then, that this prospect may be just below the horizon and may come into view before long?

There are, of course, some who are inherently pessimistic, but there can be few who do not view with satisfaction the current stock position. No one in the trade would have ventured to prophesy the present circumstances in July last year, not expected then that the Association mills would unseal all their looms by early 1962. The industry's stocks of jute goods are now 10,000 tonnes less than they were in July. Considering the increase in working hours and looms in operation, it is astonishing that the total stocks have not increased. Further, there has been a simultaneous increase in the production of outside mills and, though their figures are not included in the I.J.M.A. returns, their production meets part of the de-

mand and, consequently, affects the stock figures of the Association mills. (16.3 percent).

Pakistan Has Good Rain

It is reported that Pakistan has experienced good rain during the past week. But in India the only areas reporting rain are the upper Assam regions. Elsewhere the weather has been dry, and sowing is still held up.

I.J.M.A. Gunny Stock Figures

Stocks of jute goods held by mills reporting to the I.J.M.A. at the end of March 1962, amounted to 61,500 tonnes, made up of 16,200 tonnes of hessian (26.3 percent), 29,200 tonnes of sacking (47.6 percent), and 16,100 tonnes of other goods (26.1 percent). The total is 300 tonnes less than at the end of the previous month due to a drop of 900 tonnes in hessian to a drop of 900 tonnes by a rise in stocks, partly compensated by a rise of 200 tonnes in sacking and 400 tonnes in other goods. In March 1961, total stocks were 85,000 tons, made up of 24,600 tons of hessian (29.2 percent), 46,200 tons of sacking (54.5 per-

cent), and 14,200 tons of other goods (16.3 percent).

THE JUTE MARKETS

Manufactured Goods: Once again, the Calcutta goods market witnessed violent fluctuations, but were mainly the result of speculative manipulations. As far as overseas business was concerned, the market was dull, with nothing noteworthy to report. There was a fair amount of covering business for near deliveries, but the overseas demand for forward positions was disappointing. The market opened unchanged last Thursday. In the initial stages, price movements were small, with April B Twills rising to Rs. 134.50 and 40in. 10oz. to Rs. 52.75. Over the next few days, there was heavy covering in near delivery goods, and rumours of fresh interest from the Argentine and the U.S.A. boosted prices. By Monday morning, April B Twills had jumped to Rs. 137.25, or Rs. 3 above the week's open-

ing, and 40in. 10oz. was Rs. 2 above the opening, at Rs. 54.50. On Tuesday, rates fell rapidly, but the publication of the I.J.M.A. stock figures lent some strength towards the close.

Opening quotations on Wednesday morning were as follows:

	Apr.	May	June	July	Oct.	Sept.	Dec.
40in. 7oz.	58.65	58.75	57.50	56.60	55.25		
40in. 8oz.	42.50	41.75	46.25	35.25	37.75		
40in. 10oz.	52.50	51.85	50.25	48.75	47.00		
A Twills	135.00	130.75	127.50	124.25	122.50		
Cornsacks	116.50	124.25	121.75	127.25	125.00		
Heavy Ceers							
Plain	123.50	120.75	127.50	124.25	122.50		
A Twills	137.50	136.70	133.50	130.00	127.00		
Liverpools	132.30	130.50	134.50	131.00	130.00		

Raw Jute: The fibre market continued to be weak, in spite of mills taking up the quotas issued by the I.J.M.A. The issue of a buffer stock allocation of 250,000 maunds had little effect as mills were given 14 days in which to take it up. Imports upcountry still remained at a high level, and in most cases prices were below the minimum. The principal exception was Tossa, particularly Middles. Since this was still in great demand, with the supply being very limited, prices were steady. Mesta and jungli jute were weak, and rates were as much as Rs. 2 below the minimum. There was a big drop in arrivals in Cossipore last week. The arrivals con-

BETTER DEMAND AT INTERNAL SALE

KEEN BUYING IN QUALITY DUSTS

AT Sale No. 43, held on 11th April, there was an improved demand for the 28,829 chests of Dust on offer in the internal sale. C.T.C. Dusts were keenly competed for, and generally tended dearer and the clean and bright kinds were a strong feature. The secondary and fibrous grades also came to a better market. Plain orthodox Dusts eased further, particularly towards the close when they were sometimes difficult of sale. Bright liquoring Assams were well supported at easier rates. Legg-cut

were very irregular, although clean teas with good liquors sold well.

Quotations		
	1962	1961
	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.15 to 3.70	4.30 to 4.45
Medium Assam Dust	3.70 to 4.60	4.40 to 4.75
Legg-cut Dust	3.65 to 4.70	4.60 to 5.20
Medium Assam		
C.T.C. Dust	5.40 to 5.80	5.70 to 6.20
Good Assam		
C.T.C. Dust	6.40 to 6.90	6.50 to 7.10

There was a fair demand for the 825 chests of other grades on offer.

GRAIN FREIGHTS RISE

HEAVY grain chartering from the River Plate area continued with better rates during the past week. Pacific Coast grain charterers concluded six fixtures to Japan at the unchanged rate of \$(U.S.) 6. Gulf to West Coast India paid 68s 9d.

option East Coast India discharge 2s 6d extra with 1,000 tons discharge free. In spite of the absence of any Australian grain bookings, the Far Eastern market was quite active. Some 9,700 tons 5 percent rice in bags one to two ports Burma to one to two ports Cuba has been fixed at 55 f.i.o. and stowed, with 20th April to 20th May laydays. Ore chartering was on a heavy scale with the principal sailings to Japan, where 43s 3d f.i.o. and trimmed was paid. A shipment to Poland was concluded at 44s 6d f.i.o. and trimmed. Two shipments from Bombay to Constantza were agreed at 39s when Port Redi shippers paid 38s 6d to the Black Sea. Time charter trading was quite varied last week. The Chinese engaged s.s. *Arlington Court* at 19s 6d for nine to 12 months. Movements of vessels in and out of Kidderpore Docks have been resumed from 8th evening.

LINSEED FIRM

The market was firm during the past week and prices rose further. Arrivals of new crop seeds were unsatisfactory due to high prices in upcountry areas. Local stocks were small, and millers were in the market daily to cover against their previous sales of oil. The oil market was firm in sympathy with seeds and other edible oils. Stocks in mills were small. Sellers were reluctant to do much business at the prevailing prices. The oilcake market was firm. There were good local enquiries for ready goods. But stocks were depleted and only small business was reported. The latest quotation is as follows: Ready, April delivery, Rs. 73.30 a quintal.

HIDES AND SKINS QUIET

The market was quiet. Stocks were higher than in the previous week.

Bazaar Sales

(Between 3rd April and 9th April, 1962)

Cowhides: Wet salted (ord.) 10,700 pcs. on the basis of Rs. 8 to Rs. 11; wet salted (slaughtered) 28,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 82,000 pcs. on the basis of Rs. 200 to Rs. 230, Rs. 320 to Rs. 340 and Rs. 475 to Rs. 500; wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Purneah-Kissenganj 28,200 pcs. on the basis of Rs. 325 to Rs. 335 and Rs. 340 to Rs. 350; Pakur 15,000 pcs. on the basis of Rs. 300 to Rs. 315.

Bazaar Stocks (9th April, 1962)

Cowhides: Wet salted 176,000 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 51,000 pcs.; Assam-Dinajpur 62,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 177,500 pcs.

SHELLAC INACTIVE

During the week ended 10th April, the tone of the market was inactive. The range of quotations was as follows:

	Rs. a package
Pure Buttonlac	130 value
Lemon One Shellac	130 value
Lemon Two Shellac	116 value
Standard 1 Shellac	104 value
Pure TN Shellac	90 value
Kuami One Seedlac	120 value
Golden Bysacky Seedlac	112 value
Medium Fine Bysacky Seedlac	100 value
Fine Bysacky Seedlac	84 value
Genuine Bysacky 5% Seedlac	72 value
Grade One Class B Seedlac	108 value
Grade Two Class B Seedlac	88 value
Shipments during April until the 6th were	6,400 packages.

COMPANY AND PUBLIC NOTICES

BURN AND COMPANY LIMITED

NOTICE is hereby given that the Registers of Members and Share Transfer Books for 6% and 7% Preference Shares in the Company will remain closed from the 24th April to the 30th April, 1962, both days inclusive for the purpose of payment of Preference Dividends for the half-year ending 30th April, 1962, on or after the 10th May, 1962, to those Preference Shareholders whose names appear on the Company's Registers of Members for 6% and 7% Preference Shares on the 30th April, 1962, or to their mandates.

GENERAL MANAGER.

THE E.I.D./PARRY GROUP BOARD APPOINTMENTS

The East India Distilleries & Sugar Factories Limited and Parry & Co. Limited have pleasure in announcing the following appointments effective from 1st April, 1962:

Mr. H. V. R. Iengar, lately Governor of the Reserve Bank of India, has been appointed a Director of the East India Distilleries & Sugar Factories Limited and will, during May, 1962, take up the appointment of Chairman and Managing Director of the Company. The present Chairman and Managing Director, Mr. G. N. Noel-Tod will then revert to his previous appointment of Vice-Chairman and Managing Director of the Company, until his retirement from full time service in India.

Mr. M. J. Edwards has retired from the Board of Parry & Co. Limited, of which he was Chairman, to take up the appointment of Deputy Managing Director of the East India Distilleries & Sugar Factories Limited.

Mr. John K. John, Vice-Chairman of the Board of Directors of Parry & Co. Limited, has been appointed Chairman of Parry & Co. Limited, vice Mr. M. J. Edwards.

Mr. N. G. Bowen, Director of Parry & Co. Limited, has been appointed Vice-Chairman of Parry & Co. Limited, vice Mr. John K. John.

To bring relief in midsummer boredom,
wander where you will, in sprightly
go-lightly Bata sandals.

Sun lighted shapes and open mellow leathers,
Bata sandals are the pure classic,
pure fun footwear that evokes
cheer for comfort, praise for taste.

TEA COMPANIES—Contd.

O., Po., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

THE COMING BUDGET: TAX HOPES AND FEARS

THE tax proposals under the Central Government's Budget for 1962-63, which are due to be presented to Parliament next Monday, will come at a crucial stage in the progress of the third five year plan. The planners have assumed that the Centre will raise Rs. 1,100 crores through additional taxation (including the surpluses of public enterprises) during the current quinquennium. The Budget for 1961-62, presented last year, proposed levies aimed at raising an extra Rs. 60 crores or so during 1961-62. Although in the event the estimate was exceeded very substantially, thanks to the Finance Ministry's practice of constantly under-estimating revenue, it is generally assumed that a substantial new dose of taxation will be announced next week. There are many reasons for this. Firstly, a strong effort has to be made towards achieving the tax target fixed under the plan, and the Finance Ministry's assumption seems to be that the earlier the effort begins, the less drastic will be the levies necessary towards the closing years. Secondly, Government enterprises are showing no signs of yielding the surpluses expected of them; the temptation to make up the shortfall through heavier taxation is therefore, real. Thirdly, the Government has managed to borrow rather less from the public than it thought it would be able to. And, fourthly, the need to restrict deficit financing is, fortunately, still well realised. On the expenditure side, thanks to Goa, China and Pakistan, defence has absorbed much larger sums than those estimated a year ago; and the rise will continue this year. The steady increase in administrative expenditure persists, and it will receive a substantial boost now that bigger dearness allowances have been announced for Central Government employees. Finally, spending on the plan is also increasing as the progress of the various development programmes gathers momentum.

According to the Budget estimates for 1962-63 presented by the Finance Minister a little over a month ago, revenue receipts on the existing basis of taxation are estimated at Rs. 1,305.9 crores, and revenue expenditure at Rs. 1,369.3 crores, leaving a deficit on revenue account of Rs. 63.4 crores. The overall deficit will be larger, at Rs. 147 crores. Recent reports from New Delhi do not make it clear whether the increase in dearness allowances will cause the estimates to be revised and thus leave a still bigger deficit. According to some, the increase could have been anticipated before last month's Budget estimates were presented, and should therefore have already been accounted for in the latter. But other reports imply that the estimate of revenue expenditure will now be bigger, since the extra dearness allowances will cost Rs. 13 crores in a full year, and may cost Rs. 18 crores if back-dated to November 1961. Whatever the truth of the matter, the general assumption in the stock markets seems to be that the Finance Minister will try to cover the revenue deficit fully, and perhaps part of the deficit on capital account also. On this assumption, it is

implied, new taxation might total up to somewhere above Rs. 75 crores or Rs. 80 crores.

There is no doubt that additional levies of this order, coming after the steep increases of recent years, could have a serious impact on large sectors of the economy. That is why the stock markets have turned sluggish, and prices have shortened their commitments, and prices have fallen. For the moment, little consolation is derived from the planners' assurance that the concentration will be on indirect taxes. It is argued that, for political reasons, indirect taxes alone will not suffice since the mistaken assumption prevails that they hit only the common man. Certain marginal increases in direct taxation are, therefore, likely so that the more socialist elements in Mr. Desai's Party may be placated. No attempt is prepared to predict with any degree of confidence which direct taxes will be, or can be, raised. But, according to current rumours, for whatever reason, possible candidates may be the company tax; and the income tax on the upper-middle or the higher income groups. An attempt may also be made to raise the capital gains tax, now that Britain has plumped for a tax on speculative gains. The optimists temper these dismal thoughts with the hope that the bonus issue tax may be reduced, the argument being that most companies which were prepared to pay 12 1/2 percent have already done so; the Finance Minister should, therefore, now take a long overdue step towards the abolition of this iniquitous levy. The optimists also believe that a new orientation will be given to fiscal policy by allowing tax relief on companies' export earnings, although

the scheme recommended by the Mudaliar Committee may not be wholly accepted.

It is possible that the immediate reaction of the stock markets will centre on the changes in direct taxes. That was what happened last year, when satisfaction about the reduction of the bonus issue tax temporarily swamped disappointment over the imposition of nearly Rs. 55 crores of new indirect levies. But this year the stock markets are likely to be a little wiser in their judgment. They have learnt that where revenue targets are so high, no scheme of indirect levies can be expected to leave industry unharmed. Although the general trend of company profits during the past year has been upwards, the dent made by indirect taxes has in many cases been severe. In any case, it is pointed out, most of the indirect taxes nowadays tend to be imposed on goods which organised industry produces; the unorganised industries tend to get away lightly, and to that extent the tax base is not being widened as much as it should be. It is true that some of the major industries have in the past been able to pass on the additional tax burden to consumers, functioning as they do in a highly protected economy. But the position today is that there are large numbers which cannot do so any longer. Cotton textiles, tea and sugar, for instance, the favourite milch-cows of yesteryear, are now urgently in need of fiscal reliefs. To that extent, the task of the Finance Minister has been made more difficult.

Yet it is arguable that, now that the general elections are over, the present is a particularly opportune time politically for bold moves towards rationalising the fiscal structure. The emphasis on indirect levies has to be maintained, but the choices need to be judicious so that industrial costs are not raised, particularly in the case of exportable commodities. What is necessary is a larger spread of indirect levies on articles of general consumption, so that the tax base is widened further. The temptations are obvious, but it is hoped that the Finance Minister will

resist any pressure to raise the level of direct taxation. The evidence suggests that he has already deviated from his assurance, given when the new system of corporate taxation was introduced, that it was not his intention to increase the overall burden on companies. A suitable reduction in the company tax, belying the stock markets' fears, is therefore now long overdue. It is hoped that the injustice of the bonus issue tax will be recognised more clearly, especially in its application to

U.K. BUDGET STRATEGY

AS there are various conflicting opinions on the trend of the British economy, it is not surprising that Mr. Selwyn Lloyd's second Budget, presented early last week, has aroused controversy. The controversy has focussed gradually on the figure of £74 million estimated as the overall deficit for 1962-63, a figure which the Chancellor of the Exchequer considers to be "about right from the general economic point of view". The Chancellor's argument indicates that a neutral Budget would be appropriate, in a situation where production is stagnating in the present but demand is likely to expand in the near future. That figure of £74 million, however, does not imply a neutral Budget. It is a little larger than the estimated overall deficit for 1961-62 but much smaller than the actual overall deficit for that year.

It may be irrelevant to compare the estimate of £74 million with the actual deficit of £394 million realised in 1960-61, which was partly responsible for the sterling crisis last year. But it is relevant to observe that an actual deficit of £211 million in 1961-62 was not inflationary enough to prevent an economic recession in the fiscal year to March last. If the Chancellor believes his own figures for 1962-63, he intends his latest Budget to be more deflationary than its predecessor. In the event, as one knows well, the estimates of expenditure are usually exceeded, and the actual result of the current fiscal year may be an overall deficit much larger than £74 million. But it is evident that the Chancellor's mind is firmly set against a stimulating financial policy. Viewed against the recent economic trend and the current mood of business, his resolution is a little puzzling.

It would, however, be naive to imagine that politics had no place in the Chancellor's calculations. The Government's record in recent by-elections has alarmed its supporters, but the Government's strategists have probably reasoned that losing votes between general elections is unimportant if the public's support can be rallied in time for the next general election. The date of the next general election will probably be some months after the Budget of 1963. It is politically necessary to present a popular and stimulating

the capitalisation of share premium accounts. The basic point to bear in mind is that both corporate and personal taxation have risen so high that the incentive to save and invest is lacking. The direct tax system has still to be geared to the needs of a developing economy, which means that it has to leave a surplus for investment and, on the personal level, offer suitable concessions to the highly qualified managerial and technical personnel which the country needs.

Budget next year, and it would be politically disastrous to be compelled to correct errors of over-optimism that might have been made this year. Some British economists and many British business men feel that this political reasoning is too simple. The Treasury's main concern is, quite properly, the health of sterling, which must be assured by an adequate surplus in the current external account. The Treasury is cautious. It tends, therefore, to over- rather than to under-estimate future demands on resources, and to advise the Chancellor accordingly. Some analysts believe that the latent demands are much weaker than the Treasury imagines, and that this year's financial plan, if allowed to run its course, will put the economy into a state of lethargy from which next year's Budget will not easily arouse it. Yet an interim Budget in the middle of the fiscal year might disorganise the political plan.

A growing body of financial opinion in Britain is dissatisfied with this system of annual planning through the medium of the Budget. The budgetary calculations are in most years so inaccurate as to be almost meaningless, and even if the figures were correct, they would not necessarily be appropriate to the economic situation. The Budget is a

strong and efficient instrument of policy—more effective than credit control for accelerating or retarding consumption. But it is not a flexible instrument. It is argued that if taxes are changed when circumstances require changes, rather than at a set time each year, the Government's financing would be more efficient both for its specific purpose—providing for the Government's needs—and for its general purpose—regulating the economy. Within the present system, Mr. Lloyd is, apparently, shifting the emphasis from monetary regulation to the budgetary method of control. Quantitative control of credit will certainly be used when it seems necessary, but the technique of high interest rates has probably been discarded. This year's cautious budgeting should be viewed in that light. If Bank rate and longer-term interest rates are being lowered, the economy will, perhaps, respond to the extra-budgetary stimulus.

The fact remains that British industrialists are cautious in another sense than that applied to the Chancellor. Those concerned with durable consumer goods (excepting furniture) are more hopeful, because the Budget has reduced taxes on their products. But industrialists generally are not convinced by the official optimism about consumption and exports, and they are therefore (according to the latest available information) reducing their capital investment. Such a mood can generate recession; and it is because the Budget has not changed this mood that critics consider it inadequate. However, a slightly upward trend is observable in the seasonally-adjusted figures for exports this year, and if that trend develops it will generate optimism in two ways. An increase in exports would stimulate production. It would also—unless (an important qualification) counterbalanced by an increase in imports—provide the financial conditions required for a policy of fiscal relaxation. The U.K. Budget of 1963 may be much more pleasing than this year's.

STABILISING COMMODITY PRICES

VARIOUS interests are involved in recent moves to stabilise commodity prices; a few comments may illustrate them. In Washington, the Federal Reserve System has stated in its annual report that stabilisation of commodity prices can help to restore equilibrium in the U.S. balance of payments. In Santiago, at a banquet of the International Council of Non-ferrous Metals, the Chilean Minister of Mines, Dr. Julio Chana, has said that stable prices for copper are desirable for both producers and consumers; they should be high enough to promote investment in copper-mining but low enough to allow copper to compete freely with aluminium and plastics. The agricultural division of the secretariat of the Economic Commission for Europe, reviewing the state of agriculture in Europe, has emphasised the benefits of distributing agricultural surpluses to underdeveloped countries. March was a busy month for discussion of stabilisation of individual commodities. The second International Tin Agreement was formally ratified, so consolidating a principle already firmly established by the International Tin Council. The Lead-Zinc Study Group has never acted with similar precision, and its latest meeting in Geneva did not formulate a definite scheme for regulating surpluses of lead and zinc, but participants agreed provisionally to restrict production of the metals. The Coffee Study Group, meeting in Washington, prepared the ground for a negotiating session some months hence to work out the details of a stabilisation scheme.

The principle of price stabilisation of commodities is now broadly accepted. It is not easily translated into practice. The technique of regulating individual producers may be difficult, and the financial arrangements involved may be complex. But years of instability, at average prices that have been too low to maintain the economic health of the producing countries, have convinced many doubters that the attempt is worth making. The proposals for regulating agricultural surpluses are of a different character. The report of the Economic Commission for Europe contained the implication that the developed countries' surpluses (particularly of dairy produce) should be accepted

as permanent, and that the proper method of dealing with these surpluses was to devise an organisation to distribute them to the needy countries. A somewhat similar idea arose from the International Federation of Agricultural Producers in New Delhi in 1959; it was proposed there that food surpluses should be integrated with capital grants and loans and technical assistance to promote the development of the underdeveloped countries. British farmers have revived this idea in recent discussions with the British Government.

The developed countries feel some moral responsibility towards the countries that have not yet had similar opportunities to advance; they recognise, too, that they cannot be assured of either supplies of commodities or markets for their goods if a large part of the world exists precariously and in poverty. Some people feel that while there is still poverty in developed countries, charity should begin at home. Others insist that proper distribution of surplus goods is not charity but humanity and common sense. The developed countries can regulate their internal affairs and help other countries simultaneously. They may observe that extremes of wealth are most obvious in some underdeveloped countries. However, economists cannot readily accept the idea that North America and Europe should permanently produce food in excess of their requirements, not even for the benefit of poor countries. They feel that the problem of the farming communities in those areas is mainly political and that it should not be confused with the economic problems of other areas. The contrary argument is that if, for political reasons, the developed countries must permanently produce surplus food it is sensible to plan a permanent international organisation to distribute the surpluses. But if policies are deliberately designed to provide enough food for the needy countries it must be questioned whether Europe is the most suitable region to produce it for them.

The recent discussions on the U.S. stockpile of tin have emphasised another aspect of stabilisation—

tion—the need to provide the developed countries with adequate supplies of materials. The international tin agreements have not been suitably devised for a state of scarcity, and the only abundant source of tin is the U.S. stockpile. It has recently been revealed that the stockpile contains much more tin than is required as a strategic reserve, but the procedure for releasing the surplus is complicated, and release of large quantities of an important commodity involves the delicate question of price. It is desirable to provide enough tin in a manner that will not disturb the market. The stockpile suggests one method of stabilisation:

Current News and Comment

Braithwaite Profit Rises

Commenting on the prospects of Braithwaite and Co. (India) Ltd in his chairman's statement, which has been circulated along with the report and accounts for the year ended December 1961, Sir John Brown says that the state of the order-book is now very satisfactory. (A fuller version of the statement is printed on a later page in this week's issue of *Capital*.) The structural capacity is fully booked until 1964, and the wagon shop should be occupied until the middle of 1963. It is expected that the structural shops will work to their full capacity from the middle of August this year. The Company has recently secured an order for the fabrication and erection of the steel work for the extension of the Cossipore power station of the Calcutta Electric Supply Corporation. Orders for the mechanical work to match the increased capacity are being obtained. The wagon shop is likely to be fully occupied in view of the increasing orders for wagons. Sufficient orders are expected for the structural and mechanical workshops. The turnover should show a further increase during the current year.

Although the Clive works of Braithwaite did not have sufficient orders earlier in 1961, it is now fairly busy. The fabrication of a portion of the Brahmaputra bridge steel work has been undertaken. The wagon shop has done very well, and the output reached a record figure of 13,733 tons. It is being extended, and a new steel stock yard is being built. For the structural shops, contracts for the heavy forge and foundry projects in Ranchi and the alloy steel plant in Durgapur are in the process of being finalised. The Angus works has been reorganised and modernised. The foundry has made satisfactory progress. Its output is now about 250 tons a month, and is likely to increase further during the current year. Castings of up to 4 tons are being made. An industrial licence has been obtained to produce various types of cranes, and collaboration arrangements with British firms have been concluded.

Sir John Brown mentions that a capital outlay of Rs. 2.90 crores may have to be made for expansion during the next five years or so. The Industrial Credit and Investment Corporation has agreed to give a foreign exchange loan of Rs. 45 lakhs. An application has been made to the Commonwealth Development Finance Company of London for a foreign exchange loan of Rs. 43 lakhs. It is also proposed to issue preference shares for Rs. 40 lakhs, and an application is being made to the Controller of Capital Issues. Sir John points out that Braithwaite has decided to issue bonus shares by capitalising reserves to the extent of Rs. 43.40 lakhs, to bring greater balance between the paid-up share capital and the total capital employed in the business. But he makes it clear that the decision to issue bonus shares does not imply that the directors will necessarily maintain the same ordinary dividend on the increased capital. Whether or not more dividends will be paid will depend on the profits of the Company and on its financial requirements for expansion in the future, the need for ploughing back resources into the business is underlined by the expansion programmes launched. The profit of Braithwaite for the year ended December 1961 is Rs. 35.85 lakhs, after providing Rs. 5.75 lakhs

buying surpluses when available and releasing them when required. If the Governments of the richer countries can devise currency stabilising schemes it should not be beyond their power to devise commodity stabilising schemes, likewise financed internationally. And if they can devise schemes to finance the development of the poorer countries it should not be beyond their power to devise schemes to distribute surplus food to those countries—wherever the surplus may originate, whether it arises accidentally or is produced deliberately. Commodities should fit quite comfortably into the world's financial arrangements.

for depreciation, Rs. 32.25 lakhs for taxation and Rs. 2.37 lakhs for development rebate reserve. It shows a rise of nearly Rs. 15.14 lakhs over 1960. A taxable ordinary dividend of 25 percent has been recommended, the same as for the previous year.

Prospects for Union Carbide

Sales of Union Carbide India Ltd rose from Rs. 8.2 crores in 1960 to Rs. 9.5 crores during the year ended 25th December, 1961. There has been a good demand for the wide range of products manufactured by the Company. The production and sales of dry batteries, flash lights and zinc and sales of dry batteries, flash lights and zinc products have increased substantially. Although the chemicals and polyethylene plants in Trombay have been commissioned by March 1961, they were unable to "reach continuous running" until September 1961. The output of industrial chemicals and polyethylene resins has now reached satisfactory levels. The power shortage hampered the operations of the Calcutta battery plant and the operations of the Calcutta battery plants has of the Calcutta and Madras battery plants has been restricted due to the shortage of imported raw materials. The zinc rolling mill of the Metals and Ores Company has functioned satisfactorily. New facilities for the production of zinc callots and carbon-coated zinc electrodes have been commissioned. These facilities have helped diversify the range of zinc products manufactured by the unit. The activity of the Lucknow factory of the Eveready Flashlight Company has been extended.

Capital expenditure for the construction of new plant and equipment and the replacement of existing facilities has amounted to Rs. 1.1 crores in 1961, compared with Rs. 2.2 crores in 1960. A large portion of the expenditure has been made for completing the chemicals and polyethylene plants in Trombay. In order to shift the Calcutta battery plant for extending its production an industrial site close to the existing unit has been bought. The designing of the new facilities has been undertaken, but the construction is expected to take several years. The addition of new plants and facilities at the Metals and Ores Company has been completed. It is expected that additional melting and casting capacity will have to be added by 1963.

Intensive efforts are being made to increase exports of Union Carbide products. The profit has amounted to Rs. 83.21 lakhs (against Rs. 1.45 lakhs against Rs. 34.94 lakhs (against Rs. 21.03 lakhs) to depreciation and Rs. 65.50 lakhs (against Rs. 2.30 lakhs) to development rebate. A taxable ordinary dividend of 18 percent, including an interim of 7.5 percent, has been declared. It is covered more than twice and offers a yield of 3.6 percent at the present price of Rs. 50 a share. Taxation absorbs Rs. 21.78 lakhs (against Rs. 61.38 lakhs), while Rs. 15.54 lakhs has been transferred to special reserve. The carry-forward is Rs. 42.36 lakhs, against Rs. 46.71 lakhs brought in.

The directors say that Union Carbide has been licensed to expand its industrial chemicals and polyethylene capacities in Trombay. The Company's proposals for financing the foreign expansion and rupee expenditures on the expansion change and rupee expenditures on the expansion are being considered by the Government. In

order to surmount the raw material shortage Union Carbide is considering several schemes to produce some industrial materials and components for replacing imports.

National Rubber Expanding

Presiding at the annual general meeting of the National Rubber Manufacturers Ltd in Calcutta last week, Mr. K. N. Mukherjee referred to the satisfactory results for the year ended December 1961. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) Sales improved and the profit rose in spite of the shortage of electric power and higher raw material costs. A taxable ordinary dividend of 6.5 percent has been declared. The expansion programme is making progress and efforts are being made to increase the export of National Rubber's products. Commenting on the supply of natural rubber, Mr. Mukherjee said that the domestic production has fallen far behind consumption. As a result, substantial quantities of raw rubber are being imported. The total consumption of natural, synthetic and reclaimed rubber is estimated at about 94,000 tons by 1965, while the domestic production of natural rubber is not expected to exceed 45,000 tons. Although a portion of the shortfall is likely to be made up by the domestic production of synthetic and reclaimed rubber, the shortage of natural rubber is likely to continue. But an encouraging feature is that India may become self-sufficient in such raw materials as cord fabric, bead wire, tube valves, carbon black and rubber chemicals by the end of 1966, because many units are being set up to produce them.

Referring to the Government's industrial licensing policy, Mr. Mukherjee said licences should be issued with greater discrimination. As long as the installed capacity of the existing units is not fully used, there is no point in issuing fresh licences for establishing new units. The capacity for producing bicycles and bicycle tyres, for instance, is not being used fully. If the existing units are given an opportunity to produce up to their capacities, the bigger turnover will help reduce the unit cost of production.

Rights from Jay Shree Tea

The Jay Shree Tea and Industries Ltd has applied to the Controller of Capital Issues for permission to issue ordinary rights shares at par in the proportion of one new share for every three held. But the directors think that the Government will permit the issue of these shares at a premium. Jay Shree Tea has also asked for the Government's permission to issue preference shares of Rs. 29.16 lakhs. The shares will carry a fixed taxable dividend of 9.5 percent. The directors have made it clear that the issue of shares will be decided after making a careful assessment of the Company's financial requirements.

Jay Shree Tea has made a profit of Rs. 39.04 lakhs for the year ended December 1961, against Rs. 47.84 lakhs in 1960, after transferring Rs. 10.84 lakhs (against Rs. 8.77 lakhs) for depreciation. The taxable ordinary dividend has been reduced from 14 percent to 12.5 percent, but the share capital has, meanwhile, been increased by issuing bonus shares. The dividend is covered more than three times and offers a yield of 6.5 percent at the present price of Rs. 19.25 a share. Taxation is allocated Rs. 15.50 lakhs (against Rs. 21 lakhs) and development rebate reserve Rs. 4.50 lakhs (against Rs. 1.25 lakhs). General reserve absorbs Rs. 8.49 lakhs (against Rs. 5 lakhs). The carry-forward is Rs. 18.455, against Rs. 88,479 brought in.

Sales rose by 11 percent to Rs. 3.34 crores, but the profit was affected by lower prices of tea, although the output reached a record figure of 2.7 million kilograms. Commenting on the prospects, the directors say that the tax burden on the tea industry should be reduced in order to increase its competitive power in foreign markets. Jay Shree Tea is thinking of extending tea cultivation and is going in for a replacement programme. It has taken steps to diversify its activities. The woodcrafts factory in Assam has done well. The

plywood factory in Khardah, near Calcutta, has been extended and reorganised. The superphosphate and sulphuric acid plants have started working. The directors are optimistic about the future.

Century Mill Results Impress

The directors of the Century Spinning and Manufacturing Company have recommended a final dividend of Rs. 18 a share, subject to tax, bringing the total dividend for 1961 to Rs. 30 a share, which is the same as in 1960. But the final dividend for 1961 is on the increased capital of Rs. 2.55 crores, resulting from the issue of bonus shares in the proportion of one for four. The ordinary dividend, therefore, involves, a larger distribution of Rs. 70.36 lakhs, against Rs. 61.17 lakhs in 1960. The small setback in Century Mill shares from Rs. 639 to Rs. 626, following the dividend announcement, can hardly be attributed to the market's disappointment over the distribution, although many had been expecting a cash bonus to mark the centenary of the founding of the House of Birlas. The setback reflects the general weakness in the market, caused mainly by Budget fears.

Apart from the maintenance of the dividend on the increased capital, the shareholders have every reason to feel happy over the Company's impressive performance in 1961. The preliminary figures for the working results show that, while sales have risen by about 21.8 percent from Rs. 13.46 crores to Rs. 16.40 crores, the gross profit of Rs. 3.92 crores shows an increase of nearly 36.7 percent over the 1960 figure of Rs. 2.86 crores. Allocations include, depreciation Rs. 86.15 lakhs (against Rs. 91.33 lakhs), taxation Rs. 135.50 lakhs (against Rs. 43 lakhs), development rebate reserve Rs. 10.22 lakhs (against Rs. 23.62 lakhs), capital redemption reserve Rs. 10 lakhs (against Rs. 15 lakhs), development reserve Rs. 3.40 lakhs (against Rs. 7.87 lakhs), dividend equalisation fund Rs. 10 lakhs (the same) and contingency reserve Rs. 40 lakhs (against nil). Credit has been taken for a sum of Rs. 6.45 lakhs being the provision in previous years no longer required. After providing for the proposed dividends—ordinary as well as preference—which absorb Rs. 81.07 lakhs (against Rs. 71.88 lakhs), and making certain adjustments, there remains Rs. 3.33 lakhs to be carried forward, against Rs. 2.31 lakhs brought in. The gross block of the Company has increased from Rs. 10.54 crores to Rs. 12.63 crores, and the net block stands at Rs. 7.42 crores. The Rs. 100-paid share is currently quoted around Rs. 628, which is not much below its all-time high of Rs. 641. The share recorded a high of Rs. 740 in 1961, but that was before the issue of bonus shares.

W.I.M.C.O. Maintains

The Western India Match Co. Ltd reports satisfactory results for the year ended December 1961. Gross sales have fallen from Rs. 18.34 crores to Rs. 18.04 crores, which is attributed to the switch-over in packing from 60 sticks to 50 sticks to a box. The turnover, after the payment of excise duty of Rs. 10.09 crores, against Rs. 10.99 crores, was better at Rs. 7.95 crores, compared with Rs. 7.68 crores in 1960. The gross profit has increased from Rs. 1.52 crores to Rs. 1.66 crores. Appropriations include depreciation Rs. 20.52 lakhs (against Rs. 19.02 lakhs), taxation Rs. 57.10 lakhs (against Rs. 51.15 lakhs), development rebate Rs. 1.55 lakhs (against Rs. 1.83 lakhs), contingencies Rs. 15 lakhs (against Rs. 12.73 lakhs), and general reserve Rs. 10 lakhs (against Rs. 8.82 lakhs). The dividend has been maintained at Rs. 16 a share, subject to tax, absorbing Rs. 44 lakhs. This leaves Rs. 5.11 lakhs to be carried forward, against Rs. 4.53 lakhs brought in.

The directors state in their report that the Company's factories worked well during the year, and sales continued to be good. There was a shortage of matches, as anticipated in the previous year, and this, added to the increased demand following a rise in population, has made it difficult for the industry to meet the country's entire requirements. The Company's factories are limited by the Government to their present capacity. The paper mill worked satisfactorily, but suffered

from the price restrictions which do not give a fair return. There has been great difficulty in obtaining sufficient supplies of pulp from abroad, but every effort is being made to secure the Company's requirements from indigenous sources. The management is considering a project for the manufacture of salt and certain other chemicals such as potassium chloride, which is a raw material for chlorate manufacture. The financial position of the Company is very sound. Against a paid-up capital of Rs. 2.75 crores, its reserves and surplus amount to Rs. 2.07 crores. There was a net addition of Rs. 20 lakhs during the year to the gross block account which stands at Rs. 5 crores, and this has been written down to Rs. 2.71 crores. The Rs. 100-paid share which rose to Rs. 321 in January—the highest price recorded in 1961 was Rs. 314—is currently quoted around Rs. 307.

Kohinoor Mills Fares Well

The Kohinoor Mills Company Ltd reports encouraging results for 1961. While sales are up by only 6.7 percent from Rs. 6.75 crores to Rs. 7.20 crores, the gross profit has shot up by over 53 percent from Rs. 32.18 lakhs to Rs. 59.38 lakhs. The ratio of gross profit to sales at 8.3 percent does not compare well with the performance of many other mills producing similar varieties of cloth, but it shows an appreciable improvement over the 1960 figure of only 4.8 percent. It is significant that in spite of higher sales, raw material costs and the salaries and wages bill are lower. The dividend has been stepped up from 15 percent to 18 percent, both taxable; the distribution is made from the year's earnings. In the past four years, the Company has had to draw on its reserves for paying the dividends. After providing Rs. 17.02 lakhs (against Rs. 10.92 lakhs) for depreciation and Rs. 15.68 lakhs (against Rs. 4.25 lakhs) for taxation, the net profit amounts to Rs. 22.71 lakhs, against Rs. 14.83 lakhs in 1960. With Rs. 20.794 brought forward from the previous year, the disposable surplus amounts to Rs. 22.92 lakhs. The directors have provided Rs. 4.90 lakhs (against Rs. 7.07 lakhs) for development rebate. The proposed dividend absorbs Rs. 18 lakhs (against 15 lakhs), leaving Rs. 1,555 to be carried forward.

The directors state that new machinery of the value of Rs. 39.39 lakhs was received during the year, and machinery worth Rs. 33.22 lakhs was erected. Referring to the cotton supply position, they say that during 1962 it is likely to be critical. However, the Company's raw cotton position although not as strong as the management would have liked, is comparatively satisfactory. From 1st February, 1962, Nahalchand Laloochand Private Ltd and V. S. Apte and Son—which had been functioning as the selling agents for yarn and cloth, respectively—relinquished their agencies, as the directors were of the view that in the present market conditions the mills should begin to cater directly to the consumers. Additions to the gross block in 1961 amounted to Rs. 34.66 lakhs, bringing the total value to Rs. 4.49 crores, which has been written down to Rs. 1.31 crores. Against a paid-up capital of Rs. 1 crore, the Company's reserves and surplus total Rs. 1.07 crores. The Rs. 100-paid shares, which had touched a high of Rs. 332.50 in 1961, is currently quoted around Rs. 310 cum-dividend, offering a gross yield of a little over 6 percent.

Modi Sugar Pays Less

In spite of a larger crush, better recovery and record sales, Modi Sugar Mills Ltd has made a smaller profit in the year ended October 1961. The dividend has been reduced from 17 percent to 15 percent. The Company's sales increased by about 18.8 percent from Rs. 6.60 crores to Rs. 7.84 crores, but the gross profit fell by 5.3 percent from Rs. 39.25 lakhs to Rs. 37.20 lakhs. The provision for depreciation has been raised from Rs. 6.03 lakhs to Rs. 8.45 lakhs, and a sum of Rs. 1.60 lakhs (against Rs. 70,000) has been transferred to development rebate reserve. Taxation accounts for Rs. 12 lakhs (against Rs. 15.25 lakhs), and the proposed dividend absorbs Rs. 11 lakhs (against Rs. 12.48 lakhs in 1959-60). No provision has been made for the price fluctuation reserve and dividend equalisation fund, these received Rs. 3 lakhs and

Rs. 1.50 lakhs, respectively, in the preceding year. After making various appropriations, there remains Rs. 4.56 lakhs to be carried forward, against Rs. 42,184 brought in. The directors state that the factory worked 179 days (against 166 days) and crushed 5.14 million maunds (against 4.76 million maunds) of sugarcane, with the average recovery slightly better at 9.82 percent (against 9.76 percent). The working of the vanaspati factory, as also the soap, paints, distillery, lantern and glass-works, was satisfactory. The Company's plant for the manufacture of torch cases went into production during the year and its results, it is reported, are encouraging. Machinery for welding electrodes has been received, and the factory, it is expected, will go into production this year. The directors expect a ready market for its products. The Rs. 100-paid share of Modi Sugar is quoted around Rs. 12.44.

Sarangpur Cotton Profit Up

The directors of Sarangpur Cotton Manufacturing Co. Ltd, Ahmedabad, have recommended a dividend of Rs. 83 a share of Rs. 250 for 1961, against Rs. 165 a share of Rs. 500 in 1960. Although the dividend has been virtually maintained, the Company has done much better than in the previous year. Sales at Rs. 5.71 crores show an increase of about 18.7 percent over the 1960 figure of Rs. 4.81 crores, and the gross profit has risen by as much as 45.3 percent from Rs. 75 lakhs to Rs. 109 lakhs. The ratio of gross profit to sales has improved from 15.6 percent to 19 percent. Allocations include depreciation Rs. 26.66 lakhs, development rebate reserve Rs. 3.82 lakhs, development and rehabilitation reserve Rs. 1.27 lakhs, taxation Rs. 35.23 lakhs and general reserve Rs. 20.50 lakhs. The proposed ordinary dividend absorbs Rs. 13.23 lakhs. The Company has issued bonus shares of Rs. 250 each, in the proportion of one share for every four held. Its Rs. 250-paid share is currently quoted around Rs. 2,190.

Victoria Mills Earns More

The directors of Victoria Mills Ltd have maintained the ordinary dividend for 1961 at Rs. 25 a share, subject to tax, but it involves a larger distribution because of the increase in the capital from Rs. 17.60 lakhs to Rs. 22 lakhs through a one-for-four bonus issue. The preliminary figures relating to the Company's working results for 1961 show a satisfactory improvement over the previous year's performance. Sales are up by nearly 25 percent from Rs. 2.28 crores to Rs. 2.86 crores, and the gross profit has gone up by about 22.5 percent from Rs. 30.3 lakhs to Rs. 37.1 lakhs. Appropriations include depreciation Rs. 6.63 lakhs (against Rs. 5.97 lakhs), development rebate reserve Rs. 50,000 (against Rs. 39,000), statutory development rebate reserve Rs. 1.50 lakhs (against Rs. 1.18 lakhs), taxation Rs. 9.35 lakhs (against Rs. 6 lakhs), and bonus Rs. 6.75 lakhs (against Rs. 6.25 lakhs), and ordinary dividend Rs. 5.50 lakhs (against Rs. 4.40 lakhs). The Rs. 100-paid share of the Company is currently quoted around Rs. 462.50, which is only slightly below the year's best of Rs. 473.75, and offers a gross yield of about 5.7 percent.

New Beerbhoom Coal Earns Less

The New Beerbhoom Coal Co. Ltd has declared a taxable ordinary dividend of 10 percent for the year ended October 1961 on the increased share capital. The dividend is covered more than two-and-a-half times and offers a yield of 4.7 percent at the present price of Rs. 21.25 a share. The profit has declined from Rs. 11.98 lakhs in 1959-60 to Rs. 9.76 lakhs, after providing Rs. 5.2 lakhs (against Rs. 5.05 lakhs) for depreciation. Taxation is allocated Rs. 5.45 lakhs (against Rs. 5.4 lakhs), development rebate reserve Rs. 81,986 (against Rs. 1.64 lakhs) and general reserve Rs. 50,000 (against Rs. 2 lakhs). The carry-forward is Rs. 93,645, against Rs. 79,796 brought in.

Raisings improved from 714,376 tons to 790,386 tons and despatches from 716,944 tons to 786,324 tons. The working of Victoria colliery was interrupted by sand-stowing operations which cost a

CAPITAL, 19th April, 1962.

great deal of money for which New Beerbhoom Coal has not been fully compensated by the Coal Board. The colliery is now operating normally. Raisings of the Barmondia and New Kendah collieries have been satisfactory, but it is difficult to make any forecast about their output during the next two or three years in view of the power shortage. The project reports of New Beerbhoom Coal for expansion during the third plan have been approved. This will help it to obtain foreign exchange out of the World Bank loan recently granted to the coal industry. Arrangements have been finalised to obtain import licences for plant and equipment. The directors say that it is difficult to set an accurate idea of the expansion in output at the end of 1966 due to the shortage of power and transport.

Refinance Corporation More Active

There has been an impressive rise in the activity of the Refinance Corporation For Industry Ltd during the year ended December 1961. The number of applications for loans as well as those sanctioned rose substantially. The total amount of refinancing done by the Corporation from its inception and until the end of 1961 is Rs. 16.49 crores. A wide sector of industry has benefited from the facilities provided by it. The Corporation has approached the Central Government for more funds. The directors are considering ways and means of extending and diversifying activities. It is proposed to extend refinancing facilities in the form of medium-term credits for promoting exports. The Corporation's refinancing facilities will be made available to the State Financial Corporations as soon as the Act setting them up is amended. This is now being finalised.

The Corporation has made a profit of Rs. 20.19 lakhs for the year ended December 1961, against Rs. 19.39 lakhs in 1960. A taxable dividend of 4 percent has been declared, absorbing Rs. 10 lakhs. Taxation absorbs Rs. 8.97 lakhs (against Rs. 8.73 lakhs) and general reserve Rs. 1 lakh (against Rs. 75,000). The carry-forward is Rs. 22,741, against Rs. 682 brought in. The Corporation has charged interest at 5 percent on its loans to financial institutions.

Vikram Mills Does Well

Vikram Mills Ltd of Ahmedabad reports satisfactory results for 1961, with sales and profit up by 12 percent and 13 percent, respectively. The directors have recommended a dividend of Rs. 20 a share of Rs. 200, subject to tax, against Rs. 50 a share of Rs. 500 in 1960. The Company had issued one bonus share of Rs. 100 for one ordinary share of Rs. 500 in the previous year, subsequently, it was consolidated into a share of Rs. 600 each, and then subdivided into three shares of Rs. 200 each. Sales were up from Rs. 2.1 crores to Rs. 2.36 crores and the gross profit has risen from Rs. 26.70 lakhs to Rs. 30.67 lakhs. Appropriations include statutory development rebate reserve Rs. 48,000 (against Rs. 50,000), depreciation Rs. 6.62 lakhs (against Rs. 6.70 lakhs), additional depreciation for 1960 Rs. 75,000, taxation Rs. 9.62 lakhs (against Rs. 5.50 lakhs), bonus to employees for the years 1959 to 1961 Rs. 2.33 lakhs (against nil), general reserve Rs. 4.25 lakhs (against Rs. 9 lakhs), and dividends Rs. 3.70 lakhs (against Rs. 3.15 lakhs). The Rs. 200-paid share of Vikram Mills is currently quoted around Rs. 375.

United Flour Cuts Dividend

The United Flour Mills Co. Ltd has reduced the taxable ordinary dividend from 35 percent in 1959-60 to 10 percent for the year ended November 1961. It is covered more than twice and offers a yield of 2.6 percent at the present price of Rs. 38 a share. The profit has declined from Rs. 3.88 lakhs to Rs. 1.15 lakhs, after providing Rs. 29,113 (against Rs. 33,904) for depreciation. Taxation absorbs Rs. 80,977 (against Rs. 2.31 lakhs) and development rebate reserve Rs. 1,600 (against Rs. 4,600). The carry-forward is Rs. 10,571, against Rs. 28,594 brought in. Flour production amounted to 213,412 quintals (against 228,522 quintals). The

working of United Flour Mills was affected by labour troubles. The price of flour has also been moving down.

Indore Malwa Profit, Dividend Up

The directors of Indore Malwa United Mills have raised the dividend for 1961 from Rs. 8.50 to Rs. 10 a share, subject to tax. The distribution has been doubled since 1958, and the increase for the third year in succession follows the steady improvement in the Company's working results. In 1961, sales of cloth, yarn and waste fetched Rs. 3.47 crores, which is 8.4 percent more than the previous year's figure of Rs. 3.20 crores. The gross profit recorded an increase of 16 percent from Rs. 28.18 lakhs to Rs. 32.69 lakhs. After providing Rs. 4.54 lakhs (against Rs. 10.36 lakhs) for depreciation—the larger amount of depreciation in 1960 was really for the three years ended December 1960—Rs. 1.10 lakhs (against Rs. 39,000) for development rebate and Rs. 12.75 lakhs (against nil) for taxation, the net profit amounts to Rs. 12.16 lakhs, against Rs. 16.93 lakhs in 1960. The directors have transferred Rs. 5 lakhs (against nil) to dividend equalisation fund, Rs. 2.01 lakhs (against nil) to general reserve and the proposed dividend absorbs Rs. 5 lakhs against (Rs. 4.25 lakhs). After making some minor adjustments, there remains a sum of Rs. 26,590 to be carried forward, against Rs. 16,103 brought in.

The Company received during the year new machinery of the value of about Rs. 10 lakhs. Two Texmaco ring frames, four high efficiency plain looms and one set of Whittin's combers were added in 1961, and installation of electrical machinery is in progress. Orders for equipment worth Rs. 60 lakhs were placed during the year for renovation and modernisation purposes. These comprise spinning, weaving and processing machinery. Against the 32,000 old spindles to be replaced, the Company has placed orders for 10,880 spindles. For the balance, the directors have decided to renovate rather than replace the existing frames, in view of the extreme delay in deliveries. Further orders for machinery worth Rs. 20 lakhs, it is reported, have been placed during the current year for spinning and processing machinery. The financing of the capital programme, it is proposed, will be met partly from the accumulated profits and partly from a loan from the Company's bankers. As for the current year's profits, the directors state that the cotton shortage, increased cost of stores, dyes, coal, etcetera, together with the increase in the wage bill, will adversely affect the working results. But they expect to maintain the present level of profits, with the active steps which are being taken for the renovation and modernisation of the mills. The Rs. 100-paid share is currently quoted around Rs. 178, which is only a little below its February peak of Rs. 182, which was the highest recorded for many years.

Trichinopoly Mills Raises Dividend

The working results of Trichinopoly Mills Ltd for 1961 show a considerable improvement over the previous year's performance, and the directors have raised the dividend from 13.5 percent to 15 percent, subject to tax. While sales are up by 10.8 percent from Rs. 40.89 lakhs to Rs. 45.33 lakhs, the gross profit has recorded an increase of nearly 65 percent from Rs. 5.51 lakhs to Rs. 9.14 lakhs. After providing Rs. 96,430 (against Rs. 85,281) for depreciation and Rs. 3 lakhs (against Rs. 1.95 lakhs) for taxation, the net profit amounts to Rs. 3.73 lakhs, against Rs. 2.33 lakhs in 1960. The directors have allocated Rs. 1 lakh (against nil) to the dividend equalisation fund, but the provision for development rebate reserve is down from Rs. 55,000 to Rs. 400. The proposed dividend absorbs Rs. 2.10 lakhs (against Rs. 1.89 lakhs), leaving Rs. 61,077 to be carried forward against Rs. 2,397 brought in.

More from Bharat Survodaya

The directors of Bharat Survodaya Mills Co. Ltd, Ahmedabad, have recommended a dividend of Rs. 12 plus a bonus of Rs. 6 a share subject to tax, making a total distribution of Rs. 18 a share

for 1961, against Rs. 8 paid in 1960. The impressive increase in the dividend seems justified by the Company's performance during the year. Sales are up by about 10 percent from Rs. 1.6 crores to Rs. 1.77 crores and the gross profit has shot up by nearly 69 percent from Rs. 12.04 lakhs to Rs. 20.40 lakhs. The ratio of gross profit to sales has improved from 7 percent to around 11.6 percent. After providing for the proposed dividend, the directors have allocated Rs. 4.13 lakhs for depreciation, Rs. 3.87 lakhs for development rebate, Rs. 5 lakhs for taxation and Rs. 1.40 lakhs for general reserve. The Company's renovation and modernisation programme is in progress. In 1961, it installed new machinery worth Rs. 17 lakhs, and has finalised orders for spinning machinery against a licence for 2,400 spindles for expansion. The Company's block at the end of 1961 was placed at Rs. 76.04 lakhs, against which depreciation provided so far amounts to Rs. 1.64 lakhs. The Rs. 100-paid share is quoted in Ahmedabad around Rs. 315.

Silver Cotton Does Well

The Silver Cotton Mills Co. Ltd of Ahmedabad reports very encouraging results for 1961. Sales rose by about 13.7 percent from Rs. 1.60 crores to Rs. 1.82 crores, but the gross profit increased by 40 percent from Rs. 16.19 lakhs to Rs. 22.66 lakhs. The ratio of gross profit to sales shows an impressive improvement from 10.1 percent to 14.6 percent. The dividend has been raised from Rs. 30 to Rs. 32 a share, subject to tax. Allocations include depreciation Rs. 5.30 lakhs, development rebate reserve Rs. 70,088, development and rehabilitation reserve Rs. 23,363, taxation Rs. 7.05 lakhs, dividend Rs. 2.10 lakhs, and reserves Rs. 5.55 lakhs. The Company issued during the year 6,562 rights shares of the face value of Rs. 100 each, in the proportion of one share for each one held. The Rs. 100-paid share is currently quoted around Rs. 545.

Nagri Mills Pays More

The directors of Nagri Mills Ltd, Ahmedabad, have raised the dividend for 1961 from Rs. 75 to Rs. 85 a share, subject to tax. The preliminary figures released along with the announcement of the dividend show an increase of Rs. 2.50 lakhs in the gross profit from Rs. 18 lakhs to Rs. 20.50 lakhs. Appropriations are: depreciation Rs. 4.63 lakhs (against Rs. 3.27 lakhs), development rebate reserve Rs. 1.88 lakhs (against Rs. 46,000), development and rehabilitation reserve Rs. 63,000 (against Rs. 15,000), taxation Rs. 4.30 lakhs (against Rs. 5.69 lakhs), bonus to employees for 1959 to 1961 Rs. 3.23 lakhs, general reserve Rs. 1 lakh (against Rs. 3 lakhs) and dividend reserve Rs. 1 lakh (same). The proposed ordinary dividend absorbs Rs. 2.50 lakhs, against Rs. 2.20 lakhs in 1960. The preference dividend accounts for another Rs. 12,613.

Air Control and Chemical Engineering

Air Control and Chemical Engineering Co. Ltd is a new enterprise which has been registered in Ahmedabad to undertake the manufacture of a wide range of ventilation and industrial refrigeration products such as fans and blowers for air handling and ventilation equipment, air washers, water filters, articulated units, scrubbers, air filters, quick freezing plants, cold storage plants for fish, meat and other food products, air-conditioning plants, gas compressors for freon and ammonia, and centrifugal, rotary and reciprocating types of cooling towers. The Company is securing the collaboration of three Canadian firms—Sheldons Engineering Ltd, Air Coils Manufacturing Co. Ltd, Canada-wide Air Conditioning and Refrigeration Services—and two U.S. firms, namely, Air and Refrigeration Corporation and Dunham Bush Inc. Sheldons of Canada and Air and Refrigeration Corporation of the U.S.A. are likely to participate in the capital of the Indian Company. Air Control and Chemical Engineering will have an authorised capital of Rs. 2 crores, made up of Rs. 1.50 crores in equity shares and Rs. 50 lakhs in unclassified shares, both of Rs. 100 each. The issued capital will be Rs. 1 crore in equity shares, of which only

The reports of the Murphulani (Assam) Tea Co. Ltd and the Mim Tea Co. Ltd in the Andrew Yule group for the year ended December 1961, show divergent trends. Murphulani Tea has increased the taxable ordinary dividend from 5 percent to 15 percent, absorbing Rs. 26,250. The yield is 5.7 percent at the present price of Rs. 26.50 a share. The profit amounts to Rs. 2.23 lakhs, against a loss of Rs. 50,761 in 1960. Taxation is allocated Rs. 75,000, general reserve Rs. 50,000, and development rebate reserve Rs. 7,500. The carry-forward is Rs. 28,760, against Rs. 5,827 brought in. The crop was 1,829 quintals, and the average sale price was Rs. 6.01 a kilogram. In 1960, the crop was 1,223 quintals, and the average sale price was Rs. 5.87 a kilogram. Estimates for 1962 have been made for a crop of 2,000 quintals.

The profit of Mim Tea Co. Ltd is Rs. 77,617 (against Rs. 91,784), after providing Rs. 20,732 (against Rs. 18,073) for depreciation. The taxable ordinary dividend has been reduced from 22.5 percent to 20 percent, absorbing Rs. 31,800. The yield works out to 10.4 percent at the present price of Rs. 191.50 a share. Taxation absorbs Rs. 31,000 (against Rs. 32,000) and general reserve Rs. 15,000 (against Rs. 20,000), leaving a carry-forward of Rs. 14,563, against Rs. 15,577 brought in. The crop was 1,019 quintals, and the average sale price was Rs. 8.21 (against Rs. 8.33) a kilogram. Estimates for 1962 have been made for a crop of 1,000 quintals.

Facit Asia Ltd will shortly set up in Madras at a cost of Rs. 30 lakhs the first factory to produce calculators in India. The Company has been formed by some Indian interests and A. B. Atvidabergs Industrier of Sweden, with the latter holding the largest block of shares. The Swedish Company has secured an industrial licence from the Central Government. Factory construction will begin shortly and is expected to be completed in 1963. Facit Asia will be under Swedish technical direction. Atvidabergs has already been helping in the local production of typewriters by supplying tools and machines from Sweden and by training technical personnel.

The Central Government is reported to have approved the proposal of Mr. P. L. Jhunjhunwala of Bombay for setting up a small shaft kiln cement plant with an annual installed capacity of 30,480 tonnes in Warora, Chanda district of Maharashtra State. The capital equipment is estimated to cost Rs. 21.40 lakhs, of which about Rs. 15 lakhs worth will be imported. A new Company to be known as Shree Cement Manufacturing Co. Ltd, it is proposed, will be formed to implement the project. It will have an authorised capital of Rs. 75 lakhs of which Rs. 60 lakhs is likely to be issued initially.

Although the modern trend in setting up conventional cement plants based on rotary kilns is to have relatively large capacities, there have been important developments recently in shaft kilns in Europe, making small-scale manufacture of portland cement not only feasible, but also competitive. In India, almost all the known large-scale limestone deposits are being more or less fully exploited, and the remaining few are likely to be used shortly when some more big cement units are set up. Consideration, therefore, needs to be given to the use of smaller deposits of limestone for manufacturing cement for local consumption as well as for producing it on a small scale for making pipes, structural material, etcetera. The Development Wing of the Central Government has made a special study of the economics of small-scale cement plants with capacities ranging from 12 tons to 75 tons a day. It has expressed the view that

size for size, shaft kiln plants can be as economical as rotary kiln plants. Smaller shaft kiln units enjoy certain special advantages. Fuel and power consumption and capital costs are said to be lower. The quality of the product can be maintained consistently. The time required for the delivery of plant as well as for erection is also considerably less. Most of their production can be consumed locally or distributed to neighbouring areas by road.

The Development Wing has roughly estimated the ex works cost of cement produced by a factory having an annual capacity of 25,000 tons at around Rs. 63 a tonne, including a profit margin of Rs. 10 a tonne. This compares with the latest average cost figures of existing cement factories which the Tariff Commission has estimated at Rs. 61.60 a tonne, including Rs. 4.12 for contingencies and selling expenses. The cost of a small plant of about 100 tons a day capacity would be about Rs. 25 lakhs, says the Development Wing. Such plants have not so far been imported into India, nor are they being manufactured by indigenous cement machinery manufacturers. To begin with, imported components may be up to 80 percent of the value, involving a foreign exchange expenditure of Rs. 20 lakhs. (The foreign exchange expenditure involved in fabricating indigenously a standard sized rotary kiln plant of 500 tons a day capacity amounts to about Rs. 60 lakhs.) It might be possible to increase the indigenous components gradually, to 50 percent. In due course, it should be possible to fabricate complete plants indigenously.

Since life insurance in this country is a monopoly of the Life Insurance Corporation, the Policyholders Servicing and Research Institute, Calcutta has been formed to try to ensure satisfactory service to policyholders. The Institute has recently raised certain important issues. The new Income Tax Rules allow rebate on income tax up to 33 per cent of one's income or Rs. 12,000, whichever is less, on life insurance premium payments in the case of artists and authors. The Institute points out that only an insignificant proportion of the tax-paying policyholders will benefit from this concession. In view of the fall in the value of the rupee due to inflation, particularly in the case of long term investments like life insurance, the concession should be extended to all, especially to those in the lower income group.

The Institute says that service to policyholders has deteriorated greatly since nationalisation, because of the system of payment of commission to agents, who consequently keep the field officers engaged for ensuring quick payment of commission. Neither the agent nor the field officer is able to spare the time to serve policyholders. The Institute also questions the L.I.C. claim to have done a record amount of new business of over Rs. 600 crores in 1961. It contends that a substantial portion of the so-called new business is not genuine and suggests that the Government of India should appoint a commission with independent statistical experts to find out the proportion of real new business and also the proportion of the business on which the second premiums, particularly in the case of policies with monthly premiums, have not been paid at all. This analysis should be done for the last ten years. It will bring to light the amount of "false" new business, which may give an idea of the financial loss involved for the L.I.C. and also the number of man-days lost—man-days which could have been used profitably to serve the policyholders.

Addressing the Bharat Chamber of Commerce in Calcutta recently, Mr. Kripal Singh, Member (Transportation), Railway Board, stated that he is confident the Indian railways will be able to move all the coal required for the steel plants and the coal washeries. The railways will also be able to lift all the coal produced in the coalfields outside West Bengal and Bihar, he said. The total traffic lifted by the railways in 1960-61 was 13 million tons, an increase of 69 percent over the

first year of the first plan. Against 42,000 million ton-kilometres handled in 1951-52, the railways handled 84,000 million ton-kilometres in 1960-61—a 100 percent increase. This has been possible by very intensive use of the resources available, with the result there is absolutely no spare capacity on the trunk routes.

Mr. Kripal Singh stated that the Planning Commission's target of traffic for the Indian railways at the end of the third plan is 245 million tons, including about 87 million tons of coal, about 11 million tons of iron ore and about 12 million tons of cement. Another 10 million tons are in the offing on account of the movement of coal to the washeries from the coalfields, to the steel plants from the washeries and also for the movement of the by-products of the washeries. In the opinion of the Railway Board, a further 10 million tons of miscellaneous traffic is likely to materialise by the end of the third five year plan over and above what has been estimated by the Planning Commission. The railways are, therefore, gearing themselves to carry 265 million tons by 1965-66.

Mr. Kripal Singh said the coal traffic can be broadly divided into two categories. The first is the traffic originating in the West Bengal and Bihar fields and the second is that originating in the outlying coalfields. The total tonnage to be moved from the latter area would be roughly 31.5 million tons, and from the former about 60 million tons. The West Bengal-Bihar collieries supply coal mainly to the steel plants, washeries and "others". All the coal needed for the steel works and the washeries, he said, is now being moved and will continue to be moved. Talking of the other consumers, Mr. Kripal Singh said that in the last year of the third plan, the daily average loading of coal in these coalfields would be 4,600 wagons, whereas the actual daily average loading in 1960-61 was 3,398. Thus, during every year of the third plan, the railways have to increase coal loading in the West Bengal-Bihar coalfields by 242 wagons a day. Against this, during 1961-62 the increase in loading was 182 wagons a day. The shortfall was due to two reasons. Firstly, the full benefits of the development works undertaken in 1961-62 would begin to be reaped hereafter and secondly, the Goa operations dislocated the movement of traffic.

The railways have decided to go in for a large number of "box" type wagons to solve the coal transport problem. Mr Kripal Singh pleaded for co-operation from the coal trade and consumers. He suggested, firstly, acceptance of bulk movement of coal in trainloads comprising "box" wagons; secondly adoption of the system of dumps; thirdly, bunker loading by all major collieries; and, lastly, loading of coal on all Sundays and holidays. The railways have accepted a target of countrywide coal loading of 6.92 million wagons a day in the last year of the third plan with a margin of 5 percent. Criticism of this target, he said, is hard to understand as on that basis the receipts of coal by any industry in the country will not be less than hitherto. In fact, in quite a few cases, the receipts will go up.

In his address at the annual general meeting of the Association of Merchants and Manufacturers of Textile Stores and Machinery held recently at Bombay, Mr. Sohrab K. Khan, president, said that the stores and machinery importers had adjusted themselves to the conditions arising out of Government policy. But the manufacturers of various types of textile equipment, accessories, auxiliaries, etcetera, were facing difficulties. Insufficient raw material supplies made production planning hazardous. The special types of steel which textile accessory producers require are not being allowed to be imported on the ground that the domestic steel output has been increasing. While steel production in the country has been going up, Mr. Khan said, not all categories, especially those required by the machinery industry, are being produced in sufficient quantities. They have tried to obtain their requirements from the local plants, but without success. Mr. Khan complained that indigenous manufacturers have "to face competition" from identical foreign products imported into the country despite

their protest. He gave the example of certain textile auxiliaries which are imported under the export promotion scheme. Such imports have effectively cut into the market for similar local products, especially urea, formaldehyde and mealmine. The Government has been asked to limit these imports to the extent of the demand that domestic manufacturers cannot satisfy.

Inaugurating the meeting, Mr Pratap Bhogilal, who represents the cotton mill interests, said that India's textile machinery requirements are enormous. The prospects for the makers of such equipment should be good. In fact, the output has been rising rapidly. The number of ring frames produced in 1958 was 877, valued at Rs. 3.75 crores; in 1960, the figure rose to 1,127, valued at Rs. 5 crores. The production of plain looms has increased from 3,151 in 1958 to 5,177 in 1960. However, the production of carding engines has received a setback, the output declining from 1,148 in 1958 to 1,075 in 1960. The progress in the manufacture of automatic looms has been unsatisfactory. The machinery-making industry should avail itself of the opportunities in the domestic market. The Committee on the Requirement of Textile Machinery and Indigenous Production Programme has reported that some 15 items of textile machinery cannot possibly be manufactured in the country during the current plan period. These include combing equipment, doublers and cablers of certain specifications, Barber Colman winding and warping machines, special types of automatic looms, auto pirn winders, vacuum stripping plant, flat grinding machines, and automatic and semi-automatic screen printing machines. These will obviously have to be imported, but it indicates the scope for the expansion of the domestic industry. Moreover, the allocation of 4 million additional spindles and 25,000 automatic looms to cotton textile mills in the current plan "ensures that the machinery producers in the country will be kept busy for years to come." The indigenous equipment should be acceptable to the mills in every way. "A mere physical increase in output without a corresponding gain in quality cannot be welcomed since the textile industry has to cater to a consuming public, Indian and foreign, that is becoming increasingly conscious of quality and price".

In his address at the annual general meeting of the Tinsplate Fabricators Association last week in Calcutta, Mr. Basudeo Lal Goenka, president said that the excise duty of Rs. 200 a ton and similar levy on account of the Steel Equalisation Fund, have made tinsplate too expensive in India. The domestic price is Rs. 1,400 to Rs. 1,500 a ton compared with Rs. 1,000 to Rs. 1,100 a ton in world markets. This has made the price of Indian tin containers high, and consumers are already turning to substitute packing materials made of aluminium, paper, plastic and polythene. Mr. Goenka stressed that unless the imposts are withdrawn, the future of the tin container industry would be bleak. There is already apathy among the Indian people to the use of tinned food, and they are unlikely to buy more of such products at the present high prices. Mr. Goenka said that some major consumers of drums and tin containers like *vanaspathi* factories have recently been allowed to set up plants for making tin containers for their own use. They have so far been receiving their supplies from commercial fabricators who will soon lose valuable business. This would be a death-blow to the tin container industry, Mr. Goenka said. Also, the Government's policy of not allowing the tin container manufacturers to modernise and replace their equipment has made matters worse.

Discussing the supply prospects, Mr. Goen said that according to official estimates, tinplate consumption during the third plan will go up 300,000 tons a year from 150,000 tons a year present. He considered this an over-estimate and in his view not more than 200,000 tons will be required. Meanwhile, steps have been taken to increase domestic production. The main producer, the Tintplate Company, has been given a licence to expand output to 150,000 tons a year and another smaller concern is making 20,000 tons a year already. The Rourkela steel plant has begun production at an annual rate of 50,000 tons, and capacity

city is to be raised to 150,000 tons in course of time. "Supply of tinplate from indigenous sources is thus going to be very much in excess of demand", Mr. Goenka said. He suggested that in order to absorb the surplus that might eventually emerge, the Government should take steps to stimulate consumption by reducing the price now.

In his address from the chair at the annual general meeting of the Indian Colliery Owners Association, held recently in Dhanbad, Mr. Rasiklal Worah said that coal production in 1967 at 56.10 million tons showed a fall in the rate of expansion of output. There was an increase of only 3.49 million tons in 1961, compared with a rise of 4.83 million tons in 1960. It was disappointing that in the first year of the third plan the tempo should have suffered, Mr. Worah said. Considering the serious bottlenecks which the industry has to grapple with, it does not seem likely that the second plan target of 60 million tons will be achieved during the current year. This being the case, he wondered whether talk of raising the coal output target to 104 million tons by the end of the third plan is to be taken seriously. He was even doubtful whether the original target of 90 million tons could be realised. As for the announcement by the National Coal Development Corporation that public sector collieries will produce 30.5 million tons by 1965-66, Mr. Worah thought that the N.C.D.C. should be able to raise output to that level with the resources at its command. But during the second plan, it fell short of the target of 30.5 million tons by 3 million tons.

Mr. Worah pleaded for a more rational use of the country's coal resources. The superior grades might get exhausted sooner than is now thought. The inferior grades should, therefore, be used as much as possible. Wagon supplies fell short of needs; during 1961-62, the average shortfall was 1,232 wagons a day. According to the Steel, Mines and Fuel Ministry's assessment of the phases and requirement of wagons over the next few years for a coal target of 97 million tons by 1965-66, the average number required daily during the next four years of the third plan is 8,561 wagons. 9,611 wagons, 11,502 wagons and 12,339 wagons. Against this, the railways have at present allocated 7,261 wagons a day, including a 5 per cent "cushion" over the 1962 figure of 6,925 wagons a day. "It will be rather too optimistic to expect an average physical placement of 6,925 wagons a day for coal loading in 1962, leaving aside the permitted cushion", Mr. Worah said. Excluding 30 wagons which are allocated to the washeries, the balance of 6,625 wagons can move only 56 million tons. Therefore, there may not be enough rail transport for coal in the current year. Referring to the power shortage in collieries, Mr. Worah said that the Planning Commission was wrong in concluding that this has affected production only in a few places. A substantial loss has been caused to the collieries in West Bengal and Bihar by the power shortage in these regions.

The first prize in the all-India sugarcane crop competition has gone to a cultivator in Uttar Pradesh, Mr. P. N. Mehta, with an yield of 86.3 tons an acre. The Indian Central Sugarcane Committee, which awarded this and other prizes at a recent Patna session, has decided to set up a standing cane development committee for scrutinising development programmes. It has urged that cane development councils be set up in States where they do not exist at present. The committee has also decided to continue its revised pattern of financial assistance for the State sugarcane research schemes for 1962-63. But it has stipulated that in future only those schemes will get assistance which will be regional in character and beneficial to more than one State. The committee has stated that while attempts should continue to produce better varieties of cane, the results of research should also be properly propagated among cultivators. The acreage under sugarcane in India during 1960-61 was 5.7 million. Cane cultivation supports over 20 million cultivators and about 100 lakh workers in sugar factories. Cane

returns of over Rs. 200 crores annually accrue to cane-growers, while the cess and excise duty collected by the Government total Rs. 55 crores.

Discussing the various problems facing the cotton textile industry in their latest annual speeches, Mr. Pratap Bhogilal, chairman of the Bombay Millowners Association, and Mr. Arvind Narottam, president of the Ahmedabad Millowners Association, have decried the uninhibited growth of the powerloom sector. Measures designed to protect handlooms have only benefited powerlooms. Enjoying near-parity with mills in technical efficiency, powerlooms are virtually free from the discipline and financial obligations which weigh so heavily on the organised sector. Mr. Bhogilal said that every powerloom should be subject to an excise levy at the standard rates. The present concession of a compounded levy should be further rationalised *vis-à-vis* excise duties payable by mills. The concession so rationalised should be available only to those powerlooms which organise themselves into co-operatives. The levy on rationalised excise duty rates will help check the unregulated growth of powerlooms and thus prevent the gradual undermining of the weaving section of composite mills.

The other intractable problem relates to rehabilitation and modernisation of the industry. The magnitude of the problem is best judged by the fact that the Working Group for the Cotton Textile Industry has estimated the cost of modernising the entire industry at Rs. 800 crores. Even a minimum programme of modernisation, together with the expansion proposed in the third plan will need an investment of about Rs. 410 crores. Financial assistance from the National Industrial Development Corporation, the Industrial Finance Corporation and the Refinance Corporation is helpful, but it has its limitations. The assistance received by the industry from the N.I.D.C. up to 31st March, 1961, amounted to only Rs. 12 crore or Rs. 13 crores. Assistance from other financial institutions is still less. The industry finds itself unable to attract equity capital because of its comparatively low profitability. Mr. Bhoglal said, "It is imperative that it should be made possible for the industry to increase its profitability and enable it to retain a larger percentage of its earnings so that it might build up sufficient reserves to meet the cost of rehabilitation and modernisation." He also suggested that the rates of depreciation allowances be so fixed as to enable mills to write off their assets in 12 to 15 years. The industry expects the Tariff Commission, which is now examining its cost structure, to take into account the enormous requirements of finance for modernisation and rehabilitation, when making its recommendation on fair prices of mill cloth. While the industry continues to complain about its poor profitability and lack of funds for modernisation, the Estimates Committee blames it for continuing to declare large dividends oblivious of the needs of depreciation and extra resources.

But probably the most difficult problem facing the industry now is in relation to cotton supply. The domestic output has consistently lagged behind the plan target while the rate of consumption in mills has shown a marked increase. The industry has, therefore, had to rely heavily on imports of cotton. But this cannot go on for long in view of India's extremely difficult foreign exchange position. The country will have to boost cotton production since otherwise it will not be possible to produce enough cloth to meet domestic requirements, let alone for export. Mr. Bhogilal has suggested decontrol of cotton prices so that farmers may have the same freedom to obtain the maximum return on cotton as on other cash crops. This might help increase the cultivation of cotton.

The president of the Ahmedabad Millowners' Association, Mr. Arvind Narottam, has suggested the appointment of a cotton commission to co-ordinate the activities of various organisations interested in increasing cotton production. The industry has also been suffering from the inadequate supply of electricity and power. Mr. Narottam has urged the Central Government to take an early decision on supplying crude oil or gas to Ahmedabad mills, as economic prices so that the present coal shortage is not aggravated.

could be relieved. The declining trend in cloth exports is a matter of serious concern. From 1,000 million yards in 1950, cloth exports fell to 695 million yards in 1960 and 575 million yards in 1961. Modernisation and reduction of costs are indispensable if Indian cotton textiles are to compete successfully in overseas markets. While modernisation requires finance on a scale which the industry is unable to manage, a heavier wage bill, rising raw material prices and the heavy excise duty make it difficult to reduce production costs.

No Salary for Head of Family

A division bench of the Allahabad High Court has answered in the negative a reference by the U. P. Income Tax Commissioner whether the salary paid or credited to a *karta* of a Hindu undivided family for looking after the family business was a permissible deduction under Section 10 (2) in computing the income of the family business. The reference related to the ancestral business of a commission agency in Kanpur which was managed by the eldest member of the family in his capacity as *karta*. A sum of Rs. 1,000 was credited to him every month as his salary, but he never withdrew any amount from it. The Income Tax Officer, Kanpur, rejected the claim that the amount should be deducted from the income of the business. His view was endorsed by the Appellate Assistant Commissioner and the Appellate Tribunal, on the ground that the allowance taken by the *karta* of the family for doing his natural duty of looking after the family affairs "is nothing but appropriation of property". The High Court, while agreeing with the view that the salary taken by the *karta* cannot be deducted from the taxable income of the business, observed: "The position of the *karta* of a Hindu undivided family in some aspects partook of the nature of a partner and co-tenant or joint owner. It, therefore, appeared that, apart from any question of a special agreement, a *karta* was bound—merely by reason of his being a *karta*—to manage all the business of a family without being entitled to any remuneration for the service of management. Indeed, when under the law a *karta* represented the family, it would be anomalous to think of a *karta* as being an employee of himself or being entitled to a remuneration for acting as such and receiving panyment for his own self."

Discrimination in Marine Insurance

Speaking at the annual general meeting of the Liverpool Underwriters Association, Mr. J. R. Brocklehurst, chairman, deplored the excessive competition among insurers for cargo business, with the inevitable cutting of rates. It seems odd, he observed, that while the cost of commodities always tends to go upwards, insurance premium rates always seem to go down. He said the steadily rising expense ratio cannot be ignored. Other influences at work are tending to limit the amount of business available. Mr. Brocklehurst drew particular attention to nationalist tendencies which are forcing business out of the international market into the local market, which may not even be competent to handle it. Such action interferes with the spread of risks, a basic principle of insurance. It also impinges on the right of the buyer to choose his insurer and the terms of his insurance. However, many under-developed countries have quite mistakenly taken an insular view about marine insurance. It is doubtful if the barriers which some of them have imposed will, in the long run, promote their interests and the interests of their insurers. Mr. Brocklehurst regretted that there has not been any fall in the incidence of theft and pilferage. Inland transit insurers continue to face the wholesale theft of loaded lorries.

Revenue Deficit for U.P.

A revenue deficit of Rs. 13.35 crores has been indicated in the U.P. Budget for 1962-63, which the State Finance Minister, Mr. Kamalapati Tripathi, presented to the legislature last week. He said that part of the deficit would be met by "suitable increases in rates" under existing laws. "As for the balance," he added, "suitable measures for the year 1962-63 will be brought before the House in due course."

Revenue estimates are placed at Rs. 178.06 crores and expenditure at Rs. 191.41 crores. The estimated revenue expenditure on the third plan is Rs. 37.70 crores, whereas the revenue surplus is only Rs. 3.45 crores and the aid expected from the Centre is Rs. 20.90 crores. Under the Finance Commission's new scheme, the State's share of the divisible pool of income tax is expected to be about Rs. 2.33 crores less. The State's share of estate duty and Central excise duties is likely to be Rs. 4 lakhs and Rs. 1.7 crores higher, respectively.

Mr. Tripathi was critical of the Commission's failure to take into account the States' requirements for the redemption of debt on the ground that they are likely to show revenue deficits if allowance is made for redemption. He pointed out that the repayment of debt is unavoidable. As for Central excise duties, he said: "Even though the number of commodities has been raised from seven to 35, considerations of backwardness, population of scheduled tribes, financial weakness of States, etcetera, which have been brought to bear in determining the formula for distribution, have adversely affected the share of most of the progressive States. As a matter of fact, there are adequate provisions in the Constitution for compensating the backward and financially weaker States by making outright grants where needed. As the recommendations stand, no light has been thrown on the method by which weightage has been given to various factors taken into consideration by the Commission in determining the formula." Referring to the State's industrialisation programme, Mr. Tripathi said that a factory for manufacturing camphor is being established in Bareilly, and work in connection with the synthetic rubber factory is also progressing there. Units for manufacturing paper and newsprint, motorcycles and tractors are also likely to be set up shortly.

Improving Calcutta Port

In his speech from the chair at the annual general meeting of the Bharat Chamber of Commerce in Calcutta last week, Rai Bahadur M. G. Rungta stressed the need for improving the operations of Calcutta port. Dr. B. C. Roy, Chief Minister of West Bengal, has emphasised the importance of constructing the Farakka barrage and of developing Haldia as a subsidiary port. But, on the commercial side, the biggest factor inhibiting the development of the port has been the higher port charges. The "river due element," particularly, accounts for Rs. 5.31 a tonne on special general cargo. "If this element is removed, the Calcutta port charges can be in better alignment with those of Bombay and Madras. Modification is also necessary in the classification of goods in order to increase the competitive capacity of the port." But the main handicap will not be removed unless the maintenance expenses on the Hooghly are borne by the Central Government out of general revenues, Rai Bahadur Rungta said.

The Textile Industry Exchange Budget

A study of the balance of payments implications of production in the textile industry has been prepared by Mr. S. Kumarasundaram and published in the March issue of the *Reserve Bank of India Bulletin*. Contrary to the popular notion, the study shows that the Indian cotton textile industry, which is claimed to be the third largest gross earner of foreign exchange in the country, was actually a net spender of foreign exchange in the five-year period 1956-60. Foreign exchange receipts from the export of cotton piecegoods, cotton yarn, cotton hosiery and waste cotton varied from Rs. 59.2 crores to Rs. 74.2 crores during these five years; while payments for the import of cotton, twist and yarn, textile machinery, dyes, chemicals and fuel oil and lubricants fluctuated over a wider range from Rs. 64.7 crores in 1958 to Rs. 111.3 crores in 1960. Barring 1959 when there was a small net surplus of Rs. 4.9 crores, the industry was a net spender of foreign exchange in all the other years. Its total foreign exchange earnings during 1956-60 were of the order of Rs. 340

crores, while the foreign exchange expenditure totalled Rs. 429.2 crores.

Although great care has been taken in compiling and evaluating the numerous transactions in the industry's balance-sheet of foreign exchange earnings and expenditure, the study does not claim a high degree of precision. It only provides a broad indication of the industry's net position as spender or earner of foreign exchange. The textile industry spent during 1956-60 more foreign exchange than it earned, the deficit being placed around Rs. 90 crores. The actual picture is possibly worse, as the study has not taken into account items like steel and electric equipment used by the industry, all of which have an import component. Foreign exchange remittances for the use of patent rights, and royalty payments for processes such as sanforising, minoron and "N-iron" are also not taken into account, as data relating to these are not available separately.

In spite of a considerable increase in the domestic production of longer-staple varieties, the industry's dependence on imports for better quality cotton has actually increased, indicating a shift in the production of yarn and cloth towards finer varieties, reflecting the consumer preference in India. The study points out that there is little evidence that the increased domestic production of better quality cloth has been reflected in the quality of cloth exported. A rough breakdown of cloth exports in 1960 and 1961 shows that 75 per cent to 80 per cent of the total consisted of coarse and lower medium varieties, and only 15 per cent were of higher medium qualities. The heavy cotton textile imports in previous years, which were undergoing a continuous change in their composition towards better qualities, have been replaced by continued heavy imports of longer-staple raw cotton, to feed the growing domestic demand for fine and superfine varieties of cloth. The study rightly points out that the key to the situation lies in raising the domestic production of superior cotton. A reversal of the shift in the consumption pattern may be more difficult to achieve, but measures in this direction should be considered as a matter of plan policy. Emphasis on exports of finer or more finished varieties yielding higher earnings for each unit is also indicated as a long-term solution to the problem.

WORK IN HIGH COURTS

IF the Government of India were to call for a return showing the number of days in the year, on which each Judge attended the Calcutta High Court, and the total number of hours spent by them on the Bench, they would have a very strong case against any application for an increase to the salaries of the Judges; for we have a very strong suspicion that the return would show that for the work done, there is no higher paid class of men in India. It is a common cause of complaint that good Judges cannot be secured for the money from England; but the Government do not go the right way to work. If they were to insert an advertisement stating that the High Court Judges in India were not required to sit more than five days a week, for nine months of the year, and for not more than five hours a day; while the rest of the time was made up of holidays; and that they received, in addition, liberal leave allowances and pensions, we feel sure, that there would be no dearth of applicants for office. The present arrangement under which the holidays are interspersed throughout the year, is about as wasteful as could possibly be devised, and we would suggest to the Government of India, whether it would not be desirable to close the Court from the 15th of April to the 15th of October, and insist that between the 15th of October to the 15th of April, the Judges should sit six days a week and six hours at least daily on the Bench. During the six months of summer, there should only be sufficient Judges to dispose of urgent applications and undefended causes. It must not be forgotten that it is not only the holidays authorised by the calendars that are taken by the Judges but also a number of holidays totally unauthorised; and it is frequently the case that for many days before the long vacation and after, the work of the Court is totally demoralised. We make this suggestion seriously; we are sure it would be found to prove economical in the long run; that is to say, if the present state of affairs is to be tolerated.

A Ditcher's Diary

I AM UNABLE TO SHARE THE DELIGHT OF THOSE WHO saw afresh the rich diversity of life in India in the fact that the members of the third Lok Sabha took their oath in a variety of languages. Somebody from the north took his in Tamil, a gesture that drew some applause. Again, I am unable to add my cheer. If the ceremony proved anything, it was that the country is fast losing the one line of communication it had between one part and another. Here in West Bengal I have heard of members being congratulated on using Bengali in Parliament. Very patriotic, no doubt. But what's the use, unless I am told that a speech is made for its own sake and has no purpose beyond? As I understand it, a member from West Bengal or any other State is expected to place before the national Parliament his State's or the nation's case for its acceptance. The aim, then, must be to be understood, as readily as possible, by as many members as possible. To speak Bengali, Assamese or Oriya in that forum is to defeat the speaker's own purpose. I see some point, though, in using a regional language; and that only proves the point I have to make. If it be held that a member is not really interested in addressing Parliament at all, that his chief audience is his constituency, and hence the use of the regional language, well, why then have a national Parliament at all? It has been said of certain members of the United Nations that they use that platform for propaganda back home. Is the Lok Sabha, then, going to be another United Nations about which General de Gaulle's contemptuous quips are only slightly exaggerated? I put it to the new House that it should decide on a common language. If India's 14 languages are given equal status in the Lok Sabha, some local vanities will certainly be satisfied. But think of the waste involved! At the United Nations English, French, Russian, Spanish and Chinese can be used; and there are simultaneous translations. It may not be generally known that the U.N. secretariat uses only one language: English. If the Government of India has been forced to realise the indispensability of English until 1965, a date that will be deferred again, why can't the Lok Sabha act likewise? I speak only in the name of convenience and economy, knowing full well that chauvinism will subordinate sense.

ONE OF MY MORE SERIOUS COMPLAINTS AGAINST authoritarian rule is that there is a certain inescapable sameness about it. Irrespective of

personality and region, it makes for dullness and seeks to perpetuate boredom on the grand scale. General Ne Win's ban on beauty contests, which I myself consider vulgar (a very different thing from obscenity), reminded me of President Nasser's veil on the navel in belly-dancing and Singapore's denunciation of what I think was called sarong culture. The Madison Avenue view of life is on the rampage throughout the world; the extent of its penetration into the villages of India, if known, would horrify Mr. Morarji Desai; and I could be seen only dead at a beauty contest. But taste is one thing; dictation another. Either you believe in liberty or you don't. And time and again I come back to the dictum attributed to Helvetius, which has not been improved upon: "I detest your opinions, but I shall contend to the death your right to utter them." I can understand the Victorians who went round the world and proclaimed everything un-Victorian as uncivilised. Their misunderstanding of Indian erotic sculpture was profound. What distresses me is that the narrow Victorian view has been adopted by so many Indians, with the additional zeal of the converted. General Ne Win can well argue that there is nothing Burmese about beauty contests and I would agree with him without conceding to him the right to ban them. But what is Egypt without its characteristic belly-dance? Its purpose is frankly erotic; but, at its best, there is a certain grace about it which I have found agreeably diverting. Now, the requirements of the tourist trade see to it that the belly-dance is not abolished; but it has been so watered down that, in some ways, it has now become truly vulgar—just for that self-conscious cover on the navel. Gone is the spontaneity. Travelling along the tribal belt in central India, I saw nothing indecent in men and women going about as they have done for centuries. I was indignant when I found the same men and women on Republic Day in New Delhi, clad in national flags and stripped of their natural liveliness. There is nothing more naked than hypocrisy under cover.

PATTERNS OF TRADE CHANGE FREQUENTLY, rather too rapidly in our time. In essence I suggest, they conform to the French cliché: *Plus ça change, plus c'est la même chose*; the essence being that you make as much money as you can, as fast as possible, by selling whatever you have to sell. I will not say that morality never comes into it; but I am mildly amused to find that, when it comes to making a fast buck, a self-avowed marxist like

Fidel Castro can do as well as the slave traders of old. Cuba's offer to release 1,179 men, if indemnities totalling \$62 million are paid, is in my view indistinguishable from slave traffic, although others have been reminded of Eichmann's idea of buying lorries for Jews. When there is a money value on almost everything, Mr. Castro can be said to have taken the principle to its logical conclusion by putting price tags on his captives. The refinement of grading prisoners—leaders for \$500,000 apiece, others between \$100,000 and \$25,000 each—is also true to pattern. So were slaves graded, according to age, fitness and other criteria; and so, I imagine, is the system in the world's white slave traffic to this day. There are other details that are echoes of African history. Prisoners captured in tribal wars constituted a sizable portion of the humanity bought and sold for export to the United States and elsewhere—as in Cuba. If only because the African participants in the slave trade made much less money, their share in the cruel business is not often remembered. Their part was not very humane. But one of the things the African agents extracted by way of price from their European principals was arms. Whatever for? To wage more wars, capture more prisoners, sell them for more arms, and make more wars . . . and so went the vicious circle. Mr. Castro once wanted tractors, if I remember rightly; but at least part of the money he raises from his lucrative business in human livestock will assuredly be used for buying arms. Sympathy for the Americans is limited by the fact that the Cuban adventure was so stupid. We all have to pay for our follies. I would say the Americans are lucky; they are being asked to pay for theirs with what they have plenty of—dollars.

A COMBINATION OF THE ENGINEER AND THE statesman is a rare one indeed; the specialisation of the one seems somehow, for most men, incompatible with the breadth of vision required of the other. Yet it is a token of the greatness of Dr. M. Visvesvaraya, who died in Bangalore last Saturday, that he achieved unusual eminence as both over nearly a century of dedicated, purposeful activity. Much of Dr. Visvesvaraya's best work was done in the decades before India's independence. Starting in a modest way as an engineer in the Bombay Government, he was to inaugurate what over the years came to be accepted as almost a revolution in the irrigation techniques of the times. Several years later, when he moved to Mysore, his influence ranged over wider fields; and, aided by a progressive prince, he began to build in that State what was, in many ways, a microcosm of the India of his dreams. The striking feature about Dr. Visvesvaraya was that there was nothing in him of the futile visionary; his training and experience as an engineer had made

him a hard-headed realist who could sift the grain of practical common sense from the chaff of utopian impossibilities. He knew that India lived in her villages; hence the need for better irrigation and agriculture, and for administrative decentralisation. He also knew that industrialisation could not succeed without the backing of technical education—in both of which aspects he built Mysore into a pioneer among the princely States. Tributes have been many that he was the father of Indian planning; but the view may be permissible that the planning he had in mind was of a rather different sort than is in fashion today. It was not born of the shibboleths of political ideology; it was shaped in favour of the utilitarian rather than the grandiose endeavour; and it was backed by an emphasis on administrative efficiency which has since been partially forgotten. Men of his versatility and dedication are not easily found in India today; and the country is so much the poorer for the loss.

IT WAS A HAPPY IDEA THAT INSPIRED SIRDAR K. M. Panikkar to speak in "Defence of Liberalism" in the course of his Sarojini Naidu Memorial lectures in Sapru House, New Delhi, last week. At a time when conformism and the intolerance of rival ideas are becoming fashionable, a reminder of the powerful and progressive influence which liberalism has been in human history is particularly necessary. Mr. Panikkar pointed out that the first political manifestations of the philosophy were the American Declaration of Rights and the French Revolution. There have since been pockets of liberalism; but in terms of geography, numbers and ideology, there has been nothing like the same devotion that other, more primitive and authoritarian concepts have been able to command. For the liberal disapproves of fervour, even in defence of liberalism. His image of a world in which one is intolerant of nothing and no one is, of course, a bit overdrawn. What is important is that society as a whole should never shirk discussion and debate; that, to my mind, is the essence of the liberal's plea. From the brief Press reports of Mr. Panikkar's lectures that have come my way, it appears as if he implied that liberalism has lost ground before the communist challenge. I would venture to suggest that this is only partially true. Because of its very nature, liberalism has never had the kind of following that totalitarian movements, ancient and modern, can claim. Many of its ideas, moreover, have been taken over piecemeal by other Parties—both Tories and Labourites in Britain, and the Republicans and Democrats in the United States, outstanding examples. As a political movement, it was a force to reckon with when power was vested in a small, but not too small, section of the population. By fighting for the extension of the franchise, the liberals were, in a sense, effectively removing themselves from the seats of power. But, not being interested in more rigid and clear-cut political commitments, it seems they failed to adapt themselves to the changing mood of the times. All they ask for now is the right to voice their opinions freely; and as long as the right is demanded and exercised, we know the liberal spirit will be alive. But the stage, I submit, has come when that, in itself, will no longer be enough. The liberals will have to do some concrete, practical thinking on the burning issues of the day before their philosophy once again becomes the force it deserves to be.

UNDER THE HEADING "MINOR OPERATIONS DONE IN Week", the following gem appeared in *The Times* not so very long ago:

"To overcome the shortage of nurses, Leicester Royal Infirmary are to start five-day surgical wards which they hope will attract part-time trained nursing staff, married nurses, and nursing auxiliaries. Patients would be admitted for operations on Monday and discharged on Friday."

"In this way the infirmary hope to make big cuts in their waiting list of 3,000."

THE DITCHER

HINDUSTAN LEVER LIMITED

CHAIRMAN, MR. P. L. TANDON'S

ADDRESS

Speech delivered by Mr. P. L. Tandon, Chairman, at the Annual General Meeting of Hindustan Lever Limited held at Bombay on Wednesday, 18th April, 1962.

It gives me great pleasure to welcome you to this Annual General Meeting of the Company. I shall take as read the Report and Accounts for the year 1961, which have been with you for some time, and later in the proceedings I shall be happy to answer any question you may wish to put.

In keeping with our practice in the past, I shall today tell you something about another side of our organisation. Accounts and Finance, what is our thinking behind it and how it works.

We in Hindustan Lever believe that if the Company is to be efficient and forward looking, one essential is that its accounts and finance department must also possess the same attributes. We firmly believe that this department has a real contribution to make towards the profitability of the Company. We approach this objective in two ways: through an efficient book-keeping system that maintains historical and statutory records, and by providing management with an efficient information and advisory service. The first task may be called maintenance accounting, and the second, management accounting.

In the old days, an accounts department was content with merely keeping the historical and statutory records in an efficient manner, but important though these indeed are, a modern accounting department believes its real task to begin from there on; that it has not made its proper contribution unless it goes to the next and important stage of providing a management accounting service.

Maintenance Accounting

Our accounting management have devoted much time in the past years to the streamlining and simplification of the day to day routine accounting, so that this is done with the maximum of accuracy and the minimum of senior management intervention. A system of controls and internal checks has been designed to eliminate the chances of error and fraud and to enable us to work on the principle of reporting by exception. This means that only items brought for special attention are ment and not a multitude of routine matters. The enormous volume of essential has been reduced substantially, though without impairing the necessary degree of control.

The basic principle which we apply to management information is one of speed balanced against accuracy, and accuracy against its cost. For instance, the approximate results for the month are ready and presented to the board within ten days. If these results were to be prepared with meticulous accuracy, they would not be ready till the end of the following month, but what is prepared in ten days is sufficiently accurate and reliable for the management to decide its course of action quickly. But at the end of each quarter we take a few more days to prepare the results in order to turn the approximations into actuals.

As with our management, our accountants are prompt in discharging their responsibility to the shareholders. Over the years, by careful planning and procedural improvements, they have been able to bring the process of the production of year-end accounts into an orderly and well-organised routine, which has reached the stage that the draft accounts covering the calendar year are presented to the board of directors in the third week of January. They are audited by the end of the month and in the middle of February the results and the directors' recommendation for dividend are given to the press. By the middle of March the printed accounts are ready for distribution to our shareholders.

and our annual general meeting is held in the middle of April. Within twenty-four hours of the annual general meeting, the dividend warrants to the 14,000 odd shareholders are in the post.

The advantages of this exercise speedily and smoothly done are many: the shareholders receive their accounts and the dividend without delay, and they have the right to do so; management are in possession of the results within a few days of the year end; and the accounts department are free to devote their energies to the problem in hand—the work of the current year.

Our accountants do not however rest on their laurels and have been trying to achieve greater clarity in the published accounts, their constant aim being to give the maximum useful information simply and quickly. In this connection we welcome the Company Law Administration Department's decision to permit the presentation of the balance sheet in the modern columnar form which is now favoured by many progressive companies in other countries. We have been in the forefront in advocating the adoption of this modern style of presentation because we think it presents the significant information in a manner clearer than the old conventional form of balance sheet. The "capital employed" and "employment of capital" form of presentation sets out before our shareholders clearly and precisely the capital they own in the company and the use to which it is being put. We believe we are the first company in India to produce our accounts in this modern way. There is, however, still scope for improvement. For example, much of the detailed information required by law to be given in connection with the profit and loss account could be simplified and made clearer. Too much detail can obscure facts: giving information in a crystallised manner helps to throw it up more clearly. An important change we would also like to see is that when you are dealing with accounts in crores of rupees it seems somewhat pointless to quote the figure to the nearest rupee, when the true and fair view but help the reader to take in the figures better.

Management Accounting

This is a term that has acquired an almost mystic quality in recent years. Many people think that it is something quite new and of necessity enormously complicated, involving an expensive system capable of comprehension only by experts. This is not true. It is by no means new, and it is not particularly complex. An able and understanding accountant, even in the old days, sometimes went beyond book-keeping and discussed with his management the implications of events and trends in the business in broad financial terms. In time he developed a special advisory role where he was consulted on the moves the business had made and might make. This in a perhaps more specialised manner, is all that management accounting boils down to. It is the role of the accountant as an adviser or helper. Instead of the "accountant" who feels his task done when the results are ready, or the "controller" who sees his task only in curbing management within the straight and narrow path of expenditure by the rule, unconcerned whether that expenditure produces the best results.

For modern conditions a management accounting system has, however, to be systematised and commensurate, advantages are gained only if it is viewed as a whole and carefully planned to meet a particular management's needs. But it can start from simple beginnings and it must always be tailored to the needs of a business; it cannot be taken straight from a textbook and applied to an operation.

Management accounting information properly and simply prepared is as readily intelligible to the businessman as to the accountant. A few vital and constructive figures, hand-written on a sheet of paper and clearly presented, may sometimes be better "management accounting" than an elaborate mechanical or electronic information system, which does not in reality go beyond book-keeping. The difference, if I may emphasise, is in the approach of the accountant. Is he merely furnishing routine figures to his management, or well designed service and advice?

It is sometimes argued that management accounting can wait in India: Indian business has not reached the stage where it can afford that luxury. With this we profoundly disagree. For one thing, it is not a luxury; for a growing business it is a necessity, which should cost no more than any good accounting system. For another, if we are going to introduce the latest in plant and machinery and other techniques, it would be wrong not to get the best out of them by matching it with the latest in accounting thinking. There is no merit in going through the evolution in accounting techniques; we can start where the best have reached.

I venture next to briefly describe some of the main features of our own system, in the hope that it may be of interest to you:

Perhaps, I may start with a definition. By management accounting we understand the provision, analysis, reporting and discussion of accounting information as a guide to our management in the day to day running and future planning of the business as distinguished from the recording part of the accounting function for historical and statutory purposes. Naturally, the recording function will often be the basis of the supply of management information.

Responsibility Accounting

A management accounting service can best be described as responsibility accounting. It reports information, suited to their responsibilities, to different levels of management who can take action or offer advice based on that information.

The sheet-anchor of our management accounting service is the annual estimate and budget for the coming two years. They forecast sales, production, capital expenditure, marketing, advertising and administration expenses, leading on to profits yield on capital employed, and a cash flow prediction. They are prepared initially in terms of quantity as well as value at the lowest level of responsibility, where action is taken, and built up along functional lines. They are finally brought to the board at which each director presents the affairs and plans of his departments. These are in fact, not forecasts but plans because there is volition behind them and not just a futurity. They set the standards for the coming year, and performance is then reported against these standards, weekly, monthly and quarterly, varying with the needs.

Following on from this major document, and flowing naturally from it, are a number of returns prepared at varying intervals catering to the special requirements of management. There is for instance, a monthly profit and loss report to the board, weekly and fortnightly margins earned to marketing management, and daily raw materials yields to production management.

For regular reporting to marketing management, I might add we believe in the margin after variable costs concept. Variable costs are those which vary strictly with production and sales, and include raw materials and ingredients, packaging, excise duty and

distribution. Other expenses like marketing and administration overheads, depreciation, repairs, direct factory labour, advertising and financial items such as interest, are only apportioned to groups of products and not to individual products. Although there are a number of methods for apportionment of fixed costs, they are invariably arbitrary and give widely differing results when taken to individual products and packs. Regular apportionment of fixed costs on an arbitrary basis is of limited value and can even be dangerous as it can mislead.

Price in a competitive market depends on what the consumer is prepared to pay, what competition will permit, and not solely upon the manufacturer's cost of production. I need hardly add that Hindustan Lever has neither a monopoly nor a captive market, but operates in very competitive areas. Naturally, the margin after variable costs of a group of products must be sufficient to cover all the fixed expenses of the group and give a reasonable return on the capital employed in producing and selling these products; but our week by week reporting on movements in the margin only reflects changes in the variable costs. This gives our marketing management realism and flexibility in their pricing policy.

We treat depreciation and direct factory labour as fixed costs in the short-term; depreciation because it will be a charge to the business for so long as we retain the assets, and direct factory labour because our policy is not to retrench staff during slack periods. However, when considering the costs involved in producing a new product or expanding capacity for an existing one, we look at the total additional or "out of pocket" costs involved, and these will include depreciation and wages. Also, when reviewing a group of products over the long-term, we assemble all costs directly applicable to that group. Some of this may be arbitrary, but is used only at a point of time and for a specific purpose, and does not form part of the continual appraisal of margins and performance, for which, as I have mentioned before, only the variable costs are taken into account.

Development Accounting

Apart from reporting to marketing and production management about results and performance, our accounts department offers much service in the field of development of new packs, new products and projects. Whenever our management thinks of something new, they turn to the accountants to study the financial implications. This, in short, is where the accountants and our general management together look ahead to make sure that a change or new development will produce healthy results. It should be underlined that it is not the accountants who dictate the managers' policy; managers must make their own decisions, based upon the information they receive. And they may decide for other perfectly valid reasons to go ahead with the project which has a longer pay-back period, or even has broader economic or social objectives, but they must know where they stand and what they base their decisions on. This is where the accountant can help them.

I now turn to the organisation and other activities of our finance and accounts department:

Organisation

The department is controlled by the financial director, who has reporting directly to him the chief accountant, the chief internal auditor and commercial managers in charge of our branch offices. But our accounts department is highly decentralised. The operating management of each unit, whether factory or branch, have their own accounts departments reporting directly to the unit heads. They discharge their responsibility for accounting records and also give advice on various aspects of accounts and finance when problems arise locally, and they are expected in general to be full and active members of the local management team. Head office accountants control them very little beyond ensuring that the basic principles are uniform throughout the Company, and the

small amount of information they supply to head office is prepared in a manner comparable between units.

At the head office there is the chief accountant's department, which has no line relationship with the unit accountants. Its task is to handle general matters like consolidated budgets, annual accounts, taxation, finance, management salaries, pension and provident fund, and the maintenance of day to day head office accounting records. Much of the time of the chief accountant's department is spent on specialist service of one kind or another to central marketing and technical management.

Organisation and Methods

Commonly known as O. & M., this is a specialist department within the chief accountant's department. It concerns itself principally with the improvement of office systems throughout the Company. Most clerical systems are somehow created to meet an urgent or immediate need, and the tempo of modern business is such that once the need is over and even the situation changed, the people operating the system are so busy with day to day operations that they seem never to have time to review the system or to test its efficiency. Each time there is a new demand a modification is usually made, so that over a period the system is entrusted with forms and routine which may have lost their original justification.

In the circumstances, it is not surprising that O. & M. men can be welcome visitors to a lively manager. Their job is to examine the documentation and work flow from basic principles and take nothing for granted. They ask what is needed, why and when, and they devise a system tailored to meet the special needs of the department which would give the results in a simple and efficient way. There is a patient job of skill in "selling" themselves, but our manage-

ment has learnt to appreciate their worth.

Audit

The internal audit department is an important part of our finance and accounts group and the chief auditor reports directly to the financial director with unfettered powers of free and frank criticism. Its prime responsibility is to see that the systems and controls are functioning smoothly and that there is no abuse or fraud; but in fact it goes much further. Divorced from the heavy day to day routine of departmental responsibilities, it runs over a department's general functioning and makes objective appraisals of where systems and practices may be improved. It will not sit down and design detailed improvements but may suggest that O. & M. be called in.

We have of course our statutory auditors from outside, who state whether the accounts report correctly and fairly the state of the Company's affairs. But internal auditors go further. Being part of the Company, they have responsibility for suggesting improvements that will increase earnings, increase efficiency and reduce expenditure. They in no way interfere with the rights and duties of the statutory auditors, but these are naturally helped by the assurance of a good internal system.

Finance

As a Company, we believe in development and healthy growth. Between 1956 and 1961 the capital employed in the business increased from Rs. 75 lakhs to Rs. 1,092 lakhs, all provided from our internal resources. Today we are asking you to agree to convert part of our ploughed back profits from reserves to capital through a scrip issue. Naturally, this has been possible through a prudent policy for distribution of profits, which may not appeal to the speculator but gives the shareholder a solid, growing, long-term investment in Hindustan Lever. Normally our finance requirements are

highly seasonal, at times we have to resort to short-term borrowings, but in the long-term we plan to accumulate our own resources to finance as much as we can ourselves.

An active duty of the financial accountants is to keep the cash constantly on the screen as it flows through the Company's veins and arteries. They watch and report on its movements every week, and with the help of the operating management make monthly, quarterly, annual and five-yearly forecasts. Cash, if its flow is not carefully watched, can soon get tied up in little pockets and lie unused or not used to the best advantage. The accountants and operating management must always keep it on the move to where it is most needed.

Equally, a watchful eye is kept on the capital employed in both fixed and current assets through quarterly estimates and actuals, and on the return upon the capital so employed. To make it more realistic, for the purpose of this exercise, the fixed assets are not taken at their net book value, as shown in the Balance Sheet, but on the basis of their current replacement value with a suitable adjustment for depreciation based on this replacement value. Its realism lies in the fact that it takes into account the changes in the value of money and shows the capital employed in the business by management on present day value. After all, the historic value of money is not of relevance and in an economy even as mildly inflationary as ours a management has to be alert to any depreciation of money.

Men

As I said in my speech last year when I discussed our marketing, ultimately the quality of an activity is judged by what its men are. We, therefore, place a great deal of importance upon proper recruitment, training and promotion of accountants. Many of them are qualified, but some have been trained by us on the job. There is a carefully planned development

CAPITAL, 19th April, 1962.

programme designed to give the young accountants experience wherever possible on other sides of the organisation as well. We also arrange for them to attend courses both inside and outside the Company, not only on accounting but on general management subjects as well. The training task however does not stop here; it goes on to project the accounting services to non-accounting management, to break the mystery and fear that surrounds accounting in the eyes of non-accountants. We run special short courses at our own training centre on finance and accounts, designed to give our factory, marketing, buying and other managers an insight into accounting concepts and techniques that are likely to be of service to them.

We need men of quality in accounts; men who will feel active participants in our management and not just providers of a service. Professional skill is important but for our needs we look for more—for qualities of management, leadership and imagination. During their development we expose them to the broadening influence of spells in marketing, branches and factories, so that they learn to feel part of a team. The factory accountant should feel that he is helping with the running of the operation, and one working on a project, the excitement of looking ahead. In fact, we want all our accountants to feel that they are sharing in the running and the progress of the Company.

I hope you will appreciate what I have said today that we believe in a strong accounting and financial organisation, taking an active part in running our business and earning profits. There can be no rule about a single system, but we believe that the one we have evolved serves us well. Our accountants are, of course, ever willing to learn and are always seeking ways to improve their service to management.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 19th April, 1962.

BRAITHWAITE & CO. (INDIA) LIMITED

CHAIRMAN, SIR JOHN BROWN'S STATEMENT

The following speech is to be delivered by the Chairman, Sir John Brown at the Thirty-second Annual General Meeting of Members of the Braithwaite & Co. (India) Limited, to be held on 10th May, 1962.

Following the precedent established last year, I am again circulating with the Directors' Report and Accounts for the year ended 31st December last the statement which I would otherwise make at the forthcoming 32nd Annual General Meeting of the Company.

I must unfortunately introduce my statement this year on a note of sadness. The death occurred in July last of Mr. R. J. Newman Taylor, who, although he was never employed by this Company, did so much for its development in his capacity as Vice-Chairman and earlier Joint Managing Director of its then parent, Braithwaite & Co. Engineers Limited in the United Kingdom. I had the privilege of knowing Mr. Taylor only for the last five years of his life but in that time we were in close touch with one another in regard to the affairs of this Company and I welcome this opportunity to pay tribute to his outstanding contribution not only during those five years but, as I have reason to know, previously, which was a combination of foresight and caution based on a life time's experience of an industry which has had its ups and downs in the past in this country as elsewhere.

Profits, Taxation & Dividend

The profit for the year, after providing Rs. 5,72,910 for depreciation, Rs. 32,25,000 for taxation and transfer to Development Reserve the sum of Rs. 2,36,690, amounted to Rs. 35,86,414. It will be seen that this represents a substantial increase of some Rs. 15.14 lakhs over the corresponding figure for 1960.

The figure of profit constitutes a record for the Company and that it was achieved in the face of continuing difficulties over steel and power supplies only reflects the wisdom of the policy which has been followed over a period of years of limiting the distribution of earnings and ploughing money back into the business by further investment in plant and machinery. This has enabled us to increase our output in certain directions while making the most economical use of the steel which was available. As I indicated last year, this policy of ploughing money back into the business is one which must be continued and notwithstanding the large increase in profits, your Directors after very careful consideration of all the issues involved, have felt it advisable to recommend the same dividend as was paid in respect of 1960, viz. Rs. 2.50 p.p. per share, subject to deduction of tax. I shall have more to say in this statement on the subject of future dividends when discussing our proposals for financing our expansion programme.

Production, Development & Expansion

Clive Works: As forecast in my statement a year ago, we found that we had insufficient orders to fill the available capacity in the Structural Shops and this situation was aggravated by the situation in receipt of raw materials. The situation improved in the latter half of the year during which the Shops were employed in fabrication of the Company's portion of the Brahmaputra Bridge steelwork. Production in the Wagon Shop was maintained throughout the year at an increasing tempo and components permitted the gradual introduction of a second shift until, by the end of the year, we were obtaining outputs in excess of our planned production. The total number of wagons built in the Wagon Shop was 1,023, weighing 12,827 tons and to this must be added 124 four-wheeler wagons totalling 907 tons weight which were built in the Structural Shops in an endeavour to utilize spare capacity there. In the result, the total tonnage output of wagons was 13,733, the highest ever obtained. The development of wagon manufacture during the past two years reflects highly on

the efforts of the production staff under the energetic direction of our Chief Engineer, Mr. J. E. Sawtell, and his organisation within the Shops.

Completion of the buildings and extensions referred to in my statement last year was delayed by the acute shortage of cement from May until after the Pujah holidays in October, since when good progress has been made. Work in hand includes the extension of the General Office and the development of a new steel stock yard. This has been made possible by the removal of a large amount of erection plant and tackle to the ample space which is available at Angus Works and when it is completed the new stock yard will greatly facilitate handling of raw materials. The extension of the Wagon Works to provide for the painting of the large bogie motor and parcel vans now under construction has recently been completed and negotiations are in hand for the acquisition on lease from the Commissioners for the Port of Calcutta of an additional area adjoining Clive Works to enable us to further rationalize production of the three types of wagons now in hand.

I have referred above to the paucity of work in the Structural Shops; in this connection I must express our disappointment at the delays which have taken place in finalizing the terms of the fabrication and erection contracts for the heavy forge and foundry plant at Ranchi and the alloy steel plant at Durgapur, in both of which this Company is substantially interested as a constituent of the Braithwaite, Burn & Jessop Construction Company Limited. While agreement has finally been reached after much delay in regard to the terms of the first of these contracts, the second is still outstanding with the result not only that work cannot proceed but also that capacity earmarked by us for several months which, could the delays have been foreseen, could have been profitably utilized on other work, has remained idle. There is another and broader aspect of these delays which I fear is too little appreciated and that is that projects such as these have a very high import-saving potential. Each month's delay in finalizing the contracts and getting on with the job means that imports have to be continued eventually for longer than would otherwise be necessary and the result that industry as a whole and particularly that branch of the engineering industry which is dependent on imported components, is prevented from functioning as efficiently as it might otherwise do. I shall have more to say later in this statement in regard to exports; all I would say meanwhile is that energy devoted to finalizing construction contracts for projects with a high import-saving potential will greatly assist in creating the atmosphere which I am sure is necessary if the country's foreign exchange problems are to be successfully tackled.

Angus Works: In addressing you a year ago, I informed you that the terms of a 99-years' lease of these works had recently been agreed. This lease was signed on the 13th April 1961 and during the year a great deal of progress has been made with the rehabilitation and re-organisation of the buildings and plant under Mr. A. D. Morley. Pending finalization of our foreign exchange loan arrangements, to which reference is made later in this statement, a number of new machine tools have been obtained against rupee payment from agents importing from Eastern European countries and this has enabled us to quote for a wide range of products to recently licensed undertakings seeking component manufacture. We have submitted our applications for import licences in respect of most of the machinery which we require and we hope that licences will be forthcoming shortly after our foreign exchange requirements have been provided for.

Progress so far has been most pronounced in the foundry, the output of which is now some 250 tons per month and we hope that this will further

increase during the current year. Castings up to four tons weight are being supplied and improved techniques are permitting of a continually higher quality and complexity of work being undertaken. Notwithstanding the shortage of foreign exchange with the consequent difficulties in obtaining the necessary equipment, progress has been made with the establishment of a laboratory and within a few months this will be fully equipped to undertake all chemical and metallurgical investigations likely to be required in our production processes.

I informed you last year that the Company had submitted or was in the process of submitting applications under the Industries (Development & Regulation) Act, 1951 for the manufacture of various types of cranes. We have now received a licence in respect of overhead electrical travelling cranes, steam loco cranes and dock-side level luffing cranes and Government approval has been obtained to the terms of our collaboration agreements with Thomas

Smith & Sons (Rodley) Limited and John Smith (Kelghiey) Limited, both members of the Thomas W. Ward engineering group in the United Kingdom, for the manufacture of their products in India. We have been acquiring experience in the manufacture of overhead travelling cranes for use in our own works and three orders for outside customers have already been booked. We have also quoted the Railway Board for the supply of 10-ton steam loco cranes and are hopeful that an order will be forthcoming before very long.

Finance

During the year under review, considerable progress was made in finalising the shape and content of the plans for the expansion of the Company's activities. According to present estimates, the capital expenditure involved over the years from 1961 to 1965 will total approximately Rs. 290 lakhs of which the foreign exchange component is estimated at the equivalent of Rs. 86 lakhs. In addition, the Company's requirements of working capital will increase by some Rs. 100 lakhs and it has, therefore, been necessary for your Directors to consider ways and means of financing a total outlay of Rs. 3.9 crores.

So far as the foreign exchange component is concerned, the Industrial

Your Income tax affairs need not worry you

Preparation of Income tax returns is a complicated matter these days. This need not, however, worry you.

You will find it to your advantage to place your Income tax affairs in the hands of your bank.

The State Bank of India will be pleased to undertake the preparation of returns, the checking of assessments and the submission of claims for refund of tax at moderate charges. The Bank will ensure that you obtain all the refunds to which you are entitled.

Why not talk things over with your nearest Bank Agent or write for information?

LOAN GRANTED ON APPROVED

SECURITIES

All Sorts of Banking Business Transacted

SJ. N. BANERJEE, M.A.,

General Manager.

CAPITAL, 19th April, 1962.

Credit & Investment Corporation of India Limited has already sanctioned a foreign exchange loan for the equivalent of Rs. 45 lakhs subject to certain terms and conditions. Application has also been made to the Commonwealth Development Finance Company Limited, London, for a loan for the equivalent of Rs. 43 lakhs and it is hoped that the terms on which this loan may be granted will be finalized in the near future.

We have made a careful assessment of the Company's financial requirements in rupees and as far as we can see these will be met by the issue of preference capital to the extent of Rs. 40 lakhs. The necessary application has already been made to the Controller of Capital Issues and having regard to the fact that a dividend from the date of their allotment and within a year thereof, it is hoped that this issue will prove acceptable to the market. The balance of our requirements of rupee finance will be found from retained earnings and depreciation provisions supplemented as necessary by temporary borrowings from our bankers.

In order to maintain a balance between the paid-up share capital of the Company and the actual capital employed in its business and also to ensure that the ratio between the proposed preference share issue and the equity capital is established on a reasonable basis, proposals are being submitted to you for the capitalisation of reserves to the extent of Rs. 43,40,210. This will result in an increase in the equity capital to Rs. 1 crore but I would particularly direct your attention to the terms of the Board's announcement of this capitalisation issue. The issue is nothing more than a recognition of an existing situation and it cannot by itself in any way increase the Company's dividend-paying capacity. It should not, therefore, be taken to imply an intention on the part of the Board to recommend dividends on the increased capital at the same rate per share as has been paid in the recent past. Indeed, the question of whether and if so to what extent the total dividend disbursement can be increased from the present figure of Rs. 14,14,948 must depend on the level of profits from year to year and their relation to the Company's financial requirements for the maintenance and expansion of its business. The foreign exchange loans, if and when they are finalised, will impose an obligation on the Company to provide for their amortisation and similarly a Preference Share Capital Redemption Reserve Account will have to be created to provide for the redemption of the preference capital in due course. While, therefore, it is reasonable to expect that the increasing scale of operations will lead to an eventual increase in profits, it is clear to your Directors that for some years at least the bulk of this increase will have to be set aside for the purposes mentioned.

The work involved in assessing our financial requirements and in producing the figures and information required in connection with our loan negotiations has thrown a heavy additional burden on our Commercial and Secretarial Departments and I am indebted to Mr. V. S. Tayal and his staff for the manner in which they have discharged their task.

Exports

With the continued co-operation of our London associates, Braithwaite & Co. Engineers Limited, which in this as in other directions I would like to gratefully acknowledge, we have in the past year more than doubled our exports of pressed steel tank materials to South East Asian markets and further expansion in this field is dependent primarily on the availability of materials. I have no doubt that practically all of the development projects which consume steel in India carry a high priority; but I venture to suggest that until it is appreciated that even some of them if they do not have a high import-saving potential, must be put back for a few months, it will not be possible to create in the minds of those in charge of the country's industrial effort the necessary mental attitude which will ensure that the export problem receives all the attention which it undoubtedly demands. It may be so, I feel that much more devoted to the hitherto will have to be devoted to the establishment in the immediate future of new markets in neighbouring countries.

CAPITAL, 19th April, 1962.

tries for goods which will, in the years to come, command a natural market abroad without the necessity of devising complicated incentive schemes. I have no objection to incentive schemes and indeed they have a very useful role to play in dealing with the problem of the country's exports; but I would suggest that before they are invoked the maximum effort should be devoted to creating conditions for the export of goods which can be exported to-day without too much loss and without incentives, other than relief from import and excise duties. I do not underrate in any way the difficulties which face Indian exporters but I would say that at least some of these can be removed if the right psychological background can be created between Government and industry. As I have already indicated, I believe that timing in this matter is of the greatest importance and if the steel using industries are to be encouraged to go out and find markets for their goods—markets which undoubtedly exist—they should be allowed to import as much steel as they wish provided they can show the reasonable certainty of a net gain in foreign exchange. India is not the only country which is faced with the problem of expanding her exports and that is why I feel that there is a real urgency about establishing ourselves in our natural markets now rather than waiting for four or five years, by which time the necessary raw materials will, we hope, be in more ample supply from indigenous sources.

Labour

In general, relations with our labour force were amicable throughout the year and this has undoubtedly played a large part in the steady increase in output from the Wagon Shops providing the workers with the opportunity to earn a high rate of production bonus. Based on the decision of the Supreme Court in regard to the Company's appeal against the bonus award of the Labour Tribunal in respect of 1957 settlement of the outstanding bonus issues for the years 1958, 1959 and 1960 was effected

under a bi-partite agreement with the Workers' Union.

During the past year the Company instituted a scheme of long service awards for those retiring or resigning on account of ill-health. The Company also played its part during the National Technical Training Week held in September last by organising functions embracing the Company's apprentices and senior students from the technical wings of local schools. The award of a technical scholarship in memory of the late Mr. R. J. Newman Taylor was instituted and a prize scheme for the best apprentice at Clive and Angus Works respectively has been introduced.

Management and Personnel

Despite shortages of raw materials which in recent years have been the main hindrance to increased output, I foresee that before very long it is the shortage of skilled personnel which will impose limits on our output. I can assure you that the management of this Company has devoted a great deal of time and care to the search for talent, both within the organisation and by recruitment from outside it. Even so, they are under no illusions in regard to future needs. I am happy to say that the challenge of the opportunities presented by the expansion of the Company's business is being met by the younger members of the staff and although I do not underrate the magnitude of the task which confronts us in the next few years, I am nevertheless confident that under the present management the inevitable difficulties of growth will be overcome.

During the year Mr. J. E. Bingham, our Managing Director, was re-appointed to that office for a further period of three years from 1st July, 1961. While Mr. Bingham is the first to acknowledge the contribution of his colleagues in the management, shareholders will, I know, join with me in an expression of what appreciation of his services during what has been an arduous year. To him, to Messrs Tayal, Sawtell and Morley and to the senior executives working under

them we are particularly obliged for their respective parts in producing the satisfactory results which are now before you. They have been well supported by the staff and workers, to whom also our thanks are due.

Prospects

The Company's order book is now in a most satisfactory state. Structural capacity is fully booked with work which will not be completed until 1964, while the Wagon Shop should be fully occupied until the middle of 1963. The level of output will, of course, as in the past, be determined to some extent by the availability of raw materials but as far as can be foreseen at present we should be able to work the Structural Shops to near capacity from the month of August, 1962 onwards. An important order recently entrusted to the Company is for the fabrication and erection of the steel work for the urgently required extension of the Cossipore Power Station of the Calcutta Electric Supply Corporation Limited. All raw materials for this order are being imported from

British mills and much of the steel has already arrived in Calcutta. Fabrication is in hand and despatches will commence from the month of May with completion of erection on site expected by November, 1962. The tempo of work in the Wagon Shops is being maintained at a high level while orders for the Mechanical Works are being obtained to match increasing capacity. In these circumstances, it is reasonable to expect a further increase in output in 1962.

Looking further ahead, we believe that our record of performance to date and the needs of the country's railway system will ensure the receipt of further orders to keep our Wagon Works fully employed at least until the end of the Third Plan period. The rapid industrialisation which is now taking place in India should result in a continually expanding demand for the products of both the Structural and Mechanical Works in the years ahead.

N.B. This does not purport to be a record of the proceedings of the above Annual General Meeting.

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

Specialized ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

For more than half a century McKee engineers have specialized in the design, engineering and construction of steel-producing facilities. Our comprehensive mine-to-metal services include every phase of the work necessary for any steel-plant project, from preliminary studies to completed plant ready for initial operation.

The McKee Organization has executed contracts in 49 countries including India. Among these are some of the world's largest and most modern completely integrated steel plants and hundreds of individual units, including blast furnaces, open hearth shops, rolling mills, agglomerating, sintering and pelletizing plants. Most recent examples of large-scale integrated plants are the new Somisa plant at San Nicolas, Argentina and the C.S.N. plant at Volta Redonda, Brazil.

To the steel industry of India the McKee Metals Division offers the services of its large, well-qualified staff with a fund of sound, practical experience and specialized knowledge that is unmatched anywhere in the industry.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY
WESTERN KNAPP ENGINEERING

Represented in India by
DR. B. S. GILANI

29, Jor Bagh, New Delhi 3

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION
Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING
Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

MARKET BECOMES QUIET AS BUDGET DAY APPROACHES

Wednesday Evening.

THE Calcutta stock market has been dull and quiet during the past week. Turnover has declined to the bare minimum and transactions have been largely of a squaring-up nature. Operators have reduced their commitments as far as possible, since they want to remain light before the Central Budget, which will be presented to Parliament next Monday.

Although Budget rumours have been fewer this year, Lyons Range is concerned over the prospect of more taxation. It is generally agreed that the Central Finance Minister will have to propose new taxes to cover the Budget deficit of the Central Government, and to raise funds for development. From past assurances, it is expected that he will concentrate on indirect levies. But there are fears that there will be some changes in direct taxation, at least on political grounds.

As the corporation tax and the income tax are already being levied at high rates, the Finance Minister should consider reducing rather than increase them. The belief that this is likely in the coming Budget stems from the hope that attempts will be made to give additional encouragement to industries. The pessimists, however, expect that there may be either a rise in the corporation tax or an excess profits tax. Lyons Range is also worried over the possibility that some new indirect taxes may be imposed on industrial raw materials. This will place additional burdens on many industries. Although many manufactured products now enjoy a sheltered market, there is growing evidence of consumer resistance. If the prices of Indian products are not held down at a reasonable level, sales will be difficult to promote.

The stock market hopes that the Budget will contain at least one good feature. It expects that the Finance Minister will provide incentives for export industries, especially in the form of tax reliefs. In view of the uncertainties, however, the market is likely to remain quiet until the Budget day.

An outstanding feature of the past week has been the absence of aggressive short-selling. This is due to two factors. Firstly, there is a shortage of floating stocks as far as good shares are concerned. Secondly, in spite of several difficulties, the corporate sector has been doing fairly well. The longer-term outlook is considered satisfactory. The busy season demand has started tapering off, and money supply has become easier. Whether the increased supply of funds will be diverted to rights shares and new issues rather than to existing shares, is difficult to predict at present. Nevertheless, the fact is that investors have been attracted by new issues in a substantial measure. The belief is that the shares of new companies, especially those having foreign collaboration, are good buys at par. They are likely to do well in the future. But, in buying these shares, investors can be more discriminating. Before buying a new share, it is prudent to make sure that the industry will get the necessary supply of power, transport and raw materials. The market prospects for a new commodity must be assessed carefully. It should be examined whether the licensed capacity for a

particular industry is in line with demand on a longer view.

Indian Iron have become sluggish around Rs. 24.78. Engineering shares have generally declined in the absence of support. Guest, Keen, Williams have recovered mildly after an earlier sharp decline. Indian Standard Wagon have been neglected, in spite of the news that the Company has been permitted to issue bonus shares. Texmaco, Jessop, Binani Metals, Britannia Engineering and Dalmia Iron have fallen.

Except for a few new shares which have been supported, the prices of miscellaneous shares have been quoted lower. Indian Tack and Nail have been supported and India Carbon have been bought. Dr. Paul Lohmann have been declined on pressure. National Insulated Cable have been taken, because the Company has been permitted to issue bonus shares. Jay Shree Tea and Industries have been supported at lower prices in view of the diversification of activity. Rohtas, Indian Aluminium, Indian Cable, Indian Copper and Kesoram Industries have gained fractionally at the close.

Paper shares have recovered slightly. Interest has been taken in Orient, Titagur, India Paper Pulp, Seshasayee and Ballarpur. Sirpur have been quiet.

Prices of coal shares have been maintained, but turnover has been small. Hopes of an early rise in coal price have helped reduce the selling pressure. Scattered support has been extended to Burrakur, Bengal, New Beerbhoom and East Indian. Central India, Western Bengal and Equitable have been freely offered.

Turnover in jute shares has declined, and the trend has been mixed. Contrary to expectations, the dry weather has not disturbed sentiment, because mills have built up sufficient stocks of raw jute. Nuddea, Bally, Fort Gloster, Northbrook, Union, Reliance and Barnagore have been steady. Birla have recovered after an earlier fall. Interest has been taken in India, Anglo-India, Champdany, Kankarrah, Kamarhatti, Fort William and New Central.

There has been a predominance of sellers in cotton mill shares at the close. Bharat Commerce, Elgin, J. K. Rayon and Cawnpore Textiles have declined. Bowreah and Dunbar have been quoted lower.

Bank shares have met with limited support. United Commercial have been taken on the news that the Bank has been permitted to issue rights shares. United Bank and Punjab National have been steady.

Except for Dyer Meakin Breweries, which have been maintained, the prices of sugar shares have declined on balance. Carew, Ramnugger Cane, Belsund, S.K.G. and Cawnpore have weakened.

The selling pressure in tea shares has declined at the close, due to hopes that the coming Budget will give tax reliefs to the industry. Tezpur, Hasimara, Hantapara and Dibrugarh have improved.

Government securities have been dull. Prices have generally been maintained largely due to official support. Business has been limited and

the 3 percent Conversion loan 1986 is being quoted around Rs. 71.05.

Bombay Market

SENTIMENT SUBDUED ON BUDGET FEARS

WIDESPREAD LOSSES IN TEXTILE SHARES

Wednesday Evening.

THE Bombay stock market was subdued during the past week, and share prices declined due to tired long liquidation. Operators were generally not inclined to extend commitments in view of the coming Central Budget. Fears of heavier taxation restrained activity. As a result of heavy selling in B. B. Petrol and Swan Mills, the prices of these shares declined by more than 10 percent over the last *haval* rate. Hence interim margins were imposed on the sale of these scrip.

Steel shares were subdued due to disappointment over the delay in the announcement of the new steel retention prices. Operators were nervous because the cement and motor-vehicle industries have been transferred to the new Ministry of Heavy Industries. Although the money supply became

REDEEMABLE AT PAR
ON THE THIRD MAY, 1972.

SUBSCRIPTIONS will be received in cash or by cheque. Applications will be received at the branches of the State Bank of India at Calcutta, Bombay, Madras, New Delhi, Patna, Lucknow, Hyderabad, Cuttack, Bhubaneswar and Sambalpur from the 30th April, 1962 to 2nd May, 1962 both days inclusive. Subscription may however be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices of the State Bank of India mentioned above and at the office of the State Electricity Board, New Capital Bhubaneswar.

easier, the stock market did not think that fresh support would be available for existing issues. Rights and new shares were believed to have mopped up substantial resources.

Tata Steel declined to Rs. 138.75 and Indian Iron to Rs. 24.76. Engineering shares were depressed, and Tata Locomotive were sold at Rs. 344.50. Alcock Ashdown were transacted at Rs. 325 and Larsen and Toubro were freely sold down to Rs. 37.60 on the news that the Company would issue rights shares at a substantial premium. Premier Construction were sold at Rs. 172, but Mukand Iron were steady at Rs. 27.50. Motor-vehicle shares were quiet, and sellers predominated in Hindustan Motors at Rs. 19.48. Premier Automobiles were done at Rs. 129.

There were widespread losses in the cotton mill section. In spite of a good report and bigger profits, Century reacted to Rs. 623 on profit-taking. Bombay Dyeing were available at Rs. 69.60 and Kohinoor at Rs. 308.50. Tata Mills declined to Rs. 80 in spite of producing satisfactory results. Standard were subduced at Rs. 1,034 and Morarjee at Rs. 415. Gokak fell to Rs. 226 and Finlay to Rs. 335. India United ordinary were done at Rs. 22.88, but Apollo were offered freely down to Rs. 2.42. Swan came to hand at Rs. 340. There was scattered support for New Great Eastern Spinning and Weaving at Rs. 294 because the Company returned to the dividend list after a long interval. A taxable ordinary dividend of 12 percent was declared for 1961.

Miscellaneous shares moved down in sympathy with the general trend. Belapur Sugar declined to Rs. 236 and Phalton to Rs. 108.50. Walchandnagar Industries were quiet at Rs. 164. Cement shares were quiet, and business passed in Associated Cement at Rs. 157. Digvijay moved down to Rs. 205. Mining shares were subduced, and sellers predominated in Shivrajpur Syndicate at Rs. 38. Steamship company shares were quiet, and Scindia Steam were available at Rs. 12.76. Great Eastern Shipping were dealt in at Rs. 13.80. Bombay Burmah were steady at Rs. 652 on rumours of a bonus issue. Rayon shares turned quiet, and National Rayon declined to Rs. 547. Gwalior Rayon lost at Rs. 55.50 and Baroda Rayon at Rs. 145. There was little interest in chemical shares, and Tata Chemical were sold down to Rs. 17.16. Polychem were steady at Rs. 205 and Colour-Chem at Rs. 462.50. Synthetics and Chemi-

cals declined to Rs. 220 on profit-taking and Ceat Tyre were quiet at Rs. 197.50. Tata Oil declined to Rs. 83.80 after an earlier rise. The Company has decided to issue ordinary rights shares in the proportion of one new share for every two held, at a premium of Rs. 10 a share. The taxable ordinary dividend was raised from 5 percent to 5.5 percent, but this was below market expectations. The Company also proposed to raise funds by issuing debentures for Rs. 50 lakhs; these debentures were likely to be offered to the existing shareholders in the first instance. Voltas were available at Rs. 282. Permanent Magnets lost at Rs. 230, but Asian Cable improved to Rs. 114.50.

Bank shares were quiet, and routine business was transacted. Bank of India were done at Rs. 118 and Central Bank at Rs. 65. Bank of Baroda came to hand at Rs. 115 and Dena Bank at Rs. 70. Among insurance shares, New India Assurance were dealt in at Rs. 67 and British India General at Rs. 11.88.

Among electric company shares, Ahmedabad were placed at Rs. 92.80 and Bombay Suburban at Rs. 102. Tata Hydro were done at Rs. 112.50 and Tata Power at Rs. 1,112.50.

Madras Market

TURNOVER AND PRICES DECLINE

HOPES OF TAX RELIEF HELP TEA SHARES

Wednesday Evening.

THERE was a considerable decline in turnover in the Madras stock market during the past week. Share prices generally declined on selling pressure and support was negligible. The prices of clearing shares weakened due to professional selling. Operators were nervous about the prospect of new taxes in the coming Central Budget.

Turnover in Government securities was small and business was concentrated mainly on selected State loans. Bank shares turned quiet. Scattered interest was taken in electric company shares. The sugar section showed mixed trends. Among planting shares, prices of good tea shares were maintained on hopes of tax reliefs

for the industry. Coffee shares were neglected because the future marketing outlook was being assessed pessimistically. Rubber shares were sold freely because the present price was considered unremunerative in view of the higher production costs. In spite of some good dividends, cotton mill shares declined on balance. Miscellaneous industrials also moved down, but scattered support was forthcoming for selected chemical shares.

In the banking group, Canara Banking Corporation was done at Rs. 75.25 on the news that the Bank had decided to issue 25,000 ordinary shares of Rs. 50 each, at a premium of Rs. 10 a share. Indian were dealt in at Rs. 180 and Indian Overseas at Rs. 177. Pandyan were maintained at Rs. 26 on paying a taxable ordinary dividend of 7½ percent. State Bank of Travancore were transacted at Rs. 118. Among electric company shares, South Madras came to hand at Rs. 10.25 and Ellore at Rs. 22. Negapatam were dealt in at Rs. 12.10 and West Coast at Rs. 16.12.

Among sugar shares, Deccan were steady at Rs. 10.05 and E.I.D. improved to Rs. 40.25 on an encouraging speech from the chairman of the Company. United Breweries were quoted at Rs. 82.25 and Mysore at Rs. 53.40. India were done at Rs. 9.65 and Jeypore at Rs. 14.75.

In the planting section, Blue Mountain were dealt in at Rs. 2.57 and Balanoor at Rs. 13.75. Kil Kotagiri were steady at Rs. 4.62 and Midland at Rs. 11.20. Nennmeny were bought up to Rs. 24.65 on paying a taxable ordinary dividend of 15 percent. Ouchterlony weakened to Rs. 3.95 and Periakaramalai to Rs. 3.33. Cochin Malabar were transacted at Rs. 7.05 and Consolidated Coffee at Rs. 18.15. Emerald Valley were quoted at Rs. 5.30 and Parkside at Rs. 23. Peermade were sold down to Rs. 18.80 and Rajendra were indicated at Rs. 11.12. Thirumbadi came to hand at Rs. 1.63 and Thamarappally were done at Rs. 15.90 on declaring a taxable ordinary dividend of 18 percent. Udayagiri were offered down to Rs. 19.50 on passing the dividend and Twyford were sold at Rs. 10.60.

In the textile section, Anglo-French were done at Rs. 157.50 and Asher at Rs. 229. Buckingham were dealt in at Rs. 282 and Bangalore Woollen at Rs. 267. Tirupati were transacted at Rs. 14.85, on the proposal to issue ordinary rights shares in the proportion of three new shares for every four

CAPITAL, 19th April, 1962.

held, at par. Lakshmi came to hand at Rs. 166.50 and Madura at Rs. 38.08. Mettur were steady at Rs. 398 and Radhakrishna at Rs. 39.60. Ramakrishna were done at Rs. 250 and Sarada at Rs. 96. Cauvery Spinning were dealt in at Rs. 17.25 and Cannanore at Rs. 133. South India Viscose reacted to Rs. 180 and Travancore Rayon to Rs. 41.62. Vasanta were placed at Rs. 309 and Virudhachar at Rs. 60.25.

Among miscellaneous shares, Aluminium Industries were quoted at Rs. 23.50 and Ashok Leyland at Rs. 8.90. F.A.C.T. were bought at Rs. 8 on the news that the Bank had decided to issue 25,000 ordinary shares of Rs. 50 each, at a premium of Rs. 10 a share. Indian were dealt in at Rs. 180 and Indian Overseas at Rs. 177. Pandyan were maintained at Rs. 26 on paying a taxable ordinary dividend of 7½ percent. State Bank of Travancore were transacted at Rs. 118. Among electric company shares, South Madras came to hand at Rs. 10.25 and Ellore at Rs. 22. Negapatam were dealt in at Rs. 12.10 and West Coast at Rs. 16.12.

PREFABRICATED TUBULAR ROOFING STRUCTURES

All S & L Prefabricated Tubular Roofing structures are designed to the requirement of I.S. 806: 1957 code of practice for the use of steel tubes in general building constructions. Entirely self-supporting S & L structures of the following spans and bay lengths are available ex-stock.

Type	Nom. Bay Lengths	
	Single Span	Double Span
SLS/20	20 ft.	10 ft. and 16 ft.
SLS/30	30 ft.	13 ft. 4 in. and 16 ft. 4 in.
SLS/44	44 ft.	11 ft. 4 in. and 13 ft. 4 in.

London Market

REACTION FOLLOWS EARLY RISE CAUTIOUS APPROACH TO BUDGET DETAILS

London, 18th April.

The relief and restrained enthusiasm which followed the Budget in the past week, proved to be short-lived in the stock market, and prices in almost all sections recorded losses. The main exception was provided by gilt-edged securities which, after a slow response to the Budget, went ahead on hopes of a change in the Bank rate, and on suggestions that gilt-edged securities may be excluded from the scope of the new capital gains tax. It will not be known whether this is so until the Finance Bill is published later this week. The outline of the tax given by the Chancellor in his Budget statement proved to be less onerous than had been feared, but even so, it appears to have had a distinctly restraining effect on the volume of business. It is, however, too early to assess with any confidence the effects of the capital gains tax on market turnover. The reaction from the Budget boomlet was partly due to disappointing company news and particularly the interim statement from the British Motor Corporation, which referred to a severe setback in earnings in the first half of the Corporation's financial year, and the sharp fall in profits reported by C. A. Parsons. Foreign bonds attracted little attention, and Japanese and Greek issues lost ground. Property shares moved up strongly, while insurance shares in particular and bank shares were in demand. Widespread falls were recorded in industrial equities, but numerous good features developed. Brewery shares were outstanding on takeover talk. Mining sections provided little of interest, and prices of gold and copper shares tended lower. Oil shares improved, after losing ground earlier in the week. Rubber shares moved within narrow limits, while tea shares were neglected.

(p). subject to tax; Steel Containers Ltd.—20 p.c. Industrial Containers Ltd.—10 p.c.

New Delhi

Advance Planning Needed to Avoid Transport Shortages

(FROM OUR NEW DELHI CORRESPONDENT)

A FORMER member of the Planning Commission and now chairman of the Committee on Transport Policy and Co-ordination, Mr. K. C. Neogy, said at a Press conference recently that the neglect of the rôle of transport in India's developing economy is largely responsible for the present crisis. Since transport can make or mar a plan, it is necessary to anticipate the demand for it well in advance. Mr. Neogy, it will be recalled, pointed out the inadequacy of the provision for rail transport even in the first plan soon after he became a member of the Planning Commission.

Mr. Neogy said at the Press conference: "The transport position in the country today appears to be difficult, and there are complaints from many quarters about the shortage of railway facilities. The committee is not entrusted with the responsibility of devising emergency measures to tide over the present abnormal situation, although undoubtedly, while dealing with long-term policy, according to its terms of reference, it will have to be concerned with current developments affecting the future policy. The committee has, however, to take note of transport difficulties being experienced at present, and the causes thereof, in formulating a policy for the future."

Growing Requirements

"It has been pointed out to the committee that transport facilities have not been adequately planned to keep pace with the growing requirements of the economy. It has to be noted that in planning for transport facilities, the railways have continued to be relied upon for the movement of the bulk of the traffic, and they are expected to carry the predominant share of the traffic requirements of basic industries like coal, steel and cement. No detailed estimates have been available of the traffic carried—or to be carried—by means of transport other than railways, although the committee's secretariat has undertaken a few studies on these issues. It seems that all relevant factors could not be fully taken into account or adequately anticipated in planning transport facilities, as would appear from the shortages which have developed. Among the important factors are the increasing volume of traffic under the impact of development plans and the uncertainties of transport requirements particularly due to the mixed character of the economy."

Rate Structure

"The studies made by the committee's secretariat have shown that with steady development of road transport in India, which is an expanding economy, the long run, to lose some of the high-rated traffic, and rely for their revenues more and more on bulk goods like minerals and coal, which now earn a lower average rate for a ton-mile. The railways' rating structure is at present based on the 'value of service' principle, rather than the 'cost of service' principle. The value of service principle was, however, more appropriate in the days when the railways held the monopoly of traffic and could charge a large proportion of the overhead or joint costs of the total traffic to those items of traffic which were comparatively high-valued and could bear relatively high freight rates, leaving the low-valued and bulk traffic like coal, mineral ores, salt, etcetera, to be carried at low rates."

"There is, however, a distinct recognition in the world now that the old railway rating policy has become out-of-date, and railway rating has

to be based to a much greater extent on the cost of service. With the changing pattern of traffic on the Indian railways on the one hand, and their obligation to find resources for the plan on the other, the question of reorientation of their rating structure is assuming increasing importance. It thus requires to be examined what long-term changes may have to be contemplated in the railway rating policy, and what will be the implications of adjustments in the rates of low-rated and high-rated commodities, respectively, from the point of view of the cost structure of different types of industry in the different regions in the country and also of the economy as a whole. These questions are being examined by the committee."

Administrative Organisation

"In considering the future rôle of the railways, it seems necessary to consider important and complicated questions relating to the efficiency of the railways as a commercial and public utility undertaking. Questions pertaining to the administrative organisation of the railways, and possible improvements in the accounting and costing practices of the railways to enable them to ascertain the profitability or otherwise of specific operations, seem to merit careful examination."

"Among the suggestions received for the reorganisation of the administrative set-up of the railways are some of far-reaching implications, such as separation of the policy-making and executive functions of the railway administration, setting up a statutory corporation for the management of the railways, and formation of a single Ministry to deal with the policy for all forms of inland transport, including the railways. These issues have also been raised in the preliminary report. The committee has been studying in some detail the position and experience in various foreign countries. The policy for India can be formulated only after a careful consideration of the implications of different proposals and the special conditions and problems of this country, and also the experience of other countries where similar problems are being tackled."

"In considering the reorganisation of the road transport industry, an important fact which has to be taken into account is that the third plan has accepted the possibility of the extension of the public sector in the field of transport of goods by road, the principle of nationalisation having already been accepted and gradually enforced in relation to the transport of passengers. Earlier, however, an assurance had been given by the Government in Parliament that there would be a moratorium on the nationalisation of goods transport till the end of the third plan, and this fact had been kept in view when the preliminary report of the committee was prepared. In its final report, the committee will have to take note of the change in the policy of the Government concerning this."

Rail-road Co-ordination

"In considering co-ordination between rail and road, it is most important that the cost of providing different services and moving different types of traffic should be known with as much accuracy as possible. The trend all over the world is in favour of improving traffic costing techniques. Costing will help in determining the comparative economics of different means of transport and their appropriate rôles for different types of traffic under different conditions. Costing of road transport presents special problems, because of the character of the organisation of the industry and likely future developments in the techniques of operation and conditions of service. Costing will help the railways in the formulation of any policy which might be adopted in dealing with uneconomic services. Detailed information on specific costs, that is, costs of individual traffic and services, is not at present available on the Indian railways. The committee has undertaken certain studies with the help of a retired railway financial adviser with a view to understanding how far any refinements in the existing railway accounting procedures in India are feasible and desirable and will help in ascertaining the cost of specific services. The committee is also studying the work that is being done on this subject in certain foreign countries."

Road Transport

"The committee is seized of the main problems of development of road transport. The history of the economic development of the advanced countries of the world like the U.K. and the U.S.A. bears evidence that while industrial development in earlier periods was associated with the development of railways, road transport has been an important and potent factor in the later phases of development. With economic development and the progressively growing demands on transport, road transport must play an increasingly important part in India. There are vital questions relating to development of road transport which require examination: for example, the effect of fiscal policies on development of road transport and the relationship between contributions from road transport and expenditure on roads, and balancing of investment in roads and investment in vehicles. The road transport industry in the private sector—particularly the section of the industry engaged in freight services

—is owned at present by a large number of small operators, the majority of whom own just one vehicle each. It needs to be considered along what lines reorganisation of the road transport industry is to be contemplated, so that it might be expected to carry a proportion of the traffic relating to specific projects and specific regions in the country as part of the five year plans, and at a reasonable cost."

"In considering the reorganisation of the road transport industry, an important fact which has to be taken into account is that the third plan has accepted the possibility of the extension of the public sector in the field of transport of goods by road, the principle of nationalisation having already been accepted and gradually enforced in relation to the transport of passengers. Earlier, however, an assurance had been given by the Government in Parliament that there would be a moratorium on the nationalisation of goods transport till the end of the third plan, and this fact had been kept in view when the preliminary report of the committee was prepared. In its final report, the committee will have to take note of the change in the policy of the Government concerning this."

Coastal Shipping

"Apart from the problems of railways and road transport, the committee, according to its terms of reference, is also expected to deal with the problems of coastal shipping, inland water transport and air transport, and also the traditional means of transport, namely, bullock carts and country boats. As for coastal shipping, the committee has to address itself to the long-term aspect of the problem, namely, the future rôle of coastal shipping and the type of traffic which it could be expected to carry in the long run. In April last year, a detailed questionnaire was sent to the Indian Coastal Conference seeking from it basic factual information and its views on certain issues. The information has not yet been received, but is expected to be made available in the near future."

"The committee has collected some data on the problems of inland water transport and air transport. Inland water transport plays an important part in certain regions in the country, such as north-east India and Kerala. It is necessary to consider what rôle should be assigned to water transport in the future in these and other regions which have navigation potentialities. Also, it is necessary to consider what arrangements could be contemplated for the co-ordination of water transport with other modes of transport."

"As for air transport, the committee is collecting information on the present performance of this means of transport, the traffic—both passenger and freight—carried in different regions, the levels of fares and freight rates, etcetera. The committee will have to consider the future rôle of civil air transport in the transport system of the country keeping in view the trends in the more developed countries of the world."

Developments Abroad

"The committee feels that it will be useful to draw on the experience of some of the foreign countries in the field of transport and that it should take note of the difficult problems which have arisen in this field in those countries. The secretariat of the committee has prepared certain detailed notes on transport policies followed in some foreign countries, and additional material is being collected. The study of developments abroad has shown that problems of transport policy and co-ordination have been the subject matter of fairly long and comprehensive enquiries in several foreign countries, and it has not been possible to find

COMPANY AND PUBLIC NOTICES

BRAITHWAITE & CO. (INDIA) LIMITED NOTICE

NOTICE is hereby given that the Thirty-second Annual General Meeting of Braithwaite & Co. (India) Limited will be held at the Registered Office, 4, Clive Row, Calcutta-1, on Thursday 10th May, 1962 at 11-00 a.m. to transact the following business:—

1. To receive and adopt the Directors' Report and the Audited Accounts for the year ended 31st December, 1961.
2. To declare a dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

As Special Business

To consider and if thought fit to pass with or without modification the following resolutions of which numbers 5 and 6 will be proposed as ordinary resolutions and numbers 7, 8 and 9 as special resolutions.

5. (As an ordinary resolution)

"That the Capital of the Company be increased to Rs. 1,40,00,000 by the creation of 3,00,000 Ordinary Shares of Rs. 10 each and of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each carrying the rights and privileges set out in the Articles of Association of the Company as altered by resolution no. 8 set out below."

6. (As an ordinary resolution)

"(a) That the sum of Rs. 43,40,210 forming part of the undivided profits of the Company standing to the credit of General Reserve be capitalised and that this amount be issued as a capital bonus which shall be applied on behalf of the persons who are on the 10th day of May, 1962 holders of the 5,65,979 issued Ordinary Shares of Rs. 10 each in payment in full for 4,34,021 Ordinary Shares of Rs. 10 each and that such 4,34,021 new Ordinary Shares credited as fully paid shall be accordingly allotted to such persons respectively in the proportion of 7,6685 new Ordinary Shares for every 10 issued Ordinary Shares then held by such persons respectively and that the said new Ordinary Shares so distributed shall rank in all respects *pari passu* with the existing Ordinary Shares and shall be treated for all purposes as an increase of the nominal amount of the capital of the Company held by each such shareholder and not as income.

(b) That in satisfaction of the said capital bonus the Directors be and they

are hereby directed to allot and distribute 4,34,021 new Ordinary Shares credited as fully paid up amongst the persons who are on the 10th day of May, 1962 holders of the 5,65,979 issued Ordinary Shares of the Company in proportion to the issued Ordinary Shares held by them save that where members are entitled to a fraction of a share as a result of the issue of such capital bonus, the Directors shall allot the shares represented by the total number of such fractions to a person or persons appointed by them who shall as soon as practicable sell the said shares and distribute the net proceeds to the said members in proportion to their respective entitlements.

(c) That the draft of the agreement providing for the allotment of the said new Ordinary Shares in satisfaction of the said capital bonus submitted to this meeting and signed in the margin by the Chairman thereof for the purpose of identification be and the same is hereby approved and that authority be and is hereby given to the execution thereof on behalf of the Company as and when the same shall have been signed on behalf of the members holding Ordinary Shares in the Company on the 10th day of May, 1962 by a person to be appointed by the Directors in that behalf.

Provided that no part of this resolution shall take effect except in the event of the approval of the Government of India being obtained to the issue of the said capital bonus."

7. (As a special resolution)

"That pursuant to section 81 of the Companies Act, 1956, the Company hereby approves of the issue to the public by a Prospectus of 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each forming part of the unissued capital of the Company and carrying the rights and privileges set out in the Articles of Association of the Company as altered by resolution no. 8 set out below.

8. (As a special resolution)

"That the Articles of Association of the Company be altered as follows—

(1) Article no. 4 shall be deleted and the following new Articles adopted in place thereof—

"4. The capital of the Company is Rs. 1,40,00,000 divided into 40,000 Redeemable Cumulative Preference Shares of Rs. 100 each and

10,00,000 Ordinary Shares of Rs. 10 each.

4A. The following provisions shall apply to the Redeemable Cumulative Preference Shares—

(a) The said shares shall confer on the holders thereof the right to receive a fixed cumulative preferential dividend at the rate of 9 per centum per annum (without any deduction therefrom on account of income-tax payable by the Company but subject to deduction of tax under section 194 of the Income-tax Act, 1961, or any statutory modification or re-enactment thereof) on the capital for the time being paid up thereon and the right in a winding up to repayment of capital and arrears of dividend, whether declared or not, down to the commencement of the winding up in priority to the Ordinary Shares in the capital of the Company but shall not confer any further right to participate in profits or assets.

(b) The Company may at any time after 31st December, 1974, on three months' notice to the holders thereof, out of any profits or monies of the Company which may lawfully be applied for that purpose redeem the whole or any part of the said shares at par together with a sum equal to the arrears of the fixed dividend thereon down to the due date for redemption thereof upon giving to the holders of the shares to be redeemed not less than three months' previous notice in writing.

(c) If the Company shall at any time determine to redeem a part only of the said shares for the time being outstanding the shares to be redeemed shall be determined by a drawing to be made at the office in the presence of a Notary Public of which not less than 28 days' notice shall be given to the holders of the said shares who shall be entitled to be present at such drawing."

(2) Article no. 78 shall be deleted and the following new Article adopted in place thereof—

"78. Save as hereinafter provided on a show of hands every member present in

person shall have one vote and upon a poll every member present in person or by proxy shall have one vote for every share held by him provided that no Company shall vote by proxy so long as a resolution of its Board under the provisions of section 187 of the Act is in force.

A member registered in respect of a preference share shall not in respect of such share be entitled to vote at any general meeting of the Company except—

(i) on a resolution placed before the Company in general meeting at the date of which the dividend due on such share or any part thereof remains unpaid in respect of an aggregate period of not less than two years preceding the date of such meeting; or

(ii) on a resolution placed before the Company which directly affects the rights attached to the preference shares in the capital of the Company and for this purpose a resolution for the winding up of the Company or for the repayment or reduction of its share capital shall be deemed directly to affect the rights attached to such shares."

9. (As a special resolution)

"That Article no. 95 of the Articles of Association be altered by the addition of the following proviso at the end of the Article—

"Provided that no remuneration shall be payable to any director until the last day of the month during which the meeting or meetings to which the remuneration relates was or were held and provided further that the remuneration so payable to any director together with the remuneration payable in respect of earlier meetings during the same financial year of the Company shall not exceed the remuneration which would prior to the adoption of this Article as one of the Articles of Association of the Company have been payable to him in respect of the period from the first day of January in that financial year upto the said last day of the month."

The Transfer Books of the Company will be closed from the 26th April, 1962 to the 10th May, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and the proxy need not be a member.

Payment of such dividend as may be declared will be made on or after the 17th May, 1962 to those members whose names are on the Company's Register on the 10th May, 1962.

By Order of the Board,

Y. S. TAYAL,

Secretary.

Calcutta,

15th March, 1962.

Note:—An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the Members of Company.

CAPITAL, 19th April, 1962.

SOORAH JUTE MILLS COMPANY, LIMITED

NOTICE is hereby given that the Annual General Meeting of the Shareholders of the Company will be held at the Registered Office of the Company, at 15, India Exchange Place, Calcutta, on Wednesday, the 23rd May, 1962, at 2-30 P.M. for the following purposes:—

1. To receive and consider the Report of the Directors and to pass the audited accounts of the Company for the year ended 31st December, 1961.
2. To declare Dividends on Preference and Ordinary Shares.
3. To elect Directors in place of those retiring by rotation.

A special notice has been received from a shareholder of his intention to move the undernoted Special Resolution in connection with the re-election of Shri G. P. Birla, an associate of the Managing Agents, who retires by rotation, but being eligible, offers himself for re-election. As he has been acting as a Director of the Company since 1945, it is desirable to avail of his valuable services by retaining him as a Director of the Company. Hence, special notice is hereby given to the shareholders to pass, with or without modification, the said Special Resolution—

"RESOLVED that Shri G. P. Birla, an associate of the Managing Agents, be and is hereby re-appointed a Director of the Company liable to retire by rotation."

4. To appoint Auditors and to fix their remuneration.
5. As special business to consider and, if thought fit, to pass, with or without modification, the following Resolutions:—

(i) As Special Resolution:

"RESOLVED that the Regulations contained in the document submitted to the meeting and for the purpose of identification subscribed by the Chairman thereof, be and the same are hereby approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of the existing Articles of Association thereof."

(ii) As Special Resolution:

"WHEREAS the East Indian Produce Co. Ltd., an associate of Hindusthan Investment Corporation Ltd., the Managing Agents of the Company, maintain an Office at London in the United Kingdom and whereas the said Company carry on business of acting as Agents in the United Kingdom and the Continent for the purchase and sale of goods including Stores, Plant and machinery and rendering of services such as recruitment of technical personnel, etc., and also have dealings business connections with parties all over the United Kingdom, and the Continent and their operations are on a very large scale and whereas their expenses of maintaining their office

amount approximately to £1,25,000 per annum and whereas expenses which can be attributed to the work expected to be done for and on behalf of the Company, would depend on the value of purchases effected and services rendered through the said Company in relation to its total turnover in each year and whereas the said East Indian Produce Co. Ltd. have been acting as such Agents for and on behalf of the Company pursuant to Shareholders' Resolution dated 28th August, 1959, NOW it is hereby Resolved that the East Indian Produce Co. Ltd. continue to act as agents of the Company for a period of three years from 1st July, 1962 on the following terms as to commission and expenses and that the payment be made to them for the services rendered in the manner sanctioned by the Directors of the Company:

- (a) for purchase of Stores, etc.—5% of the Invoice price;
- (b) for purchase of Machinery—2½% of the Invoice price;
- (c) for employing technical personnel for and on behalf of the Company and for attending to enquiries—Expenses incurred by East Indian Produce Co. Ltd., apportionable to such work in each particular case;
- (d) for rendering any other special service—such remuneration as may be agreed upon between Directors of the Company and the East Indian Produce Co. Ltd.

Provided that if anything to be done in pursuance of the above arrangement requires the permission of the Central Government or the Reserve Bank of India, as the case may be, the same will not be done unless such permission is obtained."

The Register of Members and Share Transfer Books of the Company will remain closed from the 3rd May 1962 to the 23rd May, 1962, both days inclusive.

By Order of the Board,
HINDUSTHAN INVESTMENT CORPORATION LIMITED,

R. K. CHHAOCHHARIA,
Managing Director,

15, India Exchange Place,
Calcutta-1.

Dated, the 4th April, 1962.

N.B. (i) The Directors have recommended the following dividends free of income-tax payable by the Company, but subject to deduction of tax under section 194 of the I.T. Act.

On Preference Shares @ 10% per annum; and

On Ordinary Shares @ Rs. 2.50n.p. per share.

If dividends on shares as recommended by the Directors are approved at the meeting, THE DIVIDENDS WILL BE PAYABLE ONLY TO THE REGISTERED SHAREHOLDERS whose names are on the Company's Register on the 23rd May, 1962, or to their order or to their bankers. No application need be sent for dividends, as relative dividend warrants will be posted to such shareholders by the 31st May, 1962.

(ii) A member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

(iii) An Explanatory Statement in respect of the above items of Special Business is being forwarded to the Members of the Company along with the convening notice of the meeting.

THE PUNJAB NATIONAL BANK LIMITED

REGISTERED OFFICE,

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

74th YEAR OF ISSUE

CALCUTTA, 26th APRIL, 1962.

Vol. CXXXVIII No. 3797

MR. DESAI SWINGS BACK TO DIRECT TAXES

THE tax proposals for 1962-63 presented by the Central Finance Minister, Mr. Morarji Desai, in Parliament on Monday evening, are taken as a whole, less stiff than had generally been expected. According to the interim Central Budget estimates issued six weeks ago, the revenue deficit during the current fiscal year was shown as likely to be Rs. 63.46 crores and the overall deficit Rs. 147 crores. It was thought that both deficits would increase with the Government's recent decision to give bigger dearness allowances to its lower-paid employees with retrospective effect from 1st November, 1961; the increase, it was believed, would range up to Rs. 10 crores or Rs. 15 crores. On this assumption, and on the further assumption that the Finance Minister would cover at least the revenue deficit fully, it was argued that the new taxes would total no less than Rs. 75 crores or Rs. 80 crores.

Instead, Mr. Desai estimates that the levies he has just proposed will yield Rs. 71.7 crores if they had been applied over the full year. But since the changes in indirect taxes and Customs duties are taking effect a little late, the actual extra revenue during 1962-63 will be only Rs. 68.88 crores. Out of this, Rs. 8.08 crores will go to the States, and Rs. 60.80 crores will remain with the Centre. The latter will be barely enough to cover the newly-estimated revenue deficit, which has magically shrunk to Rs. 60.78 crores after a mere six weeks of rethinking, and even though the estimate of revenue expenditure now is considerably higher (mainly because of the increase in dearness allowances). The magic behind the shrinkage is simply this: Mr. Desai has decided that, even if he had not changed any taxes at all, the revenue during the current year would be Rs. 15 crores larger than he thought likely six weeks ago. Fiscal historians exercising their memories to discover what has happened since the momentous ideas of March to make such a substantial change necessary should be warned that they would be engaging in an essay in futility. Mr. Desai has decided that he will add on Rs. 15 crores to revenue from the profits on coinage operations outstanding in a suspense account, and that's that.

The general trend of the estimates supports the unfortunate impression which has been growing in the recent past that Central Government Budgets are not quite Central Government Budgets these days. Almost, it seems, as a matter of policy, revenues are regularly and deliberately under-estimated, while expenditures are irregularly and deliberately over-estimated. Thus do Finance Ministers acquire a halo of magnanimity: they say they will tax you for Rs. 60 crores, but end up (as in 1961-62) by taxing you for Rs. 120 crores. The ingenuousness of the procedure apart, it is worth reconsidering whether such are the foundations on which the health and honesty of the fiscal system should be built. Mr. Desai has succeeded, perhaps temporarily, in giving the impression that he has been generous, in so far as he has gone no further than balancing the revenue Budget for the current year. It is, however,

quite on the cards that the year will end with a substantial revenue surplus, should the Government be so kind as to deign to control its expenditure. The point is important: the tax proposals are likely to prove a lot stiffer than they look.

That the proposals should have been stiff, is something which not many care to argue about vigorously these days. The needs of the five year plans, and of defence, are rising, and they super-vene on those of a burgeoning bureaucracy. Somebody has to be milked, so the task of the Finance Minister is to do the maximum milking, and to look like doing it for the maximum good of the maximum number. Unfortunately, it is precisely on this count that the latest Budget proposals fail rather sharply. No less than two years have gone by since the Government and the Planning Commission started issuing assurances that the scope for increasing direct taxes was extremely limited, and so the future concentration would be on indirect levies. On Monday evening, those assurances were thrown to the winds. Of the total extra revenue of Rs. 68.88 crores expected this year from the new taxes, as much as Rs. 27.2 crores is to come from the direct levies. The conclusion is inescapable that a Government which first says that the scope for adjusting direct taxes is only marginal, and then proceeds to rake in over Rs. 27 crores, is doing more than merely indulging in a rather novel brand of socialist hypocrisy. A clarification seems to be required whether the statements of fiscal policy made in the third five year plan do or do not still stand.

Very few of the changes in direct taxes can be justified on any grounds other than that they contribute in some mysterious way to the achievements of the Government's socialist goals. What- ever good they may do to the egalitarian soul, they will certainly do no good at all to the economy. They soak those classes of people, and those institutions, which already contribute most by way of savings for economic progress. Much of the industrial development in this country in recent years has been brought about by companies which have conserved resources out of their profits. Yet, through the increase in the company tax from 45 percent to 50 percent, those profits are now to be attacked. It is no argument to say that the profits include a large "windfall" element, in the sense that the companies are operating in a highly protected market. The fact is that in the traditional industries, in which much of the investments lie, neither the protection (if any) nor the profits (if any) have been steady or large. Only some of the newer and rapidly expanding industries have enjoyed fair prosperity. The indiscriminate increase in the company tax lumps the two categories together, when the more judicious alternative might have been to introduce a greater measure of discrimination through indirect levies, such as the excise duties.

The company tax increase is the more regrettable considering that an earlier assurance given by the present Finance Minister has not been fulfilled. When he changed the basis of company taxation some years ago, and eliminated the sys-

tem of "grossing up" dividends, he declared categorically that it was not his intention to increase the overall burden. Incontrovertible evidence has been produced year after year showing that the burden had, in fact, been increased very considerably, and some relief was therefore necessary. Not only has the evidence been ignored and the relief withheld; the burden has now been intensified further. Admittedly, some minor reliefs have been given. Certain classes of Indian and non-Indian companies will now pay less tax on the dividends they get from other companies (as the simplified calculations in the tables on the next page suggest). But the reliefs are not only minor in themselves; they are almost negligible in comparison with the overall increase in the corporate tax. The Mudaliar Committee's report suggesting a tax reduction on export earnings has been torn so far that only a shred remains: instead of the reduction, all that has been allowed is that the company tax on export earnings will remain at 45 percent, whereas the company tax on other earnings is to go up to 50 percent. It is seriously to be wondered whether desiccated crumbs such as these symbolise the Government's ideas on export promotion. One suspects they do; no wonder India's export trade is in the mess it is.

More "socialist" than the company tax changes are probably the proposals for personal taxes. Personal income tax and super tax are to be raised sharply, although for the smaller salary earners the increases may be partially offset by the cut in the surcharge on salary incomes. The expenditure tax is fortunately to be abolished, thus eliminating an irritating dead horse from the Krishnamachari-Kaldor fiscal stable. But any loss of revenue on this count is to be made up many times over in other ways. The wealth tax is to be raised, and so is the capital gains tax—in a manner which will discourage not speculation alone, but also investment. The decision not to exempt any more, for wealth tax purposes, the money invested in the shares of new companies is a thoroughly retrograde step; it will actively hamper the flotation of new issues, whose success has hitherto been among the more encouraging symptoms of India's investment climate. As for the capital gains tax, it cannot be said the changes in it are directed purely against "speculative" gains made within one year. For many individuals, the capital gains made over a longer period (which the Government is presumably prepared to consider as gains from "investment") will be hit harder too. In this context, it is worth remembering that capital gains, especially from longer-term investments, are to a large extent notional, being merely a by-product of the inflationary era. The question may be asked whether it is right to tax them so heavily when they owe so much of their origin to the deficit financing the Government itself indulges in.

As for Mr. Desai's choice of indirect taxes, controversy will rage far and wide. But there are two preliminary criticisms which have particular validity. The first is that the taxes have not been spread enough on articles of general consumption other than those which organised industry produces; to that extent, the tax base has not been broadened as much as it should be. The second is that very little, or nothing at all, has been done for industries which are urgently in need of relief. The sugar excise duty has not been cut, although the case for doing so is very strong indeed. The cloth and yarn duties, instead of being reduced, have been raised sharply

at a time when the industry is running into rough weather because of the shortage of cotton. The tea industry will no doubt be grateful for such reliefs as it has got, although on the evidence so far available it is not clear why the excise duty rebate on exports could not have been exchanged for a further cut in the tea export duty. Both the tea gardens and jute mills will, however, deplore the Government's continuing dogma that the way to increase exports is by depressing home consumption. The increase in the excise duty on tea, and the new excise duty on jute manufactures, seem in the present state of the markets likely to hit producers more heavily than consumers. Neither of these industries looks like showing even moderate profits for the past year. The rationale for the duty increases, therefore, hardly exists.

The stock markets have reacted initially with moderate satisfaction to the tax proposals which Mr. Desai has presented. To the extent that post-Budget boomlets of previous years have been avoided, the restraint is praiseworthy. The main reason for satisfaction, it seems, is the fact that whereas new levies totalling Rs. 75 crores to Rs. 100 crores had been expected, the actual taxation promised is somewhat less. But this satisfaction needs to be qualified by the thought that today's promises are rarely tomorrow's facts: the Finance Minister might well still end up having

collected the bigger sums the markets originally thought he would want. Other qualifications are necessary too. There has been a sharp swing back to direct taxation. The effects of the swing may not show immediately, but they cannot be avoided in the results which companies produce, and the dividends they pay, a year or two hence. Finally, the tax proposals reflect little appreciation of the real needs of the economy—the need to increase the incentives to work, save and invest; to maintain the buoyancy of the capital market, to promote with greater determination the inflow of foreign capital, and of foreign managerial and technical talent. And, perhaps most important of all, to promote exports. One step

EASY MONEY FOR THE RAILWAYS

PRESENTING the interim Railway Budget estimates for 1962-63 nearly six weeks ago, the former Railway Minister, Mr. Jagjivan Ram, gave a clear hint that a determined effort would be made to increase the income of the Government's biggest semi-monopoly. Exactly how this is to be done has now been explained by his successor, Sardar Swaran Singh: he told the Lok Sabha last Thursday that both passenger fares and freight rates are to go up from 1st July, 1962, in order to bring the railways an extra Rs. 21.26 crores during the last nine months of the current financial year. Of this total, about Rs. 11.46 crores will come from the increase in fares and Rs. 9.8 crores from the increase in freight rates. But the general picture of the railways' finances which emerges after these changes remains far from happy. Approximately Rs. 12.20 crores (or nearly 58 percent) of the increase in earnings is to be used for paying the extra dearness allowances just sanctioned by the Government of India for its lower-paid employees with retrospective effect from November 1961. The rest will be credited to the railways' development fund—a terminological curiosity out of which money is used often for purposes which have nothing to do with railway development at all.

In sum, therefore, what will be happening is that, as compared with 1961-62, the railways' gross traffic receipts will be going up sharply with the increase in fares and freights. Much of the increase will be absorbed by a rise in working and miscellaneous expenditure. The depreciation reserve fund will get a little more, but an allocation still so small that it would cause astonishment if made by a rapidly expanding private concern with Rs. 1,700 crores of assets, due to grow to Rs. 1,900 crores by the end of the current year. The Government, as the lucky shareholder, will get the higher guaranteed dividend of 4½ percent of the capital-at-charge, and in the process net in over Rs. 6 crores more. No less than Rs. 12.5 crores will go off to the States via the passenger fare tax. In the end, the railways, after they have financed expenditure chargeable to the development fund, will be left with a paltry Rs. 22 lakhs. They might well ask themselves whether these are the sort of financial policies which deserve to be considered sound.

The railways can claim that their reserves are thin because they have been capitalised with the rapid expansion of recent years. But they have yet to explain why they have accepted a wrong-headed Railway Convention under which the annual allocations to reserves are pegged at an extremely low level, while the dividends to the general revenues go on rising sharply from year to year. A private company which raided money that should have gone into depreciation for paying bumper dividends to its shareholders would be leaving itself open to the charge of financial recklessness. The peculiarity of the accounting procedures cannot be excused on the ground that the flow of money between the Government and the railways resembles merely the exchanges between a fond father and a prodigal son—that the sums spent ultimately come out of the same family kitty, and so the exchanges are mere book entries. The difficulty is that, from the latest Budget, it is hard to make out just how much more money the railways require for their expansion plans. Only the latter could have provided a measure of justification for increases in fares and freights of the sort that have just been proposed.

forward, two steps back—such seems to be the reigning dictum of India's fiscal policy.

THE CENTRAL BUDGET

	(In crores of Rupees)		
	Budget 1961-62	Revised 1961-62	Budget 1962-63
Revenue	1,017.95	1,079.11	1,320.87
Expenditure	1,023.52	1,045.15	1,381.65
	Minus 5.57	Plus 33.96	Minus 60.78
			Plus 60.80 (Tax proposals)

During the current year, it is obvious that the extra money earned from the increases is not going for the expansion plans. On Sardar Swaran Singh's own showing, well over half of it is going for dearness allowances to staff; and a large part of the remainder for such doubtful "development" activities as increasing passenger and staff amenities. These are precisely the two broad headings under which the railways' expenditure needs to be drastically cut. They cannot be allowed to go on exploiting their position as a semi-monopoly by mulcting customers in order to subsidise the "welfare" schemes they have chosen for themselves. If they want more money, they first have to show that they will use it for expansion and for nothing else. Mr. Jagjivan Ram had set a thoroughly bad example, and Sardar Swaran Singh is following it. Against this background, the long and elaborate list of excuses he has given for raising fares and freights have very little justification. The excuses, taken together, boil down to one rather questionable claim: that it is a long time since passenger fares were raised, and recent increases in freight rates have been rather small, so no harm will be done if both are jerked up now. The logic is absurd, for it implies that railway charges should every now and then be raised regardless of the purpose for which the money is required and regardless of the harm done to the rest of the economy. Surely, this is not what Sardar Swaran Singh could seriously have meant.

If expansion was the sole purpose for which the extra money was going to be used, criticism of the proposed increase in various charges need not have been very strong. And of the two broad methods Sardar Swaran Singh has visualised for raising the railways' earnings—increasing passenger fares and increasing freight rates—the former is the less objectionable. There is some substance in his view that passengers have not yet contributed much to the expansion of the railways: most fares remain around the 1951 level, and the passenger fare tax, imposed in 1957, benefited not the railways but the States. The more valid case for raising passenger fares, however, rests on rather different grounds. It is that passenger traffic is increasing faster than the railways can manage; some of this traffic, especially at festival time, is rather unnecessary; so, if people must travel even when it is not essential for them to do so, they ought to be discouraged through higher fares. On this reasoning, the relatively small increase of about 5 percent for season-ticket holders is not unjustified, since they travel presumably because they have to. But the sharper increase for first-class passengers (about 15 percent) than for second and third-class passengers (less than 10 percent) has no intrinsic logic, it must have something to do with Sardar Swaran Singh's egalitarian ideas.

Whatever justification might have been offered for raising passenger fares, there is none at all for raising freight rates. Sardar Swaran Singh has suggested that recent increases in the latter have been small, but the claim is false. Most freight rates were raised by 6½ percent from April 1956 and by another 6½ percent from July 1957. Following the recommendations of the Railway Freight Structure Enquiry Committee, there was an increase averaging about 4 percent from October 1958. And following the recommendations of the Pay Commission, there was a further increase of 5 percent from April 1960. In between, minor

increases were made in the charges for military, postal and certain types of short-distance traffic; also for small consignments. The evidence thus suggests that, for industry, most railway freight rates have gone up by well over 20 percent during the past six years. Under the latest Railway Budget proposals, they will go up by at least 4 percent more. An increase of something over 25 percent in six or so years is not exactly "modest", as Sardar Swaran Singh describes it. It is enough to make a big difference to industrial and trade costs.

The pattern according to which the increases have been ordained is also highly questionable. When the Railway Freight Structure Enquiry Committee was appointed some years ago, it recommended after detailed deliberation a more rational structure of freight rates for the railways. One of the main aims of rationalisation was to correct the anomalies which had arisen through the indiscriminate increases under the surcharge system. The Railway Ministry sat on the Committee's report for months, and ended by mutilating the recommendations considerably. Ultimately, it announced with glee that whereas the Committee had recommended increases averaging about 13 percent, the Government had decided on increases averaging only 4 percent. But the dis-

RAILWAY BUDGET AT A GLANCE

	(Rupees in crores)			
	Actuals 1960-61	Revised estimate 1961-62	Budget 1962-63	Budget 1962-63 as presented in anticipated March 1962
Gross traffic receipts*	456.80	501.24	524.10	545.36
Working expenses, net, i.e. after taking credits or recoveries	313.24	330.55	345.74	356.04
Net miscellaneous expenditure (including cost of works charged to revenue)	10.69	13.51	16.35	16.35
Appropriation to depreciation reserve fund from revenue	45.00	65.00	67.00	67.00
Total	368.93	409.06	429.09	440.29
Net railway revenue	87.87	92.18	95.01	105.07
Payment to general revenues:				
(a) Dividend on railway capital-at-charge (at 4 percent for 1960-61 and 4.25 percent for the quinquennium 1961-66)	55.86	63.20	69.35	69.35
(b) In lieu of passenger fare tax	—	12.50	12.50	12.50
Net surplus	32.01	16.48	13.16	23.22

* The increased gross traffic receipts from 1961-62 onwards include the element of passenger fare tax merged in railway fares from 1.4.61 against which a payment of Rs. 12.50 crores is to be made by the railways annually to the general exchequer, during the quinquennium 1961-66, for transfer to the States.

ingenuousness of the action was soon demonstrated when a surcharge of 5 percent was imposed exactly 1½ years later, from April 1960. With the further increase averaging more than 4 percent now proposed, the total burden on railway users will be no less than what the Committee had recommended. The brief respite given over these four years may be welcome, but the work of rationalising the freight structure has to some extent been undone. The railways have yet to explain why they go round appointing committees when they intend to make nonsense of the latter's recommendations within a few years.

Sardar Swaran Singh, no doubt, thinks that his latest proposals will rationalise the freight structure further. The basic freight rate for most industrial commodities is to be increased by 50nPa a tonne for traffic carried up to 40 kilometres, and by Re. 1 a tonne for traffic carried beyond 80 kilometres, marginal adjustments being made for distances ranging between 41 and 80 kilometres. The resulting rate structure will be "slightly more telescopic than at present", which means that since the percentage increase for short-distance traffic will be greater, such traffic

will be penalised more heavily than long-distance traffic. If alternative transport facilities for short-distance traffic were available at roughly the same cost as those provided by the railways, this would not have mattered. But at a time when such facilities simply do not exist, thanks to the neglect of road transport, the change will hit many industries hard. And among the hardest hit will be those located in the West Bengal-Bihar area which have chosen to be near their sources of fuel and raw materials. In other words, one of the basic principles of industrial location—proximity to raw material sources and, to markets—is to be violated further, primarily at eastern India's cost. It is no use pretending that the increase in freight rates will be "a modest one, spread over almost all commodities and so designed that no commodity will suffer a large burden." For low-rated commodities, like coal, the increase will be large, and a quick estimate suggests that over short distances it may be 10 percent, or more. Low-rated commodities over short distances are what eastern India is mainly interested in at a time when no alternative to rail transport is available.

The Railway Minister has said that the flat increase of 50nPa or Re. 1 a tonne "will be a first step towards narrowing down the existing difference between the lowest and the highest freights, as envisaged by the Committee on Transport Policy and Co-ordination." Many will wonder whether the Committee has envisaged either this or for that matter anything else; it still seems to be celebrating the fact that it has managed to produce at least a preliminary report after three years of endeavour. In any event, if the choice in future railway freight policy is between the "cost of service" principle and the "value of service" principle, it would be dangerous to plump for the former. The fact has to be faced that Indian industries have grown up on certain assumptions; as far as transport is concerned, one of those assumptions is that railway freights would be based on the principle of charging "what the traffic will bear." If the assumptions begin to be radically upset now, serious distortions will develop in the cost structure of many industries. If coal freights, for instance, are specially low, there are very good reasons why they should be; and in any case the railways do not suffer since they make up the supposed losses in this sphere by charging more on other commodities. The more efficient railway systems all over the world do the same, and are no worse off for it. Why should the Indian railways be?

If the financial wizards of the Indian railways do not want to give "subsidies" to any of their customers, they should first start by finding the courage to cut the more irrational doles. Many of the earlier freight increases have not been applied to military, postal or the railways' own traffic: the ones now proposed will not apply to such traffic either. May one ask, why not? Admittedly, as

far as the Government is concerned, what would be involved would be merely a book-keeping change. But it would at least give a less distorted picture of the railways' finances; and it would also discourage them from constantly bellyaching about the concessions they are forced to give in the "national interests." There is no special reason why the latest freight increases should not apply fully to foodgrains traffic over all distances. There is, finally, absolutely no reason why the railways should give special concessions to sundry bipeds such as Bharat boy scouts, girl guides and the Government's other pets. If the concessions are to be given, it is the railways' business to demand that they be subsidised out of the general exchequer.

The only sphere in which large freight concessions are justified is in export traffic. Here, too, it is arguable that the railways ought, if necessary, to be compensated out of the general exchequer. It is regrettable that only manganese ore export traffic is to be excluded from the freight increases now proposed. One of the major recommendations made by the Import and Export Policy Committee—that the railways should give a freight concession of 25 percent on export commodities—thus appears to have been not only rejected, but reversed. In this sphere, as in certain others, it is clear that the railways are lacking in their understanding of national priorities. They need to be firmly reminded that their first task is to concentrate their money and energy on expanding transport facilities, instead of being a lavish *sevak sangh* squandering resources on rapidly burgeoning staff. Only in this way can they promote the growth of the economy, of industry and of exports—which is what the country is interested in.

INDECISION ON TRANSPORT POLICY

THE Committee on Transport Policy and Co-ordination, appointed by the Planning Commission in July 1959, does not appear to have made much progress beyond the preliminary report it submitted in February last year. The note circulated at a Press conference in New Delhi recently by the chairman of the Committee, Mr. K.C. Neogy (excerpts from which appeared in the New Delhi letter in *Capital* of 19th April), gives this impression. While the Committee has been asked principally to recommend the broad outlines of a long-term transport policy, it is also expected to advise on the rôle of the various means of transport over the next five or ten years. The preliminary report contained no recommendations on the point, and the note just issued does not indicate what progress has been made, although some preliminary papers

The directors of Tata Oil Mills Co. Ltd propose to increase the share capital of the Company through the issue of new equity shares of Rs. 25 each at a premium of Rs. 10 a share, in the proportion of one new share for every two held. They also propose to issue additional debentures of the value of Rs. 50 lakhs carrying interest at 6½ percent (taxable), and repayable during 1969-74. Both the proposals are subject to the consent of the Controller of Capital Issues and the approval of shareholders. As against the authorised capital

The shares of Amar Dye-Chem, which were quoted around Rs. 331.25 on 18th April, were sold down to Rs. 300 the next day, reflecting the market's disappointment over the cut in the dividend for 1961 from Rs. 12 to Rs. 9 a share, subject to tax. The dividend for 1960, it might be noted, had been paid entirely from profits exempted under Section 15C and hence no tax was deducted. The preliminary figures for the Company's working results indicate that it has not done so badly as to warrant the proposed dividend cut. Sales, exclusive of excise duty, are down by only Rs. 6 lakhs from Rs. 1.76 crores to Rs. 1.70 crores, and the gross profit, too, has suffered only a small setback from Rs. 62.11 lakhs to Rs. 59.74 lakhs. The directors have stated that the dividend has been reduced with a view to conserving resources for the large expansion programme which the Company has on hand. Apart from its own resources, the Company will also need to raise fresh capital in order to finance the expansion schemes. The question of issuing additional capital will be considered at the appropriate time. The setback in sales in 1961 is attributed to the change in the Government's import policy and the abolition of the tariff value on naphthols and fast bases. Besides, the prices of some of the

As far as the coffee industry is concerned, the outlook is far from encouraging. Coffee supplies in world markets are excessive. A large portion of the 1960-61 Indian crop has had to be sold in world markets at less than the production cost.

Shareholders of the New Great Eastern Spinning and Weaving Co. Ltd, who have gone without a dividend for four years, will find the Company's working results for 1961 highly encouraging. It is not merely that the directors have proposed a dividend of Rs. 12 a share, subject to tax, but the Company has done very well indeed. Against an increase of about 23.5 percent in sales from Rs. 2.35 crores to Rs. 2.90 crores, the gross profit has nearly doubled from Rs. 12 lakhs to Rs. 23.93 lakhs. The ratio of profit to sales is up from 5.1 percent to around 8.2 percent. The marked improvement in the working results is largely due to the programme of replacement and renovation which, it is expected, will be completed by the end of June this year. During 1961, additions to building and machinery amounted to Rs. 17.12 lakhs, and capital work worth Rs. 29.94 lakhs is in progress. Further orders for machinery worth Rs. 15.06 lakhs have been placed with manufacturers. After wiping out the loss of Rs. 8.27 lakhs brought forward from the previous year, the directors have provided Rs. 7.74 lakhs (against Rs. 5.39 lakhs) for depreciation and Rs. 2.33 lakhs (against Rs. 2.61 lakhs) for development rebate reserve. The remaining surplus of Rs. 5.59 lakhs is more than adequate to cover the proposed dividends, ordinary as well as

The Sahaganj and Ambattur factories worked to full capacity during 1961, and the total output

preference. The Rs. 100-paid share of the Company is quoted around Rs. 309, which compares well with the 1961 high of Rs. 267.

Tata Mills Does Well

The directors of Tata Mills Ltd have raised the dividend for the year ended December 1961 from Rs. 5 to Rs. 5.50 a share (Rs. 25 paid), subject to tax. While the dividend falls below the market's expectations, the impressive improvement in the Company's working results should please its shareholders. The preliminary figures released with the dividend announcement show that, while sales have increased by about 19 percent from Rs. 3.98 crores to Rs. 4.74 crores, the gross profit has shot up by over 77 percent from Rs. 32.98 lakhs to Rs. 58.47 lakhs. The preliminary results make no mention of the figure for depreciation, and the omission is difficult to understand when all other allocations have been given. The profit figure of Rs. 58.47 lakhs, however, appears to have been arrived at after providing for depreciation. Allocation to the development rebate reserve has been reduced from Rs. 7.25 lakhs to Rs. 4.50 lakhs, but the provision for taxation amounts to Rs. 16 lakhs (against nil). The net profit after taxation and development rebate reserve amounts to Rs. 27.97 lakhs, against Rs. 25.72 lakhs. A sum of Rs. 23.50 lakhs (against Rs. 21.65 lakhs) has been transferred to general reserve. But, whereas in 1960 the Company had to withdraw Rs. 9.13 lakhs from general reserve in order to pay the dividend, which absorbed Rs. 13.11 lakhs, the dividend for 1961, absorbing Rs. 14.43 lakhs, is being paid out of the year's profits. After making various appropriations, there remains a balance of Rs. 30.469 to be carried forward, against Rs. 26.322 brought in. The decline in the quotation for Tata Mill shares from Rs. 82.50 to Rs. 77 within two days of the dividend announcement reflects partly the market's disappointment, but partly it was in line with the general weakness of the market. Earlier, the shares recorded a high of Rs. 84 on 12th April, which was well above the 1961 high of Rs. 75.50.

Lakshmi-Vishnu Mills Earns More

The working results of the Lakshmi-Vishnu Cotton Mills Ltd for 1961 show that the merger of the two mills—Lakshmi Cotton Manufacturing Co. and Vishnu Cotton Mills—with effect from 1st January, 1961, has begun to pay. But for the uncertain cotton supply position, the Company would have shown still better results with the gradual implementation of its big rehabilitation programme. In 1961, it made a gross profit of Rs. 40.01 lakhs, which is about 80 percent more than the combined profit of the two units in 1960. The improvement in the results is attributed to a satisfactory offtake of the mill's products following changes in the pattern of production, particularly in the Lakshmi unit and the introduction of a third shift in spinning. Yarn sales improved considerably. Export sales, however, suffered a setback, the export percentage declining from 29.37 to 14.36. After providing Rs. 10.25 lakhs for depreciation and Rs. 7.50 lakhs for taxation, the net profit amounts to Rs. 22.26 lakhs, against Rs. 9.05 lakhs in 1960. After allowing for the loss (of Vishnu Cotton) brought forward from the previous year and arrears of depreciation, and setting aside Rs. 1.12 lakhs for development rebate reserve, there is a deficit of Rs. 94,760, which rises to Rs. 8.14 lakhs because of the proposed dividends, preference as well as ordinary (6 percent), which absorb Rs. 7.19 lakhs. This loss is being carried forward.

The directors point out that orders for machinery worth Rs. 1.28 crores have been placed for the renovation and modernisation of the two units. Machinery worth Rs. 37 lakhs has been received and is being erected. Machinery of the value of Rs. 44 lakhs, it is expected, will be received during the current year. This will be the first stage of the rehabilitation programme, and a plan has been drawn up for further renovation, which will be taken up in stages. The Company has made arrangements with its bankers for borrowing Rs. 1.75 crores. Total borrowings at the end of 1961 amounted to Rs. 89 lakhs. The Company has sought the sanction of the Controller of Capital Issues for

raising fresh capital by the issue of rights shares in the proportion of one equity share of Rs. 100 each for every four held. The rights issue will raise the equity capital from Rs. 89.60 lakhs to Rs. 1.12 crores. The Rs. 100-paid share is currently quoted around Rs. 150.

Ferro Alloys Pays More

The working results of Ferro Alloys Corporation Ltd for 1961, have enabled the Company not only to wipe out the loss carried forward from the previous year, but also to provide something for the general reserve, after stepping up the dividend from 8 percent to 11 percent. After providing Rs. 8.47 lakhs for depreciation and Rs. 54,604 for development rebate, the Company has made a profit of Rs. 26.10 lakhs. The loss of Rs. 5.54 lakhs brought forward from the previous year has been wiped out, and the directors have allocated Rs. 90,000 for bonus and Rs. 5.50 lakhs for taxation. In view of the accumulated loss, no provision was made for taxation in 1960. A sum of Rs. 3.50 lakhs has also been transferred to the general reserve. The Company was incorporated in 1955 and it began production in 1958. Within a few years, it has built up reserves and surplus amounting to Rs. 19.14 lakhs, which is about one-quarter of the equity capital of Rs. 79.81 lakhs. The gross block of Rs. 1.31 crores has been written down to around Rs. 95 lakhs. The Rs. 100-paid share is currently quoted around Rs. 163.

Rights from Ogale Glass

Ogale Glass Works Ltd reports satisfactory results for 1961, although the increase in the profit is very small in relation to the improvement in turnover. Net sales are up from Rs. 72.08 lakhs to Rs. 77.71 lakhs, and the gross profit has risen from Rs. 7.21 lakhs to Rs. 7.39 lakhs. After providing Rs. 2.69 lakhs (against Rs. 3.19 lakhs) for depreciation, Rs. 64,000 (against Rs. 29,000) for development rebate reserve and Rs. 2.60 lakhs (against nil) for taxation, the net profit amounts to Rs. 1.46 lakhs, against Rs. 3.73 lakhs in 1960. The directors have transferred Rs. 10,000 (against Rs. 25,000) to workmen's compensation and Rs. 5,000 (against Rs. 10,000) to reserve for workers' children's education fund. After providing for the proposed dividend, which has been maintained at 10 percent, there remains a balance of Rs. 31,996 to be carried forward, against Rs. 97,237 brought in. The directors have decided to issue rights shares worth Rs. 5 lakhs in the ratio of one equity share for every four held at par. The additional capital is needed to finance expansion plans. The Rs. 5-paid share of the Company is currently quoted around Rs. 7.76 *cum dividend* and *cum-rights*, compared with the 1961 high of Rs. 7.

Anglo-French Textiles Earns Less

The working of Anglo-French Textiles Ltd for the year ended December 1961, shows a net profit of Rs. 15.45 lakhs, after providing Rs. 10.14 lakhs for depreciation and Rs. 3.65 lakhs for taxation. The net profit for the previous year was Rs. 13.12 lakhs after providing Rs. 7.64 lakhs for depreciation and Rs. 3.34 lakhs for taxation. With Rs. 21.374 brought forward from the previous year, the total available for appropriation is Rs. 15.66 lakhs. Out of this, Rs. 5 lakhs (the same) is transferred to general reserve, Rs. 3.75 lakhs (against Rs. 2.50 lakhs) to modernisation loan redemption reserve and Rs. 67,377 to capital reserve. The balance of income tax paid for 1958 amounted to Rs. 1,976. The dividend on 6 percent preference shares accounts for Rs. 1.08 lakhs. The directors have recommended a dividend of 16 percent, on equity shares free of French-Indian income tax (against 15 percent), absorbing Rs. 4.80 lakhs. The balance of Rs. 33,693 is carried forward.

The mills' working during the year is considered satisfactory, although production was slightly lower, compared with the previous year. The yarn output amounted to 10.83 million lbs, against 10.99 million lbs in 1960. The cloth output was 27.20 million yards, against 28.96 million yards. Sales amounted to Rs. 3.08 crores, an increase of

over Rs. 40 lakhs compared with the previous year. Exports, however, fell by over Rs. 49 lakhs. The directors' report says that Anglo-French Textiles went ahead with its scheme for modernising plant and machinery, although progress was hampered by delays in deliveries.

Mr. R. M. King, chairman, says in his statement to shareholders that in common with other Indian mills exporting grey cloth, export sales of Anglo-French Textiles declined sharply during the year. They amounted to Rs. 1.03 crores, compared with Rs. 1.52 crores in the previous year. But the Company has been able to dispose of its output not earmarked for export in Indian markets. Total sales of cloth and yarn in India during the year amounted to Rs. 2.02 crores, against Rs. 1.12 crores, for the previous year. Anglo-French Textiles is unable to take advantage of the Government's recent decision to permit the installation of automatic looms in units of 500 as part of an expansion programme for the cotton textile industry during the third plan, since matching spindleage in the spinning department is not available. Although the Company's sales in Indian markets showed a sharp increase, the directors' policy is to raise exports to the maximum even at the expense of profit margins in accordance with the Government's export drive. Anglo-French Textiles has applied to the authorities for permission to install 400 automatic looms. This is considered to be the minimum number which should be installed if the Company is to have a reasonable chance of raising its sales to the U.K. to the 1959-60 level. As the Company cannot increase its spindleage for financial reasons, the 400 automatic looms can only be installed to replace 400 plain looms. Turning to the prospects for the current year, the chairman refers to two disturbing factors. One is the sharp fall in the production of Indian cotton, and the second relates to exports. Mr. King pleads for modification of the present export quota system.

Bonus Issue by Kaiser-i-Hind

The Ahmedabad Kaiser-i-Hind Mills Co. Ltd reports encouraging results for the year ended December 1961. Sales have risen by nearly 11.4 percent from Rs. 1.22 crores to Rs. 1.37 crores and the gross profit has recorded an impressive rise of 38.8 percent from Rs. 18.11 lakhs to Rs. 25.14 lakhs. The ratio of gross profit to sales has improved from 15.3 percent to 18.4 percent. But, instead of paying a dividend, the directors have recommended the issue of bonus shares in the ratio of one full-paid ordinary scrip for each one held, subject to the Government's sanction. The directors have decided to subdivide the existing ordinary share of Rs. 250 into shares of a face value of Rs. 100 each, so that the present shareholders would get two shares of Rs. 100 each and a fractional one of Rs. 50, for every share held. Two fractional shares can be consolidated into one of Rs. 100. Appropriations include depreciation Rs. 4.79 lakhs (against Rs. 4.17 lakhs), development rebate Rs. 90,488 (against Rs. 2,52 lakhs), taxation Rs. 7,90 lakhs (against Rs. 5.05 lakhs), and general reserve Rs. 8.95 lakhs. The Rs. 250-paid share of the Company is currently quoted around Rs. 870.

Prospects for Thirumbadi Rubber

The chairman of the Thirumbadi Rubber Co. Ltd, Mr. J. N. A. Hobbs, told shareholders at the annual general meeting that in recommending a dividend of 12 percent (against 7 percent), the directors had given due consideration to the expectations of stockholders, although strictly speaking, the year's working results can "accommodate only about half of the present rate." Mr. Hobbs referred to the representations made by some stockholders that the surplus funds with the Company should be distributed to stockholders by way of a reduction in the capital. The chairman said that the refund of capital would create difficulties for the Company in meeting its day-to-day working expenses, not to speak of any rehabilitation or development. The directors have, therefore, decided to use the surplus funds for further development of the Company's properties. The chairman also said that the year's profit cannot be com-

CAPITAL, 26th April, 1962.

pared directly with that of the previous year in view of the sales of the Calicut estate.

Mr. Hobbs said that 205.94 acres of young clearings planted between 1951 and 1954 have started yielding, and a further 100 acres are expected to mature during the next two years. As these areas have been planted with high-yielding materials, good yields are expected from them. The long-term crop potential is reported to be encouraging. But during the next few years, the crop may show a tendency to fall as a result of the cutting and removal of old rubber for replanting. The chairman hoped that the extra crop from slaughter tapping will help maintain the level of production and profits.

Same from United Motors

The working results of United Motors (India) Ltd for 1961 do not show important changes from the previous year's results. Sales are almost the same at Rs. 19.22 lakhs (against Rs. 19.12 lakhs) and the gross profit is down by about Rs. 11,000 from Rs. 1.18 lakhs to Rs. 1.07 lakhs. After providing Rs. 5,901 (against Rs. 1,116) for depreciation and Rs. 41,500 (against Rs. 48,500) for taxation, the net profit amounts to Rs. 59,810, against Rs. 68,806 in 1960. No provision has been made for contingencies reserve, which received Rs. 8,000 in the previous year. Instead, the directors have withdrawn Rs. 8,000 from this reserve in addition to Rs. 4,620 from excess provision for taxation, in order to pay the proposed dividend of Rs. 1.40 a share (the same), subject to tax, absorbing Rs. 71,484. A sum of Rs. 4,371 is carried forward, against Rs. 3,425 brought in.

Raising Revenue through Taxes

Speaking at the annual general meeting of the Indian Chamber of Commerce in Calcutta last week, Mr. Shanti Prasad Jain, president, said that Mr. Morarji Desai, the Central Finance Minister, has succeeded in imposing new taxes continuously. By any standards, the levies have been stiff. Mr. Desai described the abolition of the grossing up of dividends merely as a procedural change and not as a tax-raising measure, but he has actually raised an additional revenue of over Rs. 10 crores in one year. He has also increased the Central tax revenues from Rs. 553 crores in 1958-59 to Rs. 828 crores, as budgeted, for 1962-63. The actual receipts are bound to be larger. Mr. Jain said, since the Finance Minister has persistently under-estimated revenue. In the last four years, Mr. Desai has raised the annual tax receipts by Rs. 275 crores, representing a 50-percent increase. During this period, the revenue from income tax and corporation tax has increased from Rs. 150 crores to Rs. 226 crores. Union excise collections have gone up from Rs. 240 crores in 1958-59 to Rs. 378 crores in 1962-63, or by 60 percent. "These figures tell that Mr. Morarji Desai, as the Finance Minister, has been the heaviest collector of taxes. In spite of these heavy collections, Mr. Desai has got away leaving a feeling with taxpayers that they have not been burdened too much. Paradoxically, the members of Parliament have the feeling that Mr. Desai has not taxed enough," Mr. Jain said.

Mr. Jain pointed out that it is the obligation of the Government to ensure that the available resources are not entirely siphoned off by the exchequer, but that enough is left with the private sector to enable it to perform its rôle in economic development. The one consistent feature of the Central Budget has been the under-estimation of revenues and the over-estimation of expenditures. Figures of revenue expenditure for the past ten years show that actual surpluses have far exceeded the estimates. The deficit of Rs. 33.6 crores in the revised estimate for 1960-61 turned into a surplus of Rs. 51.25 crores in the final accounts for the year. The deficit of Rs. 5.57 crores in the 1961-62 Budget has become a surplus of Rs. 33.96 crores in the revised estimates. The capital accounts also show similar over-estimation of deficits. Mr. Jain said that this emphasises the need for a more accurate assessment of revenue and

expenditure and capital receipts and disbursements.

Accounting in Hindustan Lever

Unlike most company chairmen's speeches which interest few outside the shareholders, the annual speech of the chairman of Hindustan Lever has usually a much wider appeal. Marketing and transport formed the subjects of the previous two annual speeches, and this year the chairman, Mr. P. L. Tandon, has discussed accounting and finance in the Company in his address to the shareholders' annual meeting last week. (A fuller version of the speech was printed in last week's issue of *Capital*.) Mr. Tandon has described the development of modern techniques in the financial and accounting methods of Hindustan Lever and how this has helped promote cost control, price adjustments and marketing efficiency. In most commercial and industrial firms in this country, the accounts department only maintains a historical record of the income and expenditure of the firm, with its audit section controlling expenditure in accordance with set rules. But the accounts department can also provide management with an efficient information and advisory service, and this has come to be known as management accounting. Many people think that it is something quite new, complicated, and expensive. Mr. Tandon says that this is not true. He does not agree with those who feel that management accounting is a luxury which Indian business cannot afford at present. For a growing business, it is a necessity which should cost no more than any good accounting system.

Mr. Tandon describes a management accounting service as responsibility accounting. It reports information, suited to their responsibilities, to different levels of management, who can take action or offer advice based on that information. In Hindustan Lever, the sheet anchor of this service is the annual estimate and the budget for the coming two years. These forecast sales, production, capital expenditure, marketing, advertising and administration expenses, leading on to profits, yield on capital employed and a cash flow prediction. They are initially prepared in terms of quantity as well as value at the lowest level of responsibility. They are finally considered by the board, to which each director presents the plans of his department. They set the standards for the coming year, and performance is then reported against these standards—weekly, monthly and quarterly, depending on the needs. Returns of various kinds at different intervals are also submitted to the management. There is, for instance, a monthly profit and loss report to the board, weekly and fortnightly reports on margins earned to the marketing management, and daily raw material yield reports to the production management.

Apart from reporting to the marketing and production managements about results and performance, the Company's accounts department helps in the development of new packs, products and projects. Whenever the management thinks of something new, it turns to accountants to study the financial implication. The finance and the accounts department is controlled by the financial director, to whom the chief accountant, the chief internal auditor and the commercial managers in charge of the Company's branch offices report directly. The accounts department of Hindustan Lever is highly decentralised. The operating management of each unit, whether factory or branch, has its own accounts department reporting directly to the unit head. The chief accountant's department at the head office has no line relationship with the unit accountants.

The Company has set up an Organisation and Methods Division, as a cell within the chief accountant's department, to deal with the improvement of office systems. The internal audit department of office systems. The internal audit department ensures that the systems and controls are not functioning smoothly and that there is no abuse or fraud. Being part of the Company, the internal auditors also have responsibility for suggesting improvements which will increase earnings and reduce expenditure. The finance requirements of Hindustan Lever are highly seasonal. At times the Company has to resort to short-term borrowings, but in the long run it tries to meet its requirements from its own resources.

The financial accountants constantly watch the flow of cash to prevent its getting tied up in little pockets. An equally watchful eye is kept on the capital employed in both fixed and current assets through quarterly estimates and actuals, and on the return upon the capital so employed.

Raw Materials for Engineering

In his speech from the chair at the annual general meeting of the Indian Engineering Association (Western Region) in Bombay last week, Mr. P. R. Deshpande said that the engineering industry has made rapid progress. About 40 percent of all industrial licences granted by the Government are for engineering concerns. Rapid growth has, however, created a variety of problems such as the shortage of raw materials. The members of the Association, Mr. Deshpande said, refuse to relax their quality standards. But it is not realised outside the industry how difficult and costly it is to maintain quality when engineering concerns have to depend on indigenous materials and components. There have been many complaints that the new public sector steel plants are sacrificing quality for quantity. The result is an acute shortage of steel of special types required for engineering work. "Even in relation to steel of qualities included in the rolling programmes of steel mills, deliveries are unpredictable, and not infrequently large quantities on long outstanding orders are delivered suddenly, when they cannot be used due to the shortage of balancing supplies of other types and specifications," he said. Engineering concerns face a shortage of foundry-grade pig iron and coke, which has been the cause of much loss of production. The transport bottleneck has affected their operations by holding up for long and unpredictable periods the movement of raw materials and finished products. The industry, meanwhile, is facing a shortage of skilled technicians. Besides, absenteeism in the industry is high.

Idle Capacity in Nuts and Bolts

The bolt and nut manufacturing industry, said Mr. K. L. Chowdhary, president, in his address at the annual general meeting of the Indian Bolt and Nut Manufacturers Association, held last week in Calcutta, is unable to use its capacity to the full as the demand for its products is insufficient. The total capacity in 1961, he said, was about 150,000 tons, consisting of 95,000 tons in large-scale factories and 50,500 tons in small units, whereas actual production has stayed around 60,000 tons. Referring to the Government's estimate that the demand for nuts and bolts by the end of the third plan would be about 200,000 tons, Mr. Chowdhary said that the calculation is based on the assumption that the railways would expand according to schedule and other development activities would go ahead as planned. These estimates of demand may not, therefore, materialise. He pointed out that the demand at the end of the second plan amounted to 70,000 tons, against the planners' estimate of 185,000 tons. Mr. Chowdhary suggested that before licensing new units, a thorough study of the economic conditions of the industry should be made in order that it could develop on sound lines. The industry also needs a measure of diversification to cater to the specialised demands from new consumers like the motor car and aircraft industries. The industry has been increasing its export efforts. Earnings have gone up from Rs. 38,288 in 1958 to Rs. 523,309 in 1961 and more countries are now buying Indian bolts and nuts.

Finances of Foreign Companies

The March issue of the *Reserve Bank of India Bulletin* contains a study of the finances of a number of branches of foreign companies operating in India and foreign-controlled rupee companies over the period 1957-59. The study is confined to 207 branches of foreign companies which account for 65 percent of the total assets of foreign companies other than financial institutions, non-profit organisations, airlines, shipping companies, and other branches which have already gone into

liquidation. Of the 207 branches, as many as 179 belong to companies incorporated in the U.K. The U.S.A. accounts for 20 of the remaining 28. Considering all the branches together, nearly half are tea plantations and another one-third trading companies. The 117 foreign-controlled rupee concerns included in the study account for nearly two-thirds of the paid-up capital of all such concerns other than financial institutions and managed companies. Out of these 117 units, 93 have their controlling interest in the U.K., as against nine in the U.S.A. Manufacturing is the chief activity of over half the number of such companies. Only two are engaged in tea plantation.

The study shows that the sales (main income) of the branches of foreign companies increased at an average rate of 4.5 percent from Rs. 294 crores in 1957 to Rs. 306 crores in 1958, and further to Rs. 321 crores in 1959. A major portion of the

increase was contributed by trading companies. Countrywise, the branches of companies incorporated in the U.S.A. were chiefly responsible for the increase in sales during 1958 and 1959. The profits before tax of these branches increased by about 9.5 percent from Rs. 18.9 crores in 1957 to Rs. 20.7 crores in 1958, but there was a modest fall to Rs. 20.3 crores in 1959. Expressed as a percentage of the total capital employed or of sales, the profits before tax averaged 7 percent to 8 percent during these three years. Their gross fixed assets increased at the rate of 3.8 percent a year during 1958 and 1959, having gone up from Rs. 161.4 crores to Rs. 173.8 crores.

The performance of the foreign-controlled rupee companies, on the whole, was better than that of the foreign company branches. The former's sales increased by 5.2 percent in 1958 from Rs. 372 crores to Rs. 391.5 crores, and the rise was still

better at 7.5 percent in 1959, when the sales totalled Rs. 421 crores. Manufacturing companies contributed an overwhelming proportion of the increase in sales (main income). Sales of trading companies actually showed a declining trend in 1958 and 1959. A countrywise analysis shows that the increase in sales was shared mainly by companies whose controlling interest was held in the U.K. and other countries, and to a small extent by those from the U.S.A. The profits before tax of foreign-controlled rupee companies increased by 9.7 percent in 1958 and by 19.7 percent in 1959, having gone up from Rs. 32.96 crores to Rs. 36.16 crores in 1958, and further to Rs. 43.30 crores in 1959. The ratio of profit to capital employed and sales ranged from 10 percent to 13 percent. The gross fixed assets increased from Rs. 129.6 crores at the end of 1957 to Rs. 149 crores a year later, and to Rs. 161.7 crores at the end of 1959. The rate of increase was 14.9 percent in 1958 and 8.5 percent in 1959.

The study also compares the data on ratios of gross profits to sales (main income) and to total capital employed, and the rate of gross fixed assets formation for the branches of foreign companies, foreign-controlled rupee companies and 1,217 mainly Indian-controlled public and private limited companies. A notable feature of this comparison is the low gross assets formation in 1958 as well as 1959 of the foreign company branches compared with those controlled by Indians. The rate of gross fixed assets formation during 1958 and 1959 for the former was only 3.8 percent, while the corresponding rate in the case of mainly Indian-controlled companies was 11.3 percent in 1958 and 7.6 percent in 1959. The profitability ratios were also lower, although the differences were not large in 1957 and 1958. However, the ratio of gross profits to sales and that of gross profits to total capital employed concerning foreign branches for 1959 was 7.2 percent and 7.6 percent, respectively, against 9.6 percent and 9.1 percent for the Indian-controlled companies. But the foreign-controlled rupee companies showed a consistently better performance than the 1,217 Indian companies during the three years, 1957-1959, both in terms of profitability and capital formation. The ratios of gross profits to sales and to capital employed during 1959 for the former were 11.1 percent and 13.4 percent, respectively, compared with 9.6 percent and 9.1 percent for the latter. The rate of gross fixed assets formation in 1958 and 1959 for the rupee companies was 14.9 percent and 8.5 percent, respectively. The corresponding figures for the Indian companies were 11.3 percent and 7.6 percent.

THE RATE OF EXCHANGE

THE practical science of Exchange, as between India and other gold standard countries, is very different from what it was 10 years ago. The word Exchange is economically an abstract term; it is applied in this connection to the relative value of money between two countries bartering commodities, and expresses or should express the premium or discount on sums of money paid or received in one country or the other in connection with such barter. In the case of countries having a similar standard the element of exchange is important only so far as it affects or is affected by the respective money markets. Consequently, the effect produced, whether premiums or discount, is due to the relative demand and supply of money in the respective markets of the bartering countries. In the case of countries having different standards another element has to be added to Exchange in addition to the ordinary demand and supply of money. I allude to the comparative fluctuations of the standard units of value in the respective countries for the reckoning of barter. Now it is generally recognised that the only true basis of reckoning for barter is demand and supply, and that trade can never be progressively prosperous unless it is regulated on that basis. When, therefore, an exotic influence is introduced into the demand and supply of money, the basis is deranged and the difficulty of regulating the interchangeable supply and demand of commodities between two countries is enhanced to the extent of creating a constant series of short and excessive supply and inflated and stagnant demand which are exceedingly obstructive to progressive and sound trade.

A Ditcher's Diary

ON TUESDAY MORNING, B-DAY PLUS ONE, I HAD A curious sense of affluence and success in business. I almost felt I had, for the first time in my life, done a bit of profiteering. Let me explain. On Monday I had gone to my usual tobacconist and, for one reason or another, was obliged to buy rather more than my immediate requirement. As I looked at the 20 cigarettes on my bedside table on Tuesday morning, I said to myself: "At least on these, which I would normally have bought at a higher price this very morning, I have done Mr. Morarji Desai out of some naye paise; and I am entitled to congratulate myself". I implore Mr. Morarji Desai to reflect on my brief rejoicing and its moral implications—since he has made a speciality of morality. Doing someone out of something is hardly an honourable thing; and I should in fact have been mildly ashamed. But this is the Finance Minister's, and his predecessors', precise contribution to the evolution of ordinarily decent human nature. Dodging taxes, to use none of the current euphemisms, has become a highly skilled art, an intellectual pursuit which, if performed without the aid of professional income tax advisers, gives a man genuine intellectual delight besides the saving of some money. Nor is the world around conducive to a higher personal morality in the matter of paying taxes. Year in and year out certain commodities disappear from the counters as the Budget approaches; and nobody need suspect that there is a Government in the country to protect consumers' interests. That, too, is not paying the taxes due; charging higher prices even before additional excise or other duties have been imposed is simply rooking the ordinary citizen without any benefit to the exchequer; and the Government just stands by as this annual multising goes on. Quick money is made in a few hours or days; and I am not at all sure that traders do not pay a percentage to somebody for being allowed to get away with it. I am not, at this moment, concerned with fiscal questions. It is personal morality I am worried about.

RAOUL SALAN WAS UNDOUBTEDLY A BIG CATCH FOR General de Gaulle and his forces in Algeria, although I will wait before accepting the ex-general's word for it that the Organisation of the Secret Army is collapsing all around him. Jouhaud is already in the bag; if I remember, Juin is virtually under house arrest. Metropolitan France is definitely tired of the O.A.S., although its attitude to the F.L.N. may not have changed radically. But General de Gaulle may still have a lot of

things to do ahead of him before he can be said to have laid the foundations of the Fifth Republic. The Fourth he has completely destroyed; but there is a vacuum still in French political life. In a manner of speaking, he fills it for the time being; but even so majestic a man can be immortal only figuratively. On second thoughts, I find the frequent referendums an inadequate answer to France's needs, however convenient they may be for General de Gaulle at the moment. At a theoretical level it may well be argued that there is nothing more democratic than making the entire electorate decide on specific issues. But it is a treacherous device, usually inimical to progress. It is also, I submit, abdication of leadership. It is, moreover, capable of being used as an instrument of reaction. It is not at all impossible that the French would say "Oui" to a fascist government, should it be able to entrench itself in power. It is not to betray one's faith in democracy to remember that few progressive things in history have been immediately sanctioned by a majority of the people. It is said that *habeas corpus*, perhaps the greatest thing in the history of human freedom, got through the House of Lords because two tellers, out of an odd sense of humour, counted a particularly fat peer for ten and forgot to correct the error! In my many attacks against Prohibition and censorship, I have never once appealed to the Indian electorate or even to Parliament. The majority is not greatly affected by abstract concepts of personal freedom or economic good sense. It is an enlightened minority that has to give the lead. In General de Gaulle's case he has reduced this minority to one, himself. That's taking my reactionary theory a bit too far.

THE DEMOCRATS IN THE U.S.A. ARE APPARENTLY busy throwing their hats in the air to celebrate President Kennedy's very impressive victory over the steel producers who suddenly took it into their heads to add \$6 to the price of steel. Mr. Alistair Cooke of the *Guardian* says that the victory was Attorney-General Kennedy's rather than President Kennedy's. The former's threat to invoke the Sherman Act and other anti-trust laws went home. In some Indian newspapers I have seen eloquent appreciation of the State's triumph over big business in a frankly capitalist country like America. Well, here in India the Government's failure to hold the price line is complete. In view of their large profits, U.S. steel producers were perhaps not justified in passing on the cost of increased benefits to labour to the consumer. Perhaps there is

more to it all than has been reported. Given a similar situation, would the Government of India act likewise? I do not know. I do know that it would have very little moral right to do so. The new Minister for Railways has decided to increase passenger fares and freight rates; and he has quite unashamedly defended the increases on the ground that the railways have had, to enhance their employees' dearness allowance. I need not be told of the questionable behaviour of a section of India's manufacturing and trading community. What I suggest is that the Government sets a very bad example in its own trading operations. Is there a single commodity or service that the Government deals in which is cheaper today than before? Private enterprise has had to keep pace with inflation; but I think it can claim that there have been some items in which prices have been reduced. The Government, I know, needs all the money it can lay its hands on—for development. But the administration is getting daily more expensive; and there is very little evidence that anybody is serious about reducing costs under this head. The size of the Cabinets grows steadily; and it can hardly be maintained that there is the slightest economic or administrative justification for it.

MY FIRST FLIGHT IN THE *Caravelle* WAS ABOUT a year ago, and I remember thinking of it at the time as a rather awesome sample of gallic eccentricity, with engines neither in the wings, nor in the tail, but somewhere in between. A nervous traveller, my anxiety about how so curious a dispensation of nuts, bolts and turbojets could ever work, was soothed soon after take-off: the two powerful engines installed perhaps no more than ten yards from where one might have been sitting, swept the aircraft up in a matter of minutes to a height of 25,000 feet, whereafter it cruised along at a speed of 500 miles an hour, making the flight enjoyable not only for its smoothness, but also for its silence and comfort. My discrimination in such matters is not infallible; nor, if I may immodestly say so, is it liable to be influenced by the liberal helpings of champagne which Sud Aviation, the manufacturers of the *Caravelle*, served on the flight last Saturday; but the more modern version they brought to Calcutta strikes me as being, from the passenger's point of view, a noticeably better machine. That is not the only reason why I am gratified to hear that the Indian Airlines Corporation is about to buy four *Caravelles* for delivery in May 1963. More important, perhaps, is the prospect that, flying faster and carrying more passengers than the *Viscounts* now used on the main routes, they will enable I.A.C. to bring its capacity more in line with demand. I am informed that nowadays your luck in getting a seat often depends on the branching of your family tree; unless you are a Government official or his nephew, a booking to Delhi may have to be made

anything up to a week or ten days in advance. To supplement the increase in passenger capacity, however, what would be appreciated from I.A.C. are a few more measures to improve its standards of service to customers. It would be a pity if the Corporation, having acquired the Caravelles, failed to acquire something of the salesmanship of the men who sold them.

KING MAHENDRA'S VISIT TO NEW DELHI LAST WEEK was not exactly what I would be inclined to call a grand success; the long and detailed discussions between him and Mr. Nehru were no doubt useful for their frankness, if not quite as useful for the extent of the agreement they yielded. The joint communiqué issued at the end of the meeting, by its silence on the subject, makes it quite clear that on one of the main points at issue—the building of the proposed Kathmandu-Lhasa road—the views of the two sides remained unresolved. And if I may say so, I am not unduly surprised. Before now, it has been my suspicion that neutralism, at best, is apt to be not much more than a child of political convenience; and, in his own way, King Mahendra no doubt reminded his Indian audience that Nepal's neutrality in the Sino-Indian conflict was not incomparable to, say, India's neutrality in the conflict between Russia and the West. India herself well knows that the more "neutral" you think you are, the more reluctant you become to suffer the arrogance of good advice from others; and I venture to suggest that a certain arrogance of this variety has done more harm to Indo-Nepalese relations than New Delhi is inclined to admit. That India has certain interests to protect on her northern border which only Nepal can help her to protect, need not be denied. But why, in seeking the protection of those interests, she must lard her plea with homilies about parliamentary democracy, panchayat raj and agrarian reform, is a little beyond my understanding. India likes her friends to stand around helping her without ever questioning the political choices she may have made; can it be very surprising that Nepal likes the same too?

AS EXPECTED, INDIA HAS LOST THE FIFTH AND FINAL cricket Test against the West Indies, completing a failure that had already begun to look as ignominious as it was disappointing. After winning the rubber against the M.C.C. which toured this country during the last cold weather season, it is natural that the Indian eleven's total eclipse in the West Indies should have come as a great shock to cricket-lovers here; indeed, it may have been something of a surprise to the West Indians themselves that they managed to win so easily and decisively against a side which included some batsmen of international standard and a substantial measure of other cricketing talent. The searching scrutiny of the reasons for defeat does not, however, excite me unduly, although I am prepared to concede that much of the responsibility for the humiliation rests on the selection committee and, of course, on the captains of the Indian team. Indeed, I notice that an experienced commentator has gone so far as to say that had Worrell been captain for India, instead of first Contractor and then Pataudi, not only would the course of the games have been very different, but India might even have won. While I would not care to make so sweeping an assertion, I would venture to agree that both Contractor and Pataudi failed to make the right use of their resources, and their strategy during the game was conspicuously inferior to Worrell's. But that does not, to my mind, fully explain the collapse of the Indian batsmen. Barring Umrigar, the batting average of the rest was miserable; and Jayasimha and Manjrekar, from whom so much had been expected, cut very sorry figures indeed. The main reason, it seems to me, is that most of the Indian batsmen could not cope with the pace of Wesley Hall and the other fast bowlers, perhaps because they were afraid of personal injury after Contractor had been struck on the head. I do not support the view that cricket should be played in a spirit more appropriate to the battlefield; but I feel that if one chooses to play in the West Indies, one might as well face up to the hazardous tactics of the game there.

THE DITCHER

Consent of the Central Government (of India) has been obtained to this issue by an Order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Consent of the United Kingdom Treasury has also been obtained to this issue in compliance with the Order made under Section 1 of the Borrowing (Control and Guarantees) Act 1946; it must be distinctly understood that in giving this consent the Treasury does not take any responsibility for the financial soundness of any schemes or for the correctness of any of the statements made or opinions expressed with regard to them.

Copies of this Prospectus together with the documents specified herein have been delivered for registration to the Registrars of Companies, New Delhi, West Bengal and London respectively.

Application will be made to the Calcutta Stock Exchange for permission to deal in the Debenture Stock now being offered and for an official quotation.

The Subscription List will open at 10 a.m. on Tuesday, the eighth day of May, 1962 and will remain open until the close of banking hours on Thursday, the tenth day of May, 1962 unless the Directors decide to extend the closing date.

THE EAST INDIAN COAL COMPANY, LIMITED—Cont'd.

The Debenture Stock now being issued was created by a resolution of the Board of Directors of the Company passed on the eighteenth day of April, 1962 and will be constituted, and secured by a Trust Deed in favour of Mercantile Bank (Agency) Private Limited as Trustee for the stockholders. Interest will be payable in Calcutta on 1st May and 1st November in each year in respect of the half-yearly periods ending on the previous day. The initial payment of interest will be made on 1st November, 1962 and will amount to Rs. 30.88 p.p. per Rs. 1,000 of Stock (subject to deduction of Indian Income-tax at the appropriate prescribed rates); provided that if an application for subscription is received after the 10th May, 1962 and is accepted for allotment of Debenture Stock, the instalment of interest payable on 1st November, 1962 will be proportionately reduced. Application has been made by the Company for permission to execute the Trust Deed pursuant to the provisions of Rule 37 of the Mineral Concession Rules, 1960 while the Trustee has also made application for a Certificate of Approval pursuant to Rule 4(3) of those Rules.

The Trust Deed will contain *inter alia* the following provisions:—

1. Security—(a) The Debenture Stock will be secured by a Trust Deed executed in favour of the Trustee for the Debenture Stockholders and comprising a floating charge upon all the moveable and immovable property of the Company; subject to the condition that the Company shall be at liberty to create charges by way of a floating security in priority to or *pari passu* with the floating charge herein mentioned on stock of coal and coke wherever situated, consumable stores, book debts, outstanding moneys receivable, claims, bills, contracts, engagements, securities, investments, rights and other moveable assets in favour of banks for securing overdraft facilities in the ordinary course of business.

(b) The Company shall be at liberty from time to time to issue further debenture stock provided that such further debenture stock shall not in point of security rank in priority to the present issue but may rank *pari passu* therewith only if such further issue so ranking in point of security is approved by the Trustee of the present issue and sanctioned by special resolution at a meeting of the holders of the Debenture Stock constituting the present issue in accordance with the provisions of the Trust Deed securing the same.

The existing hypothecation and any hypothecation supplemental thereto in favour of The Hongkong and Shanghai Banking Corporation in respect of the Company's stock of coal and present and future book debts will take priority pursuant to clause (a) above over the floating charge to be created by the Trust Deed.

2. Redemption—(a) Such part of the Stock as has not been previously redeemed will mature for payment at par plus accrued interest on the 30th April, 1976. The Company may redeem the whole or any part of Stock on the 30th April, 1967 or at any time thereafter at par plus accrued interest on giving three calendar months' notice to the Stockholders in that behalf.

(b) The Company will establish a Sinking Fund to which during the year ending 30th April, 1967 and during every succeeding year ending the 30th April, the Company will contribute out of the distributable profits (as defined in the Trust Deed) of the Company's relevant financial year a sum not exceeding Rs. 5 lacs commencing from 30th April, 1967, the Sinking Fund may be applied in the redemption of Stock to be selected by drawings plus accrued interest. The Fund may also be utilised in the purchase of Stock in the market at a price not exceeding

par plus accrued interest or may be invested in trustee securities or deposited with a bank until required for redemption.

(c) The Company may at any time purchase Stock in the market at a price not exceeding par plus the accrued interest but exclusive of expenses. The Company may keep any Stock so purchased alive and re-issue the same or may cancel such Stock and in that event an amount equal to the nominal amount so purchased may be treated as having been transferred to the Sinking Fund in any future year.

3. Additional Provisions—(a) The rights of stockholders may be modified or compromised by a special resolution passed at a meeting of stockholders held in accordance with the Trust Deed, a quorum for this purpose being three stockholders present in person or by proxy. On a show of hands each stockholder present in person will have one vote and on a poll each stockholder present in person or by proxy (who need not be a stockholder) will have one vote for every Rs. 1,000 of stock held.

(b) A register of the Stock will be kept at the head office of the Company and a duplicate register at the registered office. It may be closed for any periods not exceeding a total of 30 days in any year.

(c) Stockholders will be entitled to their Stock free from equities or cross claims by the Company against the original or any intermediate holder.

(d) The Stock will be registered and transferable in amounts and multiples of Rs. 1,000.

4. Trustees—Included among various provisions designed to indemnify and limit the liability of the Trustee are the following:—

(a) The Trustee shall not be bound to take any steps to ascertain whether any event has happened upon the happening of which the security constituted under the Trust Deed becomes enforceable or to give notice to any person of the execution thereof;

(b) The Trustee shall not be responsible for the money subscribed by applicants for the Stock or any part thereof or be bound to see to the application thereof;

(c) The Trustee shall not be bound or concerned to examine or enquire into nor be liable for any defect in or insufficiency of the Trust Deed.

Provided nevertheless that nothing in any of the foregoing shall exempt a Trustee from or indemnify him against any liability for breach of trust where such Trustee has failed to show the degree of diligence and care required of him as a Trustee having regard to the provisions of the Trust Deed conferring on him any powers, authorities or discretions.

History and Business: The Company was incorporated in England on 20th of April in the year 1893 as a public company with limited liability. The registered office of the Company is at 149, Leadenhall Street, London, E.C.3. By a special resolution passed on 24th April 1950 the seat of the management and control of the Company was transferred from the United Kingdom to India from 1st May, 1950. The Head Office and the principal place of business of the Company is at 4, Clive Row, Calcutta.

The Company, which commenced business soon after its incorporation, is one of the oldest coal mining concerns operating in the State of Bihar producing from its Jharia collieries some of the finest metallurgical coal available in India. The Company owns lands extending to 5,346 bighas or 1,767 acres in the Jharia Coalfield and some 9,093

bighas or 3,006 acres in the Mugma field. The coal reserves of the Company in these areas are estimated to be in the region of 194 million tons, comprising 150.2 million tons in the Jharia field and 43.7 million tons in the Mugma field.

The Government of India in August, 1960 pursuant to the provisions of Section 4 of the Coal Bearing Areas (Acquisition and Development) Act, 1957 notified its intention to prospect the area comprising the Company's Sutikdh Colliery (which was last worked in 1928) and a suit was filed by the Company in the Supreme Court of India to restrain the Government from taking any further action in this regard. The suit was duly heard by the Supreme Court and the decision was in favour of the Government of India. Subsequently, by an order published in the Gazette of India on 16th December, 1961, Government has purported to acquire this valuable property and a claim for the compensation admissible has been lodged with the appropriate authority. Sutikdh Colliery comprises an area of 223 bighas, containing estimated coal reserves of 29.5 million tons of coal.

A serious outbreak of fire in 1935 in a colliery which adjoins the Company's Bararee Colliery has necessitated expensive protective measures being undertaken by the Company over a period of years, during which the financial assistance received from the Coal Board to meet the cost thereof has been negligible. With the completion during the past year of the Company's ropeway for the transport of sand for stowing at Bararee Colliery, it is hoped that it will now be possible to lay down a solid sand barrier of adequate thickness to ensure that this fire makes no further inroads into the Company's property.

Consequent upon the acquisition by Government of the Sutikdh Colliery, already referred to, a dispute has arisen between the Company and the National Coal Development Corporation Limited in regard to the sand rights in the Damodar River previously allotted to the Company by the Coal Board. The National Coal Development Corporation Limited has meanwhile offered, subject to the concurrence of the Government of India, to enter into an agreement for the collection by the Company of specified quantities of sand for a limited period not exceeding five years, which will permit of the Company making alternative arrangements for supplies of sand required for stowing purposes.

Development: The Government of India's Third Five-Year Plan has fixed a target of 97 million tons of coal to be reached by 1965/66, representing an increase of 37 million tons over the Second Plan target. Of this increase, some 17 million tons is expected to be raised from the collieries in the private sector of the industry. To achieve this increased level of production with the prospect of a further increase being called for during the following five years, a very substantial capital outlay is involved, including large amounts in foreign currencies, and the Government of India has arranged for facilities to be made available through the International Bank for Reconstruction and Development for acquisition of the necessary foreign exchange to cover the requirements of, for the present, the first two years of the Third Plan period. The industry's ability to achieve the Third Plan target set for it will depend to a considerable extent on the progress which is made in development of the necessary transport facilities as well as in overcoming the irregular supply of electric power and shortage of explosives.

The Company has during the past few years been engaged in carrying out a programme of expansion of output which involves the reorganisation and modernisation of its collieries to meet the increased demand for coal, primarily from the steel industry, during the Third Five Year Plan period. It is anticipated that raisings will be increased from the present level to approximately 1.6 million tons per annum by the end of 1962.

Finance: The total capital expenditure incurred by the Company during the two years ended 30th April, 1961 in connection with the reorganisation of the collieries and the planned expansion

of output amounted to £401,314 (Rs. 33,50,862). During the current year which commenced on 1st May, 1961, further capital expenditure actually incurred up to 31st March, 1962 amounted to £105,831 (Rs. 14,12,417). The additional expenditure contemplated to complete the present programme is £291,023 (Rs. 38,80,308) and it is anticipated that all of this will have been incurred by the end of 1963. The total capital expenditure in connection with this programme will amount therefore to £798,268 (Rs. 1,06,43,587) and to date has been financed from the Company's own resources which have been largely supplemented by advances received from the Hongkong and Shanghai Banking Corporation secured on the Company's stocks of coal and book debts. The proceeds of the present issue will be utilised to repay the Hongkong and Shanghai Banking Corporation which has, however, undertaken to provide further finance which, together with a contemplated issue of additional share capital within the next two years, will enable the programme to be completed.

There has been a considerable improvement in the working results of the Company over the last two years. For the year ended 30th April, 1960 raisings amounted to 583,111 tons and there was a net loss on the year's working of £3,196. For the year ended 30th April, 1961 raisings increased to 1,087,040 tons and the profit for the year after providing for depreciation and taxation amounted to £122,534. While in the recent past raisings have from time to time been restricted due to irregular electric power supplies, a shortage of explosives and deficiencies in railway transport facilities, it is nevertheless anticipated that at least 1,275,000 tons of coal will be produced during the current year ending 30th April, 1962. Profits for the ten months ended 28th February, 1962 are estimated to have exceeded the profits of the corresponding period during the previous financial year.

A high proportion of the Company's output consists of high grade coking coal, the production of which was for a number of years restricted pursuant to the provisions of the Coal Mines (Conservation and Safety) Act, 1952. It was only with the emergence of the greatly increased demand for this type of coal for the purpose of the country's expanding iron and steel industry that these restrictions ceased to operate. In these circumstances the financial results do not afford a true index of the likely course of profits which the next few years but, as will be observed from a report of the Company's Auditors incorporated in this prospectus, the profit for the year ended 30th April, 1961 amounted, after providing for depreciation but before providing for taxation, to £161,352 (Rs. 21,51,360). On this basis and after making an adjustment for interest on the indebtedness to be repaid out of the proceeds of this issue, the annual interest on the debenture stock is covered more than seven times.

By a Notification published in the Gazette of India dated 29th December, 1961 the Government of India in exercise of the powers conferred by section 30A of the Mines and Minerals (Regulation and Development) Act, 1957 have in effect provided that in respect of its effect the Company will in future be released the Company will in future be required to pay royalty at the rate of 2½% on the f.o.r. price of coal despatched. Although a simultaneous increase in the controlled price of coal has been granted, this increase will not compensate the Company for the additional royalty payable and it is estimated that the net effect on future profits will be a reduction of approximately Rs. 3,50,000 per annum, in respect of which, however, relief from taxation will be admissible.

If the capital expenditure between 1st May, 1961 and 31st March, 1962 is added to the written-down value of the fixed assets as at 30th April, 1961 as shown by the report of the Auditors and if adjustment is made for depreciation incurred between these dates, the written-down value of the fixed assets as at the date of this prospectus is more than twice the amount of the stock now being issued.

THE EAST INDIAN COAL COMPANY, LIMITED—Cont'd.

AUDITORS' REPORT

The following is a copy of the report which has been received from the Company's Auditors, Messrs. Lovelock & Lewes, Chartered Accountants.

The Directors,
The East Indian Coal Co., Ltd.,
4, Clive Row, Calcutta-1.

Dear Sirs,

We have examined the books and accounts of your Company as kept in Calcutta in which are incorporated the certified returns from the Collieries and which have been audited by us for the five years ended 30th April, 1961, and report that the profits and losses of the Company were as set out below.

These profits and losses have been arrived at after charging all expenses of working and management and after making such regroupings and adjustments as are, in our opinion, appropriate.

	Year ended 30th April, 1957	Year ended 30th April, 1958	Year ended 30th April, 1959	Year ended 30th April, 1960	Year ended 30th April, 1961
	£	£	£	£	£
INCOME					
Profits after deducting Colliery and Calcutta Expenditure	54,055	35,103	58,016	4,211	219,173
Income from Investments	8,059	9,031	6,337	5,968	6,550
Adjustments relating to previous years	—	—	550	5,237	1,490
Profit on Sale of Assets	—	13	26	20	46
Miscellaneous	23	—	—	—	—
	62,134	50,776	67,114	29,322	226,674
OTHER EXPENDITURE					
London Expenses	332	322	391	343	333
Directors' Remuneration	675	675	675	675	675
Audit Fees	285	285	465	435	412
Commission payable to Staff and Managing Agents	1,081	1,368	2,704	1,575	10,960
Colliery Cesses	9,723	8,830	9,539	9,300	13,388
Adjustment of Stores	—	—	—	—	12,335
	12,196	11,480	13,824	12,328	38,103
Profit before Depreciation, Taxation and Wealth Tax	50,038	39,256	53,290	17,004	188,571
Depreciation as charged in the Accounts	13,283	12,827	17,294	17,949	27,219
Profit after charging Depreciation	36,755	26,429	36,096	(Loss) 945	161,352
Taxation	27,060	13,078	14,775	2,251	38,818
Wealth Tax	3,198	2,963	—	—	—
	30,228	18,941	14,775	2,251	38,813
Net Profit/Loss after Taxation and Wealth Tax	(Profit) 6,527	(Profit) 8,388	(Profit) 21,321	(Loss) 3,196	(Profit) 122,534
Exchange—1s. 6d. per Rupee	= Rs. 87,027	= Rs. 1,11,840	= Rs. 2,83,080	= Rs. 42,613	= Rs. 16,33,787

Notes: (1) For the years 1957 and 1958 Taxation and Wealth Tax have been charged on the basis of completed assessments and for the years 1959 to 1961 provision has been made at the rates laid down in the respective Finance Acts.

(2) The figures of "Profits after deducting Colliery and Calcutta Expenditure" as shown in the above statement are after charging Commission to the Managing Agents @ -2/- per ton of Coal and -4/- per ton of Coke despatched from the Company's Collieries. Commission on Profit payable to the Managing Agents has been calculated @ 5% on the Net Profit of the Company after deducting Depreciation and Taxation.

We also report that the assets and liabilities of The East Indian Coal Co., Ltd., as at 30th April, 1961, which is the last date to which the Company's accounts were made up prior to the date of this report, are as set out below. These assets and liabilities have been arrived at after making such regroupings as, in our opinion, are appropriate.

	£	Rs.
ASSETS		
Fixed Assets—At net book value	606,223	
Expenditure on Fixed Assets in course of installation	125,792

	685,427	91,39,027

Notes: (i) Contingent Liability—Claim against the Company, as a Partner of Pandora Syndicate, not acknowledged as a debt = £ 4,500

(ii) No Depreciation has been provided on Land and Colliery Development

(iii) Contracts made for Capital Expenditure amount to £68,380

(iv) Bank Loan is secured by a floating charge on the Company's Plant and Machinery, Stock of Coal, Book Debts and deposit of Title Deeds and Investments.

The Dividends paid by the Company in respect of the five years ended 30th April, 1961, were as follows:—

Year ended 30th April 1957	On 240,000 Shares of £1 each @ Rs. 1.50 per share (without deduction of Tax)	Rs. 3,60,000
Year ended 30th April 1958	On 240,000 Shares of £1 each @ Rs. 1.00 per share (without deduction of Tax)	Rs. 2,40,000
Year ended 30th April 1959	On 240,000 Shares of £1 each @ Rs. 1.25 per share (Gross—subject to deduction of Tax)	Rs. 3,00,000
Year ended 30th April 1960	On 240,000 Shares of £1 each @ Rs. 1.00 per share (Gross—subject to deduction of Tax)	Rs. 2,40,000
Year ended 30th April 1961	On 240,000 Shares of £1 each @ Rs. 2.00 per share (Gross—subject to deduction of Tax)	Rs. 4,80,000

Yours faithfully,
LOVELOCK & LEWES.

CHAIRMAN, MR. J. N. A. HOBBS'S REVIEW

R. V. BRIGGS & CO.
PRIVATE LTD.
16, Old Court House Street.
(West End Watch Co., Top Floor).

The Third Five Year Plan came into operation during 1961, and the Tea Industry has been asked to increase production to 900 million lbs. by the end of the Plan period. Whether or not this target will be achieved remains to be seen, as it is not easy to obtain an increase of nearly 25% in production at a time when there is not very much encouragement for new planting. However, this Company has taken substantial steps in the planting of tea, and have no doubt that we shall play our full share in contributions to increased production. In any case, I am not unduly perturbed about the prospects for this Company as we make quality teas which should always find interested buyers at comparatively good prices. Nevertheless, from the general point of view of the industry, I am somewhat concerned about the finding of markets for the planned output. Indian teas are already facing very severe competition in world markets and internal consumption is increasing at only about 20 million lbs. per year. It is essential,

The Tea Industry has been repeatedly urging the Government of India to

In my address last year I appealed for a reorganisation of the Coffee Marketing System which was designed to handle about 250,000 tons of coffee that is now being produced, and I am very glad to say that the Government and the Coffee Board have now accepted some of the proposals put forward from various quarters. Since the beginning of the year, sales for export are being made by open auction instead of by sealed tenders; this seems to have resulted in a noticeable increase in the interest taken by established exporters, and, moreover, a number of new potential buyers, including several foreign coffee trading houses, have appeared on the scene. This is a very healthy sign, and the

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

THE DUNLOP RUBBER CO. (INDIA) LTD.

MANAGING DIRECTOR REVIEWS PROGRESS

The following is the speech delivered by Mr. M. L. Bexon, M.C., Managing Director of The Dunlop Rubber Co. (India) Ltd., at the 36th Annual General Meeting of the Company held in Calcutta on the 24th April, 1962.

Ladies and Gentlemen,

I have much pleasure in welcoming you to the 36th Annual General Meeting of the Company. The Directors' Report and Accounts have been in your hands for some time, and with your permission I should like to take them as read. You will have noticed that we have this year for the first time incorporated some information and photographs of the activities of your Company, and I am sure you will agree that this is a worthwhile addition to your general knowledge of the Company's affairs.

The Year's Trading

The year under review saw both our factories at Sahaganj and Ambattur working to full capacity, the notable feature being a general increase in productivity which was most encouraging.

During the early part of the year the Tyre Dealer Associations continued to play a worthy role in ensuring an equitable distribution of the sizes in short supply at list prices to consumers, but with the onset of the monsoon retail selling prices generally began to fall: by the end of the year the general shortage of tyres, except in a few sizes and types, was no longer felt and trading tended to return to normal.

Increased supplies of our Highway Truck and Bus tyre were made in the main sizes but the demand for this extremely popular pattern remained unsatisfied. Similarly, our Gold Seal car tyre continued to maintain its high level of acceptance with users and remained their first preference.

Throughout the many irrigation and industrial projects our Off-the-Road

tyres continued to be in keen demand and particular mention may be made of the Dunlop "Powergrip" and "Earthmover EM-7" patterns which found ready acceptance for their high quality and durability.

Sales of Cycles tyres and tubes in the domestic market increased although our deliveries to the Bicycle Industry were below the level of 1960 as the activities of some of these concerns declined during the period. It is our view that the general trend in this industry will improve before long and the signs today already confirm this view.

In the Industrial Rubber Products field our Conveyor belting expansion was completed during the period and field reports on the high quality of our product continued to be most encouraging.

The demand for Industrial and other types of hoses was also satisfactory and it is true to say, I think, that in every large project throughout the country Dunlop hoses are being used.

Dunlopillo sales remained at a high level and the demand for our range of products continued to exceed our manufacturing capacity. It is of interest that sales of Dunlopillo for industrial applications increased considerably.

During the year we were continually handicapped by the shortage of transport for the conveyance of finished products from our factory at Sahaganj to our various Sales Offices spread throughout the country, and this problem unfortunately still remains with us today. Increasing use of road transport where possible for long distance routes has proved very helpful and we would strongly urge that this medium be given every encouragement to develop to the full. Emphasis, we feel, should be placed on road building and maintenance as a positive contribution to

wards solving the existing transport difficulties.

Exports

Your Company has responded to Government's call for exports and we are currently exporting all types of tyres, cycle rims and accessories. We are also seeking to widen the range of products we export and negotiations are in progress to this end.

However, I feel it would not be out of place to mention that export business is not only highly competitive but has its own special difficulties, and by its very nature cannot be built up over a short period of time.

Nevertheless, I am glad to be able to tell you that our Cycle tyre exports in 1961 were 17% higher than in 1960, and in the first quarter of this year our overall exports were running at a level over 50% higher than the same period in 1961.

Expansion Plans

I am sorry to report that there has been a delay in implementing our expansion plans, which were mentioned at this time last year. You will probably have seen press reports that Government are considering the question of raising the target for the automobile tyre manufacturing capacity to be established during the Third Five Year Plan. It is to be hoped that their decision will be announced soon and that we shall then be able to go ahead with our full plans because Ambattur has been designed so that economical expansion can take place quickly and efficiently.

Meanwhile we are implementing some small expansions at both factories for which we have licences. We also have a licence to manufacture P.V.C. belting, for which there is a good demand from the coal mines. Because of its fire-resistant properties, it is advantageous for use in underground gassy mines, and we are finalising plans to implement this project.

The Directors have constantly under review the possibilities and necessity of expanding existing capacity and introducing new products.

Raw Materials

During 1961 the supply position of raw materials in general was reasonably satisfactory, although the foreign exchange situation and the consequent uncertainties and delays in the issue of import licences presented a constant problem. For some items, however, we had to abandon our established suppliers and find new sources in the U.S.A., with a consequent increase in our raw material bill. Despite these difficulties, production at both factories was maintained according to schedule.

On a number of items, import duties were further increased and resulted in a substantial addition to raw material costs, thus offsetting a number of economies which we had introduced.

Considerable progress has been made towards producing indigenously various raw materials we use, and we are already arranging comprehensive test programmes in order to ensure that these materials will be suitable for the very high quality products we make. It is gratifying to note that over half of our cycle rims are now manufactured from local rim strip, and as indigenous production increases, we are hopeful that during 1962 our entire output of rims will be made from Indian steel, with a consequent saving in foreign exchange.

Profit and Loss Account

The profit for the year after providing for depreciation, interest and taxation was Rs. 1,64,75,494 as compared with Rs. 1,24,56,228 for 1960. The profit after tax expressed as a percentage to sales was 5%, and, as you will have gathered from the Directors' Report, the improvement over last year's figure of 4.1% arises mainly from the increased volume of business and increased efficiency.

Excise Duty now exceeds Rs. 6 crores and absorbs a substantial amount of working capital, a matter which your

CAPITAL, 26th April, 1962.

Directors continue to keep under constant consideration.

It will be observed that overall Salaries, Wages and Bonus show an increase of approximately Rs. 34 lakhs and Welfare Expenses are also up due mainly to improved canteen and catering expenditure at factories, depots and head office.

Advertising expenditure has been increased to meet the ever growing competition facing us now and in the future, and our participation in the Indian Industries Fair accounted for a substantial portion of the increase.

The amount of Bank Overdraft Interest has decreased as a direct result of our reduced borrowings.

As a result of the temporary lull in capital expenditure until our next planned expansion receives approval and gets under way, the amount transferred to Development Rebate this year is only Rs. 7,50,000.

The amount transferred to General Reserve is Rs. 62,50,000, this being considered prudent in the light of our forward expansion plans.

Our net profit available for disposal is higher than last year by approximately Rs. 41 lakhs. The compulsory transfer to Development Rebate Reserve has decreased by Rs. 9,50,000 and this gives an overall increase of approximately Rs. 50,50,000 of profits available for disposal. Out of this additional amount it is proposed that Rs. 25,50,000 is allocated to you, the Shareholders, the balance of Rs. 25 lakhs remaining as retained profits within the Company.

The Directors recommend a dividend for 1961 of 20% subject to tax on the ordinary share capital as increased by the recent Bonus Issue. In 1960 the dividend paid on the old capital was 21.5%.

Balance Sheet

On the Assets side there have been no significant changes since last year. Inventories are higher in line with the higher level of output and sales.

The Share Capital as Issued and Subscribed has increased by Rs. 1.5 crores, which is, of course, the Bonus Issue, and Reserves have already been mentioned in the Directors' Report and need no further comment. Our overall borrowings through Bank Overdrafts, etc. are lower in line with the increased profits and reduced capital expenditure. The Provision for Taxation is higher arising from the increased profits and the additional liability in respect of the Bonus Issue.

Future Prospects

There are now several manufacturers producing tyres in the country and others are expected to come into production during 1962. Competition will, therefore, be keen but your Company does not fear this and indeed welcomes it. We have the product, the same organisation and the market accepting to retain our share of the expanding market, but it is our earnest hope that if the total manufacturing capacity of the country is in excess of demand, then free competition and consumer preference will be allowed to decide sales levels.

Employee Relations

It is particularly gratifying to record a further improvement in labour relations at the Sahaganj factory during 1961. Increased productivity was obtained from both our factories with correspondingly greater rewards to our workers. I should like to mention that the workers also shared in the annual results of the Company, an annual bonus being paid at the rate of 3% months basic salary as opposed to 2% months last year. The total bonus paid for the year exceeded Rs. 44 lakhs.

The Company entered into long-term agreements with Employees' Unions at Sahaganj and Ambattur factories, and at several of our depots throughout the country. These contain increasing benefits to the employees and reflect the success that has been achieved over the years in the field of industrial relations. At head office and the depots the service conditions continue to be improved.

You will, I am sure, wish to join the Directors in thanking the employees for the loyal service they have given and the hard work they have put in towards another year's successful results.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 26th April, 1962.

MAHINDRA & MAHINDRA LTD.

CHAIRMAN, MR. K. C. MAHINDRA'S REVIEW

Speech delivered by the Chairman, Mr. K. C. Mahindra, at the 16th Annual General Meeting of the Shareholders of Mahindra & Mahindra Limited held in Bombay on 23rd April, 1962.

As usual I extend genuine welcome to shareholders who have found it convenient to attend this Annual General Meeting, the Sixteenth in the series. That the Company's meetings deserve your personal attention is a tribute, which I willingly acknowledge, to your perspicacity and desire to learn more about this Company, its Management and the prospects it holds forth for future development.

Our efforts to present the accounts earlier than May have been speeded by the compulsory provision made in the Companies Amendment Act last year, that the Annual General Meeting must be held within six months of the closing of the Company's financial year. The revision of the Articles of Association is not yet completed, but I hope that this will be done at an early date.

Gross Profits

Since the Report and the Accounts for the year 1960-61 have been before you, the financial press has commented upon the increase in gross profits as compared to the previous year. The issue is well taken and I would like to take this opportunity to place this matter in its proper perspective. The Company's main activity is built round the manufacture and sale of Jeeps and allied vehicles. In a smooth running and well-structured organisation engaged in automobile manufacture, there is a certain minimum level of industrial workpoints, manned by skilled operators, of supervisors, inspectors and engineers, of service personnel and regional field workers and not the least important, of development technicians, accounts personnel and senior managers. Maintenance of an effective organisation requires on a minimal scale. Such provision is possible if a certain volume of vehicles are regularly produced and sold at prices which would yield the necessary margins.

Alongside are transient incidences like experimental work on complicated parts and shortages in pipelines of production, mostly raw materials which also have to be paid for. And as I mentioned last year, there is the requirement for annual increase in wage costs of Volume of production and sales along with proper emphasis on productivity. Therefore the chief determinant of profit margin. We may now analyse the 1960-61 factors as applicable to your Company's operations. The accounts as presented indicate that while selling prices have remained the same, costs have been held except for increase in wages and salaries which has perhaps been cancelled by more efficient turnarounds and more effective utilisation of machines. Development relating to manufacture of complicated functional parts has been completed and production established on more balanced bases.

I may add that the surplus as shown in the accounts before you is not extraordinary; while there is no element of capital gain therein, the profit ratio to capital employed or even sales to net profit ratio is still low and the reason is simple: in conformity with the desires and directions of Government we have held the price line despite ample justification in increased wage-costs and raw material prices for increase in sales price. It is also to be remembered that the incidence of taxation is high, and that our allocation to Reserves over the six years of the Company's operations as a public company must accordingly depend upon an increasing volume and economy of management to yield a return on shareholders' money which is both fair and attractive for further capital formation.

We can turn now to change and development in the Jeep Division in the ensuing years. The capacity is to be

increased to produce, entirely indigenously, 10,000 units and more. A programme of centralisation of Company's manufacturing activities is already under way at Kandivli, where we have purchased and taken possession of about 137 acres of land for this purpose. A complex of factory buildings, administration offices, canteens, transport maintenance shops, medical aid centre and possibly a testing track will arise in this area. A new pattern of costs will begin to emerge as we get into the stride of increased production in the course of next 2 to 3 years. It is my hope that this grouping will lead to more efficient control over quality production and over expenditure, and that with increasing turnover the Company will progress from strength to strength.

Steel Division

Operations of the Steel Division have been satisfactory and the backlog of unfulfilled contracts helped in maintaining the anticipated margins. As indicated in the Directors' Report the pattern of activity for this section is changing and although imports of special sections and varieties of steel, not so far produced in the country, will continue on a diminishing scale for next couple of years, it is to be hoped that the new Steel Works will have stabilised their respective production schedules and that with assurance of supplies the distribution of steel will be rationalised and channelled through experienced and dynamic centres. The Company's Steel Section has already gained such reputation in Calcutta and Bombay and we are hoping to spread over to Madras and Delhi shortly.

Last year, I referred to delays in the receipt of payments from Government against Steel bills. There has been no improvement whatsoever in the matter of payments although on several occasions during the year promises were made by officials concerned for speedier settlement. The authorities do not realise their contractual obligations; their apathy towards problems created by themselves, because of conflicting instructions and departmental lapses, is astounding. With the increasing volume of subsidised imports, the burden of interest charges unless payment is promptly received is becoming very heavy. It is not fair that importers who have discharged their entire contractual obligations should be made to suffer for reasons which do not concern them at all. An effective solution to this early a date as has to be found at this early a date as possible, and I would suggest that a Statutory Committee consisting of representatives of Steel and Finance, Ministries of Control, and Steel Iron & Steel Association with powers to decide each individual dispute on its merits. We may get somewhere.

Development Activities

Brief mention has been made in the Directors' Report of our development activities. I am confident the Shareholders will welcome the collaboration agreement with the world renowned International Harvester Group of Chicago in respect of manufacture of Tractors to their design. As announced, it is proposed to form a separate public Company for the purpose, which the International Harvester will give a substantial long-term loan as well as participate in its equity. Most of the formalities have been completed and we are now discussing with our associates as well as with Government the pattern of capital structure and the timing of the new Company's flotation. Shareholders will be interested to learn that Voltas Limited have agreed to join the International Harvester and ourselves in promoting a new Company as a tripartite venture. Besides participation in the equity capital of the new Company, Voltas will serve as the Company's sole distributor and thereby give to the new concern the benefit of their vast experience in the agricultural field. Steps are also in hand for installing

facilities for manufacture of agricultural implements needed for attachment to tractors. This will bring to a climax the end of the first phase in our pursuit and endeavour to establish a unit for direct assistance to agriculture.

Mention was also made in the Report to the Alloy Steel Project. While we have concluded satisfactory agreements with the well known Ugine Group in France, formal approvals of Government respecting this collaboration as well as proposals for financial arrangements are pending. I should tell the Shareholders that this is a major project and finance required is of the order of Rs. 6 to 7 crores of which the foreign exchange component is approximately 45%. Search for this kind of finance is going to be a laborious process but is well under way. In the meantime, exhaustive technical studies have been made by our French collaborators; Ugine's engineers are now in India discussing with us detailed operation plans; several prospective sites in Madras State have been examined and power supplies discussed with Electrical Authorities. Tentative search for plant and equipment has begun. I am revealing no secrets when I say that the project report prepared by us in consultation with Ugine's engineers has received warm commendation from the finance institutions whom we have approached for assistance. This is a tribute to the zeal, enthusiasm and hard work of the personnel in our Steel Division. I am hopeful that a conclusion will soon be reached and that before the next Annual General Meeting comes round the Steel Alloy project will be launched.

Ancillary Plans

Certain other ancillary plans are in various stages of development, so also expansion programmes in the various units in our associated group of companies.

The other day our Prime Minister exhorted businessmen to consider social justice as the supreme aim of national activity. He went on to say that affluence itself is good, but alongside extreme poverty it presents a painful sight. Social justice therefore must become the prime motivating factor of all human activity. This exhortation, though in general terms, is meant for every man and woman in India, no matter in what activity he or she is engaged.

In so far as business motivation is concerned, I am afraid profit motive will remain the prime criterion for the initial risks. Sound business analysis postulates a positive return on the monies and skills to be invested. But once the economics of a business venture promises such return, there is no reason why business people should not engage themselves toward harmonising the profit motive with the concept of social justice. What is social justice? To business people it must mean the consideration of more than fair returns to the employees for the work they put in, in as much as the unemployable and the unemployed with the general need to feed many mouths require a more than the market return for labour involved. There is another impressive argument in favour. Hunger has no morals and therefore the minimum needs of employees in the matter of food, clothing and shelter deserve to be met, irrespective of what their toil can fetch in the market. In order, however, to distribute more than the quantum of current wages there must be a surplus available for the purpose. Granted there may be occasions when no surpluses are available to meet such extra-normal requirements, and one can do nothing about it. Nevertheless, it should remain the endeavour of every profit-making enterprise to keep in view this narrow but practical application of social justice. Mr. G. L. Mehta, the scholar diplomat, who has served India with great distinction in several spheres and commands wide respect for his knowledge and wisdom, in an address

before the International Industrial Conference held in San Francisco in September, 1961, posed before his American audience the issue of social justice in the following words:

"The milieu within which private enterprise functions today is far different from that prevailing in the 18th and the 19th centuries. Private enterprise is no longer taken for granted, and its justification is no longer sought to be measured only by the profit rate. It is able to earn. Private enterprise will be judged by—and its survival depend upon—its social utility to the economy."

In the present context of our country's poor economic level, there can be no two arguments, for the other way would ultimately lead to chaotic conditions and revolutions of the nature which would wipe away many of the things which we today cherish.

Motivations of social justice in the planning of an industrial complex must generalise amongst the entrepreneur the aspiration of care for the poor and the lowly, but while "minimum needs" form the starting run on the track, the line at finish will not find all runners abreast at the tape. This factor of difference is a human element and should be respected as such. Richard Tawney, the noted British historian who was born in India, described it brilliantly in this passage:—

"Equality of opportunity is not the absence of violent contrasts of income and conditions, but equal opportunities of becoming unequal."

Developing the Infra-structure

This is where the responsibility of Government begins. Spread of educational and social standards, so that every citizen has an equal opportunity to grow, is a prime concern of the State, and any monies devoted to the development of this infra-structure of our future society are healthy and essential investments. In the limited sector of industrial operations State policy should inspire acknowledgement of social motivations amongst the management and the workers alike. Compulsions hardly achieve any targets—in the long run. Both management and workers need to be educated in their respective responsibilities—perhaps, so also the Government of the day. Look at the fiasco of the Compulsory Employees State Insurance Scheme which has been in operation over the last decade. I am not exaggerating when I state that there is hardly any group of industrial workers who feel benefited or satisfied with the meagre and almost callous service provided under the scheme. Every Company, despite the wage-percentage contribution that is levied on it, has to maintain its own medical contingent to look after the workers. May I suggest a complete re-study of various aspects of the scheme and if the criticism is found valid Government should not hesitate to scrap it altogether. I recommend instead that each Company should be asked compulsorily to spend its present contribution to the scheme or more on developing its own medical service and I am confident that it will be able to provide for its staff equal if not better facilities. Government should on its part build hospitals and recuperation homes in selected areas near where the workers live; the large unutilized funds of the Employees State Insurance Scheme should be devoted to this purpose.

We have also experienced during the past decade an attempt at codification of the rights of labour. I have expressed the conviction that mass poverty commands allegiance from businessmen to the dictates of social justice. In order that doles and charity should play no role in the practical acceptance and application of the concept, industrial workers should also appreciate their responsibility toward production and productivity standards. Even in Communist Russia where they are aiming to evolve a class-less society, emphasis is placed primarily on the produce of labour and not on fictional rights. Only recently Nikita Khrushchev went on record as follows:—

"Labour productivity must be always one jump ahead of the growth of wages... The level of wages depends entirely on the output of produce, on the productivity of labour in a given society."

There is also a larger obligation in addition to mitigation of mass poverty—

the obligation to remove inertia, to eradicate listless apathy amongst millions—obligation on the few thousands who can intelligently plan and operate. There has arisen however a new political platform in the country with non-planning and non-sequitor as its party slogans. Time does not permit the luxury of stop-and-go as a way of life. However valid the charges of a permit-liaison-raj may be against the present Government, responsible economists generally accept that in an underdeveloped economy planning by the State has become a pre-requisite, and an essential one, for economic betterment. Even Britain, the home of traditional laissez-faire, has reluctantly admitted, after the successful experience of France over the last six years, the need for planned development. Political plat-

forms usually adopt an extreme position, but not even the most profound advocate of non-planning will deny that "a river is water, but a river is also banks. And without banks there is no river."

It is another matter that planning may be slipshod and unrelated to facts of a particular situation; that mistakes after mistakes have been and continue to be committed; that results so far belie the claims of the planners and the hopes of the millions. These problems should be taken up specifically and one by one in order to find the lacunae in methods and performance.

Planning and Achievement

For instance, I referred casually last year to the growing lag between planning and achievement. With diminish-

CAPITAL, 26th April, 1962.

ing resources in foreign exchange the scarcity of industrial raw materials which require to be imported is being increasingly felt. For the automobile manufacturers there is still the absolute dependence on imports in their requirements of special steels and forgings, in addition to the necessity of periodic refurbishing of more progressive and therefore more efficient machinery and plant. To these are currently added shortages of coal and coke, of transport and of power. These deficiencies which will, if continued, increasingly handicap proper utilisation of plant capacities cannot just be explained away by the fact that expansion has been too rapid and has taken even the Planning Commission by surprise. Many of these deficiencies are Government-based, in the sense that the decisive voice say, in Railway development or coal production or power generation, remains solely with Government, and it must now be acknowledged that to this extent the planning techniques were deficient and that supervision over performance too slack. In a commentary on this aspect of planning in India, Barbara Ward, the well-known British economist and a sympathetic observer said recently that "in army parlance, the Q-Plans (in India) are not balanced by Q-OPs", meaning that there is need for "a tough agency demanding a regular account of work in progress, not simply in terms of money spent, but of physical targets actually achieved and giving no quarter until every back-log is made up."

There is great force in this comment. The other day at a seminar organised by the National Council of Applied Economic Research in Delhi, the discussion paper was titled "Looking Ahead". Projections were made of the future shape of things 20 years from today and certain heartening conclusions were tentatively advanced for the world of 1981. And yet, the assumptions behind these hopeful projections were, amongst others, the following:—

1. Existing transport and power deficiencies will be removed in the next 2 or 3 years.
2. Transport and power facilities will be developed ahead of their actual requirements.
3. Minerals developments policy, particularly with regard to iron ore, coal, limestone and manganese, will be geared to the short and long term requirements of industrial development and export trade, without undue insistence on reserving coal and iron ore mining for the public sector on non-economic considerations.

These assumptions appear to be just wishful thinking; but if we are to hope for a decent, deserving, justice-oriented life 20 years from today, it is time the Planning Commission and Government thought of "Q-OPs" and set about in earnest correcting the lag between plan and performance, particularly in the critical sectors. There are grave problems. I am confident that only too glad private business will be only too glad to assist in every way they can to find solutions. These are also challenges posed by an expanding economy, which offer exciting avenues for further progress and advancement.

Before I conclude, you will be interested to know that for the 5 months ended 31st March, 1962 our operations both in the Jeep and the Steel Divisions have been satisfactory. Sale of vehicles averaged 678 per month as against 517 during the corresponding period in 1960-61. Steel orders booked in this period amount to over 74,000 tons as against 164,000 tons in the whole of last year. The movement of Controlled Stocks has averaged nearly 2,000 tons a month from Calcutta and Bombay Stockyards. Negotiations for three small units in the field of flexible insulations, gauges and tools and current limiters and regulators are nearing conclusion. We can look forward to a promising year.

On behalf of the Board and the Shareholders I would like to convey greetings to our Staff and thank them for their services during the year.

Note:—This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 26th April, 1962.

Money

THE CALCUTTA MONEY MARKET FAIR INCREASE IN ADVANCES

Wednesday, 25th April.

THE general level of advances has shown a fair increase in the Calcutta money market during the past week. This is mainly because the requirements of the iron, steel and engineering industries have risen appreciably. Jute and sugar credit is slightly higher, while the accommodation given to cotton mills, and for the storage of foodgrains and seeds, is almost unchanged. In the inter-bank market, conditions have generally been comfortable. The call rate has ranged from 3 percent down to 2½ percent, although small transactions have even been reported at 2½ percent.

The exchange market has been slightly more active. There are of course hardly any tea bills these days, but those on account of gunny shipments have increased a little. Remittance has been on a fair scale. The trend in sterling has been mixed. Nominal gains have been reported in relation to the Swiss franc and the Scandinavian currencies, but the pound has eased a little in comparison with the U.S. and Canadian dollars.

BULLION WAS QUIET IN THE PAST week due to profit-taking. Silver fell from the previous week's level of Rs. 261 to Rs. 260.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 215.75. The London and New York prices were 84½d and 101.50 cents.

Gold weakened in sympathy with silver and the price declined from Rs. 145.25 to Rs. 145. The sovereign was quoted 25½p higher at Rs. 99.75.

DURING THE WEEK ENDED 20TH APRIL, Government of India Treasury bills for Rs. 205,69,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 24th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.355 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.580 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received in Calcutta, New Delhi, Madras, Bangalore and Kanpur up to the close of business on 28th April and in Bombay and Nagpur up to 11.00 a.m. on 30th April.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 25th April, 1962, to 28th April at Rs. 99.371 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 17th April to 21st April amounted to Rs. 57 lakhs.

ACTIVE NOTES FELL BY Rs. 8.26 crores to Rs. 2,141.06 crores, while the total note issue was Rs. 41 lakhs higher at Rs. 2,162.13 crores, according to the return of the Reserve Bank of India for the week ended 20th April, 1962. A decline of Rs. 5 crores to Rs. 108.86 crores in foreign securities of the paper currency reserve was

offset by a rise of Rs. 6.95 crores to Rs. 1,817.04 crores in rupee securities. This was presumably done by transferring securities from the Banking Department, in which balances held abroad rose by only Rs. 3.87 crores to Rs. 9.03 crores and investments decreased by Rs. 5.59 crores to Rs. 152.11 crores. Deposits of the Government of India fell by Rs. 32.21 crores to Rs. 51.06 crores, while other Government accounts rose by Rs. 2.97 crores to Rs. 6.86 crores. Balances of commercial banks at Rs. 88.52 crores showed an increase of Rs. 2.97 crores. Other loans and advances fell from Rs. 135.36 crores to Rs. 131.56 crores. Of which advances to scheduled banks against usance (Rs. 14.01 crores) to Rs. 12.47 crores (Rs. 14.01 crores). Ways and means advances stood at Rs. 125.87 crores, against Rs. 119.22 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 13th April, 1962, shows a drop of Rs. 9.51 crores to Rs. 577.73 crores in total deposits. Investments in Government securities are down by Rs. 50 lakhs to Rs. 242.81 crores, while other authorised investments are up by Rs. 2 lakhs to Rs. 9.13 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have risen by Rs. 1.61 crores to Rs. 293.05 crores. Cash and balances are, in consequence, shown at Rs. 27.10 crores or Rs. 45 lakhs less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 13th April, 1962, shows Demand and Time liabilities at Rs. 923.17 crores (Rs. 22.79 crores on account of borrowings from banks) and Rs. 1,203.02 crores (Rs. 12.24 crores), compared with Rs. 927.37 crores (Rs. 20.25 crores) and Rs. 1,192.99 crores (Rs. 13.98 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 2.40 crores and Rs. 79.88 crores, Rs. 50.09 crores and Rs. 79.88 crores, respectively. There is a drop of Rs. 92 lakhs to Rs. 588.47 crores in interest.

SANATNAGAR, HYDERABAD-18

for their requirements giving storage licence details.

These supplies have been imported from
Messrs. FERUNION, Budapest, Hungary.

FDS ID:

TATA-JOHNSON AND THE PAPER INDUSTRY

Although the pulp and paper industry is expanding rapidly, its output barely meets demand. Many new large-scale plants are therefore necessary. Importing machinery for these plants would be a heavy drain on foreign exchange reserves. A better plan: indigenous production of the machines.

Tata-Johnson's entry into the field is timely. Tata's, collaborating with A. Johnson & Co., a leading Swedish combine, have promoted Tata-Johnson Ltd. The company manufactures pulp and paper machinery with a high indigenous content and incorporating the latest developments in the field.

Technical know-how is provided by Sweden's AB Karlstads Mekaniska Werkstad (KMW), AB Kamyr and AB Rosenblads Patent, as well as the Cellulose Development Corporation (Celdecor), pioneers in bagasse pulping.

Machinery designed by these leading organizations is manufactured at TELCO's well-equipped works with the close co-operation of Tata-Johnson specialists in Jamshedpur.

THE CHANGES IN DIRECT TAXES

INCOME TAX AND SUPER TAX

The following are the rates of tax for the assessment year 1962-63 on incomes other than capital gains:

Assessee other than Companies

(a) Individuals, Hindu undivided families, unregistered firms, etcetera: In the rate schedule applicable to individuals, Hindu undivided families, unregistered firms, etcetera, the existing slab of Rs. 15,001-20,000 has been substituted by two slabs, namely, Rs. 15,001-17,500 and Rs. 17,501-20,000. For all the slabs above Rs. 5,000, the rates have been slightly increased as compared to the existing rates. The basic surcharge for purposes of the Union has been fixed at 2½ percent for incomes from salaries. In other respects, the existing surcharges are to continue.

(b) Registered firms: The existing tax-free slab of Rs. 1-40,000 is replaced by a tax-free slab of Rs. 1-25,000 and the slab of Rs. 25,001-40,000. The revised slabs and the rates applicable, which depend upon the number of partners in the firm, are set forth in the following table:

Rates of Income-tax in the case of registered firms

	Where the firm has four or less partners	Where the firm has five or more partners
(1) On the first Rs. 25,000 of total income	nil	nil
(2) On the next Rs. 15,000 of total income	5%	7%
(3) On the next Rs. 20,000 of total income	6%	8%
(4) On the next Rs. 40,000 of total income	7%	9%
(5) On the next Rs. 50,000 of total income	8%	10%
(6) On the balance of total income	10%	12%

Companies

(a) The rate of income tax applicable to all companies is proposed to be raised from 20 percent to 25 percent.

(b) The effective rates of super tax payable by various types of companies on incomes other than capital gains and royalties of the type mentioned at (c) below are set forth in the following table:

RATES OF SUPER TAX PAYABLE BY COMPANIES Rates applicable to companies which have made the prescribed arrangements for the declaration and payment of dividends within India

Income	Companies in which public are substantially interested and whose total income does not exceed Rs. 25,000	Other companies	Rates applicable to companies which have not made the said prescribed arrangements
(1) Dividends received from:	(2)	(3)	(4)
(i) A subsidiary Indian company formed and registered before 1-4-1961	5	5	5
(ii) An Indian company, not being a subsidiary formed and registered before 1-4-1959	5	10	25
(iii) Any other Indian company formed and registered on or after 1-4-1959	5	10	10
(2) Other income	20	25	38

of other capital assets. The gains relating to the short-term capital assets are proposed to be taxed at the rate applicable to a total income comprised of the amount of such capital gains and all other income except capital gains. The gains relating to capital assets other than short-term capital assets are to be taxed either at a flat rate of 25 percent or at a rate applicable to a total income comprised of the amount of such gains and all other incomes except capital gains, whichever is less.

The losses arising in respect of short-term capital assets can be set off against the capital gains relating to short-term capital assets as well as other capital assets and any such loss as is not fully so set off can be carried forward to the succeeding assessment year or years to be set off against the capital gains relating to short-term capital assets for those years. The carry-forward will be restricted to eight assessment years. The losses arising in respect of capital assets other than short-term capital assets can be

(c) The effective rate of tax on royalties received by a foreign company (which has not made the prescribed arrangements for the declaration and payment of dividends within India) from an Indian concern in pursuance of an agreement made with the Indian concern on or after 1st April, 1961, and which has been approved by the Central Government, is proposed to be continued at 50 percent.

(d) The effective rate of super tax payable with reference to bonus shares issued is proposed to be continued at the existing rate of 12½ percent.

Export Incentive

An incentive for export promotion has been provided for all assessee other than foreign companies (which have not made the prescribed arrangements for the declaration and payment of dividends within India). A rebate of one-tenth of the income tax and super tax attributable to income from exports out of India will be allowed in such cases. The Central Board of Revenue will make rules for the com-

CAPITAL, 26th April, 1962.

set off only against capital gains relating to any other similar capital asset. The net losses, if any, relating to capital assets other than short-term capital assets are not to be carried forward to any subsequent year.

In regard to losses under the head "capital gains" which had arisen for the assessment year 1961-62 or any earlier assessment year and have not been fully set off and are available for being carried forward within the limit of eight assessment years, only such portion of the losses as relates to short-term capital assets is to be carried forward to the assessment year 1962-63 or any subsequent assessment year. A short-term capital asset is defined as a capital asset which is held by an assessee for not more than twelve months immediately preceding the date of its transfer.

(b) Companies. In the case of companies also, capital gains are to be considered in two parts—those relating to short-term capital assets and those relating to other capital assets. Capital gains relating to assets other than short-term assets are to be taxed at the rate of 30 percent (25 percent being income tax and 5 percent being super tax). Capital gains relating to short-term capital assets are to be aggregated with all other incomes (except capital gains relating to assets other than short-term assets) and taxed accordingly. As regards set-off and carry-forward of losses, the position is to be the same as in the case of assessee other than companies. [Clauses 3, 5, 6, 7 and 11].

Income Tax Rebate on Cumulative Time Deposits

An amendment proposed to be made to Section 87 of the Income Tax Act provides that deposits made in a 10-year account or a 15-year account under the Post Office Savings Bank (Cumulative Time Deposits) Rules, 1959, as amended from time to time, will be entitled to a rebate of income tax in the same manner as contributions to recognised provident funds or premia paid for life insurance. [Clause 8, sub-clause (i)].

Higher limits for life insurance premia, etcetera

Another amendment to Section 87 of the Income Tax Act seeks to enhance the maximum limit up to which income tax rebate is available in respect of life insurance premia, contributions to provident funds, etcetera, to Rs. 10,000 in the case of individuals and Rs. 20,000 in the case of Hindu undivided families. [Clause 8, sub-clause (ii)].

Minimum Amount of dividend to be distributed by companies in which the public are not substantially interested

At present, a company in which the public are not substantially interested is required to distribute at least 50 percent of the distributable income, if it is an industrial company and 65 percent if it is any other type of company (other than an investment company). The said percentages of 50 and 65 are proposed to be reduced to 45 and 60, respectively, as a sequel to the raising of the general rate of tax on Indian companies from 45 percent to 50 percent. [Clause 10].

Entertainment Expenses

At present, entertainment expenses incurred by a company are allowed at a graduated scale, the maximum amount admissible being Rs. 1,00,000. This scale is proposed to be reduced, the maximum amount admissible being fixed at Rs. 60,000. [Clause 4].

Wealth Tax

It is proposed to abolish the exemption available in respect of shares held in new industrial companies. Part I of the Schedule to the Wealth Tax Act is proposed to be revised. The slabs have been recast and the rates of tax on the two highest slabs are proposed to be raised to 1.75 percent and 2.5 percent, respectively. [Clause 12].

Expenditure Tax

It is proposed to suspend the operation of the Expenditure Tax Act for the financial year 1962-63 and the subsequent financial years. [Clause 13].

CAPITAL, 26th April, 1962.

Stocks and Shares

NARROW FLUCTUATIONS IN POST-BUDGET TRADING

Wednesday Evening.

THE striking feature of the Calcutta stock market is that share prices have fluctuated narrowly during the post-Budget trading. This is probably due to the fact that opinion on the new tax proposals of the Central Finance Minister has been divided. When the Budget was presented on Monday evening, prices were marked up because Mr. Desai proposed to raise less revenue from new taxes than the stock market had expected. But the initial steadiness has proved short-lived. It is now being realised that, contrary to the general policy outlined by the Planning Commission, the Finance Minister has decided to raise substantial revenue by direct taxation, instead of concentrating on indirect levies. The proposal to raise the corporation tax is likely to hit companies hard at a time when operations in the corporate sector are being hampered by the shortages of transport, power, raw materials and coal. As a result of the increased corporation tax, many companies may have to make a cut in the dividends. Whether companies will be able to plough back sufficient resources into the business for expansion and modernisation is also doubtful.

The decision to levy income tax and super tax on gains resulting from the disposal of capital assets within one year from the date of their acquisition, will discourage capital formation. Investment in new shares will suffer because they will no longer be exempt from the wealth tax. The concessions on inter-corporate dividends are likely to give only a marginal benefit. The recommendations of the Mudaliar Committee for tax reliefs on exports have been ignored: only token relief is proposed by exempting export earnings from the higher corporation tax.

The effect of the various excise duties on industry is difficult to ascertain precisely at the present stage. Although the cut in the tea export duty and the partial refund of the excise duty on tea exports have been welcomed, the decision to increase the basic excise duty on tea is regretted. Considering the increased competition in foreign markets, the relief given for tea exports is not considered sufficient. The commoner teas are difficult to sell in foreign markets, and their internal offtake will be hampered by the higher excise duty.

The cotton mill industry has been given a raw deal. It is facing a difficult time due to the growing shortage of cotton. The increased excise duty on cloth and yarn will place a heavy burden on it. It is doubtful to what extent the duty can be passed on to consumers, because the prices of piecegoods are being regulated under a voluntary stamping scheme. The excise duty on electric cables and wires is considered high, and a portion of the levy may have to be borne by the manufacturers themselves. Cigarette manufacturers have not been particularly prosperous lately and they will be hit by the increased excise duty on unmanufactured tobacco and cigarettes. The excise duty on jute goods has caused a great deal of concern. If the mills are obliged to pay the excise duty first on their entire output, exports may be hampered, as refunds of the excise duty will involve a great deal of delay. Whether domestic consumers will be willing to pay more for jute goods is also doubtful.

Indian Iron have closed around Rs. 25.85. At the clearing on Wednesday, sentiment has become steadier, because the carry-forward charges have been moderate. This is largely due to the easier money supply. Indian Oxygen have been an outstanding feature in the engineering section and have improved due to the proposal for issuing bonus shares in the proportion of two-for-five. Guest, Keen, Williams and Jessop have recovered at the close. Texmaco have fluctuated due to speculative manipulations. Indian Standard Wagon and Braithwaite have been steady on the prospect of bonus issues.

Among miscellaneous shares, support has been maintained for Dunlop Rubber, Alkali Chemical, Metal Box and Britannia Biscuits. Hindustan Motors have been sluggish. Sustained interest has been taken in Indian Tack and Nail and India Carbon. Dr. Paul Lohmann and S. S. Duncan have been steady.

There has been scattered support for selected coal shares on hopes of an early rise in the price of the commodity. East Indian Coal have attracted attention on the possibility of a new share issue in the near future. For the time being, it has decided to offer debenture stock for Rs. 50 lakhs. Burrakur, Bengal, Amalgamated and Central India have been bought.

Selected jute shares have gained further on the view that mills are making fair profits. Support has been forthcoming for Bally, Northbrook, Anglo-India, Kankarrah, Barnagore and Kelvin. Birla have recovered on replacement buying.

Cotton mill shares have on the whole been depressed. Bharat Commerce, Elgin and J. K. Rayon are being quoted lower, due to the increased excise duty on cloth and yarn.

Prices of sugar shares have fallen on a predominance of sellers. Investors are disappointed because the excise duty has not been reduced to promote domestic consumption. Belsund, Carew, Ramnugger Cane and Cawnpore have weakened.

Bank shares have been extended to United Commercial and United Bank.

Selected tea shares have improved due to the tax reliefs given to the industry on exports. Tezpara, Hantapara, Hasimara and Bishnauth have hardened.

There has been a small increase in turnover in Government securities due to institutional support. Easier money conditions have increased purchases by the banks. Prices of short and medium-dated stocks have become steadier. Business has been done in the 3 percent Conversion loan 1986 around Rs. 71.10.

Bombay Market

FAVOURABLE REACTION AT FIRST

BUT CAUTION DEVELOPS ON SECOND THOUGHTS

Wednesday Evening.

WITH alarming forecasts of a substantial increase in the size of the revenue deficit, Dalal Street's initial reaction to the Central Budget was quite favourable. Although the

top gains recorded in the post-Budget session were pared by heavy profit-taking, the closing prices on Monday showed substantial gains over the previous week-end levels. Bombay-Burmah led the rise and hit a new high for the year on hectic buying, following the encouragement given to tea exports through a reduction of the export duty and the rebate in excise duty. The rise in cotton mill shares—in spite of the increased excise burden of about Rs. 12 crores on the industry—reflected the generally improved tone of the market. There was, however, hardly anything in the taxation proposals to justify the stock market's bullish fervour noticeable in Monday's special Budget session, except perhaps that the gloomiest forecasts had not come true.

The optimism of speculators was shared by only a few in and around Dalal Street. In industrial circles, it was generally felt that the market had treated lightly the proposed increase in corporation tax from 45 percent to 50 percent, although it would adversely affect the disposable surplus and capital formation by companies. In spite of the welcome exemption of export earnings from the enhanced rate of corporation tax and the concessions relating to inter-corporate dividends, the estimate of additional income of Rs. 10.25 crores from the increase in corporation tax is believed to be a gross under-estimate. The additional excise burden of about Rs. 12 crores on the textile

Rayon is more lustrous than silk and yet closely resembles it in the natural quality and touch. J. K. Rayon has a quality of its own—the quality that comes from research, technique and experience. Look for the trade mark when you buy J. K. Rayon. Permanent yarn available in different deniers.

J. K. RAYON

industry, at a time when the cotton supply position has already cast doubts on its ability to repeat the 1961 performance, will, it is felt, have a significant bearing on the outlook for cotton mill shares, particularly those manufacturing finer varieties.

The market thinks that the levy of income tax and surcharge at the full personal rates on capital gains earned through the sale of assets, including shares, within a year of acquisition will check unhealthy staging in new shares. Similarly, the inclusion of the shares of new companies for wealth tax purposes will discourage the firm allotment of large blocks of new issues which, apart from the prospects of capital appreciation, had the additional attraction of being exempt from the wealth tax. Both these measures are expected to promote wider ownership of capital. The increase in wealth tax in the highest two slabs has attracted little comment, on the view that it is not likely to impose any serious additional burden. The abolition of the unproductive expenditure tax has been welcomed. Second thoughts on the Central Budget have, however, induced a cautious tendency in the market.

Tata Steel closed at Rs. 140.75 and Indian Iron at Rs. 25.20 on rumours of an early increase in the retention price of steel. Among engineering shares, scattered support was extend-

ed to Tata Locomotive at Rs. 356 and to Alcock Ashdown at Rs. 332. Larsen and Toubro were sold freely at Rs. 33.50 on the news that the rights shares would be issued at a substantial premium. Motor-vehicle shares were quietly steady. Hindustan Motors made Rs. 19.64 and Premier Automobiles Rs. 131.

In the cotton mill section, Century were wanted at Rs. 621 and Bombay Dyeing at Rs. 69.50. Svadeshi were steady at Rs. 285 on increasing the taxable ordinary dividend from 17 percent to 19 percent. This is the second year in succession that the dividend has been raised. New Great improved to Rs. 310 and Tata Mills to Rs. 77.50 on declaring higher dividends.

Miscellaneous shares moved in line with the general trend. Among sugar shares, Belapur met with support at Rs. 236, but Phaltan were offered freely down to Rs. 109. Steamship company shares were quiet, and business passed in Scindia Steam at Rs. 12.84. Among mining shares, Shivrajpur Syndicate declined to Rs. 38 on rumours of a cut in the dividend. Chemical shares were quietly steady, and Tata Chemical were done at Rs. 17.04. Amar Dye-Chem declined to Rs. 320 on reducing the taxable ordinary dividend from Rs. 12 to Rs. 9 a share. The Company is contemplating raising further share capital to finance expansion.

Bank shares were steady, and Bank of Baroda were bought up to Rs. 114.50 on the news that rights shares would be issued at a premium of Rs. 15 a share. Bank of India were done at Rs. 117 and Central Bank at Rs. 64.50. Among insurance shares, New India Assurance met with support at Rs. 66.50.

Scattered interest was taken in selected electric company shares. Ahmedabad were placed at Rs. 93.20 and Tafa Power at Rs. 1,102.50.

Madras Market

NEW DIRECT LEVIES CAUSE CONCERN

TAX RELIEFS CHEER TEA INVESTORS

Tuesday Evening.

ALTHOUGH some of the new tax proposals of the Central Finance Minister have caused concern in Madras stock market circles, selling pressure has been absent. It is feared that the increase in the corporation tax will prove burdensome, and that companies will not be able to pay reasonable dividends and plough back enough resources into their business. The decision not to exempt new shares from wealth tax, combined with the imposition of income tax and super tax on capital gains accruing within one year of the acquisition of capital assets, is likely to discourage capital formation.

However, the adverse effect of these taxes appears to have been offset to a large extent by the various concessions given by the Finance Minister. The exemption of export earnings from the increase in the corporation tax has been welcomed. Tea interests have been cheered by the fact that the export duty on the commodity has been cut and a portion of the excise duty on exports will be refunded. Investors in cotton mill shares have turned cautious because the increased excise duty on cloth and yarn will harm the profits of mills. The industry has been facing a shortage of cotton, and the export of piecegoods has become difficult due to increased foreign competition.

Bank shares have been quietly steady, and Andhra have been done at Rs. 100. Business has passed in Indian at Rs. 180 and in Indian Overseas at Rs. 177. Among electric company shares, Negapatnam have been taken at Rs. 12.10 and Salem-Erode at Rs. 15.25. Vellore have been steady at Rs. 15.25 and West Coast are being quoted at Rs. 16.12.

Sugar shares have shown mixed trends. Support has been forthcoming for F.I.D. at Rs. 40 and for Deccan at Rs. 10.08. United Breweries have been quiet at Rs. 82.25 and Travancore at Rs. 7.15. Mysore have been taken at Rs. 53.40 and India at Rs. 9.65.

In the planting section, selected tea shares have been supported due to the fiscal relief given to the industry. Business has been done in Blue Mountain at Rs. 2.58 and in Lucky Valley at Rs. 10.60. Anandam have been taken at Rs. 13.22 on paying a taxable ordinary dividend of 18 percent. Cochín Malabar have been quiet at Rs. 7.10 on paying a taxable interim ordinary dividend of 9 percent. Consolidated Coffee have weakened to Rs. 18.25, but Coonoor are being wanted at Rs. 23. Ouchterlony have been easier at Rs. 3.98 on declaring a taxable ordinary dividend of 12 percent and Periakaramalai weaker at Rs. 3.50. Parkside have been steady at Rs. 23 on declaring a taxable interim ordinary dividend of 7½ percent. Savamalai are being

CAPITAL, 26th April, 1962.

dealt in at Rs. 2.85 on announcing a taxable ordinary dividend of 16 percent. Travancore Rubber have been quoted at Rs. 12.80 and Teekoy at Rs. 5.45.

Among textile shares, Adoni have been done at Rs. 13.10 on declaring a taxable ordinary dividend of 8 percent. Buckingham have been placed at Rs. 281 and Bangalore Woollen at Rs. 262. Kadri have been steady at Rs. 140 on paying a taxable ordinary dividend of 12 percent. Lakshmi are being quoted at Rs. 165.50 and Madura at Rs. 38.25. Palani Andavar are being taken at Rs. 232.50 and Rajalakshmi have been dealt in at Rs. 113 on declaring a taxable ordinary dividend of 20 percent. Sivanandha have gained at Rs. 26.25 on paying a taxable ordinary dividend of 26 percent. South India Viscose have hardened to Rs. 184 and Travancore Rayon to Rs. 42.10.

There has been support for selected miscellaneous industrials. Aluminium Industries have been taken at Rs. 23.50 and Ashok Leyland at Rs. 8.86. F.A.C.T. are being quoted at Rs. 8.10 and Enfield at Rs. 12.05. India Cement have been indicated at Rs. 8.97 and Mettur Chemical at Rs. 12.30. Dalmia Cement are being bought at Rs. 13.50 and Binny at Rs. 37.5. Kirloskar Electric have been steady at Rs. 20 and Madras Rubber at Rs. 21.25. Business has passed in Parry's Confectionery at Rs. 4.37 and in Seshasayee Paper at Rs. 8.56. Spencer have been in demand at Rs. 23.80 and Standard Motors at Rs. 16.75. Textool are being quoted at Rs. 183.50 and Tube Investment at Rs. 290.

BIGGER WORLD TEA CROP FORECAST THIS YEAR

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE 1962 statistical position for tea, it appears, is quite sound. According to present trade estimates, world output this year may exceed the 1961 figure by 80 to 100 million lbs. This extra quantity could be absorbed if the consumption pattern of last year is repeated. Contrary to earlier apprehensions, a similar surplus was absorbed almost fully by the world market in 1961. It is widely believed that increased domestic consumption in producing countries has taken up last year's surplus of over a 100 million lbs. In the opinion of the *Financial Times* of London this could well be an answer to the rather gloomy report of the F.A.O. on tea prospects. The F.A.O. forecasts that if the present trends of production continue, there will be substantial excess supply in a few years, with damaging effects on prices, particularly of low quality teas. Output has grown at the rate of 2.5 percent a year since the mid-50's, compared with a rise in consumption of only 1.9 percent. But, the London paper points out, the gap has been filled by a sharp increase of

about 6.7 percent in the consumption of the producing countries themselves. India alone is taking at least 25 million lbs more a year, it says.

Tea interests in India are naturally worried over the Government of India's policy of holding down internal consumption. This is wrong. A strong and healthy internal demand is considered essential as a buffer against excessive world production. In fact, a good internal market has helped the Indian producers to a great extent during the 1961-62 season. The average price fell by only 35nP a kilogram because of the buoyant domestic demand. Tea interests also point out that there need not be any apprehension that, unless internal consumption is curbed, there will not be enough for export. The tea industry in India has proved its ability to produce enough to meet any reasonable increase in demand, both internal and external, they assert.

Higher Wage Costs in Rubber

The United Planters' Association of Southern India is distressed that

the Central Government is unwilling to grant an increase in the statutory price of raw rubber to meet the additional burden on the rubber-growing industry, resulting from the Wage Board's recommendation for an interim wage increase. The Rubber Products Sub-Committee of the Association has characterised as "most regrettable" the decision of the Government to accept the recommendation of the Wage Board for payment of increased wages, while rejecting the industry's suggestion for raising the raw rubber price. The Committee met in Cochin last week to consider this question.

Early this month, the Central Government had notified the interim wage increase for labour and staff in the rubber-growing industry, as recommended by the Wage Board. Workers will get 8nP to 15nP more in their daily wages and staff will get Rs. 10 a month more.

The price of rubber in India is statutorily fixed on the recommendation of the Tariff Commission. The price was last fixed in 1930, with no increase in the net price receivable by the producer. A sum of Rs. 5 for every 100 lbs was included in the cost structure against contingencies. But this was only an *ad hoc* provision made to meet the increase in the costs of three specific items after 1958. In the last enquiry, the Commission did not take into account the increase in cost due to the rise in the number of paid holidays for workers, provision of extra amenities and increases

CAPITAL, 26th April, 1962.

in the cost of stores, manure, etcetera. Therefore, the sub-committee feels that the contingency provision has already been exhausted and is hence not available for any subsequent increase in costs. Just when the Tariff Commission's report was submitted to the Government of India, the Kerala Government announced a four-fold increase in the plantation land tax, which resulted in an increase of over Rs. 2 for a 100 lbs of raw rubber produced. This additional burden has not been covered by increase in rubber prices. When the Wage Board for the rubber plantation industry made its recommendation for an interim increase in wages, it was fully aware of the rise in costs, and therefore recommended a suitable increase in the price of raw rubber. The rejection of this recommendation for a compensatory increase in the rubber price is most regrettable, says the Committee.

Case for Price Increase

The reason given by the Central Government in its report, the Committee points out, only goes to show that it took no account of the increase in the cost of production brought about by tax measures adopted by the Kerala Government and by other increases in the cost of industrial supplies and services during the past three years. It has also not taken into account the fact that the Kerala Government has not yet decided to exclude the element of depreciation included in rubber prices in spite of the Tariff Commission's and the Central Government's recommendation to the contrary. Thus the producer is left with far less in his hands than the Tariff Commission intended when it fixed the rubber prices in 1960. Now the interim wage increase has added about Rs. 3.56 for a 100 lbs to the cost of production. This does not take into account the increase arising from payments towards provident fund, gratuity and other benefits, all of which are payable under the interim increase, the Sub-Committee concludes.

World Rubber Production

World production of natural rubber exceeded consumption in 1961, after ruling lower for three years. According to the latest estimate of the International Rubber Study Group, production reached 2,105,000 tons in 1961, compared with 2 million tons in 1960, while consumption was 2,085,000 tons. Included in the consumption figures are the estimated gross imports into Russia, which nearly doubled in 1961 to 326,500 tons and those into China which, on the other hand, fell by more than one third to 81,000 tons.

Buffer Stock Idea

An international buffer stock is the "only sure solution" to the problem of rubber price fluctuations, according to the Malayan Rubber Producers Council. The annual report of that body says that the Malayan Government is moving in line with this view. Malaya, it is expected, will press for the acceptance of this suggestion at the next meeting of the International Rubber Study Group which is scheduled to take place in Washington next month.

According to the Malayan Rubber Producers Council, efficient natural rubber producers have little or nothing to fear about competition from the present range of synthetics being marketed and those likely to be marketed within the foreseeable future. "The rubber producing industry in Malaya as a whole has been gearing itself over the last several years to become competitive with synthetics, and the measure of success achieved can be gauged by any casual visitor to the Federation of Malaya during his travels through the vast areas which have been planted or replanted with high-yielding pedigree stocks," says the Council's annual report.

New Delhi

Nationalising Light Railways: Official Policy Clarified

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India does not propose to nationalise the Shahdara-Saharanpur Light Railway at present, it is officially stated here. Its general policy on the nationalisation of branch line railways still run by private firms is that all available resources should be used for creating new transport capacity under the third plan rather than in acquiring already existing lines. So no light railway should be nationalised unless it becomes unavoidable. The Government carefully considers every individual case when the question of purchasing different lines comes up.

The following branch line railways are still in the private sector: Bankura-Damodar River Railway, Ahmedpur-Katwa Railway, Burdwan-Katwa Railway, Futwa-Islampur Light Railway, Shahdara-Saharanpur Light Railway, Arrah-Sasaram Light Railway, Dehri-Rohas Light Railway, Howrah-Amta Light Railway, and Howrah-Sheakhala Light Railway.

Shipyard in Cochin

The British firm of consulting engineers, Sir Bruce White, Wolfe Barry and Partners (India) Ltd, is tendering for the shipbuilding yard which is proposed to be located in Cochin, it is learnt here. The economics of the shipyard is being assessed with the data available from the Visakhapatnam shipyard. A thorough examination will be possible only after the technical consultants, who are expected to be appointed shortly, submit the detailed project report. The technical consultants will be asked to design the shipyard, incorporating the latest techniques and facilities for hull construction. In addition, they will prepare an estimate of the shipyard's requirements for training supervisory personnel. They will also advise on their training. Meanwhile, steps are being taken to train some skilled workers in the training school of Hindustan Shipyard in Visakhapatnam. A scheme to train some more persons, who have completed their courses at the Industrial Technical Institutes in Kerala in some similar industries, is also receiving attention.

Atomic Power Station

The Americans and the French are competing to get the contract for the atomic power station for the west coast of India. The Americans, it is learned, have offered to supply the plant at the price it obtains in the U.S.A. In other words, their price includes freight, insurance, landing charges, etcetera. But the Government should not only consider the cost of the station but also that of raw materials. Unlike the French, the American model will require enriched uranium, which India does not produce, so she will have to import it. Although the U.S. equipment might be cheaper, there will be an annual foreign exchange drain to feed the station with imported uranium. All these factors are being examined.

Making Textile Machinery

Textile Industries Machinery Corporation of Dehra Dun has been permitted to manufacture textile machinery with Russian collaboration. This will be the first venture to manufacture textile machinery in collaboration with Russia.

Replacing Plain Looms

The Government of India has decided to permit the installation of automatic looms in cotton mills for replacing their existing plain looms.

Marine Diesel Engines

A proposal to set up a marine diesel engine factory is being considered by the Central Ministry of Steel and Heavy Industries. A committee has examined the items most suitable for indigenous production. The Government, it is stated, will encourage their production within the country.

Fishing Craft Mechanisation

It is proposed to import some 250 or 300 marine diesel engines from Japan to meet the requirements of various States for the mechanisation of fishing craft. A sum of Rs. 30 lakhs has been allocated for this purpose under the ven credit scheme. The import of marine diesel engines will be made through the State Trading Corporation.

Manufacturing Tractors

The terms of collaboration of the French firm, Renault, with its Indian partners have been finalised, it is learnt here. Technical assistance to

be offered by Renault will include know-how, training of Indian engineers in France and setting up a training centre in India. The new undertaking, which is to be set up near Delhi, will manufacture 3,500 tractors a year, using 35 horse-power Perkins diesel engines. The tractors are already being produced in India. It is hoped that, by the fourth year, the Indian Company will be able to produce 90 percent of the components required in manufacturing tractors. To meet the foreign exchange requirements, the Indian Company has initially undertaken to export \$2 million worth of goods from India.

The following are the conditions for the allotment of such looms:

1. Normally the minimum number of automatic looms allotted will be 48 and the maximum 144, in a single unit.

2. All automatic looms will be of indigenous make and no automatic looms will be allowed to be imported, unless against entitlements for machinery under the export promotion scheme.

3. The reed space formula, currently applicable for replacement of plain looms by plain looms, will also be applicable for replacement by automatic looms.

4. The allotment of automatic looms will be governed by the recommendations of the fifteenth session of the Indian Labour Conference concerning modernisation and rationalisation.

5. Mills shall export 50 percent of the production for a period of five years and shall execute a bond supported by a banker's guarantee of an equal amount. The normal rate of production will be taken as 24,000 yards a year for each loom for medium and coarse cloth and 20,000 yards a year for each loom for fine and superfine cloth. The penalty for shortfall will be calculated at 10nP a yard.

Textile Exports Down

There has been a fall in exports of all textiles, including hosiery goods, during the past two years. The main reasons for the fall in hosiery goods exports are keener competition from other exporting countries like Japan and Hongkong, the higher prices of Indian goods and the setting up of hosiery factories in overseas markets, where the tariff has been raised to give protection to the local industry.

New I.C.I. Venture

The Imperial Chemical Industries (India) Private Ltd has been granted a licence for establishing a new industrial undertaking in Bombay

under the name of Chemicals and Fibres Ltd. The latter will produce polyester staple fibre (terylene). The plant will have a capacity of 4.5 million lbs a year.

Developing Small Industries

The Central Ministry of Commerce and Industry has, through the courtesy of the Ford Foundation, invited an international perspective planning study team for small-scale industries. The team consists of the following six economists and planners from the U.S.A. and Europe: Messrs Hans Grundstroem, Sweden (leader of the team), Morris Budin, U.S.A., Anders Bartal Ejerhed, Sweden, Winfield B. Heinz, U.S.A., H. Edwin Robinson, U.S.A., and Morris J. Solomon, U.S.A. (members).

The team began its work on 16th April, 1962. It will stay in India for four to six weeks. Their study is expected to include a broad review of the existing development programme for small-scale industries and the determination of "some analytical, statistical and engineering approaches concerning efficiencies of sale, management and engineering abilities in various small industries, as well as indication of new directions of development on a long-term basis, keeping in view the future planned economic growth in India."

Orissa Cement Factory

The Government of India has agreed in principle to permit the Government of Orissa to set up a cement factory in Sambalpur district. It will have a capacity of 300,000 tons.

Seminar on Planning

The seminar on "the paths of planned economy in India" has set up a working group "to define the minimum level of income, and to fix a definite period within which every attempt should be made to secure this minimum income for all households in the country. It was of the opinion that, among the objectives of planning, the first priority should be given to achieving a "national minimum of basic consumption goods and social amenities for all households in the country." The working group consists of the following: Professor D. R. Gadgil, Professor B. N. Ganguli, Professor D. Ghosh, Dr. P. S. Lokanathan, Mr. M. R. Masani, Mr. Asoka Mehta, Mr. Shriman Narayan, Mr. Pitambar Pant, and Dr. V. K. R. V. Rao. Dr. Rao will be the convener of the working group, which has been requested to complete its report by the end of September this year.

World Trade Continues to Expand: Share of Britain Drops

(FROM OUR LONDON CORRESPONDENT)

WORLD exports increased fairly steadily from the third quarter of 1960 up to the same period last year, and provisional figures for the fourth quarter of 1961 suggest that the level of the third quarter was maintained. For 1961 as a whole, the value of world exports was about 4½ percent more than in 1960, a rate of increase close to the average for the 1950s, but less than in 1959 or 1960. Exports of primary producers fell in the autumn of 1960, but recovered sharply in the spring of 1961. This higher rate was maintained in the third quarter of last year, but in the fourth quarter, some decline probably occurred. The figures are given in the *Board of Trade Journal*.

The growth in industrial countries' exports was checked in the second quarter of 1961 by a fall in their sales to primary producers, which more than offset the further rise in their trade with each other. Expansion was resumed in the second half of 1961, when exports to primary producers recovered slightly, but not sufficiently to raise this trade above

the first quarter level. During 1961, the industrial countries' exports increased by 5 percent (fourth quarter of 1960 to fourth quarter of 1961); there was an increase of some 9 percent in their intra-trade and a slight fall in exports to primary producers. The latter's exports were almost the same at the end of the period as at the beginning.

O.E.C.D. Does Well

Total exports of member-countries of the O.E.C.D. (Organisation for Economic Co-operation and Development) were expanding rapidly during the first three quarters of 1961, but in the fourth quarter, they were little different in value from the third. This halt in the rise was widespread and affected most of the principal countries except Italy. In spite of it, exports by the European members of the O.E.C.D. were 9 percent more in the fourth quarter of 1961 than a year earlier. U.K. exports increased by nearly 5 percent during 1961, those from France and West

Germany increased by about 6½ percent, and Italian exports were over 25 percent more.

Canadian exports showed much the same pattern of change during 1961 as those of the main European countries, but U.S. exports fell in the second quarter, and by the fourth quarter, were only 2 percent higher than the first quarter level. The expansion in trade between the European member-countries of the O.E.C.D. has been gradually slowing down during 1961. The increases in value, compared with the previous quarter, have been 5½ percent, 3½ percent, 2½ percent and 1 percent in the first to fourth quarters, respectively.

Exports of industrial products by the main manufacturing countries in 1961 were 5 percent more in value than in 1960. Exports from West Germany, Italy, Sweden and Switzerland increased by about 10 percent or more in value between 1960 and 1961. The change compared with a year earlier was much less in

CAPITAL, 26th April, 1962.

the fourth quarter for West Germany, Sweden and Switzerland, but this may well be due to relatively high exports in the fourth quarter of 1960 rather than any change of trend in 1961. The other three Continental countries included in the group—Belgium, France and the Netherlands—showed increases in export of manufactures in 1961, but these were less than the 5 percent average for all the main manufacturing countries. U.K. exports increased by only 4 percent, so that there was a further fall in its share of the total, but the decline was considerably less than in recent years. The U.S.A. was the only country which did not share in the increased trade in manufactures in 1961: it showed a marginal fall. Canadian exports were 2 percent higher and those from Japan 4½ percent more.

Stock Movements

A Treasury analysis of stock movements in the past two years suggests that the slackening of industrial production in 1961 may have been due mainly to an exceptionally large fall in stock accumulation by manufacturers. In the first half of 1961, while sales to final buyers were still rising fairly rapidly, manufacturers were running down their stocks at an almost unprecedented rate. This had the effect of "moderating the rise in the third quarter and stocks declined further. The combined effect was "to depress production slightly". However, towards the end of the year, there seems to have been a renewed increase in stock-building, which helped to check the decline in production in the late autumn. This analysis appears in the Treasury's latest *Bulletin for Industry*. It suggests that the industrial "stagnation" of 1961 may have been largely due to what the Americans know as an "inventory recession".

Whether the U.K. economy is on the uptrend now is not certain. In the first half of last year, while manufacturers' stocks dropped by £242 million, those of wholesalers increased by £7 million, those of retailers by £55 million, and the stocks of "other industries" rose by £30 million. A shift from manufacturers to traders, and possibly from voluntary stock-building to involuntary stock-holding, seems to have been going on. In the second half of last year, however, manufacturers actually added £55 million worth to their stocks, while the other three groups reduced theirs by a total of £128 million. These figures suggest a very different situation. The trading shelves may have been largely cleared of unwanted stock, while the manufacturers found their stocks uncomfortably low. Just why they should have started building up stocks again is not quite clear because production has been running more or less level for many months, and the ratio of stocks to output rose sharply in the final quarter of last year. Indeed, at the end of the year, the ratio was high compared with most recent years and well above its 1958 peak.

Taxing Capital Gains

The 1962 Finance Bill is one of the most complicated of recent years, thanks mainly to the new tax on short-term capital gains, which requires seven clauses and two schedules, covering 30 pages, out of a total of 28 clauses, 11 schedules and 73 pages. Members of Parliament have seldom been confronted with such a maze of close print. In an effort to help understanding, the Treasury also issued a 12-page White Paper on the taxation of short-term gains. This most unusual form of special guidance will, no doubt, be welcomed by accountants and other expert advisers, as well as by laymen.

PROPOSED EXCISE DUTY HITS GUNNY PRICES

THE Central Finance Minister's Budget proposal to levy an excise duty on jute goods caused a sharp drop in prices when it was first announced. But subsequently there has been a moderate recovery on short-covering. The excise duty proposed is Rs. 250 a metric tonne on hessians and Rs. 125 a metric tonne on all other types of jute goods. The total revenue expected is Rs. 3.12 crores.

Mr. Desai claims that the purpose of the duty is to discourage internal consumption and thus promote exports. But the market strongly doubts whether this purpose will be achieved, internal consumption will be discouraged but exports will not thereby be promoted. The duty is unjustified for other reasons also. One is that the mills are still recovering from the heavy losses they suffered during the jute crisis last year; to penalise them at this moment is, therefore, extremely unjust.

The trade says that the duty will hit mainly sacking, since this is the category which is consumed in India. But actually both hessian and sacking prices have been affected. Hessian 40in. 10oz. closed at Rs. 50.25 in the futures market before the Easter holidays, but opened at Rs. 48.80 a 100 yards for May delivery on Tuesday morning, after the Budget. In the case of B Twills, the drop in the official futures market quotations over the same period was from Rs. 126.70 to Rs. 125.80 a 100 bags. But in unofficial trading, transactions at much lower levels were reported shortly after the excise duty was announced.

How, when and at what stage the excise duty will be collected is not very clear at the present stage. It is understood that a meeting has been arranged between the I.J.M.A. and the excise authorities to discuss the matter.

Better Retting Facilities

The need for stricter supervision in growing jute and the provision of adequate retting facilities was emphasised in these notes last week. While another large crop is a distinct possibility, there must be an improvement in quality. In the past decade, there has been a vast improvement in the quality of the jute grown in India. Not very long ago, Murshidabad jute was sold as jungle, and Calcutta mills could hardly be persuaded to touch western Purnea jute "even with a barge-pole". Nowadays jute from these districts is easily marketable. This is mainly because the improvement in mill machinery enables the use of lower-grade fibre. To a considerable extent, it is also because the quality of the fibre grown in these districts has improved greatly.

With the improvement in quality, the pattern of mill buying has changed over the years. In the past the highest grades of fibre were the most difficult to sell, because the demand for specialised goods was very small. Now, however, with the growth of substitutes and greater competition, the demand for high-grade fabrics is larger than it has ever been. Can one, then, hope to produce super quality jute goods without producing a super fibre to match it?

The improvement in jute fibres over the years has been rapid, but an intensified campaign for further improvement is now urgent and would have great possibilities. Ten

years ago, what was required was a crop yielding 70 percent or 75 percent of Bottoms. Today the proportions could very easily be reversed. With mills holding large stocks—the average holding of the industry is said to be about 20 weeks' needs—and with the greater part of the stocks consisting of lower-grade fibres, mills are going to be more selective than ever in their new crop purchases. The improvement in any crop depends greatly on the retting facilities. In many districts, the plants are spoiled by being retted in muddy water, which ruins the colour and the quality of the fibre. In other districts, where the retting and washing is done in cleaner water, no effort is made to wash away loose leaf, and the jute, though of good colour, contains masses of leaf particles. This reduces its market value. The importance of retting and the supply of good retting water was indicated in the report of a Jute Enquiry Committee some years ago. It proposed that the States concerned should subsidise the digging of new tanks and the renovation of old ones. It has not been possible to find out what has been done, but a survey of the jute districts shortly afterwards revealed only some half a dozen old tanks being renovated with no new ones being dug.

This matter has been dealt with at some length because, unlike the question of producing more fibre to a plant, it has not received enough attention. Most of the research has been directed towards securing bigger plants and higher yields, but improvement in retting must go hand-in-hand with other improvements. The balance of the crop to be bought under the jute buffer stock scheme is nearly 100 percent low-grade fibre. Unless something is done now to improve the quality of the new crop, high grade jute, suitable for specialities, will again be at a premium, and the general standard of all fabrics will show a deterioration.

Raw Jute Arrivals

Arrivals of raw jute at Calcutta and mill stations during March 1962 amounted to 753,750 bales—35,000 bales from Pakistan and 718,750 bales from India. Total arrivals so far in 1961-62 are made up of 329,150 bales from Pakistan and 5,417,750 bales from India. The total arrivals in March and those for July 1961 to March 1962 constitute new high levels.

THE JUTE MARKETS

Manufactured Goods: There were two holidays for Easter in the past week. With foreign markets also observing the holiday, most of them for longer periods, very little business was transacted. The market was quiet at the opening, and B Twills were quoted at Rs. 134 in the ready position. Hessians were slightly lower at Rs. 53.40 for 40in 10oz., and the general undertone was weak. Friday and Saturday were holidays. The weakness was more pronounced at the opening on Monday, when sacking fell by Re. 1 and hessians by 50p. Selling pressure in the speculative market caused weaker conditions, and many operators waited for the Budget proposals. The position of an excise duty on jute goods had the immediate effect of a drop of Rs. 3 in heavy goods, but prices recovered slowly after the opening, only to fall back later.

Opening quotations on Wednesday morning were, as follows:

	Apr.	May	June	July	Sept.	Oct.
40in. 71oz.	37.75	37.85	37.25	36.35	35.90	
40in. 8oz.	41.85	41.00	40.25	39.25	37.50	
40in. 10oz.	52.85	51.50	50.00	48.50	46.50	
B Twills	129.50	127.00	124.25	122.25	121.25	
Cornsacks	131.50	130.50	127.25	125.25	123.25	
Heavy Cees						
(Plain)	129.50	127.00	124.25	122.25	120.75	
A Twills	155.50	154.50	151.50	147.50	146.00	
Liverpools	148.50	146.00	142.50	138.00	137.50	

Raw Jute: Mills continued to buy slowly against their quotas, and prices showed signs of falling. High-grade jute was in very short supply, but mills bought more low-grade fibre than for some time past. Imports upcountry dropped considerably and were about 25,000 maunds to 30,000 maunds a day, mostly low-grade jute. Arrivals in Cossipore last week amounted to 200 wagons.

Opening quotations on Wednesday morning were, as follows:

	Landed at Mills (Basis Bottoms)	Rs. a 100 kilos	Rs. a md.	Shipments
Assam	80.38	20.00	April-May

THE FOREIGN JUTE MARKETS

DULL TREND IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE stalemate in jute continues. Very little business is being done in any section of the trade. Fibre sellers are doing practically nothing, and spinners and manufacturers are handling very few fresh orders for yarn and cloth. No one wishes to purchase any fibre or manufactured goods as long as the present unsatisfactory raw material situation persists. Hitherto, new crop reports have not been good due to lack of rain, but the position brightened up a little on the day before Calcutta and London closed for the Easter holidays. It is reported that beneficial rains have fallen in the jute-growing districts of Pakistan and that sowings, which had been held up, were proceeding

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the 'planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their 'planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

The market was dull in the past week. Business in seed was negligible and arrivals were very small. Mills were buyers for ready and forward deliveries, but sellers were not served. The oil section was steady. Stocks were running low and business was small as sellers were not inclined to do much forward business. The local market was firm with good demand, but stocks were low and business was done on a small scale. The latest quotation is as follows: ready April delivery Rs. 92 a quintal.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES—Contd.

O. Po., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve & other Funds	Accrue under Tea	Outturn and Average Price per Kz. lb. realised for crop	Estimate	NAMES	Accounts closed	Net Profits including taxation	Dividends per cent	Paid-up per Share	Latest Market Quotations as available until

BUDGET EUPHORIA IN THE STOCK MARKETS

It is an old and unquestioned prerogative of politicians to say one thing and do quite another. Not often before, however, can the prerogative have been exercised more calmly to the detriment of the investor than in the Budget which the Central Finance Minister, Mr. Morarji Desai, presented in Parliament on Monday of last week. Mr. Desai prefaced his tax proposals by saying: (1) that companies should go in more for equity capital rather than bank or other loan finance; (2) that the wider spread of share ownership should be promoted, especially since even people with modest incomes are beginning to subscribe to new issues; and (3) that companies which wish to branch into new lines of production should be encouraged to do so by starting new companies. But the tax proposals which he has presented go contrary to all three aims. In their current mood of ebullience, the stock markets have quietly ignored the point; and as the accompanying table shows, the rise in equity prices since the Budget has been considerable. But the operators of Lyons Range and Dalal Street might yet discover, on second thoughts, that the Finance Minister's soothing words have not been backed by complementary action. On the contrary, equity investment, and new issues in particular, may be among the things that are worst hit by the Budget proposals.

	Monday, 23rd April Morning Rs.	Post-Budget Session on 23rd April Rs.	Latest Rs.

The stock markets have been cheered by three main factors. One is that the total burden of the new taxes is not as heavy as they had feared. The second is that rumours have conveniently been revived that the long-awaited increase in steel retention prices is about to be announced. And the third is that recent company reports have been encouraging, in so far as they show that profits and turnover during the past year have risen. A minor boost has meanwhile been given by the bonus issue proposal from Indian Oxygen; vague hopes have arisen that, with the uncertainty about a further cut in the bonus issue tax now ended, more companies will come forward with such issues. But, to the outside observer, these factors do not add up to an adequate reason why share prices should have risen so sharply. To some extent, it is claimed, the rise is corrective in nature, in the sense that the markets had fallen earlier in anticipation of a very stiff Budget. But the fact has to be faced that the Budget is not only bad; it is particularly bad for the investor.

There are two taxes especially, the impact of the changes in which the markets do not seem to have fully appreciated. The first is the wealth tax: it has not only been raised, but the exemption from wealth tax given to any investments in the shares of new companies for five years has also

been withdrawn. The second is the capital gains tax; it has, in effect, been increased very sharply. The Finance Minister has nowhere explained clearly what the purpose of the changes is. But it is presumed that he has withdrawn the wealth tax exemption for new companies' shares because he wants to discourage promoters from taking up large blocks of their own new issues, and in this way impel them to seek more capital from the public. The point has been forgotten that the Controller of Capital Issues already has extensive powers to tell companies how much of their new capital they should offer to the public; what is sought to be achieved by a tax disincentive is, therefore, already being largely achieved by administrative pressure. Furthermore, the intrinsic worth of a new issue is often to be judged by the proportion of the money the promoters themselves are prepared to put in it. The shadier promoter's aim always is to stake little of his own money, and a lot of the public's. This class of promoter has reason to be satisfied with Mr. Desai's proposal.

Finally, there seems to be one other misconception which is at the root of the proposal. This is that India is flowering into a "share-owning democracy", so the contributions of the rich to joint-stock enterprise do not matter any more. The fact is that the interest in buying shares is becoming more widespread, but it is nowhere near so widespread that companies can raise capital from the public easily. The most favoured among the new issues are still those which come from reputable managements; in which the promoters stake large sums of their own money first; in which institutions like the Industrial Credit and Investment Corporation, or the Life Insurance Corporation, invest; and for which foreign capital and technical collaboration

are forthcoming. Share issues lacking in some or all of these advantages still run the risk of failure; numerous indeed are the ones which have in the recent past failed, some because the promoters themselves did not invest enough money.

While the stock markets and the Finance Minister ponder the point, a more careful analysis of the changes in the capital gains tax may not be irrelevant. The tax on short-term capital gains (that is, capital gains made on assets sold within one year of acquisition) has been drastically raised on the presumption that such gains are "speculative" in nature, and speculation is what all good socialists ought to deplore. But the fact has to be faced that, speculation or not, capital gains are what people go for when they subscribe to new issues. They know that they will not get adequate dividends for several years. What they want, therefore, is a capital gain meanwhile, even if it exists only on paper and is not actually realised. By taxing short-term capital gains more heavily (that is, as heavily as current income), the Finance Minister is merely ensuring that people will want bigger and quicker gains than those they have been accustomed to hitherto. New issues which do not promise such big and quick gains will be liable to suffer. It is for the Finance Minister to consider whether, morally or economically, that would be an improvement over the present situation.

Long-term capital gains (that is, capital gains made on assets sold more than a year after they have been acquired) are, for most people, to be taxed more heavily than hitherto, but still not quite so heavily as short-term capital gains. The mercy has presumably been granted on the ground that the former are in the nature of "investment", whereas the latter are merely the fruits of "speculation." Having made this fine distinction, for reasons that have more to do with morality than economics, the Finance Minister has plunged into a curious anomaly. He has decided that "speculative" losses can be carried forward and set off against future "speculative" gains, up to a period of eight years. But "investment" losses cannot be

Looking at India's trade area-wise, on the basis of data available for the eight months from April to November 1961, the United Kingdom appears to have regained her position as India's principal supplier; she had lost this position to the United States in 1960-61. Britain also continues to be the best market for this country's exports. The deficit with her may be smaller than last year. Exports to the European Common Market countries appear to have dropped; the trade deficit continues at the high level of previous years. Exports to the U.S.A. seem to be running at somewhat higher levels, while imports from there have recorded a decline. As a result, the deficit is likely to be smaller. Trade with eastern Europe displays an unfavourable trend—for the first time in the last four years. Exports have risen somewhat, but imports have increased even more. Transactions with Russia show a surplus, but the deficit with the other countries of the bloc is bigger. India's trade with the Middle East reflects a continuing deficit, evidently because of the large volume of oil imports from this area. With Africa also, India's trade continues to

be in deficit, although it appears to have been reduced by a cut in imports. Trade with south-east Asia shows roughly the same surplus as in the past, but the deficit with the Far East has declined, mainly through larger exports. Exports to Oceania continue to exceed imports, with neither imports nor exports showing any significant change. All in all, while India's exports appear to have made some headway, they have not changed the regional pattern of deficits and surpluses.

Among the commodities whose export has looked up in the first eight months of 1961-62 are jute goods, coffee, wool and other animal hair, raw cotton, leather, art silk manufactures, and iron and steel. On the other hand, cotton textiles, pepper, raw hides and skins, manganese ore, lac and vegetable oils have registered decreases. Tea, cashew kernel, oilcakes, unmanufactured tobacco, leather, mica and iron ore appear to have maintained the previous year's level. Among imports, foodgrains, raw cotton and iron and steel have dropped, while petroleum, as well as machinery, both electrical

and non-electrical, have risen considerably. The apparent decline in foodgrain imports is not explainable unless P.L. 489 deliveries by the U.S.A. are declining or the data on Government imports tend to be fully reported only after the lapse of a few months. Most other items have maintained the previous year's level. This is not surprising since imports are strictly regulated, and often tied to the earlier levels where they cannot be cut down. But as such a policy cannot continue indefinitely, and imports may have to be at least slightly liberalised for industrial items, the slow progress in increasing exports gives cause for concern.

	INDIA'S FOREIGN TRADE IN MERCHANDISE (Rs. crores)	
	1961-62 (Provisional)	1960-61 (Revised)
Exports	639.00	632.38
Re-exports	5.38	9.91
Imports	1,001.50	1,106.91
Balance of Trade in Merchandise	- 336.32	- 464.62

to Rs. 49 lakhs will be raised through public subscription some time this year. International Harvester, which is collaborating in the venture, will participate in the equity capital of the Company and also advance loans to cover the foreign exchange requirements of the project. The American Company's joint venture in India marks an important departure from its established policy for the past 130 years: up to now it has been operating in foreign countries only through fully-owned subsidiaries. Mr. Brooks McCormick, executive vice-president of International Harvester Company, said in a Press conference in Bombay last week that the departure from the Company's established policy was influenced by the desire of the American people to help India and by the need to find some way to mechanise farming in India. Mahindra and Mahindra holds a licence for manufacturing tractors, and this licence will be transferred to the new Company. The factory will be located in Kandivli, Bombay, and the plant will have an installed capacity of 3,500 tractors a year and matched implements. The project contemplates an initial period of 18 months during which plant and machinery will be installed in the new factory. At the end of the period, tractors will be produced with an indigenous content of 51 percent. The management of the new enterprise will be in the hands of Mahindras, while the products will be marketed in India exclusively through Voltas. The tractor is likely to be marketed under the name of "McCormick International B-275".

Rights from Central Bank

The chairman of the Central Bank of India, Sir Homi Mody, told shareholders at the annual general meeting held last week, that the directors have decided to increase the authorised capital of the bank from Rs. 6.30 crores to Rs. 10 crores, and to raise additional capital by the issue of 630,000 equity shares of Rs. 25 each to existing shareholders in the ratio of one new share for every two held on such terms as may be fixed by the Controller of Capital Issues. (A fuller version of the speech appears on another page of this week's *Capital*.) This will increase the paid-up capital of the bank from Rs. 3.15 crores to Rs. 4.72 crores. The present issued capital is made up of 1,030,000 shares of Rs. 50 each, Rs. 25 paid-up, and 210,000 A shares of Rs. 25 each fully paid-up. The A shares represent bonus shares issued by the bank in 1947. The chairman turned down shareholders' suggestion for calling up the reserve liability amounting to Rs. 2.62 crores on the partly-paid shares, on the ground that it would be a breach of faith in view of the undertaking given by the bank that the uncalled liability would not be called. The decision to raise additional capital is in implementation of the Reserve Bank's suggestion that in order to strengthen their equity base, banks should endeavour to achieve a ratio of 6 percent between owned funds (paid-up capital and reserves) and deposits. At the end of 1961, the owned funds of the Central Bank totalled Rs. 7.28 crores, compared with deposits of Rs. 220.2 crores, which gives a ratio of only 3.3 percent. The proposed increase in the paid-up capital will take this ratio to around 4 percent on the basis of deposits at the end of 1961. The ratio will naturally go down with any increase in deposits this year, but the transfer of 20 percent of the declared profits for 1962 will help in keeping the ratio up. Sir Homi Mody says that if the present pace in the growth of bank deposits is maintained, the attainment of the prescribed ratio of 6 percent may take a long time even with the transfer of 20 percent of declared profits to the published reserves.

The Central Bank did extremely well in 1961, with both deposits and profit recording an impressive rise. The dividend has been stepped up from Rs. 3.50 to Rs. 5 a share, subject to tax. But the chairman has sounded a note of warning that while the management will do its best to keep up the rate of growth in profits, the future will bring additional burdens. Progressively larger amounts will be needed year after year for the payment of premia to the Deposit Insurance Corporation. The implementation of the Tribunal's award is likely to impose a further burden. The Reserve Bank's proposals for strengthening the equity base and increasing the liquidity ratio of

CAPITAL, 3rd May, 1962.

banks, will also have their effect on the resources available for employment in the bank's business.

Goodyear India Expanding

The sharp rise of about Rs. 8 to Rs. 50 in the price of the ordinary shares of Goodyear India has taken the stock market by surprise because it was disappointed by the passing of the dividend for the year ended December 1961. The cheerfulness is obviously based on optimism concerning the Company's growth prospects. The tyre factory in Ballabgarh, near Delhi, was completed in 1961, so the full effect of the factory's operations was not reflected in the results. It is, therefore, hoped that during the current year, the working will improve a great deal because the factory is now working to capacity. The bullishness has been accentuated by the news that Goodyear India has been permitted by the Government to increase its present production capacity of 213,000 tyres and tubes to 513,000 tyres and tubes a year. Steps have been taken to implement the expansion scheme, and it may be completed during next year or so. The work of expansion will not interrupt the present production, which is likely to be around 213,000 tyres and tubes a year.

The balance-sheet for the year ended December 1961 shows that substantial sums have been ploughed back into the business—development rebate reserve has received Rs. 24 lakhs and general reserve Rs. 1 lakh. The carry-forward is Rs. 51.86 lakhs. Since a large amount has been ploughed back for expansion, the ordinary dividend has been passed.

The stock market for the time being is excited over the prospect of a rights issue. But to what extent the optimism is justified, it is difficult to say. In his recent address at the annual general meeting of Good Year India, the managing director gave no hints about a rights issue. On the other hand, the directors maintain that substantial amounts have been transferred to reserves in order to meet the requirements of working capital and other contingencies. Under the circumstances, investors have been left guessing about the financing arrangements for expansion. If internal resources are used for this purpose, shareholders should not take an optimistic view about the dividend in the near future. At the same time, the long-term prospects for ordinary shares are encouraging because the ordinary share capital of Rs. 2 crores is backed by reserves of more than Rs. 2 crores and fixed assets of more than Rs. 3.35 crores. In quoting the present price, the market has probably discounted the expansion which is proposed to be undertaken soon.

Outlook for Century Mills

The shares of Century Spinning and Manufacturing Company, which had been marked down from Rs. 642 to Rs. 615 within two days of the Budget, shot up to a new all-time high of Rs. 658.50 on 28th April. The smart recovery was due partly to optimism about relief in the proposed excise levy on cloth, and partly to the release of the directors' full report on the Company's working in 1961, giving details of the various expansion plans already on hand. The preliminary figures released along with the announcement of the final dividend showed that the Company had done extremely well in 1961 with both sales and gross profit establishing new records at Rs. 16.40 crores and Rs. 3.87 crores, respectively. The directors' report holds out the promise of a still better future with the completion of the expansion programmes. The expansion of the rayon plant from 72 spinning machines to 96 spinning machines has been completed, and the full increased production, it is expected, will be reached by May or June, when additional power will be released by the Maharashtra Government from the Koyna hydro power station. The construction of the factory building for the tyre cord plant is in progress, and machinery has started arriving. The plant, it is expected, will go into production early next year. The Company has been licensed to set up a rayon grade caustic soda plant, with a capacity of 30 tons involving a capital outlay of about Rs. 1.60 crores. Plant and machinery worth Rs. 80 lakhs

has been ordered, and negotiations for further orders are in progress. The plant, it is expected, will go into production by the end of 1963.

As for the Company's proposal to set up a modern textile unit outside Bombay, the directors state that they have engaged the services of the Swiss firm of Maurer Textiles S. A. for a period of three years. Negotiations are in progress with the Maharashtra Government for acquiring the necessary land. Out of the Company's total gross sales of Rs. 16.40 crores in 1961, the rayon section accounted for Rs. 5.83 crores, against Rs. 4.60 crores in 1960, and the textile section for Rs. 10.56 crores, against Rs. 8.85 crores. The additions to the rayon plant in 1961 amounted to Rs. 1.88 crores (against Rs. 1.08 crores in 1960), bringing the total gross value of the fixed assets of the rayon section to Rs. 9.25 crores, which has been written down to Rs. 6.17 crores. The expenditure to date on the tyre cord plant, now under construction, amounts to Rs. 27.82 lakhs. While the directors' report appears encouraging, the outlook for the Company's shares should be assessed with due reference to the additional burden arising from the proposed increase in the corporation tax, the revised structure of excise duties on cloth and yarn, and the precarious cotton supply position.

Kothari Textiles Pays Less

Although the directors of Kothari Textiles Ltd have reduced the ordinary dividend for 1961 from 10 percent to 8 percent, subject to tax, the working results of the Company show a small improvement over the previous year's performance. Sales have risen by about 6.7 percent from Rs. 1.78 crores to Rs. 1.90 crores, and the gross profit has increased by about 8.6 percent from Rs. 28.40 lakhs to Rs. 30.84 lakhs. The cut in the dividend follows the setback in the net profit resulting from a substantially larger provision for taxation. While the amount provided for depreciation is down from Rs. 16.50 lakhs to Rs. 15.96 lakhs and the development rebate returns gets Rs. 2.13 lakhs, against Rs. 4.05 lakhs, serve gets Rs. 2.13 lakhs, against Rs. 7.20 lakhs, taxation accounts for as much as Rs. 7.20 lakhs, against only Rs. 1.10 lakhs in 1960. The net profit after all appropriations amounts to Rs. 4.13 lakhs, against Rs. 5.76 lakhs in 1960. Since this is not sufficient to provide even for the proposed lower dividend, the directors have transferred Rs. 2.50 lakhs from general reserve. In the previous year also, they had to transfer Rs. 1 lakh from the same reserve and Rs. 1.12 lakhs from dividend equalisation fund to pay the dividend. The ordinary dividend absorbs Rs. 5.38 lakhs, against Rs. 6.72 lakhs, and the preference dividend Rs. 1.40 lakhs. The surplus of Rs. 29.146 is being carried forward, against Rs. 44.107 brought in. The directors state that the Whittins combing machinery installed towards the close of the previous year was commissioned in 1961. The additional cone winding machinery also was commissioned during the year. The Company placed an order for a 234-spindle Barber Colman spooler and one high-speed Barber Colman warper in 1961. The machinery has already arrived and is now being erected at the mills. The extension of the existing building to house the additional cards and the new blow room is almost complete, and the blow room itself is being erected. The Rs. 10-paid share of Kothari Textiles is currently quoted around Rs. 12.10 cum-dividend.

Prospects for National Rayon

The Rs. 100-paid share of the National Rayon Corporation, which could be had around Rs. 550 on the eve of the Central Budget, was bid up to Rs. 583 on 28th April, taking it very close to its 1961 high of Rs. 593.50. The Company's working results in 1961 were not particularly encouraging. The gross profit fell by about Rs. 13 lakhs in spite of an increase of nearly Rs. 93 lakhs in sales. The decline in the gross profit was due largely to the stiff increase in the excise duty burden from Rs. 68.59 lakhs to Rs. 124.32 lakhs. Speculation apart, the recent improvement in National Rayon shares reflects optimism about the Company's performance in the current year. The chairman, Mr. Kasturbhai Lalbhai, told the share-

holders' annual meeting last week that the Company's turnover in 1962 will be higher, as the tyre cord plant has gone into production, and the expanded rayon plant will be in production for the whole year, compared with only six months in 1961. Replying to a shareholder's query, the chairman said that the Company is likely to install 12 more spinning frames during the year, taking the total to 100. The production of rayon yarn, which amounted to around 19 million lbs in 1961, will, it is expected, increase to around 22 million lbs on the basis of 150 deniers this year. The tyre cord plant has a rated capacity of 4 million lbs a year. It has already gone into production and the Company will have the benefit of full production for about seven months during the current year. National Rayon has received a licence to increase the capacity of the plant to 15 million lbs, but the directors have not yet decided when to go in for this expansion. Mr. Kasturbhai Lalbhai confirmed that Goodyear has placed a trial order for a sizeable quantity of tyre cord. Negotiations are also going on with a few other tyre manufacturers for supplying tyre cord to them. The chairman stated that while the Company will have to pay about Rs. 5.50 lakhs more as a result of the proposed increase in the corporation tax, it will not have to bear the proposed increase in the excise duty on rayon yarn.

The chairman disclosed that the Company had applied to the Government for an industrial licence to manufacture staple fibre, but no reply had been received so far. He added that National Rayon had acquired land in Mysore State for setting up a rayon grade pulp factory, but it would take anything from three to five years to complete the project. Replying to a shareholder's plea for issuing additional capital in order to bring about a greater balance between the equity capital and the gross block account, the chairman simply said that the issue of reconstructing the capital structure was being constantly examined and the shareholders would be informed when a definite decision was taken.

Non-woven Fabric from Tata Mills

The directors of Tata Mills state in their report for 1961 that the Company will soon commission a new non-woven fabric plant, which will be the first of its kind in India. The cost of the plant will be about Rs. 16 lakhs, and it is hoped to market several varieties of bonded fabrics from this plant as soon as the Company is able to overcome the initial problems of producing an unconventional fabric. A foreign technician will soon be in India to assist in the installation and initial operation of the machinery. The setting up of this plant will mark a significant stage in the diversification of the Company's production. Apart from the highly satisfactory trading conditions, the impressive improvement in its working results for 1961 is due to the change in the pattern of production. It is also attributed to better sales realisation and the reduction in labour cost brought about by the implementation of the four looms and four sides systems of operation.

In response to consumer preference for better fabrics, the Company initiated in 1959 a change in its production pattern from coarse and lower medium sorts to higher medium and superfine fancy sorts; this change was further continued in 1961. As a result, Tata Mills produced increasing quantities of bleached, dyed, mercerised and printed varieties during the year, and these fetched remunerative prices. The programme to modernise plant and machinery has made satisfactory progress. In 1961, new plant and machinery of the value of about Rs. 27 lakhs was installed. Towards the end of the year, machinery worth Rs. 9 lakhs received at the mills was awaiting installation. Orders have been placed for additional machinery worth about Rs. 4 lakhs. Against the Company's application for permission to install 20,000 spindles more to balance production, the Government has sanctioned only 3,600 spindles. This allocation, it is said, is far below the Company's balancing requirements, and efforts are being made to persuade the Government to sanction more.

The preliminary figures of the Company's working results released along with the announcement

Current News and Comment

Indian Aluminium Expansion

The ordinary shares of the Indian Aluminium Co. Ltd have improved by nearly Rs. 2.50 to Rs. 40.65 during the past week or so. The confidence springs mainly from the investor's optimism concerning the growth prospects of the Company. The expansion programme undertaken during 1959 has now been completed. The capacity of the Hirakud smelter has been doubled to 20,000 tons of aluminium ingots a year. The additional extrusion press in Alupuram has started working. Expansion of the alumina producing facilities in Muri is well under way, and part of the new facilities has already been commissioned. An important factor is that these projects have generally been completed at the originally estimated costs. In his chairman's statement at the annual general meeting held in Calcutta last Friday Mr. K. C. Mahindra says that licences have been obtained for increasing the ingot capacity in Alupuram by 5,730 tons and for establishing an aluminium foil mill in Maharashtra State with an annual capacity of 2,500 tons. (A fuller version of the speech is printed on a later page in this week's *Capital*.) The financing terms of these projects await the approval of the Government. He also hints at the possibility of further expansion and diversification as and when opportunities occur.

Commenting on the small decline in the net profit in 1961, Mr. Mahindra points out that it is mainly due to the bigger provision for development rebate reserve. There have also been rises in interest on borrowings and in wages. Exports have had to be made at prices which are below production costs. Sheets and circles are being sold to South Viet-Nam. The possibility of exporting aluminium extrusion and paste to south-east Asian countries, is being investigated. As the ordinary dividend of 15 percent declared will be paid largely out of undistributed profits exempt from tax under the Indian Income Tax Act, 78.1 percent of the dividend in the hands of the shareholders will be exempt from income tax and super tax.

Aluminium is produced mainly from bauxite ore. Mr. Mahindra draws the attention of the State Governments to the need for using bauxite deposits in a more rational manner. A large portion of bauxite-bearing areas appears to have gone into the hands of middle men who are not interested in producing aluminium. In order to ensure sufficient supplies of bauxite to aluminium producers at reasonable prices, it is necessary that bauxite-bearing areas should be given to aluminium manufacturers for prospecting and exploration.

Good Progress by Punjab National Bank

The directors of the Punjab National Bank Ltd report good all-round progress by the bank during

of an increased dividend, from Rs. 5 to 5.50 a share, showed total turnover rising from Rs. 3.98 crores to Rs. 4.74 crores and the profit before taxation and development rebate increasing from Rs. 32.97 lakhs to Rs. 58.47 lakhs. According to the directors' full report, the turnover is up nearly 19.5 percent from Rs. 4.04 crores to Rs. 4.83 crores, and the gross profit before depreciation, development rebate, and taxation, is higher by about 62 percent from Rs. 45.72 lakhs to Rs. 74.21 lakhs. Depreciation is allocated Rs. 11.37 lakhs (against Rs. 10.09 lakhs), development rebate reserve Rs. 4.50 lakhs (against Rs. 7.25 lakhs), and taxation Rs. 16 lakhs (against nil), leaving a net profit of Rs. 37.97 lakhs, compared with Rs. 24.49 lakhs in 1960.

Stadeshi, Ahmedabad Mills Fare Well

The preliminary figures concerning the working results of the Svadeshi Mills and the Ahmedabad Advance Mills, which were released along with the announcement of the dividends for 1961, showed that both the mills had done considerably better during the year than in the previous one. The gross profits of Svadeshi Mills has increased from Rs. 63.74 lakhs to Rs. 78.19 lakhs, and that of Ahmedabad Advance Mills has risen to Rs. 37.44 lakhs, compared with Rs. 14.27 lakhs in the previous period of six months ended December 1960. The directors' reports which are now available show that apart from favourable trading conditions, the improvement in the working results of these Companies was largely due to the change in their pattern of production from lower medium to higher medium and finer sorts in highly improved finishes. The directors of Svadeshi Mills state that in keeping with the policy of gradual renovation of the mill plant, machinery and buildings, new plant and equipment worth about Rs. 34 lakhs was installed in 1961. Additional machinery worth about Rs. 14 lakhs was awaiting installation at the end of the year. They have expressed disappointment over the Government's decision to sanction the installation of only 3,800 additional spindles, against the Company's urgent requirement of 25,000 spindles. As a result of this, it is unable to make any substantial addition to the number of looms working in the third shift. Efforts are still being made to persuade the Government to allot additional spindles. The Company has received the necessary installation permit and import licence for 48 automatic looms, against an application for the replacement of 240 plain looms. Although 96 additional automatic looms were later allotted against the supplementary application for the replacement of 200 plain looms, the application for an import licence for these automatic looms has been turned down. When these 144 automatic looms are erected, the total installed automatic weaving capacity would be about 35 percent.

New plant and machinery installed by the Ahmedabad Advance Mills in 1961 was of the value of Rs. 10 lakhs. Machinery worth Rs. 3 lakhs received towards the end of the year, is awaiting installation. Further orders have also been placed for additional machinery worth Rs. 1 lakh. Although the mill is fairly well equipped in basic plant and equipment, it is handicapped for want of an up-to-date finishing plant. It is nearly two years since the Company received a licence for importing a sanforizing machine, but the import, it is said, has been held up due to delay in the registration of the trade mark because of certain new conditions imposed by the Government. The Company has ordered 96 automatic looms from Japan and these are expected to be received this year. It is proposed to raise additional capital by the issue of 10,000 new equity shares of Rs. 100 each. The new shares will be offered to existing shareholders in the ratio of one new share for every four held at par. The new shares will rank for proportionate dividend to be declared for the current year.

Bharat Commerce Raises Dividend

Bharat Commerce and Industries Ltd has produced satisfactory results for the year ended December 1961. The staple fibre plant in Nagda has worked well. It now has 30,360 ring spindles

and 15,664 doubling spindles. The directors do not consider the outlook for the staple fibre yarn encouraging because of the substantial rise in domestic output. The Central Government is also exploring the possibility of importing large quantities of staple fibre in order to relieve the raw cotton shortage. The Company now owns, and is in possession of, the Kapila Textile Mills Ltd (in liquidation), and the plant in Nanjangud, Mysore State, is likely to start producing soon. The modernisation of this factory is being considered. It is proposed to shift the staple fibre spinning mill, called the Kiran Spinning Mill, to a suitable site in Thana. Steps have been taken to expand the capacity and modernise the factory. The scheme may cost Rs. 60 lakhs, and the factory with 10,000 spindles, it is expected, will begin production in the near future. Other schemes to diversify activity are also being considered.

The profit has increased from Rs. 26.42 lakhs in 1960 to Rs. 55.79 lakhs in 1961, after providing Rs. 7.93 lakhs (against Rs. 9.68 lakhs) for depreciation. The taxable ordinary dividend has been increased from 5 percent to 15 percent. It is covered more than seven times, and offers a yield of 5.4 percent at the present price of Rs. 28 a share. General reserve absorbs Rs. 30 lakhs, development rebate Rs. 4.37 lakhs (against Rs. 3.02 lakhs) and contingency reserve Rs. 2 lakhs (against Rs. 1 lakh). Taxation is allocated Rs. 8.50 lakhs. The carry-forward is Rs. 1.46 lakhs, against Rs. 94,375 brought in.

Escorts Expands and Diversifies

Escorts Ltd has made a gross profit of Rs. 32 lakhs in 1961. The directors have recommended a taxable ordinary dividend of 13 percent, absorbing Rs. 7.28 lakhs. This works out to a yield of 6.5 percent at the present price of Rs. 19.8 a share. Taxation is allocated Rs. 10 lakhs, and depreciation Rs. 4.56 lakhs. The directors say that about 30 percent of the dividend will be exempt from taxation under the Income Tax Act. A sum of Rs. 2.80 lakhs is being transferred to general reserve, raising it to Rs. 13.50 lakhs. The factory in Faridabad has been almost completed, and will start producing X-ray and electro-medical equipment soon. It will also produce railway shock-absorbers and heating equipment. The Company is likely to obtain a licence for making agricultural implements. It has arranged to import tractors and farm machinery from various countries. The plant and machinery for the production of motor-cycles and scooters is likely to be installed in the near future. Escorts has obtained a licence to manufacture piston pins also.

Alembic Glass to Issue Rights

Alembic Glass Industries Ltd reports encouraging results for 1961, with both sales and profit rising substantially over the previous year's figures. Sales are up by about 25.6 percent from Rs. 172 crores to Rs. 216 crores and the gross profit at Rs. 87.30 lakhs shows an increase of about 15.5 percent over the 1960 figure of Rs. 75.57 lakhs. In spite of the increase in the capital from Rs. 33.24 lakhs to Rs. 44.32 lakhs—the additional capital of Rs. 11.08 lakhs was entitled to dividend for ten months—the directors have stepped up the dividend from 20 percent to 30 percent, subject to tax. The proposed dividend will absorb Rs. 12.74 lakhs, against Rs. 6.65 lakhs in 1960. After providing Rs. 12.77 lakhs (against Rs. 9.87 lakhs) for depreciation, Rs. 3.25 lakhs (against Rs. 4.50 lakhs) for development rebate reserve, and Rs. 33 lakhs (against Rs. 28.30 lakhs) for taxation, the net profit amounts to Rs. 38.28 lakhs, against Rs. 32.90 lakhs in the previous year. The directors have allocated Rs. 24 lakhs (against Rs. 22.08 lakhs) to the general reserve; the provision for gratuity reserve has been maintained at Rs. 2 lakhs. After providing for the proposed dividend, there remains Rs. 4.38 lakhs to be carried forward, against Rs. 4.84 lakhs brought in. The directors state in their report that the Government has allowed the Company to import machinery worth Rs. 43 lakhs under a D. L. F. loan for its factory in Baroda and the new factory in Bangalore. The import licence is being awaited. The workshop

CAPITAL, 3rd May, 1962.

building and some other buildings in the Bangalore factory were completed during the year. In view of the Company's expansion plans, the directors have decided to issue fresh capital to the extent of Rs. 9.84 lakhs. The rights shares are being issued in the proportion of two shares for every nine held.

More from Rajalakshmi Mills

The working of the Rajalakshmi Mills Ltd for the year ended December 1961, shows a higher net profit of Rs. 21.68 lakhs, after providing Rs. 5.66 lakhs for depreciation. The previous year's net profit was Rs. 13.62 lakhs, after providing Rs. 6.13 lakhs for depreciation. Adding Rs. 300 being the refund of excess remuneration paid to managing agents, the total surplus available for appropriation is Rs. 21.69 lakhs. Out of this, the directors have provided Rs. 8 lakhs (against Rs. 2.5 lakhs) for taxation. Development rebate reserve gets Rs. 1.2 lakhs (against Rs. 7.63 lakhs) while provision for bonus for 1961 amounts to Rs. 2.9 lakhs. The directors have recommended a higher dividend of 20 percent (against 12 percent), absorbing Rs. 5.99 lakhs. The proposed dividend for preference shareholders at 8.45 percent, subject to deduction of tax, accounts for Rs. 16,900. The balance of Rs. 9,410 is carried forward.

During the year, production was fairly good due to cordial labour relations as well as the uninterrupted supply of staple fibre. The directors' report says that the market was favourable, so the Company was able to sell the finished goods at a better profit margin. Sales of finished goods during the year increased to Rs. 1.39 crores from Rs. 1.29 crores in the previous year. Cone yarns and staple fibre yarns produced by Rajalakshmi Mills had a good market throughout the country. The Company proposes to modernise the machines in stages which may cost about Rs. 70 lakhs. The directors say that the proposal to erect a mill in Dindigul has been given up. Instead, it has been decided to erect the mill in Karamalai, near Mettupalayam. The delivery of machinery is expected by the middle of 1963. The directors hope to run the factory by the last quarter of 1963 or early 1964.

Palani Andavar Mills Repeats

During the year ended December 1961, Palani Andavar Mills Ltd has earned a net profit of Rs. 17.12 lakhs, after providing Rs. 4.46 lakhs for depreciation. The previous year's net profit was Rs. 16.89 lakhs, after providing Rs. 4.7 lakhs for depreciation. With Rs. 1,210 brought forward from the previous year, the total available for appropriation is Rs. 17.12 lakhs. Out of this, income tax paid amounts to Rs. 8,316. Development rebate reserve gets Rs. 42,000 (against Rs. 5,801) and provision for taxation Rs. 7.25 lakhs (against Rs. 7.5 lakhs). The proposed dividend of 50 percent on equity shares (against 50 percent) absorbs Rs. 5 lakhs. The balance of Rs. 26,544 is carried forward. Total sales during the year amounted to Rs. 1.34 crores, against Rs. 1.23 crores in the previous year.

Sivananda Mills Profit Up

The working of Sivananda Mills Ltd for the year ended December 1961, shows a net profit of Rs. 11.65 lakhs, after providing Rs. 4.16 lakhs for depreciation and Rs. 1.35 lakhs for development rebate reserve. The net profit for the previous year was Rs. 8.37 lakhs, after providing Rs. 2.49 lakhs for depreciation and Rs. 2.95 lakhs for development rebate reserve. With Rs. 5,310 brought forward from the previous year, the total is Rs. 11.70 lakhs. Out of this, provision for taxation gets Rs. 5.3 lakhs (against Rs. 3.6 lakhs) and general reserve Rs. 3.5 lakhs (against Rs. 1.5 lakhs). The proposed dividend of 26 percent (against 22 percent) will absorb Rs. 2.6 lakhs. The balance of Rs. 5,185 is carried forward.

The directors say that the mills' working was satisfactory during the year. The average number of spindles worked was 25,521. A set of four high-speed combers imported from the U.S.A. was

CAPITAL, 3rd May, 1962.

installed during the year. The mill has been enrolled as an "exporter-manufacturer" by the Cotton Textiles Export Promotion Council under its enrolment scheme. It exported its products for the first time during the year.

Adoni Spinning: Sales Up, Profit Down

The working results of Adoni Spinning and Weaving Company for 1961 show that in spite of an increase of 10 percent in sales from Rs. 1.30 crores to Rs. 1.43 crores, the gross profit is down from Rs. 21.97 lakhs to Rs. 19.92 lakhs. After providing Rs. 8.04 lakhs (against Rs. 9.24 lakhs) for depreciation, Rs. 18,765 (against Rs. 1,09 lakhs) for development rebate reserve and Rs. 2.35 lakhs (against nil) for taxation, the net profit comes to Rs. 8.08 lakhs, against Rs. 10.34 lakhs in 1960. The dividend has been maintained at 8 percent, subject to tax, absorbing Rs. 2.40 lakhs. The dividend on cumulative preference shares accounts for Rs. 1.56 lakhs. The directors have transferred Rs. 2 lakhs (against nil) to dividend equalisation fund, and Rs. 1 lakh (against nil) to general reserve. The remaining surplus of Rs. 1.71 lakhs is being carried forward, against Rs. 59,147 brought in. The Rs. 10-paid share of the Company is currently quoted around Rs. 13.10.

Nederlandsche Handel-Maatschappij

The profit of the Indian branches—in Bombay and Calcutta—of Nederlandsche Handel-Maatschappij, N. V., has amounted to Rs. 4.07 lakhs for the year ended December 1961, against Rs. 4.68 lakhs in 1960. Income from interest and discount rose from Rs. 21.70 lakhs to Rs. 25.55 lakhs, while the interest paid on deposits and borrowings increased from Rs. 9.98 lakhs to Rs. 13.96 lakhs. Deposits declined from Rs. 2.25 crores to Rs. 1.92 crores. Cash improved from Rs. 12.75 lakhs to Rs. 20.56 lakhs. Investments were up from Rs. 49.49 lakhs to Rs. 54.56 lakhs, and advances rose from Rs. 4.05 crores to Rs. 4.45 crores.

Scope of Joint Consultation

In his address from the chair at the annual general meeting of the Delhi Management Association in New Delhi recently, Mr. S. Srinivasan, president, referred to the persistent attempts to question and whittle down the manager's authority and circumscribe his freedom to take decisions. He said the trade unions are demanding a share in the authority which rightly belongs to the management. He deprecated the trade union leadership's attempts thus to push its frontiers farther and farther into management's territory. It should not, for example, challenge management's right to introduce technological changes in production, work study and so on, but should devote itself to protecting its members from the misuse of these techniques by management. Mr. Srinivasan said he is not suggesting that unions should allow managements to function in an arbitrary manner, nor does he question the value of the management consulting the accredited representatives of the workers. But if management is to perform its legitimate functions efficiently, there should be clear understanding on what joint consultation means and in what areas it can work. There cannot be joint consultation on areas falling within the purview of collective bargaining or on managerial decisions which do not adversely affect the workers' terms and conditions of employment. But management should give a broad picture of the organisation's activities to workers, consult them on changes likely to affect their terms and conditions of work, and provide facilities for the submission of suggestions. Joint consultation is a means to reduce suspicion, Mr. Srinivasan said, and spectacular results should not be expected.

Inaugurating the meeting, Mr. G. D. Birla said the problems of employers and employees would become more and more complicated with industrial development and it would require all the talent and wisdom of the managerial class to solve them. The future of India, whether in the industrial, political or educational field, would ultimately depend on the managerial talent in the country.

He, therefore, emphasised the need to train managers in large numbers. Mr. Birla called on the Association to tackle this task in co-operation with business houses. Citing the example of the Rourkela steel plant, he said it is a typical case in which everyone is trying to pass on the responsibility for mismanagement to others. It is the business of a good manager to find out what is at fault. He should not be satisfied with offering excuses.

Price Fixing by Tariff Commission

The latest issue of the Tata Quarterly contains an interesting article on how the Tariff Commission calculates the "fair prices" for industries. The study analyses the changes in the Commission's approach to the principal elements of cost and other items taken into account for fixing prices. The review relies mainly on a few selected reports of the Commission which marked a break from the established mode of thinking and practice. It is established mode of thinking and practice. It is pointed out that in many important matters such as estimating future production, the provision of adequate contingency allowance and the inclusion of an escalator clause while calculating works and overhead costs, the problems do not appear to have been clearly analysed and boldly faced. The vital question of leaving a reasonable margin for the expansion and progress of industry has practically been ignored. Similarly, the necessity of making adequate provision for dividends in the return on capital employed has hardly received any consideration. The assumption on which the Commission bases its estimates of achievable production, extra depreciation and rehabilitation allowance, and fixes the rate of return, have not always been clearly and fully stated. The 1961 report on cement prices, however, marks a welcome improvement over the previous ones, as the Commission has made an attempt to discuss some of the assumptions and underlying considerations.

The estimate of future production arrived at by the Commission is of crucial importance. Not only the actual costs but also the notional costs, such as depreciation, return on capital, etcetera, are spread over in fixing fair prices for a unit of output. In the steel and cement industries, the production estimates of the Commission were so much on the high side that the prices fixed turned out to be far from fair. By estimating production at high levels, the Commission, on the one hand, took credit for economies of scale in the calculation of works costs and overheads which did not materialise, and on the other, prevented the full realisation of notional costs which it granted to industries after much discussion and argument and which it presumed would accrue to industry in full. It was only in 1956 that the Commission granted a contingency allowance along with an escalator clause for statutory increases in costs. The main intention then was to provide for short-term increases in the cost of raw materials, and wages through the contingency allowance, and to provide against statutory increases in costs through the escalator clause. Analysing the problem in different aspects, the study suggests that the most appropriate procedure for providing a safeguard against contingencies which are likely to raise costs by curtailing production, will be to make reasonable allowance for such contingencies in the estimate of production itself while calculating probable costs. It also considers it reasonable that all statutory increases in costs should be covered by an escalator clause. Only the non-statutory and minor increases in the costs of raw materials and wages should be taken care of by the contingency allowance.

In discussing the question of replacement costs, the study says that the Commission has granted an extra depreciation or rehabilitation allowance on an extra ad hoc basis in order to allow for the rise in the cost of fixed assets. Of particular significance to industry is the question of return on capital, and the investor is the question of return on capital. Three important factors which enter into the calculation of fair return are (1) the basis for its calculation, (2) the rate of return and (3) the coverage, that is, the items to be provided for out of the return. Until 1955, the Tariff Commission adopted the same approach as the former tariff boards, by classifying assets into two categories—fixed capital and working capital. Return on gross fixed capital and working capital. Return on gross block was added to interest on working capital,

along with other estimates of costs to arrive at the "fair price". It was in 1955 that the Commission adopted "capital employed" as the basis for calculating the return, but only in 1958 did it define capital employed as net block plus working capital.

Rihand Dam Completed

The Rihand project—the largest hydro-electric power scheme in Uttar Pradesh—will be shortly inaugurated by the Prime Minister, Mr. Nehru. The project was shelved twice, but it ultimately got under way in 1954 when the U.S. Technical Co-operation Mission offered to make available all the foreign exchange requirements. The concrete gravity dam, located in Pipri on the river Rihand, is 206 feet above the deepest foundations, 250 feet above the river-bed, 227 feet wide at the base and 3,064 feet long. The minimum probable design flood has been estimated at 17,273 cubic metres a second and the maximum flood at 23,815 cubic metres a second. The average annual run off works out to 6,328 million cubic metres. This will collect in the Rihand lake, which will cover 180 square miles. The first bucket of concrete was poured in April 1957. Nearly 60 million cubic feet of cement concrete have gone into it. The work has been completed according to schedule.

It is estimated that 919.8 million units of electrical energy will be available from the project. The power will be supplied to heavy and small-scale industries, electricity supply undertakings and for railway electrification. Power will also be supplied for the electrification of 600 rural and urban localities and for running about 1,400 tubewells. Power for railway electrification will be supplied through the Bihar State Electricity Board. The power-house will have six generating units, of which five have already been installed. Each unit is to be fed by a separate 16 feet diameter steel penstock embedded in the dam. The power will be generated at 11,000 volts and transmitted on 132,000 volt transmission lines after being transformed. The water released from the Rihand dam will be used for the extension of the Son canal system in Bihar State and will irrigate about 500,000 acres of land.

U.P. Remits Tax on Sugarcane

The U.P. Government has decided to remit the purchase tax on sugarcane at the rate of 12nP a maund with effect from 1st May, to enable sugar factories in the State to crush all surplus cane. The remission, it is understood, may later be raised to 19nP a maund. The remission has been granted principally in the interest of growers whose cane would otherwise have remained uncruised. The factories also made representations that, in view of the fall in sugar recovery and the high cost of production, they are finding it difficult to continue crushing operations in the summer months. According to the authorities, Rs. 7.58 crores is due at present from various factories in the State by way of arrears of purchase tax and cane cess. Recovery certificates have been issued for Rs. 1.54 crores, the sum due for 1959-60. Dues for 1960-61 and 1961-62 still remain to be collected. The U.P. Chief Minister has expressed himself against applying coercive measures for the recovery of the dues, since this will lead to the closure of many factories and thereby injure sugarcane growers. According to official admission, sugar mills also owe Rs. 3.07 crores to cultivators as arrears of payment for cane. There is a growing demand from cultivators that interest at the rate of 7½ percent should be paid on these arrears.

Industrialising Uttar Pradesh

In his speech from the chair at the annual general meeting of the Upper India Chamber of Commerce held in Kanpur recently, Mr. K. N. Wilcox, president, said that the progress of Uttar Pradesh has been handicapped by psychological rather than physical influences. In so far as physical considerations influence the economy of a

region, the State has advantages second to none. It is in the Gangetic plain, its soil is rich, it has great untapped natural and forest resources, a large labour force, and a ready market. Yet it is relatively speaking an industrially backward State. It is, therefore, imperative to think of rapidly industrialising the State, Mr. Wilcox said. If the State Government takes the initiative to provide some essential facilities at economic rates in the direction of land development, power, water, roads, communications, etcetera, industries, both large and small, will be attracted to hitherto backward areas. The levy of octroi duties should be examined in so far as these hinder the growth and dispersal of industries. There should be total or partial remission of octroi duties to all new industries for a specific period, and also uniformity in the rates of octroi in all municipal areas. Mr. Wilcox also suggested a holiday from sales tax for new industries, at least for a specified period. He suggested that, where the State Government levies a sales tax on finished goods, the sales tax on the raw material and stores used in the manufacture of such goods should be levied at concessional rates. Mr. Wilcox wanted the State Government to set up a department to deal with all the other State authorities to help intending entrepreneurs in getting the facilities they need.

Sales Tax on Government Departments

All Central and State Government departments in U.P. will have to pay tax on sales made by them from 1st May, according to a notification issued by the State Government. A Press note issued by the Finance Department says: "The term 'dealer', as defined in the U.P. Sales Tax Act, 1948, also covers Government departments, both State and Central." Under a notification issued in August 1958, as subsequently amended, all Government departments—excluding the Government cement factory in Churk—were specifically exempted from the tax on sales made by them. "It has now been decided," the Press note says, "to withdraw this exemption with effect from 1st May, 1962. All Government departments, both State and Central, will accordingly have to file returns, pay sales tax and comply with other provisions of the Act from the said date." What the net income from this step will be has not been estimated, but the aim is apparently to use public sector enterprises as a source of fresh taxation.

Oilseeds Production in U.P.

Uttar Pradesh accounts for 22.7 percent of the acreage and 20 percent of the oilseeds production of India. Lack of balance in the production of various oilseeds has, however, created difficulties for the *vanaspati* industry in the State. According to the final estimates issued by the Directorate of Economics and Statistics for 1960-61, the acreage under major oilseed crops is 7.49 million and production 1.29 million tons, against 7.78 million acres and 1.08 million tons in the partially revised estimates for 1959-60. The net result is a decline in area by 288,000 acres while production has increased by 215,000 tons. Figures for individual oilseeds show that in the case of rape, mustard, linseed and castor crops, there has been a substantial rise in yield to the acre while the production of groundnuts has declined in spite of an increase in acreage.

Although U. P. has the highest acreage under oilseeds, the acreage under groundnut is the lowest, being only 6.3 percent, compared with 88 percent in Gujarat, 84 percent in Mysore, 74.5 percent in Maharashtra, 63 percent in Andhra, 61 percent in Madras, 28 percent in Madhya Pradesh, 20 percent in Punjab and 12 percent in Rajasthan. The production of groundnuts is, therefore, insufficient to meet the requirements of the *vanaspati* industry in the State. By the end of the second plan period, the groundnut oil consumption was about 60,000 tons, against a production of oilseeds equivalent to 32,000 tons of oil. Considering that the industry's productive capacity is already over 100,000 tons, it has been suggested that the production of groundnuts should be increased to 500,000 tons, partly by increasing the yield to the acre and partly by increasing the acreage. The production of *vanaspati* from the four factories in Uttar Pradesh in 1960-61 was 59,302 tons, compared with

55,647 tons in 1959, showing an increase of 6.5 percent. The main problem facing the industry is the supply of sufficient edible oils at reasonable prices. For the time being, it is proposed to solve the problem of shortage of groundnut oil by using cottonseed oil.

Wages and Productivity

In his presidential address at the annual general meeting of the Employers Federation of India in Bombay last week, Mr. Naval H. Tata said that India does not have a cheap wage-cost economy, as is made out in some quarters. Individual earnings of workers in this country may be low compared with those in the more advanced countries of the West, but even managerial emoluments are correspondingly lower. Mr. Tata said that, in practical economics, it is the wage-cost for each unit of production which matters. Since India is facing a critical situation due to the foreign exchange shortage, it is necessary to raise exports. But that cannot be done if the quality of exported products is not up to the expectations of foreign consumers. Another important factor is the cost of manufacturing the products. This, the president said, depends on the price of raw materials, which is largely controlled by the Government, as well as labour cost. But, in an era of adjudicated awards, the employer has no control over wages.

It is often said that the concept of wages has a wider significance and that it should not be related to productivity only. Mr. Tata did not dispute that the latter should include an element of what has come to be popularly known as "social justice". But the yardstick of social justice should be applied to both organised industrial and unorganised non-industrial workers in India. Wages cannot outrun industry's capacity to pay, nor can they be out of tune with productivity. Mr. Tata pointed to the recent survey which showed that, between 1951 and 1957, the wage index in the organised sector rose by 24 points, but the productivity index increased by only 8.6 points. The overwhelming proportion of the working population in India belongs to the primary sector. Industrial labour forms an insignificant proportion of 5 percent, and this small minority has increased its real earnings by 27 percent between 1947 and 1958. On the other hand, an agricultural labourer receives only a fraction of what an industrial worker earns.

CORRESPONDENCE

HEAVIER TAX BURDEN ON COMPANIES

(TO THE EDITOR OF "CAPITAL")

Sir,

Your editorial, "Mr. Desai Swings Back to Direct Taxes", rightly demands clarification whether the statements of fiscal policy made in the third five year plan, do or do not still stand. It is regrettable that the assurances given by the Finance Minister, and statements made by him in Parliament, should be completely ignored merely on grounds of revenue. When the Finance Bill of 1961 was presented last year, and Mr. Desai proposed a uniform rate of 40 percent on dividends on inter-corporate investments made after 1st April, 1961, strong protests were raised on the ground that the total burden of taxation imposed on the corporate sector was too heavy. In fact, Mr. Desai himself admitted, during the course of the debates on the Budget, that the rate of 40 percent was high, but expressed his inability to reduce it. It was then shown that the net return to the shareholding company, after payment of income tax and super tax on profits and dividends, amounted to 33 percent only. True, Mr. Desai has now reduced the tax on inter-corporate dividends from 40 percent to 35 percent, but this reduction has been nullified by the increase in company tax rate from 45 percent to 50 percent. The result is that the shareholding company will now receive even less than before—32.5 percent, against last year's 33 percent.

It seems strange that the Finance Minister should have thought fit to raise the aggregate burden of taxation on the corporate sector still further,

when it was admitted on all sides that the total rate of 67 percent imposed last year was among the highest in the world. Apart from incontrovertible evidence referred to by you in your editorial, responsible bodies like the National Council of Applied Economic Research proved, after detailed research, that the aggregate burden of 67 percent was very heavy, and recommended that, in order to achieve an accelerated growth all along the industrial front, the existing heavy burden on inter-corporate investment in general must be reduced. There would appear to be an apparent contradiction in the Finance Minister's intentions as revealed by his latest Budget speech and his actions as shown by his taxation proposals and no explanation is forthcoming for the suggested increase in company taxation.

Far from encouraging investment in shares, the revised rates of company taxation, coupled with the increase in personal taxation, are bound to slacken investment potential and curtail the ability to save and invest. It is surprising to note, however, that in spite of the steep increase in corporate taxation, public reaction and opposition have not been so stiff. Despite protests lodged by various chambers of commerce and business organisations, the stock markets are generally reported to have had "cheerful trading, with a steady undertone". The obvious inference is that there is a general misunderstanding in the public mind that, when individuals form a company, they immediately acquire a capacity to bear taxes quite different from and additional to their taxable capacity in relation to other forms of income. The sooner this erroneous impression is removed, the better. In this connection, and in the context of the unexplained rise in the rates of company taxation, the following extract from an article by E. B. Nortcliffe will be found interesting:

"Companies are merely filters through which rewards for business activity of all kinds pass. The profit element in the price of goods and services comes out of one set of personal pockets, and passes through the company into another set of personal pockets. Any tax extracted by Governments in the process either decreases the output or calls for an increased input. Either way, the tax is eventually suffered by living persons. Indeed, it has been rightly said that all taxation is personal taxation, and the reader is, therefore, counselled to be wary of fiscal camouflage which might lead him to think otherwise. . . . Governments have discovered that companies are the ideal taxpayers. What are the qualities of the ideal taxpayer? Docility, honesty and prudence rank highly amongst his virtues. He is slow to object to new and heavier impositions, not given to concealment, fraud or negligence, and careful to preserve his resources against the tax collector's demands. Governments throughout the world are acutely aware of the extent to which most companies possess of these qualities. They are easily traced, they keep formal accounts, deny both proprietors access to the till, and usually understand and honour their obligations under the tax laws. In a world where the revenue requirements of governments seem insatiable, the honest taxpayer, whether corporate or individual, must expect to pay dearly for his virtue".

Yours etcetera,
K. C. KHANNA

Calcutta, 28th April.

INDIA 3 PERCENT STOCK

REUTER advises: Tenders are invited for India 3 percent stock of £1,500,000 at a minimum of 99. The issue is mainly for the discharge of £1,368,800 debentures of the Great Indian Peninsular Railway. The India 3 percent Rupee Loan Paper is quoted in London at £54 or at 19 percent discount. We think it is time that the Government should take some notice of the extraordinary difference between the value of their sterling and rupee securities, and consider whether if as is contended, such difference arises from a preference accorded to the former by the Chancellor of the Exchequer to the exclusion of the latter. It would not be politic on their part and a reasonable concession to holders of rupee paper, to take such steps as may appear advisable either by guaranteeing payment of interest in London at 1s 4d or otherwise, to put their sterling and rupee loan issues on a more equal footing.

A Ditcher's Diary

MAURICE EDELMAN ONCE WROTE A GRIMLY amusing piece on the day they dropped the bomb on Moscow. A middle-aged officer of the U.S. Air Force in Britain had had a boring day after some epistolary misunderstanding with his wife; he then got hold of a bottle of gin and a young tart with whom his encounter was not wholly successful; the next thing the man does is to take off and drop an atomic bomb on the Kremlin, starting World War III. Even the little known about the consequences of a nuclear war is so frightful that nobody in his senses is likely to unleash one. What makes it all rather less reassuring is that there is never a dearth of mad men, a distressingly large number of whom find their way into positions of supreme authority. Even before the United States felt obliged to resume nuclear tests, some sort of screening had apparently been ordered among Americans concerned with nuclear weapons. Among possible incentives to let the thing go, I find, are boredom, impulse and psychosis; also financial or domestic worries. I am not a unilateralist at all; but isn't there an element of insanity in having anything to do at all with these dreadful weapons which are being perfected daily? And what, in this context, do I mean by perfection? Some in America are already talking of "overkill", which I must say is mighty decent of them. Many are at work, on both sides of the iron curtain, on a bomb that will wipe out men but not do too much damage to property so that occupation after victory may be a practical proposition. Is it possible to remain sane while engaging in work of this kind? President Truman and Earl Attlee have spoken of their decision to drop the first atom bomb on Hiroshima without the slightest remorse. Admiration for their nerve must be somewhat mixed in ordinary, normal minds. Is it possible that a certain insensitivity is inherent in political leadership? And why speak only of politicians? I often remember a saying of Paul Valéry's which, very roughly translated, means that, to be successful, one must be a little blind, a little deaf and a little heartless. He probably meant success in any sphere of life; and there may be a great deal of truth in the cynical aphorism. There is perhaps room at the top. Not much, I fear, for sentiment and humanity.

ON MONDAY MORNING, IT OCCURRED TO ME THAT, perhaps for the first time this year, Calcutta owed a debt of gratitude to its meteorologists. They had predicted a week-end of cool breeze and scattered showers; and, for a change, both actually came. The meteorologist's task, I know, is a

thankless one: like the pavement astrologer, his forecasts are apt, more often than not, to be proven wrong, but unlike the pavement astrologer's, they are put to an early test. Calcutta, I suggest, has been fortunate this year in its spring, if so egregious a euphemism be permissible for April in this city. The cocktail party lions may not, it is true, have refrained from their chant of incurable originality that "it's the humidity more than the heat that gets you down"; but my impression is that both this year have been a good deal less than we are accustomed to expect. The city has perhaps looked a little parched, with the gentlest wind driving up eddies of dust; but the cool breeze of the evenings has been a pleasure that is altogether too rare. Does this, I wonder, mean it is no longer true that Calcutta gets hotter and hotter each year? I fear we may have to wait a long while before we can be sure. The congestion daily grows in a city that was already bursting at the seams; the Corporation sleeps while the verdure vanishes; and the encroachments on the Maidan portend a future of suffocation worse than we have so far seen. While the gentlemen in charge of the affairs of the metropolis discuss grand schemes for improving the water supply, why not, I suggest, think about getting a little more fresh air too? Cannot the Calcutta Metropolitan Planning Organisation persuade the Corporation and the State Government that, instead of tall talk about underground trains, overhead monorails and satellite towns, something ought first to be done to preserve the few parks and open spaces we already have? The haphazard growth of tiny, overcrowded buildings all over the city suggests that we may have to spend the 'seventies clearing the slums we are building in the 'sixties.

I AM NOT QUITE SURE WHETHER MR. S. A. DANGE is to be congratulated on his elevation to the chairmanship of the Communist Party of India. To preside over a fount of political hypocrisy is not exactly a distinction I would consider enviable; and Mr. Dange's labours may be the less satisfying now that he has been given a central executive and a secretariat which, with its precarious balance of "rightists" and "leftists", is likely to be no more than an ineffective noise-box of the C.P.I.'s warring factions. I have seen reports suggesting that the election was prearranged, and the possibility does not surprise me unduly; what interests me is the ease with which both the central executive and the secretariat have been expanded as a concession to accommodate the dissidents on the left. The communists themselves, if memory serves me right,

are the source of an old complaint that this is what the Congress does to mollify its ginger groups; and I myself have had occasion to remark on the facility with which Central and State Ministries tend to grow whenever the slightest sign of a fissure appears. I am not particularly reassured to see that this is a temptation of which the Congress is not the only victim; as the communists have demonstrated, horse-trading is the political fashion of our times, whereby dissidents are persuaded into silence by being offered better station in the hierarchy of Party or Government, as the case may be. Nobody need, however, be so hopeful as to expect that the reshuffling of the communist leadership portends a major change in the policy of the Party. Mr. Dange has been described as a "nationalist", and he is welcome to the flattery, which in my opinion is unearned. But it will be a long time, choose what colleagues he might, before his Party can shed the stigma of violent intentions and of sympathy with the Chinese aggressors. The sprinkling of "leftists" in the top hierarchy is liberal enough to indicate that the Party's patriotism will not improve merely in consequence of changes in its constitution.

ONCE THE PRODUCT OF CENTURIES-OLD SUPERSTITION, the average Indian's great aversion to hospital treatment is today based on empirical experience. In Calcutta, at any rate, one goes to a public hospital only if one must, for the conditions are shocking. The doctors have a good deal to say in extenuation: the conditions in which they have to work are far from ideal. Public resentment and criticism in the Press tend occasionally to be unbalanced, although even there much is understandable. Two recent developments worried me. Two Calcutta newspapers complained that their reporters had been given "the treatment" by some doctors and medical students at a teaching hospital. Not knowing the details, I suspend judgment. At Habra, a Calcutta suburb, a patient died in hospital; and then a large mob attempted to assault the hospital staff. No suspension of judgment here. Whether or not there had been negligence on the part of the doctors and the nurses, the mob had no right whatever to threaten them. Over the years, I have watched how the mob's lynch law has affected motorists in Calcutta. As often as not, it is the pedestrian's fault as much as the motorist's when there is an accident. Some drivers involved were so severely dealt with by the public that today it is a rare and brave motorist who stops his vehicle to take the victim, perhaps of his own folly, to the nearest doctor. More deaths, I am certain, are the result. Some hospital doctors and nurses, I am sure, are insufficiently sensitive, even after allowance has been made for the fact that one's perfect bedside manner is hard to maintain in face of criminal overcrowding and a total inadequacy of elementary facilities. To threaten hospital staff with physical violence can hardly be the answer. If hospital-public

VOLTAS-J. K. SMIT Diamond Bits

Freely available for the country's
mining industry, VOLTAS-J. K. SMIT Diamond
Bits are made to precise specifications in
India in collaboration with the renowned
firm of J.K. Smit & Sons, London.

Outstanding Features:

- Specially selected Industrial Diamonds, set in tungsten alloy matrix and tungsten carbide matrix to suit all rock formations.
- Built with mechanical precision, ensuring long life
- Maximum drilling performance, at lowest drilling costs
- Available in DCDMA and metric sizes to suit all diamond core drills of any make and capacity
- Special bits can be specifically ordered to suit unusually difficult ground conditions

Resetting Service: VOLTAS operate an efficient resetting service, which is available for bits of any manufacture. This resetting service will help you to keep down drilling cost. Please send us your worn Bits for resetting.

relations deteriorate further. I can see the Government introducing restrictions on the entry of patients' relations into hospitals; and I do not see how that is going to improve matters for anyone. I am afraid we may long have to live with the fact that, as about so many other things, in our hospitals numbers will continue to defeat many good intentions.

THE EXHIBITION OF SCULPTURE, POTTERY, DRAWINGS and paintings now being held by Robert Bussabarger at the gallery of the Indo-American Society on Park Street has not, I am afraid, left me greatly impressed. Bussabarger is an American, a Fulbright scholar, who has been in Calcutta for several months; but the work he has done in this country is, if I may say so, notable more for its enterprise than its maturity. I imagine that he has been impressed, as who wouldn't be, by the richness of colour in the tropical East; I am not so sure, however, that in his paintings, the translation of the colours has been entirely successful. If, however, it is primarily as a ceramist that he would wish to be judged at his latest exhibition, I would readily concede that his work is of quite exceptional quality. As a practitioner of the art and a teacher, he has, I am informed devoted the past decade to a search for new forms and ideas in the ceramic medium; it is evident that he has found much to stimulate him in this country and his experiments in the field appear to me quite fascinating. I would not say that his experiments with terracotta figures of Indian design have been equally successful, if "a new and unique expression" was what Bussabarger had sought to evolve. What he has done is worthy enough by itself, but I cannot see that it is all that different from what the traditional craftsmen of Bengal and Madras do rather better. I venture to suggest that Bussabarger's stay in this country may prove altogether too brief for the smooth evolution of his artistic experiments to maturity.

LIKE, I SUPPOSE, MANY OTHERS, I KNOW MORE questions about Pakistan than answers. What do the recent elections under "basic democracy" signify? What does Pakistan expect to profit from the Security Council debate on Kashmir? Did it have anything to do with the recent reported disturbances in East Pakistan? Are we going to witness yet another series of communal savagery in India and Pakistan? What I do know is that neither India nor Pakistan may again see the like of a man like Fazlul Huq, whose death last week in West Bengal. Fazlul Huq's failings are listed in his silly things than most people. Yet in his very unpredictability Huq held so many qualities—very public and private, of the head and of the heart. Nobody without some personal experience of the politics of this province in the 'twenties and 'thirties can be expected to understand just what Huq meant once in Bengal. Of course he could be intensely communal; there were not many things he did not do to keep himself in office. The same man could be infinitely generous to Hindu individuals; and a colleague tells me that he personally knew two Hindu students whose studies were financed by Huq. The colleague adds that almost certainly Huq was heavily in debt at the time. So generous was he in both borrowing and lending that I am quite prepared to believe the fantastic story I heard the other day. Huq, it is said, was not easy to follow at a Cabinet meeting, when a Minister asked him what had happened to his set of false teeth. Huq, I am told, replied without the slightest trace of self-consciousness that he had lent them to somebody and could not remember who! A brilliant speaker in those days in three languages, Huq was witty and guileless in almost equal proportions. Beyond all this remains the fact that one could not, especially if one was a Muslim, dominate Bengal politics in those days without substantial qualities of leadership, for the political scene then contained an array of brilliant Bengalis. Of them one was Fazlul Huq, brilliant and Bengali in equal proportions.

THE DITCHER

CAPITAL, 3rd May, 1962.

THE CENTRAL BANK OF INDIA LIMITED

CHAIRMAN, SIR HOMI MODY'S REVIEW

Summary of the Speech delivered by the Chairman, Sir Homi Mody, at the 51st Annual General Meeting of the Shareholders of the Central Bank of India, Ltd., on Wednesday, the 25th April, 1962.

During his speech at the Annual General Meeting of the Shareholders of the Central Bank of India Limited on Wednesday the 25th April, 1962, Sir Homi Mody, Chairman, said that by and large, the year was one of general expansion of national output. He said that in regard to industrial production, though there was an increase of something like 8%, the rate of growth was lower than in the previous year. Conditions of acute scarcity were allowed to develop in respect of coal, power and transport, in spite of repeated warnings of businessmen and industrialists. The failure in these all-important sectors together with an inadequacy of maintenance imports of items such as raw materials, spares and components have been chiefly responsible for the slackening in the pace of industrial production during the year.

"The Second Plan had sufficiently indicated", continued Sir Homi, "that the transport capacity was grossly inadequate for the needs of the country. The situation demanded drastic recasting of ideas with regard to targets of production and priorities.... A position has now been reached in which not only the Plan estimates are likely to be founded, but even the existing productive capacity in the country may be seriously affected."

Transport Bottleneck

Continuing, Sir Homi said that the transport bottleneck has been most seriously felt in the Coal industry. There was, as a result, growing shortage of coal in consuming centres, affecting all industries depending upon it for industrial or power production. He added that it was remarkable that when the country was desperately short of wagons, a large part of the rated capacity of the railway wagon industry should be lying idle. In the face of this situation, the targets of production set for the Coal industry during the Third Plan period would seem to be completely unrealistic. Sir Homi was of the opinion that the capital expenditure and foreign exchange involved in the projected expansion, and the time required for developing new mines, had apparently not been given adequate consideration. He went on to point out that even if we could raise all the coal estimated in the Third Plan, the problem of transport would remain.

Sir Homi observed that side by side with this imbalance in our economy was the acute power shortage that the country was experiencing. Under-estimation of the country's requirements, the failure of Public Sector undertakings to reach their targets and the disincentives to the Private Sector of the industry had resulted in a shortage which was being increasingly felt, particularly in regions which are far away from the coal fields.

All this, argued Sir Homi, provided growing evidence of the imperfections of the Five Year Plans. "Arguments about the Public and the Private Sectors", continued Sir Homi, "and even about the size of the Plans, are becoming irrelevant in this context. What the country needs is national planning in every sense of the word, and the policy of keeping the Public and Private Sectors at arm's length, so to speak, from each other, needs to be revised."

"There ought to be a much closer relationship", Sir Homi said, "between the two than is now the case, and it is a pity that the knowledge, experience and enterprise of those who have built up in the past, as they are building up in the present, an imposing structure of considerable dimensions, in the face of many difficulties, should not be more adequately utilised. There has recently been a welcome awareness on

the part of Government of the importance of the Private Sector, but there is, as yet, an imperfect understanding of the role it can play in national development. While foreign experts are greatly in demand, there is still a barrier between the Government and the Indian industrialist, arising from a certain distrust and suspicion. I have been emphasising for some years that there has been a change in the outlook of the business community, and that there are business men in its ranks who are not dominated by self-interest and are anxious to co-operate in the task of national development. I hope it may be found possible for their voice to be heard more effectively in the framing and implementation of our Plans for a rapid advance in the moral and material condition of our people."

Foreign Exchange Reserves

Sir Homi expressed concern over the persistent erosion in the total foreign exchange reserves which had dropped from Rs. 825 crores at the beginning of the Second Plan period to Rs. 502 crores at the end of 1961, in spite of large drawings on the International Monetary Fund. He said, "In the year under review our adverse balance of trade amounted to Rs. 283 crores. This shows a welcome decline from the figure of the previous year, but this was more due to a decrease in imports than to an increase in exports." "The remedy", he continued, "lies in our ability to attract greater foreign investments and to promote larger exports." As regards the first, Sir Homi advocated that our Government should seriously consider ways and means of doing away with the harassing procedures, delays and stiff-necked attitudes which a number of foreign investors, anxious to participate in Indian undertakings, were experiencing. "As regards export promotion", said Sir Homi, "Government must realise that the measures so far undertaken have but a limited value, and that the basic fact is that our products have to be competitive in quality and price. In this connection, I would quote from a speech made by Mr. Alfred Hayes, President of the Federal Reserve Bank of New York, to the New York State Bankers' Association a few months ago, on the subject of export promotion. Whilst sounding a note of warning against the habit of looking upon import restrictions, higher tariffs and exchange controls as a panacea for their balance of payments difficulties, he said: "We must be willing not merely to recognise foreign competition as an economic fact, but also to make an aggressive effort to compete more effectively in all markets, both with new and important products and with lower costs.... This is not the job of monetary policy alone, nor even of monetary policy primarily. Wholehearted co-operation from Government, industry and labour is a necessity in this area." "I would add", Sir Homi continued, "that giving subsidies and inducements, on the one hand, and increasing costs of production with all manner of burdens, on the other, is a self-defeating process."

Sir Homi Mody then informed the shareholders that with a view to improving their position, Banks effected in March an upward revision in the rates laid down under the Inter-Bank Agreement. The pressure on the credit system, however, for additional credit continued to persist and the credit ratio rose in consequence from about 62% in December 1960 to over 70% in March 1961. The banks were therefore obliged, during the busy season, not only to liquidate a part of their investments in Government Securities, but to borrow on a larger scale from the Reserve Bank, even at penal rates of interest.

Sir Homi then went on to recapitulate the various measures taken by the Reserve Bank during the year to strengthen the banking system and revive public confidence, which had been somewhat shaken by bank failures in the

preceding year. The policy of encouraging a merger of the weaker banks with the stronger ones was vigorously pursued and resulted in the reduction in the total number of Scheduled Banks from 94 to 83. In conformity with this policy, the Central Bank took over the Jodhpur Commercial Bank.

Deposit Insurance Corporation

By far the most important event that took place during the year was the passing of an Act for the establishment of a Deposit Insurance Corporation, which would fully cover about 75% of the total number of deposit accounts in the country, and provide protection to all depositors to the extent of Rs. 1,500/- per account.

"Towards the close of the year", continued Sir Homi, "the Reserve Bank also put forward a proposal for strengthening the equity base of the banking system and exhorted all the banks to observe a convention which would lead to their achieving a ratio of 6% between their Paid-up Capital and Reserves and their Deposits. This is no doubt a sound move, but if the present pace in the growth of Bank Deposits is kept up, the attainment of the prescribed ratio may take a long time, even with the transfer of 20% of declared profits to the published reserves of Banks."

Sir Homi then disclosed to the shareholders that as a step towards implementation of this proposal, the Directors had decided to increase the Authorised Capital of the Bank to Rs. 10 crores and to raise additional Capital by the issue of 6,30,000 new shares in the ratio of one new share for every two existing shares. This would increase the Paid-up Capital to Rs. 4,72,50,000/-.

Turning to the affairs of the Central Bank itself, Sir Homi informed the shareholders that, for the second year in succession, the Bank's deposits registered an impressive increase of Rs. 20 crores the total moving up from Rs. 200 crores in 1960 to Rs. 220 crores in 1961, and that in the quinquennium 1957, to 1961, the growth of the Bank's Deposits had been of the order of 42%.

Rise in Gross Earnings

Over the past 5 years, the improvement in gross earnings had been of the order of Rs. 4.43 crores, or 57%. The increase, Sir Homi affirmed, had taken place under all heads, namely, Interest and Discount, Commission, Exchange and Brokerage.

The net profit during the year showed a substantial rise, and was indeed a happy culmination of the progress made by the Bank during the first half a century of its working. He, however, sounded a note of warning that while it would be the rate of growth in profits, it must not be forgotten that the future would throw additional burdens on the

industry. As a corollary to the growth of Deposits, progressively larger amounts would be needed year after year for payment of premia to the Deposit Insurance Corporation. The implementation of the Tribunal's award was likely to impose a further burden. The Reserve Bank's proposal for strengthening the equity base and increasing the liquidity ratio of Banks would also have their effect on the availability of resources for employment in the Bank's business. It was, therefore, considered prudent and necessary to conserve the Bank's resources, and accordingly, out of this year's profit, Rs. 45 lakhs were transferred to Reserves, taking the total of the Bank's owned funds to Rs. 7.28 crores. This, however, was still short of the ratio between Capital and Deposits as envisaged by the Reserve Bank.

Referring to the dividend, Sir Homi stated that this year in view of the larger profits, it was proposed to pay a final dividend of Rs. 2.60 per share subject to tax, which together with the interim dividend of Rs. 2.40 would amount to a total dividend of Rs. 5/- per share, subject to tax, or Rs. 3.50 net for the whole year, thus restoring the dividend to the level of 14% net at which it had stood prior to the cut effected as a result of the changes in the taxation system.

Golden Jubilee

In conclusion, Sir Homi made a reference to the Golden Jubilee of the Bank which was celebrated in a befitting manner all over the country, as well as in Pakistan, Rangoon and London. The great enthusiasm witnessed everywhere served to bring home vividly the significance of goodwill and public confidence which the Bank enjoyed. Everyone connected with the Institution had derived fresh inspiration from those celebrations. In commemoration of the occasion, it was decided, in collaboration with the Devkaran Nanjee Banking Corporation, to set up a Staff Training College, which would be named after the Founder of the Institution, Sir Sorabji Pochkhanawala. Sir Homi stated an announcement to that effect had been made at the time of the Golden Jubilee and the draft outlines of the Scheme were now being examined.

At the conclusion of his speech, Sir Homi, referring to the Budget proposals of the Finance Minister which were announced after his speech went to the Press, observed "It is idle nowadays to expect from a budget anything but heavy burdens. The reactions of the harassed tax-payer can, therefore, only be in the nature of either a groan or a sigh of relief that it has been no worse, depending on how much has been sought to be extracted from him. He can expect nothing better so long as our Government's planning continues to be what it is. All that can be said, accordingly, about the latest Budget is that the Finance Minister has done his best in the circumstances and is to be commended for his courage in doing away with the vexatious and unproductive Expenditure Tax. He must not forget, however, that the additional burden he has cast on the corporate sector is unjustified and is bound to affect the pace of industrial development."

N.B. This does not purport to be a record of the proceedings of the above Annual General Meeting.

'BEHAR' the dependable name in FIRECLAY & SILICA Refractories

For nearly half a century BEHAR REFRACTORIES, are being used by leading Iron and Steel Works, Cement and Glass Factories, Tea Industries, Sugar and Cotton Mills and other Industries in the country.

Our manufacturing range includes

SILICA BRICKS • FIRE BRICKS • HIGH ALUMINA BRICKS • INSULATING BRICKS • FIRECLAY • FIRE CEMENT • STAINLESS STEELS • NOZZLES • TUYERS, ETC.

INDIAN ALUMINIUM COMPANY, LIMITED

CHAIRMAN, MR. K. C. MAHINDRA'S REVIEW

The following is the address to the shareholders delivered by the Chairman, Mr. K. C. Mahindra, at the Twenty-fourth Annual General Meeting of Indian Aluminium Company, Limited held in Calcutta on Friday, April 27th, 1962.

I have great pleasure in welcoming you to the Twenty-fourth Annual General Meeting of the Company.

The salient features of the Company's operations in 1961 are contained in the Directors' Report which has already been submitted to you along with the audited accounts for the year. You will no doubt have noticed that following the termination of the sole selling agency agreement with Venesta Foils Limited effective 30th June, 1961, sales of agency products for the year dropped to Rs. 17 million from Rs. 32 million in 1960. Production and sales of the Company's own products were however maintained at a satisfactory level during the year despite extensive dislocation by the construction work on the expansion programme at each of the plants.

The net profit for the year of Rs. 11.10 million shows an apparent decrease from the Rs. 11.98 million in 1960. During the year there were increased interest charges on borrowings, additional wage costs following new labour agreements, and exports, though small in quantum, at prices below total cost. But the major shift is due to the much larger allocation to Development Reserve (Rs. 4.55 million as against Rs. 263,000 in 1960).

During 1961 your Company entered the export sales market for the first time. Sheets and circles were sold to South Vietnam in the face of severe

competitive conditions. Your Company's efforts in this direction are in conformity with the declared wishes of the Government of India and we will continue to search for overseas markets. Currently, your Company is looking into the possibilities of exporting aluminium extrusion and paste to south-east Asian countries.

In recommending a dividend of Rs. 1.50 to be paid on each ordinary share, your Directors proposed that to the extent as it may be possible, the dividend should be paid out of the Company's undistributed profits exempt from tax under Section 15C of the Indian Income-tax Act. It now gives me great pleasure to announce that the Income-tax Officer has certified that 78.1% of the dividend on ordinary shares will be deemed to have come out from the undistributed profits of the Company exempt under Section 15C of the Indian Income-tax Act 1922. 78.1% of the ordinary dividend will thus be exempt in the hands of the respective shareholders for payment of income-tax and super-tax. Dividends will be paid to the ordinary shareholders in accordance with the above instructions of the Income-tax Department.

Expansion Programme

The most satisfying aspect of your Company's activities during 1961 was the progress made in respect of the expansion programme. At Hirakud, the expansion aimed at doubling the capacity of the plant to 20,000 tonnes per annum, was completed five months ahead of schedule. At Alupuram, the additional extrusion press was installed on time and started operating in October, 1961. The expansion of alumina producing facilities at Muri pro-

gressed satisfactorily and a portion of the new facilities was brought into operation in December, again ahead of schedule by approximately four months. In a few weeks' time the Company will have completed the integrated expansion programme undertaken during 1959. You will be glad to know that all the projects have been or will be completed within the capital expenditure figures originally budgeted. This is specially heartening in view of what appears to me, a chronic occurrence in inflationary conditions to exceed capital estimates. On behalf of all of you, may I take this opportunity of expressing our sincere appreciation of the efforts of all those within the Company who have made this remarkable achievement possible. I should mention at this stage that a few years back the Company commenced development of an engineering and design section, and the closeness between actuals and estimates are largely due to the meticulous preparatory exercises by our engineers. Our thanks are also due in very great measure to our technical consultants, Aluminium Laboratories Limited, under whose guidance and general supervision the expansion programme was conceived and carried out.

I have said it before, but it merits repetition, that your Directors are anxious that your Company continues to play its leading role in the development of aluminium industry in India. With this in view proposals consistent with sound business principles are constantly in review for further expansion of the Company's activities. In accordance with this policy plans were submitted in 1960 to the Government for the expansion of ingot capacity at Alupuram by 5,730 tonnes and for the

establishment of a foil mill in Maharashtra State with an annual capacity of 2,500 tonnes of aluminium foil. Late in 1961 we received licences under the Industries (Development & Regulation) Act from the Government of India covering these projects, although financing terms still await Government's approval. While there have been unnecessary delays we hope we shall soon be able to start construction work which when completed will save the country approximately Rs. 8 million per annum in foreign exchange. Other forward-looking plans are also under study for further expansion of the Company's activities as and when market and other conditions justify.

Philosophy of Growth

Shareholders with a historic sense will have noticed that the Company has followed over the years a consistent and continuous policy of development; the thinking of your Board and the Management has no doubt been inspired by the philosophy of growth which Indian planners placed before us, but we have advisedly, and I am proud to say, deliberately planned to be a stage ahead of the targets and aims of the Planning Commission. The Third Five Year Plan, which commenced last year, expressed a tentative but half-hearted hope that by the end of the Fourth Plan, i.e. 1971, India would reach the stage of a self-sustaining economy. In our own sphere of industrial operations, I make bold to state that the Indian Aluminium Company would reach this stage 5 years ahead; I mean that expectations are that your Company would by 1966-67 achieve sufficient strength to stand on its own and generate enough technique, enough management and enough resources to follow through further expansions.

Prof. J. K. Galbraith, the distinguished Harvard economist, and now the U.S. Ambassador to India, commenting on Indian planning in 1959, affirmed that:

"In both capitalist and communist countries investment is in very large

We have audited the Balance Sheet as at 31st December, 1961 and the Profit and Loss Account for the year ended on that date, of the Indian Branches of Nederlandsche Handel-Maatschappij, N.V. (Netherlands Trading Society) at Bombay and Calcutta.

The Balance Sheet and Profit and Loss Account are drawn up in conformity with Forms A and B of the Third Schedule of the Banking Companies Act, 1949.

We report that:

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit.
- In our opinion proper books of account as required by law have been kept by the Indian Branches of the Bank so far as appears from our examination of those books.
- The abovementioned Balance Sheet and Profit and Loss Account are in agreement with the books of account.
- In our opinion, and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act 1956 in the manner so required for Banking Companies, and on such basis and read with the notes appearing thereon, the Balance Sheet gives a true and fair view of the state of affairs of the Indian Branches of the Bank as at 31st December, 1961, and the Profit and Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

H. Visser,

Manager, principal officer of the Company in the Provinces of India at Calcutta.

measure from the earnings of industrial enterprises. Something must happen in India like this. Industrial plants must take on their full job which is to be efficient producers and to accumulate surpluses which will provide for future expansion."

Your Company has taken on this full job.

Recently, the National Planning Association, a non-profit research organisation in Washington D.C., made a case study of the Indian Aluminium Company as an example of Indo-Canadian collaboration. Here is their recorded judgement:

"... different aspects of the Company's growth reveal an underlying unity of approach... fitting current actions into a telescopic view of future objectives. This view encompasses an industrially developed economy in which aluminium will play an important role. It is enterprising business policy and enlightened self interest to be in the vanguard of this development, which demands a many sided responsibility in investment, in technical and managerial efficiency and above all in willingness to share responsibility for the Indian community's development over and above the profit motive. Indispensable to this responsibility is a confidence in one's ability to assess and face the future. It is in this confidence in the future of the country, and in the rewards of doing progressive business there, that the basic motivation of Indian Aluminium Company's management philosophy may be discerned."

You will be interested to hear that after many years of benefiting through borrowing technicians and specialists from associate companies overseas, your Company was able in 1961 to make a small beginning in lending specialist Indian staff for overseas projects. I welcome this beginning and look forward to further opportunities for your Company to assist in the development of new projects overseas through the loan of Indian specialists, as such exchanges benefit not only the overseas projects but also this Company and the men concerned through broadening of experience.

Power Cost

As we all know, aluminium industry is a major power consuming industry. About 2.5KW/year of electric power is consumed in the production of every tonne of metal, the power cost forming approximately 20% of the total cost of production. It therefore becomes necessary for all producers of aluminium to ensure a long-term supply at rates which are both economical and definite. Before setting up its Hirakud smelter and again, before its further expansion, your Company held protracted negotiations with the Government of Orissa to ensure long-term supply of power at

fixed rates. These negotiations resulted in our entering into firm long-term contracts with the Government which formed the basis of our expansion.

In mid-October 1961 the Government of Orissa levied a 15% *ad valorem* duty on the consumption of electricity in the State. This levy of duty has considerably upset our future plans and put the Company to a serious competitive disadvantage through direct increase in the cost of metal produced at Hirakud. The Company does not claim that the imposition is *ultra vires* the rights of the State, but submits that the levy will furnish a handicap to long-term planning, beside increasing the already high prices for aluminium products in the country. It is also a matter for consideration of the authorities that development in a comparatively underdeveloped country can proceed apace only if the contractual fundaments of industrial operations are not disturbed by the Government for the period of the contract. May I, in contrast, cite the case of Ghana where Volta River Authority has been set up for construction and operation of a dam and power generating plant and firm agreements have been signed with a consortium which proposes to set up an aluminium smelter. Guarantees have been given by Government of Ghana and that while the power contract is in existence, the Government will not impose any tax or other fiscal charge on the use of electric power by the Volta Aluminium Co. Ltd. The tenure of the contract is for 30 years, and rate for power is fixed firm at 2.625 U.S. mills per Kilowatt-hour or Rs. 110 per KW/year (in contrast to Rs. 190 per KW/year at Hirakud—Stage II). This constitutes the linchpin of the entire project as the power contract forms the foundation for financing the hydro dam and power plant. I have cited the Ghana example in the hope that the Government of Orissa will reconsider the matter and exempt the aluminium industry in the State from the duty.

Another interesting feature of the Ghana project may be mentioned: Government of Ghana has agreed that for the first 30 years the Volta Aluminium Company's income taxes will be based on the tax laws in effect on January 2, 1961, including receipt of benefit of Pioneer Company relief. There is also provision for exemption from customs duties of imported construction materials and exemption from minerals duties in connection with the mining or processing of Ghanaian bauxite.

Supply of Bauxite

I would like to draw the attention of the Government from this forum to another matter which is of some concern to both the present and the potential producers of aluminium in this country. It has often been said that India has plentiful supply of bauxite, the ore from which aluminium is produced. This is, perhaps, true but it is equally true that the deposits of bauxite are throughout India have not yet been thoroughly field-tested for quality or reserves. Aluminium producers in India naturally desire to make geological surveys of areas known to possess bauxite and your Company has applied for prospecting licences for several of such areas. One difficulty which is being experienced in this exploratory effort is that a lot of bauxite-bearing areas are under the mining lease of persons whom I would venture to call "intermediates", i.e. persons who have no direct interest in the utilisation of ore for producing aluminium. Large areas are thus closed for any prospecting or exploratory effort and sometimes there is a scramble for obtaining mining leases by private negotiations for areas which are yet unproven. Whatever has been done over the past years probably cannot be undone; but I venture to suggest that State Governments should from now on exercise care in issuing prospecting licences or giving mining leases for bauxite properties to persons or companies who are not directly engaged in the production of aluminium. This would ensure more effective utilisation of the bauxite reserves in the country and greatly contribute to the establishment of new economic production units.

Speaking on this occasion last year, I had mentioned to you the transportation difficulties which the Company was experiencing on account of uncertainty of railway wagon availability. This difficulty continues, and representations

made to the Railway Board have proved of little avail. The Company has been forced to use road transport in several instances, which has proved costly as well as unsatisfactory in other respects. But it would appear that we have no alternative until such time as the transportation situation in the country improves.

I had also spoken to you last year about the way in which excise duty regulations were being enforced resulting in serious competitive disadvantage to your Company. Our application to the Central Board of Revenue for permission to move aluminium ingot in bond from the smelters at Alupuram and Hirakud to the rolling mill at Belur has as yet produced no relief. This matter was also taken up with the Central Excise Reorganisation Committee. In the meantime, our losses on account of blockage of working capital on metal in pipeline and excise duty on melt loss are multiplying. This is an unfair burden which the rigidity of regulations has imposed on the Company.

Meaning of Productivity

Several years ago speaking from this forum I attempted a comparison between two kinds of growth—that in population and in productivity. Since then we in India have learnt in the bitter context of a population explosion that most of our efforts at 'national growth' have proved inadequate. We have still to comprehend the true meaning of productivity, its nature and content, for otherwise our development plans, for growth would not so fumble and confound. Despite a plethora of productivity associations, seminars, numerous delegations abroad and published records of these trips, I remain sceptical in that the true measure and content of this coordinate of industrial activity is little understood. There is a personal factor which appears to be missing in such reportings—a factor of personal judicious assessment of the extent of application of a particular analysis in a selected industry. Is productivity a mere coefficient of labour, of work done by the individual artisan? Does automation qualify the conclusions? Does the emergence of a professional managerial class, as distinct from financiers or even technocrats have any bearing on the classical concept of productivity as output per man-hour? This is a puzzling thesis.

The popular measuring rod for productivity is output per man-hour. But the President of U.S. Steel Corporation—the largest steel complex in the world—has recently raised a few broad queries:

"What about the capital invested in more efficient equipment? What about the research which produced better production processes and the know-how which made available higher quality materials? What about the input of man-management, when directed and contributed to this effort?"

These are pertinent questions; practical difficulties emerge as one begins to frame an equitable distribution of gains in productivity over the various sectors—labour, management, machines, research, technology, capital employed, etc.

Searching for an appropriate definition of Productivity, I have not come across anything better than:

"an attempt to anticipate and solve man's major problems on earth by providing through the highest technology more and more of everything, for everybody, from less and less resources."

This does not however provide either a measure for gauging the actual quantum of increase in productivity, nor provide the base for any rational system of distribution.

But no matter what economic and industrial philosophy inspires national efforts, productivity increment is essential for growth and productivity is largely the result of social attitudes of the labour force—their attitudes to technology, to professional management, to work discipline. In our country under the stress of circumstances, overburdened by extreme poverty, many of these attitudes have got perverted and frequently one witnesses drop in productivity with inexorable increase in wage

costs. This is a spectacle which one should deplore and not applaud—as many of our labour and even political leaders do, without reason and without understanding. Whatsoever the measure of productivity one may adopt, no one will deny that it is the key as well as the handmaiden of prosperity. Witness Japan: her astounding industrial recovery is explained in large part by productivity-wages-prices relationship. Over the six years, 1955-60 productivity increased by 47%, wages by 34.3% and prices only by 2.8%. As a recent survey in the London Economist indicated, "the margin between productivity and wages makes possible a high rate of capital accumulation by companies, and thus a high rate of capital investment. In addition, personal savings are exceedingly high... these are probably the most important determinants of economic growth in Japan." There is a deep lesson to be learnt here.

An odd feature in the Indian planning firmament has been the comparative playdown of productivity in the agricultural sector—a field which contributes to more than 53% of the gross national income of the country. An understanding of the perspective relationship between agriculture and industry, of the true meaning and content of productivity, of the measures which will quickly fructify and yield tangible results—these are essential virtues which we must cultivate along with discipline of mind and of habit. The latter is most needed in the context of our present development.

Industrial Workers

Government quite rightly has concerned itself over the last decade with a fair deal for industrial workers but, perhaps unwillingly, has created a climate of unenforceable and irrational demands which halt and do serious damage to the productive machine. With a larger and larger portion of the cake, the industrial worker, by and large, recognises no discipline and little responsibility for growth in results.

It may interest you, as it intrigued me, to know that a keen foreign observer mentioned to me the other day that perhaps what India needs is compulsory military training—to impart amongst the young a sense of discipline during the formative stages of one's character. A country need not become war-mingled if there is compulsory military training—witness Switzerland; nor need it possess arms—as was successfully done in Germany a few years after the war ended. This is a commendable counsel coming from a friend of our country.

In the person of Mr. A. J. Zullig, the new Managing Director of the Company, you see a very wise and experienced head. It is fortunate that the services of a man who has lived his life with aluminium and at the same time is conversant with social and industrial conditions in diverse climes and places. It is my hope that he will stay with the Company for many years and continue the tradition of sound business and forward look for which the Company has already made a name.

To the staff and workers I give our thanks on your behalf for their loyal and steady work throughout the year.

Perhaps you will allow me to conclude on a personal note. This will be the last occasion I will be addressing the Shareholders at their Annual General Meeting. I am aware of the calendar but indifferent health also has compelled me to seek retirement from active work. Let me say that I am deeply grateful to the Shareholders for their indulgence, to the members of the Board and the Staff for their confidence and to everyone connected with this great Company for the trust and loyalty they gave me throughout my 14 years' association with them. I have relished with them the dignity of shared confidence for I believe that faith and work alone do not always yield results: work is merely an expression of what man believes and does. To be enduring and work the same way. These years have been personally of great satisfaction to me. I feel happy that the Company is in good shape and that I will be entrusting the charge in the next few months into younger and abler hands.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

INDIAN PAPER MAKERS ASSOCIATION

CHAIRMAN, MR. P. J. EGAN'S ADDRESS

Speech of the Chairman, Mr. P. J. Egan, at the Annual General Meeting of the Association held in the rooms of the Bengal Chamber of Commerce & Industry, Calcutta, at 11.30 a.m. on Thursday, 26th April 1962.

Gentlemen,

With your permission I shall take the notice convening the meeting as read.

As we have now completed the first year of the Third Five Year Plan I would like to review the performance of the industry over the past year, to consider the progress made towards achieving the targets which have been set under the Third Plan and to draw attention to the obstacles which will have to be overcome in our attainment of these targets.

Official statistics of paper production up to and including March, 1962 are not yet available. However, the total production of paper and paper boards in the calendar year 1961 was 3,64,000 metric tonnes, representing an increase of 19,000 tons over the previous year. In this increase is reflected the expansion of two existing units; no new units came into production during the year. Although the increase is modest when compared with the increase in production recorded in 1958, 1959 and 1960 of 38,000, 43,000 and 51,000 tons respectively, this by no means indicates any lull in the growth of the industry but is due to the normal time lag which is to be expected between the licensing of new industrial undertakings or expansion schemes, and their implementation.

Rising Demand

As you know, the Third Plan estimates that the demand for paper in India will have increased from 3,50,000 tons to 7,00,000 tons a year by 1965-66 and, to meet this demand, the Paper Industry is required to increase production capacity from 4,10,000 tons to 8,20,000 tons a year by 1965/66.

With the improvement in literacy, increase in population, enormous development of education facilities and rapid industrialisation of the country the demand for paper is bound to increase considerably. Tentative estimates of demand at the end of the Fourth and Fifth Plans are 1,200,000 and 1,800,000 tons respectively, per capita consumption increasing to 4 kgs. by 1975 compared with less than 1 kg at present; the estimated demand of 700,000 tons by 1965/66 is therefore small by comparison.

To return to the more immediate future, production for the second year of the Third Plan is estimated at 400,000 tons. While at present Mills' whole production is being absorbed there is certainly no scarcity of paper on the market, at least of the ordinary varieties. The substantial increase in production in the past four years to which I have just made reference brought about stabilized conditions which are likely to hold good for some time. On the assumption, therefore, that the market will continue as at present to take up Mills' whole output and that imports less exports will remain at the present level of approximately 25,000 tons a year, the effective demand at the end of the second year of the Plan will be of the order of 425,000 tons representing an increase of about 35,000 tons over the first year. On this basis, if demand is to increase to 700,000 tons by 1965/66, there will be a leeway of 275,000 tons to be made up in the comparatively short space of three years; but this is not unexpected since it can only be towards the end of the Plan that the vast programmes for industrial development and expansion of education facilities will reach fruition and substantially increase the demand for paper. Not only in the far wider interests of the country's wellbeing as a whole, I sincerely hope that demand for paper reaches and even surpasses the figure of 700,000 tons by 1965-66, as by so doing it will reflect

the achievement of various objectives and targets of the Plan.

Total Licensed Capacity

The capacity of the existing units in the Paper Industry is 410,000 tons and licences have been issued for an additional 804,000 tons, bringing total licensed capacity to 1,214,000 tons. Thus, to ensure fulfilment of the Plan target of 820,000 tons, Government has given itself a margin of 50% as provision against non-implementation of some of the schemes; further licensing remains restricted, the paper industry being included in the list of industries in respect of which licences may ordinarily be rejected without reference to the Licensing Committee. The new licensed capacity is accounted for by expansion schemes of 13 existing units to the extent of an additional 145,000 tons, 21 new large units have been licensed for a new large total of 478,000 tons and 71 new small units for 191,000 tons. Three large and seven small units are expected to come into production this year.

The Paper Industry thus enters the second year of the Third Plan with a programme of vast expansion ahead of it. Expansion brings its own problems, and I would now like to deal with these as well as the more immediate ones with which the Paper Industry is confronted. First, there is the problem of rising production costs and fixed selling prices coupled with the need for the industry to maintain a level of prosperity which will enable profits to be ploughed back for expansion and which will offer a sufficiently promising prospect to attract fresh capital. Secondly, there is the transport problem which during the past year has been one of the serious impediments to the efficient working of the industry, and, finally, there is the grave problem of raw material requirements.

Low Selling Prices

The margin between the industry's selling prices and production costs is particularly important because on it depends to a large extent our ability to finance the expansion envisaged in the Plan. It is also specially relevant because 80% of the establishment of new units—units which, whatever their size, must inevitably require a much heavier capital investment per ton of capacity than the bulk of our present from which the bulk of our present output comes and which, in the case of smaller units, will not enjoy the economic

advantages that accrue from large-scale production. The selling prices of paper and board which were adopted in January, 1960 by the Government of India on the recommendations of the Tariff Commission are unduly low, and over the three years which have elapsed since the Tariff Commission made their recommendations these selling prices have been rendered steadily more uneconomic by increases in production costs which, by reason of our fixed prices, we have been unable to pass on to our customers. Our industry has been and is being squeezed between rising production costs and fixed selling prices and our profitability has correspondingly declined. One of the consequences is that there are indications of lack of progress in the implementation of some of the schemes for the establishment of new mills by licence-holders, a very disturbing development which endorses the industry's opinion that Paper manufacturing no longer enjoys the degree of profitability to attract fresh capital to the extent required for achieving the planned increase in our production capacity. The only remedy is for Government to grant immediately a suitable *ad hoc* increase in paper prices to compensate for the increase in costs which has taken place over the past three years.

In my speech last year I indicated that at the Rate Contract meeting held in March, 1961 Government had agreed to reconsider the question of prices on receipt from the industry of details of cost increases which had taken place since the Tariff Commission's investigations. Negotiations with Government culminated with visits in February and early March of this year by joint delegations of members of this and the Indian Paper Mills Association to New Delhi for discussions with the Development Wing of the Ministry of Commerce & Industry. Details of cost increases which were incurred since 1958 by five of the units whose costs were investigated by the Tariff Commission have been submitted, and the weighted average increase in the cost of production of these mills as disclosed in these statements works out at Rs. 150/- per metric tonne for raw materials, chemicals and power and fuel alone, disregarding increases in labour charges, repairs, establishments and other overheads. The industry's submissions are now being considered by Government. I trust that Government will shortly grant a suitable increase in selling prices to compensate for the cost increases which have al-

ready taken place, and, in addition, will keep intact the 5% contingency allowance in the price structure to meet further increases in the future. In this context, as an indication of the necessity for preservation of the contingency allowance, I need only refer to the freight increases introduced in the Railway Budget last week and to excise on chlorine and hessian in the Finance Bill. Besides granting an increase in selling prices, I trust Government will also abolish the reel rebate which since its introduction in January, 1960 has acted as a disincentive to expansion of reeling capacity, and will restore the differential for colouring charges to pre-1960 levels. Before I finish this subject, I repeat that the need for an *ad hoc* increase in paper prices is urgent, and express the hope that Government will reach a favourable decision at a very early date.

Inadequate Wagon Supplies

Despite the best efforts of the Railway Authorities who, with the limited supplies of wagons at their disposal, have done everything possible to help us, the deficiencies of railway transport remain the greatest single difficulty in the day-to-day running of our mills. For the major part of the past year almost all of our members accumulated large stocks of raw materials at the upcountry despatching stations but were unable to have them delivered to their mills because of the lack of railway wagons, while stocks at the mills were reduced to critically low levels. Similarly, the railways were unable to provide adequate wagon supplies for our very considerable requirements of coal, and our mills in North East India had no option but to accept large quantities of coal by road at considerable extra cost. There can be no question but that the transport shortage has impaired the Paper Industry's efficiency and added to its working costs.

The Association was very active throughout the year in bringing these transport difficulties to the notice of the authorities concerned, and during the early part of 1961 we were successful in having raw materials for the Paper Industry upgraded in the Preferential Traffic Schedule. But this upgrading produced little practical improvement and it was not until the latter part of the monsoon, when the normal seasonal reduction in pressure on the railways took place, that we were able to obtain increased deliveries of our raw materials and to reduce our upcountry stocks. Since then, the situation has again deteriorated and we are once more in a position where the raw material stocks with some mills have been reduced to no more than a few days' consumption while at the same time large accumulations are awaiting despatch from upcountry. Grave as these current difficulties are, however, perhaps the most alarming feature of the situation is its threat to the future development of the paper

hunger strikes IN BANKING HISTORY

In the 3rd Century A.D. the 'hunger strike' was a weapon used in India for the recovery of loans. The method was called "dharna". The creditor posted himself outside the debtor's house and fasted till either the debt was paid or he (the creditor) died. The debtor usually paid up, for fear of being injured by the ghost of the man. Manu the Hindu law-giver laid down five methods for the recovery of debt: "By moral suasion, by suit of law, by artful management or by customary proceedings a creditor may recover property lent; and fifthly by force."

Today friendliness and co-operation underscore banking transactions, especially when you deal with the Union Bank. The Union Bank has made a creed of *personalised service*, under which every depositor is treated as a Very Important Person. The Union Bank believes that a depositor's savings help not only himself and his family, but also the nation.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information; Safe Deposit vaults; **TELEX** contact with countries all over the world.

Industry. If the railways cannot cope with supplies of raw materials and fuel at our existing level of production, then there is a danger that the lack of transport will frustrate our development plans.

Shortage of Bamboos

It is widely recognised that pressure on the country's bamboo and other forest resources is steadily increasing not alone by the expansion of the Paper Industry, but also by the requirements of other industries and by new industrial uses of bamboo such as for rayon grade pulp. In fact, the Planning Commission indicates that, because of the shortage of bamboos, expansion of paper and newsprint in the Third Plan will have to depend heavily on the use of bagasse. It is particularly important, therefore, to plan the development of our forests on healthy and scientific lines so as to maximise their productivity in the years to come. Scientific exploitation and plantation of forests can be undertaken only over a long period of years; it requires substantial capital investment which will not be forthcoming unless the investor has a reasonable assurance that he will be able to reap the fruits of his labour and expenditure. The Paper Industry, in its own interests, is anxious to play its part in the proper development of the country's forest resources but it can undertake the necessary investment on plantation and scientific exploitation only if it is assured of long term tenure at reasonable rates of royalty. Factors to be borne in mind in the fixation of royalty rates are that paper prices are fixed, that the industry is otherwise a substantial contributor to Government revenues through the medium of Excise Duties and that, unlike forests worked by contractors on an annual basis, the areas leased to the industry will be exploited in a scientific manner resulting in better yield and correspondingly increasing royalties.

These sentiments, which have been expressed for many years by my predecessors, are fully endorsed by the findings of an F.A.O. expert who was assigned to India in 1959-60 to advise Government on the development and integration of forests and forest industries, and whose report, which has recently been made available here, includes recommendations for long term leases at minimum requirements of raw materials for pulp will be 4,000,000 tons by 1975 which must be met to the extent of 1,600,000 tons by bamboos, 1,100,000 tons by wood, 800,000 tons by bagasse and the balance by grasses and waste paper. The present output of bamboos must therefore more than double itself, and it is suggested in the report that this can be done by development of new areas, by improved silvicultural methods and by the establishment of bamboo plantations. To ensure adequate supplies of bamboos for paper making, our industry is prepared to play its full part in this development work. Apart from the question of bamboos, the recommendations in the report for the establishment of extensive plantations with fast growing species of wood are of particular importance because of the increasing shortage of industrial wood in India, which the Planning Commission estimates will amount to as much as 4,000,000 tons by 1975. Unless vigorous steps are taken on these lines there will undoubtedly be a grave shortage of raw materials for the Paper Industry in the years to come.

New Raw Materials

Many mills have been exploring the possibility of making use of new raw materials and the most important items of this kind which have been introduced during the past few years are bagasse and jute sticks. Bagasse has hitherto been used as fuel by the sugar industry, and sugar mills can make it available for paper manufacturing if they are assured of receiving adequate coal supplies to replace it. The use of jute sticks by the Paper Industry constitutes an exceedingly valuable innovation. As it has hitherto been regarded largely as waste material, it is clear that if it is developed on a substantial scale it will constitute a very great boon to the hundreds of thousands of agriculturists engaged in the cultivation of jute.

For those mills whose pulping capacity falls short of their paper making capacity the import of wood pulp under the Development Loan Fund has been particularly helpful and indeed it is only by means of such imports that these units have been able to utilise their paper producing facilities to the fullest extent.

I have dealt with the three main problems facing the Paper Industry: costs and prices, transport and raw materials. There are two other subjects which are sufficiently important to warrant mention here. The first is Excise Duty. Since Government introduced a substantial increase in the Excise Duties payable on certain qualities of paper and board in the Budget for 1961, we have been having considerable difficulties regarding the identification and classification of papers in accordance with the descriptions contained in the Excise Tariff. In some instances the Paper Industry considers that the Excise Authorities are assessing certain types of paper to duty at rates that are higher than those prescribed; and there are anomalous cases where the Excise Officers at particular mills are classifying papers under a tariff item which is different from that adopted at other mills which produce the same papers and consequently are imposing a competitive disadvantage on these units. There have also been examples of the Excise Authorities adopting a revised classification with retrospective effect and demanding the payment of arrears of additional Excise Duty—arrears which mills, by the nature of the paper trade, are unable to recover from customers. Our Association, in conjunction with the Indian Paper Mills Association, has recently dealt with these Excise problems in a memorandum submitted to the Central Board of Revenue and we are now awaiting the Board's reactions.

Export Prospects

The other subject I wish to mention is the question of exports. There is a vital need to increase the country's exports and I only wish that the Paper Industry could make a more substantial contribution to the export drive. Some of our units, such as a member of the mill specialising in the manufacture of tissue paper, are already exporting but it is desirable that the Paper Industry's export efforts should be more broad-based, particularly as we are the largest paper producing country in South Asia. Our basic problem, however, is the lack of raw materials of the quality and at the cost available to established paper exporting countries. No doubt the Special Sub-Committee appointed by the Development Council for Paper sometime ago to promote the export of paper, is giving its careful attention to this most urgent matter.

With the vast expansion taking place in the Paper Industry it is very essential that the paper mill machinery used in India is developed to meet our increasing requirements of plant and equipment. Government is taking strenuous and constructive measures to achieve this and some of the best-known engineering units in India and abroad are now collaborating in the development of the Paper Mill Machinery Industry here. Targets for the new industry have been set by the Third Plan which aims at an indigenous content of 70% by 1965-66 in plant produced by it.

I take this opportunity to express to Government the gratitude of the industry for the assistance rendered during the year by the Development Wing of the Ministry of Commerce and Industry. All of us in the industry were very grieved to learn of the untimely death of Mr. N. K. S. Iyengar earlier this year.

On behalf of the Industry I would also like to thank the Cellulose and Paper Branch of the Forest Research Institute for all the research work they are doing. This work is vital for the Paper Industry's future well-being.

Before I conclude I would like to express on behalf of my Committee and myself our very great appreciation of the work put in by Mr. Paris who acted as Secretary of the Association throughout the year.

Thank you, gentlemen.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

ADVANCES STILL RISING

Wednesday, 2nd May.

THE overall level of advances has continued to increase in the Calcutta money market during the past week. The increase has been thinly spread over nearly all the major categories—cotton, sugar, iron, steel and engineering, and foodgrains and seeds storage. It is only jute credit which remains virtually unchanged. Conditions in the inter-bank market are a little tighter than they were a week ago, and the call rate is quoting 3½ percent.

The exchange market has been very quiet, with hardly any gunny or tea bills passing. The demand for remittance has been moderate. Following the reduction in the U.K. Bank rate, sterling has suffered fractional losses in relation to most of the important currencies.

SILVER WAS QUIETLY STEADY DURING the past week. Turnover was restricted. The price rose from the previous week's level of Rs. 260.50 to Rs. 261.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 251. The London and New York prices were 84½ and 101.50 cents.

Gold was subdued on lack of support. The price was quoted at Rs. 145. The sovereign was available at Rs. 89.75.

DURING THE WEEK ENDED 27TH APRIL, Government of India Treasury bills for Rs. 44,96,25,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 30th April. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.355 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.530 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 7th May.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 1st May to 5th May at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 25th April to 28th April amounted to Rs. 35 lakhs.

THERE WAS A DECLINE OF RS. 18.02 crores to Rs. 2,123.04 crores in active notes, according to the return of the Reserve Bank of India for the week ended 27th April, 1962. The total note issue was Rs. 83 lakhs larger at Rs. 2,162.96 crores. Foreign securities of the paper currency reserve were cut by Rs. 3 crores to Rs. 105.55 crores while rupee securities were raised by Rs. 2.97 crores to Rs. 1,820.91 crores. These changes were made by transferring securities to and from the Banking Department, in which balances held abroad declined by Rs. 2.48 crores to Rs. 6.55 crores. Investments were Rs. 20.56 crores larger at Rs. 172.67 crores. Deposits of the Government of India rose by Rs. 2.58 crores to Rs. 53.64 crores and

other Governments by Rs. 7.43 crores to Rs. 14.29 crores. Balances of commercial banks at Rs. 85.15 crores showed a fall of Rs. 3.37 crores. Other loans and advances declined from Rs. 131.56 crores to Rs. 127.82 crores, of which advances to scheduled banks against usance bills were Rs. 9.80 crores (Rs. 12.47 crores). Ways and means advances stood at Rs. 110.25 crores, against Rs. 125.87 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 20th April, 1962, shows a drop of Rs. 2.15 crores to Rs. 575.58 crores in total deposits. Investments in Government securities have risen by Rs. 98 lakhs to Rs. 243.79 crores, while other authorised investments are down by Rs. 4 lakhs to Rs. 9.09 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have increased by Rs. 1.29 lakhs to Rs. 294.34 crores. Cash and balances are, in consequence, shown at Rs. 25.99 crores, or Rs. 2.01 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 20th April, 1962, shows Demand and Time liabilities at Rs. 926.89 crores (Rs. 24.52 crores on account of borrowings from banks) and Rs. 1,208.71 crores (Rs. 13.43 crores), compared with Rs. 923.17 crores (Rs. 22.79 crores) and Rs. 1,203.02 crores (Rs. 12.24 crores), respectively, in the previous week. Cash and balances with the Reserve Bank increased by Rs. 2.75 crores and Rs. 4.35 crores, respectively. There is a rise of Rs. 1.33 crores to Rs. 589.85 crores in investments. Advances and bills discounted, at Rs. 1,432.65 crores, show an increase of Rs. 8.47 crores. The ratios to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.4 percent and 67.1 percent, against 6.8 percent and 67.1 percent.

An admirable reference book in Industrial Law!

V. B. Kher's Supreme Court Digest of Labour Law Cases
Vol. II (May 1959 to December 1960) Rs. 15.00

"I welcome this little publication. It helps one to get a glimpse of the great role played by the Supreme Court of India in enunciating principles of cardinal importance in the field of labour relations".

... From the 'Foreword' to the first volume by the Hon'ble Mr. M. C. Setalvad, Attorney-General of India.

THACKER & CO. LTD., Rampart Row, Fort, Bombay.

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

United Bank of India Ltd.

UBF-Jac-61

this is the time to think about air conditioning

and this is the time to think about Carrier and Voltas

—now, while a new building is in the blueprint stage. Too early? Not at all. It's a costly afterthought to plan air conditioning once construction has begun. Before designs are finalized, air conditioning engineers and architects work in close collaboration. Provision is made from the beginning for the installation of air conditioning plant, air ducts and cooling towers. This saves money on both equipment and installation costs. And air conditioning affords architects more freedom and flexibility to adopt new building concepts and designs for architectural beauty and maximum utilisation of the available space.

Why Carrier and Voltas?

Because they bring the maximum engineering experience and skill to every air conditioning project. Carrier in the field of manufacture of equipment. Voltas in the field of engineering, installation and service.

Air conditioning plant installed by Voltas is meticulously designed to suit a particular job. Every project is carried out by skilled engineers and technicians, and serviced with the expert care that guarantees efficient, economical operation.

FRESH TAX BURDENS FAIL TO CHECK RISE IN EQUITIES

Wednesday Evening.

IT has been a good week for the Calcutta stock market. Except for the short-lived reaction on Tuesday following the Prime Minister's observations on Indo-Pakistani relations, share prices have forged ahead on sustained support. On second thoughts about the new taxes proposed by Mr. Morarji Desai, Lyons Range is veering round to the view that the fresh tax burdens will be taken by industry in its stride. If the shortage of transport, coal, power and raw materials is relieved, the increase in the corporation tax from 45 percent to 50 percent may be offset by increased turnover and profits. Contributing to the steadiness is the growing shortage of good floating scrip. Now that the tax on capital gains has been made stiffer, it is argued, investors will be discouraged from selling shares. This apart, many good shares are already in the hands of the Life Insurance Corporation. As the Corporation has not shown much interest in shares for some time, it is expected that it may soon start operating in the stock market in a substantial way.

The carry-forward charges and deliveries at the past settlement were smaller, indicating a healthier technical position. The busy season is drawing to a close, and funds have begun to flow back into the banking system. As deposits are expected to grow, the banking system is likely to have sufficient liquid funds during the next few months. The stock market hopes that a portion of the bank money will go into stocks and shares. There has been an appreciable decline in short-selling, because the stock market as a whole takes a fairly bullish view of the long-term trend. Confidence has been reinforced by the encouraging speeches of the chairmen of some leading companies. In their recent addresses to shareholders, the chairmen of Indian Aluminium, Dunlop Rubber and Goodyear India have pointed to the prospects for expansion and diversification of activity in their companies.

It is, nevertheless, time investors started taking a more discriminating view of the prospects for expansion. The installed capacity in many industries is increasing faster than the demand for the products. Hence competition will soon increase in many sectors of the Indian economy. In the circumstances, investors should be more selective in buying shares.

For the time being, Lyons Range has been cheered by two factors. The first is that the tea industry, in which large investments have been made, is likely to do better, because the export of the commodity will be promoted by the cut in the export duty combined with a partial refund of the excise duty. The second is that the prospects of an increase in the price of coal are brighter because the Central Minister of Mines and Fuel, Mr. K. D. Malaviya, has indicated his willingness to grant a rise, provided certain conditions are fulfilled.

Indian Iron have closed around Rs. 26.30. Among engineering shares, Braithwaite and Indian Oxygen have been firm because of their proposal to issue bonus shares. Support has been forthcoming for Jessop, Jay Engineering and Hindustan Wire. Texmaco have fluctuated due to speculative manipulations. Burn, Kumardhubi and Britannia Engineering have been steady.

Coal shares have improved on a broad front. East Indian have gained

on prospects of expansion. Interest has been taken in Burrakur, Bengal. Amalgamated, Central India and New Beerbhoom.

Cotton mill shares have rallied after an earlier decline. Bharat Commerce, Elgin, J. K. Rayon, Jay Shree Textiles and Cawnpore Textiles have recovered. Dunbar and Bowreah have been steady.

Jute shares have been quiet, because investors are still wondering whether the excise duty on jute goods can be passed on to consumers. Birla, Anglo-India, Northbrook, Barnagore and Kelvin have reacted. Nuddea, Kankarrah, Kamarhatty and Ganges have declined.

Miscellaneous shares have maintained their top gains in spite of earlier profit-taking. Indian Aluminium, Dunlop Rubber, Alkali Chemical, Union Carbide and Goodyear India have hardened. Indian Copper, Rohtas, Hindustan Motors, Jaipur Udyog, Orissa Cement and Kesoram Industries are steadier. Hindustan Aluminium have met with influential Aluminium buying. Angelo Brothers and National Insulated Cable have gained. Good support has been extended to new shares such as Indian Tack and Nail, India Carbon and S. S. Duncan.

Paper shares have gained on balance. Orient and India Paper Pulp are being taken on prospects of expansion. Ballarpur and Bengal have hardened. Titagur have been steady, but Sirpur are being sold freely.

Sugar shares have shown mixed trends. Interest is being taken in Ramnugger Cane and Dyer Meakin Breweries, while Belsund, Carew, S.K.G. and Cawnpore have become easier.

Bank shares have been steady, but turnover has declined. United Commercial, United Bank and Punjab National have been supported.

The demand for selected tea shares has increased due to the tax relief to the industry on exports. Tezpur, Dibrugarh and Bishnauth have gained. Sloom have improved on issuing bonus shares.

Prices of Government securities have generally been maintained. There has been scattered support from institutions due to the easier

money conditions. The 3 percent Conversion loan 1986 is being quoted around Rs. 71.10.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for April 1962 are as follows, the figures for the previous month being given in brackets:

Production:	(In tonnes)
Pig iron	109,726 (113,176)
Steel ingots	83,396 (88,241)
Salable steel	47,646 (86,294)
Despatches:	47,603 (93,312)

Bombay Market

TAX CHANGE HOPES HELP SENTIMENT

STEEL PRICE RISE EXPECTED

Wednesday Evening.

HOPES that the Central Finance Minister will modify the proposed excise duty on cloth and yarn have helped improve sentiment in the Bombay stock market. Earlier in the past week, support increased due to the improved technical position, as indicated by lower carry-forward charges at the past settlement. Investors have been encouraged by some company reports, which show that turnover and profits have increased. The speeches of the chairmen of Alcock Ashdown and Mahindra and Mahindra have been interpreted bullishly because they have outlined the expansion prospects of their companies.

Sentiment has been particularly encouraged by expectations that the retention price of steel will be increased soon. As a result of strong support, interim margins had to be imposed on bulls for Indian Dyestuff, Amar Dye-Chem, Polychem, Larsen and Toubro and Texmaco, as their prices have risen by more than 10 percent over the past *havalas* rate. On the other hand, an interim margin has been imposed on bears in the case of Minerva Mills because the price

HAS/SL-143

has fallen by more than 10 percent over the last *havala* rate.

Tata Steel closed at Rs. 144.75 and Indian Iron at Rs. 26.05. Alcock Ashdown were supported up to Rs. 344. Larsen and Toubro gained at Rs. 35.15 and Tata Locomotive were in demand at Rs. 367. Premier Construction were taken at Rs. 179 and Mahindra and Mahindra at Rs. 20.76. Motor-vehicle shares became steadier, and Hindustan Motors were taken at Rs. 20.28. Business was done in Premier Automobiles at Rs. 137.50.

Cotton mill shares recovered after an earlier decline. Century gained at Rs. 656.50 and Bombay Dyeing at Rs. 70.20. Kohinoor were placed at Rs. 304 and Swadeshi at Rs. 289. Tata Mills met with support at Rs. 79.50 and Morarjee at Rs. 418. Business passed in Standard at Rs. 1,038 and in Gokak at Rs. 223.50. India United ordinary were steady at Rs. 23.28, but Apollo were offered at Rs. 2.44.

In the miscellaneous section, sugar shares were quiet, and Belapur were available at Rs. 241. Phalton were indicated at Rs. 110 and Walchandnagar Industries at Rs. 158. Mining shares became very quiet, and Shivrajpur Syndicate fell to Rs. 35 on passing the dividend. Steamship company shares were steady, and Scindia Steam rose to Rs. 13.48. Great Eastern Shipping were transacted at Rs. 14.48. Cement shares met with support, and Associated Cement gained at Rs. 162. Digvijay were wanted at Rs. 211. Bombay Burmah were firm at Rs. 682 due to the tax reliefs on tea exports. Rayon shares were fancied, and National Rayon recovered to Rs. 574.50. Gwalior Rayon were dealt in at Rs. 59.80 and Baroda Rayon at Rs. 150. Volitas improved to Rs. 301 on prospects of expansion and interest was taken in Tata Oil at Rs. 83.20. Chemical shares were bought, and Tata Chemical were quoted at Rs. 17.96. Indian Dyestuff were taken at Rs. 548.75 and Colour-Chem at Rs. 507.50. Synthetics and Chemicals hardened to Rs. 232.50, but Ceat Tyre were easier at Rs. 186.25. Hindustan Lever rose to Rs. 69.80 because of the bonus issue.

Bank shares were quietly steady, but turnover was small. Bank of India were placed at Rs. 117 and Central Bank at Rs. 68. Bank of Baroda were taken at Rs. 114.50. Insurance shares were steady, and New India Assurance were dealt in at Rs. 68.20.

There was scattered support for electric company shares, and Ahmedabad were taken at Rs. 93.30. Business passed in Tata Power at Rs. 1,110 and in Bombay Suburban at Rs. 103.

Madras Market

VALUES STEADY ON FRESH SUPPORT CLOTH LEVY CAUSES CONCERN

Tuesday Evening.

THE Madras stock market was steadier during the past week, and share prices on the whole im-

proved due partly to fresh support and partly to firmer advices from other stock markets. Although cotton interests were disturbed by the increased excise duty on cloth and yarn, selected tea shares were supported due to the cut in the export duty and the proposal to refund a portion of the excise duty on tea exports. Cement and chemical shares were fancied due to the prospects of expansion.

Business in Government securities increased, because banks showed some interest in short and medium-dated stocks. Sugar shares were quiet because no cut in the excise duty on sugar has been proposed in the Central Budget. Coffee shares were selectively bought on optimism concerning improved exports.

In the banking section, Andhra were dealt in at Rs. 100 and Canara Banking Corporation at Rs. 80.50. Indian came to hand at Rs. 175.75 and Indian Overseas at Rs. 167.50. Punjab National were steady at Rs. 21.25 and State Bank of Travancore at Rs. 118. Among electric company shares, interest was taken in Negapatnam at Rs. 12.10 and in South Madras at Rs. 10.15. Cochin were placed at Rs. 12.25 and West Coast at Rs. 16.12.

Among sugar shares, Deccan were quiet at Rs. 9.82, but E.L.D. were maintained at Rs. 40.12. Business was done in United Breweries at Rs. 82.25 and in Mysore at Rs. 53.40. India were sold freely down to Rs. 9.65 and K.C.P. to Rs. 22.75.

In the planting section, Blue Mountain were taken at Rs. 2.57 and Lucky Valley at Rs. 10.65 on declaring a taxable ordinary dividend of 10 percent. Emerald Valley were dealt in at Rs. 5.35 because the directors have tentatively proposed to return the capital to the shareholders after selling the property. The estates are proposed to be sold at not less than Rs. 9.50 lakhs. Cochin Malabar were easier at Rs. 6.96 and Consolidated Coffee at Rs. 19.40. Kil Kotagiri were done at Rs. 5 and Gokul at Rs. 1.91. Ouchterlony were transacted at Rs. 4.07 and Periakaramalai at Rs. 3.60. Travancore Rubber hardened to Rs. 12.80 and Twyford to Rs. 10.75. Coonoor were placed at Rs. 23 and Lingapur at Rs. 4.10. Nilgiri met with support at Rs. 8.60 and Nonsuch at Rs. 21.67. Business passed in Parkside at Rs. 23.25, but Peermade were easier at Rs. 18.90.

Among textile shares, Anglo-French were steady at Rs. 147.50 and Adoni at Rs. 12. Buckingham were taken at Rs. 271.60 and Bangalore Woollen at Rs. 250.60. Rayalaseema hardened to Rs. 164.50 on proposing to issue 7,446 bonus shares. Lakshmi were dealt in at Rs. 166 and Madura at Rs. 38.50. Coimbatore Pioneer came to hand at Rs. 296.50 on declaring a taxable ordinary dividend of 25 percent. Kadri were bought at Rs. 140 on paying a taxable ordinary dividend of 12 percent. Kerala Lakshmi were sold freely down to Rs. 50 on passing the dividend. South India Viscose were dealt in at Rs. 192 and Travancore Rayon at Rs. 43.50. Radhakrishna were steady at Rs. 39.60 and Rangavilas at Rs. 52.50. Vasanta came to hand at Rs. 291.50 and Trichinopoly at Rs. 13.75.

Among miscellaneous industrials, Aluminium Industries hardened to Rs. 24.10 and Ashok Leyland to Rs. 9.12. Dalmia Cement were steady at Rs. 13.55 and F.A.C.T. at Rs. 8.15. India Cement met with support at Rs. 6.18 and Mettur Chemical at Rs. 13. Travancore Electro-Chemical were sold at Rs. 95 because the Company proposes to issue 10,000 ordinary shares at par, in the proportion of two new shares for every five held. Enfield were steady at Rs. 12.05 and Kirloskar Electric at Rs. 23.12. Madras Rubber hardened to Rs. 23 and Mandya National Paper were easier at Rs. 8.45. Interest was taken in Standard Motors at Rs. 16.75 and in

Spencer at Rs. 23.80. Parry's Confectionery were bought at Rs. 4.37, but Premier Fertiliser were sold at Rs. 7.90. Support was forthcoming for Tube Investment at Rs. 290 and for Textool at Rs. 183.50. United Electric were offered at Rs. 9.50 and Ogale Glass at Rs. 6.20.

HOW HOW HOW E FLEXIBLE F PACKAGING I J HELPS YOU R SELL YOUR S DS GOODS GO

PROTECTION

Flexible Packaging offers protection both in transit and in store by keeping the product moisture-proof, odour-proof, grease-proof and helps retain its hygienic state all throughout.

SALES APPEAL

Seeability of products serves as an attention getter. Modern flexible packaging combines this with colorful selling message to attract consumers—an effective way to sell goods faster.

ECONOMY

Flexible Packaging saves space and makes handling easier. It leads to a considerable economy in cost. Manufacturers prefer flexible packaging now more than ever for they are tailored to meet individual requirements.

Twenty-seven years of experience in Flexible Packaging and the present collaboration in technical know-how with Milprint, U.S.A., another leading manufacturer of Flexible Packaging in America, the Paper Products is well equipped to answer your Packaging Problems.

tion and storage of Ores and
Industrial Minerals.

The Central Minister of Industries,

Esso is interested in setting up a lubricating plant, in equal partnership with the Government. It has been offered an industrial licence to set up a naphtha cracker plant with a capacity of 100,000 tons a year, against its demand for a plant with a capacity of 200,000 tons. It has also shown interest in oil prospecting in areas other than West Bengal, where the joint venture with the Government failed to strike oil or even gas. The two general managers presumably went to their headquarters for consultation on these issues.

The following statement was made in reply to a question in the Lok Sabha during the past week: "The price situation over the last one year has been well under control. The general index of wholesale prices for March 1962 was 3.1 percent lower than the March 1961 level. Between January 1962 and 10th March, 1962, there was some increase in wholesale prices of certain essential commodities, such as food articles and cotton

The chairman of the International Wool Secretariat Board, Sir William Gunn, said recently: "The Secretariat is prepared to take a long-range view of the Indian market and is not looking for immediate results from its efforts." Sir William and Mr. W. J. Vines, managing director of the Secretariat, were on a seven-day tour of India. They left Bombay for Australia last week. The subjects they discussed with the Government included financial assistance from the Secretariat and the supply of skilled technical personnel in the special research programme now being planned.

KERALA URGED TO GROW MORE CASH CROPS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

AN immediate revision of Kerala's agricultural policy to give top priority to the cultivation of cash crops like coconut, cashew, rubber and tea has been urged by the National Council of Applied Economic Research which recently conducted a techno-economic survey of the State. Dr. P. S. Lokanathan, director-general of the Council, said at a Press conference in Trivandrum recently that "the policy of self-sufficiency in foodgrains is neither good for Kerala nor for the rest of India. It would divert the State's poor resources to foodgrains from valuable cash crops". He was explaining the salient features of the voluminous survey report.

Dr. Lokanathan did not agree with the State Finance Minister, Mr. R. Shankar, who has been advocating self-sufficiency in food as a positive course of action for augmenting capital formation within the State. According to him, Kerala should give top priority to cash crops which serve either as raw material for industries or figure in the country's export trade. No transfer of cultivable area from cash crops to food crops should be allowed, Dr. Lokanathan said.

The N.C.A.E.R. report says that in view of the special suitability of Kerala for growing valuable plantation and cash crops, no diversion of cultivable area from cash crops to food crops should be allowed. All possible extension of the cultivable area should be reserved for commercial crops. If, as a result of giving top priority to these crops in the State's agricultural production programme, there is any shortfall in food supplies, the Centre should make good the deficit, the report suggests.

Crop Priorities Suggested

The Council has suggested the following system of priorities for crop development in Kerala: (1) crops which serve as raw materials for industry, especially those in which the country is not self-sufficient at present, namely, coconut, cashew and rubber; (2) crops making a substantial contribution to the foreign exchange earnings of the country, namely, tea, coffee, lemon-grass oil, cardamom, etcetera; and (3) crops which contribute towards wiping out the food deficit.

For raising the yield of foodgrains, the Council has recommended the use of improved seeds, a higher dosage of fertilisers, control of soil erosion, and provision of major and minor irrigation works. The N.C.A.E.R. does not agree with the view that the need for providing irrigation facilities is less in Kerala because the State gets a large amount of rainfall. According to it, irrigation facilities are essential for double and triple cropping, stabilisation of crops, and for the effective application of fertilisers. It is estimated that the various measures to raise food production recommended in the report would raise output by 728,000 tons. By 1970-71, the foodgrains output will rise to 1.65 million tons. Kerala will still have to import about 800,000 tons from other surplus States.

Dr. Lokanathan said in the course of his Press conference that Kerala's economy was a study in contrasts. The agricultural sector of the State was certainly not unimpressive, com-

pared with any other part of India, mainly because the State has a large percentage of its cultivable area under high value-yielding crops like coconut, rubber and tea. On the other hand, productivity in the industrial sector is very low as cottage industry using antiquated techniques is the predominant enterprise. The structure of Kerala's economy is dominated by plantation crops and the poor industrial production of the secondary sector. The Council, he said, had come to the conclusion that a wise policy for the Government of Kerala to adopt would be to plan for a rate of growth which would bring the per capita income of the State to approximately the level of the rest of India by 1971. This meant an annual average increase of 10 percent. It would require an investment of Rs. 100 crores a year in Kerala for the next ten years. The amount should come partly from the State Government, partly from the Centre and mostly from the private sector. The Council has suggested that for various reasons, economic and social, Kerala should be regarded as a special case for Central assistance.

The Council has suggested a large number of new industries for Kerala including engineering industries. The total investment recommended in the industrial sector is Rs. 193 crores in the next decade. It has also recommended the modernisation of existing industries in the State. As solutions to the high rate of population growth and the consequent high density, the Council has suggested intensification of family planning efforts and migration of a section of the State's population to sparsely populated areas in other parts of the country.

The State Industries Minister, Mr. Damodara Menon, has described the recommendations of the Council as "valuable and thought-provoking", and said the Kerala Government would consider them carefully.

Cashew Corporation to be Set Up

A conference of the cashew processors in Kerala held on 28th April has accepted the State Government's proposal for setting up a cashew corporation having jurisdiction over the whole of India, to look after the import and distribution of raw nuts. This will be a public limited company with a capital of Rs. 10 to 15 lakhs; those engaged in the cashew processing industry will be the shareholders. The conference was told that some understanding had been reached at the official level that the proposed corporation should be an all-India one; ministerial level discussions on the subject would soon be held. To make the corporation the sole importing and distributing agency, the Central Government's co-operation is necessary. The conference was assured by the State Government that this co-operation would be forthcoming.

The setting up of the cashew corporation is a bid to prevent wide fluctuations in the price of the raw material for the cashew processing industry. Two attempts were made previously to import raw nuts from Africa through a central agency of the processors, but they failed because some processors refused to co-operate with the syndicates formed for the purpose. It is believed that, with the active co-operation of the Government, both at the Centre and

in the cashew-processing States, the proposed corporation can do this job and ensure raw nut supplies at reasonable prices. There are, however, several processors who are sceptical about the success of the present move.

Exporting More Indian Coffee

Greater care of quality while processing coffee both on the estates and in the curing establishments, is urged by the two-man delegation of the Coffee Board (led by its chairman, Mr. Sitarama Reddi) which visited Europe in the latter half of last year to study market conditions and to explore the possibilities of stepping up Indian coffee exports to European countries. In its report to the Central Government, the delegation, it is reported, has referred to the complaints of the growing deterioration in the quality of coffee exported from India, and has suggested that concerted efforts should be made to improve the quality in order to maintain the good name of Indian coffee abroad and to get better prices for it. Another important recommendation is that continuity of supplies should be ensured. Sales should, as far as possible, be spread throughout the year.

Associations and traders in western Europe attach sanctity to traditional channels of trade. They are against sales on consignment account, and as such this system of trade is not useful. Foreign importers are also against direct sales by the Board either to foreign countries or to the State Trading Corporation in barter or link deals. This applies to east European countries as well. In the long-range interests of the Indian coffee industry, the delegation has recommended that the Board should not make direct sales to the State Trading Corporation or any country. Foreign buyers should be enabled to secure their requirements either by participation in the auctions or through arrangements with Indian shippers. In the interests of building up stable markets abroad, coffee should be released in conformity with international prices for similar qualities and growths. On propaganda, the delegation's recommendation is that the Coffee Board should arrange to prepare posters and other display materials and films in foreign languages, and forward them to the Indian embassies and coffee trade associations abroad. About curing, the delegation says that steps should be taken at both the planter's and curer's level to see that coffees are dried to the optimum moisture before processing.

EXPLORING MARKETS FOR TEA ABOLITION OF EXPORT DUTY URGED

(BY A SPECIAL CORRESPONDENT)

ASSAM and West Bengal teas continue to lose export markets and in spite of higher crop yields last year, the season's exports to the U.K. show a decline of about 8,250,000 lbs. against north India's crop increase of 66 million lbs. Attention has repeatedly been drawn to this matter, but it is now up to the authorities to act as the tea industry can definitely earn more foreign exchange within a short period. Some definite recommendation to this end may be expected from the visit to the U.S.A. and Canada of a four-man committee of the Indian Tea Board. The committee is expected to be back in India soon.

The European Common Market also looks like a suitable area for the exploration of markets. Tea duties in Continental countries, it is expected, will be considerably reduced. Some figures on consumption as well as the duty charged have

recently been received from West Germany. These state that on 613 tons of tea consumed, the German exchequer collected more than 26 million deutschmarks as duty. This suggests that the impost is around 19 to 20 deutschmarks a lb which appears to be too high for a popular beverage. The chairman of the Tea Board, who is expected to be back in India shortly, is now reported to be exploring the possibility for increasing Indian tea exports to West Germany.

The Mudaliar Committee pointed out that higher exports can be achieved if all interests join together in a national drive. The problem, it said, must be tackled from all sides simultaneously. This means that if India is to earn more foreign exchange, the Government will have to co-operate by abolishing all export duties and refunding rail freights on teas shipped to foreign ports. Half-measures will not succeed in recapturing the markets which India has lost due to higher prices.

Manufacturing Instant Tea

The move to introduce instant tea in the U.S.A. continues. Latest reports say that the Uganda Development Corporation is also sponsoring the manufacture of "instant" tea. But although production may be increasing, methods of marketing are also receiving attention.

Effect of Higher Taxes

Some idea of the increase in taxation on tea is available from 77 working estates in the Darjeeling district. The export duty, the excise duty, the West Bengal entry tax and the Tea Board cess called for payment at source of Rs. 71 lakhs. Twenty-five gardens made no profits while all the rest put together made a profit of only Rs. 25 lakhs.

Internal Consumption Rises

Calcutta tea market reports up to 28th March, 1962, indicate that 2,272,870 packages of tea had been auctioned for export account during the 1961-62 season at Rs. 4.66 a kilogram, compared with 2,055,468 packages during the previous year at a price of Rs. 5.34 a kilogram. But gross receipts will be slightly lower than for the 1960-61 season, and the cost of freight and materials for the larger output will be higher. It remains doubtful, however, if increased production has reduced costs to any marked degree. Dusts sold for consumption in India were estimated at 964,427 packages at Rs. 4.82 a kilogram, against 759,129 packages at Rs. 5.19 a kilogram during the last season, showing an increase of 205,298 packages, or there was an increase in internal consumption of between 21 million and 24 million lbs.

Rubber Output Falls

So far this year, rubber production is short. The February output is estimated at 992 tonnes, compared with 1241 tonnes in the same month last year, whereas consumption is estimated at 4,075 tonnes, resulting in an unfortunate drain on India's foreign exchange reserves. Imports are estimated at 1,645 tonnes.

F.A.O. Study

A recent F.A.O. study notes that the larger supply of tea in 1961 caused a weakening of prices, particularly in India. The average for the year, according to it, did not differ significantly from that of 1960. But the following were, in fact, the average prices realised at the London auctions in the two years:

(000 pack-ages)	1961 Price a lb	(000 pack-ages)	1960 Price a lb
447,100	4s 8d	North India	4s 7d
98,600	3s 5d	South India	4s 3d
14,000	3s 4½d	Pakistan	Nil
203,500	4s 10½d	Ceylon	198,300 4s 8½d
88,000	3s 3½d	Africa	74,500 4s

WIDESPREAD RAIN IMPROVES NEW CROP PROSPECTS

THE anxiously-awaited rains have come in East Pakistan at a crucial moment. Already, it was being reported that the crop had been damaged in certain areas due to the dryness of the weather. The *chur* land sowings, for instance, were 25 percent smaller than last year for this reason. There was a danger that the midland sowings would be affected too if the ground did not loosen by the end of April. But the recent rains have been very widespread. From the reports received so far, it appears there is now little danger of the sowings being hampered.

Excise Duty

The Central Government's proposal to levy an excise duty on jute goods as a means of encouraging exports initially brought chaos in the trade. As usual, the time given to the trade to conform to the new orders was insufficient. It was feared that a considerable amount of April consignments may not be shipped in time to overseas buyers. It is reported that some mills are refusing to bring down cargo as they are not willing to pay the excise duty unless their buyers reimburse them. It is hoped that things will be smoothed out; otherwise some steamers will have to sail without cargo, since the drafts start falling sharply from 6th May. Already, following the Hooghly pilots' threat to stop work, it is reported that ships will be going out with less cargo and smaller drafts.

In India, the arrivals continue to be good. June futures prices have declined from Rs. 31.40 to Rs. 30.80 a maund. Although it is still somewhat early for weather conditions to affect the new crop, thunder-showers locally, as also in the jute-growing areas, have been quite frequent. Generally speaking, the pre-sowing conditions are said to be ideal. As such, a fairly good outturn is expected.

Export of Raw Jute

There have again been vague rumours about the export of raw jute, but it is doubtful if the Government will permit it. The operations of the Jute Buffer Stock Association, and the other measures taken by the authorities to maintain the price of raw jute, might well have the desired effect. With the mills continuing to co-operate in purchasing the minimum quota allocated to them, the need to resort to exports will not arise. The Jute Buffer Stock Association, which has already made an initial purchase of 50,000 bales of jute for its buffer stock, is now to make another, larger purchase. At a meeting on Tuesday, the committee of the Association decided that a further 75,000 bales should be bought by the end of next week. This will increase the buffer stock to 125,000 bales, equivalent to 625,000 maunds of jute. Purchase allocations for the additional quantity are being issued to member mills this week. As on the previous occasion, it is being recommended that purchases should be concentrated as far as possible on low-grade jute and mesta.

Importing Pakistani Cuttings

The Association does not think the immediate present an appropriate time for making any purchase of imported cuttings. Earlier, the authorities were reported to be considering the import of 100,000 bales of cuttings from Pakistan by the Buffer Stock Association. The idea was to allocate the cuttings to the mills as an inducement to purchase low-grade

jute. However, as there is strong opposition from the traders, the scheme has been kept in abeyance. The traders say that the surplus of raw jute in India is so large that there is no need to import cuttings from Pakistan. The likely carry-over at the end of this season is estimated by some in the trade at 2.4 million bales in India, against 400,000 bales brought forward, and 1.1 million bales in Pakistan, against nil brought forward.

All mills are required to apply on the prescribed form for a licence to manufacture goods liable to the excise duty. They will be required to execute a bond, with such security as the Collector of Excise may require, that all excisable goods prepared in their premises will be produced for charge of duty or deposited in an approved place of storage or otherwise satisfactorily accounted for and that no such goods will be removed from the approved premises before the proper duty has been paid, except as provided for in the Central Excise Rules. Excisable goods for export may be cleared either on payment of the duty under claim for rebate or without payment of duty under bond. To enable clearance to be given without payment of duty, however, certain conditions have to be fulfilled.

Excise duty is payable on all goods for home consumption. Each mill will be permitted to open an account-current, to which the duties payable on various consignments will be debitable. The account-holder will be required periodically to make deposits sufficient to cover the duty due on the goods intended to be cleared for home consumption.

Installing Wide Looms

A new outlet for Indian jute goods which has arisen in the last seven years is the supply of a special construction of wide hessian for use as a backing material in manufacturing tufted carpets. With the growth of the tufted carpet industry, particularly in the U.S.A., the demand for this backing material has increased. To keep pace with the demand, the Indian jute industry has been installing more and more broad looms for the manufacture of the wide hessian required. At present, more than 900 wide looms are in operation in the Calcutta mills. But there is a shortage of carpet backing material, and the installation of more wide looms is planned.

The Indian Jute Mills Association is encouraging this development. It has evolved a formula whereby all mem-

ber mills may install broad looms in proportion to their spinning capacity. The formula is a very liberal one. It would permit the installation of no less than 9,000 broad looms, which would be ten times the number at present operating and far more than will be required to meet any foreseeable demand. The installation of another 1,500 looms has already been sanctioned, but how many of these will actually be installed remains to be seen. Less than a year ago, there was a large accumulation of carpet backing material in the U.S.A., which forced the mills to curtail production. Today there is a shortage. An independent estimate has placed the additional productive capacity required at 299 looms, and this is the number the Government of India has licensed.

THE JUTE MARKETS

Manufactured Goods: The announcement of the excise duty lowered prices, particularly in the sacking market. Overseas buyers in turn stayed out in anticipation of further falls. As the short-covering for the Argentine March steamer which sailed around 18th April finished, the demand for ready Hessians eased, and the market opened on a quieter note. April B Twills were quoted at Rs. 128.75, while 40in. 10oz. was quoted at Rs. 52.75. The corresponding prices for May futures were Rs. 124 and Rs. 49.90. The market continued quiet until Saturday. During this period, sacking was somewhat steadier than Hessians due to the demand for ready B Twills. The lowest prices touched were Rs. 123.80 for sacking; Hessians were traded down to Rs. 49.60. However, last-minute covering for April due date saw a spurt in prices. Another feature which accounted for the steadiness in the market at the close was that the mills began to repurchase their April sales to the extent of the goods manufactured up to 23rd April. This was after the excise authorities had declared all goods manufactured up to 23rd April to be free of the new excise duty.

Latest available quotations are as follows:

THE FOREIGN JUTE MARKETS FIBRE FALLS

(FROM OUR DUNDEE CORRESPONDENT)

NO improvement was noticed in the jute industry during the past week and business in all sections remained dull. Trading in

yarns and cloth was idle, largely because of the easier tendency in the raw jute market. E.P.C. prices in Pakistan were marked down by anything from £2 to £9 a ton for the better grades. The higher the quality, the greater was the reduction. The lowest qualities remained unchanged. The quotations for Pakistani fibre dropped here to £110 for Mill Lightnings, £91 for Mill Hearts and £80 for Grade Hearts, with Grade Tossa-2/3 well down to £128, four to £110 and Continental Tossa-2/3 (outport) to £102 and four to £84, all c.i.f. U.K.-Continent, May-June shipment. Local spinners kept out of the market and sellers had a lean time.

In his statement circulated with the annual reports, the chairman of the Samnuggur, Titagur and Victoria Jute Companies, Mr. J. M. Garrie, says that the prospects for the current year are more encouraging, but there are many problems ahead, one of the most important being competition from Pakistan. That country is planning to increase the number of its jute looms to 12,000, to produce about 380,000 tons of goods annually, with another 2,000 looms in prospect. Pakistan may lose some of the advantages she has over the Indian mills if her raw jute prices are maintained at the existing high level. A serious competitor to Pakistani jute is the Siamese fibre, which is steadily becoming more popular. The prices

are very attractive at £68 10s a ton for No. 1 quality, £48 10s for No. 2 and £41 10s for No. 3, with Cuttings at £40, delivered in the U.K. or Continent.

The Calcutta goods market was weak, mainly for early shipment sackings. On the whole, there was little change in hessians. The latest quotations are 77s 3d for 40in. 10oz. and 57s for 71oz. May, 75s 3d and 56s 3d June and 73s and 54s 9d July-September, with B Twills at 191s 6d. 188s 6d and 186s 3d for the respective positions of shipment, f.o.b., Calcutta.

ALITALIA OPENS SALES OFFICE IN CALCUTTA

The Italian airline, Alitalia, opened a sales office in Calcutta last week-end. The office is meant to help travellers who wish to avail themselves of Alitalia's Rome-Sydney service which has a stop-over in Bombay. Another service to Tokyo will be started towards the latter part of May, according to Mr. G. Miceli-Picardi, General Manager for India and Ceylon, who met the Press in Calcutta on the occasion of the opening of the Calcutta sales office. Alitalia will also have an office in New Delhi shortly. It already has offices in Bombay, Madras and Colombo.

Calcutta Markets

GOOD DEMAND AT INTERNAL SALE

QUALITY DUSTS RISE

AT the Internal Sale, the 29,122 packages of Dusts on offer met with a good general demand. C.T.C. Dusts were a little irregular but generally dearer with the bright lines selling extremely well. Secondary fibrous grades once again had a good market. Plain orthodox varieties were easier by 20nP but the bright liquoring Assam Dusts were keenly sought after and tended dearer. Non-wither Legg-cut teas opened on a firm note but declined as the sale progressed. There were some withdrawals towards the close of the auction.

	Quotations	
	1962	1961
	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.20 to 3.50	4.25 to 4.40
Medium Assam Dust	3.90 to 4.30	4.35 to 4.50
Legg-cut Dust	4.10 to 4.45	4.50 to 5.20
Medium Assam C.T.C. Dust	5.90 to 6.20	6.00 to 6.40
Good Assam C.T.C. Dust	6.60 to 7.00	6.80 to 7.40

(Quotations are inclusive of excise duty.)
There was a good demand for the 909 chests of Leaf on offer.

LINSEED STEADY

The market was steady in the past week. Prices moved within narrow limits except for ready goods which were scarce. Arrivals from upcountry were meagre, as the markets in the centres were steady due to local demand. The oil market was steady. Stocks in the hands of millers were negligible, and they were finding it difficult to fulfil their past commitments due to late arrivals of seeds from upcountry. The oilcake market was steady with good local demand. The latest quotation is as follows: May delivery Rs. 72.34 a quintal.

HIDES AND SKINS QUIET

The market was quietly steady. Stocks were less than in the previous week.

(Between 24th April and 30th April, 1962)

Cowhides: Wet salted (Ord.) 29,000 pcs. on the basis of Rs. 8.25 to Rs. 11.25; Wet salted (Slaughtered) 16,000 pcs. on the basis of Rs. 7 to Rs. 16 and Rs. 19 to Rs. 28.

Goatskins: Wet salted (Patna, Daissee, Kustia) 64,600 pcs. on the basis of Rs. 200 to Rs. 220, Rs. 310 to Rs. 360 and Rs. 400 to Rs. 425; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Dinajpur-Siliguri 6,100 pcs. on the basis of Rs. 290 to Rs. 330; Purnea-Kissenganj 7,300 pcs. on the basis of Rs. 330 to Rs. 350 and Rs. 360; Muzafferpore 4,500 pcs. on the basis of Rs. 340; Muzafferpore-Purneah 5,400 pcs. on the basis of Rs. 450 and Rs. 490 to Rs. 515.

(30th April, 1962)

Cowhides: Wet salted 152,500 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 57,000 pcs; Assam-Dinajpur 51,000 pcs; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 175,000 pcs.

TARIFF PROTECTION FOR FATTY ACIDS

CONSIDERABLE IDLE CAPACITY

OPENING recently the enquiry into the case for further protection to the stearic and oleic acids industry beyond 31st December, 1962—the industry has been enjoying protection for 14 years—Mr. K. R. P. Aiyangar, chairman, Tariff Board, said that after the 1959 enquiry the Government extended protection for three more years ended December 1962, at the existing rate of duty of 35 percent *ad valorem* or 50nP a lb, whichever is higher. The scope of the present enquiry covers stearic and oleic acids as well as their derivatives.

At the time of the last enquiry in 1959, there were seven units engaged in the manufacture of stearic and oleic acids. Another unit in Bombay is now in production with a capacity of 91 tonnes of oleic acid a year. Of the existing units, four are producing both the fatty acids, while two are producing only stearic acid and the other two only oleic acid. At the time of the last enquiry, the total capacity of all the units was 6,598 tonnes for stearic acid and 1,161 tonnes for oleic acid. According to the Development Wing of the Central Government, the present capacity amounts to 6,949 tonnes for stearic acid and 1,768 tonnes for oleic acid, compared with 7,765 tonnes for stearic acid and 1,269 tonnes for oleic acid claimed by the producer. Stearic acid output went up from 1,931 tonnes in 1959 to 2,289 tonnes in 1960 and 2,838 tonnes in 1961, while oleic acid output increased from 300 tonnes in 1959 to 345 tonnes in 1960 and 392 tonnes in 1961. Thus there is considerable under-utilisation of existing capacity.

The total capacity for the manufacture of derivatives amounted to 432 tonnes in 1959, compared with 452 tonnes now indicated by the producers. Stearates of aluminium, zinc, magnesium, calcium and lead are produced. The total output increased from 113 tonnes in 1959 to 126 tonnes in 1960 and 166 tonnes in 1961. There is considerable under-utilisation of capacity in the case of derivatives also, Mr. Aiyangar said.

Demand Estimates

In 1959, the demand was estimated at 1,930 tonnes for stearic acid and 254 tonnes for oleic acid, and it was expected to increase to 2,743 tonnes and 610 tonnes, respectively, by 1962. The demand for stearates was estimated at 152 tonnes for 1959 and 254 tonnes for 1962. In connection with the present enquiry, varying estimates of current and future demand have been received from different parties. The apparent consumption of stearic acid, based on sales and imports, works out to 2,410 tonnes for 1960 and 2,716 tonnes for 1961. The corresponding figures for oleic acid are 335 tonnes and 407 tonnes.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to March 1962. As compared with February, the March Index for Food shows a rise of 6

points. The Indices for Fuel and Lighting, Miscellaneous and Clothing remain unchanged at 291, 309 and 588 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 4 points during March 1962.

COMPANY AND PUBLIC NOTICES

GUEST, KEEN, WILLIAMS, LIMITED NOTICE

THE Thirty-second Annual General Meeting of the Members of Guest, Keen, Williams, Limited will be held at the offices of Jardine Henderson Limited, 4 Clive Row, Calcutta, on Thursday, the 31st day of May, 1962 at 12 noon, to transact the following business:—

1. To adopt the Directors' Report and the Audited Accounts for the 52 weeks ended 30th December, 1961.
2. To declare a Dividend.
3. To elect Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification the following resolutions:—

5. As an Ordinary Resolution
That approval be and is hereby accorded (approval of the Central Government having been received) to Sir Henry Morton Leech Williams (who was re-appointed Managing Director of the Company for the period 1st January, 1961 to 31st March, 1962) being remunerated in terms of an Agreement dated 21st December, 1961 between the Company and Sir Henry Morton Leech Williams, a copy of which agreement has been signed by the Chairman for the purpose of identification.
6. As an Ordinary Resolution
That approval be and is hereby accorded (approval of the Central Government having been received) to the remuneration payable to Mr. William Morrice, a whole-time Director of the Company, being increased with effect on and from 1st April, 1962 conveyed to Mr. William Morrice by the Company, a copy of which communication has been signed by the Chairman for the purpose of identification.
7. As an Ordinary Resolution
That approval be and is hereby accorded (approval of the Central Government having been received) to Mr. William Morrice (who was appointed Managing Director of the Company for a period of 5 years with effect from 1st April, 1962) being remunerated in terms of an Agreement dated the 25th April, 1962 between the Company and Mr. William Morrice, a copy of which agreement has been signed by the Chairman for the purpose of identification.
8. As an Ordinary Resolution
That approval be and is hereby accorded (approval of the Central Government having been received) to the remuneration payable to Mr. Thomas Kay Walshaw, a whole-time Director of the Company, being increased with effect on and from 1st April, 1962 in terms of a written communication dated the 25th April, 1962 conveyed to Mr. Thomas Kay

Walshaw by the Company, a copy of which communication has been signed by the Chairman for the purpose of identification.

9. As an Ordinary Resolution

That approval be and is hereby accorded (approval of the Central Government having been received) to the remuneration payable to Mr. Bishasher Nath Khosla, a whole-time Director of the Company, being increased with effect on and from 1st April, 1962 in terms of a written communication dated the 25th April, 1962 conveyed to Mr. Bishasher Nath Khosla by the Company, a copy of which communication has been signed by the Chairman for the purpose of identification.

10. As a Special Resolution

That in view of the proposal contained in the next succeeding resolution that Mr. Mohan Murijmal Malkani be appointed a Director of the Company, consent be and is hereby accorded to Mr. Mohan Murijmal Malkani holding and continuing to hold an office or place of profit under the Company as Sales Manager, Engineering Division, at the Company's Head Office or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Central Government's approval and, in the meantime, on the terms presently applicable to him.

11. As an Ordinary Resolution

That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Mohan Murijmal Malkani be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company.

12. As a Special Resolution

That in view of the proposal contained in the next succeeding resolution that Mr. Robert Allan Binns be appointed a Director of the Company, consent be and is hereby accorded to Mr. Robert Allan Binns holding and continuing to hold an office or place of profit under the Company as Sales Manager, Fastenings Division, at the Company's Head Office or such other office or place of profit as the Directors may from time to time decide, upon such terms as to remuneration and otherwise as the Directors may from time to time determine, subject to the Central Government's approval and, in the meantime, on the terms presently applicable to him.

13. As an Ordinary Resolution

That due notice in writing signifying the intention of a Member to propose him as a Director having been left at the Registered Office of the Company pursuant to

Section 257 of the Companies Act, 1956, Mr. Robert Allan Binns be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company.

The Register of Members of the Company will be closed from the 12th May, 1962 to 31st May, 1962, both days inclusive.

By Order of the Board,

R. B. RITCHIE,

Secretary.

41, Chowringhee Road,

Calcutta-16.

26th April, 1962.

NOTES: 1. A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead and such proxy need not be a member of the Company. Proxies in order to be effective must be received by the Company not less than 48 hours before the Meeting.

2. No application for warrants will be necessary and payment of any Dividend declared will be made on or after the 18th June, 1962 only to those Members whose names are registered in the books of the Company on the 31st May, 1962, or to their Mandatees. Claims on behalf of holders of shares held on blank transfer will not be entertained.

3. Copies of the written communications and the original agreement referred to in Resolutions 5, 6, 7, 8 and 9 are available for inspection at the Registered Office of the Company from 10 a.m. until mid-day on working days.

4. The Explanatory Statement as required under Section 173(2) of the Companies Act, 1956 has been issued to all Shareholders.

COAL COMPANIES

O., Po., F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. "P" next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

74th YEAR OF ISSUE

CALCUTTA, 10th MAY, 1962.

Vol. CXXXXVIII No. 3799

TRANSPORT CRISIS: SOME LESSONS FROM CHINA

THE springtime meeting of the National Popular Assembly in Peking broke a two-year silence about China's internal situation. In violation of the Constitution, which calls for annual meetings, the Assembly did not meet in 1961. This was no doubt for the same reasons as prevented the authorities publishing any annual statistics or the customary report on the progress of the plan: the news would have been too bad, and bad news about China's economy at this stage would be disastrous for Peking's prestige in the ideological war she has declared on all the world—on Russia and the rest of the communist bloc, on India and, of course, on the United States and the "imperialists." In the best of circumstances, it would have been arrogant and reckless for China to alienate, at one and the same time, her allies, her neutralist friends and her supposed enemies. To do so when her economy is reeling, her people near famine and her industrial development faltering, would be folly. The root of her difficulties is no doubt the series of natural cataclysms that have devastated her agriculture in recent years, but her plight has been worsened by political errors that are condemned with equal vehemence by Moscow, the western capitals and the public opinion of neutralist democracies.

The calling of the National Assembly did not indicate that news about the economy was at last more cheering or at least "presentable." The meeting was mysteriously postponed on the eve of the date first set, and was then held (for the first time) totally in camera, even communist diplomats and journalists being excluded. It is evident that the economic situation remains sombre; it was extremely bad in 1961 and seems little better this year. Marshal Chen Yi was quoted as saying at the end of last year that the 1961 harvest was 10 percent better than in 1960 (when it had been 150 million tons of grain). But since then other members of the Government have confessed that it was smaller. Even if the weather is more favourable this year, China will not be at the end of her difficulties, for she is left without food reserves and would require two or three successive bumper crops to lift supplies above present bare-subsistence levels.

In industry, the outlook is no better. Production has fallen markedly, and in certain sectors catastrophically. Factories have had to be abandoned and their machinery redistributed. In the absence of statistics, one is obliged to rely on estimates, but it is thought that steel production, for example, has been only 8 million to 10 million tons, against the target of 18 million tons. Russian aid has declined by as much as 40 percent, so investment has slumped. In general, the doctrine of priority for heavy industry has had to be sacrificed, and the industrial economy set to work for agriculture. Even the nation's unnecessarily large military force (too large, that is, if Peking consented to give up its aggressive attitude towards India and the West) has been transferred to agricultural occupations. Yet some of the ways in which resources are being diverted to agriculture testify to complete confusion. The unhappy ex-

periment with backyard blast furnaces, which was such a miserable failure when steel was the first obsession, is being repeated with small (and no doubt equally inefficient) fertiliser factories. Modestly, the régime has refrained from making for these absurdly small plant the extravagant claims made for miniature steelworks, and one may expect to see them closed down as soon as the perilous agricultural position no longer justifies such waste of ingenuity.

The repetition of this experiment in small-scale production of a vital commodity perhaps contains the clue to one of China's gravest troubles: the complete inadequacy of the transport system. This affair contains a clear lesson for India—one that justifies the efforts made here to improve the rail services, and which yet suggests that even greater efforts will be needed in the immediate future. The point about small and inefficient blast furnaces or fertiliser factories is that they are scattered in isolated regions, and thus provide supplies on-the-spot of urgently needed materials that cannot be transported there by an overladen railway not be transported there by an overladen railway system. If surface communications have been neglected, as they have been in China, there can arise situations where there is no choice but to make materials where they are needed, no matter at what cost. Obviously, it would have been more rational to develop communications in phase with the growth of large-scale plant, but by the time a crisis blows up it is too late to think of that.

The inadequacy of the transport system throws light too on the parlous food situation. If the railways had been more efficient, the economy would not have suffered so severely from the effects of the agricultural crisis. Famine could have been avoided in isolated regions (there is no doubt, of course, that there have been local famines and outbreaks of pestilence, though these are not officially admitted); industrial raw materials in short supply could have been more reasonably allocated, thus lessening the shock of the farm crisis on secondary industry; and man-power could have been moved more expeditiously to regions affected by flood, drought and high wind. The régime boasts that it has added 8,000 miles to the rail network since 1951, but this will seem small in view of the vast damage suffered during the long civil war; and in any case it tells one nothing of the efficiency of rolling stock and one nothing of the efficiency of labour to the management. There is no need to labour the point, for the authorities now admit—in the style of hints and understatement that characterises all of their confessions of failure—that the rail system has been the weak link in the planning chain. They claim to have learnt from the disasters of the past two years and are determined to keep transport development in line with the growth of the whole industrial machine from now on. A long-term transport plan is, belatedly, being drawn up, and meantime the emphasis is on the modernisation and extension of existing facilities. In particular—and this recalls some Indian difficulties—a big effort is being made to link mining

centres to industrial zones and to provide sufficient wagons.

The fundamental transport crisis might explain China's policy of massive grain imports from Canada, Australia and France. Orders for over six million long tons of grain had already been placed at the end of last year, at a cost of \$317 million, not counting \$45 million to be paid for sea transport. Emergency imports of grain during a food crisis are understandable, but it is to be noted that Peking has placed forward orders for as long as two years ahead, and is still looking for new contracts—not only for foodgrains but for wool and other raw materials. Some have concluded that, since Peking cannot expect natural cataclysms to occur every year, these long-term orders are an admission that it is not unfavourable weather that is the real trouble, but a deeper, structural vice in Chinese agriculture. Perhaps; but it is also possible that Peking knows that the railway crisis will continue for several years, whatever happens to crops and the weather. The point may not be immediately obvious, but a vast subcontinent like China could be obliged to use the maritime facilities of other nations as a remedy for its own internal transport shortcomings. In other words, it could be easier to get wheat for southern China from Australia or even Argentina by sea, than to get it from inland regions by rail.

This supposition seems to be confirmed by the fact that China is selling rice through the same ports as are the destination for western wheat. Ton for ton, there is an exchange advantage in trading rice for wheat; but there is a double gain for the crippled railway network if foreign ships bring wheat where it is needed and dispose of local rice surpluses. Certain grain traders have concluded that, even if the weather is more merciful and China gets the succession of good crops she needs, countries like Australia and Canada may have found a regular market in China, one that will last as long as the internal transport system cannot redistribute food and raw materials without the aid of foreign shipping. This complicated and uneconomic arrangement should serve to drive home, in India as much as in China, the urgency of priority for internal surface transport (road and river transport as well as railways) in a developing subcontinent. The exponents of public-sector initiative are apt to imagine that one wants to imprison the State in its 19th century rôle of providing public amenities when one asks it to attend first to transport while leaving private enterprise to develop secondary industry. Yet the tragic crisis in China, confirmed by less dramatic but familiar breakdowns in India, shows that it is of no avail to boost production in industry, mining or agriculture if means of communication are relatively neglected.

It is likely that the same transport crisis is responsible for the deterioration in China's foreign trade in the past 15 months. This development is apt to be ascribed vaguely to general economic difficulties, and of course the shortage of food and industrial raw materials. The priority that must be given to food imports must reduce the volume of trade the country can afford. But it is also clear that, specifically, the lack of transport would impinge at once on the export-import trade, which presupposes the collection of exportable materials from all over the country and the distribution of imports equally widely. (It is a truism that virtually the whole Indian railway system was

constructed to answer the needs of the export-import trade, to the comparative neglect of the country's internal economic relations). This would explain why China's serious economic situation has not led to any increase in her exports. Though export earnings must be doubly desirable, the transport system is physically incapable of handling the traffic involved.

Given the foreign exchange straits in which China finds herself, it is understandable that British sales to that country should have fallen from £34 million in 1960 to £13 million last year; West Germany's from 355 million DM to 114 million DM; Austria's from 175 million schillings to 47 million schillings; and so forth. On the contrary, it is inexplicable, except in terms of the transport crisis, that China's exports to West Germany should have slumped from 269 million DM to 141

THE COTTON SHORTAGE

THE uncertainty about the cotton price policy for the 1962-63 season, which begins in September, has at last been set at rest. The Central Government has decided to increase the ceiling price of the basic variety—Jarilla fine 25/32in.—by Rs. 35 a quintal from Rs. 231 to Rs. 266, with corresponding increases in other varieties, although the differentials remain to be announced. The increase in the ceiling of the basic variety works out to Rs. 125 a candy—from Rs. 820 to Rs. 945 a candy of 784 lbs. It is noteworthy that in spite of the introduction of the metric system, ready cotton prices continue to be quoted in candies instead of quintals, because the ginning presses are designed to press bales of 392 lbs net. The revised ceiling prices will apply only to the 1962-63 season's crop; those of the current and previous seasons will continue to be governed by the ceiling prices in force at present. The floor prices of all varieties have been left unchanged. Although the increase of Rs. 125 a candy falls short of the general expectations, which had been pitched at between Rs. 150 and Rs. 200 a candy, the trade has reason to feel happy over the change in the Government's policy. For nearly a decade, cotton ceilings had been pegged at about the same level; they have now been raised for the 1962-63 season. The increase of Rs. 125 a candy, it must be conceded, is quite substantial. Only in the event of a crop failure have cotton prices risen by more than Rs. 100 a candy above the ceiling prices in the past. The trade can hope to have a reasonably smooth time in the new season, provided, of course, the 1962-63 crop turns out to be quite normal.

That cotton production should continue to be entirely at the mercy of the weather, in spite of more than a decade of planning, is a poor commentary on the efforts that have so far been made to increase output. The Government's unrealistic price policy has generally been criticised for discouraging cotton cultivation. The relative movements in the prices of various agricultural commodities like groundnut, rapeseed, wheat, rice, gram, jowar, bajra and cotton, over the past several years, suggest that the cultivation of cotton has become less and less remunerative. That prices have an important bearing on production will be readily conceded, but the importance of the price incentive can be easily exaggerated when production is largely a gamble on the monsoon. Yet the increase in the ceiling prices of cotton for the 1962-63 season is welcome. It will help to rectify the distortion in the price relationship between cotton and other agricultural commodities. But it would be idle to think that cotton production will go up automatically with the increase in ceiling prices. The vagaries of the weather apart, cotton production cannot be stepped up to anywhere near the third plan target of 7 million bales unless a concerted effort is made all along the line, which means better irrigation facilities, improved farming techniques and a satisfactory supply of fertilisers and better seeds at reasonable prices.

Some dissatisfaction has been expressed in cotton trade circles about the Government's decision to keep the floor prices unchanged. It is felt that an increase in these prices would not only have restricted the scope for speculation, but also provided a psychological incentive to greater effort on the part of cotton-growers. But the supply posi-

million DM; to Austria from 105 million schillings to 44 million schillings; and so on. Whereas China's main western trading partners expected to see their sales fall but hoped to import more from China, they all report a sharp deterioration in Chinese supplies, long delays, irregular deliveries and higher prices—in short, all the signs that the country could not gather and ship the commodities it needs to export. That Peking should fall back on sales of gold and silver to earn foreign exchange would be consistent with this explanation, for in relation to value these commodities pose negligible transport problems. One may be accused of over-simplification in seeking to find the transport crisis under every symptom of economic malaise in China, but there can be no doubting its widespread effects—nor the moral it contains for India.

tion of cotton being what it is—the carry-over at the end of the current season is likely to fall to the precariously low level of about 1.2 million bales—cotton-growers have little reason to fear any serious fall in prices. The Press note announcing the cotton price policy for the 1962-63 season, says that "the Government has taken note of the prices paid by the industry for cotton during the last few years, and considers that the increase in the ceiling prices need have no effect on the pre-

sent returns to the industry. The Government, therefore, expects that the prices fixed for different varieties of cloth under the voluntary price regulation scheme by the industry will remain unchanged." Whether or not the upward revision of ceiling prices will affect the textile industry's profit margin will depend on the cotton prices that actually prevail during the next season, which in turn will depend on the size of the new crop and the Government's import programme. In the circumstances, the official statement that the increase in ceiling prices will not affect the present returns to the industry is rather surprising. The statement implies that the industry has been purchasing raw cotton at prices substantially above the statutory ceiling, which does little credit to the authorities entrusted with the task of administering the price control. The industry's profit margin is bound to be affected if it has to pay higher prices for cotton. To insist on cloth prices being maintained at the existing levels in spite of an increase in raw cotton prices is irrational. Latest reports from Washington state that India has asked the U.S. Agricultural Trade Development Programme. The U.S. Government, it is said, is seriously considering India's request for 600,000 bales of cotton. India will pay for the cotton in rupees, some of which will be lent back for economic development, and some will finance U.S. Government outlays in India. The import of 600,000 bales of U.S. cotton will go a long way in tidying over the present shortage and it will have a sobering influence on the cotton market.

HOOGLY PILOTS STOP WORK

MORE than a week has passed since the Hooghly pilots decided to stop work and thus disrupt the working of Calcutta port. Yet no move from either side to the dispute is in sight which would put an end to the costly adventure aimed at establishing the status of the pilots in relation to the other marine services in the port. The latest statement from the president of the Hooghly Pilots Association makes it obvious that the issue involved is largely one of prestige. He has said that the pilots are willing to go back to work on their present pay scales if the service is transferred back to the Government of India. The pilots claim that when their services were transferred to the Port Commissioners from the jurisdiction of the Central Government in 1948, they were assured that the pay differentials existing at the time would be maintained if there was any future revision of the salaries of other sections of the marine services. The chairman of the Port Commissioners has apparently now admitted that such an assurance was in fact given. But various committees which were subsequently appointed to go into the matter came to the conclusion that the pilots were not entitled to any increases in salary on this ground. The latest special committee, which submitted a report in March, is nevertheless believed to have said that the pilots should get emoluments comparable to those of the assistant harbour masters. The Port Commissioners have accepted this committee's recommendations and are sending them to the Central Government for approval. The pilots have gone on strike while the Government is to consider the report, and after having withdrawn at the last minute a similar threat they held out just over a month ago.

What has happened during April to precipitate the strike after it was once called off is not clear. The pilots claim that the Port Commissioners have declined to implement a directive from the Minister of Shipping to remove the pilots' "feeling of injury". So, being "mentally distressed", they are unable to discharge their responsibilities. But what the pilots expect the Port Commissioners to do to remove their "feeling of injury" is not clear. Meanwhile, the 40 striking pilots out of the total complement of 46 have almost succeeded in bringing Calcutta port to a standstill. Yesterday, no ship was able to leave and only two could enter the harbour, against a normal movement of ten ships a day in and out.

The pilots' tactics are inspiring demands for improvement in their emoluments from the assistant harbour masters, the berthing masters, the Hooghly river surveyors, and the class II marine engineers. The river surveyors have claimed

that their emoluments were on a par with those of the assistant harbour masters in 1919, but since then their conditions have steadily deteriorated vis-à-vis the latter. It is evident that such historical situations should be left to history, and not be trotted out as justifying present and future claims. There is no more logic for the restoration of a situation which prevailed in 1948 than for one prevailing in 1919. Once the demand of the pilots for either the restoration of the pay differential or the transfer of the service to the Central Government is granted, there will be no end to such claims on diverse grounds. Each of these services is quite a specialised one, and may be tempted to hold the operations of the port to ransom by threatening a strike.

The cost of the pilots' action will not be known with certainty even after the strike is ended. What is known is that Calcutta port is vital to the country, and its closure will have far-reaching repercussions. Exports are being held up, causing loss of foreign exchange. The arrival of raw materials and machinery for industry is being delayed, and the coastal movement of coal, salt, foodgrains and other essential commodities has been brought to a stop. It will probably take weeks to clear the congestion in the port even if the pilots return to work immediately. Meanwhile, the reputation of Calcutta port for unreliability grows, adding to the cost of shipping goods to this area. The average loss on a ship for each day's delay is reported to be Rs. 10,000.

Considering the serious consequences of the strike, it is a matter for concern that the Port Commissioners do not appear to have taken firm steps to deal with the pilots. The service has already been declared "essential" under the Essential Services (Maintenance) Ordinance. But this has not altered the attitude of the pilots, since they had commenced their strike long after the notification was issued. Departmental action has been initiated against some of the pilots, but it has not frightened them. The Port Commissioners' hesitation appears to arise partly from the fact that a decision from the Central Government has to be awaited on every move proposed. Normally, this would hardly be the way to run the port; the Commissioners would be expected to have the full responsibility for keeping the various services going. But the stage has probably now been reached where further intervention by the Central Government may be difficult to avoid. The flow and counterflow of statements between the pilots and the authorities does not seem to be getting anybody anywhere. Action is urgently necessary on a plane other than

the purely verbal one to ensure that normalcy returns. Later, however, it may be necessary to ensure that the Port Commissioners are given greater discretion in dealing with their staff. The

Current News and Comment

Guest, Keen, Williams Profit Up

The turnover of Guest, Keen, Williams Ltd rose from Rs. 9.67 crores in 1960 to Rs. 10.66 crores in 1961. Additions to fixed assets amounted to nearly Rs. 1.05 crores, against Rs. 1.55 crores. The directors say that production was affected by power cuts and by shortages of good quality billets for re-rolling and matching materials. The profit has amounted to Rs. 1.04 crores, against Rs. 87.73 lakhs, after increasing depreciation from Rs. 39.84 lakhs to Rs. 45.21 lakhs. A taxable ordinary dividend of 14 percent, including an interim of 6 percent, has been declared. It is covered more than one-and-a-half times and offers a yield of 3.4 percent at the present price of Rs. 41.25 a share. The taxable ordinary dividend was 16 percent for 1960, but the total amount to be distributed for 1961 has risen to Rs. 56 lakhs from Rs. 48 lakhs in 1960. In 1960, an interim dividend of 8 percent was paid on a share capital of Rs. 2 crores only, while in 1961 the interim dividend has had to be paid on the doubled share capital. At the end of 1960, 2 million ordinary rights shares of Rs. 10 each were issued at a premium of Rs. 18.50 a share. Taxation absorbs Rs. 30.50 lakhs (against Rs. 18.40 lakhs) and taxation equalisation reserve Rs. 10.69 lakhs (against Rs. 7.66 lakhs). Development rebate reserve receives Rs. 12.21 lakhs (against Rs. 24.57 lakhs). An amount of Rs. 11.24 lakhs has been transferred from general reserve, but a sum of Rs. 5 lakhs has been transferred to create a sinking fund under the terms of the debenture trust deed. Guest, Keen, Williams has subscribed at par to 8,864 shares of Rs. 100 each in Sankey Electrical Stampings Ltd in the form of a rights issue.

More from British India Corporation

The British India Corporation Ltd has produced satisfactory results. The profit has risen from Rs. 90.93 lakhs in 1960 to Rs. 1.05 crores in 1961. The taxable ordinary dividend has been raised from 4 percent to 7 percent. A sum of Rs. 40 lakhs has been ploughed back into the business, against Rs. 31 lakhs, in order to finance the Corporation's modernisation and rehabilitation programmes. The woollen branches of the group have done well. Presiding at the annual general meeting of the Corporation, held recently in Kanpur, Mr. H. S. Chaturvedi, chairman and managing director, says that the order-book of the woollen branches is well filled, and he hopes the demand will continue at a high level. (A full text of the address is printed on a later page in this week's Capital.) The popular Lalimli and Dhariwal products have sold well. The working of this department has, nevertheless, been hampered by the shortage of imported wool. But successful experiments have been made to blend Indian with foreign wool. Mr. Chaturvedi explains the need for rehabilitating and modernising the woollen branches, and says that efforts are being made to secure an import licence for obtaining the equipment. He also mentions the difficulty in the supply of spare parts.

The Cooper Allen and North West Tannery branches face difficulties in working. Unless the equipment of the shoe factory is modernised, Mr. Chaturvedi says, it will be difficult to produce on an economic scale and expand exports. The supply of raw hides has been discouraging, since quality has deteriorated while the price has increased. In the circumstances, the shoe factory has not been able to make even the modest profit it earned in 1960, although the turnover has improved. The cotton textile mills of the Corporation have done well. The profits of Elgin Mills and Cawnpore Textiles have increased substantially. The management has taken steps to secure maximum efficiency in their operations. The directors have approved the rehabilitation and

lessons drawn from the pilots' strike might then be useful in evolving some healthy conventions for the more efficient functioning of the port in the future.

modernisation programmes. It is expected these will be completed during the next five years.

The results of the sugar factories in the B.I.C. group have been far from encouraging. In spite of a record cane crush, the results have not been satisfactory. The price realised for sugar has declined while production costs have risen. Wages have been increased on the recommendation of the Wage Board, and the prices of stores and raw materials have moved up. As a result of the large accumulation of sugar stocks at the factories, the financial strain on the companies has increased. The quality of cane has deteriorated and recovery has fallen. Mr. Chaturvedi, therefore, stresses that the price of sugarcane should be linked with recovery. He points out that the B.I.C. group has contributed nearly Rs. 4.22 crores to Government revenues in 1961.

Good Outlook for Alcock, Ashdown

Alcock, Ashdown and Co. did extremely well in 1961, with its sales and gross profit rising by 42 percent and 54 percent, respectively, over the 1960 figures. This has enabled the directors to raise the dividend from Rs. 17 to Rs. 22.50 a share, subject to tax, in spite of the increase in the capital following the two-for-seven rights issue in December 1960. The chairman, Mr. M. D. Ryall, assured shareholders at the Company's annual meeting in Bombay last week that, barring some unforeseen developments, they could look forward to a reasonably good performance this year. He referred to many factors which are still hampering production, the most important being the uncertainty of steel supplies. Although the position has improved, it is still not normal. The supply of tested steel, light angles and plates is very unsatisfactory, and is hampering export production. There is also the problem of shortages of wagons and coal and coke. But, in spite of these difficulties, said the chairman, the programme to expand production both in Bombay and in Bhavnagar, would not be unduly retarded. Activities at the Bombay works continue to increase, and with the commissioning of the transmission line manufacturing shop towards the end of last year, production potential has increased substantially. The structural order-book, with a large order from Hindustan Steel, is covered both for Bombay and

Bhavnagar well into 1963. The Company has recently secured an order from the Punjab State Electricity Board amounting to about Rs. 2 crores for towers for the Bhakra-Nangal project. This, with other existing and expected orders, will keep the Company's transmission tower shops in Bombay and Bhavnagar busy until the end of 1964. The boat-building facilities were fully occupied during 1961. In spite of severe competition, the Company is trying to interest west Asian countries in its boat-building activities. The progress in ship repair work has been poor, because most shipowners prefer to have major repairs done abroad, mainly due to the higher overall cost of major repairs in India. The Company is expecting an industrial licence for manufacturing cranes and small marine and industrial engines.

Share Offer by Paper Products

Paper Products Ltd has been doing good business for many years by producing flexible packaging from printed and unprinted paper, cellulose film and board. It manufactures drinking straws, paper bags, cartons and packagings for commercial and retail trades. It is also engaged in other miscellaneous business. The net profit was Rs. 12.72 lakhs for the year ended July 1961, and a taxable ordinary dividend of 24 percent was paid on a share capital of Rs. 16 lakhs. The Company has its own factory in Thana, Bombay. It has entered into a technical consultation agreement with the Milprint Overseas Corporation of the U.S.A. Paper Products does a large amount of rotogravure printing. The Company finds it difficult to obtain the printing cylinders used in the rotogravure printing machines in its factory. In order to become self-sufficient in the supply of these cylinders, it has been decided to install equipment for manufacturing them.

To finance the new project as well as the expansion and diversification of activity, Paper Products is offering 16,000 shares of Rs. 100 each for public subscription at par. The present paid-up ordinary share capital is Rs. 34 lakhs, divided into ordinary shares of Rs. 100 each. The list opens on 14th May, 1962, and applications for shares must be for a minimum of five ordinary shares or multiples thereof. It may be mentioned that bonus shares worth Rs. 8 lakhs were issued in 1961 by capitalising reserves. As the past performance has been good and the future prospects look promising, the issue, it is expected, will meet with good support. The demand for flexible and functional packaging is likely to increase steadily with industrial progress. The directors hope to increase the Company's profits by employing the proceeds of the new issue and pay reasonable dividends in due course.

Paper is one of the important raw materials used by the Company's factory. As there has

been a shortage of imported paper, the directors are considering the establishment of a pulp and paper mill of their own. A licence has already been obtained to set up a mill with a capacity of 4,800 tons a year. Orders for the equipment have been placed in Japan. To manage the enterprise, it is proposed to set up an independent Company under the name of Roha Pulp and Paper Mills Ltd. in which Paper Products and its directors will have substantial financial interest. When the paper mill is set up, the requirements of Paper Products for paper and board will, it is expected, be satisfactorily met. (Fuller details of the share offer are printed on a later page in this issue of *Capital*.)

Shivrajpur Syndicate Skips Dividend

The Rs. 10-paid shares of Shivrajpur Syndicate, which were quoted around Rs. 47 early in January, were sold down to around Rs. 33.50 last week. The latest quotation is only a little higher at Rs. 34.50. The fall has been particularly marked over the past few weeks when the stock market as a whole has been remarkably buoyant, but the reason is easily traced. The dividend for the year ended November 1961 has been skipped, and the Company's working results are extremely disappointing. Ore sales, less sea freight and marine insurance, are down from Rs. 1.24 crores to Rs. 51.72 lakhs. Shivrajpur Syndicate has incurred a loss of Rs. 5.81 lakhs, compared with a profit of Rs. 28.87 lakhs in 1959-60. The loss is increased to Rs. 12.33 lakhs by the provision of Rs. 5.49 lakhs for depreciation, by writing off Rs. 2.489 towards new share capital issue expenses, and by the transfer of Rs. 1 lakh to retiring gratuity reserve. After bringing in Rs. 4,942 from the previous year, writing back Rs. 48,212, being over-provision of taxation for 1959-60, and transferring Rs. 4.75 lakhs from staff welfare reserve, the directors have carried forward a loss of Rs. 7.04 lakhs.

The disappointing results for 1960-61 reflect the depressed conditions in the manganese ore market. The demand for the Company's ores was affected by the stopping of barter deals involving the export of manganese ore from January 1961. Shipments and deliveries effected during the year totalled 41,157 tons, compared with 92,529 tons in 1959-60. The output from the mines amounted to 74,760 tons, against 76,161 tons in the preceding year. The Company was granted an export quota covering 59,130 tons for the calendar year 1961, and a similar quota has been granted for 1962. The quantity of ore which remained to be shipped at the end of November 1961, against contracts already entered into, was 16,695 metric tons for delivery during 1962. In view of the accumulation of ore stocks and the depressed state of the market, the directors decided to reduce output at Shivrajpur by 50 percent, and to close the Pani mines temporarily from 15th January, 1962. Consequently, it became necessary to retrench 1,730 staff and workers during January and February. They state that every effort is being made to sell sizable quantities of ore. If barter deals are once again extended to cover manganese ore, the outlook for the trade should improve.

Kohinoor Mills Does Well

The Kohinoor Mills did very well in 1961. As against an increase of 6.7 percent in sales from Rs. 6.75 crores to Rs. 7.20 crores, the gross profit recorded an impressive rise of over 53 percent from Rs. 32.18 lakhs to Rs. 59.38 lakhs. Overall increased efficiency, fuller use of rationalised machine capacity and the change in the pattern of production to suit consumer demand—all these factors contributed to the increase in the profit margin in 1961 from 4.8 percent to 8.3 percent. In his annual speech to shareholders, the chairman, Mr. A. N. Haksar, has struck a reasonably optimistic note about the future outlook. The results for the first three months of this year have shown a definite improvement over the corresponding period of 1961. The chairman says that the Company has every hope that the current year will prove to be even better than 1961. But these hopes might not be fulfilled in view of the additional burden resulting from the Budget proposals. The Company will have to pay an extra Rs. 2.50 lakhs on account of the pro-

posed increase in excise duty on cloth, and the additional tax liability on account of the increase in the corporation tax would amount to Rs. 1.75 lakhs for 1961. Mr. Haksar has assured shareholders that the management will make every effort to offset the extra expenditure by further economies and improvement in efficiency.

The Company has made appreciable progress in its rehabilitation and modernisation programme. Machinery worth Rs. 33.22 lakhs was erected in 1961, and machinery of the value of Rs. 43 lakhs was on order at the close of the year. It is anticipated that by installing the machines on order, the Company will be able to effect further rationalisation and improve the quality of its products. Kohinoor Mills is endeavouring to put on the market newer and better varieties of cloth in order to satisfy the ever-changing consumer demand. The Company's cloth exports in 1961 recorded an increase of 25 percent, which is commendable in view of the overall decline in the country's cloth exports during the year. Mr. Haksar told the shareholders' meeting that the Company has applied to the Government for permission to install 500 automatic looms, and that there is every chance of the request being granted. This will cost between Rs. 50 lakhs and Rs. 60 lakhs. In reply to shareholders' questions, the chairman stated that the Company has no ideas of diversification or of seeking foreign collaboration, but it will continue to expand in its field. He ruled out any chance of issuing rights shares in the near future. Mr. Haksar disclosed that the Central Government has recently placed a large order for the supply of parachute cloth with Kohinoor Mills.

Madras Rubber Prospects

The impressive rise in the shares of the Madras Rubber Factory Ltd from Rs. 10 to Rs. 24 in a little over one year, seems well justified by the Company's encouraging progress during this period. The chairman, Mr. K. M. Cherian, told the shareholders' annual meeting last week that Mansfield car and truck tyres will roll out of the factory within three months. (A fuller version of the speech is published on a later page in this week's issue of *Capital*.) The erection of the factory is going on according to schedule. The building work is complete, and a major part of the machinery has arrived. Mr. Cherian stated that the plans for building and erecting the machinery had been drawn up in such a way that the factory could be expanded to several times its present size without interrupting production. The Company has sought the Government's permission to increase capacity. The chairman is optimistic it will be sanctioned. The Government now favours an upward revision of the production target for tyres to about 5.2 million, against the Planning Commission's original target of 3.7 million. It is likely that existing factories will be given preference in the expansion programme. It seems to be the Government's policy to license a capacity of up to 1 million tyres for all existing units together before new applications are considered. In this way, all the tyre factories established in India will be more or less of the same size, and they will also be of sufficiently large capacity with a production cost comparable to similar factories elsewhere in the world.

Referring to the progress of the Indian rubber industry, Mr. Cherian said it has recorded phenomenal growth since independence, but the country is still dependent on imports. He expected that even in 1965-66, India would need to import about 60,000 tons of rubber and urged the Government and the industry to take steps to meet the situation. He made several suggestions for increasing the production of natural rubber, which include encouraging the replanting of existing low-yielding plantations, a directive to the State Governments to release for rubber planting all suitable areas and to ensure that such areas are cultivated scientifically, and opening up the Nicobar and parts of the Andaman Islands for rubber cultivation.

Buckingham and Carnatic Pays More

At the annual general meeting of the Buckingham and Carnatic Co. Ltd held recently, the chairman, Mr. E. F. G. Hunter, referred to the improved

dividend declared for 1961, and observed that for the first time since 1953, an increase in the dividend on the ordinary shares had been recommended. The total distribution of 18 percent gross, equivalent to 12.6 percent net, compares with 10 percent net declared for each of the eight preceding years. The directors feel justified in recommending the higher dividend, which represents a modest 5 percent return on the ordinary capital and reserves. In spite of the need for retaining profits to finance modernisation, the chairman said that the shareholders should also participate in the higher profits of the Company, as labour and the Government have annually secured an increasing share of the revenues. The higher profit for the year was attributed to the maintenance of production at a satisfactory level throughout. The chairman referred to the Company's export performance in 1961 and said that overseas sales increased by 2½ percent. Mr. Hunter stressed the importance of the export incentive scheme which has enabled the Company to obtain modern equipment from overseas, as well as cotton, dyestuffs and chemicals. He also said that there is now a case for a reduction in the import duty on dyestuffs and chemicals in view of India's need to increase her exports of finished goods. Discussing the difficult cotton position which the textile industry is facing, Mr. Hunter said that apart from the serious shortage of most varieties of cotton, prices are inordinately high. Unless the Government took early action to import suitable short-staple cotton, the industry would later in the year be faced with an acute shortage of its primary raw material. Referring to the Company's modernisation programme, the chairman said that the re-equipment, modernisation and rehabilitation of the mills were essential for maintaining its trading position. The programme for the next three years would involve further heavy capital expenditure and this would be met from the Company's own resources.

Bangalore Woollen Raises Dividend

The Bangalore Woollen, Cotton and Silk Mills Co. Ltd has earned a higher profit in 1961 than in 1960. At the annual general meeting held recently, the chairman, Mr. E. F. G. Hunter, attributed this to the progress made towards improving efficiency in the mills and also to the good conditions which prevailed for most of the year in the domestic market. The better results have made it possible for the directors to recommend a higher total dividend of 18 percent for the year on the ordinary capital (18 percent gross or 12.6 percent net), which compares well with 10 percent net declared for each of the eight preceding years. Sales of the Company's popular fabrics, Cotswol and Angola, increased during 1961, and a substantial contract for the supply of these to Russia was completed. The chairman said that recent developments in the production of spun silk in Mysore State were promising, and there were good prospects for the silk department to work to full capacity again during the current year. The Company has been carrying on experiments with the production of Terylene wool suiting, and this fabric will be introduced in the market shortly.

Asiatic Oxygen Share Offer Soon

Asiatic Oxygen Ltd, a new Company, proposes to set up plants for the production of industrial and medical gases, including oxygen, dissolved acetylene and argon. It will also produce welding and cutting equipment, welding transformers and electrodes. It will acquire the holding interest in the Asiatic Oxygen and Acetylene Co. Ltd, which has been doing well for some years. In order to raise funds, Asiatic Oxygen will soon offer ordinary shares of Rs. 10 each for public subscription.

Acetate from Modern Mills

The chairman of the Modern Mills Ltd. Mr. N. D. Sirur, told the shareholders annual meeting in Bombay last week that the Company has undertaken a major expansion scheme for making chemicals and man-made fibres. It proposes to set up a plant in Harihar in Mysore State for the manufacture of acetate. The plant will have a

CAPITAL, 10th May, 1962.

daily capacity of 15 tons of chemical cotton from cotton linters and 10 tons of cellulose acetate flake, of which 5.5 tons will be turned into cellulose acetate yarn. The surplus chemical cotton will be available for sale to manufacturers of cellulose products, while the surplus cellulose acetate flake will be marketed principally in the form of moulding powders for plastics manufacture. If required, the Company would also be in a position ultimately to supply part of the requirements of Hindustan Photo Films Ltd which is being established by the Government of India in Ootacamund. Mr. Sirur said that two leading foreign companies in the field of chemicals and man-made fibres (one American, another European) have assured both technical collaboration and financial participation in the new acetate project. Plans for the manufacture of cellulose acetate flake, in which the American Company will collaborate, are now virtually final and the Company's loan application to the U.S. Aid Agency, it is expected, will be cleared before the end of June. Plans for the production of acetate yarns, for which European collaboration is being sought, are also progressing satisfactorily.

Referring to the working of the textile units in Bombay, the chairman said that the improvement of existing facilities in Bombay is not being overlooked. The Company will shortly add 144 automatic looms to Mill No. 2 under the export promotion scheme. It is expecting a licence to install 10,000 new spindles in the near future. It is said the management proposes to double the present capital of Rs. 46.47 lakhs shortly, specifically for financing the modernisation and expansion of the Company's two mills in Bombay. The chairman stated that since the mills have been concentrating on the manufacture of coarse and medium cloth, the burden of the additional excise duty will be comparatively light. But he criticised the proposed levy of 25nP a square meter on mercerised and sanforized cloth as being exorbitant. If it is enforced, he felt the "sanforized" trade mark will virtually cease to exist on the domestic sales of cloth. While this may be a convenient short-term measure to save foreign exchange, the long-range effect of the withdrawal of the "sanforizing" service from India needs to be carefully examined. With the prospective entry of the U.K. into the European Common Market, India's export trade in textiles must be directed to increasing the present negligible sales of well-processed cloth and made-up garments. In the circumstances, the country can ill afford to lose the "sanforizing" service. Mr. Sirur said that the real solution lies in the Government negotiating with the "sanforized" trade mark owners an equitable arrangement, by which their royalties do not involve any drain on the country's foreign exchange resources.

Gakak Mills Results Impress

The working results of the Gokak Mills for 1961 show an impressive improvement over those of the previous year. Although sales are up by only 9.6 percent from Rs. 3.85 crores to Rs. 4.22 crores, the gross profit of Rs. 75.41 lakhs shows an increase of about 74 percent over the 1960 figure of Rs. 43.19 lakhs. Favourable trading conditions apart, the marked improvement in the Company's profit margin—the ratio of gross profit to sales—from 11.2 percent to 17.8 percent, reflects the benefits of extensive replacement and renovation of machinery in recent years. In 1960, the Company spent Rs. 36.02 lakhs on replacement and modernisation, and in 1961 additions to fixed assets were of the value of Rs. 8.85 lakhs. After providing Rs. 15.14 lakhs (against Rs. 15.64 lakhs) for depreciation, Rs. 50,000 (against Rs. 80,000) for contingencies, Rs. 1.38 lakhs (against Rs. 12.75 lakhs) for development rebate, and Rs. 22.25 lakhs (against Rs. 11.03 lakhs) in 1960. With Rs. 21,125 brought in, and adding Rs. 80,000 being the provision for contingencies made in the previous year no longer required, the disposable surplus amounts to Rs. 30.81 lakhs. The directors have recommended a normal dividend of Rs. 14 a share, and a bonus of Rs. 4 a share, both subject to tax. These absorb Rs. 11.88 lakhs, against Rs. 6.83 lakhs in 1960. Allocations include Rs. 1.64 lakhs for additional bonus for the previous year, Rs. 1.08 lakhs

for tax for the previous years, Rs. 5 lakhs for debenture redemption reserve and Rs. 11 lakhs for general reserve No. 1. There remains a balance of Rs. 20,774 to be carried forward. Against a paid-up capital of Rs. 73.22 lakhs, all in equity shares of Rs. 100 each, the Company has reserves and surplus amounting to Rs. 66.45 lakhs. The gross block, valued at Rs. 2.28 crores, has been written down to Rs. 1.06 crores. The Rs. 100-paid share of Gokak Mills, which touched a high of Rs. 238 in March, is currently quoted around Rs. 223.50.

Simco Meters Issue Soon

Simco Meters Ltd is a new company formed to undertake the manufacture of single-phase and poly-phase electric meters. The U.K. firm of Dennis Ferranti Meters Ltd is collaborating with it. The Company's plant will be located in Tiruchirappalli, Madras State, with an installed capacity of 60,000 single-phase meters and 20,000 poly-phase meters a year on a single-shift basis. Trial production, it is expected, will start in January next year and commercial production two months later. The total outlay on the project is estimated at Rs. 60 lakhs, of which Rs. 35 lakhs is being raised through share capital and the balance by way of loans. The foreign exchange requirements are estimated at around Rs. 25 lakhs. It will be met by the Commonwealth Development Finance Company Ltd through subscribing to equity shares worth Rs. 6.66 lakhs and a loan of 18.33 lakhs repayable after ten years. The issued capital of the Company will be made up of Rs. 32 lakhs in equity shares of Rs. 10 each and Rs. 3 lakhs in preference shares of Rs. 10 each. Preference shares worth Rs. 1.50 lakhs have been taken up by insurance companies; the balance is to be offered for public subscription. Of the equity capital of Rs. 32 lakhs, the directors and their friends will take up shares of the value of Rs. 11.45 lakhs. The Commonwealth Development Finance Company will subscribe to equity shares worth Rs. 6.66 lakhs. The balance will be offered to the public.

Savamalai Estates Pays More

Savamalai Estates Ltd has earned a gross profit of Rs. 2.36 lakhs for the year ended November 1961, absorbing Rs. 65,250. The dividend offers a yield of 4.4 percent at the present price of Rs. 172 a share. The profit has declined from Rs. 1.77 lakhs to Rs. 87,730, after providing Rs. 1.35 lakhs (against Rs. 1.03 lakhs) for depreciation. Taxation absorbs Rs. 10,000 (against Rs. 80,000) and development rebate reserve Rs. 19,500 (against Rs. 2,958). The carry-forward is Rs. 58,548, against Rs. 65,568 brought in. The crop increased by 195 quintals to 4,830 quintals. The average sale price fell from Rs. 5.65 to Rs. 5.57 a kilogram. Estimates have been made for a crop of 5,250 quintals in 1962.

Hind Rectifiers Share Offer

Reliable reports indicate that Hind Rectifiers Ltd, Bombay, will soon be in the market to raise Rs. 12 lakhs in equity shares of Rs. 10 each to finance the Company's expansion schemes. Incorporated in 1958 as a private limited Company to take over from Kaycee Industries Ltd the business of manufacturing rectifier apparatus which was being carried on in collaboration with the Westinghouse Brake and Signal Co. Ltd, London, Hind Rectifiers was converted into a public limited Company in May 1961. Its factory is situated in Bhandup, Bombay, and it has a built-up area of 24,000 square feet. Another 18,000 square feet is under construction. The Company has been licensed to manufacture silicon diodes and silicon rectifier apparatus. It has already got a technical collaboration agreement with the Westinghouse Brake

and Signal Co. for the manufacture and application of semi-conductors and rectifiers of all types, and of rectifier apparatus embodying such semi-conductors. The Company has also obtained the Government of India's approval to enter into a sub-licence with Westinghouse Brake and Signal Co. under which Hind Rectifiers will receive the technical know-how and patent rights of the Westinghouse Electric Corporation of America through Westinghouse Brake in connection with the manufacture of silicon semi-conductors, including transistors, photo-transistors, etcetera. The expansion programme is estimated to cost Rs. 25 lakhs. It is proposed to finance it entirely by the issue of share capital. The present issued and subscribed capital is Rs. 5 lakhs in equity shares of Rs. 10 each. This is being raised to Rs. 25 lakhs by the further issue of equity shares for Rs. 20 lakhs. Out of this, shares worth Rs. 5 lakhs are being issued to existing shareholders. Shares of the value of Rs. 3 lakhs will be taken up by the Westinghouse Brake and Signal Co. The balance of 120,000 shares will be offered for public subscription.

Basmatia and Hoolungoree Tea

The working results of the Basmatia Tea Co. Ltd and the Hoolungoree Tea Co. Ltd, two Assam gardens, for the year ended December 1961, are now available. The profit of Basmatia has increased from Rs. 4.21 lakhs in 1960 to Rs. 4.49 lakhs in 1961, after providing Rs. 89,311 (against Rs. 74,810) for depreciation. The taxable ordinary dividend has been cut from 35 percent to 25 percent, but the dividend has to be paid on the increased share capital of Rs. 7.65 lakhs. The dividend is covered more than twice and offers a yield of 9.4 percent at the present price of Rs. 26.50 a share. Taxation is allocated Rs. 1.90 lakhs (against Rs. 1.63 lakhs), general reserve Rs. 70,000 (the same) and development rebate reserve Rs. 4,586 (against Rs. 3,689). The carry-forward is Rs. 48,172, against Rs. 44,554 brought in. The crop rose by 489 quintals to 3,136 quintals, but the average sale price declined from Rs. 7.21 to Rs. 6.01 a kilogram. Estimates for a crop of 2,900 quintals have been made during the current season.

Hoolungoree Tea has reduced the taxable ordinary dividend from 10 percent to 7.50 percent, absorbing Rs. 65,250. The dividend offers a yield of 4.4 percent at the present price of Rs. 172 a share. The profit has declined from Rs. 1.77 lakhs to Rs. 87,730, after providing Rs. 1.35 lakhs (against Rs. 1.03 lakhs) for depreciation. Taxation absorbs Rs. 10,000 (against Rs. 80,000) and development rebate reserve Rs. 19,500 (against Rs. 2,958). The carry-forward is Rs. 58,548, against Rs. 65,568 brought in. The crop increased by 195 quintals to 4,830 quintals. The average sale price fell from Rs. 5.65 to Rs. 5.57 a kilogram. Estimates have been made for a crop of 5,250 quintals in 1962.

Tropical Plantations Repeats

Tropical Plantations Ltd has earned a net profit of Rs. 2.81 lakhs, for the year ended December 1961, against Rs. 2.38 lakhs for 1960. Adding to the profit a sum of Rs. 223 brought forward, a surplus of Rs. 2.81 lakhs is available. A sum of Rs. 8,962 is set apart towards the short provision for taxation relating to previous years. The proposed dividend of 8 percent, subject to tax, against 8 percent for the previous year, will absorb Rs. 1.60 lakhs. A sum of Rs. 1 lakh is transferred to reserve for development (against Rs. 55,000). The balance of Rs. 12,239 is carried forward. The total tea crop for the year amounted to 246,574 kilograms. The all-in-cost was Rs. 2.72 a kilogram and the average price realised amounted to Rs. 3.83 a kilogram. The total rubber crop for the year amounted to 317,850 kilograms at an all-in cost of Rs. 1.95 a kilogram. The average price realised was Rs. 3.10 a kilogram. At the current market rate of Rs. 18.75 cum-dividend, the shares of Tropical Plantations give a yield of 10.6 percent.

More from Aspinwall

The working results of Aspinwall and Co. Ltd for the year ended December 1961 show a net pro-

lit of Rs. 3.49 lakhs, after providing for depreciation and taxation. This compares with the previous year's figure of Rs. 3.2 lakhs. Adding Rs. 18,821 brought forward, the total surplus comes to Rs. 3.68 lakhs. Out of this amount, the directors have transferred a sum of Rs. 7,746 to development rebate reserve. The dividend on preference shares at 6.66 percent, subject to tax, amounts to Rs. 14,252. The proposed dividend on ordinary shares at 9 percent, subject to tax, against 8 percent in the previous year, will absorb Rs. 3.23 lakhs. The balance of Rs. 23,326 is carried forward. At the current market rate of Rs. 7.30 cum-dividend, Aspinwall shares give a yield of 12 percent.

Bank of Tokyo Profit Rises

The Bank of Tokyo Ltd has produced satisfactory results for the year ended December 1961. The profit has risen from Rs. 17,328 in 1960 to Rs. 6.68 lakhs in 1961. Interest paid on deposits and borrowings rose by Rs. 16.08 lakhs to Rs. 48.70 lakhs, while income from interest and discount was Rs. 18.71 lakhs higher at Rs. 63.18 lakhs. Deposits improved by Rs. 1.45 crores to Rs. 3.91 crores. Cash was Rs. 61.67 lakhs larger at Rs. 93.31 lakhs. A fall of Rs. 77 lakhs in advances at Rs. 9.91 crores, was partly offset by an increase of Rs. 60 lakhs in investments to Rs. 1.17 crores.

Prospects for B.I.C.C.

In his chairman's statement circulated along with the report and accounts of British Insulated Callender's Cables Ltd for 1961, Sir William McFadzean is optimistic concerning the future prospects. (A fuller version of the statement is printed on a later page in this week's issue of *Capital*.) "In my view, we are now better equipped and better organised throughout the group than ever before to face the challenge of national and international trade in a world of ever-widening opportunity". The chairman, therefore, looks forward to the future with confidence. The profit of B.I.C.C. has risen from £6.9 million in 1960 to £8 million in 1961. The ordinary dividend has been maintained at 13½ percent. The production of power cables has reached a record level, and substantial overseas orders for power cables and special marine cables have been obtained. The construction Company, which was set up in 1949, has obtained satisfactory overseas orders. B.I.C.C. has received overhead line contracts in many countries. The principal railway electrification contract is for 250 track miles of overhead equipment in the Calcutta area. This is the third major order from the Indian railways in recent years and brings the total track mileage of overhead equipment to about 1,000. In addition to increased direct exports made by B.I.C.C., its overseas factories have expanded their production substantially. Its associated Companies in New Zealand, India, Pakistan and Portugal have done well. Sir William predicts bigger trade with Europe if the U.K. eventually joins the European Common Market. A Company called European Cables Ltd has recently been formed jointly with Felten and Guillaume in order to explore the export prospects there.

Bank Support for Government Loans

Last week, the Central Finance Minister, Mr. Morarji Desai, held important informal discussions in Bombay with bankers and industrialists and representatives of stock exchanges at two separate meetings on certain important aspects of Government policy. Mr. Desai had made pointed reference to these in his Budget speech, namely, increasing bank investments in Government securities and strengthening the equity base of new industrial concerns. He appealed to promoters of new industrial undertakings to aim at more broad-based ownership by offering larger amounts for public subscription. The move for wider share ownership is not only in keeping with the Government's goal of a socialist pattern of society, but is also in line with the trend in other democratic and industrially advanced countries. The stock exchanges have always favoured wider public participation in new capital issues. Under their listing

regulations, at least 49 percent of the capital issued by new companies should be offered for public subscription. In cases where foreign collaborators participate in the equity capital of new companies, the value of shares allotted to them is deducted from the total issue, and the promoters are required to offer at least 49 percent of the residual capital for public subscription. Indian promoters insist on retaining with themselves at least as much as the share allotted to foreign collaborators in order to ensure smooth functioning of companies. The stock exchanges do not think it is necessary for the promoters to have a majority interest in all cases. Often public participation in the more attractive issues is not what it should be. The Finance Minister appealed to promoters of new ventures to avoid allotment of large blocks of shares within family and business groups. He urged industrialists to aim at raising more equity capital and to depend less on bank borrowings. A strong equity base is necessary for the evolution of sound industrial finance. The official view seems to favour an equity-debt ratio of 1:2, but in his discussions with industrialists, Mr. Morarji Desai gave no indication that the Government has any thoughts of enforcing the ratio rigidly. This is as it should be.

In a way, the question of the equity-debt ratio is linked with the question of larger investments in Government securities, which formed the theme of the Finance Minister's discussions with bankers. For, greater reliance on the part of companies on bank loans than on equity capital has also contributed to the increase in the demand for bank credit. This in turn has restricted the scope for investments in Government securities. Despite a substantial increase in deposits, investments in Government securities by both India and foreign banks have registered a considerable decline over the past few years because of the growing pressure on bank credit resulting from the increasing tempo of economic activity in the country. Since 1959-60, the advance-deposit ratio has moved up from 59 percent to 70 percent, while the investment-deposit ratio has come down from 37 percent to around 29 percent. In his discussions with bankers, the Finance Minister drew attention to the low capital-deposit ratio which stands at around 4 percent to 4.5 percent. He criticised the recent tendency for advances to rise at a more rapid pace than deposits, and asked bankers to be more selective in granting term advances and to maintain balance in their portfolio as between medium and short-term advances. Mr. Desai said that banks should increase their investments in Government securities not so much to help the Government as to help themselves. But this view will be shared only by a few. The Finance Minister told bankers, "I do not want to use my powers; I want to achieve this by persuasion." But he did not fail to remind them of the persistent demand from some quarters, inside and outside Parliament, for the nationalisation of banks. He assured them that the banking industry has nothing to fear if it adheres to certain norms because the Government does not believe in nationalisation for its own sake.

It is apparent that the Finance Minister's discussions with bankers were aimed mainly at ensuring better support for the Government's borrowing programme. As for the low capital-deposit ratio, the Reserve Bank has already suggested certain measures to strengthen the liquidity of the banking system. The banks have agreed to raise their capital-deposit ratio to 6 percent and to transfer 20 percent of their declared profits to reserves every year until that ratio is reached. As for the steady decline in their investments in Government securities in spite of the increase in deposits, the bankers pointed out that in a situation where the Reserve Bank provides accommodation to banks at penal rates, reduction in liquid assets is unavoidable. Besides, Government securities have ceased to be as liquid as before; nor are they attractive. The return on advances is much more than what Government securities yield. Also, income from interest on Government securities is wholly taxable, whereas interest income from advances is taxable only after the expenses are deducted. This further reduces the already low yield on Government securities. Notwithstanding the obvious disadvantages of investment in Government securities, the bankers are said to have assured the Finance Minister of their support to the Government's borrowing programme. However, they have suggested the abolition of the three-tier sys-

tem of lending rates and the issue of high-yield bonds. Another suggestion related to widening the scope of the bill market scheme to increase advances to small-scale industries. The trend of the Finance Minister's discussions with the bankers has led many observers to think that the Government might raise the statutory minimum required to be invested in Government securities, should persuasion fail to achieve the desired results. The Reserve Bank of India proposed a change of this kind some time ago, but no action has so far been taken on it.

Anglo-French Textiles Earns More

For the year ended December 1961, Anglo-French Textiles Ltd made a gross profit of Rs. 40.58 lakhs, against Rs. 36.75 lakhs in the previous year. After providing for depreciation, taxation, etcetera, the net profit was Rs. 15.43 lakhs, against Rs. 13.12 lakhs. The Company's earnings in 1961 were thus more than in 1960 (and not less, as wrongly stated in the headline of the review published in *Capital* of 26th April). The error is regretted.

Industrial Containers Does Well

Industrial Containers Ltd has increased its turnover from Rs. 18.88 lakhs in 1960 to Rs. 63.24 lakhs during 1961. The Company's production has been carried on mainly with imported steel. As indigenous steel is in short supply, the prospects for the current year are considered uncertain. The profit has risen from Rs. 11,191 in 1960 to Rs. 6.15 lakhs in 1961, after raising depreciation from Rs. 43,887 to Rs. 90,257. A taxable ordinary dividend of 10 percent has been declared (against nil). It is covered more than five times, and offers a yield of 6.6 percent at the present price of Rs. 15.12 a share. Taxation is allocated Rs. 2.67 lakhs, development rebate reserve Rs. 20,011 (against Rs. 21,905) and general reserve Rs. 1 lakh. There is a carry-forward of Rs. 45,149, against a loss of Rs. 63,487 brought in.

PAPER MILLS OF BENGAL

WITH the exception of the Titagurh Company the financial position of the paper mills in Bengal is the reverse of satisfactory. They have little or no working capital, and in some instances the block account is in excess of the subscribed capital. The Bally Paper Mills Company has a capital paid up of £122,200 while the Block Account stands at £114,980, and large sums are stated to be required for the needful repairs and renewals. There is due to sundry creditors £70,678, a large proportion of which probably carries interest. This was on 31st July last, and the position has probably not improved. The Bengal Paper Mill Company has a capital of Rs. 12,00,000, and the Block Account stands in the books at Rs. 14,52,562 net, or Rs. 2,52,562 in excess of the capital. There are debentures for Rs. 3,50,000 which fall due on 30th June next, and current debts for Rs. 5,17,754. The major portions of which bear interest. The Managing Agents are endeavouring to place debentures for Rs. 6,00,000, carrying interest at 5½ percent. We doubt very much if they will be subscribed for. We cannot recommend them as a first class, gilt-edged investment. The Imperial Paper Mills Company has a capital of Rs. 12,00,000. The Block Account stands in the books at Rs. 18,01,839, and there is a debit balance at Profit and Loss at Rs. 1,75,525. There are debentures for Rs. 6,00,000, which fall due on 1st July, and current debts of Rs. 12,35,482, nearly all of which carries interest. The Managing Agents are endeavouring to place Preference shares for Rs. 8,00,000, and offer, if these are taken up, to take up the debentures. There is not the slightest chance of these shares being subscribed for, and the condition of this Company is parlous. The Titagurh Paper Mills Company has a capital of Rs. 15,00,000. The Block Account, after deducting reserves, etc., stands at Rs. 6,76,623, so that it has a working capital of nearly 8½ lakhs. As a result its current debts are only Rs. 58,893 which carry no interest.

A Ditcher's Diary

I THINK IT WAS MALCOLM MUGGERIDGE who recently wrote, with his usual exaggeration, that Mr. Nehru strikes one not as free India's first Prime Minister but British India's last British Viceroy. Nobody could doubt for a moment that Dr. Rajendra Prasad is Republican India's first President; and very Indian too. Don't ask me just what Indianness is supposed to consist in. If too many people tried to define it, and there have been some tendencies in that direction, we will, before we have said Jack Robinson, have a Committee on Un-Indian Activities on the U.S. model; and I will not concede that a Shri McCarthy can't happen here. Dr. Prasad is, of course, visibly every inch an Indian. His clothes are Indian; he is still said to use a twig for his tooth-brush in the morning; he does not mind being photographed while sitting at the feet of a *sadhu* or going for a dip in the Ganga; and of course he prefers Hindi to English. But all this is superficial. Dr. Prasad is vastly learned; and his European education (such as was available here) was as thorough as any other Indian's of the time. Yet, I suggest, this education had little impact on the essential man. Another way of putting it would be that Dr. Prasad went through that education without shedding any part of himself, without being overpowered by it. It might even be said that he tried the western values; they did not agree with him, and he gently discarded them. This is hardly the time to discuss the powers of the Indian President vis-à-vis those of the Prime Minister. But, in the contemporary world, are there two leaders more sharply contrasted than Dr. Prasad and Mr. Nehru? It is a tribute to both that they worked together for so long and, by and large, smoothly. The differences are old. On 19th December, 1935, Dr. Prasad wrote to Mr. Nehru: "I know that there is a certain difference between your outlook and that of men like Vallabhbhai, Jinnalalji and myself and it is even of a fundamental character". I do not think that much of this changed in the following 27 years. After 12 years in Rashtrapati Bhavan, Dr. Rajendra Prasad returns this week to a village *ashram*. There he belongs, close to peasants much like himself. "Progressive" folk may be wrong in thinking that the traditional values cherished by Dr. Prasad have perished. Sometimes I am not even sure that all of them should go.

ALTHOUGH I SHOULDN'T, I KEEP WATCHING MYSELF as I write this diary, handed down from better men than I, wondering all the time whether I am gathering more egotistical fat around my mind or remaining myself. It is against this background

that William Plomer in *Encounter* made an impact on me. You see, he was writing on autobiographies and also referred to diaries, which he describes rather cleverly as "a sort of instant biography", somewhat like instant coffee or tea. I will "phy", I remember with pleasure Mr. Plomer's not cavil. I remember with pleasure Mr. Plomer's autobiography, *Double Life*, I think, it was called. We are all Walter Mittys; and in an autobiography we make public our not-all-so-secret lives. Is Mr. Plomer right in bemoaning the alleged disappearance of such dubious ancient virtues as reticence and the taboo on sex? I seem to remember several autobiographies, especially of the eighteenth century, which were more exhibitionist than anything written today. But I like Mr. Plomer's epigram: "If you have a dirty mind, you can make a clean breast of it". This sort of autobiography. I must confess, I find increasingly unappetising. But, as a genre, there is much to be said for autobiographies. Nirad C. Chaudhuri wanted his *Autobiography of an Unknown Indian* to be regarded as "a contribution to contemporary history"; and that it certainly was. Arthur Koestler's two volumes of direct autobiography are a permanent record of Europe in the recent decades; and we would be the poorer without them. Mr. Plomer finds it remarkable that "although people's energies and passions are often more involved with money than with love... how little and how seldom autobiographers allude to money". To this I say, "Thank God for that". I once had a look at an American millionaire's life; and I don't want to read another book like that. Mr. Plomer makes a valid point in complaining that while a painter doing his self-portrait has only himself to consider, a writer is bound to drag in other people. It can't be helped. But, besides the law of libel, there is a sense of fairness in most people. Mr. Plomer himself says a nasty thing or two about some autobiographers, but is fair—or discreet—enough to leave them unnamed.

IN RECENT YEARS, THANKS TO A LONG SPELL OF GOOD luck, my journeys on the Indian railways have been rather rare. Nevertheless, the storm which seems to be brewing about irregularities in the sale of railway tickets at booking offices and stations gives me some considerable satisfaction. It is not that I am unaware of the difficulties of the railways: trains are heavily overcrowded nowadays, and some passengers must over time to time be disappointed. But, on the basis of what I have frequently heard, it will still be a long time before I am convinced that some sort of a black market in reservations and tickets

does not exist. The travel agents may be partly to blame, in the sense that a number of them regularly make a bid to "corner" tickets in anticipation of, say, a holiday rush. What surprises me, nevertheless, is the complacency with which the railways choose to handle a problem which cannot be all that intractable. Their first reaction is to dismiss as false the protests of disappointed passengers; and the odd excuse is offered that the protests were never recorded in the complaint books provided at railway stations or booking offices. I should have thought that the reason for the omission was simple: not many, having waited for hours in queues, would have the patience to write their complaints in books which they believe, rightly or wrongly, no senior official bothers to read. To some, the better alternative appears to be to write to the newspapers instead; and here it must be said to the credit of the railways that the letters which are published—perhaps a small proportion of those that come—do often draw an official answer, however unconvincing, I fail, nevertheless, to see why, instead of issuing denials and excuses, the railways cannot intensify the system of surprise checks at ticket counters; and perhaps ration the sale of tickets during rush periods. The officials who sit in their chairs and answer letters in the newspapers might serve their public better if they visited booking offices incognito, and found out for themselves what passengers are really complaining about.

CALCUTTA'S NEEDS ARE MANY. AMONG THE LAST things the city needs, I would name electronic traffic signals; and I shudder when I read that "the cost has not yet been worked out". It is the common experience of every motorist in Calcutta that even existing regulations are not enforced by the police, who just stand by. The "lanes" leading to the Chowringhee-Park Street junction begin a little after Sudder Street. Every day anyone can see how many drivers swerve right or left at will; and there are umpteen policemen around watching the whole proceeding with supreme indifference. I am not the one to oppose the transition from the quill to the typewriter; let bullock carts be replaced by jets at the bidding of Mr. Nehru; there is no reason why the Calcutta Police should not have more wireless vans. But the spreading craze for the latest mechanical gadgets is in many instances mere cover for incompetence in doing the most elementary things. Installation of electronic equipment at Lal Bazar will do nothing to improve human efficiency, which is at a low level going lower everyday. It may be that the introduction of mechanical devices has in some places aided the process. An administrator of great experience once told me, only half in jest, that the jeep had ruined district administration in India. In the old days a district officer rode to outlying villages, as he had

MARKET RATING INDICES FOR TOWNS OF INDIA

BOOK ONE
CLASS I TOWNS

A practical and upto-date guide to urban consumer markets of India based on the 1961 Census Figures

Here is a book that gives you vital upto-date statistical data on the developing urban markets of India. You will find it an invaluable aid for setting your sales targets. The book contains a wealth of useful economic information about towns. As a comprehensive reference source this is a 'must' for your office book-shelf.

The contents of the volume include a set of three tables. Table 1 classifies the 108 Class I towns on an all India Market Rating; Table 2 is divided into 5 sections and lists towns within States giving both an all India Rating as well as a State Rating. Table 3 is an alphabetical list of towns with both their State and all India Ratings.

to; out of sheer fatigue—his own and the horse's—he rested there overnight and heard people's grievances. Today he jumps to an outpost in a matter of minutes and spends no more time there for he wants to get back home quickly. Supervision is thus at a minimum; and today's district officers know less about their charges than their alien predecessors did. Reverting to traffic, I have a story to tell. A retired padre, after death, applied for admission into heaven. He was asked to fill various forms in which he stated that in Africa he had converted 240 pagans to the ways of God. While being interrogated, the padre saw a bearded gentleman enter the portals of heaven without the least ceremony. How come? The pious man was told that the entrant was a Calcutta taxi-driver, "who daily put the fear of God into thousands". I can't see electronics improving his ways.

I CANNOT SAY THAT THE PROSPECT OF YET ANOTHER report on the reorganisation of the administrative services, this time from Mr. V. T. Krishnamachari, moves me to excitement. There have been many reports on the subject before, and there will be many more yet; but the sum total of the improvement they are likely to yield may be epitomised by the phrase *plus ça change, plus le même chose*. That the administration at the State and district levels—Mr. Krishnamachari's main concern—is badly in need of toning up, I would not for a moment deny. What dismays me is the implicit assumption that this toning up can be done as part of the broader scheme of "democratic decentralisation"; in other words, by associating local politicians more closely with the running of the administrative services. From the experience of the past few years, I am persuaded that if a move was necessary, it was necessary in precisely the opposite direction—by giving officials clear-cut authority. Much of the demoralisation of the administration today is a direct result of politicians' pettifogging interference in day-to-day affairs; to increase the scope for interference under cover of theoretical mumbo-jumbo like democratic decentralisation would, in my view, be the straight road to total paralysis. I do not suggest that bureaucrats in the districts should be installed in ivory towers, unaware of the popular impulses that grow around them. What I do suggest is that the authority of the officials has already been greatly diluted, and it can be diluted further only at the risk of making them wholly ineffective. The affairs of Calcutta Corporation demonstrate the damage that is done when power is married to political immaturity; and I would venture to suggest that the local authorities in the district are no better than our Corporation. Until they are, reliance on the bureaucrats may have to be fuller than it is.

THE CHILDREN'S LITTLE THEATRE, WHICH HAS grown into a fine institution over the past ten years, celebrated its foundation day anniversary at the New Empire last Sunday; and I was among those invited to attend the very interesting function. As usual, the programme of dances was thoroughly enjoyed by all. The organisers demonstrated their new idea of adapting traditional Indian dance steps for rhythmic training in the classroom as part of the children's physical education programme. The main schools of Indian classical dancing were represented in the show; and it was a delight to watch groups of small children executing the steps so gracefully. An appeal was made on behalf of the C.L.T. authorities for public donations to a fund for building a training school as well as a garden theatre. The need for such a structure has been keenly felt in Calcutta, where children have hardly any facilities for recreation or amusement. I once commented on the subject and I am glad that the C.L.T. is making a serious effort to deal with the problem. Mr. Nehru has opened the fund with a fairly big contribution, and the West Bengal Government proposes to make a sizeable one too. But much more will be needed than what has been raised or promised. It is indeed hard to think of a more deserving cause, and I hope the public will donate generously.

THE DITCHER

Company Meeting

Commercial Production of Tyres to Start in Three Months

MADRAS RUBBER FACTORY CHAIRMAN EXPLAINS EXPANSION PLANS

THE Madras Rubber Factory Ltd. hopes to commission its entire plant for the manufacture of Mansfield car and truck tyres within three months, according to Mr. K. M. Cherman, the Chairman.

Addressing the shareholders at the first annual general meeting of the company held in Madras on May 4, he informed that the erection of the tyre factory was proceeding according to schedule. The entire building of the new factory was complete and the major part of the machinery had arrived, he said.

During the course of his speech, Mr. Cherman said:

I do hope, you have had an opportunity to study the Balance Sheet and the Directors' Report and, therefore, I do not propose to go into its details except to draw your attention to certain salient features of the company.

As you are all aware, the private firm of Madras Rubber Factory was acquired by your company for a total consideration of Rs. 25 lakhs. The public company was floated in 1961 and shares worth Rs. 75 lakhs were allotted on June 6. The first and second calls were made during August and October 1961 and these shares became fully paid up a few weeks before the close of books on December 31, 1961.

Unique Profits

The profits of the year were Rs. 23,51,764-94 before depreciation and Managing Agents' commission. After adjusting these, we have a net profit of Rs. 18,30,487-37 and this entire amount was earned solely from the existing business of the Madras Rubber Factory Tread Division. The total sales come to Rs. 1,64,47,976-30. The products of the company continue to enjoy the confidence of the public and there is every reason to believe that the sales and profits in the existing lines of business will continue to grow.

I am sure, you will like to join me in paying tributes to the management for these excellent results and to the previous owners of the concern for their magnificent contribution to the growth of this undertaking.

Fine Gesture

It may be pointed out here, that no payments were to be made to the promoters or to the Managing Agents for expenses incurred or for their services in the promotion of the company. The entire expenses thereof had been met by the promoters. Up to March 31, 1961, this was a private company in the sole ownership of the Managing Agents and when the company was converted into a public company on April 1, 1961, the accrued profits of the private company, which came to Rs. 5-31 lakhs, were also given away to the public company.

I have no doubt you will appreciate this fine gesture from the Managing Agents as an expression of their abundant confidence in the future of this new enterprise.

I am also happy to report to you today that the erection of the tyre factory is proceeding according to schedule. Orders for the entire machinery required for the tyre

factory were placed with our collaborators in October 1961, barely 45 days after the receipt of the necessary import licence and the foreign exchange sanction. The construction of the factory building was also started in October after getting the plans approved by our collaborators.

The pilot plant machinery was shipped at the same time and, as you all know, it commenced trial production of tyres on November 16, 1961. The entire building for the main factory is now complete. Major part of the machinery has arrived in Madras and the balance is expected shortly.

The erection work is going on round the clock and our foreign technicians are hopeful of commissioning the entire plant within three months.

Expansion Plans

The plans of the building and erection of the machinery etc. have been drawn up in such a way that the factory can be expanded several times its present size without interrupting production. We have also sufficient land for this expansion. We have also applied to the Government of India for their early consideration of our request for the increase of the capacity and we are hopeful that this will be granted as there will be need for increased production of tyres even during the Third Five-Year Plan.

Foreign Link-up

The company is extremely fortunate in having the unstinted cooperation of our collaborators Messrs. Mansfield Tyre & Rubber Co. of U.S.A. They are as keen as your management in the early commissioning of the Indian plant and have spared no money or personnel for the realisation of this goal. We are fortunate to have with us Mr. M. L. Bayer, Technical Assistant to Mr. James H. Hoffman, President of the Mansfield Tyre Co. and he has with him in Madras a team of very senior rubber technicians and engineers. Their devotion to duty, their keenness and eagerness for work and their extremely friendly attitude to people around them, have set a very fine example to our staff and workers.

We are proud of these eminent friends from abroad and I have no doubt, that you will all agree with me that our company owes a great debt of gratitude and thankfulness to our collaborators, the Mansfield Tyre & Rubber Co. and to its able and outstanding President, Mr. James H. Hoffman.

I do not want to say anything more about Mr. Hoffman at present, as I am hopeful that he will be in India very shortly for the formal opening of the tyre factory.

Phenomenal Growth

Before I conclude, may I take a few moments of your valuable time, to say a few words about the Indian rubber industry.

The Indian rubber industry, which took firm root in the country immediately after Independence, has witnessed a phenomenal growth in recent years. The consumption of rubber by all factories in India in 1951 was only 22,786 tons. In a short period of ten years, it has increased

Mr. K. M. Cherman

to 63,848 tons (1961), and the estimated consumption for the current year is 71,917 tons consisting of 47,448 tons natural, 18,000 tons synthetic and 6,469 tons reclaimed rubber.
