introduction of improved methods. There are exceptions to this rule, of course; but in the majority of areas the strength of traditional habits and the natural conservatism of the peasantry restrict progress to a snail's pace. The results of scientific work and discovery are likely to take a considerable time to percolate down to the level of the cultivator unless increased efforts are made by all those concerned with agriculture, and especially by Mr. Patil's own Ministry, to ensure that they do. It would seem that in expressing such views about progress in agriculture Mr. Patil is in fact criticising the work of his own department. If this is so then his frankness is to be recommended to all Government Ministers.

The "pessimism and despondency" which Mr. Patil is reported to have expressed about some aspects of the country's agriculture, however, are emotions which scarcely become a Minister who is, one would suppose, in a position to do something about them. Surely the situation would yield to greater effort on the part of the Government and a more ready tendency to give this all-important economic field greater priority in planned development. Was Mr. Patil serving notice on his Government colleagues of the state into which they are allowing agriculture to fall? There has undoubtedly been too much faith placed in the powers of industry to raise the standard of living in this country with the maximum rapidity; is this a warning that unless more is done for agriculture, it will inevitably impose a brake on planned progress? Whatever the answers to these questions it is important that Mr. Patil's statements should be thoroughly investigated and every effort made to bring progress in this all-important sector more nearly into line with the rest of the economy. The willingness of India's friends abroad to provide against any deficiencies in food supplies should not blind the Government to the need to encourage a more efficient and productive agriculture.

It might help towards this end if the Government had in fact made its mind up where it was going in agriculture. Since the aim of service and joint co-operative farming was responsible for the establishment of the Swatantra Party a few years ago, very little has been heard about the Government's overall agricultural policy. Perhaps this will be changed after the general election. In the meantime, there is no indication of recent official thinking on such potentially dangerous matters as land ceilings, or on the equally damaging question of excessive fragmentation. In other words, agricultural policy is just being allowed to drift, and under such circumstances it is no wonder that there is little inclination on the part of cultiva-

tors to adopt new methods. Another factor is the comparative neglect of adult education in rural areas. It is not to be expected that modern and scientific ideas will catch the imagination of the ignorant and illiterate. In this respect too, agriculture has been allowed to suffer from the extreme preoccupation with development in industry.

It may be tempting for the Government to dismiss Mr. Patil's statement as being of little consequence. But it should be remembered that agriculture is still far and away the most important economic activity in India and is likely to remain so for many years to come. It employs the vast

majority of the people of this country, and determines directly the standard of their living. If it is falling behind in the transformation of the economy, then it means that the larger part of the population which development is intended to benefit is being neglected too. It would be inadvisable in the extreme to permit too large a gap to interpose itself between the agricultural and industrial sectors. Progress is required more or less simultaneously on all fronts if the economy is to attain the required rate of growth, and this cannot be done if agriculture is allowed to remain as backward and impervious to change as Mr. Patil seems to suggest it is.

BETTER LATE THAN NEVER

MORE than 100 years ago financial journalists in Britain were writing confidently of the imminent conversion of the currency to a decimal system. It may therefore seem rash to assume that the appointment of a Committee of Inquiry to consider the most appropriate form of decimal currency for Britain implies that the system of pounds, shillings and pence, will soon be superseded. But the Government has at long last adopted a positive attitude towards reform of the currency. The decimal system, the Chancellor of the Exchequer announced in December, has been accepted in principle—though if the Committee of Inquiry finds "very grave financial or other difficulties" the matter will be reconsidered. Critics who have become impatient after a succession of delays demand to know why yet another enquiry is needed after the joint report of two investigating committees, published in 1960, revealed that the business community was strongly in favour of a decimal currency and indicated no very "grave financial or other difficulties" in making the change. These critics believe that the Government, convinced that the change ought to be made, lacks the courage of its convictions. However, to have gained acceptance of the principle—375 years after the Dutch mathematician Simon Stevinus foretold that the decimal system that he had invented would be adopted in due time in all countries—is a momentous achievement.

Discussion is now focussed on the form of decimal currency that would be most suitable. Rational forces have gained a victory, but not yet a decisive victory, over tradition; but tradition may still be strong enough to preserve the pound intact as the basis of the new currency. It will be regrettable if the benefits of decimalisation are diminish-

ed by a sentimental attachment to the pound as at present valued. A unit of half the pound's present value, a unit of 10 shillings, would be much simpler. It was recommended by investigating committees in Australia, New Zealand, and South Africa, and its equivalent is already the basic unit of South Africa's currency. The British public's ideas of value could be easily adapted to a decimal system based on a 10-shilling unit, for the only change needed would be conversion of the penny from one-twelfth to one-tenth of a shilling. The shilling would become one-tenth, the penny (which might be called a cent) would become one-hundredth, of a "new pound". For people abroad accustomed to decimal systems the new British system would, of course, be much easier than the old one; and to suppose that these people would imagine that the currency had been devalued by conversion to a 10-shilling unit is to insult their intelligence.

A more serious problem is adapting existing "money machines" to a decimal system. If Britain (following the United States and France) had adopted the decimal system in the first half of the 19th century, as advised by two Royal Commissions in that period, this problem could not have arisen. The development of complex machines has made a change in the currency more and more difficult and costly. But that the change should have been undertaken in easier circumstances is no argument against undertaking it now. Any further delay can only complicate the task. It is arguable that a costly change whose benefits would accrue in the future, not in the present, should be deferred until more urgent tasks had been performed—particularly the task of strengthening the balance of payments. But the problem must be put in perspective. The committees which reported in 1960 estimated the cost of converting and replacing "money machines" at a little less than £130 million. Rough estimates made more recently suggest that the true figure might be about £150 million, or even £200 million. It is assumed that the Government would, directly or indirectly, bear a large proportion of the cost—though it would presumably not pay much for replacement of machines that were due to be replaced regardless of the system of currency in use. However, the cost would be spread over some years; and the whole cost of the operation—whose benefits would extend into the indefinite future—would be equivalent to only a few weeks' military spending at the current rate.

The primary purpose of the change is, of course, to facilitate calculations, both by Britons and by foreigners; but there is an important secondary consideration, the potentially big export trade in "money machines" operating a decimal system. It must be recognised, however, that Britain with a decimal currency would be a very attractive market for foreign-made "money machines", particularly American and European. South Africa's experience suggests that selling pressure would be intense, and that if imports were freely permitted these machines would be for some years an exportable item on the debit side of the external payments account. But South Africa's experience suggests also that price-cutting by foreign suppliers might considerably economise the cost of replacing obsolete "money machines". These details are important, but they are incidental to the main point, which is simplifying an archaic currency. Some functions of business this simplification

would save so much time that the number of non-productive personnel could be appreciably reduced. Simplification of pricing in foreign markets might broaden the whole range of sales of British goods. It was certainly with the European Common Market in mind that the British Government decided to adopt the decimal system for the currency; and

this decision (assuming that it will not be rescinded) opens the way towards a decimal system of weights and measures. Even if the negotiations with the European Economic Community fail the effort will have been worth making; for it has imparted the final push to attain a rational currency—after a delay of hundreds of years.

Current News and Comment

Associated Cement Earns Less

The maintenance of the dividend by the Associated Cement Companies Ltd at 12 percent, taxable, for the year ended July 1961, had displeased only a few, but the working results will disappoint all. Both the effective installed capacity and actual production were appreciably higher than in the previous year. But the ratio of production to capacity could not be maintained at the previous year's level due to the shortage of power and the paucity of railway wagons for carrying coal and despatching cement. Sales recorded an appreciable rise because of the increased output. But the profit actually declined. The directors attribute this fall to increases in cost beyond the Company's control. The rise in railway freights and power supply rates, higher price of coal, further increase in the stowing excise duty on coal, etcetera, and higher prices of gunny bags without a corresponding increase in the packing charges—all these factors contributed to the rise in manufacturing costs. Administrative expenses also increased. In spite of the repeated representations to the Government of India since 1958 concerning the steadily rising costs, there was no redress by way of an enhanced selling price of cement until November 1961. So the entire rise in costs since January 1958 has fallen on the manufacturers resulting in steadily diminishing profits over the past three years.

Sales of cement, coal, firebricks and machinery rose from Rs. 27.09 crores to Rs. 30.04 crores. The realisation from the sale of power, stores, etcetera, however, was down from Rs. 48.08 lakhs to Rs. 38.54 lakhs. Stocks recorded an increase of Rs. 21.14 lakhs from Rs. 1.18 crores to Rs. 1.39 crores. In spite of substantially higher sales, the gross profit for 1960-61 declined from Rs. 6.05 crores to Rs. 5.92 crores. The ratio of gross profit to sales works out to 19.7 percent, against 22.3 percent in the previous year. After providing Rs. 2.76 crores (against Rs. 2.40 crores) for depreciation, Rs. 29.27 lakhs (against Rs. 70.04 lakhs) for development rebate and Rs. 1.53 crores (against Rs. 1.29 crores) for taxation, the net profit amounts to Rs. 1.32 crores, against Rs. 1.46 crores in 1959-60. The amount provided for taxation includes Rs. 15.35 lakhs (against Rs. 18.09 lakhs) transferred from deferred taxation reserve. Since the year's net profit is insufficient for the payment of the proposed dividend, the directors have withdrawn Rs. 98 lakhs (against Rs. 84.50 lakhs) from general reserve. A sum of Rs. 1.10 lakhs has been set aside for amortisation reserve to provide for the amortisation of quarry and factory lands. The proposed dividend absorbs Rs. 2.29 crores, leaving Rs. 61,250 to be carried forward, against Rs. 42,021 brought in.

Referring to the progress of Associated Cement's various works during the year, the directors point out that the erection of the second unit in Manchester works was completed during the year, but the anticipated output could not be maintained due to disturbed labour conditions and the inadequate power supply. Work on the blast furnace slag cement project in Chaibasa and on the slag granulation plant in Jamshedpur was completed towards the end of June 1961, and the manufacture of blast furnace slag cement was commenced soon thereafter. The project for setting up a dry process cement factory of 165,000 tonnes capacity in Jamul, near Bhillai, was taken up in September 1960, and the work on the construction of the colony and administrative buildings commenced in the early part of 1961. The work on the extension of the Dwarka works to

increase its capacity from 246,000 tonnes to 350,000 tonnes has commenced. Satisfactory progress has been maintained on the installation of the white cement plant in Kymore with a production capacity of 25,000 tonnes a year. The extension of the Katni refractory plant, increasing its capacity to 30,000 tonnes a year, has been completed. The annular kiln went into production in November 1961. The progress in manufacturing cement machinery at the Shahabad works will be adversely affected as a result of the inability of Hindustan Steel to supply some required steel plates. So the latter will have to be imported. Negotiations are being finalised for a foreign exchange loan equivalent to \$780,000 from the Industrial Credit and Investment Corporation of India for the new engineering works in Shahabad for manufacturing machinery required for cement, pulp, paper and chemical industries. The construction of the heavy engineering works of A.C.C.-Vickers-Babcock is nearing completion and production will begin shortly. Negotiations for the sale of the Company's undertaking in Pakistan are now in final stages. Associated Cement has a paid-up capital of Rs. 19.07 crores (all in equity shares of Rs. 100 each) and its reserves and surplus total Rs. 10.70 crores. Its gross block of Rs. 43.88 crores has been written down to Rs. 25.36 crores. The Rs. 100-paid share of the Company, which quoted around Rs. 143.25 early in the year, rose to Rs. 172 in November. It is currently quoted around Rs. 161 cum dividend, offering a gross yield of about 8 percent.

Great Eastern Shipping Prospects

In his speech at the annual general meeting of the Great Eastern Shipping Co. Ltd, the chairman, Mr. A. H. Bhiwandiwalla, expressed cautious optimism about the outlook for the shipping industry in general, and the Company in particular. This will be greatly welcomed, since the investors in shipping shares have had a very rough time. The optimism is based on the small but distinct improvement in tramp rates, expectations of an increase in the charter hire-rate in relation to Great Eastern Shipping's oil-tanker which will be em-

ployed throughout the next financial year and its plans to concentrate more on the overseas trade than on coastal operations. Mr. Bhiwandiwalla said that although the rise in tramp rates has been small, there is an undercurrent of feeling that the worst is now over and that shipping companies engaged in the overseas trade can look forward to better times. With the delivery of two new ships from Japan in January-February, Great Eastern Shipping will have a comparatively modern fleet of 15 ships most of which could be used for overseas trade. Equipped thus with a larger number of overseas carriers, the crisis in the coastal trade would not affect the Company to the extent it did earlier. Of the four ships engaged in the movement of coal along the coast, two are likely to be scrapped in February if the freight rate for coal is not raised to an economic level, which in turn will minimise the losses on the coastal trade. Great Eastern Shipping is trying to expand its overseas trade and is hopeful of being admitted into the Bengal-Japan-Bay of Bengal Conference.

Mr. Bhiwandiwalla said that 1961-62 might be a transitional period and the Company might not be able to do much better than in 1960-61. But he assured shareholders that they could look forward to a much better performance after 1961-62 because of the preponderance of modern units in Great Eastern Shipping's fleet and greater concentration on the overseas trade. Mr. Bhiwandiwalla complained of discrimination in favour of the Shipping Corporation of India in the allotment of cargo and the payment of freight rates. Such an attitude could hardly be conducive to better competitive efficiency in a mixed economy, he said. The chairman said that the freight earnings during the current year so far totalled Rs. 1.36 crores, against Rs. 2.12 crores in the previous year. The Rs. 10-paid share of the Company, which touched a high of Rs. 16.23 in March 1961, was sold down to Rs. 12.72 in December. The latest quotation is around Rs. 12.88.

Outlook for Premier Automobiles

The statement of Mr. Lalchand Hirachand, chairman of the Premier Automobiles Ltd, at the recent annual general meeting in Bombay underlines the growth potentialities of the Company. (A fuller version of the statement is published on a later page of this week's *Capital*.) Considerable progress has already been made in manufacturing various components of motor-vehicles. The full production of Meadows engines is likely to be reached within six or seven months. The sheet metal parts project is expected to be completed by 1963. Premier Automobiles hopes to achieve the production target of 12,000 motor-cars and 15,000 lorries a year by 1964. It has been allowed to expand the production of commercial vehicles to 7,500 units on a single-shift basis. But

its proposal for expanding motor-car production is still being considered by the Government. The Company has already received a D.L.F. loan of \$7.2 million for sheet metal equipment, expansion of tool-room facilities as well as for removal of certain bottlenecks. The sanction for a further loan of \$3 million for purchasing dies for sheet metal parts—particularly of Fiat cars—is awaited. It is estimated that the machinery acquired with this money will enable Premier Automobiles to increase the production of Fiat cars to 9,000 a year and of commercial vehicles to 9,000 a year on a two-shift basis. In addition, the Company will be allowed foreign exchange worth Rs. 5 crores and an additional Rs. 1.95 crores for purchasing machinery and equipment for forgings and castings. For these two items, negotiations will have to be made with the Agency for International Development of the U.S.A. In addition, Rs. 1 crore will be given in foreign exchange from the soft currency area, particularly from the U.K. Foreign exchange is also said to have been offered for manufacturing diesel-engines. The existing agreements with Chrysler and Fiat have been renewed for five years.

Referring to the Company's working in the current year, the chairman said that during the first five months of the year it produced 3,014 motor-cars and 1,920 lorries and sold spare parts worth Rs. 67.06 lakhs, against 2,730 motor-cars and 2,525 lorries and spares valued at Rs. 64.01 lakhs in the corresponding period of 1960-61. Mr. Lalchand pointed out that the sales of commercial vehicles were affected during the year because of the proposed hire-purchase legislation, heavy taxation on motor-cars and tight money conditions. But he expressed the hope that with the growing needs for transport facilities in the third plan, the demand for commercial vehicles would go up. The third plan anticipates an increase in vehicle production to the extent of doubling the present capacity. Premier Automobiles has received the Government's sanction for the issue of 240,400 equity shares of Rs. 100 each at a premium of Rs. 10 each. The suggestion made by certain shareholders for the issue of convertible debentures instead of an equity issue at a premium, was rejected by the chairman. It was revealed that the Life Insurance Corporation held 60,021 shares of Premier Automobiles. After recording a high of Rs. 186.50 in March, the shares declined to Rs. 150 in December and are currently quoted around Rs. 156, offering a gross yield of a little over 6 percent.

Scindia Steam Disappoints

The working results of the Scindia Steam Navigation Co. for the year ended June 1961 show a further setback—for the third year in succession. The amount of cargo carried during the year was 2,595,362 tons, against 2,676,600 tons in the previous year. Freight and passenger earnings declined by about Rs. 86 lakhs—from Rs. 18.77 crores to Rs. 17.91 crores. Income from investments and interest was down from Rs. 36.18 lakhs to Rs. 30.39 lakhs and the surplus on sale of assets decreased from Rs. 6.74 lakhs to Rs. 5.84 lakhs. The gross profit of the Company has fallen from Rs. 2.66 crores to Rs. 2.01 crores, due to the drop in freight earnings and the rise in operating costs. After providing Rs. 1.96 crores (against Rs. 1.83 crores) for normal depreciation, the year's working shows a surplus of Rs. 4.59 lakhs (against Rs. 81.26 lakhs in 1959-60). To this is added Rs. 30.42 lakhs, being excess provisions made in previous years no longer required. A sum of Rs. 25 lakhs has also been drawn from the dividend equalisation reserve, bringing the disposable surplus to Rs. 60.01 lakhs. After deducting special depreciation of Rs. 23 lakhs provided for the statutory development rebate reserve and setting aside Rs. 39,943 for investment reserve, there remains a balance of Rs. 36.62 lakhs. The proposed dividend of 60nP a share, taxable, absorbs Rs. 33.79 lakhs, leaving Rs. 2.83 lakhs to be carried forward.

The directors state that 1960-61 was among the most depressing years for the Company, and one of continuous frustration and disappointment. Operators in the liner trade continued to be affected by the fact that more and more ships

chased less and less cargo, resulting in a continuous decline in freight rates. On the other hand, costs of operation continued to rise. Similarly, operations connected with the coastal services remained uneconomic. Any improvement in the amount of cargo available in these trades was promptly offset by a fall in draughts in the Hooghly river, so less cargo was carried by the same vessels. Unsatisfactory conditions of discharge, resulting in slower turn-round, adversely affected coastal operations. Freight rates continued to be low and uneconomic.

The directors, however, think that the outlook for the current year is somewhat better in the overseas trade. Efforts have been made to rationalise berthings and to pool resources with a view to ultimate economy. "These steps, coupled with efforts to bring about an improvement in the rates of freight wherever possible, lend hope for some improvement next year." Meanwhile, Scindia Steam is awaiting the results of the enquiry concerning freight increases which is being made by Mr. R. G. Abbi, the Government director in shipping companies. An order has been placed for two additional 17-knot motor vessels from the Hindustan Shipyard. At present, the Company has a fleet of 45 vessels with a total displacement of 269,000 G.R.T. The paid-up capital of Rs. 11.28 crores, all in equity shares of Rs. 20 each, is backed by reserves and surplus amounting to Rs. 11.29 crores. The total fleet account is about Rs. 37.51 crores, on which depreciation of Rs. 11.29 crores has been provided. Scindia Steam shares are currently quoted around Rs. 13.12, which is not much higher than the 1961 low of Rs. 12. The highest price recorded in 1961 was Rs. 16.28.

Universal Electrics Share Offer

Universal Electrics Ltd will establish a factory near Calcutta to manufacture house service meters. It proposes to issue 8,100 cumulative non-redeemable preference shares of Rs. 100 each and 330,000 ordinary shares of Rs. 10 each for subscription at par. (The details of the issue are printed on a later page in this week's *Capital*). The preference shares carry interest at 6½ percent, free of company tax but subject to the usual tax deduction at source. These shares will be allotted to the foreign collaborator. The directors and their friends have agreed to subscribe for 8,000 ordinary shares. The remaining 250,000 ordinary shares are being offered to the public. The entire public issue has been underwritten. The Life Insurance Corporation has agreed to take up 50,000 ordinary shares. It will be given a firm allotment of these shares.

The cost of the project is estimated at Rs. 71.25 lakhs, to which the Refinance Corporation may contribute Rs. 25 lakhs in the form of a loan. Orders for a portion of the equipment have already been placed, and it is expected that the factory may start producing in 1963. Arrangements have been made to obtain electric power from the West Bengal Electricity Board. The present capacity will be for the production of 120,000 house service meters a year. The lay-out of the factory will provide for further expansion, if necessary.

The demand for meters is rising, and is expected to increase steadily with the expansion of power supply. The domestic production of meters was 470,000 in 1960, but these constitute a small portion of the total requirements. Imports of meters will have to be cut substantially due to the foreign exchange shortage. Under the circumstances, the prospects for Universal Electrics appear to be good. The directors hope to make reasonable profits when production begins. Foreign collaboration has been arranged with the Mitsubishi Electric Manufacturing Co. Ltd of Tokyo on favourable terms and conditions.

More from Rallis India

Rallis India Ltd has raised the dividend to 8½ percent for the year ended August 1961, from 4 percent in the previous year. The profit, before taxation and depreciation, amounts to Rs. 58.44 lakhs, against Rs. 52.13 lakhs. Provision for de-

preciation gets Rs. 4 lakhs (against Rs. 4.02 lakhs) and taxation provision Rs. 24.33 lakhs (against Rs. 7.11 lakhs). The ordinary dividend of 8½ percent will absorb Rs. 19.12 lakhs. The net additions to reserves and unappropriated balance amount to Rs. 6.99 lakhs.

Modella Woollens Share Offer

Modella Woollens Ltd, which is operating a shoddy spinning unit in Thana (Bombay) and proposes to set up a wool top unit in Chandigarh (Punjab), will enter the market soon to raise Rs. 30.50 lakhs by public subscription. (Fuller details of the issue appear on a later page of this week's *Capital*). The issue is part of the Company's programme for increasing the paid-up capital from Rs. 10 lakhs to Rs. 65 lakhs—all in equity shares of Rs. 10 each. The promoters, directors and their friends will subscribe Rs. 11.17 lakhs and shares worth Rs. 13.33 lakhs have been reserved for the foreign collaborators, who will not be paid any royalty. The balance of Rs. 30.50 lakhs is to be offered for public subscription, out of which shares of the value of Rs. 5 lakhs will be allotted to the Life Insurance Corporation. The L.I.C., along with certain stock-brokers, will be underwriting the entire public issue. The promoters hope that the Company will be able to declare a dividend soon, even before the combining unit goes into production. This is because the shoddy spinning unit has already commenced production from 1st November, 1961. The unit, consisting of 2,000 spindles and other ancillary machinery, is Italian. It has a daily capacity of 5,000 lbs of shoddy yarn made from wool rags and wool waste, and has been purchased from the promoters—Messrs Kanshi Ram Kidar Nath—for Rs. 12.45 lakhs. The Company has also agreed to purchase the factory building from the promoters for Rs. 5.67 lakhs.

The proposed wool top unit in Chandigarh is being set up in collaboration with Robert Jowitt and Sons Ltd of Bradford. Besides supplying the technical know-how, the Bradford firm will participate in the equity capital to the extent of £103,000. It will also train Indian technicians and assist in the erection of plant and machinery. Land has already been purchased in Chandigarh and the construction of the factory buildings is likely to commence shortly. Prince Smith and Stells Ltd of Keighley, England, will supply the plant and equipment. The wool top unit is expected to commence production by about the middle of 1962. The plant will have licensed capacity of 1.5 million lbs of wool tops a year. Wool tops are in scarce supply. Against an estimated annual demand of 30 million lbs, imports are around 15 million lbs and domestic production is around 8 million or 9 million lbs. The two units of the Company, when in full production, will save the country Rs. 25 lakhs a year of foreign exchange.

Prospects for Cauvery Sugars

The chairman of the Cauvery Sugars and Chemicals Ltd, Mr. G. N. Noel-Tod, explained at the annual general meeting the difficulties facing the sugar industry. He also suggested remedies for correcting the present impasse, so they will be of particular interest to the shareholders and the Government. Analysing the present position, Mr. Noel-Tod observed that the industry is currently suffering from a crisis of overproduction without a corresponding increase in the domestic consumption. Furthermore, there are no assured outlets for export. So the chairman reiterated the need for a reduction in the price of sugar in order to stimulate internal consumption. But he pointed out that the industry by itself is helpless in effecting any reduction in the price, for its cost structure is so rigid and the profit margin so slender that the industry can sacrifice nothing. Mr. Noel-Tod referred to the impact of the excise duty and urged for a reduction to the pre-1957 level until such time as consumption catches up with production. When the industry finds it impossible to reduce costs, the only alternative is to reduce the excise duty which was doubled in 1957

with the avowed object of restricting the domestic consumption, in order to release more sugar for exports. The excise duty, the chairman observed, constitutes 27 percent of the present wholesale ex-factory price. The price of sugarcane, which was increased by Rs. 5 a ton in 1959-60, constitutes 60 percent of the price of sugar after deducting taxes. As for the remedy in the form of a 10-percent cut in production, Mr. Noel-Tod said that this cut was imposed when sugarcane was practically ready for harvest, so the hardship which this is causing to the growers is very real. He said that if a cut were necessary, it should have been announced before sugarcane was planted. The chairman said that although planting has now begun for the 1962-63 season, no announcement has yet been made whether or not there is to be any cutback in production or what the minimum cane price for the season is to be.

The chairman told the shareholders that the directors had decided to postpone the expansion programme in the light of the prevailing conditions in the industry. So they have revised their earlier decision for increasing the production capacity of the factory from 800 tons to 1,000 tons a day. This is expected to help the Company conserve finance at a time when it is forced to keep large sugar stocks. The factory was able to crush 205,357 tonnes of cane and produced 18,690 tonnes of sugar at an average recovery of 9.1 percent. This is considered an achievement for a new factory. It is pointed out that although the rebate of excise duty earned on the excess production was a little over Rs. 3 lakhs, this was more or less offset by the loss on the export quota of 1,214 tonnes.

The chairman said that both ordinary and preference dividends for the year are entitled to proportionate exemption from tax under Sections 85 and 101 of the Income Tax Act, 1961, and that the income tax authorities have provisionally stated that 20 percent of the dividends are exempt from tax. It is stated that this concession is due to the fact that 6 percent of the capital at charge is not taxable in the first five years of the Company's operations. Tax will, therefore, be deducted at source from only 80 percent of the dividends. If after the final assessment of the profits for the year ended June 1961, the proportion of the dividends exempted from tax under Sections 85 and 101 are found to differ materially from the provisional assessment, then the income tax authorities will make appropriate adjustment in the individual assessments of shareholders.

Expansion of West Coast Paper

While the outlook for the paper industry depends on the Government's policy on paper prices, the shareholders of West Coast Paper Mills Ltd can derive some comfort from the observations made by Mr. N. D. Bangur who presided over the recent annual general meeting in the absence of the chairman, Mr. G. L. Bangur. The Company's technical consultant, Sandwell International Ltd of Canada, has declared that West Coast Paper's proposed expansion scheme is technically feasible and that it will not involve any major design or construction problems. Furthermore, the successful completion of the scheme will result in significant economies in the Company's operations. The integrated expansion scheme, which includes the expansion of paper production, manufacture of rayon grade (dissolving) pulp and installation of caustic soda and chlorine plant, is being scrutinised both from the point of view of financing as also the availability of raw materials. The entire scheme is estimated to cost Rs. 10 crores to Rs. 11 crores, of which the foreign exchange component will be about Rs. 6 crores. Mr. Bangur said that the Government of India had agreed to release this amount from the D.L.F. loan, yen credit and European sources. Negotiations are likely to start soon with the agencies concerned for finalising the loan arrangements. The raw material requirements—both for the present capacity as well as envisaged expansion—are engaging the attention of the management. West Coast Paper has strongly urged the Mysore Government to allocate additional forest areas adjacent to the Company's existing

areas. The State Government is said to be favourably inclined towards this, but the Company might have to agree to a substantial increase in royalty both on the existing and future supplies of bamboos. The final decision of the State Government is expected soon. Meanwhile, West Coast Paper has taken up in hand the plantation programme of various hardwood species to augment the raw material resources. It is also thinking of making use of bagasse which is available in plenty. Mr. Bangur welcomed the liberation of Goa and said that as the Company's factory is only 133 miles from the port of Mormugao, it would be possible to handle foreign traffic through this port more advantageously than the distant ports of Bombay and Madras. He criticised the levy of high electricity duty of 2nP a unit by the Mysore Government on the electricity generated by the Company's own power plant for self-consumption. Such a levy is quite unusual, particularly when there is a general power shortage all over the country and several progressive States are offering special concessions by way of complete exemption from the electricity duty to those industries which put up their own power plants.

Mr. Bangur attributed the fall in West Coast Paper's profit in spite of higher production to three main factors, namely, the increase in the cost of raw materials due to higher royalties and railway freight, the rise in the cost of essential chemicals and fuels and the increase in power charges. Besides, the prices fixed for paper with effect from January 1960, do not compensate fully for the increase in production costs. Mr. Bangur urged the Central Government to revise paper prices. Replying to the shareholders' questions, Mr. Bangur said that as a result of the anticipated expansion, West Coast Paper might be able to spare about 6,000 tons of caustic soda and about 2,900 tons of chlorine for sale in the market. The question of a rights issue for financing the expansion project would be considered when the Company had finalised all arrangements concerning the procurement of raw materials and related matters. The Rs. 100-paid share of the Company is currently quoted around Rs. 176. The highest and lowest prices recorded in 1961 are Rs. 229 and Rs. 168.50, respectively.

C.I. Spinning Turns Corner

Shareholders of the Central India Spinning, Weaving and Manufacturing Co. Ltd have gone without a dividend for six years. Considering the huge arrears of depreciation and of preference dividends, they will probably have to wait a long while yet before the shares return to the dividend-paying list. They can, however, derive some comfort from the chairman, Mr. N. H. Tata's assurance that their remarkable patience will not go unrewarded. In his annual statement, an advance copy of which has been circulated to shareholders, Mr. Tata says that after a series of disappointing years of deficit, almost wiping out the entire capital, the Company has at last turned the corner. This is in the sense that, for the first time in six years, it has shown a profit after providing full depreciation for the accounting period ended June 1961. Mr. Tata has expressed the hope that the improvement will to some extent revive the confidence of shareholders. He hopes that, in the years to come, the Company will do better, provided trading conditions remain encouraging, as they have been recently, and sudden changes in the Government's fiscal policy do not upset the profitability of the industry. The chairman feels that the day is not far off when shareholders will be able to appreciate the real value of their holding in the Company. After years of strikes and labour unrest, a reasonable period of industrial peace has returned, as the management has been able to maintain fairly good relations with workers. It will, however, be some time before the cumulative effect of better industrial relations is reflected adequately in the Company's profits.

Mr. Tata says that after making allowance for such factors as the heavy burden of interest charges, the low productive efficiency of workers in the area, the malady of absenteeism, the high percentage of damaged faulty cloth handed down from the period of disorganisation and the fact

that only 30 percent of the total plant and equipment has been renovated, the profit earned by Central India Spinning in 1960-61—Rs. 33.84 lakhs—cannot be regarded as too low. It encourages hopes of improvement in the years to come. The question of merging Central India Spinning with other units under the Tata management is still being considered. The problem is extremely complicated, but the management is trying to find a satisfactory solution. Mr. Tata points out that the Company's exports amounted to Rs. 58 lakhs in 1960-61. They helped earn an export incentive in terms of licences for importing foreign cotton, stores and machinery. The products have been well received in foreign markets, provided the prices which are normally lower than local prices are acceptable to the Company. The management sometimes has to resort to unremunerative export sales in order to secure the badly-needed foreign cotton, stores and machinery. The apparent loss on such transactions is often compensated, when viewed from the angle that the local prices of such imported goods are high enough to offset the margin of loss incurred in the export realisation.

Mr. Tata told shareholders at the annual meeting on 29th December that the management is considering the question of a rights issue in order to rectify the unbalance in the capital structure of the Company. The unbalance arises from the fact that while the subscribed capital is Rs. 96,87,500 (made up of Rs. 50 lakhs in preference shares of Rs. 500 each and the rest in equity shares of Rs. 100 each), borrowings and deposits amount to Rs. 5.11 crores and the net block is worth Rs. 3.05 crores. Mr. Tata did not indicate the exact amount of the new issue, but hinted that it might be for anything between Rs. 10 lakhs and Rs. 46 lakhs. He was confident of getting the entire issue underwritten as the Company has turned the corner and its performance in the current year has improved. The new renovation programme will cost about Rs. 30 lakhs, the bulk of which will be spent on acquiring more spindles, combers and processing machinery.

Hindustan Oxygen Share Offer

Hindustan Oxygen Gas Company Ltd is a new enterprise which proposes to set up a plant in Ahmedabad for manufacturing industrial oxygen of 28.116 million cubic feet a year and dissolving acetylene gases of 7.029 million cubic feet a year. The project is estimated to involve a total capital outlay of Rs. 40 lakhs, including Rs. 14.10 lakhs to be spent on importing plant and cylinders, partly from the U.S.A. under the D.L.F. loan and partly from the rupee currency areas. This will be met by the capital issue of Rs. 30 lakhs and the balance by borrowings. The land for the factory measuring 24,000 square yards in Naroda, Ahmedabad, is being acquired. The Gujarat Government and the Ahmedabad Electricity Company have sanctioned 300 kilowatts of power supply. The chief raw materials, namely, caustic soda, calcium carbide and acetone are easily available from indigenous sources. Hindustan Oxygen has already finalised orders for plant and machinery. The American suppliers of the plant have agreed to provide the Company with the complete know-how, designs and lay-outs. They have also agreed to train Hindustan Oxygen's engineers at their works for erection, maintenance and commissioning of the plant, free of cost. Besides, the suppliers have agreed to provide guarantees for the plant and its performance for a period of one year from the date of commissioning of the plant. The delivery of the plant is expected to be completed expeditiously.

The Company will have an issued capital of Rs. 30 lakhs, all in equity shares of Rs. 100 each. Of this, 11,000 shares are being taken up by the promoters, directors and their friends. The balance of 19,000 shares is being offered for public subscription. The outlook for Hindustan Oxygen appears to be encouraging in view of the fact that the estimated production during the third plan period by the existing units as well as by new units already licensed, at 1,650 million cubic feet of industrial oxygen and 200 million cubic feet of acetylene, falls short of the targeted capacity of 2,300 million cubic feet of oxygen and 250 million cubic feet of

acetylene. Hindustan Oxygen also proposes to set up in Rajkot another unit with a capacity of 25 percent of the Ahmedabad plant at a later stage. It also intends to undertake shortly another project for welding and cutting equipment, pressure gauges cutting torches, industrial flow meters, safety valves, circle cutting machines and similar equipment for which it has already secured the sole distributorship from the U.S. firm of Victor.

Khandelwal Udyog to Expand

Khandelwal Udyog Ltd.—the Bombay firm of structural engineering—will shortly enter the market to raise additional capital for financing its expansion schemes. It will soon be commencing the manufacture of electric overhead travelling cranes for which it has entered into a technical collaboration agreement with the Munck-Hamjern group of Norway. Under the terms of the collaboration agreement, Khandelwal Udyog will be getting the benefit of the entire technical know-how and experience of Munck in crane design and manufacture. The phased programme will commence with the indigenous manufacture of about 60 percent of the components, the balance being imported from Norway. The programme is expected to be completed in three years. Khandelwal Udyog is also said to have entered into a technical collaboration agreement with an Italian firm for manufacturing electric and combustion industrial furnaces, ovens, etcetera. The authorised capital of the Company is Rs. 1.50 crores, comprising Rs. 1 crore in equity shares of Rs. 100 each and Rs. 50 lakhs in 10 percent taxable redeemable cumulative preference shares of Rs. 100 each. The issued capital will be Rs. 60.02 lakhs, made up of 40,020 equity shares and 20,000 preference shares, of which Rs. 11.07 lakhs—all in equity shares—are already held by the directors and their friends. They will take up another 9,249 equity shares. The balance of 19,700 equity shares and 20,000 preference shares will be offered to the public shortly. The entire preference issue has been underwritten jointly by the Industrial Finance Corporation of India and the Life Insurance Corporation.

Oudh Sugar Maintains

The Oudh Sugar Mills Ltd has reported encouraging results for the year ended July 1961. The gross profit has increased by about 29 percent from Rs. 50.57 lakhs to Rs. 65.10 lakhs. After providing Rs. 10.64 lakhs (against Rs. 13.50 lakhs) for depreciation and development rebate and Rs. 29.89 lakhs (against Rs. 15.45 lakhs) for taxation, the net profit amounts to Rs. 24.57 lakhs, against Rs. 21.62 lakhs in 1959-60. With Rs. 24,000 brought forward from the previous year, the disposable surplus amounts to Rs. 24.81 lakhs. Out of this, the directors have allocated Rs. 9 lakhs (against Rs. 5.50 lakhs) to reserves. The dividend has been maintained at 20 percent, taxable. It absorbs Rs. 15.50 lakhs, leaving Rs. 31,000 to be carried forward.

Oudh Sugar Mills crushed during the year 12.5 million maunds of sugarcane, against 10,150,000 maunds in the previous year, but the average recovery declined from 10.13 percent to 9.49 percent due to the longer duration of the crushing season. Sugarcane produced by the Company's own farms amounted to 628,000 maunds, against 618,000 maunds in the previous year. The production of power alcohol and spirit increased from 1,122,000 gallons to 1,438,000 gallons, while the vanaspati output was slightly down from 15,700 tons to 15,000 tons. The Rs. 100-paid share of the Company fluctuated narrowly between Rs. 178 and Rs. 200 in 1961, and the latest quotation is around Rs. 189 cum dividend, offering a gross return of about 11.8 percent.

Patel Engineering Does Well

The increase in the dividend from Rs. 15 to Rs. 16 a share, subject to tax, provides little indication of the excellent performance of Patel Engineering Company Ltd during the year ended June 1961. The gross profit is up by about 78 percent from Rs. 47.78 lakhs to Rs. 85.27 lakhs. After pro-

viding Rs. 15.72 lakhs (against Rs. 12.36 lakhs) for depreciation, Rs. 3.47 lakhs (against Rs. 8.47 lakhs) for development rebate and Rs. 33 lakhs (against Rs. 14 lakhs) for taxation, the net profit amounts to Rs. 33.08 lakhs (against Rs. 12.95 lakhs). The directors have set aside Rs. 23 lakhs (against Rs. 3 lakhs) for general reserve. The dividend absorbs Rs. 10 lakhs (against Rs. 9.37 lakhs), leaving Rs. 92,275 to be carried forward, against Rs. 84,172 brought in.

The directors state that the construction work at the Durgapur steel project is nearing completion while that in Koyana has almost been completed. The work in Nagarjunasagar, Bhira, Ranchi, Hyderabad, Warangal and Bhadrachalam are making steady progress. Patel Engineering has secured a number of new contracts valued at Rs. 6 crores. These include the construction of the heavy machine-building plant for the Heavy Engineering Corporation in Ranchi, the construction of tunnel works in Kundah and of building, structures and other civil engineering works under the Barauni refinery project for Indian Refineries Ltd.

New Board Share Offer Soon

A new enterprise called New Board Manufacturing Co. Ltd has been registered in Maharashtra to undertake the manufacture of chip boards. The factory, which is proposed to be located in Rampur or Bareilly in Uttar Pradesh, will have an annual production capacity of 7,200 tons. The project is estimated to involve a total capital outlay of Rs. 35 lakhs, of which nearly half is likely to be spent on the import of plant and machinery. The Company will have an authorised capital of Rs. 50 lakhs in equity shares of Rs. 10 each, of which Rs. 25 lakhs is proposed to be issued in the beginning. Shares of the value of Rs. 12.50 lakhs are being allotted to New Board Manufacturing Company's financial collaborators in east Africa. The latter have arranged the required foreign exchange for importing machinery from West Germany. Shares worth Rs. 6.50 lakhs are being taken up by the promoters, and the balance of Rs. 6.50 lakhs, that is, 60,000 equity shares, will be offered for public subscription shortly. The Company has secured the technical collaboration of Messrs G. Simplekemp of West Germany who will supply the plant and technical know-how as well as train the technicians. The Company has obtained the import licence. Orders for machinery have also been placed in West Germany. Board Agencies Private Ltd will act as the Company's managing agents.

I. and E. Apparatus to Expand

Industrial and Engineering Apparatus Co. Private Ltd, Bombay, which is engaged in manufacturing scientific and industrial glasses, has received a licence from the Government to increase its production capacity from the present 1,800 tons to 72,000 tons a year. In order to undertake the proposed expansion which is estimated to involve a capital outlay of about Rs. 1.25 crores, the Company is being converted into a public limited enterprise. It is expected to enter the market after a few months to raise Rs. 35 lakhs from the public. Industrial and Engineering Apparatus has secured the technical collaboration of the well-known U.S. firm of Corning Glass Works. The foreign collaborators are likely to participate in the capital of the Company to the extent of Rs. 74 lakhs which will cover the cost of the imported capital equipment required for the project. The directors and their friends are likely to subscribe Rs. 15 lakhs, and the balance of Rs. 35 lakhs is to be offered for public subscription. The factory of Industrial and Engineering Apparatus is situated near Bombay, and efforts are being made to acquire more land to carry out the expansion scheme. Sales, now placed around Rs. 28 lakhs, are expected to increase to around Rs. 1.7 crores when the expansion scheme is completed. This will enable the Company to meet 80 percent of the country's requirements of technical and scientific glasses. Of the various raw materials needed for manufacturing technical and industrial

glass, only borax will have to be imported. Industrial and Engineering Apparatus is hopeful of earning sufficient foreign exchange by exporting its products to pay for the imported raw material.

Electro-Equipments Share Offer

Electro-Equipments Corporation Ltd, which is setting up a factory in Mulund (Bombay) for manufacturing electric house service meters in collaboration with Cekop of Poland, is offering 171,500 equity shares of Rs. 10 each for public subscription. The entire public issue has been underwritten by prominent firms of stockbrokers. Electro-Equipments has an authorised capital of Rs. 1 crore, all in equity shares of Rs. 10 each, of which Rs. 35 lakhs will be issued now. Out of this, its existing shareholders—the Company was incorporated in 1958 as a private limited enterprise and was converted into a public limited one recently—have already subscribed 100,020 shares of Rs. 10 each, fully paid-up. The promoters, directors and their friends have agreed to take up 78,480 shares, leaving 171,500 to be offered to the public. The public issue is being made at a time when the main factory building is ready and substantial part of machinery and equipment has reached the factory site. Indian technicians have already been trained by the collaborators in their factory and they are now supervising the erection of plant and machinery which is progressing satisfactorily. The factory is expected to go into production before April. The foreign collaborators have supplied complete details for the lay-out, installation and operation of the plant for which they are to be paid a consolidated fee of Rs. 50,000. Electro-Equipments has drawn a phased programme for the progressive manufacture of 60,000 meters a year on a single-shift basis.

Formica (India): A New Venture

Reliable reports indicate that the Government of India has approved the project sponsored by the Bombay-Burmah Trading Corporation for the manufacture of industrial laminates in collaboration with Formica International Ltd, London. The industrial licence is expected soon. The project will be implemented by a new public limited Company to be known as Formica (India) Ltd. It will have an authorised capital of Rs. 8 crores, and the issued and paid-up capital will be Rs. 1.5 crores and Rs. 1 crore, respectively. The foreign collaborators, it is said, have agreed to participate in the issued capital to the extent of 50 percent and they are to be paid a royalty of 2 percent, taxable, on the net annual sales of the products. The total cost of capital equipment is estimated around Rs. 1.12 crores, of which Rs. 75 lakhs will be spent on imported plant and machinery. The cost of the imported equipment will be covered by the capital investment of Formica International. The recurring annual expenditure on imported raw materials is placed around Rs. 17 lakhs, but with the indigenous manufacture of formaldehyde and phenol in course of time, the expenditure on imported raw materials is expected to decline to around Rs. 3.2 lakhs. The foreign exchange needed for importing raw materials is to be raised through exports of finished products. The prospects for exports are considered encouraging in view of the reputation of the foreign collaborators.

No targets have been fixed for plastic laminates and it is difficult to estimate the demand for them. The capacity licensed for laminates so far is about 3,600 tons a year. Another application for a capacity of 600 tons has been recommended for consideration by the Licensing Committee. At present, there is only one major unit manufacturing laminates. Three of the licences issued during 1960, which are yet to materialise, are based on the condition that the cost of imported machinery will be met through equity participation or private credits or from rupee agreement areas, and that the imported raw materials will be procured under the export promotion scheme only. The factory of Formica (India) Ltd will be located in Poona. It will have a capacity of 1,020 tons a

year of industrial laminates, including copper clad laminates and surfacing laminates.

Automatic Looms for Textile Mills

The Government of India has decided to license 10,000 automatic looms in units of 500 each on the condition that 75 percent of the cloth manufactured on these looms will be compulsorily exported. The failure to carry out this obligation will entail a penalty which will be related to the shortfall in the export performance. The licensees will have to execute bonds and bank guarantees for the fulfilment of the condition. For a unit of 500 looms, the matching spindleage will be 25,000. Applications for the looms will be entertained only from those who have the matching spindleage, which may be either from out of the available surplus spinning capacity of an existing mill or from the regional quotas of new spindles allotted to the States out of the 2 million spindles to be licensed in the first two years of the third plan. New looms will not be allotted on regional considerations but solely on the basis of the ability of the applicants to discharge their export obligation. It is proposed to include a condition in the licences that in cases where effective steps are not taken within three months to six months, the licences will be revoked.

The organised mill sector has been allotted a target of 5,800 million yards of cloth a year in the third plan, against the present production of about 5,000 million yards and the plan proposes to use 25,000 automatic looms. New Delhi's decision on the installation of 10,000 automatic looms, which marks the first major step in the expansion of the industry, will be widely welcomed, since it will help modernisation. The industry might complain about compulsion, but the Government's decision to tie up the installation of automatic looms with exports reflects its anxiety to raise exports in view of the foreign exchange shortage. The Working Group for the Textile Industry had suggested that five new units with a capacity of 25,000 spindles and 500 looms each equipped with up-to-date processing machinery should be allowed to be set up for the sake of compulsory exports. The Government, it appears, does not favour the setting up of new units, presumably because that would involve a longer period of time. So mills which have the spindleage to warrant additional loomage are to be preferred. Besides, textile mills will not be the only beneficiary; the manufacturers of textile machinery will also gain from the Government's sanction for the installation of 10,000 automatic looms. It is hoped that the textile machinery industry will be able to supply the 10,000 looms within three years.

Levy to Promote Cloth Exports

The Committee of the Indian Cotton Mills Federation has decided to collect from mills a levy on all Indian cotton of the 1961-62 season at the rate of Rs. 2.50 a bale on short-staple cotton, Rs. 5 a bale on medium-staple cotton and Rs. 10 a bale on long-staple cotton in order to increase the funds for the promotion of cloth and yarn exports. Simultaneously, the levy on imported cotton is also being raised from Rs. 130 to Rs. 150 a bale of 1½ inches and above and from Rs. 170 to Rs. 200 a bale of cotton stapling 1½ inches and above. The Committee is also said to have made certain recommendations to the Government for streamlining the export incentive scheme.

End of Cotton Control Urged

In his presidential speech at the recent annual general meeting of the Cotton Buyers Association, Bombay, Mr. Madanmohan R. Ruia strongly pleaded for a more realistic policy on cotton prices in order to raise the output. Increased cotton production remains still a mere illusion. The record crop of 5.4 million bales in 1960-61 was far below the second plan original target of 6.5 million bales. With the 1961-62 crop estimated at no more than 4.8 million bales—some think it might be around 4.5 million bales only—one may wonder how the

third plan target of 7 million bales is to be achieved. Considering the target set for cloth production in the third plan, the target for cotton appears to be quite modest. Mr. Ruia said that the vagaries of weather apart, cotton production can be increased only if the value for the primary produce is realised according to the supply and demand position and the world parity prices. The maintenance of artificial control or attempts to keep prices arbitrarily below the world level regardless of supply and demand could hardly be an answer to the problem. In order to raise production, it is necessary to allow a realistic price by either removing the present price control or, if that is not possible, by raising the present ceilings to a world parity level. This should be done without any apprehensions about the likely effect of such a step on cloth exports because other suitable methods could be devised to increase textile exports. If the present situation is allowed to drift, it would lead to perpetual shortages and the clamping of controls which make normal marketing almost impossible. Mr. Ruia's views on cotton prices are widely shared. There is indeed little doubt that the maintenance of ceiling prices of cotton at the same level for nearly a decade has seriously disturbed the relationship between cotton and other commercial crops to the detriment of cotton production.

Analysing the present situation in the market, Mr. Ruia said that the new cotton season started on 1st September with a fairly large carryover of 2,125,000 bales, including 397,000 bales of foreign cotton. But the smaller 1961-62 crop, estimated around 4.8 million bales, had created a difficult situation. Judged by the current trends, the mill consumption of cotton is likely to be some 300,000 bales more than the previous season's figure of 4,246,000 bales. After providing 225,000 bales for export and another 50,000 bales for *Ambar Charkha*, the total disposal during the season will help absorb the entire season's output, leaving the opening stock of 1,728,000 bales of Indian cotton this season practically unchanged. But this is possible only if the consumption of foreign cotton is maintained at a high level, which in turn depends on the amount of imports. Actual arrivals of cotton in 1960-61 totalled 1,020,000 bales which included about 695,000 bales of short staple cotton. Maybe, imports will be maintained at a high level, although the outlook concerning this does not appear to be very encouraging. Against the Cotton Advisory Board's recommendation of 1.2 million or 1.3 million bales, import allocations issued so far total only about 250,000 bales. Mr. Ruia's optimism that the prevailing high prices of cotton—excepting Bengal Deshi, all other varieties are quoted above the statutory ceilings—will prove to be a temporary phase and that prices will come down to a reasonable level with increased arrivals in terminal markets is shared only by a few. It is quite some time ago that the authorities introduced compulsory survey and this has been gradually followed up by the tightening of distribution control. The supply of 197/3 cotton has already been rationed and the authorities are now devising measures to enforce the varietywise distribution of cotton to mills. Mr. Ruia pleaded for a further export quota of 100,000 bales of Bengal Deshi without any grade restriction, including 25,000 bales left out of the previous 150,000 bale quota. The supply position of Deshi cotton is known to be distinctly comfortable.

Export Quota for H.P.S. Groundnut

In a memorandum submitted to the Central Ministry of Commerce and Industry, the Indian Oil and Produce Exporters Association has pleaded for the export of H.P.S. groundnut instead of groundnut oil and/or groundnut expellers. It has urged the Government for an immediate release of an export quota of 30,000 tons. Assuming that India can afford to export only a limited quantity of the groundnut crop, it is obvious that this should be exported in the form in which it will earn the maximum foreign exchange with the minimum internal disruption of the price structure. It has been the Government's policy not to permit the export of seeds, in order to promote the domestic crushing industry. But groundnut

extractions are allowed to be exported freely. This leaves only H.P.S., groundnut oil and groundnut expeller cake. For every 2.38 tons of H.P.S. which can be spared for export, one could alternatively export 1 ton of groundnut oil plus 1.31 tons of groundnut expellers. On the basis of the prevailing overseas prices and after allowing for freight and insurance charges, the net f.o.r. prices work out to £80 17s a metric ton for bold H.P.S. groundnut, £102 1½s a metric ton for groundnut oil and £28 1s a metric ton for groundnut expellers. (These were the prices prevailing at the time when the Association submitted its memorandum to the Government.) This shows that the export of 2.38 metric tons of H.P.S. would fetch about £53 10s more than the sale of one tonne of groundnut oil plus 1.31 tonnes of expeller cake. Thus by exporting 40,000 tonnes of H.P.S. rather than the equivalent quantity of oil and expellers, India can earn £900,000 more as foreign exchange. Apart from the fact that the export of H.P.S. can earn more foreign exchange than through the shipment of equivalent quantity of oil and expeller cake, there are other reasons as well which strengthen the case for the export of H.P.S. Unlike groundnut oil, the export of H.P.S. does not need to be subsidised—directly or through certain incentives. The margin which exporters can earn on the export of H.P.S., although small, is sufficient for them to remain in business and to develop the trade. It is indeed strange that one groundnut product should be forced into the export market by means of incentives when a similar product can be exported profitably without any assistance. So the Association's plea is convincing, and it deserves careful consideration by the authorities. Of course, the world market for H.P.S. groundnut is not large, and it is generally estimated around 40,000 tons to 50,000 tons from India. But that is perhaps all that the country can afford to export in spite of a bumper crop, particularly because of the official concern about the prevailing prices of groundnut oil which has led the Forward Markets Commission to fix the ceiling for the groundnut hedge contract at Rs. 215 a 250 kilograms. Spot prices are much higher than this arbitrary ceiling and the hedge contract, too, is commanding a premium in unofficial dealings.

While the export of H.P.S. groundnut is remunerative, the overseas demand for the commodity is of a seasonal character, and the main season continues up to about the end of April. Therefore, if export has to be permitted, it has to be done in time to suit the requirements of overseas buyers because then alone can the commodity fetch good prices. The Association has urged the Government to release immediately an export quota of 30,000 tons of H.P.S. groundnut which, if sanctioned, is unlikely to make any material difference to the supply position because it constitutes only about 1 percent of the crop which is estimated around 2.8 million or 3 million tons. While the Association's plea for the announcement of an early export quota for H.P.S. groundnut will be widely endorsed, its other suggestion that the quota should be allowed only to the established shippers on the basis of their performance over the past five years on the argument that exports on the first-come-first-served basis leads to forced sales at disadvantageous prices is open to question. The Government of India stated some time ago that the export policy for groundnut and its products will be reviewed in January because it would be possible to have a clear idea of the crop by that time. It is to be hoped that the announcement on the export policy will not be delayed much longer.

Engineering Costs Rise

The production of the engineering industries has been rising rapidly. But the industry is worried that its costs are increasing too due to higher labour charges, an acute power shortage and the irregularity and uncertainty of raw material supplies. In his address at the annual general meeting of the Engineering Association of India recently in Calcutta, Mr. K.L. Chowdhary, president, said that the problems have become serious as productivity has been persistently lagging behind costs. The ratio of input to output has been

familiar; the country is desperately short of money for education, and the little there is, is being spread far too thinly in support of political boasts to the effect that the number of students, schools and colleges is increasing enormously. Where, one may wonder, do residential universities come into this picture? Not for a moment would I hesitate to agree with Sir John that, as centres of intellectual intercourse, they could well be superior to non-residential ones, as indeed Oxford and Cambridge have proved; also, that they would make it easier for young men to broaden their contacts and interests in a way which alone could enable education to fulfil its true social purpose. But my objection centres on the point that, with the Government's deliberate connivance, the whole approach to education in India today has been distorted. Unless it is first corrected—of which there is no sign yet—a mere move in the direction of residential universities will do no more than scratch the surface of the problems we face. The reorientation of approach rests on a major political decision—that the country simply does not need all the half-baked B.A.s and M.A.s it is producing; that their number must be reduced sharply by restricting entry to the universities and by raising examination standards; and that the money thus saved will then be devoted to liberal scholarships for poor but promising students. Without scholarships, I am afraid, residential universities in India would soon become the preserve of the well-to-do; and without restricting entry to the universities, the money for scholarships would never be found. That is why I feel that Sir John's convocation address at Jadavpur University, although a brilliant *tour de force* in its own way, somehow skirted the main problem of Indian education today.

ECONOMISTS KNOW, AND FRANKLY ADMIT, THAT theirs is an inexact science. It becomes even more inexact when there is a black market, whose operations are necessarily secret and unpublicised. And in what essential commodity is there not a black market in India today? I would not include tickets for the cricket test at Eden Gardens among the essentials of life; but some patrons of the game have apparently paid some fantastic prices for their tickets. I am not at all convinced that love of cricket alone explains the transactions. One informant tells me that a certain trader acquired three season tickets at Rs. 3,000 each; and, he adds, the trader had never been known for his passion for cricket. His only failing is making money unaccompanied by any weakness for paying more income tax than he must. How comes he to spend Rs. 9,000 for three tickets? "Investment", says my informant; and simple-minded as I am in these matters, even I begin to see what has been happening. Those three tickets were for three Government officials with whom the trader has something to do. The officials have probably taken the elementary precaution of publicly signing three cheques for Rs. 42 each and given them to somebody, so that if an enquiry is held they can say they bought their tickets like ordinary citizens. I will not believe that the offenders cannot be "got at" still. But I know there will be no such enquiry; and I will tell you why. Almost everybody in authority who is in the least bit interested in cricket, or whose friends are, has been obliged; and they will see that there is no enquiry. It would be interesting, and of public interest, to know, for instance, how many tickets the different Ministers got, how many the Secretaries, how many the various police officials. I know the figure for one or two but cannot publish it for fear of legal action. But those who speak so loudly of a clean administration, and are serious about it (which is rare), would find a mine of information in enquiries into the pastimes of men in power. Women, drink and money are notorious corrupters for the world over. Corruption by cricket ticket, for the three officials who will assuredly "oblige" in return, seems to me a new variation; and I recommend its study to those Americans and others who call themselves "political scientists", for political science, if there be such a thing, is even more inexact without such information.

THE PREMIER AUTOMOBILES LTD. BOMBAY CHAIRMAN, MR. LALCHAND HIRACHAND'S ADDRESS

Speech delivered by Mr. Lalchand Hirachand, Chairman at the SEVENTEENTH ANNUAL GENERAL MEETING OF THE COMPANY held in Bombay on Friday the 22nd day of December 1961 at 4.00 P.M. (S.T.)

Ladies and Gentlemen:

1. I am very happy to extend a warm welcome to you all, on the occasion of the Seventeenth Annual General Meeting of the Company.

2. The Directors' Report and the Statement of Accounts for the year ending on the 30th June 1961 have been in your hands for over a month and I hope you have given due consideration to the same.

3. During the year under review, the Company's turnover increased to Rs. 22,73,86,000 as compared to the last year's turnover of Rs. 20,94,87,000 6,913 cars and 6,073 trucks were sold during the year.

4. The working of the Company for the year under report resulted in a profit of Rs. 60,59,495 after providing Rs. 56,44,279 for depreciation, Rs. 13,00,000 for development rebate and Rs. 55,00,000 for taxation. Adding to this, the balance of Rs. 3,21,332, being the amount of previous year's "carry forward" (after adjusting the amount of dividend paid on forfeited shares now annulled) and the net surplus of excess provisions, income and claims received in respect of previous years Rs. 77,292, the amount available for distribution comes to Rs. 64,58,119. Out of this your Directors have made the following appropriations:—

To contingency reserve	Rs. 10,00,000
To Dividend on equity shares at Rs. 9/- per share (subject to tax)	Rs. 49,82,540
Balance to be carried forward	Rs. 4,75,579

Rise in Turnover

5. This year's turnover shows an increase of Rs. 1,78,99,000 over previous year's. In the same way the current year's profit shows an increase of Rs. 18,40,656 over last year's. This has naturally enabled us to maintain the dividend on increased capital.

6. The progress made in the manufacture of components of motor vehicles by the Company has already been dealt with in the Directors' Report. I shall therefore only briefly summarise the position as follows:—

The Fiat transmission including gears is being manufactured in the factory.

The manufacture of axles for the Fiat car is also satisfactorily progressing. The machining of the items like Brake Drums, Hubs, Ring Gears, Pinion and Axle Shaft has been completed and the assembly of the axles has already commenced. In a short time they will be used on the vehicles.

The progress on the manufacture of front and rear axles for trucks has been steady.

D.L.F. Loan

7. As stated in the Directors' Report, an Agreement in connection with the loan of 7,200,000 dollars from the Development Loan Fund of the U.S.A. has been executed. The aforesaid Agreement was signed on the 21st August 1961 in New Delhi by Mr. John Kenneth Galbraith, U.S. Ambassador on behalf of the U.S. Government and by me on behalf of the Company. A small ceremony was held in the U.S. Embassy in New Delhi on that day which was attended by several officials of the Indian Government and senior officers of The Premier Automobiles Ltd.

While signing the Agreement, Mr. John Galbraith said that this was the

first Agreement he had signed for the private sector, since he became Ambassador and further observed:—

"There is nothing that is going to be more needed in the course of the Third Five-Year Plan than improved transportation, including improved road transportation. You (Premier Automobiles) are playing a very important and critical role in the provision of facilities necessary for this purpose. We have very high confidence in Premier Automobiles and it is our conviction that you will continue to do a very good job that you will produce good automobiles, get them out in time and for a low price. This I am happy to note, is your intention and I wish you good luck."

While thanking the D.L.F. for this assistance I made a reply suited to the occasion as follows:—

"The initial success has been there. We have made considerable progress during the first two Plans, and it is our keen desire that the work should be carried on with greater enthusiasm, so that progress towards the objective for which the Government of India are working and for which people in Commerce and Industry are co-operating with the Government, may be accelerated. We greatly appreciate the assistance that we are getting from the American Government in the form of this loan. It is particularly a happy augury that, direct help is being given to the private sector. In this country, the private sector is playing a very important role in economic development, and I am sure that this assistance will help us to rebuild our nation for the betterment of all. The D.L.F. loan to Premier Automobiles will finance foreign exchange costs of importing machinery to produce components for Dodge and Fargo trucks and Fiat cars, and to modernise and expand capacity of other portions of the company's factory. The expansion project made possible by the loan is expected to enable India to save more than 2 million dollars per year in foreign exchange, now spent in importing sheet metal components. Premier's output will be increased from 12,000 trucks and cars per year to 21,000 units."

We are awaiting sanction for our application for a further loan of 3,000,000 dollars made to the D.L.F. for the purchase of dies for the Sheet Metal components for the Fiat cars.

I place on record our thanks to the Bank of Baroda Ltd. for giving Guarantee in favour of the D.L.F. on the 26th September 1961, in respect of the loan of \$7,200,000. The Bank of Baroda has also been good enough to agree to give the Guarantee for the additional loan of 3,000,000 dollars.

Foreign Exchange Shortage

8. The subject of expansion has been engaging the attention of the Government of India for some time. Subsequent to the meeting held by the Minister for Industries in January 1961 in Delhi acute shortage of foreign exchange has developed and the Government have had to reassess the position. The thinking that was indicated at that meeting held in January was that so far as commercial vehicle manufacture each commercial vehicle manufacturer could increase the production to such capacity which he thought the market would accept. Freedom with regard to models and loading capacity was also given to the manufacturer. While the latter factors have not

changed, the Government find it necessary to restrict the expansion in production capacity as there is not enough foreign exchange to meet the requirements of the manufacturers. Your company have been allowed to expand the production of commercial vehicles to 7,500 on the basis of single shift working. We are also offered foreign exchange for the manufacture of the diesel engine. The total allocation therefore is as follows:—

- (1) 7.2 million dollars for the sheet metal equipment, expansion of Tool Room and removing of certain bottlenecks in the present capacity.
- (2) Additional 3 million dollars for obtaining dies for the sheet metal parts particularly of the Fiat car.

It is estimated that the machinery acquired with this money will enable us to increase our production of Fiat cars to 9000 per year and of commercial vehicles to 9,000 per year in two shifts.

In addition to the above, we will be allowed:—

- (a) Foreign exchange to the extent of 5 crores of rupees and
- (b) Additional 1.95 crores of rupees for purchasing machinery and equipment for forgings and castings.

For these two items negotiations will have to be made with the Agency for International Development, U.S.A. for a loan agreement. This money will be spent entirely in the United States of America.

- (c) In addition one crore of rupees will be given in foreign exchange from soft currency area and particularly from U.K.

It is expected that with the utilisation of this foreign exchange our capacity to produce commercial vehicles will increase to 7,500 units on one shift basis or 15,000 vehicles on two shift basis.

As regards the expansion of car production the matter is still under Government's consideration and no decision has yet been taken.

Production of Economy Car

9. In my last year's speech I had pointed out that it was not in the interest of the country for the public sector to take up the manufacture of an "economy car". Several representations from responsible quarters have since been made, urging the Government not to create new productive capacity either in the private or public sector unless it was in the general interest of the national economy. The Jha Committee had already made its recommendations on similar lines against the introduction of an economy car at this stage. The Development Council for Automobiles Ancillary Industries and Transport Vehicles did not favour any allocation of foreign exchange being made for the production of a new car unless the priority claims of the existing Automobile manufacturers were fully met. The economy car is almost similar to the models currently produced. To profess, therefore, that such a model can be produced at a substantially lower price would be misleading. Our economy is based on high costs due to lower volume, less efficiency of labour, high prices of materials which have to be imported from abroad and the high taxation on local products. Unless, therefore, the whole system is changed it will only be a miracle if costs could be brought down so steeply as expected. It would be useful if the Government paused a while and considered how the foreign automobile concerns declined to undertake the

manufacture of automobiles on the ground of uneconomical production and therefore decided to close down their shops which were giving handsome profits. They had the experience, the know-how and all the resources; so their decision to close down becomes significant in the context of the optimistic expectations of such low costs of the economy car. The recommendations of the French manufacturers are full of "ifs" and "buts". I would, therefore, appeal to the Minister of Industry to weigh the pros and cons of the problem more rationally before taking decision in the matter.

10. In the year 1961, the sales of vehicles have been very much similar to the sales in 1960. In the commercial vehicles, however, there has been a little set back in the demand. This is partly due to the proposed legislation on Hire Purchase. Under this legislation the present right of the financiers to take possession of the product, if stipulated instalments are not paid, has been subjected to considerable restrictions. This has created a scare and the Banks as well as financing organisations have restricted their financing operations. As is well known, the commercial vehicles are primarily sold on Hire Purchase basis. If therefore, Hire Purchase operations are restricted, it has its effect on the demand for commercial vehicles. Secondly, the heavy taxation, particularly the heavy excise duties that were levied last year, is showing its effect gradually. The tight money market also has contributed to the fall in demand. The big waiting lists have shrunk and the commercial vehicles are now available practically on demand, even in the case of popular makes. How long this situation will continue, it is difficult to say. Let us hope that with the rising tempo of production in the Third Five Year Plan, the need for transport facilities grows rapidly and in consequence the demand for commercial vehicles also goes up.

Third Plan Target

11. The Third Five Year Plan envisages an increase in vehicle production to the extent of doubling the present capacity. Under the Second Five Year Plan, the automobiles production target was established at 60,000 units. For one reason or the other, this could not be reached and the maximum production came to 52,000 vehicles. In the Third Five Year Plan the target is fixed at 1,00,000 vehicles and the Government have already started taking steps to enable the manufacturers to expand their production. Hitherto, the Government have only considered the expansion of commercial vehicles, while the expansion of cars is still under consideration I hope that expansion of the cars programme also will be given effect to before long. It is expected that more than 45 crores of rupees will be spent for the expansion programmes during the Third Five Year Plan.

12. For the purpose of improving our relations with labour, we have entered into two Agreements with the Premier Automobile Employees Union. By one Agreement, wage structure was revised, which is expected to give the workmen an annual additional income of nine lakhs of rupees. Under this Agreement, it can be safely said that we offer the best terms in the Automobile Industry.

The second Agreement covers the question of Bonus for the financial year 1959-60. The total amount approximating to Rs. 23 lakhs would be distributed as Bonus to all our employees. The share of the workmen, under this Agreement, whose earnings are below Rs. 500/- per month, comes to nearly Rs. 21 lakhs. All these terms were offered to Engineering Mazdoor Sabha, who have rejected them, if I may say so, very unwisely.

The subject of wages reclassification, etc. was referred to a Conciliation Board, of which the late Justice Bavdekar was the Chairman. The Court held elaborate deliberations and I understand, were about to sign the report. Unfortunately, the sudden death of Justice Bavdekar left the work incomplete. The Government have now appointed Shri Jeelbhoy to be the Chairman of this Board and it is hoped that the Board will soon con-

clude their deliberations and submit their report to the Government.

Parts and Components

13. While we are making progress with regard to the manufacture of parts and components, we are also making experiments and research with regard to design and other engineering problems. It was observed that some of our commercial vehicles have shown certain defects in the special conditions existing in this country. Our staff have redesigned some of the parts which will make the commercial vehicles more popular. A constant effort is being made to improve the methods of production and also improve the design, to make vehicles more popular.

14. In last year's speech I had mentioned that as a result of the Government's policy with regard to automobile manufacture, which was announced last year, the Company will have the right to manufacture the Meadows engine. The Agreement with Automobile Products of India Ltd. for the taking over of the manufacture of Meadows engine by the Company was dated the 9th December 1955 issued to them for the manufacture of Meadows engine and of API having negotiated with Meadows for the termination by mutual consent of the licence granted by Meadows to API under an Agreement dated the 16th March 1956. The balance of Rs. 9 lacs is payable in two instalments of Rs. 3 lacs and Rs. 6 lacs, at the expiration of 12 months and 24 months respectively from the date of the Agreement.

The production of Meadows engines has begun but it will take some time more before we can attain the full production as we have yet to import a number of machine tools required for the purpose.

In consequence of the transfer of diesel engine licence in favour of Premier we have negotiated a fresh executed on 29th April 1961. In pursuance of this Agreement, out of the sum of Rs. 24 lacs, the Company has paid Rs. 15 lacs to API in part consideration of the API having negotiated with the Government of India and

agreed to cancellation of the License agreement with Henry Meadows Ltd. whereby Premier have obtained slightly favourable terms particularly regarding payment of royalty which has been substantially reduced.

Equity Capital Issue

15. As stated in the Directors' Report the Company had made an application for the issue of further equity capital of the value of Rs. 2 crores in shares of Rs. 100/- each, to meet the rupee expenditure that will be needed for the purchase of land, building, etc. in connection with our sheet metal project. In addition a balance of Rs. 40,40,000 remained to be issued out of capital sanctioned by an earlier order of the Controller of Capital Issues.

The Controller of Capital Issues has now accorded his sanction for the issue by the Company of further 2,40,400 equity shares of Rs. 100/- each for cash at a premium of Rs. 10/- per share.

16. As stated in the Directors' Report the Company has selected a suitable land admeasuring about 300 acres on the Kalyan-Shill Road, near Kalyan for the new factory site. An Agreement with the Government of Maharashtra was executed on the 12th December 1961 in respect of the acquisition of this land. We expect to obtain actual possession of the land in a short time.

The construction work of the factory building at Kalyan has been entrusted to Messrs Hindustan Construction Co. Ltd. the well known and reputed firm of constructional contractors in the country.

17. The existing Agreement of the Company with Chrysler Corporation had to be revised to bring it in conformity with the present day conditions. The modified Agreement has received the approval of the Government of India and will be valid upto 31st December 1968.

Under the provisions of this Agreement the Company has to pay to Chrysler Corporation in consideration of the manufacturing assistance and other

benefits granted by the Corporation to the Company the following fee:

- (1) when the total amount paid to Chrysler for a vehicle or components is more than 50% of the Chrysler ex-factory dealer net price; 1% of the value of that portion of complete vehicle not purchased from Chrysler.
- (2) when the total amount paid to Chrysler as aforesaid is less than 50% of the Chrysler ex-factory dealer net price; 1% of the value of that portion of complete vehicle not purchased from Chrysler.

The above scale of fee is applicable upto the production figure of 15,000 vehicles per year and thereafter the fee will be open to further negotiation between the parties.

18. I am glad to inform you that the agreement with Fiat S.P.A. which was valid upto 12th September 1961 has been renewed for a further period of five years from 1st July 1961 and it has also received the approval of the Government of India.

Under the new agreement we have to pay to Fiat in addition to the payment for technical know-how etc. a fee of 2% on £300 (being the agreed value of a CKD set ex-factory) on each unit upto 7,000 units manufactured per year and this fee will be reduced to 1.5% on each unit manufactured and sold by the Company beyond 7,000 units every year.

19. Out of 1,60,000 debentures issued in the year 1958, 1,57,462 debentures have been converted into 'A' Ordy. shares as on 8th December, 1961 leaving a balance of 2,538 still outstanding. By a special resolution passed in the meeting of the debenture-holders held on 2nd June 1961 the debenture-holders have accepted bank guarantee as security in place of lien which the debentures had on the fixed assets of the Company.

Production Figures

20. For your information I may give the production figures for the five

months ending on the 30th November 1961, and they are as follows:—

The Company produced 3,014 cars and 1,920 trucks and sold spare parts of the value of Rs. 67,06,938 during the five months ended on the 30th November 1961 as against 2,730 cars and 2,523 trucks and spare parts of the value of Rs. 64,01,413 sold in the corresponding period of the previous year.

21. A fire broke out in our Factory on the night of 21st May 1961, which completely destroyed the Trim Application Dept., Trim Store and the Assembly Plant Office. As this day happened to be a weekly holiday for our workmen, there was no loss or injury to human life; the damage was confined to the materials of the approximate value of seven lacs of rupees. This damage was fully covered by insurance.

22. The business of the Premier Auto Electric Ltd. a subsidiary, was satisfactory. This Company took up the distributorship of more indigenous products, namely automobile dash board instruments in Northern and Western India and Dagenite batteries in the State of Maharashtra and West Bengal.

The other subsidiary Company the India Steering Gears Ltd. could not start business this year also due to non-availability of a licence.

The financial statements of both the companies have been published along with the financial statement of your Company.

23. The position regarding taxation is as follows:

The Income-tax assessments of the Company are completed upto the end of the financial year 30th June 1955.

The assessments of the Company as agents of Chrysler Corporation have also been completed upto 30th June 1960. The Company's application to the Tribunal for referring our case to the High Court is still pending.

The assessments of the Company as agents of Fiat Corporation have been completed upto the financial year 30th June 1960.

24. In addition to the donation of Rs. 25,000/- to the Poona Flood Relief Fund and Rs. 10,000/- for relief work at Poona mentioned in the Directors' Report, the Company has sanctioned a donation of Rs. 90,000/- to the Election Fund of the Congress Party and Rs. 60,000/- to the Election Fund of the Swatantra Party.

Welfare Activities

25. I shall now deal with some of the welfare activities in our works.

The Company has always been encouraging activities in the realm of sports. Members of our staff participate in Times of India Cricket shield, Football, Hockey, Hu-tu-tu, and Badminton tournaments in the City.

Adult education classes in Kannada are held in the colony under the auspices of the Bombay City Social Education Committee for such of the employees who desire to take advantage of the same.

There is also a Bal-Mandir Primary School (run with the aid of management) having over 300 children. The Workers' Education Classes conducted by workers-teachers trained under the Government of India Workers' Education Scheme have been recently started and about 35 worker students attend this class.

26. I extend an invitation to all the shareholders to visit our factory this year also. To facilitate the visit, Saturday 13th January 1962 has been selected and those of you who would wish to visit the factory are requested to register their names at the Head Office of the Company so that necessary transport can be arranged.

27. Before concluding, I take this opportunity to offer thanks to the staff and workers for their co-operation and the good work put in by them during the year under review.

28. And now I beg to move: "That the Directors' Report and Audited Balance Sheet as on the 30th June 1961 and Profit & Loss Account for the year ended on the 30th June 1961 be and they are hereby approved and adopted."

N.B. This does not purport to be a report of the proceedings of the Annual General Meeting.

THE KOLHAPUR SUGAR MILLS LTD.

CHAIRMAN, MR. R. R. RUIA'S SPEECH

Speech delivered by Mr. Ranniwās Ramnarain Ruia, Chairman of the Kolhapur Sugar Mills Ltd. Kolhapur, at the 28th Annual General Meeting held on Friday, 22nd December, 1961.

Gentlemen,

It gives me great pleasure to welcome you at the 28th Annual General Meeting of the Kolhapur Sugar Mills.

Before commencing the proceedings of the Meeting, I desire to mention a very happy recent achievement of our country, evidently inspired by the vision, foresight, patience and courage of our beloved Prime Minister—I refer to the liquidation of the colonial rule in Goa, for long, a Portuguese Pocket.

The feudal yoke of colonial rule of the Portuguese, for the last four hundred years and more, has now ended and by the liberation of our brethren, India, for the first time in modern history, has become one entity. This is a very great achievement. Thanks to our Army, Navy & Airforces who have done a wonderful job in clearing this pocket of foreign rule. It is a great national event and we all rejoice about it. I am sure, I am expressing your feelings and that you will join me in paying our humble tribute to our beloved Prime Minister and homage to our Motherland in honour of this event. Pray God that Panditji is given long years of health to guide our young nation, in its career of progress, assuring him at the same time that we shall do our utmost, in whatever walk of life we are placed, in achieving the same.

The Accounts for the period ended 30th June 1961, along with the Report of the Directors have been in your hands already for the statutory period and with your permission I shall take them as read.

I shall, however, mention a few salient features of the working of the year.

Mechanical Trouble

Considering the capacity of our new Plant, we could have crushed a much larger quantity and achieved a much larger production, since supplies of sugar-cane were available in plenty. But due to mechanical trouble, particularly of the Centrifugals, we were much handicapped. We crushed 2,51,850 Metric Tonnes of cane and produced 3,16,777 bags of sugar. Although the performance is gratifying and although we top the list of sugar mills in Maharashtra, I have a feeling that we could not take full advantage of the capacity of our Plant. The average Recovery was 12.57%. The results of our Estate have been the highest, since the inception of the Factory and the average yield was 46.9 M.Tns. per Acre.

The Mills have been doing considerable development work on their own Estate and for their cultivator-suppliers for all these years. Our Cane Development Department is recently well organised and is manned by a qualified staff. The Company has given financial assistance, in cash and kind, to the tune of Twenty lacs, or more to its cultivator-suppliers. The Food Minister very aptly pointed out that the real progress of the Sugar Industry in India will have to be largely in the fields, and achievement of more tonnage per acre and of quality cane—more sugar per acre—is quite necessary for any progress in the Industry.

Gentlemen, as you are aware, the acreage under sugar-cane has gone up by leaps and bounds, in the last few years, partly due to high prices of Gur in the Kolhapur District, because Gur is regarded as the 'Gold' of Kolhapur and prized much, and partly due to the availability of irrigation facility. On observing this trend, your Directors decided to launch upon the project of expansion of the Mills to a suitable higher tonnage. I am happy to note that the expansion was absolutely well-timed. Not only has it enabled the Company to keep its manufacturing cost within limits but has also helped

numerous cultivators when the price of Gur, during the last couple of years, has gone down. You will be glad to note that with the Cane Development policy of the Company and the assured price of cane, more and more cultivators are wanting to contract with the Company for giving their cane.

Large Surplus

The overall position of sugar today in India is of a large surplus. In order to meet the situation and to discourage diversion of land under food-crops towards sugarcane, Government have recently enacted a cut of 10% in the production of Sugar by factories. This measure, I am afraid, will not achieve the desired aim unless there is a planned policy of restricting acreage under sugarcane and at the same time by intensive cultivation, the tonnage and quality of sugar-cane per acre are improved. At the same time by giving incentive to higher consumption as per Capita consumption of sugar in India is comparatively very low.

Along with the expansion of the Factory plan, you are aware, the project of the expansion of the Distillery was undertaken simultaneously. I am happy to report that the expansion has been satisfactorily completed and the plant is capable of producing 6,000 Gallons per day. You will be pleased to know that the Government of Maharashtra having closed their Nasik Distillery we are the only Distillery in Maharashtra producing Absolute Alcohol and supplying it to Chemical and Pharmaceutical Industries and Educational Laboratories. Our Distillery is likewise looked upon as the Central Distillery for the Kolhapur region and the expansion of our Distillery has given a much-needed outlet for the waste molasses of neighbouring factories. The Distillery will be producing about 2 Million Gallons per year. The production of such a large quantity of Alcohol has necessitated our undertaking of Alcohol-based Chemical Industries.

You are already aware that the Company has been given a Licence for the manufacture of Acetic Acid, Butyl Alcohol and Butyl Acetate. Orders regarding the plant were placed with M/s Chematur of Sweden and the plant and machinery will begin arriving early in 1962.

In this context, I may add that I visualise a net-work of Alcohol-based chemical industries, attached to our Mills, in the future, if the Company maintains its present pace of progress, which I am hopeful, it will.

Though I have been mentioning to you some of the salient and happy features of the year of the report, I am afraid, the coming year bristles with difficulties.

Domestic Consumption

The country has entered the happy position of surplus production of sugar, from that of deficit. Unfortunately higher domestic consumption has not been achieved along with. In fact, it has remained static at 21 lacs of Tons during the last few years, which may, possibly, be due to control on sugar distribution by Government. Recently, these controls have been largely relaxed. But the previous carry-overs and the surplus production have glutted the market and the fair price for the sugar fixed by Government, on the basis of the Tariff Board Report, is not being realised. The Market in sugar has become unstable regarding prices and the selling pressure is rather acute.

Along with the falling prices of sugar, the industry has been asked to implement the Wage Board Recommendations, which we have gladly done in entirety.

With the increased cost on Labour and in Stores and Spares and also due to the large carry-over of stocks, interest and insurance charges on the

large quantity, I am afraid, the Company will not be able to show the same financial results next year.

A solution of the surplus position of sugar may lie in the Export Market. But the export of Sugar, under the International agreements, committed long ago when we were not even members, do not hold out this possibility of exporting all our surplus.

Thanks to the efforts of our Government and its dynamic Food Minister, India could get an export allocation to the States, in the free market. An outlet for about 6 Lac tons of sugar in the Export Market would enable the industry to function satisfactorily with its present installed capacity. Along with it, ways and means have to be found to increase internal consumption by cheapening sugar by a substantial reduction in the Basic Excise Duty.

Other outlets for the consumption of sugar have to be encouraged, such as Fruit canning, etc., by supplying cheap sugar, as is being done in other sugar-producing countries.

Cut in Production

Any restriction on the productive capacity of a Factory, not only hits the industry but also the cultivator-supplier who is the major partner in this industry. Though I am perfectly aware of the complex nature of the problem from the national point of view, the present cut of 10% in the production, under the Sugar Regulation Act, should, if at all, remain only a temporary feature and other long-term solutions appear to be necessary. In this context, the general criticism of the high cost-price of sugar, being a barrier to our exports seems to be ill-founded. Many of the sugar exporting countries are exporting sugar under Government subsidies. All industrial products based upon Agriculture need some subsidy from the Government, in advanced countries too. With our backward agriculture, particularly so, relating to sugar-cane and with the disproportionate wages in comparison with efficiency it will be unwise to expect India to produce sugar at competitive rates. To me it appears that India must needs enter the Export Market on an extensive scale to sustain Agricultural economy and to earn foreign exchange by supporting it with the necessary subsidy, for a long time to come. I am happy to note that our Government has realised this position.

The present cut of 10% would ultimately result in realising a 4% over-all

cut only. This amounts to only about a lac of tons of sugar and the cut would be effective on certain units. A cut of one lac tons on a few units would result in great hardship on them and the cultivator-suppliers of those Units would suffer the greatest hardship. Realising this the Governments of Madras, Bihar and U.P. have already approached the Centre to revoke the Act, in their States, in the interest of the cultivators and I take this opportunity to request the Government of Maharashtra to use its good offices to persuade the Central Government likewise.

Unprecedented Floods

In the case of the Kolhapur District, the sugar-cane grower has been already hard hit by the unprecedented floods. If his sugarcane is declined by the Mills, he would be further hit in the falling Gur Market.

You will be happy to know that the Mills have donated total contribution to the tune of Rs. 68,000/- during the year, of which Rs. 50,000/- paid to the Maharashtra Congress Election Fund and Rs. 5,000/- to the Chief Minister's Konkani Relief Fund deserves prominent mention.

In the context of the Floods, Crop Insurance, will be a very provident and a necessary protection and our Government should take it up, as some of the State Governments have already done.

I take this opportunity to thank my colleagues on the Board of Directors who have all along given me their guidance, advice and support. I am equally thankful to you all for your keen interest in the affairs of the Company.

As Chairman of the Company, I desire to express my feelings of thankfulness to the cultivator-suppliers and contractors with whom our relations have always been very cordial, and of whose invaluable co-operation I am very sensible.

Finally, I desire to record our warm appreciation of the very efficient and devoted work of our General Manager, the loyal and earnest co-operation of his colleague officers and for the never failing and hearty co-operation of the staff and workers in the discharge of their duties. Mentioning names will be invidious.

Gentlemen, it has been my very great pleasure to be in your midst this evening and for having had this opportunity of placing some of my thoughts about the industry and the progress of our Mills before you.

Thank you.

N.B. This does not purport to be a report of the proceedings of the Annual General Meeting.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent, the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A licence has been obtained from the Central Government for the establishment of this industrial undertaking at Calcutta of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

A copy of the Prospectus, along with documents attached thereto, has been delivered to the Registrar of Companies, West Bengal, as required by Section 60 of the Companies Act, 1956.

Application has been made to the Calcutta Stock Exchange for permission to deal in and for official quotations of the shares of the Company.

The subscription list will open at the commencement of Banking Hours on Wednesday, the 10th January, 1962 and will close at the close of Banking Hours on Tuesday, the 16th January, 1962. The directors may, at their discretion, close the subscription list, earlier but not before the close of Banking Hours on Friday, the 12th January, 1962.

INCOME-TAX BENEFITS

The special benefits provided under the Indian Income-tax Act, 1922, with regard to development rebate and exemption from tax for the first five years of operation under Section 15(C) will be available to the Company in respect of the proposed undertaking.

HISTORY AND OBJECTS

The Company was incorporated on 3rd February, 1961 with its Registered Office at Calcutta for the purposes mentioned in its Memorandum of Association and in particular to establish an up-to-date factory for the manufacture of 1,20,000 pcs. House Service Meters per annum.

SCOPE AND PROSPECTS

India's dynamic growth during the First and Second Five Year Plans and the progressively increasing tempo during the Third Plan is linked with the

THE MYSORE KIRLOSKAR LTD.

CHAIRMAN REVIEWS PROGRESS

Extract of the speech delivered by the Chairman of the Mysore Kirloskar Ltd., at Harihar at the time of the Twentieth Annual General Meeting.

The Mysore Kirloskar Ltd., Harihar held their Twentieth Annual General Meeting at Harihar on the 29th December, 1961. Sri Chaunagari Rangappa presided. In his address to the shareholders, he gave an account of the progress of the Company and referred to the new issue of Rs. 40 lacs.

The response from the shareholders and the public to the new issue was very substantial and could be regarded as an index to show the extent to which they have confidence in the prospects of the Company in the years to come.

As a part of the expansion scheme, the Company had opened a Branch Factory in Hubli and the building

construction for the said factory was well in progress.

New Machinery

During the year under report, he pointed out, that the Company had added to its existing plant and machinery new machinery valued at about Rs. 18.14 lacs as against Rs. 9.45 lacs in the previous year.

He further pointed out that in view of the large expansion programme envisaged by the Company, a large investment in capital goods would be required. This would in turn necessitate the provision for adequate depreciation and Development Rebate etc. Such provisions would be quite sizable and he therefore cautioned that during the next 2/3 years, the Company may be required to pass through a difficult period.

The sales of the manufactured goods during the year amounted to Rs. 1.57 crores as against Rs. 1.41 crores in the previous year. The sales of Stores and Sundries during the year under report amounted to Rs. 6.05 lacs as against Rs. 5.85 lacs in the previous year. He also gave the percentage allocation of the revenues towards the different factors of production.

Large Capital Investment

He then pointed out to the peculiar nature of the Machine Tool Industry where the capital investment required is on a very large scale whereas the profits are comparatively lower than in other industries. He therefore pointed out that the progress in a Machine Tool factory is rather slower than in other industries.

He then referred to the serious difficulties experienced by the factory in regard to the availability of quality Hard Coke and Pig Iron and also referred to the serious transport bottlenecks. These difficulties, he said, apart from increasing costs, created several critical situations in the day to day working of the Company. He therefore appealed again to the authorities concerned to give their very earnest and serious consideration to these problems.

He informed the shareholders that the Company, after protracted negotiations, was able to arrive at an agreement with the workers in respect of all the pending disputes and that the said agreement would be in force for a period of three years ending 31st December, 1964. He further pointed out to the need on the part of the employees themselves to play their part fully in enabling the Company to offer their products to the customers at competitive prices.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting.

UNIVERSAL ELECTRICS LIMITED—Cont'd.

rapid expansion of electricity in the country in which watt-hour meters are necessary for measuring the consumption of electricity. The demand for watt-hour meters is directly associated with the growth of electricity. If power is not available in ample sufficiency to meet the demand a very serious restriction on the proper growth of all industries will occur and its effect will be even more seriously felt in the processing industries which offer the greatest scope for increasing employment. Equally, if agricultural improvement and rural development take place as they should, there will be a vast and important demand for increasing quantities of power for village and agricultural development. The development of power has, therefore, to keep pace with the industrial growth of the country. There is already a good demand for watt-hour meters and with the implementation of electrical programme in hand and the expansion contemplated, this should increase in the years that lie ahead. Distribution of this power load to consumers—Industrial and domestic—would involve heavy requirement of watt-hour meters. Indigenous production in 1960 was only about 4,70,000 pieces and it is anticipated that demand for such meters will increase during and after the Third Plan period. Hitherto, the major requirement of these meters was being met by imports which have had to be severely curtailed owing to the shortage of foreign exchange.

Production in the normal course is expected to commence sometime by the first half of 1963.

PROFITABILITY

In view of the above, the Directors hope that barring unforeseen factors, it would be possible to earn a reasonable return on the capital employed in the business.

COLLABORATION AGREEMENTS

Messrs. Mitsubishi Electric Manufacturing Company Limited of Tokyo, Japan (hereinafter referred to as MELCO) are the foreign collaborators in this Project with whom the Company has entered into an exclusive technical assistance agreement, which has been concluded with the approval of the Government. Under this agreement, MELCO has undertaken to supply this Company with up-to-date technical information with regard to design and manufacturing of all types of watt-hour meters. MELCO has also undertaken to furnish a reasonable number of qualified technical staff for the purpose of advising and assisting the Company in the erection of the factory, installation of equipment, and production of the watt-hour meters. It has also agreed to train the Company's technical staff in its works. The agreement also authorises the Company to use any form of trade mark which is mutually agreed upon with MELCO, including the use of the Three Diamonds—the exclusive trade mark of the Mitsubishi Group in a suitable form. The Company has also received a licence from MELCO to export the watt-hour meters manufactured by it in India to any country in the world excepting Japan, Canada and the United States of America.

In consideration of the technical assistance, services and information the

Company is to allot and issue to MELCO 1,500 6½% (free of Company's tax but subject to deduction of tax at source at the prescribed rates) Cumulative Non-Redeemable Preference Shares of Rs. 100/- each credited as fully paid-up.

This agreement shall continue for ten years from the date of its execution during which period, in consideration of licences and all rights granted under the agreement, the Company shall pay to MELCO royalties calculated at two and half percent (2½%) on the net selling price of the watt-hour meters sold by the Company.

Agreements have also been entered into by the Company with MELCO by which the latter undertake to supply to the Company machineries of an aggregate value of Rs. 9,75,000/- of which, machineries of the value of Rs. 3,15,000/- will be supplied under ad-hoc Yen Credit, on deferred payment terms. Further, in consideration of supply of the machinery of the same value, the Company shall allot to MELCO, fully paid-up 6½% (free of Company's tax but subject to deduction of tax at source at the prescribed rates) Cumulative Non-Redeemable Preference Shares of Rs. 100/- each of the aggregate value of Rs. 6,60,000/-.

PLANT SITE

The plant will be located near Calcutta. Land required for this Project has been purchased. The Company has also received the assurance of the West Bengal State Electricity Board for the supply of adequate power.

INTEREST OF DIRECTORS

All the Directors will be interested to the extent of any shares subscribed by and allotted to them in the Company. They will also be interested to the extent of the fees they may receive for attending the Board Meetings. Mr. Inoue is a Director, Overseas Operation Division, M/s. Mitsubishi Electric Manufacturing Co. Ltd., and is, therefore, interested in the Agreements with Messrs. Mitsubishi Electric Manufacturing Co. Ltd.

Mr. S. B. Bilmoria is a partner of M/s. Bativala & Karani, one of the underwriters and brokers named in the Prospectus.

Mr. M. L. Pyne is a partner of M/s. G. M. Pyne, also one of the underwriters and brokers named in the Prospectus.

Mr. K. Khaitan is a partner of M/s. Khaitan & Co., the Solicitors of the Company who will be paid their professional charges payable to Solicitors.

None of the Directors has any interest in any property acquired by the Company within the two years preceding the date hereof or in the plant and machinery that may be purchased out of the proceeds of this issue, except as stated above.

UNDERWRITING

The issue to the public is being fully underwritten, the names of the Under-

writers and the amounts underwritten by them being as stated below:—

Underwriters:	Amount Underwritten Rs.	(c) Brokerage and preliminary expenses including expenses of this issue
The Investment Corporation of India Ltd., Ewart House, Bruce Street, Bombay-1.	10,00,000	1,55,000
*The Life Insurance Corporation of India, Jeevan Kendra, Jamsheji Tata Road, Bombay.	5,00,000	22,00,000
M/s. G. M. Pyne, 14, India Exchange Place, Calcutta-1.	4,00,000	3,95,000
M/s. Bativala & Karani, Union Bank Building, Dalal Street, Fort, Bombay.	3,00,000	Rs. 77,00,000
M/s. A. B. Pandit & Co., 32, Apollo Street, Fort, Bombay.	3,00,000	
Total	25,00,000	
		Rs. 71,25,000

In the opinion of the Directors, the resources of the said underwriters are sufficient to discharge their underwriting obligations.

*These shares have been agreed to be allotted on a firm basis to the Life Insurance Corporation of India.

UNDERWRITING COMMISSION

Underwriting commission @ 2½% of the nominal value of 2,50,000 Equity Shares underwritten, is payable to the said underwriters.

BROKERAGE

Brokerage will be paid by the Company to the Managing Brokers, Brokers to the issue mentioned in the Prospectus and to members of any recognised Stock Exchange and to the bankers @ 10 nP. per Equity Share on 2,50,000 Equity Shares offered to the public and allotted in respect of applications bearing their stamps. No additional brokerage will be payable to the Managing Brokers. Brokerage on the same basis will be payable to the underwriters in respect of applications made or procured by them provided that the relative form of application bears their respective stamps and in such case no brokerage will be payable to any other party.

No underwriting commission and brokerage will be payable in respect of shares subscribed by the Directors, their relatives, friends, nominees and connections.

CAPITAL OUTLAY AND MINIMUM SUBSCRIPTION

The estimated requirements, as per estimate made in 1961, are as follows:

	Rs.
(a) Land, Building and cost of engineering acquisition and construction of plant	48,00,000
(b) Cost of technical services payable to MELCO (in the form of Preference Shares as stated elsewhere)	1,50,000

IMPORT LICENCES

The Company has obtained licences from the Government of India for the import of all the plant and machinery at present envisaged. Orders for some of the machinery have already been placed and for the balance, negotiations are being carried on.

INSPECTION

Copies of the Prospectus and the necessary documents mentioned therein are open for inspection at the Registered Office of the Company during business hours.

APPLICATION FOR SHARES

Application for shares must be made for a minimum of 50 shares or multiple of 50 shares. Application forms properly completed must be lodged together with the amount payable on application before closing of the subscription list with any of the branches of the Company's Bankers mentioned in the Prospectus but NOT with the Registered Office of the Company.

PROSPECTUS AND APPLICATION FORMS

Copies can be obtained from the Registered Office of the Company and from its Bankers, Managing Brokers, Brokers or Underwriters as mentioned above.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

No brokerage is payable on shares reserved to be allotted to the foreign collaborators, directors, promoters, their friends, relatives and associates.

OBJECTS OF THE COMPANY

The company was incorporated on 28th July, 1961 with the several purposes mentioned in the Memorandum of Association of the Company. The main object for which the Company is established is to set up a shoddy plant for the manufacture of shoddy yarn at Thana and a wool combing plant for the combing of wool and manufacture of wool tops at Chandigarh in terms of the Industrial Licences granted by the Government of India to the Company.

COMMENCEMENT OF BUSINESS

The Company has obtained the Certificate No. 12080 dated 10th August 1961 to commence business, from the Registrar of Companies, Maharashtra, after filing a statement in lieu of prospectus.

The Statutory Meeting of the Company was held on 23rd December, 1961.

PROSPECTS

The present import of wool tops in India is restricted to about 15 million lbs., annually against 31 million lbs., being the annual requirements of the worsted spinning industry as envisaged in the Third Five Year Plan. The expected annual production of wool tops in India at present by the existing manufacturers is between 8 to 9 million lbs. The Company has been licensed to manufacture 1.5 million lbs., of wool tops per year.

The promoters, Messrs. Kanishi Ram Kidar Nath had made arrangement with Staple Hall Trading & Finance Co. Ltd., England, for the supply of a complete new wool combing and wool top dyeing and printing plant on deferred payments.

The manufacturers of the machinery are Prince-Smith & Stells Ltd., Keighley, England, who are one of the world's leading manufacturers of combing and spinning machinery. Shipment of the plant is expected to commence during December 1961 and the entire plant is expected to arrive at site at Chandigarh by April/May 1962. The plant is expected to be erected by and to go into production in the second half of 1962.

The foreign exchange of the equivalent of Rs. 13,33,000 (approximately £1,00,000) will be available to the company which will be available to the company by the issue of equity capital to the foreign collaborators is proposed to be utilised to meet its future requirements of foreign exchange necessary for expansion or any other purpose which may be beneficial to the company.

Shoddy yarn is mainly used for the manufacture of woollen fabrics like Velours, Blazers, Meltons, Flannels and Blanket cloth, etc. The Promoters are one of the first in India to start the manufacture of shoddy yarn, for which a big demand exists in the country at present. The Directors are of the opinion that the entire expected production of 1.5 million lbs. will have a ready market at a satisfactory price.

The promoters, Messrs. Kanishi Ram Kidar Nath have transferred to the company a complete NEW SHODDY SPINNING UNIT of 2,000 spindles, which has been installed at Om Baug, Thana, near Bombay.

By an Agreement dated September 5, 1961 the Promoters have agreed to lend the services of such foreign technicians employed by them and in consideration thereof the company will pay to the promoters a moiety of the expenses incurred by them.

THE SHODDY SPINNING UNIT OF THE COMPANY COMMENCED PRODUCTION ON 1ST NOVEMBER, 1961. Import Licences for the necessary raw materials have been received.

TAX BENEFITS

This being a new industrial undertaking the company will be entitled to the benefits under the Income-tax Act, 1961 as regards development rebate and depreciation. In addition, it will also enjoy exemption from Income-tax on profits upto 6% of the capital employed for the first five years of the company's operation under Section 84 of the Act.

Shareholders of the Company will also be exempted from Wealth-tax on their holdings for a period of five years under clause XX of sub-section (1) of Section 5 of the Wealth-tax Act.

Shareholders will also get exemption from tax on such dividend as is paid from the company's exempted portion of the profits.

ESTIMATE OF PROFITS

The directors are of the opinion that the company should be in a position to pay a dividend on its equity capital FROM THE VERY FIRST FINANCIAL YEAR from the profits of the shoddy plant alone, which is already in production.

FOREIGN COLLABORATION

The Company has entered into a financial and technical collaboration arrangement with Messrs. Robt. Jowitt & Sons Ltd. one of the leading top makers and wool combers in the U.K. Under the said arrangement NO ROYALTY OR TECHNICAL FEES are payable except the remuneration and expenses of the technicians sent out by them. Further the buying and/or blending of raw wool in world market (outside India) will be supervised by them on behalf of the company on the normal commission prevalent in the trade, and in turn they guarantee the quality to type of the finished tops. A formal agreement is being drawn up.

LOCATION

The shoddy spinning plant has already been installed at Om Baug, Thana, near Bombay.

The wool combing plant will be set up at Chandigarh. The Company has acquired about 23 acres of land from the State Government with the option of buying additional 19 acres within 2 years.

RAW MATERIALS

The Company is confident of obtaining adequate import licences for its requirements of raw materials for the manufacture of wool tops and shoddy yarn. Besides, the Company also proposes to use local and indigenous raw materials.

SPECIAL ADVANTAGES

(1) The shoddy spinning plant is already in production. According to the present conditions of the trade, it is expected that the profits of this unit alone should be sufficient to pay a dividend from the very first year of its working, even before the combing unit goes into production.

(2) The foreign collaborators have offered very favourable terms and no royalty or technical fees are payable.

(3) The promoters have permitted the use by the company of their trade mark "Modella". The trade mark is already popular and widely known throughout the country and is associated with the best knitting wools and fabrics.

(4) The promoters Messrs. Kanishi Ram Kidar Nath, proprietors of Model Woollen Mills, Thana and Model Woollen & Silk Mills, Verka, Amritsar, have a long experience in all aspects of the woolen trade and industry and are well connected with overseas manufacturers.

(5) The entire plant for both the Units (wool top and shoddy yarn) is NEW incorporating therein the latest technique of manufacture.

ESTIMATED CAPITAL OUTLAY

The cost of the project will be about Rs. 1,04,18,000 estimated as under:

SHODDY PLANT	Rs.	Rs.
Machinery	12,45,000	
Buildings	5,68,000	
Including stamp duty and registration if any	50,000	18,63,000

WOOL COMBING PLANT	Rs.	Rs.
Imported Machinery which will be on deferred payment	25,00,000	
Duty, freight, etc.	4,25,000	
Indigenous and other Machinery	7,00,000	
Land	5,00,000	
Buildings	10,00,000	51,25,000
Total value of Block		69,88,000
Working Capital	31,30,000	
Preliminary expenses	2,00,000	34,30,000
TOTAL		1,04,18,000

FINANCIAL RESOURCES

The Company's requirements of the capital are proposed to be met from the resources mentioned as under:—

	Rs.
Equity Capital (excluding shares reserved to be issued to the foreign collaborators)	51,67,000
Deferred payments on Machinery	22,00,000
Loan from Company's Bankers and other sources	30,51,000
	1,04,18,000

Equity shares reserved to be issued to the foreign collaborators at par within 2 years from the date of the agreement (approximately £100,000), but not before the wool top unit of the company goes into production

The above capital reserved for the Collaborators is proposed to be utilised to meet the future expansion and/or other requirements of the Company as may be beneficial.

The Company's Bankers, viz. The Hongkong & Shanghai Banking Corporation, Bombay have agreed in principle to grant facilities upto Rs. 30 lakhs on usual terms and have guaranteed the deferred payments on the combing machinery. The bank will be given a charge on the company's assets including a charge on any uncalculated capital.

Messrs. Kanishi Ram Kidar Nath, the promoters, have undertaken to arrange for and procure additional funds to meet any shortfall between the actual cost of the project and the financial resources now taken into consideration so as to complete the scheme.

APPLICATIONS AND ALLOTMENTS

Applications for shares which must be for 100 shares or multiples of 100 shares, must be made on the official form. The application form together with a remittance for the full amount payable on application must be sent to The Hongkong & Shanghai Banking Corporation or the Bank of India Ltd., at any of their branches mentioned in the application form.

MINERALS

Pulverised in most up-to-date imported grinding plants up to 300 mesh.

BARYTES, DOLOMITE, SLATE, LIMESTONE, CALCITE, BEN-TONITE SOAPSTONE, CHINA CLAY, RED & YELLOW OCHRES, GRAPHITE, Etc.

Money

THE CALCUTTA MONEY MARKET

RISE IN ADVANCES

Wednesday, 3rd January.

THE general level of advances has risen again in the Calcutta money market during the past week. The main increase has been in accommodation given to the engineering, iron and steel industries. The credit given to the jute, cotton and sugar industries has also risen slightly. But advances for the storage of foodgrains and seeds show a minor decrease. The interbank market is moderately tight, the call rate being quoted around 4½ percent.

In the exchange market, not many gunny bills have been seen, but there have been a fair number of bills relating to tea shipments. Remittance has been on a moderate scale. Sterling has maintained its rate in relation to all the major currencies.

THE RETURN OF THE STATE BANK OF India for the week ended 15th December, 1961, shows a drop of Rs. 2.40 crores to Rs. 525.76 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 4.88 crores and Rs. 5 lakhs to Rs. 248.48 crores and Rs. 9.24 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 3.65 crores to Rs. 248.15 crores. Cash and balances are, in consequence, shown at Rs. 26.80 crores, or Rs. 2.81 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 22nd December, 1961, shows Demand and Time liabilities at Rs. 840.58 crores (Rs. 23.03 crores on account of borrowings from banks) and Rs. 4,159.41 crores (Rs. 21.20 crores), compared with Rs. 847.02 crores (Rs. 25.60 crores) and Rs. 1,155.25 crores (Rs. 20.17 crores), respectively, in the previous week. Cash has declined by Rs. 25 lakhs to Rs. 47.07 crores, while balances with the Reserve Bank have increased by Rs. 2.99 crores to Rs. 74.88 crores. There is a drop of Rs. 6.25 crores to Rs. 600.06 crores in Rs. 625 crores and bills investments. Advances and bills discounted at Rs.

Stocks and Shares

CALCUTTA LOOKS FORWARD TO A BULLISH 1962

Wednesday Evening.

THE stock market has greeted the New Year by maintaining its steady trend. Operators recall that 1961 has closed with useful gains, the index for ordinary shares quoted in Calcutta having risen from 155.3 to 169.1 (1952-53 equals 100). At this time of year, crystal-gazing is the fashion, and the general feeling is that during 1962 shares will meet with rising support due to the stimulus of development plans. The appreciable improvement in industrial production during the past year inspires the hope that growth will continue, provided concrete measures are taken to relieve the shortage of transport, electric power and raw materials.

In the near term, however, there are two major uncertainties. The first is that the "Aid-India Club" will meet at the end of the current month to discuss the prospects of giving further financial assistance to India. Until the meeting is over, it will be difficult to foresee how much financial aid will be forthcoming. The second factor is that the Government is unlikely to formulate any new proposals to promote economic development until the general election is over. Meanwhile, the prospect of heavier taxation will continue to disturb sentiment. The Goa operations, combined with the vigorous preparations on India's borders, are expected to inflate the defence budget.

The growing shortage of credit is being felt. As the busy season gathers momentum, the flow of funds into the stock market is likely to shrink further. There is a long queue of new issues which are likely to be floated soon. Large funds will be siphoned off by these issues. Steel shares are being fancied on hopes of an early rise in the retention price of steel. Since the State steel plants are finding it difficult to make profits at current prices, it is thought that the Government may be generous in raising the retention price. The encouraging production and despatch figures of the Indian Iron and Steel Co. Ltd for December 1961 have been welcomed. The production of pig iron has amounted to 103,038 tons, compared with 103,064 tons in November 1961. The output of steel ingots has improved from 81,209 tons to 83,171 tons and that of salable steel from 62,119 tons to 65,031 tons. Despatches have risen from 60,837 tons to 67,203 tons, but the management says that 7,500 tons of finished materials could not be despatched due to the shortage of suitable wagons.

At today's clearing, share prices have hardened due to short-covering. Carry-forward charges have been moderate, but operators are inclined to restrict their commitments for the time being. Indian Iron have closed at Rs. 25.50. There has been selective support for engineering shares. Texmaco have been steady on reports that the Company will go in for the manufacture of machine tools with foreign collaboration. Guest, Keen, Williams, Braithwaite and Jessop have met with support. Dalmia Iron are being bought on expansion prospects.

There have been a few bright features in the miscellaneous section. Dunlop Rubber are firm on talk of expansion. Alkali Chemical have improved on declaring a higher dividend. Angelo Brothers have

gained on dividend prospects. Good-year India, Metal Box and Britannia Biscuit have been steady. Hindustan Motors have fluctuated narrowly on speculative manipulations. Indian Cable have become steadier on talk of buying by the Life Insurance Corporation. Indian Aluminium and Rohtas have improved. Rallis have gained on declaring a higher ordinary dividend. Kesoram Industries have reacted on rumours of a debenture issue. Electric shares have become steadier since the official confirmation that well-managed concerns will not be nationalised. Calcutta Electric are in demand. Tobacco shares show mixed trends, as Imperial Tobacco are steady while National Tobacco have reacted. Cement shares have become quieter.

Paper shares have improved on hopes of a rise in the price of the commodity. Orient Paper are supported on expansion possibilities but Sipur have become sluggish on talk of a rights issue. Titaghur and Seshasayee have been bought on investment account. Bengal Paper have gained on prospects of bonus and rights issues.

Jute shares have risen on the view that the demand for gunnies will improve in coming weeks. The fact that the industry has unsealed another 2½ percent of its looms from the beginning of this year has been welcomed. Birla, Fort William, New Central, Fort Gloster, Anglo-India,

Northbrook and Nuddea have hardened.

Coal shares have been sluggish and fluctuations are narrow. Scattered support has been forthcoming for Burrakur, Bengal and Central India. Western Bengal are about steady. There was a brief flutter in this section earlier on talk that the L.I.C. had bought some shares.

Cotton textile issues have turned softer due to anxiety about the supply of raw cotton. The domestic crop, it is feared, will be poor. Cloth exports during 1961 are likely to be lower than in 1960. Dunbar, J. K. Rayon and Bharat Commerce have reacted.

Except for selective support, tea shares have generally been quiet. The marketing outlook for the commodity is considered uncertain due to the increase in crops in nearly all producing countries. Bishnauth, Hasimara, Hantapara and Tezpur are available at lower prices.

Bank shares have been steady on the view that bank profits in 1961 will be higher than in 1960. The profit figures for 1961 are expected to be published soon. The Reserve Bank has urged the banks to increase their share capital and reserves to at least 6 percent of their total deposits. It has been suggested that at least 20 percent of the total profits should be transferred to reserves. Investors are wondering whether this will

Guaranteed by the Government of West Bengal)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.25 PER CENT

REDEEMABLE AT PAR ON THE 21ST JANUARY 1972

SUBSCRIPTIONS will be received in cash or cheques. Applications will be received at the State Bank of India at Calcutta, Bombay, New Delhi and Madras from 15th January, 1962 to 20th January, 1962 both days inclusive. But the list may be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the offices mentioned above and at the Head Office of the State Electricity Board, 1, Hastings Street (7th Floor), Calcutta-1.

prevent banks from paying higher dividends. But the prospect of rights issues is being interpreted bullishly for some shares. United Bank, United Commercial and Punjab National are being taken.

Government securities have been dull and fluctuations are narrow. Turnover is restricted because institutional buying is virtually negligible. The 3 percent Conversion loan 1986 has closed at Rs. 71.05.

Bankura-Damoodar Railway

There is a net loss of Rs. 4.04 lakhs in the working of the Bankura-Damoodar Railway Co. Ltd for the year ended March 1961. A dividend of Rs. 1.90 a share, subject to tax, has been declared. Taxation absorbs Rs. 53,550. After meeting the deficit from the Government subsidy and making other adjustments, there remains a balance of Rs. 850, which is transferred to reserve.

Ahmadpur-Katwa Railway

The Ahmadpur-Katwa Railway Co. Ltd has incurred a loss of Rs. 1,57,299 for the year ended March 1961. After meeting the deficit from the Government subsidy and providing Rs. 27,153 for taxation, a credit balance of Rs. 33,187 only is available. The directors, therefore, have recommended a dividend of Rs. 1.90 percent, subject to tax, and the surplus of Rs. 431 is transferred to reserve.

Bombay Market

SUGARS LEAD RISE IN EQUITIES

SIX SHARES ADDED TO FORWARD LIST

Wednesday Noon.

THE Bombay stock market started the New Year in a buoyant mood. Although buying was selective, selling pressure was conspicuous by its absence. Sugar shares were prominent due to the ordinance exempting State-owned undertakings and private industrial organisations from the operation of the Maharashtra Agricultural Lands (Ceilings on Holdings) Act, 1961. Cotton textile shares were fully steady on the belief that mills had made bigger profits in 1961 than in 1960. Investors were cautious because of the growing shortage of cotton, but they expected that the demand for cloth would improve soon when the busy season got into its stride. Six scrip—Indian Dyestuff, Amar Dye Chemicals, Polychem, Maharashtra Sugar, Dawn Mills and Finlay Mills—were marked up smartly on being promoted to the forward list.

Tata Steel closed at Rs. 143.25 and Indian Iron at Rs. 25.30. Among engineering shares, Tata Locomotive rose to Rs. 361 and Alcock Ashdown were dealt in at Rs. 316. Premier Construction came to hand at Rs. 189 and Larsen and Toubro were transacted at Rs. 39.75. Mukand Iron made Rs. 28.25 and Mahindra and Mahindra were bought at Rs. 19.24 on expansion prospects. Motor-vehicle shares were steady, and business was done in Hindustan Motors at Rs. 21.28. Premier Automobiles improved to Rs. 158 on an encouraging speech from the chairman of the Company.

In the cotton mill group, Century were maintained at Rs. 624 and

Bombay Dyeing at Rs. 66.60. Kohinoor were supported at Rs. 309.50 and Standard were bought at Rs. 1,110. Morarjee were taken at Rs. 392 and Svadesh came to hand at Rs. 280. Finlay were transacted at Rs. 322, but Apollo were freely offered down to Rs. 2.08. India United ordinary were dealt in at Rs. 15.40 and Gokak were placed at Rs. 203.

Sugar shares improved greatly in the miscellaneous section. Belapur rose to Rs. 275 and Maharashtra to Rs. 205. Phalton were transacted at Rs. 128 and Walchandnagar Industries at Rs. 170. Mining shares were quietly steady, and Shivrampur Syndicate were indicated at Rs. 46. Cement shares were maintained, and business was done in Associated Cement at Rs. 163. Digvijay were steady at Rs. 195. Steamship company shares were quiet, and sellers predominated in Scindia Steam at Rs. 13.32. Great Eastern Shipping were sold down to Rs. 12.88. Rayon shares were steady, and National Rayon rose to Rs. 561. Baroda Rayon came to hand at Rs. 157.50. Bombay Burmah were steady at Rs. 665 on replacement buying. Chemical shares were supported, and Tata Chemical were wanted up to Rs. 19.64. Business passed in Indian Dyestuff at Rs. 580 and in Polychem at Rs. 236.50. Interest was taken in Voltas at Rs. 310 and in Tata Oil at Rs. 78. Ceat Tyres reacted to Rs. 215 on profit-taking, but Synthetics and Chemicals were steady at Rs. 234 on the prospect of a rights issue.

Bank shares were firm on hopes of rights issues. Bank of India rose to Rs. 142.50 following the decision to issue rights shares. Bank of Baroda gained at Rs. 115 and Central Bank at Rs. 67. Insurance shares were quietly steady, and New India Assurance were transacted at Rs. 59.50.

Electric company shares improved on fresh support due to an official statement that well-run companies would not be nationalised. Ahmedabad Electric gained at Rs. 99.50 and Bombay Suburban at Rs. 100.50. Tata Hydro were placed at Rs. 108.50.

Madras Market

BUSINESS RESTRAINED BY CREDIT SHORTAGE

FAIR SUPPORT FOR BANK SHARES

Tuesday Evening.

THE Madras stock market opened in a cautious mood after the Christmas and New Year holidays. Turnover was restricted and operators were not inclined to extend their commitments in view of the credit shortage. Business in Government securities was negligible and prices of all dated loans slipped back. Bank shares were supported on the view that many banks might soon issue rights shares. Public utility shares were bought on investment account. Sugars turned softer due to uncertainties concerning the outlook. Sellers predominated in tea, rubber and coffee shares because the marketing outlook for these commodities was considered discouraging. Interest declined in textile shares due to the shortage of cotton. Selective support was maintained for miscellaneous industrials on good corporate news.

In the banking group, Indian Overseas hardened to Rs. 199 on the decision to issue rights shares. Canara Banking came to hand at Rs. 80.50 and Punjab National were transacted

at Rs. 20.37. State Bank of Travancore were dealt in at Rs. 125. Among public utility companies, South Madras were steady at Rs. 9.83 and Vellore at Rs. 14.25. Ellore were done at Rs. 20.25 and Negapatnam at Rs. 10.70.

Among sugar shares, Deccan declined to Rs. 11.15 and E.I.D. to Rs. 35.90. Mysore reacted to Rs. 56.50 on declaring a taxable ordinary dividend of 30 percent. Kothari slipped back to Rs. 8 and Travancore to Rs. 8.80. United Breweries were steady at Rs. 101.55.

In the planting section Blue Mountain reacted to Rs. 2.82 and Cochin Malabar to Rs. 7.23. Coffee Lands were easier at Rs. 16.62 and Consolidated Coffee at Rs. 19.80. Business was done in Devashola at Rs. 31 on the Company paying an interim taxable ordinary dividend of 10 percent. Kil Kotagiri were transacted at Rs. 4.82 and Lucky Valley at Rs. 11.35. Midland came to hand at Rs. 10.85 and Mysore Coffee were sold freely down to Rs. 5. Nilgiri were quietly steady at Rs. 8.40 and Oosoor at Rs. 2.70. Ouchterlony declined to Rs. 3.44 and Periakaramalai to Rs. 3.54. Tropical were transacted at Rs. 18.87 and United Nilgiri were bought at Rs. 23.50.

Among textile shares, Anglo-French were steady at Rs. 129 and Asher at Rs. 229. Bangalore Woollen were in demand at Rs. 238.50 and Buckingham were bought up to Rs. 253. Dhanalakshmi were done at Rs. 255 and Kadri were transacted at Rs. 114. Kothari were steady at Rs. 13.30 and K. Rajendra at Rs. 74.50. Lakshmi reacted to Rs. 162.50 and Radhakrishna were done at Rs. 39.50. South India Viscose were steady at Rs. 179, but Travancore Rayon slipped back to Rs. 43.90.

Among miscellaneous industrials, Aluminium Industries hardened to Rs. 23.20, but Ashok Leyland were easier at Rs. 9.08. A. V. Thomas were steady at Rs. 10.50 ex-rights because the Company issued bonus shares in the proportion of one new share for each one held. F.A.C.T. were available at Rs. 8.40 and Enfield at Rs. 12.50. India Cement were quietly steady at Rs. 6.40 and Kirloskar Electric at Rs. 17. Madras Rubber were bought at Rs. 21.70 and Mandya National Paper at Rs. 8.70. Parry's Confectionery were steady at Rs. 4.52 and Seshasayee Paper at Rs. 8.85. Standard Motors came to hand at Rs. 16.50 and Textool were placed at Rs. 182. Tube Investment were indicated at Rs. 281 but Tube Suppliers were sold down to Rs. 10.

THE TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past fortnight, the figures indicate Opening Quotations, Highest for the fortnight, Lowest for the fortnight, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

G.A.T.T. Explores Scope for Increasing Exports from Undeveloped Countries

(FROM OUR NEW DELHI CORRESPONDENT)

THE current year may be a crucial one for the G.A.T.T. It may also be especially difficult for India, in the context of her balance of payments position. At their eighteenth session in May 1961, Contracting Parties of the G.A.T.T. approved a recommendation of the Council that there should be a meeting of Ministers at the time of the nineteenth session of the Contracting Parties. The meeting was held from 27th to 30th November, 1961, and Ministers or their representatives from 44 countries participated. The Ministers had before them the special report of Committee III, which has carried out an extensive examination of the trade problems of the less-developed countries. The report, which has been adopted by the Contracting Parties, sets out the Committee's findings and specific recommendations for meeting these problems. The Ministers also had before them a U.S. proposal for the adoption of a joint declaration on "the promotion of the trade of less-developed countries" and a proposed programme of action, submitted by a group of less-developed countries, both of which were based largely on the recommendations of Committee III. The Ministers also considered a paper submitted by Nigeria proposing duty-free entry for tropical products.

The Ministers adopted the declaration and decided that it be communicated to the Contracting Parties and taken by them as a basis for their future work in this field. They also agreed that their Governments would undertake to observe the guiding principles embodied in the declaration to the fullest extent possible, with the object of reducing in the near future obstacles to the exports of less-developed countries. They also agreed that the Contracting Parties should take immediate steps to establish specific programmes of action, and where feasible, fix terminal dates, for progressive reduction and elimination of barriers to the exports of less-developed countries. In this connection, most Ministers agreed that the proposals for duty-free entry for tropical products should be carefully considered. The Ministers further agreed that the Contracting Parties should be required to draw up procedures for notifying and reviewing action taken by the Contracting Parties according to the programmes so established, or otherwise taken by the Contracting Parties to improve market opportunities for the exports of less-developed countries.

The Contracting Parties recognise that there is need for rapid and sustained expansion in the export earnings of the less developed countries, if their development is to proceed at a satisfactory pace. They recognise the magnitude of the task before the Governments of those countries in increasing per capita incomes and raising the standard of living of their peoples. To achieve these ends, increasing amounts of foreign exchange will be required for financing the imports needed to sustain and develop the economy. Although international aid is now, and will continue to be, essential in covering these needs, aid can be no substitute for trade. In the final

analysis, economic development will have to be paid for from the earnings of the countries concerned.

Trade and Aid

The communiqué adds: "The export trade of the less developed countries is not growing at pace commensurate with the growth of their foreign exchange needs, or with the growth of world trade generally. The Contracting Parties accordingly recognise the need for a conscious and purposeful effort on the part of all government to promote an expansion in the export earnings of less developed countries through the adoption of concrete measures to this end. The success of the efforts of developing countries will depend to a great extent on their ability to find the necessary markets. Accordingly, the Contracting Parties should reduce to a minimum restrictions inhibiting access to markets for the export products of the less developed countries. The Governments of the major industrialised areas, on whose markets the less developed countries must necessarily largely depend, must necessarily largely depend, recognise a particular responsibility in this matter. The Contracting Parties agree that, if the needs of the less developed countries for enlarged and diversified export trade are to be met, these countries must develop trade in other than traditional products. They note that some developing countries already have the investment and technological resources for the processing of raw materials and are able to produce efficiently some manufactured goods. They recognise that it is desirable that these countries and others possessing the necessary materials and skills be provided with increased opportunities to sell in world markets the industrial goods which they can economically produce, and urge that governments give special attention to ways of enlarging these opportunities.

G.A.T.T. Declaration

"The Contracting Parties recognise that governments can contribute to the general objectives outlined above by observing the following principles and taking into account the following facts concerning tariff and non-tariff measures affecting access to markets:

"(a) Quantitative restrictions: Governments should give immediate and special attention to the speedy removal of those quantitative import restrictions which affect the export trade of less developed countries. Where it is necessary for a government to maintain such restrictions under appropriate provisions of the G.A.T.T., it should apply them in a non-discriminatory manner causing the minimum hindrance to international trade, pursue policies designed to remove the underlying conditions requiring the use of such restrictions and, pending their elimination, give careful and sympathetic consideration to progressive increases in quotas. Contracting parties which are in the process of moving out of balance-of-payments difficulties should take particular care that should take particular care that liberalisation benefits are extended in the fullest measure to the trade of the less developed countries, having regard to the urgent need for helping

these countries attain rapid, self-sustaining growth.

"(b) Tariffs: Governments should give special attention to tariff reductions which would be of direct and primary benefit to less developed countries. In this connection, they should consider the elimination of tariffs on primary products important in the trade of less developed countries. They should also consider reducing those tariffs which differentiate disproportionately between processed products and raw materials bearing in mind that one of the most effective ways in which less developed countries can expand their employment opportunities and increase their export earnings is through processing the primary products they produce for export.

"(c) Revenue duties: Fiscal charges, whether imposed as tariff duties or internal taxes, may inhibit efforts directed towards increasing consumption of particular products important in the trade of less developed countries and, even where applied equally to imports and to competing domestic products, can be a serious obstacle to the expansion of trade. The Contracting Parties appreciate that adjustments in a fiscal system may be a complex matter, with important financial, economic and other consequences which have to be taken into account. Bearing in mind, however, the urgent development needs of less developed countries and the current financial and economic situation in the industrialised countries mainly concerned, they agree that the removal or considerable reduction of revenue duties and fiscal charges in industrialised countries would be a useful contribution to the foreign exchange earning capacity of less developed exporting countries.

"(d) State trading: Access to markets for products of the type studied by Committee III should not be unnecessarily impeded through the operations of State import monopolies or purchasing agencies. For many products exported by less developed countries, the prices charged on resale by some State monopolies, whether in countries with Centrally-planned economies or in others, involve an implicit heavy taxation of imports. Countries operating State import monopolies or purchasing agencies, should endeavour to improve access to their markets for products of less developed countries by decisions to import larger quantities of the products concerned and, if necessary, by reductions in the difference between import and sales prices.

"(e) Preferences: Some less-developed countries benefit neither from the preferential tariff systems which were in operation when the G.A.T.T. came into being nor from the preferential treatment being established in the new Customs unions or free trade areas. The Contracting Parties appreciate the concern of these less developed countries whose export trade in certain products may be placed at a competitive disadvantage by the preferred treatment given to certain less-developed suppliers. They note, however, that the benefits to less developed countries may include not only tariff preferences but other

forms of assurances in the marketing of the products concerned. While it was important that these various advantages would not operate to the detriment of other less developed countries, it was also necessary that action to deal with this problem should be on a basis that meets the marketing needs of supplying countries now enjoying preferred access to markets.

"(f) Subsidies: The subsidisation of either the production or export of primary products may restrict the market opportunities of less developed countries. Where this is so, the governments concerned should seek to limit the use of the subsidies in question, with a view to avoiding injury to the export earnings of less developed countries.

"(g) Disposal of commodity surpluses: Governments disposing of commodity surpluses should bear in mind that the products concerned are generally important in the export trade of one or more less developed countries, and that this is an added reason for careful observance of the principles and guidelines concerning such disposals accepted in the G.A.T.T. resolutions of 4th March, 1955, on the disposal of commodity surpluses and on the liquidation of strategic stocks and in the Food and Agriculture Organisation's principles of surplus disposal. In negotiations for reductions in barriers to the exports of less developed countries, contracting parties should adopt a sympathetic attitude on the question of reciprocity, keeping in mind the needs of these countries for a more flexible use of tariff protection. In making arrangements to bring about a general reduction of tariffs, account should also be taken of the special needs of less-developed countries.

"An important contribution to the expansion of export earnings can also be made by intensified efforts to improve the production and marketing methods of the less-developed countries. The efforts of the less-developed countries along these lines would be greatly assisted if the industrial countries would give greater attention to this matter in the framework of their technical and financial assistance programmes. Efforts to expand the export earnings of the less-developed countries and efforts to lessen the instability of such earnings which result from fluctuations in primary commodity markets should proceed concurrently. Progress towards reducing market instability, or towards offsetting its effects on foreign exchange receipts, is essential if the maximum benefits of the trade expansion effort are to be realised; at the same time, progress towards a diversified export trade will reduce the vulnerability of primary exporting countries to market fluctuations. Finally, it is recognised that there are important possibilities for encouraging sound economic development in the less-developed countries through increased trade among themselves and that these countries should keep this in mind in formulating their tariff, commercial and economic policy measures. Lest the development of this important trade potential be prevented or unduly delayed, they should strive to attain and preserve liberal access to one another's markets in the same manner as they now seek to secure improved access to the markets of the economically advanced countries.

Impression has been gaining ground in the West that the G.A.T.T. had been largely working for the benefit of less-developed countries and the balance-of-payments difficulties were nearly used as an excuse. The issue of the legality of the European Common Market vis-à-vis the G.A.T.T. has been by-

She thought she was a thrifty housewife

Like every good housewife, she worked on a budget making her husband's pay go a long way. But she grew careless one day, and did not bother to see that the cotton cloth she bought was stamped with the label 'Sanforized'.

Now look at her lovely new choli—shrunken after the first wash!

Don't take anybody's word for it. Make certain you get the full measure of value of the material you buy—

Look for **SANFORIZED** on the label!

And your clothes will never shrink out of fit!

Sanforized is a registered trademark of the U.S.A. Textile Institute, Inc., New York, N.Y. It is the only label that guarantees that the cotton cloth you buy will retain its shape and size after repeated washings.

For information: 'Sanforized' Service, 95 Marine Drive, Bombay 2

The trademark 'Sanforized'—recognised and trusted in 120 countries throughout the world—is a vital force for the export of Indian textiles.

Sanforized

Torture del passato

Siate moderni!

Non più commovente che di cambiare un semplice tessuto.

Conoscete quel tipo di tessuto che si restringe dopo la prima lavatura? Ma questo "Sanforized" non si restringe mai.

Quando comprate tessuti, cercate, per favore, di trovare, sulla confezione, il marchio "Sanforized".

Se comprate tessuti "Sanforized", sarete sicuri che il vostro tessuto non si restringerà mai.

Sanforized, il marchio che garantisce la permanenza delle misure.

Sanforized, il marchio che garantisce la permanenza delle misure.

Sempre a vontade com um vestido de tecido **SANFORIZED**

The trademark 'Sanforized' is trusted everywhere in the world. One reason is that Cluett Peabody & Co. Inc.—the owners of the trademark—maintain in India, as in other countries, technical representatives who are like watchdogs protecting the interest of the consumers and helping the Textile Industry to produce cotton cloth which will meet rigid anti-shrinkage standards. Cotton cloth that is labelled 'Sanforized' has the same international standard of performance: "it will not shrink out of fit".

Issued by Cluett, Peabody & Co. Inc., (incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trademark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

passed. With the functioning of the Treaty of Rome, the members of the European Economic Community have prospered without similar increase in their trade with less developed countries. In fact, the countries of the European Common Market are rapidly becoming independent of the raw material supplies from the tropical or semi-tropical countries on account of the development of agriculture, substitutes or man-made fibres. One indication is that while the price levels of manufactured articles have been on the increase, that of primary products have declined. The fact that the U.K. is an applicant for the membership of the European Common Market, the U.S.A. has taken serious notice of it and is taking legislative powers to have a common reduction of tariffs with the European Common Market and India has appointed a special envoy to safeguard her interests, should show the success of the E.C.M.

During 1962, the application of the U.K. for membership of the Common Market will be disposed of, the Common Market's internal tariffs would be reduced by 50 percent and the organisation of the European Economic Co-operation will come into the picture. The year will see the steps taken by the Contracting Parties to implement the decision of the Ministers' meeting. Meanwhile, the K. B. Lal Committee, set up by E.C.A.F.E., has made its report. According to a knowledgeable source, the Committee has definitely ruled out an Asian Common Market. It would rather have co-operation between various trading regions of Asia, for which purpose it has recommended the creation of a Council of Asian Ministers. This Council will recommend the manner and method of stepping up trade within a region and between one region and another. There are two basic recommendations, which

may create a controversy. The Committee has recommended that a country should be dissuaded from embarking on "uneconomic" industries and secondly, a fund or financial co-operation should be set up to assist the less-developed countries in financing their trade. Some comments are called for. Firstly, which countries are to be represented on the Council of Ministers? With the unhappy record of the functioning of its treaty with China, will India, for example, be willing to sit at the same table with communist China? Then again, can anyone dissuade India from launching at least two atomic stations, notwithstanding her precarious balance of payments position, the faulty economics of atomic energy as against other forms of energy and the greater need of finances for other more pressing projects, say, the eradication of slums? Meanwhile, according to reports, West Germany has agreed to relax further its quota for the import of Indian textiles.

German Investment in India

According to knowledgeable sources, 1962 should see a steep rise in German investments in India. Krupps have shown the way by entering the Indian industrial field. It is explained that German reserves are getting thinner. This is evident from the fact that it has to equip its growing army and make payments to N.A.T.O. It is also making advance payments for occupation forces to the U.K. and the U.S.A., in order to assist them in balancing their external payments position. The flow of refugees from East Germany has practically stopped. Side by side, German labour has been demanding higher wages. This is making German industry less competitive as a result of which it is rationalising

itself in order to increase productivity.

With the deterioration of the European situation, some Germans with experience of the last two World Wars are seeking safer places for investment. Apart from this, as internal investment slows down, there is some scope for investment abroad. In the absence of a rapprochement between Japan and China, India remains the safest country for investment this side of Suez. Technical assistance will play the main rôle in West German development aid activities. The Government and the development experts of all parties agree that the present 250-million deutschmarks fund for technical assistance is not sufficient, and must be increased.

Parliamentarians in Bonn are urging the establishment of an independent parliamentary committee for development policy. The group which dealt with development problems during the previous term of parliament was a sub-committee of the foreign committee. An independent committee would promote parliamentary work in the field of development policy. The new Government attaches great importance to development aid by setting up a special Ministry for Economic Co-operation.

Out of a total of 250 joint projects in Indian industry, about 25 percent are Indo-West German ventures.

Tariff Commission Report

The ninth report of the Tariff Commission for 1960-61 provides interesting reading. It gives details of the progress of protected industries and devotes some space to the price structure. There are two obvious lacunae in the report. Firstly, on prices, the Commission has collected its data not from the man-in-the-street but from such consumers as the railways, the Government purchasing agencies or millowners' associations. Secondly, the Commission has made no reference to the quality of the goods produced by protected industries. Even before the balance of payments crisis, leading to the ban on consumer goods imports, the Commission had been advocating a three-fold measure of protection, namely, a duty plus consumer's prejudice duty and a ban on imports. In the nature of things, it has created a protected sellers' market in India. The Commission is supposed to indicate whether the measure of protection granted to an industry has not only improved the methods of production, thereby leading to a reduction in the prices of its products, but also in the improvement in the quality of its products. The report has no comments on either of these two questions. It may be added that there was hardly any need to continue the expensive machinery of the Tariff Commission in view of the policy to continue the unbalance in the external payments position, leading to the total ban on imports.

The Tariff Commission in its report says: "During 1960, a large majority of protected industries stepped up their production. This was effected partly by fuller use of existing capacity and partly by raising the capacity itself. The result was that the protected industries offered better employment opportunities in 1960 than in the preceding year. The outlook would have been brighter still, but for certain difficulties relating to the supply of raw materials and transport. However, the protected sector is looking for further expansion. During 1960, 78 licences for expansion were issued to protected industries covering 17 industries, including electric motors, aluminium, motor-vehicles, caustic soda, soda ash, ball bearings, etcetera. In the second five year plan, targets of capa-

city and/or production were fixed for 14 protected industries and certain industries like ball bearings, electric motors, power and distribution transformers, p.f. moulding powder, plywood tea chests and bicycles, have already exceeded these targets. As for the supply position, there was for obvious reasons a scarcity of some of the commodities which are not produced in sufficient quantities domestically. Thus, as against an estimated demand of 45,000 tons of aluminium ingots, only 26,462 tons were available. Similarly, the estimated demand for ball bearings was 4,500,000 and the supplies fell short at 3,926,862 pieces only. However, by and large, improved output during the year considerably eased the supply position. The country is at present enjoying near self-sufficiency in power and distribution transformers, sheet glass, stearic acid, wood screws, brass rods, bare copper and aluminium conductors, diesel fuel injection pumps and nozzle holders, antimony metal, plywood tea chests, motor-vehicle sparking plugs, p.f. moulding powder, bicycles, engineers steel files, spinning ring frames, spinning rings, fluted rollers and spindles. Exports of protected commodities present a mixed trend. Whereas certain commodities like wood screws, zinc sheets and strips, raw silk, azo dyes, etcetera, were exported in greater quantities during the year, exports of electric motors, sheet glass, spinning rings and fluted rollers declined in 1960."

"For most of the protected commodities, the majority of the consuming units were generally satisfied with the reasonableness of prices charged by the indigenous manufacturers. All the same, there were complaints concerning prices of commodities like dyestuff, ball bearings, raw silk, stearic acid, cotton textile machinery, antimony, calcium carbide, piston assembly, caustic soda and aluminium. For instance, a millowners' association and a paper markets' association complained of high prices being charged for dyestuff by the indigenous manufacturers. As for ball bearings, some of the main consumers stated that the prices of indigenous products were much higher than those of imported counterparts. As for sericulture, a silk mill and a Government silk weaving factory reported that domestic prices were unreasonable. One or two manufacturers of cosmetics mentioned that the prices of indigenously manufactured stearic acid were higher than those of the imported acid. Some textile mills drew the Commission's attention to the alleged high and unreasonable prices charged for indigenous cotton textile machinery in relation to foreign manufacturers. Among the consumers of antimony, battery manufacturers expressed the view that the indigenous product was costly in comparison to the imported one.

"Complaints were received from motor-vehicle manufacturers about high prices of piston assemblies and sparking plugs produced in the country. As for calcium carbide, the industrial consumers observed that prices of the locally manufactured chemicals were higher than those of the imported product. One of the principal users of pistons said that the prices of the indigenous product were higher by 60 percent to 80 percent than those of imported articles. A rayon manufacturer registered a complaint concerning the high market price of domestic caustic soda. As for aluminium, the Director-General of Supplies and Disposals reported that his efforts to get aluminium sheets, ingots, etcetera, at the prices linked with the Tariff Commission's fair ex-works prices did not bear fruit. A can-making company also

complained that the indigenous prices were 15 percent to 20 percent higher than those of corresponding imported goods. It may, however, be pointed out that the evidence received by the Commission from other consumers of protected commodities does not support the above complaints. Presumably, the complainants had purchased the commodities in question from sources other than the manufacturers themselves, or their authorised distributors. As for the complaint of the Director-General of Supplies and Disposals, the Commission has already observed in its last report on the continuance of protection to the aluminium industry (1960) that fair ex-works prices estimated by it are for assessing the quantum of protection required by the industry and cannot be taken as the fair prices at which the products should be available to consumers."

Extra Textile Looms

The Central Government has decided to license 10,000 automatic looms in units of 500 each as part of the programme of expansion of the textile industry during the third plan period. According to a Press note issued by the Ministry of Commerce and Industry, licences will be granted subject to the condition that 75 percent of the cloth produced on these looms should be compulsorily exported. Failure to carry out this obligation will entail a penalty which will be related to the shortfall in the export performance. Bonds will have to be executed and bank guarantees will have to be given for the fulfilment of the export condition. For a unit with 500 looms, the matching spindles will be of the order of 25,000 spindles. Applications for the looms will be entertained only from those who have the matching spindleage. This may be either from out of the available surplus spinning capacity of an existing mill or from the regional quotas of new spindles allotted to the States out of the two million spindles which it is proposed to license during the first two years of the third plan. Applications from those who satisfy the above conditions and who are willing to give an undertaking concerning export will be received by the Central Government. The allotment of the new looms will not be on regional considerations, but will be solely on the basis of the ability of the applicants to discharge their export obligation.

Fertiliser Corporation

The working of the Fertiliser Corporation of India during 1960-61 was satisfactory. Among the highlights are the declaration of the dividend amounting to Rs. 39,27,140 to the shareholders, namely, the Government of India, the successful commissioning of the Nangal Fertiliser Factory and the establishment of a Central Institute of Fertiliser Technology in Sindri. This was disclosed at the annual general meeting of the Corporation last week. The integration of fertiliser projects under the overall administrative control of the Fertiliser Corporation of India was effected in January 1961, with a view to securing co-ordination in policy and ensuring efficient and economic expansion and working of fertiliser factories in the public sector. As a result of this integration, the constituent units of the Corporation are the two operating factories in Sindri in Bihar, and Nangal in Punjab, and three projects which are still in the construction stage, namely, Trombay, near Bombay, in Maharashtra, Naboratiya (Namrup) in Assam and Gorakhpur in Uttar Pradesh. The Corporation has an authorised capital

of Rs. 75 crores and a subscribed and paid-up capital of Rs. 39.63 crores.

Another Record Harvest

After the record foodgrains output of nearly 80 million tons in 1961, India has good prospects of another good kharif crop in 1962, of which the main cereal is rice. Agricultural production as a whole might in some cases be more than that in 1961. A spokesman of the Central Ministry of Food and Agriculture said in spite of devastating floods in several parts of the country, the position is excellent. The prices of foodgrains have been "stable". Another "clear indication" of the improvement in the food position was the Government's ability to abolish wheat zones and to expand rice zones, he said. Procurement of rice was being made in some States with a view to turning over stocks. "This method of 'turning over' with the use of indigenous stocks rather than by imports will be resorted to more and more as internal production increases further", he said. Referring to imports, the spokesman said that these had been on a lower scale than in previous years, and a large part of what was imported had gone to reinforce the buffer food stocks.

Deposit Insurance Act

The Government of India has issued two notifications under the Deposit Insurance Corporation Act, 1961, bringing the Act into force from 1st January, 1962, and constituting the Corporation with effect from the same date. The Corporation will be an autonomous body with a paid-up capital of Rs. 1 crore wholly allotted to and subscribed by the Reserve Bank of India. The Act provides for a five-member board of directors. The Governor of the Reserve Bank will be the chairman of the board. Mr. M. V. Ranganathan, Deputy Governor of the Reserve Bank, and Mr. A. Bakshi, Joint Secretary, Ministry of Finance, Department of Economic Affairs, will be the nominees of the Reserve Bank and the Central Government, respectively. The two non-official appointments to the board by the Central Government will be Professor G. S. Dewan, Retired Professor of Actuarial Finance at the Sydenham College of Commerce, Bombay and Mr. S. N. Desai, President of the Institute of Chartered Accountants of India.

The Act requires that all commercial banks functioning normally should be registered by the Corporation as insured institutions within one month of the date on which it is brought into force. It is anticipated that all the 293 banks which are eligible under the Act, including the State Bank of India and its eight subsidiaries, will be registered within the prescribed time limit. The insured banks will pay at quarterly intervals a premium of 5p per Rs. 100 a year on their deposits and will be entitled to the benefit of cover to the extent of Rs. 1,500 in the case of each depositor. The Corporation's liability will arise and be discharged on the liquidation of or enforcement of institution or the enforcement in relation to it of a scheme of reconstruction or amalgamation which does not provide for payments in full to the depositors. In the event of liquidation, payments up to Rs. 1,500 will be made by the Corporation and any expenditure thus incurred will be reimbursed to it subsequently from out of the dividends in liquidation as and when they are declared. In the event of the reconstruction or amalgamation, the Corporation will be responsible for the

payment of the deficiency, if any, in the amounts credited to the depositors up to a limit of Rs. 1,500, and it will recover the expenditure incurred by it from the subsequent payments which are due to be made to the depositors. The Act provides for the limit of the insurance to be increased at any later stage beyond the sum of Rs. 1,500 in case this is considered necessary or desirable. It also provides for the liabilities to the depositors to be discharged most expeditiously, and it is expected that, in actual practice, the payments due to the depositors will be made within a few weeks of the date on which the Corporation's liability arises.

Loan for I.I.S.C.O.

The World Bank has made a loan equivalent to \$19.5 million to the Indian Iron and Steel Company Ltd. The loan will assist in financing the Company's programme for increasing coal production from 260,000 tons to 2,200,000 tons annually, through the opening up of new mines and the expansion of existing ones, and for transporting the coal by aerial ropeways to the Company's steel works in Burnpur. The new installations will enable the Company to meet most of its requirements for coking coal of uniform and good quality from its own collieries. Three commercial banks including the Fidelity-Philadelphia Trust Company and the Philadelphia National Bank, are participating in the loan, without the World Bank's guarantee, for a total amount of \$400,000. This represents part of the first maturity which falls due in February 1967. The project to be undertaken with Bank assistance consists of the opening of two deep underground mines and of one open-cast mine at Company's properties in Chasnalla; the capacity of these mines will be about 1.4 million tons of coal a year. The Company's collieries in Jitpur and Ramnagore will be modernised and expanded so that their combined output will be increased from 260,000 tons to 750,000 tons a year. Because of the extraordinary thickness of coal seams in India, when coal is taken out, it must be replaced with sand to permit the maximum to be recovered without cave-ins. The Indian Iron and Steel Company will install or improve facilities for gathering sand from river beds and transporting it by ropeways to the mines. Aerial ropeways will also be erected to transport coal from Jitpur to Chasnalla (six miles) and from Chasnalla to Burnpur (32 miles); coal from Ramnagore will continue to be transported to Burnpur on a railway owned by the Indian Iron and Steel Company. A coal washing plant will be built in Chasnalla to ensure that the coke ovens are fed with coal of a constant quality. The works are scheduled for completion by March 1967 at a total estimated cost equivalent to \$40.2 million. The Bank loan of \$19.5 million will cover the foreign exchange requirements. The major items of imported equipment will be procured on the basis of international competitive bidding. The loan is for a term of 12 years and bears interest at the rate of 5½ percent a year, including 1 percent commission which is allocated to the Bank's special reserve. Amortisation will begin in February 1967. The loan is guaranteed by India.

Aid for Irrigation

A total sum of \$22.5 million will be available as credit to three irrigation and drainage projects in Punjab, Orissa and Gujarat from the International Development Association,

an associate of the International Bank of Reconstruction and Development, Washington. The negotiations for the International Development Association credit were conducted by a team of officers and engineers, under the leadership of Mr. M. R. Sachdev, Secretary, Central Ministry of Irrigation and Power, who also signed the agreements with the International Development Association for the purpose. The International Development Association credit will be available to India at a nominal interest of 0.25 percent, and is repayable in a period of 50 years. No payment, however, need be made in the first 10 years.

Double Tax Avoidance

A draft agreement for the avoidance of double taxation of income between France and India has been signed at technical level. The agreement now requires to be approved by the two Governments and ratified. Similar agreements have been concluded with Sweden, Denmark, Norway, West Germany and Japan. Agreements at technical level have been signed with the U.S.A. and Finland.

Indo-Pakistani Trade

The following joint communiqué was issued during the past week at the conclusion of the review of the working of the Indo-Pakistani trade agreement. "A detailed and item-wise review of the trade agreement showed that considerable progress had been made since the last meeting between the representatives of the two Governments. The two delegations conducted their talks in an atmosphere of frankness and cordiality, and were animated by a desire to fulfil their respective obligations under the agreement. In order to achieve that objective, concrete measures were decided on by both the parties to remove the existing procedural difficulties. It was agreed in particular to hold a meeting between the representatives of the two Governments at a high level to remove the difficulties that were being experienced by the fish trade. "The Indo-Pakistani Agreement was due to expire on 21st March, 1962, unless three months' notice was given by either side. Both Governments agreed not to give the notice and the agreement will now continue to run for a further period of one year. It was agreed that efforts will be made on both sides to reach the targets and ceilings specified in the agreement before the expiry of the present two-year period of the agreement in March 1962. It was further agreed that fresh ceiling for the third year will be worked out in the next meeting. For the present, certain additions have been made in the list of commodities for exports from either country. On Pakistan's side, gypsum, guar seeds and coal will be added on the export list under group 'E'. On the Indian side, coffee and coffee-beans will be added to the export list in the same group. In order to expand further the scope of the agreement, Pakistan has agreed to the Indian proposal to increase the supply of raw cotton by Rs. 1.5 crores against the supply of coal from India. This raises the present ceilings of raw cotton for two years from Rs. 3 crores to Rs. 4.5 crores. The total value of goods to be exchanged under the Special Agreement would, therefore, now be Rs. 9.60 crores, compared with Rs. 8.10 crores previously agreed to. The Indian delegation has agreed to examine on a priority basis, Pakistan's proposal of diverting a part of the railborne quota of coal from West to East Pakistan."

DON'T CARRY CASH CARRY BANK OF BARODA TRAVELLERS CHEQUES!

Keep your money safe as in a bank with Bank of Baroda Travellers Cheques! They can be cashed easily, conveniently at any branch of the Bank of Baroda, State Bank of India, Bank of Rajasthan, and some branches of the Punjab National Bank. Only your counter-signature will enable them to be cashed!

Bank of Baroda Travellers Cheques are available in denominations of Rs. 25, Rs. 50 and Rs. 100 at any of the Bank's branches!

London

T.U.C. Postpones Decision to Join Economic Development Body

(FROM OUR LONDON CORRESPONDENT)

THE anticipated announcement of an end to the "pay pause" was not forthcoming at the economic debate in the House of Commons on 18th December. The U.K. Chancellor of the Exchequer would go no further than to refer to an intermediate phase lasting until March 1963, during which the "scope for increases in wages and salaries will be small". As a result of this, the T.U.C. General Council has once again postponed a decision to join Mr. Lloyd's National Council for Economic Development, although it has agreed to meet the Chancellor again on 5th January. In spite of the T.U.C.'s refusal to co-operate, Mr. Selwyn Lloyd is going ahead with his plans, which he outlined in some detail during the debate. Sir Robert Shone, executive member of the U.K. Iron and Steel Board, will begin work as Director-General of the National Economic Development Council early in the New Year. His first task will be the recruitment of salaried technical experts. The size and shape of the planning staff will be for him to decide. Some of the staff will be civil servants, seconded from the Treasury and other departments for two or three years. Others, it is hoped, will be recruited from business and industry and also from the economic staffs of trade unions or the T.U.C. The staff will provide the surveys, analyses and "appreciations" on which the Council, as the "First Tier" in the new setup, will make its reports and recommendations.

There will be about 20 members of the Council, with the U.K. Chancellor as chairman. A few other Ministers—such as the President of the U.K. Board of Trade and the Minister of Labour—will be members. The other members will be appointed by the Chancellor from the management side of private and nationalised industry; from the trade unions, if they are willing to serve; and possibly from public or academic life. As seen by Mr. Selwyn Lloyd, the Council's main tasks will be: to study centrally the plans and prospects of Britain's main industries; to correlate them with each other and with the Government's plans for the public sector; to see how they fit in with the prospects for the economy as a whole, including the balance of payments.

As the final responsibility for decisions will remain with the Government, the Council will have no actual powers. But Mr. Lloyd has promised that the views it expresses will carry great weight with the Government, especially at the formative stage of economic policies. He also said that it would be for the Council itself to consider how far the results of its work should be made public. The Council will have complete authority over its own staff, who will not be a part of the Government "machine". The intention is that the staff—under the general direction of the Council—should be largely autonomous, "with a life and vigour of its own". It will be guaranteed by the Government the utmost co-operation from Government departments, the nationalised industries, and public bodies such as the

U.K. Iron and Steel Board and the Cotton Board. Where private enterprise is concerned, it will have to rely on voluntary information and consultation.

Trade Gap Reduced

A small decline in exports and a larger drop in imports in November reduced the U.K. trade gap on a seasonally adjusted basis from £56 million to £41 million. This was the lowest figure since the £22 million in August and was a slight improvement on the average monthly gap of £48 million in 1961. Allowing for seasonal variations, November exports and re-exports totalled £319 million—£4 million less than in the previous month. Throughout 1961, however, the export rate has diverged comparatively little from the monthly average of £321 million. Exceptional deliveries of ships caused an increase in the late summer. If these are discounted, a slight upward trend may have appeared lately.

Imports, on the adjusted basis, fell back by £19 million to £360 million, the same level as in August and September. This change may remove the impression created by the November figure that imports were resuming their growth, but it is clear that the sharp decline in early 1961 has ended. In the first 11 months of 1961, exports were running at a rate 4 percent higher than in 1960, while imports were 3 percent below last year's average. This has led to a contraction of £24 million in the average monthly gap—an improvement of £288 million a year. But this and any balance on "invisibles" account is seen against the current deficit of £339 million in 1960.

Improvement in Balance of Payments

The improvement, small and slow, in the U.K. balance of payments, was carried a stage further in the third quarter of 1961. The deficit on visible trade was £35 million, little changed from the second quarter figure of £40 million, but an appreciable improvement on the deficit of £146 million recorded in the third quarter of 1960. Net earnings from invisible trade, however, declined to £10 million, so that the current account resulted in a deficit of £25 million, against £15 million in the second quarter and £136 million in the third quarter of 1960. On long-term capital account, the outflow in the third quarter fell by £11 million to £60 million. In the event the balance of current and long-term million. In the second quarter, the overall deficit was £86 million, but these figures make no allowance for the adverse seasonal factors operating in the third quarter.

Monetary movements included an increase in the gold reserves of £279 million and a rise in overseas sterling holdings of £335 million. Sterling holdings of "non-territorial organisations" went up by £538 million (this is explained by the £536 million drawn from the International Monetary Fund) Sterling liabilities to non-sterling countries fell by £208 mil-

lion and other debts classified under "other monetary movements" fell by £96 million, mainly accounted for by repayments of money borrowed during the life of the Basle Agreement. The overall deficit of £85 million is "reconciled" with the balance of monetary movements by a positive balancing item of £125 million.

Capital Spending by Industry

Capital expenditure by industry reached a record level in the third quarter of 1961. According to the provisional estimates published by the U.K. Board of Trade, the total for the three months July, August and September was £445 million—an increase of £23 million on the previous quarter and of £40 million on the third quarter of 1960. Expenditure by manufacturing industry was 5 percent up and by the distributive and service industries nearly 6 percent higher than in the second quarter. The total expenditure of manufacturing industry, at current prices, was £329 million—some 20 percent higher than in the same quarter of 1960—with increases of 16 percent in expenditure on building work and 24 percent on plant and machinery. Expenditure on vehicles at £16.3 million was 1 percent lower than in the previous quarter and 1 percent higher than in the same quarter of 1960.

Of the total increase of £56 million in manufacturing capital expenditure between the third quarters of 1960 and 1961, £44 million was spent on plant and machinery and just over £11 million on new building. Metal manufacturing industries, principally iron and steel, were responsible for more than a quarter of the increase. The distributive and service trades spent £186 million in the third quarter, £10 million more than in the previous three months. Compared with the third quarter of 1960, expenditure on new building work was 3 percent up and on vehicles and plant and machinery 2 percent higher. The preliminary estimates show a fall in expenditure by the shipping industry.

Bank Advances Down

A reduction in overdrafts of private and professional clients of the banks between August and November is shown in the latest quarterly analysis of advances issued by the British Bankers' Association. Whereas in August, loans to personal and professional borrowers stood at £704,592,000, 18 percent of all overdrafts outstanding, the figure for November was £664,415,000. As there was a fall in total advances from £3,916,968,000 to £3,690,742,000, the proportion of advances in the personal and professional category remained at 18 percent of the aggregate. Second in importance as a percentage of the total are loans to the engineering industry, almost unchanged in amount between August and November but 13.3 percent of the total in November, against 12.5 percent in August. As the reinforced credit restrictions of July have curbed lending to private clients, they and their consequences have also helped reduce advances to

both stockbrokers and hire-purchase finance companies.

Towards Decimal Coinage

The U.K. Government has decided in principle in favour of a change-over to decimal coinage. But a full-scale examination is to be undertaken into the best form, how the change could be effected, and the cost. These decisions were announced in Parliament. In the Commons, Mr. Selwyn Lloyd reserved the Government's final decision until the findings of an enquiry. The report is expected in 1962. The Earl of Halsbury, a Governor of the B.B.C. and a former member of the Advisory Council for Scientific Research, will be chairman of the committee of enquiry. The other members will be named soon.

Mr. Lloyd said the Government thought that real advantages would follow from adopting a decimal currency. But because of the wide-spread use of accounting and monetary machinery, the transitional cost would be substantial. It should be possible to limit the cost by choice of size of the new units and a careful timing of the change-over. The Chancellor was challenged by Mr. Dugdale, Labour M.P. for West Bromwich, to say whether he was trying to help Mr. Heath, Lord Privy Seal, to get Britain into the European Common Market. He said amid laughter that the Common Market was "a different issue, but not totally unconnected."

I.C.I. Bid for Courtaulds

Mr. Paul Chambers, chairman of Imperial Chemical Industries, staggered the Stock Exchange and the directors of Courtaulds by announcing at a Press conference the other day that I.C.I. would make an offer for Courtaulds. The two Companies, which as one group would dominate the British industrial scene by its sheer size, have been exploring the possibilities of a merger since September. They were to have issued a joint statement but someone leaked the news prematurely. The only official comment from Courtaulds was that the directors "are considering their advice to stockholders in the light of the premature announcement of their discussions with I.C.I. Such advice would be given in due time." However displeased Courtaulds is at this sudden turn of events, the Company would have difficulty, if it pany would have difficulty, if it wished to do so, in successfully opposing the I.C.I. offer. This has come at a time when the Courtaulds stock was relatively depressed in price and is attractive. I.C.I. is offering its own shares in exchange for both the ordinary and preference capitals of Courtaulds, and in terms of the current price of I.C.I. shares, the offer is worth about £180 million. The Courtaulds ordinary stock went up by 9s to 39s.

If the offer succeeds, the new group would control more than 90 percent of the manufacture in the U.K. of man-made fibres, notably rayon (in which Courtaulds has almost a monopoly), Terylene (I.C.I.) and nylon (poly). Terylene (I.C.I.) and nylon (poly) are manufactured by the jointly owned I.C.I.-Courtaulds enterprise, British Nylon Spinners. I.C.I. estimates that the sales of man-made fibres throughout the world will increase at between 10 percent and 12 percent a year (and even faster in the European market) and sees the merger as the only method of getting rid of national competitive disadvantages *vis-à-vis* international groups like du Pont and Rhone-Poulenc-Rhodiaceta. I.C.I.-Courtaulds would produce with whole range of synthetic fibres and an economy in running costs and overheads that is not open to I.C.I. and Courtaulds as separate and to some degree competing groups.

THE CONSTITUTIONAL POSITION OF A JUDGE

(By an Eminent Barrister)

THE conflict between Mr. Justice Jyoti Prakash Mitter, a Judge of the Calcutta High Court, and the Home Ministry of the Government of India—the latter claiming the right to re-open the question of a Judge's age and determining the same unilaterally, and the Judge repudiating the Government's authority to do so—culminating in a writ petition before the Punjab High Court by the Judge, raises questions of considerable public importance affecting the judiciary and the public. The liberty of the subject is closely bound up with the complete independence of the Judges. When for any reason or combination of reasons, it has happened that there has been lack of courage on the judicial bench, the enemies of equality before the law have succeeded, and the administration of the law has been brought into disrepute. For a proper appreciation of the nature of the political and constitutional issues involved in this conflict, it is necessary to state briefly the facts and background as disclosed from the writ petition, the annexures thereto and the order of the Punjab High Court.

Mr. Justice Mitter was appointed an Additional Judge of the Calcutta High Court on 11th February, 1949, and a permanent Judge in January 1950. Prior to his appointment as an Additional Judge, Mr. Justice Mitter not only disclosed to Sir Trevor Harries, the then Chief Justice of the Calcutta High Court, the discrepancy between his actual age and his matriculation age, but also the basis of his statement as to his actual age, whereupon the Chief Justice accepted his actual age and forwarded it to the Government of India. The Government of India accepted this age and the date of his retirement was computed on that basis to be 27th December, 1964, and both before and after the Constitution came into force, the dates of birth as also the dates of retirement of all the Puisne Judges, including Mr. Justice Mitter, as had been accepted were published in official publications, copies of which were given to Mr. Justice Mitter at the time. The relevant entry for the year 1955-56, item No. 8, reads as follows:

Name	Date of appointment	Date of birth	Date of retirement
The Hon'ble Mr. Justice Jyoti Prakash Mitter, M.A. (Oxon), Barrister-at-Law	11th February, 1949	27th December, 1904	27th December, 1964
In a similar publication for the year 1959-60, item No. 4 reads as follows:			
The Hon'ble Mr. Justice Jyoti Prakash Mitter, M.A. (Oxon), Barrister-at-Law	11th February, 1949	27th December, 1904	27th December, 1964

The Government was, therefore, in possession of the date of the Judge's birth and also his date of retirement for well over ten years. Correspondence which are annexures to the writ petition disclose that some time in April 1959, the Home Minister of the Government of India, for the first time sought to reopen the question of the Judge's age as also the date of his retirement. It is pertinent to point out that Sir Trevor Harries was then alive and was acting as Constitutional Adviser to the Government of West Bengal. It is significant that the Home Ministry did not refer the matter to Sir Trevor Harries who could have thrown much light upon the subject. On 17th

April, 1959, Mr. Justice K. C. Das Gupta, the then Chief Justice of the Calcutta High Court, brought the Home Ministry's letter to the notice of Mr. Justice Mitter. By his letter, dated 27th May, 1959, Mr. Justice Mitter wrote to the Chief Justice as follows:

"As Government was in possession of my date of birth prior to my appointment, now more than ten years ago, I do not think it to be the intention of Government to reopen the matter. Apart from any personal consideration, any such intention, in this or in any other case, particularly after the lapse of more than ten years, must inevitably affect not only the dignity but also the independence of the judiciary. It is well known to you that in the case of a few of our erstwhile colleagues there was discomformity between the matriculation age and the real age."

He further stated:

"Had it been the Government's intention to regard the matriculation age as sacrosanct, they would have said so at the time of my appointment. On that basis, I would have either accepted or declined the appointment. In my case, there could not have been any reason for giving an age which was less than the real age, seeing that a much younger person, Mr. Justice P. B. Mukharji, had already been appointed a Judge. Moreover, even on the basis of my matriculation age, I would have been assured of full pension."

A Question of Principle

Correspondence continued over this question and on 12th August, 1959, Mr. Justice Mitter wrote to the Chief Justice as follows:

"I need hardly point out that the question raised is one of principle. If Government were allowed to question a Judge's age at any time during his tenure of office, he would be in perpetual peril of his position and would thus be unable to administer justice without fear or favour. Apart from the several similar cases, of which you and I are well aware, in the case of one of our present colleagues there is a marked discrepancy between his matriculation age and that given for the purpose of his appointment."

In September 1959, the Home Minister took the unusual step of consulting and seeking the advice of Mr. S. R. Das, the then Chief Justice of India, and the advice of Mr. S. R. Das was that in accordance with

Das's opinion at some length and wrote as follows:

"Shri Das's note calls for a detailed answer. Shri Das pretends not to know that in many cases the matriculation age used to be exaggerated. In my case, Shri Das sees some kind of fraud by someone, but not in any similar case. Shri Das is completely reticent as to similar discrepancy in the case of many a Judge both past and present. Can it be seriously suggested that I was either responsible for the age given for the purpose of my matriculation examination or was precluded from repudiating it, even if it was obviously incorrect? If this be the correct legal position, what about other Judges? It is unfortunate that the Home Minister should have thought of consulting Shri Das about this controversy. Shri Das's remarks at the end of his note were, I am afraid, made in disregard of the law of the matter. He has been well aware of an intrigue against me which was intensified by my brother's differences with Shri Asoke Sen as to the conduct of the Kashmir Conspiracy Case. My differences with Dr. Roy over Eden Gardens and as to the affairs of the National Cricket Club are wellknown, both in Calcutta and in Delhi. Prior to this matter being referred to him, Shri Das had been talking about it to diverse persons while in Calcutta. Shri Das had also discussed the matter with Dr. Roy and Chief Justice Das Gupta. In these circumstances he should have left this matter to be considered by his successor, whose appointment had already been announced and who was to assume the office of Chief Justice of India in less than three weeks' time. Fortunately for me, I had already mentioned all this background in sufficient detail to a well-known jurist in India and indicated to him that I had no confidence in Shri S. R. Das."

Government's Decision

Ultimately, on 16th May, 1961, the Secretary of the Home Department, Government of India, communicated to Mr. Justice Mitter the Government's decision that he should demit office on 26th December, 1961. Thereafter, in October 1959, Mr. Justice Mitter saw the present Chief Justice of India, Mr. Justice B. P. Sinha, in Delhi, and it is pertinent here to quote paragraph 13 of the writ petition of Mr. Justice Mitter which remains uncontroverted:

"The Chief Justice said that the controversy in question was not a matter with which the Chief Justice of India was concerned, that the Government of India had no power to reopen the question of age once it has been accepted and acted upon."

Mr. Justice Mitter was, therefore, amazed when he was informed by the Government of India in their letter No. 3/3/59-Jud.L., dated 16th May, 1961, that the impugned decision had been taken in consultation even with the present Chief Justice of India. Thereafter, on 31st July, 1961, Mr. Justice Mitter saw the present Chief Justice of India who was pleased to say that neither he nor the Government of India questioned the correctness of the age which prior to his appointment the Judge had given to Sir Trevor Harries, but that it was the policy of the Government to regard the matriculation age as the basis of a Judge's superannuation. On 7th August, 1961, Mr. Justice Mitter wrote to the Chief Justice as follows:

"When I saw you on 31st July you told me that neither you nor the Government of India questioned the correctness of the age which I had given to Sir Trevor Harries, prior to my appointment, but that it was the policy of Government to regard the matriculation age as the basis of a Judge's superannuation. You also

told me that you had approved of this policy. I shall be grateful if you can confirm all this, so as to save me from the embarrassing position in which I find myself."

The relative passage of the Chief Justice's reply dated 22nd August, 1961, is as follows:

"Yes, I confirm what I told you in the course of the talk I had with you a few weeks ago that it was decided that you should retire sometime in December next on your superannuation, without going into the correctness of the age given by a Judge according to his horoscope or other documents. That was in connection with the policy adopted by the Government of India in recent cases."

The above are the undisputed facts and circumstances under which the writ petition was filed before the Punjab High Court by Mr. Justice Mitter. It is relevant to point out that no disputed questions of fact can be raised in a writ petition.

Mr. Justice Mitter in paragraphs 17 and 18 of his writ petition gave particulars of 11 Judges, seven from the Calcutta High Court and four from the Patna High Court, showing discrepancy between the matriculation age and the age given by the Judges at the time of appointment. In paragraph 19 he also indicated that there were many other similar cases in other High Courts also.

Punjab High Court Action

The contentions of Mr. Justice Mitter before the Punjab High Court were:

(a) that he could not be removed from office by circumventing the provisions of the Constitution, viz., Article 124, sub-clauses (4) and (5). He also contended he could only be removed by Parliament in accordance with the provisions of the Constitution. In constitutional law, nothing can be done indirectly which cannot be done directly;

(b) that neither under the Constitution nor under any Statute had the Home Ministry, and much less the Chief Justice of India, any authority, direct or indirect, to terminate the tenure of a Judge at any time prior to the date of his attaining the age of 60 years on the basis of the accepted declaration; and

(c) that it was a case of discrimination and malice.

Dealing with the policy-basis of the decision regarding Mr. Justice Mitter to retire, the Chief Justice of the Punjab High Court held as follows:

"The petition, it will be seen, raises the important point whether a Judge can be asked to retire on the ground that his age is to be determined on the basis of evidence specified by Government without relation to what is his correct or true age. The contention of the petitioner is that the Government of India have laid down a wholly capricious policy, whereby the age given in the matriculation certificate is treated as conclusive evidence of a Judge's age, even though he may be able to prove that the matriculation age is incorrect and may also be able to explain the inaccuracy. The consequence of this, according to the petitioner, naturally is that where it is sought to remove a Judge without having recourse to the provisions of proviso (b) to Article 217(1), he can be told that he has reached the age of superannuation, although in point of fact he may be considerably less than 60 years of age. It will be seen at once that if there is, indeed, a right to fix a Judge's age arbitrarily, then this right is pregnant with the gravest dangers and can be used to undermine the independence and security of Judges, and an unscrupulous Home Minister can effectively get rid of a Judge by giving a finding that the age as given in a certain document (not necessarily the matriculation certificate) must form the basis of his enquiry. Thus, a policy may be adopted that the certificate or affidavit of a doctor, who was present at the Judge's birth, will be the final word on the question of the Judge's age. If the doctor can be prevailed upon to give a false affidavit, the Judge has no remedy and will have to

leave his office long before his due date, and this would have the effect of removing a Judge by a means not contemplated by the Constitution. A similar result could be obtained by any other standard of evidence, such as the statement made by a relative of the Judge in Court or upon any other occasion. The petitioner naturally laid very great stress on this point, because he had made a specific enquiry from the Chief Justice of India whether a principle had, in fact, been laid down, and the reply of the Chief Justice of India seemed to indicate that such a principle or policy had, in fact, been adopted by the Government of India and had been approved of by the Chief Justice of India. It is possible that the Chief Justice of India was under some misconception regarding this matter, otherwise he would not have permitted himself to approve of the introduction of such a dangerous policy which is calculated to undermine the independence of the highest judiciary in this country. I wish to say with all the vehemence I am capable of that to fix any piece of evidence as concluding the matter of the age of a Judge without going into the correctness of his age as revealed in other documents is against all principles of justice and violates the provisions of the Indian Evidence Act."

Dealing with the purported decision of the Home Minister, his Lordship found as follows:

"There is, however, another aspect of the matter also. No order removing the petitioner from his post has been made. He has merely been informed that his date of birth will be taken to be 27th December, 1901; on this basis the petitioner ought to retire. He has, therefore, been asked to retire. The petitioner can, if he chooses, disregard this direction on the ground that he is not bound to accept a suggestion made by the Home Ministry and the only manner in which he can be made to leave his office is by means of an order passed after an address by each House of Parliament as laid down in proviso (b) to Article 217(1) of the Constitution, and if that be so, then he need not seek any relief from this Court and there is no occasion for issuing a *mandamus* directing the Union of India not to give effect to its decision."

Independence of Judiciary

The questions which arise now are extremely grave and have to be faced squarely. The first question is, has free India got an independent judiciary or is the judiciary a subordinate branch of the executive Government? Do the High Court Judges hold office at the pleasure of the Home Ministry or do they hold office under the Constitution? The second question is, can the service of a Judge be terminated in any manner other than the one provided in

the Constitution? What then is the constitutional position of a High Court Judge? The third question is, does the Constitution or any other Statute provide for obtaining the opinion and advice of the Chief Justice of the Supreme Court for the purpose of administrative decisions? Fourthly, what is the political implication of the Home Ministry usurping the power of terminating the service of a High Court Judge—a power denied to him under the Constitution? Fifthly, what is now the position of the Judges in whose cases there is disconformity between the age given at the time of appointment and accepted by the Government and the age appearing in the matriculation certificates?

This is perhaps an appropriate place to discuss what constitutes the independence of the Judiciary. The principle of independent judiciary came from England. It took England two-and-a-half centuries to establish an independent judiciary. She has now established a system whereby the tenure of office of a Judge does not depend on the favour of the Government of the day. "Whether or not the decisions of a judge bring satisfaction or anger to the Prime Minister and his colleagues, or to the Lord Chancellor, he cannot be dismissed at will. His tenure is for life, or until retirement, subject only to good behaviour. His salary is fixed and paid out of the Consolidated Fund in order that it may not be subjected to that running fire of criticism in Parliament to which all the ordinary items of budgetary expenditure are liable. His conduct cannot even be discussed in Parliament save on a substantive motion for an address for removal from office; an extreme step to be taken only in the event of impropriety of the gravest kind." Of all primitive ideas of justice, none is more fundamental than that which predicates a judge who is impartial. Impartiality involves various factors, but it also requires certain institutional conditions. The first of these conditions is the independence of the judiciary. "A judge is not 'employed' in the sense that a civil servant is employed. He fills a public office, which is by no means the same thing; and part of his independence consists in the fact that no one can give him orders as to the manner in which he is to perform his work." The Judge owns no master. "The only subordination

which he knows in his official capacity is that which he owes to the existing body of legal doctrine enunciated by his brethren, past and present, on the bench, and the legislative enactments of the King in Parliament.

Security of Tenure

"The security of tenure which the judge enjoys is at bottom the most essential fact underlying the principle of independence. It results in a recognition by the general public that the judge has nothing to lose by doing what is right and nothing to gain by doing what is wrong. It is founded on the belief that a man cannot be relied upon to act rightly regardless of the personal consequences. The independence of the judiciary lends prestige to the office of judge and inspires confidence in the general public. It acts as a safeguard, not merely against the manipulation of the law for political purposes at the behest of the government in power, but also against the corruption of the judicial organs of the State by the bribery and intimidation of powerful outside interests which threaten the impartial administration of justice from time to time.

"The independence of the judge is of essential importance in so far as it enables the judge to adopt a particular attitude of mind towards the questions which come before him for decision. He can, in short, determine the case before him without fear that adverse results or material reward will accrue to him according to whether the decision does or does not meet with the approval of other persons." This then is the essence of what constitutes the independence of the judiciary. As has been pointed out, ever since 1701, judges in England have not held their office at any one's pleasure. Once they are appointed, they cannot be removed except for misbehaviour and that also by a joint address of both Houses of Parliament.

Story in his famous treatise on the subject states that it is indispensable that Judges should not hold their office at the mere pleasure of those whose acts they are to check, and if need be, to declare void.

British rule in India was responsible for introducing the principle of judicial independence in this country. The greatest contribution of British rule was the establishment of an independent and incorruptible judiciary and for well over a century the judiciary in India came to be looked upon by the people as independent of the Executive and as the custodian of the liberties of the people. The British departed in 1947, but they left this institution unimpaired. The transference of power did not involve any change in the concept of the rule of law. In fact, the framers of the Constitution have imported the whole of this concept into the Constitution which will be manifest from an examination of the provisions in the Constitution.

Chapter IV of Part V of the Constitution deals with the Union judiciary and Chapter V of Part VI with the High Courts in the States. There are only two relevant articles in the Constitution which govern the subject, viz., Article 217 and Article 224. Article 217 sub-clause (1) lays down that a Judge of the High Court shall hold office until he attains the age of 60 years, provided that: (a) a Judge may, by writing under his hand addressed to the President, resign his office; (b) a Judge may be removed from his office by the President in the manner provided in clause (4) of Article 124 for the re-

moval of a Judge of the Supreme Court.

Article 124 sub-clause (4) is as follows:

"A Judge of the Supreme Court shall not be removed from his office except by an order of the President passed after an address by each House of Parliament supported by a majority of the total membership of that House and by a majority of not less than two-thirds of the members of that House present and voting has been presented to the President in the same session for such removal on the ground of proved misbehaviour or incapacity."

Sub-clause (5) of Article 124 is as follows:

"Parliament may, by law, regulate the procedure for the presentation of an address and for the investigation and proof of the misbehaviour or incapacity of a Judge under clause (4)."

Therefore, under the Constitution, a Judge's service can be terminated only in three ways, viz. (i) by efflux of time; (ii) by resignation; and (iii) by removal by Parliament on the grounds and in the manner as provided in Article 124 clauses (4) and (5).

Protection of Judges

When a Judge accepts office, his tenure of office is necessarily determined at the time of his appointment and on the basis of the declaration made by him and accepted by Government. There is no provision either in the Constitution or in any other Statute which gives authority to the Home Ministry or to the Chief Justice of India to reopen the question of the Judge's tenure of office at any time thereafter and on any ground. An examination of the provisions of the Constitution in this regard leaves no doubt that any such power was purposely withheld from the executive Government for the protection of the tenure of office of a Judge. If it were permissible for the Home Ministry or the Chief Justice of India to set up subsequently any arbitrary standard for terminating the services of a Judge, it would have meant circumventing the constitutional provisions and placing the entire judiciary at the caprice of the Home Ministry and the Chief Justice of India, and that would have been the end of any independent judiciary.

It is clear, therefore, that the Constitution has made no provision for any determination of the age of a Judge once an age has been given by the judge and accepted by the Government. Therefore, the Home Ministry has no power to reopen this question now. Determination means fixing a date beforehand. The danger inherent in permitting such a course has been elaborately set out by the Chief Justice of Punjab High Court in his judgment.

The irresistible conclusion, therefore, is that the Constitution intended to provide for an independent judiciary and did not want to make the judiciary a subordinate branch of the executive Government nor to make the Judges hold office at the pleasure of the Home Ministry. In the instant case the decision of the Home Ministry amounts to circumventing the provisions of the Constitution and to an encroachment on the powers of Parliament. And if carried into effect, it will reduce the judiciary to a subordinate branch of the Executive.

It may be conceded that the declaration of age given at the time of appointment and accepted by the Government, if incorrect, may not amount to misbehaviour at that stage; but if, on the other hand, fraud is proved to have been practised and is adhered to during his term of office, then it certainly amounts to misbehaviour and he can be removed in the manner laid down

in Article 124, without waiting for his superannuation.

In the instant case, if that is the allegation of the Home Ministry, the proper procedure for the Ministry to follow was to come before Parliament, and it would have been for Parliament to decide what steps should be taken in the matter. But the present move of the Home Ministry is an artifice to usurp the power of Parliament over the judiciary.

If the Home Ministry is serious about the question of age and is not merely using it as a pretext to single out one Judge, it is imperative that all the cases, maybe 60 or 70, be brought up before Parliament and dealt with according to the Constitution on a uniform basis so that it may not be said that discrimination has been made. Further, if their cases are not disposed of all at a time and the sword is kept hanging on the heads of such Judges, they could not be expected to act as independent Judges and the public will be denied the advantage of getting impartial judgment from them.

Chief Justice Consulted

The decision of the Home Ministry to go back on the date of superannuation as accepted by the Government at the time of Mr. Justice Mitter's appointment and to retire him on the basis of the age given in the matriculation certificate was an Executive order passed on the Administrative side. The Home Ministry took the unusual and unprecedented step of consulting Mr. S. R. Das, the then Chief Justice of India and subsequently the present Chief Justice of India as will appear from the letter set out below and also from the letter dated 16th May, 1961:

Home Minister, India,
New Delhi
September 14, 1959.

My dear Bidhan,

I have consulted the Chief Justice, India, in regard to the question of the age of Justice J. P. Mitter, which was last dealt with in your letter of the 19th of August. I enclose a copy of the note of the Chief Justice of India. I entirely agree with his advice and Justice J. P. Mitter may be informed accordingly through your Chief Justice.

Yours sincerely,
Sd/- G. B. Pant

Dr. B. C. Roy,
Chief Minister, West Bengal,
Calcutta.

It is inescapable that the Home Ministry obtained the opinion of the Chief Justices in order to give its decision the force and colour of some judicial determination.

It is pertinent to point out that the Constitution of India does not provide for obtaining any opinion from the Chief Justice of India on a matter like this. In fact, the Constitution provides that if the Government needs any legal advice, it should seek it from its retained legal adviser.

Article 76, sub-clause (1) is in the following terms:

"The President shall appoint a person who is qualified to be appointed a Judge of the Supreme Court to be Attorney-General for India."

Sub-section (2) of Article 76 is in the following terms:

"It shall be the duty of the Attorney-General to give advice to the Government of India upon such legal matters, and to perform such other duties of a legal character, as may from time to time be referred or assigned to him by the President, and to discharge the functions conferred on him by or under this Constitution or any other law for the time being in force."

That being the position, it is relevant to enquire why the Home Ministry by-passed the Attorney-General and sought the Chief Justice of India's advice. In fact, such a practice of consulting Judges beforehand has been universally con-

demned. In England, as far back as 1486, during the reign of Henry VII, such a practice was described as an ancient malpractice. When in Stafford's case Judges were asked to give their opinion, they replied it was hard and contrary to order that they should give their opinions beforehand on a matter on which they would have to decide judicially. Instances of such condemnation can be multiplied. Coming to modern times, Lord Merrivale's observations on the subject will show the dangerous implication of this practice of consulting Judges:

"I want to say two or three words more with regard to the position of His Majesty's Judges in this matter. It is no part of the business of His Majesty's Judges, and never has been part of their business, at any rate since the Act of Settlement, to have any advisory concern in the acts of the Administration, or to

take any part in advising the Administration. The natural effect of associating them with the Administration and attaching to them the responsibility for conclusions which are put forward by the Administration will be to weaken the authority of the judiciary. It can have no other effect. As I have said, this is no part of the business of a Judge. The business of a Judge is regulated by his oath of office. It is to determine according to law, without fear, favour or affection, questions which arise between His Majesty's subjects or between any of His Majesty's subjects and either the Throne or the Executive. That is the function of the Judges. Why should the Judges be brought in by this side-wind to help the Executive to carry on their business, to replace the Law Officers and to relieve the Executive of responsibility as to decisions that they ought to arrive at upon the law?"

Lord Carson also condemned this practice in the following terms:

"The reasons of my opposition to this very grave and unparalleled system, which it is sought to set up, of trying to rope in the judiciary to the help of the Executive in their administrative capacity. Anything more dangerous or more unfair to the subject I cannot conceive."

(Reference: *The New Despotism* by Lord Heward.)

In a country like India, where a party with a huge majority has run the Government for 15 years and when there is no effective Opposition in Parliament, the Executive is often tempted to assume more power. The political implication of conceding this right to the Home Ministry, which it is claiming, would be disastrous for the country. The issues involved are of such grave nature involving life and liberty of subjects that the public cannot remain complacent in this matter.

We reckon our production in 1960-61 to be 69,552 tonnes of rolled products and 5,624 tonnes of castings. In other words a rise of 48% over the previous year.

In 1951-52 MUKAND employed 1,064; in April 1961—2,306. Over the past ten years production figures have soared—13,615 tonnes of rolled products and 704 tonnes of castings in 1951-52; and 425% more in 1960-61.

MUKAND manufactures high grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing flux of big orders—like the one placed by the Railways with MUKAND in October 1961 for 4,862 sets of Centre Buffer Couplers valued at Rs. 1,14,00,000.

MUKAND provides India's new and growing industries with the quality components that they must have.

MUKAND
IS
STEEL

of £1 in N.C., M.C. and T.C. There are many complaints that the E.P.C.s do not truly represent the market, and that the figures are not market prices but control prices. While there is a slight basis for this reasoning, one must also bear in mind the fact that if the E.P.C. figures are to control all the prices at which sales are registered, it is extremely difficult to be fair to all, particularly when the market varies by as much as £3 a ton depending on the mark. The E.P.C. does stand for export price control, and it is only natural that the authorities should be inclined to quote the higher prices which are being paid. The ideal of course would be to remove the price control, but this is not feasible until the country's foreign exchange position is better.

Registrations during the first half of December were unusually large at 217,781 bales. The U.K. was the biggest buyer with 32,525 bales, followed by Belgium with 27,725 bales. West Germany bought 19,205 bales, France 18,667 bales, and South Africa 17,882 bales. The total of the purchases are 50 more than last year's. Burma bought 10,000 bales, and India only 3,000 bales. Total registrations to-date amounting to 2,443,529 bales compare favourably with 2,106,169 bales, registered at this time of last year. Exports are also higher totalling 1,796,323 up to the end of November, against 1,540,302 bales last year.

Exports during the first half of December slackened off somewhat, but with the rush apparent towards the end of the month, they are not likely to be much less than 450,000 bales as opposed to 550,000 bales during November excluding India.

Tossa which promised a high quality crop at the beginning of the season followed white jute, and the quality dropped rapidly. At present, not only are the higher qualities hard to find, but the fibre in general is over-mature and weak. Nevertheless, local prices paid for tossa, compared with white jute, have been considerably higher than usual. This will obviously encourage growers to increase the proportion of tossa sown next season.

Generally speaking, growers have been disappointed with the prices which they have received this year, although it is more psychological than real. They compare current prices with the fantastic rates of last season.

The coming months are sure to create many more headaches. The financial squeeze continues, making it very difficult for balers to operate. There is every reason to believe that overseas customers still have a lot of buying to do, and it is particularly reported that Dundee, although it has generally speaking reduced its batch, expected ample supplies of the higher grades of tossa and was waiting for lower prices. It is also felt that the

U.S.A. has to purchase some of the higher grades of tossa. If this is true, prices for tossa will increase. White prices might also increase in sympathy.

THE FOREIGN JUTE MARKETS

FIBRE UNCHANGED

(FROM OUR DUNDEE CORRESPONDENT)

THERE has been very little change in raw jute prices during the past two weeks. Occasionally, a seller comes out at 10s to 20s less than he or other firms have been naming, but the price quickly reverts to its former level. Spinners here have made little response to the offers made and Continental spinners also have bought little, yet prices are being very well maintained. Sellers appear to be in a strong position and it looks as if the lower level of values which is being expected may not be reached this season. There seems to be an ample supply of jute, but the quality is generally poor and it is not every spinner who would buy inferior material. Mill Firsts are very sparingly offered, but at £157 a ton, they are considered to be too dear, while Mill Lightnings are offered at from £123, Mill Hearts from £102 and Grade Hearts £83 10s to £86, with Grade

Tossa-2/3 from £140, fours from £128 and Continental Tossa-2/3 from £107 10s, January-February, c.i.f., U.K.-Continent. Spinners in Dundee and district are, it is said, well bought in their raw material this season and they can afford to hold off.

Calcutta goods have been very irregularly quoted, but the general tone of the market has been firm with a tendency to become dearer in the near position. The intimation that the Indian jute mills would unseal another 2½ percent of their looms during January has made no impression on prices. These are quoted now at 85s 6d for 40in. 10oz. hessians and 66s for 7½oz., December 79s 6d and 60s 3d January, 75s 3d and 57s 6d February-March and 71s 6d and 54s April-June, with B Twills at 203s 6d, 197s 6d, 193s and 188s 6d for the respective positions of shipment, all f.o.b., Calcutta. Dundee spinners and manufacturers are very busy. They are all handicapped by the policy of the workers to ban overtime, on which many of them rely to get out their production. The strikes at several of jute industries' works have been settled and the go-slow policy is all well behind and users of both yarns and cloth are clamouring for delivery. Under the circumstances, prices are all very firm, and the outlook for the industry is quite bright in 1962.

BRITISH TEXTILE REVIEW: A THREAT TO WOOL

MAJOR breakthroughs in the textile industry are not quite as rare as the term may suggest, and the claim that a new method of making synthetic fibres "woolly" is "the first major breakthrough in textiles in 500 years" may be disputed. There is no doubt, however, that the new product of Newhill and Earnshaw, "Airvel", will be an important factor in the textile trade if the promise offered by the chairman, Mr. John Earnshaw, is realised. Synthetic fibres have imitated many of the desirable qualities of wool, but they have not hitherto successfully imitated its "crimp". Synthetic-fibre fabrics have, therefore, lacked the elasticity and the capacity to retain warmth which are characteristic of wool. "Airvel" has these "woolly" characteristics, while retaining the advantages, such as uniformity and light weight, of synthetic fibres.

Mr. Earnshaw was (understandably at this stage) not very communicative concerning the technique behind this achievement, but he disclosed that nylon or acrylic fibres were crimped by heat-treatment (not by a chemical process). The Company—of Bingley, Yorkshire—has spent a considerable sum on research on the process and is now considering the most appropriate means of financing its full-scale development. Initially (probably next February), the new "synthetic wool" will be supplied only to the hand-knitting trade but within a few months, some of it will be available to the machine-knitting industry. The price will be approximately double that of the same weight of average-price knitting wool, but the Company claims that "Airvel" will be competitive in price even at the start, because it is only about half the weight of the equivalent volume of wool.

Ready to Wear

Another London fashion week recently presented the fashion houses' collections for spring (Northern Hemisphere) 1962. These displays, in May and November, are gradually building up a considerable export trade in ready-to-wear clothing. Export orders resulting directly from the fashion week last May were valued at some £600,000, and it is confidently expected that the figure for November will be higher. The various fashion houses are, of course, competing among themselves, but they combine harmoniously in these events to increase the whole industry's exports. They have two characteristics in common, a high standard of workmanship and finish and a scale of prices that is in almost every category lower than that of similar goods made abroad. There may still be some room for improvement in design, but in this matter, too, the British industry has established a standard that is generally admired. It does not insulate itself from foreign trends, but it retains a characteristically British styling, unostentatious but not dull.

An interesting feature of the latest fashion week was its appeal to the markets of the European Free Trade Association. The fashion house group has recently established public relations offices in the capitals of Sweden, Norway, and Denmark, and British fashion weeks have been organised in these cities. If Britain enters the European Economic Community, the ready-to-wear industry will be

ready for a big selling effort in the Common Market—particularly West Germany. The Americans, through their Government's new trade centre in London, have been promoting ready-to-wear casual and children's clothing. It is not noticeably cheap, but many of the styles are appealing. The more formal wear shown in London fashion weeks has interested many American buyers. On the other hand, the longer-established trade in British wool cloth is going through a difficult phase in the American market.

Japanese Wool Cloth

The British wool industry is still suffering from labour shortages, and one of its problems in selling to America is to ship goods within the specified time. That market requires special styles and high quality: they are the particular attributes which can sell the goods in spite of a tariff that prohibits price-competition between British and Japanese products. But the U.S. wool industry is campaigning strongly against imports, and British firms, having had unfortunate experiences in that market in the past, are chary of risking special production for it. Improvements in the quality of Japanese cloth are watched here with some apprehension. As price-brackets in the American trade are comparatively rigid, increases in making-up costs may require substituting cheaper cloth, and good-quality Japanese cloth is often available at lower prices than the British equivalent, but the price of made-up goods does not know the origin of the cloth from which they are made, because the labelling law requires only that "foreign" origin will be acknowledged in made-up goods. Some of the problems of the American market are specific, but the challenge of higher-quality Japanese cloth is of widespread concern. The British industry fears a big increase in exports of Japanese wool cloth to the British Commonwealth in the event of British participation in the European

Common Market, involving, of course, modification of the preferential treatment of British goods.

Many firms in Yorkshire believe that the most effective way to develop their export trade is to establish a technological lead in blending synthetic fibres with wool. The responsibility for this development must be shared between the traditional

wool industry and the newer synthetic-fibre industry; and, indeed, the synthetic fibres by widening their variety are extending their versatility. For instance, Terylene, firmly established as a fibre for blending with wool by the worsted-spinning process, is now being developed for blending in the woollen sector of the industry.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953=100) declined by 0.2 percent to 123.0 during the week ended 9th December, 1961, compared with 123.2 revised

for the previous week. The index was lower by 1.0 percent and 1.4 percent, respectively, when compared with the corresponding week of the previous month and that of a year ago.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August, 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to November 1961. As compared with October, the Nov-

ember Index for Fuel and Lighting shows a drop of 3 points, while those for Food, Clothing and Miscellaneous remain unchanged at 555, 588 and 303 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 1 point during November 1961.

Middle Class Cost of Living Index Number for Calcutta, Prices in August 1939=100

CENTRAL COMPLETES 50 YEARS

Sir SORABJI POCHKHANAWALA

in the service of the people

We have travelled a long way since we set out on our journey fifty years ago. During this eventful period, we have striven hard—and achieved something. Our present position as INDIA'S LARGEST JOINT-STOCK BANK in the Private Sector is due to the unfailing support of our vast clientele. We owe them a deep debt of gratitude for their trust and confidence.

We can repay this debt in the only way open to us—by rededicating ourselves, on this, our Fiftieth Anniversary, to the service of the people. With their co-operation, we hope to continue to play our part in the economic development of the far-flung territories in which we operate.

STRONG DEMAND AT TEA EXPORT SALE

AT Sale No. 29, held on 2nd January, there was a strong general demand for the 74,947 packages on offer at the Export Auction. The main feature of the sale was the demand for "tea for price" which dealers generally were fully firm to dealer. Better liquoring and medium Assam orthodox descriptions were irregular and sometimes easier, but the remaining grades were firm to dealer particularly the better liquoring Fannings grades. There was a keen demand for C.T.C.'s which were firm to dealer particularly bright liquoring medium and off-grade descriptions. Legg-cut teas were fully firm to dealer. Darjeelings sold readily and prices were dearer with quality. Tip also sold at higher rates. Whole leaf was generally firm to dealer with strong competition for the cheaper varieties.

FREIGHT MARKETS IRREGULAR

DURING the past fortnight, unsteady conditions prevailed in the freight markets. Far East, of course, remained the busiest area, and old rates were repeated. Bagged rice from Bangkok to Ceylon paid 34s 6d f.i.o. and stowed and Burma to 6d f.i.o. was fixed at 43s f.i.o.s. against Ceylon was fixed at 43s f.i.o.s. The Burmese Government fixed another collier from South Africa at the unchanged rate of 48s f.i.o. and trimmed for January shipment. Another small vessel of 3,800 d.w. tons has been fixed on a voyage charter with coal from Calcutta to Madras at 40s free in, owners paying for trimming and discharge. Few more vessels have been accepted at \$(U.S.) 6.75 f.i.o.s. for sugar in bulk from India to one port in the north Atlantic or Gulf. Few months before, second-hand Liberty tonnage, which obtained over £140,000, could not obtain more than £100,000 for them now.

HIDES AND SKINS STEADY

The market was steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 26th December, 1961 and 1st January, 1962)

Cowhides: Wet salted (Ord.) 1,400 pcs. on the basis of Rs. 12.25 to Rs. 13.75; Wet salted (Slaughtered) 11,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Bazaar Stocks

(1st January, 1962)

Cowhides: Wet salted (Ord.) 59,000 pcs.

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 38,000 pcs.; Assam-Dinaipur 44,000 pcs.; Muzafferpore-Patna - Pakur - Purneah-Kissenganj 2,12,000 pcs.

LINSEED FIRM

The market was firm during the past week, and there was an all-round rise in prices. Arrivals were very small, and sellers were reserved. The oil section was firm, and sellers were hesitant to sell for forward deliveries. Only small local business was done for ready delivery. The oilcake market was dull. The local demand was poor. Ready January was quoted at Rs. 31.12 a maund.

COMPANY AND PUBLIC NOTICES

THE BANK OF INDIA LIMITED

Registered Office:

70-80, Mahatma Gandhi Road,
BOMBAY-1.

Issue of Capital

THE Directors of The Bank of India Limited announce that the consent of the Central Government under the Capital Issues (Control) Act, 1947, has been obtained by the Bank to an issue of capital to the value of Rs. 2,00,00,000 as follows:—

2,00,000 Ordinary shares of Rs. 100/- each.

Rs. 50 per share paid up, for cash at a premium of Rs. 20 per share.

The Directors intend to recommend the requisite proposals to the shareholders in general meeting.

It is intended that the 2,00,000 ordinary shares to be issued shall be offered to the shareholders on the Register on a date to be decided upon in the proportion of one new share for every three shares, whether ordinary (partly-paid) or "A" ordinary (fully paid), held by such shareholders on such date.

T. D. KANSARA,
General Manager.

Bombay, 22nd December, 1961.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Vol. CXXXVIII No. 3692

THE KEY CURRENCIES IN 1962

IT seems reasonable to hope that 1962 will be a year of stable exchange rates, at least as far as concerns the principal currencies. There is no prospect of revaluations, such as of the mark and guilder in 1961, nor of devaluations, such as of the French franc and related currencies at the dawn of 1959. The reason for this is not that the world's main moneys inspire special confidence. On the contrary, all of them save the Swiss franc are regarded with varying degrees of distrust, and gold quotes everywhere in north America and western Europe at a small but significant premium. The reason is rather that none of the governments concerned can be sure of succeeding if it takes isolated action. The strong currencies are not strong enough to risk an upward revaluation, and the weak currencies (among which one must now count the dollar) could not be devalued without finding so many imitators that the benefit of the operation would be lost. The manipulation of the exchange parity is the most egotistical, secret and arbitrary expression of national sovereignty in the economic sphere; by joining together in a monetary club dedicated to mutual consultation and assistance, the world's leading finance ministers have virtually contracted not to resort to it in the months ahead. One could conceive this as a general re-alignment of all their currencies at once, but such an operation would be formidably difficult, has no precedent in monetary history and, to boot, would have little chance of remaining secret till the last minute. So concerted revaluation seems as unlikely as isolated devaluation for most of 1962.

Mr. Khrushchev and his artificial Berlin crisis are responsible in part for this prospect of stability. It is no secret that Washington and London would have welcomed an upward revaluation of the Common Market moneys, no doubt followed by the Swiss franc. This would have tipped the balance in favour of the dollar and the pound while avoiding the humiliation of a devaluation of those two master-currencies. It is clear that the leader of such an operation would have had to be West Germany, for the mark is the only chronically strong currency on the Continent and the only one that is strong for sound, rather than psychological, reasons. Both Switzerland and Italy run trade deficits which would worsen, with consequent loss for their national industries, in the event of revaluation. France's persistent trade and payments surplus is so relatively new in the chequered history of that currency that no one, starting with the French Finance Minister, regards it as one of the eternal verities. The Common Market countries are sufficiently apprehensive about Britain's entry for them not to present her with an exchange advantage; if she wants that advantage, Britain will have to take it, by devaluing. Nevertheless, if West Germany had resolved to upvalue her mark substantially (rather than taking another bite at the cherry as last year), her Common Market partners might have consented to follow her part of the way, thus assisting the dollar and pound.

Anxieties awakened by the Berlin crisis have ruled out this possibility because nervous capital has been leaving West Germany, whose monetary reserves have declined. The payments balance on

current account remains surplus, and Germany's trade returns show that the mark is still over-strong. But it is unthinkable that the mark should be considerably upvalued at a time when reserves are falling, when the country's political future under an aged Chancellor and unstable coalition is uncertain, and when a danger of war exists on its frontiers. If and when the Berlin affair has been settled (or simply let drop by Moscow) and when West Germany has found the successor of Dr. Adenauer, rumours of a revaluation of the mark will be in season. In the meantime, if the U.S.A. and Britain wish to widen the gap between the gold content of their currencies and of Continental currencies, it will have to be by devaluation. Of this, there seems to be no pressing need for the first half of this year.

As regards the dollar, nothing has changed fundamentally since its prestige was lost in the gold rush of end 1960. American gold losses continue; at a much slower rate, admittedly, but only because foreign holdings of U.S. short-term paper have increased. The high level of American indebtedness to foreign holders of that paper means that, if there were a panic about the future value of debts labelled in dollars, U.S. gold reserves would fall rapidly. However, for the moment this is not to be feared. The vigorous recovery of the economy after the 1961 recession inspires a new confidence in America's ability to meet its responsibilities. It is true that the immediate result of the boom will be to reduce the trade surplus, for it raises imports of raw materials before U.S. export prices have fallen to levels competitive with European. But then, the trade balance has never been the source of the dollar's trouble; the U.S.A. has had, throughout, a trade surplus, and if that is reduced somewhat temporarily, no one doubts that it will eventually recover. More important is the effect of the boom on the payments balance;

Wall Street has once again become attractive to foreign investors, made hesitant by the slowdown of the U.S. economy and the weakness of the share market up to last September, while U.S. firms may now be less anxious to find investment opportunities in western Europe. These facts could have an early and favourable effect on the payments balance.

However, even if 1962 brings this respite, one is still entitled to argue that the dollar's position is, in the long run, unsound. Firstly, the recovery which has recreated confidence is based on government orders (for arms, public works and foreign aid) and is thus accompanied by a large budget deficit. As every capital that has ever received I.M.F. and World Bank aid knows, the first requirement of monetary stability is a balanced budget. Secondly, the Americans continue to inflict a payments deficit on themselves by giving foreign governments more aid and gifts than the U.S. trade surplus can finance. This double weakness in U.S. financial policy need never lead to a devaluation, however. A devaluation of the dollar would certainly be followed instantly by a devaluation of the pound (and hence of most sterling-area currencies) and probably of the Common Market moneys too; thus it would amount to an increase in the price of gold, against which Washington has long set its face. The dollar could secure an advantage by abandoning all fixed parity in terms of gold and "floating", whereupon it would sink lower than other currencies if they decided to "float" too. This would be a solution of despair and the consequent competition in devaluation would mark the ruin of all the post-war efforts at monetary co-operation. Obviously, rather than take that desperate course, Washington would prefer to pocket its pride and limit the convertibility of the dollar, introduce gradual exchange controls and reduce its aid to foreign governments. Steps have already been taken to limit American spending abroad, for example, by reducing the value of purchases tourists may bring home duty-free and by having subsidised exports shipped in American bottoms. There is a lot more in that line that could be done (starting with reduction in paramilitary spending abroad, a field where Mr. Eisen-

hower's reforms were withdrawn after a sentimental campaign about separating warriors from their families) in order to restore the payments balance.

Many such defensive measures would be contrary to the free-trade principles that Mr. Kennedy is crusading about, and others would be damaging to U.S. pride. Yet all of them have been adopted by other western governments since the war in order to defend threatened currencies, and as the dollar gets used to its dethronement from omnipotence, there is no reason why Washington should not behave as lesser capitals have done. People got so used to the almighty glory of the dollar that they imagined that once it lost pre-eminence, devaluation was the next step. One sees this reflex in the exchange markets today: the announcement of some defensive measure in Washington, which would normally strengthen another capital's currency, leads to a fresh access of weakness in the dollar, because speculators are convinced that it can never battle along like an ordinary money, but must seek to retain pre-eminence, if not at one value then at another in terms of gold. In 1962 we shall perhaps grow accustomed to seeing the dollar take its place among other western currencies, and defend itself by the same shifts. There are enough of these to hand (for the dollar's long reign saw some very uneconomic practices take root) for devaluation to be postponed for many a year yet.

The most evident remedy is reduction of U.S. foreign aid, which is the main cause of the payments deficit. After all, there is something absurd in the present situation that requires the U.S.A. to score an immense trade surplus in order to provide lavish aid. Since trade with the communist countries is negligible, that surplus must have been earned either in trade with the developing countries (whose deficit has then to be filled with U.S. aid) or in trade with the European countries (who, without that deficit, could afford to give more aid themselves). A more rational division of labour among the industrialised countries now associated in the Organisation for Economic Co-operation and Development, and in the monetary club set up inside the O.E.C.D., could lead to the aid burden being divided equitably, so that the U.S. contribution remained within the limits set by its trade surplus. Of course, that solution would imply the U.S.A.'s abdication from the rôle of leader of the western alliance, or at least a mitigation of its pre-eminence which depends (in part, for military forces counts too) on the fact that it is Washington that gives so much of the foreign aid. Quite apart from this struggle for leadership inside the western alliance, it might occur to its members that less aid would be required if *all* of them reduced their trade surplus in commerce with the developing countries, that is, took steps to promote the export earnings of countries like India.

The situation of the dollar, then, seems reasonably secure in the short term and, if fundamental weaknesses persist, these are not without remedy. The case of the pound sterling is similar in that the worst of the short-term danger appears to have passed and 1962 opens with the hope that the attacks can be resisted fairly easily. Fundamental weaknesses persist, however, and their remedy is less simple. For the year that is beginning, London pins its hopes on the American industrial recovery and on the continuation of low commodity prices, which will, respectively, stimulate British exports and depress the import bill. Since many of the commodities in question are imported from the U.S.A. this amounts to counting on a diminished U.S. trade surplus, whereas Washington is counting on the reverse. The combination of depressed commodity prices with a high level of activity in U.S. and European industry might seem paradoxical. Unfortunately for us in India, however, London is not too sanguine in hoping to have it both ways, for the weakness of commodity prices is chronic and does not seem to be affected as much as in previous trade cycles by an intensification of western industrial activity. Given maintenance of the pay-pause (or at least that British wages rise no faster than elsewhere, where they are rising fast), one may expect to see the reserves climb slowly through much of 1962.

Just as important—because this will encourage investors to leave their capital in London to profit

from high interest rates—the fear of devaluation has receded. The sums placed (nominally) at the disposal of the I.M.F. by the Common Market countries, while not necessarily sufficient to cope with a run on the dollar, are ample for the protection of the pound. They exceed the amount mobilised last year under the Basle Agreement, which saved the pound from a disaster that came much nearer than the public knew at the time. The question of a moderate devaluation of the pound—to be decided not in panic but in cold blood, like the only successful devaluation in France's history, that of end-1958—will arise if Britain negotiates her entry into the Common Market by the end of this year. By then, however, we will know the terms of Britain's mem-

bership and will have an idea of her trade pattern for years to come. It is probable that this will be totally in contrast to that of the post-war years—it will need to be, because it has been proved now that Britain cannot survive, nor sterling be defended, in the old system, based on Commonwealth preference and neglect of neighbouring Europe. A suitable arrangement with the Six could offer Britain the prospect of a trading system in which expansion was at last compatible with international solvency, whereupon sterling's future would be transformed. While one waits for this hope to materialise, sterling seems well able to defend itself throughout 1962, like the dollar and the other principal moneys of the world.

INVENTORIES FOR EFFICIENCY

THE shortage of raw materials, stores and spare parts for industry has been growing steadily in India in recent years. Until about 1956, the shortage was not acute; industrialisation was relatively slow, and the foreign exchange reserves were large enough to finance fairly liberal imports. But, since then, the established industries have been expanding and new ones have been arising; the requirements of the manufacturers are, therefore, becoming larger, newer and more diverse. As the process of industrialisation gathers momentum, the trend is certain to be accentuated. On the one hand, the shortage of foreign exchange will ensure that the difficulties in getting imported materials will continue for a long while yet. On the other, as experience shows, the pattern of industrialisation is such that the growth of ancillary enterprises is likely to lag far behind. It is against such a background that special interest attaches to a document just published by the National Productivity Council. This is the report of the Indian Productivity Team on Stores and Inventory Control, led by Mr. A. K. Basak, which visited Japan, the United States and West Germany about 15 months ago. Among the more important points it emphasises is that, in many industries, "material flow costs" are the third largest element in manufacturing costs, ranking only behind materials and labour. Therefore, if the former can be reduced through better inventory control, production costs as a whole can be brought down appreciably.

Realisation of this fact abroad is such that more and more companies nowadays "are systematically attempting to cope with the complex task of managing and controlling the movement of materials from their original sources through production facilities to final consumption." In the United States, the stage has been reached where a new "science", under the predictably forbidding title of "chroematerials", is being developed round this rather abstruse subject—a "science" in which industrial application is backed by considerable academic research. But in India, where advanced management techniques have not permeated very far, the report appears at first sight to be ahead of the times. In this country, the range of goods which industry requires is relatively small, simple and unsophisticated. Yet the channels through which the goods may be distributed or acquired are undeveloped. The growth of ancillary suppliers has been limited. Even where they do exist, the quantity, quality and delivery dates of the supplies tend to be unreliable. Finally, to the extent that stores and inventories have to be built out of imported products, they are subject to unpredictable bureaucratic delays and to erratic shifts in the Government's licensing policies. All these factors militate against the adoption of careful inventory control of the sort that appears to have greatly impressed the Team. The economies of the countries it visited are without exception free, competitive and highly developed—and nowhere near as badly afflicted by foreign exchange shortages as India is. By contrast, in this country, the handicaps to proper inventory control are "built-in" features of the economy. It is in this sense that the observations made by the Team will strike some here as of rather academic interest.

There is, however, much that the Team says which deserves to be brought to the notice of

Indian entrepreneurs, whose policies for stores and inventory control in general tend to be haphazard. Many conceive their function as merely to get all the raw materials they can, to process them into the final product, and then to wait for customers to come along and pick the latter up. But one of the outstanding conclusions emerging from the Team's report is that this is not enough. An attempt to reduce "material flow costs" has to be an essential part of the general effort to reduce production costs. A remarkable example is quoted of the Locomotive Division of the General Electric Company of the U.S.A., where it was discovered that the diesel engine accounted for more than one-third the material cost of a complete locomotive. To save accumulation of work-in-progress, it was arranged to use a template instead of the engine in the early stages, so that a large part of the initial wiring and piping could be done without the engine. This meant a month's reduction in the time that engines were needed in the manufacturing cycle, and led to an inventory saving of approximately \$250,000, in addition to large reductions in handling and storage charges.

Such examples could no doubt be multiplied, not only from western but also on a smaller scale from Indian experience. The fact nevertheless remains that, in this country, the importance of inventory control for reducing production costs is not generally recognised. Among the larger and more progressive companies operating in fairly competitive markets, the recognition may be there. But over a wide range of Indian industry, which is deliberately nourished by cheap credit facilities or which is sheltered by protectionism, "cost-consciousness" is rather limited. At the same time, it also seems true that, in many industries, scientific inventory control of the sort the Team recommends can hardly be applied. Major enterprises like the jute or the cotton textile industry, for instance, draw their raw materials from highly speculative markets, where price fluctuations are sharp. Their profitability, therefore, depends not on the use of neat formulae such as those implicit in A.B.C. techniques, but on price anticipation, which is a matter of human judgment. It would have been interesting if the Team could have shown what sort of improved inventory control techniques have been adopted abroad in industries which operate in similarly speculative markets. A tentative impression is that the techniques the Team has studied are applicable primarily to industries which enjoy relatively stable markets for their raw materials, stores and finished goods. These types of industries are still small in India. Although they are growing in importance, and should ultimately become dominant, the more relevant question at present is how far inventory control can help the traditional, agriculture-based and speculative industries to reduce their production costs, especially for the purpose of competing in export markets.

For companies individually, there are two topical lessons which may be drawn from the Team's report, although they have not been discussed at any great length or illustrated extensively by examples from abroad. The first is that companies and industries should be more energetic in promoting the growth of ancillary suppliers. The second is that when machinery and equipment is ordered from abroad, an appropriate

quantity of spare parts should be ordered at the same time on the basis of the manufacturers' recommendations. As a corollary to the second, it is suggested that groups of companies using similar equipment might consider establishing a joint pool of spare parts and components (like the international airlines do) to insure against sudden breakdowns. On the question of organising ancillary suppliers, the Team, as might have been expected, was particularly impressed by the achievements of Japanese industry. The value of the report, however, would have been enhanced if the Team had studied which sectors of Japanese industry have done best in this sphere; what methods they have adopted; to what extent those methods can be adapted for use in India; and which particular industries in this country should do the pioneering work. As a generalisation, what the Team says is unexceptionable, but it is also unhelpfully familiar. So a major contribution which the Team could have made would have been to continue the debate in specific, concrete terms. Perhaps the time spent in Japan was too short; perhaps a more detailed study of how the "material flow" from ancillary suppliers is organised was not included in the terms of reference. But the importance of the subject to Indian industry is so great that this could well have been among the Team's major preoccupations.

At the national, as distinct from the company or industry, level, the Team's report has a few general lessons for India's planners. It discusses the macro-economic effects of inventory changes, primarily concentrating on how the latter tend to accentuate booms and slumps. But the main problem in India is much more elementary. It is that, by ignoring the need for proper inventories, the Government and the planners have seriously handicapped the growth of industrial production. Major projects have been licensed freely, and only later has it been discovered that the materials necessary to keep them going can

neither be imported nor are they available in India. More specifically, steel plants have been built and expanded, but the expansion of facilities for supplying fuel and raw materials has been neglected. Or coal mines have been urged to increase their output, and then denied the licences for the machinery and spare parts which are essential for the purpose. Or, perhaps the most pitiable example of all, an uneconomic, high-cost motor-vehicle industry has been created behind protectionist barriers, but little has been done to create the ancillary facilities which alone might enable it to produce motor-vehicles as cheaply as they ought to be produced.

These are merely the specific consequences of a national economic attitude which holds that the flow of materials and the build-up of inventories are of negligible importance; that what matter are large plants which somehow "symbolise" economic progress even when they lie partially idle. The Productivity Team's report should help to bring a reminder, even if indirectly, that this attitude will not serve if India is to have an efficient and competitive economy. The country cannot afford to have shining new factories standing silent in the sun waiting for the raw materials and spare parts which nobody thought of getting. Nor, conversely, at a time of acute capital shortage, can it afford to tie up huge funds in burdensome stock accumulations, such as those of cotton textiles and cement some years ago and of sugar and coal more recently. Industrial costs have to be reduced, and one major way of reducing them is to ensure that materials flow from the primary source to the final consumer as fast and as smoothly as possible. This not only means that the growth of ancillary enterprises has to be encouraged and the reliability of domestic suppliers improved. It also means that transport facilities have to be expanded; and the country has to decide that the right use of its untied foreign exchange is for maintenance rather than development imports.

Current News and Comment

Punjab National Bank Earns More

The Punjab National Bank Ltd has reported encouraging results for 1961. This reflects the general prosperity of the banking industry during the year resulting from the steady growth of deposits as well as the sustained demand for credit on account of increased economic activity. After providing for tax and the gratuity fund trust and making other provisions, Punjab National has made a net profit of Rs. 1.19 crores. The profit of Rs. 1.18 crores in 1960 was subject to tax and the provision for taxation amounted to Rs. 53 lakhs. With Rs. 4.23 lakhs brought in from the previous year, the amount available for appropriations comes to Rs. 1.23 crores. From this, Rs. 45 lakhs is transferred to the reserve fund, against Rs. 11 lakhs in 1960. The provision for bonus to staff is up from Rs. 27 lakhs to Rs. 37.50 lakhs. The directors have recommended a final dividend of Re. 1 a share on old shares, making a total of Rs. 2 a share, taxable, which is the same as in 1960. A proportionate dividend of 50nP a share has been recommended for new shares. The dividend has, therefore, been maintained on the increased capital. The interim and final dividends together absorb Rs. 28.75 lakhs, leaving Rs. 10.52 lakhs to be carried forward. The preliminary figures, released along with the final dividend announcement, do not make any mention of the increase in deposits and advances during the year which enabled the bank to earn a higher profit. The Rs. 10-paid shares of Punjab National have recently improved from Rs. 20.25 to Rs. 22 on sustained investment support.

Dena Bank Results Impress

Devkaran Nanjee Banking Co. Ltd—popularly known as the Dena Bank—has done exceedingly well during the year ended December 1961. This has enabled the directors to raise the final divi-

dend from Rs. 2.52 to Rs. 3.50 a share, subject to tax, bringing the total distribution for 1961 to Rs. 5.50 against Rs. 4.38 a share (Rs. 50 paid) in the previous year. After providing for taxation and bonus to staff, the net profit is up by about 80 percent from Rs. 14.55 lakhs to Rs. 26.15 lakhs. With Rs. 7.86 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 34.01 lakhs. The preliminary figures about the working results do not indicate the amount earmarked for taxation, but the bonus payable to the staff has been raised from Rs. 2.65 lakhs to Rs. 3.50 lakhs. The allocation to the reserve fund has been increased from Rs. 8 lakhs to Rs. 15 lakhs. The proposed dividend absorbs Rs. 5.50 lakhs, against Rs. 4.38 lakhs, leaving Rs. 13.51 lakhs to be carried forward. The bank's deposits rose during the year from Rs. 35.80 crores to Rs. 43.38 crores and the working fund from Rs. 42 crores to Rs. 48 crores. It opened 11 new branches during the year, bringing the total to 107. Dena Bank's capital funds represent 2.88 percent of its deposits. With a view to increasing its resources, it has asked for the Government's permission to raise its share capital by Rs. 50 lakhs. Against its paid-up capital of Rs. 50 lakhs, reserves total Rs. 75 lakhs. The Rs. 50-paid share of Dena Bank is currently quoted around Rs. 73, against the 1961 high of Rs. 71.30.

Bank of Maharashtra Profit Up

The Bank of Maharashtra Ltd has reported encouraging results for 1961. Its deposits rose from Rs. 15.13 crores to Rs. 19.28 crores and loans and advances from Rs. 6.78 crores to Rs. 10.13 crores. The working capital increased from Rs. 17 crores to Rs. 21 crores and investments from Rs. 6.63 crores to Rs. 7.82 crores. After providing Rs. 2.25 lakhs (against Rs. 1.65 lakhs) for bonus to staff, Rs. 1 lakh (the same) for gratuity the net profit has risen by about 60 percent from

Rs. 9.50 lakhs to Rs. 16.11 lakhs. Adding Rs. 41,000 brought forward from the previous year, the disposable surplus amounts to Rs. 16.52 lakhs, against Rs. 9.93 lakhs in 1960. The dividend has been maintained at 9 percent, but since it is on the increased capital of Rs. 40 lakhs (against Rs. 32.85 lakhs), it absorbs Rs. 3.38 lakhs (against Rs. 2.88 lakhs). Provision for taxation has been raised from Rs. 3.50 lakhs to Rs. 7.80 lakhs and Rs. 4.90 lakhs (against Rs. 2.50 lakhs) has been transferred to reserves, representing 30.41 percent of the year's profit before tax and 58.96 percent of the profit after taxation. The Rs. 50-paid share of the bank has recorded an impressive rise over the past few weeks and is now quoted around Rs. 82—the highest level for many years.

United Bank Does Well

The net profit of the United Bank of India Ltd for the year ended December 1961, after payment of bonus to staff and providing for taxation, amounts to Rs. 29.50 lakhs, compared with Rs. 14.63 lakhs in 1960. The directors have decided to recommend a dividend of 6 percent, taxable, against 4.20 percent, taxable. The dividend absorbs Rs. 16.08 lakhs, and Rs. 4.10 lakhs is allocated to statutory reserve. The carry-forward is Rs. 2.40 lakhs. Deposits increased by Rs. 6.72 crores to Rs. 58.45 crores.

Mysore Kirloskar Expanding

Presiding at the annual general meeting of the Mysore Kirloskar Ltd in Harihar recently, Mr. C. Rangappa, chairman, discussed (a fuller version of the speech was printed in last week's issue of *Capital*) the Company's progress and the warm response which its new share issue for Rs. 40 lakhs met with. Under the expansion scheme, a factory is being built in Hubli. New machinery worth Rs. 18.14 lakhs was installed in the past year. Mr. Rangappa said that much provisions would have to be made in future to provide for depreciation and development rebate. Although sales rose from Rs. 1.41 crores to Rs. 1.57 crores, the return in a machine tool industry like Mysore Kirloskar cannot be expected to be as high as in other industries because capital investment is usually much bigger. The working of Mysore Kirloskar has suffered due to the shortages of hard coke, pig iron and transport.

Prospects for Kolhapur Sugar

The Kolhapur Sugar Mills Co. Ltd has produced satisfactory results during the year ended June 1961. The cane crush of 251,850 tons was a record, and 316,777 bags of sugar were produced. The average recovery was 12.57 percent. The improvement is due to Kolhapur Sugar's expansion. In outlining the Company's policy in his chairman's address at the annual general meeting in Kolhapur recently, Mr. R. R. Ruia pointed out (a fuller version of the speech was printed in last week's issue of *Capital*) how the attention given to the cane development department has produced satisfactory results. Not only have sugarcane supplies increased but their quality has also improved a great deal. Along with the sugar factory's expansion, the capacity of the distillery has been expanded. The latter is now producing at the rate of about 2 million gallons a year. Kolhapur Sugar has undertaken a programme of developing alcohol-based chemical industries. Orders have been placed for equipment for producing acetic acid and butyl acetate. Production is expected to begin soon. These chemical industries are likely to be of great help in raising the Company's profit.

Mr. Ruia is not very optimistic on the prospect for the current year. The rise in labour costs combined with the increased prices of stores and spare parts could reduce profits. Referring to a cut of 10 percent in sugar production by factories during the current year, the chairman said that the move could at best reduce production by only 100,000 tons. But the production cut would affect many factories as well as cane growers. There is no doubt that there is a sugar surplus for the time

being, so the price of the commodity has declined. To end this difficulty, it is necessary to increase domestic consumption by reducing the price. This can be done by cutting the excise duty. Besides, new uses of sugar should be encouraged. If the fruit canning industry is promoted, sugar consumption will increase. Referring to the prospect for exports, Mr. Ruia urged that steps be taken to raise them to 600 tons a year. Although exports have got to be made at losses, factories may be compensated by means of subsidy. But it is doubtful whether the promotion of exports by subsidy will benefit the economy in the long run.

Kesar Sugar Profit Down

The working of Kesar Sugar Works Ltd for the year ended July 1961, shows a substantial decline in the profit in spite of satisfactory production and higher sales. While sales rose by about 14 percent from Rs. 1.91 crores to Rs. 2.25 crores, the gross profit declined by 40 percent from Rs. 23.75 lakhs to Rs. 14.31 lakhs. After providing Rs. 3.94 lakhs (against Rs. 3.16 lakhs) for depreciation, Rs. 96,000 (against Rs. 2.10 lakhs) for development rebate and Rs. 4 lakhs (against Rs. 8.50 lakhs) for taxation, the net profit amounts to Rs. 5.39 lakhs, against Rs. 9.99 lakhs in the previous year. Including Rs. 40,000, being the development rebate provided last year and now written back and the carry-forward of Rs. 1.04 lakhs, the disposable surplus amounts to Rs. 6.83 lakhs. The ordinary dividend has been proposed at Rs. 10 a share (Rs. 50 paid), against Rs. 9 a share (Rs. 40 paid) in the previous year, absorbing Rs. 4.50 lakhs, against Rs. 4.05 lakhs. The preference dividend accounts for Rs. 91,000. The allocation to general reserve has been reduced from Rs. 4 lakhs to only Rs. 50,000, leaving Rs. 92,328 to be carried forward.

The directors state that the quantity of cane crushed and sugar produced during the year were about the same as in the previous year, the respective figures being 5,880,012 maunds (against 5,882,023 maunds) of sugarcane and 5,64,648 maunds (against 5,63,077 maunds) of sugar. The recovery was also the same around 9.6 percent. But the profit was squeezed by a rise in the cost of production and the loss on sugar export quotas. The fall in prices of chemicals and some setback in production due to the Government's policy of allowing chemical imports under the export promotion scheme affected the working of the chemical factory. As for the Company's distillery, it had a record year concerning both production and offtake. A larger production was possible because of the increase in manufacturing capacity. The offtake was satisfactory as it became possible to export 229,381 gallons of alcohol during the year. As for the current year, the directors state that the cane crop appears to be satisfactory, but the production may have to be curtailed in accordance with the production quota fixed for the factory. The working results will also depend on the prices realised. The Company has obtained an industrial licence for manufacturing sodium hydro-sulphite, formosul and some other chemicals. A scheme has been submitted to the Government of India for implementing the project with the technical and financial collaboration of the U.K. firm of A.C.C. (Brotherton) Ltd. The directors will seek the shareholders' sanction after the scheme is approved by the Government. The Rs. 50-paid share of Kesar Sugar is currently quoted around Rs. 240.

Bhopal Sugar Disappoints

The Bhopal Sugar Industries Ltd has reported disappointing results for the year ended September 1961. The gross profit is down by about 50 percent in spite of a larger crush and increased production. The dividend has been reduced from Rs. 2.25 to Rs. 1.50 a share (Rs. 10 paid), both taxable. To pay even this reduced dividend, the directors have had to transfer Rs. 50,000 from the dividend equalisation fund. Bhopal Sugar crushed 95,695 tons (against 72,608 tons) of sugarcane and produced 87,627 bags (against 73,320 bags) of sugar. The gross profit declined sharply from Rs. 14.71 lakhs to Rs. 7.42 lakhs. The directors attribute the fall to the marked decline in recovery from 10.11 percent to 9.16 percent due to the early with-

drawal of the monsoon. Besides, with the over-production of sugar in India, Bhopal Sugar was unable to realise even the controlled prices and the unsold stock had to be valued at the market prices which were lower than the controlled ones. The Company suffered a loss of Rs. 2.23 lakhs on its exports of 8,063 tons. The implementation of the wage board also adversely affected the working results. Furthermore, Bhopal Sugar had to pay Rs. 3.07 lakhs (against Rs. 2.37 lakhs) by way of sugarcane cess. After providing Rs. 2.48 lakhs (against Rs. 2.03 lakhs) for depreciation, Rs. 88,600 (against nil) for development rebate and Rs. 1.25 lakhs (against Rs. 4.50 lakhs) for taxation, the net profit amounts to Rs. 2.30 lakhs, against Rs. 6.94 lakhs in the previous year. The proposed ordinary dividend will claim Rs. 2.62 lakhs and the preference dividend another Rs. 79,125. The net profit being insufficient to meet the dividend liability, the directors have withdrawn Rs. 50,000 from the dividend equalisation fund. After making various appropriations and adjustments, there remains a balance of Rs. 1,725 to be carried forward, against Rs. 93,383 brought in.

The directors state in their preliminary report that the sugarcane crop in the current season is satisfactory. Besides, the recovery is expected to be better. Due to overproduction, the Government has restricted sugar production by 10 percent, but the output of the Company's factory has been provisionally fixed at 8,762 tons, which is about the same as in the previous year. Bhopal Sugar has been granted permission to expand its crushing capacity to 1,250 tons a day. The erection of the new machinery is progressing and the licensed crushing capacity is expected to be achieved in due course. The Rs. 10-paid share of the Company is currently quoted around Rs. 23.76, the lowest quotation for over two years.

Indian Vegetable Does Well

Indian Vegetable Products Ltd has reported satisfactory results for the year ended September 1961. Sales are up by Rs. 45.75 lakhs at Rs. 3.38 crores. The gross profit has increased from Rs. 9.35 lakhs to Rs. 10.70 lakhs. After providing Rs. 4.55 lakhs (against Rs. 3.65 lakhs) for taxation, Rs. 71,536 (against Rs. 61,833) for depreciation and Rs. 8,245 (against Rs. 7,930) for development rebate, the net profit amounts to Rs. 4.34 lakhs, against Rs. 4.08 lakhs in the previous year. The dividend has been maintained at 17 percent, and it absorbs Rs. 3.60 lakhs. The directors have allocated Rs. 1.08 lakhs (against Rs. 1.53 lakhs) to various reserves. A sum of Rs. 23,284 has been written back, being the excess provisions made in previous years. The carry-forward amounts to Rs. 2,393, against Rs. 4,342 brought in. The Rs. 100-paid share of the Company is quoted around Rs. 141.

Carborundum Universal Repeats

Carborundum Universal Ltd, Madras, has reported encouraging results for the year ended August 1961, with both sales and profit recording an improvement. Sales are up from Rs. 1.01 crores to Rs. 1.23 crores and the gross profit from Rs. 31.69 lakhs to Rs. 36.08 lakhs. After providing Rs. 14.15 lakhs (against Rs. 12.10 lakhs) for taxation, Rs. 6.98 lakhs (against Rs. 7.29 lakhs) for depreciation and Rs. 56,000 (against Rs. 31,600) for development rebate reserve, the net profit amounts to Rs. 14.39 lakhs, against Rs. 11.99 lakhs in 1959-60. The allocations include general reserve Rs. 4.50 lakhs (against Rs. 4 lakhs), development, replacement and research reserve Rs. 2 lakhs (against Rs. 70,000) and dividend equalisation reserve Rs. 2 lakhs (against Rs. 3 lakhs). The dividend has been maintained at 9 percent and it absorbs Rs. 4.50 lakhs, leaving Rs. 1.60 lakhs to be carried forward, against Rs. 20,508 brought in. Carborundum Universal has a paid-up capital of Rs. 50 lakhs, against which its reserves and surplus total Rs. 30 lakhs. Its fixed assets valued at Rs. 85.31 lakhs have been written down to Rs. 48.26 lakhs. The Company is seeking the Government's permission to increase its capital from Rs. 50 lakhs to Rs. 70 lakhs. Additional funds are required to finance the Company's scheme for manufacturing

aluminium oxide. The Rs. 100-paid share of the Company is unofficially quoted around Rs. 350; the share is not listed on any of the stock exchanges.

Jeewanlal Rights Issue

Jeewanlal (1929) Ltd has obtained the Government's sanction to increase its capital from Rs. 72 lakhs (all in equity shares) to Rs. 1.26 crores by issuing 360,000 equity shares of Rs. 10 each and 18,000 9.5 percent taxable cumulative redeemable preference shares of Rs. 100 each. The equity shares will be first offered to the existing shareholders in the proportion of one new share for every two held. The rights issue announcement is expected soon. Fresh capital is required for setting up a rolling mill in Madras which is estimated to cost about Rs. 2 crores. The plant will have an installed capacity of 4,000 tons a year which will supplement the Company's annual requirements of 8,000 tons. Land for the factory has already been purchased. The plant is expected to go into production by 1963. Jeewanlal has secured the technical collaboration of Aluminium Laboratories Ltd, Montreal, Canada. The cost of the project is to be met partly by the proposed issue of capital and partly by loans for which negotiations are said to be progressing.

Kelvin Jute Maintains

The Kelvin Jute Co. Ltd has maintained the taxable ordinary dividend at 15 percent for the year ended May 1961. It is covered more than four times and offers a yield of 8.6 percent at the present price of Rs. 175 a share. The profit has improved from Rs. 13.45 lakhs in 1959-60 to Rs. 19.71 lakhs, after increasing depreciation from Rs. 4.59 lakhs to Rs. 5.63 lakhs. Taxation is allocated Rs. 8.80 lakhs (against Rs. 5.55 lakhs), development rebate reserve Rs. 1.54 lakhs (against Rs. 1.46 lakhs) and general reserve Rs. 4 lakhs (against Rs. 1.50 lakhs). The carry-forward is Rs. 2.61 lakhs, against Rs. 1.21 lakhs brought in. Gunny sales rose from Rs. 1.82 crores to Rs. 2.34 crores and stocks from Rs. 13.90 lakhs to Rs. 33.02 lakhs.

The directors say that Kelvin Jute's working during the first six months of the current season has been adversely affected by the fibre shortage. But they expect considerable improvement during the second half of the current year in view of the larger raw jute supplies. The modernisation of the spinning department has been completed. Other modernisation schemes are likely to be undertaken soon.

Cables from Oriental Power

A new enterprise known as Oriental Power Cables Ltd has been formed to undertake the manufacture of paper insulated power cables. The plant which is proposed to be set up in Kotah (Rajasthan) will have an annual production capacity of 600 miles of cables. The project is estimated to involve a capital outlay of Rs. 2.50 crores, of which Rs. 1.03 crores is likely to be spent on imported plant and equipment. The cost of indigenous machinery is estimated around Rs. 19.50 lakhs. Oriental Power Cables has approached the Japanese firm of Sumitomo Electric Industries Ltd to supply the technical know-how. The plant and supervise production for five years. It is said to have obtained the Government's approval for importing machinery under the yen credit. The promoters expect the plant to go into production in June 1963. The Company will have an authorised capital of Rs. 2 crores, made up of Rs. 1 crore in equity shares, Rs. 50 lakhs in 9½ percent taxable redeemable cumulative preference shares and Rs. 50 lakhs in unclassified shares. The issued capital, it is understood, will consist of Rs. 75 lakhs in equity shares and Rs. 30 lakhs in preference shares. The promoters, directors and their friends are likely to take up equity shares of the value of Rs. 20 lakhs, and the balance is likely to be offered for public subscription in a few months. Oriental Power Cables proposes to meet the capital requirements for the project by raising a loan of Rs. 65 lakhs from the Industrial

Finance Corporation and obtaining cash credit of Rs. 60 lakhs from banks.

Dalmia Iron to Modernise

The ordinary shares of the Dalmia Iron and Steel Co. Ltd have improved to Rs. 11 on the publication of the satisfactory results for the year ended September 1961. After transferring Rs. 10.50 lakhs (against Rs. 8.10 lakhs) to depreciation, Rs. 11.50 lakhs (against Rs. 4.25 lakhs) to development rebate reserve and Rs. 1.50 lakhs to taxation, the profit amounts to Rs. 9.65 lakhs, including Rs. 4.142 brought in. The profit for 1959-60 was Rs. 4.04 lakhs, after adjusting a debit balance of Rs. 3.48 lakhs brought in. The ordinary taxable dividend has been maintained at 10 percent on the doubled capital and it absorbs Rs. 8 lakhs. The yield works out to 9.1 percent at the present price. The carry-forward is Rs. 1.65 lakhs.

Although production in the steel casting section has improved, it has been hampered by the shortages of electric power and foundry-grade pig iron. Dalmia Iron has been given a licence to double the capacity of the grinding media plant to 6,000 tons a year and to increase the capacity of the steel castings plant from 1,500 tons to 3,600 tons a year. To obtain the increased output, it is necessary to modernise the equipment. The project is estimated to cost Rs. 70 lakhs, and the directors hope to complete it within one year. Technical collaboration is being sought to raise the production of spun pipes from 15,000 tons to 75,000 tons.

Delhi Cloth Debenture Issue

The subscription list for the Rs. 2.5-crore 6½ percent redeemable debenture issue of the Delhi Cloth and General Mills Co. Ltd will open shortly. The debentures are a first charge on fixed assets and a floating charge on moveable assets belonging to the five units of Delhi Cloth. The debentures are redeemable between ten and 14 years commencing from the end of the tenth year after the issue at the rate of 20 percent each year. The Company has, however, the right to redeem the whole or part of the debentures outstanding at any time after ten years at a premium of ½ percent of the face value of the debentures. A preferential allotment will be made up to a maximum of Rs. 8.91 lakhs to the former holders of Delhi Cloth's 5½ percent debentures 1962-66, which have already been redeemed. Furthermore, firm allotments to the tune of Rs. 1.19 crores will be made to the underwriters. The entire issue—except those allotted to the holders of the 5½ percent debentures—has been underwritten. The debentures are being issued to meet part of the capital requirements for the buildings as well as for the plant and machinery required for the P.V.C. and rayon tyre cord projects which are estimated to cost about Rs. 11 crores. The balance of capital requirements for the projects will be met by the issue of equity and preference capital, deferred payment arrangements, loans from financing institutions and other sources, arrangements with banks as well as internal resources of the Company. The P.V.C. plant will have a production capacity of 20 tons a day. The annual capacity of the rayon tyre cord plant will be 8 million lbs. Both plants are being set up in Kotah, Rajasthan.

Prospects for Consolidated Coffee

The chairman of the Consolidated Coffee Estates Ltd, Mr. C. I. Machia, told shareholders at the annual general meeting that the world coffee situation is not likely to improve for many years. So it would be imprudent to base the future marketing policy on the assumption that world prices would improve. The chairman said that for the first time in 20 years, India has been forced to export a greater proportion of her total crop than is consumed locally, since Government policy is markedly in favour of increased exports. But there is a need for exporting an increased volume of selected coffees. Mr. Machia warned against the dangers of dumping coffee abroad at whatever price it would fetch. The Government should reconsider its coffee export policy. Mr. Machia said

that the Coffee Board should advise the Government "with clarity and truthfulness" even if it is contrary to the avowed policy of the Government.

The chairman also emphasised the need for expanding the internal market. With the stress on both internal and export markets, one irresistible conclusion is that the producer should get an adequate return. By selling coffee at whatever price it may fetch in the export market, the Coffee Board is unable to pay the grower even the so-called minimum return. The chairman prescribed four specific measures to help the producer. Firstly, the excise duty should be abolished altogether. Secondly, a direct subsidy should be offered to coffee producers by making up the difference between the cost of production and the export price. Thirdly, the rate of agricultural income tax should be reduced. Fourthly, the excise duty should be revised on an *ad valorem* basis.

The chairman defended the dividend policy in the context of the need to conserve resources because of the lower income expected in the coming year. About the prospects for Consolidated Coffee, he said that the estimated crop for the coming season may not be harvested. In view of the cautious valuation of Rs. 1.90 a point, the chairman expects that the final return might be slightly higher.

Seshasayee Industries Share Offer

The directors of Seshasayee Industries Ltd have decided to issue 400,000 equity shares to the public, instead of making a rights issue. It is said that they have made this decision in order to afford the fullest opportunity to the investing public to subscribe directly for the shares. Seshasayee Industries has completed all arrangements in connection with the issue which is meant to finance its expansion project. The present paid-up capital of Rs. 40 lakhs consists of Rs. 8.60 lakhs of 6½ percent tax-free preference shares and Rs. 31.40 lakhs of equity shares. The forthcoming issue is fully underwritten, the Madras Industrial Investment Corporation Ltd taking Rs. 15 lakhs, the Life Insurance Corporation Rs. 10 lakhs, the Investment Corporation of India Rs. 5 lakhs, and the United Commercial Bank Rs. 3 lakhs. The balance of Rs. 7 lakhs is being underwritten by seven brokers' firms in Madras, Bombay and Delhi. Seshasayee Industries' expansion scheme is expected to be implemented by the middle of 1963. The full production of 3,000 tons of electrical porcelain is likely to be reached early in 1964. Meanwhile, the Company will maintain production at the rated capacity of 1,200 tons a year.

Seven Years of I.C.I.C.I.

Last Friday, the Industrial Credit and Investment Corporation of India completed seven years of its existence. During this short period, the Corporation has come to play an important part in the Indian financial scene. Its subscribed capital is Rs. 5 crores, of which approximately 28 percent is owned by non-residents (mostly British, American and German) and the remaining 72 percent is held by Indian nationals. The capital is very widely held, and at the end of 1961, the shareholders numbered over 1,800. The resources of the I.C.I.C.I. have been augmented by borrowing. So far, three foreign exchange loans have been obtained from the World Bank, amounting in all to \$40 million. The D.L.F. has granted a loan of \$5 million. Rupee borrowing from the Government of India amounts to Rs. 17.5 crores. Thus the total capital and borrowed resources of the Corporation amount to the equivalent of about Rs. 44 crores. In addition, sizable reserves have been built up.

The operations of the Corporation have steadily increased over the years. By the end of 1961, net assistance of all types—loans, direct subscription and underwriting—sanctioned to private industry amounted to approximately Rs. 42 crores, of which Rs. 19 crores was in foreign exchange and Rs. 23 crores in rupees. The number of companies to which financial assistance was sanctioned was 166—91 for rupee assistance and 75 for foreign exchange loans. Of these, 33 companies were granted both rupee and foreign exchange assistance. The Cor-

poration has become a major factor in the field of underwriting. From 1st January, 1956 to 30th June, 1960, of the total of Rs. 35.2 crores newly-issued capital underwritten, the share of the I.C.I.C.I. was no less than Rs. 6.92 crores, or roughly 19 percent, making it the largest single underwriting institution. The Corporation has been instrumental in arranging participation loans and other operations in which Indian or foreign financial institutions combine together to meet the requisite finances. It has also played a key rôle in introducing and familiarising new forms and concepts of term-finance.

Maharashtra Land Ceiling Exemptions

The Governor of Maharashtra has promulgated an ordinance exempting State-owned undertakings and private industrial organisations from the operation of the Maharashtra Lands (Ceiling on Holdings) Act. The ordinance will remain in force until its provisions are incorporated in the Lands Ceilings Act through a Bill which will be brought before the State Legislature after the general elections. The Maharashtra Agricultural Lands (Ceiling on Holdings) Act, 1961, does not at present provide for exemption from the ceiling on holding land, to lands held by industrial undertakings. So an industrial undertaking for which land is acquired by the Government under the Land Acquisition Act, 1894, will not be entitled to hold or retain such land if it has not been actually put to industrial or non-agricultural use, and if it exceeds the ceiling area. Similar difficulty is also likely to arise in the case of lands held by Government-owned or Government-controlled corporations like the State Transport Corporation, Hindustan Antibiotics Ltd, etcetera. Such corporations will also be prohibited from holding or acquiring land in excess of the ceiling area.

In order to remove the difficulty, it has been considered necessary to amend Section 47 of the Act suitably for providing exemption to the lands held by corporations owned or controlled by the State, and also to lands held by private industrial undertakings for *bona fide* industrial or non-agricultural use. The Government has also taken powers to withdraw the exemption given to land held by an industrial undertaking if such land is not actually put to industrial or non-agricultural use within a period of two years. The Maharashtra Government has also promulgated another ordinance levying a purchase tax on sugarcane bought by factories for manufacturing sugar. The ordinance prescribes the levy and collection of the tax at a rate not exceeding 1½ p a kilogram of sugarcane. The new tax is intended to make up the loss of revenue incurred by the State due to the cessation of the Sugarcane Cess Act from 1st January.

Insuring Petroleum Imports

Following the recommendations of the Damle Committee on oil prices, the issue of channelling the insurance of petroleum products, from the overseas port of shipment to the Indian port of discharge, through Indian insurers has come to the fore. The matter is now engaging the attention of some leading insurers. This business has always been transacted by overseas insurers on mutually agreed rates and terms. Since a large amount of foreign exchange is involved in importing petroleum products, the Committee felt that if the insurance could be given to Indian companies at competitive rates, some saving would be effected. From that point of view, the Committee examined the rate prevailing in the U.K., and found that it worked out to approximately 0.0755 percent of the f.o.b. prices. For the purpose of oil pricing, the rate is important. It is admittedly low, but is presumably feasible for foreign insurers with their global trading experience, although it might not be economic for limited shipments from point to point. The Damle Committee made a reference to the Indian Insurance Companies Association, which had expressed willingness to write the business on a pool basis, and observed that "the rates quoted by it and the risks covered are not considered to be favourable compared with the risks and the

THE SOUTH INDIAN EXPORT CO. LTD., MADRAS 2

questions involved in this case. It is notorious that by reason of the University regulation, once extant, that no candidate could sit for his matriculation examination unless he attained the minimum age of 16 years on 1st March of the year of the examination, the age of a candidate was often adjusted to that requirement and was seldom the correct age. An analysis of the Calcutta University calendars for the period 1930 to 1940 shows that on the basis of the matriculation records, 92.7 percent of the candidates were born on 1st March—a most absurd phenomenon.

Now, as to the constitutional position. Section 220(2) of the Government of India Act, 1935, provided:

"Every Judge of a High Court shall be appointed by His Majesty by warrant under the Royal Sign Manual and shall hold office until he attains the age of sixty years."

The material parts of Article 217(1) of the Constitution of India are in these terms:

"Every Judge of a High Court shall be appointed by the President by warrant under his hand and seal and shall hold office until he attains the age of 60 years :
Provided that—

(a) a Judge may, by writing under his hand addressed to the President, resign his office ;

(b) a Judge may be removed from his office by the President in the manner provided in clause (4) of article 124 for the removal of a Judge of the Supreme Court."

It is clear that the Constitution enjoins that a Judge shall hold office until he attains the real age of 60 years and not any notional age of 60 years. If that be the position, how could the Government of India have asked Mr. Justice Mitter to retire on the basis of his matriculation age, without properly deciding the question of his age on a consideration of the relevant materials? The Chief Justice of India, in consultation with whom the Government of India had taken their decision, wrote to Mr. Justice Mitter as follows:

"Yes, I confirm what I told you in the course of the talk I had with you a few weeks ago that it was decided that you should retire sometime in December next on your superannuation, according to your age in the matriculation certificate, without going into the correctness of the age given by a Judge according to his horoscope or other documents. That was in consonance with a policy adopted by the Government of India in recent cases."

This policy-basis of the decision was reiterated even by the Prime Minister of India who, by his confidential letter No. 1569-PMH/61, dated 30th July, 1961, informed Mr. Justice Mitter as follows:

"I have spoken to the Chief Justice of India about this matter this evening. He told me that sometime back a rule had been framed which was probably applicable to such cases, and in accordance with this rule action had been taken in regard to Judges of several other High Courts."

There cannot, therefore, be any doubt notwithstanding whatever the Government of India may be minded to say now, that Mr. Justice Mitter was asked to demit office in consonance with the policy of the Government of India to regard the matriculation

age as the basis of a Judge's superannuation. As to this, the Punjab High Court held that if there was, indeed, such a right to fix a Judge's age arbitrarily, e.g., on the basis of the matriculation age, then that right was pregnant with the gravest dangers and could be used to undermine the independence and security of Judges.

It appears that although this controversy has been going on for the last three years, the so-called policy of the Government has been enforced in the case of Mr. Justice Mitter alone, irrespective of his real age, although it has not been controverted that there are many other similar cases. It is manifest that the policy-basis of the decision was wholly unconstitutional. There is also no doubt that this dangerous practice of consulting the Chief Justice in matters of administration must inevitably militate against the independence of the Judiciary.

Now, the most important constitutional question raised by Mr. Justice Mitter is: Does the Constitution of India guarantee a fixed tenure of office for a High Court Judge? Upon the true interpretation of Art. 217(1) read with Art. 124, the answer must be in the affirmative. Once a Judge is appointed on the basis of an age given and accepted at the time of his appointment, the question of his age cannot be reopened. A Judge can, however, be removed on the ground of proved misbehaviour or incapacity and only in the manner laid down in clauses (4) and (5) of Art. 124. Suppose a Judge were to insist upon a wrong age as being his correct age, it would be open to Parliament to consider whether the conduct of the Judge amounted to misbehaviour. Neither Art. 217(1) nor any other enactment prescribes any procedure for the determination of the age of a Judge. Unless, however, such age and consequently the date of retirement are determined prior to appointment, there can be no fixed tenure. The limit of 60 years means nothing, unless it is decided beforehand when the age of 60 is to be reached. Moreover, if a Judge holds office until he attains the age of 60, it is clear that no one can be appointed a Judge who is above 60. Therefore, the determination of the age of a Judge must precede his appointment. It is at the date of appointment that a Judge's age and consequently the date of his retirement are in fact determined. After a Judge's appointment, there is no power in the Government to interfere with the tenure of a Judge's office. That power is vested in Parliament. Even the power of Parliament is confined to the ground of proved misbehaviour or incapacity. Moreover, the other conditions imposed by clauses (4) and (5) of Art. 124 are so stringent that it is only in an exceptional case and in the most exceptional manner that a Judge can be removed. The Constitution in its wisdom has made the position of a High Court Judge almost impregnable so as to ensure the independence of the Judiciary. If the Government were allowed to reopen the question of a Judge's age at any time during his tenure of office, no Judge would be able

to administer justice without fear or favour. In view of the relative provisions of the Constitution alluded to above, the question of a Judge's age, after his appointment, is not justifiable—even in a court of law. To allow the Government or even a court of law to re-determine the age of a Judge after his appointment with a view to curtailing his tenure would amount to an invasion of the power of Parliament under clauses (4) and (5) of Art. 124.

The importance of the independence of the Judiciary from the point of view of the business and the mercantile community cannot be over-emphasised. The stakes are usually very large. In all disputes between the subject and the State, the Judiciary must needs hold the scales of justice even.

Mr. W. A. Robson, the author of *Justice and Administrative Law*, observes:

"The independence of the judiciary lends prestige to the office of judge and inspires confidence in the general public. It acts as a safeguard, not merely against the manipulation of the law for political purposes at the behest of the government in power, but also against the corruption of the judicial organs of the State by the bribery and intimidation of powerful outside interests which threaten the impartial administration of justice from time to time.

"The independence of the Judge is, we may conclude, of essential importance in so far as it enables the Judge to adopt a particular attitude of mind towards the questions which come before him for decision. He can, in short, determine the case before him without fear that adverse results or material reward will accrue to him according to whether the decision does or does not meet with the approval of other persons."

Can there be any doubt that in a democracy an independent judiciary is the only bulwark against all encroachments by the Party in power?

In the instant case, the Government, on the pretext of re-determining the age of the Judge concerned, would appear to be attempting to remove him by circumventing the provisions of the Constitution. As Robson observes, the security of tenure which the Judge enjoys is at bottom the most essential fact underlying the principle of independence.

Yours etcetera,

THE TEA DUTIES

NO sane individual ever asks the Government to tax him; for Governments like sleeping dogs are best left alone. The Indian tea industry, or rather certain individuals who consider themselves men of light and leading therein, apparently thought otherwise and agitated for a petition to Government to impose a tea cess. When an industry asks to be taxed, the inference is that it can bear it. The British Government are apparently of this opinion, for it is now being advocated that the British import duty on tea shall be raised from sixpence to nine pence per pound. The Indian Tea Association will no doubt protest, but their protest will be unheeded, for needs must when the devil drives; and Black Michael of the Exchequer at Home is not likely to let a slip millions that can be so easily collected through his hands. "So comes a reckoning when the banquet's o'er," and this is one of the results of the war. Meanwhile the tea industry in this country is naturally profoundly agitated, and a mass meeting will shortly be held at the Chamber of Commerce to vigorously protest against any enhancement of the duty, but as *The Statesman* tritely remarks in concluding an article on the subject.

"While even the least courageous Minister is prepared to face the indignation of the producers and consumers of tea with equanimity, the boldest shrinks from provoking the displeasure of the producers and drinkers of beer." This sums up the situation in a nutshell. The Ministry at home is already about as unpopular as any Ministry can be. It has sunk almost beneath contempt and the only reason why it is retained in office is that the opposition is worse. The British people will welcome a frightful howl at any increase to the income-tax. The Beer and Spirit industry is a factor that has to be reckoned with. It is a far cry from England to Bengal, and the tea industry, we fear, will suffer.

FROM

CAPITAL

16th January, 1962

A Ditcher's Diary

RIGHT UP TO THE LAST MINUTE I HAD HOPED THAT this year's collection for *Capital's* Christmas Toy Fund would be the largest on record. That is why I have waited until the second issue in the new year to announce the final figure. But now there is little point in waiting any longer; it is unlikely there will be any more subscriptions at this late date. So, it is with some disappointment that I must admit my hopes were not fulfilled. The total this time was Rs. 4,410.50, a figure which does not include the carryover from 1960. This is not a record, but it has been surpassed only twice in the past ten years. That was in 1952, when the total was Rs. 5,041, and in 1958, when it amounted to Rs. 4,511.50. There is considerable reason for satisfaction, therefore. Thanks to those who supported us this time, we were able to provide a limited measure of happiness on Christmas morning to rather more children than was possible in 1960, when the total was only Rs. 3,548.50 (the recurring 50nP still baffled me), and on behalf of over 5,000 poor children I should like to express my sincere thanks. What does impress me when I look back at past totals is that despite the difficulties of the previous ten years, the average of collections has tended to rise, if only slightly. Our worst years were 1950 and 1956, during the latter only Rs. 2,959.87 was raised. We seem to have recovered steadily since then and I am now hoping the upward trend will continue. There are so many calls on one's charity these days, and I am among the first to become exasperated with them. But this is such a small one, and is so much in keeping with the spirit of the season. I do hope those who have been so generous this year will remember us again next.

THE BIG KUMBI MELA, I GATHER, COMES ONCE IN 12 years; and all of us remember what a monstrous tragedy occurred last time when there were too many V. I. P.s around. Apart from various A.I.C.C. sessions, the Indian National Congress insists on meeting annually in some jerry-built village or township with the fewest possible amenities; and it seems purely a matter of luck that nobody actually died at Srikrishnapuri near Patna last week. Mr. Sanjeeva Reddy, whom a friend of mine has dubbed "Sanjeeva the Unready", had to be content with the English original of his address being circulated; and only a page or so of the Hindi version was read at the session. On Saturday the 67th session of the Congress appears to have ended "peacefully" only because admission tickets were no longer insisted upon. Since Mr. Jagjivan Ram was the chairman of the reception committee, he

may already have taken the hint and started considering that he could as easily solve the problem of ticketless travellers on his railways by abolishing tickets. But what did the Congress achieve? In the disgracefully undisciplined behaviour of the mob Mr. Nehru initially seemed to see only the vitality of the people of Bihar. That is certainly one way of looking at it; though perhaps not the best way. There have been suggestions that in part the chaos may have been organised by groups whose admiration for Mr. Jagjivan Ram and Pandit Binodanand Jha stops this side of idolatry. Bihar is, of course, notoriously groupist and caste ridden—which fact it was only amusing to hear Mr. Jagjivan Ram castigate—and everyone is almost always trying to do everyone else down. It should have been known that an open session of the Congress would reflect these deplorable tendencies, as they in the event certainly came to the surface. But now that the Congress is, without altogether giving up its pretensions of being a national platform, converting itself into a political Party among many, there is much to be said for abandoning the unbusinesslike annual jamborees of Congressmen and contractors. No successor has yet been named to Mr. Sanjeeva Reddy, which rather suggests that the Congress Presidentship is no longer very widely coveted. What the Party needs, I suggest, is a well-paid, efficient administrator as full-time secretary. Why not some retired I.C.S. man? Any takers?

JUST BEFORE THE FOURTH TEST BETWEEN THE M.C.C. and the Indian teams was due to start at the Eden Gardens, I remember discussing the prospects with an old cricketer friend of mine. He said, and I agreed with him wholeheartedly: "This game ought to end in a decision no matter who wins, there has already been such a dreary row of draws." That has been the trouble with Test cricket this season, it has been so dull and insipid that it hardly seemed worth anybody wasting even one day on such games. Personally I had far too much to do and did not leave my desk. The pundits have put forward various theories as to why a decision had not been achieved hitherto; finally we were even told that at Bombay, Kanpur, and Delhi the wickets were at fault. I had a suspicion that the players were not playing the brisk and sporting cricket expected of them, but instead were obsessed with the idea that they were defending or enhancing the honour of their respective countries. And I was apparently not far wrong, because when they showed a little of the sporting spirit, some glorious play was, or so

I am told, seen at the Eden Gardens on all five days of the recent Test. I am happy it came to a decisive end, and India deserved the victory. But on that account I do not see that any national honour has been lost or gained. Some of the local Press reaction, especially among cartoonists, was as disgraceful as it had previously been over the attack on Goa. And I was indeed surprised at the extraordinary jubilation of the West Bengal Government, which in its enthusiasm for celebrating the victory went one step further than the school-boys and declared itself a half holiday. I would not subscribe to the myth that State Government servants do much work even when they are in their offices. But they nevertheless insist on being paid, and it might be an interesting exercise to calculate how much public money this victory cost the taxpayer. I did not notice that the State Government went into mourning when the Indian hockey team lost its long-held Olympic championship title to Pakistan, a comparatively inexperienced and unknown side. In fact it did not, and in that it was right because all sport is subject to uncertainties, and cricket especially. It is all in the game. The main thing is that play should be in the right spirit, and if that shown at the Eden Gardens Test is kept up during the current one in Madras, the last of the England-India series, then spectators should get full value for their money and time.

IT WAS, I THINK, ONE OF THE FUNDAMENTAL assumptions of the Cobbebs technique that, no matter how monstrous the lie you told, the more often you told it, the more likely it was to be believed. It is, I suspect, one of the fundamental assumptions of the Soekarno technique that, no matter how monstrous the claims you make, the more aggressively you make them, the more likely are they to be conceded. I do not for a moment suppose that the Indonesian President has stopped seriously to analyse the legal or moral validity of his country's claim to West Irian. The argument seems simple: the territory is under Dutch rule, as Indonesia once was; Djakarta, after Goa, feels impelled to a militant display of anti-colonialism; historically and strategically, West Irian makes the most convenient victim; the Russians are only too pleased to supply the weapons; and that, for President Soekarno, is that. None of this, however, to my mind, is an adequate reason why the rest of the world, India included, should accept the threatened invasion of West Irian so calmly. The Papuans have little racial or cultural affinity with the Indonesians. There is no reason to suppose that they would prefer the sovereignty of Djakarta to that of The Hague. And one could even visualise a stage when they might, after a spell of U.N. trusteeship, look forward to the complete independence which, one might have thought, they are entitled to the chance of refusing. A successful invasion by Indonesia, then, would

TRAINING APPRENTICES IN INDUSTRY

By Mary Sur

THE Apprentices Bill, introduced in the Lok Sabha in August last year, has now been passed, and will come into force as and when notified by the Central Government. It will involve a considerable liability, financial as well as organisational, for those companies in the industries specified in the notification. The Act is not restricted to engineering trades—although it is failure to induce employers, in these trades to reach the required target of apprenticeship training which has prompted the Government to introduce legislation on the subject. The Act casts its net very wide. It can apply to any area or industry in the public or private sectors specified by the Government, and cover any trade designated. All employers in the relevant industry are covered whether they employ one or more persons to do any work in an establishment for remuneration. It is not, however, concerned with graduate or diploma apprentices under training. An apprentice is defined as meaning any person who is undergoing apprenticeship training in a designated trade in pursuance of a contract of apprenticeship. He must be not less than 14 years of age, and must satisfy prescribed standards of education and physical fitness, and his contract of apprenticeship must be registered with the Central or State Apprenticeship Adviser.

The object of the Act is to ensure that adequate numbers of skilled workers are made available for the trades which under planned development are likely to expand greatly. In fact, the possibility of such legislation was visualised in the report of

the Shiva Rao Committee on Training and Employment Services in 1952. Matching training facilities with the requirements of rapidly expanding industry is a task which must be keyed to planning. Therefore, the outstanding feature of the Act is the power given to the Central Government, after consulting the Central Apprenticeship Council, to determine by order in the official Gazette for each designated trade the ratio of apprentices to workers other than unskilled in the particular trade. In determining this ratio, the Government will take into consideration the facilities already available for ordinary apprentices in the trade as well as for graduate and diploma apprentices. Once the ratio has been fixed, the appropriate apprenticeship adviser, Central or State, may give notice to any employer to engage a number of apprentices within this ratio. But, it should be noted, the State Government may, in fact, require a number in excess of the ratio "in the public interest". Against this decision, the dissatisfied employer may only appeal to the Central Apprenticeship Council.

New Liability for Employers

Examining this new liability to be thrust on the employer, there are two main points to note. First, it seems illogical to relate the ratio of apprentices to semi-skilled as well as skilled workers in the trade in the particular establishment. For a highly skilled trade, at any rate, there is no guarantee of adequate training unless the number of apprentices is related to skilled workers only. There may be many establishments

with a large number of semi-skilled workers, and a very small proportion of skilled workers. In such instances, the apprentices will in the main have to be instructed by semi-skilled men, for the few skilled men will not be able to give them proper attention. The account appears to be too much on quantity rather than quality. Not only will this create problems of organisation for the employer, but it may lead to serious disappointment and frustration for the apprentices. The question of the proportion of apprentices to skilled workers which any trade can bear is not a simple one to decide. In the British engineering industry, there is an astonishing variation in the proportion of apprentices to skilled craftsmen. In welding, for instance, the proportion is about one to five, but in some other crafts, it may be as high as one to three, while in many firms it is as low as one to 20. Of course, trade unions, in order to protect their skilled men, have tried to keep the figure low, but the point to note here is that the figure is not only variable, but is always related to skilled workers.

To counter-balance this somewhat alarming power given to the Government, it is laid down that the Central Government is to consult the Central Apprenticeship Council, and the State Apprenticeship Advisers to consult the State Apprenticeship Councils, and that these Councils must consist of employers' representatives in the public and private sectors, of Government representatives and of persons with special knowledge and experience of trade and industry. They will, therefore, be

well-informed bodies, set up to determine technical questions on the basis of their special knowledge, and the political considerations which would crop up in a tripartite body will fortunately be avoided. They will, however, be almost bound to subordinate considerations of quality to those of quantity.

Latitude for Industry

When an employer is faced by a notice from the appropriate apprenticeship adviser requiring him to engage a given number of apprentices, what latitude will be given to him, and what will his liabilities be? First, he may select his own apprentices, provided they comply with the standards of education and physical fitness prescribed. Secondly, at the end of their training period, he may, if he wishes, offer some permanent employment, but there will be no obligation on him to retain any of them. For the rest, he must act within a definitely restricted area. His obligations include the provision, first, of practical training for the given number of apprentices in accordance with a programme approved by the Apprenticeship Adviser. Several employers may join together to provide this practical training, if they wish. Secondly, where the apprentice has not already undergone institutional training in an approved institution, the employer will be required to provide basic training also. For this, the employer of 500 or more must provide a separate space or a separate building, but for establishments of less than 500 basic training will be provided by Government institutes. The syllabus of basic training has to be approved by the Central Government in consultation with the Central Apprenticeship Council. The employer has to foot the entire bill for practical training for those apprentices who have passed trade tests conducted in recognised institutions, including their stipends, and has to give them time off during working hours to attend for related instruction—that is, further theoretical instruction at a Government institution. The costs of basic training have to be met entirely by employers in establishments of 500 or more, but those employing less than 500 will share the costs 50 : 50 with the Government up to a certain limit, after which the latter will bear the cost alone. It is expected that stipends will be prescribed at about Rs. 40 or Rs. 50 a month. Employers may not pay apprentices on the basis of piecework, nor require apprentices to take part in bonus or incentive schemes.

Powers of Apprenticeship Adviser

In addition, there will, of course, be the administrative costs involved in running training, keeping records, and making returns which will be required under the Act. Conditions of work for apprentices must comply as to health, safety and welfare with the provisions of the Factories Act, and hours for apprentices will be prescribed. No overtime will be permitted in the case of apprentices without the approval of the Apprenticeship Adviser. Tests will be conducted by the National Council, which will also determine periods of apprenticeship for the various trades. The Apprenticeship Adviser must at all times be given access to the premises to test apprentices' work, and any disputes with apprentices will be referred to him. It will be seen that the Apprenticeship Adviser has very wide powers. He is indeed misnamed Adviser, for he will not advise but instruct employers. His responsibilities are surely more than one man can handle adequately, for he has not only to ensure that all employers concerned carry out their obligations under the Act, but he must look to the welfare of the apprentices, settle their disputes, and test their progress.

POLITICAL UNCERTAINTIES MAKE MARKET CAUTIOUS

Wednesday Evening.

THE stock market has become cautious during the past week, and trading is on a small scale. Operators are unable to take a definite view as the news is mixed. At first, the address of Mr. Sanjiva Reddy, Congress President, at the Srikrishnapuri session caused a mild flutter. This was because he reiterated the importance of fixing a ceiling on urban incomes to reduce inequalities and to prevent the concentration of economic power. But Lyons Range now thinks that no such move will be made at the present stage. At one time, sentiment was also disturbed by rumours of further Chinese intrusions into Indian territory. Reports of incidents near the borders of West Bengal caused concern. But the stock market is now veering round to the view that such incidents cannot be avoided since India has a very long border to defend.

In the present hesitant mood, the Press report that the U.S. Government will not change its policy on financial aid to India because of the developments in Goa, has had little effect. The stock market is not sure about the prospects for foreign aid; it is waiting for the meeting of the "Aid-India Club" a fortnight hence.

Investors are worried about the growing shortage of coal, especially since no concrete measure has so far been taken to increase supplies. The coal industry has pointed out that raisings are being affected by the inadequacy of transport, electric power, explosives and spare parts. The decision of the Government to increase the royalty on mining leases has pleased neither the industry nor consumers. The increases allowed in the prices of coal and coke, to compensate for the rise in royalty, are considered inadequate. Consumers are disturbed that they will have to pay more for the commodity when they already have to spend heavily on getting their requirements by road.

At the close, sentiment has improved a little on hopes that the retention price of steel will be increased soon. Indian Iron are being bought since the World Bank has given a loan to the Company for extending its collieries. A general meeting of shareholders will be held in early February to confirm the loan. It is expected that, at this meeting, shareholders will get an opportunity to discuss the prospects of raising further funds if necessary.

Talk of L.I.C. buying has been a helpful factor. But the stock market feels that there will be a shortage of funds in the near future. Bank credit has become tighter since the beginning of the busy season, and a great deal of money is being siphoned off by new issues. Many of these issues are expected to be floated soon.

Indian Iron have closed at Rs. 24.72 after wide fluctuations. Except for a few scrip, engineering shares have declined. Kumardhubi have been steady on hopes of improved working. Burn have hardened on investment buying. The earlier improvement in Dalmia Iron, following reports of expansion, has not been maintained at the close due to profit-taking. J. K. Steel have enjoyed influential buying. Texmaco have declined on pressure. Guest, Keen,

Williams, Jessop and Braithwaite are quoted lower.

Interest has been maintained in Associated Batteries in the miscellaneous section on dividend prospects. Alkali Chemical have become steadier on paying a higher dividend. Goodyear India and Britannia Biscuits have met with support. British India Corporation have gained on influential buying. Angelo Brothers have been bought on dividend hopes. Rallis and Shaw Wallace are being fancied since the two Companies are expected to start a fertiliser company soon. East Anglia Plastics have hardened on reports that the factory will start producing soon. Indian Aluminium and Indian Cable have reacted on profit-taking. Hindustan Motors have been depressed on talk of bigger deliveries in Dalal Street. Martin Børn are quoted higher on dividend prospects. Imperial Tobacco have gained on replacement buying. Hindustan Tywforads are being bought on good corporate news.

Banking shares have been steady due to the publication of some good reports. Profits have been higher in 1961 than in 1960, and some banks have paid bigger dividends. United Commercial, Punjab National and United Bank have improved.

Coal shares are sluggish and fluctuations are narrow. Bengal are being taken. East India have gained on expansion prospects. Katras Jheriah have been steady on paying an interim dividend of 10 percent, taxable.

Turnover in jute shares has declined but support has been forthcoming for selected scrip. National have improved. Interest is being taken in Birla, Anglo-India, Nudde, Ganges and New Central. Kelvin have gained on producing a good report and maintaining the dividend. Bowreah and Dunbar have been smart features in the cotton mill group. J. K. Rayon have been steady on rumours that they might be included in the forward list. Bharat Commerce have reacted on profit-taking.

In spite of the improvement in auction prices, tea shares have become quieter. Sellers are predominating and prices have declined. Hasimara, Hantapara, Bishnauth and Tezpor are being offered freely.

Government securities are dull and turnover is limited. Banks are showing little interest because the busy season has started. The 3 percent Conversion loan 1966 has been maintained around Rs. 71.05 mainly because of official support.

Burdwan-Cutwa Railway

There is a net loss of Rs. 1.62 lakhs in the working of the Burdwan-Cutwa Railway Co. Ltd for the year ended March 1961. A dividend of Rs. 1.90 a share, subject to tax, has been declared. Taxation is allocated Rs. 28,035. After meeting the deficit from the Government subsidy and making other adjustments, there is a balance of Rs. 445, which is transferred to reserve.

Katakhal-Lala Bazar Railway

The Katakhal-Lala Bazar Railway Co. Ltd has earned a profit of

Rs. 98,399 for the year ended March 1961. A dividend of Rs. 3.10 a share, subject to tax, has been declared. After making necessary adjustments, a sum of Rs. 198 is transferred to reserve.

Tata Steel Output

Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, reports that the approximate production of iron and steel at the Jamshedpur steel works during December 1961 was: iron 142,100 tons; steel ingots 148,400 tons; semi-finished for sale 35,100 tons and finished steel 82,500 tons.

Bombay Market

L.I.C. PURCHASES HELP SENTIMENT

RISE IN SUGAR SHARES NOT MAINTAINED

Wednesday Noon.

THE Bombay stock market was steady and prices were maintained during the past week. The new account got off to a good start and share values were boosted due to the smaller budla charges. Money conditions were easier and outside finance was more freely available. Reports that the Life Insurance Corporation had made fair purchases helped improve the undertone. The imposition of automatic margins on six shares as their prices rose more than 10 percent over the last making-up prices, had little effect. Steel shares were fancied on the belief that the retention price of steel would be increased soon. Cotton mill shares were in demand due to hopes that the profits for 1961 would be better than those for 1960. But the decision of the Government to permit the installation of another 10,000 automatic looms was examined cautiously, because the conditions for installing the looms were considered stringent. It was pointed out that the entire production from the new looms would have to be exported, and for any shortfall in exports the manufacturer would have to pay a penalty.

Sugar shares rose at first on the belief that the Maharashtra land ceilings ordinance would help sugar companies. Later, sentiment weakened when it was realised that the measure would not help. Hindustan Motors declined substantially on pressure following the report that a large parcel of shares had been sold by a prominent holder. At the close, prices became steadier due to an improvement in the technical position of the market.

Tata Steel closed at Rs. 143 and Indian Iron at Rs. 25.20. Among engineering shares, Larsen and Toubro improved to Rs. 42 on talk of a rights issue. Tata Locomotive were steady at Rs. 358 and Alcock Ashdown were taken at Rs. 319. Premier Construction came to hand at Rs. 198 and Mukand Iron were done at Rs. 28.50. Among motor-vehicle shares, Premier Automobiles were

steady at Rs. 152, but Hindustan Motors declined to Rs. 20.84.

In the cotton mill group, Century rose to Rs. 616 and Bombay Dyeing to Rs. 68.30. Standard were wanted at Rs. 1,185 and Kohinoor were taken at Rs. 318. Morarjee were indicated at Rs. 431.25. Simplex were transacted at Rs. 159 and Gokak were done at Rs. 213. Business passed in India United Ordinary at Rs. 16.72 and Apollo were offered freely down to Rs. 2.18.

In the miscellaneous section, sugar shares closed lower after an earlier improvement. Belapur were done at Rs. 272 and Phaltan came to hand at Rs. 126. Walchandnagar Industries were transacted at Rs. 165. Cement shares were steady, and Associated Cement improved to Rs. 162.50. Digvijay were bought at Rs. 192. Mining shares were quietly steady, and business was done in Shivrajpur Syndicate at Rs. 44. Steamship company shares were quiet, and Scindia Steam closed at Rs. 13.12 after an earlier fall. Great Eastern Shipping were placed at Rs. 12.52. Bombay Burmah were steady at Rs. 657.

Rayon shares were steady, and National Rayon rose to Rs. 560 on replacement buying. Baroda Rayon were taken at Rs. 159 and Gwalior Rayon rose to Rs. 51.50. Chemical shares were steady, and Tata Chemicals were indicated at Rs. 20. Indian Dyestuff improved to Rs. 542.50 and Polychem to Rs. 223.75. Colour-Chem found buyers up to Rs. 445. Voltas improved to Rs. 308.50 on investment buying. Tata Oil hardened to Rs. 79 and Wimco to Rs. 317. Cent Tyres were done at Rs. 210 and Synthetics and Chemicals were bought up to Rs. 231.

Bank shares improved on reports of bigger profits during 1961. Bank of India hardened to Rs. 148 on a rights issue. Central Bank were done at Rs. 68.30 and Bank of Baroda at Rs. 117. Insurance shares were

quietly steady, and business was done in New India Assurance at Rs. 59.50.

Electric company shares became steadier on the prospect that the "standard rate of return" for the industry would be increased. Ahmedabad came to hand at Rs. 93 and Tata Hydro were done at Rs. 109.25. Bombay Suburban were transacted at Rs. 101.50.

Madras Market

OPERATORS CAUTIOUS BUT TREND STEADY

FAIR DEMAND FOR BANK ISSUES

Tuesday Evening.

The Madras stock market was steady during the past week, but turnover was restricted. Operators were cautious in view of the growing shortage of credit. Substantial funds were being diverted to new issues and investors were inclined to give greater attention to these shares since they were available at par. Government securities were quiet and business was limited. Prices of State loans moved down on balance. Bank shares were fancied on prospects of rights issues. Scattered investment support was forthcoming for public utility companies. Sugar shares were sold freely at lower prices because investors were worried about the decline in the price of the commodity. In the planting group, tea and rubber shares were selectively bought, but coffee shares were neglected. Selected textile shares met with support on the belief that the offtake of cloth would improve soon. Miscellaneous industrials lacked interest.

In the banking group, Indian Overseas improved to Rs. 196.50 because the Bank has issued 25,000 ordinary rights shares. Indian were done at Rs. 179 and Canara at Rs. 85. State Bank of Travancore were transacted at Rs. 125. Among electric company shares, Cochin were steady at Rs. 12.10 and Negapatnam at Rs. 10.80. South Madras were transacted at Rs. 9.83 and Vellore at Rs. 14.25.

Among sugar shares, Deccan declined to Rs. 11.05, but E.I.D. recovered to Rs. 36.12 on replacement buying. Business passed in Mysore at Rs. 56.50 and in Travancore at Rs. 8.50. United Breweries were available at Rs. 101.55 and India were done at Rs. 10.90.

In the planting group, Blue Mountain were quiet at Rs. 2.77 and Cochin Malabar at Rs. 7.35. Coffee Lands were easier at Rs. 16.62 and Consolidated Coffee retreated to Rs. 19.20. Devon were placed at Rs. 13.75, but Kalasa met with support up to Rs. 3.42 on issuing 150,000 ordinary bonus shares. Kil Kotagiri were dealt in at Rs. 4.90 and Luck Valley were done at Rs. 11.35. Nilgiri came to hand at Rs. 8.40 and Nonsuch were transacted at Rs. 25.50. Ouchterlony reacted to Rs. 3.70, but Parkside were steady at Rs. 25.95. Peermade were done at Rs. 22.50, but Periakaramalai were quoted lower at Rs. 3.55. Rajagiri were dealt in at Rs. 19.05 and Swinton were quoted at Rs. 2.82. Teekoy were about steady at Rs. 5.10 and Twyford were placed at Rs. 11.60.

Among textile shares, Bangalore Woollen were steady at Rs. 229 and Buckingham at Rs. 253. Asher were quoted at Rs. 229 and Coimbatore Spinning at Rs. 68.50. Kothari were placed at Rs. 13.50 and K. Rajendra at Rs. 76. Lakshmi reacted to Rs. 165 on profit-taking and business passed in Madras at Rs. 42.90. Mettur were bought at Rs. 392 and Premier at Rs. 310. Rajalakshmi were sold at Rs. 100.25, but Ramakrishna were in

demand up to Rs. 250. South India Viscose were easier at Rs. 181.50, but Travancore Rayon recovered to Rs. 44.80. Vijaymohini came to hand at Rs. 96 and Sarada were placed at Rs. 90.

In the miscellaneous section, Aluminium Industries were steady at Rs. 23.35 and Ashok Leyland were quoted at Rs. 9.13. F.A.C.T. reacted to Rs. 8.15, but Enfield were steady at Rs. 12.40. India Cement were dealt in at Rs. 6.42 and Andhra Cement at Rs. 9.15. Madras Aluminium came to hand at Rs. 23.25 and Madras Rubber gained at Rs. 22. Mysore Paper were steady at Rs. 15.12 and Parry's Confectionery were bought up to Rs. 4.50. Seshasayee Paper hardened to Rs. 8.90 and Spencer to Rs. 24.50. Business was done in Standard Motors at Rs. 16.50 and in Textool at Rs. 186. Tube Investments were quoted at Rs. 283, but Tube Suppliers were offered freely down to Rs. 10.

THE WEEK'S TRANSACTIONS

Glass makes a distinct difference

Any home can be modernised—with glass. And not in appearance alone. Glass seals out moisture, noise and irritating dust and, fitted cleverly, filters through healthy, natural light. Glass is easily cleaned, too!

Versatile—glass has numerous other uses in the office, factory, school, hospital and store.

The finest and most durable in India, HPG sheet glass is tested for unvarying quality at every stage of manufacture.

Available in a wide variety of sizes and thicknesses.

London Market

STOCK MARKET MORE ACTIVE

LEADING ISSUES IN DEMAND

London, 10th January.

THE feature of the stock market in the past week was the rise in the volume of business, much of which was due to selective buying, although profit-taking in the last two days appeared to have been stimulated more by New Year optimism, but it was the leading stocks which received the most attention. The economic situation gave little promise for the short-term view, but many investors were prepared to look further ahead on the hope that by the year-end, the position would be clearer, and perhaps the entry of Britain into the Common Market would have become an accomplished fact. The market was keenly awaiting the Chancellor of the Exchequer's promised statement to both sides of industry, and while awaiting any new moves he might announce, the market became little unsettled. The main item still claiming most attention was the L.C.I. bid for Courtaulds, although the market would have to wait for a week or more before the next move is announced. It still appears that Courtaulds are unwilling for an out-right merger. Steel shares were adversely affected by some depressing year-end statements from company chairmen, but engineering shares were selectively wanted. Gilt-edged were meeting with a steady investment demand, which was stimulated by the view that the 6 percent Bank rate would not be held much longer. The feature of foreign bonds was the strength of Greek issues. Wall Street's poor performance was reflected in U.S. dollar stocks, but better trends on Toronto and Montreal helped Canadian issues. Gold shares were paid little attention for the most part drifted aimlessly. Free State Geduld lost some ground on the chairman's reference to the tax position. Coppers were made and tended to ease, but tins made some headway. Oils were idle, but selective buying of rubbers continued and prices improved. Teas showed little change.

New Delhi

Assam Wants Crude Oil Price Refixed to Maintain Old Royalty Income

(FROM OUR NEW DELHI CORRESPONDENT)

WHILE attempts at national integration through conferences, committees and resolutions are in progress, thanks to the policy of appeasement, the principal unifying force, namely, the authority of the Union is being destroyed. The well-known problems of sales tax and road transport remain unsolved. And now the West Bengal Government is contesting the Centre's right to acquire land for developing the sources of coal production. Assam has followed its neighbour, and has refused to grant a licence to Oil India Ltd for exploration in the new areas—800 acres in the N.E.F.A. and 12,000 acres near the present oilfields in Moran, until the royalty issue is settled on her own terms. According to rules, the State Government is entitled to 10 percent of the well-head value of the crude as royalty. As the agreement with Oil India stands, the Assam Government will get Rs. 4.50 a ton as royalty. But it wants the price of crude oil fixed in such a way that its royalty remains at Rs. 7 a ton.

Enquiries show that royalty is really a follow-up issue. The Government of India, by a second agreement with the Burmah Oil Company, has fixed the price of crude oil according to a formula based on the Persian Gulf price of crude, plus freight, plus ocean loss, minus discount. Royalty is calculated on the crude price at the well-head. The Central Government could either allow a high yield from royalty by decontrolling the price of the crude, or earn high profits from refining through keeping down the crude price. It cannot do both. The Assam Government refuses to recognise the Central Government's crude price agreement with the Burmah Oil Company, because it is this agreement which has reduced the yield from royalty.

The Gujarat Government is equally interested in this dispute. Gujarat's oil refinery, it is expected, will go into production by 1964. The State Government, at the existing rates of royalty, has placed its income at Rs. 3 crores during the third plan period. The raising of royalty rates for Assam to Rs. 7 a ton will raise Gujarat's income by over Rs. 1 crore a year.

Oil Prospecting by Stanvac

Meanwhile, Stanvac has decided to close down its oil prospecting organisation in Calcutta. The explanation offered is that this is a measure of economy. Although the Company says it is still interested, it has not much hope of obtaining a licence for oil exploration under the existing conditions. The Government, as is already known, is undertaking the search for oil through its own Oil and Natural Gas Commission. Foreign companies such as E.N.I. and the French Petroleum Institute are not allowed exploration as independent units, but are engaged as contractors of the Commission.

More Heavy Electricals

Negotiations for the establishment of two new heavy electrical projects and a high-pressure boiler plant have reached their final stage. The heavy electrical project to be established in Hyderabad with Czech assistance,

it is expected, will cost about Rs. 23 crores, excluding the township. It will have an annual production of about Rs. 18 crores in the first phase. This, it is proposed, will be doubled during the fourth plan.

The heavy pressure boiler plant, to be located in Trichy in Madras, will also have Czech collaboration. The project, it is expected, will cost nearly Rs. 18 crores, one-third of which will be in foreign exchange. Only heavy furnaces and heavy equipment will be imported. The annual production of this plant will, in the first phase, be between Rs. 12 crores and Rs. 15 crores, with provision for doubling in the next stage.

Coal Washery with Russian Aid

A broad agreement has been reached with Russia on the National Coal Development Corporation's proposed coal washery in Kathara. The washery is to be completed in March 1965. A small team of three Russian experts will visit India by the end of this month to study the site of the washery in Kathara before drawing up a detailed project report. The coking coal washery will have an annual intake capacity of 3 million tonnes. It will feed the proposed Bokaro steel plant. The heavy electrical plant, to be located in Hardwar, Uttar Pradesh, will also be with Russian assistance. It will cost Rs. 30 crores, including Rs. 20 crores in foreign exchange.

Order for Aerial Ropeway

The Indian Coal Board has placed an order with Breco-Ropeways of London to supply an aerial ropeway, at an estimated cost of £2 million. It will be a composite plant which will include a sand-winning apparatus, feeder ropeways and heavy-capacity trunk ropeways delivering sand to a number of stockpiles for distribution to the various collieries. The whole plant, it is expected, will be completed by the spring of 1964. The project will consist of three mono-cable ropeways, each less than a mile in length and each capable of conveying 200 tons an hour. These will be connected with a single bi-cable ropeway split into five sections, and 16 miles long with a capacity of conveying 450 tons an hour. The British firm is sending out about 30 experts to plan and supervise the operation.

Swiss Credit

Switzerland's credit for India, amounting to about £8.5 million, will be used to buy various types of Swiss-made industrial equipment. Among items to be purchased are water turbines for the Upper Sileru project, electrical equipment for an Andhra Pradesh power plant, machinery for textile mills, particularly automatic looms for an Indo-Swiss joint venture, printing machinery and equipment for sugar refineries and pharmaceutical laboratories.

First contracts concluded are for the supply of equipment for various chemical product factories. These installations will be planned, supplied, and put into operation by an engineering office in Zurich. Three factories producing caustic soda, chlorine and related products are to be equipped, and several Swiss machinery and electro-technical firms will be entrusted with the manufac-

ture of the necessary machinery and plant. A Swiss alarm clock factory, in collaboration with a French firm of the same branch, has founded a company with Indian capital for the manufacture of alarm clocks.

Next E.C.A.F.E. Session

The next session of E.C.A.F.E. will open in Tokyo on 6th March. Its principal item for discussion will be the K. B. Lall Committee's report on the Asian regional co-operation in trade. The Japanese view, according to reports, is that Mr. K. B. Lall has been forcing the pace. His plan is a counterblast to the European Common Market. Japan, however, is attracted to the plan on political grounds. In the last analysis, the K. B. Lall plan is similar to the pre-war Japanese prosperity theory. Mr. Lall, it is believed, has also sounded the U.S.A. for its reactions to his plan.

The conference of Asian economic planners held here last year felt that it would be in the common interest of the developing countries in the region to take advantage of such economies of scale and possibilities of intra-regional division of labour as might promote the growth of the individual economies as well as the economy of the region as a whole. In giving effect to intra-regional co-operation, there were obvious difficulties for which solutions would have to be found through careful study and mutual consultation. For instance, the economies of different countries were at varying stages of development and each of them had its own particular conditions and problems. In some densely-populated countries, the issue of unemployment loomed large and development plans had to be formulated accordingly.

"Some countries were highly dependent on the export of a limited range of commodities which were exposed to serious fluctuations in prices, largely due to external factors. As had been pointed out, almost all countries of the region were in need of considerable economic aid which, in turn, influenced their trade patterns. Political and other conditions had also to be taken into consideration. Even so, the need remained to achieve an overall perspective and a broad common approach to the development of individual countries and of the region as a whole, so that the benefits of co-operation could be widely and equitably distributed."

Expansion in Steel

The Central Ministry of Steel will have a final meeting with the representatives of Russia to sign the agreement for the expansion of the Bhilai steel plant to 2.5 million tons. Indications are not wanting that the Russians, in certain anticipation of the Bhilai expansion, have already started manufacturing equipment for the plant. As against this, tenders for the expansion of the German-built Rourkela plant to 1.8 million tons have been issued, and it will take some months before actual orders for equipment are placed. As far as the Durgapur steel plant is concerned, even the project report has not been finally accepted.

Civil works estimates have invariably gone wrong, and the rise

in the costs of constructional works may be of the order of 100 percent. There are not more than a dozen firms engaged in the constructional work, many of which are already heavily booked. Quotations have so far been received from six of them, and are wide of the estimated mark.

The Steel Ministry is not taking any chances. It has decided on the expansion of Bolani iron ore mines for Durgapur, Rajaraj for Bhilai and Bursua for Rourkela. Proposals are also being examined to set up sinter plants for iron ore at each of the steel plants. At present, nearly 30 percent of the iron ore is reduced to dust or "fine" and cannot be used in steel-making. A sinter plant will make the fine ore thicker, to put it crudely. It also improves the quality of ore.

Coal is still a difficult problem. Although the steel production target has been reduced by 1 million tons due to the uncertainties of the fourth steel plant, the Steel Ministry has not reduced the target for coal requirements, but has kept it at 25 million tons for the steel plants in the public sector. Limestone of the requisite quality still remains the major problem of the steel industry. A two-fold programme has been planned. On the one side, areas in Bhawanathpur and Shahabad in Bihar are being tapped. On the other, schemes for the beneficiation or improvement of the quality of limestone are being discussed. They are similar to coal washeries.

Thinking on the fourth five year plan has already started. According to current estimates, steel demand in 1971 is placed at 18 million to 20 million tons. As far as the Bokaro steel project is concerned, the present thinking is to start it with a capacity of 2 million tons, expandable later to 4 million to 5 million tons. Durgapur, it is claimed, can be expanded to 3 million tons or more of capacity. The other question is whether it would be economical to expand Bhilai plant to 5 million tons in its vicinity. The more important problem, however, is of raw material and experienced personnel. A committee to undertake a survey of raw materials, and indicate their requirements as also those of power and transport facilities, is considered likely. Meanwhile, an inter-Ministerial meeting is being arranged to appraise the manufacturing capacity of plant and equipment by 1965.

Mining in Goa

A team of experts was sent to Goa by the Central Ministry of Mines and Fuel to make an on-the-spot survey of the mining operations in that enclave. It has now returned to New Delhi and will shortly make its report to the Government. The Portuguese rulers were able to expand the export trade in ores from 50,000 tons in 1958 to 4 million tons in 1961. West Germany alone imported ores worth 131 million deutschmarks in 1960—iron ore 126 million deutschmarks and manganese ore 5 million deutschmarks. German exports to Goa in 1960 were worth 19.3 million deutschmarks.

More Warehouses

The Central Warehousing Corporation is to open 17 warehouses during the next financial year. It at present has 50 warehouses spread all over the country. Ten of these were opened during the current year, and an equal number, it is expected, will be opened during the next three months. During the third five year plan, the Corporation has to set up 35 general warehouses. With the increased tempo in activity, this target is likely to be exceeded during the first two years of the plan. Apart from Central warehouses which are opened at larger centres,

the 14 State warehousing corporations in the country have so far opened more than 300 warehouses at other places.

Furnace Oil for Industry

The Central Ministry of Commerce and Industry has suggested the use of furnace oil to replace coal used by the industries in Madras and Gujarat. A beginning is to be made with the new cement plants, recently licensed by the Government. The issue is a complicated one. Under the plan suggested by the Ministry, the Centre will have to reduce substantially, if not altogether abolish, excise and other duties on furnace oil in order to make it competitive with coal. It is pointed out that excise duties are levied commodity-wise, and not industry or region-wise. As against this, the carriage of coal by sea to feed the industries in these very areas is also subsidised by the Centre, and is regionwise.

Finance is the main snag. It is argued that while in the case of coal, it is the consumer of coal, including those in the coal subsidised regions, who pay for the subsidy through an increase in the price of coal, it will be the Central exchequer which will have to forgo a part of its excise duty if it were reduced or abolished to replace coal by furnace oil in certain regions. The Government is engaged in examining the various aspects of the fuel economics of the various types before reaching a decision. It may be added that the plan visualises the lying-in of pipelines from Bombay or Madras to industrial areas concerned.

Private Fertiliser Factory

The Central Government has agreed in principle to grant an industrial licence to Shaw Wallace and Company in partnership with Rallis India, Ltd. and with the foreign collaboration of the Dutch States Mines to set up a fertiliser factory in Mangalore, provided the following conditions are implemented:

- (i) The foreign shareholding in the proposed undertaking, including the non-resident part of the investment proposed by the two major Indian partners, should not exceed 49 percent.
- (ii) The terms and conditions under which the foreign loan would be arranged by the Dutch States Mines should have the approval of the Government of India.
- (iii) The production programme should include the processing of gypsum obtained as a by-product in the manufacture of phosphoric acid, to produce ammonium sulphate required for making ammonium sulphate-phosphate fertiliser, as this would result in the production of a sizable quantity of sulphur.

The parties were also to investigate the possibility of using pyrites available in the Ingaldahl district for the production of sulphuric acid.

The firm has proposed to set up a fertiliser factory in the first instance, and later take up the production of caprolactam and lysine, with the permission of the Government. The estimated cost of the project is placed at Rs. 28 crores, including Rs. 12 crores in foreign exchange. Under the proposed plan, the Dutch States Mines will invest Rs. 5 crores, Shaw Wallace and Rallis Rs. 50 lakhs each, and Rs. 5.2 crores will be offered to the public. In addition, the Dutch States Mines will advance a loan of Rs. 6.67 crores. The Company will import 80,000 tons of rock phosphate and 70,000 tons of sulphur a year and will also require 110,000 tons a year of light naphtha or fuel oil. The

plant will have the total capacity of 103,000 tons of nitrogen and 23,000 tons of p.O5 a year.

Foreign Aid

The West German aid-to-India agreement has been signed, and a similar one by France for \$(U.S.)30 million is about to be signed shortly. The German agreement is for 500 million deutschmarks for the first year of the third five year plan. The total aid to India by West Germany is as follows:

Technical assistance programme	32
German participation in the Indus project	125
Finances for the Rourkela steel works	660
Financial assistance for the second plan	420
Financial assistance for the third plan (todate)	1,700
Guarantee for exports	2,100
Total	5,038

Heavy Structural Project

A team of Davy Ashmore of Great Britain is expected here on 10th January to finalise and sign the consultancy agreement for the twin project, the heavy structural and vessel plate plant in India. The Government has appointed Mr. S. Raghupathy, till recently a Deputy Secretary in the Ministry of Steel, as the officer in charge of this project.

Ceiling for Soda Ash

The Central Government has fixed the ceiling price (ex-works) of light soda ash at Rs. 19 a 50 kilogram. This will come into force with immediate effect, and would be in operation until 31st December, 1962. The Government's resolution on the recommendations of the Tariff Commission was published last week. In fixing the price, the Government has taken into account the manufacturing costs in the units examined by the Tariff Commission, and the scope for economy in the establishment and labour costs in the high-cost units to which attention has been drawn by the Commission. The Government is satisfied that the price fixed by it would provide a reasonable return to the capital employed in the high cost units and at the same time impress on such units the desirability of improving their efficiency and reducing the conversion charges.

With a view to protecting the interests of consumers situated away from the producing centres, the Government has decided that soda ash should be made available at export-town prices which should be the ceiling price plus a freight of Rs. 15 a ton for west coast ports (Bombay and Cochin) and Rs. 25 a ton for east coast ports (Madras, Visakhapatnam and Calcutta).

The Government has also decided that the ceiling price of heavy soda ash, sold ex-works or ex-ports towns, will be Rs. 20 a ton above the ceiling prices for light soda ash, as at present. Consumers will be free to purchase soda at ex-works or ex-ports town prices, according to their discretion. The ceiling prices include selling commission, but exclude transport and handling charges ex-works, local taxes, excise duty, etcetera.

The Tariff Commission, in its report on the fixing of soda ash prices, recommended that the ceiling price (ex-works) of light soda ash should be fixed at Rs. 20 a 50 kilograms, exclusive of excise duty and that the ceiling price of heavy soda ash sold ex-works should be fixed at Rs. 21.50 a 50 kilograms, exclusive of excise duty. The Commission also recommended that the selling price of soda

ash, both light and heavy, should be fixed on an ex-works basis only.

Calcium Carbide Selling Price

The Central Government has fixed the ex-works selling price of calcium carbide. The price for calcium carbide a 50 kilograms of 4/83 millimeter size in 50 kilograms packing will be Rs. 44, and in 100 kilograms packing will be Rs. 43.25. Prices for five other sizes have also been fixed. These prices will come into force with immediate effect, and will be operative until 31st December, 1962. The Tariff Commission has recommended the price of Rs. 45.50 for 50 kilograms of calcium carbide of 4/80 millimeter size in 50 kilograms packing and Rs. 44.75 in 100 kilograms packing. They have also recommended prices for five other sizes.

New Capital Issues

Six companies including two banks and an insurance company, have been sanctioned capital totalling nearly Rs. 1.75 crores. Of the others, one is a State-owned factory. The consent is valid for 12 months in all cases.

Industrial Machinery (Inter-Continental) Ltd., Madras, has been granted consent to issue capital of Rs. 1.50 crores in equity shares of the value of Rs. 1.20 crores and preference shares of the value of Rs. 30 lakhs. The capital will be used for the manufacture of pulp and paper-making machinery in Madras, in collaboration with Black-Clawson (overseas) Ltd and Parsons and Whittemore-Lyddon organisation of the U.S.A.

The Kerala Premo Pipe Factory Limited, Trivandrum, is to issue capital of Rs. 12.50 lakhs in equity shares of Rs. 1,000 each at par. Out of this, 500 shares will be issued for consideration other than cash and the balance of 750 shares for cash to the Government of Kerala. The proceeds will be used for acquiring and running the State-owned pipe factory.

The New Assam Valley Tea Company Ltd., Calcutta, will issue 3,000 bonus shares of Rs. 225 each on capitalisation of the Company's reserves to the extent of Rs. 6,75,000. The bonus shares will be issued in the ratio of one bonus share for every share held.

Northern India Motor Owners Insurance Company Ltd., Delhi, is to issue additional capital of Rs. 2,62,500 divided into equity shares of Rs. 100 each. The shares will be issued for cash at par and will be offered to the existing shareholders of the Company. The proceeds will be used on the Company's programme for starting fire insurance.

The Malabar Bank Ltd., Trichur, has been granted consent to issue capital of Rs. 2,00,000, divided into 2,000 equity shares of Rs. 100 each for cash at par. The proceeds of the issue will be used for financing the bank's activities. The Bank has a paid-up capital of Rs. 1 lakh.

The Martandam Commercial Bank Ltd., Trivandrum, is to issue capital of Rs. 22,200 divided into 888 ordinary shares of Rs. 25 each, fully paid-up to be issued for cash at par. This bank has a subscribed and paid-up capital of Rs. 2,06,007.

Steel Wage Board

The Central Government has appointed a Central tripartite wage board for the iron and steel industry. It consists of Mr. G. K. Shinde (chairman), Mr. Akbar Ali Khan, M.P., and Professor M. L. Dantwala (independent members); Mr. M. S. Rao and Mr. Saradindu Gupta, (employers' representatives); and Mr. Michael John, M.P., and Mr. Gopeshwar (workers' representatives). The terms of reference include

the determination of categories of employees (manual, clerical, supervisory, etcetera) who should be brought within the scope of the proposed wage fixing and (b) the working out of a wage structure based on the principles of fair wages as set forth in the report of the Committee on Fair Wages. It is stated that in evolving a wage structure, the Board should, in addition to the considerations relating to fair wages, also take into account the needs of the industry in the developing economy; the requirements of social justice and the need for adjusting wage differentials in such a manner as to provide incentives to workers for advancing their skills. The Board should bear in mind the desirability of extending the system of payment by results. In this, the Board has been asked to keep in view the need for fixing a minimum (fall-back wage) and also to safeguard against overwork and undue speed. The headquarters of the Board will be in Patna.

Indo-East German Trade

Trade talks between East Germany and India concluded here last week with an exchange of letters. As a result of the talks, it is expected that the Indo-East German trade will increase during 1962. The commodities to be imported by India will continue to include capital goods and machinery items, power generating equipment, printing paper, industrial raw materials, cinematographic films, fertilisers, machine tools and other precision and measuring tools. The export from India to East Germany will be rolled steel products, cotton, silk and woollen fabrics, leather footwear, tinned fruits and juices, coir products, wood screws, jute manufactures, linoleum, sports goods, handicrafts, chemicals, deoiled cakes, drugs and medicines, tanned and semi-tanned hides and skins, etcetera, apart from other traditional goods, namely, tea, coffee, spices, cashew kernels, essential and vegetable oils, iron ore, mica and other mining products.

Manpower Research

The Institute of Applied Manpower Research will start functioning in Delhi early next month. It will work in close collaboration with the Central and State Governments and with industrial and other organisations. The Institute will be a semi-autonomous body with a Council of 54 members, including the president, two vice-presidents, and the director, who will be appointed by the Government. The Council will include the representatives of ministries concerned, all State Governments, public and private sector management and labour, the University Grants Commission, the All India Medical Council, and the Institute of Engineers, etcetera. To start with, the Institute will have two divisions. One will deal chiefly with manpower statistics, studies of requirements and resources of manpower and methods and techniques of manpower research; the other, with problems relating to institutional preparations and training for employment, vocational guidance and improvement and use of the existing work force, including managerial personnel.

Shoe Plant from Sweden

Complete shoemaking-machinery equipment for a rubber shoe factory in Andhra, with a capacity of 40,000 pairs a day, will be supplied by A. B. Svenska Skolastfabriken, Jarrested. The order worth £9 million is one of the largest ever obtained by a Swedish company from India. The delivery will include all types of machines, from big rubber-mixing plants to small industrial sewing machines. The Swedish Company

will also give technical assistance in running the plant.

Coalmining Royalty

A decision on the royalty on coalmining leases granted prior to 25th October, 1949, was announced during last week. These leaseholders, henceforth, will be liable to pay a royalty at the rate specified in any agreement between the lessee and lesser, or at 2.5 percent of the f.o.r. price, whichever is higher. Following this announcement, the Government has also revised the prices at which coal or coke may be sold by colliery owners. For purposes of the new selling prices of coal, the States have been grouped as follows: West Bengal and Bihar; Madhya Pradesh and Orissa; Maharashtra and Gujarat; Assam territories formerly known as Khasi States in Assam State; and Andhra Pradesh. These groups are for collieries. There is another group for cokeries in Madhya Pradesh and Orissa.

Second Yen Credit

Under the second yen credit agreement concluded between the Export-Import Bank of Japan and certain other Japanese banks on the one hand, and the Central Government on the other, imports of capital goods from Japan into India against contracts of a value exceeding Rs. 4.76 lakhs cost and freight, can be financed against the credit. The Central Government has announced the procedure for the import of capital goods, specifying, among others, that: (a) payment for the goods can be effected only under a confirmed irrevocable letter of credit opened on a specified Japanese bank through the applicant's bank in India which would be the one which will furnish the bank guarantee to the Government. (b) The letter of credit would provide for payment by the Japanese bank against the second yen credit. No foreign exchange remittance from India will be permitted. (c) The letter of credit should be in the form specified. (d) All contracts should be on the cost and freight basis. (e) Insurance, if required, should be effected against payment in Indian rupees in India. The amount of insurance payment will, however, be debited to the c.i.f. value of the licence. (f) As and when payments are made by the Japanese bank to the Japanese suppliers, the rupee equivalent should be deposited with a specified government account with the State Bank of India. The rupee equivalent of yen payments should be calculated at the I.M.F. parity rate on the date of yen payments (at present this rate is Re. 1 = 75.6 yen). Interest at the 6 percent rate will be payable from the date of payment to the Japanese supplier to the date of deposit of rupee equivalent by the importer into Government account. Applicants are advised that the contracts submitted for approval should normally provide for payment on a cash basis, namely, on the presentation of shipping documents. For any customary performance guarantee required, 10 percent to 20 percent of the contract value could be withheld which should, however, be paid within 12 to 18 months after the erection of the plant. Contracts on the basis of deferred payments can be considered only in exceptional cases, and if the value of the equipment exceeds Rs 1.5 crores. In no instance can payments after 31st March, 1966, be permitted.

Coal Sampling at Steel Plants

The Central Government appointed a study group to visit individual steel plants in order to examine the facilities for sampling coal. As the group visited the steel plants, it was found that the procedure for sampling varied considerably from plant to

plant. Besides, the arrangement of unloading coal and conveying it to the dumps by conveyor belts was also different in each steel plant. The group, therefore, felt that it would not be possible to evolve a procedure which would find universal application to all the plants and each plant, therefore, must have its own procedure of sampling. The group had, therefore, to examine and find out what would be the best method of sampling at each plant which would be workable and at the same time acceptable to the steel plants and the coal industry. It has observed that the sampling procedures now adopted at the steel plants are not satisfactory enough to make them acceptable to all the parties concerned, nor could they be used as a basis for working out a bonus and a penalty scheme.

Mechanical sampling devices can be introduced at no great cost and with little or no interference with the existing conveying arrangements. The group made it a point to examine particularly the amenability of the existing arrangements to the incorporation of a sampling device and was satisfied that mechanical

sampling devices could be installed within a reasonable time, say, within a month or two. As the device should be simple and not a complicated piece of mechanism, it could even be manufactured and installed by the plant itself by their mechanical engineering departments unless, of course, a particular plant finds it more convenient to buy one or procure one from abroad. Any steel plant asking for foreign exchange for importing equipment should be granted necessary facilities for the purpose, particularly where the object is to save time in devising and manufacturing one at the works and ensure that a tried mechanical device is being installed.

World Bank Loans

Mr. Stewart Mason of the World Bank is coming to India this month, followed by technical teams, to appraise various projects in order to plan the Bank's lending programme for the current year. In 1961, the Bank granted a loan of \$35 million to the private sector of the coal industry, a second loan of \$21 million to the Port of Calcutta, a sixth loan of \$50 million to the Indian Rail-

ways, and a loan of \$19.5 million to the Indian Iron and Steel Company for the development of coal production. These make a total of \$125.5 million. It is planning to make a fourth loan of \$25 million to the Industrial Credit and Investment Corporation of India, for financing development in the private sector.

The Bank has asked the Government of India to seek bilateral credit rather than look to it for the further financing of railway development. It claims that it has made the largest investment to finance the Indian railways, and it is time that further developments were linked to the import of material on credit granted by friendly countries.

Iron Ore to Japan

The State Trading Corporation has entered into three agreements with Japan for the export of 12 million tons of iron ore—300,000 tons of the high grade to be supplied by the end of 1962, 11.25 million tons of medium quality to be supplied by 1968, and 450,000 tons of low grade during 1963-65.

TELL US YOUR JOB—

AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United

London

Sterling Area Gold Reserves Fall Sharply

(FROM OUR LONDON CORRESPONDENT)

THE fall of £85 million in the sterling area's gold reserves during December was largely due to the usual year-end payments on the U.S. and Canadian postwar loans, amounting to £67 million. Even so, this leaves a loss of £18 million in normal transactions, compared with a corresponding gain of £59 million in November (of which £50 million was used to make a repayment to the International Monetary Fund). The December result is not encouraging and at the year end, total reserves stand at £1,185 million. In the first place, the big total drop is a reminder that Britain is still not earning the balance-of-payments surplus which is needed to meet the annual debt payments, let alone providing for overseas investment and aid. All this is still being financed either out of precarious reserves or out of short-term funds attracted to London from abroad. Secondly, the December loss brings home how unreliable is the inflow of the short-term funds. Early in December, rumours of a possible revaluation of the Italian lira and the Swiss franc (both without foundation) were sufficient to drain large funds away from London, although they had only come in during October and November. At the end of 1961, further large amounts of money were withdrawn from both New York and London by Continental commercial banks for the purpose of "window dressing" of year-end balance-sheets. This seasonal withdrawal seems to have fallen more heavily on New York than London this time, and in the last few days money has apparently begun to come back to London. Sterling has hardened since Christmas.

Total Inflow

Between August and November, there was a total inflow into London of some £300 million: seen against this trend, the reversal in December was only small. But the Bank of England's *Quarterly Bulletin* points out that the inflow during August and September seems to have been due primarily to the reversal of short positions—unwinding of leads-and-lags and rebuilding of abnormally low working balances held in sterling, including inter-company accounts. A return of investment funds—either covered or uncovered—only began on any scale in October, the bank reports. This seems to be confirmed by the sharp rise in security sterling in October when the discount almost disappeared. By October, confidence in sterling had been sufficiently restored, so the Bank believed that some part of the investment inflow was probably "uncovered." On the other hand, confidence did not seem to be proof against the December rumours of further Continental currency changes.

Improvement Within Reach

For the immediate future, the Bank of England's *Bulletin* expects some improvement in the trade balance and in the balance of payments. At any rate, this improvement is "within reach"—provided the present domestic policies are continued long enough to reduce the pressure of home demand on resources. However, the more favourable immediate outlook is partly due to temporary causes. Imports are now being restrained but must be expected to re-

expand if the growth of the economy is to be maintained. The expected increase in exports this year partly depends on supplies of plant and machinery becoming available for export as a result of lower investment by British industry. But if the decline in investment lasts for long, exports are unlikely to go on increasing. There is little prospect of improvement in current invisible transactions. Besides, Government expenditure abroad is more likely to rise than to fall.

The Bank's conclusions are not exactly optimistic: "These underlying trends in the balance of payments may be hidden for a while by an immediate improvement resulting from the short-term measures recently adopted. If this occurs, there might be a risk that the vigorous pursuit of longer-term policies designed to secure increased efficiency and flexibility of the economy, will be relaxed. But the success of these policies is essential if the United Kingdom is to achieve the growth of exports on which lasting external solvency and the future expansion of the economy still rests."

Hire-purchase in Vehicles

Hire-purchase activity in the motor-car trade declined sharply in December, although some categories did better than others. According to *Hire-purchase Information*, contracts for December totalled 64,458, compared with 88,020 in November and 77,072 in December 1960. The cumulative total for last year was 1,487,966, against 1,567,936 in 1960 and a record total of 1,619,856 in 1959. In the last two years, business has been affected by the reimposition of credit restrictions.

The December figure for new motor-cars was 7,219, compared with 9,469 in November and 6,741 in December 1960, so there was an improvement on the figure a year earlier. For used motor-cars, the corresponding figures were 34,401, 44,669 and 39,486. Credit sales of new commercial vehicles at 4,418 were well down on November, but were only 240 below the December 1960 total. Contracts for used commercial vehicles were sharply lower and there was a setback on the motor-cycle side for both new and used machines. Hire-purchase sales of new motor-cycles in December at 3,810 were 1,834 down on the previous month and 1,000 lower than in December 1960. Unless the weather shows a marked improvement, January sales are also likely to be disappointing.

E.C.G.D. Expansion

More exporters are taking advantage of the facilities offered by the U.K. Export Credits Guarantee Department, which ensures that they receive payment for goods exported. During the year ended 31st March last, the Department's premium income rose to £7.4 million from £6.6 million in the previous twelve months. Claims paid showed a reduction of about 20 percent to £4,020,298, compared with £5,084,809. It is estimated that about 75 percent of this will be recovered. Recoveries during the year concerning the previous claims paid amounted to £3.9 million, against £3.7 million. The credit balance on cumulative account rose to £27.8 million from £20.4 million. This is the under-

writing reserve for risks underwritten amounting to about £650 million. Operating expenses showed a relatively small increase to £1,395,257, from £1,361,923. All these figures relate to the commercial side of the E.C.G.D.'s business. Its other activities—involving guarantees given either to encourage trade or to render economic assistance to other countries—also showed considerable expansion. The account for encouraging trade produced a surplus for the year of £927,244—nearly double that of the previous 12 months at £481,490. This raised the cumulative credit balance to £4,247,680. Business in the "Economic Assistance" section involved liabilities of £157.7 million, against £105 million and resulted in a credit balance of £150,415, compared with £35,810, raising the cumulative balance to £386,271.

Industrial Material Supplies

An analysis of the fall in industrial production between July and September, published in the U.K. Treasury's *Bulletin for Industry*, shows that most of the major industrial materials have been declining since the middle of the year. These materials include steel, non-ferrous metals, general chemicals and textiles. The fall is due only in part to a running down of stocks by users. In the motor-car industry and its suppliers, says the *Bulletin*, activity was reduced by strikes and by unusually extensive model changes. Deliveries of motor-cycles and bicycles also declined after allowance for seasonal factors. On the brighter side, construction work and its associated brick and cement industries continued to expand. So did engineering capital goods production and the food processing industry. Rubber showed signs of recovery, perhaps because of the buoyant output schedules in the motor-car industry for the coming months. Furniture remained busy, and there was no sign of weakness in the clothing, hosiery and footwear trades.

Overage Machine Tools

Nearly 60 percent of the machine tools used by the British metal-working industry are more than ten years old, the weekly journal *Metal-working Production* has reported. About 22 percent are more than 20 years old. On the view that ten years is an acceptable measure of obsolescence, this means that three out of five British machine tools can be described as "overage." The survey, the first of its kind in the U.K., was conducted by *Metal-working Production* at the request of the Machine Tool Trades Association. Its findings are based on a questionnaire sent to 15,000 companies in 19 metal-working industries. The results show that although the percentage of machine tools over ten years old is somewhat higher in the United States, the proportion of more than 20 years old there is significantly lower at 18 percent. West Germany uses younger machine tools than either. There, 55 percent are more than ten years old.

Steel Export Record

Although the crude steel output in 1961 was below the record of 1960, the industry achieved a postwar record level of direct exports—about 21½ percent of output—and a marked fall in imports contributed to a rise in net exports from 2,500,000 ingot tons to

an estimated 3.7 million ingot tons. This picture of last year's achievements in the steel market is given by the British Iron and Steel Federation. Production ran at record rates in the earlier part of 1961, but fell from August onwards, and the crude steel output is estimated at 22.06 million ingot tons, against 24.3 million ingot tons in 1960. 2 million tons of the shortfall being accounted for by falling production rates. The "real" demand for steel—that used in home industry and for direct exports—was only narrowly less than in the previous year, but requirements fell short by 2,380,000 ingot tons, of which it is estimated that 2,060,000 ingot tons were due to a heavy swing on the part of buyers from stock accumulation to stock reductions. A more encouraging picture is shown by the figures for direct exports of steel by the industry itself, estimated at 4.2 million ingot tons during 1961, representing a postwar record level.

Merchant Banks to Merge

Two of the City's leading merchant banks are to merge. Schroders, now a holding company controlling the long-established family business of J. Henry Schroder in London and New York, will absorb Helbert Wagg and Company, investment bankers. The two houses came together about 18 months ago when Schroders acquired 70 percent of the Helbert Wagg capital. Since then, they have developed close collaboration but have still been run as two separate businesses. Schroders now propose to buy up the remaining 30 percent of the Helbert Wagg shares and the two businesses are to be completely amalgamated. Schroders Ltd will be the overall holding company with Mr. Helmut Schroder as chairman and Mr. Lionel Fraser (head of Helbert Wagg) as deputy chairman. The joint operating company will be called J. Henry Schroder, Wagg and Co., and its chairman will be Mr. Gordon Richardson.

Insurance Estimate

Estimates that the British insurance companies have improved their premium income "probably by at least £100 million to a total of over £1,700 million" in 1961 are put forward by the British Insurance Association in a statement with the first batch of announcements from individual companies. But the B.I.A. lays stress on the many heavy claims that have to be met, including the major part of the insured losses of £7 million from "Hurricane Hatties" last November. The companies have increased their premium income in America, but heavy claims on the fire and casualty business mean that underwriting is unlikely to show a loss. Investment income from dollar securities will offset this and produce a surplus. In Britain, substantial fire losses, under £40 million, are cause for concern. Motor-car insurance has again been unprofitable, but better results are looked for this year, as a result of the selective premium increases. On marine business, a better profit is expected from 1959 underwriting, where accounts are just being closed, but 1960 and 1961 may be less profitable.

Cotton Licences

The open general import licence has been amended to provide for the control over imports into the United Kingdom of woven cotton textiles from India and Pakistan, to be operated by the authorities in India and Pakistan. The agreements made in September 1959, between the U.K. Cotton Board and the Indian and Pakistan cotton industries to limit imports were previously implemented by a licensing control operated by the Board of Trade. The amendment brings arrangements with India and Pakistan broadly into line with those which have been operated in Hong-kong since February 1959.

Jute

LOOM UNSEALING EXTENDED UNTIL END OF MARCH

AT its meeting yesterday, the committee of the Indian Jute Mills Association reviewed the market situation in the light of the stocks of manufactured goods at the end of December 1961. According to a Press note, it has decided that, as a temporary measure to relieve the continuing shortage of ready goods, the mills should continue to be allowed to operate the additional 2½ percent of the looms unsealed from 13th November, 1961, and also the further 2½ percent unsealed since 1st January, 1962, for a further period of two months until the end of March 1962.

While recognising that the unsealing of this additional 5 percent of the looms has meant that the industry is operating at a very high level of production with only 7 percent of the looms sealed, the committee is anxious to ensure that, in present market conditions, the output of jute goods should be stepped up to the maximum extent possible. It has, therefore, agreed that, as a further temporary means of relieving the shortage of ready goods, such mills as are in a position to operate more looms should be permitted to do so to the full extent of their ability from 15th January to the end of February 1962.

Supplementary Jute Quota

In view of the decline in raw jute prices during the last few days, the I.J.M.A. has also decided to issue a supplementary quota of approximately 300,000 maunds of jute to be purchased by mills during the week ended 13th January. Earlier, the raw jute quota sub-committee had already issued an increased quota to mills for the current week (believed to be about 800,000 maunds). But the fibre market has been weak, because all-India imports have shown a distinct improvement, and are estimated to be about 130,000 maunds a day, a very large percentage being mesta. The announcement on Saturday about the record production of jute in West Bengal has had some influence on the market, and perhaps was untimely. According to it, the production of jute in West Bengal (excluding mesta) amounts to 1.67 million maunds, or 75 percent more than in the previous year. The mesta production is also reported to be a record, so it is hardly surprising that the market is weak. The trend conflicts with the statement that prices have increased in West Bengal and are at present higher than the minimum of Rs. 30 a maund, landed in Calcutta, prescribed by the Government.

Higher Grades

Admittedly, prices in West Bengal are probably higher than in any other State, but it is wrong to generalise on this basis. The higher grades of Daissee suitable for special mill gradings are well above the minimum levels, mainly because they are scarce. But there are many other grades which do not come anywhere near the minimum price. The record production of jute in West Bengal has not helped the mills a great deal, as the quality of the fibre has suffered. Most mills buy large quantities of Daissee, but good Daissee is scarce. That is why high-grade jute is commanding such a large premium.

This is not only peculiar to West Bengal, but is typical of the entire Indian crop. With the generally

easy availability of jute, prices in most districts have tended to ease, except for the higher grades. Government circles have been perturbed about recent reports that fibre is being offered in Calcutta at below the minimum prices. Whether they will still be perturbed after the elections

is another matter, but the fact remains that some sellers are prepared to offer at less than the minimum price.

There are always ways of circumventing minimum prices. However, many of the recent sales have been

of "distress" parcels and it is doubtful if any large business has been done. Most of the fibre on offer at below the minima is jute held in stock by sellers, and because the minimum price is being offered in Calcutta, it does not follow that the same parity has been paid in the mofussil. Sellers are anxious to get rid of their stocks. Their godown space is cramped, and in some cases they have to clear their advances from the bank, hence the pressure to sell in Calcutta. Although the position in the mofussil may justify lower prices, it is most unlikely that business so far concluded below the minima will in any way affect the

I.J.M.A. STOCK FIGURES FOR DECEMBER

The Indian Jute Mills Association reports total stocks of jute goods at the end of December as follows:

Description	31st December, 1961		30th November, 1961		Increase over (+) or decrease from (-) last month		31st December, 1960	
	000 Metres	000 Metric Tons	000 Metres	000 Metric Tons	0:0	000 Metric Tons	000 Metres	000 Metric Tons
	(Lakh Yds.)	(000 Tons)	(Lakh Yds.)	(000 Tons)	(Lakh Yds.)	(000 Tons)	(Lakh Yds.)	(000 Tons)
Hessian cloth and bag	5,20.47 (5.69)	16.1 (15.8)	5,76.09 (6.30)	17.7 (17.4)	-55.62 (-61)	-1.6 (-1.6)	9,71.69 (10.62)	29.7 (29.2)

upcountry people as the jute has already passed out of their hands.

Preparations for Next Crop

It will not be long before preparations for sowing the 1962-63 crop commence in the early districts. In case there is another bumper crop it is essential that a scheme is prepared in advance to influence its marketing. A jute buffer stock scheme is admirable, and it is significant that Pakistan has already sounded her foreign customers on the possibility of co-operation in establishing one there. But any such scheme has to be worked out right at the beginning of the season. It could then remove the pressing necessity which normally exists of marketing the crop as soon as it is ready, and it would allay the fears of those who advocate a drastic curtailment of sowing lest a large crop cause a slump.

Ample Reserves

There will be no great surplus from the 1961-62 crop. But the introduction of a buffer stock scheme would permit the acceptance of a new crop as large as that of the present season without fear of any ill-effects on the rural economy, and there are very good reasons why a large crop should be grown. At the present time, the evidence indicates that the world is ready to absorb more jute goods provided their prices are kept down to a reasonable level. It is essential to have ample reserves of raw material in order that the demand can be met. If raw jute were so short that jute goods were forced up to famine prices, the substitutes that have already gained a considerable foothold would get an additional chance of being established on a permanent basis. To prevent that, it is essential that the Government look at the problem from a long-term point of view rather than from the point of view of election propaganda.

The trend in the Calcutta jute goods market during the past week has been mixed. Due to continued overseas enquiries, hessians have ruled steady, but there is no such support for heavy goods, and sacking prices have fluctuated in accordance with speculative activity. There is still a demand for early shipment but it has eased considerably so the premium for ready shipment is much less now. Mills are not in a position to sell for near shipment, but small sales by the bazaar to shippers are reported. Some mills are keen to sell forward as their jute stocks are increasing every week due to the quota scheme. But overseas buyers are not showing a great deal of interest beyond June 1962 so any sales in this category are invariably absorbed by the bazaar.

I.J.M.A. Stock Figures

The I.J.M.A. jute goods stock figures for December appear to justify the Association's decision to increase production this month. Stocks of member-mills reporting to the I.J.M.A. amounted to 55,900 tonnes at the end of December 1961, which was 1,200 tonnes less than at end of November 1961. The total was made up of 16,100 tonnes of hessians (28.8 percent), 29,100 tonnes of sacking (52.1 percent) and 10,700 tonnes of other goods (19.1 percent). Hessians stocks were down by 1,600 tonnes and sacking stocks by 500 tonnes. But other goods increased by 900 tonnes to the highest level for six months. In December 1960, total stocks were 81,500 tonnes, of which 29,700 tonnes (36.3 percent) were hessians, 41,800 tonnes (51.3 percent) sacking, and 10,000 tonnes (12.4 percent) other goods.

THE JUTE MARKETS

Manufactured Goods: At the opening last Thursday the undertone was quiet due to renewed selling

pressure in the futures market. January shipment B Twills dropped to Rs. 129 and April-June shipment to Rs. 123. Even hessians, which had shown signs of a recovery, lost Rs. 1.25, so 40in 10oz. was quoted at Rs. 54.75 for January and Rs. 47.75 for April-June. Ready goods still fetched a premium but very few mills were sellers for that position. The decline continued on Friday, when further losses were reported in both sections. But the setback was soon discounted by covering in ready goods, and by Saturday morning the losses were more than made up. Foreign enquiries kept hessians firm; after the week-end, prices advanced rapidly, and 10oz. reached Rs. 56.50 in the near position, the premium rising to Rs. 8.50 over forward shipment. There was no such support for sacking, however. Prices tended to drop, and were prevented from going down further only by the steadiness of hessians. The publication of the I.J.M.A. stock figures was a bullish factor, particularly for hessians, but sacking remained quiet.

Opening quotations on Wednesday morning were as follows:

	January	February	March	April-June
40in. 7 1/2oz.	45.75	39.75	37.75	35.75
40in. 10oz.	46.75	42.75	40.50	38.50
40in. 10 1/2oz.	56.50	51.60	49.75	47.75
B Twills	127.25	124.75	122.75	121.25
Heavy Coes (Pbans)	127.75	124.75	122.75	121.25
A Twills	153.00	152.00	150.50	147.50
Liverpools	148.00	143.00	141.00	138.50
Cornacks	132.50	128.50	125.75	123.75

Raw Jute: There was very little change in Calcutta at the opening last Thursday, and daily business was reported at the minimum rates as mills took up their quotas. Weaker conditions prevailed when imports all over India began to increase and offers were put on the market. The announcement about the record production of jute in West Bengal proved to be a major blunder, as immediately panic conditions prevailed, and sellers began to offer their stocks at Re 1 or even Rs 2 below the minima. Reports of small business at low rates filtered through, but mills in general stayed out of the market in spite of the fact that the quota for the current week was increased to about 800,000 maunds. Towards the close, the market was easy, with sellers keen for business.

On Wednesday morning, opening quotations were based on the minimum price of Rs. 30 a maund as follows:

	Landed at Mills	Basic Bottoms	Rs. a 100 kilos	Rs. a 100 kilos	Shipment
Assam	86.50	80.00	29.00	29.00	Jan.-Feb.

CRISIS THREATENS COIR FACTORIES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

A FEW days ago, a petition was submitted to the Kerala Legislature by a communist member praying for timely action to end the prevailing crisis in the coir industry. A similar plea was made in Parliament by the member representing Alleppey some time ago. It is said that the industry has drifted into a state of stagnation, exports of coir and coir products are dwindling and that there is widespread unemployment among workers. The critics often say that the industry is in the grip of a perpetual crisis. The Coir Board does not, however, fully agree with these views. The overall position of the industry, according to information collected by the Board, is as follows. Production is slowly but steadily increasing. The internal consumption is also rising. But as far as exports are concerned, there has been a slight decline in the export of coir products like mats and mattings. The labour situation is also not as bad as it is often made out to be. There is no serious unemployment or restlessness in the spinning sector where about 95 percent of coir workers are employed. The total number of workers employed in the industry is estimated by the Board at 350,000. It is true that the labour in the spinning sector is not getting the minimum wages notified by the Kerala Government and that the entire labour force is not getting regular work. These factors have become endemic with the coir industry.

Slow Disintegration

The situation is different in the manufacturing sector where about 23,000 workers are employed. Although there has not been any appreciable shrinkage in the production of articles like mats, mattings, rugs and carpets, there has been a substantial loss of employment for coir factory workers of Alleppey where the coir manufacturing industry was concentrated and where there were a large number of well-established factories producing the articles. The established and larger units there have been undergoing a slow process of disintegration. The coir factories in Alleppey, which were started and owned by reputable European firms, are either being closed down or sold or at least are reducing their manufacturing activities. The bulk of the business in coir products has shifted from the organised factories in Alleppey to those in rural areas. It is possible that there might have been a larger volume of employment in rural factories, but that is no consolation for workers in Alleppey who have lost their employment. The reason for this shift in business is that production in organised and well-established units has become relatively expensive in recent years due to extra financial obligations imposed on them by labour legislation. Smaller units, which have recently sprung up in the Sheertallai area, enjoy immunity from these obligations, so they are in a position to offer keen competition to larger units.

The mats and mattings industry in India cannot survive in a world of competition unless it changes its antiquated production methods. The traditional methods of production now employed in the spinning sector also have to be changed, for mechanisation is inevitable for the survival and healthy existence of the industry. Some time ago, the Kerala Government announced a policy of gradual mechanisation of the coir industry. There may be some displacement of labour as a result of mechanisation, but it is inevitable in the larger interests of the industry. One of the European firms now functioning in Kerala has recently established a defibring plant in Malabar where retting facilities are not available. This plant which was established at a cost of about Rs. 1 lakh will defibre 5 million coconut husks a year and produce mattress and bristle fibres which have a good market both in India and abroad. Meanwhile, the Coir Board has recommended licence for three more parties—two in Kerala and one in Madras—for putting up defibring plants.

Prohibitive Prices

The well-wishers of the coir industry are worried over the prohibitive prices of coir. Since October 1960, prices have sharply risen and up to now the trend continues. For instance, the price of Anjengo superior quality coir yarn, which was Rs. 280 a candy of six cwt. in Alleppey, had risen to Rs. 434 by October 1961. Similar increases have occurred in all varieties of coir goods whether they are manufactured or semi-manufactured products. If the present trend continues, there is every possibility of a crash in the not-too-distant future. Coir cannot go out of parity with other hard fibres like sisal for any considerable period of time. It is reported that sisal, which used to be £30 higher a ton than coir under normal conditions, has now declined by £60. This cannot last long, the exporters in India say, so a parity is likely to be re-established in the near future.

Nux Vomica Exports Fall

The export demand for nux vomica shows signs of a gradual shrinkage. This might be due to the fact that foreign buyers are switching over to synthetic substitutes on account of the apprehensions about the continuity of supplies from India. Prices remained more or less steady in 1961 in spite of the fall in export demand because Indian factories engaged in the production of medicines and insecticides were buying larger quantities. Exports in 1961 were about 50 percent less than those of the previous year, and the earnings are not likely to exceed Rs. 5 lakhs.

WORLD TEA OUTPUT RISES

BUT STOCKS REMAIN LOW

(BY A SPECIAL CORRESPONDENT)

WORLD tea production up to mid-December 1961, was about 1,289 million lbs, compared with 1,179.5 million lbs in 1960 and 1,184 million lbs in 1959. Over the three-year period, production is higher by, say, 105 million lbs. One may, therefore, ask why the auction marts for the commodity have reversed the downward trend, for, after falling from July until mid-November, there has been a moderate, but welcome, revival in prices. Although there is plenty of tea in sight, new supplies

from north India will not be available till May. World stocks appear to be on the low side whereas if properly handled, the consumption might be increased. Furthermore, Ceylon may run into labour troubles which could cause a temporary fall in shipments. Exports from north India may, therefore, be expected to gather momentum. As for the bilateral agreements already reported between the Government of India and several countries in eastern Europe, it is pleasing to note this area has taken more tea in 1961 than in the previous year.

Bumper Crop in Pakistan

Pakistan's system of exports is interesting. That country appears to provide for the home market before allowing exports. From a bumper production of, say, 56 million lbs, exports of 12.5 million lbs may be allowed, leaving 43.5 million lbs for internal consumption, or rather less than 1 lb a head. The Pakistani population is further protected as there are controls on the price of the commodity.

Low Yield in Ceylon

Much has been written with reference to gains made by Ceylon's tea propaganda campaign at the expense of India. There seems little doubt that good results have followed from some of the methods employed by Ceylon, such as providing samples of good quality produce. The restaurant in Cairo is reported to be popular. But private advices from Colombo indicate that many problems confront the industry. The yield an acre, for example, is lower than in India, but presumably the reason for this is the higher elevation of a large proportion of the estates. For example, high-grown teas produced on an elevation of 2,000 feet to 4,000 feet cover 35 percent of the planted area while 2,000 feet and less cover 42 percent of the planted area. Low lands have only 23 percent of the total area under tea. More than 75 percent of the Ceylonese tea is grown well above the sea level whereas Assam, Cachar, Terai and Doonars gardens in India rarely exceed 400 feet in elevation. The Ceylon Scientific Department is trying to ensure a uniform standard and higher output an acre. But producers there are worried about high taxation, Government interference and nationalisation. Labour is another problem which may become worse because old-time Indian workers are being replaced by the local population who are politically biased. In view of these difficulties, further private investment in tea development hangs fire. Replanting is estimated to cost about Rs. 2,500 to Rs. 3,000 an acre and costs are reported around Rs. 1.50 to Rs. 2 a lb. These figures are much the same as for India.

Too Many Taxes

The Indian tea conference recently held in Shillong adopted a resolution urging the Central Government to consolidate the Assam carriage tax, West Bengal entry tax and tea cess into one Central excise duty. Producers also asked for protection from further imposition by State Governments. It is essential for Indian tea producers to secure a more competitive position in world markets. They also want the intensification of propaganda for Indian tea in foreign markets but do not appear to have moved the Tea Board on the important question of internal consumption which, as already reported, proposes to start a campaign to raise tea exports to Scotland. As for finance for replanting, the Assam State Minister suggested that Rs. 5 crores in loans already allotted should be increased. The hire-purchase scheme for garden and factories running to Rs. 2 crores is already in operation, but the fertili-

sers subsidy for gardens in Cachar will be discontinued. With high costs, low yields and falling prices, many of these estates are threatened with financial collapse. So the producers have urged the Government to abolish the export duties.

Common Tea Prices Fall

The world surplus production has affected all tea sales. Reports from south India state that commons are fetching only Rs. 3 a kilogram, compared with Rs. 5 a kilogram a year ago. Meanwhile, internal consumption is estimated at 300 million lbs. In other words, although the known world supply is 105 million lbs higher than in 1959, it is only 50 million lbs above probable consumption. If tea sales propaganda is any use at all, an addition of this nature should easily go into stocks. As already noted, as soon as some tea agencies in Calcutta felt that the prices were low enough, and if the downward move continued offerings would be restricted, the market firmed up and in the past four sales, the prices have improved. As for withdrawals, it is interesting to note that during November 1961, more than 134 percent of the teas offered were withdrawn. The latest export figures from Calcutta show improvement by comparison with 1959, and prices at the sale on 8th December were again up.

WAGE RISE IN NORTH INDIAN TEA GARDENS OPPOSED

At a recent meeting of the Consultative Committee of tea producer associations held in Calcutta, it was unanimously agreed that there was no justification for any increase in the wages of tea garden labourers in north-east India at the present time, particularly as there had been no rise in the cost of living on estates since wages had last been fixed. It is expected that the Wage Board will be hearing the employers' representatives in the near future, when the Consultative Committee's arguments will be placed before it.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for December 1961:

Upper Assam: Weather abnormally cold; outturn about normal; earthquake reported from Namerkata, but little damage has resulted; the season has closed.

Central Assam: Cold weather has set in and the season has closed.

Lower Assam: Weather abnormally cold; the season has closed.

North Cachar: Weather abnormally cold; outturn poor; the season has closed.

South Cachar: Cold weather has set in; outturn poor in Chutlabheel; the season has closed.

Eastern Doonars: Weather cold; outturn poor in Kalchini; the season has closed.

Central Doonars: Weather abnormally cold; outturn to-date is slightly over last year; the season has closed.

Western Doonars: Cold weather has set in; outturn poor in Nagrakata; the season has closed.

Darjeeling: Weather abnormally cold.

Terai: Weather cold; crop below last year; some blister blight prevalent; the season has practically closed.

COCHIN TEA SALES

At Sale No. 2, 617,000 kilograms of tea were on offer. There was a strong demand, particularly for improved quality high-grown teas which advanced considerably. Plain low mediums and medium brokens were 10p to 20p dearer, but similar fannings were only firm to dearer. Good mediums were dearer with improved quality while whole leaf grades were strong. Unorthodox grades were irregularly 10p dearer.

STRONG DEMAND AT TEA EXPORT SALE

MIXED TREND IN DUSTS

AT Sale No. 30, held on 8th and 10th January, there was a strong demand for the 75,151 packages of tea on offer at the Export sale, and prices were generally firm to dearer. Plain brokens sold readily at about last rates, while similar Fannings were often a little dearer. “Teas for price” were keenly competed for and were also dearer. Better liquoring and medium orthodox descriptions were well supported at fully firm to dearer rates, but B.O.P.’s in these categories were irregular. There was keen competition for Fannings and these were generally dearer. Better liquoring C.T.C.’s sold at dearer rates, while medium and poorer kinds were fully firm and at times much dearer. Legg-cut teas were fully firm to dearer. Darjeelings sold at higher rates according to quality. Whole leaf was firm to dearer. Tip also sold readily, but was irregular.

	1962		1961	
	Rs. a kilo	Rs. a kilo	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	4.00 to 4.20	5.25 to 5.30		
Plain B.P.	3.50 to 3.65	4.50 to 4.65		
Plain Fannings	3.60 to 3.85	4.85 to 5.05		
Medium Assam C.T.C. B.P.	4.90 to 5.20	4.70 to 4.90		
Medium Assam C.T.C. Fannings	4.90 to 5.30	4.85 to 5.10		
Best Assam C.T.C. B.P.	5.50 to 5.80	5.50 to 5.90		
Best Assam C.T.C. Fannings	5.60 to 6.00	5.80 to 6.30		

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 25,500 chests of Dust on offer, met with a somewhat hesitant start, but later the market strengthened. Clean medium C.T.C. teas with bright liquors once again improved in value, but the plainer varieties tended a little easier. Good C.T.C.’s however, were irregular, while the smaller kinds were fully firm. Secondary and fibrous grades continued to sell well and realised improved prices. Plain orthodox varieties opened about 10nP easier, but demand strengthened towards the close and these were fully firm to dearer. Medium Assam types, however, were irregular. Legg-cut descriptions received good support and both the clean and fibrous types sold at higher rates.

	1962		1961	
	Rs. a kilo	Rs. a kilo	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.80 to 4.40	4.85 to 5.20		
Medium Assam Dust	4.20 to 5.00	5.15 to 5.25		
Legg-cut Dust	4.50 to 5.20

Good Assam C.T.C. Dust	6.40 to 7.00	5.90 to 6.50		

(Quotations are inclusive of excise duty.)

There was a good demand for the 375 chests of Leaf on offer.

LINSEED FIRM

The market was firm in the past week. Arrivals were small and sellers were reserved as stocks with mills were very small. Small business was done. The oil market was steady due to the firmness of other vegetable oils. Local buyers were interested daily, but sellers were reserved, especially for forward deliveries. The oilcake market was dull. Small local business was done. The latest quotations is as follows: ready January Rs. 31.50 a maund.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O., Po., F. and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares, respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve & other Funds	Accrue under Tea	Output and Average Price per Kg./lb. realised for crop	Estimate	NAMES	Accounts closed	Net Profits including taxation	Dividends per cent	Latest Market Quotations as available until

A SUPERFICIAL APPROACH TO EXPORTING

for exempting, at least for the time being, those companies which have only just started in production and which are not in a financial position to sustain any cut in output brought about by artificial means. Further, the burden seems likely to fall most heavily on the smaller and newer companies, which have not had time to build up export contacts, rather than on those which have been exporting for some time and are in a reasonable position to expand this section of their activities without any new investment in promotion expenditure. Cuts in the output of any company are likely to increase unit costs, a fact which can have an effect on the internal price position as well as constitute a disincentive to the expansion of exports. It is perhaps true that the industries chosen have benefited most from import restrictions. But it must be remembered that this was what their plans were originally based on, and the benefit to themselves has been—or so it would seem from the facts of Government policy on this point—no more than the benefit to the country as a whole. Finally, as between the industries affected, some are producing products which are much more likely to find expanded export markets than others, and can therefore expect to suffer less seriously. It is possible that this factor will be taken into consideration when implementing the scheme.

Until the scheme is introduced it is impossible to foretell what its consequences will be, but clearly there is a strong case for its being applied with considerable caution. It will be no benefit to the country to find that it has secured a marginal increase in exports at the cost of a considerable loss of production and the existence of a large amount of newly-installed, idle capacity. There is an obvious contradiction in official policy here: the accumulation of new manufacturing capacity

in the public sector still has priority over the import of raw materials to maintain full-capacity working in private industry. This does not suggest that the Government has thought the matter through. A policy which is less likely to cut output while encouraging exports might be a better choice, and here again the possibility of some tax incentives in addition to any other measures imposed, can be recommended. The mistake the Government may be making is to consider that export markets are easily available for the products of the industries which have been earmarked. This is probably far from the case, because the list comprises chiefly the kind of industry whose products are high-cost when manufactured in India, and in direct competition with more experienced low-cost producers when exported abroad. India's best markets for such products probably lie in those countries which do not have the foreign exchange to buy from north American and western European producers. But these are often the same countries from which India limits her own purchases in order to conserve foreign exchange.

It is possible that the Government's scheme will encourage a certain amount of cost-consciousness among manufacturers, although, as mentioned above, costs in so many of the industries listed are directly correlated with the volume of output. It might also serve to make certain industries more export minded. But otherwise it is difficult to accept that it can have anything more than a marginal effect on the volume of exports, whereas what is needed is a complete reorientation of the whole concept of exporting in a developing economy. For instance, after so many years of neglecting exports, the Government has only itself to blame if manufacturers are not inclined to take the need particularly seriously now. So many of the Government's present policies are damaging to exports; the present taxes on tea are an excellent example. The inflation of internal costs and the lukewarm attitude towards modernisation and rationalisation in such export industries as cotton textiles, all suggest that exporting is not among the Government's primary concerns. What the Americans would call "gimmicks" are not

Calcutta Markets ... 121

It is doubtful, however, whether it has taken account of them all. Not every company affected will be in a position to prosper if its raw material allocations are cut. There is a certain optimum size necessary for most production processes and if, in some cases, scale is reduced, the consequences for individual concerns and their level of costs may be serious. There is a case here

going to cure the fundamental deficiencies in the internal economy which are acting against any significant export expansion, especially in the new industries. The facts must be faced that the price of India's new exports are too high because costs have been allowed to get out of hand, their quality is too poor because of insufficient internal competition, and their sale abroad has been discouraged because the home market is so starved of goods that it is prepared to take anything it can get hold of. Towards the solution of these difficulties, the new scheme has little to offer.

Until exporting is studied against the background of the economy as a whole, there seems little prospect of any significant improvement.

THE OUTLOOK FOR SHARES

EQUITY prices in the stock markets have shown rapid and erratic fluctuations over the past two weeks. Business has on the whole been small, as both the bulls and the bears see no obvious incentive to extend their commitments on a large scale. There was a minor rally on Monday, after the Reserve Bank announced its decision to liberalise the margin requirements for bank advances against shares. But the improvement has proved short-lived; it has not been maintained because the markets think that the reduction in the minimum margin for share advances from 50 percent to 40 percent cannot have much effect in the present circumstances. The move merely continues the process of easing the Reserve Bank's selective credit controls. It comes at a time when the busy season is in full swing, and when bank funds are already heavily committed to the financing of trade and industry. No great addition is, therefore, to be expected in the flow of bank credit to the stock markets as a result of the liberalisation. The decision is nevertheless significant in certain other ways. It indicates that the Reserve Bank considers the present condition of the stock markets to be fairly healthy. The underlying assumption seems to be that this particular margin requirement in the armoury of selective credit controls has worked well, in that scheduled banks' advances against shares have remained "pretty stable" around the level of Rs. 80 crores to Rs. 83 crores during the past 21 months. An additional check against excessive speculation has recently been introduced in the form of the automatic margin system which is applicable in all the stock exchanges. The need for control over share advances from banks has to that extent decreased.

Nobody really expects that the reduction of the margin on share advances will lead to any great upsurge in equity prices. For the time being, the main worries of operators seem, rather oddly, to be astrological. Fears of unpredictable calamities

India is not the first country to discover that selling abroad is incompatible with a high-cost market at home. The need to lower costs is a favourite theme of Ministerial speeches, but it is not always within the competence of particular industries to do much about it under current economic circumstances. If, as seems likely, the new scheme proves unable to increase exports except in insignificant quantities, then the next step the Government might usefully consider is the setting up of the Ministry of Exports which was suggested some months ago. This would at least ensure that export problems are represented at the stage where they are most needed: when economic policies are being formulated.

at the time of *Astagrahi* (the confluence of the planets) are having a remarkable influence on a fraternity which is otherwise known more for its materialistic than for its spiritualistic interests. The thought of impending doom would normally be expected to induce widespread panic; but share prices are fairly steady, and operators are to be complimented for their optimism in believing that the wrath of the gods will be placated by the extensive ceremonies now being conducted in Lyons Range and Dalal Street. In any case, even without *Astagrahi*, the approach of the general elections would have had a sobering influence. Investors are grateful for the fact that electioneering speeches so far have contained less than their usual quota of socialist fire. But the mood of caution continues, for there is no knowing what may be said or done in the coming weeks as the campaigns of the various Parties warm up. In general, however, there is quiet confidence that the elections will bring no major change, since the Congress is likely to be returned to power at the Centre and in most of the States.

Astrology and politics apart, the stock markets have found reason for modest satisfaction over the progress of the economy. Mr. S. K. Patil has promised another record harvest of foodgrains which will continue to be supplemented by P.L. 480 imports from the United States, and should thus prevent any sharp rise in the price level. The statistics indicate that industrial expansion has been fairly vigorous during 1961, as a result, companies have

been able to increase their turnover and profits, although dividends have not in all cases risen proportionately. The growth of industrial output is expected to continue, as the large investments made in recent years mature. But a major source of anxiety is that the shortage of coal, power and transport facilities will have an increasingly serious impact in the future. Recent reports from New Delhi indicate that a revision of the third plan targets is contemplated so as to ensure more vigorous expansion in these sectors. But any optimism on this score is tempered by the thought that the revision has already been inordinately delayed; that it may be delayed further due to the intervention of the general elections; and that in any case the new schemes sanctioned now will take so long to materialise that no substantial relief can be visualised for some years yet. In the case of coal particularly, it is noted that the emphasis remains on talk rather than action: not one of the industry's basic difficulties has yet been seriously tackled.

Another shortage which might have more serious implications than it has had already is that concerning the availability of imported materials which are essential for industrial working. Here, much depends on how much foreign aid India gets, and whether she gets it quickly enough. It is reported that moves have been afoot to get the "Aid-India Club" meeting, due to be held towards the end of this month, postponed. Whether or not the moves succeed, it seems possible that, because of recent political developments, many western countries will no longer be as willing to provide assistance as they were before. This is naturally a matter for serious concern to investors, since it is certain that industrial expansion in the coming months will slow down appreciably if the supply of imported raw materials, spare parts and components has to be restricted further. The meeting of the "Aid-India Club" will no doubt help clarify the prospects of getting foreign aid, but it is understandable meanwhile that this should be a major factor contributing to the hesitancy of the stock markets. In brief, it looks as if caution will remain the watchword for some weeks, if not months to come, as far as equity prices are concerned. The fact that the progress of industry has not yet suffered seriously, in overall terms, should help maintain the basic undertone. But any major improvement is likely to await evidence that the Government is taking concrete steps to correct the maladjustments which have shown up in the very first year of the third plan.

JUTE'S LIVELY RIVALS

"PAST experience has clearly shown". Mr. N. L. Kanoria cheerfully reassured the Jute Balers Association lately, "that substitutes, however much favoured, have not been able to reduce the popularity of jute goods permanently anywhere", and he went on to predict that Indian jute goods would "soon recapture lost ground in the U.S.A." Whether past experience shows just that, is debatable. More important is the question whether we can trust to past experience at all in this matter, in view of the immense vitality of the rival packaging industries in the U.S.A. The fact is that jute's rivals are spending vast sums on perfecting alternative forms of packaging, and they are coming up with revolutionary new ideas every month. To rest on the supposed lessons of the past, in these circumstances, could be quite dangerous because in reality the recent history of the packaging industry contains only one lesson: namely, that packing technique is in constant evolution, so that traditional containers are under perpetual challenge from new products. Jute goods have definitely lost ground permanently in some uses, and have made encouraging comebacks elsewhere but, on balance, the only certainty is that they live in a dangerous world.

The current transformation of the American paperboard industry will illustrate this. Paperboard, which is a thicker variation of the paper sheets used in newsprint, is not everywhere competitive with jute cloth, but then nothing is: there is no container that can do all the things jute does, but that does not prevent various substitutes taking first one, then another market away from bags and hessian. Meantime, the paperboard makers are looking for new applications of their product;

already a good part of their output goes to uses that had not been thought of in the post-war years. The Mead Corporation, one of the U.S.A.'s biggest producers, last month opened its \$4.5 million research laboratories in Ohio which are dedicated to finding new ways of using their versatile material—in other words, to making inroads into the markets of traditional packs such as wooden boxes and jute bags. To do this, the paperboard manufacturers do not rely only on technological research, nor on the large funds ready to back any worthwhile discovery, but they show an interest in the problems of ultimate users which has rarely been demonstrated by the jute industry. Indeed, although its products equal in value those of the U.S. steel mills, the industry regards itself less as the supplier of the physical commodity than as the purveyor of a merchandising aid. "Once we were primarily production-minded," says a spokesman, "but now we have had to become marketing experts". That is, since their product is ultimately sold as the wrapping around something else (as is the case with any containers), their basic economic problem is not to sell containers but to help others sell the contents. Although it is no longer true, as it was once supposed to be, that Indian jute goods manufacturers did not know and hardly cared what ultimately happened to the hessian they made, they are still far from this concentration in the marketing problems of their end-users.

It is by sending their own technicians to work with end-users, for months if necessary until their packaging problems were solved, that the paperboard producers have won new markets, some of which probably impinge on those of jute goods. A few of these may be mentioned. They have de-

vised cardboard pallets strong enough to carry 4,000 lbs of cement, and cartons that are strong enough to be packed, loaded, one on top of the other in warehouses, because they can support one-ton weight without damage to their contents. Their corrugated boxes are increasingly being used to ship food; the latest conquest being the banana trade, for they are providing paperboard containers that can carry the fruit without the lowest layer in the hold being crushed. They are reinforcing their material with laminated metals and plastics, producing a container that combines the strongest features of all three packs. Standard Packaging is currently building a \$4 million plant to turn out metallised paperboard. Never afraid of experimenting with novelties, they are offering paperboard containers with a zip fastener, and a con-

tainer made of moulded pulp and peat which serves to carry a plant and which, when placed in the garden, disintegrates into the soil.

International Paper has begun marketing a disposable bag for garbage, which does away with heavy and noisy garbage bins. The same company produces an inexpensive lining for railway wagons, which helps the railways cut maintenance costs. Paperboard honeycomb is invading building, where it finds uses in panels for doors and walls; a whole house, in fact, has been constructed in this material. Perhaps no single one of these applications contains a threat that will rob hessian makers of their sleep, but they show that where so much inventiveness is at work, the lessons of the past are no comfort.

Current News and Comment

United Commercial Bank Profit Up

The United Commercial Bank Ltd has reported satisfactory results for 1961. After providing for taxation, the net profit, subject to audit, has increased from Rs. 67.43 lakhs to Rs. 72.61 lakhs. With Rs. 1.47 lakhs brought in, the amount available for appropriations is Rs. 74.03 lakhs, against Rs. 68.47 lakhs in 1960. The allocation to the reserve fund has been maintained at Rs. 30 lakhs, raising the total amount to Rs. 2.35 crores. The dividend has been maintained at 12 percent, absorbing Rs. 24 lakhs. A sum of Rs. 14 lakhs (against Rs. 13 lakhs) has been provided for bonus to staff and Rs. 4 lakhs (against nil) has been allocated to the gratuity trust fund. The balance of Rs. 2.07 lakhs is being carried forward. The Rs. 50-paid share of United Commercial is quoted around Rs. 103.50.

Indian Iron to Expand Collieries

A general meeting of the Indian Iron and Steel Co. Ltd will be held in Calcutta on 2nd February, 1962, to pass a resolution empowering the directors to borrow up to Rs. 55 crores. The necessity for further borrowing has arisen because Indian Iron has been sanctioned a loan by the World Bank to expand its collieries. It is intended to develop the Company's coal-bearing properties in Chasnal-la, Ramnagore and Jitpur for raising the metallurgical coal output to 2 million tons a year. The coal will be transported to the Burnpur works by aerial ropeway, so supplies will improve considerably. It will be recalled that the working of Indian Iron has been hampered for some time by irregular and inferior coal supplies with high ash content. The directors hope that the expansion of collieries will help rectify the present adverse position. The earnings should also improve.

The cost of the project is estimated at Rs. 17.43 crores, of which the foreign exchange expenditure may be Rs. 7.62 crores. The local expenditure is expected to be Rs. 9.86 crores. The World Bank has sanctioned a loan of \$19.5 million to finance the foreign exchange expenditure together with the interest accruing during construction on the loan withdrawals up to 31st January, 1967. The loan will be repayable over the period beginning from 1st February, 1967, and ending on 1st February, 1974. The loan carries interest at 5½ percent.

Seshasayee Industries Share Offer

Seshasayee Industries Ltd has a paid-up capital of Rs. 40 lakhs, divided into 316,000 ordinary shares of Rs. 10 each and 84,000 cumulative preference shares of Rs. 10 each carrying 6½ percent, tax-free, interest. It is now offering 400,000 ordinary shares of Rs. 10 each for public subscription at par. The entire issue has been underwritten. (The details of the issue appear on a later page in this week's Capital.) Seshasayee Industries is producing porcelain high-tension and low-tension insulators and various steel castings at its factory in Madras State. It proposes to expand the production capacity of insulators from 1,200 tons to 3,000 tons

the total amount of Rs. 100 a share, Rs. 25 a share with the premium of Rs. 10 a share is payable on application on or before 1st March, 1962. The balance of Rs. 75 a share is payable in three calls of Rs. 25 each. The new shares shall rank equally with the existing equity shares in all aspects.

Bird: A New Venture

Bird and Co. (Private) Ltd, which has rapidly built up a leading water treatment organisation, has added one more activity to its field by recently concluding an agreement with William Bobby and Co. of Rickmansworth, England. Under the agreement, Bird is to market, and later progressively manufacture, electrodiagnosis water desalting equipment in India. It is thus now able to offer a complete range of water treatment equipment to meet any requirements. William Bobby is one of the oldest firms in the water treatment business, and has plants operating in many super power-stations in England and throughout the world. It has played an active part in the development of the electrodiagnosis process in conjunction with the Chemical Research Laboratory of the D.S.I.R. and the Dutch Central Technical Institute (T.N.O.) of The Hague. As early as 1957, it installed a plant in Tobruk which is still operating satisfactorily. Since then, it has received an order for additional equipment.

Electrodiagnosis was primarily developed for the removal of salinity from water to provide drinking water in arid areas. It is not economically suitable for treating brackish water with a salinity of up to about 15,000 parts a million. It can successfully be used also for removing relatively large quantities of salts from water for industrial purposes where no suitable supplies exist. The process is simple to use, and basically only requires a supply of electricity to operate it, thus avoiding the use of large quantities of chemicals required in conventional demineralising processes, some of which may be dangerous to handle. It has another great advantage in that it is virtually continuous in operation.

Bird and Co. will progressively manufacture this equipment after the first few plants have been imported and put into operation in this country. Eventually the complete plants, with the exception of the highly specialised membrane stacks which form the active core, will be manufactured in India. It is not expected that the membrane stacks could be locally produced for some considerable time. With this service, it will be possible to produce adequate drinking water in many arid areas of India which have hitherto had no such facility.

Arrangements have also been made for Bird and Co. to handle sales in India of an important new instrument recently developed by the British firm for the detection of sucrose (a form of sugar) in sugar refineries. It has hitherto been very difficult to detect leakage of sucrose deposits into the boilers. Failure to do so can lead to serious corrosion and consequently heavy maintenance costs. This very important development will lead to a considerable reduction in maintenance costs in sugar refineries and the consequent saving of foreign exchange. It is considered likely that, in these circumstances, actual user import licences for the instruments will be forthcoming.

Automobile Products Recovering

Shareholders of Automobile Products of India Ltd, who have gone without a dividend for 12 years, can derive some comfort from the working results for the year ended July 1961, although, considering the accumulated liabilities, their investments are unlikely to bear fruit for a few more years. The turnover in 1960-61 has risen by about 40 percent from Rs. 3.13 crores to Rs. 4.39 crores. The gross profit, too, is up by about 39 percent from Rs. 16.37 lakhs to Rs. 22.75 lakhs. After providing Rs. 11.75 lakhs (against Rs. 9.67 lakhs) for depreciation and expenses on licences written off and Rs. 3.62 lakhs (against nil) for development rebate reserve, the net profit amounts to Rs. 6.88 lakhs against Rs. 6.24 lakhs in 1959-60. With a credit of Rs. 13,640 in relation to the excess provision for royalty and bad debts and income

AUSTRALIA'S LARGEST COMMERCIAL BANK CAN HELP YOU TO PROMOTE TWO-WAY TRADE WITH AUSTRALIA, NEW ZEALAND, AND FIJI

Want to sell? Want to buy? Want market information? The International Division of the Bank of New South Wales can tell you about the opportunities for trade offering with these countries. The Bank's complete banking service includes such specialized facilities as trade introductions to buyers and sellers, industrial enquiries, economic and market information, and a complete travel service. The Bank is closely and constantly in touch with industry, business, and agriculture in the areas it serves through more than 1,100 branches and agencies.

IF6101

tax refund, the total surplus amounts to Rs. 7.02 lakhs. The directors have provided Rs. 10.28 lakhs for development rebate in relation to earlier years and another Rs. 2.17 lakhs for under-provision of depreciation on fixed assets made during 1955-56 to 1959-60, with the result that the previous year-end debit balance of Rs. 9.18 lakhs has risen further to Rs. 14.62 lakhs. In addition to this big deficit, the preference dividends are in arrears from 1956-57 onwards, and the liability on that account amounts to Rs. 9.20 lakhs.

Automobile Products imported during the year machinery worth Rs. 25 lakhs for manufacturing engine components for scooters, and their production commenced in December 1961. The allotment of 25,000 equity shares of Rs. 10 each to the Italian firm of Innocenti S.G., which is collaborating in the venture, has been approved by the Reserve Bank and the allotment has been completed. Automobile Products' agreement with the Italian firm has been amended under which the royalty payable has been substantially reduced. Machinery worth Rs. 3 lakhs has also been imported for manufacturing heavy-duty brake blocks for heavy commercial vehicles. This will increase the production and sale of the Company's Firestone brake linings. The plant has been commissioned and has commenced production in the current financial year. Automobile Products has also been successful in reducing the royalty payable to Firestone Tyre and Rubber Company on the manufacture of brake linings under licence from the latter. A sum of Rs. 15 lakhs has been received from Premier Automobiles Ltd in connection with the cancellation of the Company's licence to manufacture Meadows diesel-engines. This amount has been taken to capital reserves. With this amount and with the creation of a development rebate reserve of Rs. 13.90 lakhs and with the amount brought forward, reserves and surplus of Automobile Products now stand at Rs. 30.03 lakhs. The Company has applied for permission to issue further 250,000 equity shares of Rs. 10 each to the existing shareholders to meet the capital requirements for its expansion programme. The Rs. 10-paid share of the Company is currently quoted around Rs. 11.80.

Speciality Papers Share Offer

Speciality Papers Ltd is a new enterprise which proposes to set up in Udvada, Gujarat, a plant for manufacturing various types of speciality papers like tracing, tissue and impregnated papers besides ammunition papers for high explosives. The enterprise is claimed to be the first of its kind in India. Speciality Papers has been licensed to produce 1,440 tons of all varieties of speciality papers. It has plans to expand production to around 3,000 tons a year within a few years. The total cost of the initial project is estimated around Rs. 20 lakhs. Half of the amount will come from the share capital, and the Gujarat State Financial Corporation is expected to give a loan of Rs. 5 lakhs. The rest will be met by borrowings. The Company will use imported pulp initially, but it has plans to set up its own pulp plant at a later stage. The plant is expected to go into production by October. When the plant achieves its initial licensed capacity, it will help save about Rs. 20 lakhs of foreign exchange a year. The West German firm of Eacher Wyss G.m.b.H. (Ravensburg) is providing plant and machinery worth Rs. 4.8 lakhs as well as technical know-how for the project. Speciality Papers will have an authorised capital of Rs. 50 lakhs, of which only Rs. 10 lakhs in equity shares of Rs. 10 each are to be issued in the beginning. Out of the issued capital, the promoters and their friends are taking up 51,000 shares and the balance of 49,000 shares are to be offered for public subscription. The prices of speciality papers are not governed by the Tariff Commission's formula.

Shree Changdeo Sugar Earns More

The working of Shree Changdeo Sugar Co. Ltd for the year ended September 1961 shows a satisfactory improvement over the previous year's performance. This is in pleasant contrast to the results of most other units in the industry which earned less in spite of increased production. The gross profit is up by about 10 percent from Rs. 24.81

lakhs to Rs. 27.45 lakhs. After providing Rs. 2.78 lakhs (against Rs. 3.43 lakhs) for depreciation and Rs. 9.90 lakhs (against Rs. 7.35 lakhs) for taxation, the net profit amounts to Rs. 13.19 lakhs, against Rs. 12.65 lakhs in 1959-60. The dividend has been maintained at Rs. 2.50 a share, subject to tax, absorbing Rs. 7.50 lakhs. The allocation to general reserve has been raised from Rs. 1.50 lakhs to Rs. 5.26 lakhs, but development rebate gets only Rs. 8,082, against Rs. 57,434 in the previous year. In 1959-60, Changdeo Sugar had to make good the short provision of tax amounting to Rs. 4.76 lakhs in relation to 1956-57. After making various appropriations, there remains Rs. 96,454 to be carried forward, against Rs. 61,719 brought in.

The quantity of cane crushed during the year increased from 99,017 tonnes to 120,987 tonnes and the production of sugar from 111,717 bags to 141,145 bags. The average recovery rose from 11.4 percent to 11.67 percent. The directors state that although sugar prices have slumped following the removal of control, the Company has been able to maintain its price because of the specialised bolder grain of sugar it produces. Changdeo Sugar's performance would have been still better but for the accumulation of stocks, which rose from 30,353 bags to 59,172 bags due to restricted releases. Besides, it suffered a net loss of Rs. 2.10 lakhs (against Rs. 1.16 lakhs) on compulsory sugar exports. The directors add that production during the current season would be lower than last year on account of the restriction on sugar output. The Company crushed 53,980 tonnes of sugarcane during the current season up to 7th January. Production amounted to 57,925 bags of sugar.

Antifriction Bearings Share Offer

Antifriction Bearings Corporation Ltd is a new enterprise which has been formed to undertake the manufacture of ball, cylindrical, tapered and roller bearings. The well-known Austrian firm of Steyr-Daimler-Puch A.G. is collaborating in the venture. The Company takes over the existing firm of Dhirajlal and Company which is running a plant in Lonavla with an annual production of about 50,000 pieces of ball thrust bearings and 70 tons to 80 tons of steel balls. Antifriction Bearings has obtained an industrial licence for a phased capacity of 600,000 pieces of ball, cylindrical, tapered and roller bearings of various sizes and 200 tons to 240 tons of grinding media a year for the paint industry on a two-shift basis. The entire project is estimated to cost about Rs. 1.28 crores which is proposed to be financed by the equity capital of Rs. 60 lakhs, a foreign exchange loan of Rs. 32 lakhs from the Industrial Credit and Investment Corporation of India, a deferred payment loan of Rs. 8 lakhs from the foreign collaborators and cash and borrowings of Rs. 28 lakhs through other sources.

The Austrian firm will provide the complete technical know-how and guarantee the quality of products. A sum of £13,000 a year, subject to Indian income tax, will be paid to the foreign collaborators as royalty for a period of ten years. The payment will start after five years. The Austrian firm has been given the option to convert its deferred payment loan of Rs. 8 lakhs into equity share capital. The promoters expect that 50 percent of the machinery to be imported from abroad will be received this year and the balance will come by the end of 1963. The Company has an authorised capital of Rs. 1 crore, consisting of Rs. 60 lakhs in equity shares and Rs. 40 lakhs in unclassified shares, both of Rs. 10 each. Of the equity share capital of Rs. 60 lakhs, the promoters and their friends will take up Rs. 22.50 lakhs. The Life Insurance Corporation will subscribe Rs. 5 lakhs and the foreign collaborators will take up Rs. 5 lakhs. The balance of Rs. 27.50 lakhs will be offered for public subscription. Considering the long experience of the promoters in the line, the reputation of foreign collaborators and the growing demand for ball and roller bearings, the proposed issue seems sound and attractive.

Bayer-Agrochem to Expand

The well-known German firm of Farbenfabriken Bayer A.G. Leverkusen, is planning to expand its industrial activities in India. Bayer-Agrochem

Private Ltd, Bombay, in which Bayer holds 56 percent of the share capital, is understood to have received the Government of India's permission to undertake the manufacture of Bayer insecticides, pesticides, pharmaceuticals and veterinary preparations. Bayer-Agrochem has been operating a formulation plant since 1958 for Bayer insecticides, pesticides and veterinary products in Bombay. Its products have been well received in the market. The Company has, therefore, taken the next step of the basic manufacture of these products. It has been permitted to manufacture 450 tons of ethyl-parathion and methyl-parathion a year. The Company has also received permission to manufacture 4,000 kilograms of chloroquine, 540 kilograms of rosetren, 240 kilograms of cresival, 200 kilograms of entodon, 400 kilograms of acidol-pepsin, 1,000 kilograms of piperazine hexahydrate and 360 kilograms of piperazine phosphate.

Plant and equipment for implementing the entire manufacturing programme is estimated to cost about Rs. 66.50 lakhs, of which about Rs. 38 lakhs will be spent on imported equipment. The foreign exchange requirements will be provided by the German firm which will be participating in the paid-up capital in the same proportion as at present—57 percent—of the Indian Company which is proposed to be increased from Rs. 4 lakhs to Rs. 71 lakhs. Raw materials worth about Rs. 32 lakhs a year will need to be imported in the first stage. But in the second stage, the cost will be much less around Rs. 8 lakhs a year due to improved supply from indigenous sources. The cost of imported raw materials is likely to be met by exporting the Company's products. Reliable reports indicate that Bayer-Agrochem also proposes to undertake the manufacture of 1,900 tons of rubber chemicals (accelerators, antioxidants and auxiliaries) a year. It also plans to manufacture crude mercapto benzothiazole and a number of dithiocarbonates. These proposals are said to be under the Government's consideration.

Gwalior Sugar Maintains

In spite of a larger crush and a substantial improvement in sales, Gwalior Sugar Co. Ltd has made a lower profit during the year ended June 1961. Sales rose from Rs. 70.44 lakhs to Rs. 1.30 crores, but the gross profit fell from Rs. 11.16 lakhs to Rs. 9.86 lakhs. After providing Rs. 1.58 lakhs (against Rs. 1.76 lakhs) for depreciation and Rs. 3.47 lakhs (against Rs. 3.96 lakhs) for taxation, the net profit amounts to Rs. 3.98 lakhs, against Rs. 4.50 lakhs in 1959-60. Including Rs. 12,594 Rs. 40,000 transferred from bad and doubtful debts reserve, the disposable surplus amounts to Rs. 4.51 lakhs. The dividend has been maintained at 12.5 percent, less tax, absorbing Rs. 1.99 lakhs. The preference dividends account for another Rs. 91,298. Other appropriations include development rebate Rs. 995 (against Rs. 2,625), general reserve Rs. 50,000 (against Rs. 75,000) and reserve for the redemption of redeemable cumulative preference shares Rs. 1 lakh (against Rs. 1 lakh), leaving a balance of Rs. 9,734 to be carried forward.

The directors state that the quantity of cane crushed during the year was substantially larger at 3,436,740 maunds, against 3,090,859 maunds, but the average recovery was down from 9.85 percent to 9.01 percent. The fall in recovery is attributed to the bad quality of sugarcane and the prolonged season because of the strike which continued up to 17th June, 1961. Gwalior Sugar has not been successful in getting any relief from the State Government for remission of cess or any rebate in the price of sugarcane for extending its crushing operations during the hot weather, as has been allowed to sugar factories by the U.P. and Bihar Governments. Besides, pressure was brought on bear on the Company to crush sugarcane from such distant places as U.P. and Madhya Pradesh, which adversely affected the average recovery of sugar. Apart from the additional financial burden imposed by the implementation of the Central Wage Board recommendations from 1st November, 1960, Gwalior Sugar had to suffer a loss of about Rs. 2.70 lakhs on account of compulsory exports. The directors, however, state that good progress has been made in finalising the scheme for expansion of the factory's crushing capacity and orders have been placed for machinery required to complete the substantial extension for which the Company

has already received a licence. Gwalior Sugar's application for a further increase in its crushing capacity from 1,100 tons to 1,500 tons a day has, however, been rejected. The case would be reconsidered whenever the Government revises its present policy of restricting sugar production. The directors think that the working results during the current year are likely to be adversely affected by the restriction on production and the fall in selling prices of sugar. The results of the subsidiary enterprise, Gwalior Agriculture Company, have also been affected by the poor quality of sugarcane and lower yields, which have been a general feature in the cane-growing zones of the factory during the last crushing season. The directors, however, hope that further progress in cane development and research will be made as a result of the formation of the Cane Development Council and the State Government's decision to set up a sugarcane research sub-station near Dabra where Gwalior Sugar's factory is located.

Mysore Sugar Earns Less

The working of the Mysore Sugar Co. Ltd for the year ended June 1961, shows a net profit of Rs. 20.07 lakhs, after deducting all expenses and charges, including Rs. 10.07 lakhs provided for deferred price for sugarcane pending the finalisation of the price-linking formula by the Central Government as well as Rs. 8.21 lakhs for depreciation. The net profit for the previous year was Rs. 27.10 lakhs. With Rs. 1.15 lakhs brought forward from the previous year, the total available for appropriation is Rs. 21.22 lakhs. Out of this, the arrears of gratuity reserve get Rs. 1 lakh (the same), development rebate reserve Rs. 1.55 lakhs (against Rs. 36,326), taxation provision Rs. 11 lakhs (against Rs. 13.50 lakhs) and stores depreciation reserve Rs. 50,000 (against nil). The proposed dividend of 30 percent (the same), before deduction of tax, will absorb Rs. 6.54 lakhs. The balance of Rs. 63,788 is carried forward.

The directors say in their report that the working of Mysore Sugar during the year was on the whole satisfactory. Sugarcane crushing operations for the season 1960-61 started on 1st July, 1960, and came to a close on 5th April, 1961, the number of days for which the mills worked being 267, against 213 in the previous season. The quantity of sugarcane crushed was 395,963 tons while sugar production amounted to 39,049 tons with an average recovery of 9.86 percent. The sale of sugar from the factory did not keep pace with production because of the restricted releases allowed by the Central Government from individual factories. So there was a sharp fall in the sale proceeds, leaving a large stock of over 13,700 tons at the end of the year, valued at Rs. 91.48 lakhs. This has had an adverse effect on Mysore Sugar's liquid resources. The scheme for expanding the distillery to produce 1.2 million gallons of alcohol a year was completed during the year. The production of alcohol in the distillery amounted to 857,817 gallons in terms of absolute alcohol, which is more than the quantity produced in any previous year. The entire quantity was sold.

Bengal Paper Bonus and Rights

The ordinary shares of Bengal Paper Mill Co. Ltd have improved to Rs. 104 due to the decision to issue bonus and rights shares. At first, bonus shares of Rs. 5 each will be issued increasing the paid-up value of ordinary shares to Rs. 30 each by capitalising reserves. Then these shares will be sub-divided into shares of Rs. 10 each. After the sub-division, ordinary rights shares of Rs. 10 each will be issued at a premium of Rs. 10 a share for Rs. 18 lakhs in the proportion of one new share for every three held. Bengal Paper has also been permitted by the Controller of Capital Issues to issue convertible loan stocks for Rs. 30 lakhs in units of Rs. 250 each at par, carrying a fixed interest of 6½ percent, taxable.

The proceeds of the new issues will be used to finance the expansion programme which the Company has started. It is expected that the output capacity will be raised to 100 tons a day when the expansion scheme is completed. Production amounted to 18,105 tons during the year ended December 1960. An application has been made to the U.S. Development Loan Fund for a dollar loan

through the Industrial Finance Corporation. As soon as the loan is sanctioned, orders for machinery will be placed with U.S. firms. An order has already been placed for a new paper machine which is expected shortly.

The ordinary share capital of Bengal Paper is at present Rs. 45 lakhs, divided into shares of Rs. 25 each. Reserves are more than Rs. 58.70 lakhs. Fixed assets exceed Rs. 58.70 lakhs while current assets amount to Rs. 89.93 lakhs.

Revised Ceiling Prices for Soda Ash

The soda ash industry is very much disappointed over the revised ceiling prices of soda ash announced by the Government of India on 5th January which deviate from the Tariff Commission's recommendations in many important aspects. The Government has fixed the ex-works ceiling prices of light soda ash and heavy soda ash at Rs. 19 and Rs. 20 a 50 kilograms, respectively. These prices are Re. 1 and Rs. 1.50 lower than those recommended by the Tariff Commission. Furthermore, the Government has also made an important departure from the Tariff Commission's recommendation that the selling prices of soda ash—both light and heavy—should be fixed on an ex-works basis only. With a view to protecting the interests of consumers situated away from the producing centres, the Government has decided that soda ash should be made available at ex-plant prices which shall be the ceiling price plus a freight of Rs. 15 a tonne for west coast ports (Bombay and Cochin) and Rs. 25 a tonne for east coast ports (Madras, Visakhapatnam and Calcutta). The Government contends that in fixing the price, it has taken into account the manufacturing costs in the units examined by the Tariff Commission and the scope for economy in establishment and labour costs in the higher cost units to which attention has been drawn by the Commission. New Delhi claims that the price fixed by the Government would provide a reasonable return to the capital employed in high cost units as well as impress on them the desirability of improving their efficiency and reducing the conversion charges. But the representatives of the four main producers, namely, Tata Chemicals, Dhrangadhra Chemicals, Saurashtra Chemicals and Sahu Chemicals, who met in Bombay recently to examine the revised ceiling prices, have expressed dismay over the Government's decision. They have urged the authorities to reconsider their decision and to accept the Tariff Commission's recommendations. The manufacturers contend that if the new ceiling prices are allowed to continue, they would seriously jeopardise the future development of the industry. So the industry's criticism of the Government's decision will be widely endorsed.

Apart from the fact that the revised ceiling prices are Rs. 20 a tonne less than those recommended by the Commission after a detailed enquiry into all aspects of costs and production, the industry is now expected to bear very heavy freight charges from its works to the various ports which, in addition to being contrary to the Tariff Commission's recommendations, makes further serious inroads into the relatively modest return on invested capital allowed by the Commission. While the cost of transporting one tonne of soda ash from Tata Chemicals' plant in Mithapur to Bombay is Rs. 41, the Government's decision allows only Rs. 15 a tonne for the producer; the cost of transport from Mithapur to Calcutta is Rs. 81 a tonne, but the Government has allowed only Rs. 25. The revised ceiling prices are, therefore, hardly calculated to assist the development of the industry and enable it to fulfil the rôle assigned to it in the third plan. The industry has made good progress in the last few years, with production rising from 84,233 tonnes in 1956 to 180,000 tonnes in 1961. Production is likely to reach 250,000 tonnes by the end of the current year, against the installed capacity of 275,000 tonnes. The third plan envisages a production capacity of 530,000 tonnes by the end of 1965-66 with a target of 450,000 tonnes to be achieved by 1965. The domestic demand for soda ash in 1960-61—both light and heavy—has been estimated at around 260,000 tonnes. It is likely to increase to 319,000 tonnes in 1962, 377,500 tonnes in 1963 and 425,000 tonnes in 1964. While India is now self-

sufficient in light soda ash, a beginning is just being made in relation to the manufacture of heavy soda ash. On the specific issue of the industry's expansion, the Commission observed that "considering the heavy capital investment and complicated technique of the industry, we recommend that the Government should adopt a flexible policy for the licensing of additional capacity", although the latest orders of the Government stipulate preference for newcomers. The Government has accepted the Commission's recommendation that protection to the soda ash industry be continued at the existing rates of protective duty, namely, 8.37 a quintal preferential and Rs. 11.32 a quintal, standard, for a further period of three years ending December 1964.

Cotton Control Tightened

The cotton trade is passing through a difficult time. Activity in futures has been virtually at a standstill because of the prohibitive margin of Rs. 6,000 a unit of trading. If business continues to pass in the ready market, it is because compulsory survey is not being enforced as strictly as it should be, for it is no secret that all varieties of cotton—excepting Bengal Deshi—are quoted well above the statutory ceiling rates. Hopes that conditions might improve with the progress of marketing of the crop have been belied; instead, the situation has been steadily deteriorating because of the downward revision of crop estimates. Few now expect the crop to exceed 4,650,000 bales. Until recently, distribution control had been confined to the quota system of mill buying. This was followed up by rationing the supplies of cotton of the 197/3in. variety. But the Textile Commissioner has now further tightened distribution control. The supply of the entire crop is to be allocated on a varietywise basis. Indian cottons have been divided into two broad groups, (1) medium and long-staple cottons and (2) short-staple cottons. The annual aggregate quota of short-staple cottons will be 100 percent of the total consumption of such cottons in the previous season while the corresponding quota for medium and long-staple cottons will be 85 percent of the aggregate consumption of these varieties in the 1960-61 season. Since many mills had consumed foreign cotton stapling 1 inch and below during the last season, 85 percent of such consumption will be given as additional quota in medium and long-staple cottons. The percentage allocation has been increased from the present 50 percent to 60 percent, but purchases of each variety are to be made in such a manner that the stocks on any day—including the outstanding purchases from which delivery is to be taken—shall not exceed five months' average consumption of that variety during the previous season. Mills have also been asked to restrict their total purchases and/or deliveries from 1st September, 1961, to 60 percent of their overall consumption of both Indian and foreign cotton stapling 1 inch and below during the 1960-61 season till a further overall quota is announced.

The Government of India has also released for import 200,000 bales of 400 lbs each of cotton stapling 1½in. and above from any area. Out of the quantity, 70,000 bales will be allocated to mills against their retention quota under the export incentive scheme. The balance of 130,000 bales is made up of 30,000 bales stapling 1½in. but below 1½in. and 100,000 bales of cotton stapling 1½in. and above. The premium on cotton stapling 1½in. has been raised from Rs. 130 to Rs. 150 a bale and that on stapling 1½in. and above has been raised from Rs. 170 to Rs. 200. The entire quota of 200,000 bales will be available for shipment only from 1st July to 31st October. This means that the cotton imported under this quota would be available for consumption only at the fag-end of the current season or early next season. It would not, therefore, help mills to tide over their immediate difficulties. The Government has also released an import quota, estimated around 30,000 bales, of Pakistani cotton stapling 1in. and below valued at Rs. 1.50 crores. Licences are to be issued to mills on the first-come-first-served basis. Applications from mills have to be accompanied by a letter to the Textile Commissioner agreeing to the deduction of an equivalent quantity of Indian cotton. Licences will be valid for shipment up to 10th March. With the announcement

manufacturing ELECTRIC ROTORS and STATORS

The Electrical Department of Garden Reach Workshops undertake a great variety of electrical services and manufacturing programmes.

Apart from one of their biggest services—maintaining and installing all types of electrical equipment for marine requirements—the Shop also fabricates switchboards and railway signalling apparatus including Double Line Block and Lock Signal equipment.

Motors exceeding 3,000 H.P. and transformers of 1,850 KVA representing the total installed capacity at Garden Reach Workshops are also maintained by the Electric Shop.

judiciary. A discrepancy between the matriculation and the real age is a common enough phenomenon in this country, and many Judges sitting today, whose retirements have not been contested, are in exactly the same position. The relevant point is that the date of retirement must be fixed in advance if a Judge is to maintain his independence, and that Mr. Mitter's retirement was fixed on the basis of his real age as given at the time of his appointment. For those who are still bewildered by this business of the discrepancy in ages, it is perhaps necessary to emphasise that at no time does there appear to have been any attempt on Mr. Mitter's part to mislead those responsible for appointing him, nor is the Government accusing him of any such thing. This age red herring must not be allowed to obscure the real point at issue, which is that if the independence of the judiciary is to be preserved, no Judge can be removed from office on any pretext during his period of tenure, as fixed at the time of his appointment, except by due constitutional process. This matter of preserving the absolute independence of the judiciary is of paramount public importance, and accounts for the fact that Capital has given the case so much publicity. I recommend the article for all readers' attention. Also the letters on the same subject, one of which appeared in last week's issue pointing out the grave commercial consequences that could arise when a judiciary is not independent, and another which we are publishing this week, signed by a former Judicial Minister of the West Bengal Government, pointing out that if the Government can curtail a Judge's tenure of office when his matriculation age is higher than his real age, then it is open to a Judge to claim extension of his term of office on the grounds that his real age is greater than his matriculation age. This way lies chaos, as well as an ineffectual judiciary.

ADVERTISING. WE ARE SOMETIMES TOLD, AND not by socialists alone, is a waste of talent, effort and money. While I would not for a moment endorse so rash a generalisation, I would go so far as to concede that, for organisations uninterested in a modicum of efficiency, advertising might indeed be pointless. In particular, a manufacturer who is inherently incapable of improving the quality of his sub-standard products could, conceivably, be doing a disservice to his customers by persuading them to buy; alternatively, an institution which is simply not interested in selling whatever it happens to be producing, would be merely wasting its money by advertising. The paradox that there may be organisations belonging to the second category, and that they might indeed be more numerous than we think, occurs to me whenever I come across the announcements issued by the Publications Division of the Government of India. Each week, if not oftener, I find, the Division issues a series of advertisements containing a brief list of the books, pamphlets and other publications it has on offer. But it has been my irritating experience that if one tries to purchase these from, say, the Government Book Depot on Hastings Street (the official agent), one will as likely as not be disappointed. The common answer, at the Calcutta Depot anyway, is that the book is "out of stock"; and this usually without even the minor courtesy of the salesmen bothering to check. Almost as often, one is advised to return "in a month's time", by when one might well not need the book any more, or have got it from elsewhere. Most irritating of all, on the infrequent occasions when the book is admitted as likely to be in stock, one is asked to quote the symbol or reference number before it can be extracted from the jungle of paper which is a permanent aspect of the confusion at the Depot. It was one of my innocent impressions that the main function of a book agent is to sell books, but apparently this is not always the case. It does, however, seem to me that before squandering its money on advertising, the Publications Division could make a better investment in first ensuring that its agents are better stocked—and better staffed. Perfunctory advertising is no substitute for bad salesmanship.

THE DITCHER

THIS IS NOT A PROSPECTUS BUT ONLY AN ANNOUNCEMENT

A Prospectus together with the documents specified herein has been duly filed with the Registrar of Companies, Madras. The consent of the Central Government has been obtained to this issue by an order: No. R. 388—CCI/61 dated 14-11-61 of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

An Industrial Licence L. 34 (6) 21/60/L—IND. dated 30-8-60 issued under the Industries (Development & Regulation) Act, 1951 has been obtained from the Central Government for effecting a substantial expansion to this existing industrial undertaking at Serakuppam, P.O. Vadalur, District South Arcot, Madras State, of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

The Company's shares are dealt in and are officially quoted by the Madras Stock Exchange Ltd. Application is being made to the Madras Stock Exchange Ltd. for permission to deal in the present issue of shares.

The subscription lists will open at 11 A.M. on Wednesday the 21st January, 1962 and will close at 5 P.M. on Wednesday the 31st January, 1962 or earlier as soon as the subscriptions approximating to the amounts issued hereunder to the public have been received but not earlier than 5 P.M. on Saturday 27th January, 1962.

SESHASAYEE INDUSTRIES LIMITED

(Incorporated under the Companies Act, 1956) Date of Incorporation 12th December, 1957.

SHARE CAPITAL

AUTHORISED:

720,000 Equity Shares of Rs. 10/- each	...	Rs. 72,00,000
280,000—6½% Cumulative tax-free Preference Shares of Rs. 10/- each	...	Rs. 28,00,000
	Total	Rs. 1,00,00,000

ISSUED, SUBSCRIBED AND PAID-UP CAPITAL:

316,000 Equity Shares of Rs. 10/- each	...	Rs. 31,60,000
84,000—6½% tax-free Cumulative Preference Shares of Rs. 10/- each	...	Rs. 8,40,000
	Total	Rs. 40,00,000

PRESENT ISSUE AND OFFER:

400,000 Equity Shares of Rs. 10/- each	...	Rs. 40,00,000
--	-----	---------------

The said shares are offered for subscription in cash at par in terms of this Prospectus and the subscriptions for the said shares are payable as follows:—

On application	...	Rs. 5 per share.
On allotment	...	Nil.

and the balance will be payable in two calls of Rs. 2.50 n.p. each, the first call will be made three months after the date of allotment and the second call three months thereafter.

The Preference Shares carry a fixed cumulative preferential dividend at the rate of 6½% on the capital paid up thereon from the date of allotment and free of any deduction for Indian Income-tax and to a right on a winding up to be paid all arrears of preferential dividend whether earned, declared or not down to the commencement of the winding up and the capital paid up thereon but to no other rights in the profits or assets of the Company. The said dividend will be computed and paid in accordance with the Preference Shares (Regulation of Dividends) Act, 1960.

The shares now issued will rank for dividend and be in all respects *pari passu* with the existing Equity Shares of the Company and will be entitled to participate equally with the existing Equity Shares in any dividend that may be declared after the date of their allotment irrespective of the date on which such allotment has been made.

The entire present issue of 400,000 Equity Shares has been underwritten. No shares are issued for consideration other than cash.

OBJECTS

The following are the main objects of the Company as contained in the Memorandum of Association:

1. To carry on the business of manufacturers, importers, and exporters of all kinds including electrical insulators and other porcelain products and their parts and accessories.
2. To carry on the business of manufacturers, importers, exporters of all kinds of transformers, switchgears, meters and their parts and accessories.

HISTORY OF THE COMPANY

Messrs. Seshasayee Brothers (Private) Ltd., Tiruchirappalli, obtained for the benefit of this Company two licences under the Industries (Development & Regulations) Act, dated 29th October, 1956 and 7th October, 1958 for the establishment of an industrial unit for the manufacture of porcelain High Tension and Low Tension insulators and associated cast iron and non-ferrous castings and malleable castings and mild steel forgings. The Company constructed a factory at Vadhur in South Arcot District and went into trial production early in 1960 and has now standardised the production of conventional transmission-line insulators and their associated metal parts.

Commercial production started early in 1961 and the Company has effected

deliveries of high tension and low tension insulators and hardware components to several State Electricity Boards and Private Undertakings against orders received and according to specifications required. The materials delivered have afforded full satisfaction to customers.

High Tension Insulators and porcelain accessories are being overwhelmingly imported into this country, as the small number of factories in India which are engaged in the manufacture of these products are able to meet only a fraction of the present demand. The Directors have carefully considered the demand for high tension insulators and are satisfied that a growing market exists for these goods. They believe, it would be of immense advantage to the Company to enlarge the plant and augment its installed capacity for production of insulators and malleable cast iron parts in order to meet the pressing demand that is in evidence from the various sectors of electrical industries. While the main consumers of high tension insulators are State Electricity Boards, electricity undertakings, manufacturers of switchgear and transformers, the Indian Railways who have recently been enlarging the area of their electrification have started making their demands for high tension insulators. The Directors believe that it is not only desirable but absolutely essential that the present capacity of the factory should be augmented with a view to meet both existing and anticipated demand.

The Company has now obtained a licence from the Government of India for expanding the present capacity from 1,200 tons to 3,000 tons of insulators per annum. The Directors expect that the entire output will be absorbed by current demands. The Company's Technical Consultant, Dr. Ing. habil. Kurt Draeger, in consultation with the Company's engineers, has prepared a detailed scheme for the expansion of the factory and has recommended its immediate implementation. The more important items of plant and machinery required for this expansion will be supplied by Messrs. Franz Kirchfeld, Dusseldorf, West Germany. The Government of India have kindly allotted to this Company the foreign exchange required for the import of plant and machinery. Dr. Draeger has agreed to send technicians from Germany to India who will stay and work in both the Ceramic and Foundry Sections of the factory until such time as rated production capacity has been fully established. He will also be periodically coming over to India to advise on quality control and on the expansion of the range of the Company's products.

PLANT AND MACHINERY

The Company has obtained an Import Licence (No. 991677/TPWG/61/HQ-G-1 dated 26-10-1961) for importing the necessary plant and machinery for this project and firm orders have been placed with the Company's suppliers, Messrs. Franz Kirchfeld, G.m.b.H., Dusseldorf,

who have been able to negotiate and secure advantageous prices.

TECHNICAL COLLABORATION

The Company has entered into an agreement dated 1-7-1958 with Dr. Ing. K. Draeger of Honef, West Germany, in terms of which he has to render assistance to this Company, in the planning and supervision of the factory erection and in attaining rated capacity of 1,200 tons of porcelain insulators per annum.

In pursuance of the said agreement Dr. Draeger has been responsible for the design and lay out of the existing 1,200-ton plant. He has assisted in the purchase of plant and machinery for this project in Germany and India, provided personnel for erection of the plant, trained a team of the Company's engineers and technicians in one of his associated factories, namely, Rhein West-fallische Isolatern Werke at Siegburg in West Germany and two of his senior technicians are at present in the factory supervising production and training labour.

Dr. Draeger has agreed to give his assistance for the expansion scheme and the Company has agreed that the Company will seek the approval of the Government of India for payment of additional know-how fee and royalty and to pay him such amount as the Government may approve for the services to be rendered by him and his deputies in connexion with the expansion project.

Dr. Draeger has now completed the selection of the plant and machinery pertaining to the expansion project and has enabled us to place orders for the same. He is at present busy planning the lay-out of the buildings and taking such further steps as are necessary to speedily implement the expansion programme. He has also agreed to send to India such technical personnel as his deputies and assistants as may be considered suitable for the purpose. He and his deputies will be entitled to such travelling and living allowances in India as may be in vogue from time to time in contracts for engaging foreign technicians.

MINIMUM SUBSCRIPTION

The minimum subscription on which the Directors will proceed to allot is Equity Shares of the face value of Rs. 15 lakhs.

The capital requirement for the proposed expansion is estimated as follows:

(a) Building	Rs. 11.00 lakhs
(b) Imported machinery including Import duty, freight and Insurance	Rs. 40.00 "
(c) Power Plant, Indigenous machinery and erection charges and contingencies	Rs. 6.50 "
(d) Expenses of this issue	Rs. 2.50 "
Total	Rs. 60.00 lakhs

It is proposed to provide for the above capital requirement as follows:—

By Issue of fresh capital	Rs. 40 lakhs
By Borrowings	Rs. 20 "
Total	Rs. 60 lakhs

The present issue of Rs. 40 lakhs has been fully underwritten.

ESTIMATED PROFITS

It is estimated that within a short period after the completion of the expansion the expected profits would be sufficient after payment of dividends on Preference Shares to provide a reasonable and attractive return to the Equity Shareholders.

MANAGING AGENTS

Seshasayee Brothers (Private) Ltd. were appointed as the Managing Agents of the Company with effect from 6-3-1958 for a period of fifteen years by the Articles and by an agreement dated 6-3-1958 on a remuneration of 10% of the net profits of the Company subject to a minimum of Rs. 12,000 per year in the absence of or inadequacy of profits which minimum shall, however, be increased to Rs. 18,000 per year if and when the paid up capital of the Company exceeds Rs. 20 lakhs.

PREFERENTIAL ALLOTMENTS

The Company has agreed to make the following preferential allotments, out of the present issue, namely, to the Life Insurance Corporation of India, shares of the face value of Rs. 10 lakhs in consideration of their having underwritten the like amount of shares, and Rs. 2,50,000 of their having agreed to subscribe for the said shares.

UNDERWRITING COMMISSION

An underwriting commission of 2½% of the face value of the shares will be paid to each of the underwriters in respect of the shares underwritten by them respectively.

BROKERAGE

A brokerage of 1% of the face value of the shares will be paid to the authorised brokers and bankers including the underwriters in respect of share applications bearing their rubber stamp.

All applications must be made on the form accompanying the Prospectus which can be had from the Registered Office of the Company, the Company's underwriters, Bankers and Brokers.

THE CALCUTTA MONEY MARKET

ADVANCES INCREASE

Wednesday, 17th January.

THE seasonal rise in advances has continued in the Calcutta money market. The main sources of increased requirement are the sugar mills and the engineering and iron and steel industries. Demand from the cotton and jute industries has also increased. Call for accommodation against grains and seeds storage has declined during the past week. In the interbank market, conditions are extremely tight at the lower call rate of 4 percent.

The exchange market has been active with heavy arrivals of bills, mostly on gunny account. Remittance demand has been moderate. In the London money market, the pound has shown considerable fluctuations, although the movements have been narrow. Closing quotations showed losses against the U.S. dollar, the Italian lira and the Belgian and Swiss francs.

BULLION WAS STEADY DURING THE PAST week in response to a rise in the prices of other commodities. Silver rose from the previous week's level of Rs. 243.75 to Rs. 244.75, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 208.25. The London and New York prices were 88½d and 104.75 cents.

Gold rose in sympathy with silver, and the price increased from Rs. 140.25 to Rs. 140.75. The sovereign at Rs. 98.75 showed a gain of 26½p.

DURING THE WEEK ENDED 12TH JANUARY, Government of India Treasury bills for Rs. 167.41,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 16th January. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.370 percent were allotted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.520 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 22nd January.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 17th January to 20th January at Rs. 99.385 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 10th January to 13th January, amounted to Rs. 10 lakhs.

RISES OF RS. 21.51 CRORES TO RS. 1,991.41 crores in active notes and of Rs. 19.23 crores to Rs. 2,003.90 crores in the total note issue, were prominent features of the return of the Reserve Bank of India for the week ended 12th January, 1962. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 19.99 crores to Rs. 1,638.80 crores. This was done by transferring securities from the Banking Department in which investments fell by Rs. 20.16 crores to Rs. 190.46 crores. Deposits of the Government of India moved down by Rs. 7.57 crores to Rs. 53.64 crores, but

other Government accounts rose by Rs. 81 lakhs to Rs. 12.62 crores. Balances held abroad again declined by Rs. 2.64 crores to Rs. 13.95 crores. Other loans and advances rose from Rs. 143.83 crores to Rs. 145.93 crores, of which advances to scheduled banks against usance bills amounted to Rs. 8.02 crores (Rs. 6.94 crores). Ways and means advances stood at Rs. 64.14 crores, against Rs. 61.73 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 5th January, 1962, shows a drop of Rs. 119 crores to Rs. 526.64 crores in total deposits. Investments in Government securities and other authorised investments are up by Rs. 15.14 crores and Rs. 5 lakhs to Rs. 238.60 crores and Rs. 9.35 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 6 crores to Rs. 261.21 crores. Cash and balances are, in consequence, shown at Rs. 24.47 crores or Rs. 20.12 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 5th January, 1962, shows Demand and Time liabilities at Rs. 856.94 crores (Rs. 25.13 crores on account of borrowings from banks) and Rs. 1,158.81 crores (Rs. 15.74 crores), compared with Rs. 855.52 crores (Rs. 19.68 crores) and Rs. 1,162.75 crores (Rs. 19.64 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have declined by Rs. 3.95 crores and Rs. 18.75 crores to Rs. 48.02 crores and Rs. 80.61 crores, respectively. There is a rise of Rs. 13.90 crores to Rs. 593.84 crores in investments. Advances and bills discounted at Rs. 1,298.84 crores show a rise of Rs. 13.56 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.4 percent and 64.4 percent, against 7.5 percent and 63.7 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 19-1-62.

Stocks and Shares

NEW SHARES ON FORWARD LIST RISE, BUT OTHERS QUIET

Wednesday Evening.

THE stock market has on the whole been quiet during the past week, although support has been extended steadily to six shares—Guest, Keen, Williams, Jaipur Udyog, Birla Jute, Kesoram Industries, Orissa Cement and J. K. Rayon. It looks as if these shares were being bought because some speculators knew beforehand that they would be included in the forward list. At a meeting held on Tuesday, the Calcutta Stock Exchange did in fact decide to promote the scrip to the forward list. Guest, Keen, Williams, Jaipur Udyog, Birla Jute, Kesoram Industries and Orissa Cement will be transacted as clearing shares from the clearing account which starts on 1st February. J. K. Rayon will not be included in the clearing list until some technical formalities have been completed.

The decision of the Reserve Bank to reduce the margin on advances by banks against shares from 50 percent to 40 percent has had a bullish effect. But the improvement has been short-lived, as operators think that due to the present busy season demand, banks are not likely to be interested in increasing their advances to the stock market. Although the Life Insurance Corporation has bought some shares, the support has not been sufficient to sustain prices. The growing shortage of credit has worried operators, since it might be accentuated by the flotation of various new issues. Speculators have derived little consolation from the relaxation of the Reserve Bank's credit controls, because the ban on banks financing *budla* transactions has not been lifted. As the transactions have to be largely financed from outside sources, business in forward shares has become more expensive.

Lyons Range is becoming increasingly perturbed with the approach of *Astagrahi* (the confluence of the planets). The event is considered inauspicious, so operators are keen to keep their commitments down to the bare minimum. There is also a great deal of uncertainty about the prospects for foreign aid. Press reports say that attempts are being made to postpone the "Aid-India Club" meeting, which is due to be held at the end of this month. If India cannot obtain foreign aid in time, the working of industry will suffer. Already, many industries cannot work their full installed capacity due to the shortage of imported raw materials and spare parts; they also face a shortage of coal, transport and power. Although many schemes are being discussed to relieve the shortages, it is doubtful whether any improvement can be effected for some years yet.

At today's clearing, share prices have slipped back. Although the carry-forward charges on the whole are moderate, deliveries are expected to be bigger. Steel shares have lacked support due to disappointment over the delay in announcing the new retention prices. The decision of the Indian Iron and Steel Co. to expand the production of coal from its collieries has been ignored.

Indian Iron have closed around Rs. 25.05. Guest, Keen, Williams have been prominent in the engineering section. Indian Standard Wagon have improved on dividend prospects. Britannia Engineering have become steadier due to hopes of a rights share issue. Texmaco have declined on pressure, but Dalmia Iron have

recovered on replacement buying. Kumardhubi Engineering are being bought on hopes of improved results. Indian Oxygen have been steady on maintaining the ordinary dividend.

Turnover in miscellaneous industrials has declined appreciably and support has been confined to a few scrip. Kesoram Industries have gained. Dunlop Rubber and Metal Box have been steady. Alkali Chemical have reacted on profit-taking. Indian Copper have slipped back, but Indian Cable and Indian Aluminium have been bought. Hindustan Motors have declined on pressure. British India Corporation have enjoyed influential support. Electric companies have become steadier due to the belief that the "standard rate of return" will be increased soon. Calcutta Electric have met with scattered support. Among cement shares, Jaipur Udyog and Orissa Cement have hardened. In the managing agency section, Martin Burn have gained on dividend prospects. Jardine Henderson are being taken on prospects of diversification of activities. Paper shares have become steadier on hopes that the price of the commodity will be increased soon. Orient have gained on expansion prospects. Bengal have been steady on issuing rights and bonus shares. Titagur have been bought on investment account.

There has been selective support for jute shares following the decision of the Indian Jute Mills Association to permit mills to work as many looms as they like. Meanwhile, mills are believed to be making satisfactory profits. Birla have improved. Interest is being taken in National, New Central, Bally, Nuddea, Ganges, Fort William, Union, Auckland and Fort Gloster.

Coal shares have become sluggish on reports that the production of the commodity is suffering. Scattered interest has been taken in Burrakur, Bengal and East India.

Bowreah and Dunbar have been steady in the cotton mill group due to hopes of improved results. J. K. Rayon have been bought, but Bharat Commerce have reacted on profit-taking.

Bank shares have met with support because of the improved results for 1961. United Bank and United Commercial have risen.

The improvement in auction prices in Calcutta this week has induced selective support for tea shares. It is believed that the quality gardens will show satisfactory profits for 1961. Dibrugarh, Betjan, Huldibari, Hasimara and Hantapara have gained.

Government securities have been dull and turnover is limited. There is little support from institutions. Prices of dated loans have declined, where changed. The 3 percent Conversion loan 1986 is being quoted around Rs. 71.06. The prices of State loans have fallen.

Bombay Market

EARLIER RECOVERY NOT MAINTAINED
SHORTAGE OF CREDIT RESTRICTS ACTIVITY

Wednesday Evening.

THE Bombay stock market closed in a quiet mood. After improv-

ing earlier in the past week, share prices reacted towards the close due to tired bull liquidation, combined with selling pressure. The news of the relaxation of the credit control on share advances by banks had a temporary effect, because the stock market continued to feel the credit shortage. Due to the rising trade demand for funds, it was thought that bank finance would be difficult to obtain in spite of the Reserve Bank move.

Operators were inclined to be cautious due to astrological factors. The approach of *Astagrahi* caused nervousness. Cotton mill interests were getting worried about the growing shortage of cotton. Reports of a decline in cloth exports called for caution. Attention was increasingly diverted to subscriptions for new share issues. It was believed that the long queue of such issues would mop up large funds. The introduction of automatic margins on some shares was a restraining factor. Operators were inclined to move cautiously in view of the general elections. Evidence of growing tension between India and Pakistan over the Kashmir issue was interpreted bearishly.

Tata Steel closed at Rs. 142.25 and Indian Iron at Rs. 25 on selling from Lyons Range. Among engineering shares, Tata Locomotive were supported up to Rs. 362. Larsen and Toubro were steady at Rs. 41, but Premier Construction were sold at Rs. 199.

The earlier gain in cotton mill shares was not maintained at the close. Century declined to Rs. 609 on profit-taking and Bombay Dyeing were quoted lower at Rs. 68.20. Kohinoor were available at Rs. 315 and Simplex at Rs. 159. After an earlier rise, Standard reacted to Rs. 1,175 on profit-taking.

Miscellaneous shares moved in line with the general trend. Sugar shares were quiet on the belief that the Maharashtra land ceiling law would continue to apply to sugar companies. Belapur fell to Rs. 259 and Phalton to Rs. 125. Walchandnagar Industries moved down to Rs. 165. Cement shares were steady, and interest was taken in Associated Cement at Rs. 162. Digvijay were dealt in at Rs. 195. Steamship company shares were quiet, and Scindia Steam were offered at Rs. 13. Great Eastern Shipping declined to Rs. 12.56. Mining shares were quietly steady, and business was done in Shivrajpur Syndicate at Rs. 44.20. Rayon shares were subdued, and National Rayon declined to Rs. 548 on issuing debentures. The stock market thought that the Company would not issue rights shares for the time being.

Chemical shares were quietly steady, and Tata Chemical were placed at Rs. 20. Polychem were steady at Rs. 222.50 and Colour-Chem at Rs. 442.50. Indian Dyestuff were firm at Rs. 540 and Synthetics and Chemicals were done at Rs. 225. Ceat Tyre reacted to Rs. 210 on profit-taking.

Among bank shares, Bank of India reacted to Rs. 145 on disappointment over the maintenance of the dividend. Central Bank were steady at Rs. 67.80 and Bank of Baroda at Rs. 116.50. Insurance shares showed little change, and New India Assurance were done at Rs. 59.50.

There was scattered support for electric company shares, and Ahmedabad were indicated at Rs. 93.50. Tata Hydro came to hand at Rs. 110

Madras Market

TURNOVER SHRINKS AND PRICES FALL

CARRY-FORWARD CHARGES HIGH

Tuesday Evening.

DULL conditions prevailed in the Madras stock market during the past week. Turnover was limited and prices slipped back on tired long liquidation, following easier advices from Calcutta and Bombay. Operators were concerned about the growing shortage of raw materials and electric power. Carry-forward charges were considered high, and there was no inclination to extend commitments.

Government securities were dull and routine business was transacted mainly in State loans. Bank shares were steady on hopes that more banks would issue rights shares soon. Scattered support was forthcoming for public utility companies. Sugar shares were sold freely at lower prices on reports of a decline in the price of the commodity. Tea and rubber shares reacted, with sellers predominating because the commodity prices were reported to be lower. Coffee shares were not fancied because the marketing outlook was far from encouraging. Textile shares turned cautious on reports of a decline in the offtake of piecegoods. Miscellaneous industrials lacked support due to the absence of buyers.

In the banking group, Indian Overseas came to hand at Rs. 198 and Indian were done at Rs. 181. Punjab National were transacted at Rs. 23 and State Bank of Mysore at Rs. 160. Among public utility companies, South Madras were steady at Rs. 10 and Negapatnam were transacted at Rs. 10.80. West Coast were taken at Rs. 14 and Cochin were dealt in at Rs. 12.10.

Among sugar shares, E.I.D. reacted to Rs. 35.75 and Deccan were available at Rs. 10.75. Mysore lost at Rs. 56.50 and United B-werries were quoted at Rs. 83.59 x.r. K.C.P. were done at Rs. 22.95 and Jeypore at Rs. 16.

In the planting group, Blue Mountain were easier at Rs. 2.47 and Cochin Malabar at Rs. 7.78. Chembra were sold down to Rs. 3.32 and Consolidated Coffee were offered at Rs. 17.37. Badra came to hand at Rs. 3.39 because the proposed amalgamation of Kadur Coffee Estates Ltd with Badra Coffee Estates Ltd was abandoned. The former estates will now be sold to the latter for Rs. 2.75 lakhs.

Among textile shares, Bangalore Woollen were steady at Rs. 240 and Buckingham at Rs. 253.50. Anglo-French were dealt in at Rs. 131.50 and Balarama Varma at Rs. 87.70. Lakshmi slipped back to Rs. 165 and Madura to Rs. 42.95. Kothari were steady at Rs. 13.62 and Mettur were taken at Rs. 392. Radhakrishna were offered down to Rs. 39.25 and Rajapalayam were dealt in at Rs. 175.

Aluminium Industries were steady at Rs. 23.45 in the miscellaneous section. Business was done in Ashok Leyland at Rs. 9.13 and in Binny at Rs. 310. A. V. Thomas were steady at Rs. 10.50 x.r., and Enfield were done at Rs. 12.40. F.A.C.T. retreated to Rs. 8.10, but India Cement were supported up to Rs. 6.33 on prospects of a rights share issue. Kirloskar Electric improved to Rs. 18.25, but Madras Rubber were quiet at Rs. 21.75. Mysore Paper rose to Rs. 15.12 and Seshasayee Paper to

Rs. 8.75. Spencer were steady at Rs. 24.50 and Standard Motors were placed at Rs. 16.50. Parry's Confectionery were in demand at Rs. 4.45 and Textool were quoted at Rs. 189. Tube Investment were bought at Rs. 280, but United India Fire were offered freely down to Rs. 7.60.

THE WEEK'S TRANSACTIONS

The comforts of life are spreading

Rising standards of living are finding their way into the remotest village and are coming within the reach of people with quite modest means. Consider Kerosine, for instance, which by bringing illumination to the humblest home is playing a part in this welcome development. By the end of the Third Plan, Burmah-Shell estimates that

demand for Kerosine will increase by 41.6%. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth and Burmah-Shell believes that

for tomorrow's needs we must act today

G.A.T.T. Talks on Promoting Textile Exports from Under-developed Countries

(FROM OUR NEW DELHI CORRESPONDENT)

INDIA is deeply interested in the G.A.T.T. Conference on Textiles which is commencing in Geneva on 29th January. The Conference is scheduled to consider long-term plans for the textile industry. It is feared that the western countries will make an attempt to restrict their imports of textiles. An effort, it is thought, may be made to divide the world into regions with a view to limiting exports from certain under-developed areas.

India's stand has been, and is, that the under-developed countries should not be fettered in their exports, particularly of manufactured articles like textiles, the raw materials for which they themselves produce. Such a policy would enable the under-developed countries to earn foreign exchange for their own development. It is explained that the annual export target of 850 million yards of cotton textiles, valued at Rs. 67 crores, in India's third plan has been fixed at a rather low level primarily because exports of cotton textiles during the second plan were disappointing. The third plan target, in fact, is considerably below the target of 1,000 million yards originally estimated for 1960-61 in the second plan.

The barriers against imports of cotton textiles from the less-developed nations appear to be particularly severe in some European countries. There still remains a large element of discrimination in the administration of quantitative import restrictions. In West Germany, progress has been made in eliminating import restrictions and discrimination on certain textiles as a result of consultations held under the waiver decision. West Germany has reaffirmed her intention of liberalising at specified dates her imports of a number of cotton textiles. With effect from 1st January, 1961, she has liberalised imports of such manufactures as terry fabrics, blankets, kimonos (velvet and plush), netting and fishing nets.

The French Government has thought of holding consultations. Imports of printed cotton fabrics and carpeting made of cotton fibres, for example, are liberalised only when coming from O.E.E.C. countries, the United States and Canada, New Zealand, Switzerland, Japan, Denmark, Finland and Austria are maintaining import restrictions on certain cotton textiles.

Protecting Marginal Units

In some countries where there are no quantitative restrictions, tariff levels are nevertheless rather high. The tariffs, in the view of the less-developed countries, are often designed to protect marginal units which are inefficient. Import duties and internal taxes are high in many important markets for cotton textiles. The total incidence on imported cotton textiles of import duties and internal taxes constitutes an additional obstacle to exports from less-developed countries. For example, there are import duties in the United States, France, Italy, Canada, Switzerland, Norway, Finland and Austria. Internal taxes are levied in West Germany, France, the United Kingdom, New Zealand, Canada, Switzerland, Japan, Australia, Denmark and Austria.

There is a trend in many countries to achieve some degree of self-

sufficiency in cotton textiles. This has in some cases resulted in the erection of obstacles to international trade in these products. Many less-developed countries have high tariffs and non-tariff measures which impede the expansion of trade between the less-developed countries themselves.

Quantitative Restrictions

The main findings of Committee III of G.A.T.T., referred to earlier in these columns, may now be summarised. It is stated that among the most serious barriers confronting the exports of less-developed countries are quantitative import restrictions. Exports from less-developed countries of such important products as vegetable seeds and oils, coffee, raw cotton, tobacco, tropical timber, manufactures of jute, of cotton and of coir, and sewing machines are often adversely affected by quantitative

import restrictions, which are sometimes applied in a discriminatory manner. The Committee notes that the less-developed countries, as a group, have not benefited significantly from the widely observed movement towards trade liberalisation by industrialised countries as a result of their emergence from balance-of-payments difficulties. In certain instances, industrialised countries when proceeding with their programme of relaxation of import restrictions, have extended the removal of restrictions only to imports of raw materials while the products processed from these materials have continued to be subject to restrictions.

The Committee notes with some concern that certain industrialised countries have liberalised trade on an area basis, while maintaining restrictions against other areas in which most of the less-developed countries are located. The maintenance of

such restrictions by industrialised countries is a serious threat to the balanced expansion of exports of less-developed countries and to sound patterns of growth in the international economy. The maintenance of such restrictions not only seriously affects export possibilities for less-developed countries, but also has the effect of concentrating imports in markets where goods can enter freely, thus sometimes contributing to strains on the capacity of these markets to absorb imports. Moreover, many of the restrictive measures, particularly discriminatory restrictions, are in clear contradiction of the obligations of the importing countries under the General Agreement; a conscientious application of the General Agreement by all contracting parties will in itself go a long way towards removing many of the barriers still confronting exports from less-developed countries.

High Tariffs

High tariffs and tariffs which differentiate disproportionately in favour of imports of raw materials, as compared with duties for processed goods, have also been identified as constituting serious barriers to exports from less-developed countries, particularly in the case of vegetable oils, coffee, tea, cocoa products, manufactures of jute, of

WITH SOAPS, FOODS, TOILET PREPARATIONS

cotton and of coir, sports goods, aluminium, ferroalloys and copper rollings, leather products, and certain other manufactured consumer goods. It has been found that a reduction of these barriers would be of considerable assistance to less-developed countries. In addition, it has been found that tariff preferences may cause significant diversions of trade—for example, certain tariff preferences on coffee, cocoa, vegetable seeds and oils and tropical timber.

Revenue Duties

High revenue duties and high fiscal charges have also been emphasised as major barriers to such important traditional exports from less-developed countries as coffee, tea, cocoa and tobacco, and for some of the newer exports of manufactured consumer goods. In the case of coffee, tea and cocoa, the taxes apply only to imports from less-developed countries since there is no domestic production in the countries imposing the taxes. The incidence of revenue duties on the commodities is particularly heavy in various European countries. It is also emphasised that a reduction of the barriers would be of considerable assistance to less-developed countries in increasing export earnings from these commodities.

State Monopolies

The Committee has found that the activities of restrictive State monopolies, whether in countries with centrally-planned or market economies, have an adverse effect on imports from less-developed countries of items such as coffee, cocoa, tea and tobacco, particularly where the retail prices fixed for these products are very high in relation to import costs. It has been found that decisions, followed by action, by these monopolies and by purchasing agencies in State trading countries, to import larger amounts of these products and to provide liberal access to imports from less-developed countries, combined, if necessary, with significant reductions in internal prices, would make a considerable contribution to the expansion of the export-earning capacity of less-developed countries.

This list of obstacles to the expansion of the trade of less-developed countries is by no means exhaustive. For example, a possible loss of trade opportunities for less-developed countries arises from the operation of price-support schemes, surplus disposal operations and mixing regulations in some countries. Also, the Committee is well aware of the paramount importance of seeking a solution to the problem that exists as a result of price fluctuations in the field of commodity trade, but notes that the problem is being considered elsewhere. Nevertheless, the Committee retains a strong interest in this problem and has borne it in mind in its detailed deliberations and in the preparation of its report.

A licensing policy, fixing quotas for imports from communist China

into the United Kingdom, was announced recently. The quotas include cotton, linen and man-made fibres, cotton and rayon yarn and pricegoods. This is surprising. Communist China is not a Contracting Party to G.A.T.T. and, as such, G.A.T.T. has no jurisdiction over it. Even if the world were divided into regions for the purpose of textile exports, such an arrangement will have no binding effect on China, which will continue to dump its cotton textiles, particularly in south-east Asia. Nearly 13 million Chinese live in the countries of south-east Asia. Nearly half the population of Singapore and Malaya is Chinese. They prefer Chinese textiles and thus provide a sheltered market for Chinese goods.

Foreign Collaboration

A total of 101 schemes for foreign collaboration in setting up industrial units in India were approved during three months from October to December 1961. The U.K. once again headed the list with 34 collaboration schemes, followed by the U.S.A. with 24, Japan nine, West Germany six, France and Switzerland five each, Italy four, East Germany and Denmark two each, and Australia, Austria, Czechoslovakia, the Netherlands and Finland one each. The following is the list of British companies which have entered into collaboration for the manufacture of the items shown:

Company	Product
I.C.I. Ltd	Polyethylene
Pyrotenax Ltd	Mineral insulated copper cables
International Teeth Co.	Dental products
Thomas and Sons (Rodley) Ltd and John Smith (Keighley) Ltd	Steel structurals and cranes
Densfield Holdings Ltd	Cop loaders
Formica International Ltd	Laminates, including copper laminates
Measuring Instruments (Pul) in Ltd	Measuring instruments
G. R. Herron and Son Ltd	Wool tops
Delta Metal Co. Ltd	Non-ferrous metal seamless tubes
Pye Ltd	Transistors
Villiers Engg. Co. Ltd	Villiers engines for industrial agricultural and other applications
Constructional Engg. Co. Ltd	Malleable castings
Mond Nickel Co. Ltd	S.G. iron castings
Vokes-Cardwell Ltd	Tobacco machines
Streamline Filters Ltd	Special types of filters
M.S.S. Recording Co.	Magnetic tapes for tape recorders
Dexion Ltd	Slotted angles
L. Dennis and Co. Ltd	Magenta dyestuffs
Midland Electric Mfg. Co. Ltd	Electric motor starters and switch gears
Fellows Bros. Ltd	Electric overhead travelling cranes, electric hoists and chain pulley blocks
Newall Engg. Co. Ltd	Grinders
Robert Jowitt and Sons Ltd	Wool tops
Mather and Platt Ltd	Stenter clips
Joseph Sankey and Sons Ltd	Automobile wheels
James Finlay and Co. Ltd	Formation of tea packaging company in India
Johnson and Phillips Ltd	Cables, switchgears and power factor capacitors
Ranco Ltd	Rotor-stator units used for sealed unit compressors for domestic refrigerators
U.G.I. (Meters) Ltd	Domestic gas meters
Harry W. Dietert Co., U.S.A., and Ridsdale and Co. Ltd, Yorkshire	Sand-testing equipment
Wolf Electric Tools Ltd	Portable electric tools
Merley Electrical Engg. Co. Ltd	Complete colliery haulages
South Eastern Tar Distillers Ltd	Coal tar enamels and primers
Associated Electrical Industries Ltd	Electric watt-hour meters
A.E.I. Lamp and Lighting Co. Ltd	Fluorescent tubes and miniature lamps
Shieldrop and Co. Ltd	Oil burners

Diesel Engine Project

The Government of India has approved the Kirloskar-Cummins project for the manufacture of diesel engines of a certain range, it is learned. The U.S. collaborator will take 50 percent of the equity capital of Rs 1.5 crores and will get a technical assistance fee of 2.5 percent. The proposed company hopes to export goods worth Rs. 60 lakhs a year

to pay for the components in the initial years.

Moving Coal by Sea, Road

For the carriage of coal by sea transport, the State-owned Shipping Corporation has already chartered three tramp ships and is planning to charter four more. The coal will be carried at the existing rates, the Corporation bearing the losses, if any.

As for the carriage of coal by road, the Central Government has told the States that it would be prepared to advance loans for the strengthening and widening of roads and bridges. The railways have agreed to go into partnership with State road transport companies, taking up as much as 25 percent of the equity capital. The railways will also leave goods traffic to road transport within a radius of 50 miles of a town.

Indo-Yugoslav Talks

Trade talks between Yugoslavia and India began here last week to finalise the trade arrangements for 1962. The Yugoslav delegation, led by Mr. V. Krunic, deputy chairman of the Committee for Foreign Trade, met Mr. B. N. Adarkar, Joint Secretary to the Indian Ministry of Commerce and Industry. The two delegations are reviewing the development of trade between the two countries over the past few years. At present, there is a three-year trade agreement between India and

three basic conditions, it is learnt. Firstly, all the ships will be registered in India. Secondly, they will be mortgaged to the Government until the loan is fully repaid. Thirdly, the concern will become a public limited liability company.

U.N. Aid to India

The governing council of the U.N. Special Fund last week announced the allocation of \$2,025,000 for three projects in India. They are the National Institute for Training in Industrial Engineering, Bombay, the Central Instructor Training Institute, Hyderabad, and the Rajasthan Sheep and Wool Institute. The allocation for the National Institute for Training in Industrial Engineering, Bombay, amounts to \$669,000, the Government of India's counterpart contribution being equal to \$1.62 million. The Institute will train managerial staff in various fields of industrial engineering. The International Labour Organisation will national Labour Organisation will be the act as the executing agency. The project will be spread over a period of five years. After the fifth year of operation, the Institute should be in a position to train annually 1,500 technicians and 160 executives from selected industries on the higher levels of management. The Institute will be an autonomous organisation administered by a board of governors, whose chairman will be appointed by the Government.

The allocation for the Central Instructor Training Institute, Hyderabad, will be \$612,000, and the Government's counterpart contribution will be equivalent to \$1.69 million. The Institute will give training for the industrial trades in metal-working, electricity and building construction.

The allocation for the Rajasthan Sheep and Wool Institute will be \$744,000. This will assist in establishing an Institute to improve the productivity of sheep and the quantity of wool products. The Government of India's contribution to the project will be equivalent to \$4.27 million. The project, spread over a period of five years, will be executed by the U.N. Food and Agriculture Organisation. The Institute will be set up in Malapura, a few miles from Jaipur.

Coal Conference

A two-day coal conference with the representatives of mineowners' organisations was held here during the past week to discuss the problems facing the coal industry. The representatives of the industry pointed out that while labourers, agriculturists and exporters needed incentives to increase productivity or promote exports, they alone had been called upon to produce coal even at a loss. It was urged that coal prices be raised by at least Rs. 3.50 a ton to enable the industry to meet the rising cost of production. The Government asked for data to substantiate the claim for higher prices. The conference discussed the power and transport shortages and the inadequacy of explosives. It was pointed out that coal production during the 12 months ended March 1961, was about 55.5 million tons. The production in 1961-62—according to present trends—may not be much above this figure. During the first six months of the third plan, daily loadings of coal, on an all-India basis, were 5,997 wagons or 1,186 short of the assessed demand. The railways, it is learned, have indicated that the maximum number of wagons they can offer during 1962 will be less than 7,000 a day. The power position is even worse than the transport shortage. According to estimates, production of power cannot be increased beyond the 1962 level till new generating units start working in 1964.

Loan to Jayanti Shipping

The Government of India has agreed to give a loan of Rs. 20 crores to the Jayanti Shipping Company on

London

U.K. Chancellor Agrees to End Pay Pause: But Conditions Imposed

(FROM OUR LONDON CORRESPONDENT)

DEVELOPMENTS have followed one another in quick succession during the past week in connection with the pay-pause situation. Last Friday, the U.K. Chancellor of the Exchequer was holding his separate meetings with the representatives of employers and the T.U.C. His object was to enlist their co-operation in restraining income growth during the "intermediate phase" to which he made brief reference in the House of Commons before Christmas. This is the period which will succeed the pay pause from about the beginning of April. It is, in turn, intended to give the U.K. Government time to evolve—with the aid of the National Council for Economic Development—a more or less permanent policy for keeping incomes and productivity in balance. In recent years, production in Britain has tended to rise at an annual rate of 2½ percent or 3 percent, but some of this has already been offset by agreements to come into effect this year. So the Chancellor had to warn all concerned that the general scope for wage and salary increases in the coming financial year would be small. He also made it clear that "appropriate corrective action" would have to be taken by the Government if aggregate profits showed signs of increasing excessively, compared with wages and salaries.

The British Employers Confederation's response to the Chancellor's exposé broke no new ground. Its representatives expressed the view that the balance-of-payments situation still presented the greatest danger. To correct this a substantial increase in exports will have to be secured. To achieve this, industry has to become more competitive. This, in turn, means that no general increase in incomes can be justified until productivity has caught up. Generally speaking, Mr. Selwyn Lloyd was assured of the support and co-operation of employers. The T.U.C. representatives, on the other hand, were much less forthcoming, pressing the Chancellor to tell them what he had in mind. But Mr. Lloyd riposted: "Last time you blamed me for not consulting you first; now I have called you here to consult you, so what is your advice? Are we to give the pay pause up and do nothing, or are we to give it up and work out a policy." It was ultimately agreed that the U.K. Chancellor would elaborate his present thinking on paper so that the trade union leaders could consider the matter further and then come back to see him.

Three Methods

No time was lost in getting the Treasury experts to work, with the result that the Chancellor's plans were reduced to the form of a 2,500-word letter, which the T.U.C. Economic Committee was able to consider at its meeting held later. In it, Mr. Selwyn Lloyd sets out three possible methods of controlling pay rises after the pause, which he hopes will end in April. These are: A "guiding light" figure, about 2½ percent, which unions and employers would be expected to accept; agreement on a total available for wage increases, including those already decided; and a formula doing justice to those in work where productivity cannot be measured, while taking some account of higher productivity where it can be ascer-

tained. Each has obvious disadvantages, but the Chancellor obviously prefers the first, although he asks for T.U.C. reactions. It is significant that he refers to the Treasury's estimate that production will rise by about 2½ percent this year. Whatever technique the Government finally adopts, there is no doubt that it will try hard to achieve a measure of wage restraint after the pause. Not surprisingly, they would, of course, prefer to give guidance which has the general support of both sides of industry.

The Economic Committee was unable to come to a decision on a recommendation to the General Council, so it has postponed discussion for another week, when it hopes to reach a final decision to be placed before the Council on 24th January. Mr. Lloyd, in his letter, made this appeal to the T.U.C. to join the Economic Council. "I ask you once again as a body which has consistently urged upon me the advantages of such co-ordination of economic effort, to join in this work." On the question of long-term economic policy, the letter says: "All those who influence or decide the course of wages and salaries, whether by negotiation, arbitration or in other ways, all who determine profit margins, dividends, and prices, have a special responsibility. They must recognise that in the long run all will suffer if sectional interests are allowed to prevail over the interests of the community as a whole." Just as important, they and the public must be kept informed about Britain's economic circumstances and prospects.

Engineering Industries

Manufacturers in the motor-car and engineering industries can see no sign of a business recession as some people have been fearing. The motor-car industry expects to deliver 9 percent more vehicles in the home market this year and 22 percent more to export markets than in 1961, implying a general increase of 15 percent in production. In the engineering industries, the average expectation is that home deliveries this year will be 5 percent up and export deliveries slightly more. These views were obtained by the National Institute of Economic and Social Research in its fourth industrial enquiry carried out in December. The managements of 112 firms employing one million people were interviewed in the engineering, motor-vehicle and aircraft industries.

To summarise the findings of the Institute, the motor-manufacturers are still working well below capacity but confidently expect a strong revival of demand in the spring. Firms making motor-cars are in fact down to 65 percent of capacity and makers of commercial vehicles are working at 80 percent. In the engineering industry, between 80 percent and 85 percent of the productive capacity is being used. In these industries, the physical capacity to produce has increased in the past 12 months more or less parallel with the output. About half the firms said they had "moderate" amounts of spare capacity; 14 percent of their capacity percent or more of their capacity standing idle. These general figures hide marked contrasts. Firms with little or no spare capacity were producers of heavy plant, machine tools, electronic equipment and office ma-

chinery. Those with large amounts of spare capacity were engineering firms making components for motor-cars or ships. If these expectations turn out to be correct, the output of the metal-using industries as a whole would increase by about 6 percent this year over 1961, even if allowance is made for some fall in the output of aircraft. The rise in production would be bigger than over the last 12 months, mainly because of the hoped for expansion in the motor-car output. Another proof of the confident mood prevailing in these industries is that capital expenditure by the motor-car industry in 1962 is expected to be again higher than last year. The same is true of the engineering industries which are planning a further increase in capacity, except in heavy electrical engineering. There is also fairly good news about productivity. Output last year by 5 percent in the motor-car industry.

Export Finance Schemes

Senior officials of more than a dozen insurance companies met in London the other day to consider proposals for financing exports. The British Insurance Association stated afterwards that the meeting was that of a working party which had given preliminary examination to certain proposals prior to their being considered by the insurance company. It will be some time before the final proposals are agreed by the insurance companies, the Association added. What is involved, one gathers, is the formation of a new Export Finance Corporation to which a group of insurance companies would make loans and which would in turn extend credit for fairly long periods either to British exporters or to overseas importers. The contracts would, of course, have to be insured by the U.K. Export Credits Guarantee Department. There is no question of any Government subsidy. The scheme would simply mobilise a certain amount of insurance money for long-term export finance which has hitherto been carried mainly by the clearing banks. It would be on a much bigger scale than the consortium organised last April by Lazard Brothers in which some 30 institutions undertook to earmark a total of about £12 million for long-term export finance.

The plan discussed by the insurance companies does not seem to envisage credits at fixed rates of interest. Presumably, the cost of the loans would be based—as in the Lazards' scheme—on current market rates at the time each loan is made, although the precise formula may still be open to discussion. A question on which there is some difference of views is whether the promissory notes arising from each export loan should be made negotiable. No doubt this would suit the insurance companies and it might slightly reduce the interest rate required, because the money would not have to be earmarked for the whole period of each loan. On the other hand, the authorities may dislike the idea, because the appearance of a new kind of paper in effect carrying an official guarantee would put an extra weight on the gilt-edged market.

Meanwhile, the banks are considering an entirely separate scheme

for making medium-term export credit available at fixed rates of interest. This scheme is also incomplete. Present ideas seem to be that a rate of 5½ percent might be quoted. This would not rise and fall with every change of Bank rate, although it might be subject to periodic changes—rather like building society rates—in the event of large and lasting changes in Bank rate. Credits under this scheme would be intended only for amounts of £100,000 and for terms of from three to seven years. The efforts of both banks and insurance companies appear to have strong official support. The argument advanced for so many years by the authorities that there was no gap in the export credit machinery can no longer be heard. It is to be hoped that the two schemes will be the beginning of a radical reconsideration of all the conditions under which British exporters have to compete.

Providing Risk Capital

A new enterprise has just been formed in the City by 33 insurance companies, merchant banks, and other institutions to provide "risk capital" for technical innovations and inventions. The chairman, Sir John Benn (head of the U.K. Provident Institution), received a message of enthusiastic good wishes from the Duke of Edinburgh. "The launching of Technical Development Capital, Ltd, is a great encouragement to all enterprising designers and inventors," the Duke wrote. "I am sure that this practical backing for initiative will be most valuable to British industry and British exports." Formed with the encouragement of the Bank of England, the U.K. Board of Trade, and various commercial organisations, Technical Development Capital, Ltd will have a capital of £2 million—none of it from any public funds. Its purpose is to assist the inventor or promoters of a new device or process which has passed the initial research stage but is not yet being produced commercially to get this into manufacture and on to the market.

At a Press conference, Sir John Benn said that this kind of pioneer investment is now outside the scope of private capitalists, and even insurance companies are not able, when acting separately, to use the money of their policyholders on the necessary scale in view of the risks involved. T.D.C. would overcome this difficulty by offering a channel for pooling a small part of the insurance companies' resources. Administrative services are being provided under contract by the Industrial and Commercial Finance Corporation—its set up by the City institutions to fill a somewhat different "gap" in the financial machinery—and its experience in investigating many thousands of small companies should be of real help to the new group.

Machine Tool Exports

New orders from overseas for British machine tools were 31 percent higher in October than in the same month of 1960. Their value was £3,347,000, against £2,546,000, according to figures compiled by the Machine Tool Trades Association. October's performance contrasts with a 6-percent decline in September, but the pattern of machine tool orders is always erratic. A clearer indication of the trend is given by results for the first ten months of 1961, in which new export orders were 15 percent higher than in the same period of 1960. Home orders, which have been declining throughout the year, showed a further fall of 21 percent to £6,593,000 in October, compared with the same month of 1960. This brought the home market order-book to £35,511,600. Total orders for both home and exports at the month-end were £116.75 million, against £101.75 million a year previously.

Kundah hydro-electric project, the Nilgiris.

Life-giving water, light and power to help transform our wastelands into smiling fields pour out from Bhakra-Nangal, Konar, Gandhisagar, Tungabhadra, Kundah and other projects. These great hydro-electric systems dramatise our progress and stress the fact that concrete is playing a vital part in our nation's growth and well-being.

The Third Plan has provided Rs. 1,712 crores for irrigation and power projects and huge quantities of cement will be required for their construction. In order that more cement may be available for the great projects and for the private consumer the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this.

SHORTAGE OF READY HESSIANS CONTINUES BUT FIBRE STILL WEAK

AS remarked last week, the mills are shouldering the burden of trying to maintain raw jute prices in order to help the West Bengal Government in a difficult situation; and it is no small burden. The success of the minimum quota scheme for fibre purchases has surprised many. Mills, with very few exceptions, have responded to the call and in most cases are known to have bought more than their minimum quota. They have undertaken to purchase specified quantities of jute within specified periods or, at least, they have said they will endeavour to do so. If there had been an active demand for jute manufactures for a long period ahead, the risk to the mills would have been less. But although genuine business has been done as far forward as September, the quantities have been very small.

There were times when it was possible without difficulty to sell manufactured goods for nine months, or even a year, ahead. But the bazaar, which was almost the sole buyer for shipments so far forward, is under so many restrictions and has suffered such severe blows recently that it is no longer willing or able to accept such heavy commitments. As the mills do not want to carry all the risk themselves, it is natural that they should endeavour to make corresponding sales of manufactures. But with overseas consumers only taking up limited quantities of forward goods—being intent on continuing their hand-to-mouth buying policy—the bazaar is unable to absorb large amounts.

Futures Market

Now, if there were not so many restrictions on the futures market, mills could have hedged part or all of their purchases of jute by corresponding sales in the futures section. This may not be the normal futures operation for a manufacturer but, in the special circumstances of the case, it would have enabled him to spread out the risk. As the futures market is constituted at present, it has not been possible to sell futures beyond February, and that is no hedge for a mill which may be buying jute it cannot use until, say, June or beyond. One does not advocate the wholesale lifting of restrictions: the scope of operations in the Indian futures market must of necessity be confined to one period while the influence of the gamblers is so strong. But the present circumstances demonstrate the need for some reform in the regulations.

Another aspect of the matter is the interest of shareholders. There is a tendency to talk glibly of mills buying as if they constituted impersonal entities, and it seems to be forgotten that the mills belong to shareholders who have put up capital so that they can earn something from it. They do not expect or calculate on being called on to shoulder unnecessary and unbusinesslike risks to get others out of difficulties. Under the present arrangements, the shareholders are taking on liabilities which were unthought of when they invested their capital, and which are outside the scope of normal business. This should not be forgotten when they may want assistance from those whom they are helping now.

Minimum Prices

One criticism that has been levelled against the minimum price scheme is that at the present time the prices fixed are too high. It cer-

tainly does seem wrong, at a time when supplies of raw material are exceptionally large and the demand for jute manufactures not very great, that mills should be called upon to buy jute on the basis of Rs. 30 a maund for Assam Bottoms, although sellers are quite prepared, and keen, to give discounts of Re. 1 or even Rs. 2 a maund. It makes no difference that the mills are making a profit on transactions at the minimum level; they could be making even larger profits to compensate for the huge losses sustained last year. Ready jute does not come under the category of T.S.D. contracts and so business can be done at below the minimum price for ready delivery jute without breaking any laws or agreements. But how many mills are now in a position to take up, and pay for, in a position to take up, and pay for, ready jute when their actual physical stocks are higher than they have been for a decade? If they are prepared to help the Government by buying large quantities to prevent a slump in fibre prices, then some consideration should be given by reducing the minimum price by Re. 1 or Rs. 2.

The problem is a complicated one. Apart from the actual size of the

crop—estimates of which still vary widely—one of the main difficulties is that the percentage of low quality fibre is unusually large, while the demand for the classes of goods for which this fibre could be used has fallen. Other factors, such as finance, storage accommodation, quality and so on, must necessarily be considered, and any action taken has to be viewed in relation to its effect on sowings for the next crop, which are not so very far away.

Speculative Influence

During the past week, all sections of the market have come increasingly under the influence of speculators. The chief influence on the hessian side for some weeks has been the scarcity of 9-porter and 11-porter goods. Supplies of these fabrics for the early deliveries have been virtually cornered, while other classes of hessians for the early deliveries are available only at fancy prices. Fluctuations in rates have at times been rapid, and have been influenced by rumours about the availability of shipping space, by the increase in mill production, and by profit-taking on the part of holders. Profit-taking sales by speculators have, however,

usually been accompanied by purchases of goods for deliveries further forward, and reports that mills may increase their output still further have not deterred the bulls.

I.J.M.A. Production Figures

The production during December 1961 of mills reporting to the I.J.M.A. amounted to 97,820 tonnes, made up of 37,800 tonnes of hessians (38.7 percent), 49,600 tonnes of sacking (50.8 percent) and 10,200 tonnes of other goods (10.5 percent). This was achieved in a total of 208 working hours. December's total is 3,909 tons more than November's, which had the same number of working hours. The increase in output can be accounted for by the fact that unsealing of 2½ percent of the industry's loomage was effective for a full month. The tonnage an hour increased to 469. Total production for the period from July to December 1961 is now 487,800 tonnes, made up of 187,300 tonnes of hessians, 235,700 tonnes of sacking and 64,800 tonnes of other goods.

THE JUTE MARKETS

Manufactured Goods: Sacking was very weak at the opening last Thursday due to the complete lack of interest from overseas buyers. Quotations dropped by about Rs. 2, and B Twills were quoted at Rs. 125.50 for January shipment and Rs. 119.75 for April-June. Hessians

showed very little change but the undertone there was much stronger than in sacking. In the ready position, 40in. 10oz. showed a slight rise to Rs. 56.75, but forward shipment lost some ground for April-June shipment to be quoted at Rs. 47.25. After the opening, covering business and speculative activity caused rates to rise, and over the next two days sacking prices advanced about Rs. 2, but there was little genuine business. Hessians were strong due to interest from America and also due to covering in the near position. There was an acute shortage of ready Hessians, and this was the main reason for the current premium of nearly Rs. 8 over the April-June position. After the week-end, conditions eased considerably, particularly in sacking, where rumours of a Government order for B Twills failed to give any stability to the market. At the close, the undertone of the market was weak.

Opening quotations on Wednesday morning were as follows:

	January	February	March	Apr.-June
40in. 7 1/2oz.	42.75	40.75	37.75	35.10
40in. 8oz.	46.00	43.75	40.75	37.75
40in. 10oz.	51.75	51.75	49.00	46.75
B Twills	125.75	122.75	120.50	118.50
Heavy Cees				
Plain	125.75	122.75	120.50	118.50

Cocksacks	131.00	127.25	124.00	121.00

Raw Jute: The Calcutta fibre market was very weak. While mills continued to take up their quotas at the minimum price, there were reports of business being transacted at lower rates, but there was no reliable confirmation that contracts were actually passed below the minima. On Wednesday last week, the I.J.M.A. quota sub-committee issued a supplementary quota to try and boost prices, and that brought the total for the week ended 13th January to about 1.1 million maunds. This was the largest quantity issued since the quota system began, but so much jute was on offer that it made little difference. For the current week, the quota was understood to be about 900,000 maunds, but activity was very restricted. The higher grades of jute continued to command a premium due to the keen demand for them.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills	Rs. a	Rs. a	Shipment

THE FOREIGN JUTE MARKETS

FIBRE PRICES FALL

FROM OUR DUNDEE CORRESPONDENT:

THE jute markets are settling down after the Christmas and New Year breaks. Although fibre prices in Pakistan have shown little change, shippers have been reducing their terms for Dundee and Continental spinners with a view to attracting business. There has, however, been very little fresh trading in fibre and spinners are apparently awaiting further developments. Mill Firsts are now offered at £155 a ton, Mill Lightnings £125, Mill Hearts £100 and Grade Hearts £82, c.i.f. U.K., January-February shipment. Grade Tossa-2/3 has declined

to £141, fours to £126 and Continental Tossa-2/3 to £105, same shipment, c.i.f. U.K.-Continent. Prices for cuttings have lately fallen a few pounds a ton to £67 for S.N.C. and £53 for N.C., c.i.f.

The Calcutta goods market has been somewhat irregular, but prices were firm for the near positions of shipment, especially for Hessians. Quotations are at 85s 9d for 40in. 10oz. and 60s 9d for 7 1/2oz., January, 78s 3d and 60s 6d February, 75s 3d and 57s March and 71s 9d and 54s April-June, with B Twills at 193s 9d, 189s 3d, 187s and 183s 9d for the respective positions of shipment, all f.o.b., Calcutta. It is a long time since the Indian jute mills were working with so few unsealed looms. It looks as if the consumption of jute goods is increasing throughout the world. Meanwhile, the prices of all yarns and cloth in Dundee are firm, and steady business is passing.

Meetings have been held between employers and the Jute Workers Union with a view to reaching a settlement of the labour dispute. There is still a ban on overtime, and the workers are determined to get more concessions. They are now insisting on an advance in wages for the lower-paid people in the industry. The employers say that all negotiations must go through the Wages Council, but the workers want to deal more directly with the employers.

THE PAKISTANI JUTE MARKETS

E.P.C. PRICES REDUCED

FROM OUR Dacca CORRESPONDENT

THE jute markets have not recovered after the festive season, and very little business of any importance has been transacted so far. Prices are not moving either upwards or downwards. In the loose jute markets, there is no change to report except that one large baler appears to be short of Tossa, so he is buying heavily in all stations except in Chandpur, where the prices are quite ridiculous. The continued buying pressure from one large baler is having some effect on the market and the prices for Tossa may rise even higher. For the rest, there is some buying interest, but once again the shortage of finance is the bearish factor. Most small jute balers have an unhealthy long position at prices well above the current rates. Those balers who are short are mostly the larger ones. There have been heavy shipments towards the end of December which in itself would account for large sums of money being tied up awaiting documents. This has apparently contributed to the shortage of finance.

Considering the holiday period which intervened, registrations for the second half of December are markedly high at 199,091 bales. The U.K. was the largest buyer having bought 33,650 bales. The United States bought 31,846 bales, Poland 15,120 bales, Russia 13,496 bales, Belgium 11,800 bales, Japan 11,250 bales, France 11,020 bales Italy 10,383 bales, Germany 10,245 bales and Canada 9,000 bales. India bought only 11,198 bales.

In spite of the drastic revision in E.P.C. prices, the market continues dull and inactive, both locally and overseas. In the loose jute sector, arrivals have continued at more or less the same rate with slightly lower prices being paid, since buying by most balers has been spasmodic. Although interest in Tossa has fallen off somewhat, its arrivals are also smaller. There has been an improvement in the quality of arrivals in the Mymensingh area but nowhere else. This is the better quality jute which most

growers usually hold off, but as was to be expected in this season of a bad crop, the improvement in the quality of arrivals has not been significant.

In the pucca bale market, there has been little or no activity. Cuttings have declined for the ready position over the past three weeks from Rs. 83 buyers to Rs. 82 sellers. The discount for the forward position is about Rs. 2 a bale. There were many sellers of long jute at prices well below the E.P.C. rates, but few buyers came forward. There is no doubt now that the balers have a long position, and provided overseas buyers are prepared to purchase at the new E.P.C. prices, it is certain that they will find no shortage of offers. For the last three weeks, buyers have been sitting out expecting lower prices and refusing offers even below the E.P.C. rates. Rumours to the effect that the P.J.A. Committee recommended to the authorities that the E.P.C. prices should be reduced by £1 or £2, encouraged Continental buyers to sit out waiting for lower prices. After a series of meetings between the Pakistan Jute Association and the various high Government officials, it was reported that there would be no reduction in the E.P.C. prices. Two days later, the following reductions were made: Export Firsts were reduced to £115 a ton f.o.b.—a cut of £3. The prices of Export Lightnings were cut by £5, Dacca Tossa 6 and Dundee Tossa 4 by £3, Crack Tossa 4 and Dundee Tossa 3 by £2, outport Tossa 3 by £5, and M.C., N.C. and T.C. as well as S.N.C. and D.T.C. by £2. Furthermore, the prices of cut ropes and habijabi were reduced by £4 and S.M.R. by £5, while the price of Dacca Tossa 5 was increased by £2 and that for Dacca Tossa 4 by £4. But for some reason the rate for Dacca Tossa 3 was reduced by £1. It is fair to expect that there should be a larger volume of business at these rates which certainly appear to be low.

I.J.M.A. PRODUCTION FIGURES FOR DECEMBER

The Indian Jute Mills Association reports the total production of jute goods for December as follows:

Description and quantity		Summary		
		(000 metric tons and 00,000 yds.)		
		Dec. '61	Nov. '61	Dec. '60
1. Gunny Bags				
(a) Hessian	4,808 metric tons (4,732 tons)	12,77.75	12,60.66	11,29.45
	1,50.13 thousand metres (1,61.2 lakh yds.)	(13.97)	(13.79)	(12.35)
(b) Sacking	56.7 lakh nos.			
	48,528 metric tons (47,762 tons)	10,53.01	9,94.69	10,42.36
	10,31.65 thousand metres (11,28.2 lakh yds.)			
2. Gunny Cloth				
(a) Hessian	33,002 metric tons (32,461 tons)	37.8	36.4	33.8
	11,27.62 thousand metres (12,33.2 lakh yds.)	(37.2)	(35.9)	(33.3)
(b) Sacking	4,93.8 lakh nos.	49.6	47.2	50.0
	1,063 metric tons (1,046 tons)	(48.8)	(46.4)	(49.2)
	21.36 thousand metres (23.4 lakh yds.)	10.2	10.1	8.3
		(10.0)	(9.9)	(8.2)
3. Manufactures				
	10,135 metric tons (10,024 tons)			
4. Total Production				
(All kinds)	97,586 metric tons (96,045 tons)	97.6	93.7	92.1
		(96.0)	(92.2)	(90.7)
Hours worked	208.0		208.0	213.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhal with estimates for two non-member mills. The figures in brackets are in British units.

U.K. INCOME FROM INSURANCE OVERSEAS

A QUESTION in the U.K. Parliament recently elicited the information that of the total net earnings of British insurance, about 35 percent accrued from the Commonwealth and about 20 percent from the European Economic Community. It is assumed that the proportions will move closer together if Britain joins the Community. It is hoped, of course, that the convergence will result from a growth of European business, but a large-scale shift of trade could adversely affect Commonwealth insurance. The U.S.A. is the most important of the overseas territories where British insurance companies operate directly. Underwriting experience has been notoriously unsatisfactory there, losses in the decade to 1960 aggregating approximately \$100 million. But British insurance companies have assets valued at some \$2,000 million in the United States, and their income from investments, dividends from subsidiaries, and remittances from branches, have covered the losses with a wide margin.

The Treasury and the Chancellor of the Exchequer, as well as the insurance institutions, watch the trend of overseas business closely. The nation's net invisible income is no longer making an appreciable contribution to the external payments account, and it is vitally necessary to increase the earnings of such services as insurance. The latest estimate of net earnings of insurance is about £30 million a year. It is a substantial figure, but it could be considerably larger if defects in the U.S. business could be corrected. One of these defects is fraudulent claims. The manager of the claims bureau of the Association of Casualty and Surety Companies in the U.S.A. has estimated that as many as three in four claims on motor-vehicle and general-liability policies contain some element of fraud. Efforts to combat this menace are being intensified.

Basic Investment Policy

It is, of course, primarily at home that the insurance companies are involved in the nation's problems. They expect some relaxation of the credit squeeze in 1962, but for the present, as for months past, they must observe the Chancellor's request not to lend for inessential projects. Like bankers, investment managers of insurance companies find borderline cases requiring anxious thought. Directives to bankers on their lending policies are familiar, but similar treatment of insurance companies is a new feature of the British authorities' financial technique. It is, however, a short-term factor in their investment policies. The fundamentals of these policies were discussed in a memorandum circulated recently by the British Insurance Association—a reminder, incidentally, that this high-level subject needs elucidating for "operational" insurance men.

The memorandum observed that the combined life and general funds of the Association's 259 members increased from £2,561.0 million in 1947 (the first post-war year for which

figures are available) to £6,610.6 million in 1960. Most of the increase represents the growth of life funds, which make up about five-sixths of the total funds. There are definite commitments against these funds, which, therefore, the Association insisted, are held in trust for the policyholders. That is the answer to the question whose interest is paramount—the community's, the shareholders', or the policyholders'? "The primary responsibility of an insurance company concerning its investments is the selection of those which will secure and benefit the interests of its policyholders."

The memorandum suggested that there was no conflict of interest between the policyholders and the community, since the most suitable investments were those that met "strong long-term needs by the community" and the greater was the number of people whose needs were met, the sounder were the investments; and it pointed out that insurance funds helped finance some "worth-while causes" that did not attract investors. Prolonged official restraint on the use of funds (in the property market, for instance) would not, however, accord with the interests of policyholders. Freedom to use special skill in investment is essential to maximise benefits. Investment policies, affecting the terms that can be offered, are an important factor in the competition for business.

Extending Aviation Cover

Official intervention in the actual business of insurance may be extended

as increasing hazards elevate the problems from the individual to the social plane. The frequency of disasters involving aircraft has directed attention particularly to aviation insurance. A few months ago, the Air Transport Licensing Board, an official body, recommended in a report to the Minister of Aviation that adequate cover for victims of aircraft crashes should be ensured by legislation. The Board recognised that major accidents involving British aircraft were rare and conceded that it knew of no case where the victims had not been compensated in full because of inadequate insurance; but it seemed disturbed by the possibility of serious loss of life and damage to property resulting from collisions over or crashes in a city. Insurers are at present reluctant to accept unlimited liability, or even limited liability covering all eventualities, and there is no certainty that passengers, or victims on the ground, will in all circumstances be compensated to the full extent of legal liability. The Board feels that the British Government should take the initiative in proposing an international convention to provide complete protection.

A Member of Parliament, Mr. G. A. Pargiter, suggested in the House of Commons recently that airline operators should be compelled to take out third-party insurance in the same way as car-owners. Such ideas seem to accord with the increased importance of aviation, involving increased hazards. The need for official intervention tends, moreover, to grow as competition among airlines increases. When fares are reduced as low as possible to attract more passengers, all inessential costs are likewise reduced as low as possible—and it is perilously easy to consider insurance premiums, in the upper range, as inessential.

SYNTHETIC RUBBER PLANS WORRY GROWERS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THERE is growing anxiety about the future of natural rubber in planting circles in the light of reports that the synthetic rubber factory in Uttar Pradesh will go into production this year and that the target fixed for synthetic rubber in the third plan is 50,000 tons, against 45,000 tons for natural rubber. The quantity produced by the synthetic rubber plant for the first one or two years may not cause any serious problem for rubber growers in south India. But they are worried about the time when the output of synthetic rubber would be equal to that of natural rubber. Which of the two products will then determine rubber prices? It remains to be seen how long the rubber planting industry will get the same kind of protection as it is getting today. If the Government withdraws protection, natural rubber may be left to compete with synthetics as in other parts of the world.

The rubber growing industry in south India at present produces

about 26,000 tons of natural rubber. It is doubtful whether the industry will be able to reach the third plan target of 45,000 tons. According to Dr. Rama Varma, chairman of the Rubber Board, the best that could be expected is 40,000 tons by 1965. India's present requirement is 57,000 tons and by 1965 it is expected to rise to 100,000 tons. Of the present consumption of 57,000 tons, natural rubber accounts for 39,000 tons, the rest being met through the use of synthetic rubber. The higher price of natural rubber is compelling the manufacturers to use more of synthetic rubber. The strict control that the Government exercises over imports is now a restraining factor. Once synthetic rubber is produced within India and if its price remains lower than that of natural rubber, the manufacturers may increase the proportion of synthetic rubber they use in their products. Once the methods of production are adjusted to the increased use of synthetics, it would be difficult to change the

consumption pattern in favour of natural rubber.

Major Challenge

The rubber growing industry in India, therefore, faces a major challenge of producing more rubber at cheaper rates. The cost of production in India at present compares poorly with that of other world producers like Malaya and Ceylon where the yield an acre is twice or thrice the Indian one. While the average yield an acre in India is 500 lbs, the Malayan average is well over 1,400 lbs. It is only through a lower cost of production that the challenge posed by synthetic rubber can be met. The only way in which the cost can be reduced is by raising the yield an acre through the use of high yielding planting material. Simultaneous efforts should be made for replanting the existing low yielding areas with high yielding strains. Besides, cultivation should be extended to new areas and that too with high yielding strains, as is now being done at the instance of the Rubber Board and the State and Central Governments. But the progress made so far is far from satisfactory. Now that financial assistance given for both these schemes has been made more attractive, some improvement is bound to occur. But an earnest attempt on the part of growers alone will enable the industry to meet the challenge confronting it. The former have to take special care in the selection of planting material. Carelessness in selecting planting material and in agricultural practices is quite common among small growers who form the backbone of the rubber planting industry in India. Unless growers co-operate with the authorities wholeheartedly, the efforts of the latter in making the country self-sufficient in natural rubber and to place the industry on a sound footing will not succeed.

RAISING OUTLAY ON TEA PROPAGANDA U.S. MARKET NEEDS TO BE EXPLORED

(BY A SPECIAL CORRESPONDENT)

THE known world supply of tea is about 100 million lbs higher than in recent years. The consequent fall in prices will compel manufacturers to increase the outlay on propaganda to popularise the beverage. Meanwhile, Indian teas are being priced out of world markets. Excessive taxation and high costs are said to be the cause, but, in addition, is the fact that tea interests in Ceylon appear to be employing good, maybe better, methods to attract buyers for their output. East Africa is also much more favourably placed economically as growers there are not yet bothered by excessive taxation or Government restrictions. With India's third plan production target of 900 million lbs, the question is who is going to buy the increased crop at profitable prices. The authorities seem to appreciate the need for more advertising. But this raises another question as to which new markets can be profitably explored.

Some think that the U.K. reached saturation point a few years ago, although that country appears to be the most attractive target to some of India's tea authorities. After trying to teach the British housewife how to brew tea, the latest reports indicate that specific plans are being made to wean the Scot from his usual nip of barleycorn to a taste for tea. This may be a splendid idea. But, Indian consumption is now estimated at 300 million lbs and with the population rising to 700 million by 1970,

the real field for increased propaganda and consumption is surely within India.

Important Markets

There seems to be more than a 50:50 chance that British will enter the European Common Market wherefrom tea has been barred by excessive taxation. Western Europe would appear to be another fertile field to work on because its population is also financially well off. Progress in North American markets has not been very marked. But traders in the U.S.A. and Canada are out for better results. *World Coffee and Tea* reports that the 1961 tea convention in the U.S.A. marked a clear turn in the marketing approach. "Tea is now going after the youth market. What we are seeing is an evolution in tea thinking. Some industry leaders felt that promotion should be aimed mainly at people who do most of the tea buying and tea drinking. These people are not teenagers." In this evolution, the current policy has two aspects. One is all-out promotion directed at young people, and the other is promotion of a "youthful, vigorous image for tea among all sections of the population." The U.S. Tea Council went after metropolitan New York teenagers during the month before the convention and found that teenagers can become excited about tea.

U.S. Imports of Indian Tea

The following figures compiled by the International Tea Committee, show India's share in U.S. tea imports in million lbs:

Year	U.S. Total	From India	Percentage
1950	114.6	40.5	35.3
1952	93.4	35.0	37.4
1955	105.2	36.6	34.8
1960	115.2	24.8	21.5

These figures indicate that for a full decade, the consumption has been practically stationary. During the period, India's proportion of the trade has fallen from 40.5 million lbs to 24.75 million lbs or from 35.3 percent to 21.5 percent. This is obviously a matter requiring immediate attention from the authorities. The U.S. Tea Council appears to be willing to co-operate with efforts of the producing countries to increase the consumption of tea. Reading the above figures, it would appear that the U.S.A. and Canada offer good ground for development. Other figures, compiled by the Tea Board, make more distressing reading:

INDIA'S TEA EXPORTS TO THREE KEY MARKETS			
Year	U.K.	U.S.A.	Canada
1950	254.5	84.7	23.8
1951	300.4	31.5	20.2
1952	276.1	29.4	20.5
1953	354.9	29.2	22.4
1954	324.5	32.0	19.2
1955	251.0	24.1	16.3
1956	365.4	28.4	22.6
1957	301.7	23.3	16.9
1958	330.9	25.9	19.0
1959	282.6	23.6	16.0
1960	267.6	18.3	15.3

These figures clearly show that India has lost its North American markets. Due to improved living standards, the U.K. is now drinking more milk and beer, so how much more tea can its population consume? The propaganda campaign should, therefore, be directed to India with its tremendous population growth.

COCHIN TEA SALES

At Dust Sale 2, 431,000 kilograms of tea were on offer. There was a good but irregular demand. Black leaf and high-grown teas were fully firm to dealer while plain and low mediums were sometimes 10p to 20p easier. Milled fibrous sorts were up to 50p lower. C.T.C. types were stronger and dearer.

PRICING POLICIES OF THE TARIFF COMMISSION

By S. Sinha

THE fixing of fair ex works prices by the Tariff Commission in several major industries continues to be done according to old principles in spite of the criticisms and repeated representations voiced by organised bodies of Indian commerce and industry. But since the return on capital which is linked with pricing, is the pivotal factor affecting the growth of industry, there is an urgent need for rethinking on this important question. The Commission, in fixing fair ex works prices for the products of protected and/or price-regulated industries, has been generally allowing a return of 12 percent on the capital employed. This 12 percent, in its opinion, should suffice for (a) an increased provision for labour welfare in the modern welfare State, (b) bonus and gratuity, (c) managing agency commission, (d) interest on borrowings, (e) income tax and wealth tax and (f) payment of dividends to preference and equity shareholders.

In the words of Mr. K. R. P. Aiyangar, chairman, Tariff Commission, "Since there may be variations in cost, regionally or between individual producers, a cost has to be determined which will be representative of the industry concerned. The cost for this purpose is not the ex works cost of the indigenous producer, but the price which may be deemed to be a representative fair selling price of manufacturers in India." From the above, it is clear that the Commission, taking due note of regional and unit-wise variations in the cost of production, ultimately adopts only a "representative" figure for the entire industry. Needless to say that this would, as it has been found to, cause widespread hardship, because of the essential difference in the economy between the favourably-placed and the unfavourably-placed units and the bigger and the smaller ones. Besides, serious objections have been voiced against (a) the exclusion of certain items from the cost of production, (b) the need for the inclusion of a proper rehabilitation allowance in all the relevant industries, (c) the advisability of the adoption of the employed capital of new units as the basis, and, (d) the proper amount of return on capital. The need for striking a balance among the various regional considerations has been accepted by the Planning Commission and the Government in their formulation of the successive development plans. A single selling price for the entire industry would go against the interests of not only the unfavourably-placed regions, but also of the unfavourably-placed units. Again, the interests of the smaller factory vary widely from those of the bigger ones.

Smaller Factories

The smaller factories, which, incidentally, are marginal producers, bear the burden most heavily and should be considered as the special trust of the development councils. A selling price based on a "representative" cost is detrimental to the very existence of these units, a travesty of tariff protection or price regulation, a denial of life-blood to the weak and ailing, and a betrayal of the sacred trust of developing industries reposed in the Commission under the Act. The keynote of a Tariff Commission recommendation should be "development", and development in an economy like India's means development not only of the big units but

* Commerce Annual Number, 1960

also of the smaller ones. In most of the industries enjoying tariff protection and supervision by the development councils, the smaller factories constitute a substantial proportion. In the best interest of the country, a careful consideration should be given to the continued and effective working of smaller concerns, which evidently involves the maintenance of the prices at a level sufficiently remunerative for them to build up their internal resources for expansion and to re-order their costs progressively. This, however, does not mean that wastage or inefficiency should be condoned.

Cost Items

Considerations as to the inclusion or non-inclusion of various items as affecting pricing in ordinary commercial practice should be the guiding criteria for a Tariff Commission while fixing prices for an industry, with the principal object of ensuring a fair return on capital as well as of guaranteeing a fair price to the consumer. The claims of such incidental and unavoidable items on the investor, as a fair minimum bonus, gratuity, interest on working capital and debentures, managing agents' commission, etcetera, to be considered as prior charges on revenues, must be realistically examined before an effect definition of a "fair return on capital" can be arrived at.

(a) Such expenses as bonus, gratuity, etcetera, have often been viewed by industrial tribunals as "deferred wages"; (b) interest on capital has to be paid irrespective of profit and is always allowed as a charge in the profit and loss account. There can be no argument against their inclusion in cost; (c) managing agents' or secretaries and treasurers' commission is nothing but a remuneration for specialised services rendered, as those of technical and professional consultants or ordinary specialist servants of the company, based only on performance as indicated by net profits and calculated at a definite stage of the charging process, without charging which the net divisible returns of the owners cannot be arrived at.

Look at the most vigilant, most ruthless and most exacting fiscal controlling agency of the Government—the Income Tax Department! Even what it allows are excluded from costs by the Commission. A fair minimum bonus, gratuity, interest on borrowed capital, managing agents' or secretaries and treasurers' commission, etcetera, should, therefore, be included as prior charges.

Rehabilitation Allowance

The Commission allows depreciation on a historical cost basis at normal rates prescribed by the Income Tax Department. The Federation of Indian Chambers of Commerce and Industry has urged the acceptance, at least in principle, of the replacement cost basis. A clear thinking should start with the realisation of the fundamental difference between the approaches of the Income Tax Department and the Tariff Commission.

The former seeks to impose a levy on the returns of a firm to its owners from current activities during the lifetime of its assets. Its main purpose is not the restriction of dividends, regulation of prices, development of industries or determination or provision of a fair return on capital. Its main task is matching the current fiscal needs of the State to the current income of the nation. But the task of the Tariff Commission has nothing to do with such matters of the moment. Its chief aim should be the shaping of the growth curve of an industry in the best way, consistent with the best interests of the industry, the consumer and the country.

From the extract of Marshall and Stevens' annual indices of comparative equipment costs provided in this article, it will be seen that in the 12 years from 1944 to 1956, the replacement cost of capital equipment rose by over 102 percent. The rise between 1956 and 1958 must be much greater. Depreciation reserves built by depreciation charged at normal rates (say, 10 percent) on the written-down values do not cover more than 72 percent or 80 percent of the original cost even after 12 years or 15 years, respectively. But, by this time, that is, 12 years or 15 years as the case

may be, most industries will require replacement of a very substantial portion of their capital equipment. And, according to the extract of Marshall and Stevens' indices given in this article, replacement costs of the capital equipment of most industries will have risen by more than 102 percent. This means that if an adequate depreciation reserve to meet this appreciation in capital values is not built up by matching contributions from current revenues year after year, the unit concerned will be faced with a shortfall of about 130 percent or 120 percent depending on the original cost of the assets and will have three courses open to it for replacement:

(a) Falling back on general reserves, which is very risky. (It is also unfair to investors because a general reserve is in most cases an important consideration to investors and an assurance that adequate specific reserves and provisions have been made.)

(b) Borrowing, which increases subsequent costs, throwing the trade balance of the industry out of gear and encourages inflation by sudden demands for big finance.

(c) Capital issues, which, again, create inflation and reduce the return to investors in the industry concerned and is a very costly process in a capital-dry market like India's.

None of these three courses is easy or economical, and fair as between existing or future shareholders and as between consumers and investors.

Verily, the question of rehabilitation allowance should be examined in the context of the mode by which it

P-13, MISSION ROW EXTENSION, CALCUTTA.

is desired that an industry's continued operation should be financed: either (a) through fresh capital issues or borrowings, which must involve capital servicing charges in the shape of tax-free dividends on the additional shares issued or tax-free savings for the return, in due time, of the loan capital, in addition to interest on the same, or (b) through increased revenue by way of higher product-prices.

In a period of acute inflation, that is, of ascending monetary values of capital as well as of everything, is not price fixing based on depreciation charged on the historical cost basis tantamount to asking industries to pay dividend out of capital? If the costs of raw materials and stores, wages, interest on capital, etcetera, can be accepted to increase by inflation, why should the same principle be not allowed in the case of depreciation, which is the cost of service of the installed capital to production? Should august bodies like the Tariff Commission look on while industries are drained of their life-blood by way of such capital-depletion? It is not fair to the investor to fix prices below actual cost. The Supreme Court, while considering references on bonus, has consistently held adequate rehabilitation allowances as a prior charge. As a result of great pressure, the Commission has recently conceded some rehabilitation allowance in recognition of the mounting replacement costs of equipment, but that also has not been allowed to all the industries. Steel and cement have been allowed, while sugar and paper have been denied, the meagre and merely nominal concession. A sound basis in place of the present *ad hoc* one should be formulated and applied to all the relevant industries.

Capital Employed

Capital values of units going up currently or in future will be very much greater than older ones, due to writing down in accounts, and, appreciation in market values of capital assets. Basing any quantum of return on the capital employed of any but the new units—say, of an old or even representative unit—would run counter to the accepted policy of encouraging investment in industries. The correct index should, therefore, be the employed capital of new units. Expected increases in capital expenditure in an industry during the "protected" period should also be taken into account, because such huge expenses on expansion being spread over the current output during that period would, otherwise, distort the cost structure beyond the estimates of the Commission. On the other hand, in the case of established units, care should be taken to note the actual expenses on the works side and the actual production achieved. Theoretical or *ad hoc* assumptions of production being more or less equal or equivalent to capacity or consumption of raw materials are not expected of a body like the Tariff Commission.

As for return on capital, it should have some reasonable relationship with the return in other industries so that it might be in a position to compete effectively with others in securing funds from the capital market. The return of 12 percent, as generally* allowed at present by the Commission, after meeting the various charges for labour welfare expenses, bonus and gratuity, managing agency commission, interest on borrowings, taxation on profits and dividend on preference share capital, works out, according to the Federation, to about 4 percent in dividends (net) to the equity shareholders. The corresponding percentages for the sugar, cement and coal industries are 3.86 percent, 3.82 percent and 2.42 percent, the Federation has calculated. This is hardly an encouraging prospect for the would-be investor in a market where it is difficult even for reputed, well-established concerns to raise preference capital at less than 6.5 percent free of tax. With the need for attracting investment funds in essential, particularly the protected, and/or price-regulated, industries, it would seem to be the well-considered judgment to provide for a minimum return of 7.5 percent (net) to the equity shareholders, by way of fixing prices at an adequate level. And, while maintaining much higher returns in other industries, both essential and non-essential, the consumer can hardly grudge this moderate return in these industries, where rapid development leading to substantial reduction in costs and prices must be his first concern.

And, above this minimum, consideration should be given to the practical differential existing between various industries in relation to return on capital, arising out of the varying requirements of (a) materials and stores for consumption and as average or normal/base stock, including normal length of credit-period available (b) labour effort represented by total gross emoluments, (c) fixed assets, (d) average or normal/base stock of finished goods held and (e) average debtors' balances including normal length of credit-period usual to the industry.

A Firm Code of Policy

In view of the acute and widespread anxiety in the industry, due to the apparent indifference of the Commission to the need for the various modifications in its principles and procedures, and the retardation in the expansion of many essential industries like cement and paper due to increasing costs, rendering prices fixed for them unremunerative, it is high time that the Government took genuine interest in the promotion of industries through price fixing and by formulating a permanent and definite code of principles and procedures to be applied in this matter. Domestic prices so fixed would then be the correct guide for determining the quantum of tariffs.

* In the non-ferrous metals industry, only 10 percent has been allowed.

MARSHALL AND STEVENS ANNUAL INDICES OF COMPARATIVE EQUIPMENT COSTS (1941 to 1956)

Industry	Base: 1944=100 (Approx.)				
	1944	1947	1950	1953	1956

Books

FREE MARKET: DOCTRINES UPHELD

Agenda for a Free Society. Edited by Arthur Seldon. (Published for the Institute of Economic Affairs by Hutchinson and Co. (Publishers) Ltd. 178-202 Great Portland Street, London, W.1. Price 25 shillings, pages 192.)

Under the aegis of a welfare State when there is a steady extension of Governmental activities and public expenditure is increasing by leaps and bounds, there is certainly a need to examine the basic concepts of a free market economy as elaborated by Professor Hayek in his monumental work entitled *The Constitution of Liberty*. The Institute of Economic Affairs, which has recently brought out many useful publications, has to be complimented for collecting a number of brilliant articles from such well-known authors and economists as Messrs Graham Hutton, A.A. Shonfield, Frederic Benham and E.F. Nash. The book provides an intellectual feast for those who admire a free society and will undoubtedly provoke thought among those who do not. The pillars of a free society—according to Professor Hayek—are private property and the existence of the rule of law. The absence of coercion is the most essential precondition for ensuring individual liberty, so Governments, like sleeping dogs, are best left alone.

This sort of philosophy may not naturally appeal to those who believe in the necessity or rather the inevitability of a welfare State. But when one remembers that the advent of the latter has brought in its wake a vicious circle of increased, but wasteful, public expenditure, inflationary pressures and the result-

ing controls along with the stress on full employment, one cannot deny that the threat to personal liberty and the free market mechanism from an omnipotent State becomes too great. No wonder, the faceless bureaucrats proliferate—strictly according to Parkinson's Law—and liberty is lost under the tyranny of petty officials. Not every contributor to this symposium subscribes to Professor Hayek's philosophy, and no one can expect that they should. It is pointed out by one, for example, that Professor Hayek's definition of liberty in a free society is too broad to be of any use. But everybody agrees, by and large, that the unrestricted growth of the public sector is inimical to democracy and freedom. Professor Hayek believes that a desirable attribute which a competitive economy shares with an impartial legal system is that both are "blind", i.e., no respecter of persons. The essays included in the book should have a special appeal in India where the State adheres to the idea of a socialist pattern of society as a dogma.

STATE ENTERPRISES

The Structure of Public Enterprise in India. By V. V. Ramanadham. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 18, pages 267.)

The massive outlay for the public sector as proposed in the third plan sets at rest the ideological speculation about the desirability of public enterprises. Economists and admini-

nistrators should, therefore, make an impartial assessment of the growth and structure of public enterprises and, on the basis of past experience, focus attention on those problems, the solution of which is essential for their healthy development. Dr. Ramanadham presents in his monograph a timely analysis of the important economic, organisational and managerial aspects of State enterprises in India. Beginning with a statement of their size and nature, he goes on to discuss their rationale in the context of economic planning. The pricing and profits policy of these enterprises and the complexities involved are discussed in detail. Two distinctive forms of organisation—the public corporation and the joint-stock company—are examined. Then follows a case study of the relative merits of public corporations and departmental organisations. Finally, the distinction between the approaches to problems of public administration and those of public enterprise is analysed in detail.

The author apparently thinks that the policy for earning profits in State enterprises may be poorly compatible with administrative inflexibilities at the managerial level. He adds that the price discrimination practised by a public enterprise may run counter to the Government's socio-economic policies of income distribution. After discussing the statutory structure of public corporations, Dr. Ramanadham says that neither the fact of planning nor the ideal of socialistic pattern justifies the degree and the kind of control envisaged in the Acts. The consumer, he says, is the most forgotten interest under the Indian Corporation Acts. The book contains an interesting chapter on the company form of public enterprises, in which the author examines the effects of directorial interlocking in the public sector. The Director of Industries, Orissa, is director of 34 companies. Unlike the hasty literature produced with an eye for jobs at Udyog Bhawan by career economists, the ana-

lysis in this book is marked by fairness and devotion to truth.

ANNUAL NUMBER

Commerce Annual Number, 1951. Edited by S. V. Rayan. (Published by Commerce (1935) Ltd. Brady House, Veer Nariman Road, Bombay 1. Price Rs. 10, pages 216.)

The latest annual number of *Commerce*, like its predecessors, makes a down-to-earth approach to economic problems. The main aim has been to make it eminently useful to the business and commercial community by including articles which are factual, comprehensive and topical. The articles are well edited, and the subjects chosen are fairly representative of current economic problems. Among serious subjects, there is an interesting article on the problems of international liquidity while another discusses aid for developing countries. The annual contains surveys of the major Indian industries with up-to-date facts and figures.

YEARBOOK ON FAR EAST

The Far Eastern Economic Review, 1962 Yearbook. Edited by Dick Wilson. (Published by the Far Eastern Economic Review Ltd. 209 Windsor House, Hongkong. Pages 224.)

The yearbook of the *Far Eastern Economic Review* is a mine of economic and commercial information on south-east Asian countries. The latest one has extended its coverage by including Bhutan and Sikkim bringing the total number of countries and territories individually reviewed to 28. The numerous articles highlight the main developments in east and south Asia, and analyse the prospects for the region during 1962. Profusely illustrated with tables, charts, graphs and photographs, the yearbook provides rich fare.

INDUSTRIAL

IBCON

CONSULTANTS

The industrial consultancy services offered by the group fall under the following headings:-

- IN THE PLANT:-** PLANT CAPACITY AND LAY-OUTS • PRODUCTION PLANNING AND CONTROL • STORES ORGANISATION AND CONTROL • FUEL AND STEAM UTILISATION • RAW MATERIALS CONTROL • QUALITY CONTROL • TRANSPORT • MECHANICAL HANDLING • OPERATIONAL RESEARCH • VALUATION OF PLANT AND BUILDINGS
- ON LABOUR:-** METHOD AND WORK STUDY • JOB EVALUATION • INCENTIVES • PERFORMANCE CONTROL • WAGE STRUCTURES • TIMEKEEPING SYSTEMS • PERSONNEL RECORDS • HUMAN RELATIONS • COMMUNICATION
- IN OFFICES:-** MANAGEMENT CONTROLS • MANAGEMENT ORGANISATION: EXECUTIVE AND CLERICAL • WORK MEASUREMENT • INCENTIVES • BUDGETARY CONTROLS • LAYOUT, COMMUNICATIONS AND EQUIPMENT
- AND:-** THE SETTING UP AND TRAINING OF THE CLIENT'S OWN INDUSTRIAL ENGINEERING DEPARTMENT • MARKET RESEARCH • PLANNING FOR MODERNISATION AND EXPANSION OF INDUSTRIES • TECHNOLOGICAL STUDIES IN RAW MATERIALS, PROCESS AND PLANT PERFORMANCE

IBCON PRIVATE LIMITED

HEAD OFFICE: ADELPHI, 119, QUEEN'S ROAD, BOMBAY 1.

BRANCHES:

5, RUSSEL STREET, CALCUTTA 16 • BRADY'S BUILDING., MAHATMA GANDHI RD., KANPUR.
GEORGE OAKES BLDG., SRI NARASIMHARAJA SQUARE, BANGALORE 2 • 85, WARD PLACE, COLOMBO 7, CEYLON.

ALSO IN:

U. K., PAKISTAN, BURMA, IRAQ, CHILE, ARGENTINA, BRAZIL, MEXICO AND HONGKONG

Calcutta Markets

STRONG DEMAND AT TEA EXPORT SALE
QUALITY DUSTS RISE

AT Sale No. 31, held on 15th and 17th January, offerings at the Export auction amounted to 75,068 packages. With the quality of the offerings showing some improvement, a strong demand again prevailed with prices generally firm to dearer. Plain broken were firm to dearer, and their Fannings met with keen competition at dearer rates. Better liquoring and medium Assam orthodox descriptions were fully firm and often dearer, buyers showing more interest in plainer and medium B.O.P.s. Fannings were a strong feature. C.T.C.s were the strongest feature of the sale and often showed a considerable increase in price. Legg-cut teas also met with good demand. Darjeelings were irregular, those with quality being often dearer. There was a good demand for whole leaf grades. Tip ruled dearer.

Quotations		1962	1961
Rs. a kilo	Rs. a kilo		
Clean Plain Pekoe	4.00 to 4.20	5.20 to 5.45	
Plain B.P.	3.55 to 3.65	4.50 to 4.65	
Plain Fannings	3.30 to 4.10	4.80 to 5.00	
Medium Assam C.T.C.	5.10 to 5.20	4.70 to 4.85	
B.P.	5.10 to 5.50	4.90 to 5.15	
Best Assam C.T.C.	5.30 to 5.90	5.50 to 5.70	
Fannings	5.90 to 6.20	5.50 to 6.50	
(Quotations are inclusive of excise duty.)			

At the Internal Sale, the demand for the 26,424 packages of Dusts on offer was good and general, but a slight weakening was noticeable towards the close. Good C.T.C. Dusts were keenly competed for and were generally dearer with quality while the plainer types, although irregular, were often 10nP to 15nP easier. Fibrous grades continued to sell well. Orthodox Dusts received good support at a drop of 10nP, although the small powdery types were generally dearer. The strongest feature of the sale was the bright liquoring Legg-cut Dusts, which realised very useful prices. The plainer types were somewhat irregular but generally firm to dearer.

Quotations		1962	1961
Rs. a kilo	Rs. a kilo		
Plain Orthodox Dust	3.80 to 4.40	4.80 to 4.95	
Medium Assam Dust	4.20 to 5.00	5.00 to 5.50	
Legg-cut Dust	4.60 to 5.20	5.15 to 5.35	
Medium Assam C.T.C.	5.70 to 6.20	5.50 to 5.70	
Dust	6.50 to 7.10	5.90 to 6.40	
(Quotations are inclusive of excise duty.)			

The 486 chests of Leaf, including the 48 chests of green tea on offer, sold well.

FREIGHT RATES
DECLINE

THE chartering market has been dominated by Chinese charterers who have fixed grain from British Columbia and from both coasts of Australia and fertilisers from the Adriatic. They had also been open from Cuba to China for sugar for which the charterers were indicating a rate of 94s against the owners' idea of 100s. Otherwise, the market in the Far East has followed the general trend elsewhere and rates have shown a decline. Burma rice charterers fixed four vessels to Ceylon at 39s 6d against 42s last paid. A quantity of 9,500 tons of cement in bags have been fixed from Whampoa to Chittagong or Chalna at 34s 6d f.i.o. and stowed with 1,000 load = 750 discharge. Ten thousand tons 10 percent manganese ore from Visakhapatnam (Continued at foot of next column)

COMPANY AND PUBLIC NOTICES

THE BRITANNIA ENGINEERING COMPANY, LIMITED
Issue of Equity Capital

THE Board of Directors has decided to issue 5,00,000 new Ordinary Shares of Rs. 10/- each at par, ranking in all respects *pari passu* with the existing Ordinary Shares of the Company except that they will not participate in any dividend declared in respect of any period ending on or before 31st December, 1961.

The new Ordinary Shares will be offered for subscription to the holders of the existing Ordinary Shares in the capital of the Company whose names appear in the Company's Register of Members on 12th February, 1962, in the proportion of one new Ordinary Share for every existing Ordinary Share held by them on the condition that the full amount of Rs. 10/- per share shall be payable on application and with a right to renounce all or any of the shares offered to them in favour of any other person and to apply for additional shares.

The Share Transfer Books of the Company will be closed from 30th January, 1962 to 12th February, 1962, both days inclusive.

By Order of the Board,
McLEOD & CO LTD.
C. HOCKLEY,
Secretary,
Managing Agents.

"McLeod House",
3, Netaji Subhas Road,
Calcutta, 9th January, 1962.

RALLIS INDIA LIMITED
Closure of Transfer Books

NOTICE is hereby given that the Transfer Books of the Company will be closed from 27th January, 1962 to 15th February, 1962, both days inclusive.

By Order of the Board,
KENNETH SHEPPARD,
Secretary.

16, Hare Street, Calcutta,
3rd January, 1962.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED
(Incorporated in England)

NOTICE is hereby given that the Board of Directors of this Company have declared payment of an Interim Dividend on the Company's Ordinary Stock at the rate of £3½ per cent net (tax applicable at 7s. 9d. in the £) for the year ending 31st March, 1962. Payment will be made on 15th February, 1962, to those stockholders whose names are registered in the Company's Stock Register on 30th January, 1962.

Applications for transfers received in this Office before 12 O'Clock noon on Tuesday, the 30th January, 1962, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above Dividend.

By Order of the Board,
H. C. BOWKER,
Agent.

Victoria House,
Calcutta, 14th January, 1962.

ASSOCIATED BATTERY MAKERS (EASTERN) LIMITED
Notice to Shareholders

THE Accounts of the Company for the year ended 31st August, 1961 exhibit a net profit, allowing for depreciation, of Rs. 46 lakhs. After providing for taxation and reserves, and bringing in the balance from the last account, the amount available is Rs. 26 lakhs.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES—Contd.

O., Po., C. and Dd. indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CALCUTTA, 25th JANUARY, 1962.

74th YEAR OF ISSUE

Vol. CXXXVIII No. 3694

WEST GERMAN DEVELOPMENT AID PROSPECTS

THE West German Government is at present totting up the development aid given during 1961 by itself, by the provincial Governments and by private German industry. When the total of assistance effectively given is announced, we may expect some controversy within the Development Assistance Group, or at least critical comment from Bonn's partners, for it is sure that the result will not be especially inspiring. For a start, the sums budgeted for before the year opened—or more exactly, promised under vigorous American pressure—were not lavish; they were inferior in fact to the amount given in 1959, though more than in 1960. It is doubtful, moreover, whether these promises were kept, and that for three reasons. Firstly, 1961 was election year, and politicians in Bonn and in the Länder were not anxious to demonstrate a generosity that many voters think misplaced. (The *Narrerreden*, or "fool's speeches", that are a comic feature of the Rhineland carnivals, last year exploited the theme of the poor German bleeding himself for undeserving foreigners; some electoral rhetoric was like the "fool's speeches".) Secondly, last year was a period of reduced expansion for the German economy. The increase in industrial production was about 5 percent, against 9 percent two years ago, but this was less important than the fact that profit margins were squeezed and industry was hard put to in autofinancing its investments; since much German aid is long-term credit from industry, it must have been adversely affected, and will be more so in 1962. Thirdly, throughout 1961 contradictions persisted in official German pronouncements: between the assurances of generosity that were addressed to Washington, and the insistence on strictly commercial lending that was repeated for home consumption.

The German aid programme for 1961 was drawn up feverishly in the autumn of 1960 when President Eisenhower sent the Anderson mission to Bonn to ask for help in the dollar's crisis. At that time, Bonn promised to give 3,500 million DM in 1961, including 500 million DM from the Central Budget. Yet by May last year, when the 1961 aid programme was at last finalised, this latter contribution had been purely and simply dropped, no doubt because by then the elections were only several months off. The total of projected aid had fallen to 3,219 million DM, but much of this came from exceptional, non-recurring sources—which is why the forecast for aid in 1962, made at the same time, mentioned only 1,818 million DM for this year. It began to emerge that whereas the Americans had asked for a commitment to provide aid in substantial volume every year (because the planning needs of developing countries and the weakness of the dollar both called for a steady, long-term prop), Bonn had replied with an impressive flash in the pan, a fairly generous lump sum that would not be repeated.

It is worth looking at the origin of some part of this 3,219 million DM promised for 1961. The biggest single source was the Federal loan of 1,200 million DM subscribed by private industry. This voluntary tribute was raised very quickly by the 36 associations that make up the powerful Federation of German Industry (BDI). Member firms

were not being charitable however; they were simply buying 5 percent Federal bonds. Moreover, many of them raised the liquid funds to do so by borrowing at lower rates of interest from Swiss banks! This latter circumstance explains why an operation that was intended to have a useful deflationary influence (a loan of this sort would have been indicated for domestic reasons, even if developing countries were not to benefit) in fact remained without effect on the excessive liquidity that has been pushing up West German prices and wages. Another 500 million DM came from the de-nationalisation of Volkswagen and thus cost nobody anything; only, an exceptional capital windfall did not go into the Government's accounts. Over 200 million DM were counterpart funds, coming from dollars given West Germany by the U.S.A. Thus, a good part of the aid promised for 1961 could have been raised without imposing sacrifices on anyone in West Germany. Nor would it have weighed on the payments balance because its allocation meant merely that it was placed in a central account, from which effective disbursements will be spread out over several years according to the long-term aid pacts with India, Pakistan and the African associates of the Common Market. Although German credits are not "tied", much of them will come back to Germany in the shape of orders for German equipment. In sum, the apparently exceptional effort of 1961, even if it had been made fully, would have been almost painless—as Bonn admitted implicitly by revaluing its currency in March last just when it was promising to provide much more development aid.

As for 1962, the 500-million DM contribution from the Central Budget that was not made last year is firmly promised for this year, but the exceptional items will not be repeated and other allocations are simply maintained. The upshot is that, on present plans at least, aid will total only 1,818 million DM, which would be lower than in any year since 1955. If the sums promised and accumulated, but not effectively given during 1961 are carried over to this year, assistance in the two years might average 2,500 million DM a year. This figure has been indicated as a likely average, for years to come, of West German development aid, after the "special effort" of 1961. But at this rate, the Federal Republic will be allocating to development aid much less than 1 percent of its gross national product, whereas the Development Assistance Group last March agreed that all O.E.C.D. members and Japan should aim at 1 percent, adding that this should be the average for all members, the more prosperous ones giving more. The German delegation endorsed that proposal, but practice seems to be falling short of promise.

There is no gainsaying that the cause of development aid has made great progress in West Germany in recent years, and has in fact been recognised as an obligation that the country will have to meet for the next generation. That, after all, is the main thing and marks an advance from the situation of a few years ago when West German leaders still openly expressed scepticism about the very notion of development assistance. The figures we have quoted are short of expectations, but they

are nevertheless substantial, and the part of them that India has received has been exceedingly welcome. We cannot expect a great and ancient nation to change its character in a trice, and, the fact is, there is nothing in the German character nor in German history to incline Germans to give generous aid to nations less developed than their own. There is such a pre-disposition in the American character, and it is so strong that the U.S.A. often gives foolishly. There is, too, evident historical reason why Britain, France and Belgium should understand the necessity to promote development; they have been doing so for centuries, as part of that imperialism that is nowadays rejected *en bloc*. Germany's conversion to the aid philosophy is necessarily slow, and since it began only in 1958, the results to date cannot be dismissed as negligible.

Left to themselves, it is clear, the Germans would prefer to keep their relations with developing countries on a strictly business basis: no gifts, enough export credits to keep German goods competitive, and some long-term loans offered at market rates with, perhaps, some generous provisions about repayment where big projects were concerned. Inevitably, on this basis, the flow of German capital to developing economies would forever remain the trickle it was before 1958, because these latter can no longer afford to contract that sort of indebtedness. Fortunately, far-sighted Germans are seeking to convince their compatriots that even a hard-headed business approach requires more lavish aid for development, for without it the developing nations will be unable to continue buying German equipment. More persuasive than the humanitarian or political considerations urged by Washington is the circumstance that German exports to those countries have increased by 70 percent since 1954, until they now represent one-fifth of total German sales abroad. It was while increasing their purchases from Germany, in order to promote their industrialisation, that several developing countries including India brought themselves to the verge of bankruptcy, so that what is at stake now is the solvency of one-fifth of German industry's clientele abroad. Against the facile demagoguery about foreigners sponging on prosperous Germany, leaders like Dr. Pickert have been hammering home the truth that "our exports to the developing countries are at the basis of an important part of our employment", and that "the maintenance and expansion of our exports to under-developed countries are a vital necessity because the increase in trade between the industrialised countries cannot be kept up at the present rate".

Unhappily—and this brings us back to the immediate prospects for German development aid—this lesson is just beginning to sink in when the Federal economy finds that its labour supply is inadequate for its ambitions, and expansion is slowing down. The flow of refugees from the East having been throttled off and the source of extra hands in Italy being threatened by the peninsula's own burst of prosperity, manpower is setting limits to production which automation can defeat only at the cost of extra investment, which is necessarily competitive with investment abroad. In this situation, the argument that it is good business to sustain developing nations' ability to purchase by means of aid seems, temporarily at least, less convincing. The labour shortage is exacerbating a price inflation that could have been combated in time by more ambitious foreign aid programmes. If these had been launched in 1960-61 on a scale comparable with American or French aid, they

would have restrained the growth of Germany's payments surplus, which was the first cause of that inflation. If they were launched today, however, in an economy that is running hot for want of labour, they would add to the pressure on prices. In a country where sound-money doctrines still enjoy prestige, we must expect to see aid programmes opposed this year as an additional burden that should not be taken up at this moment.

This opposition will be most effective against proposals to increase the Federal Government's budgetary contribution to aid for development. The acceptance of the principle that Bonn should finance a substantial aid effort has been awaited impatiently for several years, because, as well as making possible assistance for unremunerative projects unattractive to private lenders, it would mark Germany's admission that aid for development was a political problem, rather than a matter of business-at-market-rates. One must recognise that the economic conditions of 1962 are not favourable to that conversion. The bulk of German aid will remain a private-sector operation, backed by government guarantee. On this side, paradoxically, the outlook is fairly good. German industry, to be sure, sees its profits compressed between rising wage rates and the competitive selling prices forced on it in export markets by freer trade inside the Common Market and by Britain's and the U.S.A.'s export drives; its capacity for auto-financing labour-saving investment being reduced, it must seek to borrow in the undeveloped German

capital market. This dilemma, it would seem, would not incline it to extend its assistance to developing countries. Yet German industry is impressed by signs of over-production, or at least excess capacity, in the western world in general for things like chemicals, steel, synthetics and cars—which happen to number among its own export staples. It foresees, therefore, a period of intense competition between the leading industrial powers, both inside the Common Market after Britain joins it, and between the Common Market and the U.S.A. Few would go so far, yet, as to say that this contest will touch off ruthless price competition that could reverse the tendency for western manufactures to outstrip commodities and raw materials in value, although incidents of dumping in chemicals and synthetics clearly suggest that possibility. In any such battle, German industry with its heavy reliance on exports will find itself in the front line. True to its habit of regarding aid for development as a strictly business affair, it will tend to accentuate its use of easy credit, long-term loans and technical assistance as part of commercial strategy. Since, as has been noted, the developing countries already absorb 20 percent of German exports, increased aid on private account will be used here as a competitive weapon. Germans, in sum, were reluctant to increase their foreign aid when they were asked to do so to help the dollar, but they might willingly increase it when it is a question of beating the dollar in a world where competition in industrial manufactures has become rougher.

MORE CLEARING SHARES

ON the Calcutta stock exchange during the past month there has been a burst of activity in six shares—Birla Jute, Kesoram Industries, Orissa Cement, Jaipur Udyog, Guest, Keen, Williams, and J. K. Rayon—although the rest of the market has remained in a more or less moribund condition. The reason is that these six have been selected for promotion to the forward list. The authorities of the stock market have decided that Guest, Keen, Williams, Birla Jute, Jaipur Udyog, Orissa Cement and Kesoram Industries should be transacted as clearing shares from 1st February, 1962, and that J. K. Rayon will be promoted to the forward list as soon as the name of the Company is changed to suggest a rayon manufacturing concern. At present, the name is Juggall Kamlapat Cotton Spinning and Weaving Mills Co. Ltd.

The recent behaviour of these shares, as shown in the following table, is disturbing because their prices first rose sharply, then started to react as soon as the news of the promotion was announced. It is, therefore, obvious that those who were fortunate enough to have prior knowledge of the promotions must have benefited a great deal from the swing. This is not the first occasion on which the promotion of a share to the forward list has conferred benefit on a selected few. In the circumstances, the stock market deserves no praise for the method it has chosen to follow in the matter of selecting shares for inclusion in the forward list.

	Prices On		
	22-1-62 Rs.	17-1-62 Rs.	22-12-61 Rs.
Guest, Keen, Williams	40.12	31.37	39.00
Jaipur Udyog	12.25	12.69	11.69
Birla Jute	30.25	31.62	27.94
Kesoram Industries	31.25	31.25	29.56
Orissa Cement	17.12	16.50	16.00
J. K. Rayon	20.31	20.50	20.31

Whether or not the stock market acted democratically when selecting the shares for promotion is irrelevant to the fact that previous knowledge appears to have been used by a few to secure personal gains. In order to ensure that in future nobody can take advantage of such knowledge, it is necessary that the stock market decide about questions of promotion in a secret manner. If it is not possible to maintain secrecy, it is worth considering whether selection should not be entrusted to an independent authority such as the Stock Exchange Directorate of the Government of India.

This apart, the selection of the six shares has certainly caused no universal satisfaction. Although the stock market has never laid down con-

ditions for promotion to the forward list, it might have been expected that one essential qualification would be that the shareholding should be sufficiently broad-based to prevent cornering or rigging. Whether the six shares just promoted all possess this qualification, is doubtful. The official list of shareholders cannot be relied on to give a correct picture of the genuine shareholding because a large number of shares are generally kept in other people's names. As some of the newly promoted shares can be considered first-class investment, a fair proportion of them is already tucked away in the oak-chest of the Life Insurance Corporation. If the shares held by the L.I.C. and the companies' own managements are excluded, the shareholding in most cases cannot be anything like as widespread as it ought to be. Nobody can question the difficulty of finding out the correct position of any shareholding, but the stock market must be competent to do so before it can hope to discharge its responsibilities in a proper manner.

It is difficult to understand why the stock market should have decided to increase the forward list at the present time because the move will certainly give a further boost to speculation. When shares are placed on the clearing list, speculation is promoted because people can buy and sell them freely as long as they have sufficient funds to pay the difference in prices. Sharp fluctuations in some of these newly-promoted shares cannot be ruled out considering that they are well held and interested parties will have little difficulty in manipulating their prices. In fact, forward business in these shares has already started unofficially, but buyers are being forced to pay considerable premiums over market prices.

When the six shares have been promoted to the forward list, the total number of clearing shares will be 18. Judging from the management of the clearing business, it can be questioned whether the increase is worth while under present circumstances. The stock market has so far not furnished adequate information regarding "clearing" within reasonable time. Figures concerning the number of shares transacted, delivered and carried forward from one clearing to another are not published regularly. Unless the information is known, it is difficult to take a view about the trend. This is largely governed by the technical position and cannot, therefore, be assessed unless adequate information is available concerning turnover and delivery. The Calcutta stock market has no excuse for withholding such information from the public, considering that other stock markets in India publish it in reasonable time.

It is also extraordinary that the forward list should be extended when complaints are being heard about the shortage of funds for financing budla transactions. It may be recalled that when the Reserve Bank prohibited all commercial banks from financing budla transactions about 22 months ago, the speculative fraternity was badly shaken. It was feared that activities in clearing shares would be heavily affected due to the shortage of finance. Since that time the budla transactions have been financed with funds obtained from sources other than banks. As a result, the cost of doing business in clearing shares has become more expensive because this outside finance can only be obtained by paying more interest than is usually charged by banks. A few days ago, the Reserve Bank reduced the margin on bank advances against shares from 50 percent to 40 percent, but the ban on banks financing budla transactions continues to remain in force as a means of restraining speculation. Under such circumstances, it looks as if the extension of the forward list does not enjoy official blessings.

THE COLOMBO PLAN REPORT

THE tenth annual report of the Colombo Plan Consultative Committee, which has just been issued, contains an encouraging but rather uncritical review of the progress of the Indian economy. It outlines the achievements and problems of the decade which has passed since the first five year plan was launched. But it is rather shy in offering an opinion as to whether the achievements could have been greater or the problems fewer if different policies had been adopted. As such, the survey appears to be rather pedestrian in quality. The scraping of sensitive Government skins has been avoided through the customary ploy of reciting familiar facts embellished with familiar statistics. As far as India is concerned, the main facts brought out are that industrial and agricultural production has expanded and the growth of industry has been diversified. As a result, national income at constant prices over the decade has risen by 42 percent. But, because of the increase in population, the per capita income is only 17 percent higher. The growth has been uneven, due not only to the sharp fluctuations in agricultural output but also to the delicate external payments position. In the end, domestic prices show a substantial increase, although they have been fairly stable in the recent past; unemployment is growing; and India's balance of payments "has become more vulnerable than ever before."

At the moment, according to the report, the two main problems of policy are the effective mobilisation of domestic savings, and the conservation and expansion of foreign exchange resources. It is arguable that neither is being tackled very effectively. For the mobilisation of domestic savings, the emphasis is on increasing the tax revenues of the Central and State Governments by soaking up of private funds through fiscal measures. Dreams of raising large surpluses through the pricing policies of Government enterprises have already begun to vanish, although the third plan is barely ten months old. At the same time, no serious effort is being made to secure the large sums which could be secured through public borrowing and small savings schemes. Administrative deficiencies, and the policy of deliberately holding down the interest rates payable by the public sector, threaten to debilitate the borrowing programme further.

The Colombo Plan report does not say so explicitly, but the shortage of foreign exchange may prove an even more intractable problem than the mobilisation of domestic resources. There is an understandable reliance on loans and grants from abroad, but at the same time no great effort has been made to increase exports. So the import policy remains stringent; and the main factors determining it are "the availability of external assistance, the requirements of capital goods for new development, and the need for adequate supplies of raw materials and components to keep the expanding industrial capacity in full production." It is a pity that the report offers no categorical comment on whether the order of priorities chosen

for import licensing is the right one. The Consultative Committee is perfectly aware that, although the rise in industrial production continues, the rate of growth has slowed down. It must also be aware that the main reason for the slow-down is the shortage of raw materials, components, transport and power. The other factors which the Government is prone to emphasise—that much of the expansion in installed capacity and output had already been completed by 1960, and that demand has slackened in certain sectors—are of relatively minor importance. It would have been useful, therefore, if the Consultative Committee had em-

Current News and Comment

Prospects of Indian Oxygen

Commenting on the prospects for Indian Oxygen Ltd in his chairman's statement (a full text of which is printed on a later page in this week's issue of *Capital*) circulated along with the report and accounts for the year ended September 1961, Sir John Brown says that sales during the current year are higher than in 1960-61. The trend is expected to continue because of the rapid development of the metal-using industries. Sir John, nevertheless, expects only a modest increase in the profit due to the steady rise in production costs. The power shortage has affected the working of Indian Oxygen in 1960-61. As for the dividend, shareholders are asked to be patient because not only are the existing foreign exchange liabilities of Indian Oxygen large, but future expansion will call for more borrowing. The directors are considering the next phase of the expansion programme which will involve a large expenditure of foreign exchange. Sir John thinks that the demand for industrial gases will rise substantially in the future. Although the official objective of promoting new enterprises is not disputed, it is necessary that the existing concerns be given opportunities to expand their production capacity. If that is done, the creation of additional capacity will prove more economic.

Indian Oxygen has made considerable progress with its expansion programme during 1960-61. Production at the Jamshedpur factory has been increased by installing more equipment. Argon purification facilities have been installed at the Burnpur factory. The new factory in Bangalore has started producing. The oxygen plant in Gauhati, installed near the Indian Refineries Ltd, is expected to begin production soon. The Bombay factory has been extended. Steps have been taken to increase the production of electrodes in the Khardah factory, near Calcutta. The electrode and equipment factories in Bellaghatta, near Calcutta, have been extended and modernised. Besides, substantial progress has been made on the engineering side of the business. Sales of gas user equipment, electrodes and electric-welding equipment have increased considerably. Exports of nitrous oxide and electrodes are being promoted.

Sales of Indian Oxygen rose by Rs. 1.11 crores to Rs. 7.56 crores in 1960-61, but the profit has not improved in proportion due to higher production costs. The profit has risen from Rs. 1.02 crores to Rs. 1.08 crores. The taxable ordinary dividend of 15 percent has been maintained. It is covered more than two-and-a-half times and offers a yield of 3.7 percent at the present price of Rs. 40.37 a share. Taxation absorbs Rs. 36.25 lakhs (against Rs. 38.86 lakhs) and development rebate reserve Rs. 13 lakhs (against Rs. 12 lakhs). General reserve receives Rs. 25 lakhs (against Rs. 21 lakhs), leaving a carry-forward of Rs. 18.07 lakhs, against Rs. 13.78 lakhs brought in.

Star Paper Doubts

The offer of 277,883 ordinary shares of Rs. 10 each for public subscription at par by the Star Paper Mills Ltd has attracted comment. These shares were offered in the first instance to the Company's existing shareholders, but they did not subscribe for them. It will be recalled that some

phased that the first priority in import licensing should be not the expansion of installed capacity, but the expansion of production from existing capacity. To recognise, and emphasise, this point is important for an international aid agency like the Colombo Plan. Much of the aid India has received in recent years has been wasted to the extent that it has been used for projects which lie partially idle even long after they have been completed. The experts of the Consultative Committee fail in their duty if they do not say so plainly not only to India, but also to the countries and agencies that are helping her.

time ago, Star Paper issued 500,000 ordinary rights shares, of which the existing shareholders took only 222,117 shares. It looks as if they were reluctant to subscribe for all due to two factors. Firstly, during the year ended September 1960—the latest year for which the balance-sheet was published—the ordinary dividend was passed because the profit amounted to only Rs. 6.91 lakhs. Secondly, the industry's profitability has suffered due to the cut in paper prices.

The proceeds of the new issue will be used for financing the expansion programme which has nearly been completed. As a result of expansion, Star Paper's output may rise to 24,000 tons. New paper machines have been installed, and they are reported to be suitable for the production of kraft paper of superior quality. The expansion scheme is estimated to cost Rs. 4.15 crores, towards which the Industrial Finance Corporation will contribute Rs. 1.37 crores in the form of a loan. The directors hope that the results will improve due to expansion. But whether profits will be sufficient to pay satisfactory dividends on the increased ordinary share capital at least during the first few years, remains to be seen.

Associated Cement Disappoints

The shareholders of the Associated Cement Companies Ltd, who attended the annual general meeting in Bombay last week in the hope that the chairman, Mr. Dharamsey M. Khatau, would announce the issue of bonus shares for which the Government's sanction had long since been obtained, returned disappointed. Replying to the shareholders' queries, Mr. Khatau said that it was no use issuing the bonus shares at this stage since it was not possible to maintain the dividend on the increased capital. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) During the year ended July 1961, Associated Cement had to withdraw Rs. 98

lakhs from the reserves to maintain the dividend at 12 percent, subject to tax. Although 1960-61 was a year of further progress for the cement industry in India, the financial results of Associated Cement were disappointing in spite of the fact that the effective installed capacity and actual production were high. The profits declined due to an abnormal rise in the cost of coal, stowing excise duty, railway freight and the power supply rates. The incidence of the increases was higher than the economies achieved by continuous technical and other improvements. There was also loss of production at some works, mainly due to the coal and power shortages. In addition, despatches were hampered due to the shortage of railway wagons. The cumulative result of all these factors was that the ratio of production to capacity could not be maintained at the previous year's level.

But Mr. Khatau's speech was not entirely without hope. The revised cement prices, which came into effect from November 1961, would give Associated Cement an additional Rs. 10.50 a ton, and the Company is expected to have a better expense-profit ratio. Apart from the increase in cement retention prices, the Company's programme of expanding the installed capacity and the rehabilitation and modernisation of old plants would also begin to show results shortly. The erection of the second unit in Mancherla was completed during the year, raising its rated capacity to 330,000 tonnes. The construction of factory structures for the extension of the Dwarka works has commenced. The engineering works in Shahabad is also making good progress. The A.C.C.-Vickers-Babcock engineering works have commenced partial production, and they were expected to start paying dividends after three or four years. Replying to the shareholders' demand for the release of A.V.B. shares to them, Mr. Khatau said that the question could be considered only when the project started paying dividends. As for the issue of shares of the Asbestos Cement Company to the A.C.C. shareholders, the chairman said that A.C.C.'s present holding in Asbestos Cement is merely 24 percent and when it is able to increase its share, the directors will consider the question of issuing Asbestos Cement shares to the A.C.C. shareholders. The Chairman said that negotiations for the sale of the Company's factories in Pakistan have now reached a final stage. The sale would yield the Company Rs. 2.46 crores. There would be no difficulty concerning the transfer of money.

But Mr. Khatau's annual speech will be read with interest not only for what it says about the outlook for the Associated Cement Companies but also for the interesting observations on the cement industry's problems. The Planning Commission has estimated the demand for cement at 13.2 million tonnes in 1965-66 and has fixed a capacity target of 15.24 million tonnes to be achieved by the end of the third plan. This seems to be a realistic target both financially and technically. Mr. Khatau said. But he added that judging from the industry's performance under prevailing

conditions, production is likely to be about 10 per cent lower than the demand over the next few years unless prompt action is taken to secure for the industry reasonable foreign exchange facilities, and adequate supplies of coal, power and wagons for the movement of raw materials as well as finished products. It is also necessary that the resources and know-how of established manufacturers should be used to the fullest possible extent.

Referring to the belief in certain quarters that the recent increase in cement prices allowed by the Government is generous, Mr. Khatau said that the increase falls considerably short of what was expected to enable Associated Cement to earn a reasonable net return on capital employed, "much less to recoup the past loss of earnings or to energise it for a vigorous future." While the Tariff Commission recommended that new prices should come into operation from 1st July, 1961, and remain in force till 30th June, 1964, the Government has made the new prices operative only from 1st November and has extended the duration to 31st March, 1966. Mr. Khatau said that in an era of steadily rising costs, a fixed price for a period of about five years is bound to affect the industry adversely. The Chairman regretted that the Commission had declined to consider the payment of bonus to employees and managing agents' remuneration as legitimate items of cost. The Commission had not also recommended the automatic escalator clauses to cover the subsequent increase in the prices of fuel and power, railway freight rates and increased dearness allowances linked to the cost of living index. Mr. Khatau said that these matters would be taken up with the Government through the Cement Manufacturers Association.

Prospects for Scindia Steam

In a market where even new issues are commanding premiums, which are quite substantial in many cases, the Rs. 20-paid share of the Scindia Steam Navigation Co. Ltd virtually goes abegging around Rs. 13 in spite of the fact that the book value of the share works out to around Rs. 37. The heavy discount on Scindia shares reflects the declining fortunes of the Company which in turn broadly reflects the troubles of the shipping industry. The working of shipping companies continues to disappoint; and the directors of Scindia Steam had to withdraw Rs. 25 lakhs from dividend equalisation reserve to maintain the small dividend of 60p a share for the year ended June 1961. Scindia vessels completed 200 voyages in all in 1960-61 resulting in a drop of about 81,000 tons of cargo and one of about Rs. 85.5 lakhs in freight earnings. In his address at the annual general meeting in Bombay on Wednesday, the chairman, Mr. Dharamsey M. Khatau had a message which might provide some consolation to the shareholders. (A fuller version of the speech appears on a later page in this week's issue of *Capital*.) Mr. Khatau hoped "that the lean period is more or less over and that we should see signs of an improvement, even though gradual, before long." But he added that there are many imponderables in the shipping business. Possibly, the uncontrollable items of expenditure far exceed the controllable ones.

The adjustment of freight rates can be the only answer to compensate for the rising operational costs and for maintaining a modern fleet. Mr. Khatau said that early steps should be taken to decide on suitable machinery which would enable the industry to earn reasonable freight rates. Referring to the overseas trade, the chairman said that the level of freight rates in the overseas liner trade did not show any improvement during the year. On the other hand, the index of tramp shipping rates which touched the bottom in the middle of last year has shown some nominal improvement, although this has had no effect on liner rates. The cost of operating ships is showing a continuous increase throughout the world, which has placed liner companies in a difficult position. But there is reason to hope that the situation will improve over a period. The Indian lines have been playing their part in rationalising the services in the Indo-U.K.-Continental trade. While it is too early to judge the results as 1961 has been a year of overcoming the initial difficulties, Mr. Khatau felt that the objec-

tive is likely to be achieved in 1962. As far as the coastal trade is concerned, the basic problems are uneconomic freight rates, serious delays and detention of ships and reduced cargoes due to the deteriorating Hooghly drafts. Unless these basic problems are tackled expeditiously and the much-needed and assistance granted, the future of coastal shipping will continue to remain bleak. Mr. Khatau suggested that the freight rates be revised upwards to meet the increased costs as well as give a satisfactory return on the capital employed by shipping companies engaged in the coastal trade.

More from Voltas

Voltas shares, which were quoted around Rs. 309 on 17th January, were sold down to Rs. 303 the next day and the quotation eased further to Rs. 301 in kerb dealings. The decline occurred in spite of the directors' decision to raise the dividend for the year ended August 1961 from 13 percent to 14 percent, subject to tax. But it was by no means a case of selling on good news. The increase in the dividend fell short of the market's general expectations. This apart, the market seemed to be rather disappointed by the decline in the profit margin, although both turnover and the gross profit had recorded an improvement over the previous year's performance. The preliminary figures about the Company's working showed that while the turnover had risen by about 29.6 percent from Rs. 19.86 crores to Rs. 25.73 crores, the gross profit was up by only 14.5 percent from Rs. 1.22 crores to Rs. 1.40 crores. The ratio of gross profit to turnover works out to 5.4 percent, against 6.1 percent in 1959-60. After providing Rs. 66.50 lakhs (against Rs. 60 lakhs) for taxation, the net profit amounts to Rs. 73.05 lakhs, against Rs. 61.89 lakhs in 1959-60. With Rs. 4.25 lakhs brought forward from the previous year and Rs. 525 being development rebate reserve written back, the disposable surplus amounts to Rs. 77.30 lakhs, against Rs. 64.68 lakhs, of which nearly half has been ploughed back to strengthen the reserves in order to finance the Company's expansion schemes. Appropriations include general reserve Rs. 25 lakhs (against Rs. 15 lakhs), development reserve Rs. 5 lakhs (against Rs. 5.59 lakhs), development rebate reserve Rs. 1.82 lakhs (against Rs. 1.69 lakhs), gratuity reserve Rs. 5 lakhs (the same) and staff welfare reserve Rs. 1 lakh (against nil). The dividend absorbs Rs. 35.70 lakhs, against Rs. 33.15 lakhs, leaving Rs. 3.78 lakhs to be carried forward. Voltas has a paid-up capital of Rs. 2.55 crores, against which its reserves and surplus amount to Rs. 82.98 lakhs. The current quotation of Voltas shares is not much below the 1961 high of Rs. 319.

Indian Overseas Bank Repeats

The directors of the Indian Overseas Bank Ltd have maintained the dividend at 14 percent, subject to deduction of tax, for the year ended December 1961. The net profit amounts to Rs. 43.80 lakhs, compared with Rs. 44.66 lakhs for the previous year. With Rs. 1.92 lakhs brought forward from the previous year, the total amounts to Rs. 45.73 lakhs. Out of this, the directors have provided Rs. 18.50 lakhs (the same) for taxation, Rs. 9 lakhs (the same) for reserve fund and Rs. 5.50 lakhs (the same) for provision for bonus. The proposed dividend of 14 percent will absorb Rs. 10.50 lakhs. The balance of Rs. 2.23 lakhs is carried forward.

State Bank Pays More

The State Bank of India has done well in 1961. After providing for taxation, the net profit is up by about 25 percent from Rs. 2.17 crores to Rs. 2.71 crores. The final dividend has been raised by 25p from Rs. 12.75 to Rs. 13 a share, both taxable, which brings the total dividend to Rs. 23, against Rs. 22.75 in 1960. The dividend distribution for the year amounts to Rs. 129.37 lakhs, against Rs. 127.97 lakhs in the previous year. With Rs. 56.20 lakhs brought forward, the disposable surplus amounts to Rs. 3.27 crores against Rs. 2.73 crores. Appropriations include Rs. 75 lakhs (against Rs. 25 lakhs) for the reserve fund, bonus to staff Rs. 45 lakhs (against Rs. 42 lakhs), the staff

CAPITAL, 25th January, 1962.

welfare fund Rs. 10 lakhs (against Rs. 5 lakhs), the staff co-operative housing fund Rs. 10 lakhs (the same) and the pension fund Rs. 7.42 lakhs (against Rs. 7.29 lakhs), leaving Rs. 50.41 lakhs to be carried forward. The Rs. 100-paid share of the State Bank of India is nominally quoted around Rs. 360 *cum* dividend, offering a gross yield of about 6.6 percent.

Union Bank Earns More

The Union Bank of India Ltd has reported improved results for 1961 in line with the general experience of the banking industry during the year. After providing for taxation, the net profit is shown at Rs. 21.78 lakhs, against Rs. 19.16 lakhs in 1960. The dividend, has, however, been maintained at 67p a share (Rs. 5-paid), subject to tax. With Rs. 92,703 brought forward, the amount available for disposal is Rs. 22.70 lakhs. While the allocation to the reserve fund has been reduced from Rs. 6.50 lakhs to Rs. 4.50 lakhs, the directors have set aside Rs. 3 lakhs for the contingency account which received nothing in the previous year. Depreciation on bank's building is unchanged at Rs. 50,000, but bonus to staff accounts for Rs. 6.25 lakhs, against Rs. 5.36 lakhs. The dividend absorbs Rs. 6.84 lakhs, leaving Rs. 1.61 lakhs to be carried forward. The Rs. 5-paid share of Union Bank is currently quoted around Rs. 8.15 *cum* dividend, offering a gross return of 7.5 percent.

Central Bank Makes Record Profit

The Central Bank of India Ltd has done exceedingly well in 1961 as a result of a substantial increase of about Rs. 16 crores in deposits as well as advances. The net profit, after providing for taxation, has recorded an impressive rise of about Rs. 50 lakhs from Rs. 1.33 crores to Rs. 1.83 crores which is a new record for the bank. In 1960, too, the net profit had shown an appreciable increase of Rs. 33.62 lakhs. With Rs. 18.61 lakhs brought forward from the previous year, the disposable surplus amounts to Rs. 2.02 crores, against Rs. 1.52 crores in 1960 which included Rs. 18.83 lakhs brought in from 1959. The directors have recommended a higher final dividend of Rs. 2.60 a share (Rs. 25-paid), subject to tax, against Rs. 2.50 in 1960. With the interim dividend of Rs. 2.40 (against Rs. 2.10) a share, subject to tax, the total gross dividend amounts to Rs. 5, against Rs. 4.60 a share in 1960. But in 1960, the bank had also paid a special jubilee bonus of 50p a share subject to tax. The dividends for 1961 absorb Rs. 63 lakhs, against Rs. 64.26 lakhs in 1960 which included Rs. 6 lakhs by way of the jubilee bonus. The increase in the dividend looks small in the context of the bank's impressive performance. The directors have apparently been rather conservative concerning the dividend distribution in view of the need for strengthening the bank's capital base. This is evident from the fact that they have transferred Rs. 45 lakhs to the reserve fund which had not received anything for the past several years. Other allocations include Rs. 60 lakhs (against Rs. 51 lakhs) for bonus to staff and Rs. 10 lakhs (the same) for gratuity. No provision has been made for the contingency fund which received Rs. 8 lakhs in 1960. The carry-forward amounts to Rs. 23.37 lakhs, against Rs. 18.61 lakhs brought in. The Rs. 25-paid old ordinary share of the bank is currently quoted around Rs. 68.50. The share recorded an impressive rise from Rs. 53 to Rs. 72 in 1961.

Kirloskar Cummins Share Offer

Kirloskar Oil Engines Ltd, Poona, and Cummins Engine Company of the U.S.A. have joined hands in setting up a new enterprise to be known as Kirloskar Cummins Ltd. The latter will undertake the manufacture of heavy-duty diesel engines. The collaboration agreement has been approved by the Government of India. Kirloskar Oil Engines is the largest manufacturer of stationary diesel engines in India. Its range of engines varies from 3 horse-power to 440 horse-power. The new venture has been licensed to manufacture Cummins diesel engines up to 300 horse-power. The popularity of

CAPITAL, 25th January, 1962.

Cummins engines will be evident from the fact that in the U.S.A. more than 60 percent of the lorries are equipped with these engines. The factory will be located in Poona, and it will have a capacity of 250 engines a month. The construction of the factory will be taken up shortly, but the plant is expected to go into production after about 18 months. The rated capacity is likely to be achieved in four years. When in full production, the factory will have an annual turnover of about Rs. 5 crores. The India-made engines will be sold in world markets through the Cummins International sales organisation. Kirloskar Cummins Ltd will have an authorised capital of Rs. 3 crores and the issued capital will be Rs. 1.50 crores, of which 50 percent will be subscribed by the Cummins Engine Company. Of the balance, 25.5 percent will be taken up by the Kirloskar Oil Engines Ltd and 24.5 percent will be issued to be public some time in April. The new Indian Company is said to be the first enterprise in which Cummins will have only 50 percent capital participation. In all other overseas ventures, it owns a larger share of the capital. The Rs. 10-paid share of Kirloskar Oil Engines, which was quoted around Rs. 42.50 on 15th January, shot up to Rs. 52 the very next day on the news that the Government had approved the Company's collaboration agreement with Cummins Engines and that there was a possibility of the shares of the new Company being offered to the shareholders of Kirloskar Oil Engines.

Star Textile Engineering Offer

The Star Textile Engineering Works Ltd, Bombay, is expected to enter the market shortly to raise Rs. 12.25 lakhs in equity shares of Rs. 100 each in order to finance its expansion plans. Incorporated in 1948, the Company is engaged in the manufacture of high-draft systems for ring and fly frames, fluted and knurled rollers, sizing, drying and finished cylinders and hand-operated rubber cot mounting machines. Star Textile Engineering now proposes to increase the production capacity of these items and also to manufacture new items for the textile industry such as the drawing frame drafting system, top arm components, conveyor chains for stenters, components for ball bearing jockey pulleys, Vulcascot precision rubber cot grinding lathes and Vulcascot pneumatic rubber cot mounting machines. Star Textile Engineering has already secured the collaboration of the British firm of Vulcascot (Great Britain) Ltd and is negotiating with other foreign firms for securing manufacturing licences for other items. The factory is proposed to be located in Dombivli—a suburb of Bombay. The total capital outlay on the new project is estimated around Rs. 24 lakhs. This is proposed to be met by the issue of fresh capital amounting to Rs. 20 lakhs and by using the balance from the unutilised loan granted by the Bombay State Financial Corporation. In 1960, Star Textile Engineering's turnover amounted to Rs. 37.40 lakhs and the figure is mentioned around Rs. 40 lakhs for 1961. The Company has an authorised capital of Rs. 50 lakhs, consisting of 40,000 equity shares and 10,000 unclassified shares, both of Rs. 100 each. The paid-up capital is only Rs. 5 lakhs which is now proposed to be increased to Rs. 25 lakhs. Out of the new issue of Rs. 20 lakhs, the directors and their friends and the existing shareholders have agreed to subscribe Rs. 7.75 lakhs. The balance of Rs. 12.25 lakhs is to be raised through public subscription.

Coal Crisis in Kanpur

The coal crisis in Kanpur has brought many industrial units in the city to the verge of closure. Some of them, like the Cawnpore Woollen Mills which is popularly known as the Lalimli Mills, have closed while other mills have drastically curtailed their working. The Cooper Allen branch of the British India Corporation established a tanning extract powder plant at considerable cost, but it is lying idle for want of coal. The principal cause of short arrivals is said to be the armed action in Goa which imposed a severe strain on the availability of railway wagons. "Operation Goa" is said to have directly led to a shortage of 3,000 wagons a day. The average wagon supplies a day during

January-September 1960 were 4,190. During the period October 1960 to May 1961, the daily average was 4,735 wagons. The actual daily requirements in 1961 were 7,100 wagons but the railways were never able to supply more than 5,230 wagons. The daily shortage of 1,870 wagons was further aggravated during the armed action in Goa. As far as Kanpur is concerned, Messrs Karamchand Thapar—coal agents for some of the big industries of the area—have complained that while they were to have received one rake of 70 wagons on 23rd December and another rake of the same number on 29th December, the allotment of 23rd December lapsed for want of wagons and only 50 wagons were given against the allotment of 29th December.

The scheme for coal dumps having been generally disfavoured, the Kanpur industrialists are now pinning their hopes on a pool system which they themselves have evolved. A pool system is already working fairly satisfactorily in Ahmedabad. It is proposed that a rake should be placed at the disposal of the Merchants Chamber of U.P. which will distribute the coal to members of the pool in consultation with the Employers Association of Northern India. The National Coal Development Corporation is reported to have been impressed with the proposal which is expected to materialise after discussions with the Deputy Coal Controller and the Chief Sales Officer of the N.C.D.C. who will be visiting Kanpur shortly. Formerly, the Coal Controller used to allot wagons. But the system has been discontinued, and now the indents are placed by the suppliers of coal on behalf of their clients, while the railways allot the wagons. Industrial circles in Kanpur maintain that this bifurcation of duties for the same purpose has created confusion with the result that fixed quotas are lapsing. If a pool is formed, the N.C.D.C. is reported to be prepared to supply steam and slack coal in a tentative proportion of 50:50. There does not appear to be much enthusiasm among the Kanpur industrialists for accelerating road movement of coal, mainly on the ground that it is—under the best of circumstances—bound to be more expensive than rail transport. About 2.6 million tons of coal are at present moved by road, but further prospects would essentially depend on tax concessions and other inducements which State Governments are prepared to offer to road operators.

Idle Capacity in Industries

An analysis of the official statistics of installed capacity and actual production shows that some industries in 1961 were unable to make use of their rated capacity. In such industries as diesel engines, electric meters, electric fans and lamps, linoleum, aluminium virgin metal, ball bearings, copper, wood screws, electric steel sheets, pig iron, finished steel, steel ingots, metal castings and motor-car and tractor tubes, the production has been fairly good in relation to installed capacity, but in several others output fell considerably short of the rated capacity. In the case of railway wagons, bleach powder and hacksaw blades, nearly one-third of the rated capacity could only be used. In the case of wheat flour, chrome tanned hides, leather ware, about 50 percent of the capacity remained idle. Other industries are also unable to use their rated capacities. The under-utilisation of the installed capacity of the railway wagon industry is attributed to the short supply of M.S. steel sheets and plates. As for the units manufacturing wires, the allocation of raw materials is made only to the extent of 294 tons, against an annual assessed capacity of 4,600 tons for working on a single-shift basis. Vanaspati manufacturers, soap and toilet industries have also reported the inadequate supply of coconut oil and palm oil. On the other hand, the fluctuation in demand in the case of agricultural machinery and implements, paints and varnishes, bolts, nuts, and rivets, etcetera, is said to be the reason for the under-utilisation of capacities. The inadequacy of supply of indigenous raw materials and their high prices are mentioned as reasons for the under-utilisation of capacities in wires and wire drawing industries. The cities in wires and wire drawing industries. The cities in wires and wire drawing industries, lack of power shortage, transport bottlenecks, lack of managerial skill and labour trouble have also been responsible for idle capacity in some cases. Although the indigenous production of raw mate-

rials required by the industries has been rising, the requirements of the rapidly growing industries could not yet be met.

Role of Established Importers

The State Trading Corporation's main aim is said to be to supplement the existing trade channels and to avoid interference with trade in traditional lines. But over the past few years, the Corporation's field of operations has greatly expanded, and it now covers traditional items and traditional markets. At present, the Corporation is handling some 41 commodities. Its share in India's import trade in 1960-61 amounted to about Rs. 27 crores. While the Corporation's activities have been rapidly growing, the share of established importers in India's import trade has continued to decline. In October 1960-March 1961, the established importers' share came to only Rs. 27 crores out of a total of Rs. 290 crores, against Rs. 74 crores out of Rs. 353 crores in January-June 1957. The trade, therefore, resents the widening sphere of the Corporation's operations, although established importers were playing an important and useful rôle in the import and distribution of goods.

In its draft report, the Import and Export Policy Committee—popularly known as the Mudaliar Committee—has recommended that the Corporation be used wherever necessary for diversifying the trade and procuring supplies of essential goods from east European countries. But it suggests that the Corporation be asked to consult the established trade and industry about the quality of goods to be imported and about its import programme. The Committee has also recommended that a judicious selection of items of import which are entrusted to the S.T.C. be made in order to avoid disruption of established channels of trade as much as possible. The Committee recognises the useful rôle which the established importers can play in the economy by importing goods at lower prices, thereby saving considerable foreign exchange. Secondly, they keep in stock a large range of goods which the actual users will not individually be able to import and stock. The Committee has, therefore, recommended that the share of established importers in the import trade be increased but import licences be issued subject to the condition that a reasonable margin of profits would be charged and that timely supplies would be made to actual users. In view of the shortage of foreign exchange and increasing import restrictions on consumer goods, it is not considered feasible to admit any newcomers in the import trade at this stage. The Committee has also suggested that the grant of import licences to consumers' co-operative stores be slowly liberalised after ensuring that consumers take advantage of the facilities.

Fire Insurance

The British Insurance Association has announced that the damage caused by fire in the United Kingdom in October 1961 is estimated at £3.8 million—the fourth highest figure of the year. This brings the estimated total of damage caused by fire for the first ten months of the year to £33.7 million, compared with over £37 million for the same period of 1960. At this rate, fire losses in the U.K. are likely to exceed £40 million for the third successive year. Although there were fewer fires causing damage of more than £100,000 last year, there was an increase in fires of intermediate size, between £10,000 and £100,000. These are likely to bring the total near the record figures of both 1959 and 1960. Before 1959, fire damage never exceeded £28 million. The figures represent the estimates for material damage only and do not include consequential losses resulting from the disruption of business and other activities. In 1959, the total damage exceeded £44 million. One of the reasons for the heavy loss was drought and the dry summer. The weather in 1960 was not favourable either, and the loss exceeded £44 million. Even 1961 is going to be a bad year for U.K. fire insurers, and such wastage would materially affect their accounts.

In contrast, the Indian fire loss ratio has been excellent for many years. In 1959, the ratio was

35.7 percent of the net premium for Indian insurers and 19.9 percent for non-Indian insurers. The reinsurances from India are normally channelled to U.K. insurers by reciprocal arrangements, whereby U.K. insurers channel reinsurance to India. The revenue accounts of such exchange of reinsurances are likely to show a debit for Indian insurers, since the premiums received from overseas might be offset by heavy claims. This may eventually alter the balance altogether, so the terms of exchange may be modified for the benefit of Indian companies. It is a strange anomaly that in spite of the advanced manufacturing techniques in the U.K., fire losses should be so huge. In an elaborate review made by an experienced official in the U.K. last year, fire was attributed to such minor causes as smoking and the careless use of matchsticks. Whether modern techniques of manufacture and improved processes of production lead to such fires, or whether carelessness is the cause should be investigated by U.K. underwriters.

Electrification of Eastern Railway

The work of electrification between Mogalsarai and Gaya stations of the Eastern Railway is expected to be completed by the middle of 1962. The work was begun in the middle of 1960. According to a spokesman of the railway, the aerial telegraph and telephone lines at present running by the side of the railway track have to be cabled and laid underground before electric traction could be opened. The cable for the purpose has to be imported. As for the overhead equipment, the traction wires have been completed in the entire length between

the two stations except for some portions in the Mogalsarai yard. The erection of masts has also been completed up to Mogalsarai and that of brackets and wiring is in progress. At intervals of every ten to 15 kilometres on the railway track, switching stations have been provided. These stations could be controlled by a control centre in Mogalsarai. The power supply for feeding the overhead traction is being obtained from the Rihand power-house, and for this purpose two substations have been constructed, one in Son Nagar and the other in Karma Nasa.

The direct electric traction system has already been in use on Indian railways near Bombay, Madras and Calcutta. Traction on the alternate current system, 25,000 volts single-phase 50 cycles, is of recent origin. Work in this connection first started during the second five year plan on the eastern and southern zones. On the Eastern Railway, Gomoh has already been electrified and opened for the running of goods trains. The portion from Gujhandi to Gaya is also expected to be commissioned by the middle of this year. About 100 A.C. electric locomotives—each costing about Rs. 10 lakhs—for use on the southern and eastern zones have already been ordered. It will be recalled in this connection that in his recent speech to the Coal Consumers Association, Mr. D. C. Driver referred to the non-fulfilment of the railway electrification targets. The electrification project in the southern zone was perhaps needlessly delayed by the decision to manufacture the rolling stock at the Chittaranjan Locomotive Works, when the overhead equipment could have been erected in six months' time in the Tambaram-Villupuram section. Even so, there has been criticism that only single-line working is to

be introduced on this section. With the completion of various projects in Neyveli, new problems would arise. The best way to meet them is to lay a double track right from the start.

Expansion of U.P. Leather Centre

The carcass utilisation-cum-training centre in Bakshi-ka-Talab, near Lucknow, is to be expanded in February when machinery imported from the Netherlands is to be installed. The centre is run by the Government of India in collaboration with the U. N. Food and Agriculture Organisation. The F.A.O. expert, Mr. F. H. Mock, who is in charge of the centre has expressed his confidence that the installation of new machinery would give a fillip to India's footwear industry. The Working Group of the U.P. Government's Industry's Plan Committee has formulated a number of schemes for manufacturing leather board, hydraulic leather, fancy leather, upholstery leather and shoe grindery. The present footwear output is estimated at about 100 million pairs annually, and about 10 percent of the output is accounted for by Kanpur and Agra. Although most of the grindery required by manufacturers are of indigenous make, some important items are still imported.

Uttar Pradesh produces 5.3 million pieces out of 22.5 million pieces of goatskins which is the country's output. The main markets to which raw goatskins were exported in 1959 were Russia (Rs. 5.51 crores), the U.S.A. (Rs. 2.27 crores), West Germany, Czechoslovakia, Italy and the U.K. Tanned skins in the same year were exported to the U.K. (Rs. 18.88 crores), West Germany (Rs. 3.42 crores), the U.S.A. (Rs. 1.58 crores) and France (Rs. 1.02 crores). Footwear was mainly exported to the west Asian and African markets, the Russian one being a recent addition. The export price of tanned goatskins was about Rs. 800 a cwt. The number of tanned goatskins a cwt. is, of course, more than that of raw skins due to the moisture content of the latter. The prices of tanned skin crusts were generally 40 percent more than those of raw. It has long been felt that still better prices could be secured for exports if the tanned skins are converted into glace kid. Also, the internal consumption of the latter is expected to increase as the production of chrome leather from cow hides is decreasing due to non-availability of good raw cow hides. About 5.3 million pieces of goatskins are available a year in U.P., and the supplies could be augmented from the neighbouring State of Bihar as well. As far as vegetable tanned leather is concerned, U.P. is responsible for 60 percent of the country's production, and fleshings or cuttings are available in large quantities for the production of glue and gelatine.

SCIENTIFIC MANAGEMENT

It seems anomalous, but, we think, nevertheless true, that politicians are always most interesting when they are not dealing with politics. At a meeting at Birmingham, Mr. Chamberlain delivered himself of some advice to Englishmen of business, which comes with peculiar force from one who was himself originally a man—and a very good man—of business. The right hon. gentleman observed that employers have to bring to bear more scientific intelligence on the management of their business. The old rule-of-thumb methods will not last for ever, and, in the presence of the development of science abroad, it is perfectly certain that we shall suffer seriously unless our manufacturers take advantage of the opportunities that are afforded to them to bring the highest theoretical knowledge into combination with practical experience. Mr. Chamberlain referred to the new University of Birmingham, which he said was intended to introduce a higher knowledge, a greater acquaintance with the theories upon which our practice is based, so that all persons who are in positions of authority, whether as employers or managers or otherwise as controllers of business, shall have this great scientific acquirement to bring to the aid of their commercial industry. On the other hand, the speaker added the part of the working men was, so long as they are working men, to develop the practicability of their labour.

FROM

CAPITAL

30th January, 1902

A Ditcher's Diary

PROFESSOR R. H. TAWNEY AND MR. HANNEN Swaffer functioned at two vastly different intellectual levels; one an aristocratic savant of profound scholarship, the other, latterly, a columnist on a popular Sunday paper. In their outlook on the world they were born in, however, they were both radicals; and in their later years the total lack of idealistic fervour in the growing generations in Britain must have surprised, perhaps even pained, both. To put the change all down to the welfare State is perhaps too facile an explanation, although an atmosphere of prosperity and easy money does something to the sensibilities of many. Professor Tawney's *Religion and the Rise of Capitalism* was what I would call a seminal work. It was the beginning of new thinking on the rôle of religion in shaping a society's economic pattern. Again, *The Acquisitive Society* set many serious students thinking on new lines; perhaps it also implanted in some a sense of guilt which is the beginning of the awakening of a social conscience. But nobody expected *The Acquisitive Society* to be a best-seller such as Professor Galbraith's relatively light-weight *The Affluent Society* has become. Perhaps Professor Tawney hoped and worked for the day when the masses would have an opportunity to be cultured, which could come only with leisure. It is permissible to doubt still whether the shape mass culture has taken in the U.S.A., and will in every other country, filled Professor Tawney's heart with unalloyed joy. Mr. Hannen Swaffer was a master of the popular idiom. I have heard it said that sometimes he was sensational. Perhaps he had to be. But I am quite certain that beneath the loud phrasing of his various exposés there flowed a genuine feeling for the welfare of the people and a sincere abhorrence of injustice in any form whatever.

IT WAS, UNTIL NOT SO LONG AGO, ONE OF MY FIRMER beliefs that nationalisation could not achieve the impossible. Not without a certain embarrassment, I am now compelled to admit that it sometimes can. A year or so ago, sharing Calcutta's desperation, I recommended the take-over of the Oriental Gas Company by the West Bengal Government without compensation; it was assumed at the time that no matter who ran the gas supply undertaking in this city, nobody—not even the State Government—could possibly run it worse. The assumption has unfortunately been falsified; and it looks as if, under its new bureaucracy, the Oriental undertaking has been reduced to an even greater shambles than it was. I am sure that the stock of excuses to explain the deterioration has not been exhausted; and I am a little surprised that instead of making the conventional offering,

the Government's Directorate of Publicity has gone one better by compiling statistics to show that the supply of gas has actually improved. But to deal with the controversy on these lines is, in my view, somewhat futile; for the unfortunate fact, as consumers know it, is that there is so little gas nowadays that, apart from statistics, there is not much anyone can cook. If a total breakdown of the gas supply system, which some have forecast, does take place, I would not be too surprised to see the Government issuing yet another Press note—this time perhaps urging Ditchers to appreciate the virtues of learning to live without the stuff. The medical authority of the Chief Minister would, conceivably, be mobilised to drive home the point that the vitamin content of uncooked food is superior to that of cooked; or that, for dental health, the mastication of raw meat constitutes excellent exercise; or that cold baths are a proven tonic for brain and blood. For the present, however, it is poor consolation to be told that more and better gas is being pumped in at one end of the supply system. The consolation would be greater if some of the gas could percolate through those rusty pipes to cookers and geysers at the other end. The greatest consolation of all would be if the Oriental undertaking issued a little more gas, and the Publicity Directorate a little less.

IT SEEMS SAFE TO ASSUME THAT BEFORE MR. T. T. Krishnamachari so unexpectedly decided to file his nomination he must have received from Mr. Nehru the assurances he was rumoured to have been seeking concerning the future trend of India's economic policy. From what little I know of T.T.K. personally, I cannot see his consenting to stand for re-election unless, first, he has had at least a tentative promise of a cabinet appointment, second, he feels he has reasonable prospects of eventually returning to his old desk at the Finance Ministry, and third, he has the confidence that once there he will be able to implement his own brand of extreme socialism. Which all goes to confirm the impression that recently there has been a sharp swing to the left in the management of India's affairs. Such movements do occur from time to time as the inevitable outcome of the personal tussles which are always going on in New Delhi. But this particular one has more than usual significance because it appears to be resulting in a formidable accretion of power and popularity to another controversial figure, Mr. Krishna Menon. I wonder if many people have noticed how, since the Goa incident, Mr. Menon has come to express much more accurately the feelings of the Indian people in their atti-

tude towards the world than Mr. Nehru. While the Prime Minister seems to be preoccupied with the damage done to his own and his country's international image, Mr. Menon, with no such mental and emotional reservations, is busy expressing a vigorous contempt for external opinion which is much closer to the popular mood over Goa. If, as Mr. Nehru maintains, the Goa business had nothing to do with the Congress's election chances in general and Mr. Menon's in particular, it cannot have escaped him that his Defence Minister has been hailed as "the liberator of Goa" and is now more closely associated with the action in the minds of the electorate at home and the public abroad than he is himself. This may not be altogether contrary to Mr. Nehru's conscious wishes, because it has always been a subject of amazement to the impartial observer to what lengths he is prepared to go to protect Mr. Menon from his critics, even, apparently, to the extent of telling them "to go to hell". If Mr. Menon's single-minded expression of the popular mood on the Goa and Pakistan problems continues to gain him the kind of support which he is already reputed to be able to command from the communists and the armed services, then there may soon be a pretty definite answer to the old question: "After Nehru, who?"

A SCHOOL OF THOUGHT TO WHICH I REFUSE TO subscribe is the one which holds that take-over bids are invariably as reprehensible in principle as they are dangerous in practice; clearly too much depends on the circumstances of each individual case. That is why I cannot share all the doubts which are being voiced about the fight which I.C.I. is at present putting up in Britain for the control of Courtaulds, for a straightforward take-over bid this has now become whatever it was at the beginning. In the manufacture of synthetic fibres, I am prepared to agree with Mr. Paul Chambers of I.C.I. that there are obvious economic advantages in size. And no doubt the combined organisation would be neither too large nor too monopolistic in the context of the Common Market economy, although the same cannot be said for the British economy alone. Provided Britain joins the E.C.M., therefore, it is difficult to see why so much public concern should have been aroused by the matter, and Mr. Chambers' bustling impatience would seem to be entirely justified. Not so the lack of importance he appears to be attaching to the political implications of what he is doing. If, as Mr. Chambers claims with more triumph than discretion, the Board of Trade has no power to interfere in such tussles, then it is high time it had. No commercial organisation, however large, has a right to pursue its own ends without fear of interference—whether or not its chairman considers they are identical with the nation's as a whole—if these in any way threaten to conflict with the public interest as the public chooses to see it. That the public has an interest in the outcome is a fact which Mr. Cham-

INDIA'S LONGEST CONVEYOR BELT AT NEYVELI LIGNITE PROJECT

Over 12,000 ft. in length and 3½ ft. wide, this Dunlop conveyor belt will shortly be delivering thousands of tons of lignite every day with faultless regularity at Neyveli.

In the manufacture of conveyor belting, experience is a vital factor, for only sound design will ensure quick, efficient and economical flow of materials. The Dunlop organisation has the cumulative experience gained from many different countries of the world where conveyor belting is manufactured.

You can depend on Dunlop to deliver the goods!

India today is caught up in the feverish activity of industrial advancement. Projects are planned... dams are being built... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country, indicative of what a country is worth in cold hard cash.

bers' own words suggest he would be the last one to deny. I can see no reason, then, for rejecting the suggestion that the whole business be subject to a thorough official investigation, on the results of which the take-over bid might be made to wait. I could pose a number of questions which might be discussed apart from the obvious one of monopoly policy. What about the shareholders' interests, for instance: why is Sir John Hanbury-Williams's valuation of Courtaulds' worth in a takeover bid so much higher than the offer Mr. Chambers first made to Courtaulds' startled shareholders, when this was obviously based on the merger discussions the two had been having over the past few months; and does Mr. Chambers really have the unqualified approval of his shareholders for bidding up the take-over price when each increase reduces the face value of their own shares, at least for the time being?

WRITERS OF FOURTH LEADERS IN *The Times* had a field day some years ago when there was a report that somebody was on the point of introducing cricket into Tibet. If relations between China and the Soviet Union were friendlier than we know them to be, it might have been in order to think that cricket is now going to Russia from Tibet via China. To obviate all speculation, the Soviet archaeologists and historians will perhaps shortly and conclusively "prove" that it was not the effete British who first played cricket; the Russians started it all. What period, then, is it to be attributed to? The dreadful Czarist days? Well, Stalin thought nothing of seeing himself in Eisenstein's *Ivan the Terrible*. Mr. Khrushchev, the architect of de-Stalinisation, can hardly do that: still less can he say that cricket was introduced in Russia by Stalin. He can, of course, claim that his permitting cricket is further evidence of his liberalism; but this will raise the hackles of Messrs Molotov & Co., who will see in cricket additional betrayal of the revolution wrought by the great Lenin and strengthened by the immortal Stalin. In spite of official frowns, jazz is said to have made its way with the delinquent youth of Russia. But, in spite of encouragement from the Party, cricket seems unlikely to flourish there. The Stakhanovites, for instance, will take a dim view of batsmen lazily waiting in the pavilion while two of their comrades are toiling away at the wicket. Is the Party likely to forgive a fielder who has missed a catch? Even as good Marxist training helped the Chinese mountaineers climb Mount Everest, as was claimed, an intimate acquaintance with dialectics will probably help Russian cricketers bat and bowl more efficiently; and some day the M.C.C. will perhaps be defeated by its Russian counterpart, proving once again the superiority of communism over capitalism. The umpires will presumably be good Party men. If so, will the wicket keeper, or bowler, be wise to cry, "How's that?" The future of bodyline bowling is unknown. It is the Party line I am worried about. And what happens to Mr. Gromyko when the idiomatic meaning of "playing cricket" gets around in Russia?

HAVING PLOUGHED THROUGH SOME OF THE REPORTS on what eight planets cramped in the single house of Capricorn may be up to some time next week, or 100 years hence according to some, I cannot say that I am sitting back in the happy thought that I shall not be looking for subjects for another instalment of *A Ditcher's Diary*. Whatever happens to humanity, Banaras priests and ghee merchants are not doing badly at all. If the useless pyramids of Egypt served the social purpose of giving employment to a lot of people, these yagnas are consuming a good deal of what surely is bad ghee; and not a few human lives may have been saved in consequence—perhaps only to be killed later in the calamity unprevented by the yagnas. Perhaps the most comforting thing said is that the effects of the conflagration may bypass India, if she is called Bharat or Hindustan. (Would the late Mr. Jinnah have tried to force the name Hindustan on this country if he had consulted the astrologers?) Another reassuring thing said is that disaster may not arrive in the next 1,000 years. I remember the immortal words of Lord Keynes: "In the long run we are all dead." Including the astrologers.

THE DITCHER

INDIAN OXYGEN LIMITED

CHAIRMAN, SIR J. D. K. BROWN'S STATEMENT

The following is the statement circulated by Sir John Douglas Keith Brown, Chairman, Indian Oxygen Limited to the Members of the Company with the Annual Report for the year 1961.

Following the precedent established last year, I am again circulating with the Directors' Report and Accounts for the year ended 30th September last the statement which I would otherwise make at the forthcoming 27th Annual General Meeting.

Profits, Taxation and Dividend

The profit for the year, after providing Rs. 44,95,981 for depreciation and Rs. 36,25,000 for taxation, amounted to Rs. 71,30,284 as compared with a net profit for the previous year of Rs. 62,98,449 after charging depreciation of Rs. 37,10,806 and taxation of Rs. 38,85,900. Although the profit after taxation shows a fair increase over the previous year, as stated in the Directors' Report, it was earned at a relatively lower rate. The reason for this lay primarily in an increase in works cost which, I am afraid, is today all too familiar a trend throughout the Indian economy. Persistent shortage of power in several regions where your Company operates contributed significantly towards these increased costs. Calcium carbide which, as stated by me last year, is now procured almost wholly from indigenous sources, continued to give unsatisfactory yields and also remained in short supply, leading to multiple transfers of our stocks between consuming points at heavy additional cost. The result of all this was an appreciable increase in the cost of production of dissolved acetylene, which has not been compensated by any increase in selling prices.

A refund of tax on profits of an earlier period received during the year and an amount rendered surplus in the tax provision account on the finalisation of the relative assessments have accounted for a total credit in the appropriation account of Rs. 10,50,133. The question of the disposal of the available balance on Profit and Loss Account of Rs. 57,06,872 has received the most careful consideration of your Directors in the light of commitments in respect of our various expansion schemes and the further demands which seem likely to be made on us to meet the country's requirements of our products. Having regard to all these considerations we decided to recommend a dividend at the rate of 15%, which is the same rate as was declared in respect of the previous year. This dividend, however, will be paid early in March on the share capital of the Company as increased during the year through the rights issue to which members subscribed between the middle of April and the middle of May, 1961.

Sales

You will see from the accounts that sales during the year reached a level of just over Rs. 7.56 crores, being about Rs. 1.11 crores higher than the previous year. This represents an increase of a little over 17% and I am sure you will agree that it may be considered very satisfactory, particularly bearing in mind the limitation placed on our sales by power cuts suffered by our customers. Sales of all products increased, including, I am glad to say, a satisfactory increase this year in the sales of dissolved acetylene, the sales of which in the previous year, you will recall from my statement, were a little disappointing. I told you last year about the argon purification facilities which the Company had installed at its Burnpur factory and which would for the first time allow argon to be produced in India. The benefits accruing to those who use argon in their production processes are clearly indicated by the spectacular increase in the sale of this gas, which is particularly essential in fabricating aluminium. Substantial increases were recorded in the sales of gas-user equipment and electrodes, both of which were manufactured in the two works at Beliaghata and Khardah respectively in larger quantities during the year. Better availability of bought-out items from feeder industries also allowed us to sell increased quantities of electric welding equipment and equipment for the administration of medical gases.

Finance

The issue of further share capital which was approved at the last Annual General Meeting was completed during the year and provided an additional finance to your Company to the extent of Rs. 1.08 crores, of which Rs. 48 lakhs was accounted for by the share premium. The subscription of The British Oxygen Co. Ltd. of Rs. 64,80,000 towards this rights issue was a valuable contribution towards meeting our requirements of foreign exchange for expansion and this sum has since been earmarked for major projects in hand.

Capital expenditure incurred during the year amounted to Rs. 1,43,09,027 and almost half of it was accounted for by the purchase of oxygen and dissolved acetylene cylinders from the United States of America against accommodation received from the Export-Import Bank. This provides a timely increase in the stock of cylinders carried by the Company, which otherwise would be considerably strained in meeting the increasing demand for industrial gases.

Arising out of the increasing tempo of the industrialisation of the country based on a growing volume of steel production, as I have already indicated, a further large increase in the demand for our products is anticipated during the Third Plan period and subsequently. In view of this we are already giving thought to the next phase of our expansion beyond the programme now under way. Our being a capital-intensive industry, this will necessarily give rise to additional requirements of finance, particularly foreign exchange, and this important matter is at present receiving careful consideration.

Development and Expansion

In my statement last year, I referred to the fact that by including our industry's requirements, the draft outline of the Third Five Year Plan had recognised the importance of industrial gases and electrodes in the country's economy. I have been grateful to find that the Plan as finally published has also recognised the importance of liquid oxygen explosives and included requirements thereof in the official plan targets, showing incidentally a larger than fourfold increase during the Plan period.

Oxygen requirements in the Jamshedpur area have continued to grow and the Company has in hand a programme to install three additional 400M3 oxygen plants in the Jamshedpur factory to augment production from the existing plants. The first of the three additional plants has just recently been installed and trial runs are scheduled to begin almost immediately. The second and third additional plants have been shipped from the United Kingdom and should be installed at the Jamshedpur factory shortly.

The oxygen and dissolved acetylene factory which has been built at the new site at Bangalore was completed during the year, together with an administrative block. Production of dissolved acetylene at the new factory commenced in September this year, while the oxygen plant came on stream in November.

I mentioned last year that at Gauhati, we had installed an oxygen plant within the premises of Indian Refineries Ltd. You will be glad to learn that during the year the Company acquired its own plot of land and commenced erecting an oxygen and dissolved acetylene factory at the new site. The oxygen plant which had been installed in the premises of Indian Refineries Ltd. was transferred to the new factory and oxygen production new factory and oxygen production commenced last September. A dissolved acetylene producing plant is now being installed in this factory and it is

hoped that production will commence in February, 1962.

An industrial licence for installing a second 400M3 oxygen plant in our Bombay factory was obtained during the year and arrangements are now in hand for its installation in order to increase oxygen availability in the Bombay area, which practically throughout the past year has been barely sufficient to meet the rising demand there.

Plans have been laid to increase the production of electrodes at the factory at Khardah, near Calcutta, within the present licensed capacity and work was commenced during the year on extending the factory buildings to house additional plant and afford further storage capacity. An industrial licence has also been obtained for setting up a wire mill within this factory and the necessary plant and machinery has already been ordered against import licences in hand. The setting up of this wire mill will render our electrode production independent of suppliers of core wire on the basis of arrangements that are envisaged for obtaining suitable rods for wire drawing.

Steps have also been taken to supplement the machinery installed in the Equipment Factory at Beliaghata and to extend the factory premises. The expansion and modernisation of facilities at the Electrode and Equipment Factories will allow the production not only of larger quantities but also a wider range of products.

The Company continued during the year to pursue actively the development of indigenous manufacture of items of equipment hitherto imported. As explained by me last year, wherever possible and economic, this is being done by encouraging the growth of feeder industries which are helped with technical assistance and designs. Notable among last year's achievements were the production of the 'Cub' machine, a small oxygen profile cutting machine, as well as items of medical equipment, for the production and assembly of which at the Equipment Factory at Beliaghata an industrial licence was received during the year. Another important step was the indigenous development of 'Indarc' welding transformers, which are now marketed by us.

From all that I have said on this subject of development and expansion you will appreciate that our efforts are not confined to increasing our sales of industrial oxygen and dissolved acetylene in cylinders, with which products we are probably principally associated in the public mind, but that we are making substantial progress on the engineering side of our business also. Those of you who have seen our pavilion at the Indian Industries Fair currently in progress at New Delhi may have been surprised at the range and diversity of our production, which has increased in both respects to a remarkable degree in recent years. Incidentally, we have been gratified by the many favourable comments which have come to our notice on our exhibit at this Fair, with its accent on progress, indigenous manufacture and diversification, and it gives me great pleasure to commend those responsible for its organisation.

Competition

In my statement last year, I referred to the policy of the Government of India, which envisaged a widening of the base of ownership in the industrial gases field through pursuance of this policy sixteen new industrial gas units have been licensed in the last year and have taken place in the total licensed capacity of our competitors in this field, and in the year under review these licensed capacities have about doubled in both oxygen and dissolved acetylene.

Perhaps the most important outcome of Government's policy in this regard

was the development which took place during the year in connection with the tonnage oxygen plant which your Company had agreed to install at Jamshedpur so as to make available to The Tata Iron & Steel Co. Ltd. its requirements of oxygen in the process of steel making. This projected arrangement was referred to by me in my address to members at the 26th Annual General Meeting held on the 14th February, 1961. Government's reaction to our application for a licence for substantial expansion at Jamshedpur to allow the installation of this plant has been summed up by Mr. J. R. D. Tata in his statement as Chairman attached to the 54th Annual Report of The Tata Iron & Steel Co. Ltd. in the following words:—

"In this connection, I regret to have to report that the Government of India have refused to sanction a very satisfactory arrangement we had concluded with Indian Oxygen Co. whereby that Company was to put up, at its own cost, a tonnage oxygen plant at Jamshedpur from which the Steel Company was to purchase on favourable terms its greatly enlarged requirements of oxygen. On the ground that the Indian Oxygen Co. already has too large a share of the business, Government have decided that the plant should either be put up by another company in collaboration with a different foreign firm or that the Steel Company should put up the plant itself. As the first alternative would have resulted in delay and unnecessary complications through the presence of two oxygen suppliers at Jamshedpur, and in the loss of certain financial benefits which would have accrued from the proposal initiated with the Indian Oxygen Co., we had no alternative but to decide to put up a tonnage plant of our own and to shoulder the additional capital expenditure which will amount to over a crore of rupees."

Mr. Tata's statement gave rise to some comment at the time when it was published in August last, the burden of which was that this was a case where economic considerations appeared to be overlooked in favour of ideology. This brings me to the point that while the social objective of planning is not disputed, in my opinion the attainment of planned industrial development on an economic basis must receive equal consideration; and I feel that a compromise between the two is possible within the framework of the Government's policy. My suggestion is that on the basis of the estimated demand during the next five or ten years, an allocation of at least a portion of the considerable additional production capacity required may be made among the existing enterprises after taking into account their relative sizes and technical and financial resources. This will enable them to proceed with perspective planning on a fairly firm basis and will ensure that at least a part of the additional capacity is made available in the most economic manner, in step with the increase in demand, without allowing a particular unit to grow too large. I fear that unless something like this is done, not only the economies but indeed some of the products themselves of large scale organisation in this field will be denied to Indian industry.

Exports

No one connected with industry in this country today can fail to be acutely conscious of the absolute necessity of increasing exports to enable the mounting demand for imports of essential raw materials and components to be met, and we in Indian Oxygen Ltd. are wholly in sympathy with the Government's aspirations in this regard. I must, however, point out the difficulties that are encountered by an industry such as ours since products like oxygen and acetylene are basically unexportable. However, inasmuch as these products constitute the raw materials for industry in general and facilitate indigenous metal fabrication, their contribution to the solution of this problem lies in the saving of foreign exchange which takes place by the progressive elimination of imports of manufactured items and by incorporation in the manufactured products

JOY-VOLTAS DIAMOND CORE DRILLS

For efficient drilling anywhere!

JOY-VOLTAS Diamond Core Drills have phenomenal versatility, enormous reserve strength and dismantling arrangement for easy transport. Made by Voltas Limited in collaboration with Joy Manufacturing Company, U.S.A., these Drills are rugged, heavy-duty machines built for efficient drilling in all formations at low cost.

Joy drilling accessories are also made by Voltas.

exported by the Indian engineering industry. Nevertheless, mindful of our responsibilities, we arranged during the year for one of our senior executives to visit the South-East Asian countries to assess the market for such of our products as can be exported. Your Company now exports nitrous oxide and electrodes to this region and we are hopeful that this flow will increase and widen in time with the re-organisation and modernisation of our Electrode and Equipment Factories.

Management and Personnel

Your Directors are keenly aware that the years that lie immediately ahead contain a challenge that in the final

analysis must be met mainly by the competence and stature of the management. Following from this awareness, the top management structure of the Company was strengthened and re-organised during the year by the creation of functional divisions each headed by a Chief Executive. Considerable thought has also been given to training schemes within the Company, some of which were satisfactorily started during the year. A search for talent within the organisation was made and I am glad to say that four members of the staff were selected for intensive management training. You may be interested to know that as at the close of our financial year we em-

ployed in all 3,763 men and women. Of these, 131 were in the officer grades of whom only six were non-Indians. I take this opportunity to extend once again to our Managing Director, Mr. A. K. Sen, and to his colleagues in the management and to all staff and work-people our thanks for their part in producing the results which are before you.

In these days it is essential that an organisation should develop its own personality and this can be done no better than through an efficient system of communications within the organisation itself. Towards this end, and also with a view to projecting the

personality of your Company to individuals and bodies outside, the publication of a House Journal called "Oxygen News" was commenced during the year. You will be glad to know that this publication has been well commended for its quality and presentation.

Technical Collaboration

Active technical assistance continued to be received during the year from our parent company, The British Oxygen Company Limited. Specialist personnel from the parent company visited our factories, studied our problems and gave us most valuable advice to enable us to improve our efficiency. A number of our personnel also visited the establishments of The British Oxygen Company Limited in Great Britain and have undoubtedly benefited from the specialised guidance and training so readily offered them.

We were particularly glad to welcome a few weeks ago, Mr. T. E. Potts, Managing Director of The British Oxygen Company Limited Group. Mr. Potts stayed with us for about three weeks, visiting Calcutta, Jamshedpur, Burnpur, Madras, Bangalore, Bombay and Delhi in a strenuous and crowded programme. Your Directors look forward with interest to receiving shortly from The British Oxygen Company Limited their comments and advice on our future expansion plans, of which Mr. Potts made a particular study during his visit. Visits such as this are invaluable for the opportunities which they afford us to discuss our problems with those who are able to draw on a world-wide experience of our industry. I take the opportunity to record here our thanks not only to Mr. Potts but also to the Chairman and the other members of the Board of the parent company.

In June last The British Oxygen Company Limited celebrated the 75th anniversary of its incorporation and on the occasion held a conference of Chairmen and Managing Directors of all its associated companies overseas. Your Managing Director, Mr. A. K. Sen, and I had the pleasure and the privilege to attend this conference, which gave us a welcome opportunity of meeting our counterparts in the other companies and discussing common problems. We also gained an insight into the wide range of interests covered by the parent company and the scale of effort which is being devoted to research and development, in the benefits of which we in Indian Oxygen Limited will continue to share.

Prospects

It is too early in the new financial year to give you any firm indication of the likely trend of profits this year. Sales so far compare favourably with the corresponding period in the previous year and having regard to the continuing development of the metal using industries, we would expect this progress to be maintained. At the same time, we found that in the second half of our last financial year, our activities were affected by power shortages, and I fear that this is a feature which will, unfortunately, recur for some years yet. We have also to bear in mind the increase in the cost of production to which I have referred earlier in this statement. Nevertheless, we have no reason to fear that our profits will not be maintained and indeed, it would be reasonable to expect some modest increase. At the same time, I must again point out that the extent of our existing foreign exchange liabilities and the prospects of our having, within the next few years, to shoulder further loan liabilities demand from shareholders the exercise of a degree of patience. Our prosperity is, I would repeat, tied up with the growth of important sectors of the country's expanding industry and I am confident that, organised as we are on the basis of technical competence, service to our customers and personnel who have the welfare of the Company and its growth at heart, our performance in the years ahead will be found not wanting.

Calcutta,
23rd December, 1961.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE ASSOCIATED CEMENT COMPANIES, LIMITED

CHAIRMAN, MR. DHARAMSEY M. KHATAU'S SPEECH

Speaking at the 25th Annual General Meeting of The Associated Cement Companies, Limited held in Bombay on Friday, 19th January, 1962, the Chairman, Mr. Dharamsey M. Khatau said:

Production and Profits

"Although the year under review has been one of further progress for the Cement Industry in the country—in terms of increased production and despatches—rising costs of materials and services have more than offset the benefits accruing from this increase in production. Our financial results for the year are rather disappointing despite the fact that the effective installed capacity and actual production were higher. Profits have declined due to an abnormal rise in the cost of coal, slowing excise duty, railway freight and electric power-supply rates. The incidence of these increases was higher than the economies effected by continuous technical and other improvements. There was also loss of production at some Works mainly due to coal and power shortages, and loss of despatches due to paucity of railway wagons, which to some extent was aggravated by the strike of the Central Government employees in July 1960. The cumulative result of all these factors was that the ratio of production to capacity could not be maintained at the level of the previous year."

Coal Shortage

Referring to the acute coal shortage in the country, the Chairman stated that the timely action by the Ministry of Commerce and Industry, following representations by the Company, had enabled its factories to tide over this coal famine. "I would however refer here," Shri Khatau continued, "to two factors which currently threaten to make matters difficult for the Cement Industry—viz. the deterioration in the quality of coal supplied and the new B.O.X. type wagon introduced by the Railways. While the quality of coal has been lowered as a matter of Government's general policy of conserving high grade coal, the new type wagons, which owing to their outside dimensions cannot be weighed on the existing weigh-bridges, have been responsible for considerable short loading of coal resulting in heavy losses to the consumer. Your Company is continuously taking such steps as are possible to meet the situation."

Packing Charges

The Chairman mentioned another set-back suffered by the Company as a result of Government's arbitrary decision in fixing the packing charges for cement for the last quarter of 1960, at rates far below the rates recoverable from consumers. This decision caused heavy losses to the Company, though repeated and urgent representations by the Industry persuaded Government later to allow the Industry to pack a portion of its cement in sound reusable bags as from 1st January, 1961. "While the decision was in itself most welcome it was vitiated by the fact that a completely unrealistic low charge of Rs. 13 per metric ton, which bore no relation to the prevailing market prices, was fixed as the average packing charge for new and used bags—taken together. This further added to your Company's losses on account of packing charges. Further repeated representations by the Industry finally led Government to adopt a realistic basis for fixing the average cost of new and reusable packing materials. However, the heavy initial losses which your Company suffered on this account could not be recouped during the period under review."

Dividend

"Blocked as we were by a fixed retention price, already too low, it was inevitable that against the tide of rising costs of materials and services, the profits of the Company should steadily diminish over the past three years. During the year under review the unexpected happenings to which I have

referred above made further inroads into our profits. In the last three years the Company has had repeatedly to dip into its meagre reserves to be able to pay a modest dividend to shareholders. This year the withdrawal from Reserves has been as high as Rs. 98 lakhs.

"Despite the reduction in the net distributable profits as compared to last year, your Directors have decided to maintain the dividend at the same level, namely Rs. 12 per share, subject to deduction of tax. Your Company has been emboldened to do this in the hope that the relief which has come—although belatedly—by way of a higher retention price, will yield better results in the next few years."

Tariff Commission

Reviewing the circumstances that led to the belated Tariff Commission enquiry into cement prices, after Government's refusal to grant interim relief despite industry's numerous representations, the Chairman said: "It was hoped that the enquiry would be completed in time for Government to announce the revised price from 1st July, 1961,—that is, immediately after the expiry of the previous price-period. The revised price, however, came into effect only on 1st November, 1961, thus putting the Industry and your Company to a further substantial loss of earnings."

"I think I must dispel the belief held in certain quarters that the price increase granted to the Industry by Government is generous. The increase awarded falls considerably short of what was expected to enable your Company even to earn a reasonable net return on capital employed, much less to recoup past loss of earnings or to energise it for a vigorous future."

The Chairman continued: "I should like to say that the general approach of the Tariff Commission to the question of revision of cement prices was, by and large, fair. It has shown a sympathetic awareness of the difficulties which the Industry has had to face. Stating that Cement ranks in importance next to Iron and Steel in the economic development of the country, it recommended certain steps to stimulate the Industry's growth on a high priority basis. The fact that its final recommendations, pronounced still further by Government fell short of our expectations, does not take away the basic merit of its method of approach."

"After carefully investigating all the factors involved, the Tariff Commission recommended an effective increase of Rs. 12.11 per tonne in the retention price allowed to your Company—which did not cover its full requirements. Unfortunately, Government has scaled down even this increase in price by Rs. 1.25 per tonne. It is frustrating to note that the recommendations of an independent statutory body, made after a most detailed and searching scrutiny of costs, should have been scaled down by Government."

"It is to be regretted that, once again, the Tariff Commission declined to consider the payment of bonus to employees and Managing Agents' remuneration as legitimate items of cost. It is also to be regretted that the Tariff Commission has not recommended automatic escalator clauses to cover subsequent increases in the price of fuel and power, railway freight rates, and increased dearness allowance linked to the cost of living index. The Commission has apparently left it to mission has apparently left it to Government to vary the price in relation to these factors as circumstances may warrant. This is unfortunate because our past experience shows that redress in such matters by Government is unduly too long delayed."

"The Tariff Commission recommended that the new prices should come into operation from 1st July, 1961 and remain in force till 30th June, 1964, i.e. for three years. Government has, however, made the new prices operative only from 1st November, 1961 and has

extended the duration to 31st March, 1966. In an era of steadily rising costs a fixed price for a period of nearly five years is, in my opinion, bound to affect the Industry adversely."

The Chairman added that all these matters will be taken up with Government through the Cement Manufacturers Association which was formed in February 1961 to protect the interests of the Cement Industry.

Demand for Cement

On the question of the current and future demand for cement, the Chairman mentioned that during the year under review there was a rise in the tempo of demand in all sectors, which available supplies were unable to keep pace with, due partly to shortages in production and partly to inadequacy of rail transport. To meet this transport gap at least partially, the Company had been developing the transport of cement by road where conditions are favourable and during the year, the Company was able to transport nearly 25 per cent of its despatches of cement by road. Mentioning the reimposition of control over distribution of cement by State Governments, the Chairman felt that the shortage of cement was likely to continue for some time.

Third Five-year Plan

"The Planning Commission has estimated the demand for cement at 13.2 million tonnes in 1955-56 and has fixed a target of 15.24 million tonnes of capacity to be achieved by the end of the Third Five-Year Plan period. This seems to be a realistic target both financially and technically."

Judging from the present trends, however, the Chairman felt that a prodigious effort was necessary to achieve these targets. While welcoming the appointment by Government of the two important Panels for the Cement Industry—one to look into the problems

facing it and to stimulate research and development, and the other to increase its productivity, he hoped that these Panels would see that bottlenecks impeding production and productivity are expeditiously removed.

Shri Khatau continued: "Judging from the performance of the Industry under prevailing conditions, production is likely to be about 10 per cent lower than demand over the next few years unless prompt action is taken to secure for the Industry reasonable foreign exchange facilities, adequate supplies of coal, power and wagons for the movement of raw materials as well as the finished product. It is also necessary that the resources and 'know-how' of established manufacturers of cement should be utilised to the fullest extent possible."

Expansion and Rehabilitation

Reviewing the Company's planned programme of expansion, rehabilitation and modernisation, Shri Khatau reported the completion of the second unit at Mancherla raising its rated capacity to 3.3 lakh tonnes and that of the Blast Furnace Slag Cement project at Chabasa and the slag granulation plant at Jamshedpur. Though the manufacture of blast furnace slag cement had commenced soon after, owing to preliminary teething troubles the licensed capacity of 1.7 lakh tonnes of slag cement could not be fully achieved. The Chairman said, however, that the Company as well as TISCO were making every effort to increase the slag cement output. The work on the construction of administrative and residential buildings for the Company's new dry process cement plant at Jamul (formerly Durg) was progressing according to schedule and the bulk of the machinery for this plant was being manufactured at ACC Workshops. The construction of factory structures for the extension to Dwarka Works which would raise its annual capacity from 2.46 lakh tonnes to 3.5 lakh tonnes had already commenced.

Refractories and Silivereite

The extension to the Company's refractory plant at Katni raising its capacity from 17,640 tonnes to 30,000 tonnes a year, was also completed and the annular kiln was put into operation recently. Efforts in diversification in the manufacture of products like Accoset-50, Accocid, ceramic grinding media etc. were being intensified. The

Specialized ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

For more than half a century McKee engineers have specialized in the design, engineering and construction of steel-producing facilities. Our comprehensive mine-to-metal services include every phase of the work necessary for any steel-plant project, from preliminary studies to completed plant ready for initial operation.

The McKee Organization has executed contracts in 49 countries including India. Among these are some of the world's largest and most modern completely integrated steel plants and hundreds of individual units, including blast furnaces, open hearth shops, rolling mills, agglomerating, sintering and pelletizing plants. Most recent examples of large-scale integrated plants are the new Somisa plant at San Nicolas, Argentina and the C.S.N. plant at Volta Redonda, Brazil.

To the steel industry of India the McKee Metals Division offers the services of its large, well-qualified staff with a fund of sound, practical experience and specialized knowledge that is unmatched anywhere in the industry.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY
WESTERN KNAPP ENGINEERING

Represented in India by
DR. B. S. GILANI
29, Jor Bagh, New Delhi 3

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION

Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING

Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

demand for the Company's Silvicrete white cement was steadily growing and that product has been well received. The construction work on the foundations and structures of the new white cement plant at Kymore with an annual capacity of 25,000 tonnes had been completed.

New Products

Shri Khatau also announced that the Company had commenced at its Shahabad Works the manufacture, for the first time in India, of a special cement known as Oil Well cement for the Oil and Natural Gas Commission, for use in oil wells in Assam and Gujarat. The demand for this product was at present small, but it is likely to increase with the development of the country's oil resources. The Chairman also reported that the Company had successfully manufactured a portland cement with water-repellent properties which would overcome in a large measure the storage and handling difficulties experienced at present by the cement consumer under highly humid and moist conditions. The new product will be marketed in the near future.

New Engineering Works at Shahabad

Continuing, the Chairman reported that the Company's new Engineering Works at Shahabad which was only in the planning stage last year had made considerable progress. The factory buildings and housing colony were

coming up and most of the plant and machinery required for the project had been ordered from abroad and some had already arrived at site.

ACC-Vickers-Babcock Ltd.

Referring to the completion of the AVB Heavy Engineering Works, the Chairman stated that the factory had commenced partial production and had already secured orders for the manufacture of boilers as well as cement machinery. The Chairman cautioned, however, that a capital-intensive project like the AVB would take a few years before it could materially add to the profits of ACC.

Pakistan

The Chairman also announced that negotiations for the sale of the Company's factories in Pakistan had now reached the final stage and the matter would be placed for the consideration of the shareholders at the meeting.

Managing Agency

The Chairman then referred to the Company's proposals for the extension of the duration of the Managing Agency Agreement from five to ten years and raising the Managing Agents' remuneration to 7½ per cent. The matter was under negotiation with Government and the Chairman expressed the hope that, in view of the time-consuming nature of the Company's development projects and the special responsibilities

shouldered and services rendered by the Managing Agents, Government will appreciate the Company's views and accede to its request.

Labour-Management Relations

Reviewing labour-management relations Shri Khatau stated: "The labour situation at our Cement Works was fairly peaceful, principally because in co-operation with our Unions, we had voluntarily implemented the Wage Board recommendations. A part of the credit for this satisfactory position must also go to the Chairman of the Wage Board whom the Government of India constituted as the Central Machinery to resolve differences of interpretation arising in the process of implementing these important recommendations."

"I am afraid our Collieries have a different story to tell because there were no less than five strikes during the year 1960-61, and similar interruptions in production have continued during the current year also for no valid reasons. The principal cause of this sorry state of affairs is the irresponsible attitude and behaviour of union leaders whose continued indulgence in factional fights has seriously interfered not only with the production of coal but also with the peace of the Kotna Colliery and its colony. The Code of Discipline which all the Central Organisations of Labour had accepted

is not always being implemented. This is most unfortunate for, if it is to bring about any appreciable improvement at all, it must be continuously acted upon as an article of faith by all the contracting parties. In this joint endeavour, the role of the Government cannot be over-emphasised. There have been frequent complaints against the procedure adopted by the Machinery set up by the Central and the State Governments to implement the Code."

Bonus

In spite of lower net profit this year the Chairman said, the Directors had decided to maintain the rate of bonus to the employees at the same level as the previous year, solely with a view to preserve cordiality of labour-management relations. As a result, the large majority of employees, particularly those in the lower scales of pay would receive substantially higher amounts of bonus, in view of the increase in their basic wages, as recommended by the Cement Wage Board.

Shri Khatau concluded with an expression of warm appreciation of the hard work and unstinted co-operation of all the Company's employees.

Note: This does not purport to be a report of the proceedings of the Annual General Meeting which will be sent separately to shareholders on request.

THE SCINDIA STEAM NAVIGATION CO. LTD

CHAIRMAN, MR. D. M. KHATAU'S REVIEW

Summary of the Address of Mr. Dharamsey Mulraj Khatau, Chairman, The Scindia Steam Navigation Co. Ltd., delivered at the 42nd Annual General Meeting of the Shareholders, on Wednesday, the 24th January, 1962 at Scindia House, Ballard Estate, Bombay 1.

After welcoming the Shareholders the Chairman referred to the Audited Accounts and Directors' Report for the year ending 30th June, 1961 and stated that the results of the year could not be considered to be encouraging and that they reflected the situation faced by shipping companies all over the world and India in particular. Despite this adverse economic situation, the Company was fortunate in covering its costs, making a nominal profit of Rs. 4.5 lakhs, and declaring a dividend of 60 p.p. per share after drawing Rs. 25 lakhs from the Dividend Equalisation Reserve.

The Chairman stated that the level of freight rates in Overseas Liner trades showed no improvement during the year whereas costs of operating ships showed signs of continued increase. However, as a result of rationalisation of services by all member lines of the India/U.K.-Continent Conference, the next year should show improved results.

Shri Dharamsey added:

"One significant event of this year has been the decision of the Shipping Corporation of India to join the Conference covering the India/Pakistan/U.K.-Continental trades as also in the U.S.S.R. trade. I sincerely hope that their association with India Steamships and ourselves will be a source of strength and will enable the Indian Lines to cater more effectively and efficiently to the requirements of the trade because this co-operation between the Government Corporation and the Indian Lines will lead to the growth of mutual confidence. I say this because I believe that there is considerable scope for expansion of Indian Shipping in trades not yet served by Indian ships. It, therefore, is very necessary that this expansion should cover trades and routes not yet catered for and take place along strictly planned and rational lines."

Conference Members

He further stated that the Conference members were greatly concerned over increased expenditure to cover which an increase in rates was the only answer. The Conference representatives have placed this position before the Ministers of Transport and Finance, who whilst appreciating the situation, felt that owing to the difficult foreign exchange position of the country, the problem of freight increase had become a little difficult of solution. It could, however, be expected that this situation would not continue for long and would soon right itself.

In regard to coastal and adjacent trades, the Chairman pointed out that there was further deterioration and hence the coastal results were very disappointing. The basic problems facing coastal shipping are uneconomic rates of freight, serious delays and detentions to ships and reduced cargoes due to the deteriorating Hooghly drafts. Unless these basic problems are tackled expeditiously and the much needed relief and assistance secured, the future of coastal shipping will continue to remain gloomy. The obvious answer, therefore, lies in permitting upward revision of freight rates as costs increase. In this context the Chairman said that Shri R. G. Abbhi, the Government director on boards of Indian Shipping Companies, had been specially asked by the Government to go into the costs of operations on the coast. It was a sincere hope that when Shri Abbhi had finished his examinations he would be able to recommend to Government to fix a level of freight rates for the coast which would not only take care of increased costs but would also give a satisfactory return to the

companies on the capital employed in the coastal trade.

Further Orders

The Chairman mentioned that in addition to the delivery of m.v. 'Jalakirti', further orders were placed with the Hindustan Shipyard Ltd., and felt that in view of the size of the Company's business and fleet, it was very necessary to work out a steady programme of building new vessels every year. As ships were ready earners of foreign exchange he hoped that the requisite foreign exchange would be made available for this purpose.

As regards future prospects Shri Dharamsey stated:

"You naturally expect me to tell you something about our future. I know it will not satisfy you if I say that it is difficult to forecast the future with any degree of certainty. On the other hand, there are so many 'imponderables' in the shipping business and possibly the uncontrollable items of expenditure far exceed the controllable ones. The adjustment of freight rates can be the only answer to compensate for increased and increasing costs of operation and the maintaining of a modern fleet. I feel that in our developing economy, the transportation has still to receive the priority it deserves in terms of plan-

Konkan Services

The Chairman referred to the Konkan Services and the report submitted to Government in 1960 by the Konkan

Coastal Shipping Services Committee and added:

"We conveyed the acceptance of recommendations of the Committee early in January 1961. The decisions of the Government of India, on the report of the Committee were conveyed to us only in October 1961. These decisions, however, fell far short of the recommendations of the Committee. Due to this disturbing development, the B.S.N. Co. (1953) Ltd. had no alternative but to announce the closure of its services from 1st December, 1961. I am happy to say that both the Government of India and the Government of Maharashtra have shown due appreciation of the Company's position and negotiations with the two Governments are still continuing. In the meanwhile, in the hope of a satisfactory settlement, the Company has agreed to maintain its services till the end of May 1962. The situation will be reviewed before then."

After placing on record the long and valuable services rendered by Shri Dinshaw D. Romer, a director of the Company who retired due to ill health, Shri Dharamsey thanked the Minister of Transport and his colleagues in the Transport Ministry for the interest shown by them in furthering the cause of Indian shipping. He also appreciated the services rendered by the Company's agents abroad and in India and thanked the shippers and consignees for their continued support.

The Audited Statement of Accounts were placed before the Shareholders for their approval and adoption.

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 24th January.

THERE seems to have been a pause in the seasonal rise of advances in the Calcutta money market during the past week. Little change has been recorded in the total outstanding. Slight increases in demand for funds from the cotton industry, the sugar mills and on account of food-grains and seeds storage are about balanced by moderate declines in the requirements of the jute mills and the engineering and iron and steel industries. Conditions are easier in the interbank market, and there are lenders over at the enhanced call rate of 4½ percent.

There has been moderate activity in the exchange market during the past week despite a sharp drop in the volume of gunny bills; tea bills have remained extremely scarce. Remittance demand has been keen. In the London money market, quotations for the pound have again fluctuated within narrow limits. At the close, slight gains were recorded against the U.S. dollar, the Deutschmark, the Italian lira and the Swiss franc, but quotations were slightly easier in terms of the Canadian dollar and the remaining Continental currencies.

BULLION WAS STEADIER DURING the past week in sympathy with the rise in prices of other commodities. Silver advanced from the previous week's level of Rs. 244.75 to Rs. 246, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 209.75. The London and New York prices were 88d and 104.75 cents.

Gold was steady, and the price rose from Rs. 140.75 to Rs. 141. The sovereign at Rs. 98.75 showed a gain of 25p.

DURING THE WEEK ENDED 19TH JANUARY, Government of India Treasury bills for Rs. 230,63,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 23rd January. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.370 percent were allotted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,520 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 29th January.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 24th January to 27th January at Rs. 99.386 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 17th January to 20th January, amounted to Rs. 47,00,000.

THE DECLINE OF RS. 5.82 CRORES TO Rs. 1,985.59 crores in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 19th January, 1962, but the total note issue was Rs. 58 lakhs larger at Rs. 2,004.48 crores. Notes held in the Banking Department consequently rose by Rs. 6.40 crores to Rs. 18.89 crores. Deposits of the Government of India increased by Rs. 1.49 crores to Rs. 53.64 crores, while other Government accounts rose by Rs.

10.29 crores to Rs. 23.91 crores. Balances of commercial banks at Rs. 82.46 crores showed a rise of Rs. 6.72 crores. Balances held abroad again declined by Rs. 2.55 crores to Rs. 11.40 crores. Investments increased by Rs. 53.12 crores to Rs. 243.58 crores. Other loans and advances rose from Rs. 145.93 crores to Rs. 147.62 crores, of which advances to scheduled banks against usance bills amounted to Rs. 9.52 crores (Rs. 8.02 crores). Ways and means advances were Rs. 52.92 crores, against Rs. 64.14 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 12th January, 1962, shows a rise of Rs. 3.05 crores to Rs. 529.68 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 9.92 crores and Rs. 5 lakhs to Rs. 228.68 crores and Rs. 9.30 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 6.48 crores to Rs. 267.69 crores. Cash and balances are, in consequence, shown at Rs. 26.69 crores or Rs. 2.22 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 12th January, 1962, shows Demand and Time liabilities at Rs. 856.20 crores (Rs. 25.62 crores on account of borrowings from banks) and Rs. 1,157.47 crores (Rs. 16.25 crores), compared with Rs. 856.94 crores (Rs. 25.13 crores) and Rs. 1,158.81 crores (Rs. 15.74 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have decreased by Rs. 1.50 crores and Rs. 9.05 crores to Rs. 46.52 crores and Rs. 71.56 crores. There is a drop of Rs. 10.18 crores to Rs. 583.66 crores in investments. Advances and bills discounted at Rs. 1,309.58 crores show an increase of Rs. 10.74 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 65.0 percent, against 6.4 percent and 64.4 percent.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 25-1-62.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate

'But can I sell my product there?'

Of course he can—with the help of Voltas! Whatever the size of his business, and wherever its site, the enterprising Indian manufacturer can depend on Voltas to distribute and sell his products efficiently, economically. For Voltas is everywhere in India! With its vast network of branches, agencies, sales depots and warehouses, Voltas touches every market in every part of this great country. The effective Voltas system of distribution is designed to answer fully the needs of both producer and consumer, and in the process to serve the larger interests of the nation.

For taking products to their markets **VOLTAS IS THERE**

VOLTAS

VOLTAS LIMITED, Head Office: Bombay 1

Calcutta • Madras • New Delhi • Bangalore • Cochin • Ahmedabad • Secunderabad • Lucknow
Kanpur • Jaipur • Nagpur • Bhopal • Patna • Coimbatore • Madurai • Vijayawada

Briefly, Voltas' activities comprise

- **Marketing and Distribution of goods:**
Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods—Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.
- **Manufacture and Development:**
Air Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery...and the list is growing!
- **Service:**
Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

Stocks and Shares

MARKET FEARS MR. T. T. KRISHNAMACHARI MAY RETURN TO CABINET

Wednesday Evening.
THE stock market has reacted bearishly to the news that Mr. T. T. Krishnamachari is likely to be elected to the Lok Sabha without a contest. Since stiff taxation was levied when Mr. Krishnamachari held the Finance portfolio in the Central Government, operators have become nervous lest he is again given an important assignment in the Cabinet. There has been no fundamental change in fiscal policy since Mr. Krishnamachari resigned as Finance Minister, and the prospect of heavier taxation during the third plan has been discounted to a large extent already, so the present decline in share prices appears to be exaggerated. It is possible that the trend will remain uncertain until the general elections are over. But, on a longer view, the outlook is considered fair, because it is hoped that the Congress Party will be returned to power.

Early in the past week, there was brisk trading in the six shares which will be promoted to the forward list soon—Birla Jute, J. K. Rayon, Orissa Cement, Jaipur Udyog, Kesoram Industries and Guest, Keen, Williams. At the close, however, there has been a reaction on profit-taking. For the time being, operators are not inclined to extend their commitments due to various uncertainties. The first is the long delay in announcing the new retention prices of steel. The Press report that the Government might fix different retention prices for producers, according to their individual costs of production, has caused a great deal of concern.

The second factor is that large funds are being mopped up by new share issues. The shortage of credit is growing. The decision of the Reserve Bank to reduce the margin on share advances by banks from 50 percent to 40 percent, has not been of much use because banking funds are being increasingly employed in financing the requirements of the busy season. Although there are reports of buying by the Life Insurance Corporation, the support is considered marginal in character.

The third factor is that Lyons Range has become worried about the prospects for foreign aid to India. The meeting of the Aid-India Club, due to be held next week, is awaited with keen interest. Reports that the meeting is not likely to consider increasing the aid given to this country, have disturbed sentiment.

Indian Iron have closed at Rs. 24.56 and the undertone remains uncertain. Among engineering shares, Indian Standard Wagon have been bought on hopes of improved results. The earlier improvement in Guest, Keen, Williams has not been maintained at the close. Britannia Engineering are steady on issuing rights shares. Dalmia Iron have recovered on producing a good report. Jessop, Burn and Texmaco have reacted on profit-taking. Indian Oxygen have been steady on issuing a satisfactory report.

The turnover in miscellaneous shares has declined considerably. The steady features have been Dunlop Rubber, Indian Aluminium, Indian Cable, Kesoram Industries and Dr. Paul Lohmann. Rallis have improved on increasing the ordinary dividend. Martin Burn have been bought on dividend prospects. Jardine Henderson have been fancied on prospects of diversification of activities. Britannia Biscuits and

Union Carbide have gained. British India Corporation have enjoyed influential buying. Hindustan Motors have declined on pressure. Rohtas and Indian Copper have been quiet. Orissa Cement have been firm but Jaipur Udyog have reacted on profit-taking. Paper shares have been steady and support has been extended to Orient, Titagur, Bengal and Seshasayee.

Sugar shares have been quiet, with sellers predominating. Carew and Champaran have weakened, but Dyer Meakin Breweries have been taken on rumours of a bonus issue.

Coal shares have become sluggish and investors are disturbed by reports of the growing shortage of transport and explosives. Scattered business has been done in Burrakur, Bengal and Central India.

The earlier improvement in jute shares has been lost at the close due to profit-taking. Birla, Nuddea, Ganges, Fort William and Bally have reacted.

Cotton mill shares have become hesitant in response to fears of a shortage of raw cotton. Reports of a decline in cloth exports have induced caution. J. K. Rayon, Bharat Commerce and Elgin have declined. Scattered interest is being taken in Bowreah and Dunbar on hopes of improved results.

The recovery in auction prices has inspired selective support for tea shares. It is thought that the quality producers may show satisfactory profits for 1961. Huldibari, Hasimara, Hantapara, Tezpur and Dibrugarh have met with support.

Bank shares have been steady and interest has been taken in United Commercial, United Bank and Punjab National. Preference shares offering high yields have met with support.

Government securities have been dull and business has virtually come to a standstill. Banks are showing little interest because their funds are profitably employed in meeting trade demands. The 3 percent Conversion loan 1986 is quoted around Rs. 71.05. The prices of State loans have declined, where changed.

The recent issue of 118,000 ordinary shares by India Carbon Ltd has been over-subscribed 116 times. The allotment has been made in the following manner. Applicants for 25 to 1,000 shares have been allotted 10 shares each after drawing lots. Applicants for 1,025 to 2,000 shares have been allotted 10 shares each, 2,025 to 3,975 shares 15 shares each, 4,000 to 4,975 shares 20 shares each, 5,000 shares 25 shares each, 5,025 to 7,500 shares 30 shares each, 7,600 to 9,900 shares 40 shares each, 10,000 to 19,900 shares 50 shares each and 20,000 shares 70 shares each. The despatch of letters of allotment and regret will start next week. The total number of allottees is 11,045, out of which 6,894 are in the lower group of 25 to 1,000 shares.

Bombay Market

SUBDUED START TO THE NEW ACCOUNT

COAL SHORTAGE HITS TEXTILES

Wednesday Noon.

THE Bombay stock market started the new account in a subdued

mood. In spite of lower budla charges, support was poor during the past week. At first, trading was highlighted by the sharp rise in three scrip—B. R. Cotton, Apollo and Swan—due to interested buying. At the close, sentiment deteriorated on nervous bull liquidation and concentrated bear pressure following the report that Mr. T. T. Krishnamachari was likely to be elected unopposed to the Lok Sabha. The nervousness was accentuated by the fact that many textile mills in Ahmedabad might have to close down due to a shortage of coal. Operators were inclined to cut their commitments on concern arising from astrological considerations. Steel shares turned quiet following a Press report that the Government was thinking of fixing the retention prices of steel on the basis of the individual production costs of each manufacturer.

Tata Steel closed lower at Rs. 139.25 and Indian Iron at Rs. 24.52. Among engineering shares, Tata Locomotive reacted to Rs. 352 and Mukand Iron to Rs. 27.50. Business passed in Premier Construction at Rs. 192 and in Larsen and Toubro at Rs. 40.20. Alcock Ashdown were freely offered down to Rs. 330. Motor-vehicle shares were quiet, and Hindustan Motors declined to Rs. 20.44. Premier Automobiles were available at Rs. 149.

Cotton mill shares showed losses all round. Century declined to Rs. 584 on pressure and Bombay Dyeing were quoted lower at Rs. 68.60. Kohinoor were indicated at Rs. 308 and Finlay were dealt in at Rs. 364. Standard moved down to Rs. 1,120 and Apollo were transacted at Rs. 2.54. India United ordinary came to hand at Rs. 17.76. Business was done in Gokak at Rs. 222 and in Morarjee at Rs. 394.

Miscellaneous shares moved down in sympathy with the general trend. In the sugar group, Belapur weakened to Rs. 251 and Phalton to Rs. 115. Sellers predominated in Walchandnagar Industries at Rs. 162. Steamship shares were quiet, with sellers predominating. Scindia Steam recovered fractionally at the close on short-covering in view of the general meeting of the Company. Great Eastern Shipping declined to Rs. 12.80. Cement shares were quiet, and Associated Cement fell to Rs. 160.50 on disappointment arising from the fact that the Company would not issue bonus shares for the time being. Digvijay moved down to Rs. 190.

Mining shares were quietly steady, and business passed in Shivrampur Syndicate at Rs. 42. Bombay Burmah retreated to Rs. 641 and National Rayon declined to Rs. 534.50. Gwalior Rayon were steady and rose to Rs. 52.50, but Baroda Rayon were sold freely down to Rs. 157. Chemical shares were quiet, and Tata Chemical lost at Rs. 19.60. Indian Dye-stuff were quoted at Rs. 517.50 and Polychem came to hand at Rs. 217.50. Synthetics and Chemicals were available at Rs. 222. Voltas lost at Rs. 295 and Wimco were steady at Rs. 310. Ceat Tyre were quiet at Rs. 205, but Tata Oil were steady at Rs. 81.

Bank shares were steady, but turnover was restricted. Central Bank were wanted at Rs. 69 and business passed in Bank of India at Rs. 145.50. Dena Bank improved to Rs. 72.50 and Bank of Baroda were done at Rs. 118. Insurance shares showed little

change, and New India Assurance were available at Rs. 59.

Electric company shares turned softer, and Ahmedabad Electric were sold at Rs. 94. Tata Hydro came to hand at Rs. 110.50 and Bombay Suburban were placed at Rs. 101.75.

Madras Market

ASTROLOGERS KEEP MARKET QUIET

THREE MORE SHARES FOR FORWARD LIST

Tuesday Evening.

THE Madras stock market was quiet during the past week and turnover shrank considerably. Operators were worried about the approach of *Astagrahi*—the confluence of eight planets. Although the market authorities decided to include three more scrips—Mettur Chemical, Dalmia Cement and South India Viscose—in the forward list, there was little increase in activity. The growing shortage of cotton and power was an adverse factor.

Business in Government securities was dull because institutional support was lacking. Scattered interest was taken in selected public utility companies. The earlier enthusiasm about bank shares declined because the dividends declared so far did not show much improvement. Sugar shares were sold freely at lower prices due to the possibility of a further decline in the price of the commodity. Tea and rubber shares turned quiet and sellers predominated in coffee shares. Interest declined in textile shares and miscellaneous issues fell out of favour.

In the banking group, Indian Overseas came to hand at Rs. 199.50 and Indian were done at Rs. 180. State Bank of Travancore were transacted at Rs. 125 and Andhra came to hand at Rs. 100. Among public utility companies, West Coast were steady at Rs. 14 and Salem-Erode were bought up to Rs. 14.25. Kumbakonam were wanted at Rs. 11.10 and Vellore were quoted at Rs. 14.75.

Among sugar shares, Deccan were easier at Rs. 10.25 and E.I.D. were dealt in at Rs. 35.75. United Breweries reacted to Rs. 63.59 and Mysore were sold down to Rs. 55.50. India came to hand at Rs. 10.90 and Jeypore were done at Rs. 16.

In the planting group, Blue Mountain fell to Rs. 2.43 and Chembra to

Rs. 3.35. Kalasa were steady at Rs. 3.35 on issuing 150,000 bonus shares. Cochin Malabar were quiet at Rs. 7.33 and Consolidated Coffee were offered freely down to Rs. 16.90. Business passed in Ouchterlony at Rs. 3.65 and in Periakaramalai at Rs. 3.30. Peer-made were bought at Rs. 22 and Parkside were taken at Rs. 25. Nilgiri were placed at Rs. 8.40 and Midland were done at Rs. 10.80. Kil Kolagiri were dealt in at Rs. 4.95 and Devon were placed at Rs. 13.76. Teekoy were quiet at Rs. 5.10, but Travancore Rubber were steady at Rs. 13.12.

In the textile group, Bangalore Woollen were steady at Rs. 239 and Buckingham at Rs. 253.50. Coimbatore Cotton were placed at Rs. 218 and Dhanalakshmi came to hand at Rs. 258. Lakshmi reacted to Rs. 165.50 and Madura to Rs. 42.35. Mettur were in demand at Rs. 396 and Radhakrishna were bought at Rs. 38.75. Ramakrishna were steady at Rs. 250 and Sarada were taken at Rs. 90. South India Viscose hardened to Rs. 187, but Travancore Rayon were easier at Rs. 43.50. Vijayakumar were dealt in at Rs. 120 and Vijayeswari were taken at Rs. 170.

Among miscellaneous industrials, Aluminium Industries showed little change at Rs. 23.40 and Ashok Leyland were steady at Rs. 9.08. India Cement were transacted at Rs. 6.12 as the Company had issued ordinary rights shares for Rs. 1.25 crores at par. A. V. Thomas were in demand at Rs. 10.50 and Binny were placed at Rs. 310. Hindustan Lever were dealt in at Rs. 59.25 and Kirloskar Electric rose to Rs. 18.25. Madras Rubber were easier at Rs. 21.55, but Mettur Chemical were steady at Rs. 14.95. Orissa Cement were steady at Rs. 17.12 and Parry's Confectionery at Rs. 4.50. Seshasayee Paper came to hand at Rs. 8.75 and Spencer were indicated at Rs. 24.50. Business passed in Standard Motors at Rs. 16 and in Textool at Rs. 189. Tube Investment were quoted at Rs. 280 and Tube Suppliers were done at Rs. 10.

Foreign Aid Prospects: West Germany Asked for More

(FROM OUR NEW DELHI CORRESPONDENT)

THE Additional Secretary to the Central Ministry of Commerce and Industry, Mr. T. Swaminathan, left for Bonn on Tuesday. The purpose of his visit is primarily to persuade the West German Government to give more aid to India for the third five year plan. (The prospects of assistance from West Germany are discussed in a leading article in this issue of *Capital*.) The indications are that no new members will join the Aid-India Club, which is to meet in Washington on 29th January. The aid so far offered for the second year of the plan is \$220 million short of what India needs. The U.S.A. offered \$500 million for 1962-63. But she said that she would give this sum if other countries, which were already members of the club or which might subsequently become members, raised their total contributions to a level comparable with the proposed U.S. contribution. If the U.S.A. now abides by this resolve, there will be a gap of \$440 million for the second year of the plan.

Some comments are necessary. Part of the West German aid is totally untied. India can use it for financing any project or for securing maintenance imports from any source. Part of the aid from the U.K. and the U.S.A. is tied only to the extent that it has to be used for purchases from those two countries. The rest of the aid is tied to specific projects. The net effect of the gap in aid, if it remains unbridged, will be that certain projects which are awaiting a financial allocation will be held up, and perhaps even delayed until the fourth plan. By and large, it is hoped, the gap will have hardly any effect on the tempo of industrial production during 1962-63, which, with better house-keeping, the Government expects at least to maintain at, if not improve upon, compared with the 1961-62 level. Meanwhile, some Japanese business men, it is reported, have indicated their country's willingness to provide more aid.

It may, however, be added that no agenda for the Aid-India Club meeting has yet been indicated. The size of the gap will be known only after the meeting. One view here is that the forthcoming conference will be largely for the purpose of "stock-taking". Another meeting, during the summer, may indicate the commitments for the remaining three years of the plan. After his three-day visit to West Germany, Mr. Swaminathan will proceed to Geneva to lead the Indian delegation to the G.A.T.T. Conference on Cotton Textiles, which was mentioned in these columns last week.

E.C.A.F.E. Meeting

The Chief Controller of Imports, Mr. Satarawala, is leading the Indian delegation to the Bangkok meeting of E.C.A.F.E. which commenced on 22nd January. This meeting is a prelude to the fuller session, at ministerial level, which starts in Tokyo on 6th March. The Bangkok meeting will hold a preliminary discussion on the K. B. Lal report, which visualises setting up an organisation for Asian economic co-operation. A study of the working of the European Common Market and the European Free Trade Association will be made at the meeting. Other

items on the agenda are a review of the development of trade in the region, and consideration of proposals for organising an Asian trade fair.

Special Officer for Oil

The Finance Ministry has appointed Mr. P. Govindan Nair, I.C.S., as special officer in charge of the oil industry in the public and private sectors. Mr. Nair, until recently, was Counsellor for Economic Affairs at the Indian Embassy in Washington.

Coal Targets Raised

The private sector of the coal industry submitted an expansion programme under which the total target of additional production for the third plan period worked out to 16.83 million tons. Following the sanction of a loan by the World Bank, the Government asked the private collieries to make a detailed appraisal of their demand. In doing so, they have been able to raise their target of additional production to 23.63 million tons. As the plan allocations are made on a yearly basis, the Government has asked the industry to go ahead with its programme. It is presumed that efforts will be made to secure foreign exchange for the additional 6.80 million tons in due course. Meanwhile, attempts are being made to raise the rupee finance to match the World Bank loan for the private sector of the coal industry. The National Coal Development Corporation has similarly raised its target of additional production by 2 million tons. The total third plan target of 97 million tons has thus gone up to nearly 106 million tons.

Power for Coal Industry

Meanwhile, the Government has set up a study team for assessing the requirements of electric power for the coal industry during the third plan. The team, with Mr. P. P. Agarwal, Joint Secretary to the Central Ministry of Irrigation and Power, as convenor, will also recommend what steps should be taken to meet the demand for power. Other members of the team are Mr. T. N. Idnani, Member (Utilisation), Central Water and Power Commission; Mr. Chhedi Lal, Joint Secretary to the Central Ministry of Steel, Mines and Fuel; Mr. A. Zaman, Coal Controller; Mr. Balwant Singh Nag, Adviser, Planning Commission; and Mr. V. Kalyansundaram, Director of Minerals, Planning Commission.

According to the terms of reference, the team will assess the power requirements of the coal industry, colliery-wise and year-wise; examine the present position of power supply; and suggest measures for increasing it to meet future needs, year by year, in the third plan period. The team has been asked to examine whether private licensees supplying power to collieries are using their full capacity, and if this is not being done, the reasons for it. The recommendations of the team will include revised allocations to various consumers of the D.V.C. supply, keeping in view the requirements of the coal industry. The team will submit its report within a period of one month.

The coal industry is concentrated mainly in West Bengal, Bihar and Madhya Pradesh. There are also

coalfields in Andhra Pradesh, Orissa and Maharashtra. At present, the demand of the industry is met by the thermal generating units it has installed, and by State Electricity Boards. The D.V.C. power system also supplies approximately 80 percent of the power requirements of collieries in West Bengal and Bihar. The study team which has now been constituted will review measures for matching power supply with the programme of raising coal in various fields in the country.

More Capital from Public

The Government, through the Controller of Capital Issues, is evolving a pattern for greater participation by the public in the capital structure of public limited liability companies. By an unwritten convention, the Government has insisted that at least 49 percent of the equity should be offered to the public even in an undertaking which secures foreign capital participation. It is claimed that, at least in urban areas, industrial shares are rapidly replacing gold and ornaments as a store of value. An average man no longer likes to put his money in land. This tendency is partly responsible for the semi-boom in industrial shares, it is stated.

Industries Fair

The Indian Industries Fair held in Delhi from 14th November, 1961, to 11th January, 1962, was the largest of its kind ever held in Asia. The Fair covered an area of 155 acres and contained more than 400 pavilions and stalls. Among the pavilions on the 30 miles of roads within the exhibition grounds, were 24 foreign pavilions, of which 18 were sponsored by foreign governments. The British contribution was a pavilion of 42,000 square feet, which cost the U.K. Government about £170,000 and which was its biggest effort so far at an overseas fair.

The purpose of the official participation was largely to enhance British prestige. Apart from the U.K. being India's best customer, it is extending co-operation and aid in many fields. British investment in private industry in India is paramount among overseas investments. This message was presented in comprehensible form at the fair. The central point of display was a group of products manufactured by over 70 firms either directly owned by British firms or with whom British firms have collaboration agreements. These products, brought from all parts of India, show the widespread nature of British investment in India and the contribution the U.K. has made to India's industrialisation, particularly over the last five years.

W. Bengal Power Supplies

The Planning Commission has agreed to the installation of one additional 75,000-kilowatt power generating unit in the Durgapur coke oven plant power-station of West Bengal, and to the procurement and installation of six 1,500-kilowatt package units. The decisions have been taken in the light of the report of the Sachdev Committee, which was set up to enquire into the causes of the recent failure of power supply in West Bengal and Bihar, and to assess the power situation in these States.

For Bihar, the installation of two 50,000-kilowatt units in Barauni, in lieu of the two 30,000-kilowatt units originally included in the third plan, has also been accepted. The Calcutta Electric Supply Corporation is going ahead with the installation of an additional 50,000-kilowatt unit, which had been approved earlier but has not yet been implemented.

The aggregate installed generating capacity throughout the country rose from 2.3 million kilowatts in March 1951 to 5.7 million kilowatts by March 1961. The increase in generating capacity during the five years of the second plan, despite foreign exchange and other difficulties, was almost equal to the total generating capacity installed up to March 1951. The installed generating capacity by 1965-66 is expected to be about 13 million kilowatts—an increase of nearly 125 percent in the five years, compared with 66 percent in the second plan and 48 percent in the first plan. The shortage experienced in the West Bengal area was attributed by the Sachdev Committee to two or three factors. These were the consecutive failure of power supply in Calcutta due to the inexorable growth of demand in the Calcutta area; the delay in the installation of a 50,000-kilowatt unit by the Calcutta Electric Supply Co., permission for which had been obtained earlier; and the delay in commissioning three 75,000-kilowatt generating units in the Damodar Valley Corporation area.

Newsprint Control Order

The Government of India has promulgated the Newsprint Control Order to regulate the acquisition, sale and consumption of newsprint in the country. The Order, which comes into force immediately, has been issued under the powers conferred on the Government by the Essential Commodities Act, 1955. It is laid down that no person, other than an importer, shall acquire newsprint except under an authorisation issued by the Controller, who will be the Chief Controller of Imports and Exports or any officer appointed by the Central Government. It has also been stipulated that no dealer in newsprint shall sell newsprint, unless the sale is authorised by the Controller.

Simultaneously, the Government has published an import trade control public notice outlining its decisions on the allocation of newsprint in the country. Considering the overall foreign exchange position and the availability of newsprint, and with a view to ensuring equitable distribution among all units of newspapers, it has now been decided that from April 1962 onwards, it will not be possible to meet all the demands of daily newspapers for additional newsprint on account of an increase in their circulation. In the case of daily newspapers with circulation of over 10,000 copies, the maximum of a 10 percent increase over and above the average circulation certified during the calendar year 1961 will be allowed. In the case of any daily with an average circulation of less than 10,000 copies, a maximum of 25 percent will be permissible.

Employees State Insurance

The rate of the employers' special contribution to the employees State insurance scheme will be raised, in the areas where the scheme has been implemented, from 1½ percent to 2½ percent from 1st April, 1962. The employers' special contribution in the non-implemented areas will continue to be at the present level—¾ percent of the wage roll.

London Market

PRICES FALL IN STOCK MARKET

GOOD CORPORATE NEWS LIFTS I. C. I.

London, 24th January.

THE stock market continued its recent improvement prior to the

week-end, but conditions subsequently deteriorated and much of the earlier improvement was lost. Business remained at a remarkably high level throughout. The demand was very selective earlier, but this imparted a firm appearance to the market as a whole as very little selling developed. The various items of adverse news had little effect on general firmness before the week-end, but subsequently they began to bear their influences more heavily on the market. The prospects of labour troubles developing out of the U.K. Government's wages policy and uncertainty concerning the general outlook were the restraining influences. Courtaulds scored a sharp rise on the increased bid from Imperial Chemicals but much of this rise was lost following profit-taking due to fears of Government intervention or that the bid would fail.

Imperial Chemicals, in contrast, lost ground on the increase in the bid terms and then moved up due to the I.C.I. chairman's favourable reference to profits and prospects. Gilt-edged securities had a quiet week and recorded very little change in spite of confident expectations that the British Bank rate would eventually be reduced. Property shares suffered a setback on fears of Government control of building development. Numerous good features appeared in industrials but an easier tendency developed after the week-end. Steel shares were depressed by discouraging annual statements. Gold and copper shares drifted lower, although finance house issues attracted some attention. Tins were quiet but most of the recent gains were held. Oils, rubbers and teas were generally quiet and fluctuated within narrow limits.

DURGAPUR STEELWORKS

SYMBOL OF INDO-BRITISH CO-OPERATION

Area of Site—
2½ Square miles
approximately 1,600 acres.

Covered area—
3,300,000 Square feet
(76 acres approximately).

Length of Works Boundary Wall—
7 miles approximately.

Total length of Rail tracks—
70 miles approximately.

Total length of Roadways—
16 miles approximately.

This giant Steelworks has been built by the combined efforts of British and Indian engineers. It is already contributing substantially towards the progress of national industries and transport.

BRITISH COMPANIES WORKING FOR INDIA

ing with private industry when they have liens on their old posts has been stopped, except in very exceptional circumstances. Some time ago, the Government used to make such appointments either on a token salary of Re. 1 or on full salary. It is thought that it is wrong in principle to have such officers in Government departments dealing with private industry who are themselves permanent employees of private firms. The action raises suspicion, even if it be unfounded, about the officers' independence and impartiality.

Any appointments which have already been made by the various departments are to be reviewed with the idea of discontinuing the arrangements as early as possible. Since, by their very nature, honorary appointments do not admit of the normal process of advertisement and selection, they have been excluded from the purview of the U.P.S.C. in consultation with the Commission. The appointments are to be made only in very exceptional cases. They are to be confined to obtaining the services of highly qualified persons and in clearly advisory posts, and not in any cadre post or existing post.

Trade Talks with Bulgaria

Trade talks between an official delegation from Bulgaria and the Government of India began here last week. The Bulgarian delegation is led by Mr. Dragan Draganov, deputy director in the Bulgarian Ministry of Foreign Trade. At present, there is a three-year trade agreement between India and Bulgaria, which was signed on 3rd March, 1960. Under the agreement, trade between the two countries is to be on a balanced basis, and payments are to be regulated through non-convertible Indian rupees. Over the past few years, India's trade with Bulgaria has been increasing. In 1961, it was estimated at over Rs. 1.12 crores both ways, against Rs. 56 lakhs in 1960.

Poultry Industry

The poultry industry in India is essentially a cottage industry, al-

though it has employment potentialities in rural as well as urban areas. During the second plan, five regional poultry farms and 269 poultry extension centres were established and equipped for the production of a nucleus stock of superior birds. During the third plan, it is proposed to establish three more regional poultry farms in addition to expanding some of the existing State poultry farms.

The adoption of mechanical means of multiplication and rearing has revolutionised the poultry industry all over the world. A sound poultry industry depends upon three basic requirements: (i) large hatcheries for the production and supply of breeding stock; (ii) the availability of compound poultry feed and feed supplements; and (iii) proper marketing facilities so as to provide remunerative prices to producers and supply quality products to consumers at reasonable prices. It is found that there has been a very good response all over the country to the idea of taking up poultry farming on a commercial scale. But the main handicaps are equipment, technical know-how and facilities for hatching, feeding and marketing. The Government of India has, therefore, decided to give assistance for foreign collaboration to set up farms, plants and factories. Collaboration in the following fields will be considered helpful: (1) manufacture of poultry equipment, such as incubators, feeders, waterers, brooders, starting and laying batteries, trapezes, poultry dressing equipment, electric candlers and graders; (2) poultry feed manufacturing plants; (3) commercial hatcheries and breeding farms; (4) broiler industry; and (5) poultry processing plants.

It is considered desirable to set up a composite plant, including a commercial hatchery, a breeding farm, a feed manufacturing unit and a poultry processing plant. The Government has recently sanctioned one such collaboration programme with Messrs Arbor Acres Farm, Connecticut, U.S.A., with an authorised capital of Rs. 25 lakhs on a 50.50 share basis. Under this scheme, it is proposed to establish two farms, one in Bombay and the other in Calcutta. It is expected that the farms will produce about 500,000 breeding stock of egg-laying and meat-type strains of poultry for further multiplication in the country. It is planned to breed the well-known Ventessa male bird in India. The possibility of Rockefeller Farms giving aid to India is not ruled out.

N.C.A.E.R. on Urban Saving

Since 1958, one of the major preoccupations of the National Council of Applied Economic Research has been a study of saving and its magnitude, saving patterns and behaviour, and attitudes to saving. Last year, a study was published, which incorporated estimates of saving in India at the aggregate level by studying separately saving in the household sector, the corporate sector and the Government sector. As far as the corporate and Government sectors are concerned, the data were as complete as might be expected. But in the household sector, the estimates could not be considered as firm; nor were there data as between urban and rural household sectors. The National Council, therefore, felt that it would be highly desirable to have an independent check by making a survey, on a sampling basis, of a number of households in the urban areas in the first instance.

The results show that urban household saving is about 14 percent of the household income (including saving in consumer durables). This, together with the saving in the Government and corporate sectors, lends support to the view that the overall saving in India cannot be anything less than 10 percent. "The Council

would, therefore, like to reaffirm its conclusion that the average rate of saving in India is now well over 10 percent." The survey shows that the urban income in India in 1960 amounted to Rs. 2,748 crores, or Rs. 445 per capita. With deductions for income tax, this comes down to Rs. 2,640 crores, or Rs. 428 per capita. Almost 50 percent of the urban income was derived from wages and salaries (employee compensation); about 36 percent from self-employment in business (including farming), professions, services, etcetera; 12 percent from rent, interest and dividends; and the balance represented transfer incomes, such as pensions, contributions, etcetera.

The income distribution of households, as revealed by the survey, was highly uneven. About 85 percent of the households had an income of less than Rs. 3,000 and owned 52 percent of the aggregate net income. The remaining 15 percent of the households had an income of Rs. 3,000 or more, and owned 48 percent of the aggregate income. The survey showed that income was fairly correlated with occupation, education, age of the head of the household and the number of earners a household. It was found that, on average, there were 1.5 earners a household, and that 40 percent of the urban families lived in their own houses. The aggregate gross saving was estimated at Rs. 453 crores, or 17.2 percent of the disposable income. The net saving (after deducting depreciation) was Rs. 362 crores, or 13.7 percent of the income. The share of the financial assets in the aggregate saving (like insurance, provident fund, liquid assets, etcetera) was almost equal to that of the physical assets (like house property, other property, durable goods, business assets, etcetera). The net increase in liabilities during the reference period of the survey was found to be Rs. 177 crores.

As in the case of income, savings were found to be unevenly distributed. Thus, only the top 15 percent of the households in the urban sector accounted for practically the entire amount of aggregate saving, while the remaining 85 percent of the households either did not save or dissaved. Among the occupational classes, those engaged in business, self-employed or in managerial, executive and administrative capacities, and also those engaged in professional and technical work, were the most important so far as saving was concerned. Saving preferences were found to be in the following order: first was investment in own business; next was housing; then Government securities and small savings; followed by contractual savings. Productive investments, such as in business, farms, life insurance, provident funds, liquid assets, shares and bonds, accounted for nearly two-thirds of the total household investment, while the balance of the investments was either wholly unproductive or relatively less productive.

The average propensity to save (of the urban households) was 13.7 percent of the disposable household income for the year 1960. The corresponding marginal propensity to save was 34 percent for all income classes, and 24 percent when the lowest and highest classes were left out. Also, for those families with about the same income in 1960 as in 1959 (expecting no change in their income during 1961) and with the lowest and highest income classes left out, the marginal propensity to save was found to be 23 percent. The aggregate study of saving made by the National Council of Applied Economic Research, using the time series data relating to the entire household sector, estimated the marginal propensity to save at 20 percent.

Scope for Taxation

This would mean that the marginal saving rate in urban India is higher

than for the country as a whole. Even at the present level and distribution of income, an increase in saving is possible by the extension of life insurance and provident funds, which at present constitute a small percentage of income but which have considerable scope for increase. The Government, it is pointed out, has a major responsibility in mobilising saving through higher direct and indirect taxation. In short, there is scope for further taxation. Reduction of wasteful expenditure in connection with weddings, ceremonies, etcetera, and reduction of debt incurred especially for consumption purposes, can also promote savings. It appears that a good portion of the savings are in less productive or unproductive forms. They can be channelled into productive forms by suitable measures to induce the households to do so.

A pilot study of rural saving in India was conducted by the National Council of Applied Economic Research in the last quarter of 1960 in 12 villages drawn purposively from eight States. This survey was basically intended to help devise appropriate methods and techniques for conducting a large-scale enquiry into the saving behaviour of households in rural India. The pilot study revealed a high degree of variability in the saving-income ratio as between villages. Of the 12 villages surveyed, three villages reported dissaving to the tune of 2 percent to 9 percent of the gross income. The positive saving recorded in other villages ranged from 2 percent to 13 percent, with the exception of two villages, which registered a saving-income ratio of nearly 40 percent. "It is neither possible nor preferable to hazard any guess as to the ratio of rural saving to rural income in India on the basis of the findings of such a small sample, but it appears that a crude estimate derived from the above data would point to an average net saving-income ratio of 5 percent to 6 percent for rural India," it is stated.

Using Furnace Oil

The Government of India is expected to announce shortly its policy for industries in general, and the cement industry in particular, with reference to furnace oil from coal. The ching to furnace oil from coal. The use of furnace oil will become possible only if its price at the factory gate compares favourably with that of coal. The cement industry welcomes the move because it would save storage capacity, provide an un-interrupted supply of fuel and be cleaner. It wants, however, to know the sulphur content of the furnace oil before it alters plant and machinery for the change-over.

The Government's plan is to retain the duty on furnace oil, but to reduce that on cement, the reduction being mopped up by the Government to create a fund from which the cement factories using furnace oil would be compensated to the extent of the difference between the delivered price of coal and that of furnace oil. A beginning will be made with three cement factories in Saurashtra, followed by some in Madras and then in Gujarat. The system—if it proves successful—may be extended to other industries. The Government hopes to import adequate quantities of furnace oil from Russia or other rupee-payment countries. An official announcement is expected shortly.

NAMES AND DATES

Mr. R. W. Baxter has been appointed Regional Information Officer in charge of British Information Services in eastern India, in Calcutta. Mr. Baxter is at present editor-in-chief of British Information Services, New Delhi. He will go to Calcutta about the end of March. Mr. Baxter will replace Mr. P. J. F. Storrs, who will go to a new appointment in the British Information Services in Ottawa, Canada.

London

T. U. C. Decides to Join Economic Development Body

(FROM OUR LONDON CORRESPONDENT)

LEADERS of the Trades Union Congress have decided to join the proposed National Economic Development Council. By nine votes to one, the T.U.C. Economic Committee decided last week to take the plunge. Its recommendation will go before the General Council when it meets this week, and it is almost certain to be carried. If the recommendation of the Committee is endorsed in full, three conditions will be put to Mr. Lloyd Chancellor of the Exchequer, namely: (1) That the T.U.C.'s six representatives on the Development Council will not be bound by majority decisions and will reserve the right to report back to the General Council on the activities of the Development Council; (2) that they will also reserve the right to raise any subject which seems relevant to the Council's work; and (3) that, in the T.U.C.'s view, wage restraint in isolation is not the answer to Britain's economic difficulties, and that any policy on incomes must apply fairly to all sections of the community. Mr. Frank Cousins and Mr. Robert Willis—two of the leading opponents of joining the Development Council—were absent from the T.U.C.'s recent meeting. Mr. Ted Hill was the only one who voted against the recommendation.

Output Index Up

The official index of industrial production has now been rebased on 1958, instead of 1954 and certain adjustments have been made to take account of fuller figures. The new series shows for November a 1 point recovery to 113 in the seasonally adjusted index for all industries. Since the index for manufacturing industry is unchanged at 112, the increase must have occurred in the remaining industries, including construction, gas and electricity. The November figure at 113 is the same as that for September, but is still three points below the peak level of 116 recorded by the new series for June, July and August. The index level at 112 for manufacturing industry in October and November is the lowest for any other month of 1961 and represents a six-point fall from the July peak of 118. Over the first 11 months of 1961, the adjusted index for all industries averaged 114, compared with 112 in the corresponding period of 1960.

The new index shows the industrial trend in a more unfavourable light than the old. While the seasonally adjusted November figure for all industries at 113 is 1 point up on October, the figure for manufacturing industries alone is only 112, the same as for October and 1 point below the January figure, which was the lowest of the year. Moreover, it shows a drop of 5 percent since July in manufacturing industry, compared with a drop of only 2½ percent in all industries. The difference is probably due to continued high activity in construction and the utilities. The new index, based on 1958, also shows that since that year the annual growth of industrial output has been even smaller than was indicated by the 1954-based index. With 1958 as 100, the average for the first half of 1961 is now only 115.7, instead of 116.5 as it would be with the earlier index.

Trade Gap Unchanged

First figures of the United Kingdom's trade in December contain few

surprises, the gap between imports and exports being scarcely changed since November. Exports, as yet, show no sign of the hoped-for upturn, but imports were also down. The December trade gap works out—on a seasonally adjusted basis—at £39 million, just £1 million less than the November figure, but more than £7 million below the monthly average of £46.5 million in 1961 as a whole. Both exports and imports, on the adjusted basis, fell last month, the latter declining to £350 million, the lowest figure since September 1959. Exports and re-exports, at £311 million, reached their lowest level since May, except for September, when the same figure was recorded.

On the "crude" basis of values recorded at the ports, December's trade gap was the smallest since April. At £27 million, it compared with £42.5 million in the previous month and £45.5 million in October. Imports and exports both showed a sharp seasonal drop, the former to

£338.5 million, compared with £374 million in November and the latter, including re-exports, to £311.4 million, against £332.3 million. A look over the whole of 1961 shows a considerable improvement in Britain's overseas trade, compared with the previous year. While exports rose by 3½ percent, imports fell by the same percentage, and the average monthly trade gap contracted from £72 million to £46.5 million.

Record Retail Sales

Trade was probably brisk enough during the Christmas season to raise retail sales to a record level last month. This is the conclusion from the U.K. Board of Trade's provisional assessment, which puts the December retail trade index at 118 (seasonally adjusted), compared with only 115 in October and November (1957 equals 100). But the Board warns that this sharp upturn does not necessarily mean a corresponding change in the underlying trend of sales. It may only

reflect some reaction from the slower spending last autumn, which in turn followed record late summer business. The previous sales peak was touched in July and August, when the index reached 117, just before and after the purchase tax rates were raised in the "Little Budget." In September, the index fell to 116 in spite of higher tax rates, and in the following two months it was a point lower at 115. The Board is treating the December figure of 118 with some caution, for it is known that first returns make exact estimates difficult. Inevitably, there are imperfections in the method of seasonal adjustment. Nevertheless, the Board says: "It is quite clear that December sales were significantly higher than in November."

As for the immediate future, the conclusion is the non-committal one that "it would be unwise to assume that this high level will necessarily be maintained in the coming months." Compared with a year previously, the value of December trade showed an increase of about 4 percent, compared with 5 percent in November (when the change was large because of specially low sales in November 1960) and 3 percent in September and October. Since late July, the retail figures have been fractionally higher as a result of the purchase tax increases which helped lift the index of retail prices from 114.6 to 115.7 in the month ended mid-August covering the "Little Budget."

GENERAL MANAGER.

ENDING THE SYSTEM OF CONTRACT LABOUR

By Mary Sur

AS far back as 1931, the Royal Commission on Labour condemned the contract system of employment of labour on regular work. "Whatever the merits of the system in primitive times", said the Report, "it is now desirable, if the management is to discharge completely the complex responsibility laid upon it by law and by equity, that the manager should have full control over the selection, hours of work and payment of the workers". Various subsequent Enquiry Committees appointed in different States have expressed the same view.

The contract system, where the labour contractor is himself an employee of the company, is obviously open to abuse, and it has declined in the years since the Royal Commission attacked it. The old *sardar* system in the jute mills, for instance, was gradually being replaced by direct employment, when the Jute Tribunal finally dealt it a death blow

in the award of 1948. Other industrial tribunals have ruled against it in individual companies, and the Supreme Court has upheld their right to do so if they come to the conclusion that employment of contract labour is unreasonable in the circumstances of the particular case. Now, however, a direct frontal attack has been made on the system in one of the country's major industries, namely coal-mining.

Mr. L. P. Dave, who constituted the single-member court set up by the Government to enquire into the question of contract labour in coal mines, has held that abolition of the system can be achieved without impairing productivity. He has recommended that in all processes directly connected with the raising and despatch of coal and the manufacture and despatch of coke, contract labour should be abolished as early as possible, and in any case not later than 30th September, 1962, except in seven categories. He has suggested that the industry should bring about this change in three instalments, or "slabs" the first by 1st March, the second by 30th June, and the last by 30th September.

Exempted Categories

The seven exempted categories are mostly labour engaged on intermittent and irregular work, such as the sinking of pits and the driving of inclines, dyke cutting and stone work underground. Rather surprisingly coal loading and unloading have been included in the exempted categories, but with the proviso that the principal employer shall engage a nucleus of wagon and truck loaders to whom regular work can be guaranteed, and the number of such nucleus should be reviewed quarterly. It is clear, therefore, that the principle has been accepted by the court that where work can be considered regular, engagement of labour through contractors should be abolished, and it should only be retained where work is of an intermittent or occasional character.

This ruling is in line with the conclusions reached at the last Indian Labour Conference. The Union Labour Minister in his opening speech at that conference admitted that total abolition of contract labour was not feasible, but urged employers to cut it out as far as possible, and, after considerable discussion, the tripartite conference ultimately agreed in principle that contract labour should not be used "where the work is perennial, where it is incidental or necessary to the normal work of the factory, where there is sufficient work to employ a considerable number of whole-time workers, and where the work being done in most concerns in the

particular industry is done through regular workmen".

Apart from the moral effect that the Dave award is likely to have on other industries, it contains some recommendations which, if implemented by the Government, will have a direct effect on the employment of contract labour everywhere. Thus, where it is not feasible to abolish contract labour altogether, Mr. Dave has suggested measures to ensure fair wages and conditions of employment to the contract labourers. He has recommended that the principal employer should either make payment of wages direct or remain responsible for seeing that wages are paid, and that payment should be made from the principal employer's office. For this purpose, he has suggested suitable amendments to the Payment of Wages Act, to enable a contractor's labourer to claim wages from the principal employer, and has also recommended that the definition of "employer" in the Industrial Disputes Act should be amended so that the principal employer would come under his definition in respect of workmen employed by a contractor. The representatives of both employers and workmen, who appeared before the court, agreed to these suggested amendments, so there is little doubt that the Government will act upon them, especially since it has received the approval of the Indian Labour Conference to the principle of reducing contract labour.

In certain directions, the Government has already anticipated the suggestion for placing further responsibility on the principal employer for the conditions of contract labour. Under the Employees' State Insurance Scheme, the principal employer is responsible for seeing that the contributions of contract labour are paid and that they receive their due benefits. An amendment in the Provident Fund Scheme Rules in 1961 has similarly made the principal employer responsible for contributions from and dues to contract labour.

Factories Act

If the Payment of Wages Act and the Industrial Disputes Act are to be amended as suggested, then some amendment will surely be called for in the Factories Act. For a long time there was doubt as to whether contract labour was covered by the definition of worker in the Factories Act, since this includes "persons employed directly or through any agency" on work incidental to or connected with the manufacturing process. The Supreme Court, however, last year ruled in the case of the State of Kerala v. Patel (V.M.) that the word "employed" in the definition denotes a relationship of master and servant, and that though the definition appears to be wide, it is in fact limited by the word "employed", and to be a worker under the Factories Act a person must have been employed by the factory. But it seems only fair that contractor's labour working in a factory should be assured of the same safety and welfare provisions as other labour, and to achieve this some amendment to the Factories Act definition is necessary, at least in relation to these provisions.

The definition of an employee under the Mines Act is already much wider than under the Factories Act. A person is said to be employed in

a mine if he "works under the appointment of or in the knowledge of the manager, whether for wages or not" on any mining operation or work incidental to or connected with mining operations. And the definition of "owner" in the Act includes "any contractor for the working of the mine or any part thereof".

In view of recent developments and possible amending legislation, employers who still engage regular labour through contractors must now seriously review their employment position and find out whether, according to the principles of the Indian Labour Conference, it is advisable to continue to employ contract labour. The system of recruiting labour through contractors may have had some justification in the past, but it is peculiar to colonialism and is no longer appropriate. It used to be argued that contract labour was more disciplined than directly employed labour. Such discipline—based on the fear of losing the job—is not at all in line with modern concepts of industrial management.

Certain work must, admittedly, be contracted out because it is not economic to retain workers on the payroll to carry out irregular or occasional work such as painting and repairs. Certain outside work, such as transport of goods, is also in many cases more reasonably given to a company specialising in this type of work. But these forms of contract are very different from contract labour employed through a contractor, who is himself an employee of the company, to work on regular jobs in the factory.

Largest Employer

The Government is itself the largest employer of outside contract labour in the country. In 1959 the Central Public Works Department employed on an average over 33,000 contract workers daily. But their conditions of employment are regulated through the contracts. That this has tightened control and improved the conditions of work of contract labourers is shown by the fact that in the C.P.W.D. report on the working of the fair wage clauses for the year 1959, the vast majority of the 5,000 irregularities detected by inspectors were technical, such as non-display of notices, whereas complaints of irregular deductions from wages numbered only 55.

Welfare facilities for contract labour, however, were in most cases reported by the C.P.W.D. as inadequate. This is as true in other industries as in Central public works. While the first step to improving conditions of outside contract labour must be to see that they receive their due wages and that no illegal deductions are made, it is also most necessary to provide for their health and welfare. The C.P.W.D. has model rules which are incorporated in their contracts. Private industry might likewise see that their contractors provide decent working and living conditions for their labour. There is no reason why, if the factory employer has to make welfare provisions for his own labour, the outside contractor should not have to do likewise.

In any amending legislation this point will have to be borne in mind, and some distinction will have to be made between the system of engaging labour through a contractor to do work in the factory which is incidental to the manufacturing process, and a contract which is made with an outside builder or transport operator to carry out a particular job which is outside the normal manufacturing process. The outside contractor should be considered as the employer of his own labour and responsible for their welfare. The factory owner can only be responsible for reasonably safe working conditions during the time when they happen to be working on his premises.

Jute

JUTE BUFFER STOCK AGENCY REGISTERED

A GREAT deal has been heard recently about the jute buffer stock agency, and it appears that at long last the registration and formalities have been completed. When the agency will start operating, however, is another matter. The object in setting it up is to buy jute and help stabilise prices at Rs. 30 a maund, basis Assam Bottoms. It is to be hoped that all sections of the trade and industry will be consulted before any line of action is definitely decided on. No one wants to participate in a farce, and there is a genuine fear among many in the trade that they may be presented with a fait accompli which harms their interests but does not to any appreciable extent benefit the cultivators.

The administration of the jute buffer stock bristles with difficulties, and many suspect that it will be persevered with only as long as it has any propaganda value for the coming general elections. Most of the cultivators this correspondent has been in touch with—except possibly in small pockets in Bihar—are quite happy about the return they have received. They express little concern about the present price of jute, as about 70 percent is already out of their hands and is lying with stockists. That is why so much jute has been on offer at below the minimum prices. Unless the authorities take a realistic view and change their ideas of floor rates, they will be condoning the resort to malpractices. Buyers cannot be expected to continue buying at prices higher than those at which the fibre is frequently being offered.

Good-quality Fibre

There seems to be a general impression among those who wish to out the trade and industry in order that all jute prices are low. This is not the case. In spite of the large crop, the supply of good-quality fibre is short of the demand, so its price is not low. There is a glut of low-quality jute—partly because of unfavourable climatic conditions at harvest time, partly because the crop was so large that the *ryots* could not handle it efficiently, and partly because jute was grown on land which was not suitable. When measures are adopted for purchasing jute, they should, therefore, be confined to the low qualities. To buy good-quality fibre would be to create an artificial shortage and force its price up to prohibitive levels, which would militate against the success of any scheme. Moreover, if purchases are confined to the low qualities, the authorities will be able to secure a larger quantity for a smaller outlay.

It is stated that the Central Government authorities are studying the possibility of exporting raw jute, for which, they say, there are purchasers abroad. It is to be hoped that the trade will take a very strong line against this, as the only type of jute in which overseas buyers would take any interest is that which is in short supply for the Indian mills themselves—that is, good-quality jute. One would have thought that the Government had learnt its lesson on the folly of exporting jute, having had its fingers burnt badly after the last episode in 1959 when exports were made through the S.T.C.

Purchase Quotas

The member-mills of the I.J.M.A. continue to suffer the burden of trying to stabilise the price of jute. In a Press release last week, the I.J.M.A.

indicated that during the seven weeks the jute quota scheme has been in operation, up to the week ended 13th January, the quota allocated to mills has amounted to over 4.7 million maunds. Against this, mills have actually purchased over 6 million maunds, or about 1.3 million maunds in excess of the quota. In the subsequent two weeks, quotas of 900,000 maunds and 1 million maunds have also been exceeded. The quotas issued have always exceeded the rate of imports on an all-India basis. This indicates the limits to which the I.J.M.A. members are prepared to go to support the market.

Concerted action by the mills has helped the position considerably, particularly since much of the jute purchased has been for early delivery, which has compelled balers to buy at once in upcountry centres to cover their sales in time. But, in recent weeks, with stocks mounting, much of the business concluded has been for forward shipment, and contracts up to the end of April have been reported. Most mills now have jute in stock, or purchased up to May, so they can no longer buy or pay for jute for earlier deliveries. Mills buying forward jute have in every case found that they have sellers over, which demonstrates the latter's eagerness for business.

In the absence of support from consuming markets, prices in the jute goods market tended to decline in the early part of the past week. There were, of course, intermediate fluctuations, and a fair amount of bazaar business was done. Although most mills were prepared to book their profits on forward sales, particularly since their jute position became so healthy, only a few buyers could be found. There was moderate business in specialties. Towards the close, the market has improved following foreign business in hessians, and local Government orders for heavy goods.

Raw Jute Arrivals

Arrivals of raw jute in Calcutta and mill stations during December and January amounted to 896,300 bales. Of 1961 amounted to 896,300 bales. Of 1961, 48,950 bales came from Pakistan this, 847,350 bales from India. The total was 58,350 bales more than in November 1961, arrivals from India being up by 61,450 bales and those from Pakistan down by 3,100 bales. Total arrivals for the period from July to December 1961 were 3,443,250 bales, made up of 238,400 bales from Pakistan and 3,204,850 bales from India. In recent years, total arrivals have only been higher on one occasion (July-December 1958), and, of course, the latest total exceeds the corresponding figure for the 1960-61 season by 736,850 bales. During the current season, arrivals from Pakistan have been 30,750 bales smaller than in July-December 1960, but the deficit has been made up by a large increase of 767,600 bales in the arrivals from India.

THE JUTE MARKETS

Manufactured Goods: The jute goods market was quiet at the opening last Thursday. Overseas buyers took little interest, so local speculators indulged in some bear-selling. Opening quotations for B Twills showed a fall of 75nP or Re. 1, and January shipment stood at Rs. 124.50—a premium of Rs. 7 over April-June. A similar situation existed in hessians, where 40in 10oz fell back to Rs. 53.75 in the near position and

Rs. 46.25 for forward shipment. The increase in the mills' production from 15th January added to the depressed state of the market, and up to the week-end, there was a steady decline in rates. Sacking, in particular, was very weak due to lack of overseas interest. But, after the week-end, business was confirmed in hessians with the Argentine and the U.S.A., and heavy goods steadied up in sympathy. On Monday, both sections of the market advanced by 50nP, but the undertone continued to be weak. Tuesday was a holiday and markets were officially closed. Opening quotations on Wednesday morning were as follows:

	January	February	Jan.-	April-
			March	June
40in. 7oz.	42.50	40.00	37.25	34.75
40in. 8oz.	45.75	43.00	40.00	37.25
40in. 10oz.	54.25	51.35	48.50	46.25
E Twills	122.25	121.50	119.50	117.50
Heavy Cees				
(Plain)	123.75	121.50	119.50	117.50
A Twills	153.00	151.00	148.00	144.00
Liverpools	148.00	141.50	138.50	135.00
Cornsacks	128.25	125.50	122.50	120.00

Raw Jute: Imports in upcountry markets showed a decline, but this

did not prevent raw jute prices from weakening. Reports of business below the minimum rates continued and most sellers were keen for ready business at almost any price. Mills took up their quota in full, but there was a tendency to go in for longer deliveries, and business was reported for March-April shipment. Conflicting reports about buffer stock operations at minimum prices caused the undertone to become a little steadier, and less jute was offered at cut rates. High-grade jute goods continued to be done at a premium, but much of the fibre offered in this category did not meet the mills' requirements. A labour strike in Cossipore caused an accumulation of wagons in the receiving centre, but there was little change in quoted rates. It was reported that mills had purchased much more than the quotas allotted to them since the inception of the quota system, and that purchases had far exceeded arrivals. Last week, all-India arrivals dropped to under 100,000 maunds a day.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills		
	Rs. a	Rs. a	Shipment
	100 kilos	100 kilos	
Assam	80.38	30.00	Feb.-Mar.
Northern	79.04	28.50	"

Assam Tossa	83.05	31.00	"

GOOD ENOUGH IS JUST NOT GOOD ENOUGH!

The work of standardization and certification is precise and exacting. Goods produced to standards qualify for carrying the ISI certification mark of the Indian Standards Institution.

Before, and even after, a licence for affixing the ISI mark on any product is granted, exacting tests and inspections are carried out at various stages of its manufacture. Certified goods are picked up from the manufacturers' works and sent to independent laboratories for testing. ISI inspectors constantly check whether the manufacturer is complying with required standards. Certified goods are also collected at random, from the distributor and the retailer, and tested for quality. Legal sanctions are available against abuse or unauthorised use of the ISI mark.

Nothing, therefore, is left to chance. With ISI "good enough" is just not good enough. For the interest of the consumer, as well as the good name of Indian industry, have to be protected.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in December, although quite satisfactory, did not seem to reflect the sharply increased buying in the Calcutta market recently. At an estimated 72 million yards, bag cut-up was 54.8 million yards and piecegoods deliveries 17.3 million yards, compared with 54.9 million yards and 16.7 million yards, respectively, in December 1960, which also totalled 72 million yards. The estimated consumption last year was 76 million yards below 1960, a decline of nearly 9 percent. U.S. spots and afloats last month increased sharply, totalling 18 million yards higher than at the end of November. At 237 million yards, 94 million yards were spots and 143 million yards were afloats. With heavy December shipments from Calcutta, trade sources expect that afloats would increase further. Appearing below are two tables which include the December figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (Million yard-)		U.S. burlap consumption (estimated in- dustry total) (Million yards)

THE FOREIGN JUTE MARKETS

FIBRE PRICES STILL FALLING

(FROM OUR DUNDEE CORRESPONDENT)

IN spite of the fact that the Governments of India and Pakistan are doing their utmost to maintain raw jute prices, it is evident that the declining trend has not been arrested. Sellers in Dundee are prepared to discount the Pakistani rates by some pounds a ton, in the face of dire threats from that country that the supplies will be cut off if they are known to have sold at less than the E.P.C. rates in Pakistan. The growers in the East consider that fibre prices should not be lower, but they seem to forget that the manufacturing

industry requires cheaper fibre as well as yarns to enable it to compete with substitutes.

Last week, the prices for most yarns and cloth in Dundee were reduced by £5 a ton. Hessian yarns were reduced from 18.07d to 17.49 a lb for C.H.W. 8 lbs cops or spools, in J.C.H. quality from 19.21d to 18.64 a lb, while 3 ply 8 lb J.C.H. twist is down from 21.13d to 20.56d a lb, and 24 lbs sacking weft has been allowed to remain unchanged at 13.96d a lb. Rove also remains unchanged. The cloth end of the trade is generally quiet. Manufacturers, especially spinners, are unwilling to sell in view of the uncertainty about delivery because the workers are still going slow. Hessian 40in. 10oz. is now between 14.87d and 15.25d a yard and 8oz. between 12.60d and 12.90d a yard.

THE PAKISTANI JUTE MARKETS

FALL IN FIBRE CONTINUES

(FROM OUR DACCAR CORRESPONDENT)

THE fall in prices continues in all sectors of the Pakistani jute and gunny market. The growers are now resisting the fall while overseas buyers are trying to force prices further down. The weakness in the loose jute market is attributed to the reluctance of balers to purchase fibre. Being unable to sell, they have reduced their buying substantially. Besides, the money position being tight, it is difficult for them to buy anyway. This slackening off of buying interest has weakened the market in upcountry areas. North Bengal, which is always the cheapest area, is resisting the fall in prices, partly because the vegetable crops are now coming in giving alternative work to growers. Although very little jute is coming into these areas, the shortage of wagons is helping to keep prices down. Both growers and brokers have suffered by the sharp fall in prices. It is, however, almost certain that arrivals will become so small shortly that local prices will not fall further. There may even be a rise in local prices, although this may not be reflected overseas.

No serious complaints have been heard about moisture. But good quality jute, which lately started coming in, has again disappeared. It is unlikely that one would see much of it during this season. There has been little or no activity in the pucca bale market, and prices quoted are nominal. It is apparent, however, that there is some potential buying interest in cuttings waiting for lower prices, since this mark has not come down to the same extent as long jute. But the dominant feature of the market is at present overseas buyers. The latter have been pleasantly surprised by the sharp fall in prices, and are now waiting for even lower prices. The question is: how long can overseas buyers hold out? There is a danger that some of them might feel that the bottom of the market has already been reached, so it is time not only to start buying again but for building up normal stocks, which the mills were unable to do during the last season due to high prices.

The time is approaching when the weather will once again play an important rôle in the market. Opinions about the size of the crop vary and this correspondent is not inclined to think that it is likely to be larger than 6.7 million bales. Whatever the size of the crop, however, rain in February which will give the growers a chance to prepare the land for the next crop, will have a bearish influence on the market. The arrival of the rain in March-April will also have a very serious effect on the market, depending on the time and the volume of rainfall.

Plantation Topics

MINIMUM WAGES IN KERALA NOT TO BE REVISED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

OFFICIAL circles say that the Kerala Government does not want to go ahead with its earlier proposal to revise the minimum wage rates for plantation workers in the State, since the National Wage Board is now prepared to give interim awards. If the State Government revises the wages, exercising its powers under the Minimum Wages Act, it is feared that it would amount to the undermining of Wage Boards. The State Government is, therefore, anxious to avoid this possibility and is apparently anxious to co-operate with the Wage Boards in their efforts to recommend a fair wage for plantation workers.

The background of the move for the revision of minimum wages in the Kerala plantation industry is briefly as follows. In the erstwhile Travancore-Cochin area, the minimum wages were fixed in 1952. The wages were divided into basic wages and dearness allowance, and the latter was linked to the cost of living index on a sliding scale. Minimum wages in the Malabar area

were fixed by the Madras Government in 1952. Subsequently, a dispute arose about the wages and it was referred to a special tribunal. The wage rates awarded by the tribunal were considered high by employers, especially because of the provision for the retrospective effect of the proposed wage structure. So the dispute continued. Finally, a settlement was reached in 1957, and acceptable wage rates were fixed. These rates happened to be higher than the rates in Travancore-Cochin. When the State of Kerala came into existence, two separate sets of wages were prevalent in the same State. A uniform rate was fixed by raising the Travancore-Cochin rates to the Madras level by a tripartite agreement in 1958. According to this settlement, the sliding scale fixed in Travancore-Cochin was abolished. Since then, the cost of living index rose substantially. There was also a demand from labour for the revision of wages in the plantation industry. At a meeting of the Industrial Committee on Plantations held

in Calcutta in 1959, it was decided to constitute wage boards for the tea, coffee and rubber planting industries. As the decision of the wage boards was not forthcoming even after a considerable lapse of time, labour in Kerala raised a demand for interim relief through a revision of the existing wages.

Tripartite Conferences

The Kerala Government attempted through a series of tripartite conferences at various levels to reach an agreement on this issue, but failed. So the labour unions served strike notices. Under the stress of the circumstances, the Government proposed to revise the minimum wages in the industry. It drafted some tentative proposals and placed them before the State Minimum Wages Advisory Board. The Board considered the proposals on 28th November, 1961, and decided to accept them as far as they applied to tea and rubber estate workers. The most important aspect of the proposals is the reintroduction of dearness allowance on a sliding scale on the basis of the variations in the cost of living index: 4nP for every ten points beyond 389 in the cost of living index is the dearness allowance recommended by the Minimum Wages Advisory Board. To get over the difficulty under the Payment of Wages Act, it was suggested that the payment for the current year might be on the basis of the cost of living average for the previous year. If

worked on this basis, a tea estate worker would get a minimum wage of Rs. 2 to Rs. 2.08 a day, against the existing wage of Rs. 1.72 and Rs. 1.57 recommended by the Tea Wage Board under its recent interim award. The basic pay would remain unchanged.

Decision Opposed

It is understood that the planter member on the Minimum Wages Advisory Board alone opposed the Board's decision to accept the proposals placed before it by the State Government. His argument was that there was a commitment on the part of labour not to raise any demand for wage increases pending the decision of the wage boards. He urged the Advisory Board to defer consideration of the Government's proposal until the decisions of the wage boards were known. It was after this meeting of the Minimum Wages Advisory Board that the National Wage Board for Tea re-

commended an interim relief of 15nP in the daily wages for tea estate workers. The Rubber Wage Board is also considering the problem of giving an interim relief. It had its first sitting in Madras in the second week of January. It is understood that employers' representatives offered to give the 15nP increase in wages (the increase recommended for tea workers) to rubber estate workers in anticipation of an increase in the statutory price of rubber. Labour representatives were, however, unwilling to accept this offer, since they felt that if the Kerala Government revised the minimum wage rates according to its own proposal which was subsequently endorsed by the Minimum Wages Advisory Board, the workers would definitely get more than 15nP. Further consideration of this issue has been postponed to 8th February. Meanwhile, some of the labour leaders met the Kerala Labour Minister to know whether the State Gov-

ernment would honour its commitment to labour that its powers under the Minimum Wages Act would be exercised and that the wage rates would be revised. The Minister's reply was not encouraging, according to them.

The communist-controlled A.I.T.U.C. thinks that the revision of minimum wages, as proposed by the State Government, will be more beneficial to workers and that the revision of minimum wages is obligatory on the part of the State Government. It is, therefore, thinking in terms of starting an agitation soon to press the Government to honour its commitment. A.I.T.U.C. leaders claim that other labour unions also share their view on this matter.

Wages in Coffee Estates

The trade union leaders, who were adamant in their demand to get the minimum wages in tea and rubber estates revised immediately, were willing to take a sympathetic

attitude towards coffee estates. They seemed to realise that if the burden on coffee estates was increased by way of higher wages, many would face a crisis. They agreed to a postponement of wage revision in coffee estates. It was decided with common consent in the last meeting of the Minimum Wages Advisory Board that the wage proposals for coffee estates might be considered after ascertaining the views of the interested parties.

ATTAINING TEA TARGET IN THIRD PLAN

CUT IN PRODUCTION COSTS NEEDED

(BY A SPECIAL CORRESPONDENT)

IT is interesting to note that Mr. I. F. Morris, chairman of the Indian Tea Association, said in his address to the Doars branch of the Association last week that "there was no possibility of achieving the 900 million lbs production target and selling the extra tea at remunerative prices unless producers were given adequate practical incentives by way of reduced taxation". From the proceedings of the meeting, it is clear that the planting community has made representations to the Government on the importance of reducing production costs. The urgency of this move was clearly demonstrated by the statistics on India's tea exports published in last week's issue of Capital.

Fall in Exports

Tea exports form one of the main props for the success of India's third plan. Yet the authorities are allowing this country to lose exports to the U.S.A., which fell from 35.3 percent of the latter's tea imports in 1950 to 21.5 percent by 1960. To Canada, the quantity exported fell from 23.8 million lbs to 15.3 million lbs, and the trade with Australia has also been lost. For the purpose of earning foreign exchange, all these markets are vital to India. The chairman of the Tea Board admitted in the past the need to increase the expenditure on propaganda to raise the consumption of tea because of the importance of earning foreign exchange. Mr. Morris, however, said that "no progress appears to have been made in dealing with the problem of rationalising taxes." To make Indian teas more competitive in overseas markets, Mr. A. S. Bam, chairman of the Tea Board, who also addressed the meeting, referred to the proposal for acquiring surplus tea garden lands by the West Bengal Government. This move is not likely to benefit the tea companies. Although some reduction in fertiliser prices has been announced, the expenditure on education, roads and communications looks like rising sharply.

Tea Output Rises

Crop figures so far received from the major producing countries show the tea output around 1,321 million lbs, compared with 1,206 million lbs in the last season and 1,214 million lbs in 1959—an increase of 107 million lbs over the three-year period (the 1961 figures were affected by drought in north India) or rather less than 9 percent in two years or 4½ percent a year. The same districts produced 1,087.4 million lbs in 1950 and 1,376.8 million lbs in 1960 or an increase of 26½ percent during a decade—2.65 percent a year. The rate of advance has, therefore, quickened. Tea is also being grown in many new areas, such as Indo-China, Japan, Taiwan, the Congo, Malaya, the Union of South Africa, Mozambique, Mauritius and in some South American Republics, such as the Argentine and Brazil. So there are

good grounds to expect ample tea supplies for some time to come.

On the other hand, since mid-November the downtrend in tea prices has been checked for the time being, and tea auction marts show an improving enquiry for all grades at firm to dearer rates. A few weeks ago, the weekly sale average in Calcutta was down at Rs. 3.78 a kilogram, but at Sale No. 30 held on 8th and 9th January, the price was up at Rs. 4.33 a kilogram for export teas and Rs. 4.90 a kilogram for internal ones. Producers are still offering freely, and about 75,000 packages a week continue to find a ready market for export. This somewhat more encouraging outlook may be due to stocks being low in outports because of the recent restricted buying on a falling market which now has to be made good.

Regulation Scheme

Since April 1933, the international tea regulation scheme was administered by the International Tea Committee under the terms of the International Tea Agreements entered into by the representatives of producing countries with the approval of each and all of their respective governments who passed the necessary legislation. So the scheme operated effectively in each country. The first agreement—entered into by producers in India, Ceylon and what was then the Netherlands East Indies—provided for the regulation of exports from, and control of extensions in, these three countries for a period of five years from 1st April, 1933. A second agreement was entered into for a further period of five years from 1st April, 1938, and during the second World War was extended up to 31st March, 1948. Kenya, Uganda and Tanganyika up to March 1947, Malaya up to the time of the Japanese occupation, and Nyasaland up to February 1949, also participated in the scheme.

Interim Agreement

An interim producers' agreement—signed by representatives of the industry in India, Pakistan, Ceylon and Indonesia and continuing the main features of the previous agreements—was in force from 1st April, 1948 to 31st March, 1950. An agreement maintaining the scheme in operation was concluded by representatives of the same four countries for a period of five years ended 31st March, 1955. Thereafter, it was not renewed, but an agreement has been reached between the Governments of India, Pakistan, Ceylon and Indonesia and the industry in the four countries for continuing the International Tea Committee.

It is, however, doubtful if anything on these lines can ever be revived because there are already too many growers in the world. Besides, with the opening of the European Common Market, further developments are on the way. For example, a tea development agreement between the six E.C.M. countries and the Government of Ruanda Urundi (Central Africa) seems to foreshadow still further competition for established tea exporting countries. Above \$1 million is being provided for this development programme through the European Development Fund, and further finance will be made available by the Government of Ruanda Urundi. The present programme is to plant 500 hectares.

Serious Competition

While this competition will be serious, it may also prove helpful because the promoters anticipate that tea will be admitted to the European Common Market on a much lower tariff basis. As it will take four to five years before large crops can materialise, there would appear to be a fair opportunity for the producing

countries to get off to a good start in the new markets.

CALCUTTA TEA SALES IN DECEMBER

PRICES RECOVER ON STRONG DEMAND

THREE sales were held in December, numbered 26, 27 and the centenary commemoration Sale No. 28. The feature of all sales during the month was the general recovery in prices in the face of a strong and general demand. However, teas containing stalk and fibre and possessing plain liquors did not show a marked recovery, although "teas for price" ruled dearer, say Messrs. Carritt Moran and Co. Private Ltd in their monthly tea market review. Although easier in the first sale, plain descriptions were dearer in subsequent auctions with fannings being a strong feature. Although prices tended dearer, there was some irregularity in the orthodox Assam category. Better liquoring descriptions were keenly competed for, and were sometimes appreciably dearer. Medium broken grades generally sold at or only a little above the previous sale rates. All fannings, however, particularly bright liquoring OFs, were in strong demand. An improved demand for C.T.C. descriptions resulted in dearer prices; this trend was generally more marked for better liquoring teas, but in the last sale of the month, mediums met with keen competition. Secondary grades with bright liquors sold well but, where a poor leaf also produced an indifferent liquor, prices were irregular. The prices of leg-cut teas improved. Darjeelings sold well and prices advanced with quality. Whole leaf grades—particularly the cheaper varieties—ruled dearer. Tip was also dearer.

The standard of leaf and liquor of Darjeeling teas showed a seasonal improvement, with a few early cold weather invoices being offered in the second half of the month. Leaf appearance of Assam teas was fully average. Orthodox teas were generally of a better style than in the previous month, but stalk and fibre was still present in the lower grades. Liquors were a little brighter. C.T.C. manufacture teas were the same in leaf appearance as in the previous month, being rather brownish with a number of invoices containing fibre.

Liquors showed a slight improvement. There was a slight decline in orthodox leaf appearance of Doars and Terai teas, but liquors were of an average standard. C.T.C. and leg-cut teas were rather brownish, and many invoices contained fibre. Liquors were average for the time of year. A satisfactory standard of leaf appearance was maintained, with a general improvement in liquors.

The Internal Market

There was a fair demand for the 1,253 chests of leaf on offer. The small quantity of green tea, sold in the second sale, met with a good demand, but a decline was noticed in the last auction. There was a total of 76,559 chests of dusts on offer in the three sales held during the month. The demand was good and general throughout. Medium C.T.C. descriptions sold well, although a slight decline was noticed for inferior quality. In the last sale of the month, however, the decline was halted. Good C.T.C. teas met with a useful demand, and they increased in value in the last two sales. Fibrous descriptions met with a fair enquiry and sold quite well, but at irregular rates. Although the brighter liquoring orthodox teas met with much interest in the market, the remaining varieties in this category declined in value and closed below the opening quotations. Legg-cuts found an irregular market, and while an easier tendency was noticed in the second sale, the demand hardened in the third. These teas closed on a dearer note.

	1961-62		1960-61	
	A kilo Rs. nP	A lb Rs. nP	A kilo Rs. nP	A lb Rs. nP
Sale No. 26 Clean Plain Dust	3.85	4.78

Sale No. 28 Clean Plain Dust	3.83	4.83		
Medium Assam C.T.C. Dust	5.78	5.63		

(Inclusive of zonal excise duty.)

Export sales up to and including Sale No. 28 totalled 1,473,942 chests at an average price of Rs. 4.83, compared with 1,336,163 chests at an average price of Rs. 5.58 for the

same period of the previous season. Internal sales at 5,864 chests of leaf and 517,040 chests of dusts (average prices Rs. 4.01 and Rs. 4.82) against 9,914 chests and 453,692 chests respectively (against Rs. 4.41 and Rs. 5.29) of the corresponding period of the previous season.

COCHIN TEA SALES

At Sale No. 4, 338,000 kilograms of tea were on offer. There was a good but irregular demand. Plain low mediums and medium brokens were steady while similar fannings were up to 10nP dearer. Good mediums were easier. The prices of best liquoring grades were firm, depending on quality.

AIR-INDIA AND I.A.C. CARRY MORE TRAFFIC

(FROM OUR NEW DELHI CORRESPONDENT)

AIR-INDIA International and the Indian Airlines Corporation carried more passengers, cargo and mail during the first half of 1961 than during the same period of 1960. Other highlights of the progress of civil aviation in India during the half-year are: Air-India International introduced Boeing 707 on the India-Japan and India-Nairobi routes, and increased the frequency of its services to the U.S.A. from two to five a week. A new aerodrome was opened in Tulihal and a new terminal building at the Varamasi aerodrome was constructed. Besides a hazard beacon was installed on Parasnath Hills.

Indo-Swiss Air Talks

India-Switzerland air talks are now being carried on. India has an air agreement with Switzerland, based on the Bermuda model and signed in 1949. Since then, India has revised her air agreements with all countries except Switzerland. India's existing pattern of agreement is to vest in herself the right of pre-determination not only of service frequencies but also of the number of

"fifth freedom" passengers carried by an airline.

Viscounts for I.A.C.

The Indian Airlines Corporation has purchased four second-hand Viscounts from the Norwegian airline, Fred Olsen. It is a semi-barter deal arranged through Banwarilal and Company, which has taken the Corporation's out-of-use fleet of *Heron*s and *Vikings*. All the four aircraft are due to be delivered by the end of this month. This will increase the Corporation's Viscount fleet to 14.

Financial Worries of Airlines

Almost all international airlines are facing financial difficulties. Their passenger traffic has not kept pace with the increase in capacity, due to the introduction of jets. According to the 1961 survey of *Radar*: "North Atlantic airlines, their seat capacities swollen by new jet fleets, face an uncertain prospect for the peak summer season as advance bookings fail to keep pace with the capacity increase. While there are important exceptions, officials of many trans-

CAPITAL, 25th January, 1962.

atlantic carriers admit that the volume of early bookings is not greatly above last year's at this point; in some cases it is even lower." But the carriers still believe that the chances are good, for the traffic is expected to rise to fill a profitable percentage of their expanded seat capacities.

Prospects for B.O.A.C.

B.O.A.C.'s plight, which is due to overcapacity, is no less grave, although it was foreseen four-and-a-half years ago. It was clear that B.O.A.C. had ordered too many aircraft, even assuming an average annual traffic growth of 15 percent. "In 1962, if traffic grows at the average world rate, B.O.A.C. will find itself with 35 percent too much capacity, even assuming that all *Britannia 107s* and *DC-2Cs* are sold by 1962", *Flight* says. The fact that the traffic growth has fallen considerably short—particularly during last year—has aggravated what might in any case have been a serious situation.

B.O.A.C.'s managing director, Sir Basil Smallpeice, tells staff in the current edition of *B.O.A.C. News* that the Corporation is "more than £8.5 million worse off" than in the budget prepared last March. A loss of £2.6 million in revenue is attributed to the strike in July. Revenue since April has been below the budget estimate by as much as £6,250,000, largely due to the shortfall on the Atlantic route. The worldwide passenger load factor has been 52 percent, compared with 58½ percent budgeted. The only cheerful news is that B.O.A.C.'s expenditure has not exceeded the budget estimate. The analysis from which the above extract is taken predicted "70 percent too much B.O.A.C. capacity" in 1965, assuming the disposal of all the Corporation's *Britannia 107s* and *DC-7Cs*. Since then, B.O.A.C. has ordered an additional three Boeing 707s and has changed an order for 35 V.C.10s to include 20 Super Standard, and has ordered ten more Super V.C.10s in addition. "B.O.A.C. will have to find truly prodigious amounts of traffic if results more disastrous than those in 1961-62 are to be averted."

B.O.A.C.-M.E.A. Pool Agreements

B.O.A.C. and Middle East Airlines have renewed their pool agreements covering services between London and Beirut and the Persian Gulf area for another year.

Jet Services of Air-India

Air-India International will introduce Boeing 707s on its Sydney, Djakarta and Moscow routes next May, following delivery of the last two aircraft on order. The service between Madras and Djakarta will be operated initially with a Comet IV to be leased from B.O.A.C. until improvements are completed at the Madras airport to permit handling of big jets. All of Air-India International's nine Super-Constellations will have been transferred to the Indian Air Force by May 1962.

New Pool Agreement

Air Ceylon and the Indian Airlines Corporation have reached agreement in principle on a pool operation between Bombay and Colombo. The Corporation now operates daily services between Bombay, Madras and Colombo and Air Ceylon between Colombo and Madras. Under the projected agreement, Air Ceylon would retain the Colombo-Madras segment and the Indian Airlines Corporation would operate the Madras-Bombay services.

Operating Helicopters in Pakistan

New York Airways will survey East Pakistan to determine the feasibility of operating helicopters under an agreement with Pakistan International Airways and Pan American World Airways.

Commodity Markets

BRITISH TEXTILE REVIEW: A GIANT COMBINE

THE "glamour" of synthetic fibres has somewhat obscured the fact that about four-fifths of the U.K.'s production of man-made fibres is still in the form of viscose and acetate. Courtaulds is, of course, the dominant producer of these fibres. Its output of acrylic fibre is substantial and growing. It owns equally with Imperial Chemical Industries the capital of British Nylon Spinners, which is at present the only producer of nylon in Britain. Courtaulds has recently absorbed British Enka, which was the second-ranking British (but Dutch-controlled) producer of filament rayon yarns. Such is the group (with important interests also in paint, chemicals, packaging, etcetera) that I.C.I. proposed to integrate in its vast chemical-paint-metal-textile combine. If Courtaulds is merged with I.C.I., this premier British industrial group will control about nine-tenths of the man-made fibre output of the U.K., for I.C.I., besides its big interest in nylon, is the sole producer of Terylene polyester fibre. It is developing also Ultron polypropylene fibre, which is expected to be an important addition to the range of man-made fibres.

The proposal to merge the two biggest man-made fibre groups has been criticised as contrary to the principles of competitive trading. The remaining independent producers—Kirkless, Lamsil and two enterprises in the James Nelson group—cannot put up an effective opposition. But the merger was evidently planned on the international plane. As a producer of man-made fibre, I.C.I. with Courtaulds would be bigger than its principal European competitor, Rhone-Poulenc/Rhodiaceta, but not quite as big as its principal American competitor, Du Pont. At a press conference at which the proposed merger was discussed, the chairman of I.C.I., Mr. Paul Chambers, emphasised the advantages enjoyed by the huge integrated groups in the United States and Europe and implied that economy of research, development and marketing was necessary to make the British industry fully competitive against such opposition. Foreign-based competition in the U.K. market is by no means inconsiderable. The American-owned Chemstrand Company in northern Ireland is a major producer of acrylic fibre: its Acrilan is in direct competition with Courtaulds' Courtelle. The Dutch-owned British Enkalon Company—planned likewise to operate from northern Ireland—will challenge the domestic monopoly of British Nylon Spinners in the nylon trade.

Expanding Trade

Montague Burton is another big group (smaller, of course, being specialised) which is planning internationally. Mr. Lionel Jacobson, chairman, announced in December that Burton would establish on the Continent a multiple-store tailoring organisation on the same lines as that which has succeeded phenomenally in Britain. The Continent has no organisation comparable with the group which is the British wool industry's biggest single customer, and Mr. Jacobson presented a vista of expanding trade; for Burton operates on much narrower profit margins than are normal on the Continent. The "multiples", incidentally, are still increasing their share of the U.K. market, as they can combine the styling of first-class designers and cutters with low pricing. It may be through such organisations that the British wool industry can most effectively develop its export trade. They are obviously suitable

outlets for British cloth and British made-up goods. But their foreign trade will not be confined to British materials, so the British wool industry must still exert itself to provide the best possible products at the lowest possible prices. (In Britain itself, the proportion of Italian cloth in suit-ings is considerable.) The growth of the "multiples" abroad may benefit the wool trade in general rather than the British industry. But it can benefit equally such man-made fibre as Terylene and Courtelle, which, blended with wool, are used increasingly in clothing.

U.K. Cotton Goods in Europe

Some observers believe that the cotton industry is overoptimistic concerning its prospect in the European Common Market if Britain becomes its member; they think that the competing power of, particularly, Dutch industry has been underrated. However, the chairman of the U.K. Cotton Board, Lord Rochdale, addressing a gathering in Manchester recently, insisted that the participation in the European Common Market would, on the whole, benefit the British industry. He admitted that more Continental specialities would enter the U.K. market, but he observed: "For the first time in their lives, our own salesmen will encounter a group of major markets whose standards of living compare with our own where tariff barriers are being lowered, instead of being raised". Yet most of Lancashire's ideas on the European Common Market seem to be focussed on its protective character, in relation to non-European goods. No European cotton industry can compete with the Asian industries in the ranges in which they specialise, if specialisation is an appropriate term to use for a trade which is becoming more and more general. Britain is the one country into which these goods are admitted freely (although subject to voluntary restraints), and Lancashire sees the Common Market organisation as a shelter against these free imports.

However, the big surplus of cotton goods which developed in the U.K. last year seems to be attributable to imports from Europe rather than from Asia. The Asian goods are genuinely low

cost, in the sense that their prices are based on low wages, but many of the European goods have obviously been uneconomically priced. The Spanish industry, which has been accused of "dumping" its goods on the U.K. market, has been persuaded to accept a scheme for voluntary limitation of its exports, similar to those negotiated with the Asian Commonwealth industries. The system of importing raw cotton has also been discussed. The chairman of the Manchester Cotton Association, Mr. W. Williams, said at the annual meeting last month

that there was no longer room for two raw cotton trade associations catering for a small trade. "Both the Manchester and the Liverpool Cotton Associations are mere shadows of what they were", he said, recalling the pre-war era when they imported more than 3 million bales of raw cotton annually. "The real importers today are the spinners." Mr. Williams felt the need of a single efficient association, open to spinners and merchants and agents, to fulfil the requirements of the diminishing industry.

WHOLESALE PRICE INDEX FALLS

THE official wholesale price index (base: year ended March 1953 = 100) receded by 0.2 percent to 122.6 during the week ended 30th December, 1961, compared with 122.8 (revised) for the earlier week. The index was lower by 0.4 percent and 1.3 percent, respectively, when compared with that of a month ago and

the corresponding week of the previous year. The monthly average for December 1961, worked out to 122.8, against 124.3 (revised) for November 1961 and 124.6 for December 1960. The annual average for 1961 stood at 125.8, compared with 122.9 (revised) for 1960.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to December 1961. As compared with November, the De-

cember Index for Food shows a drop of 7 points, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 291, 588 and 308 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 3 points during December 1961.

Compiled and constructed by the Statistical Department of "Capital".

important beginnings

In December 1911, Bihar acquired the status of a separate province. This marked the dawn of a new phase in the history of this ancient state.

The birth of the new province synchronised with another epoch-making event. In December 1911, shattering the silence of the jungle hamlet of Sakchi, as Jamshedpur was then called, the newly-built Tata Iron and Steel Works roared into life and produced the first cast of pig iron. The commissioning of India's first iron and steel works helped to put Bihar on the industrial map of India and to set the country on the path to economic maturity.

In the course of fifty years, with the steel works as its nucleus, Jamshedpur has grown into a major industrial centre in India and the second largest city in the fast-developing State of Bihar...a city where industry is not merely a source of livelihood but a way of life.

GOOD DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 32, held on 22nd and 24th January, there was a good demand for the 49,177 packages on offer at the Export auction. Plain broken sold readily around last rates, while similar Fannings were fully firm and sometimes dearer. "Tea for price" was dearer. Better liquoring Assam orthodox B.O.P.s sold well, but rates were sometimes a little below last. Medium B.O.P.s were firm and often dearer. Orthodox Fannings were a strong feature and were dearer, depending on quality. C.T.C.s were irregular; the best with autumnal quality were firm to dearer but the remainder in this category were up to 10nP easier. Medium and secondary grade C.T.C.s were also irregular and generally a little easier.

Quotations	1962
Clean Plain Pekoe	Rs. a kilo 4.00 to 4.20
Plain B.P.	3.55 to 3.65
Plain Fannings	3.90 to 4.20
Medium Assam C.T.C. B.P.	5.10 to 5.40
Medium Assam C.T.C. Fgs.	5.10 to 5.40
Best Assam C.T.C. B.P.	5.60 to 5.90
Best Assam C.T.C. Fgs.	5.80 to 6.20

(Quotations are inclusive of excise duty.)

At the Internal Sale, the demand for the 25,661 packages of Dusts on offer was good and general. There was strong enquiry for bright liquoring C.T.C. Dusts, but the plainer types were somewhat irregular and generally easier. Fibrous descriptions continued to sell well. Orthodox teas met with good support at up to 10nP below last rates with the small powdery types generally firm. Legg-cut teas were once again keenly competed for, and realised useful prices.

Quotations	1962
Plain Orthodox Dust	Rs. a kilo 3.80 to 4.40
Medium Assam Dust	4.20 to 5.00
Legg-cut Dust	4.60 to 5.20
Medium Assam C.T.C. Dust	5.60 to 6.10
Good Assam C.T.C. Dust	6.50 to 7.00

(Quotations are inclusive of excise duty.)

The 410 cases of Leaf teas on offer in the internal sale were absorbed at irregular rates.

FREIGHT MARKETS ACTIVE

THE Chinese charterers continued their activities in accepting vessels for foodgrains from British Columbia and fertilisers from the Adriatic ports at the unchanged rates of 48s 6d and 64s 3d, respectively. They also fixed a few vessels of 12,000 deadweights on time charter. The Baltic Exchange Chartering Committee accepted 62s 6d for foodgrains from the Pacific to the east coast of India, which is 7s 6d above the rate they indicated during end-December 1961. In the Indian ore market, a few fixtures have been concluded for February shipment, Bombay to Northern Range at \$(U.S.) 8, Bombay to Poland at 46s, Madras to Holland at 43s 6d. According to unconfirmed reports, three or four fixtures have been concluded for carrying ore from Marmagao to Japan and Trieste. Rice charterers have fixed four vessels for February-March shipment to Ceylon at 41s, and they are in the market for shipping 30,000 tons of rice during the March position. The Government of India has accepted 52s f.i.o. and stowed for 10,000 tons of bagged ammonium sulphate from Rostock to Cochin and Madras, 1st to 15th February. Three more handy-size vessels have been fixed for carrying coal to the Indian coastal ports; Calcutta-Bombay at 45s, Calcutta-Madras at 40s, all with the terms of f.o.b., owners paying for trimming and discharge.

COMPANY AND PUBLIC NOTICES

THE DURBHANGA SUGAR COMPANY, LIMITED

NOTICE

NOTICE is hereby given that the Fiftieth Ordinary General Meeting, being the Annual General Meeting, of The Durbhanga Sugar Company, Limited, will be held at the Registered Office of the Company at Lohat, on the 28th day of February, 1962, at 10.30 A.M. for the following purposes:—

Dalmia Iron & Steel Ltd.	15-2-62	2 p.m.
State Bank of India	27-2-62	4 p.m.
Durgha Sugar Co. Ltd.	28-2-62	10-30 a.m.

DIVIDENDS DECLARED OR PROPOSED.—Attock Oil Co. Ltd.—1 sh. (Int.) per £1 unit stock, free of U.K. tax; Scindia Steam Navigation Co. Ltd.—60nP per share, subject to tax; Rallis India Ltd.—8½ p.c. (o), subject to tax; Associated Battery Makers (Eastern) Ltd.—15 p.c., subject to tax.

LINSEED FIRM

The market was firm in the past week, but business was negligible because arrivals were small. Crushers were keen buyers each day. The oil but sellers were reserved. The oil market was steady and prices firmed up. Local buyers were in the market daily for ready and forward deliveries due to high prices of other vegetables. Business was on a small scale. Millers were not keen to do much business as seed supplies were short. The oilcake market was steady.

STATE BANK OF INDIA
NOTICE

THE Seventh Annual General Meeting of the Shareholders of the State Bank of India will be held at the Bank's Local Head Office at Apollo Street, Bombay, on Tuesday, the 27th February 1962, at 4 P.M. (Standard Time) for the transaction of the following business:—

To receive the Central Board's Report, the Balance Sheet and Profit and Loss Account of the Bank made up to the 31st December, 1961 and the Auditors' Report on the Balance Sheet and Accounts.

P. C. BHATTACHARYYA,
Chairman.

Calcutta, the 19th January, 1962.
28th Paus, 1883 (Saka).

Belgian manufacturer's agent located in Brussels wishes to meet in Belgium, Holland, West Germany or France Indian businessmen to help them making proper contacts and after their departure, follow and check the selling or buying negotiations they may have started.

BIRDS
are
stepping
up
it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

STEEL
PRODUCTION
SOARS
BY 425%
AT MUKAND

We reckon our production in 1960-61 to be 69,552 tonnes of rolled products and 5,624 tonnes of castings. In other words a rise of 48% over the previous year. In 1951-52 MUKAND employed 1,064; in April 1961—2,306. Over the past ten years production figures have soared—13,615 tonnes of rolled products and 704 tonnes of castings in 1951-52; and 425% more in 1960-61.

	57/58	58/59	59/60	60/61
	(Rs. in lacs)			
CAPITAL	51	51	71	61
Depreciation provided to date	32	36	41	50
Profits retained in business to date	25	35	45	57
Profit for the year	19	30	31	53
Dividend for the year	5	5	8	10

MUKAND manufactures high grade steel products—bars, rods and castings. Presently an expansion programme is under way. It will cope with the growing flux of big orders—like the one placed by the Railways with MUKAND in October 1961 for 4,862 sets of Centre Buffer Couplers valued at Rs. 1,14,00,000.

MUKAND provides India's new and growing industries with the quality components that they must have.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O., Po., F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve and other Funds	Acreage under Tea	Outturn and Average Price per Kg./lb. realised for crop	Estimate	NAMES	Accounts Closed	Net Profits including taxation	Dividends per cent	Paid-up per Share	Latest Market Quotations as available until

A Weekly Journal of Commerce, Industry and Finance
WITH WHICH IS INCORPORATED
THE INDIAN FINANCIAL REVIEW

Vol. CXXXVIII No. 3695

CENTRAL bankers are by tradition tight-lipped men. Not often before, therefore, can one of them have broached so delicate a subject—relations with the Government—with such information, tact and authority as Mr. H. V. R. Iengar did in his address to the Commerce Graduates Association, the Democratic Group and the Progressive Group in Bombay last week. The address constitutes a fitting climax to a distinguished, if sometimes controversial, career since Mr. Iengar's translation from the Central Finance Ministry five years ago. Critics may say that it is unprovocative in the simplicity of its basic theme: that the effectiveness of a central bank depends to a large extent on the confidence it enjoys in its exchanges with the Government. They may, perhaps unfairly, attach significance to the fact that Mr. Iengar should have reserved this particular theme for his valediction to the public barely six weeks before he retires from high office. None of this, however, detracts from the fact that although the basic theme may be simple, its elaboration is not. For illuminating the nature of the intercourse in ideas and decisions between the Reserve Bank and the Government, Mr. Iengar's speech will be a "must" for future students of Indian banking history. It is notable for its candour, limited though it may be by the Governor's situation and responsibilities. The times are changing, and so are traditions, including the traditions of silence in central banks. Mr. Iengar's speech is testimony that the change is not for the worse.

objective of monetary policy would traditionally have been to maintain the stability of the currency. But the nature of the economic policy chosen has been such as to make it at times recklessly expansionist. Mr. Jengar gave little idea of how an adjustment has been reached with such a fundamental dichotomy of objectives in recent years. He merely prescribed three general principles for a satisfactory working arrangement between a Government and a central bank. The first is that the Government must have confidence in the central bank and its governor; in turn, the central bank must be conscious of the Government's wider commitments and ultimate responsibility. The second is that the cordiality of the relationship should not suffer if the governor is forthright in expressing his views, even to the point of being considered "difficult." And the third is that the Treasury should not interfere with the operational or administrative responsibilities of the central bank, as long as the general policy pursued by the latter is in harmony with the Government's economic objectives.

As a generalised statement of principles, what Mr. Jengar said was unexceptionable; and it is good to know that the Indian Government and the Reserve Bank have got along so well that "so far no directives have actually been issued" by the former to the latter. But it would have been interesting to hear at whose cost the accord has been maintained; in other words, whether there has been a genuine give-and-take on both sides, or whether the Reserve Bank has usually been the only pliable party. In specific terms, some would say that maintaining the value of the rupee would have been among the major preoccupations of the Reserve Bank. While it is to be complimented on its success in having persuaded the planners to restrict deficit financing during the third plan,

timidity may have been responsible for the lack of protest while deficit financing was being recklessly continued through the greater part of the second plan. Mr. Tengar is entitled to the modest satisfaction he chooses to express about the spirit of compromise on both sides. But the suspicion will remain that greater firmness on the part of the Reserve Bank might have served the country better on such fundamental issues of policy.

Nobody suggests that a Government and a central bank should engage in what one of the Reserve Bank's mentors once called a "running dog-fight", whenever they happen to disagree. Even on crucial questions like deficit financing, violence in argument is unnecessary. But it is still permissible to doubt whether, in recent years, the Reserve Bank has ever differed with the Government in the forthright manner that Mr. Tengarr rightly claims to be its privilege. That differences of opinion have existed, one need not doubt. But they have been deducible only from the most muffled of undertones in reports and speeches. In the process, the public has often been deprived of the benefit of the Reserve Bank's expert opinion. What is worse, the Reserve Bank has often lost by default the valuable support it would have got for many excellent ideas, had they been more clearly stated and more widely known. The times are changing so that central banks, apart from their more technical responsibilities of handling money and exchange, are beginning to be recognised as having certain educative functions too. Those functions can be performed only if the banks exercise in practice the independence—albeit qualified—which they in theory claim. As far as the Reserve Bank is concerned, it has so far made no more than a vague beginning in this direction.

The point is illustrated by certain significant remarks in Mr. Iengar's speech. Looking into the future, he indicated that four areas of conflict might develop—or, as he more diplomatically put it, "four areas in which . . . the need for accommodation of ideas may arise between the Government and the Reserve Bank." The four are: (1) interest rate policy; (2) deficit financing; (3) how

to handle sub-standard banks; and (4) the policy for financing co-operative institutions. Of all these sectors, perhaps the only one where the Reserve Bank's views are clearly known is deficit financing; and the reason may be that it is the only one where, at the moment, they happen to coincide with the Government's. On the policy for financing co-operative institutions, the Reserve Bank has declared itself somewhat less categorically. And on the question of interest rates and sub-standard banks, very little indeed is known about what either the Bank or the Government proposes to do. Admittedly, interest rates on bank advances to the private sector are being jerked up artificially; and sub-standard banks are being merged with stronger ones. But these are mere expedients, not policies. Nobody knows whether,

WHEN FIGURES CAN LIE

A CONTRIBUTOR to our recent *Annual Review* may have surprised some readers by pointing out (page 49) that industrial production statistics in Russia, on the one hand, and in western countries and India, on the other, are essentially incomparable, because the former are gross and the latter net. This might seem to be a minor detail of the statisticians' art, but in fact it makes quite hazardous any comparison of growth rates in Russia and the democracies—and such comparisons are nowadays a staple of political discussion. The issue of the monthly bulletin of the European Economic Community that appeared at the same time as our *Annual Review* contains a study of this very question by the director of the Common Market's statistical office. Professor Rolf Wagenfuhr. Asked what he thought of Russian economic statistics, Wagenfuhr replied: "In the first place, we must get rid of the idea that the Russians are bad statisticians or that they cheat. On the contrary, they are in the lead in the development of certain theories, such as the theory of probability for example, or the theory of 'linear programming'. The difference between their statistics and ours is a difference of needs and of concepts. In the Soviet Union, statistics are meant to be used for planning; in our countries they are generally meant to provide information for the State and other people. So the point of departure is different. Secondly, general ideas and methods are different. This is especially the case with statistics on industrial production, which play a capital rôle in the question of growth rates. We in the West take net industrial production; for each industry we count only the value added by that industry, without several times over the same product; this gives us a net figure.

"The Russians, on the contrary, add up the products of all industries. In the case of cotton textiles, they count first the yarn, then the fabric, perhaps then the treated fabric and finally the piecegoods that are made from that fabric. This is what they call gross industrial production. They do this in order to see all the detail of the results of their planning and in order to have an overall view of all their industry. So the problem for us is to make comparable statistics produced by these two quite different methods. The first conclusion we can draw is that in an economy that is progressing rapidly and which is always seeking to break up production processes into stages and then join them together only in the last stage, which is the finished product, the Russian system yields industrial production indices which considerably over-estimate the growth rate, in comparison with western indices based on net industrial production".

In other words, and to stick to the illustration of the cotton textiles industry chosen by the professor, if the Indian mills introduced a new stage into the treatment of fabrics—say, a new process to make cloth crease-resistant—all that would be added in the Indian index would be the "added value" of that process, the extent to which it made cotton textiles more valuable. But if the Russian mills did the same thing, their index would rise by the total value of all the cloth passing through that process, because their statistics count the same product over and over again regardless of how many processes it passes through. The professor is correct to point out that

once the process of using fly-flappers on sub-standard banks has been completed, the Reserve Bank has any particular pattern of national and regional banking in mind. Nor has any clear idea been given about how it would wish to correct the present-day distortions in the interest rate structure that are largely its own creation. Most people would readily endorse Mr. Iengar's dictum that "quite often what matters is not the exercise of power, but restraint in its use." They would also agree that, where a central bank's relations with the Government are concerned, the dictum applies equally, with the word "independence" replacing "power". But they may still feel that independence in theory is no independence at all; if it exists, it must be seen to exist, especially on major issues of banking and monetary policy.

the Russians do this without any intention of cheating; they have their own reasons for handling figures this way. Moreover, this method would make no difference to a calculation of growth rates if all products were passing through the same number of processes every year. But in fact one of the features of industrial progress is that the number of sub-processes, special treatments, finishing operations and the like is constantly multiplied, as part of the increasing division of labour. This increasing complexity of the production process must be very significant in the present phase of Russian development, where a powerful basic industry is being refined to meet more varied consumer needs. So all statements about Russian industrial growth have to be converted into net figures before they can be compared with democratic performance.

How to do this, since the Russians give us no information about added values? There are a number of ways of doing it, but all are arbitrary; so it is as well to realise that any comparable figure for Russian expansion contains an element of guesswork—and our statisticians know that our methods of calculating industrial production already are sufficiently approximate not to warrant the sacred reverence with which politicians and laymen are apt to regard them. Wagenfuhr chooses to estimate Russian industrial growth by following the index for steel consumption, on the grounds that there is a close relation between use of steel and the expansion of total industrial production. The crudity of the method is obvious; no statistician in India or the West would consent to replace our present, highly sophisticated industrial production index numbers with the mere figure for steel consumption. Yet no one has a better method than Wagenfuhr's to apply to the gross Russian statistics. The point is worth pondering when we hear prophets forecast the future of the world by juggling with comparative growth rate statistics!

At all events, what results does the professor attain with this method? For the period 1956 to

1959, instead of the 38 percent increase in gross industrial production indicated by official Russian statistics, he gets a 26 percent increase in net industrial production. The Common Market in the same period achieved a 16 percent increase, but with a population that rose only slowly, whereas the Russian population expanded very quickly. Thus, on a per capita basis, the Common Market was 21 percent ahead of Russia in 1956, but in 1959 it was 33 percent ahead. So much for the tale of spectacular wealth-creation under communism, the "overtaking" of capitalism, and so on. True, in the same period U.S. industrial production actually declined by 3 percent (for reasons which President Kennedy has decided to attack), so that both Russian and western Europe moved nearer the American figure. For the future, both Russia and western Europe, however, have a long, long way to go before they can equal American performance, on a per capita basis. Taking account of the different demographic evolution of these regions, it appears that in 1972 the Common Market's population (not counting Britain or other candidates for admission) will be 180 million, the U.S.A.'s 203 million and Russia's 250 million. Therefore, reckoning industrial production per capita, Wagenfuhr ventures the following table:

Year	Common Market as % of U.S.A.	Russia as % of U.S.A.	Common Market as % of Russia
1956	46	38	122
1965	62	57.60	104.110
1972	68	53.63	107.127

Clearly, by 1972 (which is already farther ahead than we can seriously pretend to foresee) no one will have overtaken anyone else, though certain differences will have been reduced. Of course, if we accept the communist philosophy, which emphasises less the personal satisfactions (per capita production) than the total political power (total output regardless of population) that economic progress brings, then we will note that Russia will constitute a very big unit by 1972. Its total output will be about 70 percent of American, while the Common Market's will be 60 percent. In fact there is no earthly reason why we should abandon our democratic, humanist conviction that what matters is personal happiness, and start totting up the total power that the State can marshal. But if we did choose that power-based attitude, it would suffice to point out that by 1972 Britain's total production will no doubt have to be added to the Common Market's. And if we are thinking of total economic power in order to calculate the ability to make war or to aid developing countries, then of course all the western figures—American, Common Market and British—have to be added together, because in these matters they have a common approach. Neither relatively (i.e., on a per capita basis) nor absolutely (as an economic unit set against its opponents), then, does Russia seem in view of surpassing anyone, once we cut gross industrial production back to net.

BLUNDERING GIANTS

WHEN the President of Britain's Board of Trade, Mr. Frederick Erroll, requested the chairman of Imperial Chemical Industries and Courtaulds to discuss with him the proposed acquisition of Courtaulds by I.C.I. he could not threaten legal action to obstruct the biggest merger in Europe's industrial history. The U.K. has no anti-trust laws comparable with the U.S.A.'s. But the question had arisen whether the Government could stand aloof from such a transaction, involving two of Britain's biggest combines. This intended merger is different in kind, as well as in degree, from previous moves to consolidate British industry. Imperial Chemicals with Courtaulds would nearly monopolise production of man-made fibres in Britain; it would occupy a dominant position in the chemical and the paint industries; and it would be extensively interested in metals, packaging materials, and various other products. Consolidation of the man-made fibre industry (principally synthetic fibres—

nylon, Terylene, Courtelle) was the main purpose of I.C.I.'s proposal, and it is in this category that the enlarged group would be nearly a monopoly.

The proposal has raised the question how far the consolidation of British industry can be allowed to go. It is the most spectacular attempt to reorganise British industry and trade into bigger units, and it has swollen the problem to a crisis. But the problem itself is familiar; for mergers have already created (or are in process of creating) immensely strong groups in the food and drink, newspaper and magazine, glass-container, footwear, and other industries. While Courtaulds has accused I.C.I. of trying to monopolise the fastest-growing sector of the textile industry, I.C.I. has argued that this sector should be vertically integrated (because making the raw materials and spinning the fibres into yarn are complementary processes requiring continual interchange of experience), and also that the industry cannot afford the extravagance of duplicated re-

search when it is competing with the giants of the U.S.A. and continental Europe.

Either of these arguments could be applied to other industries of advanced technique; and both may be valid, for the fibre and for other industries. But the implication of these arguments is disturbing, for they suggest that industry cannot compete effectively on the international plane if it is organised competitively on the national plane. Mr. Paul Chambers, chairman of I.C.I., uttered some relevant thoughts at the recent luncheon of the American Chamber of Commerce in London. He was concerned with co-ordination of industrial effort, by some mode of planning and forecasting, rather than with the financial and managerial structure of industry, but his awesome spectacle of "blindfolded giants blundering about all over the place" in ignorance of the activities of their competitors seemed particularly relevant to his Company's bid for its rival.

The idea that private industry's research and development should be co-ordinated is now widely accepted in Britain, but the idea that such co-ordination should be achieved by concentration of industrial power is widely rejected. The Government is in an awkward position. It is committed to the idea of efficiency, and it is committed—at least theoretically—to the idea of free competition; and in Mr. Chambers's view, these ideas may be mutually incompatible. Doubts about the Government's resolve to maintain free competition arose when the Monopolies Commission recommended that the biggest tobacco group, Imperial Tobacco Company, should relinquish its big holding of shares in its nearest rival, Gallaher. The Commission has no power to enforce its recommendations, but the Government could have applied com-

pulsion. Instead, it allowed Imperial Tobacco to retain the controversial holding. It is possible, however, that in this case the Government was influenced by the thought that if Imperial Tobacco sold the shares the principal shareholder in Gallaher would be American.

Political opponents are now insisting that the Government adopt a firmer attitude towards financial transactions that concentrate industrial power in a few hands. They argue that the whole question should be investigated, that the economics of the problem should be clarified, that the law should be strengthened to enable the authorities to intervene in any development that seems to be against the public interest. Yet the debate over I.C.I.-Courtaulds has demonstrated how difficult it may be to combine free competition with efficiency. It is undeniable that research on a particular problem done by two or more firms independently involves some waste of effort; and the same objection must be raised against multiplication of products of similar character. Yet huge organisations are not necessarily efficient. Critics say that I.C.I. itself, even without Courtaulds, is too big to operate with maximum economy and enterprise. And it is questionable whether any body of private individuals should be in a position where they can influence the whole economy. The fact remains that British industry is being consolidated, and it is certainly being strengthened by the process. Amalgamations are beneficial at least up to a certain point—where they approach monopoly. But it is said on the London Stock Exchange that the shares that may particularly attract a bidder are those of the second-ranking company in an industry; for acquisition of that company by the biggest would effectively subdue competition.

Current News and Comment

A.V.B. Works in Durgapur

The A.V.B. heavy engineering works in Durgapur will be formally inaugurated by Dr. B. C. Roy, Chief Minister of West Bengal, next Tuesday. The construction of this modern industrial plant and housing colony on a 700-acre site has been completed in only two years. Equipped with the most up-to-date machine tools, the A.V.B. works will be one of the largest engineering units in Asia. A.V.B. Ltd brings to India the varied knowledge of three leaders in industry—the Associated Cement Companies Ltd, Vickers Ltd and Babcock and Wilcox Ltd. These enterprises have joined together in establishing a modern heavy engineering works to manufacture cement-making machinery, steam-raising plants, pressure boiler plants and heavy equipment for mining and other industries. The manufacture of A.V.B. products will be carried out in four workshops, two machine shops and one forge shop. The shops have been designed to allow for progressive expansion in the future. The works comprise a structural plating shop, a tube shop, two vessel shops, an X-ray bay, a test-room, a stores building and the works offices.

Among the modern machine tools is a 3,000-ton vertical hydraulic plate-bending machine, capable of bending five-inch thick steel plates employed in the manufacture of high-pressure boiler drums, atomic heat exchangers, and pressure vessels required for the fertiliser, chemical and oil refining industries. This equipment will make it possible to manufacture steam-raising plant in the high-pressure range for the first time in India. The 22-foot vertical borer. Among the pressing equipment is a 1,000-ton heavy duty dishing and flanging press and an 800-ton plate edge curving press. Considerable welding equipment—including automatic equipment of the latest type—has been installed, so that the most modern fusion welding techniques for steel may be employed in manufacturing various products. A.V.B. will also produce cement-making machinery, for which orders have already been received. The machinery will be manufactured according to the designs developed by A.C.C. and Vickers, whereas specialised

items will be manufactured according to the designs of the Fuller Company of America.

Besides, A.V.B.'s contribution to the manufacture of steam-raising plants for thermal power-stations will be substantial. To ensure that industrial steam-raising plants give the optimum performance, it is necessary to "tailor-make" them to suit varying local conditions and the type of fuel to be used and, in certain cases, to make supplementary use of waste products as fuel. This calls for vast experience, careful analysis and the employment of special designs, as well as excellent manufacturing facilities. Under the third plan, the installed power generation capacity is proposed to be raised from 5.8 million kilowatts to 12.8 million kilowatts. A substantial portion of this additional power is proposed to be obtained by installing thermal plants for which the Government has set a target of Rs. 35 crores of equipment a year by 1966. In this field also, A.V.B. can draw on the vast technical knowledge of the U.K. partners and the manufacturing resources available in its own shops to supply equipment. A.V.B. has already received its first orders from the Maharashtra State Electricity Board. Four Babcock radiant-type boilers fired by automatic spreader-stokers will be installed at the Khaperkheda power-station, near Nagpur. These boilers, which will cost over Rs. 2 crores, will double the power output of the Khaperkheda power-station. An order for a similar type of boiler has also been received from Korba, Madhya Pradesh, for increasing the capacity of the Korba power-station. The value of this order is Rs. 50 lakhs. A.V.B. also expects to secure an order for eight 60-megawatt high-pressure boilers. The value of this order will be about Rs. 12 crores.

More about Scindia Steam

The tone of the shareholders' comments at the annual general meeting of the Scindia Steam Navigation Company on 24th January reflected their disappointment with the Company's working results. Apparently, the note of subdued optimism which characterised the chairman's speech, an advance copy of which was circulated about a week

before the annual meeting, left the shareholders cold. Many made the point that in view of the declining fortunes of the shipping industry, the Company should branch off into new lines. Some said that the coastal services should be discontinued because they were unremunerative and had led to the accumulation of losses. Others even went to the length of suggesting that the Company had better be sold to the Government. In making such a suggestion, what they had in mind was perhaps the fact that against a book value of over Rs. 37, the Rs. 20-paid share of the Company is quoted barely around Rs. 13.

The chairman, Mr. Dharamsey M. Khatau, counselled patience. He said that "you cannot sell the Company, nor can you shut it down." He reminded the shareholders that since shipping was in the nature of a public utility, it was not easy to discontinue coastal services. The management was trying to persuade the Government to adopt a policy which would place the industry on a sound footing, and that was all it could do. He seemed optimistic about the outcome of Mr. R. G. Abhi's enquiry into the structure of coastal freights. The Maharashtra Government had already agreed to give a subsidy to the Bombay Steam Navigation Company to enable it to continue the Konkan services. Mr. Khatau pointed out that with Scindia Steam's joining the Conference covering the India-Pakistan-U.K.-Continental trades, its working on the overseas routes should show better results. As a result of joining this Conference, the Company will be able to save on operational costs since every ship would be assured of full cargo both ways. Another advantage of the Conference was the system of pooling, under which the earnings of the member-lines were to be shared according to fixed ratios. Cut-throat competition would be avoided. Mr. Khatau revealed that Scindia Steam's share in the total earnings was fixed at 30 percent for the U.K. area and 39 percent for the Continent.

Replying to a question whether there was a possibility of an increase in dividend for the current year, the chairman said that it would depend upon the profits. The Company's earnings from freight and passenger traffic, during the five months ended November 1961, amounted to Rs. 6.85 crores, against Rs. 6.98 crores in the corresponding period of the previous year. Depreciation had been fully provided for and there were no arrears. The income-tax assessment had been completed up to 1957. A sum of Rs. 63 lakhs still remained unprovided for development rebate reserve. The Life Insurance Corporation held 230,000 shares in the Company. The management was considering plans for the diversification of activities of the workshop. The chairman pointed out that it was not advisable that the shares of the subsidiary concerns should be issued to the shareholders of Scindia Steam.

Larsen and Toubro Diversifies

In spite of the recent marked setback in equity prices, the shares of Larsen and Toubro have continued to hold remarkably steady around Rs. 40.50 on sustained support based on the Company's growth potentialities. Larsen and Toubro is expanding its activities which are likely to involve a fresh capital outlay of over Rs. 50 lakhs. It has sponsored a new enterprise known as the Audco (India) Private Ltd in collaboration with Audco Ltd—a subsidiary of the well-known Birmingham firm of Serck Ltd—for manufacturing lubricated plug valves. The new enterprise will have an authorised capital of Rs. 50 lakhs—all in equity shares of Rs. 100 each—of which Rs. 12 lakhs is proposed to be issued. This is to be subscribed equally by Audco and Larsen and Toubro. The latter proposes to take over Tractor Engineers which has secured from an affiliated enterprise the manufacturing business of track parts and a transfer of an industrial licence to manufacture track parts for 2,000 crawler track type tractors, besides several other facilities. These include the lease of 13,711 square yards of land in Sion, Bombay, with factory building and the installed plant and machinery owned by the Government, machinery and machine tools valued around Rs. 24.5 lakhs, besides an import licence for raw materials of the value of Rs. 10.6 lakhs. Tractors Engineers has an issued capital of Rs. 7,000 in seven equity shares of

Rs. 1,000 each and is held by only two members. In purchasing the shares of Tractor Engineers and fulfilling its contractual obligations with its "affiliate firm" for purchasing the facilities and assets of that firm, Larsen and Toubro will have to provide initially about Rs. 18 lakhs for capital goods and Rs. 22 lakhs for raw materials. The production of track parts is expected to yield a fair margin of profit, so the directors consider the investment to be advantageous to Larsen and Toubro. The affiliated firm of Tractor Engineers will get a fixed annual fee of Rs. 2 lakhs for providing guidance and help. The directors of Larsen and Toubro have convened an extraordinary general meeting of the shareholders on 15th February to approve of the Company's investment in Tractor Engineers and Audco (India) Ltd.

Associated Battery Earns Less

The ordinary shares of Associated Battery Makers (Eastern) Ltd have declined to Rs. 34.50, because the taxable ordinary dividend has fallen below the market's expectations. In spite of a rise in sales from Rs. 2.06 crores to Rs. 2.18 crores, the profit has declined by Rs. 6.5 lakhs to Rs. 45.57 lakhs for the year ended August 1961, due to the rise in production costs. A sum of Rs. 7.47 lakhs (against Rs. 7.79 lakhs) has been provided for depreciation before arriving at the profit figure. A taxable ordinary dividend of 15 percent has been declared. It is covered more than two-and-a-half times and offers a yield of 4.3 percent at the present price. For 1959-60, an interim taxable ordinary dividend of 15 percent was paid on the share capital of Rs. 50 lakhs, and the final dividend was 10 percent, taxable, on the increased share capital of Rs. 1.18 crores. The dividend for 1960-61 has been paid on the increased share capital after the issue of rights shares.

Out of the profit for 1960-61, taxation is allocated Rs. 21.50 lakhs (against Rs. 23.77 lakhs), fixed assets replacement reserve Rs. 3.99 lakhs (against Rs. 4.07 lakhs), development rebate reserve Rs. 69,937 (against Rs. 1.51 lakhs) and general reserve Rs. 3 lakhs. There is a carry-forward of Rs. 8.24 lakhs, against Rs. 8.73 lakhs brought in. The directors say that sales show a small but promising rise. The subsidiary Company—Chloride and Exide Batteries (Eastern) Ltd—continues to be a useful marketing organisation.

More from Rallis India

There has been steady support for the shares of Rallis India Ltd around Rs. 153 for some time. The confidence is likely to be reinforced by the satisfactory results produced for the year ended August 1961. The good effect of Rallis India's diversification of activities has begun to show. There has been considerable expansion of activities in the industrial field. Ralliwolf has worked satisfactorily, and its output has been used as far as practicable. It has declared a maiden dividend. Plans have been prepared to expand its activities further. The results of Rallifan have not been satisfactory, since its working was hampered by the transfer of the plant and equipment to a new factory. There has been delay in the introduction of the new model which is expected to be placed on the market before the end of this year. Ralli-Hoyland has reached the stage of profitable production. The Teddington Chemical Factory has had a satisfactory year. The turnover of Hemalatha Textiles has increased, and the profit has risen considerably. Ralli Chemicals' factory is likely to start production soon. The business of Boehringer-Knoll is expanding and the profit is rising. It is expected to do much better when the factory starts production within a few months.

Rallis India has increased the taxable ordinary dividend from 4 percent to 8½ percent. It is covered more than two-and-a-half times and offers a yield of 5.6 percent at the present price. The profit has risen from Rs. 48.11 lakhs in 1959-60 to Rs. 54.55 lakhs in 1960-61, after providing Rs. 3.99 lakhs (against Rs. 4.02 lakhs) for depreciation. Taxation absorbs Rs. 30.11 lakhs (against Rs. 41 lakhs), development rebate reserve Rs. 13,500 (against Rs. 17,000), general reserve Rs. 5 lakhs (the same) and contingencies reserve Rs. 2 lakhs. The carry-

forward is Rs. 4.36 lakhs, against Rs. 4.49 lakhs brought in.

Angelo Brothers Earns More

The profit of Angelo Brothers Ltd has shown a rise of Rs. 9 lakhs to Rs. 16.03 lakhs for the year ended August 1961, although sales declined from Rs. 2.01 crores to Rs. 1.62 crores. The improvement is due to higher operational efficiency. The decline in turnover is due to two factors. Firstly, China has not bought the commodity for a long time. Secondly, foreign buyers have been cautious due to the fixing of minimum export prices. The directors say that the business was interrupted for some time by the delay in fixing the current minimum export prices. The competition in foreign markets has increased. Trading results up to now are reasonably satisfactory, but the situation is still fluid and liable to change.

A taxable ordinary dividend of 22½ percent, including a bonus of 10 percent, has been declared. It is covered more than two-and-a-half times, and offers a yield of 9.7 percent at the present price of Rs. 23.19 a share. The profit has been arrived at after providing Rs. 98,921 (against Rs. 1.03 lakhs) for depreciation. Taxation absorbs Rs. 8.60 lakhs (against Rs. 7.30 lakhs), development rebate reserve Rs. 31,034 (against Rs. 6,526) and general reserve Rs. 50,000 (the same). The carry-forward is Rs. 2.09 lakhs, against Rs. 2.23 lakhs brought in.

Structural Engineering to Expand

The chairman of Structural Engineering Works Ltd, Mr. A. D. Shroff, said at the annual general meeting that the management is considering the question of raising finance for the expansion schemes. No decision has yet been taken whether fresh capital will be in the form of an equity issue or convertible bonds or loans. But Mr. Shroff assured the shareholders that this would be done in a manner which would entail minimum cost to the Company and impose minimum burden on the shareholders. The expansion plans will involve a capital outlay ranging from Rs. 1.5 crores to Rs. 3 crores. Structural Engineering proposes to manufacture Cochran boilers and penstocks which alone would cost about Rs. 90 lakhs. Some of the machinery required for the project has already been received. Structural Engineering has obtained a licence to set up a galvanising plant, and it is expected to go into production by the end of September. Referring to the prospects, Mr. Shroff said that the shareholders could look forward to a fairly good future in view of the increasing demand for the Company's products. Structural Engineering has sufficient orders in hand to keep it busy for the next full year. The contract for the supply of concrete pipes to the Bombay Municipal Corporation was alone worth Rs. 1.5 crores. The Company would also be supplying about 6,000 tons of structurals to the Rourkela steel plant. The Rs. 100-paid share of the Company is currently quoted around Rs. 175.

Phaltan Sugar Disappoints

The working of Phaltan Sugar Works Ltd for the year ended September 1961 has been disappointing. In spite of a larger crush and higher production of sugar, the gross profit declined by about 40 percent. This compelled the directors to reduce the dividend from Rs. 12 to Rs. 9 a share, both taxable. To provide for the reduced dividend, the directors had to withdraw Rs. 3.50 lakhs (against Rs. 1 lakh) from dividend equalisation reserve. Phaltan Sugar crushed 133,000 tonnes of sugarcane producing 157,000 bags of sugar, against 115,000 tonnes and 147,000 bags respectively, in the previous year. The average recovery declined from 12.67 percent to 11.74 percent due partly to adverse weather conditions and partly to the trouble in the factory's boiling house. In spite of the increased output, sales were down from Rs. 1.29 crores to Rs. 1.24 crores. Inadequate releases of sugar by the Government led to the accumulation of large stocks, which amounted to 42.6 percent of the year's output, against 22.8 percent in the previous year. Phaltan Sugar's profits were also

affected by the loss of about Rs. 3.90 lakhs on the compulsory export of 16,502 bags of sugar, against only 941 bags in 1959-60. After providing Rs. 4.14 lakhs (against Rs. 3.89 lakhs) for depreciation, Rs. 1,526 (against Rs. 23,513) for development rebate and Rs. 3.80 lakhs (against Rs. 7.40 lakhs) for taxation, the net profit amounts to Rs. 5.50 lakhs, against Rs. 10.58 lakhs in 1959-60. The directors have transferred Rs. 3.50 lakhs from dividend equalisation reserve in order to pay the reduced dividend of Rs. 9 a share absorbing Rs. 9 lakhs. After taking into account Rs. 13,201 being the income tax refund and Rs. 35,221 brought forward from the previous year, there remains Rs. 21,809 to be carried forward.

The directors state that the ordinance restricting production during the current season to 90 percent of the previous year's output is likely to affect the current year's production and, therefore, the working results. As for the possible effect of the Maharashtra Land Ceilings Act, it is too early to say how exactly it will affect Phaltan Sugar's profit margin. The Company has received the Government's sanction to increase its crushing capacity to 1,000 tons. The directors state that they are taking necessary steps to implement the expansion programme as early as possible. The Rs. 50-paid share of Phaltan Sugar is currently quoted around Rs. 115 which is well below the 1961 low of Rs. 122.

Watches from Indo-French Time

On 27th January, Indo-French Time Industries Ltd, Bombay, released its first batch of gents' wrist watches. The watch, which is being marketed under the trade name of Zephyr, has been manufactured in collaboration with Sedim—a consortium of French watch manufacturers. The movement parts have been made in France, and they have been assembled under strict French technical supervision. The watch has been priced at Rs. 52 plus taxes; it has 17 jewels and is water-proof. The beginning has been made with a pin-lever watch but Indo-French Time Industries will soon undertake the manufacture of genuine lever watches which will be priced at between Rs. 80 and Rs. 100. Ladies' watches are expected to follow in due course. The initial output will be 90,000 pieces a year on a single-shift basis, and it will go up to 300,000 pieces over a period of five years. The foreign component, which is now placed around 60 percent of the total value, will be reduced gradually. Indo-French Time Industries' Zephyr wrist watch is the first one to be manufactured indigenously. So far four schemes with a total capacity of 1.3 million watches a year are said to have been sanctioned by the Government.

Woodcote Estates Show Loss

The directors of Woodcote Estates Ltd have decided to wind up the Company in view of the continuous losses for the past three years. The declaration of solvency along with the affidavit has already been submitted to the Registrar of Companies. An extraordinary general meeting will be held on 17th February, 1962, to pass the special resolution on liquidation and the appointment of liquidators. The directors have also submitted to the shareholders the audited accounts for the half-year ended December 1961, which show a net loss of Rs. 23,600. With the loss of Rs. 5,942 brought forward from the previous period, the total loss amounts to Rs. 29,542 which is carried forward. Woodcote Estates' reserves and surplus are shown at Rs. 12,053. The outstanding debenture liability, including the accrued interest, amounts to Rs. 1.27 lakhs. The debenture sinking fund stands at Rs. 40,462, fixed assets at Rs. 2.68 lakhs and investments at Rs. 10,269. The equity shares of the Company (Rs. 1 fully paid) are now quoted at Rs. 1.63 (nominal).

Prospects for Spencer

The chairman of Spencer and Co. Ltd, Mr. Z. R. Irani, said at the annual general meeting that the trading results for the year ended June 1961, were the best for the last 13 financial years. The

turnover has been showing a rising trend from Rs. 3.19 crores in 1956-57 to Rs. 4.54 crores in 1960-61, although it declined to Rs. 2.97 crores in 1957-58. Discussing the contribution of different departments to the Company's profit, the chairman said that the wholesale and retail trade contributed the largest extent, being 28 percent. Drugs and pharmaceuticals contributed 25 percent, hotels and catering 13 percent, house furnishing 7 percent, tea 6 percent, refrigeration and airconditioning 12 percent, aerated waters 3 percent, cigars 1 percent and sundries 5 percent. In keeping with the avowed policy of Spencer to keep prices within reasonable limits, Mr. Irani said, a fair proportion of the increased expenditure has had to be absorbed by the Company. The Company's future, therefore, rests on the assiduous promotion of turnover.

The chairman said that Spencer's interests lie in the consumer goods field. The board is "firm in its resolve" to foster and promote these activities to the best of the Company's financial capacity. Another important point to which the chairman referred was the maximum use of the Company's resources. On 30th June, 1956, Spencer had a cash and bank balance of Rs. 60.69 lakhs, whereas on 30th June, 1961, there was a net overdraw of Rs. 21.53 lakhs. The difference of about Rs. 82.22 lakhs is due to the various fixed assets acquired such as land, building and machinery. It also included Rs. 19.66 lakhs in corporate investments. Besides, Spencer's Kanpur factory made a small profit during the year, against a large loss suffered previously. This is an encouraging feature. The plant and machinery has been purchased partly for modernisation and partly for expansion. The chairman said that Spencer's future rests on marketing and on the continued existence of reasonable purchasing power. He struck a note of optimism when he said that as long as there is no appreciable change in conditions as exist at present, the Company would face the future with confidence.

Canara Bank Rights Issue

Canara Industrial and Banking Syndicate Ltd proposes to issue 500,000 "B" class ordinary shares of Rs. 10 each at a premium of Rs. 1 a share to both ordinary and preference shareholders as on 1st March, 1962. The amount of Rs. 10 each is payable in four instalments. An extraordinary general meeting of the bank will be held on 16th February, 1962, to revise the rates of dividend on preference shares from 6 percent, tax-free, to 8.57 percent, taxable, and from 5 percent, tax-free, to 7.15 percent, taxable, and to increase the authorised capital.

Hongkong and Shanghai Bank

The directors of the Hongkong and Shanghai Banking Corporation Ltd have announced that, subject to audit, the profit of the bank for the year ended December 1961, including dividends received from the Mercantile Bank Ltd, the British Bank of the Middle East and other subsidiaries, amounted to £2,707,216 or \$(HK) 43,315,459, after providing for taxation, etcetera. It is proposed to pay a final dividend of 10s a share, making a total of 15s a share for the year which, considering the new capital structure, is the same as that declared for 1960.

Indo-U.K. Textile Talks

The two-day talks in Bombay between the representatives of the Indian Cotton Mills Federation and the U.K. Cotton Board on Britain's demand for the voluntary restriction of Indian yarn exports to the U.K. ended inconclusively on 24th January. The various points were fully discussed, but it was felt that more thought would have to be given by the two sides to arrive at a mutually satisfactory solution which would take into account the British industry's difficulties on the one hand and India's need for earning more foreign exchange on the other. The two delegations agreed to adjourn the present talks to resume them in the near future. The Cotton Board's representatives said that increasing yarn imports have been causing great anxiety to the British industry. Total

imports of yarn into the U.K., which were 14.6 million lbs in 1958, were expected to reach 45 million lbs in 1961. According to U.K. statistics, annual imports from India between 1958 and 1961 had risen from 5.6 million to 13 million lbs. India accounted for more than 38 percent of total imports of doubled yarn. In 1961, she was sending 9.5 percent of production of folded yarn for sale. The British delegation urged that an inter-industry agreement for a voluntary ceiling on Indian yarn exports to Britain would help the British industry in carrying through its reorganisation plans. While fully appreciating the difficulties of the British industry, the Indian representatives pointed out how India was running an increasingly adverse balance of trade with Britain and how it was important for India to increase her foreign exchange earnings through larger textile and yarn exports. Preliminary discussions on the voluntary restriction of Indian yarn exports to the U.K. were held in London in July 1961 between the representatives of the Indian cotton industry and the U.K. Cotton Board. Later, the Board sent a memorandum to the Indian Cotton Mills Federation suggesting that the Indian industry agree to a ceiling of 7.49 million lbs based on average yarn exports to the U.K. in 1958-59 and 1960.

E.R.I.C. Makes Fair Progress

The Export Risks Insurance Corporation's report for 1961, which has been released within less than a month of the close of the accounting period, shows an all-round improvement in its performance concerning the number of policies issued, maximum liability under the policies, value of shipments, contracts and credits issued, premium income and the value of bills for which the banks gave credit. The Corporation's claims experience continued to be adverse, but it was not quite as bad as in the previous year. Its steady progress in the course of a few years of its existence indicates the exporters' growing awareness of the importance of its policies. The risks covered by them are not covered by the policies issued by ordinary commercial insurance policies. Besides, the Corporation has been trying hard to evolve new types of policies. In 1961, the Corporation issued 426 policies with a maximum liability of Rs. 13.02 crores, against 324 policies for a maximum liability of Rs. 8.14 crores in 1960. More than half of the liability incurred by the Corporation in 1961 is accounted for by policies of Rs. 5 lakhs or more and about a quarter by policies of the value of Rs. 1 lakh to Rs. 5 lakhs each. Policies in force on 31st December, 1961, numbered 418, and the maximum liability of these policies amounted to Rs. 12.91 crores. In addition, the Corporation had liability of Rs. 56 lakhs under policies which are no longer current, but under which claims might arise. The Corporation's maximum liability, therefore, amounted to Rs. 13.47 crores, against Rs. 8.42 crores at the end of 1960.

Of the 426 policies issued in 1961, 283 policies were for comprehensive risks shipments, 26 were for packing credit, eight for comprehensive risks contracts, five for political risks shipments and four were for specific risks shipments. Out of 383 comprehensive risks shipment policies, 60 were issued for more than three years and the rest were one-year policies. In 1961, the policyholders declared contracts and shipments of Rs. 16.84 crores, against Rs. 10.16 crores in 1960. The share of policies on credit terms was Rs. 11.47 crores, against Rs. 6.96 crores and preshipment advances declared amounted to Rs. 54.42 lakhs. The policies issued by the Corporation are generally treated as additional security by the banks. According to the Corporation's report, 96 policyholders obtained financial facilities for 3,096 shipments worth Rs. 2.94 crores. These figures do not include exporters insured with the Corporation to whom banks may have offered financial facilities without either the assignment of the policies or the transfer of rights under the policies concerning individual shipments. In addition, banks and other financiers gave preshipment advances of Rs. 54 lakhs against packing credit policies. The Corporation's premium income in 1961 amounted to Rs. 3.48 lakhs, against Rs. 2.36 lakhs in 1960, giving an average premium rate of about 29½ percent against 34½ percent in the previous year. This reduction in the average rate may be attributed to

the overall revision of rates towards the middle of last year. Interest income during the year amounted to Rs. 2.06 lakhs. The Corporation paid claims of the value of Rs. 4.32 lakhs in relation to 48 shipments, against Rs. 3.76 lakhs for 27 shipments in the previous year. Thus while the gross income was Rs. 6.33 lakhs, the total outgo amounted to Rs. 3.37 lakhs, leaving Rs. 2.97 lakhs which has been credited to underwriting reserve. No provision has been made for income tax because the reserve has not yet reached the figure when tax becomes payable.

Joint-sector Units in Maharashtra

The study group on joint-sector enterprises for industrial development in Maharashtra, which was set up by the Consultative Committee on the Third Plan, has suggested Government participation in the share capital of these undertakings to a minimum of 26 percent and a maximum of 49 percent and the dispersal of shareholding in such enterprises among as wide a cross-section as possible. Under the terms of reference, the study group had been asked (1) to assess the scope for joint-sector enterprises for industrial development, (2) to suggest the industrial projects which could be taken up in the joint sector as well as (3) the terms of partnership between the Government and the private sector. In its report which has already been adopted by the Consultative Committee, the study group says that there can be no doubt there exists considerable scope and justification for establishing industrial undertakings in the joint sector. In the past, State Governments are known to have played a helpful, promotional rôle by State aid to infant industries. The report says that the joint-sector schemes should generally relate to such industries for developing which private enterprise is not easily forthcoming. Furthermore, these schemes should keep in view the need to attract entrepreneurs to the relatively backward areas of the State.

The study group has enumerated several industries which could be taken up in the joint sector. These include (1) establishment of a coke-oven-cum-by-products recovery or fertiliser plant; (2) production of alumina in Kolaba, Thana district; (3) production of stainless steel and ferro-alloys by the electrical smelting processes; (4) production of purified salt and chemicals on a large scale in the Ratnagiri area; (5) manufacture of fine and superfine cloth under the export promotion scheme by the installation of modern composite spinning and weaving units with automatic looms and most modern machinery; (6) production of electrolytic manganese using low-grade ores; (7) large-scale mining of manganese and iron ore in the areas reserved for the public sector; (8) manufacture of town gas meters, a large number of which will be in demand in Bombay once the Trombay fertiliser project increases the city's gas supplies, combined with other types of meters and measuring instruments in an economic-sized unit and (9) the use of sugarcane bagasse for manufacturing paper. This list is not exhaustive. As new opportunities arise, it is likely that other manufacturing lines will suggest themselves.

It is not clear how much amount could be set apart by the Government in the third plan for such joint-sector schemes. The study group has suggested that the Government of Maharashtra may indicate a figure, say, Rs. 8 crores or Rs. 10 crores, which it will be prepared to invest in the joint-sector ventures to start with. It may not be necessary for the Government to tie up its funds in joint-sector ventures for all time to come. It should be possible for it to sell out its shares in due course and invest the proceeds for developing other industries. In this way, the investment undertaken by the State Government will be able to stimulate the growth of a larger number of industries than would be possible if the money is to be permanently locked up. As for organisation, the study group feels that the pattern of association should be such that the Government can have a substantial voice in policy matters of the undertakings, so that in cases where the managing partner proves to be a lame duck or it is considered necessary to displace him, the Government can intervene and take over the management too for a limited or unlimited period without recourse to the provisions of the Industries (Development and

Money

THE DEPOSIT RATE PACT
IN TROUBLE

(FROM A SPECIAL CORRESPONDENT)

THE inter-bank agreement on interest rates, which was concluded between banks with deposits over Rs. 25 crores (big and medium banks) and those with deposits below Rs. 25 crores (small banks) in August 1958, has run into trouble. Last August, the medium banks gave notice, as stipulated under the agreement, that they would be forced to withdraw unless the big banks allowed them the option of paying 4 percent more interest on deposits to their customers. According to the medium banks, circumstances have changed radically during the past two years. When the agreement was finalised in 1958, the banking system was saddled with surplus funds. Now, after the Palai Bank crash and the flow of funds from the organised to the unorganised sectors due to the official interest rate policy, it has become difficult to attract deposits in competition with big banks without a differential margin.

The inter-bank agreement covered 27 big banks, including the exchange banks, and ten medium banks. Its supporters say that it has worked well during the past few years, and introduced an element of stability in the banking system. The fact that the State Bank of India was not a signatory has not interfered with the success of the agreement, since that Bank has not offered competition in the payment of interest rates on deposits. The Indian Banks Association tried to rope in the State Bank of India as a precautionary measure. But the efforts did not succeed because the Bank claimed that it had certain special obligations to fulfil under the nationalisation law. The Bank did, however, allow its subsidiaries to continue as members of the Indian Banks Association and of the agreement; the subsidiaries could thus take advantage of the 4 percent concession which banks with deposits under Rs. 25 crores were permitted. It is intriguing how the State Bank had mentioned as an excuse for not joining, did not affect the position of the subsidiaries which are otherwise supposed to share the responsibilities of the parent institution. Thus, it looks as if the State Bank has been running with the hares and hunting with the hounds in relation to the interest rates agreement. This is evident from the fact that the State Bank chairman, at a recent Press conference called while releasing the Karve Committee report, seemed to admit that there was an anomaly which required rectification, although nothing has been done to correct it so far.

Fundamental Question

The fundamental question is whether the change in the situation has been so radical as to warrant the concessions demanded by the medium banks. Have these banks really been facing difficulties in gaining deposits in competition with their bigger neighbours? Or do they merely want a price for co-operation with the bigger banks? It is undeniable that all banks have been forced to compete more strongly in a market where funds are not growing fast enough. The monetary situation has undergone a change in view of the smaller doses of deficit financing. Because of the monetary policy in the organised sector and the increasing activity in the economy, more money is being used in the unorganised sector itself. To that extent,

the flow of funds into the organised sector has received a setback. This is a situation which both the big banks and the medium banks have to face. The best solution for it would be to have a more realistic monetary policy. All banks should get together and impress the point on the Reserve Bank and the Government of India, instead of trying to cut one another's throats.

Another point to consider is whether the Palai Bank crash has really imposed serious handicaps on the medium banks. Many doubt it. If anybody has suffered, it is the small banks. The latest working results show that most of the medium banks have done very well, many of them having increased their deposits by 20 percent or 25 percent during 1961. That they might have done still better by offering greater incentives, is a different matter.

Deposit Insurance

With the inauguration of the Deposit Insurance Corporation, the supposed disadvantages of the medium banks will have greatly decreased. Depositors, whether of a big bank or of a small bank, are now entitled to the same sum in the event of the bank failing. It is an exaggeration, therefore, to argue that the medium banks are under a serious disadvantage in reassuring depositors about the security of their funds. Assuming that they are allowed to pay 4 percent more interest on deposits, other and more complicated problems may arise. The small banks will want to pay 4 percent more than the medium banks. The big banks will then have to cope with a gap of 4 percent between their own rates and those offered by the small banks. Furthermore, if the argument of the medium banks is to be accepted, a possible plea of certain big banks, like the Bank of Baroda and the United Bank of India, could not be easily brushed aside. These banks have accepted extra obligations by taking over certain small units. They may not like to see medium banks scoring an advantage by paying higher deposit rates.

Even with an upward revision of interest rates, it is doubtful whether the medium banks will be able to secure larger deposits. The move will merely promote demands for a further rise in deposit rates. That may in due course interfere with the Government's programme for borrowing at cheap rates. It is not the big banks alone who have an interest in seeing to it that the medium banks do not carry out their threat of withdrawing from the agreement.

BANK PROFITS AND RESERVES

A PRESS communique issued by the Reserve Bank says that on 27th December, 1961, the Governor issued a letter to all Indian scheduled banks requesting them to observe the convention of transferring at least 20 percent of their annual declared profits (i.e., profits after making the usual and necessary provisions) to their published reserves, till their reserves become equal to the paid-up capital and till such time as their ratio of paid-up capital and reserves to total deposits reaches at least 6 percent. In this connection, a

in the '40s; but I doubt if those 100 flowers are blooming still. In West Bengal, where modern art is not now at its best but much valuable writing continues, it is disappointing that political propaganda should be so conventional and uninspired. And where is the spirit of satire? Surely Dr. Roy could be shown angling for deep sea fish, or travelling on Calcutta's underground railway or monorail. I can see Mr. Krishna Menon riding a cheap jeep. Mr. Jyoti Basu refusing from Dr. Roy a cheque—his salary as leader of the Opposition. The possibilities are endless; and an inventive people like the Bengalis should refuse to vote for candidates, regardless of Party, whose election campaigns do not reflect the genius of the people. There are four weeks to go yet; and I expect to see a truly creative election in West Bengal, one that creates not only members of Parliament and the Assembly but also interesting posters, pamphlets, songs and what have you.

TALKING OF ELECTIONS, I FIND THAT DR. RAM Manohar Lohia intends to contest no less a constituency than Mr. Nehru's own. But he is not so insane as to expect to defeat Mr. Nehru; Dr. Lohia only wants to give the Prime Minister "a jolt". A jolt, even a minor one, can do Mr. Nehru nothing but good; but I am not at all certain that it is in the doctor to administer it. If memory serves, in the last election Mr. Nehru's rival was a *sadhu*; and the latter secured something like 75,000 votes—no mean performance at all against the Mahatma's political heir and the country's undisputed idol. It is a sad reflection on the progress of youth and modernism in this country that the fundamentalist and the traditionalist constitute a far more formidable challenge to the Prime Minister's more or less 20th-century ideas than any progressive and democratic opposition. To the weakening of the democratic socialist opposition in India Mr. Nehru's own contribution may have been considerable.

TURNING DOWN INVITATIONS TO PRESS CONFERENCES is something I have to do every day of the week; life is just too short to accept them all. But one I received the other day has only been declined with great regret, and a mere part of the reason for that was its location in London. In fact, it took place on 30th January in the Committee Room of the Lloyd's Register of Shipping, Fenchurch Street, under the chairmanship of Sir Kenneth Pelly, and with the approval of the Society for Nautical Research and the Trustees of the National Maritime Museum. Its object was to get the largest possible world-wide publicity for a search which is going on for old volumes of registers to complete a collection to be preserved for posterity. It seems that from 1760 to 1833, the earliest detailed records of merchant shipping were contained in the registers issued by the underwriters and merchants from Lloyd's coffee house, and later from the Royal Exchange. Only one set of these registers exists, the unhappy result of a rule ordering that all books be destroyed at the end of each year. This surviving collection is kept at the headquarters of Lloyd's Register of Shipping, but it is not complete; some of the books cannot be traced, and in a few earlier volumes, pages are missing. It is now proposed to place these valuable documents in safe keeping, and so that specialists may have access to the records, arrangements are being made to have the existing volumes reprinted. But before this is undertaken, an effort is being made to find the missing copies. It is pointed out that some of the registers may have escaped destruction, because despite the rules it seems likely that if a subscriber died during the year, or left Britain, his book may have escaped its predetermined fate. There is already evidence that some of the registers may be found in Australia, Canada, the United States, and even in Chile and the Argentine. There might be some in India, and especially in Calcutta. The present owners may not know what the books represent, because the title "Lloyd's Register" had not been adopted at that time. If anybody here thinks he has one, I shall be glad to contact the people concerned on his behalf or provide him with their address.

These brushes are invaluable for buffing and cleaning exceptionally severe scaling or rust from structural work, also specially adapted for weld cleaning, and other, tough scaling propositions and rough castings. "TWISTKNOTS" may be operated at considerably higher speeds than ordinary wire wheels and a comparatively light pressure increases both the efficiency and life of the brush in addition to lightening the work of the operator.

Madras-1.

question has been raised whether the usual and necessary provisions include "provision for taxation".

The Reserve Bank has now advised banks that such of them as already have reserves equal to or exceeding their paid-up capital, should transfer not less than 20 percent of their disclosed profits, arrived at after making the usual and necessary provisions and after deduction of the provision for taxation. On the other hand, banks whose reserves are less than their paid-up capital and who are, therefore, required to make a

transfer to reserves under Section 17 of the Banking Companies Act, should follow, till they reach parity of reserves with paid-up capital, the same basis of computation as they observed in their profit and loss account for the year 1960. That is, if they had made transfers to reserves on the basis of profits before taxes, they should continue to do so till their reserves equal their paid-up capital.

It is possible that banks which have already attained parity of paid-up capital and reserves are required,

hoarded wealth in ancient india

From early Buddhist literature one learns that wealth was hoarded underground in brass jars or buried under a river bank. The nature and amount of the wealth thus hoarded was registered on gold or copper plates.

The tendency to hoard wealth doubtless arose from the lack of opportunities for investment. The *Dharmasastras* for instance allowed only men of the Vaishya community to lend money on interest. Frequent invasions by neighbouring kings and the resultant fear of the future made people believe that there was nothing safer than burying their gold or silver.

Times have changed. Today the saving habit has many incentives—savings help not only the individual but also the nation. And many opportunities exist for profitable investment with reliable and streamlined institutions like the Union Bank of India. The Union Bank prides itself on its unique *personalised service*, under which every depositor is treated as a Very Important Person.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information; Safe Deposit Vaults; TELEX contact with countries all over the world.

by reason of an increase of their paid-up capital, to make transfers to their reserves under Section 17 of the Banking Companies Act. Such banks could compute their disclosed profits for the purpose of transfer to reserves after making the usual and necessary provisions and after deduc-

tion of the provision for taxation. The Governor's letter which was first issued to the Indian scheduled banks has also been addressed to all non-scheduled banks. Thus, all Indian banks are expected to follow the convention set out in the Governor's letter.

THE CALCUTTA MONEY MARKET

INTERBANK FUNDS TIGHTEN

Wednesday, 31st January.

FOR the second week in succession, there has been very little change in the level of advances outstanding in the Calcutta money market. The requirements of the cotton and sugar mills show a slight increase, but those of the engineering and iron and steel industries are slightly down, as is call for accommodation against food-grains and seeds storage. The only major source of demand which shows a slight increase is the sugar industry. In the interbank market, conditions are tighter, but the official call rate remains the same at 4½ percent.

There has been an improvement in the exchange market during the past week, with large quantities of gunny bills in evidence. The supply of tea bills has continued to be moderate. Remittance demand has been keen. In the London money market, the pound closed strong against the twin dollars and all major Continental currencies with the exception of the Swedish krona.

BULLION WAS EASIER DURING THE PAST week due to profit-taking. Silver fell from the previous week's level of Rs. 246 to Rs. 245.50, quoted today for ready delivery, and the rate for forward delivery was Rs. 209.75. The London and New York prices were 86½ and 103.75 cents.

Gold improved from Rs. 141 to Rs. 141.75. The sovereign at Rs. 98.75 showed little change.

DURING THE WEEK ENDED 26TH JANUARY, Government of India Treasury bills for Rs. 24,57,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 30th January. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.525 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 5th February.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 31st January to 3rd February at Rs. 99.386 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 24th January to 27th January, amounted to Rs. 5,00,000.

THE DECLINE OF RS. 4.99 CRORES TO RS. 1,985.59 crores in active notes was an outstanding feature of the return of the Reserve Bank of India for the week ended 26th January, 1962, but the total note issue was Rs. 80 lakhs higher at Rs. 2,005.28 crores. Notes held in the Banking Department consequently rose by Rs. 5.79 crores to Rs. 24.68 crores. Deposits of the Government of India increased by Rs. 16.52 crores to Rs. 68.67 crores due to satisfactory tax collections, while other Government accounts fell by Rs. 5.08 crores to Rs. 23.91 crores. Balances of commercial banks at

Rs. 80.02 crores showed a decline of Rs. 2.44 crores. Balances held abroad fell by Rs. 43 lakhs to Rs. 10.97 crores and investments by Rs. 61 lakhs to Rs. 42.97 crores. Other loans and advances rose from Rs. 147.62 crores to Rs. 149.03 crores, of which advances to scheduled banks against usance bills amounted to Rs. 10.38 crores (Rs. 9.52 crores). Ways and means advances stood at Rs. 60.80 crores, against Rs. 52.92 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 19th January, 1962, shows a rise of Rs. 14.57 crores to Rs. 544.25 crores in total deposits. Investments in Government securities are up by Rs. 4.14 crores to Rs. 232.82 crores, while other authorised investments are down by Rs. 2 lakhs to Rs. 9.28 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have risen by Rs. 42 lakhs to Rs. 268.11 crores. Cash and balances are, in consequence, shown at Rs. 29.72 crores or Rs. 3.03 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 19th January, 1962, shows Demand and Time liabilities at Rs. 868.08 crores (Rs. 26.99 crores on account of borrowings from banks) and Rs. 1,165.44 crores (Rs. 16.72 crores), compared with Rs. 856.20 crores (Rs. 25.62 crores) and Rs. 1,157.47 crores (Rs. 16.25 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 11 lakhs and Rs. 4.99 crores to Rs. 46.63 crores and Rs. 76.55 crores, respectively. There is a rise of Rs. 4.48 crores to Rs. 588.14 crores in investments. Advances and bills discounted at Rs. 1,315.91 crores show an increase of Rs. 6.33 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6.1 percent and 64.7 percent, against 5.9 percent and 65 percent.

Stocks and Shares

QUIET UNDERTONE AT THE SETTLEMENT

Wednesday Evening.

THE undertone of the stock market has become quiet due to the clearing today, and share prices have been marked down. Although the carry-forward charges are on the whole moderate, support is poor. So even small selling reduces prices disproportionately.

During the past week, business has been on a cautious scale. Lyons Range is inclined to take a bearish view of the election of Mr. T. T. Krishnamachari to the Lok Sabha. It is thought he will be given an important portfolio in the Central Cabinet. As he has indicated that he is in favour of more controls over the prices of commodities, investors are worried. They fear that the Central Cabinet, when reconstituted after the general elections, may be more socialist.

For the present, operators are not inclined to extend their commitments as the time for the confluence of eight planets is approaching. Being nervous about the occasion, many outside financiers have withdrawn their funds from the stock market. Meanwhile, bank credit has become tighter due to the busy season demand. Although the Life Insurance Corporation has bought some shares, the support is still marginal in character.

Considerable funds have been mopped up by new issues, and there are many more in the queue. There have also been a number of rights share issues. Sirpur Paper Mills Ltd proposes to issue 1,092,762 ordinary shares of Rs. 10 each at par. Of these, 546,381 shares will be allotted to the foreign collaborators—Kimberly Clark Corporation of the U.S.A.—and the remaining 546,381 shares will be offered to the existing shareholders. Hindusthan Pilkington Glass Works Ltd has been permitted by the Controller of Capital Issues to issue one million ordinary shares of Rs. 10 each for subscription at a premium of Rs. 4 a share. Of these, 48.75 percent will be allotted to the foreign collaborators—Pilkington Brothers Ltd of the U.K.—and the remaining 51.25 percent will be offered to the existing shareholders in the ratio of five new shares for every four held.

In spite of the general apathy, there have been a few notable improvements. Brisk trading has taken place in Orissa Cement and Kesoram Industries. These shares will be promoted to the forward list from Thursday. In addition to the speculative support these scrip enjoy, they are being fancied due to satisfactory yields and good growth prospects. Orissa Cement is believed to have been given a satisfactory retention price for cement. Its refractory division is doing well and plans have been framed to expand the capacity.

Lyons Range has turned cautious in view of the general meeting of the Indian Iron and Steel Company which will be held next Friday to approve the World Bank loan given for the expansion of its collieries. At the meeting shareholders will get an opportunity to debate the question of a further share issue. Indian Iron have moved up and down on rumours of an early rise in the retention price of steel. But some operators

are inclined to take a cautious view since they are not sure whether the price fixed will be uniform or different for each manufacturer. Indian Iron have closed around Rs. 24.52.

In the engineering section, Indian Standard Wagon have gained on rumours of a bonus share issue. Jessop have recovered on replacement buying. Kumardhubi Engineering, Britannia Engineering and Dalmia Iron have been steady. But Guest, Keen, Williams, Burn and Braithwaite have been quiet.

Turnover in miscellaneous industrial shares has declined considerably and fluctuations have been narrow. Orissa Cement and Kesoram Industries have, nevertheless, been prominent on increased support. Dunlop Rubber have been steady on talk of a rights share issue. Hindustan Motors have declined on pressure. Angelo Brothers have become quiet due to the cut in the ordinary dividend. British Indian Corporation have slipped back on profit-taking, and the news of their inclusion in the forward list of the Delhi stock market has been ignored. Isaac Holdens have recovered. Interested support has been forthcoming for Phillips India. Martin Burn have been steady on dividend prospects, and the cut in the dividend by Associated Battery appears to have been discounted. Rallis India have hardened on producing satisfactory results, but Jaipur Udyog have backed away on profit-taking.

Paper shares have been quietly steady. Bengal have been bought due to the issue of bonus shares. Orient have been steady on expansion prospects and Titagur have improved due to investment buying. Sirpur have become easier on issuing rights ordinary shares but Seshasayee Paper have met with support.

Except for Seebpore Coal which have improved on hopes of improved results, coal shares have been sluggish. Amalgamated have fallen on pressure. Burrakur, Bengal and Central India have been quiet.

The earlier improvement in jute shares has not been maintained at the close in view of the rise in the price of raw jute. Attention has been concentrated on Birla, Nuddea, Ganges, Bally, Fort Gloster, Fort William and Guapore.

Cotton mill shares have recovered on replacement buying. J. K. Rayon and Dunbar have improved. Bowreah and Bharat Commerce have been steady.

Bank shares have maintained their previous gain and interest is being taken in United Commercial, United Bank and Punjab National.

Tea shares have been selectively bought due to an improvement in auction prices this week. Hasimara, Tezpur, Betjan, Huldibari and Dibrugarh have gained.

Government securities have been dull and fluctuations are narrow. The Reserve Bank has started buying outright 3½ percent loan 1963 and 3 percent loan 1963-65. It has also been selling 4 percent 1960 loan and 4 percent 1961 loan. Until recently, the Reserve Bank bought and sold these securities in switch operations only. It is, therefore, thought that the 3 percent 1963-65 loan will probably

be repaid in 1963. The 3 percent Conversion loan is quoted around Rs. 71.

Bombay Market

INVESTORS FEAR CUT IN CLOTH PRICES

BUT SENTIMENT SLIGHTLY BETTER AT THE CLOSE

Wednesday Evening.

THE Bombay stock market closed in a cautious mood. Turnover during the past week was small and operators were not inclined to extend their commitments either way due to various uncertainties. There was an appreciable decline in share prices earlier due to tired bull liquidation, combined with selling pressure. The election of Mr. T. T. Krishnamachari to the Lok Sabha disturbed sentiment, because it was feared that the official economic policy would become more socialistic. Cotton mill interests were worried over the forthcoming report of the Tariff Commission on cloth prices. A section of the trade thought that prices would be fixed at lower levels. Evidence of increased competition in foreign markets was also interpreted bearishly.

At the close, selling pressure abated on talk of L.I.C. buying. Rumours of an early increase in the retention prices of steel helped improve sentiment. The decision of some companies to diversify their activities had a good effect. The imposition of automatic margins on sales of B.R. Cotton and Shivrampur Syndicate helped restrain bear pressure.

Tata Steel closed at Rs. 139.25 and Indian Iron at Rs. 24.68. Among engineering shares, Mukand Iron improved to Rs. 27.70 on buying by knowledgeable quarters. Tata Locomotive were quoted at Rs. 348 and Premier Construction were taken at Rs. 188. Larsen and Toubro came to hand at Rs. 40.25, while Alcock Ash-down were freely sold down to Rs. 330. Motor-vehicle shares turned quiet, and sellers predominated in Hindustan Motors at Rs. 20.40. Premier Automobiles were available at Rs. 148.50.

Cotton mill shares recovered at the close after an earlier decline. Century rallied to Rs. 582 on short-covering and Bombay Dyeing were placed at Rs. 68.30. Business passed in Kohinoor at Rs. 305 and in Simplex at Rs. 168.50. Central India rose to Rs. 159 and Swan to Rs. 405 on buying by informed quarters. Morarjee came to hand at Rs. 391 and Gokak were done at Rs. 217. India United ordinary were taken at Rs. 18 and Apollo improved to Rs. 254. Tata Mills were steady at Rs. 79.80 and Svadeshi were placed at Rs. 285. Business was done in Standard at Rs. 10.92.

In the miscellaneous section, sugar shares lost further ground on selling pressure. Belapur lost at Rs. 245 and Phalton were sold at Rs. 115. Walchandnagar Industries weakened to Rs. 153. Mining shares were subdued, and Shivrampur Syndicate were offered down to Rs. 41. Steamship company shares were quietly steady, and Scindia Steam recovered to Rs. 13.08 on short-covering due to a fairly encouraging speech from the chairman of the Company. Business pass-

ed in Great Eastern Shipping at Rs. 12.72. Cement shares were quiet, and Associated Cement reacted to Rs. 159. Sellers predominated in Digvijay at Rs. 187.

National Rayon improved to Rs. 535 on fresh support induced by a report that the Company would soon set up a plant to produce rayon grade pulp. Bombay Burmah were steady at Rs. 635. Chemical shares were quietly steady, and Tata Chemical came to hand at Rs. 19.60. Indian Dyestuff rose to Rs. 508.75 and Polychem to Rs. 217.50. Synthetics and Chemicals were steady at Rs. 218. Voltas were bought at Rs. 293.50 and Tata Mills came to hand at Rs. 79.80. Coat Tyre were quiet at Rs. 200, but Gwalior Rayon rose to Rs. 53.15. Orissa Cement were firm at Rs. 18.

Among bank shares, Bank of India were steady at Rs. 146 and Central Bank were wanted up to Rs. 69. Dena Bank improved to Rs. 72 and Bank of Baroda were quoted at Rs. 118.25. Insurance shares were quietly steady, and business was done in New India Assurance at Rs. 58.50.

Electric company shares reacted at the close due to profit-taking. Ahmedabad Electric were quiet at Rs. 96, but Tata Hydro were bought at Rs. 111.50. Bombay Suburban were quoted at Rs. 103.

Madras Market

APPRECIABLE DECLINE IN TURNOVER

ASTROLOGICAL FACTORS WORRY MARKET

Tuesday Evening.

TURNOVER declined appreciably in the Madras stock market during the past week. Operators were not active because of a decline in orders from outside sources. There was little inclination to extend commitments as the time approached for the confluence of eight planets. A section of the stock market feared that it might have adverse effects. Limited interest was shown in the three scrip—Madura Mills, South Indian Viscose and Dalmia Cement—which were recently promoted to the forward list.

Business in Government securities was negligible. Interest in bank shares declined, but stray support was forthcoming for selected public utility companies on yield considerations. Sugar shares were quiet, with sellers predominating at lower prices. Planting shares weakened due to the uncertain outlook for the marketing of tea and coffee. Cotton mill interests were worried about the growing shortage of cotton. In the miscellaneous section, stray support was extended to selected miscellaneous industrials due to good corporate news.

In the banking group, Canara Industrial and Banking Syndicate were quoted at Rs. 225 on issuing 500,000 ordinary shares of Rs. 10 each at a premium of Re. 1 a share. Business was done in Indian at Rs. 181 and in Indian Overseas at Rs. 199. Punjab National were done at Rs. 22.95 and State Bank of Mysore at Rs. 155. Among public utility companies, Ellore were steady at Rs. 22 and Negapatnam were quoted at Rs. 10.80. South Madras were placed at Rs. 10.10 and Vellore came to hand at Rs. 15.

In the sugar section, Deccan weakened to Rs. 10 and E.I.D. were sold down to Rs. 35.62. United Breweries were quiet at Rs. 84, but

Mysore met with support at Rs. 55.50. Cauvery were offered at Rs. 104 and Jeypore at Rs. 16.

Among planting shares, Devashola improved to Rs. 30.30 on issuing bonus shares in the proportion of two new shares for every five held. Blue Mountain reacted to Rs. 2.50 and Cochin Malabar to Rs. 7.23. Coffee Lands were offered freely down to Rs. 14.75 and Consolidated Coffee were weaker at Rs. 16.50. Ouchterlony came to hand at Rs. 3.63 and Periakaramalai at Rs. 3.28. Peermade were done at Rs. 22 and Parkside were placed at Rs. 25. Rajendra were sold down to Rs. 11.12 and Swinton were easier at Rs. 2.82. Teekoy were quiet at Rs. 5.10 and Travancore Rubber were easier at Rs. 13.12. Kil Kotagiri were offered down to Rs. 4.95 and Nilgiri were quiet at Rs. 8.40. Nonsuch were transacted at Rs. 23.62 and Nilambur at Rs. 14.12.

In the textile group, Madura rose to Rs. 42.50 and Lakshmi were steady at Rs. 164.75. Business passed in Bangalore Woollen at Rs. 239 and in Buckingham at Rs. 253.50. Coimbatore Spinning were placed at Rs. 72 and Dhanalakshmi were taken at Rs. 260. Mettur were steady at Rs. 356, but Pankaja were easier at Rs. 93. Kothari were bought at Rs. 13.30 and Ramakrishna at Rs. 250. South India Viscose hardened to Rs. 185.50, but Travancore Rayon reacted to Rs. 43.12 on profit-taking. Vijayakumar were quoted at Rs. 129 and Premier came to hand at Rs. 329.

In the miscellaneous section, Aluminium Industries were placed at Rs. 23.40, but Ashok Leyland lost at Rs. 9. India Cement turned quiet at Rs. 5.75 on issuing ordinary rights shares at par in the proportion of five new shares for every nine held. Binny were placed at Rs. 310 and Dalmia Cement were done at Rs. 12.25. Enfield were dealt in at Rs. 12.40 and F.A.C.T. weakened to Rs. 8.10. Sellers predominated in Madras Rubber at Rs. 20.25, but Madras Aluminium were supported up to Rs. 23. Mysore Paper were quiet at Rs. 15.12 and Panyam Cement at Rs. 103. Parry's Confectionery were steady at Rs. 4.45, as were Seshasayee Paper at Rs. 8.65. Spencer were placed at Rs. 23.66 and Standard Motors were in demand at Rs. 16.60. Textool were transacted at Rs. 189 and Tube Investments were done at Rs. 282. United Electrical were offered at Rs. 9.50, but W.I. Plywoods were bought up to Rs. 215.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week, the figures indicate Opening Quotations. Highest for the week. Lowest for the week. Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last named is shown in parentheses and will not be given where such a quotation is not available.]

WHY IT PAYS
TO LOOK FOR
THE TRADE-MARK

TIMKEN®
REGISTERED TRADE-MARK

ON ALL THE
BEARINGS
YOU BUY OR USE

If the trade-mark "Timken" is on the bearings you buy, you know you're getting the uniform, high quality that gives long, trouble-free bearing performance in automobiles, machine tools, farm equipment, railroad equipment—wherever wheels and shafts turn. And when you buy Timken tapered roller bearings you're also assured of bearing engineering service you can't get anywhere else.

"Timken" is the registered trade-mark of the world's oldest and largest manufacturer of tapered roller bearings. It identifies the bearings, steel and rock bits made by the Timken Roller Bearing Company and its subsidiaries and divisions the world over. Specify Timken bearings when you build or buy equipment, use them for replacement too. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO" Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

Raising Third Plan Target for Cement Production

(FROM OUR NEW DELHI CORRESPONDENT)

THE Standing Committee of the Central Advisory Council of Industries, which met here last Saturday, considered a proposal from the Central Ministry of Commerce and Industry to raise the third plan target for cement production to 18 million tons. It is explained that during the third plan period, the increase in the domestic consumption of cement is expected to be at least 10 percent a year. The third plan targets were 15.2 million tons a year for capacity and 13 million tons a year for production.

The capacity target would have to be revised to about 18 million tons for the third plan. The industry's capacity, as on 1st January, 1962, was 9.47 million tons. An additional capacity of 5.95 million tons has been licensed. The additional capacity, it is stated, will be created by expanding the existing factories (capacity 3.83 million tons) and by setting up new factories (capacity 2.12 million tons). To safeguard against lapses due to unavoidable reasons, still more capacity is being sponsored. In sanctioning such additional capacity, preference is being given to areas where the shortage is more acute. The recent trend in the demand for cement has indicated that the rise in demand is likely to be substantially more than 10 percent a year. It will, therefore, be necessary to review the capacity target of 15.2 million tons and raise it to about 18 million tons.

On average, the investment a ton of annual cement capacity is of the order of Rs. 140 or 150 for a new unit and about Rs. 100 or 120 for the expansion of an existing factory. The industry's expansion during the second plan, from a capacity of 4.8 million tons to 9.3 million tons, has called for an investment of about Rs. 50 crores. The investment in the third plan is likely to be of the order of Rs. 80 crores. The selling price and distribution are controlled under the Cement Control Order as revised from time to time. The State Trading Corporation's selling price for packed cement is Rs. 133.80 a ton, f.o.r. destination.

Special Feature

A special feature of the expansion programme is that before the close of the third plan, there will be adequate capacity for manufacturing complete cement plants in A.C.C., ACC-Vickers-Babcock (A.V.B.), K. C. P. Ltd., the Sahu-Jain-F.L.S. combine, and one or two other well-known collaborators. It is expected that a substantial number of plants will be set up with the machinery supplied by these companies. This will add to the capacity by about 3 million or 4 million tons a year. At present, the imported element does not exceed 40 percent of the total plant value; it is expected to come down to 20 percent or 25 percent or even less by 1965-66. The Government has considered a number of suggestions for conserving cement and for increasing supplies by mixing it with pozzolanic materials as well as for manufacturing slag cement. It is felt that considerable savings could be effected by inter-grinding portland cement with silicious admixtures either at the point of use or in the cement factory itself. Materials which lend themselves to partial replacement of cement are available in many places in India,

and some of these are in close proximity to cement factories.

The Government of India appointed a technical committee in 1957 to examine these and other related matters. The deliberations of the committee have pointed to the need for manufacturing slag cement, so a capacity of over 1 million tons has been licensed. The A.C.C. factory in Chaibasa and the Mysore Government factory in Bhadravati, already manufacturing slag cement, based on slag from Jamshedpur and Bhadravati, respectively. The Bhilai steel plant is expected to supply slag to the A.C.C. factory in Durg. Similarly, the remaining steel factories are expected to supply slag to cement factories. The Government has appointed a slag committee to look into this specific problem. It has been estimated that the demand for cement at the end of the fourth plan will be 26 million or 28 million tons a year.

Consumption of Refractories

During the third plan, the domestic consumption of refractories is expected to increase three times, namely, from 570,000 tons to 1.6 million tons a year. This is based on a steel production capacity of 10 million tons a year and a pronounced increase in the consumption of certain special types of refractories such as fireclay refractories and basic refractories. Taking this into account, the third plan target for the industry has been kept at 2 million tons a year for capacity and 1.6 million tons for production. An additional capacity of 1,689,000 tons has already been approved under the Industries (Development and Regulation) Act. The additional capacity covers both the expansion of some of the existing factories as well as entirely new undertakings.

On average, the investment a ton of refractories is of the order of Rs. 400 for new units and Rs. 250 for the expansion of an existing factory. The industry's expansion during the second plan by creating fresh capacity of 400,000 tons has, therefore, resulted in an investment of about Rs. 12 crores. During the third plan, Rs. 12 crores is expected in the private sector or Rs. 24 crores is expected in line with the third plan target of 1.6 million tons of annual production. Attempts are being made to manufacture in India certain essential parts of refractory machinery during the third plan.

Since the steel industry consumes about 65 percent of the total refractories output, the refractories industry is more or less concentrated in Bihar, West Bengal, Orissa and Madhya Pradesh. There are smaller units in other parts of the country, such as Gujarat, Delhi, Maharashtra and Madras; they cater to the needs of non-steel users. Of the raw materials, fireclay and quartzite are available in practically all States, while magnesite is only available in the State of Madras which feeds not only the internal but also the overseas markets. Recently, magnesite deposits have been found in Almorah (Uttar Pradesh) and Rajasthan. Measures are being taken to exploit the former commercially. While the industry generally uses coal as fuel, it has lately switched over partly to

oil and gas firing in order to produce better quality refractories fired at higher temperatures. The current annual coal requirements for the industry are 360,000 tons.

The consumption of refractories in India is about 200 lbs a ton of ingot steel. This is considered too high, compared with the consumption in such industrially advanced countries as the U.S.A., the U.K. and West Germany, where the consumption is not more than 85 lbs. The reasons for higher consumption in India are related to steel-melting practices. Since there has been a great deal of improvement in the quality of refractories, it is estimated that the consumption will be of the following pattern:

	(In lbs. a ton of ingot steel)
Firebricks	80
Silica	25
Basic	45
High alumina	10
Others	5
Total	165

Coal Mining Machinery

The coal mining machinery project, which is being set up in Durgapur in technical collaboration with Promash-export of Russia, was initially conceived for a capacity of 30,000 tons of coal mining machinery a year valued at about Rs. 15 crores. It will now be developed for a capacity of 45,000 tons valued at Rs. 24 crores. The production programme includes such items as coal cutters (22,500 loaders (1,371 tons), conveyors (22,500 haulages (3,816 tons) and electrical winders (1,167 tons). Besides, it will have capacity for booster fans, pumps, automatic cage keps, safety-books and oil-drilling rigs, and other equipment for oil exploration and the boring of wells. The plant is scheduled to be completed during the latter half of the third plan.

In addition to the above items, the manufacture of haulages, coal cutters and conveyors required by coal mines has also been developed in the private sector. At present, there are five sizable private sector units licensed to manufacture coal cutters, haulages, conveyors and winders. These units are expected to produce coal mining machinery valued at about Rs. 1.5 crores by 1965-66. Besides, there are a few more units which produce conveyors not only for mines but also for other purposes. Their production during 1961 is expected to be Rs. 70 lakhs, and the output is likely to be steadily raised during the third plan period. Haulages and conveyors are already being manufactured in the private sector. The first indigenous coal cutter is expected to be available to the mines in early 1962.

Coal Washery Equipment

Steps have also been taken to create capacity for manufacturing coal washery equipment. Two units in the private sector have already been licensed for the manufacture and installation of a complete coal washery plant. These units, which are in collaboration with a leading U.K. and U.S. firm, respectively, will

also undertake a turnkey job. One of the units already has two large engineering workshops of its own, in which it proposes to effect a substantial expansion, while the other licensee is going ahead in establishing a new manufacturing concern. The two units are likely to be in a position to deliver two to three complete coal washeries a year. The first indigenous coal washery is expected to be put into operation by 30th June, 1964, provided a firm order is placed soon. Besides the two units, which are already licensed, three other schemes for the manufacture and supply of complete coal washery plants are at present being considered by the Government.

Earthmoving Machinery

For earthmoving machinery and allied material handling equipment industries, the items included are shovels and draglines, crawler tractors, motorised scrapers and dumpers, and towed scrapers. The total requirements of the country over a period of five years are as follows: shovels and draglines 275 a year; crawler tractors 150 to 160 d.b.h.p. 1,100 a year; motorised scrapers and dumpers 1,200 a year; and towed scrapers 200 a year.

The following firms have been licensed for manufacturing the items mentioned against each:

Hindustan Motors Ltd., Calcutta

(i) Spare parts for the existing fleet of Caterpillar tractors and bulldozers in India. Capacity not yet fixed

(ii) Caterpillar towed scrapers to be attached to the existing fleet of Caterpillar tractors in India or for export. Capacity not yet fixed

(iii) Caterpillar "Athay" dumpers to be attached to the existing fleet of Caterpillar tractors in India or for export. Capacity not yet fixed

(iv) Marion shovels-excavators with carrying types of booms and other attachments (clamshells, draglines, etcetera). Capacity not yet fixed

Tata Engineering and Locomotive Co. Ltd., Jamshedpur

(i) P. and H. excavators 1½ to 2½ cubic yards. 50 nos. a year

(ii) Replacement parts for the above 10 percent of the above

Tractors and Bulldozers (P) Ltd., Bombay

(i) Bulldozer attachments. 60 units a year

(ii) Scraper attachments. 60 units a year

(iii) Track parts for 2,000 tractors

Automobile and Agricultural Industries Corporation, Bombay

(i) Track rod pins for tractors. 36,000 nos. a year

(ii) Bushings for tractors. 6,000 nos. a year

Farm Equipment Company, Kanpur

(Numbers a year)

(i) Track roller shells. 4,032

(ii) Sprockets. 120

(iii) Idlers. 120

(iv) Track pins. 43,200

(v) Track bushings. 43,200

(vi) Track tins. 28,800

(vii) Component parts of rollers for 1,200 rollers

(viii) Component parts of sprockets for 720 sprockets

(ix) Component parts of idlers for 240 idlers

(x) Rouser shoes. 14,400

Representative: Muller & Phipps (India) Private Ltd., Bombay • Madras • New Delhi.

Exclusive Industrial and Railway Distributors:

William Jacks & Company, Ltd. Bombay • Calcutta • Madras • New Delhi

The targets for 1965-66 have been tentatively fixed as follows:

(Numbers a year)	
Crawler tractors	500
Dumpers and scrapers	500
Shovels	100

The production of such equipment in 1961 was nil, and the value of the production in 1965-66 is estimated at Rs. 17.5 crores.

Chemical Plants

The requirements of various types of chemical plants by 1965-66 are estimated broadly as follows:

Type of plant	Value of machinery (Rs. crores)
Nitrogenous fertiliser	28.50
Phosphatic fertiliser	0.80
Soda ash	2.10
Sulphuric acid	0.84
Caustic soda	3.00
Petroleum refining	11.20
Total	46.44

As against the above, the industry's present position is as follows. There are about 60 firms licensed for manufacturing chemical machinery, a very large number of which are already in production, with a total licensed capacity of Rs. 16 crores a year. On full implementation of their schemes, these units are likely to be able to supply complete plants, as indicated below: Sulphuric acid plant, 12 plants a year; superphosphate plant, nine plants a year; caustic soda plant, two plants a year; nitric acid plant, two plants a year; bleaching powder plant, one plant a year; chlorine plant, one plant a year; carbon disulphide plant, one plant a year; and fertiliser plant, one plant a year. In addition, the units will also supply numerous individual items of chemical machinery like pressure vessels, distillation stills, crystallisers, neutralisers, vacuum pans and evaporators.

As for nitrogenous fertiliser plants, only one party has so far been licensed for the manufacture and supply of a complete plant. However, even at present, firms like Simon Carves, against their own designs and drawings, are getting approximately 40 percent of the plant fabricated by different Indian firms of their choice. In one of the recent contracts, it has been possible for it to get equipment worth Rs. 1.04 crores fabricated in India.

It is expected, therefore, that by 1965-66, these 60 units with an aggregate capacity of Rs. 16 crores a year will be in a position to have a turnover of about Rs. 8 crores. The production of chemical machinery is steadily rising and reached a figure of about Rs. 1.50 crores during 1961.

Solvent Extraction Plants

In the field of solvent extraction plants, eight units have been licensed for the manufacture and supply of the continuous type of solvent extraction plants with an aggregate capacity of 40 to 45 complete plants a

year, which in terms of value will be equivalent to Rs. 4 crores a year. Most of these firms have already started manufacturing and have also delivered a number of complete plants. The estimated value of production during 1961 is Rs. 76 lakhs. By 1965-66, it is expected that the units will be in a position to have an actual turnover of about Rs. 3 crores, against their licensed capacity of Rs. 4 crores.

Furthermore, in the public sector, it has already been decided to set up one heavy plate and vessel works with a capacity of 40,000 tons a year and an actual turnover of 30,000 tons of machinery by 1965-66. In terms of value, the output will be worth about Rs. 6 crores. It is expected that a second plate and vessel works will be established in the public sector during the third plan period, although this might come up a little later, after the first unit. The projected heavy machine building plant in Ranchi is also likely to manufacture some of the items for chemical plants, although this project will mainly concentrate on steel plants.

Paper Imports

The State Trading Corporation, it is learnt, is negotiating a "link" deal with Norway under which India will import paper and paper pulp in exchange for non-traditional specified items to balance the imports. The annual turnover will be about Rs. 1 crore. A similar agreement with Sweden for an annual turnover of Rs. 3 crores is already in operation.

Testing of Iron Ore

Seventy tons of Salem iron ore is being sent to Norway for testing in order to ascertain its suitability for manufacturing pig iron or steel.

Diesel Engines

The range and type of diesel engines, whose production has been undertaken, may broadly be classified as follows:

Capacity	Nos.
Single cylinder horizontal engines (3½ to 50 horse-power)	23,500
Single cylinder vertical engines (3 to 12 horse-power)	30,000
Multicylinder vertical engines (from 16 to 600 horse-power at varying speed ranges)	13,650

Machine-building Project

The heavy machine-building project, which is being set up in Hatia (Ranchi), will have a capacity of 80,000 tons of machinery a year in two stages, with 15,000 tons in the first stage. The plant will produce machinery and equipment primarily for the iron and steel industry, besides possessing adequate capacity to meet the requirements of the mineral oil industry. It will also manufacture general engineering

items like heavy cranes, excavators, oil drilling rigs, crushing and grinding equipment press and forge equipment, etcetera. The following indicates the machinery proposed to be produced in the plant:

Description of items	(In tons)	
	1st stage	2nd stage
Rolling mill equipment	20,000	34,500
Blast furnace equipment	4,000	5,500
Steel-making equipment	5,000	7,050
Crushing and grinding equipment	2,100	3,150
Coke oven and by-product equipment	6,000	7,700
Crane equipment	4,400	6,570
Spare parts for metallurgical equipment	1,500	1,080
Mining equipment	..	880
Excavators	..	5,000
Press forging equipment	..	1,360
Heavy oil drilling rigs	..	5,500
Miscellaneous heavy machine parts and assemblies	2,000	1,810
Total	45,000	80,050

The first seven items are mainly meant for steel plants. The project is expected to be completed by December 1964.

Fishery Project

Because of its success in Kerala, the India-Norway fishery agreement is being extended to Karwar and some other coastal States interested in the development of fisheries. Mechanised fishing boats, improved fishing methods, ice factory freezing plants and fish vans have played an important part in the development and marketing of fish in large parts of Kerala. An oceanographic research vessel constructed in Norway has been commissioned for exploratory fishing and marine research off the Indian coast. The construction of a slipway and the necessary fisheries establishment at the site made available by the Government of Kerala for a fisheries station in Cochin is being expedited.

After its extension to other States, the Indo-Norwegian project will acquire a multi-State character. It will be administered by the Government of India in consultation with the State Governments concerned and the representative of the board of the Norwegian India Foundation in India. The activities will be co-ordinated with the fisheries development programmes of the Government of India within the framework of the third plan. The Norwegian India Foundation will provide equipment and Norwegian personnel as may be agreed upon for carrying on the activities.

In addition to the contribution of Rs. 1.66 crores already agreed to in the main agreement of 17th October, 1952, and the second supplementary agreement of 21st April, 1956, the Norwegian India Foundation has contributed Rs. 87 lakhs up to 31st March, 1961, for implementing the activities undertaken under the previous agreements. Appreciating the need for implementing the fisheries programmes in India's third plan, the Norwegian India Foundation will—in addition to its contribution towards the completion of the remaining capital investments under the previous agreements—contribute up to Rs. 33.2 lakhs a year for financing the activities envisaged in the agreement and for fulfilling the remaining commitments under the first and second supplementary agreements. The contribution by the Government of India will consist of land, sites, Indian personnel, labour, local materials and buildings.

New Industrial Projects

The Government of India has approved in principle some important industrial projects. Approval, it is believed, has been accorded to Dalmia Iron and Steel to set up a unit for manufacturing cast iron spun pipes

in collaboration with a French firm, Pont-a-Mousson. The issued capital of the new undertaking is placed at Rs. 2 crores or Rs. 2.5 crores. The foreign collaborator will get a net royalty of 1.125 percent.

Mr. V. S. Vaidya of Poona proposes to set up a plant for manufacturing glass fibre plastic reinforcements and continuous yarns in collaboration with B. T. F. Industries of London, which will provide the technical know-how for manufacturing different products with fibre glass, also manufactured by the same undertaking as the basic raw material. The proposed unit will manufacture 480 tons of glass fibre strand mat for plastic reinforcements, 180 tons of glass fibre rovings (also for plastic reinforcements) and 60 tons of glass fibre continuous filament yarns a year.

Bombay Burmah Trading Corporation Ltd, Bombay, proposes to set a plant for manufacturing industrial laminates in collaboration with another British firm, Formica (India) Ltd. The project will be designed to manufacture 1,020 tons of industrial laminates, including copper clad laminates and surfacing laminates. Unlike fibre glass, there is already a licensed capacity of 3,635 tons for three units in Andhra, Punjab and Maharashtra, of which capacity amounting to 75 tons has been installed.

Apprentices Act

The Apprentices Act, it is expected, will come into force from March 1962 in all the States and Union territories except Jammu and Kashmir. The actual operation of the Act may, however, begin next July. The Central Labour Ministry, it is understood, has begun informal consultations with industrialists in various parts of the country to ensure smooth operation of the Act. The Apprentices Act, which received the assent of the President on 12th December, provides for the regulation and control of the training of apprentices.

C. D. F. C. Aid

Mr. John Christie of the Commonwealth Development Finance Co. Ltd has arrived in New Delhi to discuss with the Government the possibilities of his organisation financing Indian development projects. He met Mr. L. K. Jha, Secretary of Economic Affairs, on Tuesday.

Jet Engine Manufacture

The managing director of Bristol Siddeley Engines Ltd, Sir Arnold Hall, said at a Press conference in New Delhi that he proposes to discuss with the Government the possibilities of extending the existing collaboration agreement to cover the manufacture of jet power generation and marine propulsion engines in India. These engines are already in use in Britain. He also discussed the future possibilities of jet engines which are still in the experimental stage. Fitted to prototype aircraft, these could fly in any direction, reverse in mid-air, and take off vertically or from the smallest runway. Sir Arnold paid tribute to Indian technicians for manufacturing turbo-jet engines for Gnat aircraft at the Bangalore factory of Hindustan Aircraft Ltd, which he claimed were in some ways better than those manufactured in Britain. His Company is collaborating in the manufacture of jet engines in India.

NAMES AND DATES

Professor Humayun Kabir, Central Minister for Scientific Research and Cultural Affairs, Government of India, will formally inaugurate the Engineers Guild (India) at the U.S.I.S. auditorium on 5th February, 1962, at 10-15 a.m.

London

New Scheme Prepared for Financing Capital Goods Exports

(FROM OUR LONDON CORRESPONDENT)

"in a reasonable competitive position," Mr. Lloyd said.

The scheme will help mainly exporters of large-scale "capital goods" like ships, aircraft, and power station equipment. It will do nothing to help other sections of the engineering industry, machine tool manufacturers, for instance, whose exports are less costly and are normally sold on credit contracts running for less than three years.

Overseas Trade

Britain's trade gap—measured by the excess of imports over exports—narrowed last year by £288 million to £558 million. This improvement still falls short of what is needed to keep the U.K.'s external payments position in balance. Exports rose by £128 million to £3,682 million. Imports were reduced by £143 million to £4,398 million. A 7 percent drop in imports of industrial materials reflected a much lower level of stockbuilding. Purchases of foreign steel were down by £52 million, textile fibres by £20 million and timber and plywood by £12 million. A significant and disappointing feature was that all the increase, compared with 1960, took place in the first quarter of the year with little change later.

The £128 million increase in Britain's exports last year was accounted for mainly by a continued growth in exports to western Europe, the increase to the European Common Market countries being particularly marked, says the U.K. Board of Trade in a detailed analysis of Britain's trade in 1961, published last week. At £163 million, exports to western Europe were 16 percent higher than in 1960. The most outstanding improvement was in exports to Italy and France, which rose by 30 percent and 28 percent, respectively, and to Holland and Belgium, which rose by 19 percent. The increase in exports to West Germany was only 5 percent. There were also substantial increases in exports to the iron curtain countries and Japan. Russia and eastern Europe bought £28 million worth of British goods—36 percent more than in 1960—and Japan took an additional £14 million or 51 percent. These improvements were, however, offset by falls in exports to the United States, Australia, New Zealand, and India. Goods shipped to the sterling area countries were valued at £27 million—2 percent less than in 1960—while exports to the United States fell by £38 million.

Of the total value of the year's exports at £3,682 million, sales of machinery and instruments accounted for £137 million, 14 percent more than in 1960, and sales of ships for £36 million. A 17 percent increase in commercial-vehicle exports was, however, offset by a fall of 34 percent in motor-car exports, the overall decrease being £63 million, and sales of railway vehicles and aircraft also fell, by £6 million and £3 million, respectively. Engineering products made up 46 percent of the value of all goods exported. Among those goods to show an increase on 1960 were excavating and earthmoving machinery, boilers and boiler house plant, machine tools, textile machinery, paper-mill and pulp-mill machinery, tractors, and office machinery. Exports of electric machinery and apparatus were £26 million, or 11 percent higher than in 1960. This

group included larger exports of radio and electronic equipment, radar and navigational equipment, telegraph and telephone equipment, transformers, switchgear, and generating plant and motors. Exports of scientific instruments, including photographic goods, watches and clocks, rose by 15 percent. Sales of motor-cars overseas, which had been at a low level since June 1960, showed a definite improvement in the final quarter of 1961, when exports were 9 percent higher than in the same quarter of 1960. But, the Board of Trade says, "in 1961 as a whole the value of motor-car exports was less by a third than in 1959 and 1960." The number of cars exported declined from 570,000 in 1960 to 371,000 last year. Deliveries of ships, on the other hand, were particularly high, and at £89 million were nearly 70 percent greater than in 1960. Metal exports rose by less than 1 percent. Textiles lost £12 million or 4 percent in overseas sales, an increase in man-made fibre exports of 8 percent being offset by falls of 5 percent and 10 percent in exports of wool and cotton textiles, and of 4 percent in fabrics.

Decision Welcomed

By 21 votes to eight, the General Council of the T.U.C. decided to participate in Mr. Selwyn Lloyd's proposed National Economic Development Council. The Chancellor has welcomed the decision. He has promised to set up the Council as soon as possible, but it is open to some doubt whether the T.U.C. move is likely to prove as helpful as might be expected. As one member of the General Council put it after the meeting: "Nobody was wildly enthusiastic about it." What ultimately tipped the scales was the hope that the T.U.C. will stand a better chance of influencing Government policy from within the Development Council than from outside. But it is still full of misgivings about the Government's intentions, and its own position is bristling with reservations. There is little doubt, for example, that if the emphasis of Government thinking remains on wage restraint, the T.U.C. will eventually boycott the Development Council as it did the Cohen Council some years ago.

Jute Profits Warning

Lower profits in 1962, for the second successive year, are forecast by Sir William Walker in his statement with the full accounts of Jute Industries for the year ended September. It is probable that the Company will incur stock losses during the year, in contrast to the stock profits realised in the past two years, and the 1962 profits thus are likely to be lower than those for 1961. Results for the year were cushioned by the rise in raw jute prices in September. If this had not taken place, an extra £125,000 would have had to be written off stocks. Home trade has improved but raw jute qualities are causing concern, with scarcity keeping prices high and weakening the competitive position of jute against other materials.

Sales of Heavy Industry

New orders received by the industries producing engineering and electrical goods were at a level pace in November, but were about 9 percent

lower than a year earlier. The reduction was in orders from the home market, which were 13 percent below those of November 1960. Export orders were at the same high rate as a year earlier. In fact, the inflow of export orders, which dropped a little in the second and third quarters of last year, revived strongly in the third quarter. In October and November, new export orders greatly exceeded export deliveries. Deliveries to the home market have been maintained at a high rate. In November, they were 7 percent more than a year earlier, while export deliveries were 3 percent more. The order-book for the home market declined further in November, and at the end of that month, unfilled orders were 8 percent less in value than the peak at the end of April. There was a further small increase in unfilled export orders which have been rising steadily for the past two years.

Future of Cotton Mills

"It is up to the industry to determine its own place in the economy within the general framework of the Government's policy"—in those words, Mr. Niall Macpherson, the Parliamentary Secretary to the U.K. Board of Trade, rejected the pleas from both sides of the House of Commons for guarantees on cotton imports. It really is not possible, Mr. Macpherson insisted, for the Government to assure any industry of a given proportion of the market in the country. If it did, the Government would be ignoring questions of demand, price, competition, and the effects on trade relations with other countries.

This uncompromising message drew from Mr. Harvey Rhodes, the Labour member, the comment that it was a different story just before the 1959 election. It was a "lame tale," Mr. Rhodes thought, but this was an accusation which Mr. Macpherson vigorously denied. What he had said was the "core of the trading policy of the country." Mr. Macpherson went as far as admitting that sudden imports from low-cost producing countries might unbalance the market.

Commonwealth Immigrants

More than double the number of Commonwealth immigrants came to Britain last year, compared with 1960. The net inflow is estimated at 136,000 for 1961, compared with 58,000 in 1960. Mr. Butler, Home Secretary, circulated figures the other day showing the estimated net inward balance of movement from countries for which figures are available. The heaviest influx was from the West Indies, 66,330. Next came Pakistan, 25,100 and India, 23,750. Figures for the principal countries are:

	1960	1961
West Indies	49,650	66,300
E. African territories	500	5,453
W. African territories	250	2,653
Cyprus	1,200	6,859
Malta	1,400	500
Hongkong	500	2,150
Malaya	~ 400	700
Singapore	~ 50	950
India	5,900	21,750
Pakistan	2,500	25,100
Ceylon	1,100	650

A minus sign indicates a net decrease showing that more nationals of a country have returned to their homes than the total who have arrived in Britain.

Investment Plans

A sign that industry is not preparing for a recession comes from the U.K. Board of Trade. Forecasts for capital outlay in 1962 supplied to the Board by managements towards the end of last year, indicate that there may be an increase of about 3 percent in capital investment this year. As such a small rise could have mere statistical causes,

the Board estimates that expenditure will be "much the same" this year as last. The forecasts take manufacturing and distributive and service industries together. The most significant point is that the same companies—when they supplied provisional forecasts for the 1962 expenditure some six months ago—gave a very similar picture of "leveling out." Thus in spite of the July measures, the formidable bank credit squeeze and the widespread fall in profits, total capital expenditure plans have not been reduced.

Taking manufacturing industry only, the same applies. Plans are being made for roughly the same outlay as was made in 1961. Little or no change is intended in expenditure on new building work as well as on plant, machinery and vehicles. However, there should be considerable changes as between individual groups of industries. The estimates suggest that capital expenditure of the iron and steel and motor-vehicle industries will be substantially reduced, and that this drop will be offset by increased expenditure of "most other sectors." As for the distributive and service industries, which include shipping, forecasts indicate that they mean to spend about 8 percent more this year than last. Again there has been no change from the forecasts supplied last summer. This group of industries appears to have spent about the same amounts in 1961 as in 1960 and is now planning to move upwards this year. Its expenditure on new building work and on plant and machinery is expected to be about 15 percent higher in 1962 than in 1961. In fact, apart from a fall in spending on new ships and a merely "slight" rise in outlay on motor-vehicles, this sector looks like providing the main stimulus to the building trade and the capital goods industries this year.

Stocks Reduced

Revised estimates in the *Board of Trade Journal* confirm that industry's total stocks scarcely changed in the third quarter of last year. But the latest figures—on a seasonally adjusted basis—show in place of a 41 million rise in volume (at 1954 prices) a decline of the same size. This is the first fall recorded since the opening quarter of 1959. Within the overall change, there was an increase of £55 million (not £59 million as first thought) in manufacturers' holdings, offset by a drop of £56 million (originally £58 million) in wholesale and retail stocks. Actual changes, not adjusted, show a rise in materials held by the engineering, and food, drink and tobacco industries, and a fall—no more than seasonal—in stocks of textile, clothing and other manufactures. New detail indicates that the record fall of £21 million in wholesalers' stocks was spread over the categories of wholesale distributors, coal and building material merchants and dealers in industrial materials. The latest figures confirm first estimates that industry's capital outlay—seasonally adjusted and at 1954 prices—rose to a new peak of £447 million in the third quarter. The increase over the previous three months is now put at 6 percent. Spending by the distributive and service industries was 7 percent higher at £108 million, and outlay by manufacturers went up by 5½ percent to £239 million.

Wholesale Prices Unchanged

Wholesale prices in December showed little change on average from the levels of October and November. But certain increases, partly seasonal in kind, took place in materials and products of the food industries. These rises mainly accounted for a 0.5 percent lift in the Board of Trade's provisional December index

of industrial materials and fuel. Fuel prices were unchanged. Higher charges for food products accounted for an increase of 0.1 to 116.8 in the index for all manufactured goods.

Steel Output Falls

Steel production ended last year with no sign of any significant recovery from its depressed working level. The output in December averaged 356,600 tons a week, 21 percent lower than in December 1960, the U.K. Iron and Steel Board has announced. So unpromising was the situation that a number of firms took extended holidays over Christmas. Production for the whole of 1961 was 22,086,000 tons, a fall of 9 percent, compared with a year earlier. The limited recovery in the motor-car industry lifted the level of working slightly at some plants, but generally the industry used only 74.5 percent of capacity in the fourth quarter of 1961, compared with 78 percent in the third quarter.

Emphasising that forecasting for this year is particularly difficult, the Board says that it is "unlikely that steel production will be more than in 1961." The key factor is stocks, because stock reductions were the principal cause of last year's fall in the steel output.

Tax Relief on Profits

An appeal for tax relief on profits from export sales is made by the National Association of British Manufacturers in a memorandum to the U.K. Chancellor of the Exchequer on the forthcoming Budget. The Association says it recognises that such relief might be considered inequitable by certain manufacturers—makers of components, for example—but it believes that the immediate necessity for giving a direct incentive to exports now outweighs such considerations. The Association's president, Colonel E. R. Mayer, says in an accompanying letter: "We are very conscious of the necessity for increasing exports, and we believe that this increase must come largely from the medium and smaller-sized firms. These firms in particular find it difficult to meet the increased costs which they have recently been called upon to bear and yet to develop their export trade; this involves them in additional effort and expense which they can ill afford, especially when the keen competition which they must face usually results in a smaller element of profit on any business they may secure." Other recommendations made by the Association include increased relief for plant and machinery to provide incentive for greater production capacity by re-equipment withdrawal of the duty on heavy hydro-carbon oils, and the amalgamation of income tax and profits tax into one corporation tax.

Decimal Currency

The chairman of the T.U.C., a statistician, a department store chief, an industrialist and a bank director are to take part in the Government enquiry into the practical problems of changing over to decimal currency. The U.K. Treasury announced the other day that the members of the committee of enquiry under Lord Halsbury's chairmanship will be Professor R. G. D. Allen, Professor of Statistics, London University; Mr. Vernon Fly, of Fly's (Wimbledon) Ltd.; Miss Anne Godwin, chairman of the T.U.C. General Council; Mr. J. M. A. Smith, part-time member, National Coal Board and former assistant managing director of the Ford Motor Company; and Mr. R. G. Thornton, director of Barclays Bank. The Government has decided in principle to adopt decimal currency unless the difficulties are overwhelming.

Plantation Topics

INDIA LOSING AMERICAN MARKETS FOR TEA

(BY A SPECIAL CORRESPONDENT)

IN the 18th January issue of *Capital*, this correspondent referred to India's loss of tea markets in the U.S.A. and Canada. In 1950, the U.S.A. imported from India 84.7 million lbs and Canada 23.8 million lbs. In 1960, the figures were 18.8 million lbs and 15.3 million lbs or a total loss of 74.4 million lbs. This represents a loss of hard currency amounting to Rs. 14.88 crores. For the past few years, the prices in Calcutta have exceeded Rs. 2 a lb, so the country appears to have lost about Rs. 15 crores a year.

Disquieting Trends

These disquieting developments are apparently ignored by the Government which is supposed to be devising methods for increasing Indian foreign exchange receipts from exports. Meanwhile, planting interests have urged the Central Government to provide tax relief. It is hoped that the figures given above have been submitted to show the cost to this country of taxing its products out of world markets. It is not clear why the Central and State Governments fail to realise that in addition to loss of outmarkets and foreign exchange, the income tax revenue comes from internal points. A number of Cachar tea gardens are already on the verge of financial bankruptcy, so little or no income tax will be available from that area.

The Chinese Example

Speaking at the last annual meeting of the Tea Traders Association, Mr. G. A. Whitaker is reported to have said that a hundred years ago, China had the monopoly of the world's tea trade and lost it to India by imposing an export duty on teas from 1843 up to 1902 to the great advantage of India and Ceylon. Can not India learn a lesson from the past? The greed of the Chinese led to their loss of the world tea markets. Should India follow the same path in spite of her recent experience in the jute trade? In addition to reduced exports to the U.S.A. and Canada, the *Tea and Rubber Mail* (London) refers to similar losses of business with Australia and New Zealand. Both these countries have increased their purchases from Ceylon. It is, however, heartening to read that the Tea Board has made splendid efforts in the Middle East, since this is one of the few markets showing increasing consumption. Surely, there is going to be a severe competition for consuming markets. The formation of a new company with a capital of over \$1 million by the present six members of the E.C.M. is a sufficient indication that whether or not the U.K. joins the European Common Market, its members intend to promote a "tea drinking community."

TEA BOARD TO GRANT LOANS TO ESTATES

The Government of India has decided to place Rs. 5 crores at the disposal of the Tea Board to enable it to grant long-term loans to tea estates for replanting, replacement and the extension of tea acreage. The broad terms and conditions of the loan under the plantation finance scheme would be as follows: (i) The rate of loan to an individual estate will be limited to Rs. 7,400 a hectare or Rs. 3,000 an acre to a plains garden in four instalments; and Rs. 9,900 a hectare or Rs. 4,000 an acre to a hill garden in five instalments. (ii) The loan will be

payable to the Board over a period of eight years commencing after the expiry of seven years from the disbursement of the first instalment. (iii) The rate of interest on the loan will be 7 percent a year with a rebate of ½ percent for prompt payments of principal and interest on the due dates. (iv) The security should be primarily in the form of *pari passu* charge obtained through appropriate arrangements with banks now financing short-term loans on the fixed assets of an estate. The estates willing to avail themselves of the loan assistance may send their applications to the Tea Board in the prescribed form to be obtained from the Board's office in Calcutta, Cochin, Coonoor, Madras and Palampur (Kangra).

COCHIN TEA SALES

At Dust Sale 4, 324,000 kilograms of tea were on offer. There was a good demand for the residual fibrous grades. Powdery sorts were the weakest feature of the sale while others were firm to dearer.

At Sale No. 5, 449,000 kilograms of tea were on offer. There was a good but irregular demand. Plain low mediums and mediums were steady. Best liquorings were irregular but generally higher, the prices depending on quality. Orange pekoes were firm.

STANVAC DEVELOPS NEW FUEL

A new substitute fuel for high-speed diesel oil has been developed by Standard-Vacuum Oil Company. The latter has turned over the formula and composition of the new fuel to the Indian Institute of Petroleum for further tests and application. Whereas the components of high-speed diesel oil have to be imported, those of the new fuel are available locally. Furthermore, these components are at present surplus to India's requirements. Yet another advantage is that the components which go into the making of the new fuel are cheaper than those now used for high-speed diesel oil. The performance of the new fuel is equivalent to that of high-speed diesel oil. The Indian Institute of Petroleum is expected to conduct intensive fleet tests to determine its large-scale effectivity when used in transport services. After initial studies in India, Stanvac engaged the services of Institut Français Du Pétrole—an independent petroleum research group in France—to conduct intensive laboratory tests for determining the effects of the use of the new fuel in machinery. Using radio-active tracers the Institute's finding confirms that the new fuel's performance is satisfactory. Since the components are locally produced, the new fuel, if introduced in India, will save a considerable amount of foreign exchange at present spent in importing high-speed diesel oil. It is anticipated that in 1962, India will import about 453,000 tons of high-speed diesel oil at Rs. 147 a ton. The total bill for this will work out to nearly Rs. 67 crores in foreign exchange. Another factor in favour of the new fuel is that it will alleviate to a great extent the problem of unbalance which is confronting the oil industry today by using components at present surplus to India's requirements. Since the components are cheaper than high-speed diesel oil, the new fuel, exclusive of taxes and freights, is expected to cost less.

Jute

INEFFICIENCY OF RAILWAYS HAMPER MOVEMENT OF JUTE

THE jute trade has suffered badly because of the inefficiency of the railways. The supply of wagons for moving fibre has long been a headache to the industry. At the end of each delivery period, contracts for the supply of jute to mills have to be extended because wagons are not available. Mills have to accede to requests for extensions supported by certificates from station masters, and in some cases from divisional superintendents, to the effect that wagons are not available.

A long-standing grievance of the jute trade is that it is extremely difficult to get wagons at any time for taking jute to mills on the west bank of the Hooghly, or to mills south of Howrah. Thus many sellers, when offering jute, add a request for "Sealdah-side mills". There have been several conferences in Calcutta over the years to discuss this problem, but no real solution has been found. Whether it is because of bottlenecks or operational inefficiency is not known. At one time, before regrouping, one section blamed the other, but although it is now all one railway group, the deadlock continues.

Freight Rates

The correct calculation of freight rates is another matter the railway authorities should investigate. Frequently—some would say in the majority of cases—the charges are incorrectly calculated. Rectifying the charges and making the necessary adjustments must cost the railways many lakhs of rupees. The demands for undercharges are sent to the mills and have to be paid. The debits are often not made until the time for making claims is about to expire, or has expired, with the result that the jute merchant, who is responsible for the freight, loses his money.

The question of shortages is also very common. Claims against these will not be entertained unless supported by a "short certificate" from the goods clerk at the delivery station, and must be submitted within a certain period. Frequently, goods clerks refuse to issue the certificate within the stipulated time, and then the railways take shelter behind the provisions of the Railway Act and refuse to pay.

The shortage of wagons for the movement of jute was one of the causes of the slump in prices at the agencies. With a bumper crop to deal with, wagon facilities were, and still are, totally inadequate. Consequently, jute piled up and "distress sellers" accepted almost any price to get rid of their stocks. The labour strike in Cossipore, since settled, added to the confusion. With hundreds of wagons delayed there, all bookings for Cossipore have meantime been suspended. On many occasions, attention has been drawn to difficulties with the railways but instead of improving, the situation seems to be steadily deteriorating.

U. S. Burlap Consumption

Although the U.S. consumption of burlap during December 1961, at 72 million yards, was normal for that particular month, the statistics for the full year 1961 indicate new low levels all round. Total consumption from January to December amounted to 781 million yards, giving a monthly average of 65 million yards. The total in 1961 was 76 million yards less than in 1960, and 116 million

yards less than the peak year of 1959. The monthly average last year was nearly 6½ million yards less than in 1960.

In spite of the poor figures, hessians continue to rule stronger than sacking. The U.S.A. and the Argentine have shown small interest, but only for near shipment, and forward goods remain at a discount of Rs. 8 due to a lack of interest. Sacking prices have fluctuated rapidly due to speculative activity, and during the past week, have passed through a range of about Rs. 5. Bull liquidation towards the close has depressed the market, and dull conditions have prevailed. All mills are keen for business in both sacking and hessians, but there are no genuine buyers, and the bazaar is not willing to absorb any more. Present prices still show a fair profit for mills on current rates of jute.

The fibre market, following a further issue of quotas totalling about one million maunds, shows signs of improving. Tossa, in particular, is very steady and only small offers are available at the minimum rates. White jute and mesta can still be obtained for ready delivery at a small discount, while buyers can get the lower grades of mesta at a fair discount. The strike in Cossipore is holding up the unloading of wagons, and in most districts, imports have fallen. On an all-India basis, arrivals amount to 70,000 maunds or 80,000 maunds daily. Thus, the quota issued by the I.J.M.A. sub-committee continues to exceed the weekly rate of arrivals, and has been mainly responsible for the recent recovery of rates.

THE JUTE MARKETS

Manufactured Goods: The goods market during the past week has followed the pattern now usual at the end of the month—unloading by weak bulls either because of profit-taking or because they are unwilling to take up P.D.O.s. There has been to take up P.D.O.s. There has been very little interest from overseas parties, except in a small way for hessians, and the forward section has been completely neglected. Last Thursday, the market opened on a steady note, due to an increase in speculative activity and heavy covering by local shippers against January due date contracts. B Twills advanced by Rs. 2 in the ready position and stood at Rs. 125.25, against Rs. 119.50 for April-June. Hessians improved by 75nP to Rs. 55 for 40in. 10oz. in the January position, which was Rs. 8 over forward shipment. Friday was a holiday, and on Saturday B Twills jumped up to Rs. 127, but heavy bull sales saw a drop of Rs. 2 after the week-end. Hessians managed to maintain some stability and over the next few days only fractional changes were recorded. This steadiness was due to small overseas interest. Towards the close, the market was again easier as speculative activity increased.

On Wednesday morning, opening quotations were as follows:

	Ready	February	March	April-June
40in. 7½oz.	43.00	41.25	38.25	35.75
40in. 8oz.	46.50	41.25	41.00	38.25
40in. 10oz.	54.75	52.63	49.85	47.00
B Twills	123.25	122.00	120.25	118.75

Heavy Ceos				
(Plain)	124.00	122.00	120.25	118.75
A Twills	152.50	152.00	148.00	145.00
Liverpools	150.50	144.00	139.50	136.50
Cornsacks	128.00	126.50	123.25	121.25

Raw Jute: There was a slight improvement in the upcountry markets at the beginning of the past week, although jute remained on offer in Calcutta at the minimum rates. Ready jute, however, was available at a discount of about Re. 1, except Tossa. Imports in the upcountry agencies began to fall off, which helped prices to improve, but the closing of bookings for Cossipore due to the labour strike counteracted this in some districts. A fresh quota was issued for the week ended 3rd February, and this was reported as about one million maunds. Mills bought steadily throughout the week against quotas. After the week-end, fibre prices upcountry showed a distinct improvement, and towards the close, in some cases, they actually advanced above the parity of Calcutta indications. The labour strike which had been holding up wagons in Cossipore was settled on Monday, and the unloading of wagons commenced on Tuesday. All stockists were keen sellers and large quantities of all grades were on offer. Mills were not particularly interested in quick shipment jute, and most of the business was for shipment in March or April. Opening quotations on Wednesday morning were as follows:

	Landed at Mills		
	Basis Bottoms		Shipment
	Rs. a 100 kilos	Rs. a Mt.	
Assam	80.38	30.00	Feb.-Mar.

THE PAKISTANI JUTE MARKETS

FIBRE RATES CONTINUE TO FALL

(FROM OUR Dacca CORRESPONDENT)

THE market remains weak and almost inactive, both in Pakistan and Europe. In upcountry areas, the reduction in arrivals has been halted but prices continue to fall as more and more balers sit out being unable to sell overseas. The Narayanganj pucca bale market has been featureless. It is difficult even to obtain quotations which, in any case, will be purely nominal. The overseas markets have shown little or no interest. As the prices of white jute are at the minimum, there is no question of a further reduction—a point which is gradually becoming obvious to buyers. They have, therefore, bought selected marks occasionally. The prices of Tossa still leave scope for a further reduction, since output Tossas remain

above the minimum. This has encouraged optimistic buyers to sit out waiting for a further reduction. With the chairman of the Jute Board away from Narayanganj, it is unlikely that anybody will have the authority to reduce the E.P.C. prices further. E.P.C. registrations for the first half of January amounted to 64,000 bales. Obviously, this figure does not include business registered after the cut in E.P.C. prices. South Africa was the largest buyer with 8,830 bales while India bought nothing at all.

THE FOREIGN JUTE MARKETS

LABOUR TROUBLES CONTINUE

(FROM OUR DUNDEE CORRESPONDENT)

WHILE the Pakistani Government is showing determination to keep up raw jute prices, shippers are anxious for business, so they are ready to discount the E.P.C. prices by several pounds a ton. It is still felt by jute manufacturers that fibre prices are too high and that there ought to be a reduction. Perhaps, in comparison with other textiles, raw jute prices are not excessive, but since there are many competitive substitutes, only lower prices would result in a greater demand for raw jute.

Mill Firsts are quoted at from £149 a ton, Mill Lightnings from £124 and Mill Hearts from £97, with Grade Tossa-2 from £139, fours £123

and Continental Tossa-2 from £101 for January-February shipment, c.i.f. U.K.-Continent. Spinners in Dundee and on the Continent are buying very little fibre, so sellers are passing through a lean time.

The labour troubles in Dundee and the district have not yet ended. There is still the same difficulty about deliveries, the main cause being the ban on overtime. In Forfar and the district, where there is a branch of the Jute and Flax Workers Union in Dundee, the workers have decided that they will work overtime. They may be more conscientious in that smaller county town, with no wish to harm their employers. Meanwhile, the workers in Dundee are not only drawing much less wages each week but are hampering the working of mills. Manufacturers are desperate for deliveries of jute yarns, and both spinners and manufacturers are as busy as the labour situation will permit them to be. The unions are still pleading for a rise in wages for the lowest-paid workers in the industry, which no doubt will come in due course.

The Calcutta goods market was again firm during the past week, and the prices were higher at 84s 3d for 40in. 10oz. and 66s 6d for 73oz., January, 80s 3d and 62s 9d February, 76s and 58s 3d March and 71s 9d and 54s April-June, with B Twills 192s, 190s 3d, 186s 6d and 184s 3d for the respective positions of shipment, f.o.b. Calcutta. Jute yarns and cloth were quiet but firm with spinners and manufacturers beginning to look for new orders for forward delivery.

PRODUCTION PLANNING: NEW THEORY ANALYSED

Investment and Production. By Vernon L. Smith. (Published by Harvard University Press, Cambridge, Massachusetts, U.S.A. Price \$7.50, pages 320.)

This is not a book for the literary economist. Originating from a doctoral dissertation, it presents a unified theory of production and investment. Dr. Smith explores the empirical and theoretical nature of the interdependence of "short-run" current account production decisions and "long-run" investment planning with special reference to the effect of technological changes. The monograph also contains a theoretical treatment of the problem of optimal capital replacement policy. The author concludes by developing a decision theory of production—investment planning over time which is a synthesis of short-and-long-run decisions in production planning. In spite of the use of about 70 graphs to illustrate his theories, the treatment is all through mathematical. There is nowhere a translation of this line of reasoning into words for the benefit of the large body of literary economists. Even after the lapse of more than 70 years, Alfred Marshall's statement in this connection in the preface to the first edition of his *Principles* still seems true: "The chief use of mathematics in economic questions seems to be in helping a person to write down clearly, shortly and exactly, some of his thoughts for his own use... But when a great many symbols have to be used, they become very laborious to anyone but the writer... It seems doubtful whether anyone spends his time well in reading lengthy translations of economic doctrines into mathematics that have not been made by himself".

CONGRESS RULE

Sotto Voce (Second Series). By Vignheswara (N. Raghunathan). (Published by B. G. Paul and Co., 4 Francis Joseph Street, Madras 1. Price Rs. 5, pages 396.)

Long ago, the Arnold Bennett-type headmasters were teaching the English language and literature in Madras State. The impact of English institutions and ideas produced a line of writers like Rt. Hon. Sastri, Mr. S. V. V., Mr. R. K. Narayanan and Mr. Raghunathan who were steeped in the classical education of the East but thought in English. It is superb craftsmanship of the English language that Mr. Raghunathan shows in his essays which were written some ten years ago but have not yet lost their topical value. Many of his essays are, as it were, the social and political footnotes to an era. Although the "progressive intellectuals" of the Congress Party may be shocked by the archaic and "feudal thinking" of the author, his one-man challenge to the Party in power will be appreciated by those who abhor a monolithic political setup. The main political pre-occupations of the period February 1949 to August 1952, were the framing of the Constitution and the passing of the first amendment, making virtually ineffective the most important of the fundamental rights, that dealing with the rights of personal liberty, freedom of speech and conscience. There are many papers in the volume on these and allied topics which throw light on the Congress Party's professions

and practices concerning the basic liberties of the citizen.

ECONOMIC PLANNING

Some Basic Planning Problems. By Charles Bettelheim. (Issued by the Indian Statistical Institute, Calcutta, and published by Asia Publishing House, Contractor Building, Nicol Road, Ballard Estate, Bombay 1.)

In this slim monograph of some 70 pages are presented six selected papers which Dr. Charles Bettelheim prepared during his three visits to the Indian Statistical Institute during 1953-56. Dr. Bettelheim's name is well-known in economic circles, particularly for his contributions to the methodology of planning. Economic planning, unfortunately, very often leaves no scope for half-way houses. It is not difficult to point to scores of instances in India where the resort to such half-way houses has created most embarrassing situations for the planners and has struck at the roots of certain accepted policy decisions. True to the logic of his subject, Dr. Bettelheim has unequivocally listed the merits of the superstructure of controls which planning involves; and they are a formidable list. But his thesis is that one cannot do without controls and plan an economy at the same time. Otherwise, either the plan goes awry or one builds up considerable inequalities of wealth and power which are dangerous road-blocks for prosperity. The logic is irrefutable, but the flesh is weak.

LAND REFORMS

Effects of Land Reforms in Saurashtra. By R. R. Mishra. (Published by Vora and Co. Publishers Private Ltd, 3 Round Building, Kalbadevi Road, Bombay 2. Price Rs. 12, pages 240.)

One of the first tasks which was tackled by the Saurashtra Government after the integration of the 222 States of Kathiawar, was to rationalise the land tenure system and to replace the old feudalistic order by a democratic system based on the ownership of land by the tiller of the soil. This survey was undertaken at the instance of the Research Programme Committee of the Planning Commission. The volume is divided into three parts. Part I constitutes the general background wherein are discussed the pre-reforms position, events leading to the land reform legislation and its implementation. The implications of the legislation have been examined in detail and the financial effects of the scheme of compensation discussed. In Part II, the effects on the general agricultural pattern of the selected villages of the survey have been studied. In Part III, attention has been focussed on the economic conditions of different categories of cultivators. The problem of sales and purchase of land has also been discussed. For the purpose of the survey, the year 1947-48 has been used as a base year. But land reforms have many other aspects besides the one which has been studied here. It would be interesting and informative to study the social, political and other side-effects of the reforms.

The British System of Taxation. (Published by the Reference Division, Central Office of Information, London. Pages 53.)

ATTAINING THE FOOD TARGET UNDER THE THIRD PLAN

By T. R. Ramachandran

INDIAN agriculture is faced with a challenge—the challenge of producing 110 million tons of foodgrains by 1965-66 to meet the requirements of India's rapidly rising population, which by then may have risen to over 490 million from the present 438 million. Are the chances good? Mr. S. K. Patil, India's Minister for Food and Agriculture, is confident that the challenge can be met. He says: "A revolution peaceful, widespread and far-reaching in its impact, is taking place in Indian agriculture... With accelerated development in the agricultural sector, the country is ready to take a long leap towards the cherished goal of a self-sustaining economy." A World Bank report notes with remarkable optimism: "Proper application of known techniques in conjunction with the possible expansion of irrigation and cultivated area, could increase India's agricultural output four or five-fold. By the time that has been achieved, new techniques will have evolved and the way will be open for further progress." An American team of agricultural specialists recently sponsored by the Ford Foundation in India came to this conclusion: "A third plan target of 110 million tons of domestic production can be achieved. The best in Indian agriculture is comparable to the best in other countries. The task is to develop ways of raising the low average to the highest levels which some Indian cultivators have achieved."

The striking performance of some progressive farmers in Indian States bears this view out; it has only to be sustained and emulated by all agriculturists. In Andhra Pradesh and Madras, where the average yield of rice an acre generally touches four figures, they have succeeded in raising output five to seven times. In Orissa, where the State average yield of rice from each acre is around 500 lbs, they have increased it 10.1 times (1953-54) and even 13.7 times (1951-52). In wheat, the farmers in Punjab have raised the yield six to seven-fold. In Madhya Pradesh, Bihar and Bombay where the State average is generally as low as 500 lbs, the increase was as high as ten to 15 times.

Stagnant Yield Levels

That these cases, however, have been only exceptional is rather evident when one takes a glance at the past three decades of India's agricultural yields, which have remained shockingly stagnant, and even low.

YIELDS AN ACRE IN SELECTED CROPS IN INDIA

Crop	(1931-32 to 1958-59)		
	1931-32	1948-49	1958-59
Rice	879	868	816
Wheat	581	569	701
Maize	713	551	649
Gram	475	496	616
Sugarcane	3,132	2,907	3,616
Cotton	76	61	93
Jute	1,204	996	1,139
Tobacco	846	711	657

Almost a universal fall in yields of different crops in 1948-49 is apparent from the table. Agricultural productivity in 1958-59 over that in 1931-32 registered only a marginal increase. If one compares the productivity yields of rice and wheat during the first and second five year plans, the trend again is not far different. The average yield from each acre of rice during the second plan was 807 lbs, an increase of 3 percent over the average yield in the first plan period (783 lbs). In wheat, the average yield has declined by 2 percent from

675 lbs in the first plan to 662 lbs in the second. The challenge in the third plan now assumes its correct perspective; for it is against this downward trend that the plan's new dimensions have to be reviewed, such as a targeted increase of 27.5 percent in rice yield, 20.1 percent in wheat, 18.2 percent in sugarcane, 13.7 percent in cotton and 15.9 percent in jute in 1965-66. The greater part of these increases in yields, as the plan report says, will necessarily have to be secured in areas under irrigation and assured rainfall, but even in other areas, through soil conservation and dry farming, there should be some improvement in the average yield.

Need for Greater Productivity

An analysis of the input-output ratio during the last five years also underscores the need to raise agricultural productivity. It is estimated that an investment of Rs. 950 crores in agriculture during the second plan resulted in a 15.5 percent addition to the agricultural output of 1955-56. The third plan visualises another Rs. 1,718 crores of investment in agriculture against an increase of 41 percent in output; in other words, with less than double the financial provision, it is aimed almost to treble the marginal output. Again, funds available domestically for investment in the public sector have shown a meagre increase during the last five years. While the second plan investment in the public sector has gone up by more than 100 percent over that in the first plan, domestic savings in the public sector have increased only by 4 percent. If the problem of agriculture is tackled adequately, this should be a potential source of revenue. Mr. Colin Clark, the famous economist, has urged increased land tax not merely as a source of public revenue, but to induce farmers to produce more. He argues that for a very high land tax, Japan's yield from each acre is four times that in India, indicating that higher tax on land does not result in a fall in production. On the contrary, as more land has to be paid on the same land, tax has to be paid on the same land, he argues, the farmers are forced to exploit their lands in full with the use of better techniques and improved agricultural practices. Controversial though this suggestion may be in India, it focusses attention on a much neglected aspect of agriculture, namely, its ever-present ills and on the vital need to remedy them through such all-out measures as price stabilisation, crop planning, greater irrigation, supply of better seeds and implements, and proper fertilisation.

What is the urgency of these measures? The Ford Foundation team has drawn pointed attention to this fact: "The gap between needs for foodgrains, as indicated by the plan targets, and supply, as indicated by production trends, is growing wider... In order to produce 110 million tons of foodgrains annually by the end of the third plan, the rate of production increase must average 8.2 percent a year... This rate of increase compares with an annual average of 2.3 percent from 1949-50 to 1958-59, and an average of 3.2 percent from 1952-53 to 1958-59. The task is overwhelming. The urgency for an all-out effort is obvious."

Price Stabilisation

Among the measures to increase food production, the cultivator must be assured freedom of operation unaffected by the price level. Price

uncertainties, particularly of agricultural commodities during the second plan, have been a serious deterrent in adopting incentives to greater yield. Many cultivators go into debt for crop expenses and frequently for capital items. For added operating expenses and new investment for expanded production, there is no guarantee that the increased outlay will be covered by sale of the additional produce. As the Ford Foundation team has rightly stressed, "to encourage increases in foodgrain production, the cultivator should be assured of a price which will enable him to invest in fertiliser, seed and new equipment knowing that, with average crop conditions, he can repay any debts with the added income that results from adoption of improved practices." A conscious and consistent price policy is, therefore, necessary to guide production to planned targets.

One difficulty which has impeded the implementation of such a comprehensive policy is the inadequate facility for foodgrains storage. Although the Rural Credit Enquiry Committee had recommended the establishment of warehouses as a major step to improve the marketing structure for agricultural produce, the progress in this field has been far from satisfactory. The Central Warehousing Corporation has built nearly 40 warehouses in the country, but the State Warehousing Corporations have been rather inactive. In view of the Government's decision to build up a reserve of 5 million tons of foodgrains over the next few years, the present storage capacity of 2.13 million tons needs to be stepped up. To increase the capacity as speedily as possible and to ensure proper scientific preservation of grains requires a high priority. The import of foodgrains such as American wheat under P.L. 480, coupled with the anticipated high level of food production in the third plan, is likely to keep down the price level. While this may be true with specific reference to wheat, the situation concerning rice and subsidiary foods, may continue to be difficult or may even deteriorate. The remedy to some extent may lie in organising and combining resources on the land and improving the system of distribution.

Crop Planning

The total increase of 30 percent in agricultural production, as aimed in the third plan, cannot be achieved if only the 6 percent of the total sown area is to be increased. Even allowing for a 17 percent increase in productivity an acre, the target of production seems feasible only with crop planning. The plan Report has already indicated a change in the crop pattern and diversion of some area from millets to commercial crops. Multiple cropping, too, offers a good solution; proper fertilisation and irrigation make this possible with much of the land. At present, 66 percent of the area with assured irrigation or rainfall is under one crop only. When two crops are grown on the same acreage in one year, it is equivalent to doubling the size of the holdings, and likewise with three crops, to tripling. It is obvious, therefore, that any additional expense, such as providing for irrigation, drainage and fertilisers, is an economical undertaking. It should not be too difficult to finance these projects with so valuable an asset as land collateral.

The exploitation of the backlog of unutilised capacity is admittedly another right step to increase the yield from each acre. It is estimated that 17 percent of the additional irrigation potential created during the last decade is lying idle; the condition is still worse with minor irrigation works which have even gone out of use for want of proper maintenance. Secondly, only 40 percent of the cultivated area is under improved varieties of seed, and of the improved strains raised by registered growers, more than half goes into direct consumption. Thirdly, in the matter of implements, 25 percent of the installed capacity of industries producing them is idle for want of steel. A technological break-through seems clearly called for to rip open the hidden potential. Next, as important as irrigation, seeds and implements is fertilisation. The present demand for more chemical fertilisers—a sign conducive to greater productivity—must be fully met. The use of nitrogenous fertilisers has risen rapidly from 55,000 tons a decade ago to 460,000 tons during 1960-61. The estimated consumption at the end of the third plan is expected to be more than five times the current figure.

Finally, co-ordinated planning and action are vital to good results. Expansion of research facilities and the strengthening of co-operatives in Indian agriculture have been set up as recognised goals in the third plan. The working of co-operatives in India has, however, been patchy. To set up effective multi-purpose service societies is one of the aims of Government policy, but the unequal development of the different sectors presents a formidable, although not insuperable, problem. Co-operation as a movement, as Mr. S. K. Dey, Central Minister for Community Development and Co-operation has said, is indivisible; the different sectors—credit, marketing, processing, industrial, transport and miscellaneous co-operatives—are closely interlinked. Substantial progress in one front will not be possible without corresponding progress in the related sectors.

The Package Programme

The implementation of the package programme recently claims to have had encouraging results in agricultural production. The community development project which started with a lot of fanfare, aimed at increasing the farmer's prosperity by raising his agricultural production. One of the reasons for its failure has been its inability to make the farmer self-reliant. The package programme has started with a view "to demonstrating in pilot districts the most effective ways of expanding production by co-operative efforts between the Centre, the States, the districts, the blocks, the village and individuals", and its process is "to combine all factors for the rapid increase of food production into one integrated impact programme" carried over a five-year period in seven districts (now proposed to be raised to 15) selected out of the wheat, rice and millet-growing regions. And these factors, as mentioned in the foregoing, are price incentives, credit, seeds, fertilisers, pesticides and marketing arrangements. The programme thus offers all the measures as a single, concerted, effective—in other words, a package—deal. Its success should be a harbinger of co-ordinated efforts in several spheres and even if it proves its merit only at the district level, a gradual extension with a well-regulated implementation scheme may lead to greater agricultural productivity all round. The third plan, however, with its limited five years and an ambitious all-India programme, should directly look to the farmer; he, in fact, has to take up the challenge, and any countrywide measure to strengthen his conviction and aid his efforts, will be the surest way to meet it.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to November 1961. As compared with October, the November indices for Government securities

and preference shares show drops of 0.6 and 0.9 points, respectively.

There were rises in banks 0.2 points, cottons 2.9 points, jutes 12.3 points, cements 2.5 points, engineering 31.0

points, papers 119.9 points, sugars 22.7 points and miscellaneous 7.3 points, while declines occurred in coal 0.5 points, minings and oils 11.7 points and teas 10.2 points.

Combining all the factors, the Capital variable yield securities index advanced by 13.9 points during November 1961.

Weights	Index of Govt. Securities	Index of Preference Shares	Variable Yield Securities											Combined Index
			Banks	Cotton Mills	Coals	Jute Mills	Mining and Oil	Cement, Lime, etc	Eng. and Metal Works	Tea Shares	Paper Mills	Sugar Shares	Others

EMPLOYMENT PROSPECTS IN THIRD PLAN

(BY A SPECIAL CORRESPONDENT)

THE chief objective of a modern economy, whether it is a planned one or not, is to have full employment for all able-bodied persons between the ages of 15 and 60, and in certain cases, 65. Even among able-bodied persons, there will be a certain number of persons who are unemployable. For mainly historical and climatic reasons, the people of this country are, in general, less energetic and active than their counterparts in western countries. It is, therefore, necessary to eliminate a certain percentage from the estimated number of unemployed before arriving at the actual numbers unemployed. At the same time, many people remain employed only for a certain number of months during a year in the villages, where almost the entire population depends on agriculture. This means under-employment for a vast number of persons. The figure given in the third plan as at its commencement is 15 million to 18 million. This figure in terms of full unemployment has to be added to the figure of fully-unemployed persons.

The above analysis presupposes that reliable, accurate and continuous statistics of unemployment classified according to different categories for different age-groups, are available. But, unfortunately, such data do not exist. Even after the completion of two five year plans, it is complained even by the Planning Commission that no reliable and continuous data about unemployment are available for the urban area, not to speak of the rural area. Sporadic data about employment are available, which even put together will not give an overall picture of employment in the country. The only reliable and up-to-date statistics which are available over a period of years relate to factories, mines, plantations and certain Central Government offices and the only comprehensive statistical information about employment can be obtained from the population censuses of 1931, 1951 and 1961. The final results of the 1961 census have not so far been issued.

On the basis of the meagre statistical information as mentioned above and the results of certain sample surveys which are not up-to-date, the Planning Commission has estimated the arrear of the unemployed at the end of the second plan as 9 million. Besides, there has been under-employment for about 15 million to 18 million persons. The total arrear of unemployment cannot, therefore, be 9 million, but should be at least 12.5 million, if only a fifth of the under-employed is taken into account. But from this figure at least, 15 percent of the total unemployed, or 1.8 million, should be subtracted as unemployable, leaving a gap of 10.5 million. The new entrants to the labour force during the third plan have been put at 17 million. It will, therefore, be necessary to find gainful employment for about 27.5 million persons in the plan period, in order to eradicate the unemployment evil.

Third Plan Provision

The Planning Commission has made provision for only 14 million persons, 10.5 million in the urban area, and 3.5 million in the rural area, leaving a margin of 13.5 million at the end of the third plan (12 million according to the Planning Commission). It is regrettable that at the end of 15 years of planning, there will be an arrear of unemployment of the order of 13.5 million. The arrear has

risen along with the increased tempo of expenditure on each new plan. This figure was 5.3 million at the end of the first plan, 9 million at the end of the second and is expected to be 13.5 million at the end of the third plan. The contention of the Planning Commission is that the rate of population growth has been accelerated on account of better sanitation, more medical and hospital facilities and better living conditions, in spite of provisions for family planning. But this is not the main factor for creating more unemployment. Another important factor cited by the Planning Commission is that with the progress of the plans, more and more labour-saving devices have to be used in industries in order to achieve a higher rate of growth. But in spite of the efforts of the planners, the contribution of large-scale industries and mining to the national income is only a little over 10 percent. This contention, therefore, has not much basis.

From the foregoing analysis, it becomes clear that planning has missed one of its chief objectives, that is full employment, and that there is some snag somewhere. The proportion of the income originating from the large-scale industrial sector, plantation industries and mining should be changed from the present 10 percent or 12 percent to about 33 percent, and that from the agricultural sector, the most uncertain and static sector of the economy, from the present 50 percent to 25 percent or so, has to be brought about if the objective of full employment has to be pursued successfully. The persons who will be displaced from the agricultural sector will mostly be absorbed in the expanded small-scale industrial sector, which is complementary to large-scale industries, and the tertiary sector. The enlargement of the latter sector is inevitable with the growth of large-scale industries.

This transformation cannot, however, take place overnight. But at least a beginning should now be made. The plan expenditure has to be reallocated and a much bigger sum of money needs to be allotted to

large-scale industries including power and fuel, and to some extent to small-scale industries which feed the former. Wasteful expenditure should be reduced to a minimum. Large-scale industries should be less capital-intensive. The expenditures on community development which do not generally generate any income, major irrigation projects taking a long time for completion and social services without any corresponding gain to the community can be cut to the minimum. By this process, about Rs. 500 crores may be saved: Rs. 250 crores from community development, Rs. 100 crores from major irrigation and Rs. 150 crores from social services. These funds can be reallocated to the large-scale industrial sector. The Planning Commission should find out ways and means to increase the investment expenditure on less capital-intensive large-scale industries and also encourage ancillary industries to grow. This will lead to the enlargement of the contribution of the industrial and mining sector, especially of the large-scale, and to a corresponding reduction of the agricultural sector.

Reallocation of Expenditure

But the task of doing so is not easy. Only a bigger allotment of expenditure will not produce the desired result. There is unemployment on the one hand, and shortage of personnel on the other. This may sound paradoxical, but it is true. The unemployment mostly relates to agricultural labour some of whom do not earn enough for their livelihood even during the season. Then there are persons in the urban as well as in the rural areas, who cannot be suitably or gainfully employed because they have no opportunity for obtaining training. They are unskilled labour. Side by side, there is the shortage of managerial and technical personnel, even for existing large-scale industries, and to some extent, for small-scale industries. For offices, trained personnel are not available. The unemployment, which looks so colossal, is not due to any normal cause, but

largely due to maladjustments. The availability of personnel has not been properly correlated with the needs of the country. There should have been hundreds of elementary technical institutions in both the urban and rural areas, where students could be admitted and trained after the primary stage. Vocational institutions should be opened for women. But nothing has been done in this direction. The result is that many students ask for admission in the secondary schools, after they pass the primary stage, but cannot obtain admission because of the shortage of seats in these institutions. This is also true of colleges where accommodation for students is much less than required. Such persons are not unemployable in the sense that they cannot be employed due to their lack of proper training and education. Elementary agricultural institutions in the rural areas should also be started to impart training on modern methods of agriculture for students who pass the primary stage. This should help increase the yield from each acre, thereby giving full employment for those engaged in agriculture.

The cost on these schemes should be much less than the benefits which accrue to the nation. The cost may not be more than Rs. 250 crores to Rs. 300 crores, but about 3 million persons could be engaged as students, teachers and workers (for building and repairing houses for such institutions). The productivity of factories would increase, creating surpluses for export. Although the full impact of the measures is difficult to gauge accurately, there should be employment for about 1 million. In the circumstances, there should be reallocation of plan expenditures between different sectors. The educational and training systems should be so changed as to suit the planned growth of the country.

Commodity Markets

TIN FALLS ON U.S. STOCKPILE RELEASE REPORTS

TIN is exceptional among metals—indeed, among commodities generally—in achieving a big rise in price during 1961. The price slipped back somewhat in the last weeks of the year, because speculators were selling metal which they had bought in the exuberant conditions prevailing after the buffer stock was exhausted and of which they did not intend to accept delivery, but the undertone of the market has remained very firm. Dealers believe that consumers who have hesitantly refrained from buying because the U.S. Congress will soon consider the application to release tin from the stockpile will regret their inactivity. Tin is the one major metal of which current production is unable to satisfy requirements, and its price must rise if Congress refuses to authorise releases on a considerable scale. Its price will probably rise anyway, because releases will probably not be permitted at prices much below £1,000 a ton—and, in spite of some speculators' forecasts, the market price has failed by a considerable margin to reach that level. Congress is not insensitive to the feelings of producers; nor is it unaware that the average price paid for the tin in the strategic reserve was well over £1,000 a ton.

Price Prospects

The comparative lethargy of the tin market is indeed surprising. The International Tin Council has raised the price range of the International Tin Agreement from £730-£880 to £790-£965 a ton, but the fluctuating market price has shown little inclination to move towards the new "ceiling". It is thought that the revision of the price scale will bring forth some additional supplies from Malaya and Thailand, but if consumption continues to expand this year as expected, the basic shortage of the metal will persist. An authoritative market opinion is expressed by A. Strauss and Company in its monthly *Tin Market Review*: the production of tin is likely to be short of consumption as much this year as it was last year; but extraneous sources of supply—stocks held by Governments and in U.K. warehouses and at Malayan mineheads—which made up the balance last year have been either exhausted or reduced to near-minimum levels. The I.T.C.'s new price range, the firm suggests, "should be viewed with alarm by all major tin consumers"; not because the upper limit is too high but because the lower limit is too low to stimulate prospecting and exploitation of reserves.

Copper Firm

Copper has not been notably active, but its price has been distinctly firm. The spot position has been tightened by withdrawals of stock from L.M.E. warehouses to be refined abroad. The price of copper has recently been firm, in spite of the unsatisfactory trend of consumption. Recurring influences in the market for some time past have been the situation in the Congo and the event or threat of labour troubles in Chile—both these influences have been operating recently. However, opinions on the price trend ebb and flow. It is arguable that at any normal level of demand, the current price is too low, but there is certainly no basic shortage of the metal, if only because substantial stocks have been accumulated by producers. It has not escaped notice in

London that India's increasing requirements are now being satisfied mainly by U.S. supplies, so that a potentially important support for the London market is inoperative. While the balance of forces has kept the price of copper unusually steady since the middle of 1961, the price of zinc has fluctuated rather widely. In recent weeks, the trend of this metal has been decidedly upward, and, as stocks have been reduced, dealers expect a further recovery in the new year. In London, however, there is certainly no shortage of supplies. Even wolfram has been steadier in recent weeks after its long decline. Low prices have gradually affected supplies, and some consumers have apparently judged that these prices were too favourable to last.

Metal Business in E.C.M.

The London Metal Exchange has no clearer view than any other body on the progress of the negotiations between Britain and the European "Six," but it is considering the changes that may be required in the event of agreement. London would hope to expand its business—already considerable—with the present members of the European Common Market, and the London Metal Exchange might register some Continental warehouses as approved points of delivery against standard contracts; but there is no intention here to emphasise the European business so that London's stature as a world market is diminished. In the same spirit, London would view with disfavour a common external tariff on lead and zinc high enough to isolate the European market.

Lead and zinc, however, remain depressed. Current low prices of zinc have deterred some suppliers, but Russian supplies have reappeared.

Recovery in Quicksilver

The minor metals have been more interesting. Wolfram has continued its recovery, and quicksilver, more hesitantly, has moved up a little from its depressed level of late last year. Foreign, rather than the U.K. demand, has supported quicksilver recently, and major suppliers—Italian and Spanish—seem to be holding off for higher prices.

LAC CROP EXPECTED TO BE SMALLER

According to the final estimates of the 1961-62 Katki lac crop, issued by the Indian Lac Cess Committee, the crop is estimated at 392,000 maunds, compared with the preliminary estimate of 393,000 maunds and a normal production of 265,000 maunds which is based on the average production in the ten years preceding 1960. The estimate for Madhya Pradesh has been reduced from 151,000 maunds to 136,000 maunds while those for Uttar Pradesh, West Bengal and Bihar have been increased from 5,000 maunds to 12,000 maunds, 30,000 maunds to 35,000 maunds and 154,000 maunds to 156,000 maunds, respectively. The estimates for other States are the same as in the preliminary forecast. According to the preliminary report, the Aghaai (Kusmi) lac crop is expected to yield 55,500 maunds this year, compared with 95,000 maunds last year and a normal yield of 75,000 maunds, again based on the average production in the ten years preceding 1960.

Calcutta Markets

STRONG DEMAND AT TEA EXPORT SALE

QUALITY DUSTS RISE

AT Sale No. 33, held on 29th and 31st January, there was a strong demand for the 62,341 packages on offer at the export auction, the strongest feature of the sale being the competition for clean black Fannings. Plain brokenes were up to 15nP dearer while Fannings were often considerably dearer. "Teas for price" were about steady. Orthodox B.O.P.s generally sold well except for a few poorer liquoring Assams which were easier. Similar Fannings were dearer, bright liquoring Assam O.F.s often appreciably so. The prices of best C.T.C.s showed some irregularity, but those with autumnal quality sold well. Medium and secondary descriptions were firm to dealer with more interest centred on B.P.s. Legg-cut teas were fully firm except for the more fibrous kinds which were a little easier. Darjeelings sold well. Whole leaf grades were firm around last rates. Tip was strong.

	Quotations	
	1962	1961
	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	4.00 to 4.20	5.20 to 5.45
Plain B.P.	3.70 to 3.50	4.50 to 4.65
Plain Fannings	4.00 to 4.50	4.80 to 5.00
Medium Assam C.T.C. B.P.	5.30 to 5.50	4.70 to 4.90
Medium Assam C.T.C. Fannings	5.20 to 5.50	4.90 to 5.15
Best Assam C.T.C. B.P.	5.70 to 6.10	5.70 to 6.15
Best Assam C.T.C. Fannings	5.80 to 6.30	5.80 to 6.20

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a good general demand for the 26,601 chests of Dusts on offer. Bright liquoring C.T.C. teas were keenly competed for and were fully firm while the poorer types were irregular with the leafy teas generally lower by up to 20nP. Fibrous C.T.C.s once again sold well. Dusts of orthodox manufacture opened up to 10nP easier but strengthened considerably as the sale progressed. The strongest feature of the sale were the non-wither Legg-cut descriptions which realised useful prices.

	Quotations	
	1962	1961
	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.90 to 4.00	4.85 to 5.10
Medium Assam Dust	4.30 to 5.10	5.05 to 5.35
Legg-cut Dust	4.60 to 5.20	5.15 to 5.40
Medium Assam C.T.C. Dust	5.20 to 6.10	5.60 to 5.90
Good Assam C.T.C. Dust	6.50 to 7.00	6.60 to 6.40

(Quotations are inclusive of excise duty.)
The 628 packages of leaf teas on offer sold at irregular rates.

HIDES AND SKINS STEADY

The market was steady. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales

(Between 23rd January and 29th January, 1962)

Cowhides: Wet salted (Ord.) 20,000 pcs. on the basis of Rs. 11 to Rs. 14; Wet salted (Slaughtered) 17,000 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.
Goatskins: Wet salted (Patna, Assam-Dinajpur 59,000 pcs.; Muzafferpore-Patna - Pakur-Purneah-Kissanganj) 146,000 pcs.

Daissee, Kustia, Killed) 101,700 pcs. on the basis of Rs. 325 to Rs. 370; Rs. 430 to Rs. 445 and Rs. 500 to Rs. 520; Wet salted (he-killed) on the basis of Rs. 5.12 and (she-killed) on the basis of Rs. 4.87 a piece; Assam-Dinajpur 17,800 pcs. on the basis of Rs. 340 to Rs. 380 and Rs. 400 to Rs. 420; Purneah-Kissanganj 51,900 pcs. on the basis of Rs. 370 to Rs. 390 and Rs. 400 to Rs. 415; Patna-Pakur 23,500 pcs. on the basis of Rs. 250 to Rs. 260, Rs. 270 to Rs. 320 and Rs. 365 to Rs. 380; Patna-Muzafferpore 10,500 pcs. on the basis of Rs. 325 to Rs. 345 and Rs. 370 to Rs. 385; Purneah-Kissanganj 7,100 pcs. on the basis of Rs. 525 to Rs. 550.

Bazaar Stocks

(29th January, 1962)

Cowhides: Wet salted 144,500 pcs

Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 49,000 pcs.;

SHELLAC UNCHANGED

During the week ended 31st January, the market was unchanged. The range of quotations was as follows:

Shellac and buttolac—hand-made		Rs. a package
Pure Buttolac	150 nominal	
Lemon One Shellac	150 nominal	
Lemon Two Shellac	136 nominal	
Standard I Shellac	120 nominal	
Pure T.N. Shellac	112 nominal	
Seedlac		
Golden Kusmi	—	
Kusmi One	130 nominal	
Golden Bysack	120 nominal	
Manbhumi Fire Bysack	104 nominal	
Fine Bysack	90 nominal	
Genuine Bysack 5%	80 sellers	
Grade One Class B	112 sellers	
Grade Two Class B	92 sellers	

Shipments during January until the 25th were 15,870 packages comprising shellac 8,775 packages, seedlac 5,226 packages, buttolac 266 packages, and others 1,612 packages.

LINSEED QUIET

The market was quietly steady during the past week, and prices showed a slight decline. Arrivals from upcountry areas were better. The oil market was dull and small business was reported for ready delivery. The oilcake market was quiet. Prices declined in the absence of enquiries. The latest quotation is as follows: Ready, February, Rs. 32.25 a maund.

COMPANY MEETINGS AND DIVIDENDS DECLARED OR PROPOSED

By Order of the Board,

Per Pro THE BRITISH INDIA CORPN., LTD.,
R. P. MATHUR,
Dy. Secretary,
Secretaries & Treasurers.

Sutherland House,
Kanpur,
Dt: 22-1-1962.

THE BENGAL PAPER MILL COMPANY LTD.

NOTICE is hereby given that a General Meeting of the members of the abovenamed Company will be held at the Registered Office of the Company at 14, Netaji Subhas Road, Calcutta on Monday, the 26th day of February, 1962 at 2-45 P.M. to consider and, if thought fit, to pass with or without modification the following resolutions namely:—

- (As a Special Resolution)—That each of the existing Ordinary Shares of Rs. 25/- each in the capital of the Company be subdivided into five Ordinary Shares of Rs. 5/- each.

- (As an Ordinary Resolution)—That (a) it is desired to capitalise the sum of Rs. 9,00,000/- part of the amount standing to the credit of General Reserve and accordingly that the Board of Directors be and they are hereby authorised to capitalise the said sum of Rs. 9,00,000/- to apply such amount in full to 1,80,000 unissued Ordinary Shares of Rs. 5/- each in the capital of the Company and to distribute such 1,80,000 shares credited as fully paid up to and amongst the holders of the Ordinary Shares of Rs. 5/- each in the capital of the Company on the Register of members at the close of business on the 26th day of February, 1962 in the proportion of one new Ordinary Share of Rs. 5/- for every five Ordinary Shares of Rs. 5/- each then registered in the name of such holders of the Ordinary Shares and (b) the said 1,80,000 shares be allotted on terms that the same shall rank *pari passu* in every respect with the Ordinary Shares of the Company previously in issue, and (c) the draft of the Agreement providing for the allotment of the said new ordinary shares under the said capitalization submitted to this meeting and signed in the margin by the Chairman thereof by way of identification be and the same is hereby approved and the Board of Directors of the Company be authorised to affix the Common Seal of the Company to the duplicate engrossments of such Agreement as and when the same shall have been signed on behalf of the members holding such ordinary shares of Rs. 5/- each in the Company on the 26th day of February 1962 by some person to be appointed by the Board in that behalf under Article 119 C of the Articles of Association of the Company.

- (As a Special Resolution)—That the Regulations contained in the printed document submitted to this meeting and for the purpose of identification subscribed by the Chairman hereof be approved and adopted as the Articles of Association of the Company in substitution for and to the exclusion of all the existing Articles thereof.

By Order of the Board,
H. P. DHANUKA,
Director.

- (As a Special Resolution)—That the capital of the Company be increased from Rs. 1,00,00,000/- by the creation of 12,60,000 Ordinary Shares of Rs. 10/- each ranking *pari passu* in all respects with the existing Ordinary Shares in the Capital of the Company and 74,000 unclassified Shares of Rs. 100/- each.

- (As a Special Resolution)—That the Company do raise money by the creation and issue of unsecured Convertible Loan Stock of the nominal value of

Rs. 30,00,000/- on the following terms and conditions, namely:—

- (i) the Stock will carry interest at the rate of 6½% per annum (subject to tax);
- (ii) the Company will redeem the Stock at par on the 31st day of December, 1970;
- (iii) the Stock will be in units of Rs. 250/- each and be offered in the first instance to the holders of the Ordinary (equity) Shares of the Company and to the extent the Stock is not subscribed by them be disposed of in such manner as the Board of Directors of the Company think most beneficial to the Company;
- (iv) each holder of the Stock shall be entitled by not less than one month's notice in writing to the Company hereinafter mentioned to convert each unit of Rs. 250/- of the Stock held by him into;

- (a) 10 Ordinary (equity) Shares of Rs. 10/- each between the period of the 1st July, 1963 and the 31st December, 1964;
- (b) 9 Ordinary (equity) Shares of Rs. 10/- each between the period of the 1st January, 1965 and the 30th June, 1966;
- (c) 8 Ordinary (equity) Shares of Rs. 10/- each between the period of the 1st July, 1966 and the 31st December, 1968;

- (v) The Ordinary (equity) Shares into which the Stock will be converted as aforesaid will rank *pari passu* in all respects with the then existing Ordinary (equity) Shares of the Company except that the Ordinary (equity) Shares so converted will not be entitled to any dividend declared on the Ordinary (equity) Shares by the Company for the year during which the conversion has taken place but so nevertheless the holders of the Stock will receive the interest due on the Stock in respect of such year.

- (vi) A member who is entitled to attend and vote at the

meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

ANGELO BROS. LIMITED

NOTICE is hereby given that the Fifty-fifth Annual General Meeting of Shareholders of Angelo Bros., Limited will be held at the Registered Office of the Company, No. 6, Lyons Range, Calcutta, on Tuesday, the 27th February, 1962, at 3 P.M. to transact the following business:—

- To receive and adopt the Directors' report and the audited Balance Sheet and Profit and Loss Account for the year ended 31st August, 1961.
- To consider and declare a dividend in respect of the year ended 31st August, 1961.
- To appoint Auditors and to fix their remuneration.

As Special Business

- To appoint a Director in place of Sir D. N. Mitra, C.B.E., who retires by rotation under Article 107 of the Company's Articles of Association and is eligible for re-appointment subject to compliance with the provisions of Section 281 of the Companies Act, 1956, and to consider and if thought fit to pass the following Resolution of which special notice, as required by Section 281 of the Companies Act, has been received by the Company.

That pursuant to the provisions of Section 281 of the Companies Act 1956, Sir D. N. Mitra, C.B.E., who has attained the age of 70 years and who retires by rotation be and is hereby re-appointed a Director of the Company, and it is hereby specifically declared that the age limit for Directors prescribed under Section 280 of the said Act shall not apply to him.

Note:—

- A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.
- An explanatory note as required under Section 173 of the Companies Act, 1956, has been sent to each Shareholder entitled to notice of the meeting.
- The Share Transfer Register of the Company will be closed from 12th February, 1962 to 27th February, 1962, both days inclusive.

Warrants for the dividend when declared will be forwarded in accordance with registered instructions, but if no such instructions have been received, to the registered address of the Shareholders whose names appear on the Company's Register at the date of declaration.

By Order of the Board,
TURNER, MORRISON & CO.,
LIMITED,
C. N. RODEWALD,
Director,
Managing Agents.
Calcutta, 24th January, 1962.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

COAL COMPANIES

O., Po., F. and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

centrated on the main task in hand. That task is to persuade the Government to make sugar cheaper—first by reducing the excise duty which was raised a few years ago with the specific purpose of restricting consumption; and then by cutting the minimum price of cane (after the

NO SCOPE FOR INTEGRATION

REPORTS of an impending move towards greater Asian economic co-operation and integration should not be allowed to raise too many false hopes. Anything which can reduce trade barriers and increase exchanges between nations is to be encouraged. But it is important to realise the strict limits to what is possible at this particular stage of Asia's economic development. Economic co-operation is nowadays the fashion, and much of its popularity is based on the undoubted success of the European Common Market. But Europe is not Asia. The circumstances that exist there are not to be found here. It would be the height of foolishness to consider for one moment that an Asian Common Market is a practicable possibility in the foreseeable future, although certainly closer ties need not be ruled out. Provided these qualifications are borne in mind, then any moves towards closer integration of national and regional economies are all to the good and can be welcomed without reservation.

It is no contribution to the success of any such projects in Asia that they should be based on the spirit of Bandung. Whatever this was—if in fact it was ever anything more than a figment of the collective imagination—it has absolutely no relevance whatever to matters of economic integration and co-operation. These must be based purely on practical factors and viewed strictly against the background of hard reality. And when this is done it has to be accepted that there is little scope for more than has already been achieved. Possibly a slightly less strict definition of national political barriers when these interfere with economic advantages, would contribute towards mutual prosperity throughout the region: the case of Sui gas for use in western India, or Pakistani jute for consumption in Calcutta, or even Assam oil for East Pakistan, immediately spring to mind. But merely to quote these examples is to emphasise the difficulties which would have to be faced in any co-operation of this kind. It is no coincidence that the Common Market is not an economic project entirely, but involves a substantial measure of political integration as well. To suggest that anything of the kind is possible in Asia today, where nationalism is still in its infancy and is regarded with a measure of enthusiasm which in Europe has now almost completely given way to disillusionment, would be unrealistic in the extreme. There is no harm in testing out the ground, but even limited hopes are likely to give rise to disappointment in the absence of the necessary background circumstances.

Political factors apart, it is difficult to see what economic foundations there are on which to build. The essence of the Common Market is that, unlike the circumstances of 50 years ago, trade and exchange between industrialised countries is growing faster than between these and under-developed countries. To illustrate from Britain's current dilemma, trade with the Commonwealth countries, which are largely under-developed industrially, has shrunk to a much smaller proportion of Britain's total trade than was the case ten years ago. If trade between industrialised and under-developed countries is not growing at the rate at which world trade is increasing as a whole, trade between under-developed countries is scarcely expanding at all. This is not surprising. Primary products do not have the same range and variety as industrial goods, nor are there sufficiently rich markets in other under-developed countries to absorb them. There can be no great exchange of raw materials between countries whose industries are too small to provide the necessary demand. What under-developed countries require are usually capital goods and equipment; but as they are all wanting them at the same time there is little scope for exchanges between them.

As the industrialisation of Asian countries progresses, then no doubt the opportunities for closer co-operation will grow. India, for instance, would

general elections are over). Airy talk of reducing the sugar surplus by boosting exports will get the industry nowhere. The primary problem is to secure an expansion of the market in India, and only later to look for the shifting markets which may be available abroad.

welcome markets in this region for the products of her new industries. But from the point of view of the buyers, these are expensive and of doubtful quality, and from the point of view of this country, are required to earn harder currencies. Even the reduction of tariffs and protection between countries in the region would be difficult, if only because each one is pledged to the "infant industry" theory. One of the factors which has assisted integration in western Europe is a uniform desire of all units to increase competition so as to boost efficiency, and the willingness to dismantle protective barriers surrounding national industries wherever necessary. This would be unthinkable in Asia today, particularly in India where anyway the size of the internal market is quite sufficient to ensure efficiency for the time being without the need for any larger groupings. In the narrow context, it is difficult to see what advantages an economy such as India's could derive from greater integration which could not be obtained by a rather more liberal interpretation of the existing system of controls and protection.

The best contribution which any move towards greater integration could make would be to modify to some extent the continued growth of economic nationalism in Asia. Any movement which might serve to keep alive the truth that commercial and economic activity is international, and that ultimately all nations are inter-dependent, and that the more extreme type of autarchy can only be pursued at heavy cost, would serve a useful and welcome pur-

THE PROBLEMS OF FOOD

ONE day in mid-December attention was directed simultaneously to two aspects of the problem of food. Supplementary estimates of expenditure presented to the British House of Commons brought the estimated cost of the nation's agricultural supports to the highest figure in ten years—£348 million for the current fiscal year. In New York the Economic Committee of the United Nations General Assembly approved a plan that would experimentally provide \$100 million—£35.7 million—to transfer food from countries with a surplus to countries with a deficiency. The situation is familiar. Some countries produce too much food, because over most of the world agriculture is in some way subsidised. Other countries cannot satisfy their needs from their own production and lack means of payment for sufficient imports. Countries that need imports and can afford to pay for them protect and subsidise their agriculture, and the "natural" exporters of food cannot find markets for all their exportable surpluses.

There is no more potent cause of disharmony in the non-communist world than agriculture. It has caused disagreement among the signatories to the General Agreement on Tariffs and Trade, among the members of the European Economic Community, between the United States and Europe, between Britain and other members of the Commonwealth; it is the biggest problem in the negotiations between the E.E.C. and Britain, because it involves not only Britain's agriculture but also her relations with other members of the Commonwealth. The developed countries have made important progress towards free trade in manufactured goods, but they have been unable to agree any semblance of a liberal policy on trade in agricultural produce. As a result of this failure, the world's trade, and consequently the world's payments, are distorted.

The difficulties have not formed a clear pattern. Essentially the most serious factor is the restriction of the developing countries' exports, but the impediments to trade among the developed countries, though less damaging to these countries' eco-

pose. The encouragement of regional aid schemes, on the style perhaps of the Colombo Plan, would serve to increase prosperity as well as good relations between the various nations. The movement of labour, especially of the skilled or highly educated variety, if facilitated, could play a useful part; although it is difficult to see what could be done internationally when, particularly in India, even present mobility is being reduced by provincial barriers. If some of the will to overcome national prejudices and the economic restrictions based on them, such as has accounted for the remarkable progress of the Common Market, could be encouraged in Asia, even on a strictly limited scale, then a useful purpose would be served. But when development plans are being based increasingly on strictly national criteria, and when even aid requirements and allocations differ so widely between the countries of the region, it is not easy to see what progress could be made in the foreseeable future.

It is reported that a declaration is to be circulated by E.C.A.F.E. for signature by at least ten national governments in Asia. It is not expected that this will commit them to anything more than a general statement of intentions concerning closer integration and co-operation. It is not, for instance, likely to involve any promises concerning the integration of development plans or the pooling of foreign exchange resources, although some form of payments union has been suggested. What it will in fact entail is not easy to predict when the economic and political circumstances of the region are at present so unfavourable to moves of this kind. In the absence of outside pressure, it is doubtful whether western Europe would today be showing the will to integration which it is showing. Perhaps this could be provided in Asia's case by a co-ordination of aid policies under a single authority designed to promote the supra-national spirit. But it is doubtful whether this would be acceptable either to the present givers or receivers of international aid.

nomies, are almost equally serious in their total effects. It might be thought that a big local market would be an adequate advantage for the agriculture of industrialised countries, but in fact the principle of specialisation of production, the principle whereby specialised products are exchanged internationally, tends to substitute industry for agriculture in some countries, and in all those countries the tendency is resisted. The problem is further complicated by the distribution of the world's population and by the different rates of growth of population. Naturally and rightly, the governments of the developing countries improve their medical services. The average life of each human being is thus lengthened, and the population grows fast. But the production of food does not increase correspondingly, unless the governments apply their efforts urgently to this task.

Calamities of nature are an important, though temporary, additional complication. China's huge purchases of grain, following a succession of floods and droughts, are the most obvious example of such special demands for food, affecting the foreign exchanges, the bullion markets, and shipping. The International Wheat Council has recently reported that the world's trade in wheat in 1961-62 will probably be larger than ever before and reduce stocks considerably for the first time in four years; but the "prospective improvements in the world supply-demand position" are due mainly to temporary factors, and "the underlying causes which have created the imbalance will, to a large extent, remain unless further adjustments are made to production programmes and trade policies". The production programme for wheat has been adjusted in the United States, and in general that country has moderated the immense agricultural surpluses that developed in the 1950s. (Exchanging food-stuffs for base metals when metals are plentiful seems a sensible procedure, if the mechanism of free markets is not allowed to function.) But free economic agricultural production is a permanent characteristic of the world's economy. (A recurring example of its effects is the flood of cheap foreign butter on the British market—gratifying

to the British housewife but strongly resented by the Commonwealth countries that traditionally produce butter for export.)

There is apparently no solution of this problem of uneconomic production that would satisfy all concerned. Indeed, none of the problems of food can be easily solved. To reconcile the interests of the Commonwealth with those of the European Economic Community is particularly difficult—perhaps impossible—in respect of food. But these problems, like any others, can be alleviated by compromise. Politicians and economists are generally agreed that the developed countries must allow freer access to their markets; otherwise the less-developed countries cannot get sufficient means of payment for their imports from the developed countries. Institutions such as the International Monetary Fund can alleviate the imbalance of payments, but to stimulate a "natural" flow of pay-

Current News and Comment

Ashok Leyland Does Well

The preliminary figures about the working of Ashok Leyland Ltd for the nine months ended September 1961, indicate that the Company has fared better than in the previous year. The financial year has been changed from 31st December to 30th September in order that Ashok Leyland falls in line with the associate, Leyland Motors Ltd of the U.K., which ends its financial year on 30th September. After meeting all expenses and providing for depreciation, the Company has made a profit of Rs. 46.03 lakhs for the nine-month period, which compares with Rs. 48.87 lakhs in the preceding 12 months ended December 1960. The net profit, after providing Rs. 14.60 lakhs for tax, amounts to Rs. 31.43 lakhs, against Rs. 37.87 lakhs in 1960. With Rs. 12,525 brought forward from the previous year and adding another Rs. 1.58 lakhs, being the sales tax refund, the disposable surplus amounts to Rs. 33.14 lakhs. From this, the directors have set aside Rs. 3 lakhs for the payment of bonus to employees. A sum of Rs. 8.89 lakhs has been transferred to development rebate reserve. The proposed dividend at the rate of 8 percent a year absorbs Rs. 20.34 lakhs, leaving Rs. 90,789 to be carried forward. The Rs. 5-paid share of the Company is currently quoted around Rs. 8.75.

A.V.B. Works Opened

The A.V.B. works in Durgapur was inaugurated by Dr. B. C. Roy, Chief Minister of West Bengal, on Tuesday. In his speech delivered at the inaugural ceremony, Mr. Dharamsey M. Khatau, chairman, said that A.V.B. Ltd was formed in January 1959 with the idea of establishing a heavy engineering works to manufacture heavy machinery, such as cement-making machinery, steam-raising plants, heat-exchangers and pressure-vessels. In terms of modern power-station boilers, the manufacturing capacity of the A.V.B. works is estimated at 500,000 kilowatts a year. The combined cement machinery manufacturing capacity of A.V.B., with the assistance of A.C.C., will be about four to five plants a year having a capacity of 600 tons a day. The new project will, therefore, assist materially in supplying the heavy engineering and steam-raising plants which are essential for India's industrial expansion. Moreover, this will be achieved while conserving valuable foreign exchange, although in the initial phase the Company will still require considerable foreign exchange until such time as the complementary industries which will supply its needs have been developed in India, Mr. Khatau said.

The A.V.B. works have been laid out in such a way that there is ample room for progressive expansion. "Although these works are only being opened today, we are already giving thought to this question of expansion," the chairman said. The plant and equipment in the works is of the latest and most modern type. Mr. Khatau said that the Company has given first priority to the question of training of staff and operatives. Some time ago, A.V.B. selected some apprentices from

its partner Companies, and these people are now working in Durgapur. But it is the Company's intention in the future to recruit local labour for training to the maximum possible extent. A few specially selected graduate engineers were sent to the U.K. for special training in the works of Vickers and Babcock soon after the formation of A.V.B. Ltd. This process of training will be continued, and A.V.B. will rely substantially on the assistance it obtains from its three partners during the first few years of its existence, the chairman said. In locating the industry in Durgapur, one of the most important considerations was that of transport. "We would, therefore, like to emphasise the importance of the new 'express highway' between Durgapur and the port of Calcutta being completed as soon as possible." It was on the assumption that this road would be available that the Company located its works in Durgapur, Mr. Khatau said.

Progress of Baroda Rayon

In their report for the year ended December 1961, the directors of Baroda Rayon Corporation Ltd state that the factory is likely to go into production by the end of June 1962. The entire Japanese machinery and equipment of the value of Rs. 3 crores has reached the factory site. Most of the Japanese technicians have already arrived and the erection work is progressing. The production capacity of the sulphuric acid plant has been doubled in one stage, and the sulphuric acid output will be 40 tons a day when the factory goes into full production. The construction of factory buildings is nearing completion. These buildings have been so constructed as to provide accommodation for the additional machinery to be installed under the expansion scheme. Baroda Rayon is awaiting the licence from the Government for raising the capacity of the required machinery for raising the capacity of the rayon plant from 5 million to 6 million lbs a year. It has applied for a licence to set up a plant for manufacturing rayon-grade caustic soda which is in short supply. The directors hope that the Government would consider the application favourably. With the addition of the caustic soda plant, Baroda Rayon will have a fully integrated rayon unit. Meanwhile, the capital outlay on the project, which was originally estimated at Rs. 7 crores, has now been raised to Rs. 8 crores. This is attributed to the higher cost of indigenous components of machinery, an increase in import duty on machinery as well as an increase in the cost of civil engineering works. The Rs. 100-paid share of Baroda Rayon, which rose from Rs. 119 to Rs. 171 in 1961, is currently quoted around Rs. 156.

Asian Cables Expansion Plans

Asian Cables Corporation Ltd has undertaken its second project for manufacturing 600 miles of paper insulated power cables, 200 miles of plastics mains cables and 360 tons of enamelled magnet wires a year on a two-shift basis. The project is

expected to involve an additional outlay of Rs. 2.50 crores, bringing the total investment to about Rs. 3 crores. Asian Cables is ready with the design, drawings and lay-out. Three top representatives of the U.K. firm of Enfield Cables, which is collaborating in the project, are at present in Bombay to finalise the details of the new project in which Phelps Dodge Copper Products Corporation of the U.S.A. is also collaborating with technical know-how and finance. The project is expected to go into production by the end of 1963. Asian Cables intends to produce paper insulated power cables of all varieties including 22 and 33 kV power cables which are not manufactured in India at present. The project is expected to save Rs. 1 crore of foreign exchange a year. The Company's first cable plant for V.I.R. and C.T.S. cables, which was commissioned in November, will be in full production in about two or three months, producing 1.5 million core yards of these cables a month on a single-shift basis. Asian Cables has installed the most modern manufacturing and testing equipment capable of producing many varieties of cables. It has also a programme to manufacture L.T. plastic cables. Along with some other cable manufacturers, the Company is going ahead with a project to set up a rod rolling mill which is to be operated by a different enterprise. Asian Cables has obtained a foreign exchange loan of Rs. 60 lakhs from the Industrial Credit and Investment Corporation of India to meet a part of the total foreign exchange component of Rs. 1.15 crores for the expansion scheme. The balance of Rs. 55 lakhs is provided by the two foreign collaborators as their share in the Company's equity capital. Asian Cables' P.V.C. plant is expected to go into production by the end of the current year. The Rs. 100-paid share of the Company is currently quoted around Rs. 101.50.

C.I. Spinning Rights Issue

The shares of Central India Spinning, Weaving and Manufacturing Co. Ltd, which recorded a spectacular rise from Rs. 128 to Rs. 167 by about the middle of January, continued to remain distinctly firm during the latter part of the month in spite of the pronounced weakness of the stock market. The sustained influential support for the shares, it appears, was based less on the chairman's encouraging annual speech than on the consideration of the impending rights issue. Mr. N. H. Tata, chairman, told shareholders at the last annual meeting that the management was considering the question of a rights issue in order to rectify the lack of balance in the capital structure. Against the authorised and paid-up capital of Rs. 98.88 lakhs (of which the preference capital accounts for Rs. 50 lakhs), borrowings and deposits amount to Rs. 5.11 crores and the net block is Rs. 3.05 crores. C. I. Spinning has now announced its decision to raise the authorised capital to Rs. 5 crores, comprising Rs. 50 lakhs of preference shares, Rs. 93.75 lakhs of equity shares and Rs. 3,56,25,000 of unclassified shares. The directors propose to issue 46,875 equity shares of Rs. 100 each at par to the existing shareholders in the ratio of one share for each one already held. The proposal is subject to the consent of the Controller of Capital Issues, the National Industrial Development Corporation and the shareholders. An extraordinary general meeting will be convened in due course for adopting the resolutions. Along with the announcement of the rights issue, C. I. Spinning has also announced that Tata Sons Private Ltd and Tata Industries Private Ltd and their associates have agreed to subscribe at par for such rights shares as they are entitled to and have also agreed to take up such equity shares at par as are not subscribed by the existing equity shareholders, in repayment of their unsecured loans to the Company. Shorn of technicalities, all this means that the entire equity issue has been virtually underwritten. The market's reaction to the announcement of the rights issue has not been favourable; the quotation for the shares declined sharply from Rs. 162 to Rs. 149 within a day of the announcement. This, however, is not surprising. The amount of the new issue exceeds the market's general expectation. The ordinary shareholders have gone without a dividend for six years and C. I. Spinning has huge arrears of the preference dividend and of depreciation. The new equity issue will increase the

Company's liability still further. The shareholders will probably have to wait long before their investment begins to bear fruit. But they now have the chairman's assurance that C. I. Spinning has turned the corner and that the day is not far off when they will be able to appreciate the real value of their holding in the Company.

Outlook for Voltas

The preliminary figures about the working results of Voltas Ltd for the year ended August 1961, which were released along with the announcement of a higher dividend from Rs. 13 to Rs. 14 a share, both taxable, showed that turnover and gross profit at Rs 25.73 crores and Rs. 1.40 crores, respectively, had set new records. But neither the higher dividend nor the record profit could please the market which had pitched its expectations still higher. But the shareholders might derive some comfort from the chairman's annual statement and the directors' report which have now been released. Mr. J. D. Choksi, chairman, takes quite an optimistic view of the Company's future. He points out that in spite of severe import restrictions, there will always be room for a flexible, well-balanced and well-organised import organisation in India's economy. Voltas aims to consolidate and expand its trading activities rather than consider them as a thing of the past. Mr. Choksi is optimistic that Voltas will retain its status as importers and distributors and at the same time strengthen its industrial base. Referring to the manufacturing activities, the chairman says that the Company has been endeavouring to achieve the objective of local manufacture in different ways, namely, (1) by bringing about collaboration between foreign associates and suitable Indian manufacturers and retaining for itself the distribution of the locally-made products, (2) by either the Company or Tata Sons associating with other foreign principals as partners in manufacturing enterprises and (3) by undertaking certain lines of manufacture itself.

Local manufacture has made considerable progress. Many of the Company's divisions have achieved a position where more than 50 percent of their business is in products of indigenous manufacture. During the year, Voltas commenced commercial production of Joy-Voltas diamond core drills and Voltas-Smith diamond bits for the mining industry. For the first time in India, Voltas designed, engineered and manufactured 22 kV switchboards of the fully drawn-out pattern. The directors state in their report that the physical possession of 120 acres of land acquired by the Maharashtra Government has not yet materialised as the formalities of compulsory acquisition have still to be completed. Voltas' manufacturing operations at its Chinchpokli factory in Bombay continue to expand. The new factory of Roche Products Ltd in Balkam has commenced operation. The formalities connected with the establishment of a Carrier air-conditioning factory are nearing completion. The exploratory talks with Brown, Boveri and Company of Switzerland came to an abrupt end, and the existing distributorship agreement was also terminated. Voltas is considering a possible alternative scheme to fill the gap caused by the loss of this business. The Rs. 100-paid share of Voltas is currently quoted around Rs. 300.

Madura Mills Repeats

Madura Mills Ltd has maintained the dividend at 15 percent. The market had been expecting a higher dividend, so there was a drop of more than Rs. 2 in the quotation following the dividend announcement. The lower profit for Madura Mills also influenced the sentiment. According to the preliminary figures, subject to audit, the Company's net profit for the year ended December 1961, amounts to Rs. 77.47 lakhs, after taxation, against Rs. 78.92 lakhs for the previous year. Provision for taxation is Rs. 69.40 lakhs.

Loss for South Karanpura Coal

In their report for the year ended 31st August, 1961, the directors of the South Karanpura Coal Co. Ltd say that the results have been poor due to

difficult geological conditions underground, the extreme shortage of explosives, irregular transport and the scarcity of power. The Company has suffered a loss of Rs. 1.74 lakhs, after having made a profit of Rs. 44,143 in the previous year. A sum of Rs. 1.68 lakhs (against Rs. 1.34 lakhs) has been allocated for depreciation. The dividend has been passed, against 2½ percent, taxable, in the previous year. Bringing in Rs. 20,181, and making other adjustments, there is a debit balance of Rs. 1,54,124 to be carried forward. About 192,666 tons of coal (against 192,482 tons) were raised and 187,082 tons (against 191,226 tons) were despatched. The wagon supply position was extremely erratic and stocks reached a dangerously high level.

Bonus from Devashola (Nilgiris)

The Devashola (Nilgiris) Tea Estates Co. Ltd proposes to increase its authorised capital from Rs. 6 lakhs to Rs. 10 lakhs and the paid-up capital from Rs. 6 lakhs to Rs. 8.40 lakhs. It also proposes to issue 24,000 new equity shares of Rs. 10 each as bonus shares at the rate of two shares for every five held. The new shares will rank for dividend and in all other matters equally with the existing equity shares, except that they are not entitled to any dividend for the financial year prior to 1st January, 1962. The Company has obtained the Government's sanction for this issue.

Bharat Ball Bearing Share Offer

The Shri Ram group of industries has promoted a new enterprise known as Bharat Ball Bearing Co. Ltd to undertake the manufacture of ball and roller bearings in technical collaboration with Fanfir Bearing Company of the U.S.A. The factory, which is proposed to be located in Ranchi, Bihar, has been licensed to manufacture 2.5 million bearings of various sizes a year. The outlay on the project is estimated around Rs. 2 crores, which is proposed to be financed by raising Rs. 75 lakhs in share capital, Rs. 60 lakhs as a long-term loan from the Industrial Finance Corporation which has already been agreed to, Rs. 35 lakhs in cash credits from banks and the balance from the Company's current earnings. The cost of imported equipment is placed around Rs. 65 lakhs. Bharat Ball Bearing has received the import licences under the D.L.F. credit arrangements. Orders for the bulk of the machinery have been placed, and the promoters expect the plant to be commissioned before the end of the current year. Bharat Ball Bearing will have an authorised capital of Rs. 2 crores, of which Rs. 75 lakhs made up of Rs. 55 lakhs in equity shares of Rs. 10 each and Rs. 20 lakhs in 9.3 percent taxable cumulative preference shares of Rs. 100 each are to be issued in the beginning. The managing agents have agreed to take up preference shares worth Rs. 5 lakhs. The balance of Rs. 15 lakhs to be offered to the public has been underwritten by the Life Insurance Corporation (Rs. 10 lakhs) and the Industrial Finance Corporation (Rs. 5 lakhs). Out of the equity issue of Rs. 55 lakhs, only Rs. 26.95 lakhs is proposed to be offered to the public, the balance being subscribed by the directors and their friends. Bharat Ball Bearing is likely to enter the market for raising the necessary capital towards the end of February. The Associated Industries Corporation will be the managing agents of the Company.

T.A.K. Machinery to Raise Capital

T.A.K. Machinery Ltd is a new enterprise which has been incorporated in Maharashtra State to undertake the manufacture of a wide range of lifting and conveying equipment. It has been licensed to manufacture electrical overhead travelling cranes, electrical hoists, portable floor cranes, chain pulley blocks and various kinds of conveyors such as belt and slat conveyors, bucket elevators, roller and screw conveyors. In addition, T.A.K. Machinery will undertake structural fabrication work and the production of grey iron castings. The Company has entered into a technical collaboration agreement with Fellows Brothers Ltd—an enterprise belonging to the John Folkes group of engineering industries in the U.K.—for manufacturing electric cranes, hoists and chain pulley blocks.

CAPITAL, 8th February, 1962.

Negotiations for technical know-how for conveying equipment are in progress. T.A.K. Machinery will have an authorised capital of Rs. 1 crore. Its issued capital will be Rs. 50 lakhs, half of which will be subscribed by the directors and their friends and the balance will be offered for public subscription. The Company is negotiating for land between Bombay and Poona and is likely to enter the market for raising capital within a few months.

Maharashtra Cement: A New Venture

Plans for the setting up of the first cement factory in Maharashtra State are in an advanced stage. The project has been sponsored by Tendulkar Industries Private Ltd, and the State Government is said to have indicated its willingness to extend financial support. A new enterprise known as Maharashtra Cement Co. Ltd is being formed to undertake the project which is estimated to cost about Rs. 2 crores. The promoters have secured the technical collaboration of Messrs Krupps of West Germany. The factory, which will have an annual capacity of 250,000 tons, will be located in Chanda district. The crushing plant will be located in Yeotmal district. In view of the abundant supply of high quality limestone in the area, it is proposed to manufacture cement according to the dry process based on heat exchangers. The cost of machinery and equipment is estimated around Rs. 1.20 crores, of which Rs. 60 lakhs will be spent on imported machinery for which arrangements have been made with the foreign collaborators. The Government of India is reported to have approved the import of equipment needed for the factory. According to present indications, the factory is likely to go into production in 1964. Maharashtra Cement will have an authorised capital of Rs. 5 crores in equity shares of Rs. 100 each. The issued capital will be Rs. 2 crores, of which shares worth Rs. 50 lakhs are likely to be subscribed by the promoters, directors and their associates. Tendulkar Industries Private Ltd will be the managing agents of the Company.

Southern Engineering Corporation

Southern Engineering Corporation Ltd is a new enterprise which is being promoted by Kamanis of Bombay to set up a plant in Andhra Pradesh for manufacturing transmission line towers and structures. The new project, which is estimated to cost about Rs. 50 lakhs, is part of a larger plan of Kamanis to put up a network of engineering units at various centres. The estimated outlay on the project involves a foreign exchange component of Rs. 10 lakhs for importing part of the equipment. This is proposed to be obtained either under a D.L.F. loan or on a rupee payment basis. The scheme does not propose to have any foreign technical collaboration since Kamanis themselves have specialised in this field for over a decade and have already supplied their products abroad, especially to Canada and New Zealand. With the steadily increasing steel production in India, Kamanis do not anticipate much difficulty in securing the required types of steel sections which constitute the chief raw material for the project. An adequate quantity of zinc is also expected to become available from indigenous sources within two years when the new venture goes into production. The proposed plant is expected to manufacture 12,000 tons of transmission line towers and other structures a year. Its employment potential is estimated around 2,000 workers. The authorised capital of the Company will be Rs. 50 lakhs, made up of Rs. 15 lakhs of preference capital in shares of Rs. 100 each and Rs. 30 lakhs in equity shares of Rs. 10 each. The Kamanis group will take up a part of the issued capital. The balance will be raised through public subscription.

More from Elgin Mills

The support for the ordinary shares of the Elgin Mills Co. Ltd around Rs. 22.81 is likely to be reinforced due to the satisfactory results for the year ended September 1961. Sales reached a record figure of Rs. 5.82 crores, against Rs. 4 crores for 1959-60. There has also been appreciable improvement in operational efficiency. So the profit has

CAPITAL, 8th February, 1962.

risen from Rs. 26.83 lakhs in 1959-60 to Rs. 36.82 lakhs in 1960-61, after raising depreciation from Rs. 5.65 lakhs to Rs. 9.57 lakhs, transferring Rs. 4.93 lakhs (against Rs. 1.24 lakhs) to development rebate reserve and providing Rs. 31.75 lakhs (against Rs. 24.50 lakhs) for taxation. The taxable ordinary dividend has been increased from 11½ percent to 17½ percent. It is covered more than six-and-a-half times and offers a yield of 7.7 percent at the present price. Rehabilitation reserve is allocated Rs. 10 lakhs (against Rs. 18 lakhs) and general reserve Rs. 20 lakhs. The carry-forward is Rs. 80,801, against Rs. 88,973 brought in.

The directors say that in spite of their best efforts, exports have declined due to the quota restrictions in the U.K. and the keen competition from Japan, Hongkong, Pakistan and Europe. In the face of increased competition, the directors think that the present export incentives are inadequate. Elgin Mills has undertaken an extensive renovation and modernisation programme. It is estimated to cost about Rs. 1.35 crores during the next five years. After the closing of the financial period, commitments for capital expenditure have amounted to Rs. 26.50 lakhs. With the installation of the new plant and machinery, it is hoped that the quality of products will improve and export prospects broaden. Elgin Mills has applied to the Central Government to set up a new spinning unit consisting of 12,000 spindles. In addition, 10,348 more spindles are proposed to be installed for balancing purposes.

Canara Bank Maintains

The working of the Canara Bank Ltd for the year ended December 1961 shows all-round improvement over the previous year's performance. Deposits rose by 21.9 percent from Rs. 30.82 crores to Rs. 37.56 crores and advances by 22.6 percent from Rs. 16.63 crores to Rs. 20.76 crores. The net profit, after making usual provisions and taxation, has risen by 68 percent from Rs. 12.65 lakhs to Rs. 21.24 lakhs. The dividend has, however, been maintained at 15 percent. With the previous year's carryforward of Rs. 45,000, the disposable surplus amounts to Rs. 21.69 lakhs. Allocations include statutory reserve Rs. 6.70 lakhs (against nil), contingency reserve Rs. 4.50 lakhs (against Rs. 3.50 lakhs) and bonus to staff Rs. 4 lakhs (against Rs. 3.10 lakhs). The preference dividend absorbs Rs. 62,400 (the same). The ordinary dividend accounts for Rs. 5.40 lakhs (the same), leaving Rs. 47,000 to be carried forward. Total reserves amount to Rs. 63 lakhs, including Rs. 6.30 lakhs standing to the credit of the share premium account, which brings total capital funds to Rs. 1.13 crores. The bank will need to raise capital funds by another Rs. 1.12 crores in order to raise them to 6 percent of deposits.

Bengal Paper Bonus and Rights

The price of the ordinary shares of the Bengal Paper Mill Co. Ltd has been steady around Rs. 104 due to the news of the reorganisation of share capital. The existing ordinary shares of Rs. 25 each will be sub-divided into five ordinary shares of Rs. 5 each. It is then proposed to issue ordinary bonus shares by capitalising reserves to the extent of Rs. 9 lakhs, the bonus shares being in the proportion of one new share of Rs. 5 each for every five of Rs. 5 each held. Afterwards, every two ordinary shares of Rs. 5 each will be consolidated into one ordinary share of Rs. 10 each. Bengal Paper also proposes to issue convertible loan stock for Rs. 30 lakhs carrying interest at 6½ percent, taxable. The stock will be offered to the existing ordinary shareholders for subscription at par in the proportion of one unit of Rs. 250 for every 45 ordinary shares of Rs. 10 held. The stock is repayable in December 1970, but it can be converted into ordinary shares at the option of the stockholder provided he exercises his option after July 1963 and before December 1968. Bengal Paper will also issue ordinary rights shares of Rs. 10 each for Rs. 18 lakhs for subscription at a premium of Rs. 12 a share. They will be offered to the existing shareholders in the proportion of one new share of Rs. 10 each for every three of Rs. 10 each held. The proceeds of the issues will be used to finance the expansion scheme. It is regretted that certain de-

tails concerning the issues were given wrongly in a note appearing on page 97 in *Capital* on 18th January.

Wire Ropes from Mohatta Heckel

B. R. Herman and Mohatta (India) Private Ltd, Bombay, has promoted a new enterprise to be known as Mohatta Heckel Ltd, to undertake the manufacture of wires and wire ropes. The promoters have secured the technical and financial collaboration of the West German firm of George Heckel GmbH. The plant which is proposed to be located in Kalyan, near Bombay, will have an initial capacity of 7,200 tons of wire drawing and 3,600 tons of wire ropes a year. At a later stage, the Company hopes to undertake the manufacture of wire rope making machinery and allied equipment in collaboration with Saamag—an associate of George Heckel. The factory is expected to go into production towards the end of 1963. The project is estimated to cost about Rs. 1 crore, of which Rs. 45 lakhs will have to be spent on imported machinery. The details about the capital structure are being worked out. The Company is likely to enter the market to raise finance by about the middle of the current year.

Wool-tops from Dhruva

Dhruva Woollen Mills Ltd, Bombay, is setting up a complete modern wool-top plant in Thana. The Company has been licensed to manufacture 1.5 million lbs of wool-tops a year. The U.K. firm of G. R. Herron and Sons Ltd will provide the technical know-how. The collaboration agreement has been approved by the Government of India. The project is estimated to involve an initial outlay of about Rs. 50 lakhs. Dhruva Woollen has imported modern machinery and plant from the U.K. at a cost of Rs. 26 lakhs. Machinery has reached the factory site, and the construction of the factory is progressing. According to present indications, the plant is expected to go into production in the second quarter of the current year. The value of annual output is estimated around Rs. 1 crore. The project will help save a considerable amount of foreign exchange. Dhruva Woollen already owns a worsted spinning plant in Bombay and is manufacturing hand-knitting wool as well as weaving and hosiery yarn. The wool-tops to be manufactured by the new plant will meet the Company's own requirements. The surplus will be available for the woollen industry.

Bengal National Chamber

The Bengal National Chamber of Commerce and Industry completed 75 years of its existence on 2nd February. To commemorate the occasion, a souvenir volume has been issued reviewing the Chamber's growth and activities. The first constitution of the Chamber, which was established two years after the Indian National Congress, was drafted by A.O. Hume and revised by W. C. Bonnerjee, both of whom were intimately associated with the Congress. The Chamber was on many occasions invited to send delegates to attend the sessions of the Congress. When the Chamber was established in 1887, it had on its rolls only 35 members, all of them in their individual capacity and all of them from Calcutta. But, since then, the Chamber has steadily gained in strength and has today on its rolls more than 300 members. Most of them are either companies or partnership concerns, and quite a few belong to the districts. In addition, the Chamber has affiliated to it 36 different sectional associations of trade and industry, of whom 24 have common working arrangements with the Chamber, which provides secretarial services to the associations concerned and office accommodation to them in its own building. The 1,300 or so members of these associations receive practically all the benefits of direct membership.

New Prices for Chemicals

The Government of India has accepted the Tariff Commission's recommendations on the fair

selling prices of caustic soda, chlorine and hydrochloric acid. For bleaching powder, however, it has fixed a price which is lower than that recommended by the Commission. The new prices, which came into force from 1st February and will be effective till the end of 1964, have been fixed on an ex-works basis as at present. The ex-works selling price of fused solid caustic soda conforming to I.S.I. specification (technical grade) has been fixed at Rs. 36 a 50 kilograms and that of caustic soda lye (100 percent NaOH content) at Rs. 31 a 50 kilograms. The price of caustic soda flakes has been fixed at Rs. 41 a 50 kilograms. The ceiling prices for caustic soda, solid and flakes, will be proportionately higher for every 1 percent of purity above 96 percent NaOH to provide for the sale of rayon-grade caustic soda. The ceiling price for liquid chlorine has been fixed at Rs. 21.85 a 50 kilograms and that for commercial grade hydrochloric acid at Rs. 9.70 a 50 kilograms. The prices fixed for stable bleaching powder of different sizes of packings are Rs. 31.25 for 55 kilograms, Rs. 28.50 for 50 kilograms, Rs. 23.50 for 40 kilograms, Rs. 15.75 for 25 kilograms and Rs. 9.25 for 12.5 kilograms.

While the industry does not seem to have been particularly happy with the fair selling prices fixed for caustic soda, chlorine and hydrochloric acid, it is very much disappointed with the Government's decision on the ex-works price for bleaching powder which is lower than that recommended by the Tariff Commission. The latter worked out the fair selling price of bleaching powder at Rs. 26.30 a 50 kilograms, but recommended the maintenance of the price at Rs. 30.15 on the ground that otherwise the existing unit might not have sufficient incentive to expand its production, necessitating the import of the chemical. The Government has admitted that there is considerable force in the Commission's argument, but it feels that the extent of the incentive suggested by the Commission is on the high side and that it would suffice if the selling price is fixed on the basis of Rs. 28.50 a 50 kilograms of packing. The industry points out that not many months ago, the Government itself had raised the selling price of stable bleaching powder to Rs. 30.15 a 50 kilograms of packing. The new price has been reduced by Rs. 1.65 a 50 kilograms, although production costs have gone up since then. At present, Metturr Chemicals is the only unit manufacturing stable bleaching powder, but three more units have been given industrial licences to produce stable bleaching powder. While it is quite natural for manufacturers to press their claim for higher prices, a study of the Commission's report shows that in fixing fair selling prices it has taken great care to ensure (1) that the existing units are able to maintain production at the highest possible level consistent with the proper maintenance of plant and machinery and (2) that while low cost units are given sufficient inducement to expand, the high cost ones are encouraged to make the best use of their resources to expand and reduce their costs. In determining the fair selling prices, the Commission has maintained the existing margin for contingencies, which is Rs. 20 a ton of caustic soda in the three forms, with the modification that the rate will now be Rs. 20 a tonne. The margin for contingencies will be Rs. 10 a tonne each for liquid chlorine and hydrochloric acid, and the rate will be Rs. 20 a tonne for bleaching powder. The Commission has allowed a return of 12 percent on capital employed which it considers adequate at the current level of taxation on profits, interest on borrowings, bonus, etcetera. Capital employed has been estimated as equivalent to the average net value of assets plus the working capital assessed as an amount equal to five months' cost of production exclusive of depreciation. The fair selling prices recommended by the Commission do not provide for a separate element for rehabilitation allowance.

Futures Trading in Groundnut

Futures trading in groundnut, which was virtually at a standstill for nearly two months, has been resumed from 1st February. The Forward Markets Commission has done away with the ceiling and special margin for the May contract. The restrictions, which have now been imposed, relate to a member's net position and the weekly

range of fluctuations. Futures trading will be prohibited if the hedge contract rises more than Rs. 5.50 a 250 kilograms above the week-end closing quotation. No member shall hold a net long or short position exceeding 5,000 metric tons. For the purpose of calculating the net position, unfulfilled export commitments will be excluded. The trade is naturally pleased with the Commission's decision to permit futures trading, so the market can be expected to work smoothly unless the authorities intervene without much consideration of the basic forces of demand and supply.

It was on 2nd December that the January hedge contract in groundnut touched the arbitrary ceiling of Rs. 215 a 250 kilograms prescribed by the Commission. Official dealings came to a standstill. Thereafter, only on five occasions, did the hedge contract record a price lower than the ceiling rate of Rs. 215 and that too for a short while. But while the hedge contract continued to be quoted nominally at the ceiling of Rs. 215, spot groundnut prices continued to edge their way up. Even the most inferior quality of tenderable variety was bid up to Rs. 226 a 250 kilograms. The ceiling on futures had thus failed to check the rising trend in ready groundnut prices. Spot prices rose in spite of the steady flow of arrivals with the progress of the marketing season. The Commission's decision to allow futures trading in the May contract without any ceiling or margin is in strange contrast to its earlier stand. Is it because it has belatedly realised that the ceiling on futures cannot check the rising trend in the spot material? Or have the authorities yielded to mounting agitation in groundnut producing areas against the absence of hedging facilities for the commodity—an agitation which the Government could scarcely ignore at the time of the general elections? Meanwhile, trading in the May contract has been allowed without any ceiling and the contract is quoted at Rs. 235. The April contract continues to be under the old ceiling of Rs. 215. One would have expected the Commission either to close the April contract or to remove the ceiling and permit free dealings.

New Glass Fibre Plastic Project

Reliable reports indicate that the Government of India has approved the scheme submitted by Mr. V. S. Vaidya of Poona for manufacturing glass fibre plastic reinforcement and continuous filament yarns. Mr. Vaidya proposes to set up a factory in Poona for manufacturing 480 tons a year of glass fibre strand mat and 180 tons of glass fibre rovings for plastic reinforcements and also 60 tons of glass fibre continuous filament yarns. The capital equipment for the project is estimated to cost about Rs. 41.5 lakhs, of which the imported component is valued around Rs. 27.5 lakhs. In the initial stages, the Company will need to import certain raw materials like glass cullet and vinyl type emulsion which will become available from indigenous sources in due course. Mr. Vaidya proposes to enter into collaboration with B. T. R. Industries of London, which is perhaps the only organisation in this field outside the group of Messrs Fibre Glass of the U.K. and Oven Corning of the U.S.A. B.T.R. Industries will provide the technical know-how for manufacturing different products. The fibre manufactured by the Company will be the basic raw material. B.T.R. Industries will also participate in the capital of the Indian enterprise which will not exceed 50 percent of the total capital. This will cover the entire foreign exchange requirements for plant and machinery. The foreign collaborator will receive a royalty of 5 percent on net sales (taxable) payable from the third year onwards for a period of 15 years. This payment is estimated around Rs. 2.5 lakhs (taxable) a year for the fourth and fifth year and Rs. 5 lakhs during subsequent years. Glass fibre reinforcement plastics have proved their utility during the past decade or so as strong light-weight materials possessing unique properties which distinguish them in many aspects from better known plastic and glass products. There is no indigenous output of glass fibre of the type which can be used for manufacturing chop strand mats or rovings for manufacturing reinforced products. The only other scheme approved by the Government so far is that of Fibre Glass Ltd of the U.K. The terms of collaboration offered by B.T.R. Industries are

said to be more favourable than those by Fibre Glass Ltd.

Industrial Estates in Kanpur

In addition to the existing 38-acre Government-sponsored industrial estate in Kanpur, a 250-acre estate was founded recently by the U.P. Chief Minister, Mr. C. B. Gupta. He said that this Rs. 5-crore venture would be the biggest co-operative enterprise of its kind in India. The proposed estate will have 308 plots varying from 800 square yards to 2 acres for setting up industries for producing nine categories of goods. It is expected to provide employment to about 12,000 people. The third plan provides for the setting up of 300 industrial estates of varying sizes and types, although the Planning Commission has not been entirely satisfied with the outcome of the 60 estates set up during the second plan period. The Commission said: "While many of these estates have been successful in their main aim of providing suitable factory accommodation and other conditions favourable to working efficiency, expenditure on some of them has been on the high side, and the new employment created is not yet commensurate with the expenditure involved. Moreover, since most of the industrial estates have been located close to fairly large towns, the objective of establishing new centres of industries has been achieved only to a limited extent."

Locating more than one estate in cities like Kanpur defeats the second object, although it is pointed out that at such sites in cities or large towns it is hereafter proposed only to provide developed sites instead of complete factory premises. Considerable doubt on the ultimate utility of industrial estates of the type established in India was expressed at the 11-day seminar on industrial estates in Madras towards the end of last year. An Italian expert, M. Alessandro Molinari, representing the Association for the Development of Industry in southern Italy, pointed out that usually these estates are not possible without the creation of an extensive and imposing network of economic and technical assistance facilities. In his view even at such tremendous cost of resources and energy, considering the low potential of the small-scale industries which are all that could flourish in such estates, "the contribution to industrialisation and its acceleration in the countries adopting such policies will be very slight."

Paddy Shortage in Kanpur

Barring three or four big rice mills, smaller units numbering about 60 in Kanpur are threatening to close down. Some of them have, in fact, already closed. Millowners complain that they find paddy supplies extremely meagre to cope with the demand. Besides, they have to surrender 35 percent of the milled rice as a levy charged by the State Government at the rate of two-and-a-quarter seers a rupee to build up the Government stockpile. The levy is resented by both small and big mills, particularly as the prevailing market rate is two seers a rupee. Daily paddy arrivals in Kanpur are only about 600 maunds whereas as the daily consumption of rice is estimated at 2,500 maunds. Kanpur district is not self-sufficient in paddy. But since paddy movement from neighbouring districts is banned, there is no means of augmenting supplies except through smuggling. So both paddy and rice are smuggled to Kanpur in very large quantities, and this naturally means unfair competition to rice millers. The latter have demanded that unless the Government gives up its levy of 35 percent of the milled rice at discriminatory rates, they would be unable to carry on their business.

Employees State Insurance

That all was not well with the working of the Employees State Insurance had long been suspected, and the decision of the U.P. Board of the E.S.I. to set up a committee of enquiry is not, therefore, surprising. Mrs. Sucheta Kripalani, the State Minister for Labour, referred to two principal complaints while presiding over the last meeting of

the Board. Firstly, charges of unsympathetic behaviour and issue of false certificates were made against the doctors. Secondly, there were complaints of irregularities in the payment of dues to insured employees by the Corporation. While the findings of the committee will be awaited with general interest, it is common knowledge that the expectations entertained about the benefits of E.S.I. scheme have generally been belied throughout the country. The Mudaliar Committee's report on planning and health survey, which was released towards the end of January, says that the Employees State Insurance Corporation is such a centralised body that it cannot function effectively unless there is some devolution. Commenting on the delay in referring even small matters to the head office, the Commission said: "It is impossible for the Employees State Insurance Act to be administered unless the States' responsibility is realised and full co-operation obtained from the States."

The committee found that many so-called panel dispensaries function under such adverse circumstances that they cannot be called dispensaries at all. These will have to be replaced by polyclinics if conditions are not to become worse when families of workers are also included in the scheme. As for the number of hospitals, the position is obviously unsatisfactory. The overall number of beds work out to 2.5 a 1,000 employees. Naturally, there is opposition from trade union interests to the Corporation's plan for extending the scheme to new areas before a good job has been made of it in areas where it has already been implemented. Since the Corporation has decided to double with effect from the next financial year the present rate of the employers' special contribution, it is necessary to ensure that the money is spent to better effect than hitherto. The proposal is to extend the scheme with a view to covering 24 million industrial workers by 1963, but nominal yield tensions without actual benefits will only yield the negative satisfaction of obliging the employers in these areas to contribute at the same higher rate as in the implemented areas.

FUTURE OF INDIGO

WHETHER the planters of Behar as a body admit it or not, no one with ears to hear and eyes to see can fail to recognise the fact that king indigo has been dethroned. This is not altogether tantamount to an admission that the days of natural indigo are numbered. But the serious competition of its synthetic rival in the world's market can no longer be ignored. One of the most promising signs is the more interested in the fortunes of Behar is the more general recognition of the folly of putting all one's eggs in one basket. The time is still far distant when it may be necessary to discuss the advisability of relegating indigo growing to the category of unprofitable industries. There are many directions in which scientific research may open up means of cheapening the production of the natural dye. The past year though not so fruitful of results as was anticipated, and manum an advance both on the agricultural and manufacturing sides. The members of the Planters Association are well advised in prosecuting upon undiminished ardour the investigations upon which their staff of experts have hitherto been engaged. Both at Dulsing Serai and Peeprah the foundations of most useful work have been laid. Next season will see the scope of enquiry and experiment considerably widened since, in addition to the chemical researches of Mr. Rawson and his assistants, the Association will benefit by the labours of a biologist and bacteriologist. The last mentioned scientists will practically break fresh ground, and it is not improbable that discoveries of an important character may be the outcome of their engagement.

CORRECTION

It was wrongly stated in the issue of Capital dated 30th November, 1961, on page 793, under the heading "J.K. Steel Pays the Same" that J.K. Steel Ltd proposed to acquire J.K. Business Machines Ltd as a subsidiary Company by investing "not more than Rs. 100 lakhs". This should have read "not more than Rs. 11 lakhs". We regret any inconvenience caused.

A Ditcher's Diary

IT COULD BE A MEASURE OF THE VERY LIMITED IMPACT of modern poetry on popular minds that between Saturday afternoon and Monday, when the world was to have come to an end, everyone was expecting a bang: Had not T. S. Eliot solemnly written that it would come about with a whimper? But I am not prepared to believe that the prophets now proved wrong are whining in sorrow. First, they had hedged themselves pretty well with conflicting dates and areas of disaster. Secondly, they organised massive *yagnas*; and doubtless calamity has been averted because of the planets' obliging response to prayers in parks to the accompaniment of burning incense. Interpreting the future is a business in which you cannot lose, given vagueness and eternity. The gains on the other hand can be considerable. If, for instance, I had acquired an interest in the takings of a temple in a fairly popular part of the city, and if at the same time I could direct the display of news in a popular newspaper, I would be foolish not to put on the front page, in the biggest available types, all the news of blizzards, gales, storms, air crashes and such like. Big crowds would then come to my temple and pay their *naye paise* into the divine kitty of which I am, of course, "honorary" treasurer and sole dispenser. It is no use saying that I would in that case be in jail: I would not, for among my *chelas* would be Ministers and Commissioners of Police. (Mr. Nehru can take his rationalist custom to any other shop; I would not know the difference.) Some years ago Mr. E. M. Forster wrote that ours is an age of faith; and this shocked many. Mr. Forster was then thinking of the militant creeds like fascism and communism that were contending for our loyalty and submission; but it would not surprise me if, subconsciously, Mr. Forster was also thinking of his years in India. There is, in all conscience, enough superstition still in the West; but in this part of the world faith, which is not confined to football pools or the choice of precious stones, can be and frequently is fatal. And it is the poorest section of the people that pays the most to racketeers in religion. I see no obvious causal connection between independence and the apparent boom in the *guru* trade. More than one hindu friend of mine does.

NOT MANY DAYS AGO, AN AMERICAN ECONOMIST remarked to me that one of the more striking things he had found about Calcutta was a certain "crisis of confidence": a seemingly pervasive belief among its population that nothing would be, or perhaps even could be, done to improve conditions in the city. It is a belief with which I am familiar.

and which, I confess, I have often myself shared. The Calcutta Metropolitan Planning Organisation's proposal to study the feasibility of building a tunnel under the Hooghly, as a partial contribution towards solving the city's growing traffic problems, does not, I am afraid, leave me overjoyed. Over almost a decade, according to my memory, there has been a spectacular succession of grandiose schemes for an underground railway, or a circular railway, or a monorail network; and perhaps the only feature common to them all, of which we can be sure, is that none of them will ever be implemented. In the circumstances, I might perhaps be excused if I took the same dismal view of the Hooghly tunnel. About the need for it, or for another bridge across the river, there cannot at this late hour of day be much doubt; the recurring chaos caused by the traffic bottleneck at Howrah bridge is an experience with which most of us are painfully familiar, even though our forays to the other side of the river may be mercifully infrequent. As to the feasibility of building the tunnel, it is not for me to say; but it is hard to see why, conditions being what they are, an expert investigation should not be made. It is said that the Central Government is reluctant to sanction the Rs. 2½ lakhs odd of foreign exchange which would be required for a feasibility study; this sign of niggardliness, not the first that the Centre has shown towards Calcutta, reinforces my gloomy impression that the problems of this city are better appreciated in some other world capitals than they are in New Delhi. I might have had some sympathy with the Centre's attitude if I knew that it had some better alternatives in mind; but, as far as I am aware, it has none. Even the much-advertised project for the Durgapur Expressway, which was to have been a vital link between Calcutta and its rapidly industrialising hinterland, is, one hears, on the way to being lost in the Finance Ministry's files.

I HAVE THE HIGHEST RESPECT FOR GENERAL DE Gaulle as a statesman, reminding us of an age that is no more. If in his broadcast on Monday he said little new, I am not necessarily disappointed. But it is difficult to see the basis for the new optimism let loose over the Algerian incubus. When President de Gaulle spoke of "positive hope" I could only think of the O.A.S. gangs; and for them I coined a new name: The Illogical Negativists. Will they negative any agreement that the President may some day sign with the F.L.N.? They will certainly try; and it is depressing to read that they virtually control the Algerian cities in which the Europeans are in a majority. The withdrawal of the French troops from Algeria

apparently continues, which in effect means that the O.A.S. and the F.L.N. are poised for a showdown in which metropolitan France will be more or less neutral. The consequences can only be bloody; but the O.A.S. and the F.L.N. have only themselves to thank for it. (I should add that I am not being unfair in equating the two; they are both savage and beyond the pale of reason.) If it is true that the F.L.N. has given guarantees on the future of the Europeans in Algeria—and Paris finds these "substantial", even "surprising"—the O.A.S. will yet be wise to co-operate with General de Gaulle. In the final analysis the Europeans can live in Algeria only with the good will of the Muslim majority; and there has been enough interracial bitterness already. But then unreason, like jealousy, feeds upon itself; and a senseless journey once undertaken by a community that has lost its head rarely stops before the tragic end has been reached. But General de Gaulle has set France on the right road; and he apparently intends to remain resolute.

IF MY MEMORY SERVES ME RIGHT IT WAS UNDERSHAFT, the "Cannon King" in Bernard Shaw's *Major Barbara*, who almost burst with astonishment when told by his prospective son-in-law that at least one qualification he had for marrying the millionaire's daughter was an ability to distinguish right from wrong. To meet a man who knew the answer to the problem which had troubled mankind, and exercised its greatest philosophical minds, ever since the creation, was considered by Undershaft as no less than miraculous. The difference between Shaw's young hero and Field Marshal Montgomery is that one was in his twenties while the other is old enough to know better—they both claim to know the difference between right and wrong. Perhaps to the Field Marshal's simple soldierly logic it is quite easy to make such a decision about *Apartheid*, or at least his recent statements in South Africa suggest he thinks so. But I think he has been the victim of men much cleverer than himself, who must now be most gratified by the moral support he is giving them and the military assistance he has promised. On the face of it—and I doubt whether the Field Marshal has looked any further—there are many attractions in *Apartheid*, especially when the differences between black and white in South Africa are so obviously irreconcilable without bloodshed. But can it seriously be contended by a man of the undoubted moral standing of Field Marshal Montgomery that the policy is motivated by anything other than the basest of race instincts, or in practice amounts to anything more than political, economic and social suppression of the black majority by the white minority? I am not myself an uncritical supporter of black nationalism in Africa, a movement which I consider to be an unsavoury mixture of personal greed, international opportunism, and at least as much colour prejudice as enthuses *Apartheid*. But

For exacting, drilling needs, specify **VOLTAS-SMIT** Diamond Bits

Freely available for the country's mining industry, VOLTAS-SMIT Diamond Bits are made to precise specifications in India in collaboration with the renowned firm of J.K. Smit & Sons, London.

Outstanding Features:

- Specially selected Industrial Diamonds, set in tungsten alloy matrix and tungsten carbide matrix to suit all rock formations.
- Built with mechanical precision, ensuring long life
- Maximum drilling performance, at lowest drilling costs
- Available in DCDMA and metric sizes to suit all diamond core drills of any make and capacity
- Special bits can be specifically ordered to suit unusually difficult ground conditions

Resetting Service: VOLTAS operate an efficient resetting service, which is available for bits of any manufacture. This resetting service will help you to keep down drilling cost. Please send us your worn Bits for resetting

CAPITAL, 8th February, 1962.

I cannot see that the solution to the racial and colour problems of Africa is a policy inspired by some of the lowest instincts of hatred and exclusiveness to be found in man. It is unlikely many Africans will be dismayed by the Field Marshal's threat to "draw his sword" in defence of white supremacy, but I wonder whether such immature threats and statements coming from a man of this standing do not do more harm to the cause of the whites in Africa than the strict merits of their case deserve.

LORD MONTGOMERY IS NOT THE ONLY BRITISH PEER and marshal who seems to have left the world of reality recently for the more comfortable one of sheer fantasy. In the House of Lords the other day, Air Chief Marshal Lord Dowding is reported to have explained how his wife's mother rid her chicken run of rats and mice by simply asking them to leave. I have heard of mothers-in-law talking the hind legs off donkeys, but this is something new even for the unconventional Lord Dowding. I must confess this man's character has always puzzled me. Nobody who has read his book *Lychgate*, a vindication of his views on spiritualism, can fail to be mystified that its author should ever have been sufficiently practical and hard-headed to direct Fighter Command to victory in the Battle of Britain. How such a man ever earned the nickname "Stuff" is something I should like explained to me one day. It seems Lady Dowding has tried her hand at it too. She claims to have persuaded insects and rats to leave her house by talking to them. The idea, apparently, came from Hollywood—I might have known. An American, Mr. J. Allen Boone, has written a book on how he stemmed an invasion of his house by ants just by telling them to go away. This is a book I must read, because the idea obviously has wide application here in India. For a start I should like to try it on the mosquitoes on my verandah, which seem to become more numerous and aggressive every day. When I complain to the nearby Maharaja in whose tank they breed, he looks at me with surprise and points out that as they are royal ones I should think myself lucky. It had not struck me that I ought to be talking to the mosquitoes rather than the Maharaja. I am sceptical about the efficacy of the idea when applied to Calcutta's bandicoots, and I frankly cannot see how it will work with street beggars. But nobody is going to accuse me of not being willing to try, although I cannot help thinking that if talking was all that was needed this city would today have no problems at all. In fact, this is not really very different from what Mr. Nehru has been trying with the Chinese, and look what success he has had.

I LIKE THE *Spectator's* ADVERTISEMENT IN THE 100th number of *Encounter*: "Greetings and congratulations to *Encounter* on its 100th issue from the *Spectator* just having achieved its 6964th." Capital is not quite as old; but the success story of *Encounter*, at a time when in Britain one periodical after another has been folding up, is quite remarkable. Anglo-American co-operation has not always worked wholly successfully in every field; but in *Encounter*, which is cheap in India at Re. 1 a copy, I find something engagingly American and something reassuringly English. It is lively without being frivolous; and only occasionally has its anti-communism been unpleasantly acrid. The 100th number is star-studded; but the better pieces come from the lesser known; and although there are no writers from India—why?—there is a lot about India and the East. Mr. Enright is agreeably controversial; Mr. Dwight Macdonald less agreeably on Hemingway. All in all, an excellent issue.

THAT RATHER SINISTER SWATANTRA PARTY ELECTION advertisement which features a hangman's knot and the caption, "inflation is capital punishment," reminds me of a definition of capital punishment which somebody sent me the other day. I believe it was originally given by the editor of an American newspaper: "Capital punishment is when the government taxes you to get capital in order to go into business in competition with you, and then taxes the profits on your business to pay for its losses."

THE DITCHER

CAPITAL, 8th February, 1962.

Money

THE CALCUTTA MONEY MARKET

RISE IN ADVANCES

Wednesday, 7th February.

THERE has been an increase in the total of advances outstanding in the Calcutta money market during the past week, thus reversing the relatively stagnant conditions of the past fortnight or so. All the main sources of demand show an improvement, including the cotton and jute mills and call for accommodation against foodgrains and seeds storage. The requirements of the sugar industry have increased sharply, but those of the engineering and iron and steel industries are slightly down. In the interbank market, conditions are tighter and there are reported to be borrowers over at the increased call rate of 4½ percent.

Conditions have been fairly active in the exchange market despite a slight fall in the supply of tea bill's. Gunny bills have remained in good supply. Demand for remittance has been moderate. In the London money market, the pound has strengthened against all important currencies with the exception of the French franc and the Swedish krona.

BULLION SHOWED A MIXED TREND during the past week. Silver was steadier on renewed buying, and the price rose from the previous week's level of Rs. 245.50 to Rs. 247.75 quoted today for ready delivery. The rate for forward delivery was Rs. 211.25. The London and New York prices were 87½d and 103.75 cents.

Gold was quiet due to profit-taking, and the price declined from Rs. 141.75 to Rs. 140.50. The sovereign was lower at Rs. 98.25.

DURING THE WEEK ENDED 2ND FEBRUARY, Government of India Treasury bills for Rs. 40,98,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 6th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,540 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 12th February.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 7th February to 10th February at Rs. 99.381 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 31st January to 3rd February, amounted to Rs. 12,75,000.

A rise of Rs. 13.08 crores to Rs. 1,993.68 crores in active notes was the main feature of the return of the Reserve Bank of India for the week ended 2nd February, 1962, but the total note issue was Rs. 52 lakhs less at Rs. 2,004.76 crores. Notes held in the Banking Department, consequently, fell by Rs. 13.59 crores to Rs. 11.09 crores. Deposits of Government of India and other Government

accounts decreased by Rs. 57 lakhs and Rs. 1.54 crores to Rs. 68.10 crores and Rs. 17.29 crores, respectively. Balances of commercial banks at Rs. 75.61 crores showed a decline of Rs. 4.41 crores. Balances held abroad rose by Rs. 19 lakhs to Rs. 11.16 crores, but investments fell by Rs. 1.05 crores to Rs. 241.92 crores. Other loans and advances rose from Rs. 149.03 crores to Rs. 158.86 crores, of which advances to scheduled banks against usance bills amounted Rs. 17.88 crores (Rs. 10.38 crores). Ways and means advances stood at Rs. 60.76 crores (Rs. 60.80 crores).

THE RETURN OF THE STATE BANK OF India for the week ended 26th January, 1962, shows a rise of Rs. 2.77 crores to Rs. 547.02 crores in total deposits. Investments in Government securities are up by Rs. 8.21 crores to Rs. 241.03 crores, while other authorised investments remain unchanged at Rs. 9.28 crores. Advances including loans, cash credits, overdrafts, and bills discounted and purchased have increased by 1.52 crores to Rs. 269.63 crores. Cash and balances are in consequence shown at Rs. 25.93 crores or Rs. 3.89 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 26th January, 1962, shows Demand and Time liabilities at Rs. 866.73 crores (Rs. 23.18 crores on account of borrowings from banks) and Rs. 1,170.78 crores (Rs. 15.36 crores), compared with Rs. 868.08 crores (Rs. 26.99 crores) and Rs. 1,165.44 crores (Rs. 16.72 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 11 lakhs and Rs. 3.39 crores to Rs. 46.74 crores and Rs. 79.87 crores, respectively. There is a rise of Rs. 7.86 crores to Rs. 596.01 crores in investments. Advances and bills discounted at Rs. 1,322.63 crores show a rise of Rs. 6.72 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.2 percent and 64.9 percent, against 6.1 percent and 64.7 percent.

MARKET RECOVERS AS THE THREAT OF DOOM PASSES

Wednesday Evening.

THERE has been an appreciable improvement in the stock market during the past week. Share prices have risen on a broad front due to renewed buying and short-covering. Lyons Range is relieved that the conjunction of planets has had no adverse effect. Attention has largely been concentrated on the five shares which have recently been promoted to the forward list. Some of them have risen sharply during the past week due to the shortage of floating stocks.

Towards the close on Wednesday, fluctuations have narrowed and it looks as if the gains are being consolidated. The technical position appears to have improved, as is evident from the lower carry-forward charges at the last settlement. But operators have become cautious in view of the general elections. Meanwhile, the Press report that Mr. T. T. Krishnamachari believes there is little justification for a further rise in direct taxation, has brought some relief to Lyons Range. Many operators are nevertheless worried that further taxation will be imposed in the Central Budget which will be presented after the general elections. Speculation continues about whether the new Central Cabinet, when constituted after the elections, will be more "red" or less.

Steel shares have become hesitant due to two factors. The first is that the announcement of the new retention price is being delayed. A Press report states that the private steel producers have been asked to meet the Tariff Commission to discuss the price. Some uncertainty prevails because it is not certain whether the Government will ultimately fix a uniform retention price for all producers, or different retention prices for each, depending on the production costs.

The second factor is that the effects of the shortage of coal and transport are being reflected in the working of the steel companies. Although the despatches of the Indian Iron and Steel Company have risen from 67,203 tons in December 1961 to 72,029 tons in January 1962, nearly 3,500 tons of finished materials could not be despatched due to the shortage of suitable types of railway wagons. The production of pig iron has fallen from 103,038 tons to 86,754 tons because one blast furnace was taken off for repairs and relining. It is expected that it will not be back in production before seven weeks. The output of steel ingots has declined from 83,171 tons to 78,574 tons, but that of salable steel has risen from 65,031 tons to 74,121 tons.

Lyons Range is taking a more cheerful view of jute shares. The working of the industry has improved with abundant supplies of fibre. If the present relationship between the price of raw jute and that of jute goods is not disturbed, the industry hopes to recover a substantial portion of the losses incurred in earlier months of the current financial year. This apart, some mills have diversified their activities and others propose to do so soon. If the support for jute shares is maintained, it will do much to sustain the morale of the stock market.

Indian Iron have closed around Rs. 25.30. Among engineering shares, Indian Standard Wagon have had a spectacular rise on rumours of a rights issue. But no official confirmation is available, and it does not look

as if the Company needs to raise finance through rights shares for the time being. Jessop have recovered on replacement buying in view of the expansion plans. Guest, Keen, Williams have become steadier and Texmaco have risen on speculative support. Kumardhubi Engineering, Indian Oxygen and Britannia Engineering have been steady. Binani Metals has improved slightly.

There have been many bright features in the miscellaneous section. Indian Copper have recovered on replacement buying. The earlier improvement in Dunlop Rubber, following talk of a rights share issue, has not been maintained at the close due to profit-taking. Orissa Cement and Kesoram Industries have gained appreciably on sustained buying. Hindustan Motors have recovered on short-covering. Indian Aluminium, Aluminium Corporation, Indian Cable and National Insulated Cable are steadier. Jay Shree Tea and Industries, Rallis and Union Carbide have met with support. Jaipur Udyog and Schrader-Scovill Duncan have gained. B.I.C. have recovered on replacement buying. Interest is being taken in Britannia Biscuits, Metal Box and Goodyear India. Tobacco shares have been quiet and Imperial Tobacco are being sold freely. India Steamship have weakened on a predominance of sellers. Electric company shares have become steadier and scattered support has been forthcoming for Calcutta Electric. Paper shares are steady. Orient have gained on expansion prospects. Titagur have been bought on investment account. Sipur are quiet on the issue of rights shares but Bengal have improved on issuing bonus and rights shares. Seshasayee and Ballarpur are steady.

Interest in jute shares has broadened but support is confined to selected scrip. The more prominent are Birla, Fort Gloster, Northbrook, Anglo-India, Bally, Nuddea, Gangas and Gourepore.

Coal shares have been sluggish and routine business is being transacted in Burrakur, Bengal, Amalgamated and New Beerbloom.

Elgin have been a smart feature in the cotton mill section and the price has risen appreciably due to the declaration of a higher dividend. J. K. Rayon have slipped back on disappointment that the shares will not be included in the forward list for the time being. Bowreah, Jay Shree Textiles and Bharat Commerce are steady.

Sugar shares have become weaker, with sellers predominating. Carew, Dyer Meakin Breweries and Champaran have been offered at lower prices.

The improvement in auction prices has induced selective support for tea shares. Hasimara and Huldibari have hardened on prospects of bonus issues. Tezpur, Betjan, Dibrugarh and Tyroon have improved. Hantapara have weakened on pressure but Brooke Bond and Dhelakhat are being supported.

Turnover in Government securities has been small. Routine business is being transacted in Central Government loans and the 3 percent Conversion loan 1986 is being quoted around Rs. 71.

Tata Steel Output

Tata Industries Private Ltd. managing agents for the Tata Iron and

Steel Company Ltd. report that the approximate production of iron and steel at the steel works in Jamshedpur during January 1962 was: pig iron 155,300 tons; steel ingots 143,700 tons; semi-finished steel for sale 37,600 tons and finished steel 81,400 tons.

Bombay Market

UNDERTONE BECOMES STEADIER

GOOD CORPORATE NEWS HELPS

Wednesday Noon

THE undertone of the stock market became steadier during the past week. Share prices were marked up all-round due to short-covering and renewed support. The main stimulus was provided by the fact that the confluence of the planets had had no evil effect. Operators were encouraged by the flow of good corporate news. Some companies decided to issue rights shares for financing their diversified activities. Cotton mill interests were cheered by the improvement in cloth exports during January 1962. It was thought that special measures would soon be taken to boost exports further. The decision of the Government of India to import more cotton was welcomed.

The technical position of the market improved as the carry-forward charges at the last settlement were lower. The decision of the authorities to enforce automatic margins on some shares restrained selling.

Tata Steel closed at Rs. 142.25 and Indian Iron at Rs. 25.25 on support from Lyons Range. Among engineering shares, Alcock Ashdown were fancied at Rs. 344 on prospects of a bonus issue. Tata Locomotive were steady at Rs. 359 and Larsen and Toubro rose to Rs. 44.25 on the news that the Company might issue ordinary rights share in the proportion of one new share for every two held at par. Mukand Iron improved to Rs. 29.15 on knowledgeable buying and Premier Construction came to hand at Rs. 193.50. Motor-vehicle shares were steady. Business passed in Hindustan Motors at Rs. 20.68 and in Premier Automobiles at Rs. 142.

Cotton mill shares improved all-round. Century jumped to Rs. 604.50 on short-covering and Bombay Dyeing were quoted at Rs. 69.40. Simplex were fancied at Rs. 173 and Kohinoor were taken at Rs. 317.50. Swadeshi came to hand at Rs. 294 and Morarji were transacted at Rs. 411. Gokak were done at Rs. 229 and Tata Mill were steady at Rs. 82.50. Central India reacted to Rs. 151 on the news of a rights share issue. B. R. Cotton reacted to Rs. 84 on profit-taking. Apollo rose to Rs. 2.70, as did India United ordinary to Rs. 19.28. Standard Mill came to hand at Rs. 1.155 and Finlay were done at Rs. 370.

Among miscellaneous industrials, some shares were steady. Associated Cement were taken at Rs. 154.50 and Digvijay Cement were placed at Rs. 193. Sugar shares were quiet and Belapur weakened to Rs. 250. Phaltan were sold at Rs. 118.50 and Walchandnagar Industries at Rs. 153.50. Sellers predominated in steamship company shares and Scindia Steam were marked down to

Rs. 12.88. Business passed in Great Eastern Shipping at Rs. 12.72. Mining shares were quiet and Shivrampur Syndicate were available at Rs. 44.

Chemical shares were steady. Tata Chemicals turned bearish at Rs. 19.12 on the news that the Company would issue rights shares at a premium of 50p each. Indian Dyestuff recovered to Rs. 545 and Polychem to Rs. 226.25. Colour-Chem improved to Rs. 470 and Synthetics and Chemicals rose to Rs. 235. Rayon shares were strong and National Rayon improved to Rs. 551 on a report that the Company would set up a plant to produce rayon-grade pulp. Baroda Rayon were steady at Rs. 161 on the prospect that production would start soon. Gwalior Rayon were firm at Rs. 54.50. Bombay-Burmah recovered to Rs. 660 on the prospect of diversification of activities. Hindustan Lever rose to Rs. 62.50. Voltas were steady at Rs. 305 and Tata Oil were bought at Rs. 81.

Bank shares were steady but turnover was limited. Central Bank came to hand at Rs. 69.50 and Bank of India were transacted at Rs. 148. Dena Bank were done at Rs. 72.50 and Bank of Baroda were placed at Rs. 118.50. Insurance shares were quietly steady and New India Assurance came to hand at Rs. 58.80.

Madras Market

REPLACEMENT BUYING LIFTS PRICES

NEW FORWARD LIST SHARES ATTRACT

Tuesday Evening.

THE stock market was steady and share prices improved during the past week. There was a great deal of replacement buying because the conjunction of planets passed off uneventfully. Support was forthcoming from outside sources. Higher advices from Bombay and Calcutta helped. Attention was concentrated mainly on the three shares—South India Viscose, Metturr Chemicals and Dalmia Cement—which were recently promoted to the forward list.

Business in Government securities was restricted and fluctuations were narrow. Bank shares were steady but sugar shares weakened due to the predominance of sellers. Selected public utility companies were fancied for investment purposes. Planting shares were quiet due to uncertainties about the marketing outlook for tea, coffee and rubber. Sentiment in textile shares improved on the view that there may not be an acute shortage of raw cotton. Selected miscellaneous shares were bought on good corporate news.

In the banking section, Indian Overseas were steady at Rs. 200 and Indian at Rs. 180. Canara Industrial and Banking Syndicate were done at Rs. 225 and Punjab National came to hand at Rs. 22.50. Among public utility companies, support was extended to South Madras at Rs. 10.12 and Negapatnam at Rs. 11.15. Salem-Erode came to hand at Rs. 14.95 and West Coast were done at Rs. 14. In the sugar group, Deccan were quiet at Rs. 10 and E.I.D. were sold down to Rs. 35.62. United Breweries weakened to Rs. 82.25 and Mysore were available at Rs. 55.50.

Among planting shares, Blue Mountain were quietly steady at Rs. 2.68 and Cochin Malabar at Rs. 7.23. Chembra were done at Rs. 3.40 but Coffee Lands were sold down to Rs. 14.25. Devashola were done up to Rs. 30.30 on the issue of bonus shares in the proportion of two new shares for every five held. Consolidated Coffee weakened to Rs. 16.75 and Oucherloy to Rs. 3.73. Peermade were done at Rs. 22 and

Parkside at Rs. 25. Periakaramaluri were steady at Rs. 3.45. Mysore Plantation were offered at Rs. 1.95 and business passed in Nilgiri at Rs. 8.49. Nonsuch came to hand at Rs. 23.62 and Ossoor were done at Rs. 2.70. Thirumbadi were steady at Rs. 1.55 and Travancore Rubber at Rs. 13.12.

Among textile shares, Bangalore Woollen were steady at Rs. 240 and Buckingham at Rs. 257. Business was done in Anglo-French at Rs. 133 and in Kothari at Rs. 13.30. Lakshmi were done at Rs. 165 and Loyal at Rs. 48.50. At first, Madura declined due to disappointment over the maintenance of the ordinary dividend at 15 percent, taxable, but the share recovered to Rs. 41.25 at the close due to short-covering. Metturr were done at Rs. 396 and Radhakrishna at Rs. 38.50. South India Viscose were steady at Rs. 190.50 but Travancore Rayon were quiet at Rs. 42.85.

In the miscellaneous section, Aluminium Industries were steady at Rs. 23.50 on declaring a taxable interim ordinary dividend of 9 percent. Ashok Leyland were quiet at Rs. 8.50 on paying a taxable ordinary dividend of 6 percent. India Cement were done at Rs. 5.87 on issuing ordinary rights shares in the proportion of five new shares for every nine held. Dalmia Cement improved to Rs. 12.80 and A. V. Thomas were steady at Rs. 10.50. Kirloskar Electric were bought at Rs. 18.25 but Madras Rubber were quiet at Rs. 20.65. Mysore Paper were sold down to Rs. 15 but Seshasayee Paper were steady at Rs. 8.70. Parry's Confectionery reacted to Rs. 4.31 but Spencer were steady at Rs. 23.65. Standard Motors were done at Rs. 16.60 and Textool at Rs. 189.50. Tube Investments were steady at Rs. 282 but W. I. Plywoods reacted to Rs. 210.

this is the time to think about air conditioning

and this is the time to think about Carrier and Voltas

—now, while the surveyor collects data about a construction site.

Too early? Not at all. Before the architect prepares his design he must

know what plans the landlord has for his new building.

Plans to air condition it, for instance.

Why Carrier and Voltas?

Because they bring maximum engineering experience and skill

to every air conditioning project. Carrier in the field of

manufacture of equipment. Voltas in the field of engineering,

installation and service.

Carrier

the people who know
air conditioning and
refrigeration best

No Fresh Licence Being Granted for Expanding Sugar Capacity

(FROM OUR NEW DELHI CORRESPONDENT)

ADDRESSING the Development Council for the Sugar Industry, which met here a few days ago, Mr. L. G. Rajwade, chairman of the Council and Joint Secretary in the Central Department of Food, declared that under the third plan, the target of sugar capacity and production has been fixed at 3.5 million tons—1.3 million tons more than the installed capacity in actual operation at the end of the second plan. Of the 1.3 million tons of additional capacity required to be established, only about 450,000 tons has been approved so far, in the shape of 19 new factories (15 of them co-operatives) and substantial expansion in 49 existing units. About 850,000 tons of capacity still remains to be licensed. But in view of the problem of disposal of surplus stocks, it has been decided very reluctantly not to license any further capacity in the sugar industry for the present.

The Council considered a note from the Indian Sugar Mills Association on modernisation of sugar mills. The Association says that the problem of rehabilitation and modernisation of the plants has been engaging its attention for some time. To make a realistic estimate of the expenditure necessary for rehabilitation and modernisation, the Association got 24 sugar factories in different parts of the country actually surveyed for this purpose by reputed technologists. The surveys relate to the immediate replacement requirements of the factories for the next five years, and do not provide for full replacements. Of the 24 factories selected for the purpose, 13 factories have undertaken expansion programmes. In most cases, they had actually completed their programmes by the time the survey was made.

Estimated Expenditure

According to the survey, the estimated expenditure on rehabilitation and modernisation alone is estimated at Rs. 49.81 lakhs a factory. The estimate of expenditure is based on the prices in 1959 of plant and machinery quoted by the two consortiums of sugar mill machinery manufacturers in India. This estimate, however, does not include ancillary items and installation costs. These are taken to be about 25 percent. Similarly, it is necessary to provide for the subsequent rise in prices, which is estimated to be about 12 percent. Thus the actual expenditure on rehabilitation and modernisation would work out to about Rs. 70 lakhs a factory.

The next question relates to how many units within the industry need to be modernised and rehabilitated. In order to assess that, the different units within the industry can be classified in the following three groups:

- Units that have not expanded at all.
- Units that have expanded but the expansion is 30 percent or less of their prior capacity.
- Units that have effected expansion by more than 30 percent of their prior capacity.

The total number of working units installed prior to 1951 is 136. Of

these, 67 fall in category A, 20 in category B and 49 in category C. It is estimated that the expenditure on modernisation and rehabilitation in the case of units in categories A and B will be about the same—about Rs. 70 lakhs a factory. The expenditure will be about Rs. 35 lakhs a factory for the units falling in category C. On this basis, the total rehabilitation and modernisation requirements of the industry work out to Rs. 78.05 crores.

Nuts and Bolts Imports

High-tensile nuts, bolts and studs are widely used in the motor-car, motor-cycle, scooter, tractor, earth-moving machinery, machine tool, aircraft and other ancillary industries. The manufacture of most of these items at present depends on imported components. The import of high-tensile nuts and bolts is taking place in "packs of components". So the exact amount of imports is not available. Hence, the estimate of the requirements of high-tensile nuts and bolts has to be made with reference to the production targets of the industries mentioned above. The total annual estimated requirements of bolts, nuts, rivets, studs, etcetera, were 100,000 tons by 1961 and 200,000 tons by 1965. The production of large-scale units will be 75,000 tons by 1961 and 150,000 tons by 1965; the balance will be manufactured by small-scale units. The manufacture of high-tensile bolts and nuts requires special machinery along with testing and inspection facilities. The use of such bolts and nuts is limited now, but could be increased considerably if production is increased.

A motor-car requires about 250 nuts, bolts, rivets and studs, and a lorry requires about 350 of them. Their cost comes to about 1 percent of the ex-factory price of a vehicle, and the same has been assumed for all the other items, including the machine tool industry. The requirement for replacement and for reconditioning has to be added to the above estimate. In the production of high-tensile bolts, nuts, rivets, studs, etcetera, the price of steel (the main raw material) is about 20 percent of the total cost of the finished product. The approximate requirement of high-tensile bolts, nuts, etcetera, will be about 6,000 tons out of the total requirement of 75,000 tons by 1961, and 12,000 tons out of 150,000 tons by 1965.

Paint Capacity

The existing annual capacity for paints, enamels and varnishes in the organised sector of the industry is of the order of 85,000 tons. Current production is around 50,000 tons. The paint industry covers a multitude of products. Different processes are employed for manufacturing the same product. The paint production capacity depends not only on the capacity of equipment, but also size and types of the kind of paint on such factors as the kind of paint produced (ready-mixed paints, stiff paints, etcetera), the nature of mix-pigments, etcetera. In view of the complicated nature of the industry and the diversity of its products, the production capacity has been assessed on the basis of the manufacturers' past best performance. The capacity will vary according to the

grade of product manufactured. The paint panel, constituted by the Development Council for Oils, Soaps and Paints, has estimated the production and capacity targets for surface-coating materials by the end of the third plan period at 160,000 tons and 190,000 tons, respectively. There is thus a gap of about 110,000 tons to bridge for attaining the third plan production target.

The Development Commissioner for Small-scale Industries has recently published a report on the paint, varnish and lacquer industry based on the results of surveys carried out by the Small Industries Service Institutes in Calcutta, Bombay, Delhi and Madras. In this report are given the consumption figures for paints and varnishes in 1957, and the estimates for 1961 in the eastern, western, northern and southern regions of India. The composition of the four regions is as follows: Eastern region: West Bengal, Orissa, Bihar, Assam, Manipur and Tripura. Western region: Bombay, Madhya Pradesh and Mysore. Northern region: Delhi, Punjab, Uttar Pradesh, Rajasthan, Jammu and Kashmir and Himachal Pradesh. Southern region: Madras, Andhra Pradesh and Kerala.

Third Plan Expansion

The industry is at present concentrated in Calcutta and Bombay. This is mainly due to the location of the various consuming industries in these areas. During May 1960, a Press note was issued stating that there is immediate scope for the establishment of additional capacity for manufacturing paints and varnishes in the northern and southern regions. It was also reported that as part of the expansion proposed during the third plan period, fresh capacity of 10,000 tons in each of these two regions could be installed. For this purpose, it was stated, applications for the grant of licences under the Industries (Development and Regulation) Act, 1951, for the development of capacity for manufacturing paints and varnishes in these areas might receive favourable consideration. But the response to this notification has been rather poor. So far only one scheme for the setting up of a paint unit in the southern region has been received and licensed.

Some of the existing paint manufacturers in the eastern and western regions have now come up for the expansion of their capacities to cope with the growing demand. Proposals have also been made for establishing new units in these areas. Normally, it takes 12 to 18 months for effecting substantial expansion or for setting up new undertakings. Meanwhile, due to the development of consuming industries, the demand for surface-coating materials is rising. It is felt that the time has come to consider the licensing of additional capacity in Bombay and Calcutta. Besides, it is proposed to intensify the export of paints in the third plan period. In this connection, it would be necessary to encourage the expansion of such units as are economically placed for production in relation to their capacity as well as to adopt modern techniques to manufacture quality products so as to be competitive in the export market. The location of

the units adjacent to ports will prove advantageous for exports.

Of the additional 110,000 tons of paint production to be achieved during the third plan period, at least 35,000 tons may be reserved for new units as well as those in the under-developed area (that is, places other than Bombay and Calcutta) whose capacity will be expanded. The balance of 75,000 tons could be produced in the Bombay and Calcutta regions. For achieving this output, a capacity of about 90,000 tons has to be established.

Cotton Imports

Cotton and jute are causing a major headache to the Government of India. The U.S. P.L. 480 facilities have widened India's expectations as far as agricultural produce is concerned. After the signing of a long-term wheat agreement under P.L. 480, India has been urging on the U.S. administration a similar deal for cotton. In anticipation of this deal, India has been expanding the production of cotton piecegoods, particularly of the finer qualities. One result of this policy has been that the normal "carryforward" stock has been exhausted. India needs about 1.2 million or 1.3 million bales of cotton, for which nearly Rs. 75 crores worth of foreign exchange is required. To meet this demand, India has only Rs. 25 crores worth of free foreign exchange, which will help her to purchase only 400,000 bales. Russia is being sounded about exporting cotton to India, since the U.S.A. has flatly refused, at least for the next three months.

Jute presents a different problem. It is in surplus, so prices have declined. This may mean that the jute buffer stock authorities will have to enter the market in order to stabilise values. Here again, the issue is who will provide the finance.

Russian Experts Leave

With the departure for Russia of 90 Soviet technicians, the Bhilai steel plant has been placed on an equal footing with the other two steel plants as far as the employment of foreign technicians is concerned. The coming months will show whether the superior performance of Bhilai was due to the Russian technicians, or to better management, equipment and raw materials.

German Credit for India

An agreement will shortly be signed with a West German organisation, Kreditanstalt für Wiederaufbau, to make available, from the West German credit to India, sums not exceeding 15 million deutschmarks to the Industrial Finance Corporation. 10 million deutschmarks to the Small-scale Industries Corporation and 5 million deutschmarks to the Industrial Credit and Investment Corporation of India, it is learned here.

New Cement Units

The Government is inclined to sanction at least one cement factory near Goa, in Belgaum district, it is learned here. Two applications are now being examined. Prior to the integration of Goa with India, the Government was reluctant to consider such applications, mainly because of the fuel difficulty. Goa has solved this problem, and the intention is to import furnace oil. There is an untapped demand for cement in Goa. The Government has already moved 5,000 tons of cement to Goa to meet its urgent requirements.

Another cement factory has been sanctioned. It will be located in Guguz in Chanda district of Maharashtra. Its installed capacity is placed at 250,000 tons a year. Tendulkar Industries, which are the managing agents, will manufacture part of the equipment. Foreign exchange is

being made available for the equipment which is not manufactured in India.

Grading of Coal

The Government of India has appointed a committee of technical experts for examining the procedure for the sampling and grading of coal. The Coal Controller is the convener of the committee which includes Mr. A. B. Guha, coal mining adviser, Department of Mines and Fuel, Dr. Sadgopal, deputy director, Indian Standards Institution, Dr. A. Lahiri, director, Central Fuel Research Institute, or his nominee, and a mining engineer. The committee has been asked to examine the current procedure for the sampling and grading of coal as well as the draft procedure recently drawn up by the Indian Standards Institution. It will suggest the changes required in the present procedure in order to bring it in conformity with modern scientific practice, consistent with administrative and practical needs. The committee, which has been asked to submit its report within two months, will work out a time schedule according to which the modifications in the procedure could be effected. The grading of coals was introduced in India several years ago. The procedure adopted by the various authorities in charge of grading has undergone changes from time to time, depending on the prevailing conditions. The grading of coal has assumed great significance now in the context of the need to secure the right quality of coal for industries in the third plan.

Fertilisers from Sindri

The General Manager of the Fertiliser Corporation, Dr. S. K. Mukherji, said at a Press conference last week that the Corporation is worried about the fall in the production of the Sindri fertiliser plant. The troubles of Sindri initially began when it started getting coal over the quality of which it had no control. Lately, another factor has cropped in. Since 1947, Sindri has got its gypsum supplies from Rajasthan. The present sources in Rajasthan are either drying up or yielding only inferior qualities of gypsum.

An expert committee, which was set up to examine the working of the factory, submitted its report last week. Its basic recommendations are to switch over to the direct sulphuric acid method of manufacture and the blending of coal. The committee recommended that over a period of seven years, a production of 240 tons a day should be obtained by the direct acid method. As coking coal is now reserved for the steel plants, the blending of coal is recommended to ensure uniformity of quality. Meanwhile, the Fertiliser Corporation is considering the import of gypsum from Pakistan, and even from Egypt. Side by side, plans are being made to explore alternative sources of supply in Rajasthan. Dr. Mukherji said that Rajasthan is still rich in gypsum of superior quality.

Turbines in N. India

As many as 20 sites have been selected for the installation of low power turbines in hilly areas in northern India. These areas are, in some cases, inaccessible, and the supply of electric power to them from the main State transmission systems is difficult and uneconomic. The turbines will harness the water resources of hill streams for generating power. In Jammu and Kashmir, two sets of 20 kilowatts have been installed in Kupwara. In addition, a scheme has been formulated for installation of a low power turbine in the mountainous regions of the State. The turbines will have a generating capacity of 25 kilowatts

to 250 kilowatts. The Himachal Pradesh administration is installing one 17-kilowatt set in Bharmour, besides the 20-kilowatt set already working in Chhaila.

The work of installation of two 50-kilowatt units on the Billing Nallah in Lahaul, Punjab, is progressing. There is also a scheme for the installation of three 50-kilowatt sets in the State. In Uttar Pradesh, five schemes for the installation of such low power turbines have been fully investigated. The sets are to be installed in Rudraprayag, Champawat, Nandakini, Bhilangana, and New Genti-chharra, the installed capacity ranging from 40 kilowatts to 200 kilowatts. The electrification of these remote areas will not only accelerate their economic development, but also bring them closer to other parts of the country.

Power for Collieries

Detailed information about the power supply to collieries in the third plan has been invited by the five-member study team, recently set up by the Government of India, with Mr. P. P. Agarwal, Joint Secretary, Central Ministry of Irrigation and Power, as its convener. The team has been asked to assess power requirements for the coal mining industry in the third plan, and recommend steps to be taken to meet the demand. Letters are understood to have been sent to the Coal Controller, Calcutta, the D.V.C., and the Joint Working Committee for the Coal Industry, Calcutta. The Coal Controller has been asked to furnish information on power supply and the programme of raising coal for each year of the third plan, and phased annual requirements of power for each colliery, or group of collieries, served by a common source of power.

Information has also been called for on the present use of power by the collieries, along with any restrictions which might have been placed on it, and the existing contractual arrangements with power supply authorities. The Damodar Valley Corporation has been asked to give full information on its contractual obligation for power supply to the coal mining industry, and the present requirements in the area served by it. Furthermore, the D.V.C. will give the team information on its programme to meet the power requirements of the collieries in the third plan. The Joint Working Committee for the Coal Industry has been requested to give suggestions. It is expected that, after the collection of full information on various aspects of power supply to the coal-mining industry, the team will visit West Bengal and Bihar to hold discussions with the interests connected with collieries.

Ceiling Prices for Chemicals

The Government of India has fixed the ex works ceiling prices for caustic soda, liquid chlorine, hydrochloric acid and bleaching powder. These prices, which have come into force from 1st February, 1962, will be effective till the end of December 1964. The ex works ceiling price has been fixed Rs. 36 a 50 kilograms of fused solid caustic soda and at Rs. 31 a 50 kilograms of caustic soda dye on the basis of 100 percent NaOH content. For caustic soda flakes, the price has been fixed at Rs. 41 a 50 kilograms. The ceiling prices for caustic soda, both solid and flakes, will be proportionately higher for every 1 percent of purity above 96 percent NaOH to provide for the sale of rayon-grade caustic soda. The ceiling price of liquid chlorine has been fixed at Rs. 21.85 a 50 kilograms. For commercial grade hydrochloric acid, the price has been fixed at Rs. 9.70 a 50 kilograms. The price fixed for stable

bleaching powder of different sizes of packings are Rs. 31.25 for 55 kilograms; Rs. 28.50 for 50 kilograms; Rs. 23.50 for 40 kilograms; Rs. 15.75 for 25 kilograms and Rs. 9.25 for 12.5 kilograms.

Indo-Bulgarian Trade

Talks between a trade delegation from Bulgaria and the officials of the Government of India ended here last week. A protocol was concluded indicating new schedules of goods available for export and import between the two countries for 1962. In the course of the discussions, the two delegations reviewed last year's trade and the steps to be taken to expand the trade between the two countries during 1962. The volume of trade during 1961 is estimated to be of the order of Rs. 2 crores. The commodities to be imported into India will continue to include capital goods and machinery items, steel materials, chemicals and other industrial raw materials, fertilisers, machine tools, cables, bleached wood pulp, etcetera. Exports from India to Bulgaria, on the other hand, will be rolled steel products, cotton and woollen fabrics, leather footwear, tinned fruits and juices, tinned fish and prawns, corn products, wood screws, diesel engines, air compressors, spectacle frames, rubber goods, asbestos manufactures, coke-oven by-products, railway wagons, jute manufactures, linoleum, sports goods, handicrafts, chemicals, deoiled cakes, drugs and medicines, tanned and semi-tanned hides and skins, etcetera, apart from other traditional goods like tea, coffee, spices, cashew kernels, essential and vegetable oils and mica.

Indo-Russian Trade

India, thanks to Russia, had a balanced trade with the communist bloc during the first five months of 1961-62. The exports from and imports into India during the period were worth Rs. 25.18 crores. All the countries in the bloc except Russia had an adverse balance against India, the combined total of which was Rs. 6.18 crores. Russia gave a favourable balance of trade to India of exactly Rs. 6.18 crores. The countrywise comparative figures of the balance of trade for 1961 and 1960 are as follows:

	(In Rs. lakhs)	1961	1960
Bulgaria		8	-7
Czechoslovakia		-160	-60
East Germany		-17	-113
Hungary		-39	-22
Poland		-194	-50
Rumania		-157	-172
Yugoslavia		-13	-34
		-618	-232
Russia		+618	+566
		Nil	+334

India, it will be seen, did better in 1960 as far as exports are concerned. Exports to East Germany and Yugoslavia have declined.

World Bank Mission

A technical mission of the World Bank, led by Mr. Stewart Mason, is arriving in India shortly to appraise highway and irrigation schemes which might be financed by the Bank. The team includes Mr. Bergan and Mr. Parand, who will study the highway schemes, and Mr. Johnson, Mr. Dexheimer and Mr. Mitchell, who will examine irrigation projects. Mr. P. Wright, senior economist of the World Bank, will accompany the mission. The World Bank is committed to providing India with aid amounting to \$400 million during the first two years of the third plan, of which nearly \$250 million has already

CAPITAL, 8th February, 1962.

been received by the Central Government.

State Bank Chairman

It was announced in August 1961 that Mr. Ranganathan, at present Secretary to the Central Ministry of Commerce and Industry, would be appointed as chairman of the State Bank of India in succession to Mr. P. C. Bhattacharyya, who is to take over as Governor of the Reserve Bank of India with effect from 1st March, 1962. The Government of India is unable to spare Mr. Ranganathan for appointment as chairman of the State Bank of India. It has, therefore, been decided that Mr. B. Venkatappaiah, at present Deputy Governor of the Reserve Bank of India, will be appointed as chairman of the State Bank of India, in succession to Mr. P. C. Bhattacharyya, with effect from 1st March, 1962. Mr. D. G. Karve, at present vice-chairman of the State Bank of India, will be appointed as deputy governor of the Reserve Bank, in succession to Mr. Venkatappaiah.

Utkal Machinery

The partners of Utkal Machinery Ltd are meeting in Rourkela for business talks and steel plant inspection soon. The delegations include: Dr. H. W. Rudhart, member of the G.H.H. board of directors, and Dr. H. Esslinger, also of Gutehoffnungshuette, Sterkrade; Dr. H. H. Koppers and Dr. Karl Kuepper, directors of Koppers Export G.m.b.H., Essen; Mr. H. Pfeiffer and Mr. G. Zimmermann, directors of Voith, Heidenheim; Mr. Holck-Larsen and Mr. H. R. Steenstrup of Larsen and Toubro Ltd, and Mr. G. Vogel of Utkal. Utkal, operating under an Indo-German industrial partnership scheme, will go into production soon and will have a wide range of manufacturing lines. The manufacturing programme includes sintering plant, pig-casting machines, blast furnace, special mill cars, converters, hot metal mixers, tanks, columns for the oil industry, heat exchangers, aerial ropeways, cable-cars, crushing machinery and cement-making plant. It also covers the manufacture of equipment for coke-oven plant, by-products plant, heavy chemical industries and plant for the production of paper, cardboard and cellulose.

U.N. Wheat Meeting

A three-member delegation is representing India at the U.N. Wheat Conference in Geneva which opened on 31st January. Mr. H. Lal, Director-General of Food, Government of India, is the leader of the delegation. The other members are Mr. B. L. Sahney of the Department of Food and Mr. S. P. Virmani of the flour-milling industry. The conference is expected to negotiate a new international wheat agreement to replace the present three-year agreement which expires in July 1962. As one of the keen interest in the outcome of the conference. Other big importers are the United Kingdom, Brazil and Japan. Among the main exporting countries are the U.S.A., Canada, Australia, Argentina and France.

U.K. Private Investment

In 1960-61, the United Kingdom took over one quarter of India's total exports, and supplied almost one-fifth of her total imports. Many British firms are arranging to manufacture their goods in India in co-operation with Indian industry. Out of 800 joint industrial enterprises approved by the Indian Government in the past two-and-a-half years, 250 have been British, compared with 150 German and 140 American. Latest figures show that the total British private investment in India amounts to about £300 million—three times as much as

CAPITAL, 8th February, 1962.

the private investment of all other countries put together.

Metallurgical Coal Mines

There is no truth in reports, published in a section of the Press, that the Government of India is considering the nationalisation of metallurgical coal mines or that a British team which recently visited this country has made such a recommendation.

Asian Trade Fair

An E.C.A.F.E. committee has decided to hold an Asian Trade Fair in Karachi from October 1963. The Fair will have a predominantly Asian character. But the question of inviting other member-States of the U.N., in addition to the members of E.C.A.F.E., has been left for decision by an ad hoc committee on the Asian Trade Fair, which will be convened soon by the Executive Secretary to make arrangements for the Fair.

Asian Common Market

The forecast that 19th February may become an historic date for Asia because a number of Asian Governments intend to issue on that day a collective declaration of their willingness "to translate the aspiration of Asian economic collaboration into reality" may prove as correct as the Hindu astrologers' forecast about the end of the world on 3rd February. The K. B. Lal report, on the basis of which this forecast has been made, has undergone further changes since Mr. Lal's departure for Europe. The report is now in the form of a suggestions rather than recommendations. Running to 43 pages, it was circulated to the Asian members of E.C.A.F.E. ten days ago. It has not yet reached the Government of India and so cannot be discussed at the Central Cabinet meeting on 8th February.

The leader of the Indian delegation to the E.C.A.F.E. meeting in Bangkok, Mr. Satarawala, is expected here by the end of this week, after which he will submit his review of the meeting to the Government. Official sources consider it unlikely that the Government will take a decision on the report until the general elections are over. It is thought that the Ministerial meeting of E.C.A.F.E., scheduled to be held from 6th March in Tokyo, will have a preliminary discussion on the report. Indications from Bangkok point to the possibility of Japan opposing the K. B. Lal Committee's scheme, which visualises not an Asian common market but machinery for regional co-operation, particularly through what economists call "the territorial division of labour". Under the plan, various countries would voluntarily ban the development of uneconomic industries and encourage industrialisation on a regional rather than countrywise basis. The report also suggests setting up a development bank to assist regional development.

The Bangkok meeting discussed the effects of the European Common Market. The view was expressed that the E.C.A.F.E. region, instead of concentrating on the handicaps resulting from the U.K.'s entry in the European Common Market, should examine whether the opportunities which will arise with the U.S.A. reducing tariffs will be considerable. It was explained that, like India, the U.S.A. was equally interested in the market for agricultural products. The meeting also discussed ocean shipping freights. It was noted that very few Governments have so far taken steps for ensuring a continuing examination of freight problems by the establishment of freight study units. The attention of the meeting was drawn to the increases in freight rates,

averaging 10 percent, by Shipping Conference lines in 1961. Several Governments of the region pointed out that increases were often announced without prior consultation with them. In this connection, it was stated that the Shipping Conference lines would be willing to supply the relevant data on their operating costs if any member of the region was interested.

The E.C.A.F.E. meeting had before it data supplied by various countries of the region on particular examples of freight rates which were considered unfair or anomalous by Governments and trade organisations. Such freight rates also constituted an obstacle to the growth of regional trade. The countries of the region stressed that regional co-operation

through joint consultation with shipping lines could make an important contribution to the solution of such difficulties. It was also felt that shipping lines had no public relations organisation to explain their viewpoint. The meeting noted the assurance given by representatives of shipowning countries that they would invite the attention of the Shipping Conference lines to the data submitted and the views expressed by the countries of the region. It was felt that the region would continue to depend on foreign shipping in the foreseeable future to carry its foreign trade and that the development of adequate merchant shipping could only be aimed at as a relatively long-term objective. In this connection, some countries suggested the establishment of joint

shipping lines by co-operative action among the countries of the region.

Viscount Knollys

The chairman of Vickers Ltd, Viscount Knollys, is in India on a short visit. His Company is interested in entering into collaboration with the Government to start a unit for manufacturing frigates in the Bombay Naval Yard. His Company already has a tie-up with the Government for manufacturing tanks.

Diesel Marine Engines

The German firm M. A. N. and the Danish firm Burmeister and Wain are competing for the contract from the Government undertaking for manufacturing diesel marine engines. The project is tied up with the second shipbuilding yard in Cochin.

Advanced ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION
Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING
Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY

Pay Pause in the U.K. to End Shortly, Says Labour Minister

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Minister of Labour, Mr. Hare, announced in the House of Commons last week that the Government's pay pause would end on 31st March. But he gave a warning that there is only scope for strictly limited increases. The undertaking given to the civil service non-industrial unions earlier last month to restore unfettered arbitration for their pay claims would operate from the beginning of April. The Government would give increases agreed to since last July, which had not yet been implemented, from a date to be decided. Selfish sectional interests which disregard the national interest will seriously harm Britain's progress, the Minister said. The same principle of limiting pay increases should apply to all forms of income, including profits and dividends. Mr. Hare made the announcement on behalf of Mr. Selwyn Lloyd, U.K. Chancellor of the Exchequer, in reply to an Opposition motion deploring the effects of the Government's industrial policy. In the final speech of the debate, which ended in a victory for the Government by 315 votes to 229—majority 86—Mr. Macleod, Leader of the House, said that the Government's aim is to go ahead with a long-term national incomes policy. A white Paper will be issued on "the position and development" of Phase 2 of the policy.

Gain or Loss

London's traffic chaos last Monday, when underground train drivers held a one-day strike, did not encourage the hope that things might soon improve on the labour front. But the Government's promise to end the pay pause in its strict form at the end of March may well take the edge off the present threat of labour disputes. Much of the exasperation of labour has been due to the unyielding nature of the pause. In the next phase, when average increases of about 2½ percent will be permitted, there should be a little more scope for diplomacy. To that extent, the outlook for the economy looks a little better. But it still remains to be seen whether the narrow limits set for the next round of increases will be enough to pacify the unions and their members. Undoubtedly, they will press hard for a good deal more. The real test—for the Government's firmness of purpose and for the preservation of industrial peace—is still to come.

How much has the country gained from the pay pause? If all the wage and salary increases, which would normally have been granted in the past six months, are now simply to operate after 1st April, a limited gain will have been made. For a single year, the wage bill would not have run ahead of the national output. But this gain could easily be thrown away if what was not paid during the pause is added on to wage increases in the future. Britain is not out of the wood yet.

Bank Advances Up

Bank advances went up slightly in January—by £15 million—and this is the first rise since July. Had it not been for the debiting of end-year interest and other charges to the totals in red, the aggregate of outstanding advances would almost certainly have shown a further slight fall. In

any event, £15 million is a drop in an ocean—£3,383 million. Inevitably, the rate at which advances have been declining has itself fallen and the total may now have levelled out. There may be small increases in the next two months when overdrafts are permitted to take some of the strain of tax payments. Otherwise, the relatively static condition of advances at their reduced level will reflect the *status quo* of the economy.

By dint of their diligence in the closing months of 1961, the banks are in a strong liquid position. The average liquidity shown by the January statement for the 11 banks is 36.15 percent, the range of ratios being 35.1 percent to 41.9 percent. The average is unusually high and will safely take care of the running down of the banks' cash associated with heavy tax payments to the exchequer in the next two months. This drawing on deposits may top four or four-and-a-half points off liquidity ratios which all of the banks can stand.

Profits and Dividends

The U.K. Treasury has collected figures which, among other things, show (1) that gross profits (including the surpluses of nationalised industries) rose in roughly the same proportion between 1953 and 1960 as incomes from employment, and (2) that since the middle of 1960, the rise in incomes has continued while profits have been falling. Comparing the second and third quarters of 1961 with the first half of 1960, incomes from employment went up by 11 percent while gross profits fell by 11 percent. Both incomes and profits are included in total domestic incomes, which rose in this period by over 6 percent. As output failed by a wide margin to match this rise, costs in Britain a unit of output went up by about 4 percent. As profits have fallen, the rise in dividends—pronounced in 1960—has levelled out. Whereas in the third quarter of 1960, gross dividends were 28.7 percent higher than in the third quarter of 1959, in the succeeding quarters the rise was 20.5 percent (fourth quarter 1960), 14 percent (first quarter 1961), 12.1 percent (second quarter), 8.8 percent (third quarter), and 2 percent (fourth quarter). In December the rise was only 1 percent on December 1960.

If prosperity means more pay for less work, Britain has been prospering since 1953. Between 1953 and 1960, total incomes (from employment and self-employment, and gross profits) rose, on average, by 6½ percent a year. Output rose by 2½ percent a year. Incomes from employment were 57½ percent higher and from self-employment 29 percent, while profits rose by 59½ percent and rents by 75 percent (the last figure includes mythical rent received by owner-occupiers). Profits in this calculation are gross, i.e., they are struck before allowing for the cost of wear and tear, depreciation and the monetary appreciation in stock values due to the general rise in the price level. Profits, net of these items, were 46 percent higher in 1960 than in 1953. For companies alone (i.e., excluding public corporations), the rise in profits was 56 percent gross and 41½ percent net. Incomes from employment in 1960 were five

times greater than in 1933, dividends two-and-a-quarter times greater and rents two-and-a-half times more.

More Unemployment

Unemployment in Britain has hit its highest point for two years, as the impact of the Government's economic squeeze makes itself felt. On 15th January, there were 461,063 jobless, according to figures issued by the U.K. Ministry of Labour, showing an increase of 71,654 over the December total. This brought the unemployment rate up to 2 percent, for the first time since February 1960. It was 1.7 percent in December, and 1.9 percent this time last year. One big factor in this unusually steep rise was the 12,055 school-leavers who registered for jobs after Christmas. The effect of the squeeze and the falling demand for labour is shown most clearly in the number of jobs vacant at labour exchanges—223,252. When the economy is booming, there are often as many jobs vacant as there are unemployed, sometimes more. Now the jobless total is double the number of vacancies.

Terms of Trade

The deterioration in Britain's balance of payments position cannot be laid at the door of any adverse movement in the terms of trade. The December figures now available show that, on average, the terms of trade—reflecting the relation between import and export prices—were even more favourable last year than in 1960. The average index figure (1954 equals 100) was 86 for 1961, compared with 89 for 1960. In December, it held steady at 85. Although the export price index edged up from 112 to 113 with the import index unchanged at 96, the export price improvement was not sufficient to alter the terms of trade index. Throughout last year, the export price index showed little change, the average level of 112 being maintained for 11 months.

Record Export Credits

Business declared under the U.K. Export Credits Guarantee Department's "commercial" insurance during the last quarter of 1961 was, at £197.5 million, a record for any quarter. Business declared during 1961 was also, at £172 million, a record, showing a £17.5 million increase on the 1960 business. The face value of comprehensive policies increased during the quarter by £31.7 million to £867.1 million (also a record). New comprehensive policies included general merchandise (£3 million a year), machinery (£2.9 million) handling plant (£1.4 million), and steel wire ropes (£1 million). Specific policies were issued during the quarter to the value of £10.1 million, including textile machinery (£3.8 million) and fertiliser plants (£1.4 million).

Not included in the above figures are the "small exporter" policies sold since their introduction in April, under which cover for £991,000 has already been allocated. Under the financial guarantee facility (also announced in April), cover had during 1961 been agreed in principle on 13 projects valued at about £95 million

with loan values totalling some £70 million. Claims paid during the quarter totalled £873,000.

Commonwealth and Six

Last week, British officials, led by Sir Pierson Dixon, had for the first time discussed with the "six" the problems of possible association of Commonwealth countries with an enlarged European Economic Community, including Britain. The delegates discussed the experts' report on basic imports which, according to a British proposal, should be exempt from tariffs, and the report on the problems of manufactured imports from industrialised Commonwealth countries. The working party studying these questions is to continue its researches into Australian and New Zealand trade patterns, having nearly completed the work on Canadian goods. Meanwhile, the Commission and the British delegation are pressing ahead with the analysis of the trade of less-developed Commonwealth countries under the so-called Deniau classification. This comprises four main categories:

1. Countries whose trade would be affected by Britain's adoption of the Community's common external tariff. These include India, Pakistan, Ceylon, and the Falkland Islands.

2. Countries whose chief exports are similar to those of the overseas States, chiefly in Africa, at present associated with the "six." Most of the African members of the Commonwealth, the West Indies, and various tropical islands, such as Fiji, come into this category.

3. Countries whose exports of temperate agricultural products would be affected by Britain's adoption of the common agricultural policy recently agreed by the "six."

4. A miscellaneous group, including transit ports and bases, such as Aden and Gibraltar.

A fifth category has since also been established, to include Commonwealth countries which at first sight seem unlikely to come under any of these headings. The countries of the second category seem the most likely candidates for association with the enlarged Community. Their precise status will take much thrashing out, but, especially as the "six" are at present renegotiating their associations with 16 African States, all former colonies of France, Belgium, and the Netherlands, and with 16 African States, all former colonies of Italy, whose links with the "six" were negotiated for them before they achieved independence. These associated States enjoy free access to the European market, as well as aid from a £581,250,000 development fund, to which even countries such as West Germany and Luxembourg make contributions. All 16 States have recently expressed their willingness to renew their association with the E.E.C., but they want more favourable terms than any possible newcomers from the British Commonwealth.

Brevities

Stothart and Pitt has been awarded through its Malayan associates a £100,000 contract to design and manufacture three complete bituminous coating plants for the Malayan Government.

The Europe-Indonesia Freight Conference has announced that the eastbound freight rates will be increased by 10 percent from 1st March, except the rates for cement, manure, motor-cars up to 480 cubic feet or continental equivalents and concrete iron (betonisen). This is the first increase in the Indonesian trade since 1957.

SHORTAGE OF GUNNIES FOR EARLY DELIVERY CONTINUES

THE dominant feature of the gunny market at present is the scarcity of manufactured goods for ready or early shipment. It is stated that the bazaar is still holding February-March goods, but the holders are unwilling to sell as they are apparently waiting for higher prices for ready delivery. The demand for goods for early shipment has not been satisfied. There is small interest for forward shipment, and buyers appear to be looking for lower prices in view of the large supply of raw jute available.

Conditions in the raw jute market depend to a large extent on the mills' ability to sell manufactured goods. All the mills are well stocked with the raw material and are keen for business as there is a fair margin of profit at today's rates. With such large stocks of fibre, they have naturally been more selective recently in their buying policy and there has been a considerable change in the class of material required. Their needs now are mainly for qualities that are scarce, namely, good quality jute and low quality Tossa. Good quality jute is scarce because the quality of the current crop is well below average, and that is a position which cannot be remedied until a new crop is grown. Also, the current crop is so heavily rooted that an unusually high proportion of low quality jute has accumulated. Tossa is meeting with heavy demand from both kutchas and pucca balers. The latter, particularly, are prepared to pay premiums for this class of jute, although most mills are not. The mills' main difficulty is to secure the qualities they want, without having to buy large amounts of other qualities at the same time.

Fibre Purchase Quota

The quota issued by the I.J.M.A. for purchase by the mills during the current week is reported to be about 750,000 maunds. This is well in excess of the arrivals, which on an all-India basis are estimated to be about 550,000 maunds a week. In spite of the large purchases made by mills over the past few months, which have lifted the raw material stocks of the industry to higher levels than for many years, the upcountry reaction has been slight. In only a few districts is the price parity above that of Rs. 30, basis Bottoms, landed in Calcutta. Nevertheless, the Government is still determined to push up prices, but it seems very unlikely that further efforts will prove more successful than those already tried.

Why is it that prices have not reacted to the bulk purchases? The principal reason, it appears, is that most of the jute is already out of the hands of the growers and in the hands of stockists. These people have been holding it for a long time in the hope of a revival in prices, but they are now getting nervous, and are prepared to sell at the minimum rate or even below. Mills, however, having large stocks in hand, are not interested in ready jute, except in certain circumstances. They are more interested in forward shipment, even up to April-May. Consequently, stockists see their chances of liquidating stocks gradually disappearing, and are steadily lowering their prices in order to obtain business. A certain amount is being bought up by local shorts who are covering bare contracts, but very little is being taken up direct by

the mills. Nor are mills' purchases of forward shipment likely to help the market, as most sellers would naturally sell bare, without covering in the agencies, in the hope of being able to cover at a profit nearer the time of delivery.

Price too High

The trade in general thinks that the current minimum price fixed for jute is too high. If it were withdrawn, it is admitted that there would be an immediate slump in raw jute rates initially, but it would not be long before rates found their natural level again—and that would be below Rs. 30 in the present circumstances. What, then, is the use of trying to hold fibre prices at an artificially high level? One reason is prestige—Government prestige. As is election propaganda, the Congress Governments in the early stages rashly pledged that they would hold fibre prices at Rs. 30. If they fail to do so, they feel they will lose the votes of the growers. Furthermore,

they fear that any slump in prices now might affect the sowing of the new crop—which is not too far distant—and might well bring another crop failure akin to the 1960-61 season's.

The Government should make a stronger effort to see that instructions about line-sowing, etcetera, are carried out. It should spend some money on the digging of suitable retting tanks, which were promised long ago but in many cases never constructed. It should also ensure that the subsidised fertilisers are used as intended, and do not reach the black market. That may do a lot more good than any efforts to push up prices.

THE JUTE MARKETS

Manufactured Goods: The market opened on a quiet note last Thursday due to the almost complete lack of

overseas interest. Heavy selling pressure in the sacking section caused new low levels to be recorded, and ready B Twills opened at Rs. 121.50, which was Rs. 4 over the April-June price. Hessians dropped by Re. 1 to Rs. 53.75 for ready delivery, and Rs. 46.75 for forward shipment. The sacking market continued to rule weak and prices tended to fall, but towards the week-end, short-covering lifted ready hessians. After the week-end, interest switched to ready sacking and while ready B Twills advanced to Rs. 121.25, the forward position eased to Rs. 117. In the absence of overseas interest and the cessation of local covering, hessians slumped by about Rs. 2. Towards the close, scattered enquiries were received for both sacking and hessians, and prices recovered slightly.

Opening quotations on Wednesday morning were as follows:

	Feb.	March	Apr.-June	July-Sept.

I.J.M.A. STOCK FIGURES FOR JANUARY

The Indian Jute Mills Association reports total stocks of jute goods at the end of January as follows:

Description	31st January, 1962		31st December, 1961		Increase over (+) or decrease from (-) last month		31st January, 1961	
	000 Metres (Lakh Yds.)	000 Tons	000 Metres (Lakh Yds.)	000 Tons	000 Metres (Lakh Yds.)	000 Tons	000 Metres (Lakh Yds.)	000 Tons
Hessian cloth and bag	5,49.36 (6.01)	16.6 (16.3)	5,20.47 (5.69)	16.1 (15.9)	28.89 (+ 0.4)	1.0 (+ 0.4)	5,40.20 (10.28)	29.0 (28.5)
Sacking cloth and bag	6,29.17 (6.88)	30.4 (29.9)	5,97.41 (6.33)	28.8 (28.3)	31.76 (+ 0.35)	1.6 (+ 1.6)	5,78.60 (10.70)	46.5 (45.8)
Others		13.2 (13.0)		10.7 (10.5)		2.5 (+ 2.5)		10.6 (10.4)
(660 Metric Tons/Tons)		60.2		55.6		4.6		86.1
Grand Total		(59.2)		(54.7)		(4.5)		(84.7)

N.B.—These figures are based on replies received and represent all members of the Association and Gagalbhal with estimates for two non-member mills. The figures in brackets are in British measures.

but concentrated mainly on forward shipment. Business was reported for deliveries up to the end of May, but not many sellers were keen to go as far forward as this since most of them were holding stocks which they preferred to sell first. High-grade jute was in demand, but there was little on offer, and that only at a premium. Some mills bought Bottoms only, while other mills were interested in only Middles, but it was obvious throughout the week that buyers were much more selective in their purchases. Tossa jute ruled very steady due to the premiums being paid by pucca balers, but other grades were available at varying rates below the minimum price, although the general undertone was steadier than a week ago. All-India arrivals were reported to be about 550,000 maunds a week. The quota issued to mills for purchase during the week ended 10th February, 1962, was about 750,000 maunds.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms		Shipment

THE PAKISTANI JUTE MARKETS

FIBRE FALLS FURTHER

(FROM OUR Dacca CORRESPONDENT)

THE Pakistani jute market remained featureless during the past week. The prices of jute, both locally and overseas, have declined to a lower level. As reported earlier, some balers and their London agents have a long position with the result that some cheap sellers have appeared from time to time. These cheap offers have encouraged buyers to keep off the market waiting for lower prices. The drastic reduction in the E.P.C. prices last month has encouraged them to believe that if they sit out, they can force the Pakistani authorities to reduce the rates further. Balers being short of cash and having a long position, are keeping off the market. This has kept local prices down in spite of a drastic reduction in imports. This means that if the buying interest revives, the loose jute market would rise rather more quickly than other markets because of small offerings. In the Narayanganj pucca bale market, there has been little or no activity. Long jute is definitely facing a buyers' market. Prices of cuttings do not, however, show any easier trend. In the kutcha bale market, the mills have been able to buy large quantities for forward delivery, often from reputable sellers and at prices considerably lower than those on the overseas markets. In London, although it is difficult to sell, it is obvious that buyers will have to come in again. They are merely sitting out waiting for lower prices. Meanwhile, better marks are being picked up at full prices.

In Pakistan, the P.J.A. apparently wishes to reduce the E.P.C. rates but does not wish to accept the responsibility of doing so without the backing of the Government. At the same time, they do not wish to quote as P.J.A. market prices figures which obviously bear no relation to the level at which business is being done. They have, therefore, stopped issuing the daily market report until such time when they can arrive at a decision to quote prices which truly reflect the market.

Reports from London indicate that there are free sellers of Export Lightnings and Export Hearts as well as outport Tossa 2/3s and outport Tossa 4s at prices sometimes below the minimum and always below the E.P.C. rates. There is also an apparent lack of interest in white or tossa. But if the overseas mills are to replenish their stocks, they must buy fairly large quantities. It would appear to be only a matter of time before the buying interest is revived. But it is unlikely that prices will

rise above the present P.J.A. market prices.

At the end of January, widespread rains have prepared the ground for cultivation in anticipation of the sowing of the jute crop at the end of this month or early next month. If prices remain at the present level, it is unlikely that sowings will either be large or early.

THE FOREIGN JUTE MARKETS

WORKERS DEMAND HIGHER WAGES

(FROM OUR DUNDEE CORRESPONDENT)

THERE is a strong feeling in Dundee that the dispute between the employers and workers in the jute industry will soon be ended. The majority of workers are getting tired of it due to the loss of wages caused by the banning of overtime in the industry. Many are losing anything between £3 and £4 a week because they cannot work as they want to. Meetings will be held during the next few days by different unions of workers. It is expected that work will be resumed in all mills and factories by the end of next week. Workers have demanded a 10s a week increase on the existing minimum rates, the granting of which would probably restore amicable relations between workers and employers.

As far as the market is concerned, the easier trend in raw jute prices has not been conducive to trading. The Pakistani authorities have been keen to maintain their prices at an unchanged level, but shippers are anxious for business, so there has been a steady decline in their quotations.

Mill Firsts are down to £146 lowest, Mill Lightnings to £119, Mill Hearts to £95 and Grade Hearts £82, while Grade Tossa-2/3 is offered at £138, fours £123 and Continental Tossa-2/3 £101, February-March, c.i.f. U.K. Continent. Even at these low rates, spinners are displaying little or no interest. There is still a lot of jute to be disposed of during this season, but sellers are reluctant to allow values to fall.

The Calcutta goods market has rather been irregular, but the prices seem to be fairly satisfactory at 80s for 40in. 10oz. and 62s 6d for 74oz. February, 75s 3d and 58s 9d March and 71s 3d and 53s 6d April-June, with B Twills 184s 9d, 180s 9d and 178s 6d for the respective positions of shipment, all f.o.b. Calcutta. Dundee yarns and cloth are firm and unchanged, and a small volume of bushness has been transacted.

Plantation Topics

PROSPECTS FOR RAISING COFFEE EXPORTS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE world coffee situation is not likely to improve for many years. It would, therefore, be unwise to plan for the future on the assumption that the market would improve. The Government of India's policy is markedly in favour of increased exports. But some leaders of the coffee growing industry in south India such as Mr. C. I. Machia, chairman of the Consolidated Coffee Estates, have expressed their fears about the official policy of "export at any cost." For the first time in 20 years, India has had to export a greater proportion of her coffee crop than is consumed locally. If she can export an increasing volume of selected coffees, there is a possibility of familiarising the foreign market with the particular characteristics of the Indian produce. "But if coffee is dumped abroad at whatever price it will fetch, in the interest of an export drive which is unfortunately forced upon every commodity without due regard to its individual economy, nothing but loss can result", Mr. Machia said while addressing the recent annual general meeting of his Company. The chairman urged the Government to re-examine its coffee export policy. He said that the Coffee Board should advise the Government with "greater clarity and truthfulness" even if it is contrary to the avowed official policy. In his view, an export policy which merely looks to an immediate increase in the physical volume of export without understanding or accepting its long-term effects on the industry is not only short-sighted, but also dangerous.

Two Conditions

There are two conditions which are essential for improving India's capacity to export more. One is that the return to the grower should be such that he will continue to be in business. The other is that the export drive should be made realistically with a view to creating a preferential demand for Indian coffee in the world market. Otherwise, Mr. Machia said, export promotion becomes a purely mechanical operation. It is also to be realised that not all the coffee produced in this country is of exportable quality. It is essential in the interests of the industry to export the best quality coffee which is capable of earning a premium in the export markets. Besides, a sound internal market expansion programme should be undertaken to absorb the increased output.

According to Mr. Machia, there are four specific measures open to the Central and State Governments to grant relief to growers. One is to abolish the excise duty altogether and to maintain the existing minimum release price. Another is to offer a direct subsidy to growers by making up the difference between the cost of production and the export price. The third is to reduce the rate of agricultural income tax on coffee and to liberalise the rules relating to depreciation, new clearings, etcetera. The fourth is to revise the excise duty on an ad valorem basis. A judicious use of all these four measures should be adopted so that the fall in revenue from coffee is not unduly heavy on any particular account. Mr. Machia firmly believes that the ultimate solution to the present problem of the coffee industry lies in the home market. The latter should be expanded to absorb at least two-thirds

of the increased crop so that the loss on export of the remainder can be maintained at a reasonable level.

Prospects for Cashewnuts

The cashew processing industry in India has started the new year with doubtful prospects. The foreign demand remains at a low ebb. The lack of enquiry from America, which is the largest buyer of Indian cashew kernel, is worrying exporters. Kernel is at present nominally quoted at 42 (U.S.) cents a lb. compared with the peak price of 62 (U.S.) cents in the second quarter of last year. A section of processors in Quilon has expressed the fear that the action over Goa may have some effect on the availability of raw nuts from Portuguese east Africa. If the authorities there proceed to obstruct the shipment of nuts, the processing factories in India will have to face the shortage of raw material to some extent. The trade in raw nuts is

practically an Indian monopoly and any action as a counter-measure to the Indian action in Goa might create great difficulties in getting raw nut supplies. There is another section of processors who do not apprehend any trouble. They say that most of the exporters in Portuguese east Africa are either Portuguese nationals or Pakistanis of Indian origin. So the Portuguese Government is not likely to turn against them for retaliation. Besides, the banning of exports would amount to the virtual destruction of the cashew crop in that area, since India is the only country interested in getting raw nuts for processing. The processors in Kerala carry some stock of both raw nuts and shelled kernels.

Meanwhile, reports say that the African crop this season has been as good as the one in the previous season, amounting to 150,000 tons. But nobody seems to be sure of the possible supplies available from it for India. The Indian crop may be a better one because the flowers are well set for a bumper crop. But nothing can be said definitely until actual harvesting is over. The prospects for processed kernels are bright as long as they can stand competition against other edible nuts, particularly almonds. But like other export commodities, cashew requires a policy of proper balance between internal consumption and export. Meanwhile, some means should be devised to

control the unhealthy competition and rivalry within the industry. The crises which often develop in the cashew processing industry can in most cases be traced to cut-throat competition and rivalry among processors.

TEA CONSUMPTION IN U.K. AND U.S.A.

INDIA URGED TO REGAIN DOLLAR MARKETS

(BY A SPECIAL CORRESPONDENT)

WITH reference to the development of tea planting in the European Common Market countries, it may be noted that the German Social Democrats have tabled a Bill in the lower house of the Legislature calling for the abolition of tariffs on tea and coffee by 1st July. Meanwhile, tea production is no longer confined to three or four Eastern countries. Given time, there is reason to suppose that large areas will be planted in Africa and Latin America. The warning of the U.N. Food and Agriculture Organisation should not, therefore, be ignored. At the same time, there should also be ever growing markets for new producers. For India, however, the in-

WE IN BIRDS MEET THE DEMAND

Rising steel production requires more and more vital raw material, iron and manganese ore, limestone, coal, dolomite, and refractories... New plants need essential water treatment processes... Agriculture requires tubewells in greater volume... the country's growing markets demand more jute products, paper, electricity, steel structurals and castings. And the Birds/Heilgers group is always there to spur their production... to meet these demands. But expansion doesn't stifle achievement. Nearly a hundred years of experience and research continues as Birds strive harder to bring you better products and better materials to keep pace with India's fast expanding economy.

Commodity Markets

WORLD TRADE IN COTTON
PIECEGOODS DECLINES

IN the third quarter of 1961, according to figures published in the U.K. Cotton Board's *Quarterly Statistical Review* for December, the cotton yarn output in those non-communist countries, for which quarterly figures are available, was about 1 percent greater than in the third quarter of 1960. During the first quarter, production was below the level reached a year earlier, while in the second quarter it was much the same as in the corresponding period of 1960. As so often happens, conditions in Europe are completely different from those in North America. The cotton industries of several west European countries are experiencing a recession and not only in the U.K. but also in West Germany, Belgium and France, cotton yarn production in the third quarter was less than in the same period of 1960. Spain and Portugal are notable exceptions to the general European trend. In contrast, the U.S. cotton industry has recovered to some extent from its own recession, and yarn production both there and in Canada in the third quarter was greater than a year earlier. Indian yarn production still shows a marked upward trend, but the cotton yarn output in Japan in the third quarter was reduced below the level of a year earlier by a strike.

The setback to world trade in cotton piecegoods continued in the third quarter of 1961. Shipments from the main non-communist exporting countries in the first quarter were about the same as a year earlier. In the second quarter, they were about 4 percent less than in the second quarter of 1960, while in the third quarter they were approximately 8 percent less than in the corresponding period of the previous year. The decline, compared with a year earlier, affected exports of India, Japan, Hongkong, the U.K. and virtually all the continental west European countries except West Germany and, possibly, Spain. The U.S.A. was one of the few countries to export a larger volume of cotton cloth than in the third quarter of 1960. During the first nine months of 1961, exports of man-made fibre piecegoods from non-communist countries were much the same in total as in the same period of 1960, a slight increase in the first half of the year being counterbalanced by a slight decrease in the third quarter. The main changes in the third quarter, compared with a year earlier, were a reduction in Japanese shipments and an increase in exports from Italy. Exports from the U.K. and the U.S.A. both showed decreases.

Deterioration in the U.K.

The situation of the U.K. cotton industry has deteriorated further since the last issue of the *Review*. The rate of single-yarn output a working day in November was 10 percent below the year's peak, which was reached in April, and about 14 percent below the level of November 1960. This understates the true extent of the decline, since waste yarn production in November was only about 4 percent less than a year earlier while the reduction in output of other yarns was as much as 16 percent. The decrease in the level of production—compared with the previous November—has been even more severe in spun man-made fibre yarns than in cotton yarns and has been spread over all count ranges. The output of doubled yarn in October was 15 percent less than a year earlier, when production was already running at about 4 percent below the peak levels reached earlier in 1960.

The rate of cloth production a working day in October was about 5 percent less than the June level and about 7 percent less than in October 1960. Cotton cloth production in October was about 9 percent less than a year earlier; the reduction has been almost wholly in grey cloth, the output of colour woven fabrics (other than terry towelling) having been maintained at the previous October's level. On the man-made fibre side, there have been very marked decreases over the past 12 months in the output of spun fabrics and of tyre fabrics and smaller decreases in the production of mixture fabrics of various types. On the other hand, the output of continuous filament rayon fabrics has expanded substantially.

Shortage of New Orders

The shortage of new orders has been such that order-books have continued to shrink in spite of the fall in production. Moreover, stocks of finished products in the hands of spinners and weavers have been tending to accumulate. The recession has caused a number of permanent mill closures, widespread short-time working and a wastage of labour. It is virtually certain that the immediate cause of the decline in output has been the reduction in stocks in the pipeline beyond the converting stage. One mildly encouraging feature of the situation is that retail sales of clothing, corrected for price changes and seasonal variations, after falling slightly in the first half of 1961, recovered in August, September and October to something like the peak level reached in the final quarter of 1960. In addition, cotton piecegoods imports have fallen from a total of 225 million square yards in the first quarter of 1961 to 196 million square yards in the second quarter, 167 million square yards in the third quarter and 50 million square yards in October. Imports from India, Hongkong, Spain, Portugal, Yugoslavia and the U.S.A. have fallen since the beginning of the year, but there has been a rapid growth in arrivals from Formosa. There has only been a slight decrease in cotton yarn imports since the first quarter of the year. Exports declined still of the previous year. The further in the third quarter has been drop in cotton yarn exports has been particularly sharp during 1961, shipments to Australia, the largest markets, having been affected severely. Exports of both cotton and man-made fibre piecegoods were smaller in the third quarter than in the preceding quarter and the corresponding quarter of the previous year. Among the few increases—compared with a year earlier—were trade in cotton piecegoods with the Congo and in man-made fibre piecegoods with Rhodesia and Nyasaland.

The U.S. cotton industry's recovery from the recession continued in the third quarter, when the consumption of raw cotton in spinning mills was about 1 percent greater than a year previously. In October, the daily rate of consumption was 7 percent greater than in October 1960. The consumption of rayon staple is reported to have increased more rapidly than for several years, and the consumption of synthetic staple is also running above the 1960 level. The cotton cloth output was still running below 1960 levels up to August, but the output in September exceeded that in September 1960. Inventories, moreover, have been declining since May and order-books have been lengthening. Profits rose in the second quarter and mill margins have widened.

ternal market waits to be explored fully.

With the people in the U.K. drinking more coffee, milk and wine, expectations of a higher ratio of tea consumption seem to be over-optimistic. But surely, something can be done to recover India's losses in the dollar markets. In 1950, the average price of tea sold at the Calcutta auctions was Rs. 2.05 a lb and Rs. 1.72 a lb in 1951. The year 1952 was a disastrous one with the average price down to Rs. 1.41 a lb, but exports to the U.S.A. showed no improvement. There was a fall of around 60 million lbs in imports by North America (including Canada) and a consequent loss of valuable foreign exchange which has continued year after year. Indian propaganda should, therefore, be concentrated in the North American markets.

U.S. business men are reported to be keen on re-establishing contacts if good tea is supplied. But the price

must be competitive. To earn more foreign exchange, India's costs and prices must be lowered. If the markets in America and India are developed, this country could export high quality varieties for earning foreign currency and at the same time prevent any glut of tea from accumulating in home markets. If Pakistan can provide for home consumption before allowing exports, surely India can do so as well. Besides, it is in the interest of the Government to discover new markets, for it helps the producers to make profits and the tax collectors to gather revenue.

Foreign Exchange Earnings

During four of the five seasons of the first plan, that is, 1952-53 to 1955-56, tea earned Rs. 441.15 crores of foreign exchange. During the 1956-60 period, it earned Rs. 517.69 crores. Had India retained the markets held in 1950, these figures would have been far better. In that case, the much-needed imports could have been increased substantially. Earnings during the third plan will fall unless energetic steps are taken to improve the situation. The tea industry can contribute about a quarter of the total foreign exchange earnings of India, in addition to providing Rs. 70 crores as export duty as in the first plan and Rs. 80.10 crores during the second. Excise duties are said to have yielded Rs. 16.22 crores and Rs. 27.12 crores during the same periods. To this has to be added income tax, State Government taxes, Assam carriage tax, West Bengal entry tax, Kerala sales tax, etcetera.

Propaganda in U.S.A.

American retailers are planning to encourage the tea drinking habit among the young. South Indian tea is reported to be more suitable for iced-tea blends. Instant tea is also said to be very popular among consumers. The *Assam Review* said recently: "A sustained campaign for promotion of Indian tea in the U.S.A. is again urged by the World Trade Department of the Indian Chamber of Commerce and a thorough analysis of American tastes for an extensive promotional campaign has been made by the State Trading Corporation of India." It is, however, reported that a party of business men from Calcutta will shortly visit the U.S.A.

New Plantations

According to local reports, Ceylon already spends about Rs. 30 lakhs a year to popularise consumption. That no time should be lost in developing new markets and in reviving lost ones is brought out by a reference to new plantations as the following table shows:

	(In acres)	
	1946	Today
East Africa	66,500	146,500
Formosa	87,600	119,200
Japan	60,100	115,600
Iran	12,000	27,000
Turkey	5,800	28,800
Argentina	4,300	75,200
Brazil	3,100	12,100
Peru		5,400

It will be seen that the threat from new growers is already formidable.

COCHIN TEA SALES

At Sale No. 6, 448,000 kilograms of tea were on offer. There was a selective demand. Low medium, medium and good medium broken were much easier while similar fannings were irregularly easier. Best liquorings met with good enquiry and were generally higher. Unorthodox grades were weaker and easier.

INDUSTRIAL IBCON CONSULTANTS

in the
expansion of
TEXTILE INDUSTRY

IBCON offers to intending promoters of textile industry, comprehensive consultancy services comprising:

- Project study and financial estimates.
- Project design including equipment, buildings, power, steam, water-supply, etc.
- Advice on purchase of equipment from India or abroad by tenders or negotiations.
- Supervision of construction of buildings and erection of equipment and services.
- Commissioning and operation.
- Senior and supervisory staff selection.
- Management organisation, clerical procedures, quality control, scientific cost and wage schemes.
- Technical assistance after commissioning to ensure successful and profitable operation.
- Also production planning, waste control, stores, dyes and fuel consumption.

slightly from 23.43 cents a lb in July to 24.97 cents a lb in October, although this compares unfavourably with the figure of 28.59 cents recorded for October 1960.

Cloth Exports Rise

Exports of cotton cloth are also doing relatively well and in the first nine months of 1961 were some 7 per cent larger than in the corresponding period of 1960 and 2 per cent more than in that of 1959. The main reason for the increased shipments is the greater success achieved in the markets of Canada, the U.K., France, Indonesia and Venezuela. Exports of man-made fibre cloth, on the other hand, have been falling off during the year. The main losses have been in shipments to South Africa, Canada, the Far East and the Caribbean area.

President Kennedy has ordered the Tariff Commission to study the imports of all cotton products and to advise on the desirability of imposing additional duties to compensate for the higher price American mills pay for raw cotton. Imports of cotton piecegoods fell off markedly during the recession. All the main suppliers, except Japan, suffered from the decline in imports, many of them very heavily, notably Spain, India, Hongkong, Portugal and Egypt. It is reported, however, that imports in July and August increased somewhat with the revival in activity in the domestic industry.

Because of a strike in the mills belonging to the "big ten" spinners, cotton yarn production in the third quarter was about 3 per cent less than in the same period of 1960. The decline in spun rayon yarn production over the same period was over 10 per cent, reflecting depressed conditions in that section of the industry, but the spun synthetic yarn output continued to expand. Cotton cloth production was less affected by the strike than that of yarn and the output in the third quarter was about 3 per cent greater than a year earlier. The output of filament rayon fabrics and synthetic fibre fabrics continued to exceed the 1960 levels in the third quarter, but spun rayon cloth production throughout the year has been less than in the corresponding period of the previous year. In spite of the reduction in cotton yarn output in the third quarter, cotton textile stocks continued to rise, contributory factors being the Government's tight money policy and the decline of exports. It is reported that the pressure exerted by stocks has led to the progressive weakening of prices since the summer, and cases have been quoted of prices being insufficient even to cover the cost of raw cotton. The Government has approved a 25 per cent curtailment of spindles to be operated in the first quarter of 1962; the present level of curtailment is 18.3 per cent, having only comparatively recently been increased from 15.2 per cent. One suggestion which has been made for dealing with the stock situation is that authorised organisations should buy up surplus yarn.

Exports of cotton piecegoods in the third quarter were about the same as in the first and second quarters of the year but were appreciably smaller than a year earlier. Preliminary figures for October suggest a further reduction, compared with the previous year's level. Exports to Australia, Burma, British East Africa and some European countries were smaller in the third quarter compared with a year earlier, but there was some expansion in shipments to Singapore, Ceylon, Indonesia and the Netherlands. Exports of rayon piecegoods—like those of cotton piecegoods—were rather smaller in the third quarter than a year earlier, after showing an expansion in the first half of the year. Shipments to West and South Africa, Ceylon and Hong-

kong suffered particularly in the third quarter, compared with a year earlier, but those to Singapore and Indonesia increased. Shipments of synthetic fibre cloth were well maintained at 24 million square yards in the third quarter.

Indian Expansion Continues

Cotton yarn production in India continued to expand. Provisional figures for the third quarter indicate that the output was 10 per cent greater than in the corresponding period of 1960. The main increase has been in the coarse and medium count ranges, while the output of fine yarns has actually decreased somewhat. Mill production of cotton cloth in the third quarter was only about 1 per cent greater than in the same quarter of 1960, with medium quality cloths doing better than other types. In the cloth markets, there are reports of stock accumulation and poor seasonal demand. The Government has decided to set up a committee to keep under constant review the causes of mill closures and to take suitable steps to tide over the temporary difficulties of marginal mills.

Exports of cotton cloth from India continue to decline. Third quarter shipments are expected to show a further reduction below the level of the first half of the year and may be 50 million yards less than in the third quarter of 1960. The main losses appear to have been in shipments to the U.S.A., the U.K. and Australia, but there has been some revival in trade with the Sudan.

West European Recession

There has been a distinct change for the worse in the situation of many of the continental cotton industries since the middle of 1961. In the first half of the year, cotton yarn production in these countries taken as a whole was about 3 per cent greater than in the same period of 1960, but in the third quarter it was about 2 per cent less than a year earlier. The reduction so far seems to have been confined to the E.E.C. countries—West Germany, in particular—but also Belgium and France. The cotton yarn output in the third quarter was about the same as, or greater than, a year earlier in Sweden, Switzerland and Austria, although the expansion in the latter seems to have been entirely at the expense of spun rayon. Spanish and Portuguese production appears to have been still well above the 1960 level. It is probable that the decline in the level of activity will spread to some of the industries which managed to maintain production up to the third quarter, since most of them report a shortening of order-books and an accumulation of stocks in spinners' and weavers' hands. There is little doubt that the familiar textile stock cycle is the basic cause of the present recession.

Exports of cotton piecegoods from the continental west European countries have fallen off seriously since the first quarter of 1961, and in the third quarter were perhaps about 6 per cent less than in the corresponding period of 1960. Exports from West Germany, one or two of the minor exporting countries and, possibly, Spain were running at or above the previous year's level in the third quarter, but the contraction has affected all other major continental exporting countries. West Germany has provided a smaller market for French and Dutch exports, but on the whole it is extra-European trade which has suffered most. Shipments of French, Spanish and Portuguese cloth to the U.S.A. have declined markedly. Portuguese trade with the colonies and Spanish trade with the U.K. have decreased. Australia has taken smaller quantities from several countries, and Dutch exports to Indonesia and South Africa and Belgian

exports to the Congo have also fallen off. In contrast, exports of man-made fibre piecegoods from continental west European countries have been maintained more or less at the 1960 level. Italy has shown an outstanding performance, which has more than compensated for a severe

decline in shipments to the U.S.A. with an expansion in exports to European countries. With the probable exception of France, all other main exporting countries appear to have approximately maintained the level of exports of man-made fibre fabrics reached in 1960.

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) advanced by 0.7 per cent to 123.7 during the week ended 20th January, 1962, compared with 122.9 (revised) for the previous week. The index was higher by 0.7 per cent when compared with the corresponding week of the previous month but was lower by 1.7 per cent than that of a year ago.

Calcutta Markets

GOOD DEMAND AT TEA EXPORT SALE

AT Sale No. 34, held on 5th February, there was a good but less general demand for the 74,269 packages on offer at the Export auction. Plain broken were easier by up to 10nP while Fannings in this category were firm to dearer except for the poorest sorts which were easier. "Teas for price" were easier. Buyers were more discriminating in their purchases of Doars and Assam B.O.P.s; those with autumnal quality were firm to dearer but poorer liquoring Assam B.O.P.s were easier. Fannings were again a strong feature. C.T.C.s were irregular, the best were sometimes up to 20nP easier but mediums and secondary grades were usually firm. Legg-cut teas shared in the general decline with some withdrawals. Darjeelings sold readily, flavoury invoices were generally dearer but teas from lower elevations were irregular and tended easier. Tip sold well. Whole leaf grades were fully firm to dearer, especially the cheaper varieties.

	1962	1961
Quotations

(Quotations are inclusive of excise duty.)

TIME CHARTER MARKET ACTIVE

ONCE again it was left to the Chinese and River Plate grain exporters to provide the bulk of the freight business. The Chinese charterers mainly accepted vessels to move fertilisers from the Adriatic and north Continental ports at 63s and 64s. Foodgrains fixtures from British Columbia to China were concluded at the unchanged rate of 47s 3d. The Baltic Exchange Chartering Committee has engaged two ships from the Gulf to the west coast of India at 68s 9d, against 70s last paid. Fixtures of iron ore from Marmugoa to Rijeka and the Antwerp-Weser range have been concluded at 34s 6d f.i.o. and trimmed. The Japanese steel mills have decided to continue their normal imports of iron ore from Marmugoa, and the first vessel with 1/9 February laydays has been fixed at 41s f.i.o. and trimmed. This year, it is understood, about 900,000 tons of iron ore will be exported to Japan from Marmugoa. The time charter market was quite active.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks were higher than in the previous week.

Bazaar Sales

(Between 30th January and 5th February, 1962)

Cowhides: Wet salted (Slaughtered) 16,400 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 44,700 pcs. on the basis of Rs. 330 to Rs. 365, Rs. 430 to Rs. 445 and Rs. 500 to Rs. 520; Wet salted (he-killed) on the basis of Rs. 5.12 and (she-killed) on the basis of Rs. 4.27 a piece; Assam-Dinaipur 16,900 pcs. on the basis of Rs. 340 to Rs. 360, Rs. 380 and Rs. 400 to Rs. 415; Purneah-Kissanganj 67,700 pcs. on the

basis of Rs. 370 to Rs. 390 and Rs. 400 to Rs. 415; Patna-Pakur-Bhagalpur 16,800 pcs. on the basis of Rs. 275 to Rs. 300, Rs. 330 to Rs. 350 and Rs. 380 to Rs. 400; Patna-Muzafferpore 10,360 pcs. on the basis of Rs. 330 to Rs. 343, Rs. 350 and Rs. 375 to Rs. 385; Purneah (heavy) 500 pcs. on the basis of Rs. 550.

Bazaar Stocks

(5th February, 1962)

Cowhides: Wet salted (Patna, Daissee, Kustia, Killed) 65,000 pcs.; Assam-Dinaipur 64,000 pcs.; Muzafferpore - Patna - Pakur - Purneah - Kissanganj 155,000 pcs.

LINSEED FIRM

The market was firm during the past week. There was an all-round rise in the prices of seeds and oil. Arrivals declined, and the prices were somewhat higher than the local rates. Crushers were in the market daily, but very small business was reported. The oil market firmed up again. Local buyers showed interest due to the steadiness in seeds, but other vegetable oil markets, but the oilcake market was steady and the local demand was better. But stocks were limited. The latest quotation was as follows: Ready, February Rs. 32.75 a maund.

COMPANY AND PUBLIC NOTICE

EASTERN INVESTMENTS LTD.

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the members the following dividends for the year ended 31st December, 1961, subject to deduction of tax at source—

On the taxable Cumulative Preference Shares a Final Dividend @ 2.22% (being dividend at the stipulated rate of 5% per annum increased by 11% thereof and after deducting therefrom Income Tax at Company's rate of 25% i.e. @ 4.44% per annum less Interim Dividend @ 2.22% already paid.

On the issued Ordinary Shares @ 14% per annum.

By Order of the Board,

BUILDING SHIPS AND HARBOUR CRAFT

L.N.S. AJAY—first Defence Vessel made in India and launched in September, 1960.

Whether it is building ships or harbourcraft for port development, Garden Reach Workshops have complete building, docking and repairing facilities for vessels of all types. These facilities are supported by over 50 years of experience.

GARDEN REACH WORKSHOPS LTD.

(A Government of India Undertaking)

SHIPBUILDERS & REPAIRERS, ELECTRICAL, STRUCTURAL & GENERAL ENGINEERS
43/46 Garden Reach, Calcutta 24.

Telephone No.: 45-1561 (4 lines)

Telegram: COMBINE.

BRISHA—the twin screw Kart Nozzle steam tug, built for the River Steam Navigation Co. Ltd., Calcutta.

PADMA—the twin screw diesel harbour launch, built for the Commissioners for the Port of Calcutta.

MAHSEER—one of the four twin screw Tunnel Stern steam tugs, built for the North Eastern Railway.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued In 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 7-2-62 Rs.	A year ago Rs.	Year of Issue	NAMES	Amount Issued In 000's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 7-2-62 Rs.	A year ago Rs.

COAL COMPANIES

O., Po., F. and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES—Contd.

O., Po., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Paid-up Capital Ordinary	Net Block Accounts	Reserve & other Funds	Accrue under Tea	Outturn and Average Price per Kg./lb. realised for crop	Estimate	NAMES	Accounts closed	Net Profits including taxation	Dividends per cent	Paid-up Share	Latest Market Quotations as available until

Vol. CXXXVIII No. 3697

U.S. ECONOMY AND THE COMMON MARKET

WHEN President Kennedy calls the Common Market "the greatest challenge we face" and proposes to the Americans a revolutionary tariff policy to meet that challenge, no one could be more surprised than people in the six countries of the Common Market. They know, of course, that their association has achieved some notable successes in recent years, but they know too how far behind the American giant they still remain—and will remain for the rest of the century even if current discrepancies in growth rates persist. Europe has done very well, but no one who is aware of the vast differences in living standards and productive power on the two sides of the Atlantic will find it reasonable to present the European economy as a "challenger" of the American. The disproportion is so great that the over-dramatic campaign that is being orchestrated by the President and his advisers on the theme must seem to many to be demagogic, in the vein of the "New Frontier" rhetoric that was developed during the election struggle. There is, beyond doubt, an element of that exaggeration Americans love so much, and yet there are good reasons for trying to strike the American imagination as forcibly as possible with the dangers they face. Those reasons relate, not to the vigour of the European challenge, or even the communist menace, but to the extent of the decay of the enterprising spirit in the U.S.A. This decay is much more serious than many people realise. President Kennedy is keenly aware of it, and if he chooses to wave the bogeyman of an up-and-coming European giant, he is perhaps less guided by the facts about Europe's capabilities than by a knowledge of what will stimulate his countrymen to greater effort.

The same applies to the remedy that the President has suggested—tariff disarmament within the Atlantic world. There are ample grounds for thinking that this is not a practical solution. Congress will probably never agree to the massive de-protection the White House is asking for; the European countries themselves would not be anxious to reduce their common external tariff to zero on many manufactures, and by 50 percent on the rest. Once again, the President's proposal seems to have a demagogic flavour, and more than one European observer has expressed surprise at what seems to be a panic reaction to the few modest successes of the Six. Yet, here too, the President is perhaps less influenced by the facts than by a determination to re-invigorate the U.S. free-enterprise economy by attacking it at the point where its recent sluggishness shows up—in its taste for cosy protection. Europe, in other words, has little to do with the matter, either as a challenge to the U.S.A. or as its salvation in a free-trade area. The root of the evil that Mr. Kennedy is assailing is inside the U.S.A. itself, and Europe is brought in as a pretext and object lesson.

The extent of that evil does not appear in a comparison of U.S. and foreign economic performance, for any such comparison only brings out the comfortable lead the U.S.A. enjoys. It appears, rather, in a comparison of the way the U.S. economy works today and the way it worked up to five years ago. What that comparison reveals is a stealthy hardening of the arteries of a vigorous race. Behind the disconcerting alterna-

tion of boom and recession—already in itself a sign of deep-seated malady—there has occurred a progressive increase in unemployment and a progressive deterioration of the percentage of utilised capacity. The following table shows how the employment position has worsened from cycle to cycle, so that what was regarded as a slump-level of unemployment comes to be a boom-level in a later cycle:

	Unemployed in millions	Jobless as percentage of labour force
1953 boom	2.8	4.3
1954 slump	5.9	7.7
1955 boom	4.0	6.0
1956 stagnation	3.9	5.8
1957 slump	4.1	6.0
1958 slump	6.2	9.0
1959 boom	5.0	7.3
1960 stagnation	5.3	7.5
1961 recovery	6.3	8.8

No less eloquent are the figures for percentage of idle capacity in various branches of industry. Those that follow are for the end of 1960, with (in brackets) the average percentage for the years 1954-60: steel 48 (19); non-electric machines 28 (23); electric machines 26 (16); chemicals 23 (18.3); oil refining 17 (10.3). It must be emphasised that the decline in utilisation of resources, human and fixed, that is revealed in these two sets of figures is not the result of any crisis of capitalism; if it were simply a long-term insidious slump, the case would be clear and the remedies probably simple. But on the contrary, the U.S. economy has been expanding, with the peak of every boom higher than the peak of the last. It is as though one were watching the tide come in: every wave runs higher up the beach, but as it recedes every wave leaves more flotsam and jetsam on the sand—and the floating wreckage in this case happens to be idle men and unused machines. The nation is getting richer but it cannot use the wealth it has under hand, in its men and capital; so the President is correct in calling this a decay of the pioneer spirit, a decline of the enterprising mentality.

The same conclusion is suggested by the reduced rôle of innovations, new products, in successive expansions. Traditionally, a new product—the motor-car, television, etcetera—has played the pilot rôle in American booms, and economists and business men were right in seeing the supreme importance of innovation and invention in the U.S. economy. Yet in recent years there has been no revolutionary new product, and firms have been content with offering perfections of known goods or with pushing consumption of them nearer saturation point. Typical of this trend have been colour television and portable television, air conditioners and the compact car suggested by the European small-car invasion. None of these has been significant enough to support general expansion for more than a short period. It would be absurd to chide a nation for not inventing something we have not heard of yet; maybe there is nothing new in the way of durable consumer goods it needs just now—but if that were the case,

the Government would be entitled to assume the rôle of innovator by providing services so far neglected, such as water supplies and medical care. One is tempted, nevertheless, to put down this absence of innovations to lack of enterprise when one sees it combined with other signs of complacency, such as the diminished enthusiasm for renewal of existing capital. In 1945 only 38 percent of American machine-tools were over ten years old; today more than 60 percent are.

The exodus of American capital to foreign economies is a symptom of the same mood, for it amounts to admitting that prospects for expansion at home seem poor. It is notable that this migrating capital heads for Britain and the Common Market, where U.S. firms feel confident that their past experience will be repeated in a familiar pattern; it shuns the uncertainties both of fresh paths at home and of the developing countries. Naturally, in the free-enterprise philosophy, firms are entitled to make that choice, but the President is entitled, by the same philosophy, to point out that the very firms that are exporting capital are spending too little on research and development of new products. That is, they say the American horizon is limited but they are doing nothing to widen it; hence the new encouragement that is being given to research by tax policies and in government contracts. Moreover, if the American horizon is limited, the Department of Justice is well placed to enquire how far infringement of the anti-trust laws is responsible. Its first enquiries soon revealed scandalous collusion between 28 electrical firms seeking to install the deadening atmosphere of secret monopoly over a vital sector of industry, and present candidates for prosecution include a galaxy of what used to be fearless American enterprise—Westinghouse, General Electric, General Motors, Kaiser Aluminium, Alcoa, United Fruit, Du Pont and Pan American Airways.

The attack that the new Administration has launched on these symptoms of dislike of competition has been taken for antipathy to big business but it is obviously an effort to restore big business to its own faith—as we see when the Government extends the same attack to the monopoly practices of the big labour unions. Current official efforts to break up giant firms like Lockheed and Boeing are not due to distaste for sheer bigness, but to the wish to let some air into a stale atmosphere that pioneering forebears would have found suffocating. In many fields the battle will not be directly against the capitalists but against the trade unions that have consented to be used as a cover for private interests, when they demand protection in the name of maintaining employment. The quest for stability and permanence has become much more important to American workers at the same time as their employers have sought security; in particular they have begun to lose that mobility that once distinguished them from European workers. Since this is not accompanied by any progress of socialist doctrine among U.S. workers (most of whom anyhow already enjoy better conditions than workers in welfare States), one is entitled to see it as another aspect of the decline of enterprise.

It is this constellation of symptoms that the "New Frontier" philosophy seeks to attack, rather than any real menace from Europe. The U.S.A. could probably continue at this pace for many decades yet before any foreign nation, European or communist, could hope to challenge its industrial superiority. For all the sarcasm that the predominantly Republican Press is pouring on the New

Frontiersmen "down there on the wild Washington frontier", the present Administration is faithful to the best American traditions in denouncing a frame of mind that leaves the nation rich while so many of its resources are idle. Most of the methods it has so far chosen are judicious, and if others have an air of exaggeration one must recall that the problem is to get a rich man to his feet when he faces no real and present dangers but is simply being unfaithful to a tradition of hard work, risk-taking and inventive enterprise. The plan for an Atlantic free-trade area needs to

JEALOUSY ABOUT INDUSTRIES

CONFLICTS of economic interest between the States, or between the Centre and the States, are by no means new in India. To some extent, they are only inevitable under a federal constitutional structure which does not, indeed cannot, rigidly demarcate the powers and responsibilities of the federal and State authorities. But, in recent months, there has been growing evidence that the conflicts are becoming more serious, and are beginning to assume dangerous forms, so that the whole process of economic growth might be threatened if they are allowed to continue. In Assam, the State Government, angered by the thought that its royalty income will fall if the price of crude oil is reduced, has been withholding leases for prospecting from Oil India Ltd, in which the Central Government has a large shareholding. As a result, the work of oil exploration which the Company was to have undertaken has been seriously delayed. At the Inter-State Mining Conference held in Calcutta last month, similar resentments were expressed. The West Bengal Chief Minister, Dr. B. C. Roy, spoke angrily about the need for coal-producing States to assert their "rights"; the State Governments concerned should, he said, be allowed to go in for coal mining, and the royalties on coal-mining leases should be raised sharply. A comparable, but older, dispute has long been the headache of the tea industry; the rationalisation of tea taxes, by the merger of the Assam Government's carriage tax and the West Bengal Government's entry tax into the Central excise duty, has been greatly delayed by inter-Governmental wrangling.
