As against this, the internal production is only 30,785 tons and we have to rely on imports to the extent of about 48,000 tons natural and synthetic, and 5,000 tons reclaimed rubber during this year. The position will considerably improve next year when we can expect about 30,000 tons of G.R.S. rubber from the Bareilly plant and 5,000 tons of reclaimed rubber from indigenous production.

Plan Estimates

The revised estimates for consumption of rubber for the Third Plan period are being compiled and it seems to be fairly certain that the original estimate of 93,500 tons consumption for 1965-66 will have to be radically modified as the figure may be nearer 1,40,000 tons. In spite of the expected indigenous production of 40,000 tons of natural, 30,000 tons of synthetic and 10,000 tons of reclaimed rubber, the country may have to depend on imports to the extent of about 60,000 tons even in 1965-66.

I dare not predict the possible requirements of rubber for the Fourth Plan, but I feel it is high time that the Government and industry studied the situation so that they are at least armed with the knowledge of the future trend.

Bold Policy

I would, in this connection, suggest to the Government and the Planning Commission to enquire fully about the possibilities of the production of additional quantities of natural rubber in India. A bold policy regarding the replanting of the existing low yielding plantations, a directive to State Governments to release for rubber planting all the suitable areas and to see that such

areas are cultivated according to the latest scientific methods and finally to take immediate steps to open up the Nicobar and parts of the Andaman Islands for rubber cultivation, are some of the suggestions I submit for the consideration of the Government.

Regarding the other principal raw materials required for the industry such as carbon black, rubber chemicals, rayon cord, tyre valve tubes, etc., though we have to rely on imports for the current year, we will be entirely self-sufficient by 1963 or the latest by 1964, as several new factories have been licensed for manufacturing the above articles.

Existing Plants

We have had only two tyre factories in India for nearly 25 years. Though over these years these factories have expanded their production considerably, the consumption of tyres in the country exceeded the production, and for the last two years, we have had to depend on large imports. The Government has, therefore, licensed seven more factories of which so far only three have commenced production. It is hoped that before the end of this Plan, all the remaining four will also have come into production, thereby increasing the output to about 3-8 million tyres and tubes as against the present production of about 2 million.

The Government now favours an upward revision of the target of production of tyres to about 5-2 million as against the Planning Commission's original estimate of 3-7 million. It is likely that all the existing factories who have the resources and who can arrange the necessary foreign exchange will be given preference in this expansion programme. It also seems to be the Government's policy to license a capacity of up to a million tyres for all existing units before new applications are considered.

Equal Share

In this way, all the tyre factories established in India will be more or less of the same size and they will also be of sufficiently large capacity with a cost of production comparable to their counterparts elsewhere in the world. Moreover, the Government believes that the cost of expansion of the existing units will be far cheaper, as far as foreign exchange is concerned than the licensing of new units at the present time.

I am glad to inform you that we have submitted our application for a substantial expansion and that we will be in a position to implement the setting up of this additional capacity without any loss of time, immediately the licence is issued to us.

Tremendous Progress

The Indian rubber industry has achieved tremendous progress in recent years. Already its production value has exceeded Rs. 80 crores and the total labour employed, over 30,000. It is fairly certain that production may reach nearly Rs. 200 crores by the end of the Third Plan period, with a corresponding increase in the labour employed. Your directors have full confidence in the future of your company and with the untiring efforts of the management, staff and labour, we look forward to better and better results in the years to come.

NOTE: This does not purport to be a record of the proceedings of the annual general meeting.

AUDITORS' REPORT

We have audited the above Balance Sheet of THE BANK OF TOKYO LTD., as at 31st December, 1961 (Consolidated) and also the annexed Profit & Loss Account of the Bank for the year ended upon that date in which are incorporated the Returns from the Bombay Branch audited under Section 228 of the Companies Act, 1956 by other Auditors.

In accordance with the provisions of section 29 of the Banking Companies Act, 1949, read with the provisions to sub-sections (1) and (2) of section 211 and to sub-section (5) of section 211 and section 227 (5) of the Companies Act, 1956, the Balance Sheet and Profit & Loss Account are not required to be and are not drawn up in accordance with the Sixth Schedule to the Companies Act, 1956. The Accounts are therefore drawn up in conformity with Forms A & B of the Third Schedule to the Banking Companies Act, 1949.

We report that :

- We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit and have found them to be satisfactory ;
- The transactions of the Bank which have come to our notice, have been within the powers of the Bank ;
- In our opinion, proper books of account as required by law have been kept by the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the branches of the Bank ;
- The Bank's Balance Sheet and Profit & Loss Account dealt with by this report are in agreement with the books of account and the returns ;
- In our opinion and in the host of our information and according to the explanations given to us, the said accounts give the information required by the Companies Act, 1956 in the manner so required for banking companies and on such basis the said Balance Sheet gives a true and fair view of the State of the affairs of the Bank as at 31st December, 1961 (Consolidated) and the Profit & Loss Account gives a true and fair view of the Profit for the year ended upon that date.

Section 60, Companies Act, 1956, and have not been withdrawn.

MAIN OBJECTS OF THE COMPANY

The main objects of the Company, as set out in its Memorandum of Association, are to carry on the business of manufacturers of and dealers in products articles and packagings made from paper, board, pulp, of all kinds, cellulose films, polyethylene, plastic films and metal foils and films of all kinds and other flexible or treated or laminated materials including cardboard railway and other tickets, mill board, paper and cardboard boxes, wall and ceiling papers, toilet rolls and tapes, containers, drinking straws, bags, pouches, envelopes, sheets, rolls and all kinds of flexible packagings; and manufacturing, fabricating, printing, treating, waxing and laminating all kinds of packaging materials, and business of manufacturers of and dealers in paper and board of all kinds and products made from paper and board of all kinds.

PRESENT BUSINESS

The Company at present is engaged in production of flexible packaging from printed and unprinted paper, cellulose film and boards and is registered under the Industries (Development & Regulation) Act, 1951. The Company also provides amongst numerous other things, cellulose film neat seal strip packaging for various tablets, transparent cellulose film and waxed paper for the twist-wrap, paper packaging for bread, biscuits and other articles, paper and cellulose bags, pouches and wrappings for all types of goods including textiles, ready-made clothes, hosiery and other articles, food articles, tobacco, soaps, umbrellas, razor blades, plastic goods, toys, engineering products, machine goods, spares, electric bulbs, hurricane lanterns and innumerable other goods. The Company also manufactures drinking straws, paper bags, cartons and various other packagings for commercial and retail trades.

THE BRITISH INDIA CORPORATION LIMITED, KANPUR

CHAIRMAN, MR. H. S. CHATURVEDI'S REVIEW

Address by Mr. H. S. Chaturvedi, Chairman and Managing Director, to the Shareholders of the British India Corporation Limited, at the Forty-second Annual General Meeting of the Corporation held in Kanpur on Saturday, 28th April, 1962.

Gentlemen, I extend a cordial welcome to you on the occasion of the 42nd Annual General Meeting of the Corporation.

The Directors' Report, the Balance Sheet, and the Audited Accounts for the year ended 31st December, 1961 have been circulated as usual, and with your permission, I shall take them as read.

I am happy to report that 1961 was a good year for the B.I.C. Group as a whole. You will see from the Corporation's Profit and Loss Account that, after deducting all expenses, the profit before taxation amounts to Rs. 1,05,36,221 as compared with Rs. 90,93,242 for the previous year. After providing for depreciation and

taxation, the surplus available is over Rs. 61 lacs as against Rs. 53 lacs last year.

The overall results have enabled your Directors to recommend a dividend payment per Ordinary Share, of 35 p.p. less tax, which represents a gross return of 7% per annum on capital invested by Ordinary Shareholders. The need to improve further and to build for the future, however, is obvious, and out of the available trading surplus, about 40 lakh rupees has been ploughed back into the business, as against a corresponding figure of about 31 lakh rupees last year.

I would like to draw your special attention to the increase in overheads by over a crore of rupees during the year. This was partly on account of the payments on the Corporation's income-tax assessments. The main factor however which necessitated higher borrowings in 1961 is reflected in our present production policy. The value of stocks to meet the requirements of work in progress has increased

considerably, the stock-in-trade at December 31st, 1961 being Rs. 4.42 crores, showing an increase of Rs. 1.14 crores over Rs. 3.28 crores as at 31st December of the previous year. The current year has started with a full order book for our Woollen Branches, and there is every indication that the high level of demand will continue.

Woollen Branches

Production, in our Woollen Branches has been satisfactory during the year. The market demand for our popular Lal-imli and Dhariwal products continues to be good, and the Branches were able to sell their entire production.

Import licences for raw materials were issued on the basis of 50% of wool consumed during the period 1956-57. This amount is obviously quite inadequate for current requirements. A notable development in the Woollen Branches, however, has been the successful introduction, after considerable experimentation, of various

blends of Indian and imported wools. I am glad to report that the market demand for these products has been favourable.

With regard to our programme for the rehabilitation and early modernisation of our plant and machinery, plans sub-divided into various phases and projects had been submitted to the Textile Commissioner, but no licences have yet been issued. We shall, however, continue to press this matter.

The problem of obtaining adequate spare parts to maintain our old machinery in running condition, still remains. In many cases we have been unable to execute urgent orders for the Defence Services, because machines have remained out of commission, due to the non-availability of spare parts. This is a situation which deserves special consideration by Government.

Our Woollen Mills have been recently called upon to divert substantial quantities of weaving yarn spun out of imported wool which is already in short supply, to small-scale weaving units in Amritsar. To do so is bound to effect seriously our pattern of production. It will also result in a number of weavers being thrown out of employment from the Lalimli and Dhariwal Mills, which have earned their high reputation as specialized manufacturers of cloth, blankets, hosiery goods and knitting wool, and not as wholesalers of spun yarn.

Leather Branches

The Cooper Allen and North West Tannery Branches continued to face

THE PAPER PRODUCTS LIMITED—Cont'd.

HISTORY AND DEVELOPMENT

This Company was incorporated at Delhi on 12th of June 1950 as a Public Limited Company. The promoters of this Company, viz. Shri Sardari Lal Talwar and Shri Roshan Lal Talwar had in fact made a start of this business in the year 1935 at Lahore as a partnership firm under the name and style of Paper Products Company. The turnover of the said firm for the year ending March 1947 was Rs. 4,36,682-1-6. After the partition of the country, a fresh and humble start was made by the firm in a rented factory at Shahdara near Delhi. The turnover was Rs. 13,99,514-2-9 for the year when the running business was taken over by this Company in August 1952. After the take over, this Company started making a real and rapid progress. The said firm was the pioneer in India in the field of organized flexible packaging and even now this Company is the premier flexible packaging manufacturer in the country, as is evident from the Company's sales figures quoted below (Inclusive of Sales of Waste Paper):—

Financial Year.	Sales.
1952-53	Rs. 14,72,320. 12.6 p.
1953-54	Rs. 17,75,631. 5.3 "
1954-55	Rs. 25,26,136. 15.0 "
1955-56	Rs. 39,01,432. 11.9 "
1956-57	Rs. 49,90,140. 99 p.p.
1957-58	Rs. 58,35,244. 49 p.p.
1958-59	Rs. 84,62,474. 42 p.p.
1959-60	Rs. 1,05,88,453. 34 p.p.
1960-61	Rs. 1,18,71,553. 46 p.p.

Sales from 1-8-1961 to 31-3-1962 i.e. for the first eight months of the current financial year are Rs. 1,00,37,223.13p. (subject audit) as compared to period last year (peak sales months, of the financial year). It will thus be observed that sales in the first eight months have registered an increase of 38.74 per cent over the sales for the corresponding period in the previous year. This increase compares very favourably with the percentage of increase of about 12% during the year 1960-61 over the sales for the year 1959-60.

FOREIGN TECHNICAL COLLABORATION

The Company has entered into a technical consultation agreement with Messrs. Milprint Overseas Corporation, Milwaukee, Wisconsin, U.S.A., one of the leading producers of flexible packaging in U.S.A., having associates in almost all parts of the world. The collaborator's part of the technical manuals in respect of standard operating procedures, technical news letters and other confidential data on the technical advances in the manufacture and sale of flexible packaging materials made from cellulose films, polyethylene, saran, aluminium foils, glassine and waxed papers and combinations and laminations thereof and other types of papers and films presently known or subsequently to be developed. The Company shall be paying to the foreign collaborator three-fourth per cent of its total net turnover up to a maximum ceiling of U.S. \$90,000 subject to Indian income-tax to be paid in equal quarterly instalments spread over a period of five years beginning October, 1, 1960, as stipulated in the agreement. The Government of India have accorded their consent to the said payments.

RAW MATERIALS

The main raw materials required by the Company are paper, board, cellulose films, metal foils and plastic films. The actual consumption of paper during the

Year ended 31st July	Sum up capital of the company	Net Profit before taxations	Rate of dividend	Amount of dividend distributed
1957	Rs. 9,37,677.06	5,09,012.10	12%†	Rs. 1,12,099.42
1958	Rs. 9,38,500.00	5,86,126.50	15%†	Rs. 1,40,652.79

† without taking into account Development Rebate and Extra Shift Depreciation Allowance.

† free of Co's tax but subject to tax at source.

year 1960-61, imported and indigenous quantities, was over 2,000 tons. Requirements of the Company for proper packaging rate of growth continues are expected to rise approximately to 6,000 tons by the end of 1967.

IMPORT OF NEW EQUIPMENT

Apart from the Flexographic and other types of printing facilities at its disposal, the Company is engaged in Rotogravure printing which is considered to be the most important printing process in use for the flexible packaging industry throughout the world for fine and faithful reproductions. It has recently been given an import licence of a value of Rs. 4,25,700/- for the import of a complete plant for the manufacture of rotogravure printing cylinders. The setting up of this plant as an auxiliary service will give the Company self-sufficiency in one of its important basic requirements and while ensuring efficiency and speedy service to the Company's clients is likely to widen the scope of its activities and may provide a stepping stone to improve its present working.

OBJECTS OF THIS ISSUE

Apart from the proceeds of this issue for the purchase of the aforesaid machinery and equipment from abroad and locally, for the manufacture of printing cylinders and erecting necessary buildings for the said purpose, the objects of this issue, inter alia, are two-fold, firstly to provide additional working capital which is required as a result of the expanding business, increase in sales and the installation of the new equipment and secondly to better organize the scope of the Company's activities with the participation of fresh public capital.

FUTURE PROSPECTS AND DIVIDEND

The consumption of packaging in India is comparatively speaking still low and with the successful implementation of the Five Year Plans and the resultant increase in the standards of living of the population and the vast multiplication of the industries in the country, one can expect a rapid increase in the needs for proper and modern flexible and functional packaging. The need for exportable products, suitably and attractively packed, alone, brings into limelight the importance of modern flexible and functional packaging. It is considered necessary that in order to stand in competition in the export markets, the Indian manufacturers must pack their products properly in attractive and functional packagings. The package must provide not only protection from dust, heat and other atmospheric influences and preservation from deterioration but also a strong sales appeal and visibility. It is, therefore, believed that other things being equal, in the years to come, the demand for flexible packaging of all types is likely to increase to a great extent.

As explained above the Company's sales had been on the increase and it

may reasonably be anticipated that the rate of increase will be maintained because the demand for proper packaging from the rapidly increasing industries in the country is bound to grow. All goods purchased have to be properly packed before they leave the factory. It is therefore not unreasonable to expect bright prospects for the Company's business in the coming years.

On the basis of the past working result of the Company and considering the growth prospects mentioned above, the directors have every reason to hope that with the additional finance now to be made available by the present issue and provided no unforeseen circumstances arise which have the effect of hampering or curtailing the Company's operations, the profits of the company will be sufficient to enable it to pay reasonable dividends.

MINIMUM SUBSCRIPTION

The minimum amount which in the opinion of the Directors is required to be provided is Rs. 16,00,000 to be utilised under the following heads:—

- (i) Purchase price of property (machinery, equipment, both imported and indigenous and buildings, etc.) Rs. 10,00,000
- (ii) Expenses of the Issue Rs. 1,00,000
- (iii) Repayment of money borrowed in respect of foregoing matters —
- (iv) Working Capital Rs. 5,00,000
- (v) Any other expenditure —

ESTIMATED AMOUNT OF THE EXPENSES OF THE ISSUE

It is estimated that the expenses of the issue which will be paid by the Company will not exceed Rs. 1,00,000/-.

UNDERWRITING

The shares now intended to be issued have not been underwritten.

BROKERAGE

Brokerage at the rate of one percent will be paid to recognized brokers on the nominal value of the shares allotted on applications bearing their stamp.

The Managing Brokers, will receive commission @ 1% of the nominal value of all shares allotted under the present issue.

INSPECTION OF CONTRACTS AND OTHER DOCUMENTS

Copies of the Prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company on any working day during the office hours until the subscription list is closed.

BICC

SIR WILLIAM McFADZEAN'S STATEMENT

The following are extracts from the circulated statement of the Chairman, Sir William McFadzean, C.A., Companion I.E.E., on the 1961 Accounts.

TRADING RESULTS

1961 was a year of great activity in the BICC Group and also one of considerable achievement.

SOME DETAILS OF GROUP ACTIVITIES

Power Cables. Production has been at a record level and the good load factor in the Parent Company, W. T. Glover & Co. Ltd., and Scottish Cables Ltd., has permitted very efficient use of the plant.

Important overseas orders included one from the Central Electricity Board of Malaya for 122,000 volt oil-filled cable and lower voltage cables, with a total value, including overhead transmission line, of some £330,000; one from Hong Kong for 66,000 volt oil-filled cables, value £45,000; and another from the Karachi Electricity Supply Corporation for the supply and installation of 66,000 volt oil-filled cables, value £100,000. Scottish Cables also received a £175,000 order for power cable for the Water and Power Development Authority of West Pakistan.

Submarine Power Cables. In the face of intense international competition we were proud to receive the contract, value £4,700,000, from the New Zealand Electricity Department for the supply and laying of three 25 1/2 mile lengths of single core 250,000 volt d.c. cables to provide a power link between the North and South Islands. These cables will be laid by British Insulated Callender's Construction Co. Ltd.

From the Trinidad & Tobago Electricity Commission we obtained an order for the supply and installation of a 24 mile length of 33,000 volt a.c. 3 core power cable for linking Trinidad and Tobago.

Metals. The BICC Group's consumption of aluminium has further increased and we continue to be the largest individual purchaser of copper in the World. Our 1961 figure reaching the record level of 250,000 tons.

Construction. Since our Construction Company was set up in its present form

in 1949 to provide specialist services primarily in support of our electrical manufacturing interests, it has achieved a record of steady expansion, averaging a 12 1/2% per annum growth in turnover. During 1961 one quarter of the business was in respect of overseas orders received from every Continent.

Overseas we have been engaged on overhead line contracts in numerous countries.

The principal railway electrification contract was for 250 track miles of overhead equipment in the Calcutta area. This is the third major order from Indian Railways in recent years and brings the total track mileage of overhead equipment, for the supply and installation of which we have been responsible, to nearly 1,000.

OVERSEAS AFFAIRS

For 1961 our direct exports from this country and sales by overseas subsidiaries amounted to £46,000,000 or some 30 1/2% of our total sales—with export orders on hand at a record level. The real contribution is, however, greater for many of our products sold to customers in the United Kingdom are incorporated in manufactured goods finally sold overseas.

The output of many of our overseas factories has expanded during the year and in particular I would mention the further progress made by such of our subsidiaries as Scottish Cables (South Africa) Ltd., Rhodesian Cables Ltd. and Malayan Cables Ltd., and the good results achieved by our Associated Companies in which we have substantial investments in New Zealand, India, Pakistan and Portugal.

Our Canadian Company has again incurred a loss, but prospects are brighter, some return in business. As I write this review we have just agreed the sale of part of our holding to General Cable Corporation of U.S.A. whilst retaining control. Stockholders will recall our partnership with General Cables in Venezuela which is working well. We have for some years past had an Exchange of Technique Agreement with them, and are convinced that this further partnership in Canada will also prove of mutual benefit.

serious operating difficulties during the year. Until the plant and machinery of the Shoe Factory is modernized, it will remain a vexed problem to cater for modern markets in sufficient volume to produce profits. So far, unfortunately, it has not been possible to obtain the necessary import licences to take up any programme of rehabilitation.

The raw hide position remained substantially unchanged, the quality of hides having continuously deteriorated. Prices on the other hand have risen due to shortage of supplies.

Although the turnover increased during the year, it was not possible to realise the modest profit shown in 1960.

Cotton Textile Units

The results of the Elgin Mills Co. Ltd. and Cawnpore Textiles Ltd., for which the Corporation is now working as secretaries and Treasurers were very satisfactory. The sales and profits were substantially higher com-

pared with previous years, due to better trading conditions, and the sustained efforts of the Management to achieve higher productivity. Bearing in mind market trends and consumer preferences, our production patterns were adjusted to ensure maximum results from the installed equipment.

I am also glad to report that rehabilitation and modernization programmes to replace old equipment and installation of up-to-date machines over the next five years, have been approved for both the Companies. During the past two years a sum of Rs. 26,50,000 has already been expended on other rehabilitation programmes at the Elgin Mills, and an approximate sum of Rs. 11 lakhs at Cawnpore Textiles.

Sugar Units

A record was created in the quantity of cane crushed and sugar produced during the season 1960/61 in all the six sugar units of the Group. While this achievement may be considered satisfactory, it has been largely offset by losses suffered in respect of exports, increased wages imposed by the Sugar Wage Board, and high rates of interest paid on bank overdrafts necessitated by accumulations of sugar stocks. Other adverse factors were higher prices of consumable stores, and lower prices obtained for sugar as a result of price decontrol, in the wake of over-production and lower exports.

The machinery in most of our sugar factories is old, and requires rehabilitation and replacement. This is not yet possible chiefly for reasons of financial stringency and restrictions of large-scale expansion.

Another factor, which is causing considerable concern, is the deterioration of cane quality in East U.P. and North Bihar, where our Group factories have recorded a steep decline in recovery. The matter is receiving the attention of the Government authorities concerned, and it would appear that the only way to compensate factories for lower recovery, is to link the price of the sugarcane with the recovery.

Labour Welfare

This year again, I am glad to report that our relations with labour continue to be quite satisfactory. The Board has recommended special payment of three annas in the rupee to all workers, on their basic earnings in 1961.

The Coal Position

The coal situation, which has been very precarious during the past twelve months, still continues to be unsatisfactory. The Corporation's factories satisfied upon adequate supplies of coal to function effectively, and it is a matter of great concern that substantial cuts have been made in the allocations of railway wagons for transportation of coal. Production in the Lal-milli Mills was stopped in January, 1962, when the factory had to close down for six days due to shortage of coal. We can only hope that the authorities concerned will not allow productivity to suffer through lack of co-ordination between coal suppliers and transport arrangements.

General

The total contribution of the B. I. C. Group of Companies to the Union and State Exchequers this year is 4.22 crores of rupees in various forms of taxation as against 3.73 crores last year. This increase by nearly half a crore of rupees is largely due to excise duty on woollen and cotton textiles to the tune of about 25 lakhs of rupees in excess of last year's figure. Cane Cess this year has also increased by about Rs. 7 lakhs, the other increases being in respect of income tax and sales tax.

Before I close, I would like to thank all my worthy colleagues on the Board for their invaluable support during the year under review. I would also like to express my appreciation of the harmonious working of the staff as a whole. The loyalty and enthusiasm of all categories of staff who have contributed so much to the year's achievements deserves special mention, and I would like to place on record my thanks for the co-operation extended to me. If teamwork and efficiency are combined with courteous dealings in all contacts and circumstances, I have no doubt that the B. I. C. will continue to go from strength to strength.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Money

THE CALCUTTA MONEY MARKET

SMALL DECLINE IN CREDIT

Wednesday, 9th May.

THE general level of advances has fallen a little in the Calcutta money market during the past week, indicating that the busy season is near its end. It is only the credit given to the iron, steel and engineering industries which has increased. Cotton and jute advances have decreased, while the accommodation given for sugar, foodgrains and seeds is almost unchanged. In the inter-bank market, conditions have been tighter, with the call rate quoting between 3 1/4 and 4 percent.

The exchange market has been extremely dull, and bills on account of gunny and tea shipments have been negligible. But remittance has been on a moderate scale. Sterling remains strong in relation to most of the important currencies.

BULLION SHOWED A MIXED TREND IN Calcutta during the past week. Silver advanced from the previous week's level of Rs. 261.50 to Rs. 262.50, quoted today for ready delivery; the rate for forward delivery was quoted at Rs. 214.25. The London and New York prices were 84 1/2 and 101.50 cents.

Gold was quiet in spite of the rise in silver due to the lack of support. The price declined from Rs. 145 to Rs. 144.25. But the sovereign rose from Rs. 99.75 to Rs. 100.25.

DURING THE WEEK ENDED 4TH MAY. Government of India Treasury bills for Rs. 46,04,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 8th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.355 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,580 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to 11 a.m. on 14th May.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 9th May to 12th May at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 1st May to 5th May amounted to Rs. 15.25 lakhs.

ACTIVE NOTES ROSE BY RS. 22.10 crores to Rs. 2,145.14 crores, according to the return of the Reserve Bank of India for the week ended 4th May, 1962. The total note issue was Rs. 2,98 crores smaller at Rs. 2,159.98 crores. Foreign securities of the paper currency reserve were cut by Rs. 86 lakhs to Rs. 105 crores, and rupee securities were raised by an almost equivalent amount to Rs. 1,820.87 crores. These changes were obviously made by corresponding transfers to and from the Banking Department, in which balances held abroad again fell by Rs. 56 lakhs to Rs. 5.99 crores. Investments were Rs. 8.65 crores larger at Rs. 181.32 crores. Deposits of the Government of India fell by Rs. 2.28 crores to Rs. 51.36 crores,

while other Government accounts rose by Rs. 1.77 crores to Rs. 16.06 crores. Balances of commercial banks, at Rs. 78.98 crores, showed a fall of Rs. 6.17 crores. Other loans and advances increased from Rs. 127.82 crores to Rs. 129.57 crores, of which advances to scheduled banks against usance bills were Rs. 7.86 crores (Rs. 9.80 crores). Ways and means advances stood at Rs. 113.64 crores, against Rs. 110.25 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 27th April, 1962, shows a rise of Rs. 74 lakhs to Rs. 574.84 crores in total deposits. Investments in Government securities are up by Rs. 10.28 crores to Rs. 254.07 crores, while other authorised investments remain unchanged at Rs. 9.09 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 18 lakhs to Rs. 294.16 crores. Cash and balances are, in consequence, shown at Rs. 23.40 crores, or Rs. 1.69 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 27th April, 1962, shows Demand and Time liabilities at Rs. 931.31 crores (Rs. 27.46 crores on account of borrowings from (1) 62 crores), compared with Rs. 926.89 crores (Rs. 24.52 crores) and Rs. 1,208.71 crores (Rs. 13.43 crores), respectively, in the previous week. Cash and balances with the Reserve Bank and Rs. 4.20 crores to Rs. 1.20 crores and Rs. 80.03 crores, respectively. There is a rise of Rs. 10.71 crores to Rs. 600.56 crores in investments. Advances and bills discounted, at Rs. 1,433.08 crores, show an increase of Rs. 43 lakhs. The ratios to total liabilities of cash and balances are, in consequence, shown at 6.1 percent and 66.8 percent, against 6.4 percent and 67.1 percent.

IWT-AVB. 3345

The REAL POWER of AVB...

Vast Technical Resources... Modern Workshops...

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools... here is the *real power* of AVB. The essential combination to generate *real industrial power*.

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry... by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. 6" ram-type horizontal mill and boring machine: This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India
2. Numerous capstan and turret lathes: Up to 36" diameter swing and central lathes up to 42" diameter.
3. 28/60 vertical model hydrotel milling machine: With 360° profile milling equipment.

INDIAN IRON SUPPORTED ON HOPES OF STEEL PRICE RISE

Wednesday Evening.

THERE has been sustained support for Indian Iron in the Calcutta stock market this week. A Press report says that the Tariff Commission has submitted its recommendations on the new steel retention prices to the Central Government, so operators hope that the latter's decisions will be announced soon. As changes in the retention prices are made to cover rising production costs, there is no doubt that there will be an increase in the prices. To what extent the producers will be compensated for the increase in production costs, remains to be seen.

At today's settlement, Indian Iron have closed at Rs. 26.15. The carry-forward charges show little variation from the past settlement. Although the technical position is believed to have improved, operators are disappointed, because the carry-forward charges have not declined in line with easier money conditions. The stock market is getting concerned over whether the banks will be able to divert more funds to stocks and shares when the busy season demand subsides. As the Government is keen on ensuring larger support for its coming borrowing programme, the banks are being told to go slow in extending loans to industry. In the circumstances, the stock market may be wrong if it expects that banks will give it credit more generously. The support from the Life Insurance Corporation has, meanwhile, been sporadic. It is likely to divert a large portion of its funds to new Government loans when they are floated a few weeks hence.

Reports that the Capital Issues Advisory Committee is thinking of forcing buyers of ordinary shares to take up preference shares of the same company, have caused concern in market circles. It should be remembered that investors in ordinary and preference shares generally constitute two different classes. People accept the risks of the business by buying ordinary shares in order to benefit from the future growth of a company. Investors in preference shares are not prone to risk-taking. They want to be assured of a fixed return on their investments. The other recommendation of the Committee that, when a company issues convertible debentures—convertible into ordinary shares subsequently—they should be offered first to the existing shareholders, has been generally welcomed.

Except for some selective support for engineering and miscellaneous shares, turnover has on the whole been restrained. The effect of many good company reports has been counter-balanced by some adverse developments. The Prime Minister's statement on Sino-Indian and Indo-Pakistan relations has induced caution. Whatever the outcome of the border problems, defence expenditure is expected to increase steadily. The interruption of work at Calcutta port due to the strike by the pilots, may affect trade and industry seriously, unless the dispute is settled soon. The shipping companies, in particular, have been affected because it costs them nearly Rs. 10,000 a day when a ship is detained in port.

Cotton mill shares are dull. Mill interests have strongly represented to the Central Finance Minister that the industry will be seriously affected by the increased excise duties on cloth and yarn as proposed in the Central Budget. There is a growing

shortage of raw cotton, and the recent decision to raise the ceiling prices of raw cotton may add to production costs. In any case, the industry has been forced to pay higher wages and buy more expensive raw materials and spare parts. It is, therefore, hoped that the Finance Minister may modify the duties.

Among engineering shares, Braithwaite, Indian Standard Wagon and Indian Oxygen have been firm due to the issue of bonus shares. Burn have met with support on prospects of expansion. Interest has been taken in Jessop, Kumardhubi, Jay Engineering and Indian Steel and Wire Products. Texmaco have enjoyed influential support. Binani Metals have reacted on profit-taking, while Hindusthan Wire and Steel Containers have been steady.

Although turnover in miscellaneous industrials has declined, prices of selected shares have generally been maintained. Indian Aluminium have improved on prospects of a fresh share issue. Scattered interest has been taken in Dunlop Rubber, Orissa Cement and Indian Copper. Angelo Brothers are being taken on hopes of a higher dividend. Hindustan Motors have fluctuated widely, while Indian Cable are being sold on fears that it will be difficult to pass on the full burden of the excise duty to consumers. Tobacco shares have been subdued due to the increased excise duty. Imperial Tobacco and National Tobacco have declined. Indo-Burma Petroleum have gained on declaring a satisfactory final dividend. New Asiatic Insurance have been bought on rumours that the Company will soon undertake a new industrial venture. The Company has called up a further sum of Rs. 5 a share. Hindustan Aluminium have met with influential buying. Goodyear India have reacted on profit-taking. Metal Box, Britannia Biscuits and Union Carbide have been maintained. Among new shares, Indian Tack and Nail, India Carbon, Isaac Holdens and S. S. Duncan have gained.

Paper shares have been steady. Support has been forthcoming for Orient, Shree Gopal, Ballarpur, India Paper Pulp and Bengal. Interest has been taken in Sesashayee Paper on reports that the factory will soon start production.

Bharat Commerce have been steady in the cotton mill section due to a good report. J. K. Rayon, Elgin and Cawnpore Textiles are being sold freely.

Jute shares have become hesitant due to the confusion about the way in which the excise duty on jute goods is to be realised. Birla, Anglo-India, Kankarrah and Barnagore have slipped back. Gourepore, Northbrook, Bally and Fort Gloster have, nevertheless, been supported.

Coal shares have met with increased support. Burrakur, Bengal, Amalgamated, Pench Valley and New Beerbhoom have improved. East Indian have gained on prospects of expansion. Central India and Ranee-gunge have hardened. Among sugar shares, Dyer Meakin Breweries have risen smartly on rumours of a bonus issue. But prices of other shares have fallen.

Bank shares have maintained their previous levels.

Tea shares have shown mixed trends. Gardens with export prospects have been fancied. Tezapore,

Dibrugarh and Tyroon have gained. Soom are being taken on the issue of bonus shares. Hantapara and Hasimara have declined.

Prices of Government securities have, on the whole, been maintained. Except for some institutional support for short and medium-dated stocks, turnover has been limited. The 3 percent Conversion loan 1986 is being quoted around Rs. 71.10.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during April 1962 was: iron 144,400 tons; steel ingots 143,600 tons; semi-finished steel for sale 34,300 tons; and finished steel 75,700 tons.

Bombay Market

COMPANY NEWS HELPS SHARE PRICES

EASIER MONEY CONDITIONS

Wednesday Evening.

THE Bombay stock market started the new account in good form. Carry-forward charges were slightly smaller, reflecting easier money conditions. News of good dividends and expansion plans induced support for selected shares, such as Century, Bombay-Burmah, Alcock Ashdown and New Standard Engineering. Steel shares were strongly supported because Dalal Street thought that the Government would soon announce the new steel retention prices. Tata Steel shot up because the Company has been licensed to produce ferro-silicon. Cotton mill shares were generally maintained, but trading was restricted because it was hoped that the Central Finance Minister would reduce the excise duty on cloth and yarn proposed in the Budget.

An important factor contributing to the steadiness was the absence of selling pressure. In spite of the Prime Minister's observations on the Sino-Indian and Indo-Pakistani borders, bears were reluctant to sell due to the receipt of good corporate reports. Meanwhile, the Stock Exchange authorities had to impose margins on bulls in the case of Texmaco, B. B. Petrol and Elphinstone because their prices had risen by more than 10 percent over the previous make-up prices.

Tata Steel closed at Rs. 148.50 and Indian Iron at Rs. 26.25. Among engineering shares, New Standard Engineering shot up to Rs. 260 on the news that the Company has been permitted to issue rights shares at a premium of Rs. 20 a share. These shares will be issued to the existing shareholders in the proportion of one new share for every two held. Alcock Ashdown were taken at Rs. 350 and Tata Locomotive at Rs. 373.50. Larsen and Toubro came to hand at Rs. 33.90 and Mukand Iron at Rs. 28.25. Premier Construction were transacted at Rs. 175. Motor-vehicle shares were steady, and

Hindustan Motors were dealt in at Rs. 20.20. Premier Automobiles were done at Rs. 137.50.

Century were a firm feature in the cotton mill section and closed at Rs. 663. Bombay Dyeing were wanted at Rs. 67.90. Ambica Silk rose to Rs. 202.50 on increasing the taxable ordinary dividend from Rs. 15 to Rs. 20 a share. Kqhinor were dealt in at Rs. 306. Simplex at Rs. 174 and Svadeshi at Rs. 290. Standard jumped to Rs. 1,042, but Apollo were freely sold down to Rs. 2.40. India United Ordinary were bought at Rs. 22.16 and Tata Mills at Rs. 78.

In the miscellaneous section, sugar shares showed mixed trends. Maharashtra Sugar were wanted at Rs. 176 on prospects of diversification of activity. Belapur were steady at Rs. 238, but Phalton were quiet at Rs. 109.25. Mining shares were generally quiet, and Shivrajpur Syndicate declined to Rs. 34 on passing the dividend. B. B. Petrol were firm at Rs. 1.64 on rumours of a refund of capital. Cement shares were steady, and Associated Cement were bought up to Rs. 163.50. Business passed in Digvijay at Rs. 212. Steamship company shares improved at the close due to rumours of an increase in coastal freights. Scindia Steam were bought at Rs. 13.64 and Great Eastern Shipping at Rs. 14.64. Rayon shares were steady, and business passed in National Rayon at Rs. 567. Baroda Rayon came to hand at Rs. 147 and Gwalior Rayon were dealt in at Rs. 58.50. Bombay Burmah were a firm feature and improved to Rs. 702 on the news that Formica India Ltd, in which Bombay Burmah has substantial interest, has been permitted by the Government to issue new capital. Formica India will establish a plant in Maharashtra to manufacture industrial and surfacing plastic laminates. Ceat Tyre were quiet at Rs. 180, but Synthetics and Chemicals rose to Rs. 240. Chemi-

cal shares were steady, and business was done in Tata Chemical at Rs. 17.76. Polychem were firm at Rs. 221.25 and Colour-Chem at Rs. 510. Wimco were supported up to Rs. 310 on prospects of expansion. Voltas were dealt in at Rs. 306.

Although turnover declined in bank shares, prices were generally maintained. Bank of India came to hand at Rs. 114. Central Bank at Rs. 67.50 and Bank of Baroda at Rs. 106. Insurance shares improved on balance, and New India Assurance were transacted at Rs. 70. British India General were dealt in at Rs. 12.04.

Electric company shares were on the whole quiet, and Ahmedabad declined to Rs. 92.30. Bombay Suburban were placed at Rs. 103.50. Tata Hydro at Rs. 113 and Tata Power at Rs. 1,112.50.

Madras Market

VALUES MAINTAINED IN DULL MARKET

DECISION ON CLOTH LEVY AWAITED

Tuesday Evening. PRICES in the Madras stock market were maintained during the past week, although turnover declined appreciably. Buyers were inclined to hold off until the uncertainties were cleared up. The reaction of the Central Finance Minister to the cotton mill industry's demand for modification of the excise duty on cloth and yarn, was awaited with great interest. Support from outside

centres diminished, and bank credit was in short supply.

Business in Government securities declined to a mere trickle and enquiry was not expected to broaden in view of the prospects of new loan flotations in the coming weeks. Support for bank shares declined, although prices were generally maintained. Sugar shares showed mixed trends. Interest was taken in selected tea shares on hopes of increased exports. Good coffee shares were fancied because it was hoped that exports would improve. Rubber shares were generally neglected because production was almost stagnant. Cotton mill shares turned hesitant following the uncertainty over the excise duty on cloth and yarn. Among miscellaneous industries, selected cement and chemical shares met with support due to good corporate news.

In the banking section, business passed in Indian at Rs. 176 and in Andhra at Rs. 100. Indian Overseas were dealt in at Rs. 168 and State Bank of Mysore at Rs. 153. Among electric companies, Elore were bought at Rs. 22 because the Company has decided to refund Rs. 5 a share to the shareholders out of the compensation received from the Andhra Pradesh Government for acquisition of the Company's electric supply undertaking. The directors are also seeking the authorisation of the shareholders to start a new manufacturing concern. South Madras were steady at Rs. 10.15 and Negapatnam at Rs. 12.10.

In the sugar section, Deccan were dealt in at Rs. 10.15 and E.I.D. at Rs. 40.25. Mysore were done at Rs. 53.40 and Travancore at Rs. 7.15. India were easier at Rs. 9.60 and K.C.P. at Rs. 22.75.

Among planting shares, Blue Mountain came to hand at Rs. 2.58

CAPITAL, 10th May, 1962.

and Nenmeni at Rs. 24.65 on declaring a taxable ordinary dividend of 15 percent. Cochin Malabar were bought at Rs. 7.04 and Consolidated Coffee at Rs. 19.40. Tropical were done at Rs. 18.75 on paying a taxable ordinary dividend of 8 percent and Wartyhully at Rs. 2.70 on declaring a taxable interim ordinary dividend of 5 percent. Business passed in Ossoor at Rs. 2.75 on paying a taxable ordinary interim dividend of 5 percent. Kil Kotagiri were dealt in at Rs. 4.98 and Lucky Valley at Rs. 10.62. Ouchterlony were quiet at Rs. 4.05 and Periakaramalai at Rs. 3.57. Parkside were placed at Rs. 22.73 and Peermade at Rs. 18.90. Gokul were taken at Rs. 1.91 and Devon at Rs. 13.50.

In the textile section, Adoni were steady at Rs. 12.10 on declaring a taxable ordinary dividend of 8 percent and Balasubramania at Rs. 143 on paying a taxable ordinary dividend of 15 percent. Buckingham were indicated at Rs. 271.60 and Bangalore Woollen at Rs. 250.60. Jawahar were dealt in at Rs. 13.20 on the announcement of a taxable ordinary dividend of 15 percent. Kothari were bought at Rs. 12.10 on paying a taxable ordinary dividend of 8 percent. Lakshmi reacted to Rs. 165 and Madura to Rs. 38.37. Mettur met with demand at Rs. 400 and Rangavilas at Rs. 50. Virudh-nagar were wanted at Rs. 62 on the payment of a taxable ordinary dividend of 10 percent. Travancore Rayon were steady at Rs. 43.80, as were South India Viscose at Rs. 191. Ramakrishna were supported at Rs. 250 on prospects of a higher dividend.

Among miscellaneous shares, Aluminium Industries rose to Rs. 24.10 and Ashok Leyland to Rs. 9. Dalmia and Cement were placed at Rs. 13.85 and India Cement at Rs. 6.18. F.A.C.T. were done at Rs. 7.90 and Enfield at

CAPITAL, 10th May, 1962.

Rs. 12.10. Jeewanlal came to hand at Rs. 10.25 on declaring a taxable final ordinary dividend of Rs. 5.30 percent. Ogale Glass were dealt in at Rs. 6.60 on issuing ordinary rights shares, in the ratio of one new share for every four held, at par. Madras Rubber jumped to Rs. 25 on an encouraging speech from the chairman of the Company. Kirloskar Electric were steadier at Rs. 23.25, but Madras Aluminium were quiet at Rs. 21. Seshasayee Paper were transacted at Rs. 8.50 and Spencer at Rs. 23.89. Standard Motors were bought at Rs. 16.62 and Textool at Rs. 183.50. Travancore Cement were steady at Rs. 8.40 and Tube Investment at Rs. 290. Sellers predominated in United India Fire at Rs. 7.10 due to the cuts in fire insurance premiums. Mettur Chemical met with support up to Rs. 13.15, but Mysore Paper were easier at Rs. 13.70. Aspinwall were placed at Rs. 7.30 and Binny at Rs. 364.85.

THE BIG HURRY IN THE WORLD OF NUCLEAR PHYSICS

The hurry is to find a compact source of energy that will be as prodigious as the sun and will not exhaust though the world live a million years. ■ Closest to the ideal is Uranium 235, a scant one milligram of which, when fissioned or 'exploded', releases more energy than that obtained by burning millions of tons of coal. This great world of power will keep all of us going, and going well, when the present natural sources such as coal give out. Already atomic power stations are an actuality in many countries including India. ■ Shaping the giant pressure vessels enclosing the reactor cores demands a very specialised knowledge of welding. ■ It is this specialised knowledge and application of industrial gases that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED

10C-4

Aid-India Club to Meet Shortly: Inadequate Matching Contributions Cause Concern

(FROM OUR NEW DELHI CORRESPONDENT)

REPRESENTATIVES of the countries belonging to the Aid-India Club are scheduled to meet in Washington on 28th May. The principal item on the agenda is about raising more money for the second year of the third five year plan, and for ensuring continuity of financial support for the remaining three years of the plan. The U.S.A., it will be recalled, had initially offered aid amounting to \$1,000 million to India to finance the expenditure during the first two years of the plan, provided the other aid-giving countries, excluding the World Bank, committed themselves to matching aid of \$1,000 million. At India's request, the aid of \$45 million each, already committed by the U.S.A. and West Germany, was excluded from the offer, although the two sums were tagged on to the total aid. For the first year, the following commitments were made: Canada \$28 million, France \$15 million, West Germany \$225 million (plus \$45 million), Japan \$50 million and the United Kingdom \$182 million, giving a total of \$500 million. The World Bank was to offer \$250 million and the U.S.A. \$500 million (plus \$45 million). For the second year, the commitments so far made are as follows: Canada \$28 million, France \$15 million, West Germany \$139 million, Japan \$30 million and the United Kingdom \$68 million, giving a total of \$280 million. The World Bank is to offer \$150 million and the U.S.A. \$500 million.

New Board of Trade

The Minister of International Trade, Mr. Manubhai Shah, has decided to set up a Board of Trade in India. This will be organised on the pattern of the British Board of Trade, the last meeting of which was held some time in 1835. The U.K. Board was set up in 1786, and its members include the Archbishop of Canterbury. The Boards of the Treasury and the Admiralty were set up before 1800. The Treasury Board does not meet to transact business, but its members—the Prime Minister (First Lord), the Chancellor of the Exchequer (Second Lord), and the Junior Lords (Government Whips)—all have Treasury duties of some kind or other. The Board of Trade never meets, and none of its members—except the President—takes any part in its work.

Developing Petro-chemicals

The setting up of an oil refinery in south India and four steam-cracking units to meet the requirements of ethylene, propylene, butylenes, butadiene, benzene, tail gases, etcetera, has been recommended by the committee appointed last year to prepare a programme for developing petro-chemicals in India during the third and fourth five year plans. The committee says: "From economic consideration, it is essential to establish steam-cracking units near a refinery. This is so because such a step would avoid the need for transport of naphtha over long distances. Secondly, some of the uncracked liquids from the steam-cracker as well as certain other products, which cannot be used for the production of chemicals, could be returned with advantage to the refinery for proper utilisation. It is, therefore, necessary to set up steam-cracking units in the western, eastern and southern zones of the country in order to meet the requirements of organic chemicals and finished products in these regions. From these considerations, it would follow that a steam-cracker should be established near the refineries in Bombay. Similar consideration would hold good concerning a second steam-cracker to be established in conjunction with the Barauni refinery in the eastern region. A third steam-cracking unit could be established in Gujarat when the refinery is set up there. A fourth steam-cracker would have to be set up somewhere in south India in conjunction with a refinery in that region."

Middle Distillates

It is explained that by the end of the third plan period, there will be a surplus of petrol, but there will be heavy deficits in middle distillates such as kerosene, high-speed diesel oil, light diesel oil and fuel oil, as well as in other products. This deficit can be met either by imports of

these products or by undertaking additional refining of indigenous or imported crudes in south India. The latter step will have to be preferred because it will cost much less foreign exchange. In addition, it will provide petrol and surplus naphtha for the petro-chemical industry. It is desirable to plan a refinery of economic size in south India and base it on imported crude. The refinery can switch to the use of indigenous crude if oil is found in south India.

A steam-cracker will provide olefine and aromatics. Using these materials, it should be the endeavour, the committee says, to build up a petro-chemical industry for manufacturing diverse products, keeping in view the estimated demands indicated by the end of the third and fourth plan periods.

Naphtha Surplus

The estimated surplus of naphtha likely to be available from 1960 to 1966 is as follows:

Year	Surplus of naphtha (In tons)
1960	209,000
1961	152,000
1962	270,000
1963	503,000
1964	553,000
1965	973,000
1966	899,000

The estimated surplus at the end of the third plan is 889,000 tons. The additional surplus, which will result during the fourth plan, is 1,260,000 tons or a total of 2,159,000 tons. The demand for naphtha by the end of the fourth plan for manufacturing chemicals is estimated at 2.15 million tons, as indicated below :

	(In tons)
Naphtha required for manufacturing nitrogenous fertilisers in factories already licensed or approved as well as under consideration	396,000
For producing town gas for the city of Bombay (an approved project)	95,000
For captive steam-cracker of Union Carbide Ltd (licensed)	60,000
For four steam-crackers each having a capacity of about 200,000 tons of naphtha throughout	800,000
The special naphtha-cracking unit for the production of C4S	300,000
For the production of nitrogenous fertilisers during the fourth plan	500,000
	<u>2,151,000</u>

The committee says: "The demand for and supply of naphtha by the end of the fourth plan appear to be very close to each other. If petrol consumption increases at a faster rate than the 10 percent a year assumed during the fourth plan, and/or if more than 50 percent of the additional production of nitrogenous fertilisers during the fourth plan is based on naphtha, there would be a deficit; and this would have to be bridged by either imports of naphtha or by increasing the refining capacity in the country beyond 20 million tons."

Scrapping Refinery Pact

The general manager of Burmah-Shell in India, Mr. H. A. Eccles, discussed last week his Company's

broad proposals and intentions with the Central Minister of Mines and Fuel, Mr. K. D. Malaviya. He said that, following discussions with the Government, Burma-Shell in India is planning to convert itself into a rupee company, to offer substantial and widespread equity participation in both its marketing and refining enterprises to the Indian public, and to discuss with the Government the immediate termination of the current refinery agreement and the basis of operation in future under an industrial licence like other industries, subject to an understanding on certain basic points. Detailed discussions will follow with the Government departments concerned.

The lead given by Burmah-Shell, it is expected, will be taken up by the other two oil Companies. The Company, it seems, has told the Government that it wants no preferential treatment for the oil industry. As far as Burmah-Shell is concerned, it is prepared to scrap the refinery agreement and thereafter operate like any other industry in the country, subject to an understanding on certain basic points. The Company has a large investment of sterling in its two enterprises. It has never intended to take any part of this investment out of India. But a point to be discussed could be the taking out of India of profits earned on this investment. Remittance of profits is normally permitted by the Government. The second issue is likely to be the import of crude from Burmah-Shell's normal sources. The Government could have no objection to this, provided the price is competitive.

Capacity Expansion

The third point concerns the expansion of the refineries. The Government's attitude so far has been not to permit any expansion of the refinery capacity or even the use of expanded capacity under the existing refinery agreement. But when the refinery agreement is scrapped, the Government could have no objection to the expansion of refinery capacity, so long as it does not involve any additional foreign exchange outlay. Lastly, some understanding will have to be reached on the pattern of distribution. As the Indian Oil Company—a Government of India undertaking—is extending its field of operations, this will be necessary to avoid rate war in the future.

Then again, there is the question of profits. The Damle Committee's report, it will be recalled, considered that a return of 12 per cent on the capital employed in the marketing organisations of the three oil companies should be regarded as adequate. This was on the basis of estimated capital requirements of Esso, Standard Eastern and Burmah-Shell for the increased volume of business for the future, after taking into account the discount on posted prices at Rs.7536 lakhs or Rs.106.36 a kilolitre. The oil companies have claimed that the price formula prepared by the Damle Committee does not offer a return of 12 per cent on the capital employed. The 12 per cent profit ceiling recommended by the Damle Committee is gross profit subject to 63 per cent income tax and minus bonus paid to employees. As far as bonus is concerned, the Committee says: "It is apparent that bonus must come out of profits and cannot be an item of expenditure in the cost of production." The net profit should be in the neighbourhood of 3 per cent. This may be another point for discussion with the Government. Meanwhile, the oil companies have not yet scrapped their refinery agreements nor have they started converting themselves into rupee companies. All they have done is to express their readiness to satisfy the Government of India, pro-

FLEXIBLE PACKAGING
that protects your product

Flexible Packaging, because of the protection it offers Physical, Chemical, and Hygienical is a selling asset in today's market. It adds attraction to both Consumer and Industrial Goods to create sales-appeal.

Twenty-seven years of experience in Flexible Packaging and the present collaboration in technical know-how with Milprint, U.S.A., a leading manufacturer of Flexible Packaging in America, equips The Paper Products better today to answer your Packaging Problems.

London Market

PROPERTY SHARES RISE FURTHER

INDUSTRIALS IRREGULAR

PROFIT-TAKING after the recent advance brought irregular conditions to the stock market during the past week. Business remained at a high level and many good features developed on selective buying, but numerous losses were also recorded. Sentiment was affected by the threat of a national dock strike, and by the uncertain performance of Wall Street. The Chancellor's optimism on exports and the balance of payments failed to draw any further response from the market after the previous good rise. Other encouraging items such as the good end-April gold reserve figures and the payment of a further instalment on the debt due to the International Monetary Fund also had little effect.

In spite of some good investment comment and company statements, the trend in the industrial market was irregular, and leading issues were mainly lower. Steels and tobacco lost ground, and the recently buoyant breweries reacted on profit-taking. Many property shares scored fresh gains, but bank and insurance shares lost some of their recent improvements. Hire-purchase counters were firm. Gold and copper shares scored useful early gains under the lead of finance house issues, although a slight reaction became apparent later.

Pending Industrial Licences

The Government of India has referred to one of its senior officers in the Ministry of Commerce and Industry all the pending applications for industrial licences in order to ensure their speedy disposal. Six hundred and forty applications, it is

WELLMAN

OFFER COMPLETE SERVICES IN MECHANICAL HANDLING EQUIPMENT

For over 50 years Wellman Smith Owen have been engaged in pioneering and developing Mechanical Handling Equipment for diverse industries and particularly for Steel Plants. During this period they have studied every aspect of the subject and have many outstanding inventions to their credit. Lately, as a member of the ISCON Group, Wellman Smith Owen designed and supplied 33 cranes including seven 150-ton and three 280-ton Ladle Cranes and two 200-ton Ingot Stripping Cranes, for the Durgapur Steelworks.

Wellman Smith Owen Handling Equipment is specially developed and designed to withstand the most severe working conditions and give continuous reliable service with minimum maintenance.

In addition to this, the Wellman Incandescent Group are also specialists in Industrial Heat Engineering. They design and erect a very wide range of furnaces, ovens etc., for use in diverse industries and are now in a position to manufacture progressively in India many products, which hitherto, have had to be imported.

vided there is an agreement on the basic issues.

Foreign Collaboration

During the quarter ended March 1962, 123 schemes requiring foreign collaboration were approved by the Government. These included 30 cases of British collaboration, 31 cases of collaboration from the U.S.A., 15 from West Germany, three from East Germany, eight each from Japan and Switzerland, seven from France, five from Holland, three each from Italy and Austria, two from Sweden, and one each from Denmark, Australia, Canada, Czechoslovakia, Finland and Hungary. The Canadian collaboration is for a newsprint project. French collaboration includes a sanitaryware project and Japanese collaboration includes a scheme for making timepieces. U.S. collaboration includes projects for making polyethylene, polystyrene, aircraft parts and ball bearings and the British collaboration includes one with the well-known firm of J. Lyons for making frozen foods and ice-cream.

Another P.L. 480 Deal

The Governments of India and the United States concluded an agreement here during the past week providing for the sale to India of tobacco and maize valued at \$11.1 million, or Rs. 5.3 crores, under U.S. Public Law 480. India will pay for the supplies in rupees. The United States will make available to the Government of India 85 percent of the sales proceeds to be used in economic development projects. The United States will supply 2.8 million lb or 1.27 million kilograms, of high quality leaf tobacco, which will be used as a constituent of the blend mixture required for producing top quality cigarettes. The agreement will also provide 125,900 metric tons of maize for the starch industry in India. The agreement brings the total of commitments under the six Indo-U.S. P.L. 480 agreements to \$2,348.4 million, or Rs. 1,118.3 crores.

New Wheat Agreement

India, which has been a member of all international wheat agreements since 1949, is likely to sign a new agreement in Washington by 15th May, 1962. The agreement was drawn up at the U.N. Wheat Conference in Geneva early this year. It follows the pattern of the 1959 agreement, except that the maximum and minimum prices have been changed. The maximum price for the basic quality of wheat (No. 1 Manitoba northern wheat) under the 1959 agreement was \$1.90 a bushel; under the new agreement, it has been raised to \$2.02½ a bushel. Likewise, the minimum price has been raised from \$1.50 a bushel to \$1.62½ a bushel. In each case, the increase is 12½ cents a bushel. India imports wheat mainly from the United States under the P.L. 480 agreement of May 1960, payment being made in rupees. Under the agreement, India has, however, to import 400,000 tons of wheat commercially every year. These commercial imports will be governed by the international wheat agreement.

Foodgrain Imports

About 3.2 million metric tons of foodgrains, costing about Rs. 120 crores, were imported during 1961-62, including about 324,000 metric tons of rice costing about Rs. 15.61 crores. It is not possible to say how much was sold out of the 1961-62 supplies, but the approximate quantities of wheat, rice and other foodgrains issued from Central stocks during the 1961-62 financial year, were as follows:

	(In '000 metric tons)
Wheat	2,858
Rice	686
Other foodgrains	34
	3,578

CAPITAL, 10th May, 1962.

The value of wheat issued was about Rs. 107 crores and of milo Rs. 1 crore. It is not yet possible to give a correct estimate of the value of rice issued from Central stocks, since the issue prices vary from Rs. 16 to Rs. 30 a maund according to quality. The Government of India held a reserve stock of about 2.1 million metric tons of foodgrains at the end of March 1962. Imports during the 1962-63 financial year are expected to be about 4 million metric tons. This will cover both consumption requirements and the provision for buffer stock.

Loss on Sugar Exports

The production of sugar during the period 1st November, 1961, to 15th April, 1962, was 2,280,000 tons. The total quantity of sugar sold and despatched amounted to 1,096,000 tons and exports were 89,000 tons. The offtake of sugar for internal consumption was 1,030,000 tons and the closing stocks with factories on 15th April, 1962, were 2,353,000 tons. Sugar has been exported mainly to the U.S.A., Canada, Malaya and the Middle East. The loss on exports during 1960-61 is estimated at Rs. 8.67 a maund on shipments to the U.S.A. and Rs. 15.80 a maund on those to other markets. This should indicate at what price sugar is being exported from India. The losses are being borne by the Indian taxpayer and consumer.

Iron and Steel Production

The production of iron and steel in 1961-62 was as follows:

	Pig iron for sale (In tons)	Steel ingots (In tons)
Bhilai steel project	446,000	789,000
Rourkela steel project	117,000	354,000
Durgapur steel project	290,000	463,000
T.I.S.C.O.	—	1,650,000
I.I.S.C.O.	240,000	930,000
Total	1,093,000	4,186,000

This output compares with the production target of 4.8 million tons of steel ingots for the year, the first year of the third five year plan.

Fertiliser Plant in M.P.

The party which was granted a licence for setting up a fertiliser factory in Madhya Pradesh, has informed the Government that it is unable to proceed with the scheme since it has not succeeded in securing a suitable foreign collaborator.

Bombay Port Modernisation

Mr. Posthuma's recommendations on the dock modernisation scheme have been broadly accepted by the Bombay Port Trust. The latter has prepared a revised scheme on the basis of his recommendations. The International Development Association has been approached for a foreign exchange loan for executing the scheme as well as other Bombay Port Trust schemes in the third plan.

Developing Paradip Port

The amount earmarked in the third plan for the development of Paradip port in Orissa is Rs. 1.54 crores. It will cover the first and second priority works recommended by the Intermediate Ports Development Committee. It is intended to enable Paradip to handle 550,000 tons of traffic a year, consisting of 500,000 tons of iron ore and 50,000 tons of other cargo. No further sums have been earmarked for the development of Paradip to handle larger quantities of iron ore, pending the results of the studies which the Planning Commission had recommended.

Steamer Service to Goa

With the merger of Goa with Indian territory and the consequent resumption of the steamer service to Goa, it has become necessary to review the recommendations of the Konkan Coastal Shipping Services Committee for an increase in fares and subsidy. One of the important

reasons given by the shipping company for its losses was the suspension of the service to Goa in 1955. The position is being examined in consultation with the Government of Maharashtra, and a decision, it is hoped, will be taken soon.

Electrical Multiple Coaches

One hundred and forty-one broad-gauge electrical multiple coaches are expected to be produced during 1962-63. The main sections of the railways where they will be used during the third plan period are: (i) Sealdah-Ranaghat and Dum Dum-Bangaon; (ii) Sealdah-Diamond Harbour-Budge Budge, Lakshmikanthapur-Canning and Ranaghat-Krishnapur; (iii) Burdwan City-Santipur; and (iv) Howrah-Docks (via chord); and (v) Howrah-Kharagpur.

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

Rise in Reserves Slows Down, but Sterling Remains Strong

(FROM OUR LONDON CORRESPONDENT)

LAST month's gold reserve figures, showing an increase of £7 million to £1,240 million, conform closely to the City's expectations. Allowing for the £25 million repayment to the I.M.F., there was a real increase of £32 million. This is a satisfactory performance, even for a month in which seasonal influences are favourable to the sterling area. What is also apparent from the April outturn is that the rise in the reserves has now slowed down appreciably. Last month's £32 million real increase compares with £72 million in March and £80 million in February, but those figures were easily a record for any two-month

period. Latterly, partly as a reflection of the successive cuts in Bank rate and partly as a result of more stringent conditions in several foreign centres, the flow of money to London has slackened. This in itself is by no means an unwelcome development. What really matters is that confidence in sterling should remain high and that it should be reinforced by an improvement in the underlying balance of payments. The continued strength of sterling in the market is a promising sign.

I.M.F. Loan Halved

Meantime, Britain has repaid another £25 million of its £535

million borrowing from the I.M.F. The debt was incurred early last August when the pound was under severe pressure in the foreign exchange market. This is the fourth repayment. It follows one of £100 million last October, another of £50 million at the end of November, and one of £75 million at the end of February this year. Allowing for the latest transaction and for drawings of sterling from the I.M.F. by other countries, the amount to be repaid has been reduced to £256 million. Thus, in only nine months, the debt to the Fund has been reduced by more than one half. The latest repayment, like the three earlier ones, has been made possible by the continued strength of the pound.

Chancellor on Expansion

Speaking at a Sheffield business men's dinner last week, Mr. Selwyn Lloyd said that what had been achieved in the last year or so, formed "a firm base for sound expansion." The reason why he had not used the Budget to encourage activity was that he expected to see production expand in 1962 without any such additional stimulus. He repeated that "12 months from now" he expected consumer expenditure to be 4 percent up in real terms on today's figures. In view of this and other favourable factors the Chancellor said that people ought not to be pessimistic about the level of home demand. As for exports and the balance of payments, Mr. Lloyd was remarkably optimistic. Taking the current account balance, he pointed out that the deficit in 1960 had been £288 million, and in 1961 £70 million, an improvement of £218 million. He would not be surprised if there was a further improvement in 1962.

Mr. Lloyd also estimates that the overall balance of payments for 1962, including both current and long-term capital accounts, will yield a slight surplus. Meanwhile, he pointed out that the gold reserves at the end of April are about £350 million higher than they were last July. The U.K. has now repaid £250 million to the I.M.F.; in addition she has repaid nearly £300 million received from European central banks under the Basle arrangements. In defending his Budget against the criticism that it has been too restrictive, the Chancellor stressed that "a strong budgetary policy is an essential basis for an easing up on the monetary side. In the last few years, we had leaned heavily on monetary measures. The three recent Bank rate reductions which had brought the cost of bank borrowing down to less than it had been since January 1960 would not have been possible without the strength of sterling which followed from the July measures, or without this firm Budget." His object was not to restrict, but to create a sound basis for expansion. He had to put sterling first because devaluation would be "a disaster." The battle of the last 16 months had been to safeguard sterling, and it has succeeded.

Bank Loan Rise Halted

The monthly statement of the clearing banks for the four weeks ended 18th April suggests that the demand for bank advances, apart from temporary accommodation to help with tax payments, has fallen

off. While the gross figure of advances is up £8.4 million, the net figure, excluding transit items, has actually fallen by £6.6 million. "The upward rise in advances over the first months of this year, due mainly to customers' requirements to meet tax payments, has thus been halted," comments the Banking Information Service. The statement goes on to point out that there is generally some seasonal pressure for bank credit at this time of year; the last time net advances fell at this season was in 1952, when a small decline of £3 million was recorded.

By the make-up day of 18th April, Bank rate had already come down to 5 percent and one would have expected this to stimulate some demand for credit, particularly as lower profits reduced the flow of internal finance. This may be a reflection of the "pessimism" which has been reported from the industrial areas for several months past. But we have yet to see what 4½ percent will do, and in any case, the banks are still heavily restricted in the kind of requests they may satisfy. Incidentally, the Chancellor went out of his way to mention the special deposits and the other credit restrictions as instruments which he would "not hesitate to use," if the situation demanded it.

Europe Buying British

Britain's exports to eastern and western Europe in the first quarter of this year were for the first time considerably higher than its exports to the Commonwealth. Sir William McFadzean, chairman of the British Export Council for Europe, told a Press conference in Berlin that according to provisional figures, Britain had exported from January to March 1962, a total of £362 million worth of goods to 19 countries in Europe, including the Common Market, the European Free Trade Area, and Greece, Ireland, Iceland, Spain, Turkey, and Yugoslavia. This figure "for the first time ever is considerably higher than British exports to Commonwealth countries," Sir William said.

In 1961, Britain exported £1,325 million worth of food to these 19 countries—an increase of 17 percent over the 1960 figure. Sir William said that 39 percent of Britain's exports were now going to Europe alone—by far the biggest percentage to the Common Market. West Germany, including West Berlin, was now buying more than £220 million worth of British goods annually, but this was still less than 5 percent of German imports. Three years ago, Britain had sold only £90 million worth of goods to West Germany. "We can sell more and we will sell more. We sell £120 million worth of goods to Italy, but it will be more than £150 million before the year is up," he said.

Spending by Industry

After the heavy drop in industrial capital expenditure in the fourth quarter of last year, it has been widely assumed that investment would decline further this year. The latest figures of industrial building approvals suggested a continuing contraction. This is not apparently the view taken in Whitehall. A paper on national income and expenditure in the fourth quarter of 1961, published in the Government's *Economic Trends*, asserts that total industrial capital expenditure in 1961 "agrees closely with the results of the Board of Trade's investment intentions enquiry made last summer."

At the end of last year, a further enquiry was made into investment intentions for 1962, and the replies from industry indicated that expenditure this year would be about the same as in 1961.

SMALL QUANTITIES OF LOW-GRADE JUTE TO BE EXPORTED

THE Indian Government has announced that the export of raw jute from this country is to be resumed on a small scale. It is believed that negotiations are being held with Poland, Czechoslovakia and Russia; and quantities totalling up to 100,000 bales might be released for export. The exports will, of course, be confined to low-grade jute. The decision has been taken in response to the view that the fibre market remains weak. The following note issued by the Jute Commissioner explains the background to the move:

"In the last few days, following the welcome pre-monsoon showers, which are important for the jute crop, the price of jute has tended to decline, and the market has shown a certain degree of nervousness. An analysis of the supply and demand position shows that there is no cause for apprehension. The official estimates of the jute and mesta crops for 1961-62 are 6,269,000 bales and 1,705,000 bales, respectively. The total crop is thus about 8 million bales. The trade carryover at the beginning of the season was only 150,000 bales. By the end of April, member-mills of the Indian Jute Mills Association had purchased about 6.73 million bales and non-member mills about 500,000 bales. Buffer stock purchase quotas so far total 125,000 bales. The estimated surplus at the end of April, therefore, was only 800,000 bales. If about 200,000 bales of this are assumed to have been retained for use in domestic small-scale industries, the actual surplus amounts to 600,000 bales. There should be no difficulty whatever in this quantity being purchased partly by the I.J.M.A. mills on their quotas and partly by the Buffer Stock Association, even if the jute trade is unwilling to hold any stocks at all at the end of this season.

"If it is found that the actual crop is somewhat larger than the official estimate of 8 million bales given above (though this is very improbable), the trade may be assured that all the surplus, whatever it may be, will be taken up by the Buffer Stock Association. Moreover, henceforward it will be ensured that buffer stock purchases are made in adequate quantities every seven to ten days. This, it is hoped, will restore confidence in the ability and intention of the Buffer Stock Association to take up the surplus, which has tended to be in doubt because of the unfortunate procedural delays that held up purchases in April.

Smaller Area Sown

"Interested parties have been claiming that the progress of sowing of the 1962-63 jute crop shows only a very small decline in acreage from 1961-62. The evidence from State Government sources in Bihar and West Bengal is to the contrary. A study of the variations in acreage over the last five years or so shows that the exceptionally high acreage of 1961-62 was entirely attributable to the impetus given by abnormally high prices. The acreage in 1962-63 is likely to be about 20 percent less than in 1961-62. The present unfavourable ratio of jute prices to paddy prices may also have affected sowing. Efforts will, of course, continue to increase yield an acre, so that a crop of the order of 7 million bales can be achieved according to the third plan target. With the present level of jute goods production, the annual consumption of fibre will be about 7.3 million bales (including 200,000 bales for domestic small-scale indus-

tries). In any case, buffer stock operations will again be undertaken next season if necessary, and it is the firm intention of the Government not to allow the price of jute to fall again to uneconomic levels.

"Meanwhile, as certain jute consuming countries, especially in eastern Europe, have been showing eagerness over the past few months to purchase jute from India, it has been decided to release a small part of this season's surplus for export. It is proposed to export only the lower grades of jute, which are acceptable to the east European jute industries.

Import of Cuttings

"It is necessary to correct the misapprehension which has arisen over a reported decision to import jute cuttings from Pakistan. No cuttings have been imported since October 1961, and it is not proposed to resume import at this stage when the prices of Indian jute are still weak. It is expected, however, that in due course cuttings can be imported next season at favourable prices without affecting the Indian jute. The Central Government has, therefore, considered the possibility of channelling future imports through the Buffer Stock Association, so that cuttings can be purchased when prices are favourable, but are not released to the Indian market except when local prices justify it. In order to support the price of low-grade Indian jute, mills have been informed that their future entitlements to imported cuttings will depend on their purchases of low-grade Indian jute between 15th April and 31st May this year. No import licence for cuttings will be issued as long as any substantial surplus of local jute remains to be taken up by the Buffer Stock Association. Meanwhile, the Government is studying ways of making the buffer stock operations more effective next season, and in particular of linking them with mofussil warehouses and jute-growers' co-operatives, so that the benefit of buffer stock purchases can reach the growers directly."

Mixed Trend in Gunnies

The behaviour of the gunny market has been rather peculiar during the past week. Seldom does one section of the market go up while the

other goes down. But in the past week, hessians have risen sharply from Rs. 50 to Rs. 53.20, although sacking has declined from Rs. 125 to Rs. 119.90, recovering at the close to Rs. 123 (all May futures). The rise in hessians is attributed largely to local settlements between the bears and the bulls, as overseas business has been negligible.

Much to the surprise of the trade, the April due date did not reflect a surplus of 40in. 10oz. hessians. A leading shipper continued as a buyer of ready 40in. 10oz., which added strength to the market and gave an opportunity to one of the larger bulls to manipulate prices in his favour. When it was known that the demand for 40in. 10oz. in the ready position was considerable, buying activity in the futures market increased sharply. It was argued that if ready goods were being traded up to Rs. 55, May futures at Rs. 50 were attractive. Later in the week, the bear and bull positions revealed outstandings of nearly 35 million yards in May futures—about 17,500 bales. Assuming that the bulls were merely speculating, and had no intention of taking delivery, the mere fact that the outstandings were so large left little doubt that the bears would have to cover or suffer losses.

It is expected that production in May will be sufficient to meet the demand. As such, deliveries in the futures to cover the above contingency appear very unlikely. The directors of the East India Jute and Hessian Exchange have already advised all members that, if the outstandings on 16th May are not below 30 million yards in the May futures, an emergency will be declared, and suitable steps will have to be discussed. Past experience indicates that each time an emergency has looked likely, the market tendency is invariably upwards. The same may happen in the present instance. If a ceiling price is fixed, traders using futures as a hedge will automatically become short of actual goods. In the light of the mills' policy of selling little in a tight market, heavy premiums will have to be paid for short-covering.

Calcutta Port Troubles

The Hooghly pilots' strike continues, and a stalemate has been reached.

ed. The Port Commissioners are not prepared to concede the pilots' demands, and the pilots are not prepared to go back to work even though the strike has been declared illegal. Meanwhile, serious harm is being done. Of the 75 ships in port, no more than one or two are able to sail each day. Likewise, of the ships waiting at Sandheads, the arrivals in the port are only one or two a day. Due to the poor drafts during May, the loading capacity of outgoing steamers has been reduced considerably, as they have, to sail at a moment's notice with the minimum draft. The steamship companies have lodged a strong protest with the Central Government as the strike is resulting in heavy losses.

Excise Confusion Continues

The excise duty levied by the Central Government on internal consumption is still causing confusion, as the authorities have not yet clarified certain details. The hardship to the shippers, in particular, is considerable. On the one hand, some mills are refusing to bring down cargo; on the other, the steamer agents are threatening to sail as soon as they are allocated a pilot, irrespective of what cargo they have to shut out or short-ship. Overseas buyers in turn have protested strongly. Being unaware of the conditions prevailing in Calcutta, they have made reserves on the shippers for full damage if April contracts are not shipped on the April steamers within the stipulated bill of lading dates. Their contention is that the internal excise duty was levied to promote, not to hamper, exports. At the moment, it appears that if the authorities concerned do not clarify matters, the position of the trade will be jeopardised.

Following the introduction of the excise levy on jute yarn, which came into effect from the midnight of 23rd-24th April, excise officers at the Kelvin Jute Mill prohibited the transport of yarn to Waverley Mills for the production of jute carpet-backing. As a result, Waverley Mills had to close for three days (Tuesday, Wednesday and Thursday) last week, resulting in the laying-off of workers and in interruption to the manufacture of export goods. This might have been avoided had a directive been issued in time by the excise authorities to their officials at the site permitting the transfer of yarn on the execution of a surety bond. Yarn movement was permitted on Friday on the mill officials signing a surety and agreeing to execute a bond within three days. Since the formalities could not be completed over the week-end, the mills were told that the time allowed had lapsed. But yarn movements

STATE BANK OF INDIA'S

RUPEE TRAVELLERS

CHEQUES FOR

CARE-FREE TRAVEL

You can travel anywhere in India and outside without having to carry a large amount of cash, without being in fear of theft or of running short of money.

The State Bank's travellers cheques, issued in denominations of Rs. 100/- and Rs. 50/-, represent the ideal travel funds. They are as safe as a bank draft and are encashable anywhere, anytime.

This is one more of the many services the Bank provides to its clients and the general public. For complete information, please ask for a copy of our illustrated booklet from the branch nearest to you, or consult your travel agent.

SISTA'S-58-19

Pipework installations by S&L

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers and draughtsmen, many of them trained abroad, now provides,

- * fabrication of all types of pressure pipework,
- * fabrication of bent boiler tube, superheater elements and coils for all purposes,
- * the installation of piping system for all pressure and temperature conditions.

You CUT initial cost by 80% by choosing an AIRCON

EVAPORATIVE CLIMATE
CONDITIONER FOR YOUR
THEATRE!

Here's an almost theatrical case of reduced rates! An AIRCON Evaporative Climate Conditioner costs you only 1/3rd to 1/10th as much as an equivalent refrigerant air conditioner!

And where a refrigerant air-conditioner consumes 2000 watts per hour, AIRCON needs only 310 watts per hour—comparative running costs are less than 1/6th!

So when you want to give your theatre a well-coming air—your most economical means is AIRCON. If the slightest defect in workmanship or material arises in the

first year, we shall service it free of charge. Please write to us for any information you may require.

Favourable Weather

Weather conditions continue to be favourable in both India and Pakistan. Intermittent sunshine and rain have created ideal sowing conditions. The general impression one gathers from the reports received so far is that the new Pakistan crop is likely to be about 20 percent less than the last one. The shortage will be reflected mainly in white jute. Sowings in the lowlands are estimated to be 25 percent less than last year. Since the sowings have been delayed and the river levels are normal, it is feared that there will be some loss because the plants will have to be cut before they are fully grown. Normally one-fourth of the crop comes from the lowlands. The midlands usually account for nine-sixteenths of the crop. Sowings this year have been almost 20 percent less than usual. In the highlands, the normal area of land has been prepared for sowing as rainfall has been good during the last ten days. The highlands usually produce three-sixteenths of the total crop. In India, sowings have started, but it is still too early to make any estimate.

THE JUTE MARKETS

Manufactured Goods: Last Thursday, a quieter trend was witnessed in sacking, which was maintained due to the steadiness of hessian. But lack of business in sacking, and rumours that one of the bulls had liquidated his position by switching to August futures, caused panic. Prices fell sharply from the opening of Rs. 125 to Rs. 119.90 by Saturday. Hessians, on the contrary, showed a fairly steady trend and moved downwards only slightly in sympathy with sacking. Ready B Twills were traded at the same price as May. The fluctuations in the differentials between May and August futures were interesting. In B Twills, August futures remained Rs. 3.25 below May, after being Rs. 2 less at one time. The differential for 40in. 100z. Hessians increased from Rs. 2.80 to Rs. 4.15.

Good overseas business was done in sacking. Peru bought 8,000 bales of Liverpool Twills for May-June-July shipment. Continental buyers placed orders for about 5,000 bales of sacking and hessian. Australia bought 3,000 bales of sacks and woolpacks for May-September shipment. East Africa bought 5,000 bales of B Twills for May-June shipment, while West Africa bought 6,000 bales of sacking for August shipment. Moderate business was also reported from the U.S.A. for July-September and October-December positions.

THE FOREIGN JUTE MARKETS

FIBRE WEAKENS FURTHER

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices in Pakistan have been easier in the past week, and shippers have offered to sell at levels well below the E.P.C. rates. Occasionally, these E.P.C. prices are reduced, but it makes little or no difference to the Dundee market as already the discounted offers here are often less than the new terms quoted by Pakistan. Business continues to be very dull. Until fibre prices show signs of settling down, buyers are likely to continue holding off as long as possible. Only trifling lots have been purchased, and both spinners and manufacturers are entering orders for the smallest of quantities. Many are still busy with orders in hand, but there has now been a dearth of fresh business for so long that producers are feeling the pinch and they are becoming anxious about the future. No one can blame buyers for their refusal to operate on a larger scale, while raw jute is displaying its present weakness.

Offers of raw jute of all qualities were quite freely made, from Mill Lightnings downwards. Fairly decent marks of that grade were quoted at from £110 a ton, Mill Hearts from £90 and Grade Hearts from £80, with Grade Tossa-3 from £127 and fours from £108, also Continental Tossa-3 from £83, c.i.f. U.K.-Continent. Sellers had rarely been as quiet as they were last week. A few lots changed hands on the spot at cheap prices, suspected to be parcels which had been arbitrated on and were carrying a heavy allowance.

Calcutta goods were again irregular at around 80s for 40in. 100z. Hessians and 57s for 71oz., May 77s and 57s June, and 73s 9d and 55s 6d July-September, with B Twills at 188s 3d, 185s 3d and 182s 3d for the respective positions of shipment, f.o.b., Calcutta.

A reduction of £5 a ton was made in the values of yarns and cloth on 28th April. Hessian yarns were reduced from 17.04d to 16.47d a lb for 8 lb C.H.W. cops and from 18.08d to 17.50d for 8 lbs J.C.H. cops or spools.

CAPITAL, 10th May, 1962.

Plantation Topics

BRIGHTER OUTLOOK FOR TEA FORECAST

THE outlook for tea in the coming season is considerably brighter than was anticipated at the end of 1961. At that time, many growers would have been happy to hear that a serious slump might at least be avoided, say Messrs W. S. Cresswell and Co. Private Ltd in their annual report on the Calcutta tea market for the 1961-62 season. Producers can now safely say that there will be no great difficulty in disposing of the smaller than usual stocks remaining on their hands from the 1961 crop. Indeed, there appears to be a shortage of better qualities in almost all markets. There is no evidence of excess stocks with buyers either in India or abroad, although recent price trends indicate that the supply of plainer varieties may be ample, and in many markets the poorest teas are unwanted. The firm feels that market discrimination against inferior teas and the reward of higher prices for careful manufacture is a healthy trend. The big question mark of any attempt to delve into the future, it says, is the likely size of the crop. The 1961 outturn was a record one, and an increase of such magnitude is not anticipated in 1962. Much effort and capital, however, are being put into increasing production to achieve the third plan target of 900 million lbs by 1965. "Unless nature is particularly unkind, we do not doubt that a further rise will be recorded in the coming season," the firm says.

Production Abroad

The plantations in Indonesia are generally reported to be in bad shape. So production there is unlikely to increase, but the African output will almost certainly rise again. The industry in Ceylon has its problems and difficulties, but somehow always manages to improve its output. Perhaps 1962 will be an exception. Tea drinking in the coming season will show steady progress in the Middle East, India and Pakistan, while Britain's possible entry into the European Common Market offers prospects of spreading the tea habit in that region. "We think the race between production and consumption is likely to be close and we wonder whether the gloomy forecast of a large surplus of tea by 1965 made by the Food and Agriculture Organisation of the United Nations may not need revision."

The overall statistical position of tea, the firm says, is fairly satisfactory. But within this framework, it detects a growing lack of balance. Quality teas, which can be produced in certain areas only or at certain seasons, are always in short supply and can only appreciate in price in the year ahead. The demand for strong liquoring C.T.C. teas is growing quickly on account of their better cup value, and these types, properly made, are also unlikely to face any serious marketing difficulty.

Outlook for Common Tea

The firm is, however, much concerned about the future of plain orthodox teas which represent some 25 percent of north Indian production. Blenders do not want them except at low prices or in time of shortage. Quotations for similar types in other markets are below what would cover the cost of production in north India. Their main supporters are the internal market—now rapidly switching its buying to stronger liquoring C.T.C. types—Egypt and Sudan. "While we are hopeful that these latter will again take large quantities of plain teas from the Calcutta market, we foresee, should crops be larger than

anticipated in the coming season, that the bulk of plain teas may prove difficult to dispose of at remunerative prices." The firm predicts that the market in 1962 will offer greater rewards than usual for good plucking and careful manufacture, and severer penalties for teas of poor cup or indifferent appearance.

NORTH INDIAN TEA EXPORTS UP PRODUCTION OF DUSTS RISING

(BY A SPECIAL CORRESPONDENT)

THE tea report on the 1961-62 season published by Messrs W. S. Cresswell and Co. Private Ltd provides the answers to some of the puzzles which have been puzzling many people. For example, of the excess crop manufactured in north India which is estimated at 66 million lbs, exports up to the end of February 1962 showed a gain of only 4 million lbs. The final figures are not expected to show a rise of more than 15 million lbs. Exports from south India are said to have been the same as in the previous year. India's offtake is placed at 320 million lbs or an increase of 54 million lbs. But it has to be remembered that, due to the drought in 1960, stocks carried forward were reduced to the barest minimum, so the estimate of actual consumption of about 300 million lbs looks correct. The firm also points out that manufacturers increased the production of dusts from about 85 million lbs to 110 million lbs. This was partly due to the increasing manufacture of C.T.C. teas. There is no doubt that this process produces stronger and more coloury teas and gives many more cups to the lb. Blenders are said to be particularly interested in these teas.

The Budget proposals concerning taxation on tea have given an added incentive to exporters by reducing the export duty from 44nP a kilo to 25nP a kilo, and also allowing a rebate or excise duty at a flat rate of 15nP a kilogram on all exported teas. Excise duties have, however, been increased by 5nP or 10nP a kilogram as indicated in the following table:

Zone	Existing rate of excise duty a kilogram (In naye paise)	Proposed rate of excise duty a kilogram (In naye paise)
I	10	15
II	15	25
III-a: Darjeeling	25	30
Others	25	35
III-b	35	45

The net effect of the changes is a loss of Rs. 19 lakhs in the yield from excise revenue on the basis of present consumption. But at an average rate of Rs. 2.50 a lb, every million lbs of tea exported will provide Rs. 25 lakhs of foreign exchange. Exports from north India and 79 million lbs last year were around 335 million lbs from south India. The Finance Minister has apparently proceeded cautiously, but considering the urgent need for earning more foreign exchange, a bolder step should have been taken. Mr. Desai, for example, could have abolished the export duty altogether. But it is not only fiscal adjustments which are necessary.

The cost of production of tea is already too high, and the transit haul from Assam to the port of shipment is long, troublesome and expensive. A freight rebate on tea export should, therefore, be considered.

Mr. Desai is reported to have declared recently that the increase in the excise duty on tea would be readjusted if it reduced internal consumption too drastically. But due to the rising standard of living as well as the sharp increase in population, internal consumption is not likely to be checked. Meanwhile, the reduction of the export duty on tea has improved sentiment, but probably it will not be sufficient to increase exports to any marked degree.

COFFEE OUTPUT FALLS SHARPLY

CROP FAILURES ALSO REPORTED ABROAD

(BY A SOUTH INDIAN CORRESPONDENT)

THE latest report from planting districts says that the 1961-62 season's coffee crop, which is now being received in the pool, is considerably below the original estimates of 48,000 tonnes or 50,000 tonnes. The outturn, it is stated, has been a major disappointment this year, and the country will be fortunate if it touches 40,000 tonnes. Last season the bumper crop touched the record figure of 67,000 tonnes. Pool receipts are also smaller. According to the Coffee Board, pool receipts up to the end of March amounted to only 35,733 tonnes, against 53,159 tonnes received during the corresponding period of the previous season. The present method of visual estimate has been most unreliable. The earlier this defect is rectified, the better. The marketing policy is closely geared to the estimated output. Besides, individual owners keep finances according to the crop estimate. So there is an immediate need for a more accurate method of crop estimation. The Coffee Board has done some preliminary work in this direction. It would be desirable if a simple and easily understandable method is soon evolved.

India is not the only country which will harvest a smaller coffee crop this season. Crop failures are also reported from some of the major producing countries, so the world crop is expected to be down by about 7 percent at 73 million bags, compared with the record crop of 1959-60. There has been a rise in demand for quality coffees which is in short supply, resulting in more favourable prices. But it is difficult to expect similar conditions during the coming year. The coffee industry in India will have a large exportable surplus which will have to be offered to a saturated foreign market. Prices are bound to decline under the circumstances. The leading coffee producing countries have joined together and have arrived at an agreement restricting exports to traditional markets in the hope of regulating prices. To some extent, this has brought stability to the coffee market.

But for long-term stability, it is necessary for all coffee growing countries to join the agreement. The Coffee Board has urged the Government of India to seek immediate membership of the agreement, but the latter has postponed a decision by a year to examine further the pros and cons. It is possible that, by keeping out of the agreement, India will have immediate benefits in the sense that she may be able to export all her surplus, but it will not be wise to keep out of this important international agreement for long, according to coffee planters.

Wages and Productivity

The Coorg Planters Association chief, Mr. Somanna, said at the recent annual general meeting that the Central Wage Board for the Coffee Industry should take into account the "special economic position" of the industry and its prospects for at least the next ten years before giving an award. Lower selling prices and higher production costs have made it impossible for the industry to bear additional burdens. There are four ways to enable the industry to pay higher wages. Firstly, the yield to the acre has to be increased. Secondly, production costs should be reduced to the minimum without affecting the efficiency of estates. Thirdly, some of the increased cost of production should be passed on to the Indian consumer by raising selling prices. This is not unreasonable as the prices of all other commodities have risen sharply in comparison to coffee. Fourthly, the productivity of workers should be increased. It is necessary to study the workers' capacity to work, and find ways and means to create incentives to increase productivity and earnings. Mr. Somanna suggested that time and motion studies be undertaken to investigate this problem.

The labour problem was also discussed at length by Mr. A. B. Spence, chairman of the Central Travancore Planters Association, at the annual general meeting last week. He said: "It is a distressing feature, increasingly evident today, that the output of work, particularly by our male field workers, is steadily falling. When a fair wage is asked for, it is only fair that a fair day's work is done."

The Central Tea Wage Board is now engaged in rationalising the wage structure and laying down principles which may govern the fixing of wages. The interim wage rise recommended by the Board has come into force and estates have started paying it. Old age-security for plantation workers has also been receiving attention. An agreement was recently signed by the representatives of the planters and workers in Kerala. According to this, workers will get gratuity benefits at the time of their retirement. Among the items of social security offered by the plantation industry are provident fund, gratuity, sickness benefit and lay-off relief. Free housing and medical care are also available. A fresh problem worrying the planters is the possibility of shortage of labour with the growing industrialisation of the country.

An admirable reference book in Industrial Law!

V. B. Kher's Supreme Court Digest of Labour Law Cases
 Vol. II (May 1959 to December 1960) Rs. 15.00

"I welcome this little publication. It helps one to get a glimpse of the great role played by the Supreme Court of India in enunciating principles of cardinal importance in the field of labour relations."

...From the 'Foreword' to the first volume by the Hon'ble Mr. M. C. Setalvad, Attorney-General of India.

THACKER & CO. LTD., Rampart Row, Fort, Bombay.

ROAD BUILDING MACHINERY STAYS ON THE JOB WITH **TIMKEN**[®] REGISTERED TRADE MARK tapered roller bearings

SINCE Men are building roads in impossible places—through steaming jungles and over 1899 freezing mountains. Breakdowns here can mean days, not just hours, of delay. But Timken tapered roller bearings keep machines rolling day after day, year after year. They practically eliminate friction. And they're precision-made of case-hardened nickel-rich steel to make them extremely tough and wear-resistant—to assure highest quality. ■ You'll find Timken bearings in almost every kind of machine in the world, making them run better with less maintenance and at lower cost. It's a result of the partnership between Timken Company engineers and the men who design road-building machinery, cars, trucks, railroad rolling stock, farm equipment—a partnership that goes back to 1899. ■ We invite you to use our experience and knowledge to make your product even higher in quality—more competitive. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

COMPANY AND PUBLIC NOTICES

THE EAGLE ROLLING MILLS LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Saturday the 9th June, 1962, at 10-10 A.M., for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year ended 31st December, 1961, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit, to pass the following resolution which will be proposed as a special resolution:—

"That, in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a commission (to be divided between them in such manner as they shall from time to time determine) of 1% of the net profits of the Company in each financial year over the period of five years extending upto and including the financial year of the Company ending on 31st, December, 1966".

To consider and, if thought fit, to pass with or without modification the following Resolution of which a notice has been received by the Company from a Shareholder under Section 257 of the Companies Act, 1956, which will be proposed as an Ordinary Resolution.

"That Mr. A. H. Sethna be and is hereby appointed a Director of the Company".

The Share Transfer Register of the Company will be closed from 1st June, 1962, to 9th June, 1962, both days inclusive.

By Order of the Board,
BIRD & CO. (PRIVATE) LIMITED,
Secretaries & Treasurers.

Registered Office:
Chartered Bank Buildings,
Calcutta, 5th May, 1962.

Notes:—

- (a) A member entitled to attend and vote at this Meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- (b) The Dividends, if declared, will be paid on or after 18th June, 1962, to those shareholders whose names appear in the Company's books on the 9th June, 1962, or to their mandatories. No application for Dividend warrants will be necessary.
- (c) Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, is being sent to all members.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given to the members of the above-named Company that the Annual General Meeting (being the one hundred and twenty-eighth Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 21, Netaji Subhas Road, Calcutta, on Thursday, 31st May, 1962, at noon, to consider the Accounts of the Company for the year ended 31st December, 1961, and to transact other ordinary business and the undernoted special business.

Special Business

NOTICE is also hereby given of the following Resolution, which will be proposed as an Ordinary Resolution, of which Special Notice dated 23rd April, 1962, as required by Section 281 of the Companies Act, 1956, has been received:—

"That pursuant to the provisions of Section 281 of the Companies Act, 1956, it is hereby declared that the age limit imposed by Section 280 of that Act shall not apply to Mr. S. C. Law, a Direc-

tor of the Company, who has attained the age of 69 years, and who retires in rotation and, being eligible, offers himself for re-appointment, and that the said Mr. S. C. Law be and is hereby re-appointed a Director of the Company."

NOTICE is also hereby given that the Transfer Books and Register of Members of the Company will be closed from 17th May, 1962 to 31st May, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.,
D. MANSON,
Managing Director,
Managing Agents.

21, Netaji Subhas Road,
Calcutta, 24th April, 1962.

Note:—A member entitled to attend and vote at this meeting is entitled to appoint a proxy to attend and vote in his stead. Such proxy need not be a member of the Company.

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956, has been forwarded to the members of the Company.

What makes the candle burn?

Oxygen of course! Any schoolboy knows that. But before Lavoisier, who gave it the name, had studied the gas, it was one of the most puzzling questions.

Since then the properties of this gas have been studied by scientists enabling them to put it into use in various fields — welding and cutting of metals, blasting of huge rocks, relief to suffering patients etc. Its greatest use, however, has been in Industry in the shape of welding and cutting.

THE NEW INTERCORPORATE AND COMPANY TAXES

INCOME TAX is a subject which few people are able to consider objectively and dispassionately. When the pressure of personal taxation weighs so heavily on each of us, there can be little residual capacity for sympathising with the next man. An appeal on behalf of joint-stock companies may, therefore, appear to border upon the ludicrous. But the question "How high are company taxes?" assumes considerable importance when it is remembered that all taxation, whether individual or corporate, is ultimately suffered by living persons and that intercorporate investment plays a rôle of crucial importance when it is used to promote new enterprises in a developing economy. Before considering the recent taxation proposals relating to companies as contained in the Finance (No. 2) Bill, 1962, it is worth reviewing briefly the position of tax rates applicable to Indian companies during the past few years.

It was in the year 1959 that the new (existing) scheme of taxation on company profits and dividend income was introduced. Under the old system, the income of Indian companies was, broadly speaking, taxed at the rate of 51.5 percent, and the shareholders were given a credit for income tax at the rate of 31.5 percent, which was deemed to have been paid by the company on their behalf. A part of the income tax paid by the companies was thus, in effect, refundable in respect of profits distributed to the shareholders. The new scheme levied a total tax at the rate of 45 percent (20 percent income tax and 25 percent super tax) on the profits of the company, and no part of this tax was refundable to the shareholders. The issue whether the new scheme had increased or decreased the burden of tax on companies, was considered at length. Important commercial organisations carried out surveys of companies' profits and tax liabilities with a view to determining the correct position. The results of the survey indicated that the new scheme had resulted in an increase in the tax burden of the corporate sector—from about 43 percent to 45 percent. In view of the Finance Minister's statement in his Budget speech in February 1959 that the "overall tax burden applicable to Indian companies will be so fixed that the yield will be equal to the present gross yield minus the credit given now to the shareholders", business organisations expected that a slight reduction would be given in the rates of companies' taxation in due course.

However, when the Budget for 1960-61 was presented, the Finance Minister stated that although the Government had not had sufficient experience of the rate of 45 percent, he did not propose to make any change in that rate, but had decided to adopt it as the final figure. Representations were made to the Government against this stiff increase in the tax burden, but these were unsuccessful. The corporate sector ultimately reconciled itself to the tax rate of 45 percent in the hope that at some future date suitable relief would be forthcoming. In the subsequent year, that is 1961-62, the rates of tax on intercorporate dividends were revised, and the position thereafter was reviewed in an article published in

Capital on 9th March, 1961. It was shown there that the aggregate burden of taxation on dividend-paying and dividend-receiving companies was among the highest in the world, and that a total burden of 67 percent was too big a deterrent to intercorporate investment. It was then strongly urged that a uniform rate of 30 percent should be charged on dividends received by a company from its investments in another company, irrespective of the status of the dividend-paying or receiving company.

Against this background, the recent announcement to increase the rates of tax payable by Indian companies from 45 percent to 50 percent came as a bolt from the blue. While companies had expected a reduction in the rate of corporate taxation, they are now faced with an extremely inequitable and inexplicable increase. The Finance Minister has tried to sugar-coat the bitter announcement by a simultaneous reduction in the taxes on dividends from intercorporate investments on dividends from intercorporate investment. But the unpalatable fact remains that in spite of the reduction, the combined burden of taxation on intercorporate investment has increased further. This is evident from the accompanying tables, which show the net return to a shareholding company, under different arrangements, after payment of tax on profits and dividends at existing rates and at the rates proposed in the Finance (No. 2) Bill, 1962. (The case of Indian public companies whose total income does not exceed Rs. 25,000 has been omitted.)

The figures in the tables show an overall increase in the taxes on intercorporate investment; the slight relief to minority shareholders falls far short of requirements. The most disturbing feature of the new tax proposals revealed by the tables is the steep rise in the tax burden on intercorporate investment in what are popularly known as "basic industries", that is, industries listed in the fifth schedule to the Income Tax Act 1961. As a result of the increase in the income tax rate, the worst sufferers will be those companies engaged in make an investment in companies engaged in basic and heavy industry. In their case, not only has the tax on the profits of the manufacturing company gone up, but there is also a 5 percent increase in the tax on dividends received from that company, resulting in a total reduction of net yield to the investing company by as much as 6.5 percent. Is this in conformity with plan policies and priorities?

The proposed tax rates on company profits and their dividends will particularly affect new issues and new flotations in the corporate sector as the maximum net return on intercorporate investment in companies formed after 1st April, 1961 (with the exception of those listed in the fifth schedule to the Income Tax Act, 1961, and public companies with an income of less than Rs. 25,000) will be limited to 32.5 percent. It is now generally admitted that the new issue market is the most important source of equity finance for new large-scale enterprises. It is also known that intercorporate investments have a special rôle to play in the expansion of this source. What, then, is the justifi-

cation for the increase in the rates of corporate taxation? The Finance Minister's taxation proposals, read in the context of his latest Budget speech, are baffling. A high corporation tax will upset institutional saving and may also lead from equity to debt financing because interest is a deductible expense. Yet the Finance Minister wants industry in the private sector to exercise a greater measure of restraint in relying on bank finance! He also wishes to encourage the public at large,

even people with modest incomes, to invest in shares, but he forgets that high rates of tax will induce people to shy away from risky enterprises.

In discussing the scope for intercorporate investments, it is relevant to examine the eventual

yield to the entrepreneurs or other active investors who are shareholders in the investing company. Looking at the position from the viewpoint of the individual shareholder behind the investing company, the net yield of 32.5 percent will be further subject to personal taxes on unearned income, which may now rise to a new high of 87 percent for persons in the top-income brackets. The Finance Minister wants private industry to diversify its activities, but what is the effect of his taxation proposals on such diversification? Take the case of a few individuals who form an investment company called "A". That company invests in a manufacturing subsidiary company called "B". The manufacturing company does well and wishes to diversify its activities. So it forms a new subsidiary company called "C" for the new line of manufacture. Let us examine the effect of taxation on this form of investment under the proposed rates of taxation:

Proposed Rates	
	Rs.
Company "C" makes a profit of	100.00
It pays a tax of	50.00
It is left with	50.00
Company "B" receives the above	50.00
It pays tax thereon at 35%	17.50
It is left with	32.50
Company "A" receives the above	32.50
It pays a tax thereon at 35%	11.37
It is left with	21.13

The paltry yield of Rs. 21.13, when distributed among the various individuals who form themselves into an investment company, will be liable to further individual taxation, which may be as high as 87 percent, against the existing 84 percent. This is a rather odd way to encourage diversification. It can, of course, be suggested that the entrepreneurs need not introduce fresh investment through the medium of another company if it involves further taxation. This suggestion overlooks the fact that intercorporate investment has been found necessary even in the industrialisation of developed countries, one of its chief advantages being that it serves as a useful mechanism for the transfer of surplus funds and organisational resources to those who need them. In a developing economy, investments by companies must assume an increasing rôle in the growth of new enterprises.

The increase in corporate taxation is sought to be justified on the grounds of (1) increase in the tax provisions of companies; (2) increase in the percentage of dividends on paid-up capital and profits; and (3) increase in the aggregate fixed assets of companies. The cheerful mood of the stock markets in post-Budget sessions is also given as a justification for the rise in corporate taxation. But these arguments suffer from major fallacies. Firstly, the provision for taxation can never be a true criterion of the profitability of a concern. Taxable profits are computed after numerous adjustments to real profits; and even though the rate of tax may remain the same, the provision for taxation may increase due to an increase of taxable income in spite of a fall in real profits. Recently, the Finance Minister has withdrawn the additional depreciation allowance and has also reduced development rebate from 25 percent to 20 percent. The effect of the reduction in these allowances is that the taxable profits go up, and so also does the provision for taxation. In the circumstances, to say that because profits and the provision for taxation show an increase, the profitability of the companies has gone up, justifying an increase in tax rates, is to say "heads I win, tails you lose".

Secondly, as regards the percentage of dividends on paid-up capital, the real test should be the percentage of dividends to the net worth of the company. Moreover, some companies try to maintain a stable level of dividends; in their case, distributed profits as a percentage of gross profits vary inversely with the level of gross profits. Thus any increase in the percentage would imply a

fall in gross profits. Thirdly, it is true that the paid-up capital and gross fixed assets of companies have shown an upward trend, but has the pace of growth been so fast as to justify a higher levy which will retard it? The National Council of Applied Economic Research thinks otherwise, and holds that the growth of the corporate sector in terms of paid-up capital has not been proceeding very fast, nor are there any signs of buoyant expansion. (*Taxation and Private Investment*). On the other hand, it is probable that if taxation had been lower, the ability and willingness to invest would have been greater and private investment would have been at a much higher level. It is, therefore, imperative that the burden of taxation on intercorporate investment is not increased to such an extent that the rate of corporate capital formation is adversely affected. The explanation that there has been a boom in the stock markets after the Budget proposals is wholly unsound. The professional speculator in stock can create artificial booms for short periods;

THE BUDGET DEBATE

THE Central Finance Minister, Mr. Morarji Desai, has given no hint of the likely modifications in his tax proposals in his replies to the general debates on the Budget in the two houses of Parliament. But it is fairly obvious that he has no intention of going back on any of the proposed changes in direct taxation. Minor concessions seem likely in some of the new indirect imposts, particularly on cotton textiles. But these concessions could in any case have been given later if a few months' experience of the new levies had shown that they had done serious harm. On the other hand, the impact of the additional direct taxes will be difficult to establish quickly. Once raised, reduction of the rates will present political difficulties also. The debate itself indicated that members took very little interest in the point. This is unfortunate. For, the adverse effects will not be confined merely to the incomes or profits of the individuals and companies directly involved, but will retard the pace of economic development as a whole. It seems to be insufficiently realised that putting up the rates affects only the honest taxpayers; the unscrupulous, especially the more prosperous among the speculators and the shopkeepers, manage to get by without paying their due share. Too little attention appears to have been paid to the laxity in tax collection.

Not unexpectedly, the debate produced no new ideas in either house. Criticisms generally fell into three broad categories. Firstly, there were complaints that the burden on the common man was becoming too heavy. Spokesmen of the Communist Party and some Socialist members contended that the richer classes had got away lightly. Secondly, some speakers referred to the waste in Government expenditure. Thirdly, reference was made to the unprofitable operation of the public sector undertakings. The Finance Minister's replies to the charges were routine and uninspiring. His production of a match-box to prove that the new indirect taxes have not led to any rise in prices was as irrelevant as it was unconvincing. He attempted to deny the charge of waste by adding up the figures mentioned in the reports of the Public Accounts Committee, and contending that the Committee could locate only Rs. 3 crores of such expenditure out of a total Government outlay of Rs. 3,000 crores in a particular year. He defended the public sector projects by quoting the profits made by a few of them, while trying to explain away the losses sustained by many others and conveniently ignoring the cost to the country resulting from the delays in implementing many. How in such a situation he can continue to hope to obtain the contribution of Rs. 450 crores from public sector enterprise for financing the third five year plan is baffling, since the plan is already in its second year.

The Finance Minister admitted that the yield expected over the plan period from last year's tax measures is Rs. 450 crores and from this year's imposts Rs. 400 crores. The Budget had placed the prospective revenue receipts from the latest im-

posts at about Rs. 72 crores in a full year and Rs. 69 crores this year; these estimates would give roughly Rs. 285 crores for the whole third plan, or perhaps Rs. 320 crores or Rs. 330 crores if allowance is made for the normal rise in tax yields with economic growth. He has thus confirmed industry's fears that the burden of the tax measures proposed will in fact be larger than he has claimed in the Budget. While underestimation of revenues may appear a safe procedure for the officials of the Finance Ministry, it is questionable whether it sets a healthy precedent for financial probity from those who ought to show the way. On the basis of the revised estimates of revenue from the taxes levied since the third plan was inaugurated, the Centre has still to raise Rs. 250 crores to fulfil its plan target of Rs. 1,100 crores of additional taxation. This may mean further revenue-raising efforts of approximately Rs. 40 crores in each of the succeeding three years. The res in each of the succeeding three years. The prospect is, however, gloomier than that for three reasons. The States do not appear to be able to raise the additional Rs. 610 crores in taxes expected of them by the planners. The surplus of Rs. 450 crores from Central and State enterprises also appears unlikely to materialise. Since the Centre's borrowing programme is already in the difficulties and the chances of the small savings target being achieved are remote, Mr. Desai may find himself compelled to resort to larger doses of fresh taxation than he is now contemplating. But he should remember that there is a stage beyond which rates can be raised only at the risk of diminishing the yield.

From this point of view, the debate in Parliament was lacking in any long-term perspective. Most of the participants were unwilling to look ahead and visualise what sort of a tax structure they would like to see emerge for promoting economic development. The Finance Minister did, of course, say that he had already "planned (tax measures) for all the five years". He admitted in the course of his speeches that corporate taxation is higher in India than in almost all developed countries, barring the U.S.A.—a curious situation considering that this country needs to offer incentives for saving and investment to accomplish the fastest rate of growth possible. It is, therefore, to be hoped that his future plans will allow for some concessions in direct taxation, particularly corporate taxation, if the proposed levies do more harm than he is prepared to admit so far.

THE PROPOSED CUT IN U.S. ECONOMIC AID

THE Foreign Relations Committee of the United States Senate has recommended a 25 percent cut in U.S. economic aid to India. If approved by Congress, the cut will apply both to the \$727 million provided for the current fiscal year ending on 30th June and to the \$815 million proposed by the Kennedy Administration for the next financial year. That India has a close and anxious interest in these proceedings is obvious. By far the biggest

contribution for covering the foreign exchange deficit of the third five year plan is expected from the U.S.A. Appreciating the situation, the U.S. Agency for International Development had proposed a bigger allocation for India in 1962-63. Unless Congress reverses the Senate Committee's decision, India's chances of obtaining all the foreign assistance needed for the plan will become dangerously slim.

President Kennedy has suggested that during 1962-63 the United States give \$3,400 million in economic aid to the outside world, or about \$1,000 million more than the amount voted by Congress for 1961-62. In addition he has recommended \$1,400 million or so for military assistance. If approved, the amount for economic aid will be the largest ever sanctioned by the United States for assistance to under-developed countries in a single year. Out of this, the United States has already tentatively agreed to provide \$500 million to India for the second year of the third five year plan; this was done at the meeting of the Aid-India Club held in May last year. This amount will evidently not be affected by the Senate Committee's cut. If, however, President Kennedy's proposals are approved without major changes by Congress finally, the amount of aid India actually gets will be somewhat larger particularly if the current negotiation over the proposed Bokaro steel plant are successful. For the first year of the third plan, the United States had agreed to give \$545 million, besides foodgrain shipments under P.L. 480. About \$458 million of the former sum has already been committed, and the balance is likely to be committed before 30th June, when the U.S. fiscal year ends.

Apart from shipments under P.L. 480 and the Wheat Loan of 1951, amounting to nearly \$1,300 million, U.S. assistance to India in the first and second plans totalled about \$1,000 million. For the third plan, the Planning Commission has estimated that India will need Rs. 2,600 crores in foreign assistance, besides Rs. 600 crores in P.L. 480 shipments. A sizeable portion will come from the U.S.A. Despite the opposition from certain sections of Congress, as reflected in the Senate Committee's action, the outlook is quite promising. By virtue of her geographical position, her size, her population, and her peculiar status among the neutral nations, India has become an important country from the U.S. point of view. India is trying to achieve rapid economic progress within a democratic political framework, in contrast to the totalitarian methods being pursued by China. For all these reasons she is looked upon as a testing ground for the free world's ideas in the cold war. In addition, India is receiving significant amounts of aid from Russia and some east European countries. This has given new impetus to aid from the West, and particularly from the U.S.A.

It is to the credit of the U.S.A. that she has persisted with her worldwide aid programmes in spite of a great deal of criticism both at home and abroad. Many Americans tend to think of aid to under-developed countries as a variation of the Marshall Plan. The Marshall Plan itself was highly successful, because its objective was limited and clear—the rehabilitation of the war-shattered economies of western Europe. The Russian threat to western Europe at that time was keenly felt. The same quick success has not attended American efforts to aid the under-developed countries. On the other hand, she has been criticised for numerous, sometimes contradictory, reasons. At home, the U.S. Government has been attacked for helping Yugoslavia, a communist State; or Peru, because she has a conservative government; or India, because she is neutral. As a writer in the *New Statesman* puts it, "the safest axiom regarding the U.S. foreign aid programme is that whatever is done is wrong because it is too much, too little, too soon, too late, too pragmatic, too doctrinaire, too selfish, too altruistic."

Three important changes have been made in U.S. aid policy in the past year or so. The first is the establishment of the Agency for International Development within the U.S. Administration to co-ordinate all U.S. aid activities. The Agency is also responsible for administering all aid other than loans granted by the Export-Import Bank and food-grain sales for local currency under P.L. 480. This

is a logical step in view of U.S. attempts to achieve greater co-ordination of all western aid activities in under-developed countries. The second step is to require repayment in dollars of all new development loans, other than local currency loans out of P.L. 480 sale proceeds. This is designed to meet criticisms that loans repayable in local currencies can never be really got back; at the same time, it gives borrowing countries a more exact idea of their debt-servicing obligations. The interest charged on most new development loans has been reduced to 7 percent. There is an initial grace period of ten years, and the loan is repayable over the subsequent 40 years.

The other change is to insist that purchases from U.S. aid funds should be made in the United States. This is to some extent understandable, since most aid-giving countries impose a similar condition. It is designed partly to meet domestic criticism that, while there are many "depressed"

areas within the U.S.A. itself, aid funds should not be spent abroad. Still, the restriction reduces the bargaining power of the borrowing countries in negotiating purchases with manufacturers, particularly if a loan is also tied to a specific project. The best solution, the developing countries feel, would be for all aid-giving countries to agree to extend "untied" loans. If this does not appear to be feasible now, many think that the aid-giving countries should offer lump-sum loans to start with, "tied" to purchases within the respective countries but not "tied" to specific projects or schemes. The borrowing country can then decide which loans it will use for which schemes. Under such a procedure, the lending country will continue to get the praise for financing specific projects. It is hoped that the U.S.A. will take a major step forward in the evolution of such a policy, since it will help the borrowing countries to derive the maximum benefit from the aid they get.

Current News and Comment

Indian Copper Profit Falls

The fall in the trading profit of the Indian Copper Corporation Ltd from £1,307,982 in 1960 to £1,222,163 in 1961, is not surprising, considering that the international price of copper in 1961 was lower than in 1960. Although the output of the Corporation is much smaller than domestic requirements, the Indian price is usually governed by world factors. A taxable ordinary dividend of 27 percent has been maintained, absorbing £370,251. The dividend is to be paid on 31st August, 1962. The books of the Company will be closed from 9th June to 1st July, 1962. Out of the profit, depreciation absorbs £165,000 (against £175,000), gratuities £4,125, decretal amount under the kyanite suit £68,465 and taxation £504,512 (against £500,477). A sum of £56,250 (against £50,625) is transferred to development rebate reserve and general reserve is allocated £100,000 (against £200,000). The carry-forward is £72,310, against £118,750 brought in.

More from Kumardhubi Engineering

The directors of the Kumardhubi Engineering Works Ltd take a fairly optimistic view of the outlook for the Company. There has been an appreciable increase in business. Orders are considered sufficient until the middle of 1963. The foundry is working to capacity, showing an in-

creased turnover. The structural steel works has been handling more business. The profit has amounted to Rs. 7.80 lakhs for the year ended November 1961, compared with Rs. 8.37 lakhs in 1959-60. The taxable ordinary dividend has been increased from 10 percent to 11½ percent. At the present price of Rs. 8.15, the share offers a yield of 4.3 percent. The dividend is covered more than twice. Taxation absorbs Rs. 3.65 lakhs (against Rs. 2.64 lakhs), and development rebate reserve Rs. 38,300 (against Rs. 62,500). The carry-forward is Rs. 13,579, against Rs. 37,543 brought in. Depreciation is allotted Rs. 6.20 lakhs (against Rs. 5.10 lakhs) before arriving at the profit figure.

Good Outlook for Soorah Jute

Presenting their report for the year ended December 1961, the directors of the Soorah Jute Mills Co. Ltd say that the prospects for 1962 are good. As a result of the increased raw jute supply, the mill is working to capacity and the market for gunnies continues to be satisfactory. The profit has declined from Rs. 9.51 lakhs in 1960 to Rs. 5.88 lakhs in 1961, after increasing depreciation from Rs. 2.09 lakhs to Rs. 2.40 lakhs. A taxable ordinary dividend of 25 percent has been paid absorbing Rs. 3.50 lakhs. It offers a yield of 9.8 percent at the present price of Rs. 25.56 a share. Taxation is allocated Rs. 2.60 lakhs (against Rs. 4.15 lakhs), and general reserve

Rs. 2 lakhs (against Rs. 1.20 lakhs). The carry-forward is Rs. 16,168, against Rs. 21,730 brought in.

Dunbar and Bowreah Cotton Results

The Dunbar Mills Ltd and the Bowreah Cotton Mills Co. Ltd have shown excellent results for the year ended December 1961. The profit of Dunbar Mills has risen from Rs. 24.52 lakhs in 1960 to Rs. 40.11 lakhs in 1961, after providing Rs. 8.86 lakhs (against Rs. 9.93 lakhs) for depreciation. The taxable ordinary dividend of 20 percent has been maintained, but the ordinary share capital has meanwhile been raised from Rs. 28.50 lakhs to Rs. 38 lakhs. The dividend is covered more than five times and offers a yield of 6 percent at the present price of Rs. 33.25 a share. Taxation absorbs Rs. 20.75 lakhs (against Rs. 1.60 lakhs), development rebate reserve Rs. 1.11 lakhs (against Rs. 4.10 lakhs), depreciation for earlier years Rs. 6.50 lakhs (against Rs. 8 lakhs) and general reserve Rs. 4.50 lakhs (against Rs. 10 lakhs). The carry-forward is Rs. 2.30 lakhs, against Rs. 2.16 lakhs brought in. Additional plant and machinery worth Rs. 6.79 lakhs has been installed. Further orders for Rs. 18 lakhs have been placed for modernising the mills.

The profit of Bowreah Cotton has increased from Rs. 13.67 lakhs to Rs. 30.67 lakhs, after raising depreciation from Rs. 11.99 lakhs to Rs. 12.31 lakhs. The taxable ordinary dividend has been doubled to 20 percent, offering a yield of 4.9 percent at the present price of Rs. 41 a share. It is covered more than six times. Depreciation for earlier years amounts to Rs. 6.50 lakhs. Development rebate reserve is allocated Rs. 3.75 lakhs (against Rs. 4 lakhs) and general reserve Rs. 13.50 lakhs (against Rs. 5 lakhs). The carry-forward is Rs. 2.16 lakhs, against Rs. 1.14 lakhs brought in. The installation of mercerising and other machinery has been completed. Plant and machinery valued at Rs. 25.18 lakhs has been added in 1961. Further orders for Rs. 25 lakhs have been placed for modernisation of the mills.

The directors of both Dunbar Mills and Bowreah Cotton Mills point to the growing shortage of raw cotton. The domestic production in 1961-62 is estimated at only 4.2 million bales. The directors hope that the shortfall will be made good by increased raw cotton imports.

Bengal Flour Pays Less

The Bengal Flour Mills Co. Ltd has reduced the taxable ordinary dividend from 40 percent to 25 percent, including an interim of 5 percent, for 1961. It is covered more than twice, and works out to a yield of 6.5 percent at the present price of Rs. 38.62 a share. The profit has fallen from Rs. 13.69 lakhs in 1960 to Rs. 7.30 lakhs in 1961, after providing Rs. 1.21 lakhs (against Rs. 1.68 lakhs) for depreciation. Taxation is allocated Rs. 3.27 lakhs (against Rs. 6.52 lakhs), development rebate reserve Rs. 22.157 (against Rs. 18,758), and general reserve Rs. 1 lakh (against Rs. 2.50 lakhs). There is a carry-forward of Rs. 1.69 lakhs, against Rs. 1.88 lakhs brought in. Production in the past year was affected by labour troubles. The directors say that the available funds of the Company will be fully used to build up wheat stocks.

Cheviot and Delta Jute

The Cheviot Mills Co. Ltd and the Delta Jute Mills Co. Ltd have incurred losses for the year ended November 1961, due to the relatively high prices of raw jute which prevailed during the period in relation to those of jute goods. The directors, however, take an encouraging view of the outlook for the current year as fibre supplies have been abundant at cheaper rates. The operational efficiency of the mills has improved and a reasonable ratio has been maintained between the price of raw jute and that of manufactures; so it has been possible to transact simultaneous business at a reasonable profit during the current year.

The Belvedere Jute Mills Co. Ltd was amalgamated with Delta Jute Mills on 30th November, 1951. Consequently, the preference share capital of Delta has risen from Rs. 5 lakhs to Rs. 14.06

lakhs, and the ordinary share capital from Rs. 28 lakhs to Rs. 50 lakhs. The excess of the book value of the assets and liabilities of Belvedere over the face value of its shares, has been shown as capital reserve. The loss of Delta has amounted to Rs. 9.12 lakhs, after raising depreciation from Rs. 3.07 lakhs to Rs. 5.51 lakhs. Bringing in Rs. 15,632, transferring Rs. 35,000 from the dividend equalisation reserve and paying the usual preference dividends, a debit balance of Rs. 8.97 lakhs is being carried forward. The ordinary dividend has been passed. With the installation of further up-to-date drawing and spinning machinery, the modernisation of the drawing and spinning sections has been completed to the extent of 87.5 percent of the mill's loomage. Gunny sales rose from Rs. 1.56 crores to Rs. 1.87 crores.

The loss of Cheviot Mills is Rs. 16.01 lakhs, after increasing depreciation from Rs. 2.64 lakhs to Rs. 6.87 lakhs. Bringing in Rs. 6,533 and transferring a sum of Rs. 22.40 lakhs arising from the sale of the Orient Mill property, a taxable ordinary dividend of 5 percent has been declared, which absorbs Rs. 1.93 lakhs. It offers a yield of 1.9 percent at the present price of Rs. 25.75 a share. The dividend was passed in 1959-60. Development rebate reserve is allocated Rs. 2.58 lakhs, leaving a carry-forward of Rs. 1.21 lakhs. The installation of further modern drawing and spinning machinery has helped improve the supply of heavy wet yarns to the extent of 60 percent of the requirements, and similar machinery to secure the balance of 40 percent of the yarns will be installed shortly.

Burmah Oil Pays More

On the strength of an improvement of more than £1 million in net profits for 1961, the directors of the Burmah Oil Co. have raised the final dividend on the £84,419,080 of ordinary stock from 1s 4½d to 1s 7d a share, free of tax. This brings the total for the year to 2s 1d, tax-free, against 1s 10½d, tax-free, last time. Group trading profit is down from £4,973,050 to £4,456,515. But depreciation charge is lower. Adding increased income from trade investments and other sources, pre-tax profit is up from £18,446,093 to £20,183,474. Net earnings after tax, at £11,086,581, compare with £9,996,513. Last year the Company's holding in Oil India Ltd was reduced to 50 percent; this is, therefore, no longer consolidated. The 1961 accounts of the Tinplate Company of India, being available, have been consolidated. These changes are reflected in the figures. The Company is still heavily dependent on income from its large investments in Shell and British Petroleum; so the immediate outlook is satisfactory.

Ceat Tyres Earns More Profit

Ceat Tyres reports encouraging results for 1961—the second year of production. Sales have recorded an impressive rise from Rs. 1.37 crores to Rs. 3.62 crores. The improvement in the gross profit is even more impressive: it is up from Rs. 4.26 lakhs to Rs. 49.36 lakhs. The ratio of profit to sales works out to 13.6 percent, against a mere 3 percent in the previous year. The improvement was, however, to be expected with the better utilisation of plant capacity. Production is still running far below the licensed capacity of 1,000 tonnes a month; the figure for 1961 is mentioned as around 325 tonnes a month. Out of the year's profit of Rs. 49.36 lakhs, depreciation claims Rs. 13.86 lakhs (against Rs. 12.29 lakhs) and development rebate reserve Rs. 22.87 lakhs (against nil). After taking into account the previous loss of Rs. 8.03 lakhs carried forward, and writing off preliminary expenses, commission and brokerage amounting to Rs. 2.92 lakhs, a sum of Rs. 1.66 lakhs is being carried forward. No dividend has been recommended for 1961, but the shareholders may not have to wait long for their investment to begin to bear fruit. The directors have expressed the view that the Company would be able to attain the licensed capacity by early 1963, provided raw material licences are received according to schedule. Licences for plant and capital equipment required for the expansion have been granted and satisfactory progress has been made in this. The Company increased its paid-up capital during

the year from Rs. 1.15 crores to Rs. 2.76 crores by the issue of rights shares. The reserves and surplus, including share premium, amount to Rs. 65.14 lakhs. Additions to the fixed assets made in 1961 totalled Rs. 22.42 lakhs, which brings the value of these assets to Rs. 1.69 crores. The provision for depreciation made on them amounts to Rs. 23.27 lakhs. The Rs. 100-paid (old) share of the Company is quoted around Rs. 185.

New India Assurance Fares Well

The directors of the New India Assurance Company has recommended a dividend of Rs. 4.50 and a bonus of Rs. 1.20, making a total distribution of Rs. 5.70 a share, subject to tax, for 1961. The net distribution works out to Rs. 3.99 a share, which is the same as in the preceding year. As in the previous two years, the dividend of Rs. 4.50 is to be paid out of the profits for the year, while the payment of the bonus of Rs. 1.20 is to be made from the balance of the capital reserve of Rs. 30.99 lakhs built up from the compensation received for the Company's life business. Dividend and bonus account for a total distribution of Rs. 56.96 lakhs. Although the dividend has only been maintained, the preliminary report shows that the Company has done much better than in 1960. The net premium income in 1961 exceeds Rs. 12.6 crores, representing an increase of Rs. 1.8 crores over the previous year's figure. The profit after provision for taxation and transfer to departmental reserves, it is expected, will exceed Rs. 70 lakhs, against Rs. 59 lakhs in 1960. The Company's working results appear very impressive, since the net premium income in 1957 amounted to only Rs. 6.3 crores and the profit earned was Rs. 27.97 lakhs. The Rs. 15-paid up share of the Company (face value Rs. 75) is currently quoted around Rs. 70 cum-dividend, offering a gross yield of 8.8 percent.

Same from Mukand Iron

The Rs. 10-paid shares of Mukand Iron and Steel Works have eased from Rs. 29 to Rs. 28.20, following the directors' decision to maintain the dividend for 1961 at 12 percent, subject to tax, and the release of the preliminary figures for the Company's working results. But shareholders have a little reason to complain about the dividend; it though it has apparently been maintained, it actually involves a larger distribution of Rs. 12.39 lakhs, against Rs. 10.39 lakhs, on account of the increase in the paid-up capital. Nor can the small setback in the gross profit from Rs. 62.81 lakhs to Rs. 61.43 lakhs be considered unsatisfactory in view of the billet shortage which affected the working of the rolling mills adversely. The directors' full report will show how the rolling mills have been hit during the year. The provision for depreciation has been stepped up from Rs. 9.73 lakhs to Rs. 11.52 lakhs, and the development rebate reserve gets Rs. 4 lakhs, against Rs. 1.70 lakhs. Allocation to the gratuity reserve is down from Rs. 6.50 lakhs to Rs. 1.50 lakhs, and the share of the general reserve is also lower at Rs. 7.55 lakhs, compared with Rs. 10 lakhs. Taxation is unchanged at Rs. 25 lakhs.

Shreeniwas Cotton Raises Dividend

Shreeniwas Cotton Mills did well in 1961, with both sales and gross profit rising substantially. This has enabled the directors to raise the dividend from Rs. 18 to Rs. 20 a share, taxable. Mr. P. D. Bangur, who recently presided over the Company's annual meeting in the absence of the chairman, Mr. G. C. Bangur, took an optimistic view of the outlook. Of course, a good deal must depend on the cotton supply position, which continues to be a source of anxiety, and the outcome of the industry's plea for relief from the proposed excise duty on processed cloth. According to Mr. Bangur, Shreeniwas Cotton Mills will have to pay an additional Rs. 45 lakhs a year by way of excise duty and another Rs. 2.75 lakhs on account of the increase in the corporation tax. Optimism about the future is based on the extensive modernisation and renovation carried out over the past few

years. The Company has spent as much as Rs. 2 crores on modernisation since 1963. The spinning department has been completely modernised. Additional new combing equipment has been installed which now enables the Company to comb the entire yarn production. The spinning and weaving departments are fully equipped with the latest humidification and ventilation plant. The processing department has also been reorganised. Mr. Bangur stated that the Company would continue to need additional resources for the modernisation of its weaving section, for which a beginning has been made by planning the installation of 96 automatic looms. The programme of substantial renovation has resulted in the diversification of the Company's production by progressively increasing the proportion of finer varieties to suit the changed pattern of consumer demand. The production of grey cloth has been eliminated and the entire output is now processed in dyed, bleached, mercerised and printed forms. The Company is trying to build a good export market. Since January 1962, it has exported goods worth Rs. 16 lakhs, with further orders on hand amounting to Rs. 9 lakhs. It is trying to introduce rationalisation without causing much dislocation to the general employment of workers. The subsidiaries of the Company—Shree Madhusudan Mills and Sree Gopal Industries—are, it is stated, making satisfactory progress.

Podar Mills Earns More

The preliminary report on the working of Podar Mills for 1961 shows that the Company has done much better than in 1960, although the dividend on the ordinary shares has only been maintained at Rs. 12 a share, including a special bonus of Rs. 2, subject to tax. The gross profit of Rs. 30.80 lakhs shows an increase of about 15.4 percent over that of 1960, which was Rs. 24.94 lakhs. The gross profit in 1959 was a mere Rs. 11.42 lakhs. After providing Rs. 6.72 lakhs (against Rs. 6.67 lakhs) for depreciation, Rs. 13.50 lakhs (against Rs. 6.50 lakhs) for taxation, and deducting other charges, the net profit amounts to Rs. 8.14 lakhs, compared with Rs. 9.98 lakhs in 1960. The allocation to the development rebate reserve has been reduced from Rs. 1.75 lakhs to Rs. 1 lakh, but the general reserve and dividend equalisation reserve, which received nothing in the previous year, get Rs. 1.80 lakhs and Rs. 60,000, respectively. A sum of Rs. 1.36 lakhs is being carried forward, against Rs. 2.40 lakhs brought in. The Rs. 100-paid share of Podar Mills is currently quoted around Rs. 150 cum-dividend, offering a tax-free yield of about 5.9 percent.

New Great Insurance Does Well

The New Great Insurance Co. of India Ltd reports encouraging results for 1961. The net premium income of the fire department has gone up substantially from Rs. 42.24 lakhs to Rs. 50.61 lakhs, and that of the miscellaneous department from Rs. 31.99 lakhs to Rs. 40.40 lakhs. The marine premium, however, is down from Rs. 19.50 lakhs to Rs. 14.65 lakhs. Departmental reserves have been increased from Rs. 56.62 lakhs to Rs. 60.37 lakhs. The net profit, after providing for taxation and after increasing the general reserve by Rs. 3 lakhs, amounts to Rs. 3.30 lakhs, compared with Rs. 2.75 lakhs in 1960. The improved results have encouraged the directors to step up the dividend from Rs. 2.50 a share to Rs. 3 a share, subject to tax. The Rs. 20-paid share of New Great Insurance is nominally quoted around Rs. 21.

Prospects for Atul Products

Atul Products had a difficult time in 1961. The Company was unable to make full use of its plant due to the shortage of coal and raw materials; the loss of production was of the order of Rs. 50 lakhs. Besides, indiscriminate imports of dyes by the State Trading Corporation led to unexpected glut in the market and substantial decline in dye prices. The chairman, Mr. Kasturbhai Lalbhai's annual speech to shareholders, delivered last week, holds out little hope of any improvement in the prospects for the Company in the near future, except that the management is trying hard to reduce the dependence on foreign raw materials. The chair-

man has, in fact, warned that the inadequacy of coal and raw materials will continue to be a problem for some time to come. The shortfall in the Company's production in the current year will be more than in 1961, unless the Government so plans the production of coal and supply of wagons that it is able to fulfil its assurance that at least the recently reduced coal quotas will be fully made available to Atul Products. Mr. Kasturbhai said that if coal was to remain in short supply in the country and particularly in Gujarat, the Government should see to it that oil was made available as fuel to the industries in Gujarat in sufficient quantities and at suitable prices. He urged the State Government to take up this and other related problems with the Central Government.

A substantial part of the raw materials used by the Company is imported. The difficult foreign exchange position necessitated a cut in the import licences granted to it last year, and there has been a further cut this year. Although efforts are being made to procure raw materials from countries which accept payment in rupees, there are problems in these arrangements, in that the Company has no choice of quality and range of goods. Besides, the prices of materials have been going up and delivery schedules are not always scrupulously adhered to. Referring to the Company's efforts to produce as much of its raw materials as possible, Mr. Kasturbhai Lalbhai says that it has already started the production of four intermediates for use in the manufacture of Azo dyes. This has largely relieved the troubles for the nine Azo dyes which are being manufactured in large quantities. Plants for the manufacture of 22 other intermediates needed by the Company, it is expected, will be ready by 1964. Orders have been placed for the steel structure required, and orders for equipment will be placed shortly. A plant for an important intermediate required for naphthol dyes is being installed, and is likely to be commissioned by the end of this year. With the completion of these schemes, the Company would be 80 percent self-sufficient in its raw material requirements, the chairman said.

The Company has plans to diversify and co-ordinate its production and that of other associate companies working at Atul with a view to having a broad-based chemical complex, which will avoid too large a dependence on any one group of products. A licence has been received for the manufacture of certain chlorinated products by utilising the chlorine from the caustic soda plant. Cibatul will first manufacture urea formaldehyde plastic and then expand its lines for making related products. The Rs. 100-paid shares of Atul Products have recently been fluctuating between Rs. 515 and Rs. 525.

Share Offer by Gammon India

Gammon India (Private) Ltd, Bombay, which specialises in civil engineering works and has built many water towers, will soon convert itself into a public limited company, and enter the market to raise funds to finance its expansion programme. The new company will have an authorised capital of Rs. 1.75 crores, all in equity shares of Rs. 10 each. The issued capital will be Rs. 1.15 crores. Besides the existing paid-up capital of Rs. 55 lakhs, the promoters propose to issue 600,000 equity shares of the value of Rs. 60 lakhs at a premium of Rs. 7 a share. Of this, the directors and their friends will take up shares of the value of Rs. 20 lakhs, and the remaining 400,000 shares will be offered for public subscription. The new issue which is being exclusively made to Indian residents, it is expected, will come into the market by the end of this month.

Borosil Glass Works Expansion

Borosil Glass Works, Bombay, which is already manufacturing scientific and laboratory glassware, is embarking on a big expansion programme in collaboration with Corning Glass Works of the U.S.A. The new factory with a capacity of 7,200 tons a year will be located in Marol, Greater Bombay. The programme of manufacture includes glass tubing, rodding, industrial glass and chemical glass plants. The project, which is estimated to involve a capital outlay of Rs. 1.50 crores, will be

implemented by a new company to be known as Borosil Glass Works Limited. It will hold a monopoly of all patents of Corning Glass Works for the next five years; any other collaboration plans of the American firm in the field of laboratory or scientific glass manufacturing in India will be subject to the approval of the Indian Company. The new concern will have an issued capital of Rs. 1.50 crores in equity shares of Rs. 10 each, of which 49 percent will be taken up by Corning Glass Works. Of the remaining 51 percent, 49 percent will be offered for public subscription to satisfy the listing requirements of the stock exchanges. The existing shareholders of Borosil Glass Works are likely to be offered shares of the value of Rs. 20 lakhs. The details of the capital issue are still being worked out, and the Company is likely to enter the market some time in September. The promoters expect the new plant to go into production in June 1963 and the rated capacity to be achieved in 1964. When in full production, the Company, it is claimed, will be able to meet about 80 percent of the country's requirements of scientific and laboratory glassware. The turnover of the Company, it is expected, will reach Rs. 2 crores in 1965.

According to the managing director, Dr. S. R. Lele, the existing Company's sales in 1961 were to the tune of Rs. 29.30 lakhs, yielding a net profit of about Rs. 7 lakhs. In spite of the increase in capacity from the present 1,800 tons to 7,200 tons, the number of labourers employed in the new factory will rise by only a small margin as the new plant will be fully mechanised. About 96 percent of the raw materials will be secured from indigenous sources. The value of imported plant and equipment is said to be around Rs. 80 lakhs. The foreign exchange requirements are likely to be met entirely by the share subscription of the foreign collaborators. Machinery is likely to be purchased mostly from the Continent, where it can be had more cheaply than in the U.S.A.

Dharamsi Chemical Earns Less

The directors of the Dharamsi Morarji Chemical Co. have recommended a dividend of 16 percent—Rs. 8 a share on old scrip and Rs. 2 on the new bonus shares allotted in October 1961—on the increased capital. They are of the view that no tax is payable by the shareholders, as the whole of the dividend is being distributed out of the profits of new industrial units exempt from tax. This, however, is subject to confirmation by the income tax authorities. In 1960, no dividend was paid, as the directors wished to plough back all the distributable profit to finance the expansion plans. Instead, bonus shares were issued in the ratio of four for every ten held. Between 1959 and 1961, the paid-up capital has been raised from Rs. 13.69 lakhs to Rs. 31.83 lakhs through a two-for-three rights issue and the four-for-ten bonus issue. The preliminary report shows that the Company has fared badly in 1961. The fall in the gross profit from Rs. 41.85 lakhs to Rs. 27.60 lakhs is unexpectedly large. After providing Rs. 11.66 lakhs (against Rs. 6.27 lakhs) for depreciation, and Rs. 60,000 (against Rs. 12 lakhs) for taxation, the net profit is down from Rs. 20.52 lakhs to Rs. 14.14 lakhs. From this, the directors have set aside Rs. 5.25 lakhs (against Rs. 79,000) for development rebate and Rs. 3.75 lakhs (against Rs. 3.69 lakhs) for bonus to employees. A sum of Rs. 4.30 lakhs has been transferred to general reserve No. 2, representing exempted profits, and Rs. 2.50 lakhs to general reserve No. 1. The dividend is to be paid from general reserve No. 2. The directors have split up the existing general reserve No. 2 amounting to Rs. 26 lakhs and transferred Rs. 21.11 lakhs to general reserve No. 1, keeping a balance of Rs. 4.89 lakhs representing the profits exempted from tax. This brings the total amount standing to the credit of general reserve No. 1 to Rs. 33.81 lakhs. After providing for the proposed dividend for 1961 out of general reserve No. 2, there will remain a sum of Rs. 5.20 lakhs to the credit of this account. The Rs. 50-paid share of Dharamsi Chemical is currently quoted around Rs. 192 cum-dividend, offering a tax-free yield of nearly 4.3 percent.

Elphinstone Mills Pays More Again

The Rs. 50-paid shares of the Elphinstone Spinning and Weaving Mills, which could be had

around Rs. 55 in 1961, were bid up last week to a high of Rs. 142. The latest quotation is a little lower around Rs. 138. The sustained investment support which brought about the spectacular rise, has been based on optimistic ideas about the Company's working results. The optimism has not proved misplaced. For the second year in succession, the directors have raised the dividend—from 18 percent to 22 percent for 1961. In 1959, the Company paid 14 percent after a break of two years. The increase in the dividend is well justified by Elphinstone Mills' encouraging performance in 1961. Sales are up by about 27.7 percent from Rs. 2.27 crores to Rs. 2.89 crores, and the gross profit has increased by nearly 32 percent from Rs. 36.93 lakhs to Rs. 48.78 lakhs. The ratio of gross profit to sales works out to 16.8 percent, against 16.3 percent in 1960. The dividend is covered nearly three and a half times. After providing Rs. 8.08 lakhs (against Rs. 6.30 lakhs) for depreciation, Rs. 2.28 lakhs (against Rs. 2.37 lakhs) for development rebate reserve and Rs. 16 lakhs (against Rs. 7 lakhs) for taxation, the net profit amounts to Rs. 22.42 lakhs, against Rs. 21.26 lakhs in 1960. Allocations include Rs. 75,421 (against Rs. 79,607) for development reserve and Rs. 70,793 (against nil) for doubtful debts. No provision has been made for replacement reserve, which received Rs. 9.35 lakhs in 1960. The preference dividend takes Rs. 1.75 lakhs, and the proposed ordinary dividend absorbs Rs. 6.60 lakhs (against Rs. 5.40 lakhs). There remains a surplus of Rs. 1.37 lakhs to be carried forward, against Rs. 1.06 lakhs brought in.

Coimbatore Pioneer Pays More

The increase in the dividend of Coimbatore Pioneer Mills for 1961 from 16 percent to 25 percent, seems well justified by the marked improvement in the Company's working results. As against a rise of 11.2 percent in sales from Rs. 1.26 crores to Rs. 1.40 crores, the gross profit has increased impressively by 36.4 percent from Rs. 22.02 lakhs to Rs. 30.02 lakhs. After providing Rs. 2 lakhs (against Rs. 33.000) for development rebate, Rs. 5.63 lakhs (against Rs. 5.36 lakhs) for depreciation, and Rs. 9.50 lakhs (against Rs. 7.50 lakhs) for taxation, the net profit amounts to Rs. 19.39 lakhs, against Rs. 14.87 lakhs in 1960. The proposed ordinary dividend will absorb Rs. 6.25 lakhs, against Rs. 3.25 lakhs. The dividend on cumulative preference shares accounts for Rs. 8.450. The provision for general reserve has been reduced from Rs. 4 lakhs to Rs. 3.25 lakhs. The carry-forward amounts to Rs. 17.916, against Rs. 14.352 brought in.

The directors report that a humidification plant has been installed at the Company's B mills. The preparatory and spinning machinery at the A mills is being modernised. Under the expansion scheme, 10,000 spindles for spinning staple fibre are being installed in B mills, of which 5,720 spindles have already been commissioned. Steps are being taken for the establishment of a ball and roller bearing unit. The directors have decided to issue further capital of Rs. 60 lakhs in equity shares of Rs. 100 each. The current quotations for the Company's Rs. 100-paid share is around Rs. 286.

Usha Martin Black

The ordinary shares of Usha Martin Black (Wire Ropes) Ltd have been steady around Rs. 16.10 on the news that the factory has gone into trial production. The directors expect to begin normal production soon. The first annual report of the Company for the year ended December 1960, shows a loss of Rs. 1.46 lakhs, after providing Rs. 13.182 for depreciation. The loss is being carried forward.

Poor Outlook for Lucky Valley

Although the dividend has been maintained at 10 percent (Re. 1 a share), the working results of the Lucky Valley (Nilgiri Hills) Tea Estates Ltd for 1961 show a heavy fall in the gross profit from Rs. 220 lakhs to Rs. 1.22 lakhs. This is attributable mainly to the lower tea crop of 305,757 lbs. against 351,427 lbs in 1960. The average sale price of tea was around Rs. 2.31 a lb, compared with Rs. 2.34

amounted to Rs. 63,345 tonnes, against 60,816 tonnes in 1959-60. The mill worked mostly on imported wheat. The breakfast foods factory continued to show improvement during the year, although due to foreign exchange shortage, the Company experienced considerable difficulty in obtaining its requirements of raw material from abroad. After providing Rs. 2.97 lakhs (against Rs. 2.90 lakhs) for depreciation and Rs. 17 lakhs (against Rs. 21 lakhs) for taxation, the net profit for 1960-61 amounts to Rs. 9.45 lakhs, against Rs. 16.30 lakhs in the previous year. In spite of the setback in the profit, the directors have maintained the dividend at 12.8 per cent, subject to tax. Dividends—ordinary as well as preference—absorb Rs. 7.30 lakhs, against Rs. 7.57 lakhs. A sum of Rs. 35,000 (against Rs. 38,000), has been set aside for development rebate reserve and Rs. 75,000 (against Rs. 85,000) has been taken to various other reserves. No allocation has been made to general reserve and dividend equalisation reserve, which received Rs. 8 lakhs and Rs. 2 lakhs, respectively, in 1959-60. There remains a surplus of Rs. 2.62 lakhs to be carried forward, against Rs. 1.57 lakhs brought in.

The directors state in their report that the land for the solvent extraction plant to be located in Bombay has been acquired and most of the imported plant has arrived. The building of the fan factory is nearly complete. Plant and machinery have started arriving and erection work is in progress. Meanwhile, the production of fans continues in the old workshop. In order to finance the new projects, the Company has offered to the existing shareholders an additional 200,000 equity shares of Rs. 12.50 each at a premium of Re. 1 a share in the proportion of one new share for every two held. The issue of debentures for Rs. 30 lakhs, for which the consent of the Controller of Capital Issues has been obtained, is under negotiation. The Rs. 12.50-paid share of Ganesh Flour Mills is currently quoted around Rs. 19.

Jawahar Mills Profit Up

The working results of Jawahar Mills of Salem for 1961 show a marked improvement over those of the previous year. Sales are up by about 15.6 per cent from Rs. 88.14 lakhs to Rs. 1.02 crores, while the gross profit has shot up by nearly 36.5 per cent from Rs. 12.43 lakhs to Rs. 16.97 lakhs. The profit margin works out to 16.6 per cent, against 14.1 per cent in 1960. After providing Rs. 3.75 lakhs (against Rs. 3.83 lakhs) for depreciation, Rs. 10,000 (against Rs. 50,000) for development rebate reserve, Rs. 6.15 lakhs (against Rs. 2.58 lakhs) for taxation and deducting other charges, the net profit amounts to Rs. 5.78 lakhs, against Rs. 4.91 lakhs in 1960. The dividend has been maintained at 15 per cent, subject to tax, absorbing Rs. 2.54 lakhs. Appropriations include Rs. 83,386 (against Rs. 1.85 lakhs) for bonus and salary for the previous year, Rs. 98,734 (against nil) for contingencies, Rs. 21,773 (against nil) for general reserve, and Rs. 41,000 (against nil) for dividend equalisation reserve.

Steel Containers Cuts Dividend

Commenting on the prospects for the current year in their report for 1961, the directors of Steel Containers Ltd say that it is difficult to forecast the trend, as the supply of steel sheets is uncertain. The profit has increased from Rs. 6.87 lakhs in 1960 to Rs. 12.24 lakhs in 1961, after providing Rs. 35,643 (against Rs. 33,390) for depreciation. But the taxable ordinary dividend has been cut from 30 per cent to 20 percent. It is covered more than four times, and offers a yield of 9.1 percent at the present price of Rs. 22 a share. Taxation absorbs Rs. 5.48 lakhs (against Rs. 3.13 lakhs), and general reserve Rs. 1.50 lakhs (against Rs. 2 lakhs). Rehabilitation of plant and machinery reserve is allocated Rs. 2 lakhs (against Rs. 3 lakhs), leaving a carry-forward of Rs. 77,799, against Rs. 36,562 brought in.

Anandam Rubber Earns More

The working of the Anandam Rubber Co. Ltd for the year ended December 1961 shows a net profit of Rs. 81,888. after providing for depreciation and taxation. The net profit for the previous

year was Rs. 55,049. With Rs. 30,096 brought forward from the previous year, the total amounts to Rs. 1.12 lakhs. Out of this, the dividend on preference shares at 7.35 percent, subject to deduction of tax, absorbs Rs. 18,375. The proposed dividend of 18 percent on ordinary shares, subject to deduction of tax (against 15 percent), absorbs Rs. 45,000. The balance of Rs. 48,669 is carried forward.

The tea crop harvested during the year amounted to 135.312 kilograms at an estate cost of 258.77nP a kilogram, against an estimate of 130.000 kilograms. The tea crop estimated for 1962 is 132,000 kilograms at 287.57nP a kilogram. The average price realised was Rs. 3.97 a kilogram. The rubber crop harvested during the year amounted to 55,050 kilograms at an estate cost of 185.40nP a kilogram, against an estimated crop of 65,000 kilograms at 185.85nP a kilogram. The rubber crop estimated for 1962 is 60,000 kilograms at Rs. 1.81 a kilogram. The average price realised for rubber was Rs. 3.41 a kilogram.

Progress of Hope's Metal Windows

The construction of the factory by Hope's Metal Windows (India) Ltd is nearly complete and the installation of equipment has started. Production is expected to begin soon. The Company has entered into an agreement with Henry Hope and Sons Ltd of the U.K. for the supply and installation of some plant and equipment. The payment for the latter will be made by allotting shares in Hope's Metal Windows (India) to Henry Hope and Sons Ltd. During the year ended December 1961 Hope's Metal Windows has incurred a loss of Rs 4,482, which is being carried forward.

Nil from National

The National Co. Ltd has incurred a loss of Rs. 6.32 lakhs for the year ended October 1961, after providing Rs. 12.77 lakhs (against Rs. 7.86 lakhs) for depreciation. The unsatisfactory results are due to higher prices of raw jute in relation to those of jute goods. The dividends have been passed. A debit balance of Rs. 5.90 lakhs has been offset by transfers from general reserve. It is proposed to install 155 wide looms. The Company has at present 74 wide looms. Its application to the National Industrial Development Corporation for a loan of Rs. 16.94 lakhs is pending. The Company has applied to the Corporation for a further loan of Rs. 82 lakhs for modernisation and expansion.

Jeewanlal Raises Dividend

Jeewanlal (1929) Ltd proposes to set up rolling mills in order to ensure greater supplies of raw materials for its own factory. The project may cost Rs. 2 crores, and a loan has been negotiated. Technical collaboration has been arranged with Aluminium Laboratories Ltd of Canada and Alean Asia Ltd of Hongkong. The consent of the Controller of Capital Issues has been obtained for issuing fresh capital of Rs 54 lakhs. Steps have also been taken to modernise and expand the existing anodising plant. The Company has increased its profit from Rs. 7.79 lakhs in 1960 to Rs. 9.13 lakhs in 1961. After providing Rs. 1.53 lakhs (against Rs. 1.56 lakhs) for depreciation, Rs. 6.731 (against Rs. 58.591) for development rebate, and Rs 6.36 lakhs (against Rs 7.41 lakhs) for taxation, the taxable ordinary dividend has been raised from Rs 4.5 percent to 10.5 percent, absorbing Rs. 7.56 lakhs. The carry-forward is Rs. 32,985 against Rs. 9,223 brought in. The ordinary shares are being quoted at par. Working was affected by the shortages of raw materials and power. Nearly half the capacity of the plant remained idle.

Aspinwall (Travancore) Shows Loss

The working of Aspinwall and Co. (Travancore) Ltd for the year ended December 1961, shows a loss of Rs. 58,702, against a profit of Rs. 78,364 for the previous year. The loss has been incurred

due to the payment of retrenchment compensation of Rs. 2.01 lakhs during the year, against Rs. 43,162 in 1960, and also due to the lower profit on the sale of fixed assets. Provision has been made in the accounts for depreciation, tax on capital gains and agricultural income tax.

The directors' report says that the retrenchment compensation was an exceptional payment, keeping in line with the Company's policy of reducing costs and overheads. They have, therefore, thought it desirable to maintain the dividend at 4 percent on ordinary shares, subject to deduction of tax. To make this payment, Rs. 1.12 lakhs has been transferred from reserves to the profit and loss account. After adjusting taxation for previous years and taking into account the excess depreciation written off in earlier years and the balance brought forward from 1960, the profit and loss account shows a balance of Rs. 299, which is carried forward.

Thamarapally Rubber Profit Up

During the year ended December 1961, the Thamarapally Rubber Co. Ltd earned a net profit of Rs. 1.02 lakhs, after providing for depreciation and taxation. The net profit for the previous year was Rs. 74,283. Adding to the year's net profit Rs. 22,808 brought forward from the previous year, the total available for appropriation is Rs. 1.24 lakhs. Out of this, the preference dividend at 6.54 percent accounts for Rs. 4,905. The additional dividend of .04 percent on preference shares for 1959 absorbs Rs. 30. The proposed dividend of 18 percent on the increased capital (against 30 percent on old capital) will absorb Rs. 76,875. A sum of Rs. 30,000 is transferred to debenture redemption account. The balance of Rs. 12,539 is carried forward.

To provide funds for the acquisition of Calicut Estate, Rs 8 lakhs was raised during the year by issuing 850 debentures of Rs. 500 each bearing interest at 9.3 percent, subject to deduction of tax, and 37,500 equity shares of Rs. 10 each. Three hundred and thirty-two acres of mature budded area, five acres of immature budded area and about 304 acres of reserve land of Calicut Estate were purchased on 17th August, 1961, for Rs 7.80 lakhs. The rubber crop harvested during the year amounted to 162,259 kilograms at an estate cost of 143.71nP a kilogram. The crop estimated for 1962 is 194,934 kilograms at 175.55nP a kilogram.

Trading in Cotton Futures Resumed

Trading in cotton futures in Bombay was resumed on 9th May after a lapse of nearly three months. Officially, trading in futures ended with the March contract, but business was at a standstill since 14th February when the March contract shot above the statutory ceiling of Rs. 693 a candy of 3 quintals. The new hedge contract in which trading has now started is I.C.C. March 1963. Seldom has trading in a new crop contract been permitted so early in the year considering that except in Punjab, new crop sowings in the country start only about the middle of June, so nothing can be known about the crop in May. Apparently, the authorities have yielded to the pressure from the trade, which had little to do after the closure of the futures market. The March 1963 contract appeared on the E.I.C.A. board at Rs. 730.25 a candy, which is 36 paise above the Government's ceiling rate of

is well above the current season's ceiling of Rs. 693 a candy. Futures trading has been made possible only because of the upward revision of the ceiling rates for the 1962-63 season; the ceiling for Jorilla fine 25/32in.—the basis of the hedge contract—has been raised to Rs. 798 for 3 quintals. The March contract fluctuated between Rs 734.75 and Rs. 732 from 10th to 12th May, and activity has been extremely restricted. The market is unlikely to become active until traders are able to take a definite view of the outlook for the new crop, which will be possible only after the monsoon begins. Meanwhile, the new crop March contract must continue to reflect the prevailing tight supply position. All varieties, excepting Deshi, are fetching fancy premiums, making nonsense of the Price Control Order. Considering the precariously low carry-over stocks with which the current season is likely to end on 31st August, cotton prices might not return to the current levels during

the next season, unless the new crop sets a record and the Government is able to arrange large imports from the U.S.A. under P.L. 480 as the country's tight foreign exchange position does not permit sizeable imports from other sources.

As for the structure of the new season's hedge contract, Moglai Jarilla line 25/32in. has been kept as the basis, with tolerance for tenderable cotton raised from 1/32in. to 2/32in. All descriptions tenderable under the contract will be up to 2/32in. "off", excepting Cambodia "A" and Dholeras, which will be tenderable up to 1/32in. "off" only. If the hedge contract price is below Rs. 755 at the time of fixing the tendering differences, the difference between the contract rate and the spot rate of the variety for which the basis is fixed will be adjusted by 15 percent. When the price is between Rs. 755 and Rs. 775, only 7½ percent difference will be adjusted. If the price is above Rs. 775, there will be no adjustment. In plain language, this means that if prices are higher at the time of fixing the tendering differences, it will be less disadvantageous to the tenderers, so the contract will attract more tenders.

Steel Re-rollers Hit by Levy

In a memorandum submitted to Mr. Morarji Desai, Central Finance Minister, the Steel Re-Rolling Mills Association of India has explained how the steel re-rolling industry is adversely affected by the proposal to impose duty on a number of iron and steel products. This entirely new levy is creating enormous difficulties for about 200 steel re-rolling mills in various parts of the country. These mills mostly roll steel bars, rods, light angles, hoops and a few other shapes out of semi-finished steel. Some of them use re-rollable scrap as their raw material. The re-rolling mills have to sell their products at statutory selling prices. But the price structure is rather complicated in as much as a base price has been fixed over which certain items of permissible extras on thinner materials and on account of bundling, transport, etcetera, are chargeable. Sales tax and similar other taxes and duties are separately charged.

The memorandum says it is understood from the Iron and Steel Control authorities that, according to the instructions received from the Central Finance Ministry, excise duty is to be paid only on the base price and that the extra charges admissible do not attract any excise duty. It is reported, however, that the excise officials are at places computing the value of the product by not only including these extras but also by including even the sales tax paid. The dutiable items produced by the re-rollers are also large in number. Technical difficulties in ascertaining which items are dutiable are, as such, appreciable. The officials concerned appear to be unable to ascertain on which items and on what basis the duty is to be charged. Some officials are also reported to be charging duty on various raw materials such as billets, re-rollable scrap, etcetera, which are clearly not dutiable. There is yet another complication, it is pointed out. The controlled prices only fix the ceiling. Due to market fluctuations, a number of mills have to sell their products at somewhat lower prices. But the excise officials are inclined to charge duty on the basis of the Steel Controller's schedule of prices and not on the basis of the lower rates at which the goods are actually sold.

What, however, is causing the greatest hardship is the virtual stoppage of movement of stocks due to extremely slow clearance through the excise department. The department is not sufficiently manned to cope with the day-to-day volume of stocks offered for clearance by mills at various places throughout the country. Unlike most taxes, excise duty has to be paid before obtaining clearance of goods intended for delivery. It has not perhaps been taken into account that Government departments themselves purchase about 70 percent of the products made dutiable, the Association points out. Therefore, it may well happen that the net yield to the exchequer would not be considerable. In view of the difficulties involved, the Association urges dropping the proposals for levy of duty on so many items of steel products, or, in case such withdrawal is not possible, increas-

ticularly successful because, to some extent, the strength of the film lay in the novel from which it was born; Bibhuti Bandopadhyay was a story-teller of the finest calibre. But *Kanchanjanga* shows that, as story-teller and film-director, Mr. Ray himself combines the two qualities with ease and felicity. His enterprise in bringing new talent to the screen is something which I have always admired; and in the latest film Miss Alakananda Ray and Miss Indrani Sinha give memorable performances. My only criticism of *Kanchanjanga* is a minor one: there are times when, briefly, the sequence of the scenes tends to drag. This was a shortcoming neither of *Apur Sansar* nor of *Tin Kanya*; but it detracts little from the unquestionable genius which has gone into the production of *Kanchanjanga*.

HORRORS HAVE ONLY TO BE THOUGHT OF—and soon they begin to arrive. Especially is this true of a language. George Orwell rightly thought that in a 1984 set-up, when thinking has to be "organised", it would be necessary to devise a language entirely different from English as we know it today, or perhaps I should have said, as we knew it yesterday. What was satire has almost become a reality today; aided, not by the communists, but by Madison Avenue and its equivalents the world over. I have written before of "emergent meetings" of companies; of the "quantum" of foreign exchange sanctioned by Finance Ministers; and of the "expertise" of "know-how" wallahs. (Expertise, in French, means a survey, nothing to do with expertness, a perfectly good English noun.) But these illiteracies multiply daily; and they are infectious. (I cannot claim that I, who am usually careful, have never used some of the horrors.) A very inventive friend of mine had once to express his gratification to a colleague who had undertaken to do something in response to a last-minute request. The message, for the teleprinter, read: "Bravoest. Multithanks". That, I think, was funny. The following, quoted by a Delhi paper from an advertisement in *Argosy*, amuses me a little less:

Minipiano and ministudent seek miniflat. Maxi-urgent. Box: xxx.

In personal column ads., which can be expensive, one naturally tries to be brief. I have myself used "ads.", though under no severe pressure to save money or space, only to suggest that these things grow on you; and the next generation, which may not even know the full words, will speak a despicable kind of lingo. Everybody around the process during the war. Everybody, or me spoke of "basha" (hut), "gen" (news, or gossip: the same thing) and "snafu" (this I cannot spell out); and so did I. Nancy Mitford perhaps went too far in condemning radio (wireless) and dentures (false teeth); but there is much to be said for a measure of elegance even in everyday speech and writing. If you try, you will be accused of pedantry and pomposity. Not caring that be elegant, I say: "Scram". I do not believe that you can clothe beautiful thoughts or feelings in ungainly neologisms devised by beatniks, disc jockeys and P.R. men.

THREE MEN OUT FOR A DRIVE IN THE COUNTRY contrived to get lost and, accordingly, stopped a placid-looking farm labourer and asked him the way.

"I say, my good fellow, can you tell us where we are?"

The rustic considered the matter carefully and finally delivered his judgment. "Arrah," he said. "You be in a motor car."

Two of the travellers did not take kindly to this reply and, as the car plunged onward into the depths of the countryside, they expressed themselves very forcibly on the subject of village half-wits. The third traveller, a civil servant, remained quite unmoved.

"Why the fuss?" he asked. "I consider the man's reply to have been most meritorious." Pressed to explain himself, he continued: "In the first place, it was accurate. In the second place, it was concise. And finally," he concluded in tones of mingled admiration and approval, "it added precisely nothing to existing knowledge."

THE DITCHER

Money

THE CALCUTTA MONEY
MARKETRISE IN ADVANCES
RESUMED

Wednesday, 16th May.

THERE has been a moderate increase in advances in the Calcutta money market during the past week. Most of the rise is in iron and steel credit, and in the funds given for the storage of foodgrains and seeds. But advances in other categories—cotton, jute and sugar—are also higher. In the interbank market, conditions have been slightly easier, with the call rate quoting 4½ percent to 4 percent.

The exchange market has been extremely dull, with hardly any bills on account of either gunny or tea shipments. But remittance has been on a moderate scale. The trend in sterling is mixed, but on the whole it is fairly steady.

SILVER WAS QUIET IN CALCUTTA LAST week and the price declined from the previous week's level of Rs. 262.50 to Rs. 260, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 250. The London and New York prices were 84½d and 101.50 cents.

Gold was steady on fresh support. The price advanced from Rs. 144.25 to Rs. 147.25. The sovereign at Rs. 100.50 showed a rise of 25p.

DURING THE WEEK ENDED 11TH MAY, Government of India Treasury bills for Rs. 26,06,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 14th May, 1962. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.350 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.590 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 21st May.

IT IS STATED THAT 91-DAY INTER-mediate Treasury bills will be sold from 15th May to 19th May at Rs. 99.371 percent subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 9th May to 12th May amounted to Rs. 16.75 lakhs.

THERE WERE RISES OF Rs. 28.26 crores to Rs. 2,188.24 crores in the total note issue and of Rs. 16.16 crores to Rs. 2,161.30 crores in active notes, according to the return of the Reserve Bank of India for the week ended 11th May, 1962. The currency expansion was covered by raising rupee securities of the paper currency reserve by Rs. 30 crores to Rs. 1,850.87 crores. Deposits of the Government of India fell by Rs. 2.31 crores to Rs. 49.05 crores while other Government accounts rose by Rs. 2.72 crores to Rs. 18.78 crores. Balances of commercial banks at Rs. 89.04 crores showed a rise of Rs. 10.06 crores. Balances held abroad in the Banking Department again dropped by Rs. 1.19 crores to Rs. 4.80 crores and investments by Rs. 26.07 crores to Rs. 155.25

crores. Other loans and advances rose from Rs. 129.57 crores to Rs. 138.93 crores, of which advances to scheduled banks against usance bills amounted to Rs. 11.21 crores (Rs. 7.86 crores). Ways and means advances stood at Rs. 109.85 crores, against Rs. 113.64 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 4th May, 1962, shows a drop of Rs. 21 lakhs to Rs. 574.63 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 7.41 crores and Rs. 9.07 lakhs to Rs. 246.66 crores and Rs. 9.07 crores, respectively. Advances, including loans, cash credits, overdrafts and bills discounted and purchased, have increased by Rs. 2.03 crores to Rs. 296.19 crores. Cash and balances are, in consequence, shown at Rs. 21.61 crores, or Rs. 1.79 crores less.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 4th May, 1962, shows Demand and Time liabilities at Rs. 927.58 crores (Rs. 29.03 crores on account of Rs. 1,221.51 crores (Rs. 11.74 crores), compared with Rs. 931.31 crores (Rs. 27.48 crores) and Rs. 1,214.91 crores (Rs. 11.62 crores), respectively, in the previous week. Cash has declined by Rs. 36 lakhs to Rs. 51.28 crores, while balances with the Reserve Bank have increased by Rs. 42 lakhs to Rs. 80.45 crores. There is a drop of Rs. 7.79 crores to Rs. 592.77 crores in investments. Advances and bills discounted, Rs. 1,438.53 crores, show a rise of Rs. 5.45 crores. The ratios to total of advances and discounts are, in consequence, shown at 6.1 percent and 66.9 percent, against 6.1 percent and 66.8 percent.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 18-5-62.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
18-5-62	19-8-62	2,00.00	Rs. 2.590%
11-5-62	12-8-62	2,00.00	Rs. 2.580%
4-5-62	5-8-62	2,00.00	Rs. 2.580%
27-4-62	28-7-62	2,00.00	Rs. 2.640%
19-4-62	20-7-62	2,00.00	Rs. 2.640%

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

MARKET STEADY DESPITE MOVE TO CUT U.S. AID

Wednesday Evening. THE Calcutta stock market has stood up remarkably well to a flood of discouraging news. First, the U.S. Senate Foreign Relations Committee has decided to cut aid to India by 25 percent. Although the U.S. Government hopes to get the cut restored, the move is, nevertheless, considered disturbing as the Aid India Club is due to meet at the end of this month. The main object of the meeting is to persuade the other members of the Club to increase their aid to India during the second year of the third plan, so that their total assistance at least matches U.S. aid. As India's foreign exchange reserves have now dropped to a low of about Rs. 109 crores, she will find it extremely difficult to complete the development programmes included in the plan, unless substantial foreign assistance is forthcoming.

Secondly, the Prime Minister's observations on the Sino-Indian border dispute appear to indicate that tension between the two countries will continue for a long while. The stock market has not reacted bearishly because the possibility of the continuance of the dispute for a long time had been more or less taken for granted. The market is, however, worried over the growing cost of defence. Thirdly, the Central Finance Minister, Mr. Morarji Desai, has made it clear in his replies to the general debates on the Budget, that he does not intend to modify his tax proposals, although minor changes in the cotton excise levy are not ruled out. The stock market thinks that the increased tax burden will be taken by industry in its stride.

The steadiness of the market is due more to the absence of selling than to buying. Operators are encouraged by hopes of a rise in the retention price of steel in the near future. The shortage of good scrip is growing, so holders are reluctant to sell their shares. In spite of the improved sentiment, share prices are not expected to move very much forward in the short term. Although the busy season is drawing to a close, the stock market is unlikely to obtain larger credit from banks. The official view is that banks should try to restrict the flow of credit to industry in order to promote bigger investment of funds in shares. The Life Insurance Corporation will probably keep off the equity market, at least for the time being, because it would like to reserve all available funds for the new Government loans.

The recent conference between the Central Finance Minister and bankers, held in Bombay, has shifted attention to the Government's borrowing programme. The market in Government securities has, meanwhile, become lifeless. There is scarcely any public support for Government loans. In fact, the bulk of these loans is held by the Reserve Bank and the Government itself. An important factor contributing to the lack of interest in official borrowing is that the return on Government securities is much lower than on other investments. The market has, therefore, started speculating about the prospect that the Government may offer a higher interest on the new loans which are likely to be floated soon. As a result, turnover in Government securities has shrunk to almost a trickle, although prices are being maintained mainly due to offi-

cial support. The 3 percent Conversion loan 1986 has closed around Rs. 71.10.

Indian Iron have closed around Rs. 26.36, after having been higher. Selected engineering shares have met with strong support. Indian Standard Wagon have gained on prospects that the Company will issue bonus shares soon. Interest is being taken in Burn, Braithwaite and Indian Oxygen. Kumardhubi have become steadier on hopes that the Company will do better in the future. Texmaco have enjoyed speculative support, and Hindusthan Wire have hardened on knowledgeable buying. Jessop have been steady.

Turnover in miscellaneous industrials has shrunk, but prices of selected shares have, on the whole, been maintained. Indian Aluminium are being taken on hopes of a rights issue, while Hindustan Aluminium have attracted attention on reports that the new factory in Rihand will start producing soon. Replacement buying has lifted Orissa Cement and Jaipur Udyog. Indian Copper have become sluggish on disappointment over the maintenance of the ordinary dividend. Dunlop Rubber, Alkali Chemical, and Rallis have been steady. Interest is being shown in New Asiatic Insurance on reports that the Company will undertake a new industrial project. National Insulated Cable have hardened because the Company will issue bonus shares soon. Tobacco shares have weakened due to the increased excise duty. Imperial Tobacco are being sold freely. Indian Steamship have gained on hopes of an increase in coastal freights. Hindustan Motor have fluctuated widely due to bouts of buying and selling. Among new shares, Indian Tack and Nail, India Carbon, S. S. Duncan and Dr. Paul Lohmann have attracted attention.

Enquiry for coal shares has broadened, and prices have improved due to optimism concerning an increase in the price of the commodity. The assurance of the Railway Minister that the transport of coal will be improved has also induced support. East Indian, Burrakur, Western Bengal and Central India have been gained. Seebpore Coal are being taken on maintaining the ordinary dividend. Katras Jherriah have been firm due to a shortage of scrip.

The prospects of a good crop during the next season has helped maintain steadiness in selected jute shares. Prominent scrip are Birla, Northbrook, Anglo-India, Gourepore, Fort Gloster, Bally and Kelvin. Barnagore have enjoyed support on rumours that the Company will be transferred to the Indian register. Kankarrah have slipped back on profit-taking. Delta, Cheviot and New Central have been steady.

In the cotton mill section, Bowreah and Dunbar are being wanted on producing good reports. Bharat Commerce have been maintained, while Elgin have lost. J. K. Rayon have been subdued.

Except for Dyer Meakin Breweries, which have been firm on rumours of a bonus issue, sugar shares have lacked interest. Carew, Belund, S. K. G. and Cawnpore have been easier. Support for bank shares has declined, although prices are more or less unchanged.

The poor support at the first export auction held at Calcutta last

Monday for the new season's tea has induced caution in tea shares. Except for Soom which have improved due to the issue of bonus shares, prices have generally slipped back. Tezpore, Hantapara, Hasimara and Brooke Bond have become easier.

Bombay Market

CLEARING SHARES GET MORE SUPPORT

MILD REACTION AT THE CLOSE

Wednesday Evening.

THE Bombay stock market was in a more ebullient mood in the past week. The support for clearing shares broadened and their prices improved under the leadership of steel shares. Tata Steel met with hectic buying due to the proximity of the dividend, combined with prospects of an early increase in the retention price of steel. The decision of some companies, such as Elphinstone Mills and Jaipur Mills, to pay higher dividends, encouraged bulls. Standard Batteries have decided to issue rights shares for financing the Company's expansion plan.

Dalal Street was enthused by hopes that the Central Finance Minister would modify the excise duty on cloth and yarn at the time of passing the Finance Bill. Meanwhile, reports of many cotton mills showing bigger turnover and profits for 1961, helped

maintain sentiment. At the close, there was a mild reaction due partly to profit-taking and partly to the caution induced by the decision of the U.S. Senate Foreign Relations Committee to cut aid to India by 25 percent. Attention is also being diverted to new shares which are likely to be floated during the next few days. As the new loan programme of the Central Government is expected to be launched soon, the supply of bank credit is likely to become tighter.

Tata Steel closed at Rs. 149.50 and Indian Iron at Rs. 26.35 due to strong support from Lyons Range. Among engineering shares, Mukand Iron were firm at Rs. 28.25 and Premier Construction at Rs. 171.50. Alcock Ashdown were taken at Rs. 350 and Larsen and Toubro at Rs. 33.75. There was scattered support for Tata Locomotive around Rs. 370 and for Mahindra and Mahindra at Rs. 19.60. Motor-vehicle shares were quietly steady, and Hindustan Motors closed at Rs. 20.56. Business was done in Premier Automobiles at Rs. 138.

Cotton mill shares improved on a broad front, although top gains were

eroded at the close due to profit-taking. Century rose to Rs. 677 on prospects of expansion, and Khatau were wanted at Rs. 505. Elphinstone improved to Rs. 137 on paying a higher dividend, and Bombay Dyeing closed at Rs. 67.80. Kohinoor were bought at Rs. 308, and Standard improved to Rs. 1,042 on replacement buying. Finlay were taken at Rs. 315 and Morarjee at Rs. 420. Simplex came to hand at Rs. 172 and Svadeshi at Rs. 286.50. Business was done in Tata Mills at Rs. 77 and in India United ordinary at Rs. 22.32. Apollo were easier at Rs. 236.

In the miscellaneous section, sugar shares showed mixed trends. Belapur were steady at Rs. 235, but Phalton were easier at Rs. 106.50. Walchandnagar Industries were supported at Rs. 158. Steamship company shares recovered on rumours of a rise in coastal freights. Scindia Steam rose to Rs. 13.60 and Great Eastern Shipping to Rs. 14.48. Among mining shares, Shivrajpur Syndicate gained at Rs. 40.50 on short-covering. A margin has been placed on the bulls because the price of the scrip rose by more than 10 percent over the past *havala* rate. Cement shares

were steady, and Associated Cement were transacted at Rs. 162.50. Digvijay were taken at Rs. 213. Bombay-Burmah were steady at Rs. 701. Rayon shares improved on balance, and National Rayon gained at Rs. 567. Gwalior Rayon were wanted at Rs. 59 and Baroda Rayon at Rs. 150.50. Chemical shares were quietly steady and Tata Chemical were placed at Rs. 17.60. Polychem came to hand at Rs. 217.50 and Colour-Chem at Rs. 515. Interest was taken in Voltas at Rs. 303.50 and in Tata Oil at Rs. 82.20. Synthetics and Chemicals hardened to Rs. 242 on prospects of a rights issue, but Ceat Tyre weakened to Rs. 182.50. Hindustan Lever were firm at Rs. 47.75.

Bank shares were steady, but turnover declined. Business passed in Central Bank at Rs. 63 ex-dividend and in Bank of India at Rs. 111.50. Dena Bank were taken at Rs. 70 and Bank of Baroda at Rs. 105. Insurance shares were firm, and New India Assurance were bought up to Rs. 71.

Electric company shares turned quiet, and Ahmedabad declined to Rs. 91.70. Bombay Suburban were available at Rs. 103 and Tata Power at Rs. 1,107.50.

CAPITAL, 17th May, 1962.

Madras Market

TURNOVER DROPS, BUT PRICES HELD GROWING SHORTAGE OF CREDIT

Monday Evening.

THERE was an appreciable decline in turnover in the Madras stock market in the past week, although share prices were more or less maintained. Attention was diverted to new shares, and support from outside centres dried up. Business was largely concentrated on clearing shares, but operators were inclined to proceed cautiously, as the Aid India Club is meeting at the end of the current month. Although carry-forward charges at the past settlement were moderate, the stock market was worried over the growing shortage of credit.

Business in Government securities was negligible, and the trend was not expected to change as the Central Government is likely to launch its borrowing programme soon. Support for bank shares declined, while scattered interest was taken in selected electric company shares. Sugar shares showed mixed trends. In the planting section, tea shares were transacted cautiously because the marketing outlook was considered uncertain. Turnover in coffee and rubber shares was negligible, although prices showed little variation. Cotton mill shares lacked support because further developments over the excise duty were being awaited. Selected miscellaneous shares met with scattered support on prospects of expansion and diversification of activities.

In the banking group, Canara Bank were done at Rs. 75.25 and Indian at Rs. 176. Indian Overseas were placed at Rs. 168 and State Bank of Travancore at Rs. 118. Among electric company shares, Negapatnam were steady at Rs. 12.10 and South Madras at Rs. 10.15. Cochiti were wanted at Rs. 12.25 and Ellore at Rs. 22.

Among sugar shares, E.I.D. hardened to Rs. 40.12 on reports that the Company will issue further sterling shares in order to raise funds for expansion. Deccan were transacted at Rs. 10.25 and Jeypore at Rs. 14.75. Mysore were steady at Rs. 53.40 and K.C.P. at Rs. 22.75.

In the planting section, Blue Mountain improved to Rs. 2.57, but Consolidated Coffee were easier at Rs. 19.15. Cochin Malabar came to hand at Rs. 7.04 and Be Be at Rs. 2.53. Ouchterlony were placed at Rs. 3.52, and Periakaramalai at Rs. 3.52. Travancore Rubber were taken at Rs. 12.80 on declaring a taxable ordinary dividend of 12 percent. Twyford reacted to Rs. 10.75 on reducing the taxable ordinary dividend to 6 percent. Peermade were steady at Rs. 20, but Parkside were steady at Rs. 22.73. Nilgiri were bought at Rs. 8.90 and Lucky Valley at Rs. 13.60 on cutting the taxable ordinary dividend to 12.50 percent.

In the textile section, Buckingham were quiet at Rs. 266 and Bangalore Woollen at Rs. 245 on profit-taking. Bhavani attracted attention at Rs. 11, on the issue of rights shares in the proportion of two new shares for every three held, at par. Radhakrishna were bought at Rs. 39.25 on paying a taxable ordinary dividend of 12.50 percent. Lakshmi reacted to Rs. 166 and Madura to Rs. 97. Vijayamohini were easier at Rs. 43.50 and South India Viscose at Rs. 190. Kothari were bought at Rs. 12.10 and K. Rajendra at Rs. 79.50. Mettur

CAPITAL, 17th May, 1962.

rose to Rs. 400, and Pankaja were done at Rs. 93.50.

Among miscellaneous industries, Aluminium Industries hardened to Rs. 24 on fresh support. Andhra Cement were taken at Rs. 10.10 on declaring a taxable ordinary dividend of 10 percent. Ogale Glass were sold at Rs. 6.60, on the issue of rights shares in the proportion of one new share for every four held, at par. Dalmia Cement improved to Rs. 13.60 and F.A.C.T. to Rs. 7.50. Spencer attracted support up to Rs. 23.60 on declaring an interim taxable ordinary dividend of 6 percent. Hindustan

Insurance were wanted up to Rs. 22.50, on the news that the Hyderabad United Insurance Co. Ltd. has been amalgamated with the former. The Company has been permitted to issue 23,158 ordinary shares of Rs. 25 each to the existing shareholders of Hyderabad United Insurance. Madras Rubber hardened to Rs. 25.10 on the prospect that the new factory would start work soon. Madras Aluminium were indicated at Rs. 21.25 and Madras Cement at Rs. 92. Seshasayee Paper were done at Rs. 2.40 and Standard Motors at Rs. 16.62. Interest was taken in Textool at Rs. 183 and in Tube Investment at Rs. 290. Mysore Paper declined to Rs. 13.70, but Parry's Confectionery were steady at Rs. 4.48.

New Delhi

India Worried Over U.S. Aid Cut Move

(FROM OUR NEW DELHI CORRESPONDENT)

Year	Estimated production of steel ingots (million tons)	Estimated requirements of ferro-manganese ('000 tons)
1961-62	5.25	58
1962-63	6.25	63
1963-64	7.25	73
1964-65	7.75	78
1965-66	8.50	85

TWO developments during the past week are likely to have serious repercussions on the forthcoming meeting of the Aid-India Club. Firstly, Senator Symington has succeeded in persuading the Senate Foreign Relations Committee to reduce U.S. aid to India during this and the next fiscal year by 25 percent below the levels proposed by the Kennedy administration. The U.S. budget provision for this year is said to be \$727 million; the U.S. administration urged that it be raised to \$815 million for next year. The reduction is in addition to the gap in matching aid to the tune of \$220 million.

India's reported decision to buy the Russian supersonic M.I.G. 21s is another development which is causing some concern to the U.S. and British Governments. India's reported decision follows the supply of F-104 G jets by the U.S.A. to Pakistan. But it should be admitted that in order to get the cut restored, the Kennedy administration has to carry the U.S. Congress with it. The burden of the argument of Senator Symington was that due to the massive economic aid given by his country, India was able to build up her military strength. That it is largely his own country's military aid to Pakistan, which has compelled India to spend large sums of money on defence has been ignored by him. This, however, indicates the prevailing climate of opinion in the U.S.A. Meanwhile, India's deal with Russia for supersonic aircraft, however justified it may be, will be taken advantage of by the anti-Indian lobby in the U.S.A.

India's sterling balances have dropped to Rs. 109 crores. It will, therefore, be difficult for India to sustain her economy unless "maintenance" aid is forthcoming from the U.K. and the U.S.A. While fully appreciating India's problems, the U.S. administration finds it difficult to explain to its legislature this country's unwillingness to ask for military assistance while it has no hesitation in asking for economic aid. India, it is complained, did not even enquire whether the U.S.A. would be prepared to supply military jet aircraft to India, and if so, on what terms and how soon.

To sum up, these unexpected developments are not a happy augury for the forthcoming meeting of the Aid-India Club, since they may hamper firm commitments of foreign aid for the third plan period. New Delhi will not be surprised if the forthcoming meeting—like its predecessor—is also confined to a review of the plan expenditure and further consideration is postponed to the next meeting of the Club later this year. One effect of the development will be that some projects may have to be crowded out into the fourth plan.

Ferro-manganese Demand Up
The demand for ferro-manganese arises mainly from the requirements of the Indian steel industry as well as for exports. Assuming the consumption requirements at 10,000 tons for each million tons of steel ingots produced, and taking into account the phasing of steel production proposed during the third plan period, the domestic demand for ferro-manganese is estimated as follows:

Location	Annual capacity (tons)	Remarks
Electro-Metallurgical Works (expansion)	44,400	Expected to be completed by 1962-63
Sandur Manganese and Iron Ores (P) Ltd	30,000	Expected to be completed by 1963-64
B. P. Khemka (P) Ltd (new scheme)	36,000	Expected to be completed during third plan period
Kanhan	24,000	
Total	98,400	
or	104,400	

In relation to the estimated total requirements of ferro-manganese, the installed capacity on completion of the above schemes will be adequate for ensuring a domestic output of about 200,000 tons by 1965-66. This gives no scope for the further expansion of capacity under the third plan. If and when additional capacity has to be brought into existence, the question of the optimum size of units would have to be carefully studied before newcomers are allowed to put up their plants.

Manganese Ore Reserves

During the first and second plan periods, the Geological Survey of India carried out the detailed mapping of the Chindwara-Balaghat-Bhandara-Magpur belt of Madhya Pradesh and Maharashtra, the Singhbhum and Keonjhar-Bonai belt of Bihar and Orissa, Jabua deposits of Madhya Pradesh, Panch Mahal deposits of Gujarat, Banswara-Udaipur deposits of Rajasthan, and the Visakhapatnam-Srikakulam belt of Andhra Pradesh. Probable manganese ore reserves, excluding the mangiferous rocks, are estimated at 180 million tons, of which 48 million tons are of high-grade ore with a manganese content of over 45 percent. India has considerable reserves of low-grade manganese ore. The in-

dustry has, therefore, to exploit these low-grade ores in the long run.

Further exploration has been planned by the Geological Survey of India during the third plan in selected areas in Panch Mahals, Gujarat, the Madhya Pradesh belt, the Koraput-Kalahandi and Sundergarh belt in Orissa, the Banswara-Udaipur belt in Rajasthan, and the Chitaldurg, Tumkum, Bellary and Sandur deposits of Mysore. For achieving a capacity of 262,200 tons by 1965-66 by implementing the schemes already licensed, plant and machinery worth about Rs. 2 crores will have to be imported. The overall investment requirements are placed at Rs. 2.5 crores during the third plan period. Since all the plants already in operation have been established during 1956-61, no investment on replacements is anticipated during the third plan period. The maintenance imports for the industry are spares and electrode paste. The electrode paste requirements are estimated at 0.03 ton for each ton of ferro-manganese. The production of ferro-manganese in closed electric furnaces will yield by-product gases which are rich in carbon monoxide. By developing industrial outlets for these gases, the overall costs of ferro-manganese can be brought down to some extent. Although attention was recommended under the second five year plan for exploring this possibility, there has

project in the Bhadrak district of Orissa.

Licences for importing machinery for the two schemes have been issued and the additional capacity is expected in the second year of the third plan, if not earlier. An annual installed capacity of 25,000 tons of ferro-silicon will thus be available from the second year of the third plan. In estimating the requirements under the third plan, one will have to take into account the expansion programmes for steel, alloy and tool steels, stainless steel, electrical grade silicon steel, steel castings and electric furnace billets based on scrap. It is roughly estimated that for producing 10 million tons of ingots, the steel industry's requirements of ferro-silicon alone will be about 25,000 tons. The requirements of alloy and tool steel plants, which might be set up in the third plan, and of the steel castings industry are not known at present. The target for alloy and tool steels, including stainless steel, is 200,000 tons. The overall demand for ferro-silicon by 1965-66 is not expected to exceed 40,000 tons.

Consumption Needs

By planning for a capacity of 53,000 tons of ferro-silicon a year, it is felt, the consumption requirements of the last year of the third plan will be adequately met. As mentioned earlier, two firms, namely, the Mysore Iron and Steel Works and Messrs Serajuddin and Company, have been granted licences, the former to expand its capacity to 20,000 tons and the latter to establish a new plant with a capacity of 5,000 tons a year. In addition, the schemes of Mr. B. D. Panda for establishing a plant with a capacity of 7,000 tons a year has been approved by the Government. Foreign exchange for importing machinery has been sanctioned, and the additional capacity is expected by the latter half of the third plan period. An annual installed capacity of 32,000 tons of ferro-silicon will thus be available during the third plan period. There is, however, scope for setting up additional capacity of about 8,000 tons a year.

Thus by the end of the third plan period, the production of ferro-silicon will be of the order of 32,000 tons a year, the breakdown of output being as follows:

	(In tons)
Mysore Iron and Steel Works	20,000
Mr. B. D. Panda	7,000
Serajuddin and Co.	5,000
Total	32,000

The Government has agreed to license the schemes of Tatas and of Pranlal Patel for 10,000 tons and 7,000 tons of ferro-silicon a year, respectively. Enquiries also show that the chances of the Serajuddin project going into production are not very bright. If this capacity is revoked, it is likely to be allocated to Ferro-Alloy Corporation, which is already manufacturing ferro-silicon outside its licence. Producers are opposed to an increase in the licensing capacity beyond 50,000 tons a year.

Target for Ferro-chrome

There has been no regular production of ferro-chrome in India so far on account of the lack of demand. The current demand is estimated at about 200 tons to 250 tons. The following two schemes for manufacturing ferro-chrome were licensed in the second plan period, but no capacity has so far been established:

Name	Location	Capacity a year
Ferro-Alloys Corporation, Tumkur	Tumkur (Bombay)	6,000 tons
Serajuddin and Company, Calcutta	Bhadrak (Orissa)	10,000 tons

Although the requirements of ferro-chrome by 1966 could go up to 9,600 tons a year, it is felt that, for

Specialized ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

For more than half a century McKee engineers have specialized in the design, engineering and construction of steel-producing facilities. Our comprehensive mine-to-metal services include every phase of the work necessary for any steel-plant project, from preliminary studies to completed plant ready for initial operation.

The McKee Organization has executed contracts in 49 countries including India. Among these are some of the world's largest and most modern completely integrated steel plants and hundreds of individual units, including blast furnaces, open hearth shops, rolling mills, agglomerating, sintering and pelletizing plants. Most recent examples of large-scale integrated plants are the new Somisa plant at San Nicolas, Argentina and the C.S.N. plant at Volta Redonda, Brazil.

To the steel industry of India the McKee Metals Division offers the services of its large, well-qualified staff with a fund of sound, practical experience and specialized knowledge that is unmatched anywhere in the industry.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY
WESTERN KNAPP ENGINEERING

Represented in India by
DR. B. S. GILANI
29, Jor Bagh, New Delhi 3

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION
Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING
Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

UNITED STATES: CLEVELAND • NEW YORK • WASHINGTON • CHICAGO • SAN FRANCISCO • UNION, N. J. HIBBING, MINNESOTA ABROAD: LONDON • TORONTO • MEXICO CITY • SAO PAULO • BUENOS AIRES

the present, the third plan target should be placed at 35,000 tons a year. Enquiries show that neither of the two units already licensed has gone into production, and the Government might be compelled to revoke the scheme of Serajuddin. The schemes of Tatas and Pranal Patel for the combined manufacture of ferro-silicon and ferro-chrome are being sanctioned.

The third plan demand for ferromolybdenum is placed at 1,000 tons a year and of ferro-vanadium at 750 tons a year. The application of Pranal Patel for the manufacture of both these items is being approved.

Iron Ore Exports

The State Trading Corporation will export 750,000 tons of iron ore to Czechoslovakia and Hungary during 1962. The entire quantity will be sold to Messrs Metalimex of Czechoslovakia. The ore supplied will be homogeneous, and the price is accordingly higher than the Japanese rates. The earlier contract with Metalimex is nearing completion. So a contract for future supplies had to be negotiated and finalised. Czechoslovakia is the largest buyer of Indian iron ore after Japan.

Marine Diesel Engines

The establishment of a marine diesel engine project has been engaging the attention of the Government for some time. There was a proposal for including a scheme in the second plan for manufacturing these engines in the public sector. Pending the scrutiny of the economics of the project, the inclusion of the scheme in the second plan was approved in principle. It was stated in the plan

that the resources required for it would be provided at the appropriate stage. Seven firms of international repute were invited to submit preliminary reports for establishing a plant on a technical collaboration basis. Out of these, three submitted their project reports in 1957. At the time of re-phasing the plan, it was, however, decided to defer further action on the project.

But, in view of the increased demand from the Hindustan Shipyard for marine diesel engines as well as the prospective demand from the second shipyard, the establishment of which is proposed under the third plan, the marine diesel engine project has been included in the third plan. On the basis of a capacity target of 50,000 d.w.t. to 60,000 d.w.t. (the optimum capacity of the Hindustan Shipyard by the end of the third plan), the annual requirements of marine diesel engines—including those required for auxiliaries—have been estimated by the Development Wing at 75,000 to 80,000 horse-power. With a view to making an economically viable unit, it has been found necessary to pool the demand for diesel engines for building ships with the miscellaneous demands arising principally from diesel generating sets. The ancillary demand as well as that for auxiliary engines under shipbuilding will be for units of capacity generally below 1,000 horse-power, whereas that for marine diesel engines required for the propulsion of ships will be for units of 8,000 to 10,000 horse-power. But since it will take some time before sufficient supplies of diesel engines of higher ratings could be provided by the shipbuilding industry, it has been decided

that the investment on the project as well as the manufacturing programme might, in the initial years, be restricted to the production of auxiliary diesel engines for ships and diesel engines required for shovels, earth-moving equipment, etcetera. The production of heavy marine diesel engines of 5,000 horse-power, it is proposed, should synchronise with the development of peak demands from the shipyards.

Board of Trade

By a resolution, the Government has set up a Board of Trade. The resolution says:

"For the development of India's economy, it is necessary that both internal trade and exports expand quickly and on sound lines. The Government of India has, therefore, decided to constitute a Board of Trade to review all aspects of trade and commerce and to advise and make recommendation to the Government from time to time, with particular reference to the following:

"1. Expansion of production, internal trade and exports, including diversification of exports.

"2. Rationalisation of imports and forging suitable import-export relationships.

"3. Maintenance and improvement of the quality of production, standards, standardisation and quality control; organisation of inspection for quality control and preshipment inspection.

"4. Export incentives.

"5. Development of fair, ethical and efficient trading practices, including

CAPITAL, 17th May, 1962.

maintenance of fair prices, price support, price regulation, organisation of stockpiling and buffer stocks; display of price lists and markings including price markings.

"6. Studies of individual commodities, market research and market surveys.

"7. Development of State trading in commodities, particularly for external trade; expanding the functions and operations of the State Trading Corporation/Corporations and other agencies;

"8. Promotion and development of export houses and export agencies;

"9. Wholesale and retail marketing; co-operative marketing and co-operative consumer stores; fair-price shops, etcetera.

"10. Exhibitions, trade fairs, emporia, show-rooms and trade centres in India and abroad.

"11. Promotion of salesmanship and marketing techniques and the training of personnel for international trade; and

"12. Facilitating the movement of goods, particularly goods for export by rail, road, air, etcetera."

Members of the Board

The Board will consist of not more than 15 members. The Minister of International Trade will be the chairman, and the Special Secretary in the Department of International Trade the vice-chairman. Its members will be: the president of the Federation of Indian Chambers of Commerce and Industry, the president of the Associated Chambers of Commerce, non-official members not exceeding six nominated by the Government representing trade, industry, economists and others, the Secretary of the Ministry of Finance (Department of Economic Affairs), the Additional Secretary of the Planning Commission, and two senior officers in the Department of International Trade designated for this purpose as full-time directors dealing with production, incentives, quality control and movement. A Joint Secretary in the Department of International Trade will be the member-secretary.

The Board will have power to co-opt members, not exceeding five. The Secretaries to other Ministries will be requested to attend its meetings, whenever necessary. The Board may also specially invite such other persons as it may consider necessary and, in particular, the following: presidents or chairmen of the Indian Cotton Mills Federation, the Indian Jute Mills Association, the All-India Manufacturers Organisation, the State Trading Corporation, the Tea Board and the Forward Markets Commission, the Director-General of Shipping, the Chairman of the Railway Board, and the Director of the Indian Standards Institution. The Board is appointed for a term of two years. It will lay down its own rules of procedure. It may constitute a standing committee and other committees from its members, with co-opted members not exceeding one-third of its strength, to transact such business as it may decide. The headquarters of the Board will be Delhi, but it may meet at any other place in India. The Board, it is expected, will meet once every month.

Raising Exports

Some comments are necessary. It is not the machinery alone but the effort, which can stimulate exports. The Board of Trade, for example, should study the effort the exporters and the Governments of foreign countries make for promoting exports to India. This correspondent has some intimate knowledge of how commercial counsellors of foreign diplomatic missions help their countrymen to secure contracts in this country. Then again, there is the

CAPITAL, 17th May, 1962.

question of competitive costs and the quality of goods. In a recent speech, the U.S. President, Mr. Kennedy, said that "there can be no increase in sales abroad unless our prices and costs are competitive, as the result of plant investment, modernisation and productivity". He appealed to workers to join the Government in fighting inflation and thus enable the U.S.A. to maintain its competitive strength. Similar requests have been made by Mr. Selwyn Lloyd in Britain and Dr. Erhard in West Germany.

But under the welfare State ideology, the tendency in India has been to raise costs. Meanwhile, the protected market has adversely affected the quality of indigenous goods. Nobody pleads for freezing wages or for denying workers their legitimate dues. What is needed is to re-introduce competition—particularly in the labour market. This alone can improve efficiency and productivity and bring down costs.

Escudo Currency

The escudo currency which was circulating in Goa, Daman and Diu, has ceased to be legal tender from 15th May, 1962. All monetary transactions in these territories are now being conducted only in Indian currency. To enable the public to exchange their escudo holdings into Indian currency, conversion facilities are being provided for one month from 15th May, 1962, for escudo notes and for three months for escudo coins. Mr. T. Sivasankar, I.C.S., is being appointed Governor of Goa.

West German Aid

A five-year agreement was recently signed between India and West Germany. Under it, the West German Government will give technical assistance to India for the development of agriculture in Mandi district on the lines of the Indian Government's intensive agricultural district programme. A German agricultural assistance team of eight advisers and seven technicians will be assigned to Mandi. With the aid received from West Germany, an agro-technical development centre will be established in the district with training facilities, demonstration and trial areas, and a rural technical training and repair shop. Other contributions of the West German Government will be a soil-testing laboratory, a stationary and a mobile plant protection station, and model installations for animal husbandry, dairy, fruit processing and water management. In addition to the facilities to be provided in the district, the training of selected Indian specialists in West Germany is also planned.

Besides the promotion of foodgrain production, the production, processing and storage of fruits and vegetables as well as the development of animal husbandry, animal breeding and dairying will be undertaken. Intensive mixed farming will be the general line on which the development of agriculture will be followed up by the joint project. The first group of German experts is shortly expected in Mandi district. The West German Government's financial contribution to this centre is placed at Rs. 80 lakhs over a period of five years.

Nutrition Programme

The Government of India and three international organisations—the United Nations International Children's Emergency Fund, the World Health Organisation and the Food and Agriculture Organisation—have entered into an agreement for a three-year expanded nutrition programme in Uttar Pradesh. It aims at increasing the production of nutritionally valuable foods such as fruit, vegetables, milk, eggs and fish, and includes free-feeding programmes for school-children and nursing or pregnant mothers. The area of operation in the eastern

districts of Basti and Gorakhpur will extend over 800 villages and cover a total population of 600,000.

Cement Output and Demand

The cement output and demand during each of the last three years were as follows:

Year	Demand	Production
1959	8.07	6.93
1960	9.26	7.84
1961	16.59	8.25

The Tariff Commission has, however, estimated the effective demand during 1961 at only about 9 million tons. Two new cement factories are expected to be set up during the current year. The first of these is likely to be commissioned by July 1962, and will be located in Ammasandra, Mysore. The initial installed capacity of the factory will be 100,000 tons a year. The second factory is likely to be commissioned by the end of the current year and will be in Wuyan, Jammu and Kashmir. The factory's installed capacity will be 20,000 tons a year.

Steel Consultants

The Government of India has appointed Messrs M. N. Dastur and Company, Consulting Engineers, Calcutta, as consultants for the planning and development of the iron and steel industry, including the ferro-alloy industry. Under the agreement, which will remain valid for six years, the consultants will give the Government the benefit of their experience and advice on matters relating to the

development of the iron and steel industry. They will also advise on any problems connected with the expansion of the existing iron and steel plants, including ores, mines and quarries, and those which may be established in the public or private sectors. This decision, it is said, should remove one hurdle in the way of getting U.S. aid for the Bokaro steel project.

Labour in Coalmines

A high-powered commission will be appointed by the Central Labour Ministry to go into the question of labour-management relations, and the law and order situation in coalmines if the conditions do not improve in the next six months. This was announced by Mr. Gulzari Lal Nanda, Central Minister of Planning, Labour and Employment, at a tripartite meeting on coalmining in New Delhi. Mr. Nanda said coalmine labourers were working in hard social and economic conditions. Steps have no doubt been taken to attend to their basic needs such as medical facilities, education, housing, adequate water supply and safety. But there is much leeway to be made up and, unless progress is made at a faster rate, a lasting solution cannot be found.

Foreign Collaboration

Out of the 402 technical and financial foreign collaboration agreements approved by the Government of India in 1961, majority capital participation has been agreed to in 14 cases. The industries in which majority capital

participation has been allowed are gaskets, coal washeries, tyre-tube valves, capacitors, industrial refrigeration machinery, ball-bearing, paper machinery, contraceptives, motor-car electrical equipment, single-spindle automatic lathes, calcium benoyl P.A.S., calcium P.A.S., sodium P.A.S., dithane fungicides, and plasticisers, and motor-car wheels. In addition, the Government has received the following two proposals for majority foreign capital participation: (1) a proposal from Fibre Glass Pilkington Ltd, Bombay, for the manufacture of glass wool, glass textiles and staple tissues in collaboration with the Owens-Corning Fiberglass Corporation, Ohio, U.S.A., and the Fiberglass Ltd., U.K., with a little over 51 percent foreign capital participation; and (2) a proposal from Prentice Hall Inc., U.S.A., for establishing an organisation for publishing scientific, technical and other standard books with 51 percent foreign capital participation. Both are being considered.

Manufacture of Phosphorus

The project for the manufacture of phosphorus in the public sector has been deferred for the time being. The decision has been taken due to the non-availability of adequate power in the third plan, and because the economic aspects of the project do not at present appear to be quite attractive. Foreign help will be necessary in the form of heavy equipment and technical know-how, because of the highly hazardous and complicated technology involved.

Have you a personal deposit account with the State Bank of India?

If so, the State Bank has a special service to offer under the

SPECIAL CREDIT TRANSFER SYSTEM

introduced as from the 1st January, 1962 to cater to certain personal needs of customers mainly in the lower and middle income groups

Whereby any customer having a personal account with the Bank is enabled to use any of its over 950 offices in the country for transfer of money paid in cash for credit of his account to the extent of Rs. 1,000 in any one instance

FREE OF CHARGE

For details please contact any office of the State Bank where you will always find a friend

STATE BANK OF INDIA

India's leading bank—at the Nation's

Service

THE INDIAN BANK LTD.,

(Established in 1907)

REGD. OFFICE: INDIAN CHAMBER BUILDINGS, ESPLANADE, MADRAS-1.

Offers complete Banking service of every description, backed by more than 54 years of sound experience

U.K. Economic Outlook: Differing Views on Expansion

(FROM OUR LONDON CORRESPONDENT)

ARE the forces of economic expansion really at work in Britain? In the opinion of Government circles, there is little doubt that they are. Outside that select sphere, however, there are grave doubts. Many of the doubters have no particular axe to grind, although there are some who have. It is a good thing, therefore, to take a look at their beliefs and arguments, and see just where they fit into the general picture. For instance, the National Institute of Economic and Social Research remains cautious in its appraisal of likely events during the rest of the year. The Institute agrees that a further rise in exports is "pretty certain" but "there is no certainty about how big it will be". It foresees a rise in real consumer spending by the end of 1962, but is less hopeful on this score than the Chancellor of the Exchequer. It projects a current surplus in the balance of payments this year of around £200 million, but with the qualification that "1962 is likely to be a more favourable year

than most for the balance of payments, mainly because restricted demand at home is holding back imports".

The trouble in relating the doubts of the Institute to the robust confidence of the Government's economic spokesmen is that the latter's case, as far as it is argued in public, is not supported by the necessary facts and figures. As the gap between official and unofficial estimates of the rise in exports this year is not particularly large, the debate turns mainly on forecasts of consumer spending. The Chancellor said in his Budget that, by April next year, total personal spending might rise by 4 percent in real terms—a very large rise in relation to the average experience of recent years. The Institute, looking no further than the end of 1962, puts the probable rise at around 2½ percent, "unless there is a sharp change in consumers' borrowing or savings". Obviously, the Government is expecting a change, mainly because it expects hire-purchase spending to

receive a sharp boost as agreements taken out two years ago run off.

Up to and including March, the official theory has not received much practical support. New credit extended in March (the pre-Budget month) was 30 percent less than 12 months before. The April figures for hire-purchase car sales did not suggest that they were more spectacular. In its hire-purchase projections, the Treasury is guessing: the run of figures relating to this business do not go back far enough to make confident predictions of what is likely to happen to this class of debt in any given year, even a year when the public ought to have far more money to lay out in hire-purchase deposits. Undoubtedly, there will be some increase this year in such spending, but there is no sign of a boom.

The real dilemma of economic policy lies in the relationship between incomes and production costs. The "pay pause" succeeded in slowing down the rate of increase in

CAPITAL, 17th May, 1962.

wages. The average increase in weekly wage rates in the first quarter of this year was 3.9 percent, compared with 5.1 percent a year earlier. Moreover, the time between increases was spun out from an average of 13 months to 15 months. Yet in spite of the "pause", and because output tailed off, unit costs in manufacturing industry have continued to rise. So have prices, although not rapidly enough to prevent a narrowing in profit margins. For the Government's incomes policy to be a real success, industrial costs have to fall, and it appears that this will only happen when output begins to rise again and productivity improves. Output has turned up and it may increase sufficiently this year to slow down the rise in manufacturers' unit costs that would otherwise follow the rather more generous wage settlements about to be negotiated.

The Institute believes Britain's output this year will be little more than 1 percent above the 1961 average. Even this modest growth assumes that the decline in investment in manufacturing industry will not spread. It also rests on the forecast that exports will continue to rise by about 2 percent a quarter. Taking all these factors into account, the Institute concludes that there is no reason to suppose that real consumption this year will go up by more than 2½ percent, unless there is a sharp change in consumers' borrowings or savings. By contrast, the Government is forecasting a rise of 4 percent in the coming 12 months. Clearly, a policy based on the Government's more optimistic assumptions will tend to be more restrictive than one which accepts those made by the independent Institute.

Rise in Exports

The latter sticks to its view that this year exports of goods might be 4 percent to 5 percent higher than last year. This would imply a rise of some 8 percent to 9 percent between the end of 1961 and the end of 1962—a figure not far short of the 10 percent increase that economic safety demands. West German competition is not as strong as it was (although the Italians may now take up the running) and the long decline in exports to the sterling area seems to have stopped. On the other hand, exports to the U.S.A., which have risen strongly, may, in the Institute's view, have reached their peak. Another disturbing feature as far as the U.S.A. is concerned is the fact that American industry is spending five times as much as British firms on research. Americans spend three times more on research than Britain for every worker employed. A survey explains: "Taking the 350 largest firms which do research in each country, the average large American firm spends five times as much as its British counterpart". British industry cannot hope to compete with America "in absolute volume of industrial research," the survey admits. But it claims: "To some extent our industry might be able to compensate for its small total resources by greater concentration of effort".

The official attitude has just been clarified in Geneva by Mr. Peter Thomas, Parliamentary Under-Secretary for Foreign Affairs, who told the U.N. Economic Commission for Europe that its annual economic survey was too pessimistic about Britain's situation. The authors, he thought, had perhaps not fully appreciated how much stronger her economic position is now than it was last summer. A substantial rise in exports was expected this year. Making Britain's annual policy statement, he said continued restraint in home demand and incomes is for the time being essential to the success of her economic policies.

CAPITAL, 17th May, 1962.

Jute

DIFFICULTIES IN OPERATING THE JUTE BUFFER STOCK SCHEME

RAW jute prices have been weak in spite of the fact that the mills have bought most of the 1961-62 crop and are already holding five months' stock on their own account. Many of them do not have covered storage space left, and some have had to stack jute in the open. This is clear from a Press statement issued by Mr. C. L. Bajoria, chairman of the Indian Jute Mills Association and president of the Jute Buffer Stock Association last Friday. The Buffer Stock Association, nevertheless, proposes to take up another 250,000 maunds of jute.

Outlining the difficulties involved in buffer stock operations, Mr. Bajoria says: "The growing weakness in raw jute prices has been causing some concern and has allegedly given rise to expressions of doubt concerning the intentions of the Jute Buffer Stock Association. If there is any such doubt, then it can only be the result of incorrect information. The establishment of the Jute Buffer Stock Association is not to be regarded purely as an expedient to halt a price decline at a particular time or under any circumstances. Its promoters had a much broader aim, which is to stabilise both supplies and prices on a longer-term basis by countering, as far as possible, not only the uncertainties of the market, but also the vagaries of nature.

"This is not to say that the Association has taken no action to support jute prices against recent tendencies. The situation must, however, be viewed realistically. It is too much to expect that a new organisation, which is just beginning to find its feet, should suddenly be able to step in and achieve something which has never been attempted, far less done, in the past. That there have been procedural delays is true, but these were not of the Association's making. The machinery of buffer stock operations is highly complex, particularly so if bank credit is involved. Despite this, two successive allocations of buffer stock jute totalling 625,000 maunds have already been made to the mills, and substantial purchases have been made against these."

At a meeting of the committee of the Association held last week, it was intended to take up another 250,000 maunds of jute, but this was found impracticable as the necessary formalities with the State Bank of India have not yet been completed. The next allocation will, however, be issued at the earliest possible date. The statement adds: "It should also be noted that special arrangements have to be made for the storage of buffer stock jute, which must be separate from the mills' own jute stocks. Virtually all mills are already holding five months' stock on their own account, as a result of which some of them are stacking jute in the open for want of covered accommodation. This could involve mills in considerable losses in view of the approaching monsoon season.

Causes of Weakness

"If jute prices in India have shown signs of sagging, in spite of the purchasing power deployed by the Buffer Stock Association and also by the Indian Jute Mills Association through its jute purchase quota system, then other causative factors must be looked for. These can be found in the heavy decline in the prices of jute in Pakistan and Thailand, and to some extent also in the depressing effect of the delay in shipments of jute manufactures resulting from the new excise duty. The actual size of the

Indian jute crop may well be another important consideration, but on the basis of the official Government forecast the marketable surplus remaining cannot be very great.

"On the production side, it is encouraging to see a high level of output and offtake maintained since the beginning of this year, as shown by the following figures:

TOTAL: JANUARY-MARCH

	Average (Jan.-March) 1960	1961	1962
I.J.M.A. production (000 tons)	251.8	263.8	251.1
Exports (000 tons)	185.4	174.5	176.5
Exports (Crores of Rs.)	30.6	26.2	36.0
Internal consumption (000 tons)	58.4	78.1	80.1
Internal consumption (Crores of Rs.)	41.0*	85.5	

*Provisional

"The mills have for some time been allowed to operate looms to the full extent of their ability, but the latter is circumscribed in many cases by a shortage of spinning capacity. This is because the mills were not permitted to import modern preparing and spinning machinery against 12½ percent of their loomage, which until recently was the average sealed portion representing the gap between productive capacity and demand. As a result of recent developments, however, the Central Government has decided to sanction additional imports of machinery to supplement local manufacture, with a view to matching the full productive capacity of the industry's loomage. Given certain other facilities to improve its competitive strength, the industry should be able to increase its production further by about 36,000 tons annually valued at Rs. 5 crores; at present about 5 percent of the looms are sealed. The mills have also been given the opportunity of installing additional carpet-backing looms to the full extent of their spinning potential. The export value of this item is now Rs. 15 crores annually, and there are fair expectations of a boost in the period ahead.

"The Indian Jute Mills Association has also taken a hand in helping to promote raw jute cultivation in India and so as to improve the acreage yield and so as to improve the quality of the fibre. Intensive cultivation blocks have been set up by the Association on a pilot basis in West Bengal, Assam, Bihar, Orissa and U.P. to demonstrate the advantages of scientific farming through the use of improved seed, fertilisers and modern equipment. A seed multiplication scheme has also been introduced, with financial support from the Central Government, with the object of saturating the principal jute-growing areas with better quality seeds during the next few years.

"The present favourable trends in this most important export trade of the country must be maintained and stimulated. The Central Government can help tremendously by taking prompt decisions on vital matters. I am glad that a committee has recently been set up to consider what forms this assistance should take."

Minimum Price of Fibre

Trade discussions on the floor price of raw jute continue. At the time the authorities fixed it at Rs. 30 a maund, they had no idea that the outturn would be over 8 million bales. As trading is taking place below this rate the minimum price appears to be unrealistic. At a Press conference, Mr. C. L. Bajoria, chairman of the I.J.M.A., admitted that the Jute

Buffer Stock Association has purchased low-grade jute at Rs. 3 below the floor price. It is quite paradoxical that, on the one hand, the authorities should be trying to maintain the floor price, while on the other a Government-sponsored association should make purchases below it. It is quite true that if the J.B.S.A. had not made the purchases, the price would have fallen below even Rs. 27. In certain areas in Pakistan fibre has been traded down to Rs. 18 a maund. If low-grade jute can be exported, it would lessen the industry's problems because, even if the J.B.S.A. stocks inferior jute, not much of it can be consumed by the mills.

In spite of the action said to be taken to support raw jute prices, jute futures have touched Rs. 30.22 a maund. Selling pressure is attributed to the keenness of growers and stockists to dispose of the balance of their holdings in view of the favourable prospects for the new crop. Since even the present price of jute continues to be more remunerative than that of paddy, the consensus of opinion is that the 1962-63 sowing will be reasonably good. In fact, some optimists expect an even better crop than the current one. Arrivals continue to be good, with an abundance of sellers but reluctant buyers.

Import of Spinning Machinery

The rate at which the increased production has been consumed over

the last nine months leaves little doubt that the overall world demand for jute goods has substantially increased. The emphasis seems to be on hessians where, despite the usual dull months of January-March, the offtake has been exceptionally well maintained. Exports from India during the last seven months totalled 270,000 tons, compared with 230,000 tons during 1960-61. The internal demand for jute goods has also increased, and will perhaps continue to increase. As such, the I.J.M.A. has to consider how production can be increased further. Five percent of the looms are sealed at the moment due to restricted spinning capacity. Therefore, arrangements to increase spinning capacity have to be made first. It is reliably understood that the Central Government has decided to sanction additional imports of spinning machinery so that the industry can unseal all the looms.

Shipment Delays Continue

Negotiations to settle the Hooghly pilots' strike have failed. The Port Commissioners are making alternative arrangements to run the port as efficiently as possible, but the situation remains critical. Most of the April steamers should normally have sailed by now, but they are still in port as sailing dates have become uncertain. Steamer agents have agreed to load their vessels up to a draft of 18 feet only, so that they can sail at a moment's notice.

The confusion caused by the Central Government's imposition of the excise duty has still to be sorted out. In the meantime delays on this account are adding to shippers' harassment. Present indications are that quite a few of the U.S. April loaders will sail only towards the

—THEY FLY NOTHING BUT THE BEST

You may not recognise all the planes in the PIA fleet. Some of them are used for the local air-bus services that make flying in Pakistan almost as cheap and simple as hopping on a bus. They were chosen because they were exactly right for just that kind of job. In the same way, only the great Boeings are sufficiently big, fast and comfortable for PIA's New York run. And PIA extend this thinking far beyond just choosing their planes. They maintain and fly them with loving care, and land them strictly on schedule. (PIA hold an unbroken record for punctuality.) This is what makes people say nice things about PIA. It brought the airline 63% more passengers last year, and 41% higher profits than ever before. The figures wouldn't go up if they weren't great people to fly with.

end of May and perhaps even during the first week of June. The delay in April shipments creates problems for May contracts, since incoming vessels waiting at the Sandheads will be delayed in entering the port, discharging cargo and taking export cargo. If the April steamers have space, May contracts could be shipped on them provided the buyers agree, but due to draft restrictions this does not appear practicable. Hence, unless the port situation improves in the near future, May contracts will be delayed till June.

THE JUTE MARKETS

Manufactured Goods: The market opened on a quieter note. May futures were quoted at Rs. 52.80 for 40in. 10oz. hessians and Rs. 121.60 for B Twills, while August futures were

Rs. 48.74 and Rs. 118.70, respectively. When the bulls realised that the pilots' strike may delay May shipments, profit-taking caused a sharp reaction, hessians touching a low of Rs. 51.70 in May futures. In 40in. 10oz. hessians, the differentials between May and August futures decreased from Rs. 4.20 at the opening to Rs. 3.30 at the close due to the uncertainty of deliveries. Outstandings being still fairly large, the tussle between the bulls and the bears is likely to continue. If the delay caused by the pilots' strike is prolonged, the bears will be in a stronger position to deliver their shipment goods for May against the hedge contracts, and as such avoid being squeezed by the bulls. The premium for May 40in. 10oz. hessian over June declined from Rs. 3 to Rs. 1.75, and may decrease further. In the sacking section, the fluctuations were limited from Rs. 121 to Rs. 123.

in May futures. Ready B Twills were neglected. With export demand remaining low and local consumption tailing off, there is every possibility that B Twills may become surplus at the end of May. There was talk from time to time of bulls taking delivery and artificially increasing the differential between May and August futures to Rs. 10. However, when the differential increased from the low of Rs. 2 to Rs. 3 for May futures, there was evidence of bulls unloading their holdings, which gave the impression that in this sector the bears are definitely in a stronger position and the differential of Rs. 3 may be the highest for the time being. Most qualities of sacking were freely available.

Moderate business in hessians was reported daily from the U.S.A. in the forward positions. May-June shipments were virtually neglected, as the present stocks in the U.S.A. appear to be sufficient for what are normally considered to be low seasonal months. What is important is the fact that U.S. buyers appear to be realising that, due to increased demand for hessians, really cheap burlap prices are unlikely. Whereas two months ago good business was expected around Rs. 46 for July-September, they now feel that even Rs. 46.50 for October-December is reasonably attractive. Nevertheless, until consumer demand picks up, any large scale buying is not foreseen. The U.S.A.'s consumption during April was 70 million yards, stocks declined from 254 million yards to 249 million yards. The Argentine bought 2,000 bales for May shipment out of her quota of 7,000 bales. Purchases were extremely slow. Now that there is a strong possibility of the May steamer being delayed to June, she may abstain from further purchases this month. There was strong demand for hessian bags from the Continent. Premiums up to 5 percent above the normal quotations were paid for June-July shipment. Interest from various eastern bloc countries is expected soon, as also from other European countries making purchases from India under trade agreements. In the sacking sector, some enquiries were received from the Continent, but generally business this week was poor.

Latest available quotations are as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 7oz.	38.85	38.40	37.65	35.75
40in. 8oz.	41.85	40.50	39.60	37.25
40in. 10oz.	54.25	52.25	50.25	47.75
B Twills	124.80	122.55	121.00	120.25
Cornsacks	130.00	127.00	124.50	122.75

THE FOREIGN JUTE MARKETS FALL IN FIBRE CONTINUES

(FROM OUR DUNDEE CORRESPONDENT)

RAW jute prices in Pakistan continued to move lower during last week. The almost daily fall in quotations kept off local buyers, not only of fibre, but of yarns and goods as well. The Pakistani E.P.C. rates showed little change from day to day, and the manner in which values have been coming down in Dundee does not fully demonstrate the weakness of the market. There seems to be little doubt that prices for raw jute will be lower yet. A good crop for the next season is in prospect, and a carry-over of more than 1 million bales from the current crop seems more than probable. It is felt by the local industry that fibre values are being artificially bolstered up by the Pakistani authorities.

The quotation for Mill Lightnings came down another 40s a ton to £100. Mill Hearts were obtainable at £90 and Grade Hearts at £80, with Grade Tossa-2/3 from £127, fairs £105 and Continental Tossa-2/3 from £99 and fairs £83, c.i.f., U.K.-Continent.

Calcutta goods were slightly irregular, although the prices kept up well.

I.J.M.A. STOCK FIGURES

The introduction of the excise duty on jute goods from 24th April inevitably resulted in delays in the clearance of goods from the mills at the busy end-month shipment period. The actual stocks of goods with the mills at the close of the month were, therefore, much larger than they would otherwise have been, and as the figures give a distorted picture and would be misleading, they are not being published in the usual way. Instead, the I.J.M.A. is publishing figures calculated from additional data received from the mills, in an endeavour to give as close an estimate as possible of what the stock position would have been, had clearances from the mills been normal. The Association has taken the May opening stocks and deducted therefrom the despatches from the mills during the first five days of the month, the resultant figures being the equivalent of the stocks as at 5th May less the production for the first five days of the month. Although the extent to which shipments were held up is not precisely known, this calculation gives a reasonably close approximation to what the end-April stock position would have been in normal circumstances, and the relevant figures are given in the following statement with the end-March stocks figures for comparison:

CAPITAL, 17th May, 1962.

Plantation Topics

F.A.O. WARNING TO RUBBER PLANTERS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE F.A.O. has warned rubber-growers that those who depend on high-cost ordinary rubber for their livelihood may be gradually squeezed out from the world market as the competition from the synthetic product has been increasing. During the past decade, the latter has captured a substantial portion of the world market, partly because of its technical properties, but chiefly on account of the stability and low level of synthetic rubber prices, compared with those of natural rubber, says a recent F.A.O. publication on the outlook for the commodity.

During the recession of 1958 and again since mid-1960, competition from synthetic rubber has forced down natural rubber prices, and natural rubber producers have over the past decade tried to cut their production costs as much as possible. Replanting with high-yielding material is now widespread in several rubber-growing countries, in a bid to produce natural rubber as cheaply as possible. Between 1952 and 1960, replanting schemes designed to assist growers in replacing ordinary with high-yielding trees were drawn up in all major producing countries, but only a few have become effective. Ceylon, Malaya and Viet-Nam are among the countries which have made good progress in this matter, while in Indonesia and Thailand replanting has made little or no headway.

More High-yielding Trees

Ceylon, the Federation of Malaya, Indonesia, Thailand and Viet-Nam account for about 85 percent of the world's rubber output and area. Consequently, they set the world trends in production and yields. At present, only about one-sixth of their combined mature area is under high-yielding rubber trees, but such trees occupy roughly one-half of the immature plantations. Since the ratio of immature to mature acreage is roughly one to three, the proportion of high-yielding trees on the world's mature plantations will substantially increase by 1970 with the coming into production of these immature trees, even on the assumption that no further planting with high-yielding material takes place during the next few years.

According to the F.A.O., however, large-scale replanting is likely to continue in countries with highly developed plantations such as Malaya and Viet-Nam, and to become more widespread among growers using less advanced techniques, notably in Thailand and a number of minor producing countries. In addition, considerable areas may be newly planted under development schemes such as the jungle clearance programme in Malaya, the Kerala rubber project in India which provides for 80,000 to 120,000 hectares (one hectare is 2.471 acres) of rubber plantations under the current five year plan, or the Brazilian diversification project under which surplus coffee lands are to be turned over to rubber.

Therefore, in the opinion of the F.A.O., the proportion of high-yielding trees on the world's mature plantations may reach as much as one-half after 1970, and the average cost of producing natural rubber may be considerably reduced. The more efficient producers may thus be able to compete with the synthetic

product. This should serve as a timely warning to those producers in south India who are reluctant to replace their worn-out areas with high-yielding planting material due to the immediate benefit they can get by keeping on the low-yielding trees. The poor response to the call for replanting and to the replanting subsidy offered by the Indian Rubber Board does not augur well for the rubber planting industry in south India.

Plantation Bonus Issue

The Kerala Plantation Labour Committee has failed to settle the issue of bonus to plantation workers at its meeting last week. The issue has been pending for some time before this Committee, comprising representatives of both workers and plantation owners as well as of the State Government. While the State Government demands a 9 percent bonus for last year, the employers are willing to consider only 6½ percent. Both sides, however, it is reported, have made some concessions from their original stand, so it is possible that a settlement might be reached in the near future.

RAISING TEA EXPORTS

MORE ENQUIRIES FROM ABROAD EXPECTED

(BY A SPECIAL CORRESPONDENT)

SINCE the relief recently granted, many articles have been published in newspapers stating that tax concessions will raise tea exports. But this correspondent, while agreeing that the move is in the right direction, pointed out that it would have been better to abolish all export duties because, quite apart from taxes, production costs in India are too high and foreign buyers can get cheaper teas from this country's competitors. Some senior members of the tea industry say that the reduction of import duties on export teas comes to about 2½d a lb and more than twice that sum on a kilogram and that it may be sufficient to influence buying orders from foreign markets to be sent to Calcutta in preference to Colombo.

There are two main export interests: firstly, there are growers who ship direct to the U.K. markets. Secondly, there are producers who sell at the Calcutta auctions to meet the foreign demand from world markets (including some enquiries from Australia, America, Canada as well as many Far Eastern areas and Ireland will find Calcutta auctions more attractive under the new taxation proposals. Meanwhile, new traders hope that the enquiry will spread to medium and even to low grades.

Internal Consumption

Some tea people think that the potential demand inside India will grow to such an extent that more poor quality teas will be wanted. This view is apparently shared by some producers, so the Tata-Finlay enterprise proposes to sell package teas. The new combine, it is expected, will make a determined drive to capture south Indian retail markets where there is less competition from old established blending firms. Other agencies are reported to be interested

in developing instant tea for local consumption.

First Auction Held

The first auction of the season was held on 14th May. Offerings were mostly from Darjeeling, and another sale will be held later this month. The regular weekly auctions will begin in June. In view of the general strength of London and Colombo auctions, it is anticipated that opening sales will show reasonable profits for the industry.

U.S. Tea Imports

U.S. tea imports during March 1962 were much the same as in the corresponding month a year earlier. But it is interesting to note that blended tea is now being taken in small quantities from India and Ceylon. In considering the reduction of imports on tea exports, one is apt to forget that with a fresh levy on plywood and aluminium foil and an increase in rail freight, the actual cost of production will not show any real fall. Again, the higher excise duty on teas taken for local consumption will raise the cost of living. The interim wage demands further add to the difficulties of growers.

U.K. tea stocks continue to fall and were last reported at 135.8 million lbs plus 8.7 million lbs afloat. Stocks at the end of April in 1959 and 1960 were as follows:

	(In million lbs)	
1960	Stocks	167.6
	Afloat	16.2
1959	Stocks	162.5
	Afloat	14

Dangers of Overproduction

The chairman of the Indian Tea Board, Mr. A. S. Bam, has done good work in the U.S.A., Ireland, England, Scotland, Germany and many other places where the Board has centres. Because of the Government's desire to increase exports, India's percentage of world business should not fall further in 1962-63. One may, however, hope that New Delhi would realise the folly of having an overproduction of tea, for the larger crop may not yield more revenue to the Government. Secondly, foreign buyers may purchase tea at lower prices, so foreign exchange receipts may not increase. A strong internal demand is, therefore, essential to counter the growing world output, especially since Pakistan intends to launch an ambitious programme (a) to establish new gardens, (b) rehabilitate old estates, and (c) assist the existing gardens to improve production. From a planted area of about 79,000 acres, the plan is to have 100,000 acres under tea by 1965. This could mean 80 million lbs of tea a year by 1970. This looks a reasonable target.

COMPANY AND PUBLIC NOTICES

THE INDIAN STANDARD WAGON COMPANY LIMITED

NOTICE IS HEREBY GIVEN that an Extraordinary General Meeting of the above-named Company will be held at the Registered Office of the Company, 12, Mission Row, Calcutta-1, on Friday the 29th day of June 1962 immediately following the conclusion of the Annual General Meeting of the Company to be convened for 11 a.m. on that date for the purpose of considering and, if thought fit, passing the following Resolutions, whereof those Nos. 1, 4, 6 and 8 will be proposed as Special Resolutions:

AS SPECIAL RESOLUTION:

1. That the authorised share capital of the Company be increased from Rs. 60,00,000 to Rs. 1,00,00,000 by the creation of 1,51,889 new Ordinary Shares of Rs. 25 each and 20,390 new Ordinary Shares of Rs. 10 each.

AS ORDINARY RESOLUTION:

2. That it is desirable to capitalise the sum of Rs. 38,98,500 out of the amount standing to the credit of the Plant Replacement Reserve in the books of the Company and accordingly that such sum be set free for dis-

tribution amongst the Holders of the Ordinary Shares of the Company on the Register of Members at the 29th day of June 1962 (joint holders being considered as one person for this purpose) in the proportions in which they hold such Shares respectively on that day and on the footing that they become entitled thereto as capital and on condition that the same be not paid in cash but be applied in paying up in whole at par 1,55,940 new Ordinary Shares of Rs. 25 each to be allotted and distributed credited as fully paid up Bonus Shares to and amongst the said Holders of Ordinary Shares in the proportions aforesaid, that is to say, at the rate of one of such new Ordinary Bonus Shares for every one Ordinary Share held by the Members respectively according to the Register of Members at this the 29th day of June 1962.

AS ORDINARY RESOLUTION:

3. That the draft of the Agreement providing for allotment of the said new

Ordinary Shares in satisfaction of the said capital bonus submitted to this Meeting and signed in the margin by the Chairman by way of identification be and the same is hereby approved and the endorsement of the same be executed by the Chairman of this Meeting on behalf of the Holders of the existing Ordinary Shares of the Company as on this the 29th day of June 1962 and by Mr. H. A. Fowler, a Director, and the Managing Agents on behalf of the Company under its Common Seal.

AS SPECIAL RESOLUTION:

4. That the said 1,55,940 new Ordinary Shares of Rs. 25 each be and they are hereby allotted as Bonus Shares to the Holders of Ordinary Shares whose names appear on the Register of Members on this the 29th day of June 1962 credited as fully paid in pursuance of and subject to the provisions of the above mentioned Agreement in the proportion of one such new Ordinary Bonus Share for every one Ordinary Share held by them respectively.

AS ORDINARY RESOLUTION:

5. That every two Ordinary Shares of Rs. 25 each in

CAPITAL, 17th May, 1962.

the capital of the Company as increased by the capitalisation and distribution already resolved upon be consolidated into one Ordinary Share of Rs. 50.

AS SPECIAL RESOLUTION:

6. That the Ordinary Shares of Rs. 50 each in the capital of the Company resulting from the consolidation last resolved upon be subdivided into five Shares of Rs. 10 each.

AS ORDINARY RESOLUTION:

7. That shareholders shall deliver up for cancellation the Certificates relating to the Ordinary Shares of the denomination hitherto subsisting as a condition of entitlement to the issue of new Certificates of the new denomination in exchange thereof, or in the case of lost Certificates such evidence and indemnity as the Directors might have required on an application for the issue of duplicates.

AS SPECIAL RESOLUTION:

8. That the Articles of Association of the Company be altered by deleting from the beginning of Article 4 the following words namely "The capital of the Company is Rs. 60,00,000 divided into 1,60,000 Ordinary Shares of Rs. 25 each and 20,000 Preference Shares of Rs. 100 each" and substituting therefor the following words namely "The capital of the Company is Rs. 1,00,00,000 divided into 8,00,000 Ordinary Shares of Rs. 10 each and 20,000 Preference Shares of Rs. 100 each."

The Registers of Members and the Transfer Books of the Company for Ordinary Shares will remain closed from the 5th June 1962 to the 29th June 1962, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and, on a poll, to vote in his stead and a proxy need not be a Member.

PHILIPS INDIA LIMITED

Notice of Annual General Meeting
THE thirty-second Annual General Meeting of the Members of Philips India Limited will be held on Thursday, June 14, 1962 at 11 a.m. at the premises of the Bengal Chamber of Commerce & Industry, Room No. 2, 6, Netaji Subhas Road, Calcutta-1, to transact the following business:

1. To receive the Directors' and Auditors' Reports and pass the Accounts for the year ended December 31, 1961.
2. To declare a Dividend.
3. To appoint Directors in place of those retiring.
4. To appoint Auditors and fix their remuneration.
5. To transact any other ordinary business of an Annual General Meeting.

AS SPECIAL BUSINESS

To consider and if thought fit, to pass, with or without modification, the following resolutions:

6. As an Ordinary Resolution

"That with effect from January 1, 1962 Mr. W. A. C. H. Bosschaart, the Managing Director of the Company, shall be entitled to receive from the Company remuneration for his services in accordance with the terms set out in an Agreement dated May 2, 1962, made between the Company of the one part and Mr. W. A. C. H. Bosschaart of the other part."

7. As a Special Resolution

"That, in view of the proposal contained in the next succeeding resolution, consent be and is hereby accorded for increasing the number of the Directors of the Company from five to six."

8. As an Ordinary Resolution

"That due notice in writing signifying the intention of a member to propose Mr. Deba Priya Mukherjee as a Director having been left at the Registered Office of the Company pursuant to Section 257 of the Companies Act, 1956, Mr. Deba Priya Mukherjee be and is hereby appointed, subject to the approval of the Central Government under Section 269 of the said Act, as a Director of the Company."

9. As a Special Resolution

"That this Meeting hereby accords its consent under Section 314 of the Companies Act, 1956 to Mr. Deba Priya Mukherjee holding and continuing to hold an office or place of profit under the Company as its Chief Adviser, Personnel & Industrial Relations, and being entitled to receive from the Company, subject to the approval of the Central Government, the remuneration as set out in the resolution of the Board of Directors passed on May 2, 1962, a copy of which was laid on the table and signed by the Chairman for the purpose of identification."

The Register of Members of the Company will be closed from May 24, 1962 to June 14, 1962, both days inclusive. The Dividend, if approved, will be payable on or after July 2, 1962 to those shareholders whose names are on the Register of Members on June 14, 1962 or to their mandates.

By Order of the Board
W. A. C. H. BOSSCHAART
Chairman and Managing Director

HERCULES INSURANCE COMPANY LIMITED

(Incorporated in India)

NOTICE IS HEREBY GIVEN that the TWENTY SEVENTH ANNUAL GENERAL MEETING of the Hercules Insurance Company Limited will be held at the Registered Office, 16, Hare Street, Calcutta on Wednesday the 6th June, 1962 at 3 P.M. for the purpose of:

1. Considering the Accounts, Balance Sheet and the Reports of the Board of Directors and Auditors for the year ended 31st December, 1961.
2. Declaring a Dividend.
3. Appointing Directors in the place of those retiring. And, in this connection notice is hereby given that Special Notice as defined in Sec. 190 of the Companies Act, 1956, has been received by the Company under Sec. 281 of that Act to move the following resolution at the meeting.

"That Sir Badridas Goenka, the Chairman of the Company, who has attained the age of 78 years and is retiring at this meeting, be and he is hereby re-appointed a Director of the Company and the age limit prescribed by Sec. 280 of the Companies Act, 1956, shall not apply to him."

4. Appointing Auditors and fixing their remuneration.

AS SPECIAL BUSINESS

5. To consider and, if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

"That subject to the approval of the Central Government this meeting approves the payment of remuneration to Mr. E. K. Srinivasan as the Managing Director of the Company with effect from the 16th July, 1962 on the terms set out in the Agreement dated the 9th May, 1962 and made between the Company of the one part and Mr. E. K. Srinivasan of the other part (a copy of which was produced to the meeting and signed by the Chairman hereof for purpose of identification) or on such other terms as may be agreed between the Central Government and Mr. E. K. Srinivasan and the Board of Directors of the Company."

To consider and, if thought fit to pass with or without modifications the following resolution which will be proposed as an Ordinary Resolution:

"That subject to the approval of the Central Government and with effect from the 1st January, 1961, the Chairman and the Deputy Chairman of the Board of Directors of the Company shall each be entitled to receive out of the funds of the Company for their services in attending meetings of the Board or a Committee of the Board a fee of Rs. 300/- per meeting of the Board or a Committee of the Board attended by them or such fee not exceeding Rs. 300/- as may be agreed between the Central Government and the Board and each of the other Directors of the Company shall be entitled to receive out of the funds of the Company for his services in attending meetings of the

Board or a Committee of the Board a fee of Rs. 250/- per meeting of the Board or a Committee of the Board attended by him or such fee not exceeding Rs. 250/- as may be agreed between the Central Government and the Board."

7. To consider and, if thought fit, to pass with or without modifications the following resolution which will be proposed as a Special Resolution namely:

"That the Regulations contained in the printed document submitted to this Meeting and for the purpose of identification signed by the Chairman thereof be and the same are hereby approved and adopted as the Articles of Association of the Company in substitution for all the existing Articles thereof."

The Share Transfer Books will be closed from the 30th May, 1962 to the 6th June, 1962, inclusive.

By Order of the Board,
E. K. SRINIVASAN,
Managing Director.

Calcutta, 9th May, 1962.

Note—1. A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

2. The dividend when declared will be paid only to those shareholders whose names appear on the Company's Register as on the 6th June, 1962.

Explanatory statement as required by Sec. 173 of the Companies Act, 1956 has been forwarded to the members of the Company.

TEA COMPANIES

O., P. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

EXPORT PROMOTION: OLD WINE
IN NEW BOTTLES

INDIA'S foreign trade remains in the doldrums. During 1961-62, imports have fallen and exports have risen, so the external trade deficit has been reduced. But the decrease in imports has not been voluntary; it has been forced by the foreign exchange shortage, and has led to the widespread under-utilisation of industrial capacity. The rise in exports has to a large extent been fortuitous. Even with the narrowing of the trade deficit, the foreign exchange reserves have fallen to the dangerously low level of Rs. 108 crores. The reserves can hardly be allowed to fall much further without threatening the stability of the currency. Yet there has been little sign during the past few weeks that any progress has been made towards framing a more rational export policy. With characteristic aplomb, the new Minister for International Trade, Mr. Manubhai Shah, told the All-India Manufacturers Organisation in Bombay last week that the Government would do everything possible to help exporters, and to ensure that they did not suffer losses. A Board of Trade has been set up on the British model, to promote exports and to do a myriad other things. Scintillating ideas have been aired about how Indian industry can be compelled to sell more goods abroad, and how foreign buyers can be persuaded to take its products. But, at the end, the sad impression survives that no major re-orientation of export policy is in sight. In accordance with past tradition, verbosity remains a substitute for action.

The basic problem facing India's exports can be stated simply. As international trade is growing, competition in world markets is becoming more intense. But since manufacturing costs in Indian industry have been rising steadily, its products have become harder to sell abroad, and its share of world trade has been falling. To some extent, the weaknesses are structural, in the sense that the demand for the traditional exports of the primary-producing countries fluctuates violently from year to year, and in any case has not expanded as spectacularly as the demand for the products of the industrialised countries. But, to a large extent, the weaknesses are also man-made, in the sense that no serious effort has been made to check the rise in production costs and selling prices—the one way in which the resort to substitutes and to technological innovations abroad might have been discouraged. The Indian Government's response to this situation has been two-fold. On the one hand, it has decided, rightly, that the export trade needs to be diversified—in terms not only of the commodities sold but also of the areas to which they are sold. On the other hand, it has taken the view that profits in the protected market at home are too large, so those profits should be partially mopped up in order to give industry a greater inducement to export. Both policies have been ornamented with a large variety of fiscal and organisational paraphernalia, ranging from excise duties for depressing domestic consumption on the one hand, to State trading and export promotion councils on the other. But the overall achievement, as the longer-term trend in exports shows, has been negligible.

Nothing that Mr. Manubhai Shah has said so far indicates that a radical improvement in policy is afoot. His major achievement hitherto has been the setting up of the Board of Trade, which may be the tallest of the tall poppies in the garden of export promotion, but the effectiveness of which remains to be seen. The Board has certain advantages over some of the existing organisations of the same type: it is fairly compact; private industry is represented on it; and it will meet every two months, instead of being merely a biannual or annual forum for speech-making. But it is purely advisory in character, and advice is the one thing the Government has never been short of, nor paid much attention to. Rumours are circulating that Mr. Shah has a number of other ideas too, most of them notable mainly for their varying degrees of irrationality. One is that there should be three or four State trading corporations, as if the one already existing had not done enough harm. Another is that a general cess of, say, 1½ percent should be imposed on industrial production for the specific purpose of financing the export campaign. According to Press reports, Mr. Shah has also suggested that companies should set up subsidiaries specially for promoting exports (forgetting that the present system of taxation discourages the formation of subsidiaries). In addition, he has recommended that industry should establish branches and build contacts abroad (forgetting that the Reserve Bank is extremely niggardly in giving foreign exchange for the purpose).

The freedom with which such ideas are advertised brings one disturbing reminder: it is that the report of the Import and Export Policy Committee, headed by Sir A. Ramaswami Mudaliar, may have already been largely forgotten. The report has been in the Government's hands for

well over two months. One of its relatively minor recommendations (about annual licensing) was partially accepted when the new import policy was announced at the end of March. It was said that the decisions on the remaining recommendations would be outlined at the time of the Central Budget; the only "concession" then given was that the tax on companies' export earnings was not raised. The rest of the report now seems to be lying unopened gathering dust on Secretariat shelves, although the Government has done the Committee the honour of saying that its recommendations are still "being considered." The energy which Mr. Shah is reputed to have brought to his new portfolio might be better devoted to framing positive decisions on the Committee's report. Homilies and exhortations are all very well, but perhaps the reminder is needed that it is only commodities, not words, for which there is an export demand.

There are two points, in particular, on which firm decisions seem to be urgently necessary. One is that export industries should be given a blanket guarantee that they will promptly get licences whenever they have to import raw materials, spare parts or machinery for the purpose of increasing their production. The second is that the system of export incentives, whether in the form of import entitlements or excise duty rebates, should be made simpler and more liberal. Many of these incentives, though attractive on paper, are worthless in practice. To talk of giving further incentives, and financing them through indiscriminate levies on production, is futile as long as the administrative machinery cannot be geared to implement the incentives which already exist. The basic problem of reducing production costs meanwhile remains; but there is no better way of attacking it than by first ensuring that industry is given the facilities to work to full capacity. This not only means that raw material shortages, such as those now afflicting the cotton textile and engineering industries, have to be overcome through liberal imports. It also means that adequate supplies of basic needs like fuel, power and transport have to be assured for the future.

THE AID-INDIA CLUB MEETING

THE Aid-India Club will meet in Washington next Monday against a background of events which appear to have adversely affected this country's prospects of getting foreign assistance. The Club is meeting for the second time this year to consider how it can raise a quota of \$1,000 million to meet the foreign exchange requirements for the second year of India's third five year plan. The last meeting, convened at the end of January, took place shortly after the Goa affair which drew much place perhaps one reason why it was then decided to postpone consideration for a few months. But the stage has now come when action can hardly be deferred: the third plan is already in its second year, and a further delay would be extremely harmful. For the first year of the plan, 1961-62, the Club provided a total amount of \$1,000 million, half of it from the U.S.A. (not counting the \$45 million each previously promised by the U.S.A. and West Germany). The United States has already provisionally agreed to give \$500 million for the second year also, provided the other members of

the Club together raise an equal amount. Until now, the latter have come forward with offers totalling only \$280 million, so a gap of \$220 million remains. The principal task of next week's meeting is to persuade these countries to increase their offers of assistance to match the U.S. figure.

OFFERS FROM AID-INDIA CLUB

	(In million dollars)	
	1961-62	1962-63

proposed by the Kennedy administration. The Committee's previous action had threatened to upset the calculations on which the Aid-India Club's discussions were to take place. The reduction will now amount to only \$88 million. This means that the allotment for 1962-63 will be the same as for 1961-62. From the first year's allotment, it is reported, about \$458 million has already been committed, in the sense that agreement has been reached with the Indian Government on using the funds for specific projects and purposes. The total aid for this country authorised by the U.S. Congress last year was said to be \$727 million; this included, in addition to the development loans totalling \$545 million mentioned above, payment of the U.S. share of the cost of transporting P.L. 480 shipments. The \$815 million proposed by the Kennedy administration for the next U.S. fiscal year includes the \$500 million already agreed to as part of the Aid-India Club's programme; the larger sum, again, includes payment of transport costs for P.L. 480 shipments and perhaps some additional development assistance for such schemes as the Bokaro steel project, should negotiations be concluded successfully. It has now been reduced to \$727 million.

Even the smaller cut is unfortunate, for it undermines the U.S.A.'s role in the Aid-India Club's efforts for the second year of the third plan. The U.S. Government will face considerable difficulty in getting the cut fully restored in view of the furore caused by the Indian proposal to buy M.I.G.-21 supersonic jet fighters from Russia. U.S. Congressmen are particularly susceptible to view such deals as anti-American, especially when the country involved is one receiving U.S. aid. Britain, as a member of the Aid-India Club, is also reported to be worried over the prospect of India acquiring the Russian planes. It is unlikely, however, that this will have any adverse effect on the size of her aid offer. The other members of the Club may be affected by these developments in so far as they will be influenced by the U.S. attitude. They are unlikely to raise their offers of aid unless the U.S.A. takes the initiative in pressing them to do so. But in the present circumstances, the U.S.A. is perhaps not in a strong position to do this.

Certain other recent developments are also relevant to the forthcoming meeting of the Aid-India Club. The first is the decision of the West German Government to insist on loan funds provided by it being spent on purchases in that country itself. It is reported that Bonn has given an assurance that this restriction will not apply to India, presumably because this country already has a large deficit in trade with West Germany. But West Germany's enthusiasm for foreign aid is at best lukewarm. In the absence of a restriction to "buy German" from aid funds, her reluctance to give more assistance might grow. The second development is the reported inability of the Russians to supply the electricity generators required for all the four projects for which they had undertaken to provide equipment. If true, this will mean that the projects will have to be delayed, with serious consequences for the various targets of the third plan. Even if India is able to tap alternative sources, the foreign exchange needs will go up. When the overall prospects are so unpromising, it is surprising that the Central Minister of Steel and Heavy Industries should assert joyously that the Bokaro steel project will go through with or without American help.

The third and considerably more important development results from the Government's fresh assessment of the foreign exchange requirements of the third plan projects. It is reported that the exchange gap is now Rs. 2,231 crores, against the plan estimate of Rs. 2,030 crores and the draft outline figure of Rs. 1,900 crores. The higher figure is the result of using actual quotations for foreign equipment in estimating costs and the need to undertake preliminary work on a larger number of projects than was originally contemplated. The country's exports, meanwhile, have recorded a modest rise of Rs. 23 crores in 1961-62 over 1960-61, but this is nowhere near the rate of growth prescribed in the plan. It is unlikely that in framing its latest estimate, the Government has taken this aspect into account. The foreign exchange reserves having dropped to a low of just over Rs. 100 crores, it is unsafe to proceed on the assumption that they can be drawn down any further. A loan from the International Monetary Fund can provide

only temporary relief and cannot, therefore, help to solve the basic problem.

The only bright spots in this otherwise rather unpromising picture are provided by a World Bank report on the Indian economy, and by the belief that certain other countries might join the Aid-India Club. The former has emphasised the need for "foreign aid in the requisite amounts, at the appropriate time and in the required form," if Indian economic progress is to continue. Since the

ROLE OF INVESTMENT TRUSTS

THE serious attack of growing pains now being suffered by the Japanese economy—the growth rate of 17.7 percent seen three years ago has had to be reduced to 5 percent because of inflation and a subsequent payments deficit—has naturally hit the country's stock markets. This, in turn, has put to the test the system of popular investment trusts which, by attracting the savings of millions of modest investors, played a great rôle in the period of industrial expansion. There were those who feared grave disillusion among the class of new investors (many of them peasants flush with cash after a few good crops) when they discovered for the first time that a bull market cannot last for ever. It was known, moreover, that some of the investment societies to whom they entrusted their savings had not been as prudent as they would have been obliged by law to be in other countries. Yet, on the whole, this system for mobilising the money of millions in support of industry has stood the test well. A few amendments may be required in the law governing investment societies, in the light of experience gained in their first major setback, in order to reduce their total freedom of operation. But these are matters of detail. The really big concerns, such as the Nomura Securities Company and the Yamaichi Securities Company, have emerged unscathed, although of course their certificates are, for the time being, worth less than at the peak of the boom. It is at this time, during their moment of adversity, that one can with a good conscience recommend them to the attention of those in India interested in attracting small savings to industrial equity.

The Japanese investment companies date from 1956, but they already own 10 percent of all the stock quoted on the Tokyo exchange. (The U.S. companies, on which they are modelled, own less than 8 percent of the shares listed in New York.) They have opened offices, and sent their agents, throughout Japan, and used every means of mass communication—the Press, radio and television—to popularise share investment in classes previously remote from this aspect of capitalism. They succeeded so well that it is calculated they canalised three-quarters of small savings; so that ten million Japanese are today stockholders or owners of investment trust certificates. The bull market of course helped; but then this mobilisation of savings was itself part of the cause of the continuous rise in stock values. Some of the funds they attracted naturally deserted traditional havens: bank deposits and savings accounts. Yet it cannot be said that they grew simply at the expense of those institutions, for they mobilised new money that would otherwise have lain idle. The preference for equity over fixed interest deposits is normal during a period of rapid industrial growth. Since the stock market has declined, funds have moved back to banks and savings accounts. But the increment to national savings that was the work of the investment societies remains, and will continue to appear when the market picks up. This point is dwelt upon because in this country, where jealousy between the public and private sectors has not disappeared, it would perhaps be objected that the trusts merely redirected savings to new uses. On the contrary, they uncovered new funds available for economic growth, and these move between variable and fixed interest employments in accordance with familiar rules. Besides, the investment trusts can perfectly well be required by law to invest a proportion of the money they collect in the securities of the State or of the public sector.

More interesting was the rôle the trusts played in drawing foreign private capital to Japanese industry. Japanese domestic saving does not suffice to finance the country's rapid expansion. Having

World Bank is the sponsor of the Aid-India Club meetings, it can be expected to use its expert knowledge and authority in supporting this country's case for further assistance. In spite of the difficulties on the domestic political front, the U.S. Government also can be relied on to use its influence in favour of India. But it remains to be seen how far the generosity of the Aid-India Club will remain unaffected by the controversies over Goa, Kashmir and the proposed purchase of Russian planes.

recovered from their postwar fears of a "colonisation" of their economy by the Americans, the Japanese now seek to procure American—and lately, with particular interest, European—capital for their industry. Legislation to prevent speculation by foreigners remains severe. At first, capital sent from abroad could not be withdrawn in less than five years; but from 1961 the waiting period has been reduced to two years. Dividends and interest may be remitted freely at any time, and in special cases funds may even be withdrawn in the first two years. So much to show that the Japanese attitude to foreign private investment remains cautious. Even so, the investment societies managed to secure substantial amounts of it for industry. They sold their certificates abroad, placed the shares of Japanese companies on Wall Street, floated debenture loans for Japanese industry in foreign capitals, and served as the channel through which large sums of foreign capital went directly to the Tokyo exchange. Having demonstrated their solidity and sound management during the recent market decline, they are intensifying these activities abroad, for the country sorely needs foreign exchange to tide over the payments crisis brought on by too fast expansion. The two Companies mentioned, Nomura and Yamaichi, did most of the work abroad; there is no need of—there may even be disadvantage in—a multiplicity of national investment societies to woo foreign capital when one or two well-reputed houses suffice.

A similar mechanism for attracting foreign risk capital has lately appeared on the other side of the earth, in Spain, where industry's capital requirements are similar. After the foundation in Switzerland of several foreign-owned investment societies specialising in accumulating Spanish stock, the first Spanish-owned investment trust has succeeded in getting its certificates listed in Zürich. Obviously, an open-end trust that first establishes its reputation at home, and then gets the support of foreign banks for quotation of its certificates abroad, can serve as a channel for importing risk capital just as well as a foreign investment society. There are precedents here which may be worth pondering by the Indian financial community.

A DEVELOPMENT SCHEME FOR KERALA

ON the basis of a techno-economic survey, the National Council of Applied Economic Research has prepared a ten-year development scheme for Kerala. The survey gives the impression that if the State is not to lag behind of others, it will have to aim at a higher rate of growth than the one projected for India as a whole. An annual increase of 10.7 percent in the per capita income is the target set for Kerala by the N.C.A.E.R. The investment required is estimated at Rs. 1,000 crores—Rs. 400 crores during the third plan and Rs. 600 crores during the fourth plan. Raising such a large sum will be possible only with liberal assistance from the Centre and substantial investment by the private sector, since the resources of the State Government are not expected to exceed Rs. 180 crores during the ten-year period.

A proper system of crop priorities in the sphere of agriculture, and technological improvements in the industrial sector, are the main planks of the N.C.A.E.R. scheme of development. It is pointed out that top priority should go to

the cultivation of commercial crops, and that it is not good for Kerala to aim at food self-sufficiency. Although the recommendation runs counter to the current official thinking, it appears to be economically sound. In a framework of national planning, it is unnecessary for individual States to plan for self-sufficiency in everything. The soil and climatic conditions of Kerala are more suited for the production of certain cash crops like rubber and coconuts in which the country is not self-sufficient. It would be wise for the State to use the maximum land and resources for the production of these crops, and to depend on the neighbouring surplus States for the extra foodgrains it requires. As the N.C.A.E.R. suggests, Kerala can legitimately ask for a declaration of policy from the Centre that all food requirements beyond the local production will be met from surpluses elsewhere in the country if the State gives priority to the production of cash crops which are either in short supply or which are valuable foreign exchange earners. This does not, however, mean that Kerala should give up her efforts to raise food production. Only such efforts should not be at the expense of cash crops.

Although the agricultural sector, especially cash crops and plantations, has a large potential for future growth, the development of agriculture cannot provide a long-term solution to the economic problems of Kerala. There are limits beyond which employment in the agricultural sector cannot be increased. The basic problem of unemployment and under-employment can be solved only through rapid industrialisation. Therefore, the greater emphasis laid on the industrial sector by the N.C.A.E.R. is understandable. It is pointed out that the conspicuous absence of mineral ores need not deter Kerala's industrial growth. The State offers many attractions to investors already. The abundant supply of skilled labour, and infrastructural facilities like transport and power, are among the attractions. Kerala also possesses a variety of local resources in the form of forests, marine wealth, and agricultural cash crops. The N.C.A.E.R. recommends that the strategy of industrial development should be based on technological advancement, both through the replacement of antiquated processes by more modern techniques in the existing industries like coir and cashew, and through the introduction of technologically-advanced industries. The Council's report contains a long list of industries, both large and small, suitable for Kerala. Among them, pride of place is given to engineering industries, including shipbuilding, precision instruments, machine tools and heavy electrical equipment. Projects of these types often present a range of locational possibilities but, as the N.C.A.E.R. report says, Kerala deserves "special consideration" on account of the peculiar problems with which it is beset—for example, a high degree of unemployment, a technologically backward industrial sector and the shyness of investment in private enterprise in Kerala. Among the agro-based and forest-based industries recommended for location in Kerala are tyre factories, paper and rayon pulp factories and particle board plants. There is scope for chemical industries also. A total investment of Rs. 193 crores is recommended by the Council in the industrial sector—Rs. 144 crores in large-scale industries, Rs. 27 crores in small industries and Rs. 22 crores in cottage industries.

A programme of industrial development of this magnitude presupposes the ready availability of power. Therefore, the N.C.A.E.R. recommends that the installed capacity should be raised from the present level of 150MW to 800MW by 1971, and for this an investment of Rs. 105 crores is suggested. Kerala has rich hydro-electric resources which, if used properly, can enable it to sell electricity to neighbouring States at a handsome profit. Kerala is producing electricity today at the low cost of 1.7np a unit. Even a liberal estimate of the employment opportunities created by the suggested development would leave Kerala with a backlog of 650,000 unemployed by 1971. The colonisation of sparsely populated areas in other States like Madhya Pradesh and Orissa, the starting of rural public works and the expansion of the rubber planting programme are among the measures suggested by the N.C.A.E.R. to relieve unemployment. But a more effective solution is

birth control. Kerala will have to pay more attention to family planning programmes than the rest of India. As the Kerala Minister for Industries has rightly said, the N.C.A.E.R. report contains

several "valuable and thought-provoking" recommendations. But its usefulness will depend greatly on how far the State Government is able to implement those recommendations.

Current News and Comment

Progress of Hindustan Aluminium

The directors of the Hindustan Aluminium Corporation state in their report for the year ended December 1961, that the construction of the Company's integrated aluminium plant in Renukoot, Mirzapur district of Uttar Pradesh, has made excellent progress. The construction of all the factory and residential buildings and the erection of the major portion of the plant have been completed in a record time of less than 18 months. The Rihand Dam power-station was commissioned in February 1962, and the transmission lines from the power house to the Company have already been energised. A section of the reduction plant is already under trial, and the directors hope to produce the first batch of ingots in the next few weeks by using imported alumina. The alumina section, it is expected, will be ready by about the third quarter of this year, by which time the entire plant should be ready and tuned for regular production. The import licence for the fabrication plant, which has been much delayed, will, it is expected, be received soon, and orders for the equipment will be placed without delay. The U.P. Government has agreed to provide the required power for this plant from Rihand. In view of the growing demand for aluminium in the country and especially for A.C.S.R. conductors which will soon replace copper conductors, the Company has sought the Central Government's permission to expand the capacity from the present 20,000 metric tons to 50,000 metric tons of aluminium ingots a year. It will also be necessary to set up a thermal power-station to meet the additional requirements of the expanded plant, and the Government's sanction for the power house is also being sought. The profit and loss account for 1961 shows a deficit of Rs. 1.88 lakhs after transferring Rs. 39.80 lakhs to the "expenditure during construction" head, but before making any provision for depreciation and taxation. This deficit has been set off against the previous year's surplus of Rs. 2.11 lakhs brought forward, and thus a net surplus of Rs. 23.339 is carried forward to next year's account. Fixed capital expenditure incurred so far amounts to Rs. 11.62 crores. The Rs. 10-paid share of the Company is currently quoted around Rs. 18.36.

are considered satisfactory. The directors are confident that the Company will make good profits in due course. It will enjoy the usual tax exemption which is permitted to a new industrial undertaking.

Prospects for Killick Industries

The Rs.100-paid share of Killick Industries is currently quoted around Rs.87, which is only a little above the year's low of Rs.83.50. The shareholders, who have suffered considerable losses on their investments and have had to go without a dividend for 1961, can, however, derive some comfort from the chairman's observations at the Company's annual meeting which was held on 18th February. The chairman, Mr. A. N. Haksar, has assured that there is no reason for pessimism about the Company's future. The prospects, according to him, are reasonably good, although the shareholders might have to wait for some time to get their "just returns". With the additions that are now being made, Killick Industries will prove in the not-distant future to be a Company with sound foundations.

Referring to the working of various subsidiaries, Mr. Haksar said that the engineering factory manufacturing vibrators and pre-stressed concrete equipment, is doing well. The Company hopes shortly to reach an agreement with a well-known European manufacturer for technical help for its steel file factory. Another subsidiary, Killick Caribonum, has reached the break-even point, and this venture will show profit before the end of the year. The project for the manufacture of slotted angles and other allied products, in collaboration with Dexion Ltd. of the U.K., is expected, will go into production in the first quarter of 1963. The Company has sought the Government's permission to act as secretaries and treasurers for a new concern to be set up for making filter-tips for cigarettes in collaboration with Cigarettes Components Ltd. of the U.K. Killick will also have a 25 percent investment in this project. Snowcem has progressed very well and efforts are being made to extend its activities to other allied lines. A. R. Haseler and Company has shown better results and the improvement, it is expected, will be maintained. The main subsidiary, Killick Nixon and Company is said to have turned the corner. Shipping and clearing and forwarding departments which suffered a setback last year have done far better in the current year and are showing reasonable profits. The Kilpiece Division of Killick Nixon suffered a considerable loss in 1961 as a result of a sudden slump in the U.K. market, and it had to carry large stocks of textiles. But it has now succeeded in disposing of the larger portion of these stocks and is likely to do fresh business profitably in future.

Dealing with managed companies, Mr. Haksar stated that, excepting Shivrajpur, all companies were doing well. Kohinoor, it is expected, will do equally well, if not better than in 1960, in spite of additional tax burdens. All the three electricity companies are faring well, and it is hoped that in the course of this year, the Government will amend the law governing the return allowed to electricity undertakings. Hingir Rampur Coal Company has undertaken an expansion programme, and the production and profits, it is expected, will increase in the next 12 months. Shivrajpur has had a bad year, and although substantial sales of manganese ore have recently been made on a barter basis, the profit margin is poor. Mr. Haksar explained that the dividend for 1961 had to be passed with a view to conserving the resources to finance various new projects sponsored by the Company.

Prabhat Udyog Share Offer

The subscription list for the Rs. 29.40-lakh public issue—all in equity shares of Rs. 100 each—of Prabhat Udyog Limited, Bombay, will open on 30th May, and will close on 9th June or earlier but not before 2nd June. (Fuller details of the announcement appear on a later page in this week's issue of *Capital*.) The entire public issue has been underwritten. The Company is already engaged in

the manufacture of pressure stoves, pressure lamps, gas mantles and spare parts, having taken over in June 1961 the running business of Messrs Prabhat (Stove and Lamp) Products Co. Private Ltd. Sales for 1961-62 are placed at Rs. 84.37 lakhs, and the profit is estimated around Rs. 4 lakhs. Subject to unforeseen contingencies, the Company expects to pay a reasonable and satisfactory dividend from the very first financial year. Additional funds are needed for expanding production capacity to 500,000 pressure stoves, 100,000 pressure lamps, 100,000 gross gas mantles a year on a two-shift basis. The Company also proposes to start the manufacture of non-pressure stoves, and it is negotiating for foreign collaboration for making liquid gas stoves. The implementation of the expansion programme, it is estimated, will cost about Rs. 70 lakhs, of which Rs. 44.40 lakhs will be needed for repayment of the loans incurred by Prabhat (Stove and Lamp) Products Co. Private Ltd from its directors, their relatives, and friends and others (partly to be discharged by the issue of equity shares of the value of Rs. 22.80 lakhs) and Rs. 16 lakhs will be required for the replacement of machinery, extension, erection of building, etcetera. The capital requirements, it is proposed, will be met by raising Rs. 60 lakhs through the share capital issue and by securing a loan of Rs. 10 lakhs from the Industrial Credit and Investment Corporation of India. The expansion programme is expected to be completed by March 1965. The Company expects its sales to increase from Rs. 84.37 lakhs in 1961-62 to around Rs. 2.25 crores in 1964-65. The issued capital of the Company is Rs. 60 lakhs in equity shares of Rs. 100 each. Out of this, it will allot 30,000 equity shares, credited as fully paid-up, as part of the consideration for the purchase of the business of the Prabhat (Stove and Lamp) Products Co. Private Ltd, and in repayment of the loans advanced to it by its directors, their friends and relatives. The promoters, directors and their friends have agreed to take up further shares of the value of Rs. 60,000. The balance of Rs. 29.40 lakhs is now being offered for public subscription.

Growth Prospects for Philips India

The latest results of Philips India Ltd for the year ended December 1961 are likely to discourage investors. The ordinary shares have improved sharply to Rs. 38.37 during the past month or so, and at this price they look more than fully priced. The taxable dividend of 12 percent yields no more than 3.1 percent at the present price. The dividend is covered more than twice. Whatever the stock market's assessment of the growth prospects, it is certainly exaggerated in view of the latest performance. This is the third year in succession that Philips India has maintained the taxable ordinary dividend of 12 percent. Judging from the possible expansion indicated in the latest report, the prospects appear to have been adequately discounted by the present value of shares. Sales rose by about 23 percent to Rs. 6.8 crores, but the profit has risen from Rs. 62.96 lakhs in 1960 to only Rs. 66.21 lakhs in 1961, after transferring Rs. 19.44 lakhs (against Rs. 19.04 lakhs) to depreciation. The decline in the percentage of profit in relation to turnover is partly due to the excise duty levied on radio sets. The expenditure incurred for accelerating the process of integration and commencing production in the new light factory in Bombay, as well as the heavy interest charges, have contributed to the lower profit margin. As bank borrowing has been increased, the burden of interest charges is expected to continue. Borrowing rose from Rs. 1.01 crores to Rs. 1.86 crores, but the profit before tax, when it is related to the net worth, shows a rise over that of 1960. The net value of fixed assets has increased by Rs. 11 lakhs. Current assets are more than Rs. 1 crore higher at Rs. 5.19 crores, but this is mainly due to the increase in stocks of finished goods and raw materials.

The move to develop indigenous sources of supply is being rewarded. The output has increased in spite of severe import restrictions. The indigenous content of a radio set has risen to about 70 percent. With the progress of integration and the availability of supplies such as valves from local sources, the indigenous content will

show an appreciable increase in the future. The directors have arranged for foreign loans to meet the cost of imported capital equipment needed for implementing the first stages of the expansion schemes. With the increased production of radio components at the Loni and Calcutta factories, the prospect of supplying them to electronic equipment manufacturers has improved. The light factory in Bombay, which was acquired in December 1960, has started producing lamps of standard quality. Extensive repairs to the old plant and machinery have been made. Steps have been taken to increase the capacity of the factory, and it is proposed to undertake there the manufacture of various other products, such as burners for gas discharge lamps and glow-switches for fluorescent lamp starters. The production of radio components at the Loni factory is being expanded. The manufacture of radios at the Loni and Calcutta factories has started showing satisfactory progress. Philips India's manufacturing efforts in collaboration with other parties—many of which are small-scale industries—in various lines, such as electronic measuring instruments, industrial D.C. units, public address equipment, amplifiers and cinema projectors, have made satisfactory progress.

Out of the total profit, taxation absorbs Rs. 36 lakhs (against Rs. 33.5 lakhs) and development rebate reserve Rs. 3 lakhs (against Rs. 2.9 lakhs). The carry-forward is Rs. 1.43 lakhs, against Rs. 63,622 brought in.

New W.I.M.C.O. Project

The chairman of the Western India Match Co. Ltd, Mr. Chunilal V. Mehta, told the shareholders' annual meeting in Bombay last week that the Company proposes to start a project in south India for the recovery of marine chemicals from sea. Negotiations with the Madras and Central Governments are under way, and the directors expect to know before long whether it is possible to go ahead with this scheme. Apart from common salt for which there is a great demand from industry and which also has export possibilities, the Company intends to extract from sea-water sufficient potassium chloride to feed its chlorate factory and other chloride consumers. The chairman criticised the policy of restraining the mechanised sector from increasing its capacity in spite of the continuing shortage resulting from the cottage industry's failure to satisfy the rising demand for matches in the country. He also complained of the growing shortage of timber and suggested that some substitute such as cardboard would have to be used, but there was an excise duty on cardboard which the Government was not willing to waive. Commenting on the proposed increase of 50nP a gross in the excise duty on matches of 50 sticks execution, Mr. Mehta said that it was difficult to get the authorities to realise that there cannot be a uniform box price in all areas, since local taxation is not uniform. He added that the excise duty on the Company's products had reached the formidable level of 60 percent of the wholesale price, and W.I.M.C.O. paid as much as Rs. 10 crores to the Government on this account. The proposed increase in the corporation tax was likely to cost the Company an extra Rs. 6 lakhs for 1961.

Referring to the working of the paper mill, Mr. Mehta stated that it had to be closed for some days because of the late arrival of pulp following delays in the receipt of licences. The Company has still to depend on imported pulp, since indigenous supplies are not yet available. The chairman regretted that the Assam Pulp Mills scheme, in which W.I.M.C.O. was to take an interest and which would have completely solved the Company's pulp difficulties, had to be abandoned on account of financial complications. However, the Company is at looking round for alternative suppliers and is at the same time examining the possibility of manufacturing certain quantities of pulp itself. Mr. Mehta pointed out that the restrictions on the import of raw materials resulted in a reduction of potassium chlorate output in 1961. Similarly, the delay in getting licences for the import of phosphorus compelled the Company to resort to friction painting on only one side of the match boxes for some days. The Rs. 100-paid share of W.I.M.C.O. which recorded a high of Rs. 321 early in January,

CAPITAL, 24th May, 1962.

is currently quoted around Rs. 309, offering a gross yield of about 5.4 percent.

Oriental Power Cables Share Offer

The subscription list for the Rs. 80-lakh public issue by Oriental Power Cables Ltd will open on 24th May, and will close on 31st May or earlier, but not before 26th May. The entire public issue, made up of 53,000 equity shares of Rs. 100 each and 27,000 9½ percent redeemable cumulative preference shares of Rs. 100 each, has been underwritten. The Company proposes to set up a factory in Kotah, Rajasthan, for manufacturing paper-insulated power cables and plastic-coated V.I.R. wires. Sumitomo Electric Industries Ltd of Japan will provide the complete technical know-how, for which it will receive a royalty, free of taxes, of 1 percent of the net ex-factory invoice value of the products. No minimum royalty is payable to the Japanese firm. It is proposed initially to manufacture paper-insulated power cables. The plant will have a capacity of 600 miles of such cables a year. The factory, it is expected, will go into production by the end of 1963. The project is estimated to cost Rs. 2.50 crores. The cost will be met by the capital issue of Rs. 1.05 crores, and by a medium-term loan of Rs. 85 lakhs from the Industrial Finance Corporation of India. The balance of Rs. 60 lakhs will be raised by way of loans and/or overdrafts from the Company's banker or managing agents. The issued capital consists of Rs. 75 lakhs in equity shares and Rs. 30 lakhs in preference shares. Out of this, the directors and their associates will take up equity shares worth Rs. 22 lakhs and preference shares of the value of Rs. 3 lakhs. The balance of Rs. 53 lakhs in equity shares and Rs. 27 lakhs in preference shares is being offered for public subscription.

Maiden from National Machinery

The directors of National Machinery Manufacturers Ltd have recommended a maiden dividend of Rs. 6 a share, subject to tax, for 1961, which is entirely justified by the Company's excellent results. (While sales have risen by about 22 percent from Rs. 2.97 crores to Rs. 3.63 crores, the gross profit shows an impressive increase of 90 percent from Rs. 32.19 lakhs to Rs. 61.08 lakhs. The directors report an all-round rise in the production of ring frames, spares and conversion materials during the year, but production could not keep pace with the growing demand due to the insufficiency of raw materials and components of the quality required. Efforts are being made to get over these difficulties by procuring materials from indigenous sources. After providing Rs. 15.14 lakhs (against Rs. 15.62 lakhs) for depreciation and Rs. 2.47 lakhs (against Rs. 1.26 lakhs) for development rebate reserve, the net profit amounts to Rs. 43.48 lakhs, against Rs. 15.30 lakhs. From this, the directors have set aside Rs. 18.82 lakhs for arrears of depreciation, and a sum of Rs. 4.37 lakhs has been transferred to development reserve in respect of previous years. The proposed dividend will absorb Rs. 15.14 lakhs. After taking into account the debit balance of Rs. 3.96 lakhs brought in, there remains a surplus of Rs. 1.37 lakhs to be carried forward. The directors report that preliminary work on the manufacture of N.M.M.-Ruti automatic looms, in collaboration with the Swiss firm of Ruti Machinery Works Ltd, has now been nearly completed and the manufacture of these looms is likely to be fully established in the course of the next few months. The Company proposes to manufacture 1,500 looms a year, in the first instance. The necessary imported components for looms have started arriving according to schedule.

Seebore Coal Profit Rises

The ordinary shares of Seebore Coal Co. Ltd have hardened to Rs. 47.75 during the past few days partly because of the satisfactory results for the year ended December 1961, and partly due to the general support which has been forthcoming for coal shares in the expectation that the price of the commodity may be raised in order to encourage production. The taxable ordinary dividend has

been maintained at 42.6/7 percent, which offers a yield of 6.3 percent at the present price. The dividend is covered more than four times. The profit has improved to Rs. 5.13 lakhs from Rs. 3.85 lakhs in 1960 due to higher sales at Rs. 29.44 lakhs, against Rs. 21.35 lakhs. The profit figure has been arrived at after transferring Rs. 56,416 (against Rs. 51,479) to depreciation. Taxation is allocated Rs. 2.48 lakhs (against Rs. 1.83 lakhs), development rebate reserve Rs. 9,296 (against Rs. 10,691), and general reserve Rs. 1 lakh (against Rs. 50,000). The carry-forward is Rs. 67,383, compared with Rs. 57,532 brought in. Raisings were 110,903 tons, compared with 92,290 tons, and despatches improved to 109,835 tons from 91,258 tons. As raisings in the Pretoria colliery have been suspended, a small area of the Koithi seam in this property is being worked by an adjoining colliery. This is a source of additional revenue, but it is unlikely to last for more than another year or so.

Outlook for Isaac Holdens

The ordinary shares of Isaac Holdens (India) Ltd have fallen back to Rs. 19, due to losses incurred by the Company during the year ended December 1961. Commercial production started only on 13th January, 1961, and was seriously affected by the shortage of electric power. The delay in the arrival of wool shipments also interrupted production schedules, but the quality of wool tops turned out by the Company has been high. The directors say that normal working has now started and results during the current year will improve. Production during 1961 was 1.02 million kilograms, but since the end of the year, a satisfactory rate of output, in excess of 2.3 million kilograms a year, has been achieved. The machinery of the first French combing unit of 10 combs has started production. The dye and recombining plants are ready for shipment, and the grease plant is being erected.

The order book is fairly encouraging. The directors say that at the instance of the Government, the combing of Indian wool on a commercial scale for the first time was undertaken by the Company. Valuable assistance was received from technical consultants, who produced tops and garments from blends of Indian wool. The Company proposes to undertake the processing of synthetic and cellulosic fibres for the use of the woollen industry, and this project is being pursued. The directors think that this work would be more effectively carried out by a separate company. Therefore, Indian Fibres Limited was formed and registered as a subsidiary to promote the production and sale of tops made from synthetic fibres and Indian wools. The issue of import licences to purchase further machinery for making the remaining 1.6 million kilograms of wool tops, is awaited. There is a loss of Rs. 8.29 lakhs, after providing Rs. 5.16 lakhs (against Rs. 1.38 lakhs) for depreciation. Bringing in the previous loss, a debit balance of Rs. 14.68 lakhs has been carried forward.

Digvijay Cement Raises Dividend

Judged by the modest setback in Shree Digvijay Cement shares from Rs. 212.50 to Rs. 210 following the announcement of the dividend, the market is apparently dissatisfied with the directors' decision to step up the dividend for 1961 by merely Re. 1, from Rs. 9 to Rs. 10 a share, both taxable. But shareholders will find the directors' report on the Company's working results encouraging. In spite of a fall in cement output and despatch, the Company has earned a gross profit of Rs. 67.46 lakhs, which is nearly 53.6 percent higher than the 1960 figure of Rs. 43.93 lakhs. It must be noted, however, that the 1961 profit figure includes Rs. 10.76 lakhs (against nil in 1960) received as dividends from the subsidiary company—West Coast Paper Mills—for the two-years ended June 1960 and 1961. After providing Rs. 18.85 lakhs (against Rs. 18.08 lakhs) for depreciation and Rs. 16.69 lakhs (against Rs. 10.25 lakhs) for taxation, the net profit amounts to Rs. 28.22 lakhs, against Rs. 13.97 lakhs in 1960. Allocation to development rebate reserve has been raised from Rs. 1.21 lakhs to Rs. 6.23 lakhs, and a sum of Rs. 77,000 (against nil) has been set aside for rehabilitation and development reserve. The pro-

posed ordinary dividend absorbs Rs. 13.44 lakhs (against Rs. 12.09 lakhs) and preference dividend accounts for another Rs. 5.19 lakhs (the same). There remains a surplus of Rs. 2.58 lakhs to be carried forward, against Rs. 1,550 brought in. In 1960, the directors had to draw Rs. 4.07 lakhs from general reserve for dividend payment.

In their preliminary report the directors state that cement output in 1961 dropped from 449,000 tonnes to 400,400 tonnes, and despatches declined from 450,000 tonnes to 400,300 tonnes. Clinker output, however, was higher at 423,000 tonnes, against 412,000 tonnes. Cement output declined due to the stoppage of one of the grinding mills in Sikka for major overhauling. This was, however, compensated by the higher output of the clinkering grinding plant in Bombay. The effect of higher retention prices for cement is reflected in the Company's working results for two months only, and the directors expect better results this year. The Central Government has granted the import licence for machinery for expanding the Company's capacity from 430,000 tonnes to 630,000 tonnes under D.L.F. loan. The asbestos sheets and pipe plant is being established in Ahmedabad with an initial capacity of 32,900 tonnes a year, and the foreign collaborators have deputed their erectors. It is expected that the plant will go into production shortly. The Company has finalised negotiations with the well known firm of Johns Manville Corporation. The principle of the financial agreement has been approved by the Government and it is considering the price at which the shares are to be offered to the foreign collaborators.

Raymond Woollen Repeats

The directors of Raymond Woollen Mills have decided to maintain the dividend for 1961 at Rs. 12 a share, subject to tax. The preliminary figures on the working results show that the Company has fared better than in 1960, with its gross profit up by about 6.2 percent from Rs. 50.94 lakhs to Rs. 54.11 lakhs. After providing Rs. 5.67 lakhs (against Rs. 9.52 lakhs) for depreciation and Rs. 21 lakhs (against Rs. 17 lakhs) for taxation, the net profit amounts to Rs. 23.81 lakhs, against Rs. 20.71 lakhs. Appropriations include development reserve Rs. 70,000 (against Rs. 1.25 lakhs), investment depreciation reserve Rs. 1 lakh (against Rs. 3 lakhs) and general reserve Rs. 9.70 lakhs (against Rs. 3 lakhs). The proposed dividends on ordinary and preference shares absorb Rs. 10.62 lakhs, leaving Rs. 2.95 lakhs to be carried forward, against Rs. 1.17 lakhs brought in.

Gaekwar, Navsari Mills Earn Less

Although the directors of Gaekwar Mills and Navsari Cotton and Silk Mills have maintained the dividends for 1961 respectively at Rs. 16 and Rs. 12 a share, subject to tax, both companies have fared rather badly in 1961 when the industry as a whole did reasonably well. In spite of larger sales, both have made smaller profits with Gaekwar doing a little better than Navsari. The directors attribute the poor working results to dull trading conditions, higher prices of cotton and increased wage bills. They point out that conditions in the cloth market have been very much unsettled by the fresh imposts on processed cloth, and that the production of mercerised cloth will be affected if the excise duty is not substantially reduced. The total turnover of Gaekwar Mills in 1961 recorded an increase of 8.5 percent from Rs. 2.03 crores to Rs. 2.20 crores, but the gross profit was down by 5.7 percent from Rs. 27.97 lakhs to Rs. 26.39 lakhs. Allocations include Rs. 6.75 lakhs (against Rs. 7.05 lakhs) for depreciation, Rs. 4.15 lakhs (against Rs. 2.48 lakhs) for development rebate, Rs. 4.43 lakhs (against Rs. 9.55 lakhs) for taxation, Rs. 3 lakhs (against nil) for dividend equalisation fund and Rs. 1 lakh (against nil) as provision for depreciation of investments. Dividend absorbs Rs. 6.40 lakhs, leaving a sum of Rs. 90,000 to be carried forward, against Rs. 24,000 brought in. The Rs. 100-paid share of Gaekwar Mills is currently quoted around Rs. 246 cum-dividend, offering a gross yield of about 7 percent.

The turnover of Navsari Cotton is up by about 9 percent from Rs. 1.18 crores to Rs. 1.28 crores,

The present U.S. allocation—the first allotment in the 1961-62 season—brings the total quantity of cotton supplied by the U.S.A. under P.L. 480 to India to-date to around 1.7 million bales. In 1960-61 alone, the U.S.A. gave India about 712,000 bales of which 575,000 bales were of cotton stapling 1in and below. With the latest announcement concerning U.S. cotton, the import allocation issued by the Indian Government this season so far amounts to 815,000 bales. Details of the actual purchase authorisation issued in Washington for the 180,000 bales are eagerly awaited, as the cotton is urgently needed here. While the agreement refers only to long staple varieties, informed sources say that a substantial quantity of cotton stapling 1in. and below will also be allowed to be imported under this allocation. The contract and shipment period, it is said, will be 30th June and 31st July, respectively, which means that the U.S. cotton will become available to Indian mills, by about the middle of August. Apart from the U.S.A. which is being approached for a further quantity, if not on rupee payment basis, in exchange for manganese ore, the Indian Government is negotiating with the Sudan, Russia, Pakistan and Yugoslavia. The Sudanese delegation, which visited this country recently, had important discussions with the trade and industry and the Government. The Sudanese Government, it is felt, could be persuaded to allow India to import about 200,000 bales, if only an agreement could be reached.

concerning the mode of payment. In view of her difficult foreign exchange position, India would naturally like to have cotton imports arranged for barter or deferred payment, preferably the former. Informed sources think that some way will be found to procure Sudanese cotton. India would need to import a further 800,000 to 900,000 bales in order to make good the present shortfall. The outlook for the next season beginning September will depend essentially on the size of the new cotton crop. One can only hope for the best because the prospect of another bad harvest is frightening.

Indo-U.K. Trade Declines

According to figures compiled by the U.K. Trade and Navigation Accounts, there was a substantial decline in the value of Indo-British trade during the first quarter of 1962, compared with the same period of 1961. Principal U.K. imports from India were down to £37.32 million from £42.84 million, and British exports to this country fell from £38.50 million to £30.96 million. Indian tea exports were markedly lower at £17.99 million, compared with £22.52 million in January-March 1961. Barring only oilseed cake and meal, crude fertilisers and crude minerals, all other chief items of Indian exports fell in value. Tobacco and tobacco manufactures, metalliferous ores and metal scrap, animal and vegetable oils, fats, greases and derivatives and miscellaneous textile manufactures, were the items in which there was a proportionately larger fall than in others. In U.K. exports to India, there were declines in almost all principal items, barring small rises in non-electrical machinery, chemicals, railway vehicles, scientific instruments, watches and clocks. Among U.K. machinery exports, for which India has been one of the main markets, only a few items showed increases, and these include aircraft and internal combustion engines, textile machinery, electronic and nucleonic valves and tubes, radio, television, radar and sound-recording apparatus, electric cables, wires and strips. All other items recorded falls of varying proportions; and those showing sharp declines were boilers and boiler-house plant, machine tools, industrial and works trucks, tractor and mechanical handling equipment, converting machinery and transformers.

Meaning of Public Purpose

Mr. Justice Oak of the Allahabad High Court has held that nationalised roadways do not constitute a "public purpose", although they may be a public service maintained in the public interest. He has also ruled that the U.P. Government is under an obligation to obtain a permit for plying stage carriages and that it is not entitled to exemption under the relevant clauses of the Motor Vehicles Act. According to Mr. Justice Oak, the transport of passengers along a certain route by the Government is a commercial activity. The court made these observations while partly accepting the writ petitions filed by a dozen private carriage operators for quashing the notification of the State Government nationalising certain motor routes in the Agra region. Mr. Justice Oak declared that a rule framed by the Government declaring the running of roadway buses by the State as a "public purpose" was *ultra vires*.

It is interesting to recall in this context the observation of the Law Commission—based on some earlier judgments of the Supreme Court—that "public purpose" is not a matter for subjective satisfaction of the appropriate Government and that it must be established objectively. But the recent judgment of the Supreme Court dismissing a petition challenging the compulsory acquisition of land for a private company in Punjab has raised some confusion in the public mind. This judgment, it has been pointed out, is at variance with that delivered by the Supreme Court in December last, quashing the proceedings of the U.P. Government for securing land for a private company to locate a factory for manufacturing textile machinery parts. The majority judgment in this case said the argument could not be accepted that "the intention of the legislature could have been that individuals should be compelled to part with their lands for the private profit of others, who may be the owners of companies, through the Govern-

ment." In the Punjab case, the land was acquired for locating a refrigeration factory. A typical comment on the perplexity caused by the contradictory judgments is as follows: "Amidst the conflicting findings of one Bench of the Supreme Court that deems the manufacture of refrigeration compressors and components a public purpose and another that does not consider the production of textile machinery parts that contribute to the satisfaction of the more basic human need of clothing, the average citizen may well wonder how much the constitutional protection guaranteed for his property rights is worth in the light of the acquisition laws in their present form." There may be no escape from the present position until the Land Acquisition Act of 1894 is suitably amended on the lines proposed by the Law Commission.

Prospects for Khadi

The Chief Minister of Uttar Pradesh, Mr C. B. Gupta, told a zonal meeting of the Khadi Commission in Lucknow that in future khadi production should be more for domestic consumption than for commercial purposes. The flaw in his argument is that this could not be done without upsetting the employment pattern. The fact remains that even an annual production of Rs. 15 crores of khadi has proved unsalable. Even increased rebates are not likely to push up sales as long as people prefer mill cloth to khadi. Sales resistance has developed with the use of khadi for making the uniforms for workers of a political Party. The problem of overproduction has also engaged the attention of the Planning Commission which has ruefully admitted that during the last two years of the second plan period, there was a large-scale accumulation of stocks and "special steps have had to be taken for further development of sales."

These steps have not obviously been effective even in the short run. The great expectations entertained about the Ambar Charkha have not been realised, and traditional khadi, it appears, still holds the centre of the stage. The Ambar Charkha, it was originally expected, could be plied eight hours a day for 300 working days in a year and could produce eight hanks a day. Actually, however, it could be worked only two hours a day and production did not exceed 1.8 hanks a day. Commenting on the shortfall, the third plan says: "The assumptions themselves might not have been realistic as handspinning is done mostly by women and that too during spare hours." During the third plan, the performance of the Ambar Charkha is not expected to exceed four hanks a day. The improvement is to be achieved by the formation of compact areas of *gram ekais*. Three thousand of these units are contemplated in the plan period. Ambar Charkhas, it is hoped, will be worked, on average, "for considerably more than two hours for 200 days in a year which was the average during the second plan." The target for khadi in the third plan is fixed at 160 million yards. Since even the present output cannot be sold Mr. Gupta did well in calling for radical rethinking of the whole question, although such a course may be politically unpopular.

CORRESPONDENCE

IMPORT OF CHICORY FOR MAKING FRENCH COFFEE

(TO THE EDITOR OF "CAPITAL")

Sir,

Until March 1961 import licences for chicory were granted to exporters of French coffee under the export promotion scheme. Up to then actual user licences were also granted to coffee manufacturers for this item. From 1st April, 1961, chicory import for actual users has been canalised through the Indian Coffee Board, Bangalore. Simultaneously, exporters of French coffee were asked to register their names with the Board for their requirements of chicory. The Coffee Board invites tenders from foreign chicory manufacturers from time to time and imports the brand and quality

for which the lowest tender is submitted. As a result, sometimes one quality is imported and sometimes another. Moreover, the Coffee Board usually allots to French coffee exporters only the exact quantity of chicory used in the process of export.

The All India Coffee Manufacturers Association has been representing to the Coffee Board and the Central Ministry of Commerce and Industry that, as far as internal consumption is concerned, any policy can be adopted because chicory of any quality can be forced on domestic consumers. But a foreign buyer cannot be compelled to accept the quality that one chooses to give him from time to time. For exports, uniform quality is essential. Different French coffee exporters have for long been using their own particular qualities. So the Association has been urging the authorities to grant individual licences to French coffee exporters so that they can import the quality suited to their requirements.

Indian French coffee exporters have to buy raw coffee in the internal auctions where prices are nearly double foreign coffee prices. So they have to bear considerable loss in the process of export. It was to compensate for this loss that the export promotion scheme was devised for chicory. By its removal from the export promotion scheme, French coffee exports will suffer. There is good scope for French coffee exports to the Middle East and the Far East, and about 100 tons, worth Rs. 6 lakhs, can be exported annually. As against this, chicory licences will have to be granted for about Rs. 150,000. Thus, there will be a net gain of Rs. 450,000 in foreign exchange. Raw coffee can be exported on the basis of samples, but manufactured coffee can be exported only on the basis of brand names. Building up a brand name involves a lot of publicity, agency and other organisational expenses. How can a coffee manufacturer recover all this when foreign coffee prices are half of Indian prices? For all these reasons, the authorities should reinstate chicory under the export promotion scheme in the interest of French coffee exports.

Yours etcetera,

D. J. JIGYASU,

Secretary.

All India Coffee Manufacturers Association
Madras, 14th May.

U.S. TRADE PRACTICES

BEFORE his departure to the United States Consul-General Patterson delivered a lecture in Calcutta on the commercial progress of the great American republic. He set forth some remarkable figures, and proved, doubtless to his own complete satisfaction if not to that of his hearers, that the United States is rapidly becoming the boss country of the world. Now it is impossible to deny the immense progress as a trading nation, which the United States has made of late years, nor can we refuse credit her with the possession of all the essentials for still more startling progress in the future. Her natural resources are many; her area grand; her people pushing, eager, resourceful and industrious to a remarkable degree. Yet there are those who hold that she had her commercial policy been more enlightened; her fiscal system reformed; and her merchants, as distinguished from her manufacturers, more politically powerful. It has indeed been said that the interests of the American merchant are constantly sacrificed to those of the agriculturist, the manufacturer, the mine-owner or the railway boss, and that it was to the merchant's political weakness we owed the absence of effective resistance to such commercial iniquities as the Silver Bill, the McKinley Tariff, etc. Be this as it may, a case has been brought to our notice which appears to show that, while American Consuls are lecturing on commercial progress and American Presidents preaching reciprocity in trade, the existing Customs law of the States are in many respects almost as great a hindrance to business as were those of Japan sixty years ago.

FROM

CAPITAL
29th May, 1962

A Ditcher's Diary

A GOOD MEMORY IS NOT NECESSARILY AN UNFAILING aid to understanding when it comes to international affairs. As I read of India's negotiations with the Soviet Union for two squadrons of M.I.G. jet fighters at cut prices, I at once thought of President Nasser's purchase of Czech arms. This was immediately followed by the late Mr. John Foster Dulles's refusal to extend U.S. aid for the Aswan Dam and, later, by the Suez campaign, which did Anglo-French reputation little good but did not exactly enhance the prestige of the Egyptian army either. West Asian affairs have never been the same again. The differences are too obvious to need elaboration: Nehru is not Nasser nor India Egypt; it is difficult to see another Eden-Mollet combination; and I can't spot India's Israel at all. Was I, then, wrong in remembering the Egyptian experience? I certainly hope so. Yet it is difficult to see things clearly when Mr. Krishna Menon thinks it enough to rebuke the Press; and the Anglo-U.S. envoys won't talk. There is need for caution on all sides. Surely, as Mr. Menon has already said with heat, India is a sovereign country and has every right to buy arms anywhere she likes. Mr. Menon knows well enough that buying cars—I will not say, jeeps—is one thing; jets another. Taking a wheat loan is quite different from accepting bazookas and Sabres; indeed, Mr. Menon has been the loudest to condemn those guilty of the second category of transactions. Does paying some sort of a price make all that difference? It would be silly of the Kremlin to imagine that buying a few jet fighters would commit India; and western fears are probably exaggerated. I am even prepared to believe that the negotiations with the Russians were never meant wholly seriously. But the reports appear already to have brought forth an American offer, which may have been the general idea in New Delhi all along the line. But why did Washington have to wait until the "leak"? Every U.S. Administration uses foreign affairs to persuade Congress and Congress reactions to plead with foreign governments. I am waiting to see what use is made of the jet story combined with the recent recommendation for a cut in U.S. aid. If somebody, in New Delhi or Washington or both, is being too clever by half, it is India that may be the loser.

IT IS POSSIBLE TO EXPAND CABINETS ALMOST ad infinitum, to multiply Raj Bhavans, and to open Embassies and Consulates in Timbuktoo and Mogadiscu. If you were the Prime Minister of India you would still have a large number of unemployed politicians on your hands. Those whose occupation was gone because of the last election

are all right if they have a career to go back to. Most have none, for they had made politics their profession and know no other trade. I have been wondering to what extent this insecurity encourages the practices recognised as corrupt. If I didn't have a job after five years, I would be foolish or more than human not to make hay while the sun shone. In the imperfect democracies of earlier centuries the problem was not nearly as acute. Only men of means went into politics; and defeat did not mean starvation. (An eccentric friend of mine contends that true democracy is possible only on the solid basis of slavery, as in ancient Greece. I have my doubts how "true" that democracy was in reality.) But sorry as I am for politicians without jobs, I do not know that there is an answer. Lloyds lost heavily when the Liberals had that *débâcle* in the U.K. elections in 1945. Do insurers in this country do much business in this line? What are premium rates like for Congressmen? How do they compare with those for the communists or the Swatantra candidates, who seem most likely to "cover" themselves? It isn't the loss of income alone (salary plus) which afflicts an ex-Minister. There is the loss of face, loss of authority over other people's destinies; and I still remember the sad face of a Minister who had been ill for months and so was requested to consider retirement. "Retirement?" the poor man cried. "What, that liveried *chaprassi* will no more stand at the door?" He died in harness, if that's the word. But of ex-Ministers I have a more amusing story to tell. Some busybody had been trying to get Lal Bazar on the telephone and got my friend instead. From the other end: "Shri.... goes to Dum Dum at 9 o'clock. Please send a pilot sergeant immediately". My friend: "And who may Shri.... be?" (Shri.... was, is, actually an all-India leader, known to everyone.) T.O.E.: "What? Shri.... is ex-Chief Minister of...." M.F.: "That's interesting. Let me see if I can find an ex-pilot sergeant to escort the ex-Chief Minister. Good-bye."

RARELY IF EVER, IN MY MEMORY, HAVE I KNOWN of chambers of commerce in this country sponsoring the production of films related directly or indirectly to their activities; most of them, one gets the impression, are too busy dealing with the day-to-day affairs of their constituents, or with the Government, to indulge in public-relations efforts of the kind. Yet it is perhaps a sign of the times that the Indian Chamber of Commerce has been somewhat unorthodox and enterprising in sponsoring a documentary on business and industry in this State, entitled *West Bengal: A Panorama*.

a special showing of which was arranged for the Press last Friday. The general standard of the film was high, and supported by an excellent commentary, it proved to be both entertaining and instructive. I cannot say that my appetite for documentaries is insatiable; those produced by the Films Division of the Government of India have by now ensured that, more often than not, I am among the herd which regularly flocks out of cinema-halls whenever the appearance of one is threatened on the screen. The Indian Chamber of Commerce's film had its weaknesses too: while competent, it was not particularly imaginative; it looked, at times, too much like a series of cine snapshots of factory scenes; and it managed to bestow on Calcutta an aura of loveliness which diminishes one's faith in the truthfulness of the camera. Nevertheless, these were but minor shortcomings. A single success does not move me to hope that other chambers of commerce will follow suit with a flood of documentaries on the nuts, bolts and what-have-you that their members might happen to be manufacturing these days. But in so far as the Indian Chamber's documentary betokens a more conscientious effort by commerce and industry to improve its public relations, there is every reason to welcome it.

"THE PUBLIC HAVE LONG DECIDED", SAYS F. F. Armstrong in his standard reference work *The Book of the Stock Exchange*, "that the coat of arms belonging to the stock exchange consists of one bull rampant, one bear malevolent and one stag lambent". Yet no one can satisfactorily explain how this menagerie came to be associated with speculation. All that is sure is that bulls and bears were known by those names in London in the 1600's, long before the present Stock Exchange was built. Armstrong guesses that bear is a perversion of *bare* in the sense of *short of*, so that an operator on the bear tack is one who has deliberately gone short of a security. I raise the question now because I have seen that the famous speculator Andre Kostolany, who made various fortunes in his native Budapest, in Paris and on Wall Street, has written his memoirs and, speaking of bears, plumps for another explanation. The French equivalent of our phrase "to count one's chickens before they are hatched" is *vendre la peau de l'ours avant de l'avoir tué*, to sell the bear's skin before killing the bear. A hunter who was so confident that he could make the kill that he began asking prices for the skin would, I suppose, be a bear, in that he was selling something he did not have, believing he could get it easily later. The only trouble with this explanation is that, bear is solely an English expression; they would think you crazy in Paris, Brussels or Geneva if you announced that you were *un ours* for the day, though they would understand if you said you were bearish, using the English word. For bull, Kostolany accepts a variant of the familiar theory: "The bull charges forward like an animal sure of his power, tossing skywards with his horns every-

These brushes are invaluable for buffing and cleaning exceptionally
severe scaling or rust from structural work, also specially adapted
for weld cleaning, and other tough scaling propositions and rough
castings. "TWISTKNOTS" may be operated at considerably
higher speeds than ordinary wire wheels and a comparatively light
pressure increases both the efficiency and life of the brush in
addition to lightening the work of the operator.

thing he meets on his path". Or as Armstrong says:
"Bull may be explained by the ponderous, deter-
mined and aggressive behaviour of that animal".
Perhaps a reader more learned (or more inventive)
than I can think of more plausible derivations for
these words we use every day without quite
knowing why.

IN INDIA NOWADAYS, YOU CAN BUY A NEW MOTOR
car, use it with moderate care for a few years, and
then sell it at a price higher than the one you paid.
There are people, one hears, who make a regular
business out of the shortage; and their prosperity
has not been noticeably diminished by the two-year
restriction on the resale of new cars, which, to put
it mildly, has been a failure. I am reminded of
the fact when I hear of the Government's eager-
ness to check profiteering in imported cars by
diplomatic personnel, by stipulating that their
vehicles, if sold in India, should be sold only to the
State Trading Corporation at a "reasonable" price.
That a good deal of profiteering goes on in import-
ed cars, is obvious; might it not, however, be more
appropriate to set an example by first making an
effort to stop the even more widespread profiteer-
ing in Indian cars? In any event, I am not so sure
that the restriction the Government is inviting the
diplomatic corps to accept is entirely reasonable.
My support for it might have been a little warmer
if a reciprocal guarantee could be simultaneously
given: that Indian diplomatists, too, would in
future forsake their little profits, if not on cars,
then on a number of other things they are pri-
vileged to obtain duty-free. That diplomatic
privileges are sometimes misused, by foreign per-
sonnel in India as by Indian personnel abroad, it
is not necessary to deny. I still cannot see why
these unsavoury, and on the whole rather minor,
matters cannot be settled through informal dis-
cussions when specific cases of misuse occur. A
blanket restriction which fails to discriminate be-
tween the innocent and the guilty is not only unfair;
it sets a precedent which other countries might be
inclined to follow in worse ways. If diplomatic
privileges are regulated by international conven-
tions, it is necessary that the conventions, once
accepted, be observed with faith and reciprocity.

PROFESSOR D. W. BROGAN LATELY CONFESSED THAT
he had not finished reading Boris Pasternak's
Dr. Zhivago but made up for it by adding that he
shortly may. So may I; but not very shortly, I
fear. Meanwhile, my interest in the extent of
de-Stalinisation in Khrushchev's Russia remains
acute; and I chanced to read the other day in the
Spectator five poems by the 29-year-old Soviet poet,
Yevgeny Yevtushenko. I had never heard of him
before; but then my time for reading poetry is not
unlimited. I do not set myself up as Dr. Leavis, or
anyone like that, when I say that I rather like the
poems. He feels "for the Party card close to my
heart"; but it seems remarkable that he is allowed
to go abroad—he recently concluded a very success-
ful tour of Britain—even after writing:

Mother, let me congratulate you on
the birthday of your son. . .
It was from you that he inherited
devotion without pity to this age. . .
You didn't make him prosperous or famous,
and fearlessness is his only talent.
Open up his windows. . .
Give him his notebook and his ink-bottle,
give him a drink of milk and watch him go.
Watch him I certainly will; and not only for that
drink of milk. I should not be surprised if he is
being watched by some others too. Listen:

You're a brave man they tell me, I'm not.
Courage has never been my quality.
Only I thought it disproportionate
so to degrade myself as others did.
My voice
no more than laughed at pompous falsity;
I did no more than write. . .
I left out nothing I had thought about.
defended who deserved it, put a brand
on the untalented, the ersatz writers. . .
How sharply our children will be ashamed. . .
remembering how in so strange a time
common integrity could look like courage.

I am afraid I've badly mutilated the extracts with
dots that hide no obscenities; but I hope something
of the ring of truth remains. Unmistakably a new
voice. I do hope it will not be cruelly—or with
kindness—silenced too soon.

THE DITCHER

THIS IS AN ANNOUNCEMENT AND NOT A PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

The Central Government have granted necessary licences and/or approvals for the manufacturing programme of the Company. Copies of the relevant licences and/or letters are open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting these licences the Government of India do not take any responsibility for the financial soundness of these undertakings or for the correctness of any of the statements made or opinions expressed in regard to them.

A copy of the Prospectus having attached thereto the documents mentioned hereinafter has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Applications have been made to the Calcutta, Bombay and Madras Stock Exchanges for permission to deal in and for an official quotation of the Shares of the Company. The Subscription List will open at the commencement of banking hours on Thursday, the 31st May, 1962 and will remain open until the close of banking hours on Saturday, the 9th June, 1962, unless closed earlier or later at the discretion of the Directors, but not before Monday, the 4th June, 1962.

Raj Paul Chadha & Co., New Delhi	Rs. 2 lakhs

In the opinion of the Directors, the resources of the Underwriters are sufficient to discharge their underwriting obligations.

CONSENTS

Consents in writing of the above-named Directors, Bankers, Auditors, Solicitors, Underwriters and Brokers to act in their respective capacities have been obtained and filed with the Registrar of Companies, West Bengal and have not been withdrawn. Messrs. S. B. Dandekar & Co. and Messrs. Singh & Co., the Auditors of the Company, have given and not withdrawn their written consents to their Report being included herein in the form and context in which it appears. Messrs. S. B. Dandekar & Co. have also given and not withdrawn their written consent to their Report on Asiatic Oxygen & Acetylene Co. Limited being included herein in the form and context in which it appears.

MAIN OBJECTS OF THE COMPANY

The Company was incorporated on the 12th April, 1961, as a public company in the State of West Bengal with objects as stated in its Memorandum of Association and obtained a Certificate of Commencement of Business from the Registrar of Companies, West Bengal, on the 16th November, 1961. The Company has as its main objects the manufacture and sale of industrial and medical gases including oxygen, dissolved acetylene, argon, hydrogen, nitrogen, nitrous oxide, etc., electrodes, welding and cutting equipment, welding transformers and generators and other equipment, apparatus and appliances relating to the foregoing or ancillary thereto.

PROMOTION OF THE COMPANY

This Company has been promoted by the Asiatic Oxygen & Acetylene Co. Ltd., of Calcutta, which itself is engaged in the industrial gas business. In view of the industrial development taking place in India, the Government of India is encouraging the setting up of units throughout the country for the manufacture of industrial and medical gases, welding equipment and accessories, etc.

There has been a steep rise in the demand for industrial gases since 1956 due to industrial development under the Five Year Plans, particularly the increase in production of steel and the rapid growth of engineering industries. According to the Third Five Year Plan the indigenous production of steel would reach a target of 6.8 million tons of saleable steel and correspondingly the demand for oxygen is estimated to increase to 1,550 million cubic feet by 1965-66. To take advantage of this opportunity, the Promoters have secured collaboration of Air Products and Chemicals Inc., which is one of the established and progressive manufacturers of industrial and medical gases in the United States of America. Air Products and Chemicals Inc. have also agreed to participate in the Share Capital of the Company to the extent

of Rs. 25,00,000. Technical collaboration arrangements have been concluded with K. G. M. Equipment Company and Metal & Thermit Corporation of the U.S.A. Similar arrangements have been negotiated with Westinghouse Electric International Company of the U.S.A.

An arrangement (approved by the Government of India) has been reached with a majority of the shareholders of the Asiatic Oxygen & Acetylene Co. Ltd., whereby their shareholdings in that company are being transferred to the Company in exchange for Equity Shares in the Company of equivalent nominal value at a rate stated hereinafter.

PRODUCTION PLANS AND BUSINESS PROSPECTS

A. Manufacture of Industrial and Medical Gases

The Company proposes to establish manufacturing units at Bombay, Madras, Rourkela, Durgapur, Patna, Gauhati and/or other important industrial centres. In view of modern plant and equipment being acquired by the Company, not more than 50 persons will need be employed in any of the factories and, accordingly, the Company is not required to obtain licences under the Industries (Development & Regulation) Act, 1951, which position has been confirmed by the Central Government by its letter No. 19(14)(38)IA(IV)/58 dated the 5th June, 1958.

Initially, the Company aims at reaching a total production of 176.4 million cubic feet of oxygen and 45.6 million cubic feet of dissolved acetylene per annum. The production is expected to commence within one year.

B. Manufacture of Welding Electrodes

The demand for welding electrodes in India is estimated at 500 million feet per annum which is expected to reach 900 million feet by 1965-66. There is sufficient demand for these products to enable the Company to dispose of its entire production satisfactorily. The promoters have obtained Licence No. L/1A(7)/N-248/61 dated the 5th August, 1961, under the Industries (Development and Regulation) Act in favour of the Company for the manufacture of coated and uncoated electrodes with an installed capacity of 36 million feet per annum on single shift basis. The Company has further been permitted by the Government of India, vide their letter No. L.E.I(B)-17(258)56, dated the 7th April, 1962, to work double shift. It is intended to reach initially a capacity of 65 million feet per annum. The Company will set up its factory at Calcutta which is a highly developed industrial area with all facilities available for an industrial undertaking of this nature.

C. Manufacture of Welding and Cutting Equipment and Arc-Welding Transformers

The Company proposes to establish its factory for the manufacture of these products in Calcutta along with its industrial undertaking for the manufacture of electrodes.

The Central Government had granted a licence No. L/9(N-38/59) dated the 12th October, 1959, to the promoters for the manufacture of 9,000 units of regulators, 7,500 units of torches and 150 units of oxy-cutting machines per annum. This has been now transferred in favour of the Company. The import of welding and cutting equipment over the last few years has been restricted due to the shortage of foreign exchange and the demand within the country has not been fully met by indigenous manufacture.

The Government has also granted a licence No. L/5(1)/N-86/61 dated the 23rd August, 1961, under the Industries (Development & Regulation) Act in favour of the Company for the manufacture of welding transformer sets and motor generators with an installed capacity of 2,400 and 240 units respectively per annum.

LAND, POWER, WATER, ETC.

The promoters have agreed to acquire for the Company a plot of land measuring 5 acres near Durgapur situated on the Grand Trunk Road in Mouza Gopinathpur in the District of Burdwan on 60 years' lease, with two options to further renew the lease for 30 years each, from the Durgapur Projects Limited, and a payment of Rs. 30,250/- has already been made to the Lessors on the 9th November, 1961, which will be reimbursed by the Company. The formal lease documents are being finalised. The agreed terms of the proposed lease are considered to be fair and reasonable. Negotiations have been taken in hand to acquire factory sites at other centres. The Directors are satisfied that suitable sites with adequate power and water

supply transport facilities, etc., can be acquired.

PROFITABILITY

On the basis of the existing prices of the products which the Company proposes to manufacture, the Directors are of the opinion that in the absence of any unforeseen circumstances, there will be a fair and reasonable return on the capital of the Company.

FOREIGN TECHNICAL COLLABORATION

The promoters have negotiated and concluded agreements with Air Products and Chemicals, Inc. and KGM Equipment Company, a Division of Air Products, of the U.S.A., for technical collaboration in the manufacture of industrial gases and oxy-acetylene welding and cutting equipment and with Metal & Thermit Corporation of the U.S.A. for the manufacture of electrodes. All these agreements have been approved by the Government of India. Technical collaboration arrangements for manufacture of arc welding transformers have also been negotiated with Westinghouse Electric International Company of the U.S.A., and an application for its approval has been made to the Government of India.

The main features of the technical collaboration arrangements, the terms of payment under which are set out in the respective agreements, are summarised below:

A. Collaboration with Air Products and Chemicals Inc. of U.S.A.

The agreement covers industrial and medical gases, oxygen, nitrogen, hydrogen, dissolved acetylene, argon and medical oxygen, including liquid oxygen and liquid nitrogen. Air Products will furnish the Company for a period of ten years with technical know-how acquired or developed by it for the manufacture, distribution and sale of the said gases. They will also make available training facilities for the Company's personnel in their factories and the services in India of a top management executive and technicians.

B. Collaboration with KGM Equipment Company of U.S.A.

The Agreement with KGM Equipment Co., which is for a period of ten years, gives the Company the exclusive right to manufacture, use and sell in India the oxy-acetylene welding and cutting equipment specified in the Agreement in respect of which they will furnish technical know-how and other assistance in the setting up of the factory, the purchase of plant and machinery for the factory, training of the personnel and operation of the factory. Selected technical personnel of the Company will be sent to KGM Equipment Co. for training. KGM Equipment Co. gives the company a non-exclusive licence to freely export the equipment to be manufactured by the Company to the neighbouring countries such as Burma, Pakistan, Afghanistan, Ceylon, Indonesia, etc.

C. Collaboration with Metal & Thermit Corporation of U.S.A.

The Agreement with Metal & Thermit Corporation, New York, which is also for a period of ten years, provides for the furnishing of know-how and technical services to the Company to manufacture, use and sell electrodes specified in the Agreement. These services include preparation of plant layouts, detailed specifications and engineering assistance and drawings and engineering assistance for procurement of the manufacturing equipment. They will also provide training facilities to the Company's personnel in India and also the services in India of their technical personnel.

D. Collaboration with Westinghouse Electric International Co. of U.S.A.

A technical collaboration agreement has been negotiated with Westinghouse Electric International Company of the U.S.A., for a period of ten years, for the manufacture of arc welding transformers. Westinghouse will make available facilities in their plants and provide services of their personnel in India. The agreement has been submitted to the Government of India for approval.

PLANT AND MACHINERY

Imports of plant and machinery to the value of Rs. 86.69 lakhs have been authorised by the Ministry of Commerce and Industry (vide letter No. 1(56)FE/61 dated the 22nd March, 1961, of the Deputy Economic Adviser to the Government of India) out of which Rs. 61.69 lakhs is covered by the U.S. Development Loan Fund Loan No. 157 to the Government of India. Agreement had been concluded with Air Products for the purchase of plant and machinery for the manufacture of oxygen and dissolved acetylene valued at Rs. 56.69 lakhs. The Company has obtained the Import Licence No.

990940/DLF157/61 dated the 29th March, 1962, for their import. Formalities concerning the finalisation of the purchase of the plants in accordance with the terms and conditions of the licence are being completed. Arrangements are being made for the purchase from the U.S.A. of plant and machinery for the manufacture of electrodes, oxy-acetylene welding and cutting equipment and arc welding transformers. The remaining machinery and equipment is available in India. The promoters have obtained an import licence for the value of Rs. 48,14,727/- out of which Rs. 2,03,803/- has been utilised by them. Orders had been placed for the gas cylinders covered by the unutilised amount of this licence and necessary Letters of Credit have been established. The promoters have agreed to transfer these cylinders to the Company at cost. An application has been made to the Government of India to allow the transfer. Meanwhile, shipments of the value of Rs. 3,80,822/- have already arrived and further shipments are likely to arrive in the coming weeks.

RAW MATERIALS

The principal raw materials which are required are mostly obtainable from indigenous sources although certain items may be required to be imported for some time. The Directors anticipate that the Company will have no difficulty in obtaining supplies of the raw materials.

TAX BENEFITS

The Company will be entitled to Development Rebate under the Income Tax Act, 1961. As a "new industrial undertaking" the Company will get the benefit of exemption from income-tax under Section 84 of the Act on its profits up to 6% on the capital employed in the "new industrial undertaking" for the first five years of the Company's operations. Other shareholders are entitled to exemption from tax on dividends payable to them from the Company's exempted portion of the profits.

ACQUISITION OF THE ORDINARY SHARES OF THE ASIATIC OXYGEN & ACETYLENE CO. LTD.

The Asiatic Oxygen & Acetylene Co. Ltd. has been carrying on business of the manufacture of industrial gases since 1942. It has a factory at Calcutta manufacturing oxygen and acetylene gases to which has recently been added a new single unit with a capacity of 7,000 c.ft. per hour of oxygen and corresponding acetylene capacity. It has another factory at Bhilai for the manufacture of dissolved acetylene gas to which it is proposed to add an oxygen unit.

It is now also engaged in certain engineering and construction work. It undertook the sub-contract for the Indian portion of the work relating to the Dugda Coal Washery in Bihar for Hindustan Steel Ltd., the erection of which has since been completed. It has also entered into a similar sub-contract for another coal washery being set up at Patherdih for Hindustan Steel Limited.

The well-known firm of Surveyors, Talbot & Co. of Calcutta, made a valuation of the assets of the Asiatic Oxygen & Acetylene Co. Ltd. Based on their Report and on the accounts of that company for the preceding three financial years, Singh & Co., Chartered Accountants, made a valuation of the shares of that company. A majority of the shareholders agreed to exchange their shares at the rate of 38 shares of this Company for 10 shares of the Asiatic Oxygen & Acetylene Co. Ltd., which rate was approved by the Company Law Administration Department, Government of India, vide their letter No. 8(29)-CL.VI/61 dated the 16th September, 1961. The Asiatic Oxygen and Acetylene Co. Ltd. paid a dividend of 40 per cent subject to tax in the last financial year, that is 1960-61. This did not reflect the results of the working of the new plant which increased the capacity of the company to produce oxygen by more than 100 per cent and the installation of which was completed towards the end of that year. Should some or all of the other shareholders be unwilling to transfer their shares in the Asiatic Oxygen & Acetylene Co. Ltd., the shares of a value of Rs. 26,60,000 being the value of the entire 70,000 shares at the above rate of exchange and the value of shares in the Asiatic Oxygen & Acetylene Co. Ltd. acquired by the Company, may be subscribed for cash by all or some of the aforesaid shareholders who have agreed to the exchange or their relatives or their friends or such shares will be allotted to other applicants.

MANAGING AGENTS

It is proposed to appoint Soorajmull Nagarmull as the Managing Agents of

the Company for a period of ten years from the date of their appointment. Necessary approval of the Government has been obtained, vide their letter No. 9(164)-C.III/61 dated January 10, 1962. The remuneration to be paid to them in respect of their services as Managing Agents for each financial year or part thereof of the Company is based on the net profits of the Company determined in accordance with the provisions of the Companies Act, 1956, and is as follows:—

- 10 per cent on the first Rs. 10 lakhs net profits or fraction thereof;
- 9 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- 8 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- 7 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- 6 per cent on the next Rs. 10 lakhs net profits or fraction thereof;
- 5 per cent on the next Rs. 25 lakhs net profits or fraction thereof;
- 5 per cent on the next Rs. 25 lakhs net profits or fraction thereof;
- 4 per cent on any sum over one crore of rupees net profits.

The Managing Agents are entitled to be reimbursed by the Company the expenses incurred by them on behalf of the Company as may be determined by the Board of Directors of the Company subject to the provisions of the Companies Act, 1956. In the event of the Managing Agents being entitled to compensation for loss of office, the limit of such compensation will be governed by Section 366 of the Companies Act, 1956. Other terms and conditions are set out in the Proposed Managing Agency Agreement.

Soorajmull Nagarmull have been acting as Managing Agents of the Asiatic Oxygen & Acetylene Co. Ltd., since February 19, 1942, and have thereby acquired considerable experience in the business of industrial gases and ancillary equipment. In view of their proposed appointment as managing agents of the Company they will resign from the managing agency of the Asiatic Oxygen & Acetylene Co. Ltd.

MINIMUM SUBSCRIPTION, CAPITAL OUTLAY AND SOURCES OF FINANCE

The minimum subscription in respect of the public issue under this Prospectus on which the Directors will proceed to allot shares is Rs. 67,00,000 being the whole of the Equity Share Capital now offered for subscription by the public.

The capital required for the purpose of implementing the Company's planned

production is Rs. 3,74,10,000/- made up as follows:—

	Rs.
1. Cost of land and buildings	44,00,000
2. Cost of plant, machinery and equipment	2,07,75,000
3. Development expenses including training and engineering fees	17,75,000
4. Preliminary expenses including expenses of incorporation and of this issue, including brokerage and underwriting commission	5,62,500
5. Other Promotion Expenses	2,37,500
6. Acquisition of shares in the Asiatic Oxygen & Acetylene Co. Ltd.	26,60,000
7. Working capital	70,00,000
Total	3,74,10,000

The above capital requirements will be financed as follows:—

	Rs.
1. (i) Share Capital from Subscribers to the Memorandum of Association, the Directors, their associates and friends, and the Foreign Collaborators	66,40,000
(ii) Par value of the shares of this issue to be allotted in exchange for shares in the Asiatic Oxygen & Acetylene Co. Ltd.	26,60,000
2. Share subscription from the public in terms of this Prospectus	67,00,000
3. Loans from the Industrial Finance Corporation of India and other sources	1,64,10,000
4. Bank borrowings for a part of the working capital as and when required in the usual course of business	50,00,000
Total	3,74,10,000

LOAN CAPITAL

The Industrial Finance Corporation of India has sanctioned a loan of Rs. 1,50,00,000/- such loan to be secured by a mortgage of the fixed assets of the Company including the plant and machinery which is to be acquired by the Company, and of the assets of the Asiatic Oxygen & Acetylene Co. Ltd. The mortgage will be subject to such terms and conditions as may be agreed upon. The

balance of Rs. 14,10,000/- will be obtained by means of borrowings from banks or will be arranged by the Promoters, Directors and/or Managing Agents as and when necessary.

PRELIMINARY AND PROMOTION EXPENSES

The preliminary expenses, including expenses of incorporation, payable by the Company, are estimated to be Rs. 1,53,000, which have been incurred by the Asiatic Oxygen & Acetylene Co. Ltd. in connection with the promotion of the Company. This amount is to be reimbursed to the Asiatic Oxygen & Acetylene Co. Ltd. Save as mentioned hereinbefore, no other consideration has been paid or is payable by the Company to the promoters. Other promotion expenses are estimated to be Rs. 2,37,500 payable by the Company.

EXPENSES OF THE ISSUE

The expenses of this issue, including underwriting commission and brokerage, are estimated at Rs. 4,09,500 and will be paid by the Company.

UNDERWRITING COMMISSION

The underwriters will be paid an underwriting commission not exceeding 2½% of the face value of shares underwritten by them respectively. The total amount of underwriting commission payable by the Company is estimated at Rs. 1,67,500/-.

BROKERAGE

Brokerage will be paid by the Company to members of recognised Stock Exchanges and to banks at the rate of one per cent on the nominal value of the Equity Shares to be allotted to the public in respect of applications bearing their stamps.

Brokerage on the same basis will be payable to the underwriters in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps and in such case no brokerage will be payable to any other party.

APPLICATION AND ALLOTMENT

Applications for shares, which must be for 50 shares or multiples of 50 shares, must be made on the accompanying official form and will be refused if not so made. The application form together with a remittance for the full amount payable on application must be sent to a branch of the Company's Bankers, namely, State Bank of India, United Bank of India Ltd., First National City Bank or Bank of Tokyo Ltd., at Calcutta, Bombay, Delhi, Madras, Hyderabad, Indore, Kanpur, Bangalore, Ahmedabad, Baroda or Surat.

Payments may be made by cash, bankers draft or cheque. If payment is made by cheque or draft, it must be drawn on a Scheduled Bank situated in

the town at which the application form is submitted.

Cheques or drafts must be made payable to State Bank of India, A/c. Asiatic Oxygen Ltd., Equity Issue, or United Bank of India Ltd., A/c. Asiatic Oxygen Ltd., Equity Issue, or First National City Bank, A/c. Asiatic Oxygen Ltd., Equity Issue, or Bank of Tokyo Ltd., A/c. Asiatic Oxygen Ltd., Equity Issue, as the case may be, and should, for the applicant's own protection, be crossed "A/c. Payee Only". A separate cheque or draft must accompany each application.

Allotment will be notified by the despatch of an Allotment Letter. The Directors reserve the full right of accepting or rejecting any application in whole or in part. If no allotment is made, the application money in full and where the number of shares allotted is less than the number applied for, the balance of the application money, less the money payable on allotment on the shares allotted, will be refunded to the applicant within two months of the close of the subscription list and in such case the balance is commission, if any, will be payable by the applicant.

No interest will be paid by the Company on application money deposited. Failure to pay any amount due on the shares allotted when due will render the shares and previous payments made thereon liable to forfeiture. No allotment will be made in the name of partnership firms, minors or Trustees. The shares will, when issued, be subject to the provisions of the Memorandum and Articles of Association of the Company as in force and as may be amended from time to time.

The Company shall have a first and paramount lien upon such shares as are not fully paid up for any moneys called or payable at a fixed time in respect of such shares and such lien shall extend to all dividends declared in respect of such shares.

ISSUE OF SHARE CERTIFICATES

The Share Certificates will be issued in exchange for Letters of Allotment within three months of allotment.

THE BURMAH OIL COMPANY LIMITED

CHAIRMAN, MR. W. E. EADIE'S STATEMENT

The Annual General Meeting of the Company will be held in Glasgow on 8th June, 1962.

The following is summarised from the Statement by the Chairman, Mr. W. E. Eadie, which has been sent to Stockholders:

Accounts

The 1961 Profit on Trading amounted to £4,456,515, a decrease of £516,515 compared with 1960. This reduction is due partly to adverse trading conditions, although increased volumes of sales compensated to some extent for lower profit margins. The main reason for the reduction is the change in shareholding interests in the joint venture companies in India and Burma whereby holdings in these companies now come in the category of Trade Investments. Depreciation at £719,622 is £478,807 lower than for 1960, chiefly because of the transfer of the interests in Oil India Ltd. and The Burma Oil Company (1954) Ltd. to Trade Investments. Dividends from Trade Investments at £4,060,445 are £1,171,072 higher than 1960 due to increased dividends received from marketing and refining interests and to the inclusion of dividends received from The Burma Oil Company (1954) Ltd. Other 1961 Dividends and Interest at £12,386,476 are £604,357 greater than in 1960 due mainly to the increased final dividend for 1960 received on holdings in The British Petroleum Company Ltd. After charging taxation and deducting retentions by Subsidiary Companies the profit dealt with by the Company is £11,041,983 compared with £9,235,798 in 1960. The Board has appropriated £2,000,000 to General Reserve and recommends a final dividend for 1961 of 1s. 7d. tax free, payable on 22nd June.

Burma

Crude production by The Burma Oil Company (1954) Ltd. increased by 3.7 per cent but output was insufficient

to provide for the expansion in consumption and some 21,500 tons of products were imported. Work on the Syiam refinery extension is now well in hand. It is proposed to link the Syiam refinery with the Dunneadaw installation by a submarine products pipeline.

Pakistan

The Group's sales of petroleum products increased by approximately 5 per cent. Natural gas production from the Sui field increased by 15.6 per cent. Proposals to extend the pipeline system to northern parts of West Pakistan are under discussion. In East Pakistan gas from Chhatak is being supplied to a cement works nearby and from Sylhet to a fertilizer factory at Panchuganj. The refinery at present under construction at Karachi by Pakistan Refinery Ltd., in which the Company will have a 15 per cent shareholding is expected to start up towards the end of 1962.

India

Total demand for petroleum products in 1961 rose by approximately 9 per cent. In the face of competition sales through subsidiary and associated companies increased by approximately 6.5 per cent. The Oil Price Enquiry Committee set up by the Government reported during the year and the price recommendations contained in it became effective on 1st October, 1961. The prices and profit levels formulated by the Committee are the subject of further discussions between the established oil companies and the Government. The Nahorkatiya field of Oil India Ltd. continued to provide crude oil to the Assam Oil Company's refinery in order to supplement production from the Digboi field. There should be a considerable increase in Oil India's production in 1962 when the Numati refinery becomes fully operational and a further increase in 1963 when the Government-owned refinery at Barauni

Canada

B.O.C. of Canada Ltd. and Murphy Oil Company Ltd. drilled two unsuccessful wildcat wells in the Liard River area of Northwest Territories. An agreement was made in September 1961 with Great Plains Development Company of Canada Ltd., whereby 200,000 shares were acquired in the company, up to the end of 1964, to take up in whole or in part an additional 300,000 shares.

Australasia

B.O.C. of Australia Ltd. completed a marine seismic survey in the Gulf of Papua on behalf of a Group which includes also Murphy-Australia Oil Company and two other companies.

22,800 Equity Shares of the Company of Rs. 100/- each Credited as fully paid up in respect of loans advanced to the said Private Limited Company by its Directors, their friends and relatives.

As to the residue of the Consideration for the said purchase the Company will pay and discharge the rest of the liabilities of the Company.

Nature & Title: The immovable property is freehold and will be acquired as a freehold estate.

Particulars of Transaction: As stated herebefore the Vendors, the said Prabhat (Stove & Lamp) Products Co. Private Limited, had mortgaged the said immovable property, machinery, plant and equipment to the said First Mortgagees for an aggregate sum of Rs. 5,00,000/-. Shri K. M. Sharma, Shri B. R. Misra and Shri B. M. Desai, the Shareholders and the Directors of the said Private Limited Company who mortgaged the said property as aforesaid are also Shareholders and Directors of this Company. The Company will redeem the said mortgage by repayment of the mortgage dues out of the proceeds of this issue. The said Private Limited Company and the said Messrs. Sharma, Misra and Desai are interested accordingly.

INSPECTION OF DOCUMENTS

Copies of the Prospectus and necessary documents mentioned therein are open for inspection at the Registered Office of the Company on any working day during the hours of 10-30 A.M. to 2-30 P.M. during the period the Subscription List remains open.

The Company will also as part of the consideration for the said purchase allot

THE CALCUTTA MONEY MARKET

SMALL INCREASE IN ADVANCES

Wednesday, 23rd May.

THERE has been a very small increase in the general level of advances in the Calcutta money market during the past week. Most of the increase is accounted for by the sugar and the iron and steel industries. Cotton and jute credit is unchanged, but funds for the storage of foodgrains and seeds have decreased a little. Conditions in the interbank market have been easier, the call rate ranging from 3½ percent to 3¾ percent.

The exchange market has been dull, although a few more gunny bills have been noticed. Remittance has been on a moderate scale. Sterling has weakened slightly in relation to all the major currencies except the Norwegian kroner.

SILVER WAS QUIET IN CALCUTTA during the last week and the price was quoted at Rs. 262 for ready delivery. The rate for forward delivery was Rs. 250.25. The London and New York prices were 84½ and 101.50 cents.

In spite of an easier tendency in silver, gold was steady and the price advanced from Rs. 147.25 to Rs. 149.25. The sovereign hardened from Rs. 100.50 to Rs. 101.75.

DURING THE WEEK ENDED 18TH MAY, Government of India Treasury bills for Rs. 10,85,00,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 22nd May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.350 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.590 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 28th May.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 23rd May to 26th May at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 15th May to 19th May amounted to Rs. 15 lakhs only.

DECLINES OF RS. 25.24 CRORES TO Rs. 2,163 crores in the total note issue, and of Rs. 14.64 crores to Rs. 2,146.66 crores in active notes, were the notable features of the statement of the Reserve Bank of India for the week ended 18th May, 1962. The contraction of the currency was adjusted by reducing foreign securities by Rs. 3.50 crores to Rs. 101.50 crores and rupee securities by Rs. 21.50 crores to Rs. 1,629.37 crores in the paper currency reserve. These securities from the Issue Department to the Banking Department. Hence balances held abroad rose by Rs. 1.43 crores to Rs. 6.23 crores and investments by Rs. 25.72 crores to Rs. 180.97 crores. Deposits of the Central Government increased by Rs. 3.70 crores

to Rs. 52.75 crores while other Government accounts fell by Rs. 6.43 crores to Rs. 12.35 crores. Balances of commercial banks at Rs. 87.30 crores showed a decline of Rs. 1.74 crores. Other loans and advances dropped from Rs. 138.98 crores to Rs. 129.14 crores, of which advances to scheduled banks against usance bills amounted to Rs. 6.93 crores (Rs. 11.21 crores). Ways and means advances stood at Rs. 117.38 crores, against Rs. 109.85 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 11th May, 1962, shows a drop of Rs. 96 lakhs to Rs. 573.67 crores in total deposits. Investments in Government securities are down by Rs. 18.01 crores to Rs. 228.65 crores, while other authorised investments remain unchanged at Rs. 9.07 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have risen by Rs. 2.54 crores to Rs. 298.73 crores. Cash and balances are, in consequence, shown at Rs. 24.51 crores, or Rs. 2.70 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 11th May, 1962, shows Demand and Time liabilities at Rs. 913.22 crores (Rs. 27.43 crores on account of borrowings from banks) and Rs. 1,227.95 crores (Rs. 12.49 crores), compared with Rs. 927.58 crores (Rs. 29.03 crores) and Rs. 1,221.51 crores (Rs. 11.74 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.31 crores and Rs. 2.47 crores to Rs. 52.59 crores and Rs. 82.92 crores, respectively. There is a drop of Rs. 18 crores to Rs. 574.77 crores in investments. Advances and bills discounted, at Rs. 1,441.72 crores, show an increase of Rs. 3.19 crores. The ratios of cash and balances to total liabilities of cash and balances, and of advances and discounts, are, in consequence, shown at 6.3 per cent and 67.3 per cent, against 6.1 per cent and 66.9 per cent.

THE INDIAN OVERSEAS BANK LIMITED
Central Office: 151, Mount Road, Madras-2

others as second Mortgagees for a sum of Rs. 2,00,000/- to secure in all a total sum of Rs. 5,00,000/-. Under the terms of this Mortgage, the mortgage debt is repayable on 12th May, 1963. The Company will redeem this mortgage by application of the proceeds of this issue by 31st August, 1962.

To enable the Company to create a first legal Mortgage in favour of The Industrial Credit & Investment Corporation of India Ltd., referred in the foregoing paragraph, the Company has obtained an undertaking from the said Mortgagees vide their letter dated 28th April, 1962, in which they have agreed to discharge the said Mortgage any time earlier than 12th May, 1963 after the expiry of a three months' notice in that behalf.

The Industrial Credit & Investment Corporation of India Ltd. have agreed in principle as per their letter No. PP/6642 dated 15th September, 1961 to lend to the Company a sum of Rs. 10,00,000/- to meet a part of the cost of capital equipment to be obtained. The loan will bear interest at 6½ per annum and is repayable in ten half-yearly instalments starting from October 1963. The loan is to be secured by a first legal mortgage of the Company's present and future immovable and movable properties subject to hypothecation of such of the movables in favour of the Company's Bankers as may be required for Cash, Credit and Overdraft facilities. So long as the loan or any part thereof is outstanding, The Industrial Credit & Investment Corporation of India Ltd. shall be entitled to appoint a Director on the

Board of the Company and such Director shall not be liable to retire by rotation nor shall he be required to hold the qualification shares. The Company has undertaken to The Industrial Credit & Investment Corporation of India Ltd. to make adequate arrangement for the appointment of technical and managerial personnel to look after the project.

UNDERWRITING COMMISSION

A commission at the rate of 2½% on the nominal value of the shares which will be taken up by the Underwriters or for which they will procure Subscription in terms of the Underwriting Agreement with them.

In addition to the said Commission the Underwriters will also be paid brokerage at the rate of 1% of the nominal value of the Shares on allotments made in respect of applications bearing their stamps.

BROKERAGE

Brokerage at the rate of 1% of the nominal value of the Equity Shares will be paid by allotment in respect of applications bearing the stamp of a Bank or of a Member of a recognised Stock Exchange. Brokerage on the said basis will be payable to the Underwriters in addition to the underwriting commission on allotment made in respect of applications made or procured by them provided that the relative forms of application bear their respective stamps.

PURCHASE OF PROPERTY

The Company has entered into an Agreement with M/s Prabhat (Stove & Lamp) Products Co. Private Ltd. dated 30th April, 1962 in terms of Article 3(1)

of the Articles of Association of the Company, to purchase the said Prabhat (Stove & Lamp) Products Co. Private Ltd. as a going concern together with the assets therein mentioned and subject to the liabilities as therein specified and on the other terms and conditions mentioned in the said Agreement. The immovable property referred to in the said Agreement is at present subject to the Mortgage herebefore mentioned. The immovable property machinery, plant and equipment which will also be the subject of acquisition by the Company is situated at Jogeshwari and consists of Freehold land admeasuring 32,781-1/5 Sq. Yds. together with the buildings, structures and constructions thereon. The name, address, description and occupation of the Vendors is as follows:—

Prabhat (Stove & Lamp) Products Co. Private Ltd.,
Noble Chambers,
Parsi Bazar Street, Bombay-1.
Private Limited Company.
Manufacturers of Stoves, Lamps,
Mantles and Spares thereof.

Consideration: Under the terms of the said Agreement for the sale of all the said assets including machinery, plant and equipment and this immovable property, part of the consideration for the sale of the entire assets of the Private Company is the allotment of 7,200 Equity Shares of Rs. 100/- each of the Company Credited as fully paid up as referred to herebefore.

The Company will also as part of the consideration for the said purchase allot

as it was believed that the excise duty on cloth and yarn would be modified in order to give relief to the industry. It was rumoured that the duty on mercerised cloth would be cut by about 15p a metre. Reports that arrangements have been made to import 180,000 bales of American cotton under P.L. 480, stimulated enquiry for cotton mill shares. Steel shares were supported on hopes that the official announcement of higher retention price would be made soon.

There was a mild reaction at the close due partly to unfavourable political rumours and partly to profit-taking. Rumours of changes in the Central Cabinet were interpreted bearishly. Operators turned cautious due to the growing tension in Sino-Indian relations. The prospects of foreign aid were considered uncertain due to the earlier cut in U.S. assistance to India, since reversed. The coming meeting of the Aid-India Club is being awaited with great interest.

Among cotton mill shares, the prominent scrip were Century, Bombay Dyeing, Kohinoor and Khatau. The commissioning of the Koyna power plant a few days ago helped bullish sentiment. Reports were current that the Life Insurance Corporation had bought some textile shares. In the miscellaneous section, Digvijay Cement were steady on paying a higher ordinary dividend; the company has itself received handsome dividends from its shareholding in West Coast Paper. Steamship company shares improved on the announcement of increased coastal freights. Selected chemical shares were fancied due to hopes of better

dividends. W.I.M.C.O. were firm on undertaking a new industrial project.

Tata Steel closed at Rs. 150.50, Mukand Iron at Rs. 28.50, Alcock Ashdown at Rs. 334 and Larsen and Toubro at Rs. 33.50. Among textile shares, Century were quoted at Rs. 674, Bombay Dyeing at Rs. 69.60, Gokak at Rs. 222.50, Khatau at Rs. 490, Kohinoor at Rs. 309, Simplex at Rs. 173, Standard at Rs. 1,026, Svadeshi at Rs. 288 and India United ordinary at Rs. 21.46. Among 'sugar' shares, Belapur were quoted at Rs. 236 and Phalton at Rs. 105.50. Bombay-Burmah were placed at Rs. 687, National Rayon at Rs. 557, Shivrajpur at Rs. 40, West Coast Paper at Rs. 183 and Tata Chemical at Rs. 16.52. Polychem came to hand at Rs. 215, Indian Dyestuff at Rs. 572 and Scindia at Rs. 13.64. Ahmedabad Electric were transacted at Rs. 91.50 and Andhra Valley at Rs. 1,012.50. Associated Cement were indicated at Rs. 161.50 and Digvijay Cement at Rs. 212. Bank of Baroda were steady at Rs. 104.50 and Bank of India at Rs. 111.50.

Madras Market

NEW ISSUES ATTRACT FUNDS

INVESTORS BUY WITH DISCRIMINATION

Tuesday Evening.

ALTHOUGH share prices in the Madras stock market during the past week were maintained, turnover declined to a considerable extent. Local operators were reported to have shifted their attention to out-

side stock markets. Investors were cautious and bought with discrimination. Their attention was mainly concentrated on new shares. As substantial funds are being invested in new issues, support for existing shares has declined greatly.

Business in Government securities was negligible because investors were inclined to wait for the new loans of the Government, which are expected to be floated soon. Bank shares were dull, but electric company shares met with selective buying. Sugar shares showed mixed trends. E.I.D. and Deccan were supported. In the planting group, tea companies producing quality teas met with support, while rubber shares were neglected due to the slow progress in production. Travancore Rubber have announced a taxable ordinary dividend of 12 percent. Coffee shares were generally hesitant because the marketing outlook for the commodity was considered uncertain. Interest in cotton mill shares was small because the impact of the increased excise duty on cloth and yarn proposed in the Central Budget was being examined carefully. Jawahar Mills has declared a taxable ordinary dividend of 15 percent. Bhavani Mills were bought on the issue of rights shares in the proportion of two new shares for every three held. Among miscellaneous shares, selected cement and chemical shares were fancied due to prospects of expansion. Travancore Cement has paid a taxable ordinary dividend of 6 percent and Textool is issuing 20,000 rights ordinary shares at a premium of Rs. 10 a share in the proportion of one new share for every two held. Spencer were steady on paying an interim taxable ordinary

CAPITAL, 24th May, 1962.

dividend of 6 percent. There were also rumours of a bonus issue.

In the banking group, Indian Bank were taken at Rs. 177 and Indian Overseas at Rs. 168. In the sugar section, E.I.D. were steady at Rs. 40 and Deccan at Rs. 10.50. Among planting shares, Blue Mountain met with support at Rs. 2.50, Cochin Malabar at Rs. 7, Consolidated Coffee at Rs. 18.90, Kil Kotagiri at Rs. 5.10, Lucky Valley at Rs. 11.10, Nilgiri at Rs. 9, Oucherlony at Rs. 3.88, Parkside at Rs. 23, Peermade at Rs. 20.10 and Periakaramalai at Rs. 3.52. Among textile shares, Bangalore Woollen were taken at Rs. 242, Buckingham at Rs. 265, Lakshmi at Rs. 167, Madura at Rs. 37.75 and Mettur at Rs. 400. South India Viscose were quiet at Rs. 184, as were Travancore Rayon at Rs. 42.90. Among miscellaneous industries, Aluminium Industries were steady at Rs. 24.20, Ashok Leyland at Rs. 8.85 and Digvijay Cement at Rs. 13.55. Enfield were quoted at Rs. 12.10, F.A.C.T. at Rs. 7.85, India Cement at Rs. 6.80 and Madras Rubber at Rs. 24.50. Business passed in Parry's Confectionery at Rs. 4.50 on the news of a bonus issue. Spencer were bought at Rs. 23.60, Standard Motors at Rs. 16.62, Textool at Rs. 180.50 and Tube Investment at Rs. 290.

THE WEEK'S TRANSACTIONS

DON'T LET DENTS DENT YOUR PROFITS

The brands always in demand by the textile industry are:

INDIA BRAND
Best Egyptian Cotton Healds
Heald Piecing Yarn
Best Polished Steel Wire Reeds
Brass Reeds also Striking Combs and
Dobby Harness (with and without rubber)

CYCLE BRAND
Wire Healds
All Metal Reeds, Jute Combs and Jute Reeds

SWAR BRAND
Egyptian Combed Cotton Yarn and
Staple Fibre Yarn

SKF offer the widest selection of bearings

Illustrated here is the **SKF SPHERICAL ROLLER THRUST BEARING** which has one row of obliquely disposed rollers guided by a high flange on the shaft washer and running on a sphered track on the housing washer. It combines very high carrying capacity with complete self-alignment. The surface of the roller end next to the guiding flange is so formed that the rollers are always separated from the flange by an oil film when under load. The bearing can therefore be used at relatively high speeds, even if the load is very heavy. Unlike other thrust bearings, it can also carry radial loads.

London Market

SETBACK AFTER BETTER START COMPANY REPORTS DEPRESSING

London, 23rd May.

AFTER cheerful conditions had prevailed at the beginning of the account following the settlement of the dockers' wage dispute, the stock market became unsettled, and prices drifted a little lower over the remainder of the period. The very good trade figures announced on Wednesday failed to put investors in a more cheerful mood, and company news exercised more influence. These included figures from Rolls Royce, which, but for a readjustment of accounting procedure, would have produced a net loss, lower profits from Bechams in spite of higher sales, and a cautious statement from the chairman of Schweppes in his annual review. Although gains probably held the advantage numerically when trading was resumed after the week-end, price movements were generally small, and several leaders lost a little more ground. On Tuesday conditions were subdued by various items of unfavourable company news. South African gold shares were the main talking point of the week, with sustained American and later Continental buying pushing many prices up to new high levels for the year. An official U.S. denial of hopes that America might change its gold price was responsible for a slight reaction on Tuesday. Nevertheless, gains on balance were widespread and, in many instances, substantial. Coppers were quiet, while tins were generally lower. Gilt-edged securities made further headway on renewed investment buying, and there was a general advance in prices extending to about half a point. Oil shares improved early in the period, but later reacted and showed little change on balance. Tea shares reacted sharply on some disappointing dividend news, but rubbers were featureless.

New Delhi

Demand for Machine Tools Rises: Expansion of Capacity Planned

(FROM OUR NEW DELHI CORRESPONDENT)

THE second plan had an ambitious programme for manufacturing machine tools. Not only was the production of heavier machine tools taken up, but there was also a considerable diversification of output. The progress of the organised machine tool industry in the public and private sectors, as well as of the small-scale units, is briefly as follows. By the end of the first plan, Hindustan Machine Tools Ltd started its manufacturing operations and developed the production of high-speed H-22 lathes with imported components. The first series of five H-22 lathes manufactured in the factory came off the production lines in May 1956. In 1957, the Government of India bought the shares owned by Messrs Oerlikons of Switzerland and terminated the managing rights of the consultants by mutual agreement. Due to the restricted demand in India for precision lathes, presumably because they are costly, it was considered necessary to diversify production by including different types of machine tools in the manufacturing programme. With technical collaboration from Messrs Fritz Werner of West Germany, Hindustan Machine Tools started producing six types of milling machines in 1957. In order to diversify the programme still further, the Company concluded technical collaboration agreements with Messrs Hermann Kolb of West Germany for producing radial drill machines, with Messrs Batignolles of France in 1959 for producing low-priced lathes, and with Messrs Officina Meccanica Olivetti of Italy for 16 types of cylindrical grinding machines.

Shortage of Castings

With a view to overcoming the continued difficulties experienced by the factory in procuring castings, a foundry project of H.M.T., at an estimated cost of Rs. 60 lakhs and with an ultimate capacity of 6,000 tons, was approved in 1959. The construction was started in December 1959 and completed in May 1961. The foundry commenced production in June 1961. Taking into account the variety of problems to contend with in raising the capacity in this field in the short-term, a target for annual capacity and production of Rs. 30 crores worth of machine tools has been proposed for 1965-66. The following sectorwise breakdown of the target has been suggested: the public sector Rs. 16 crores, and the organised private sector Rs. 14 crores. In view of the high priority accorded to the industry and the gap to be covered for meeting the estimated demand fully from indigenous sources, a further expansion of capacity is obviously welcome. In other words, the target does not set a ceiling for development programmes and favourable consideration will have to be given to well-conceived schemes for increasing the domestic production further so as to reduce India's import requirements.

The second machine tool project of H.M.T., designed to double the capacity of the unit from 1,000 machine tools to 2,000 machine tools a year, was expected to spill over into the third plan period, but it was completed in record time by April 1961. The Company has entered into a technical collaboration agreement with Messrs Renault of France for

manufacturing special-purpose machines. The Central Government has approved the setting up of a new machine tool plant in Punjab with the collaboration of Limex of East Germany. The technical know-how, machinery and equipment required for the project are to be obtained from East Germany on a non-con-vertible rupee payment basis. This veritable rupee payment capacity of plant—with an annual capacity of 1,000 machines—will cost Rs. 7.5 crores, of which Rs. 3 crores will be in foreign exchange. The capital will be provided by H.M.T. from the profits earned by it. It has been estimated that the unit will go into production in three years from the date of sanction. The proposed production programme includes 550 milling machines, 100 gear-cutting machines, and 350 special-purpose machines.

Ranchi Factory

The proposed factory in Ranchi is being planned for a capacity of 10,000 tons a year, including the production of complete machine tools. The Czechoslovak Government will assist in this project. The production programme of the factory is planned in four phases. During the first phase, the production of lathes, planers and radial drills is expected to be taken up. The manufacture of other types of machines will be taken up in the next two phases. The interval between consecutive phases will be one year. The maximum output is expected to be reached two years after the starting of production under different phases. So the maximum production of the factory, that is, Rs. 8 to Rs. 9 crores, will be achieved only after the conclusion of the third five year plan. An output of about Rs. 3 crores has been tentatively estimated for 1965-66.

Heavy Electrical Plants

From the studies made towards the end of the second plan by the Machinery Working Group, it became evident that the demand for heavy electrical machinery in the third and subsequent plans will be quite substantial. The Central Water and Power Commission had placed the demand as follows on the assumption that 2 million kilowatts of generating capacity will be added annually during the fourth five year plan:

Item	Initial (In million kilowatts)	Ultimate (In million kilowatts)
Steam and hydraulic turbines and generators	0.75	1.5
Transformers 33 kV and above	0.60	1.20
Heavy industrial motors	0.26	0.52
Traction motors	0.2	0.4
Control gear for industrial motors and traction motors	Rs. 5 crores	
High-tension switch-gear	Rs. 6.27 crores	
Static capacitors	30,000 kVA	
Rectifiers	81,000 kW	
Switch-boards and controls with instruments	Rs. 5 crores	

The total value of the requirements was estimated at Rs. 80.65 crores year.

As a result of this estimate of demand, it was decided to increase the manufacturing capacity in the country by developing the Bhopal factory to its optimum limit and to construct two new plants—one with Russian collaboration and the other with Czech assistance. The project to be developed with Czech assistance covered an additional unit for manufacturing high-pressure boilers for thermal power-stations. Preliminary studies on these new projects were commenced in the last year of the second plan. The production programme, as provisionally finalised for the three heavy electrical projects, is as follows:

Heavy Electricals Ltd, Bhopal		Ultimate production programme (Rs. 50 crores of output)	
Item	Range of sizes	Approximate output	
Hydraulic turbines and generators	up to 150,000 kW	500,000 kW	a year
Steam turbine-generators and condensing plant	up to 150,000 kW	500,000 kW	a year
Generators for diesel sets	100 kW to 2,000 kW	as required	
Transformers	10,000 kVA and above at 33 kV and above	6 million kVA	a year
Current and potential transformers		as required	
Static capacitors		as required	
A.C. circuit breakers	11 kV to 275 kV	4,100 units	a year
D.C. circuit breakers		as required	
Switch-boards and control desks		as required	
D.C. motors, generators and exciters	Maximum size 5,000 horse-power	65,500 kW	a year
D.C. welding generators		as required	
Traction electrical equipment including motors, control gear, transformers and rectifiers		for 60 electric locomotives, 30 diesel electric locomotives and 50 E.M. units a year	
A.C. industrial motors	Ratings 500 to 5,500 horse-power	250,000 horse-power	a year
Industrial motors control gear		to match motors made in the factory	

The following are the details of the second heavy electrical project with Russian collaboration:

Production programme	Initial (In million kilowatts)	Ultimate (In million kilowatts)
Steam turbines and turbo alternators	0.75	1.5
Hydro turbines and generators	0.60	1.20
Large size motors	0.26	0.52
The estimated capital outlay for the first stage is Rs. 35 crores to Rs. 40 crores. The salable output of the first stage is Rs. 25 crores.		
The following are the details of the third heavy power equipment plant with Czech collaboration:		
Production programme	Initial (In million kilowatts)	Ultimate (In million kilowatts)
Steam turbines and turbo alternators	0.62	1.30
Diesel engines	—	209,000 horse-power

The estimated capital outlay for the first stage is Rs. 27 crores. The

salable output of the first stage is Rs. 12 crores.

Board of Trade

The first meeting of the Board of Trade has been fixed for 9th June. The Minister of International Trade, Mr. Manubhai Shah, will preside. In addition to the presidents of the Associated Chambers and the Federation of Indian Chambers of Commerce and Industry, Mr. G. D. Birla, Sir A. Ramaswami Mudaliar and Mr. Sachin Chaudhuri are among those nominated as members of the Board. The Government has already decided to appoint directors of productivity, incentives, etcetera, as part of the export promotion drive. In order to ensure the quick transport of goods, the railways have been asked to introduce a system for fixing "export" labels. Leading houses like Tatas and Birlas have been requested to set up special export departments, which will be engaged in market research and establishing contacts. It will enable the Government to offer financial assistance more freely than at present. The Government is considering a proposal for levying a special cess on manufactured goods

to enable it to finance export promotion. It is also planning to set up a training institute in applied commerce, both for its own officers and for those of the private sector. The State Trading Corporation, which will be given major responsibility for export, is also being reorganised.

Making Aluminium Foils

The Planning Commission has approved applications for industrial licences for manufacturing aluminium foils on the specific condition that new units will not go into production before 1965. The third five year plan lays down no production target for aluminium foils. The Development Wing of the Central Ministry of Commerce and Industry has, however, suggested a target of 9,000 tons by 1966 because of the growing demand for the commodity. On the basis of this estimate, four applications have been approved, including that of the existing unit, Venesta, for producing an additional 2,000 tons to 3,000 tons (its application was for 4,000 tons), of the General

Industries Society for 1,200 tons a year (against 1,500 tons applied for) of the Indian Aluminium Company for 2,500 tons (against the requested 3,000 tons) and of Aluminium Corporation of India for 500 tons only. The Indian Aluminium Company has a new composite scheme for manufacturing 2,000 tons of aluminium metal and 2,500 tons of aluminium foils. The General Industries Society proposes to get metal from Hindustan Aluminium for manufacturing foils. But the Planning Commission thinks that aluminium ingots should not be diverted to the manufacture of foils till the industry is able to meet the internal demand for the metal in full. The present production of aluminium falls short of the demand by 25,000 metric tons a year.

U.S. Steel Mission

According to reports from Washington, the Secretary to the Department of Steel, Mr. N. N. Wanchoo, has been able to arrive at an agreement about the scope of the U.S. mission, which is expected here early next month to make a factual survey of the Bokaro steel project. Apart from the availability of iron ore, coal and transport, the U.S. steel industry had initially questioned the need for 10 million tons of steel at the end of the third plan. Secondly, it wanted latitude to select the site for the

fourth steel plant, in order to judge Bokaro on its merits. Agreement has now been reached for appraising the suitability of Bokaro alone. The U.S. mission will not be empowered to select an alternate site. It can, however, say that Bokaro is unsuitable. The third point for discussion was the end-products to be manufactured at Bokaro. U.S. steel experts claimed that Rourkela, which produces the same end-products as Bokaro is expected to do, should first be expanded to its full capacity before the construction of the fourth steel plant is undertaken.

Meanwhile, the Central Minister of Steel and Heavy Industries, Mr. C. Subramaniam, has thrown a spanner in the works. Speaking in the Lok Sabha last week, he announced that the Bokaro steel plant would be erected with U.S. assistance if possible, and without it if necessary. "If U.S. aid is not forthcoming, the project will not be abandoned. Fortunately, we are not without friends in the world with ability, capacity and willingness to extend help." Who these friends could be is a subject for speculation in the lobbies. They could be neither the British nor the West Germans, both having already committed themselves to expand the Durgapur steel plant by 600,000 tons and the Rourkela plant by 800,000 tons, respectively. The French, the Belgians and the

Japanese have the ability to manufacture steel, but have not yet shown their willingness to finance the fourth steel plant.

This leaves the Russians in the field. They have not only shown their "ability and capacity" to build a one-million-ton steel plant in Bhilai but have willingly undertaken to expand its capacity to 2 million tons. They have also indicated their willingness to expand the Bhilai plant further. The Russians, it is reported, had indicated their willingness to build the Bokaro steel plant as well. It will be a challenge not only to the Americans but also to the Germans. The U.S. reaction to this development is still unknown.

Evasion of Responsibility

The Central Minister of Steel said in the Lok Sabha last week that at present there appeared to be an evasion of responsibility in the public sector steel plants. His solution was to entrust responsibility to individuals and punish them if they failed in their performance. There is need to place more and more responsibility on "our young men who should think, dare and act," Mr. Subramaniam said. The Minister said that the Rourkela steel plant is a "sick child." An official committee had diagnosed its troubles. In about six to 12 months, the defects—there have

CAPITAL, 24th May, 1962.

been as many as 26 breakdowns would be remedied and product raised. While the Minister was in a position to hold out any assurance that the third plan target of 10 million tons would be realised, promised that he would "endeavour to achieve it." The expansion of capacity of the Bhilai steel plant has advanced substantially. Tenders for Rourkela and Durgapur have been called for and the expansion programmes would be implemented according to schedules.

Alloy Steel Plant Estimates

Even before it has been launched the estimates for the alloy steel plant have been raised from Rs. 38 crores to Rs. 60 crores. The search for finance for the project still continues.

Fertiliser Project Dropped

Messrs Khandelwal have returned the industrial licence granted to them for setting up a factory in Itarsi for manufacturing fertilisers, it is learned here. The production of fertilisers in this unit was to be based on coal and, therefore, was regarded as uncompetitive. Meanwhile, interest has been shown in setting up a fertiliser plant in Goa. Whether the Government should itself take up the Itarsi project or combine it with the Goa project to be entrusted to the private sector is being examined here.

Developing Goa Mines

The representatives of Goa mine owners, who were here last week, were assured by the Government of India that all their existing contracts would be honoured. As for prices, the Goa administration will announce the prices for different grades of minerals once every year. The mine owners will be allowed to enter into long-term contracts, but prices may not be fixed for a term longer than three years. They were further assured that on the basis of a long-term programme, they should continue to develop their mines, modernise them and also undertake beneficiation and other diversification programmes. The Government will give them assistance.

Enquiries show that the State Trading Corporation will not handle ore exports from Goa. The Goa administration, it is learned, fixed the prices of ore containing 55 percent of iron at Rs. 20.61 a ton for exports to Germany and Italy. The Government of India, it is pointed out, was not agreeable to this price, which was lower than that fixed last year. This might be the reason for the mine owners' visit to New Delhi. The Japanese have a slightly different arrangement. They import ore in part payment of equipment supplied.

Esso and Refinery Pact

Esso Standard Eastern Inc. has informed the Government of India that it is prepared to scrap the refinery agreement and to reorganise the Esso corporate structure in India. The Company has said that it is willing to consult the Central Ministry of Mines and Fuel for replacing the agreement by the usual industrial licensing procedure. At the same time, the Company will consider merging Esso Standard Eastern's marketing organisation in India—at present a branch of a U.S. corporation—with the refinery company, an Indian corporation, in order to create a single enterprise incorporated in India.

In its proposal to the Government, Esso has also stated that it will be prepared to consider Indian ownership of shares in the suggested Indian refining and marketing company, provided the outlook for profitability and return on investment is such as

CAPITAL, 24th May, 1962.

to attract Indian investors. Mr. J. W. Sinclair, General Manager of Esso Standard Eastern in India, said that his Company foresees a period of expansion and development of the Indian oil industry and believes that it is capable of playing an important rôle in this development, contributing substantially to the expansion of India's economy. Esso Standard Eastern, Mr. Sinclair said, is seeking the Government's concurrence for moves which not only will adapt the Esso interests to an altered situation in India but will also establish mutually beneficial relations between the Company and the people and the Government of India.

Lubricating Plant

Mr. Sinclair, who communicated his proposals to the Central Minister of Mines and Fuel, Mr. Malaviya, it is believed, said that the negotiations for setting up a lubricating plant—in which the Government of India would be equal partners with Esso—were proceeding satisfactorily, so an agreement is expected shortly. As far as the petrochemical plant is concerned, Esso Standard Eastern does not like to go into a partnership with the Government. It is convinced that the minimum capacity needed for an economic plant is 200,000 tons a year, instead of the 100,000 tons licensed by the Government. Enquiries show that Esso Standard Eastern is no longer interested in oil exploration which, under the existing policy, could be entrusted to the private sector contractors or explorers of oil, selling their find at well-head to the Government at the officially fixed prices. The quantity of oil refined in India during 1961 by the different refineries is as follows:

	(In metric tons)			
Assam Oil Company	448,346			
Burmah-Shell	2,910,778			
Caltex	997,708			
Stanvac	2,046,317			
	6,403,149			

The categorywise refined products were as follows:

Product	(In thousand metric tons)			
	Esso	Burmah-Shell	Caltex	Assam Oil
Light distillates	351	436	181	91
Diesel oil	530	744	319	75
Kerosene	256	549	126	86
Lubricating oils	—	—	—	25
Bitumen	138	290	—	10
Heavy ends	671	764	301	75
Other products	10	15	—	56

India, U.K. and the E.C.M.

The Ministry of External Affairs has been holding consultations with the representatives of the United Kingdom, West Germany, France, Italy, the Netherlands and Belgium in order to explain to them India's views about Britain's proposed entry into the European Common Market.

Panel on State Enterprises

The Central Government proposes to set up shortly a joint committee of Parliament to supervise the working of public sector enterprises, it was announced in the Lok Sabha last week. This will help in improving the work of these undertakings. An official motion for setting up the committee will soon be introduced in the House.

Pamba-Kakki Project

The U.S. Government has informed the Government of India of its approval for a loan of Rs. 9.6 crores to finance the foreign exchange cost of the Pamba-Kakki hydro-electric project. It is the intention of the Government to secure a loan of Rs. 15.31

crores from the U.S. P.L. 480 counterpart funds to finance the rupee cost of the project. No loan agreement has yet been signed.

Power Plants from Russia

Plant and equipment for the following third plan power projects are being procured from Russia:

Korba thermal power-station (Madhya Pradesh)	Four units of 50 megawatts each
Neyveli thermal power-station (Madras)	One unit of 50 megawatts and one unit of 100 megawatts
Singrauli (Obra) thermal power-station (Uttar Pradesh)	Five units of 50 megawatts each
Pathratu thermal power-station (Bihar)	Seven units of 50 megawatts each

The chairman, Central Water and Power Commission, was recently sent to Russia to discuss with the Soviet authorities the equipment delivery programme. Thereafter, discussions were held with the representatives of the Russian suppliers in New Delhi. The position which has emerged from these discussions is as follows:

Project	Third plan targets (in terms of megawatts)	Achievements anticipated
Korba	200	200
Neyveli	150	50
Singrauli (Obra)	250	Nil
Pathratu	350	150 to 200

Altogether only eight or nine units of 50 megawatts each at the above power-stations are likely to be commissioned in the third plan, against the 950 megawatts originally planned. The Russian authorities have been requested to improve the delivery of equipment, particularly for the Singrauli (Obra) and Pathratu thermal stations. Their reply is awaited.

Uneconomic Collieries

The Government of India's policy, by and large, is not to encourage the development of small uneconomic collieries which cannot raise production to 10,000 tons a month or whose area is less than 100 acres. Under the Industries (Development and Regulation) Act, 1951, factories which employ less than 50 labourers, working with the aid of power, or less than 100 workers, working without the aid of power, are not required to obtain any licence under the Act. In order, however, to regulate the opening or re-opening of coal mines on a scientific basis, the Coal Board insists on the production of such a licence by coal mines. The proposal to amend the Act to make it applicable to collieries, irrespective of the number of workers employed, is now being considered.

Non-ferrous Metals

A study of the position concerning India's requirement, the indigenous production, etcetera, of the more important non-ferrous metals, is in progress. The Statewise figures of production of bauxite during 1959-61 are as follows:

State	1959	1960	1961
Bihar	76,953	106,276	153,660
Gujarat	100,804	222,862	249,517
Madhya Pradesh	37,698	47,512	42,415
Madras	1,276	789	553
Maharashtra	592	7,693	27,289
Mysore	668	2,248	2,471
Total	217,991	387,380	475,905

The bauxite used for manufacturing aluminium and the actual pro-

duction of aluminium ingots during the years 1959 to 1961 are as follows:

Year	Bauxite used (in metric tons)	Aluminium metal produced (in metric tons)
1959	69,000	17,248
1960	73,000	18,243
1961	74,000	18,381

The present requirement of aluminium in the country is estimated at about 60,000 metric tons, against the estimated production of 35,000 metric tons in 1962. The entire demand, which is expected to increase to about 115,000 tons, will be met from indigenous sources by the end of the third plan, it is hoped.

Production of Copper

The indigenous production of copper is at present about 9,000 metric tons a year, against the estimated present demand of about 86,000 metric tons. A licence has been issued for an electrolytic copper refinery with a capacity of 8,500 metric tons. The setting up of a 21,000-metric-ton copper smelter, in the public sector based on the deposits in the Dariba and Khetri areas in Rajasthan, during the third plan period is being considered. These plants are expected to go into production in 1965. The Sikkim Mining Corporation has been set up to exploit the copper, lead and zinc ores of Bhotang mines.

The present demand for lead and zinc in India is estimated at about 40,000 metric tons and 86,000 metric tons, respectively. The indigenous production of lead is at present about 3,500 metric tons. About 4,500 metric tons of zinc is obtained by getting zinc concentrates refined abroad. A licence under the Industries (Development and Regulation) Act has been granted for setting up an 18,000-metric-ton zinc smelter in India and for increasing the production of lead to 11,000 metric tons a year during the third plan. A proposal for setting up a zinc smelter with a capacity of 12,000 metric tons by using imported zinc concentrates is also being considered. Exploratory work for proving copper, lead and zinc ore deposits in Sikkim, Madras and in other parts of the country is being continued.

The present requirement of antimony is estimated at about 700 metric tons which is being met by indigenous production from imported ores. The demand for tin is at present estimated at about 5,000 metric tons, all of which is being met by imports.

New Newsprint Plant

A proposal to set up a newsprint plant in Kangra, Punjab, has been approved. The Company's name will be Kulu Valley Development Company, which will be formed in collaboration with a Canadian firm.

More Sugar for Export

The Government of India has released 100,000 metric tons of sugar for export. The quantity is in addition to the 50,000 metric tons released for export on 1st May, and the 100,000 metric tons released in February.

Loan for Buying Ships

A loan of Rs. 9.20 lakhs has been given by the Government of India to R. Akoojee Jadwet and Company of the Andaman and Nicobar Islands for the purchase of ships. Two ships, m.v. Saheeda and m.v. Ciena, have been purchased by the Company at Rs. 8.46 lakhs and Rs. 10 lakhs, respectively.

Importing Raw Cotton

Under the cotton textiles export incentive scheme, mills will be allowed to import cotton against exports of their cloth and yarn from the April-June 1962 quarter onwards. Mills will be eligible for import entitlements for raw cotton worth up to 66 2/3 percent of the f.o.b. value of cloth and yarn exported. The

mills may retain for their use all the imported cotton if their exports consisted of fine and superfine cloth and yarn of counts 60s and above, and if the exported cloth was manufactured out of the foreign cotton imported by them. In other cases, mills may retain 30 percent of the imported cotton and the remainder will have to be made available to the Textile Commissioner on terms to be prescribed from time to time.

Tractors from Czechoslovakia

Mr. V. Kirsbaum, Trade Representative and Commercial Counsellor of the Czechoslovak Embassy, said last week: "India is one of the biggest buyers of Czechoslovak tractors and other agricultural machinery." He added that, "at present, there are three types of tractors which are being manufactured in Czechoslovakia. First of all is Zetor 3011 Major, three-cylinder diesel engine of 30 horse-power with a minimum speed of 12 kilometres an hour and a top speed of 24.5 kilometres. The other type which is going to be introduced in the market is Zetor Minor with a 22 horse-power two-cylinder diesel engine. The third type is Zetor Super of four-cylinders and 50 horse-power." Mr. Kirsbaum continued: "Czechoslovakia is not only a supplier of tractors to India, but in collaboration with Messrs. Tractors and Bulldozers in Baroda, a progressive manufacturing of Zetor Super tractors was started. Nearly 50 percent of indigenous parts are now being used in manufacturing these tractors. The factory is having a capacity of 2,000 tractors a year."

Developing Orissa

In its techno-economic survey of Orissa, the National Council of Applied Economic Research has recommended the setting up a second steel plant in Bonaigarh. The report says: "Investment in large-scale industries, as envisaged in the report, will give a strong push to the economy of Orissa. The spearhead of such a process of industrialisation will be the establishment of industries based on locally available minerals. Investment in such industries accounts for 90 percent (or Rs. 488 crores), out of a total investment of Rs. 538 crores in large-scale industries. The bulk of the investment will be absorbed by a new steel plant in Bonaigarh (Rs. 300 crores), expansion of the Rourkela steel plant (Rs. 150 crores) and several other metallurgical and metal-based industries. These developments will raise the industrial output in Orissa eight-fold. The industrial structure will also undergo a healthy change as the productivity of the structure as a whole will be more than doubled. This will be largely due to the preponderance of high-value-adding heavy and metallurgical industries. Locationally, the bulk of industrial activities will be concentrated within a triangular area, with Rourkela and Hirakud supplying the base and Cuttack forming the apex. Along with the development of large industries, there will be considerable stimulus for the development of several small-scale and processing, manufacturing and ancillary industries. It is expected that a number of industrial centres will spring up all over this region.

"The mining output is expected to grow at an annual rate of 37 percent during the current decade, and this should lead to the establishment of several mineral-based industries within the State as well as large expansion of iron ore exports. But certain essential conditions must be fulfilled; namely, improvement of methods of mining and adoption of mechanised mining techniques, rapid expansion of transport facilities, including the development of Paradip port, training of mining labour and upgrading of skills and large-scale mining by the Orissa Mining Corporation."

Preparing a Blueprint for Faster Economic Growth in the U.K.

(FROM OUR LONDON CORRESPONDENT)

THOSE who favour a planned economy can take heart for the future from the fact that the U.K. would appear to be launched on its first five year economic plan. This is the outcome of the second meeting of Mr. Selwyn Lloyd's National Economic Development Council, at which the Chancellor of the Exchequer made his first tentative disclosure of his new economic policy and the lines along which he anticipates it will develop. It represents a new and definitely more optimistic phase, for "Neddy" has undertaken to advise on the fastest rate at which the economy can grow consistent with soundness.

The Council has authorised its director-general, Sir Robert Shone, to prepare a first report, by the end of this year, and to take 4 percent a year, over the period 1961-66, as the figure which should focus thinking on the problems of faster growth. Sir Robert hopes that the study itself will stimulate growth, even before any action arising from the report can be decided on. The four public-owned industries with which discussions will take place this year are coal, electricity supply, gas, and the Post Office. Railways and transport generally have been left out in the meantime, because Dr. Beeching, chairman of the British Transport Commission, and himself a member of N.E.D.C., is in the middle of his own traffic studies. The private industries selected are agriculture, chemicals, chocolate and sugar confectionery, construction (including building materials), electrical machinery, electronics, iron and steel, machine tools, motor-vehicles, paper and board, petroleum, and wool textiles.

Although the figure of 4 percent fixed as the hypothetical target of annual growth—representing a total of nearly 22 percent during 1961-66—is slightly lower than the 4.1 percent put forward by the Organisation for Economic Co-operation and Development for this decade, the comparison is misleading. Allowing for the expansion expected in the working population, the N.E.D.C. figure repre-

sents about 3.3 percent a worker. The ambitious nature of the figure may be measured against the 1½ percent rate a worker in the inter-war years and earlier, one of about 2 percent during the 1950s, and the rather poor performance in 1961-62. But the Council's advisers regard it as reasonably ambitious.

Outline of Report

The report will be under three heads: (1) general economic implications—for example, for exports, balance of payments, savings, investment and manpower—of a faster rate of growth; (2) its impact on the 16 selected industries; and (3) a study of the general obstacles and of economic policies and industrial arrangements and attitudes which affect it. The whole exercise will be regarded as a trial run, and Sir Robert expects to do a fuller and wider survey next year. But he and the Council think it important to start their actual job of stimulating expansion this year. It has been agreed to take the annual rate of growth in the gross domestic product as the measure of economic development. The Council is also beginning a special study of the distributive trade. Together with the 16 industries and the estimate of how much Government services will contribute, it hopes the enquiry would cover more than half the gross domestic product.

The Council's office has already begun work on a number of topics, including the balance of payments, taxation, research and development. Other subjects which it has in mind are regional development, on which it is commissioning some work, matters under direct Government control, and those affecting management and labour. The last is a particularly broad heading, and it will be surprising if its conclusions come quickly. So much for the mechanics of the operation. As to whether it will succeed or fail will considerably depend on the measure of support which both sides of industry accord to the recommendations as well as whether the Government's anticipations in the economic sphere are

realised. These have been optimistic, but apparently not unduly so.

Trade Gap Narrowing

The City has been encouraged by the reassuring April trade figures to hope for an early return of special deposits to the clearing banks. It is true that the figures (after adjustment for seasonal factors) show only a small further improvement over March. But the adjusted import-export gap has steadily narrowed from £68 million in January to £44 million in February, £35 million in March and £31 million in April. Another way of looking at the trend is that in the last three months, February-April, the seasonally adjusted export figures were ¾ percent higher than in the three previous months November-January, while imports were down 1 percent. The improvement in the trade balance is painfully slow, but if it is not interrupted by any untoward events, it now seems likely to live up to the Government's forecast of exceptionally good export "opportunities" this year.

Industrial production is now rising slowly. The seasonally adjusted index for all industries declined last autumn and fell sharply further in January, but has since been recovering. Even so, the latest figure (for March) does no more than bring the average for the first quarter to the same level as the fourth quarter of 1961. It is still below the level of last summer, and this is even more pointed in the separate figures for manufacturing industries alone, which after the slight recovery of the last few months, are still below the average for 1960. As industrial investment has been running high for more than two years, spare capacity must have been increasing all the time, at least in the form of physical plant and equipment. No doubt any massive upsurge in demand and output would quickly produce the familiar bottlenecks and cost pressures. But there ought to be no difficulty about allowing output to rise by a little more than the 2½ percent the Chancellor has indicated for 1962. In any case,

the whole pattern of Treasury forecasts and arguments in the past few months suggests a gradually increasing pace of expansion, with the bulk of it coming in the latter part of the year.

Against these favourable factors, must be set the threats which face any expansion scheme. First and foremost comes the possibility—just highlighted by General de Gaulle—that negotiations for Britain to join the Common Market may fail for political, not economic, reasons. That would be a major setback, not only for the U.K. but for Europe as well. Next, there is the threat presented by the recent deterioration in world confidence, which could extend itself to world trade with disastrous effects. On the other hand, there are a host of others, less serious perhaps, but all adverse in their way, over which it is not possible to have complete control. Included in this category are wage demands and disputes, costs, profits, productivity, etcetera. The full implication of the N.E.D.C. target is not only that the U.K. ought to go after a faster rate of economic growth in the next five years than it has achieved at any time in this century, but also that the rate of growth in 1963-65 will have to exceed 4 percent a year to make up for the slow rate achieved in 1961-62.

Growth Vs. Equality

The question is "how?" As it happens, a fundamental contribution to the answer is published in the latest *Westminster Bank Review*. The bald thesis put forward by Mr. A. E. Jasay, in an article called "Paying ourselves more money", is that to have faster economic growth you have to tolerate greater inequality. Or, put the other way, the cause of equality stands a greater chance if you eschew rapid economic growth. This reactionary notion is not new. It was, for instance, touched on by Lord Franks in his last annual statement at Lloyds Bank. The special attraction of Mr. Jasay's argument is the statistical support he gives it. Briefly, he is able to show that in the last ten years, when economic growth in this country has been painfully slow, wages have gained on company profits. That is, wages and salaries have grown faster than profits, and their share in the national "cake" has grown larger. He then proceeds to show how the redistribution of income between these two broad categories would be influenced, first, assuming that the Government clung to slow growth (2½ percent a year), and secondly, if it set a "fast" target of 4.6 percent a year. In a phase of slow growth, real wages would probably rise a shade faster than output and profits would fall, whereas in a period of rapid growth, though wages and salaries would increase, profits would rise much faster.

According to Mr. Jasay, the honest choice (which contrasts with the inherently dishonest appeal for equal restraint on profits and incomes) might be put in these words: "Wages may go up faster than profits, but still too slowly for your liking; or else fast, but still more slowly than profits. A loss in labour's relative share could be traded for more rapid progress towards affluence—or conversely. Both relative and absolute gains may be worth-while aims, but to have more of one you must accept less of the other." He argues that it might be better political salesmanship, as well as better economics, to take explicit account of the clash between the growth in incomes and their equitable distribution. "Here at last the principle of 'getting something by giving up something else' clearly emerges. This is the sort of ground on which genuine bargains are based."

RAW JUTE EXPORT QUOTA DOUBLED

THE Jute Commissioner, in a Press note issued on Monday, says that, following the recent announcement of the resumption of exports of raw jute to east European countries, enquiries for Indian jute are also being received from some other countries in western Europe, the U.S.A. and Japan. The Central Government has decided to permit exports of the lower grades of jute to all countries, and has also raised the quantity allowed for export from 100,000 bales to 200,000 bales. Exports will be confined to jute and mesta of the 1961-62 crop, and shipments must be effected by 31st July, 1962. Intending exporters have to submit their detailed proposals to the Jute Commissioner for approval.

The authorities hope to conclude in the near future the sale of 100,000 bales to east European countries on the basis of the E.P.C. prices laid down by Pakistan for Export Hearts. In view of the surplus of jute available in East Pakistan and the quotation in the London market being below the E.P.C. prices, it remains to be seen whether these same prices can be obtained from the west European countries also. The east European countries have a surplus of rupees in India and may, therefore, be willing to pay the minimum price. But it is doubtful if the west European countries will do the same.

Jute Acreage Might Decrease

Some reduction in the Indian jute acreage appears probable this year. Representatives of the Governments of West Bengal, Assam, Bihar, Orissa, U.P. and Tripura told the Central Supervisory Body for Jute, which met in Calcutta last Friday, that jute sowings till the first week of May had been running 15 percent to 20 percent behind last year. Only in Orissa is the jute acreage expected to be maintained at the 1961 level due to the steady extension of canal irrigation facilities to new areas.

Dr. H. K. Nandi, Director of Agriculture, West Bengal, announced the State Government's decision to restrict the cultivation of jute and mesta to a combined total of 1 million acres. If necessary, the proposed restriction would be enforced by legislation, he added. Last year the rise in the aggregate area under jute and mesta to 1.5 million acres caused diversion of paddy land to the commercial crops. It would, however, be the endeavour of the State Government, said Dr. Nandi, to raise the average yield to 3.5 bales an acre through intensive cultivation, so that the overall production of jute and mesta remains unaffected.

Low Returns to Farmer

The State representatives felt that the jute price generally received by the grower was at several places much lower than the parity of the Calcutta minimum price of Rs. 30 a maund (basis Assam Bottoms). This would hamper any planned approach to stabilise the production of jute in the country and to popularise the practices of improved cultivation. In the Assam Government's view, price of Rs. 25 a maund in the primary markets should be assured to the grower in that State, considering his present cost of cultivation.

Judging from the movement and the present rate of offtake of the fibre, the Jute Commissioner, Mr. Ajit Mozoomdar, observed that there appears to be little possibility of any considerable quantity of the current season's jute being left in the hands of growers. Nevertheless, as a precautionary measure, the Central Government is arranging larger purchases

of jute by the Buffer Stock Association and also exports to a number of east European countries.

The Supervisory Body discussed the question of improving the quality of Indian jute which, despite its many commendable characteristics like strength, softness, etcetera, is said to suffer from colour deficiency due to the unsuitable and inadequate retting water generally available in the country. It was recommended that the Jute Agricultural Research Institute and the Indian Jute Mills Association should work together to devise a simple, quick and inexpensive method which the jute grower can adopt to improve the colour of his fibre immediately after retting. Since the row-cropping of jute might take a few more years to become established as a general farm practice due to the unavoidable delay in the development and mass manufacture of a multi-line seed drill suiting all kinds of soil, the Supervisory Body is of the view that concerted efforts should meanwhile be made to find out a low-cost weedicide which could achieve the main purpose of sowing jute in lines—namely, the reduction of intercultural expenses.

The reported reduction in the acreage sown to jute has led some of the larger speculators to believe that the 1962-63 crop may be insufficient for the industry's requirements. Of course, at this early stage no reliable forecast can be made. Although the initial showers were a week or ten days later than usual, subsequently the rainfall in the majority of the jute-growing areas has been sufficient, and the weather conditions are said to be favourable.

Hooghly Pilots Return to Work

The Hooghly river pilots have returned to work. The meeting held in Delhi between the representatives of the Pilots Association and the Central Government indicates that the demands of the pilots have not been conceded. The movement of ships under the emergency arrangements was showing signs of improvement in the port, when the pilots decided to resume work. It is hoped that the port will return to normal within a week.

The excise levy continues to cause much annoyance. The latest position is that shippers have to execute a guarantee bond to the extent of the value of their shipments, failing which the excise officer posted at the mills will refuse to allow the cargo mills will leave the mill premises. This may result in short shipments and subsequent claims from overseas buyers, particularly where large amounts are involved.

THE JUTE MARKETS

Manufactured Goods: In the absence of overseas business, the market opened on a quiet note. But this was short-lived. Large-scale speculative activity caused a very sharp rise which was more marked in hessians where May futures opened at Rs. 51.86 for 40in. 100z. and business was transacted up to Rs. 54.20 at the peak. August futures, Rs. 54.20 at the peak, August futures, were traded up to Rs. 51.60 from an opening of Rs. 49. The mills sold freely in the rising market for all deliveries up to January-March. The differentials between May and August futures narrowed to Rs. 2 (but recovers at the close to Rs. 2.50), which indicated the slackness of demand for ready goods. The shipping instruction due date revealed a surplus of ready hessians in most constructions, apart from 40in. 100z. Even for this, shipping instructions were not

received in full. Although the outstanding in the May futures has been reduced to 20 million yards, it is still considered fairly large. But the bulls are unlikely to take delivery as the board of directors of the East India Exchange have declared alternate deliveries—40in. 7½oz. may be tendered at a discount of Rs. 14 and 40in. 100z. "C" group at a discount of 75nP from the closing price of May futures 40in. 100z. Deliveries in 40in. 7½oz. to the extent of 6 million or 7 million yards are visualised. In the sacking section, shipping instructions indicated a lack of demand for B Twills. The differential between May B Twills and May futures declined to Rs. 1.25. Indian mills were free sellers for May B Twills even at 50nP higher than May futures, with no buyers. The differential between May and August B Twills, which was Rs. 3 last week, declined to 75nP. The outstanding in May futures is still reported to be about 60,000 bales.

Overseas business during the past week was very slack. It was more pronounced in sacking, while in hessians also the U.S.A., which had bought fairly well during the first 15 days of this month, stayed out of the market at the higher levels. U.S. buying was confined to importers who were taking a position. The implications of the shipping delays resulting from the pilots' strike caused an improvement in the spot prices in the U.S. market. But now that May shipments will go forward as originally intended, many felt that the present stocks would be sufficient to enable the consumers to wait for lower levels. Alternatively, they may continue buying on a hand-to-mouth basis. Nevertheless, the demand for better quality hessians continued. Mills were reluctant to quote for bright hessians even for July-September shipment. This was obviously due to the poor quality of the jute available. A new feature was the entry of Poland, which bought 1,000 bales or 2,000 bales of hessians for July-September shipment.

Latest available quotations are as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 7½oz.	39.90	39.75	39.25	37.15
40in. 80z.	43.00	42.75	42.00	39.90
40in. 100z.	56.00	54.25	52.50	42.50
B Twills	124.00	124.25	124.00	123.25
Corn sacks	131.00	130.00	128.25	126.50
Heavy Cees (Plain)	128.00	125.00	124.00	123.25
A Twills	155.50	154.00	151.00	151.00
Liverpools	143.50	140.50	141.50	140.00

Raw Jute: Fibre displayed a steadier tendency. Jute futures firmed up from Rs. 30.24 to Rs. 30.60 after the announcement of the further export quota. The shortage of better quality fibre continued as sellers were reluctant to offer. Most of the jute on offer was of low grade, and was not wanted by the mills. Dealers were anxious to dispose of the stocks before the arrival of the new crop in the market.

Latest available quotations are as follows:

	Landed at Mills (Basis Bottoms)	Rs. a	Rs. a	md.	Shipment

I.J.M.A. PRODUCTION FIGURES FOR APRIL

The Indian Jute Mills Association reports the total production of jute goods for April as follows:

Description	Quantity		
1. Gunny Bags			
(a) Hessian			
4,327 metric tons	(9,160 tons)		
1,16,36 thousand metres	(1,27,3 lakh yds.)		
81.8 lakh nos.			
(b) Sacking			
44,282 metric tons	(93,563 tons)		
9,38,24 thousand metres	(10,47,5 lakh yds.)		
4,21.4 lakh nos.			
2. Gunny Cloth			
(a) Hessian			
32,815 metric tons	(69,296 tons)		
11,28,85 thousand metres	(12,34.5 lakh yds.)		
(b) Sacking			
765 metric tons	(1,575 tons)		
12,93 thousand metres	(15.2 lakh yds.)		
3. Other Manufactures			
14,918 metric tons	(31,712 tons)		
4. Total Production (All kinds)			
97,037 metric tons	(205,504 tons)		
Summary			
(000 metres and 00,000 yds.)			
	Apl. '62	Mar. '62	Apl. '61
Hessian	12,46.81	13,83.09	9,32.36
	(13.62)	(14.56)	(10.20)
Sacking	9,72.17	9,77.41	8,73.35
	(10.63)	(10.69)	(9.55)
Others			
	(000 metric tons and tons)		
	Apl. '62	Mar. '62	Apl. '61
Hessian	37.0	38.4	27.9
	(36.5)	(37.8)	(27.5)
Sacking	45.0	45.2	41.1
	(44.3)	(44.5)	(40.4)
	15.0	14.2	11.5
	(14.7)	(14.0)	(11.3)
Grand Total	97.0	97.8	80.5
	(95.5)	(96.3)	(79.2)
Hours worked	200.0	200.0	170.0

N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

THE FOREIGN JUTE MARKETS

BIG FALL IN FIBRE

(FROM OUR DUNDEE CORRESPONDENT)

THE continued weakness of fibre was responsible for the idle conditions prevailing in all sections of the local jute industry last week. Pakistan has suspended the E.P.C. prices from 14th May, and the minimum rates are supposed to take their place. This has resulted in a big drop in some prices. Mill Lightnings, for instance, fell from £108 10s to £101, Mill Hearts from £90 to £88, and Grade Hearts from £79 to £78, while Grade Tossa-3 came down to £123 from £127, four to £102 from £105, Continental Tossa-1 to £98 from £99, but four remained unchanged at £83 a ton. April-May shipment, c.i.f., U.K.-Continent. The fall, therefore, varied from £1 to £7 10s. So far, no alteration has been made in the fixed rates for jute yarns and cloth. Presumably because of the irregularity in the fall of fibre prices, most people in the trade are expecting a cut in the cloth and yarn rates. Prices for Thailand jute remained unchanged on balance; they recovered after displaying an easier tendency. After being about £2 a ton lower, they were back again to £68 for No. 1 quality, £48 for No. 2, and £41 for No. 3, delivered in the U.K. or the Continent.

I.J.M.A. STOCK FIGURES

In the table relating to the I.J.M.A. stock figures which appeared on page 846 of Capital of 17th May, the stocks were wrongly shown as being in terms of thousand million tons. The figures were actually in thousand metric tons.

S&L make it

S & L undertake fabrication and installation of the pipe-work, as well as the design work entailed in the engineering of the piping system. Our years of experience gained on projects so far completed in India, plus the extra attention that has made S & L so well-known for quality and dependability, assures you of complete satisfaction.

COFFEE CONSUMPTION
IN U.K. RISESNEED TO EXPAND MARKET
FOR INDIAN TEA

(BY A SPECIAL CORRESPONDENT)

CALCUTTA being the headquarters for the disposal of north Indian tea, information about the industry is easily available; but less is heard about coffee. It is, therefore, interesting to note that with only a 14 per cent rise in the area under coffee in the past ten years, the output is reported to have increased three-fold. Over the same period, the tea acreage in south India has increased by 4 per cent, whereas crops are higher by 7.3 per cent. Meanwhile, while the consumption of tea continues to make some progress in the U.K., coffee is making great strides there. Against prewar imports of around 16,000 tons, over 40,000 tons were imported in 1961. So the Indian Tea Board is taking steps to maintain its share of the beverage in the U.K. market, for the

population is turning to milk, soft drinks, wine and beer.

Boom Periods

A reference to past trade cycles shows that the tea graph fluctuates in approximately ten-year movements. For example, 1917, 1926, 1936, 1946 and then 1954, after a disastrous season in 1952, were good years. The question now is: is the industry again on the upgrade? Only time will tell how long the rise in prices will last.

Bilateral Agreements

Although the Government of India has entered into bilateral agreements with seven or eight communist countries as well as several nations of Africa and even South America with a view to raising tea exports, they are all comparatively poor countries. Some circles consider that it will be wiser to try to regain the lost markets in high-income countries such as Australia and New Zealand, North America and the European Common Market. This correspondent anticipates that this is what will now be attempted. Investigations have already been carried out and practical plans will follow. The year 1963-64 may see good teas selling around the 1954 boom levels.

Quality Disappoints

The first sale of the new season's teas was held on 14th May. Offerings totalled over 26,600 packages, the bulk of which came from Darjeeling. Prices were reported to be irregular, and except for Darjeeling, the rates were below brokers' valuations. The quality was rather disappointing, and the trade fears that, in going for quantity, quality will suffer. Meanwhile, London buyers were reported to be selective in the last sale, but really good invoices sold well. News from Colombo is also satisfactory as far as prices are concerned.

Tea Delegation

After visiting North America and Europe, the Indian tea delegation returned home on 17th May. This country will soon know what is lacking from the buyers' point of view. The trade, with the help of the new Ministry of International Trade, may be expected to improve matters, but the main trouble which has to be overcome is costs.

U.S. Demand for Instant Tea

Reports say that there is a great demand for "instant tea" in the U.S.A. There is much talk about the changing pattern of tea drinking in America.

Books

INVESTING IN SHARES: HOW
TO MAKE MONEY

How to Invest for Profit in Stocks and Shares. By Arthur H. Thrower. (Published by Thorsons Publishers Ltd, 91 St. Martins Lane, London, W.C.2. Review copy received from Rupa and Co., 15 Bankim Chatterjee Street, Calcutta 12. Price 20s, pages 256.)

Investing Your Money. By Brian P. Whitehouse. (Published by W. and G. Foyle Ltd, 119-125, Charing Cross Road, London, W.C.2. Review copy received from Rupa and Co., 15 Bankim Chatterjee Street, Calcutta 12. Price 4s, pages 91.)

Mr. Nehru has occasionally described the stock exchange as a speculators' paradise where people go only for reckless gambling. Mr. Morarji Desai, however, said while presenting his latest Central Budget that the Government should encourage wider share ownership in India's industrial enterprises. These conflicting views on the role of stock exchanges notwithstanding, small investors in this country are gradually holding more and more shares for the income they yield as well as for the rapid capital appreciation. Good literature on the subject is needed to help the ordinary investor—who is not acquainted with the intricacies of high finance and unable to appreciate the mass of facts and figures in company balance-sheets—to acquire a working knowledge of how to make money on the stock exchange. Stock market specialists in India—eager to show their expertise and possibly believing that it is their exclusive preserve—have written books which are full of technical jargon. Mr. Thrower's book is free from this defect, although he shows the insight of a specialist. Investing money in the stock exchange, he says, is a difficult science requiring long experience as well as acquaintance with the principles of trading. He gives hints to investors on what they should and should not do.

Dividend and yield are not always the only criteria for buying shares, nor are scrip which are low today destined to remain so. The fantastically high dividends declared by Malayan rubber companies a few years ago, following the threat of nationalisation, indicated that risk and return always have a close relation-

CAPITAL, 24th May, 1962.

ship. The best that investors can do is not to put all their eggs in one basket, so that what they may lose on the swings is more than compensated by what they may gain on the roundabouts.

Mr. Whitehouse's book is shorter than Mr. Thrower's. It contains much factual material relevant to stock exchange investments. He gives a good piece of advice to investors: never rely on tips too much, even if they are alleged to have come straight from the horse's mouth.

INVESTMENT GUIDE

The Investor's India Year-book, 1962. Compiled by Place, Siddons and Gough (Private) Ltd. (Published by Orient Longmans Ltd, 17 Chittaranjan Avenue, Calcutta 13. Price Rs. 20, pages 417.)

The latest issue of the *Investor's India Year-book* maintains its usual high standard. Apart from a lucid analysis of economic trends and the growth prospects of the major Indian industries, the publication contains up-to-date facts and figures of companies whose shares are quoted in the stock exchanges. The compilers have also included brief details about new companies which have been formed recently. The publication conforms to its old reputation of being factual, reliable and comprehensive.

INDIAN CONSTITUTION

A Comparative Study of the Indian Constitution, Vol. I. By D. K. Sen. (Published by Orient Longmans Private Ltd, 17 Chittaranjan Avenue, Calcutta 13. Price Rs. 18, pages 381.)

In his small volume on the Indian Constitution, Sir Ivor Jennings said that the Constitution "is impregnated with the idea that law and the Government are dangerous and ought to be kept in concentration camps." He added that the Indian Constitution is dominated by a view of constitutional law, which is now regarded as outmoded. This view is derived from the works of Dicey. Sirdar D. K. Sen says in the preface that there is no evidence to justify Sir Ivor's first statement. The absence of any trace of Dicey's views on the Indian Constitution destroys Sir Ivor's second criticism. The author rightly discourages the attitude of some people in India to regard the Constitution as sacrosanct and immutable and commends a detached point of view in examining it. The author has brought out the limitations which hinder a comprehensive analysis as "there is yet to grow up a body of authoritative decisions on many of the provisions of the Constitution". As the cardinal feature of the Indian polity is its federalism, the Indian Constitution has been compared with other federal constitutions, but references, where necessary, have also been made to the principles embodied in democratic constitutions of a unitary character.

The origin and meaning of constitutions, the difference between written and unwritten constitutions, the influence of the doctrine of separation of powers, the difference between parliamentary and presidential forms of Government, the distinction between rigid and flexible constitutions, the characteristics of unitary and federal constitutions, have all been clearly and briefly brought out. The

CAPITAL, 24th May, 1962.

historical background to the Indian Constitution, the rules of comparative law concerning constitutional interpretation and an analysis of the Indian polity form the introductory part of the first volume. The second part deals with the general principles of organisation, including a study of the structure of the Indian Republic, a comparative study with other federal constitutions, the distribution of legislative and executive power, federal finance, the extraordinary and emergency powers of the executive, and the external relations of the Indian Republic, particularly its position in the Commonwealth. This is the first of three volumes and is an invaluable manual for those interested in the Indian Constitution.

THE ECONOMY OF PUNJAB

Techno-economic Survey of Punjab. (Compiled and published by the National Council of Applied Economic Research, New Delhi. Price Rs. 20, pages 234.)

The National Council of Applied Economic Research conducted a techno-economic survey of Punjab at the request of the State Government during 1959-60 in order to make an appraisal of the resources available within the State and to outline a development programme for the decade 1961-71, indicating the directions of growth. The per capita income of Punjab in 1956 was Rs. 296, against Rs. 261 for the country as a whole. The State's economy has a large agricultural sector, an active small-scale industrial sector and a tertiary sector which is virtually dependent on the fortunes of the agricultural sector for its growth. During 1956, the primary sector contributed 47 per cent to the State's net output, the tertiary sector 42 per cent and industry 11 per cent, the major share of which came from small industry.

The development programme suggested by the National Council is three pronged: (a) strengthening the infrastructure, (b) revitalising the agricultural base, and (c) the expansion of the industrial sector to produce intermediary products and durable consumer goods for both the local and external markets. Of the total investment recommended for the ten-year period 1961-71 (Rs. 1,114 crores), the State is assigned the responsibility to undertake an outlay of about Rs. 660 crores. But a study of the State's finances indicates that it will be able to raise an additional amount of only about Rs. 275 crores during the period. If the development programme envisaged by the Council is implemented in full, the State's income will be more than doubled and the per capita income will increase by 40 per cent. The primary output will fall from 47 per cent to 40 per cent, while the secondary output will rise from 11 per cent to 18.4 per cent. Besides, the additional labour force of 2.6 million will be fully absorbed by the economy.

The Council's approach to some of the problems is academic. The study looks like a treatise on the economic geography of the region. Many things have been taken for granted and some of the forecasts are unconvincing. Some parts of the book contain data which are at least 50 years old. In drafting the report, greater attention should have been paid to the grammar and diction of the English language.

STEEL STATISTICS

Statistics of World Trade in Steel, 1960. (Compiled by the Secretariat of the Economic Commission for Europe, Geneva, Switzerland. Price 30s, pages 39.)

The European iron and steel industry established new records in 1960.

Its activity continued at a high level in 1961. The total world steel output rose sharply in 1960—a year particularly favourable to producers—and the trade in semi-finished and finished steel products increased substantially. These are some of the highlights of the statistical data contained in the new publication of the Economic Commission for Europe on the world trade in steel, 1960. The publication provides data on exports of semi-finished and finished steel products, by regions and countries of destination.

HEALTH SERVICE

Health through Choice. By D. S. Lees. (Published by the Institute of Economic Affairs, 66A Eaton Square, London, S.W.1. Price 7s 6d, pages 63.)

Dr. Lees's book analyses the inescapable economic dilemmas created by a health service financed out of general taxation. He questions the arguments used in defence of a State health service and challenges the view that the National Health Service has contributed to the improved health of the British people. The author makes a systematic assessment of the arguments for and against the National Health Service in particular and State health service in general. He concludes that, provided those in need can receive the help they require, there is no reason why people should not be left free to buy medical services from competing suppliers by paying for private insurance, or with the aid of private insurance. The author reinforces his arguments at various stages by drawing on experience in the U.S.A., Australia, New Zealand, Sweden and other countries, in most of which a debate is going on in the view of the operations of the alternative medical services. He has assembled a formidable array of facts on the subject. The publishers hope that the booklet will generate discussion on a fundamental issue of public policy. The theme is of topical interest in India, especially in view of the operations of the employees' State insurance scheme.

INCOME TAX LAW

Practical Problems of Income Tax. By R. N. Lakhotia. (Published by Asha Publishing House, 16A Amherst Street, Calcutta 9. Price Rs. 6, pages 332.)

The law relating to income tax in India has become complicated in recent years. Mr. Lakhotia has produced this volume in the form of problems and solutions. A copy of the schedule of rates is given in the appendix. The book is intended for the use of students, income tax officers and consultants.

SHIPPING ANNUAL

Shipping and Port Review, International Shipping and Shipbuilding Annual Issue, January-February 1962. (Edited and published by E. H. Tip, from 8, Dharamtala Street, Calcutta 13. Price Rs. 10, pages 162.)

The special issue of *Shipping and Port Review* contains a comprehensive coverage of the Shipping and Shipbuilding Conference held in Bombay in December 1961. It includes the papers read at the conference as well as its proceedings. Profusely illustrated, the publication contains a number of articles which discuss the problems of, and prospects for, shipping both in India and abroad.

COMPANY AND PUBLIC NOTICES

THE BOMBAY BURMAH TRADING
CORPORATION LTD.

Registered Office:

9, Wallace Street, Fort, Bombay 1.

TEA: PROSPECTS FOR THE NEW SEASON

THERE has been a moderate improvement in tea shares in the Calcutta stock market during the past few weeks. The improvement is partly in sympathy with the general trend of the market. But, to a large extent, it reflects the more cheerful view which is being taken about the prospects for the industry following the substantial fiscal concessions it has been given under the Central Budget for 1962-63. A noteworthy feature, however, is that investors on the whole remain cautious: although tea is about the only industry which will benefit from the tax proposals announced nearly six weeks ago, its shares have improved no more sharply than those of other industries (except where bonus issues have been announced). The reason is that the tea company reports for 1961 published so far have generally been disappointing, since only in rare cases has there been an increase in profits and dividends as compared with 1960. Investors remember that 1960 itself was a poor year: the production of the north Indian gardens fell sharply since weather conditions were adverse, and although prices rose, the rise was not large enough to enable the companies to maintain their revenues. In 1961, the experience has been almost exactly the converse. Thanks to the favourable weather, the output in north India has not only recovered fully, but has established a new all-time record. At the same time, prices have fallen, and the fall has been accentuated by the fact that the crops of nearly all other major exporters—Indonesia excepted—have increased too. The total output of the main exporting territories (India, Pakistan, Ceylon, Indonesia and East Africa) has thus risen to nearly 670 million kilograms, or 44 million kilograms more than in 1960.

Nevertheless, as the leading Calcutta tea-broking firm of J. Thomas and Co. Private Ltd points out in its latest annual report, it is significant that "despite an unprecedented increase in world supplies, there has been no indication of a glut of teas in the various consuming countries." A buyers' market may have prevailed during the greater part of the past season, but "it is unlikely that any country is presently holding unusually large stocks". The assessment appears to be broadly correct. Part of the increase in 1961 supplies seems to have been used for replenishing stocks that were depleted after the short north Indian crop of 1960. Part of it has been absorbed by the rise in world demand (although that rise is not as undoubtedly been absorbed by the substantial increase in this country's domestic consumption. Assuming that stocks nowhere are too large, J. Thomas and Co. has predicted that the new 1962-63 marketing season "should commence on a healthy note" and the opening sales "will be well supported." The results have been disappointing at the two auctions held so far: one last Monday and the other a fortnight earlier. But J. Thomas really still is right, since the May sales are never and the marketing season has yet to get into its stride.

Among the more welcome features of the J. Thomas report this year is that while it is opti-

mistic, it is not recklessly so. Cheerfulness has sometimes been the occupational disease of the broking fraternity, not only in tea but in other trades as well. J. Thomas and Co., however, concedes straightaway that the trend of the market in the coming months will depend primarily on the size of the crops in north India and in the other major exporting territories. The firm does not think that world production this year will increase as much as it did in 1961. At the same time, world consumption "has not so far shown signs of lagging too far behind supplies". So, a "satisfactory offset" is expected, at prices "which may not show any substantial change from the last season, provided there are no major fluctuations in world supplies." On the basis of the evidence available so far, the view seems justified, although it is not one which can bring much joy to the tea producer and investor. The latter in any case have reason to be worried since the total crops of the major exporting countries this year seem to be running about 4 million kilograms above last year's corresponding level—the entire increase being accounted for by Ceylon and East Africa, which are India's most formidable competitors.

There is no doubt that the competitive strength of Indian tea in foreign markets has been increased appreciably by the fiscal concessions in the latest Budget. J. Thomas and Co. has not analysed in any great detail the possible effects of the concessions, although its annual report has appeared almost a month after the Budget was presented. Nevertheless, it is evident that tea producers, as such, will not benefit as much as appeared likely at first. The advantage of the increase in the export duty, and of the excise duty rebate on exports, is likely to go to foreign buyers and to shippers in the first instance, although some of it may ultimately travel back via the price mechanism to the producers. The producer's meanwhile will have to pay over Rs. 3 crores more as excise duty, at a time when they are already finding it hard to raise short-term funds. The in-

GENERAL INSURANCE STRAITJACKET

GENERAL insurers in India have for many years been criticised for allegedly giving rebates and indulging in other malpractices. The latest indictment has come in the form of a directive from the secretary of the executive committee of the General Insurance Council. The mittee of the General Insurance Council, which is charged with paying commissions or giving inducements in excess of those provided in the Insurance Act 1938. The Act fixed the commission at 15 percent for non-marine insurance and 10 percent for marine insurance irrespective of the size, nature and profitability of the account. In most commercial transactions on either side. But this is not the case in insurance, where the "price" has been determined by statute, and "supply" and "demand" have to be regulated to conform with the price. Any predetermined price of this sort is necessarily artificial and hence unrelated to the

crease in railway freights, and the new excise duties on plywood and aluminium foil, will increase the burden further. To what extent tea companies will benefit from the so-called "concession" in company tax on export earnings remains to be seen: nobody seems to be sure whether the concession will be given to the final exporter or the original producer. Nor does anybody seem to know for certain why the excise duty rebate has been given instead of a straightforward further cut in the export duty. Finally, the point seems to have been overlooked that the latest fiscal changes will tend to encourage "direct shipments" to foreign auction centres, when the Government's aim otherwise is to develop the Calcutta and Cochin markets.

Perhaps the most regrettable feature of the changes, however, is that they show the Government is determined to depress the domestic consumption of tea. The move is hardly justified, since it is only on the foundations of a substantial home market that a vigorous export trade can be built. The industry has been asked to achieve a production target of 900 million lbs under the third plan. As matters stand, it is understandably worried that a huge surplus of tea will develop in world markets if the major producers, India included, go on boosting their output vigorously. In conditions of glut, this country may be among the worst sufferers since its industry has to cope with major cost disadvantages. Those disadvantages have by no means been eliminated by the fiscal concessions which have recently been given. The steady rise in labour costs has still to be checked, and the multiplicity of Central and State levies has to be rationalised and reduced before Indian producers can compete strongly in foreign markets. The need for increasing their strength is the greater now that world demand is increasing and new markets are waiting to be won. If more tea is to be produced, it has to be produced more cheaply. An expanding market has to be created by allowing the domestic demand to rise as well as by taking fiscal and promotional measures to boost exports. India cannot rely for success on the temporary advantages of her competitors. Her industry has to be given some assurance of long-term health and stability before it wins the export markets which, in better circumstances, it undoubtedly could.

laws of supply and demand. Other artificial proposals, therefore, necessary to sustain the price. This is the weakness which is at the root of the so-called illegal rebates and inducements in general insurance. The Government is understandably keen to ensure that the terms of the Insurance Act are faithfully implemented. From time to time, therefore, it has introduced a series of regulations, ostensibly with the concurrence of the representatives of the trade, but in reality under the implicit threat of nationalisation. These regulations now hang like a millstone round the necks of the insurers.

It appears that general insurers have not been able to explain to the Government that the so-called rebating is a legacy of the old days when India had principal agents and commission payments were determined by the terms of trade. Having been accustomed to paying commissions

the terms of which were determined by the marginal price of sale and purchase, it became almost a normal practice. Meanwhile, the law was changed. It abolished the practice of having principal agents. It also limited all commission payments to 15 percent or 10 percent, as already mentioned. The historical background has to be clearly appreciated before the growth of the present maladies can be understood. The insurance companies, again, have failed to impress on the Government that the statutory limitation of commissions can be quite unsuited to the actual situation. They did not, or could not, advocate elimination of the unrealistic provisions from the Act. In France and elsewhere in Europe, it is not uncommon to pay a commission higher than 15 percent if the profitability of accounts warrants a larger payment. Insurance is a highly specialised business. No insurance executive can afford to see his figures in the red and no insurance company will give larger commission payments unless the accounts can sustain the increase. Yet, in India, the Government has interfered in the general insurance business and made numerous rules and regulations, simply because the Insurance Act has unrealistic provisions.

Very recently, the Tariff Committee (which is a statutory body established by the Insurance Act and is composed of elected insurance officials), under pressure from the Controller of Insurance, decided to reduce the fire premium rates by 15 percent, which brings the total of such reductions to 35 percent since 1953. This happened because the Controller of Insurance, who administers the Insurance Act, felt that by reducing the surplus available from fire insurance, the money left in the hands of the insurers would be less, so they would not be able to pay anything extra to the agents and the insured under the stress of competition. There is no historical basis for the view that rate reduction has ever served the purpose the Controller has in mind. The gross direct premium income of general insurers in India during 1962 is expected to be Rs. 40 crores. At least Rs. 16 crores is expected as fire premiums. It can be assumed that at least 50 percent of this will come from tied connections where the commission is either 15 percent or even nil. On the balance of 50 percent, after allowing for legitimate and permissible field expenses, the outgo by way of excess commission can at most be 5 percent. In other words, the outgo may be roughly estimated at Rs. 40 lakhs. But by reducing the fire premium rate, the Tariff Committee and the Controller of Insurance will reduce the total premium income by Rs. 2.40 crores. It seems, therefore, that to plug an outgo of about Rs. 40 lakhs, a sum of Rs. 2.40 crores is to be forgone.

The gradual reduction in rates has caused serious injury to the trade. If further reductions are made, they will add to the harm. The impact on the future of insurance in an industrialised India cannot now be properly visualised. The situation is worsened by the fact that the reduction has been made on the basis of inadequate statistical material and in disregard of factors that enter into the computation of fire insurance premium rates. The executive committee of the General Insurance Council, it is said, has now devised a comprehensive scheme whereby it feels that all loopholes for undue payments will be

closed. If that is the case, there is no need to give effect to the reduction in fire premium rates from 1st July, 1962.

The latest directive is claimed to be the result of serious thinking on the problems confronting general insurance. The chairman of the executive committee, it is reported, has suggested that one way to check the evil of rebating may be to give powers to the administration to check and control the receipt and payment of commissions at the very source. The idea appears to be that official representatives should be posted wherever feasible in the accounts offices of insurance companies, and that they should be given the authority to check receipts and authorise disbursements from 1st July, 1962. It is reported that the committee "readily agreed" to this suggestion. To begin with, implementation will be limited to checking transactions, whether of receipts and/or payments, with a view to ensuring that transactions repugnant to the Act and the Code of Conduct, whether direct or indirect, do not take place. Chartered accountants, if possible, with several assistants, will be appointed. The cost of this operation is to be borne by the insurers. It has been suggested that the outgo by way of expenses will be small compared with the saving in rebates which will result on a premium income of about Rs. 40 crores. The saving thus made, it is expected, will be reflected in the profits and reserves of the companies. Theoretically, there can be no objection to showing an authorised representative any payment or receipt vouchers of any kind, but the

issue here is one of principle. There is no reason why an insurance manager should give outsiders the power to sit in judgment over the administration of his company. That would amount to evading the obligations imposed by the trade and violating the trust reposed in the management by the shareholders. And yet this is considered necessary in order to sustain an artificial climate of commission limitation.

A second instalment of regulations for the business is in the form of a modification of the non-diversion agreement among 17 companies in Bombay, which is reported to have proved a failure. Instead of the non-diversion agreement being voluntary, it has been issued in the form of a directive from the General Insurance Council. It deals with non-diversion of field officials under certain conditions, with a mutual assistance pool whereby 3 percent of all insurance will be ceded. The pool is designed to create a premium fund to assist insurers who may lose business on account of readjustment. No business can be diverted by unfair means, although what is unfair has not been clearly defined. The present series of regulations have added to the burden of the trade. It has been rumoured that they may be the last of the series. If they fail, the Finance Minister, Mr. Morarji Desai, is reported to have said, there may be no alternative but to nationalise general insurance. But some insurers feel that the threat has to be faced for what it is worth, and no useful purpose will be served by following a policy of appeasement.

AGRICULTURAL PRICE POLICY

There appear to be good grounds for the optimism expressed by the Central Food and Agriculture Minister, Mr. S. K. Patil, in the course of his reply to the Lok Sabha debate on the demands for grants for his Ministry. He is reported to have said that the food situation in India has never been as good as it is at present. There have been three excellent crops in succession since 1958-59, and the 1961-62 harvest is also expected to have been a good one. The Minister's statement is, therefore, not without justification. However, foodgrain imports were 3.31 million tons in 1959, 5.06 million tons in 1960 and 3.44 million tons in 1961. Thus, in spite of the good harvests, sizeable imports have been necessary. Imports this year are also likely to be large. Hence, while the situation is satisfactory, there is no reason for complacency. Indian agriculture continues to be notoriously dependent on the monsoon. Until the dependence is greatly reduced, the food position each year can be assessed only after the harvest-ing has begun.

The third plan production target for foodgrains has been fixed at 100 million tons in 1965-66. With the output somewhat less than 80 million tons in 1961-62, it will be necessary to bring about an annual increase of nearly 6 percent over the next four years. A major part of the increase has to come from new irrigation facilities and from the wider use of chemical fertilisers. The execution of major river valley projects is subject to many unforeseeable factors; hence some delays will have to be reckoned with in the plans for extending irrigation. The progress of schemes for the manufacture of fertilisers has also not been satisfactory. The target for fertiliser output for 1965-66 has been increased to 1 million tons in terms of nitrogen content, against the original plan figure of 800,000 tons. A number of schemes have also been licensed for achieving the higher target, but the prospects are not bright. Already one private sector licence has been turned in; and since the foreign exchange position is unlikely to show any great improvement, there may be further hold-ups. The package programme, which is being supported by the Ford Foundation and the West German Government, might well be successful, but it will be too late for its lessons to be applied over the whole country before the end of the third plan.

It is surprising that Mr. Patil should have expressed concern over the demand for holding the price line. Among those anxious to hold the price line are presumably his colleague, the Finance Minister, and the Planning Commission. From past experience, their anxiety appears to

be justified. It may be true that a large proportion of the population will not be affected by an increase in foodgrain prices. This proportion consists of people living in the rural areas who are engaged in the cultivation of some crop or other. As consumers they will be largely unaffected by a rise in grain prices, but as producers they will benefit. By the same token, they will, on balance, lose from a fall in prices, unless the increase in the marketable surplus more than makes up for the price decline. For the rest of the population, however, the lower foodgrain prices are, the better it is from the immediate standpoint. But their long-term interest is in assuring farmers of a fair return that will induce them to produce the increasing quantities that are required. Since Mr. Patil, as Central Food and Agriculture Minister, does not represent India's food-growers alone, he has to devise a policy that is in the interests of the community as a whole. It is here that his speech in the Lok Sabha was unfortunately vague.

Looking at the trends over the past few years, it seems that foodgrain prices have risen somewhat less than the general price level. Wheat prices, in particular, have moved down, reflecting the large-scale imports of the commodity from the U.S.A. under Public Law 480. But the prices of agricultural products as a whole have risen just about as much as all prices combined. This indicates that farmers in general cannot have lost much through the price movements of the last ten years. Among them, growers of commercial crops like jute and oilseeds have gained, because the prices of these commodities have risen relatively sharply. Growers of the major cereals like rice and wheat, and of sugarcane, tobacco and cotton, have not done as well. Still, while Mr. Patil's concern for the foodgrain farmer is understandable, he cannot contend that farmers as a whole have been the losers on account of increases in the general price level.

The present is an opportune time for evolving a broad agricultural policy, as distinct from the piecemeal measures designed from time to time to deal with the problems of specific commodities. The policy can lay down the priorities among the various agricultural targets. The price policy for the individual commodities can then be based on these priorities. At the same time, the inducements offered to the farmers should not be such as to lead to a sharp increase in the general price level, and particularly in the prices of necessities like foodgrains. That would be politically dangerous and would wreck the plan by inflating the cost of various projects. Exports would also be

hampered. Already many of this country's agricultural exports, like oilseeds, are priced out of world markets and can be exported only with the help of special measures. Also, it is well known that the contribution of the agricultural population towards meeting the cost of economic development is negligible, both in relation to the total contribution and in relation to the benefits which farmers have got from the five year plans. The economic history of Russia, Japan and Britain proves that a country cannot progress far without a substantial contribution from the rural sector. As it is, political considerations have prevented any revision of the system of land taxation. Mr.

Patil may have lost sight of these points, but a price policy for agriculture has to take them into the account.

MOVEMENTS IN WHOLESALE PRICE INDEX (Base Year 1952-53 equals 100)							
Year (monthly average)	All com- modities	All agri- cultural commodities	Rice	Wheat	Oil- seeds	Cotton	Jute
1951-52	118.0	118.8	104	94	132	128	220
1955-56	92.5	88.0	78	72	85	97	117
1956-57	105.3	104.5	97	88	120	111	125
1957-58	108.4	107.4	105	88	120	106	133
1958-59	112.9	114.0	105	105	127	99	118
1959-60	117.1	116.5	105	96	135	106	125
1960-61	124.9	123.8	108	90	150	112	210
1961-62	125.1	122.9	105	91	156	109	178

The profit has amounted to Rs. 4.08 lakhs, against Rs. 1.71 lakhs in 1960. Taxation absorbs Rs. 1.30 lakhs (against Rs. 48,000) and buildings and machinery reserve Rs. 75,000. The carry-forward is Rs. 40,035, against Rs. 42,558 brought in. The crop was 723,716 kilograms, compared with 525,805 kilograms in the previous year. The average sale price was Rs. 3.84 a kilogram, compared with Rs. 4.43 a kilogram in 1960. Estimates for a crop of 725,747 kilograms at a cost of Rs. 25.22 lakhs have been made for 1962.

Bhartia Electric Steel Repeats

Although sales of the Bhartia Electric Steel Co. Ltd rose from Rs. 74.74 lakhs in 1960 to Rs. 1.05 crores during the year ended December 1961, the working would have been better but for the power shortage. The position of the order-book is satisfactory. The factory is now producing centre buffer couplers and roller-bearing axle boxes. The demand for steel castings is expected to increase due to the rise in the production of railway wagons. Orders have been placed for a 4-ton electric furnace, the installation of which should help raise liquid steel output. The plant has been modernised and is expected to reach a production capacity of 500 tons of finished steel castings before long.

The profit of Bhartia Electric Steel has increased from Rs. 2.45 lakhs in 1960 to Rs. 12.86 lakhs in 1961, after providing Rs. 5.60 lakhs (against Rs. 3.49 lakhs) for depreciation. Development rebate reserve is allocated Rs. 2.74 lakhs (against Rs. 2.05 lakhs) and taxation Rs. 4.65 lakhs. A taxable ordinary dividend of 10 percent has been maintained, which is covered more than twice. The yield is 7.9 percent at the present price of Rs. 12.69 a share. The carry-forward is Rs. 46,999, against Rs. 496 brought in.

Investa Machine Tools Disappoints

The shareholders of Investa Machine Tools and Engineering Company, who have gone without a dividend for as many as 18 years, will perhaps have to wait for a few more years before their investments begin to bear fruit. The Company has still to clear arrears of preference dividend for 15 years. Of course, the liability on this account is by no means heavy since the Company's preference capital amounts to only Rs. 10 lakhs. The preliminary report on the Company's working for 1961 shows that it has fared badly during the year. The total turnover at Rs. 45.09 lakhs is slightly better than the 1960 figure of Rs. 44.65 lakhs, but the gross profit has been nearly halved from Rs. 9.23 lakhs to Rs. 4.65 lakhs. After providing Rs. 1.84 lakhs (against Rs. 5.53 lakhs) for depreciation, and nil (against Rs. 96,000) for taxation, the net profit amounts to Rs. 2.62 lakhs, against Rs. 1.99 lakhs in 1960. Allocation to development rebate reserve has been stepped up from Rs. 54,507 to Rs. 2.08 lakhs, leaving a balance of

Current News and Comment

Clive Row Investment Pays Less

There has been a fall in the profit of the Clive Row Investment Holding Co. Ltd from Rs. 15.97 lakhs in 1960 to Rs. 14.63 lakhs for the year ended December 1961, due to the difficult conditions in the jute, coal and tea industries. The taxable ordinary dividend has been cut from 8 percent to 7.5 percent, including an interim of 2.5 percent. The dividend absorbs Rs. 10.41 lakhs and offers a yield of 8.7 percent at the present price of Rs. 8.62 a share. Taxation is allocated Rs. 4.25 lakhs, against Rs. 5.51 lakhs. The carry-forward is Rs. 2.49 lakhs, against Rs. 2.52 lakhs brought in.

Texmaco Earns More

The ordinary shares of the Textile Machinery Corporation Ltd have reacted to Rs. 25.80 because the taxable ordinary dividend has been maintained at 10 percent for the year ended December 1961. The dividend offers a yield of 3.9 percent at the present price. The trading profit has increased from Rs. 58.72 lakhs in 1960 to Rs. 76.39 lakhs in 1961. Depreciation is allocated Rs. 23.37 lakhs (against Rs. 21.84 lakhs), development rebate reserve Rs. 5.80 lakhs (against Rs. 3.75 lakhs) and taxation Rs. 19.81 lakhs (against Rs. 9.35 lakhs). The carry-forward is Rs. 62,642, against Rs. 58,707 brought in.

Orissa Cement Does Well

The ordinary shares of Orissa Cement Ltd have become steadier around Rs. 20.12 due to the satisfactory results for the year ended December 1961. Clinker and cement production has shown a substantial improvement over the 1960 level. The output of clinker was 335,000 tons, compared with 320,000 tons, and that of cement 373,000 tons, compared with 357,000 tons. Despatches were higher; they could have been still better but for wagon shortages. The ex-works price of cement was raised with effect from 1st November, 1961. The expansion of the basic refractory section has been making good progress. It is hoped that the new chemically-bonded bricks project will be completed early next year. The capacity of the basic plant is 19,000 tons, and that for chemically-bonded bricks 10,000 tons a year.

The profit has risen from Rs. 67.47 lakhs in 1960 to Rs. 1.13 crores in 1961. The taxable ordinary dividend of 15 percent has been repeated, and it is covered more than thrice. The yield works out to 7.5 percent at the present price. Depreciation amounts to Rs. 37.82 lakhs (against Rs. 38.65 lakhs) has been provided before arriving at the profit figure. Development rebate reserve is allocated Rs. 2.91 lakhs (against Rs. 3.42 lakhs), taxation Rs. 44 lakhs (against Rs. 28.50 lakhs), and general reserve Rs. 30 lakhs (against Rs. 10 lakhs). The carry-forward is Rs. 1.11 lakhs, against Rs. 32,158 brought in.

Kamarhatty, Kanknarrah Jutes Lose

The working results of the two jute mills—Kamarhatty Company Ltd and Kanknarrah Com-

pany Ltd, under the managing agency of Jardine Henderson—for the year ended December 1961, are disappointing. Substantial losses have been incurred as raw jute prices were high in relation to those of manufactured goods. The working has, however, improved since the end of 1961 due to an abundant supply of fibre from the 1961-62 crop. As the margin between the raw jute price and that of manufactures has widened, the mills have been able to work at a profit. The directors say that the results achieved during the first quarter of 1962 are encouraging. Kamarhatty incurred a loss of Rs. 17.61 lakhs, after providing Rs. 6.90 lakhs for depreciation. Bringing in a credit balance of Rs. 39,774, a debit balance of Rs. 17.21 lakhs has been carried forward. The dividends have been passed. The taxable ordinary dividend was 5 percent in 1960. As a result of the progressive unsealing of looms, a shortage of spinning capacity is being felt. The directors have, therefore, decided to install several additional spinning frames, besides two sacking web drawing frames. Certain units of the new machinery have already been installed and the balance, it is expected, will be in production soon. It is expected that the move will improve the efficiency of the mills. The question of modernising the weaving department does not arise until the necessary equipment can be obtained from domestic producers as imports are not likely to be permitted. Kanknarrah Company showed a loss of Rs. 16.02 lakhs, after providing Rs. 6.13 lakhs for depreciation. Bringing in a debit balance of Rs. 14.78 lakhs, a total debit balance of Rs. 30.80 lakhs has been carried forward. The dividends have again been passed.

Hattikhira Tea Earns More

The Hattikhira Tea Co. Ltd—a Cachar garden—has paid a taxable ordinary dividend of 8 percent for the year ended December 1961. The dividend absorbs Rs. 1.01 lakhs and offers a yield of 6.4 percent at the present price of Rs. 12.44 a share.

The other points raised by Mr. Kilachand related to the working of the futures market, in which the trade is vitally interested. He urged the Government to decide the terms and conditions

An expert study team on sugar, led by Mr. D. R. Narang of Lucknow, which recently toured the Philippines, Louisiana and Hawaii in the U.S.A., and Porto Rico, has recommended expansion of the existing sugar units in India to a crushing capacity of 3,000 tons of sugarcane a day. The team's visit to these countries was sponsored by the National Productivity Council in collaboration with the U.S. Aid Mission. In the opinion of the team, India should follow the modern trend of discouraging small units and encouraging large factories. The average cane-crushing capacity of Indian sugar factories at present is 1,000 tons a day. The team has also suggested that the system of payment for cane by weight must go and it should be replaced by payment on the basis of quality. In order to end frequent fluctuations in the cost and production of sugar, it has recommended that quotas should be fixed for sugarcane growers as well as sugar mills. This will end the present state of affairs in which factories sometimes work up to June and sometimes close down in March or April. Another recommendation relates to instrumentation and automation for process control and operation. To achieve this, the instrument section at the National Sugar Institute in Kanpur should be enlarged and an expert on instrumentation should be obtained under the U.S. aid programme. Methods for better utilisation of by-products, indigenous manufacture of sugar machinery and intensification of research work both on sugarcane and sugar technology have been suggested by the team, which was impressed by the work of the co-operative sugar factories in Louisiana. Altogether, the team visited 19 plantations and factories—six in the Philippines, nine in the U.S.A., and four in Porto Rico, besides some experimental and research stations.

dustrial Development Corporation for promoting large and medium-scale industries by giving them grants and loans, and if necessary, by equity participation and underwriting. The Kerala State Financial Corporation as well as the Government continue to aid the establishment and development of new industries under the State Aid to Industries Act. The labour force is educated and its productivity, in the delegation's opinion, is higher than in other parts of India. In spite of these advantages, local capital for industrial development has remained shy as the moneyed classes, by and large, do not like taking risks. The State Government has, therefore, to attract capital from outside by widely publicising the opportunities available.

The State has some pioneering industries like fertilisers, chemicals and rayon, and it is suitable for starting heavy and large industries. The delegation is surprised that the Central Government has allotted a relatively small amount for establishing these industries, and those sanctioned under the third plan are only a shipbuilding yard, a phyto-chemical plant and a forms press. The report, therefore, suggests a number of new industries based on the State's agricultural, forest, marine and mineral resources, which could be profitably started. It suggests that the declining coir industry should be revitalised by adopting modern methods of production and by setting up factories in Kozhikode and Trivandrum for making rubberised coconut fibres. All other existing industries should be supported and encouraged to grow. The new industries suggested in the heavy and large-scale field include ship-building, pig iron, marine diesel engines, switchgear and transformers, forging and re-rolling plant, high carbon steel and heavy steel castings, alloy steel fabrication, soda ash, acetic acid and calcium carbide. According to the delegation's report, the possibilities of starting medium and small industries are great, and it has drawn up a fairly long list of those which, in its view, can be economically established in Kerala.

U.P. Financial Corporation Report

The U.P. Financial Corporation provided assistance to the tune of Rs. 59.04 lakhs to various industries during the first year of the third plan. According to the annual report, the Corporation extended assistance in the shape of its loans and Government loans under the liberalised aid scheme, totalling Rs. 34.68 lakhs and Rs. 24.36 lakhs, respectively, to 52 large, medium and small-scale industries. During the seven years of its existence, the Corporation has sanctioned in all Rs. 3.19 crores to 394 enterprises. Of these, the Corporation loans amounted to Rs. 1.98 crores for 91 industrial units, and Government loans totalling Rs. 1.21 crores were sanctioned for 303 units. Eight applications involving a total of Rs. 31.30 lakhs were under consideration at the end of the year. On the disbursement side, a sum of Rs. 55.92 lakhs of the sanctioned loans was advanced to loanees during 1961-62, raising the total of the disbursed amount to Rs. 2.45 crores since its inception. With a net profit of Rs. 3.93 lakhs during the year, the Corporation's net returns so far amount to Rs. 23.76 lakhs. Out of the loan assistance of Rs. 3.19 crores, Rs. 95.70 lakhs were sanctioned to engineering industries, Rs. 59.65 lakhs to sugar and *khandasari* units, Rs. 39.34 lakhs to ice and cold storage units, Rs. 18.65 lakhs to electrical goods industries, Rs. 11.02 lakhs to metalware units, Rs. 7.89 lakhs to textile industries, Rs. 6.45 lakhs to leather industries, Rs. 5.70 lakhs to chemicals, paints and varnish industries, Rs. 5.70 lakhs to drugs and pharmaceuticals, and Rs. 69.9 lakhs to miscellaneous concerns. The U.P. State Industrial Corporation, floated during the year with an authorised capital of Rs. 5 crores and a paid-up capital of Rs. 75 lakhs, underwrote shares worth Rs. 31.50 lakhs of three industrial units. The Corporation has also selected sites in Bareilly, Kanpur, Hardwar, Gorakhpur, Mirzapur, Varanasi and Ghaziabad for setting up industrial estates.

Survey of Indian Export Trade

Stagnation in exports is not inevitable, and with energetic and appropriate measures, it should be possible to achieve a steady increase in India's ex-

ports, says the World Trade Department of the Indian Chamber of Commerce, Calcutta, in a study entitled, *A Survey of India's Export Trade*. While every effort should be made to diversify the export trade as much as possible, the survey says India should give top priority to the problems confronting the traditional industries so that they not only maintain but improve their competitive position. At present, these industries are experiencing serious difficulties which prevent them from contributing their maximum to export earnings. For example, too many taxes and inadequate and irregular supply of fertilisers hamper tea export effort. Labour legislation tends to impose burdens unrelated to the industry's capacity to pay, and there is lack of effective publicity. In the case of cotton textiles, obsolete machinery and excessive taxation have affected the industry's efficiency. The irregular supply of raw jute has been a serious handicap to the export of jute goods. The survey discusses the problems of other commodities and concludes that the following commodities have export potential: confectionery, aluminium ware, meat products, bone manufactures, canned fruits and vegetables, roofing tiles, sports goods, films and stationery.

Dealing with the direction of trade, the survey points out that India had a deficit in the balance of trade with as many as 35 countries in 1960-61. There has been a persistent deficit with almost all the west European countries, the deficit with West Germany being as much as Rs. 105 crores in 1960-61. Except for Russia and China the balance of trade with the rupee payment agreement countries has also been adverse to India. Among the Asian and African countries, the balance has generally been adverse to India, except for countries like Afghanistan, Aden, Hongkong, Iraq, West Pakistan, the Philippines, the Sudan and Thailand, with whom it was favourable during 1960-61. India has been having a persistent adverse balance of trade with Japan, which amounted to about Rs. 25 crores in 1960-61. With Australia and New Zealand it has been favourable to India. In the case of the U.S.A., the balance of trade has been adverse to India in recent years, amounting to as much as Rs. 190 crores during 1960-61. With Canada, it was favourable until 1957, but became adverse in 1958 and in 1959, but was again favourable to India in 1960-61. With the U.K. the balance has been adverse to India at about Rs. 41 crores during 1960-61. The survey points out that the U.K.'s proposal to join the European Common Market need not unduly frighten India. So long as India is able to supply goods of the right quality and at competitive prices, she has little reason to fear from the emergence of trade blocs. The survey makes several routine suggestions for increasing exports. It suggests that compulsory export is no solution. It fears this may, on the other hand, discourage exports.

Industrial Progress of U.P.

The Director of Industries, Uttar Pradesh, in his report on the Department's activities during 1961-62, says that all-round progress was maintained in many spheres of production in the State. During the year, goods worth Rs. 326 crores were produced by 2,393 registered factories, compared with Rs. 294 crores worth by 2,198 factories in 1960 and Rs. 211 crores worth by 1,909 factories in 1959 in the organised sector. Factory employment during 1961 rose to 247,000 from 240,000 and 216,000 respectively in 1960 and 1959. The sugar and textile industries accounted for more than 50 percent of the total output in 1961. The number of factories registered during the year was 417, and the Central Government granted 90 licences for setting up certain large and medium industries involving a total investment of Rs. 45 crores. In the public sector, the State Government's cement factory in Churk produced 218,290 metric tonnes of cement. The Government Precision Instruments Factory in Lucknow produced 43,629 water meters and 530 microscopes, compared with the target of 36,000 water meters and 300 microscopes a year. The profits from the Precision Instruments Factory, it is expected, will be around Rs. 10.14 lakhs or 21 percent of the total capital in 1961. The expansion of the Churk cement factory has also been progressing according to plan. One of the two kilns for the factory has already been com-

missioned, raising the daily output from 700 tonnes to 1,050 tonnes. A pilot firebricks plant, set up at a cost of Rs. 3 lakhs during the year, produced 900 tonnes of refractory bricks. Four new Central Government projects were allotted to the State during the year, namely, the Rs. 30-crore heavy electricals plant in Hardwar, the Rs. 27-crore nitrogenous fertiliser factory in Gorakhpur, the Rs. 13-crore diesel locomotive plant in Varanasi and the Rs. 20-crore antibiotics factory in Rishikesh. Important industries fast coming up in the private sector are a synthetic camphor unit in Bareilly—the first of its kind in India—at a cost of Rs. 1.3 crores and with a capacity of 900 tons a year, a Rs. 8-crore unit for producing motor-vehicle tyres and tubes and a Rs. 8-crore newsprint factory in Moradabad-Bareilly with an initial capacity of 100 tons a day, to be doubled later. The synthetic rubber factory in Bareilly and the aluminium factory in Pipri will, it is expected, go into production shortly.

Share Offer by Hind Rectifiers

The subscription list for the Rs. 12-lakh public issue of Hind Rectifiers Ltd will open soon. The Company is raising its share capital from Rs. 5 lakhs to Rs. 25 lakhs—all in equity shares of Rs. 10 each. Out of the new issue of Rs. 20 lakhs, shares worth Rs. 5 lakhs are being issued to existing shareholders, and shares of the value of Rs. 3 lakhs are reserved for allotment to the Westinghouse Brake and Signal Co. Ltd, London, for the supply of plant and equipment. The balance of Rs. 12 lakhs is to be offered to the public. The additional capital is being raised for financing the Company's expansion programme. It is already manufacturing selenium plates and apparatus, and it has plans to extend its activities to the production of silicon semi-conductors. Orders for machinery have been placed for the manufacture of silicon diodes. The plant, it is expected, will go into production before the end of this year. The Company also has plans to produce transistors for power and signalling at a later stage. It has entered into a technical know-how agreement with the Westinghouse Brake and Signal Company.

Industrial Activity

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity increased by 14.4 points during August 1961. There were rises in sugar, tea, jute, cement, coal, pig iron, finished steel, paper, motor-cars, electricity and railway ton-miles. Yarn, cloth, tyres and bicycles fell.

IMPROVING CALCUTTA

SO long as the improvement of Calcutta is taken promptly in hand we are not wedded to any particular form of taxation to meet the interest on the expenditure. At the same time it is easy enough to object to a tax, it is not so easy to suggest an alternative for it. For some years past, we have urged that if money was required, jute was a fit object for the imposition of an export duty, far more so than rice, an export duty on which is quite indefensible. Political economists insist that the only justification for the imposition of an export duty is, that the article on which it is imposed must be a monopoly, and that there must be no substitute for it. Jute exactly complies with these requirements. But this is not all; jute is a monopoly of Bengal, and Calcutta is the capital of that province, so that more fitting than that a small impost should be placed on the most prosperous staple to purify the city through which the bulk of that jute passes. The query is made, why should jute only be taxed? Our answer is, because it can bear it. Do we understand our local contemporary to suggest a tax on tea, or indigo or coal? The secret of successful Government is to tax articles that will not feel it, and to help those that need assistance. A small tax on jute would not be seriously felt; because it is known that the growers (unlike tea planters) are very prosperous; indeed the ryots of Eastern Bengal are good examples of the unearned increment, and it would more than cover the interest and sinking fund on the expenditure necessary to make Calcutta the Queen of the Eastern Seas. But whatever is determined on, "O let it be soon".

FROM

CAPITAL
3rd June, 1902

A Ditcher's Diary

AT THE INAUGURAL SESSION OF THE RECENT MEETING of the Indian Federation of Working Journalists, there were some unfortunate interruptions when Mr. A. K. Sen, Law Minister, was making his at once fatuous and facetious speech. I am under no obligation to condone the interruptions; but I think it does a glib politician no harm occasionally to be contradicted. Mr. Sen was addressing a gathering of professional journalists; and the usual platitudes about the Press being a pillar of democracy and all that were simply not in order. But I blame the journalists more. Why was it necessary to invite a Minister? Is an assembly of newspapermen not important enough by itself? Men of my profession are bad enough when they are arrogant; far worse when they do not take themselves—more important, their profession—seriously. And this is my only deduction from the journalists' anxiety to get a Minister to address them. There may be other reasons too. It is largely with the help of the Government that the journalists in this country have been able to secure some rights. This was perhaps inevitable because collective bargaining would have entailed hardship and, possibly, more bitterness. A good Press needs good working conditions; and if all employers are not enlightened enough to provide them without official compulsion, the State probably has to step in. I have only two complaints. Trade unionism has perhaps come to stay in the Indian Press; but I am old-fashioned enough still to cling to the notion that we journalists are unwise to forget that ours is a profession, a rather different thing from just working for wages. Journalists need money as much as anyone else; but no good journalist ever joined the profession only for money. Secondly, the dangers inherent in leaning too heavily on the Government must never be forgotten. *Timeo Danaos et dona ferentes*; and I fear politicians when they come with gifts. A Government is, by definition, a potential enemy of a free Press; and the two do well to treat each other with a certain suspicious, if cordial, hostility. The senior journalist responsible for the interruptions on Saturday afternoon, an old New Delhi hand, tells me that in his opinion there was a freer Press in India in the pre-independence days. Perhaps he exaggerates; but only slightly.

DEMOCRACY, I SOMETIMES THINK, IS ITS WORST enemy when not its own executioner. Hitler, we seem to forget, was democratically elected, more or less. In more recent times, General de Gaulle has used the referendum to enhance his personal

power, while pretending to be more democratic than anyone else. President Soekarno and Field-Marshal Ayub Khan and Dr. Nkrumah are democrats all; and not many in history have gone more to restrict the area of freedom. I was driven to these somewhat high falutin thoughts by Sardar Pratap Singh Kairon's recent announcement that he would hold a referendum on Prohibition. As far as I can see, there is no provision for referendums in the Indian Constitution; and if Punjab holds one, no matter what the issue is, it will in my opinion set a bad precedent. A Shri Haddock will perhaps challenge the decision before the Supreme Court; but even before that Parliament should tell Mr. Kairon that he has no business to hold a referendum on Prohibition. Article 47 of the Constitution says that "... the State shall endeavour to bring about prohibition of the consumption except for medicinal purposes of intoxicating drinks and drugs which are injurious to health"; and this is one of the directive principles. I have said before that the State has endeavoured, vainly and harmfully, more in behalf of this Article than of the other directive principles: Article 45, for instance, which is about free and compulsory education; or Article 50, which is about separating the judiciary from the executive. Not as though I consider Parliament particularly ship or Prohibition; but to bypass the country's supreme legislature, which is what a referendum will amount to, is to throw open a method which may later be employed to bypass democracy itself. Prohibition itself is an abridgement of personal freedom; and with horror I have lately been reading Kenneth Allsop's *The Bootleggers* and a collection of writings on *Organized Crime in America*. From the point of view of law and order Punjab's reputation, never very high, has been particularly poor in the Kairon régime; and if Prohibition comes, things will be exciting indeed—except for those who will be rooked, blackmailed or simply sprayed with bullets.

I HAVE HEARD IT SAID THAT THE ANNUAL CALCUTTA Dinner in London is quite incomprehensible to anyone who has not served a full apprenticeship as a Ditcher. It may well be so. Each year, between 300 and 400 Ditchers and their guests dine together to pay their respects to the city in which many have lived and worked, often for their most cherished years. Some of the diners travel quite long distances (by U.K. standards) to be present at this annual banquet which brings together the clans that, with the passage of time, have grouped them-

selves around the merchant houses, the banks and all the multiplicity of businesses that our ancient city embraces. In a letter from London, I am told that this year the menu, the speechifying and the music were of a high order. I mention the music because it appears that at last London orchestras are becoming familiar with *Jana Gana Mana*. The lately retired Mr. Stenhouse was in the chair and Major-General Bishop was the principal guest who replied to the toast of the evening in a speech that reflected in every way the very real affection which Ditchers have for Calcutta. At the same time, it was a very personal statement in which a man, who is naturally somewhat shy and reserved, laid bare something of his warm feelings towards India and all its peoples. The Dinner has not always been so fortunate in its chief guest, whose swansong to Calcutta was entirely worthy of him and of the occasion. Major-General Bishop goes soon to an important post at the head of the Information Service in the Commonwealth Relations Office. And as it is a job where personal qualities and an understanding of other people count for more than technical tricks, his success is assured.

NOT LONG AGO, I MENTIONED HERE A BOOK CALLED *How I Made \$2,000,000 in the Stock Market*, written by Nicholas Darvas, a dancer who has performed in Calcutta cabarets. The book became a best-seller in the United States, and was the centre of a storm which now seems to have fizzled out rather inconclusively. At the height of the controversy, the Attorney-General of New York, Mr. Louis Lefkowitz, chose to announce that Mr. Darvas, according to his tax returns and brokers' accounts, had never made anything like \$2 million in the stock market or any place else. He roundly described the book as "unqualifiedly false" and accused its author of "fraudulent and deceptive practices". Curiously, however, his department never instituted proceedings against the dancing speculator, although the allegations of fraud and deceit would have implied prompt legal action. Mr. Darvas, on the contrary, had recourse to due process of law: he sued Mr. Lefkowitz for libel. The case was "tried" not before the courts but, as so often in the United States today, before the television screens. The protagonists appeared in person before large audiences and made some wild statements about each other, but the judges of the land were consulted only on a technical point about the Attorney's right to enquire into the dancer's affairs. The facts of the case—primarily, whether Mr. Darvas ever made \$2 million by the methods described—were never argued. The whole matter has ended ingloriously and unsatisfactorily with an out-of-court settlement, in terms of which Mr. Darvas withdraws his libel action and the Attorney desists from his enquiry into Mr. Darvas's fortune and its origins. As the dancer said, "We made a deal: I stop suing him and he stops harassing me". Since it had been stated that Mr. Darvas's book was vir-

tually an advertisement for a particular method of speculation, Mr. Lefkowitz also made him sign a promise not to engage in the business of investment adviser—which, said Mr. Darvas, "is like asking me not to fly to Mars". I get the impression that this clause was put in to save the Attorney's face when he realised that he could not conclusively prove that Mr. Darvas had not made \$2 million. Like so many of the interesting episodes in life, this one ends leaving us all none the wiser, and we shall probably never know whether Mr. Darvas is a stock market genius or a mere impostor. However, Mr. Lefkowitz did state flatly (although after examining only one of Mr. Darvas's many brokers' accounts) that the dancer "has never amassed more than \$216,000". That is indeed a long way short of \$2 million, but I would say that anyone who can teach us how to make \$216,000 on Wall Street while dancing our way around the world is worth listening to.

"No hurry!" said the Carpenter.

They thanked him much for that.

I VERY MUCH DOUBT THAT MALCOLM SCOTT CARPENTER said any such thing when he was waiting in his capsule on a raft after his return from space. He proudly says that he was the first U.S. astronaut to go up without a previous cancellation of his trip; and when one thinks of Glenn's excruciating return journeys from the launching pad, this does seem an achievement. But something simply had to go wrong; and, sure enough, something did. It is perhaps unkind to laugh at the Americans just because their errors are public knowledge while the Russians do not admit their failures; but the countdown stopped half-way was becoming a joke. Even if Carpenter's trip was almost a "carbon copy" of Glenn's, no such launching is entirely valueless in terms of additional knowledge. Mr. Khrushchev has more than once high-mindedly said that his country and the United States should jointly explore space for peaceful purposes; but I do not see how two such implacable rivals can co-operate in a matter with such obvious military potential. It remains a depressing thought still that perhaps a lot of money, counted in billions, is being wasted on much duplicated effort. A friend, who does pure mathematics for pleasure, does not agree. He says you constantly discover new things, or new techniques, as you do your experiments. He is probably right; but even in America the criticism has been heard that excessive secrecy has led to inadequate inter-departmental co-operation and consequent waste. I have heard it suggested that, with research, the sea may one day yield food for human consumption; but what is space going to offer? Knowledge for knowledge's sake? I am all for it; most governments aren't; and when two governments spend, with the approval of their peoples, vast sums of money on space research, you may be certain that behind it all there is some purpose—obviously military. I am sure it is very unimaginative of me that I am slightly depressed each time a sputnik speeds its way into space. But congratulations, of course, for Carpenter.

THOSE WHO STUDY SUCH MATTERS WILL AGREE that the Beaverbrook Press hardly qualifies as a special friend of India, which it usually puts in the same condemnation as the British Council, Buckingham Palace and the Mountbatten family. But making due allowance for his antipathies and eccentricities—most of which are harmless because his newspapers merely amuse and fail to instruct—Lord Beaverbrook is a remarkable character in many ways. A few days ago, on his eighty-third birthday, Britain's other leading newspaper proprietors gave him a congratulatory dinner and it was recalled that he was over 40 when he bought the then dying *Daily Express* which he soon turned into a thriving property. Perhaps the most surprising thing about this strange man is that he has recently written a life of Jesus which he has called *The Divine Propagandist*. As one reviewer remarked: "With that canny self-knowledge which has always been one of his strongest weapons, he observes 'the desire for the spiritual Kingdom is apt to belong to the later years'". How true.

THE DITCHER

CAPITAL, 31st May, 1962.

Money

THE CALCUTTA MONEY MARKET

INTERBANK CONDITIONS EASIER

Wednesday, 30th May.

THERE has been a slight increase in the general level of advances in the Calcutta money market during the past week. Jute, sugar and cotton credit is virtually unchanged, but advances to the engineering industries and for the storage of foodgrains and seeds show a minor increase. In the interbank market, conditions have eased considerably, the call rate being down to between 2½ percent and 2¾ percent.

The exchange market has been dull, with very few bills on account of either tea or gunny shipments. Remittance has been on a moderate scale. Sterling has eased in relation to all the major currencies except the Canadian dollar.

BULLION WAS QUIET IN CALCUTTA during the past week due to the absence of support. Silver declined from the previous week's level of Rs. 262 to Rs. 256.50, quoted today for ready delivery. The rate for forward delivery was quoted at Rs. 216.25 a kilogram. The London and New York prices were 84½d and 101.50 cents.

Gold fell in sympathy with silver, and the price came down from Rs. 149.25 to Rs. 148.50. The sovereign, at Rs. 101.50, showed a loss of 25nP.

DURING THE WEEK ENDED 25TH MAY, Government of India Treasury bills for Rs. 29,63,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 29th May. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.365 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.540 percent a year. Tenders for Rs. 2 Crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 4th June.

IT IS STATED THAT 91-DAY INTER-mediate Treasury bills will be sold from 30th May to 2nd June at Rs. 99.361 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 23rd to 26th May amounted to Rs. 11 lakhs.

ACTIVE NOTES FELL BY RS. 24.81 crores to Rs. 2,121.85 crores, according to the return of the Reserve Bank of India for the week ended 25th May, 1962. The total note issue was Rs. 48 lakhs larger at Rs. 2,163.48 crores. Notes held in the Banking Department consequently rose by Rs. 25.30 crores to Rs. 41.64 crores. A decline of Rs. 5 crores to Rs. 96.50 crores in foreign securities of the paper currency reserve was offset by a rise of an equivalent amount to Rs. 1,834.97 crores in rupee securities. This was done by transferring securities to and from the Banking Department, in which balances held abroad fell by Rs. 8 lakhs to Rs. 6.15 crores. Investments at Rs. 180.31 crores showed a fall of Rs. 66 lakhs. Deposits of the Government of India

declined by Rs. 3.74 crores to Rs. 49.01 crores, while other Government accounts rose by Rs. 3.54 crores to Rs. 15.89 crores. Balances of commercial banks at Rs. 89.12 crores showed a rise of Rs. 1.82 crores. Other loans and advances fell from Rs. 129.14 crores to Rs. 121.74 crores, of which advances to scheduled banks against usance bills amounted to Rs. 3.73 crores (Rs. 6.93 crores). Ways and means advances stood at Rs. 104.17 crores, against Rs. 117.38 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 18th May, 1962, shows a rise of Rs. 67 lakhs to Rs. 574.34 crores in total deposits. Investments in Government securities are down by Rs. 4 crores to Rs. 224.65 crores, while other authorised investments remain unchanged at Rs. 9.07 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 1.82 crores to Rs. 296.91 crores. Cash and balances are in consequence shown at Rs. 27.20 crores, or Rs. 2.89 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 18th May, 1962, shows Demand and Time liabilities at Rs. 915.11 crores (Rs. 26.46 crores on account of borrowings from banks) and Rs. 1,232.96 crores (Rs. 12.87 crores), compared with Rs. 913.22 crores (Rs. 27.43 crores) and Rs. 1,227.95 crores (Rs. 12.49 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.20 crores and Rs. 86.17 crores, respectively. There is a drop of Rs. 4.33 crores to Rs. 570.44 crores in investments and bills discounted. Advances and loans show a drop of Rs. 4.04 crores. The ratios to total of advances and discounts are, in consequence, shown at 6.5 percent and 66.9 percent, against 6.3 percent and 67.3 percent.

AUDITORS' REPORT ON THE ACCOUNTS OF THE INDIAN BRANCHES OF BANK OF CHINA ANNEXED HERETO :

We have audited the annexed Balance Sheet of the Indian Branches of the Bank of China as at 31st December, 1961, and also the annexed Profit & Loss Account of the Indian Branches of the Bank for the year ended on that date in which are incorporated the unaudited returns of the Bombay Branch not visited by us with the books of accounts of the Calcutta Branch and with certified returns and particulars from the Bombay Branch.

In accordance with the provisions of Section 23 of the Banking Companies Act, 1949 read with the provisions to Sections (1) and (2) of Section 211 and Sub-section (5) of Section 212 and Section 227 (5) of the Companies Act, 1956, the Balance Sheet and the Profit & Loss Account are not required to be audited in accordance with the Sixth Schedule of the Companies Act, 1956. The accounts are therefore drawn up in conformity with Forms A and B of the Third Schedule to the Banking Companies Act, 1949.

We report that :—

(a) We have obtained all the information and explanations which, to the best of our knowledge and belief, were necessary for the purpose of our audit ;

(b) In our opinion, proper books of account as required by law have been kept by the Calcutta Branch of the Bank so far as appears from our examination of those books and proper returns adequate for the purpose of our audit have been received from the Bombay Branch of the Bank not visited by us ;

(c) The Balance Sheet and the Profit & Loss Account of the Indian Branches of the Bank dealt with by this report are in agreement with the books of account and the returns ;

(d) In our opinion and to the best of our information and according to the explanations given to us, the said accounts give the information required by the Banking Companies Act, 1956, in the manner so required for the notes appearing thereon, the Balance Sheet gives a true and fair view of the state of the affairs of the Indian Branches of the Bank as at 31st December, 1961, and the Profit & Loss Account gives a true and fair view of the profit of the Indian Branches for the year ended upon that date.

Stocks and Shares

SHARE PRICES TUMBLE: REACTION TO CRASH IN WORLD MARKETS

Wednesday Evening.

THERE has been a sudden and sharp deterioration in the Calcutta stock market this week, and share prices have dropped sharply on a broad front due to nervous selling. The news of the crash in world stock markets has taken Lyons Range by surprise. During the past couple of days, share prices in the New York, London and Continental stock markets have collapsed in a sensational fashion. There is no sign of resistance yet, and panic prevails. The worry is the greater because nobody is sure why the collapse has occurred. Although the conditions of 1929 are being recalled, there is no sign of an economic depression on the horizon. The Governments of the U.S.A. and the U.K. are, on the contrary, busy devising anti-inflationary measures. As a precaution, local operators have rushed in to sell so as to lighten their commitments.

The panic has been accentuated by certain other developments. The adjournment of the Aid-India Club meeting, without deciding the amount of aid for the second year of the third plan, is likely to have serious repercussions. As India's foreign exchange reserves have declined to a precarious level, she will find it extremely difficult to maintain economic activity without immediate financial assistance from abroad. Knowledgeable circles say that some of the planned projects may have to be deferred due to the absence of timely aid. It is, nevertheless, hoped that India will ultimately obtain the aid she needs to implement the plan. As some more countries have expressed their desire to join the Club, it is hoped that U.S. aid will be matched by the rest of the members.

The political news this week has been far from encouraging. There have been rumours of differences among members of the Central Cabinet over the political and economic policies of the Government. Sentiment has also been disturbed by talk of Mr. T. T. Krishnamachari's return to the Cabinet. Tension between India and China over the border question is growing. Although the Security Council has decided to postpone the discussion on the Kashmir question, Indo-Pakistani relations are not expected to become more cordial in the near future.

These developments apart, the stock market has started to feel the shortage of funds, because substantial sums are being diverted to new issues. Until the flotation of new shares is completed, more funds are unlikely to be invested in existing equities. As subscriptions for new issues are many times the value of the shares offered, the funds will remain blocked for quite a while.

Under the circumstances, the trend cannot but be discouraging, at least for the time being. It is, nevertheless, hoped that selling pressure will soon end because nothing has happened to justify a gloomy view about the working of the corporate sector. In spite of various difficulties, such as the shortage of transport, power, coal and raw materials, industries have been doing well. The prices of several commodities, such as steel, coal and paper, are expected to be increased soon, so the working of these industries should be stimulated. An encouraging factor is that the technical position of the stock market is considered fairly healthy; carry-forward charges in the past settlement were normal. If investors be-

come more discriminating, there is little cause for worry.

Indian Iron have declined to Rs. 25.96. Among engineering shares, Indian Standard Wagon have been steady on the issue of bonus shares. Burn have been taken on prospects of expansion. Texmaco, Jessop and Britannia Engineering have declined on profit-taking. Hindusthan Wire are being taken by informed quarters. Indian Steel and Wire Products have enjoyed influential buying.

Miscellaneous shares have moved down in sympathy with the general trend. The decline has been due more to the absence of support than to selling pressure. In spite of the general marking down of prices, interest has been taken in Union Carbide and Jardine Henderson. India Steamship are being sold freely because the increase in coastal freights has fallen below the expectation of steamship companies.

Among paper shares, interest has been concentrated on Orient, Bengal and India Paper Pulp. Ballarpur have declined on profit-taking. Interest in Sirpur is lacking due to the issue of rights shares.

In the coal section, Burrakur have slipped back, but support has been forthcoming for East Indian. Bengal, New Beerboom, Central India and Western Bengal have been marked down.

Jute shares have become hesitant, and prices have fallen all round. Birla, Anglo-India and Bally have declined. Interested support has been extended to Cheviot and Budge. Kamarhatty and Kankarrah are being offered freely due to disappointing results.

Cotton mill shares have been subdued because the outlook is considered discouraging. The price of raw cotton has increased and exports of cloth have fallen. J. K. Rayon, Bharat Commerce, Elgin and Jay Shree Textiles have declined.

Routine business has been transacted in bank shares. United Commercial are being taken on the issue of rights shares. United Bank have been steady. Dyer Meakin Breweries

have been a firm feature in the sugar section because the Company has obtained permission to issue bonus shares, in the proportion of one new share for each one held, by capitalising reserves. Ramnugger Cane, Belsund, S. K. G. and Cawnpore are being sold at lower prices.

Tea shares have shown a mixed trend. Good dividends have helped to maintain support for Betjan, Ananda-Bag, Rydak, Baradighi and New Dooars.

Turnover in Government securities has been small, although prices have more or less been maintained. The 3 percent Conversion loan 1936 is being quoted around Rs. 71.05.

Bombay Market

PRICES FALL ON BULL LIQUIDATION

MARKET PANICKY AT THE CLOSE

Wednesday Evening.

THE Bombay stock market closed the past week in a depressed mood and the undertone was panicky. Earlier in the past week, share prices started falling due to tired bull liquidation. Cotton interests were perturbed over the growing shortage of cotton. They were inclined to take a gloomy view of the outlook because the price of cloth is not likely to be raised, although production costs have increased considerably. The deal in the announcement of the new retention price of steel disappointed holders of steel shares.

At the close, prices broke sharply on nervous selling in sympathy with the sharp declines in stock markets in the U.S.A., the U.K. and the Continent. The news that the Aid-India Club meeting has been adjourned without taking any decision concerning the quantum of assistance it would give India during the second year of the third plan, was considered unfortunate. Operators were also

Chartered Bank Buildings, Calcutta-1.

nervous about reports of further Chinese incursion into Indian territory. Investors were inclined to sell shares in order to subscribe to various new issues.

Tata Steel declined to Rs. 145.50 and Indian Iron to Rs. 25.60. In the engineering section, Tata Locomotive were available at Rs. 359.50 and Premier Construction at Rs. 167.50. Mukand Iron were transacted at Rs. 25.25 and Larsen and Toubro declined to Rs. 33.50. Alcock Ash-down were offered freely down to Rs. 332. Motor-vehicle shares turned quiet, and sellers predominated in Hindustan Motors at Rs. 19.48 and in Premier Automobiles at Rs. 130.

Cotton mill shares showed losses all round. Century fell to Rs. 650 after an earlier rise. At first, support was extended to these scrips on reports of diversification of activity. Bombay Dyeing declined to Rs. 68.80 and Kohinoor to Rs. 297. Business passed in Morarjee at Rs. 414, in Svadeshi at Rs. 288 and in Tata Mills at Rs. 81. Simplex came to hand at Rs. 178 and Gokak at Rs. 219.50. India United ordinary were placed at Rs. 21.68 and Apollo were sold freely down to Rs. 2.24. Standard were quoted at Rs. 985 and Finlay at Rs. 310.

Miscellaneous shares moved down on selling pressure. Sugar shares were quiet, and Belapur were quoted at Rs. 235. Phalton were sold at Rs. 103 and Walchandnagar Industries at Rs. 159. Steamship company shares lacked interest because the increase in coastal freights was considered inadequate. Scindia Steam were offered at Rs. 12.68 and Great Eastern Shipping at Rs. 13.92. Mining shares were sold freely, and Shivrampur Syndicate declined to Rs. 37 because the working of the Company during the current year is far from encouraging. Margins were imposed on selling these shares because the price fell more than 10 percent over the past *havalas*. Cement shares were quietly steady, and business passed in Associated Cement at Rs. 159. Digvijay were about steady at Rs. 209 on the news that rights ordinary shares would be offered to the foreign collaborators in connection with the production of asbestos cement. Bombay Burmah reacted to Rs. 674 on paying the same interim dividend. Rayon shares were quiet, and National Rayon declined to Rs. 541 on pressure. Gwalior Rayon moved down to Rs. 58.50 and Baroda Rayon to Rs. 138.50. In the chemical section, Tata Chemical were quiet at Rs. 16.52 and Indian Dyestuff at Rs. 557.50. Voltas were bought at Rs. 294.50 and W.I.M.C.O. at Rs. 296.50 on talk of expansion. Coat Tyre reacted to Rs. 177.50, as did Synthetics and Chemicals to Rs. 234.

Although the prices of bank shares were maintained, turnover declined considerably. Bank of India were placed at Rs. 112 and Central Bank at Rs. 62.30. Among insurance shares, New India Assurance were steady at Rs. 71.

Prices of electric company shares declined on balance and support was

lacking. Ahmedabad Electric fell to Rs. 90 and Bombay Suburban to Rs. 103.50. Tata Power were indicated at Rs. 1,107.50.

Madras Market

SLUGGISH CONDITIONS PREVAIL

AID-INDIA CLUB MEETING DISAPPOINTS

Tuesday Evening.

SLUGGISH conditions prevailed in the Madras stock market in the past week. Turnover declined considerably and local operators diverted their activity to outside markets. In spite of normal carry-forward charges at the past settlement, there was no inclination to extend activity. Investors turned their attention to new shares and sold existing holdings in order to buy new issues. At the close, sentiment deteriorated sharply in sympathy with the declines in the Calcutta and Bombay stock markets. The crash in the world's stock markets has caused nervousness. As the Aid-India Club meeting has been adjourned, it is feared that India will face great difficulties in obtaining the foreign exchange necessary even to finance her "maintenance" imports.

Business in Government securities was negligible because the flotation of the new loans is being awaited. Bank shares turned quiet due to the issue of rights shares by some institutions. There was scattered support for selected electric company shares. Interest in sugar shares declined following the fall in the price of the commodity. Planting shares were sold freely on reports of a decline in the price of tea at the last auction sale in Cochin. Coffee shares were not fancied and rubber shares were sold because of discouraging reports concerning production. Cotton mill shares turned hesitant due to the payment of unsatisfactory dividends. Selected miscellaneous shares were bought due to individual corporate news.

In the banking section, Canara Banking Corporation were quiet at Rs. 75.25 on the issue of 25,000 rights ordinary shares of Rs. 50 each at a premium of Rs. 10 a share. Indian were transacted at Rs. 177 and Indian Overseas at Rs. 168. Among electric company shares, Negapatnam came to hand at Rs. 12.10 and Vellore at Rs. 15.25. West Coast were dealt in at Rs. 16.12 and Ellore at Rs. 22.

Among sugar shares, Deccan were quiet at Rs. 10.20 and E.I.D. slipped back to Rs. 39.62. Mysore were about steady at Rs. 53.40, but India declined to Rs. 9.60. K.C.P. were indicated at Rs. 22 and Kirlampudi at Rs. 64.

In the planting section, Kalpetta turned quiet at Rs. 11.90 on the issue of rights ordinary shares at par in the proportion of one new share for every two held. Peermade rose to Rs. 20.40 on paying a final taxable ordinary dividend of 17.5 percent. Blue Mountain were quiet at Rs. 2.48 and Cochin Malabar at Rs. 7.05. Consolidated Coffee were easier at Rs. 18.75 and Devon at Rs. 13.50. Ouchterlony were available at Rs. 3.85 and Periakaramalai at Rs. 3.45. Tee-koy were done at Rs. 5.45 and Twyford at Rs. 10.75 on paying a taxable ordinary dividend of 6 percent. Kij Kotagiri were dealt in at Rs. 5.50 and Parkside at Rs. 23. Peninsular were sold at Rs. 22.10 and Swinton at Rs. 2.82.

Among textile shares, Balarama Varma declined to Rs. 120 on declaring a taxable ordinary dividend of 10 percent. Sellers predominated in Coimbatore Spinning at Rs. 79 due to the payment of a taxable ordinary dividend of 10 percent. Cauvery Spinning came to hand at Rs. 17.25 on declaring a taxable dividend of 15 percent. Bangalore Woollen were placed at Rs. 243 and Buckingham at Rs. 265. South India Viscose declined to Rs. 179 on the news that the Company has been officially asked not to pay any dividend before providing fully for depreciation. Lakshmi reacted to Rs. 157 and Madura to Rs. 37.25. Mettur were steady at Rs. 400 and Rayalaseema at Rs. 124. Travancore Rayon were easier at Rs. 40.95 and Vijayalakshmi at Rs. 102.60.

Among miscellaneous industries, Aluminium Industries were taken at Rs. 24.10 and Ashok Leyland at Rs. 8.75. Parry's Confectionery were firm at Rs. 5.40 on the issue of bonus shares. Dalmia Cement were wanted at Rs. 13.35, but Enfield were quiet at Rs. 12.10 on paying a taxable ordinary dividend of 4 percent. F.A.C.T. were sold at Rs. 7.85, but India Cement were steady at Rs. 6.15. Madras Rubber improved to Rs. 24.15 and Madras Aluminium to Rs. 22. Standard Motors were quiet at Rs. 16.62 on reducing the taxable ordinary dividend to 7 percent. Seshasayee Paper were quiet at Rs. 8.15, and Textool were bought up to Rs. 178. Tube Investment rose to Rs. 290, but Mysore Paper reacted to Rs. 13.70.

New Oil Refinery Proposed for South India

(FROM OUR NEW DELHI CORRESPONDENT)

THE Government of India is planning to establish an oil refinery in south India. It is scheduled to go on stream by 1966 or 1967. The Government has engaged the services of the Italian firm, E.N.I., and the Indian Petroleum Institute to prepare a project report. The terms of reference are as follows:

(a) Estimates of the quantity and pattern of demand for various petroleum products, including lubricating oils and bitumen by the end of the third and fourth plans in India and in the south Indian States of Kerala, Madras, Mysore and Andhra Pradesh;

(b) how the existing requirements of various petroleum products, including bitumen and lubricating oils, are being met in these States;

(c) in the light of the refinery programme as laid down in the third plan and as visualised by the Ministry of Mines and Fuel for the third and fourth plans, particularly the expansion of existing or projected units, what would be the economic areas for supplies coming from the refineries lying north of these States by 1966 and 1971;

(d) the amount and pattern of demand for various petroleum products, including bitumen and lubricating oils, in south India;

(e) the size of the refinery to meet the requirements of the area and any deficit area in the north by 1966 and 1971, if required;

(f) the probable location or locations, in order of priority, of the refinery from distribution and other angles;

(g) crude oil or oils to be imported initially. Middle Eastern, Indonesian, north African, Russian (or other rupee-payment sources) and other available and suitable crudes are to be considered;

(h) at least two alternative processing schemes, one for fuels and bitumen, if required, and the other for fuels, bitumen and lubricating oils, based on at least two alternative crudes or combination of crudes. The effect of replacement at a later date of the imported crude by an indigenous crude, which may be like Ankleshwar or Nahorkatiya crude, on the yield pattern, process scheme and other relevant aspects, is to be examined.

The terms of reference also cover the economics of the refinery based on each of the proposed processing schemes, giving (i) a general description of main and auxiliary processing units and off sites, (ii) the approximate cost of equipment, (iii) the total approximate capital investment for the erected refinery, broken into foreign exchange and rupees, (iv) cost of crude oil, (v) requirements of utilities and chemicals and their costs, (vi) manpower requirements, (vii) the total approximate operational cost, and (viii) the foreign exchange saving and return on capital.

Raising Plastics Output

A rapid growth of the plastics industry has been visualised under the third plan because the shortage of domestic primary materials, which retarded its expansion, will be removed. As for processed plastic goods, it is stated the basic approach underlining decentralisation which was recommended under

the second plan should hold good during the third plan period also. The potential of the small-scale sector in this field should also be exploited fully. To implement the policy of decentralisation successfully, it has been recommended that the processing activities of primary producers should be limited to 25 percent of the output of moulding powders. The creation of additional capacity in the processing sector to cope with the supply of moulding powders will involve substantial investment as well as foreign exchange expenditure. In this context attention has to be given to the indigenous manufacture of dies, moulds and other equipment as well as the planning of capacity in relation to its use on a double-shift basis.

For meeting the domestic demand and export targets, it is contemplated that indigenous production will have to be 47,000 tons (165 million lbs) in 1965-66. To achieve this level of production, the capacity target proposed is 85,000 tons (190 million lbs), which is distributed among the different plastics as follows:

Material	Capacity	(In tons)	
		Indigenous requirements	Exports
P.F. moulding powder	6,700	8,900	1,340
U.F. moulding powder	4,450		
Cellulose acetate moulding powder (including butyrate, propionate and ethyl cellulose)	6,700		
Polystyrene (including styrene alloys)	13,400	40,000	8,000
Polyolefines	26,800		
P.V.C.	13,400		
Polyvinyl acetate	4,450	8,900	890
Cellulose nitrate	890		
Laminates	1,780		
Nylon	890	1,780	1,780
Acrylics	1,780		
Polyesters	1,340		
Polyurethanes	890	1,340	1,340
Others	1,340		
	84,810	62,250	11,120

Although the application of straight polystyrene has its drawbacks, the co-polymers and styrene mixtures have been used in many different fields. In view of the relative cheapness of this material, it is likely to be popular in many applications where other plastics were used previously. The target capacity under this head includes both high-pressure and low-pressure polyethylene as well as polypropylene. A large increase in the consumption of polyethylene is expected because of its likely extensive use as a lining material in packing fertilisers. It has been roughly estimated that in this field alone, the requirements may reach the level of 10 million lbs a year when all the fertiliser projects proposed under the third plan

go into production. Another likely field of application of polyethylene is its use as liner for canals to prevent seepage. Furthermore, with larger supply of polyethylene and the resultant lower price, much greater use of polyethylene is anticipated as material for packaging as well as for finished goods for export. With the third plan sugar target at 3.5 million tons, the supply of alcohol for producing polyethylene may be somewhat easier than expected earlier. But, by and large, the future production of polyethylene will have to be based on other raw materials like natural gas, coke-oven gas and petroleum naphtha and refinery gases.

Poly-vinyl Chloride

A large increase in the production of poly-vinyl chloride has been visualised because it will consume some quantity of unused chlorine produced by the electrolytic caustic soda plants. But the production of the other major raw material, calcium carbide, has not yet attained stability in quality and price. Unless good quality carbide is produced economically, the target envisaged may not be achieved. It has been said that the production of poly-vinyl chloride via ethylene dichloride may be somewhat cheaper. If calcium carbide as a raw material is not found economical, other materials such as natural gas, refinery gas or naphtha, will have to be considered. P. V. C. exports also depend on production costs and, therefore, the establishment of units of optimum economic capacity will be essential. Among the important plastics under this head is cellulose acetate which is popular with the Indian moulder. This is based on indigenous cotton linters. The following schemes have been licensed for implementation:

	Capacity (tons)
P.F. moulding powder	
Saurashtra Electrical and Metal Industries Ltd., Bombay	900 (new)
Hyderabad Laminated Products Ltd., Secunderabad	600 (new)
U.F. moulding powder	
Saurashtra Electrical and Metal Industries Ltd., Bombay	300 (new)
Polystyrene	
Polychem Ltd	1,500 (expansion)
Hindustan Polymer Ltd., Andhra Pradesh	7,500 (new)
Polyethylene	
Alkali and Chemical Corporation of India Ltd., West Bengal	5,000 (expansion)
Union Carbide India Ltd., Bombay	9,000 (expansion)
Duncan Bros., Gauhati, Assam	4,000 (new)
P.V.C.	
Ahmedabad Manufacturing and Calico Printing Co. Ltd., Bombay	3,600 (expansion)
D.C.M. Chemical Works, Kotan, Rajasthan	6,000 (new)
India Cements Ltd., Madras	6,000 (new)

Standard Mills Ltd., Bombay	5,000 (new)
Dhrangadhra Chemicals, Madras	12,000 (new)

So far only polyethylene has been based wholly on indigenous raw material. It is expected that styrene monomer will be produced before the middle of the third plan. Phenol will be available from the Durgapur coke-ovens of West Bengal as well as from the basic chemicals and intermediates plant of the Central Government and certain other units in the private sector. Urea and formaldehyde will be available indigenously during the third plan. Thus, except for some of the monomers, most of the raw materials will be available indigenously. The following table summarises the development programme of the plastics moulding powder industry during the third plan period:

	(In tons)	
	1960-61	1965-66
Annual capacity	15,540	85,000
Production	9,463	74,000

Rourkela Steel Expansion

The Rourkela steel plant is faced with some serious problems which are having repercussions on its expansion programme. Reports say that financial assistance from West Germany for the expansion of the plant may not be forthcoming till adequate arrangements are made to reach the production target of one million tons a year. It has also been agreed that a sum of Rs. 10 crores for the rehabilitation of the Rourkela plant should be the first charge on the new West German credit to India. Following the teething troubles and the criticism in India, the West German Government sent a six-man mission to Rourkela. The mission was headed by Mr. Solveen, Secretary to the West German Ministry of Economic Affairs. Its report criticises Hindustan Steel. The present unsatisfactory state of affairs, it is pointed out, should be attributed to faulty operation and management by Hindustan Steel. Only about 30 percent of the Indians trained in West Germany, it is estimated, were able to get the jobs for which they were trained. Many trainees have joined other firms. Following this report, it has been suggested that another team of German experts be sent to India to improve operating and administrative procedures.

In building the three steel plants in the public sector, India has obviously followed three separate patterns. One is the Russian pattern, which is a Government-to-Government package deal. The Bhilai plant has been a success because it not only has the best iron ore and coal, but the system of commissioning and operation has been such as to inculcate a sense of pride among the operatives. The Rourkela steel plant was designed by the West German steel industry, but its erection and commissioning was done by Hindustan Steel through over 40 suppliers of equipment. In between stands the Durgapur steel plant, which is a package deal with a British consortium—Indian Steelworks Construction Company. The working of the three plants has shown so far that there has been little or no trouble at Bhilai and Durgapur. But Rourkela has had the worst luck. In the expansion programme for Bhilai, the Government has approved another package deal with Russia. But notwithstanding the unhappy lessons of Rourkela, it is not prepared to have another package deal either with the British for the expansion of Durgapur or with the Americans for building the Bokaro steel plant.

There are, however, indications that the rehabilitation and expansion of the Rourkela steel plant will be taken up side by side. The Germans are also planning to set up a consortium of

DELHI will have more THERMAL POWER

AVB's newest assignment: to supply high pressure boilers for the Delhi 'C' Power Station of the local Electric Supply undertaking.

These modern steam generating units, designed to deliver 960° F-steam at a pressure of 1300 lb. per sq. in., will drive two turbogenerators with a total capacity of 125,000 kw. There will be provision for increase to 187,500 kw. in the near future. Low grade coal, the primary source of energy for the power plant, will be processed in the latest Babcock Type 'E' Pulverisers and burned under the surveillance of automatic combustion control equipment.

The Delhi installation is the latest in a distinguished series of contracts entrusted to AVB in Maharashtra, Madhya Pradesh, Uttar Pradesh and other parts of India.

In providing much-needed thermal power for Delhi, AVB will make yet another contribution to the development of Indian industry...the all-round progress of the nation.

An outstanding example of international collaboration, AVB brings to India the varied and extensive knowledge of three leaders in industry—India's Associated Cement Companies Ltd., Britain's Vickers Ltd. and Babcock & Wilcox Ltd. These famous enterprises have joined together in establishing at Durgapur a large and modern heavy engineering works to 'tailor-make' cement-making machinery, high pressure boiler plants and heavy equipment for mining and other industries.

major suppliers of plant and equipment in order to secure the maximum co-operation between the West German steel industry and the Government of India.

Subsidy for Cement Units

The Government of India promised to reappraise the proposed subsidy to cement manufacturing units for switching over to furnace oil, following the Central Finance Minister's Budget proposal to give a general subsidy through a reduction in rail freight. The Government has decided to honour its original undertaking, allowing a rise in the selling prices of cement for such units as take up the use of furnace oil, with such modifications in the price increase as will reflect the general concession already given in the railway freight.

Cement Target

The Central Ministry of Heavy Industries has asked the Planning Commission to raise the cement production target from 15.2 million metric tons to 18 million metric tons, and provisional licensing to 20 million

metric tons for the third plan. The target for installed capacity is similarly proposed to be raised from 13.2 million metric tons to 15 million metric tons. The cement industry, it is learned, has assured the Government that it will be able to increase cement production by a million tons within the next 12 months provided coal and transport are made available to it. Meanwhile, although licences for 5.8 million tons of cement have so far been issued, active steps have been taken to install a capacity of only 3.2 million tons. There is a need for licensing a capacity of 20 million tons to enable India to have an output of 15 million tons by 1966.

Cattle Population Up

India's cattle population rose by 15,083,196 during the ten years ended 1931, it was stated in the Lok Sabha last week. This was in addition to young stock, which increased by 5,293,376. The population of buffaloes also rose. The statement added: "It has not been possible to take any effective measures for the elimina-

tion of unwanted cattle and buffaloes."

The Minister of International Trade, Mr. Manubhai Shah, said in reply to another question that in order to ensure the availability of raw materials for manufacturing footwear and other leather goods, the export of hides and skins has been banned and the export of raw skins restricted. Undressed hides and skins worth Rs. 1.70 crores were imported into India during the nine months ended December 1961 in addition to cow-hides worth over Rs. 70 lakhs.

Under the second plan the footwear production target was fixed at 102 million pairs, which included 2 million pairs for export. The target fixed for export has been exceeded. A production target of 153 million pairs has been suggested for the third five year plan. This would include an export target of 4 million or 5 million pairs. Against an increase of 6 million pairs during the first plan and 13.3 million pairs in the second, the increase will be 51 million pairs during the third plan period. Tak-

ing into account the increase in demand for leather footwear, leather goods and industrial leather during the third plan period, the Development Wing has estimated the requirements for hides at 22.64 million pieces by 1965-66. Against this, the internal supply might be of the order of only 20 million pieces. The additional quantity of hides required will have to be met by (a) taking steps to collect, preserve and process all the hides which are indigenously available; (b) importing raw hides; and (c) restricting the export of semi-processed hides.

Export of Shoes to Russia

The State Trading Corporation has finalised deals for exporting to Russia shoes and handicrafts worth Rs. 79 lakhs. A trade delegation led by the Additional Divisional Manager of the S.T.C. finalised a contract for supplying 230,000 pairs of shoes valued at about Rs. 66 lakhs. The shipment will have to be completed before the end of 1962. In addition, contracts for the supply of handicraft articles worth about Rs. 13 lakhs were also concluded. The items for export will include brassware, scarves, zari bags, knitted ware, etcetera. The delegation also had discussions on the export of woollen textiles and sufficient orders were procured. These orders are being scrutinised by the S.T.C. in consultation with the various manufacturers in India before entering into a final commitment.

Publishing Prospectuses

A Press note, issued last week by the Department of Company Law Administration, says: "Many companies offering shares or debentures to the public have been publishing in newspapers and other publications announcements of the issue of capital to the public with a note such as 'This is only an announcement and not a prospectus, etcetera'. However, these announcements are usually found to contain copious extracts from the relevant prospectuses filed by the companies with the Registrar of Companies concerned. The Government has been advised that announcements of this nature will be tantamount to publication of prospectuses in an abridged form, and such practice is not in conformity with the provisions of Section 56 of the Companies Act, 1956, which provides that every prospectus issued by a Company shall state the matters and the reports set out and specified in Schedule II to the Act. Any default in this respect will render the persons concerned liable to the penalties under the law and also to pay compensation to every person who subscribed for any shares or debentures on the faith of the abridged prospectus. Company promoters and company managements are, therefore, enjoined to take all possible care to ensure strict compliance with provisions of the law relating to the issue of prospectuses, and their failure to do so will not hereafter be condoned by the Government.

"If for any reason a company should find it not possible to publish its prospectus in full in newspapers and other publications, it would be well advised to publish only a mere announcement of its intention to issue capital, indicating the names and addresses of the brokers, etcetera, from whom copies of applications along with copies of the prospectus can be had, without giving extracts from the proposed prospectus. In this connection, the Government has devised a pro forma for making announcements of the issue of capital by companies which may not consider it possible to publish the full prospectus in newspapers and other publications. A copy of the pro forma has been

circulated to all the chambers of commerce and stock exchanges for the information of their constituents and can be had by those interested from the office of the Registrar of Companies in each State. Though the adoption of the said pro forma for making the announcement of a new issue in the Press is not mandatory, if any company chooses to make the announcement in any other form, it would do so at its own risk."

Provision for Depreciation

According to another Press note, "It has been brought to the notice of the Central Government that some company managements have been declaring and paying dividends without providing for depreciation on their immovable properties in the manner specified in Section 205 read with Section 350 of the Companies Act, 1956, on the ground that the immovable properties of the company from which a substantial portion of its profits is derived, are held as its capital investment and are not used for the purpose of the business carried on by it and that the income tax law does not make any allowance by way of depreciation of those assets for calculating its total income.

"In this connection, the Government would like to draw the attention of all concerned to the fact that the provisions of Section 205 of the Companies Act, 1956, under which no dividend shall be declared or paid without providing for depreciation in the manner specified therein, are mandatory in nature and must be strictly complied with by every company before declaring any dividend.

"For the purpose of complying with the aforesaid requirement under the company law, it is immaterial as to whether depreciation for any assets is actually admissible under the income tax law. The only provision of the income tax law that is relevant for the above purpose is the provision specifying the rates of percentage as contained in the Indian income tax rules for the purpose of determining the depreciation of various assets referred to therein. Provisions of the income tax law relating to the admissibility of depreciation allowance for the purpose of calculating the total income of the assessee company are not relevant for the purpose of Section 205 read with Section 350 of the Companies Act.

"The chambers of commerce and trade associations have been advised of the above position, and the Government hopes that all company managements would take steps to ensure compliance with the requirement of the provisions of Section 205 of the Companies Act. If any company declares or pays dividends for any financial year without providing for the requisite amount of depreciation, it would do so at its own risk. In this connection, the attention of all concerned is invited to the penal provisions of Section 629-A of the Companies Act."

New Manufacturing Schemes

During 1960, 2,241 applications under the Industries (Development and Regulation) Act were received in the Development Wing of the Central Ministry of Commerce and Industry for scrutiny and comments. Out of these, 1,907 applications were disposed of till the end of March 1961. Some of these applications included schemes for manufacturing more than one item. The total number of schemes for various items processed by different directorates of the Development Wing during the year amounts to 2,449, against only 1,987 in 1959. Out of 2,241 applications, 1,440 were for new units, 852

were for substantial expansion and 157 were for new articles. After the approval of the schemes by the Licensing Committee and the grant of licences to the parties concerned, the Development Wing is required to keep a watch on whether the licensed schemes are progressing according to the terms and conditions laid down in the licences. This work is continued until the schemes are completed and the units begin manufacturing the licensed items.

The licensed undertakings are required to submit half-yearly returns and other special returns indicated in the licence. These reports are carefully scrutinised and the position showing the different stages of implementation of the schemes is reported to the Central Ministry of Commerce and Industry, the Planning Commission, and the State Directors of Industries. In cases of genuine difficulties experienced by the entrepreneurs in implementing their sanctioned schemes, assistance has been made in implementing the schemes or where insufficient progress has been made in spite of all possible assistance, action is taken to revoke the licences.

Excise Levy on Acids, Gases

At a meeting held last week, the Development Council for the Inorganic Chemical Industries discussed the proposed levy of ad valorem excise duties on mineral acids and industrial gases. It concluded that the ad valorem basis would not be satisfactory for the following reasons:

1. The actual prices realised for a particular gas or acid by the manufacturers will vary considerably from time to time and place to place. The ad valorem excise duty will, therefore, be a perennial source of controversy between the manufacturers and the excise authorities, and will create numerous administrative difficulties in collection.

2. The production cost and consequently the selling price of an acid or gas will be higher in some places than in others due to higher transport, handling and power costs. To relate the duty payable to the manufacturers' selling price, will in effect be to require the consumer, who ultimately pays the duty, to pay excise on the transport, handling and power charges. This cannot be the intention of the Government. The consumer already has to pay a higher price for products made in less favourable locations.

3. Where sales tax or other similar imposts are leviable on the basis of the selling price, the effect of the ad valorem duty will again be to impose additional burdens on consumers in less favourable locations.

4. It is customary to have different prices for bulk sales and for sales in smaller quantities. The levy of ad valorem excise duty will lead to the complications arising from the different prices charged by the same producer. A uniform rate of levy will help avoid this. The Development Council, therefore, strongly recommended that the basis for levying the duties be changed from ad valorem to specific or unit basis (per ton or per unit volume of the product), the duty being levied on an equitable, uniform, all-India basis.

Jute Output and Prices

The Informal Consultative Committee of the Central Ministry of Food and Agriculture was informed last week that the Government is maintaining "a close and constant watch" on raw jute prices. This is necessary in view of "this season's good crop and the abnormal price conditions which prevailed in the

previous season as a result of the shortage of raw jute." The Central Minister of Food and Agriculture, Mr. S. K. Patil, stressed the need to safeguard the farmer's interests in "this internationally important crop." He said that incentives were given to the producer in former years to grow more jute. As a result of the intensive drive, the production of jute in India had increased from 1.6 million bales in 1947-48 to 6.3 million bales in 1961-62. Mr. Patil said it is necessary to see that the farmer is not "penalised" for increasing production in the national interest. Prices, it is hoped, will rule at a point somewhat higher than the agreed minimum of Rs. 30 a maund.

The Agriculture Secretary, Mr. G. R. Kamat, said that a study is being made of jute production costs, as well as their relation to the cost of paddy cultivation. The Government hopes to decide shortly the further steps necessary to ensure a fair price to the jute grower. In reply to a member's question, Mr. Kamat said that there is no proposal at present to import jute from Pakistan or Thailand. Only small quantities of low-priced jute cuttings have been imported from Pakistan.

The consultative committee was informed that the 1961-62 jute and mesta crop is the largest in India since partition, amounting to 7,980,000 bales (6,269,000 bales of jute and 1,708,000 bales of mesta). In spite of the sharp increase, however, no overall surplus is expected. This is due to the fact that the stocks with the I.J.M.A. mills at the end of the 1961 season had declined to the "unprecedented low level" of about 450,000 bales; besides, the mill consumption of jute has increased. During this season, the consumption of raw jute and mesta—both of mills and domestic small-scale industries—is expected to be 6.7 million or 6.8 million bales. The balance of the crop will be needed for replenishing stocks with the trade and industry. The production target for the third five year plan is 6.2 million bales of jute and 1.3 million bales of mesta. The jute target has been exceeded in the very first year of the third plan. It will be necessary to ensure that production is at least maintained at this level over a number of years.

Aid for Light Railways

The Central Government has no contractual right to purchase certain light railways. The power to purchase these lines vests in the local district boards, in terms of the contracts between them and the light railways. This apart, the Government's general policy at present is not to nationalise the light railways so that all available resources are used in creating new assets rather than in acquiring already existing ones.

In the case of the Ahmedpur-Katwa and Burdwan-Katwa Railways, under the terms of the contracts, the Government of India is paying a subsidy to make up the shortfall in the guaranteed rate of interest of 3½ percent a year on the paid-up share capital. In the case of the Howrah-Amta and the Howrah-Sheakhala Light Railways, the Central Government is not liable to pay any such subsidy, as the Government is neither under any contractual obligation to pay subsidy nor has it any financial interest in these two railways. The net profit of these two railways equivalent to 4 percent on the paid-up capital, has been guaranteed by the district board of Howrah, under the terms of the agreements with these Companies, subject to a maximum of Rs. 28,000 a year in the case of the Howrah-Amta Light Railway and a maximum of Rs. 950 a year for each mile

of line constructed and opened in the case of the Howrah-Sheakhala Light Railway, which comes to a maximum of about Rs. 19,000 a year.

Coal Target and Output

In reply to a question in the Lok Sabha last week, the Central Minister for Mines and Fuel, Mr. Malaviya said that the coal target set for 1960-61 was 60 million tons. Out of this, 16.15 million tons was to be from the public sector and the balance from the private sector. The public sector achieved the rate of production fixed for it and the private sector did likewise in relation to its target. The total production during the year was, however, about 55 million tons, of which about 10.5 million tons was raised in the public sector.

The public sector was required to achieve a rate of production of 16.15 million tons by the last year of the second plan. This was not only achieved but slightly exceeded. In other words, although the total production in the public sector during the second plan period fell short by about 6 million tons, production in the public sector in the last year of the plan exceeded the target.

Increasing Exports

Some of the major additional steps which the Government proposes to take for raising exports, are: (1) priority in allowing foreign exchange for industries producing for export, (2) promoting the establishment of a large number of export houses and international trading firms, (3) enlargement of the rôle of the State Trading Corporation and Export Promotion Councils and encouraging exports through co-operative organisations, (4) introduction of a programme for reducing costs in major export industries and export commodities, (5) faster modernisation of industries by making imported capital goods and equipment available as a compulsory machinery entitlement in every export promotion scheme, a portion of the foreign exchange earned—10 percent to 20 percent, depending on the nature of the industry—will be required to be used by exporters and exporter-manufacturers for importing machinery and plant for modernisation, (6) introduction of various new fiscal measures such as excise bonus related to exports besides the refund of Customs and excise duty already granted, (7) income-tax relief to exporters, (8) intensification of activities like market surveys and product display, (9) easier availability of indigenous and imported raw materials for manufacture for export, (10) liberalised and expanded financial and credit facilities to exporters, (11) establishment of an effective system of quality control, grading and preshipment inspection, and (12) priority in movement and concessional railway and ocean freight rates on goods for export.

New Companies Formed

The total number of companies formed during 1961-62 was 1,614. They comprised 199 public and 1,415 private companies, accounting for a total authorised capital of Rs. 179 crores and of Rs. 146 crores, respectively, compared with 163 public and 1,530 private companies registered with a total authorised capital of Rs. 157 crores and of Rs. 130 crores, respectively, in 1960-61. The number of public and private companies registered in 1959-60 was reported to be 87 and 1,365, having an authorised capital of Rs. 67 crores and Rs. 93 crores, respectively. The number of public companies floated during the year rose by 46, compared with those registered in 1960-61 and was the highest during the last six years.

MONSOON PRECAUTION— check your tyres!

Even 20 miles per hour can be a dangerous speed on a wet and slippery road—if your tyres are worn, there is every chance of skidding.

Protect yourself today against skidding by fitting Dunlop Gold Seal tyres to your car. Behind the designing of these tyres lies Dunlop's unique experience on the world's greatest racing circuits where cars with Dunlop racing tyres touch speeds of 180 miles per hour in the rain!

U.K. Starts Talks with E.C.M. on Protecting Commonwealth Trade Interests

(FROM OUR LONDON CORRESPONDENT)

WITHIN the next few weeks will be decided the question whether the U.K. joins the six nations in the European Economic Community, that is, the Common Market. These weeks are important, for they mark the decisive negotiations on the important question of Commonwealth preference. There is no lack of advice on the Commonwealth reaction to British participation in the Common Market, for Australia, New Zealand and Canada, to mention only the larger interests, are all represented at the highest levels; trade and industry throughout the Commonwealth are represented at the current meeting of the various chambers of commerce; and a full-scale two-day debate is expected soon in the House of Commons. The British negotiators in Brussels are aware of just what is implied by their undertaking to ensure that Commonwealth interests will be safeguarded during this vital couple of weeks in the Common Market discussions.

The point is that, without special arrangements, Britain's entry into the Common Market could result in the destruction of many industries in Commonwealth countries. A resolution unanimously adopted recently by a meeting of the Council of the Commonwealth Producers Organisation, said it was "gravely apprehensive," because of recent public statements by responsible officials of the European Economic Community, that safeguards may not be obtainable for Commonwealth primary producers. The resolution went on to appeal to members of both Houses of Parliament "to be particularly vigilant in this matter, and to Her Majesty's Ministers to be steadfast in fulfilling the undertakings they have given."

Some of the most recent statements of leading members of the European Economic Community, particularly Dr. Mansholt, the vice-president of the Commission responsible for agricultural policies, have shown an unwillingness to pay heed to the interests of Commonwealth producers. During the past few weeks also, the U.S. Under Secretary of State has given fresh expression to the well-known dislike of the U.S.A. for Commonwealth preference.

Apart from the prospect of disruption of established trading patterns which this attitude fore-shadows, it involves two serious mis-

conceptions: (i) that Commonwealth preference is no longer of substantial importance, and (ii) that new outlets for Commonwealth produce can easily be found to compensate for the loss of free entry and preference in the U.K. market. It is true that the overall incidence of Commonwealth preference is low and has been eroded (in the case of specific rates of duty) by the mounting inflation of money prices and of duties (though not of real yields). But the average incidence of the preference is low because many of the bigger commodity groups (e.g., wheat, wool and other natural fibres) enter duty-free from all sources. Many other Commonwealth industries, however, enjoy a preference which was the principal factor in their establishment and remains vital to their existence. Sugar, dried fruit, canned fruit and wine are outstanding examples. Without special arrangements—among which it is realised "associated overseas territory" status could provide a palliative for some Commonwealth countries—many industries would face not only the loss of a preference, but the imposition of a new duty under the common external tariff. The double blow of a "preference in reverse" could destroy them. As far as individual industries are concerned, the position is briefly as follows:

Threat for Industries

Sugar: No effective substitute for the Commonwealth Sugar Agreement seems possible. The agreement was negotiated with great care and after long deliberation and has been proved by years of successful operation. It provides a guaranteed price for part only of the Commonwealth's production. It is, therefore, essential to provide for the continued existence of the protection afforded by the Commonwealth Sugar Agreement, while retaining the Commonwealth preference as well as maintaining free entry into the U.K. for Commonwealth sugar not bought under the price terms of the Agreement. The door must also be left open for increased outlets for Commonwealth sugar. No arrangements that do not achieve these aims would safeguard the economy of the territories which depend largely upon sugar.

Fresh fruit: The principal point emphasised under this heading is the

need to protect the West Indies' market in the U.K. against competition from Latin American countries, particularly for bananas. Preferential free entry is important to Commonwealth citrus producers in various places. The maintenance of the duty-free market in the U.K., capable of absorbing their export crops, is essential to the fruit-growing industries of Australia, New Zealand and other Commonwealth countries. Reverse preferences, especially if associated with restrictive quotas, could prove fatal. No comparable alternative outlets are available.

Dried fruit: Without preferences, Australian producers would be at a considerable disadvantage in comparison with their American competitors.

Canned fruit: The Australian industry has been built to its current extensive level on Britain's tariff preference, on which it depends for existence.

Wines: Without the substantial preference accorded to Commonwealth wines, the industries of Australia and Cyprus would be very seriously affected.

Tea, coffee and cocoa: The loss of free entry to Britain and the imposition of duties on the present proposed E.E.C. levels would be likely to reduce consumption in Britain and injure Commonwealth producers in India, Pakistan, Ceylon, Africa and the West Indies.

Meat and dairy produce: The dependence of New Zealand on the British market is such that the prosperity of that country could be destroyed by the loss of free entry, with the added handicap of a levy on imports. Australian producers face similar difficulties.

Tobacco: In 1961, Britain imported 182 million lbs from Commonwealth countries with a preference of 1s 6½d a lb. More than half this came from the Rhodesian Federation. This might partly be compensated if association with the E.E.C. gave the Federation preferential treatment over American and other foreign leaf.

Not surprisingly, the Commonwealth and the Common Market formed the outstanding topic for discussion at the chamber of commerce meetings. Pointing out that Com-

monwealth trade, like world trade, had doubled in volume since shortly before the second World War, Lord Casey, of Australia, said: "Trade between Commonwealth countries is one of the most potent factors in holding the Commonwealth together. It is often said that Commonwealth trade must decline because Commonwealth countries are now producing the very goods which have been traditionally made in the U.K. However, this doctrine does not seem to work out—otherwise how is the large and expanding trade between the U.K. and the U.S.A. to be explained? Certainly the composition of Commonwealth trade has changed and will continue to change over the years. We now make for ourselves things that we previously imported from the U.K., but in their place the U.K. exports to us more sophisticated goods and equipment which we do not make and which the U.K. did not make a generation ago."

Commonwealth Trade

Lord Casey said that intra-Commonwealth trade was expanding as fast as world trade. He believed it would continue to do so. He added: "I believe that it has a great future, given reasonable policies on the part of governments. This brings me back to the U.K. application to join the Common Market, and I would simply want to say just this: In forging the new links sought with Europe, let none of us forget the importance to us over a lifetime and more of intra-Commonwealth trade. Anything which discounts the value of that trade or put it at risk would be a severe disservice."

About the same time, the official view of the situation was explained by Mr. Frederick Erroll, President of the Board of Trade. He adopted the facing-both-ways stance of the Government, but if anything, leaned more towards the E.E.C. than the Commonwealth. "We believe," he said, "that membership of the Common Market would promote a more rapid expansion of the British economy and from this Commonwealth countries would certainly benefit. We have repeatedly made it clear that we shall need terms which safeguard the essential interests of Commonwealth countries, but we have to recognise that there will almost certainly be some diversion and change as well as a general growth of trade."

Exporters in the Commonwealth would be "wise" to plan on the basis that in the long run their goods must stand or fall by their quality and competitiveness. Referring to the protection some Commonwealth Governments afforded their own manufacturing industries, Mr. Erroll said there was a great danger that they would lose opportunities for expanding their exports. He also pleaded for "enlightened administration" of import controls.

FIBRE STEADIER FOLLOWING TALKS ON MINIMUM PRICE FOR NEXT SEASON

IT is reported that, at a meeting in New Delhi a few days ago, the Planning Commission and the Central Ministries of Food and Agriculture and Community Development decided to recommend that a minimum price of Rs. 30 a maund for raw jute should be guaranteed for the coming season. However, the recommendation is in no sense final. Other Ministries will have to be consulted before a decision is reached. The latter are expected to point out that if the minimum price of raw jute is as high as Rs. 30 a maund for the next season, the prospects for India's jute goods exports will be seriously harmed. The meeting has nevertheless influenced the sentiment of market operators in Calcutta, who feel that the authorities do intend to raise the price of raw jute. Even so, however, the price of fibre has not increased sharply, and this shows the true state of supply and demand at present. The Jute Buffer Stock Association has already purchased a considerable quantity of raw jute. Since the State Bank has agreed to provide finance to the full extent, it should be able to continue supporting the market.

At the meeting in New Delhi, it was noted that the third plan target of 6.2 million bales of jute has already been reached. The meeting felt that, to arrest the fall in prices, the Jute Buffer Stock Association should make bigger purchases this year. Another decision, it is believed, was that the Association, which now consists of representatives of only the jute mills and the Commerce and Industry Ministry, should also include a representative of growers. The Planning Commission and the Ministries, it is understood, decided that the Association should be asked to encourage co-operative marketing societies by purchasing the stocks offered by them at a minimum price of Rs. 30 a maund. However, trade circles do not believe that a return of Rs. 30 a maund can be assured at this stage. It certainly cannot be assured in the case of the old crop, most of which has already left the growers' hands.

Sowings Satisfactory

The sowings for the new crop are progressing satisfactorily in both India and Pakistan. The acreage in both countries will be less than in the current year. But it is hoped that due to the favourable weather conditions, the quality of the crop will more than compensate for any fall in production.

During the past week, the steady trend in hessians has been pronounced, while interest in sacking has remained poor. Hessian business with the U.S.A. has been quite substantial. Overseas buyers continue to purchase at rising levels, which indicates that there is a fair demand for hessians even at a price of Rs. 54 for July-September. The bulls argue that the mills cannot increase the output of hessians. So if the stocks at the end of May fail to show a substantial increase, the statistical position of hessians will be very healthy.

Purchases made by the U.S.A. recently are believed to be about 10,000 bales or 15,000 bales, spread over for shipment in July-September and October-December. The bulls claim that overseas buyers are beginning to consider the forward discounts quite attractive in comparison with ready prices.

Argentinian Demand
A June steamer has been declared for the Argentine. It is rumoured

that the Argentinian offtake in June-September may be 30,000 bales or 40,000 bales. Although there has not been much interest during the past week from west European and east European countries, it is suggested that the communist countries have accumulated a surplus of rupees through various barter, against which they might buy jute goods. Judging from the high prices paid for hessian bags, with mills in both India and Pakistan reluctant to sell even for July shipment, it seems that large-scale buying has already taken place.

Reports received from Australia indicate that good weather conditions have prevailed during the last three weeks, so that the country expects its requirements of sacking to increase substantially. The other important sacking market, Cuba, has so far shown no interest, but her requirements for August-December will have a strong bearing on the primary market. Also, seeing the disparity between sacking and hessian prices, the mills are staying away from booking sacking sales. Therefore, some say that if business with Australia and Cuba commences, short-covering will lead to a bigger rise in sacking than in hessians.

Buffer Stock Purchases

The total purchases of buffer stock jute so far against the allocations issued by the Jute Buffer Stock Association to its member-mills amount to over 750,000 maunds, valued at nearly Rs. 2 crores. At a meeting of the committee of the Association last Friday, it was decided to take up another 250,000 maunds of buffer stock. The cost of this quantity will exceed Rs. 60 lakhs. The formalities with the State Bank of India about financing the buffer stock have been completed, and the Association has begun to make payments against the purchases already made.

THE JUTE MARKETS

Manufactured Goods: The gunny market opened on a steady note due to renewed speculative activity by

the bulls, who were still long in May futures. As reported earlier, the differential between May and August futures in 40in. 10oz. hessians had increased from Rs. 2 to Rs. 2.80. This differential continued to grow, with hardly any business passing. In order to inflate the ready prices, speculators purchased freely for May and June delivery, at the same time refusing to sell their holdings in May futures. When the outstanding commitments were still 17½ million yards and the differential had increased to Rs. 3.50, it looked as if a squeeze was being engineered. Last Friday, the board of directors of the East India Jute and Hessian Exchange took timely action and declared an emergency in May futures. A maximum price of Rs. 55.50 was fixed for May futures, combined with a maximum price of Rs. 57.50 for T.S.D. contracts. However, the Forward Markets Commission in Bombay did not endorse the recommendation since prices had declined soon after the results of the meeting were known. Moreover, some felt that it was rather impractical to suggest closing-out prices for T.S.D. contracts. In such an eventuality, if there were defaults against May due date contracts, for which shipping instructions had been issued, the shippers would not be able to fulfil their overseas obligations unless sellers could be found at the maximum price of Rs. 57.50. The maximum price imposed for T.S.D. contracts was, therefore, withdrawn. The deliveries declared early this week showed an outstanding of only 2,800 bales in hessians for May futures. Sellers declared their option of tendering 40in. 7½oz. to the extent of 2,725 bales, the rest being 40in. 10oz. Meanwhile, August futures firmed up rapidly, business being transacted up to Rs. 52.48 for 40in. 10oz. July-September goods were traded up to Rs. 54. In sacking, quiet conditions prevailed. The differential between the two futures declined further and ready B Twills were traded up to 10nP higher than August futures. July-September B Twills were quoted at the same rate as May-June. Towards the end of the week, heavy selling by a large speculator caused August futures to

recede to Rs. 122.60 from the highest level of Rs. 124.80. Deliveries declared in the settlement of May futures showed a total of only 3,100 bales, the balance having been settled.

Latest available quotations are as follows:

	May	June	July-Sept.	Oct.-Dec.
40in. 7½oz.	40.75	40.75	39.50	37.50
40in. 8oz.	43.75	43.75	42.50	40.00
40in. 10oz.	57.00	55.00	52.75	50.00
B Twills	123.90	123.50	122.90	121.75
Cornsacks	129.00	129.00	128.00	125.50
Heavy Cees (Plain)	125.00	123.75	122.90	121.75
A Twills	153.50	151.50	148.50	148.50
Liverpools	140.50	140.50	139.50	138.50

Raw Jute: The market firmed up on reports that the authorities are taking measures to stabilise fibre prices. Till recently certain qualities of raw jute were traded down to Rs. 25 a maund; there was now buying interest from the mills up to Rs. 28 a maund. Sellers continued to offer Bottom grade jute below the minimum prices quite freely. There was not much fluctuation in the futures market, quotations remaining around Rs. 30.50.

Latest available quotations are as follows:

	Landed at Mills (Basis Bottoms)	Rs. a 100 kilo	Rs. a md.	Shipment

THE PIONEERS OF THE GRINDING WHEEL INDUSTRY IN INDIA

in jute yarns and cloth last week. In Dundee, some qualities of jute yarns were reduced by approximately £5 a ton, but the volume of business did not increase. Ordinary hessian yarns in the web C.H.W. class remained unchanged on the basis of 16.47d a lb, and fine yarns and fine roves also were unaltered. Hessian warp yarns J.C.H. were cut from 17.50d to 16.93d a lb for 8 lbs, and 3 ply 8 lbs twist was reduced from 19.52d to 18.95d a lb while rove was down £5 10s a ton to £112 for 48 lbs. The small sizes, 4 lbs to 6 lbs, were all unchanged.

No change was made in the prices for ordinary Hessians and 40in. 10oz. was quoted at 14.32d and 8oz. at 12.21d a yard. Most tarpaulin and

sacking rates were reduced; 14 porter 36in. 18oz. tarpaulin was down from 29.11d to 28.41d a yard, and 7 por. 27in. 16oz. sacking from 23.77d to 23.16d a yard. The prices for some imported goods on spot in the U.K. were reduced, 40in. 10oz. coming down to 110s a 100 yards and 36in. 10oz. to 104s 6d. Sackings in the U.K. were unchanged.

Raw jute sellers continued to reduce their terms for most qualities. Mill Lightnings were down to £100 a ton, Mill Hearts to £88 and Grade Hearts to £78, with Grade Tossa-2/3 at £123, but fours came down to £100 and Continental Tossa-2/3 to £96 10s and fours to £81, c.i.f. U.K.-Continent, May-June shipment. Very few offers of the new crop were

made. Indeed, any prices mentioned were more or less nominal, and sellers did not appear to care whether they sold or not. There were only tentative offers at £100 for Mill Lightnings and £90 for Mill Hearts, August-September, c.i.f., U.K.-Continent.

Calcutta goods advanced steadily to 86s 6d for 40in. 10oz. and 62s 3d for 74oz., May, 83s 6d and 62s June, 80s 3d and 60s July-September and 76s and 56s 6d October-December, with B Twills at 191s 3d for May, June and July-September and 189s 9d for October-December, f.o.b., Calcutta. It was reported here that speculators were operating because of the lack of rain in the jute growing districts of India.

Books

RURAL CREDIT

A Rural Credit Scheme for India. By C. R. B. Menon (Published by Orient Longmans Private Ltd. 17 Chatteranjan Avenue, Calcutta 13. Price Rs. 3, pages 143.)

This book does not give any clue about what Mr. Menon is aiming at. Of the 11 chapters, eight appear to be a preface, according to the author's own admission! In the chapter entitled "economic development in money economy," diverse topics such as the rule of law, draftsmanship, and economic activity by "civilised" individuals are discussed, but little economics. Many interesting remarks are made. For instance, "pending the liquidation of adult illiteracy, the village mind could have been reached through television, but for some obscure reason, the Government of India has not yet introduced television into India!" "The Governments which they (invaders) found in India were autocratic, despotic and oppressive." Does Mr. Menon believe that Babar and Nadirshah were all democrats and invaded India only to establish the rule of law? The author's new credit scheme does not come under economics, but might form the discourse between the proverbial parrot and the king in the Panchatantram.

AN AUTOBIOGRAPHY

Autobiography of a Personnel Officer. By Kanji Dwarkadas. (Published by Asia Publishing House, Contractor Building, Ballard Estate, Bombay 1. Price Rs. 20, pages 315.)

The fact that a personnel officer has enough material to write an autobiography indicates India's industrial progress. The author approached the veteran trade union leader, N. M. Joshi, and requested him to write a detailed history of the trade union movement in India. The latter sorrowfully answered: "There is nothing to write; the trade union movement in India has made no progress. It is all politics." As Mr. Dwarkadas's activities were mostly confined to western India, the book naturally pays much attention to the textile industry. His time was divided between politics and work as a personnel officer. Born on May Day, 1892, the author started his life as a weaving apprentice and became a labour officer in a textile mill. For two years, he was a member for labour of the Bombay Legislative Council. He was connected with the Industrial Disputes Committee and was one of the founder-members of the All-India Trade Union Congress. Besides, he was connected with the All-India Home Rule League and the National Home Rule League.

Mr. Dwarkadas's greatest work was in connection with labour housing in Bombay. In his efforts to clear the slum areas, he obtained the help of Lady Mountbatten. His association with the textile industry came to an end on 31st August, 1950, when he was Chief Labour and Welfare Officer of the India United group of mills.

A NEW JOURNAL

Southern Economist. (Edited and published by Susheela Subrahmanya from 45-88, Silver Jubilee Park Road, Bangalore 2. Annual subscription Rs. 10.)

In spite of the infant mortality among periodicals in India, it is a sign of the times that financial journalism is receiving impetus along with India's rapid economic growth. The inaugural issue of this fortnightly journal, which aims especially to highlight south India's economic problems, contains interesting features on industry, banking and companies.

Plantation Topics

TEA EXPORT PROSPECTS CONSIDERED GOOD

(BY A SPECIAL CORRESPONDENT)

THE Central Food and Agriculture Minister, Mr. S. K. Patil, told the Lok Sabha last week that there is no danger of a food shortage or of depressed prices. "If ever they tend to go down further, the Government would step into the market. This system of price support will be extended gradually to cover all important crops. Informally, the Government has already covered jute and cotton, and other crops would be brought under it."

This statement will interest the tea-grower. Meanwhile, Mr. Manubhai Shah, Minister for International Trade, has said: "The outlook for the export of Indian tea in the coming years is very bright. The Government is taking a number of steps to promote the sale of Indian teas in traditional and new foreign markets." Britain has already taken up the question of duty-free entry of tea into the European Common Market, but is reported to be meeting opposition from the French. At present, 37 percent of India's tea goes to the U.K., whereas only about 1 percent is imported by the six members of the E.C.M.

Home Market

On the 1962 tea prospects, J. Thomas and Company, which has just issued its annual report, says: "From the Indian producer's point of view, the steadily expanding internal market should serve to provide an outlet for a substantial proportion of the crop, while it is also beyond doubt that quality teas of both orthodox and C.T.C. manufacture will be in good demand." The firm points out that lower prices in 1961 failed to stimulate exports. It is, therefore, purely a matter for conjecture whether the new fiscal proposals will make any material difference to producers since any gain from the fiscal changes will be offset to a great extent by increases in the excise duties on tea, aluminium foil and plywood as well as higher freight rates. The increased tax on companies will mean less profit and less finance to plough back for expansion and development.

Bilateral Trade Facts

The firm says that the various bilateral trade agreements which the Government has negotiated, have undoubtedly opened up new markets for Indian teas. But this has also adversely affected India's exports to some of the traditional markets for orthodox teas. On the question of costs and profits, the firm suggests that Cachar estates may benefit from the development of the C.T.C. process of manufacture. C.T.C. teas appear to give more cups of the beverage, weight for weight. In order to popularise Indian tea abroad, the emphasis will have to be on the C.T.C. types of which India is, and will continue to be, the major supplier. As for the crop prospects, the firm says that "it is most unlikely that world production in general and Indian production in particular will show the same extent of increase as in the past year. From the standpoint of demand, the fact that the world consumption has not so far shown signs of lagging behind supplies, is also encouraging."

North Indian Crop Figures

The following are the north Indian crop figures up to 15th May, 1962:

	1962	(In lbs)
1961	25,661,580	
1959-60	27,712,372	
	26,087,757	

These figures give no cause for alarm, since heavy cropping rarely starts before July.

This year, crops are about average so far, and it is generally expected that main areas will not produce more than another 100 million lbs this year. Meanwhile, the number of new buyers is likely to increase. The purpose of the recent visit of the Indian tea delegation to America and Europe was to develop buying interest in Indian tea. Mr. Bam said recently that the U.S.A. actually increased imports from India by 5 million lbs last year. There are indications that the foreign demand this year might be larger.

Effect of Taxation

The question of the effect of taxation on the home market needs consideration. There has been some discussion on who will pay the higher cost due to the increase in excise duties. Some tea brokers consider the duty increase will have little effect on domestic consumption.

The Danger Spots

In considering the question of supply and demand, two danger spots appear to be in Africa and South America. The following table shows the increase in the planted area (in acres) since the end of the second World War:

	1946	Recent figures	Increase
East Africa	66,500	146,500	80,000
Argentina	4,300	75,200	70,900
Brazil	3,100	12,100	9,000
Peru		5,400	5,400

Furthermore, Russia, Turkey and Iran are all growing tea. In the Far East, Formosa and Japan have extended cultivation in recent years.

OUTLOOK FOR PEPPER EXPORTS

SEASONAL FALL IN COIR PRICES

(BY A SOUTH INDIAN CORRESPONDENT)

THE present position of Indian pepper, it is believed in trade circles, is basically sound. India has

been able to sell about 16,000 tons overseas during the first seven months of the current season, that is, November 1961 to May 1962. At least 5,000 tons might have been absorbed by the home market during this period. The balance from the current season's crop cannot be more than 5,000 tons. When distributed between the export and home requirements during the remaining five months of the current season, this quantity is not likely to be a problem.

There was a mild setback in pepper prices last week. The rate of the garbled variety for export fell from Rs. 320 to Rs. 315 a quintal in the Cochin market. This was largely a reflection of New York market conditions. The U.S. pepper market last week was dormant, as most dealers were attending the American Spice Trade Convention. There are conflicting reports about the possible size of the U.S. demand during the period ahead. The new Sarawak and Lampong crops would soon be available and the U.S.A. it is expected, will look for them immediately. Indian pepper might be neglected unless prices are attractive. The other report is that the U.S.A. might continue to show interest in Indian pepper in view of the doubtful prospects of her getting a sufficient quantity from Indonesia where political conditions are unsettled. However, it does not appear that Indian shippers are anxious to sell their stocks at any price. They do not seem to be willing to make any substantial concession.

Lemongrass Crop

The lemongrass oil season has just begun in Kerala—the world's largest producing area. Current rains are likely to benefit grass cultivators. The expectation is that the new season's crop would be at least 15 percent more than the last year's yield of 1,300 to 1,400 tons of lemongrass oil. The last season was a boom period when for the best part, prices were ruling at "prohibitive" levels. Recently, there has been a levelling off in prices, although still attractive to producers. The latest quotation from Cochin is Rs. 285 for 10 kilos.

High Coir Yarn Prices

The usual monsoon fall has started in coir prices. The latest quotation for the superior variety is Rs. 125 a quintal. This is a period when shipments are low and overseas demand for coir yarn will be less active. There are also indications that consumers abroad have started showing

resistance to the "prohibitive" prices at which coir yarn has been selling for over the past 18 months or so. However, sellers are unwilling to reduce their prices to any appreciable extent, largely because of the high cost of production. It is stated that retted husks now made available to spinners were bought at a comparatively high price, and there is a limit beyond which sellers cannot reduce their rates.

HIDES AND SKINS QUIET

The market was quietly steady. Stocks were less than in the previous week.

Bazaar Sales

(Between 22nd May and 28th May, 1962)

Cowhides: Wet salted (Slaughtered) 11,900 pcs. on the basis of Rs. 10 to Rs. 16 and Rs. 19 to Rs. 27.50.

Goatskins: Wet salted (Daissee, Kustia) 68,100 pcs. on the basis of Rs. 310 to Rs. 340 and Rs. 400 to Rs. 425; Wet salted (she-killed) on the basis of Rs. 4.25 and (she-killed) on the basis of Rs. 4 a piece; Assam-Dinajpur 23,000 pcs. on the basis of Rs. 270 and Rs. 315 to Rs. 340; Purneah-Kissenganj 18,500 pcs. on the basis of Rs. 300 and Rs. 325; Patna 5,500 pcs. on the basis of Rs. 190 to Rs. 210.

Bazaar Stocks

(28th May, 1962)

Cowhides: Wet salted 101,500 pcs. **Goatskins:** Wet salted (Patna, Daissee, Kustia, Killed) 36,000 pcs.; Assam-Dinajpur 45,000 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 155,000 pcs.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices by groups, have now been brought up to April 1962. As compared with March, the April Indices for Food, Clothing and

Miscellaneous indicate rises of 9 points, 4 points and 1 point, respectively. The Index for Fuel and Lighting remains unchanged at 291 points.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living rose by 5 points during April 1962.

Compiled and constructed by the Statistical Department of "Capital"

Advanced ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION
Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING
Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

The dictionary defines engineering "as the art and science by which the mechanical properties of matter are made useful to man in structures and machines." In the McKee Organization it is much more than that—it is a constant, unflagging effort toward advanced design, increased plant efficiency, improved construction and greater economy.

The results of that effort are readily apparent in the many contributions to the progress of steel-making made by the McKee Metals Division in more than half a century of specialized, world-wide engineering and construction for the steel industry.

Pioneering by McKee engineers in the fields of plant design, ore beneficiation, automation and production methods have been invaluable to the industry. Recent examples are McKee's work in pelletizing and in the first successful application of gas injection in blast furnaces.

McKee can deliver this kind of advanced engineering and construction to the steel industry in India and back it with an unmatched fund of practical experience and specialized knowledge.

WISE MOTORISTS RELY ON BURMAH-SHELL

USING IDLE RURAL LABOUR IN PRODUCTIVE SCHEMES

(BY A SPECIAL CORRESPONDENT)

AT the three regional conferences convened by the Planning Commission in New Delhi, Calcutta and Hyderabad, the programme for the maximum use of rural manpower in productive village schemes was specially discussed. The outcome of the discussions was that, in addition to the 32 pilot projects established under the programme in 1961-62, another 150 projects should be set up during 1962-63, at the rate of 15 projects, on average, for each of the States. The areas to be selected for the projects should have heavy population pressure and chronic under-employment.

Rural unemployment and under-employment prevail widely in India, but it is only under the third five year plan that a practical scheme for using the under-employed and the idle in undertakings of permanent value to the rural areas has been taken up. The village works programme is an integral part of the country's plans for increasing agricultural production. But it is also an expedient for mitigating seasonal unemployment and under-employment among rural labour, which could eventually remove the imbalance in the village economy by diverting a progressively larger proportion of the landless and workless sections into more or less permanent employment.

Unemployed Labour

The number of the unemployed rural labour force in India has been estimated at about 18 million (6 million by way of backlog and 12 million new entrants). The target is to provide work for an average of 100 days in the year to about 100,000 people in the first year of the third plan, progressively rising to about 2.5 million by 1966. The total cost of the programme over the five-year period is estimated at Rs. 150 crores.

The scheme has considerable potentialities for providing a solution to the age-old problem of seasonal unemployment among about 50 per cent of the rural population, who depend on agriculture for a living but who do not own any land or are only marginal cultivators. While unemployment or under-employment and the consequent wastage of human resources are a common feature all over the country, they prevail in an aggravated form in the rural areas, especially in the form of disguised unemployment. It is, however, in the rural areas that it would be possible effectively and intensively to mobilise this section of the population for productive purposes. Besides agriculture, rural industry and other services, additional work opportunities in the countryside are provided by local development programmes like minor irrigation, soil conservation, contour-bunding, road and house construction, afforestation, distribution of fertilisers and so on.

Lack of Institutional Agency

In a scheme which is designed to use idle rural manpower, organisational aspects are important. It is important to have an effective organisation at the village level which can not only formulate a proper scheme based on local needs and conditions, but can mobilise the resources to implement it. Much of the existing rural unemployment is not due to an absolute shortage of capital. It is largely due to the

absence of an institutional agency which can organise the residual labour force for the performance of socially useful and beneficial tasks.

This deficiency is now being rapidly overcome. During the last two years in the rural areas, an organisational and institutional structure consisting of *panchayats* and *panchayat samitis*, on the one hand, and of co-operatives on the other, is being steadily built up. Between them these two sets of institutions are to cover the entire social and economic life of the villages. They are also statutory agencies charged with the responsibility of organising and executing an increasing range of development activities. Perhaps not in all States, and also not in all areas in the same State in which the *panchayat raj* has been established, have these institutions yet acquired the requisite competence and efficiency to undertake the above activities efficiently and effectively. But through trial and error and under necessary supervision and direction, they will acquire the experience and competence necessary.

Extra Work Needed

The most important preliminary problem is to estimate the number of under-employed or unemployed persons outside the self-employing field, who will be requiring employment. On the basis of the tentative estimate of 18 million, the need is to find remunerative employment for 180 crore mandays at the rate of 100 days a person in a year. This is obviously a formidable task, but considering that this is spread over more than 500,000 villages, the problem should be manageable, because it would mean that, in any village with a population of between 1,000 and 1,500, about 7,000 to 8,000 man-days of work a year would have to be found. Apart from the employment which has to be provided during the slack season under the rural works scheme, other sources of employment are also becoming increasingly available in the villages under other schemes, such as the cottage and village industries, schemes of the Khadi and Village Industries Commission, of the Handloom crafts Board, and of the Handloom Board. Opportunities for gainful work as village artisans such as blacksmiths and carpenters, for which organised training facilities are being provided on an increasing scale, are also being made available.

The rural works programmes are under the exclusive charge of the Central Government, and are separate from and independent of other schemes, although it is likely that in a number of villages, they will be dovetailed into one another. The general pattern of the former has been outlined in a resolution adopted by the Development Commission Conference held in July 1961 in Hyderabad as the "fuller utilisation of the under-employed manpower in the villages", to be achieved by undertaking "such works during the slack season as would build up community assets at the lowest possible cost", that the works taken up should cover a village or group of villages, and that normally the expenditure on any particular scheme should not exceed Rs. 50,000. It is further prescribed that they should particularly assist agricultural production, be labour-intensive, not involve high technical skills, utilise local resources, and, lastly

and most important of all, create remunerative community assets.

Local Contributions

An important consideration in the scheme is that part of the expenditure on its implementation should be secured from local contributions, which together with the repayments of loans granted for the purpose from Central funds, could be retained by the local body—the *panchayat* or *panchayat samiti* concerned—"to be used as a revolving fund for extending the scope of the programme so that it makes a larger contribution to the expansion of employment opportunities."

A number of items of work of this category can be visualised, but two of primary significance to every village are, first, the annual repair of irrigation channels and sources, and secondly, repairs to village roads and improvement of communications. If used to be a customary practice in a large number of Indian villages to mobilise local labour during the slack season to undertake repair and renovation of their main irrigation sources through voluntary labour or *shramadan*. This practice should be revived and even made a statutory obligation on every *panchayat*, with the important difference that, instead of *shramadan*, wages would be paid in cash or in grain. Since the resources of many *panchayats* are still meagre, the expenditure on payment of wages for labour will have to be met from a special cess levied by the *panchayat* on cultivators owning five or more acres of land, who will be the principal beneficiaries from it. This is not likely to be resented by cultivators, who almost everywhere are willing to bear small extra financial burdens when the proceeds are used for the collective benefit of the village.

The repair of village roads and paths is another customary practice which can be converted into a statutory obligation. Both cheapness of execution and an assurance of employment for a section of the unemployed are ensured when a *panchayat* undertakes road construction and repairs on its own, instead of entrusting it to a contractor. A number of neighbouring villages can undertake this programme in mutual co-operation by pooling their resources so that mobility of labour would also result, and the advantages can be shared by all of them.

Soil Conservation

Other projects which can be included in the scheme are soil conservation, contour-bunding and planting of trees. Extensive soil conservation measures are contemplated as part of land improvement schemes during the third plan; they are essential to prevent continuous erosion of the soil and increase the productivity of land. As the third plan says, for balanced development of the agricultural resources, "it is essential that large-scale soil conservation and dry farming techniques are taken up on the basis of mass participation by the rural communities concerned". Of similar significance is the scheme of planting trees which would supply the essential fuel requirements of the villagers, who waste animal dung, a valuable manure, as fuel. *Panchayats* can acquire plots of lands not used for cultivation for planting trees and recover the expenditure

by selling wood as fuel at reasonable prices.

As *panchayats* in different States acquire greater experience of formulating, organising and implementing the programmes, more and more of the local unemployed labour and under-employed persons will be assured of either regular or part-time employment within the village itself or in neighbouring villages, while simultaneously more and more permanent assets would be created for every village. At the same time, it is also possible to visualise a situation in the near future—it may be even during the period of the current plan—when other schemes for rural areas would be taken in hand, such as construction of storage godowns for big villages or groups of small villages, village housing schemes, small cottage industries, in all of which idle or under-employed rural labour and semi-skilled workers would find fuller employment and opportunities for self-employment. A specific suggestion at the regional conferences organised by the Planning Commission on this subject, was that the rural works programmes should be integrated with development and production schemes for each village, which have been drawn up or are being drawn up.

Under the programme, a network of labour co-operatives should come into existence, in which work-seeking local labour can enlist itself and through which labour required for different categories of local works will be recruited. By such a system the rural workers would improve their organisational strength and efficiency.

Third Plan Allocation

The third plan makes an allocation of Rs. 150 crores for these programmes. This works out to a provision of Rs. 3,000 a village for five years, on average. If this allocation can be augmented by an equal amount contributed by the local population, the State Government and the *panchayats*, a sum of Rs. 300 crores should be available for the programmes during the plan period. With the requisite organisational effort also forthcoming, the target of providing gainful work for 100 days in a year for a large proportion of the under-employed labour force will not be impossible of achievement. The scheme evolved at the regional conferences provides for the training of the personnel recruited for implementing it by arranging short-term orientation courses.

If the targets are achieved, the rural economy would be considerably strengthened, and there would be no dearth of resources for the maintenance of the local assets. The rural works programme can, in this sense, be a significant factor in promoting capital formation in the rural areas. Further, while wages paid to the workers would increase their purchasing power, food production would also be increased, and the programmes could then have no inflationary effects.

On the basis of experience gained in the 32 pilot schemes sanctioned for 1961-62, the programme is being extended to another 150 projects. It is necessary to repeat that their efficient execution is interlinked not only with the extension of the *panchayat raj*, but also with the competence of the institutions set up to enlist the co-operation and participation of village labour. The warning that Mr. V. T. Krishnamachari, former deputy chairman of the Planning Commission, uttered concerning other plan programmes for rural areas, that they "have not had their full impact on employment in the rural economy on account of the failure to implement them expeditiously", applies with particular force to the special programme.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to August 1961. Compared with the preceding month there were increases in sugar 127.98 points,

tea 36.29 points, jute 19.20 points, cement 16.10 points, coal 7.00 points, pig iron 3.65 points, finished steel 15.60 points, paper 2.55 points, motor-cars 49.82 points, electricity 4.42 points

and railway ton-miles 5.64 points, while decreases occurred in yarn 0.21 points, cloth 1.01 points, tyres 4.53 points and bicycles 76.77 points.

Combining all the factors, the Capital Index of Indian Industrial Activity increased by 144 points during August 1961.

CARRYING OIL PRODUCTS THROUGH PIPELINES

(BY A SPECIAL CORRESPONDENT)

THE Government of India has plans to build a number of crude oil and product pipelines. These include a 600-mile product line from the Barauni refinery to Delhi via Kanpur, Lucknow and Allahabad; and another one to Calcutta; a shorter product line from Gauhati to Siliguri; a 300-mile dual crude oil and product line from Bombay to Bhusaval; a 120-mile product line from Bombay to Poona to be extended by 300 miles later to Hyderabad, and a 350-mile product line from Cochin to Madras via Bangalore. The operation of product pipelines poses several tricky problems.

The day-to-day operation of a pipeline is not as simple as might be supposed. For one thing, changes in temperature affect the viscosity of the oil, and this in turn affects the rate at which it can be pumped. With viscous oils, it may be necessary to heat the oil to maintain adequate pumping rates. Moreover, the availability of oil at one end of the pipeline may vary with the rate of production of the oilfield or the refinery, and the demand for it at the other end may change with the rate of intake by the refinery or consumption in the market.

Complicated Problems

These problems become much more complicated when more than one oil product is pumped through the line as in refined product pipelines. Normally, no attempt is made to segregate the different grades which are pumped product to product. A recent development is the use of segregating plugs between grades. As long as the rate of flow can be kept reasonably fast, little mixing takes place at the interface, and the small contaminated plug between grades can be pumped into the storage tank of the particular grade at the receiving end which can absorb it without appreciably affecting the quality. However, if the pumping goes too slowly or ceases altogether, contamination will increase to an unacceptable extent. It is vitally important to keep the contents of the pipeline moving at good speed.

For these reasons, the operation of a pipeline needs careful planning and control. The passage of products through the pipeline is required to suit the supply, the demands at the recovery end and the availability of storage. A reliable system of inter-communication is essential to ensure that the programme is known and adhered to, changes in plan catered for and emergencies dealt with. For accurate control, it is imperative to know the exact location of the interface between different grades. Many techniques are available for this purpose, including the use of radioactive tracers, gravimeters, automatic samplers, etcetera. It is equally important to keep watch on the pressure and rate of flow, and recording meters are provided to meet these exacting requirements. The scope and operational problems of Le Havre-Paris product pipeline, commissioned in 1953, indicate how the difficulties were surmounted. It is a 140-mile, 10-inch common carrier with a maximum annual capacity of 4.2 million metric tons built at a cost of about £5 million. The operating Company is Societe des Transports Petroliers par Pipeline (T.R.A.P.I.L.) in which the French Government has a 31-percent holding.

This pipeline links four refineries in the Lower Seine area, and also

the port of Le Havre with the Paris region. It feeds a dozen terminals, each of which is connected by pipe with neighbouring depots or tank farms numbering 32 in all. It is from these depots that the final distribution by road takes place. The supplying refineries are those of C.F.R. in Le Havre, Esso in Port Jerome, Mobil Oil in Notre Dame de Gravenchon, and Shell in Petit Couronne. The pipeline also carries products imported at Le Havre. The Le Havre-Paris pipeline does not carry heavy fuel oils which are unsuitable for transport by pipeline in the cold climate of northern Europe and, in any event, cannot be carried in the same line as light products. It supplies the depots of 16 different distributors in the Paris region.

Interesting Feature

By far the most interesting feature of the pipeline's operation is the smooth handling of 31 different products, each batch of which has to be delivered at the appropriate depot in the correct volume and specifications. A central despatching depot controls the entire operation. Automatic controls are extensively used at the terminals and in the four main pumping stations. Two more pumping stations were built in 1956 and 1957 to handle the extra heating oil traffic. They are run by remote control from the despatching depot, thus avoiding the need for personnel who could not be employed fully throughout the year. The products carried by the pipeline are three grades of aviation gasoline, two jet fuels, 15 different motor gasolines, illuminating kerosene, four gas oils, two gas oils with low sulphur content, and four heating oils. In the winter of 1956, it also started carrying light fuel oil.

In spite of the complexity of the operation, careful advance planning—coupled with flexibility in modify-

ing plans as, for example, when a tanker consignment for the line fails to arrive on time—has made it possible correctly to forecast the times of arrival of batches within a minute on average. Between each two products, some inter-mixture occurs, and to reduce downgrading of products, a particular sequence is meticulously observed. Thus, light fuel oil is followed by heating oil, and then in turn by diesel oil, a kerosene buffer, ordinary-grade gasoline, premium gasoline, aviation gasoline, premium gasoline again, ordinary gasoline and so on back to light fuel oil. In each case, excepting the mixtures of diesel oil and kerosene and of kerosene and gasoline, the inter-mixture of products following each other in the line is included in the lower quality product, i.e., the inter-mixture of ordinary and premium gasolines is included in ordinary gasoline. The mixtures of kerosene with diesel oil and gasoline are, however, taken through to the end of the line and shipped back by barge to the refineries for re-treatment. The pipeline also carries smaller volumes from upstream refineries for export from Le Havre. Its operations during the winter months—October to January inclusive—are virtually continuous to meet the enhanced demand for heating oils.

By using the pipeline for the trip from Le Havre to Paris, the distance is roughly halved, compared with that by river, and the time taken reduced from eight to ten days to a mere 40 hours. The pipeline's costs consist mainly of capital charges, the operational staff employed being only 110. Pipe laying costs for crossing the densely populated areas in the Paris region were three times those in the open country. It costs the refinery twice for transporting products by rail than by pipeline. His outlays on hiring barge transport—including loading and unload-

ing charges—are some 20 percent higher than the pipeline's actual operating costs, but barging is still needed for heavy fuel oil. In practice, the pipeline's tariffs are fixed for each section of the line, not on an overall kilometre basis, at rates below comparable barge charges.

Worthwhile Economies

The worthwhile economies of the Le Havre-Paris pipeline over the alternative barge transport along the winding Seine, sometimes subject to freezing and flooding, were testified by the operating Company's decision to build a second pipeline along the same route reserved solely for diesel fuel, heating oil and light fuel. The Rouen-Paris section of the second T.R.A.P.I.L. pipeline was completed towards the end of 1961. It has a diameter of 12 inches, against 10 inches for the old line, and has an annual carrying capacity of about 5 million tons.

To conclude, in transporting petroleum products, the pipeline must be used to near-full capacity and the individual items must be moved in large batches for limiting the unavoidable mutual contamination between adjacent batches of different products. The extent of inter-face depends on many factors, such as viscosity, rate of pumping, pipe diameter and surface conditions. Under normal pumping conditions, a 60-mile 8-inch pipeline will have its terminal at a 3,000-foot inter-face containing 20 tons of mixed products. Small bores and higher velocities are preferable in spite of the increase in pumping costs. As an indication of the rate of recovery of capital investment in the pipeline, it is estimated that, on the basis of 75 percent use of capacity and with increasing pump boosting capacity, an 8-inch product line carrying an initial 500,000 tons annually, and rising by 6 percent compound a year, will carry 1 million tons in 12 years and 1.4 million tons in 19 years, when a duplicate line will have to be laid.

The use of physical separators—as is the practice in the United States—is not considered necessary over the relatively short distances covered in Europe. Except for separating heavy oils, they are likely to disappear with the use of lined pipe and high velocities of throughput.

Engineering and Transport

MORE FLIGHTS BY I.A.C. ON TRUNK ROUTES

(FROM OUR NEW DELHI CORRESPONDENT)

THE Indian Airlines Corporation has announced that its winter schedule for 1962-63 will provide more capacity on the trunk routes, compared with 1961-62. For example, against 28 flights weekly since 1961-62 during the peak period on the Delhi-Bombay route, there will be 33 during 1962-63. Similarly, there will be an increase in the frequency on the Bombay-Madras routes from seven to 14. The Calcutta-Delhi route will have 21 flights weekly, against 11 in 1961-62. The planned operating hours for Viscounts during the 1962-63 cold weather will be 21,540, compared with 11,500 hours operated from October 1961 to March 1962. One major change visualised by the Corporation in 1962-63 concerns the pattern of the night airmail services. The four major cities—Delhi, Bombay, Madras and Calcutta—will have direct Viscount services operating during the night. A night service on the Bombay-Calcutta route will also be operated by Skymasters via Nagpur. Nagpur will have a day

connection with Delhi by a *Dakota* service operating on the Delhi-Gwalior-Bhopal-Nagpur route. When the second batch of five *Fokker Friendship* aircraft is received during 1962-63, the *Dakotas* will be replaced by *Friendships* on certain regional routes, particularly in the south and on the west coast.

Traffic Survey

A traffic survey of the circular route in south India—Madras-Bangalore-Coimbatore-Cochin-Trivandrum-Madurai-Trichy-Madras—has already been undertaken by the National Council of Applied Economic Research on behalf of the Corporation. Surveys for other regions south of Bombay are now in progress by the Council. A study of air traffic trends has already been made by the planning department of the Corporation for both trunk and regional services and forecasts of traffic prepared. The re-equipment programme of the Corporation, which is at present being examined, is based on such forecasts.

The I.A.C. has entered into agreements with a number of State Governments for the operation of certain regional services, as required by the latter on the basis that they would subsidise the losses incurred in the operation. The services so operated are: Delhi-Chandigarh-Kulu, Mangalore - Bangalore - Mangalore, Delhi-Phoolbagh-Lucknow and return, Delhi-Jaipur-Udaipur-Ahmedabad and return, and Hyderabad-Vijayawada-Visakhapatnam. The total subsidy received by the Corporation during 1960-61 in this way was Rs. 9.05 lakhs.

The I.A.C. has also informed the Government of India of its decision to purchase four medium-range *Caravelles* for using them on its main routes. As reported earlier, foreign exchange is the main bottleneck in this deal. According to reports, the manufacturers have proposed easy payment terms. The cost of a *Caravelle* is about Rs. 1.56 crores. Another plan is to acquire on lease four *Caravelles* for the peak travel period, namely, the cold weather season, from a European airline, for which winter is a slack period. *Caravelles*, it may be added, are now used once a week on the Lebanese International Airways' Beirut-Kuwait-Bahrain service. The aircraft have been leased from an unspecified operator. The *Caravelle* could fly from Bombay to Calcutta in a little over two hours, and from Delhi to Madras in three hours with 79 passengers.

Dacca-Kathmandu Flights

It is reported that Pakistan International Airlines is considering the possibility of operating a service between East Pakistan and Nepal when the necessary facilities are available. It is likely that the flight will be from Dacca to Kathmandu direct. The Royal Nepal Airlines Corporation does not at present operate a service to Pakistan. It operates DC-3 services from Kathmandu four times a week to Patna, three times a week to Calcutta, and twice a week to Delhi, with connecting services by other airlines to points in Pakistan. The Indian Airlines Corporation also operates DC-3 services to Kathmandu six times a week from Patna, three times a week from Calcutta and three times a week from Delhi.

COMPANY AND PUBLIC NOTICES

THE STANDARD COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, at 4 P.M. on Friday, the 22nd June, 1962, for the following purposes:—

1. To consider and approve the Audited Accounts of the Company for the year, ended 31st December, 1961, and to receive the Directors' and Auditors' Reports thereon.
2. To declare the Dividend recommended by the Directors.
3. To appoint a Director in the place of a retiring Director.
4. To appoint Auditors and fix their remuneration.

As Special Business

5. To consider and if thought fit, to pass with or without modification the following Ordinary resolution of which a notice has been given to the Company under Section 257 of the Companies Act, 1956.

"THAT Mr. D. C. B. Pilkington be and is hereby appointed a Director of the Company."

The Share Transfer Register of the Company will be closed from 11th June 1962 to 22nd June, 1962, both days inclusive.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 11th May, 1962.

Note: (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.

(b) The Dividend, if declared, will be paid on or after 2nd July, 1962, to those Shareholders so entitled whose names appear in the Company's books on the 22nd June, 1962 or to their mandatees. No application for Dividend Warrants will be necessary.

EXPLANATORY STATEMENT

With regard to Item No. 5, it is pointed out that Mr. D. C. B. Pilkington was appointed an additional Director and the Chairman of the Board with effect from 20th March, 1962. In terms of Section 260 of the Companies Act, 1956, he now vacates his office and in view of his vast experience in the affairs of the Company your Directors recommend his re-appointment to the Board as being in the best interest of the Company.

BALMER LAWRIE & CO. LTD.

THE Board of Directors of the Company has decided to recommend to the forthcoming Annual General Meeting, the payment of a Final Dividend of 18 per cent for the year ended 31st December, 1961.

BALMER LAWRIE & CO. LTD.,

D. MANSON,
Managing Director.

Netaji Subhas Road,
Calcutta,
24th May, 1962.

SHAW WALLACE & COMPANY LIMITED

NOTICE is hereby given that the Sixteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, 4, Bankshall Street, Calcutta, on the 29th June, 1962, at 3 p.m. for the following purposes:—

1. To consider the Profit & Loss Account for the year ended 31st December, 1961, the Balance Sheet as at that date and the Reports of the Directors and the Auditors.
2. To declare a Dividend on the Ordinary Shares.
3. To appoint Auditors and to fix their remuneration.
4. To elect Directors in the places of three Directors retiring.
5. AS SPECIAL BUSINESS to consider and, if thought fit, to pass, with or without modification the following Resolution:—

As an Ordinary Resolution—

"That approval be and is hereby accorded to the under-noted investments—

(a) 25 Ordinary Shares of Rs. 100 each in Matheson, Bosanquet & Co. Ltd. at a cost of Rs. 14,513.

(b) 247 Ordinary Shares of Rs. 10 each in Wallwood Plantations & Agency Co. Ltd. at a cost of Rs. 3,568."

An Explanatory Statement pursuant to Section 173 of the Companies Act, 1956 has been forwarded to the Members of the Company.

The Share Transfer Register of the Company's Ordinary Shares will be closed from 20th June to 29th June, 1962, both days inclusive.

N.B. A Member entitled to attend and vote at the Meeting is and vote at the Meeting is entitled to appoint a proxy to attend and vote instead of himself and the Proxy need not be a Member of the Company.

By Order of the Board,

D. A. HOUGHTON,
Calcutta Director & Secretary.
4, Bankshall Street,
Calcutta.
Dated, 17th May, 1962.

5th June, 1962.

THE CALCUTTA JUTE MANUFACTURING CO. LTD.

THE Directors of the above Company have decided to recommend the payment of the dividend on Cumulative Preference Shares for the year ended 31st December, 1961 @ Rs. 8.45nP per share (subject to deductions of tax). This payment of dividend will be made out of the profits for the current year and is subject to the confirmation of the shareholders in the Annual General Meeting to consider the accounts for the year ending 31st December, 1962.

The dividend will be payable to the shareholders whose name will appear in the Register of Members as on 28th June, 1962.

The Share Transfer Books will remain closed from 18th to 28th June, 1962, both days inclusive.

By Order of the Board,

DAYARAM & SONS,
Managing Agents.

4, Dalhousie Square East,
Calcutta,
24th May, 1962.

THE SENDRA COAL COMPANY LIMITED

THE Board of Directors has decided to recommend to the forthcoming Annual General Meeting of the Members the following dividend for the year ended 31st December, 1961, subject to deduction of tax.

On the 1,28,400 issued Ordinary Shares @ 3½ per annum.

By Order of the Board,

F. W. HEILGERS & CO. (PRIVATE) LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta: 24th May, 1962.

ORISSA CEMENT LIMITED RAJGANGPUR

THE Twelfth Annual General Meeting of the Shareholders of the Company will be held at Rajgangpur, the Registered Office of the Company on 18th June, 1962 at 11-30 A.M. Notices of the meeting setting out the agenda and explanatory Statement on the special business to be transacted thereat have been sent by post.

By Order of the Board,

S. C. AGGARWAL,
Secretary.

Dated: 22nd May, 1962.

ACC REFRACTORY PRODUCTS

The Backbone of India's Industries

FIREBRICKS

ACC top quality firebricks are available in medium, high and super alumina content and can be made to the size, shape and quality required. They possess all the physical properties needed for long service under the most severe operating conditions in high temperature zones.

ACCOCID

A special cement which resists the corrosive action of acids and chemicals, Accocid is recommended for laying acid-proof bricks and tiles. It can also be used as a lining to resist the corrosive action of acids.

ACCOSSET-50

A Monolithic Refractory Cement. Accosset-50 is a highly refractory mortar furnished with airsetting properties. It can withstand a temperature of 1710°C and is recommended for monolithic constructions, laying up and coating ordinary and high-alumina bricks, making repairs and for filling in patches of the furnace etc.

COAL COMPANIES

O., Po., F. and Dd. indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXVIII No. 3713

STABILISING INCOMES FROM COMMODITY EXPORTS

EVEN before it came up for discussion by an international conference in Rome this summer, the American plan for stabilisation of the receipts of raw material exporters was being criticised by the supposed beneficiaries. The plan, indeed, is not particularly generous—as one would expect, for it is proposed by a nation that has always been hostile to any serious attempt to stabilise commodity prices. However, it is less the financial provisions it embodies that have aroused the criticism of certain Latin American countries than the fact that the U.S.A. proposes, not to stabilise prices, but to give loans when prices fall. Perhaps they are being ungrateful, but the candidates for this new form of assistance see it as merely an extension of the existing system of development aid, when what they dream of is a market organisation that would enable them to get along without aid because in that market they would be able to earn their living securely. Discussion, therefore, is liable to become confused. A rich nation offers help, but the countries it wants to help want to earn their own revenues. They are likely to resent a plan that includes a veritable "means test" and which, at best, promises limited help in hard times in the shape of loans whose servicing could be expensive.

The American scheme is, in effect, a system of compensatory loans. Nations having a low standard of living (revenue a head below \$650 yearly) would receive loans when their exports fell below the average of the three previous years. Such credits would not exceed 20 percent of average export sales in those three years, nor would they exceed 66 percent of the loss suffered in the bad year in question. The loans would normally be repaid in three years, with a limit of five years, and would bear interest at 0.5 percent above current interest rates. The scheme would cover all the members of the International Monetary Fund and the World Bank, or, if this global scope were impossible, it would be limited to the nations of South America. The loan fund required in the former case would be \$1,800 million; in the latter case, \$800 million. These sums would be collected from all the participants, naturally with heavier contributions from the rich nations not qualified to benefit from the arrangement. There are special clauses to cover exceptional circumstances. The scheme is not an American invention; it was studied (and criticised) by a commission of United Nations experts in 1953.

New Delhi has not yet given its opinion on the scheme. On the face of it, the American plan seems not to have had such countries as India in view, but rather Latin American nations whose external trade is often of a tragic simplicity. (In 1957, for example, 75 percent of Bolivia's exports were the one commodity, tin; 63 percent of Brazil's, coffee; 56 percent of Chile's, copper; and so on.) In their case, the scheme might work fairly simply. It cannot be denied that it would export revenues from year to year (often 20 percent), which make development planning almost impossible. On the other hand, it supposes that developing countries will consent to contract new

loans at a moment when their revenues have declined, knowing that the cost of servicing and repaying them will weigh on the payments balance when trade improves. There is nothing irrational in such procedure, but it is psychologically difficult, and increases the sentiment of dependence cult, and increases the economy most acutely feels at a time when the economy most acutely feels its inadequacies. Moreover, some will be inclined to see in it a tinkering with the symptoms of unbalanced world trade, instead of an attack on the root of the trouble: wide variations in commodity prices. The acceptance of the plan in countries like the U.S.A. and Britain, however, seems assured, for it involves no sacrifice whatever on importers of raw materials. They simply make loans when they can most easily afford it, when commodity prices are low, and are paid interest for the gesture.

When the scheme comes up for debate, one may expect to hear arguments in favour of arrangements that would really try to iron out price variations instead of just offering temporary relief. Of these, the scheme most in favour today among people genuinely interested in stabilising commodity prices is that for a world stocking mechanism for tea, coffee, cocoa, cereals, rubber, minerals and even textiles. An international fund (one for each of those commodities, or one giant fund for all) would buy those goods at an average price and then re-sell them at the same price plus a fee for storage and management. This simple idea is taken from the British marketing boards

and the French stabilisation funds that operated fairly successfully in those countries' African territories and which have been taken over by African Governments after independence. Advocates claim that this system, given a global coverage, would avoid the extreme oscillations in commodity prices and give exporters the assurance of steady revenues without the feeling of dependence on the goodwill of the richer nations; and it would also give importers guarantees of prices and supplies (or at least ample advance notice of inadequate supplies), which presumably would be appreciated by western industry.

Needless to say, Washington was well aware of the existence of these proposals, and if it brushed them aside in favour of its much less ambitious compensatory loan arrangement, it must have been because it has grave objections to them. The objections are not hard to guess. The main difficulty is in the price at which the stabilisation fund would buy commodities for stocking. If it made the least error (and nothing is easier to go wrong about than future levels of supply and demand for commodities), the impact on production could be serious. If it set prices too high, producers would be stimulated to turn out excesses, and if the fund were not to be ruined buying them all up at a guaranteed price, it would have to ask local governments to ration exports and limit acreages; that is the unsatisfactory situation one finds today. If it set them too low, production would be inadequate and there would be an international black market, with people trying to buy and sell commodities outside the scope of the world fund. Price-fixing, which, however "unjust" it may seem when left to the anonymous market, is today a non-political affair, would at once become the subject of infinite demagoguery. One can easily imagine in what colourful terms Colonel Nasser would discuss the fixing

of a world cotton price, or Mr. Nkrumah the price of cocoa!

The sums required by a fund that aimed to buy and stock immense quantities of various commodities would be considerable, but not impossible to raise if the Organisation for Economic Co-operation and Development were to be serious about the scheme. Contributors, it should be noted, would not be pouring money into a dubious venture. They would be lending to an organism that held the security of stocks of commodities which it had bought, by definition, at low prices and was holding to sell when prices rose. The affair might fail to work and might make losses (as national commodity boards have done before today), but lenders could hardly lose all their stake—as they do when they give aid and gifts to a developing economy which simultaneously loses equivalent sums because of the fall in the price of its exports. The sums that have been mentioned tentatively as the working capital of such a fund are indeed astronomical, and this has been enough to discourage interest in the suggestion in some quarters; yet no more likely arrangement for raising astronomical sums exists than this one.

In fact the security represented by stocks of commodities held by an international organisation seems so impressive to some that they have married this scheme with the familiar proposals for a world currency. That is, the fund would buy commodities with its own paper, of which the backing would be, not the single commodity gold, but the various more useful goods it held in store. It is just possible that two vastly ambitious schemes become more reasonable by being combined in this way, but it might be better to keep them separate for the time being. It is surely enough to propose a veritable revolution in world commerce without proposing a total recasting of world payments too. A large number of authorities, notably bankers, would agree that commodity prices should be and can be stabilised, but would reject the argument that there is really a chronic shortage of means of payment that is hampering the smooth expansion of world trade.

FARM MARKETING CO-OPERATIVES

A CERTAIN amount of encouragement is being given by the Central and State Governments in developing agricultural marketing. But much remains to be done to help the farmers with better storage facilities and more efficient marketing services. The importance of improving the marketing structure—particularly in the context of the grow-more-food campaign and in the economic interests of cultivators themselves—cannot be under-estimated. The linking of credit with marketing has to be ensured not so much by emphasising the borrower's contact with the lending society as by determining that marketing societies give better service to the cultivator. Marketing services do not merely consist of buying and selling. They include the supply to the final consumer of the product which he may require, at a given time, in a given form, and at a given place. The services may, therefore, consist of at least seven different stages: assembling, grading, standardising, packing, processing, storing, transport and financing.

The Indian cultivator today has little or no staying power and is seldom able to hold his goods, which are frequently of a perishable nature, till the market turns in his favour. He is not provided with pledge loans or adequate storage and warehousing facilities to protect him from making "distress sales." With the growing commercialisation of the agricultural marketing system, direct sales between the producer and consumer are now rapidly becoming a thing of the past. Whatever one may say about the adverse effects which the middleman's exorbitant profits can have on the incentives of the cultivator, there is no doubt that, unless alternative marketing services are organised on a co-operative basis, the middleman will continue to be indispensable. The proper working of the agricultural marketing system, therefore, depends on his efficiency both as a wholesale purchaser and as a distributor. With the middleman's specialised knowledge of buying and selling, his contacts with outside agencies and markets, and

To be sure, the dangers of a global inflation, which are usually urged against proposals for a managed international currency, might be less were the holder of stocks of commodities to be the issuer of that money—because it could stifle inflation by releasing the goods it held.

Ignoring then the refinement that consists in linking the commodity price question with the world currency debate, one may stick to the assumption that the commodity fund would raise resources in the normal way, by Government subscriptions. The affair need not set out from the start to cover all commodities, but could take one or two—say, coffee and jute. It would thus have time to prove its feasibility while working with limited funds; above all, it would have to answer in practice the previously mentioned objection about the difficulty of fixing reasonable prices. If it could show that prices could be determined without demagoguery, and that any mistakes made could be corrected by price adjustments, it would gradually win support and justify its extension to a wider range of commodities. Yet, however gradual and tentative one tries to make these modest beginnings sound, many in the U.S.A. and Britain will still regard the whole principle as revolutionary and oppose it for that reason. No doubt this is the reason Washington ignored such schemes in favour of its limited proposal outlined above, for that proposal marks no innovation in the existing pattern of world commerce.

It may be doubted whether any satisfactory scheme for stabilising commodity prices can hope to avoid being "revolutionary", in the sense that it puts world trade on a new footing and rescues raw material exporters from their present insecurity and dependence on the rich nations. If one is not ready to consider revolutionary solutions, it is best not to meddle with the question at all. Palliatives and more "generous" offers to the developing countries are not what is wanted, as the U.S.A. will no doubt be told. Any genuine solution must sound ambitious, even pretentious, because the problem faced by raw material exporters is immense and concerns, to speak quite prosaically, the future of the world.

his up-to-date information on prices, the Indian peasant has no alternative but to deal with him. This fact, more than any other, has been responsible for the introduction of a certain degree of specialisation in farm production. The current trend in Indian agriculture is not so much the production of food to attain self-sufficiency, as the production of specialised cash crops which enable the middleman to meet demands that bring better returns to the cultivator. The middleman is, therefore, largely responsible for influencing the farmer on the type of crops to be grown on his fields.

The assembling, grading and standardising of agricultural produce are all important functions. The bulk assembly of goods facilitates bulk distribution, and proper grading and standardising enhance the value of the commodity, reduce freight, handling and storage charges, and help widen the market. Packing and processing are closely interlinked, and the objectives are to facilitate handling of the commodity, reduce freight and storage costs, prevent losses by deterioration, and make the products more attractive to purchasers. Storage and warehousing are essential where most agricultural commodities are produced seasonally and surplus stocks have to be held over during a glut. Storage, therefore, brings about the adjustments necessary for the post-production periods and for the proper distribution of the products, which is helped by transport. Speedy and effective transport cuts down marketing costs and the immediate need for storage or warehousing. But the transport of agricultural produce presents many problems. A lot depends on the size and bulk of the commodities to be transported, the period of perishability, and a host of other factors which influence the prices which the middlemen are willing to offer.

Last but by no means least, another important agricultural marketing service is financing and risk-bearing. It is vitally necessary to assist the various agencies concerned in the sale of produce,

its storage over long periods and its distribution. Financing is usually always proportionate to the time taken in the actual marketing of agricultural produce. Thus, the longer it takes for a particular commodity to reach a consumer, the greater the finance required for it. Grading and standardising might help reduce financing costs. But two types of risks remain: physical and economic. Physical risks may result from deterioration or damage, while economic risks may arise due to price fluctuations. The first may be covered by insurance, and the second can usually be guarded against by such measures as hedging, speculation and futures trading. In individual cases, risks vary with the bulk of the commodities and the distances over which they have to be transported. In order to develop better agricultural marketing services in an expanding economy and to reduce the number of intermediaries, it has become necessary to encourage the growth of efficient co-operative marketing societies. The primary need today in the rural sector is to construct a large number of godowns and warehouses in various places—including mandis and villages. Service or special marketing co-operatives have to be made to participate in this activity. Under the provisions of the Land Acquisition Act, the local governments can supply convenient sites for the erection of godowns and warehouses. Priorities should be extended to such co-operatives by giving financial assistance and essential construction materials.

Through the formation of agricultural co-operative marketing societies, the corrupt practices of intermediaries and middlemen may be minimised and eventually eradicated. In effect, the co-operatives will indirectly provide the cultivator with greater incentives to produce better crops and to extend his area of cultivation. In addition, they will guard the farmer against the many malpractices of the middleman, such as underweighting of crop and wrong quotation of prices. This, in turn, will give the cultivator stronger bargaining power in the market. Planned, scientific co-operative marketing societies are, however, still in their infancy in India. They have, in the past, suffered heavily due to dissensions among members, which frequently resulted in their being exploited by the middlemen and other competitive agencies. The formation of these societies in the foreseeable future and their subsequent success will, therefore, depend largely on whether or not the cultivators, organisers and promoters are able fully to understand the basic principles of co-operation. They should be able to resist outside influences which might prove destructive, establish the societies on a financially sound footing, and have skilled operators who are fully conversant with the business aspects. Proper and reliable contacts are also necessary—particularly in distant markets—to supply the co-operatives regularly with news, cost estimates, forecasting of future trade and other marketing intelligence. Unless Indian agricultural co-operatives are able to satisfy these conditions the future of agricultural marketing in India—and indeed, the possibility of the economic emancipation of the cultivators—will remain bleak.

AID-INDIA CLUB MEETING DISAPPOINTS

THE Aid-India Club met and adjourned early last week without announcing further commitments from any of the member-countries. This means that the gap of \$220 million required to match the U.S. offer of \$500 million for the second year of India's third five year plan remains unfulfilled. The reaction in New Delhi has been restrained, but the meeting of senior officials, which took place immediately after the World Bank announced the postponement of the meeting, and the more recent meeting between the Planning Commission and the Chief Ministers of the States, indicates that a serious view is being taken of the situation. This is as it should be. While one is reminded of the crisis India had to face in the early years of the second plan, the outlook now is considerably worse. In 1957-58, the foreign exchange reserves were not quite as small as they are now. The amendment of the Reserve Bank of India Act, with special reference to the provisions relating to the backing for the paper currency, gave some flexibility. Now, however, the

reserves have touched a new low of Rs. 101 crores. Even for current transactions, they cannot be allowed to fall much further. In fact, a minimum of approximately Rs. 83 crores in foreign exchange holdings has to be kept as part of the paper currency reserve.

India is already receiving external assistance on a sizeable scale for her plans of economic development. The object of the Aid-India Club meeting was that such assistance would be forthcoming in adequate amounts to ensure the steady implementation of the third plan. On the basis of the revised foreign exchange cost of plan projects, this country would have had to face considerable difficulty even if the full amount of \$1,000 million for the second year had been forthcoming from the Club members, apart from the \$150 million promised by the World Bank. The U.S. offer of \$500 million was originally made on the condition that the other members of the Club (apart from the World Bank and its associates) would together provide an equal sum. Although Austria and the Netherlands have joined as full members, the total aid offered by members other than the U.S.A. remains at \$280 million. Even if Italy and Belgium are brought in by the time the next meeting takes place, the matching amount may not be found. Italy has agreed to give about \$100 million for various petroleum projects, but the amount will be spread over a number of years. In any case, it is already too late for the second year of the plan to be benefited by fresh commitments at the next meeting. In the circumstances, the main hope is that the U.S.A. will not insist strictly on the "matching" provision; if she does, the shortfall in the Club's contribution during 1962-63 will be about \$440 million, not the \$220 million being mentioned. The apparent failure of the Aid-India Club meeting has come at a time when many aid-giving countries, including the U.S.A., are insisting

that the funds lent by them should be used to make purchases within those countries. The trend towards "tied" aid is accentuating the difficulties.

The foreign exchange crisis has evoked a variety of reactions. Mr. Nanda, the Central Minister of Planning and deputy chairman of the Planning Commission, has emphasised the need to execute projects without delay, in order to avoid wasting the country's productive potential. But it remains to be seen whether the plea will meet with a positive response. If it does, although the immediate strain will not be less, there will be hopes of an earlier easing of the strain. The reported blanket ban on air bookings by international airlines without the prior approval of the Reserve Bank of India is an instance of hasty action. Instead, the Central Government might well consider making a more careful scrutiny of foreign trips by its own officials.

Unfortunately, India has not been paying as much attention to exports as she should have done. The disappointment over the Aid-India Club meeting has served to highlight the point. In this context, a strong effort is necessary to present the Indian case before the European Common Market authorities persuasively. The market for tea and for many other Indian goods remains largely unexplored on the Continent. A heavy E.C.M. import levy may keep Indian goods out effectively. For the present, some further cuts in imports into India may be inevitable. In imposing them, the Government should bear in mind that existing industrial capacity should not be allowed to be idle while new capacity depending on imported raw materials is created. There will be many practical difficulties in ensuring that this does not happen, difficulties in ensuring that this does not happen, since a good part of the external aid is for specific projects. But where "untied" foreign exchange is available, "maintenance" imports should get preference over development imports.

Current News and Comment

Kumardhubi Fireclay Results Impressive

The Kumardhubi Fireclay and Silica Works Ltd has produced excellent results for the year ended December 1961. Sales and profits have established new records. The expansion and modernisation schemes have made satisfactory progress. The new tunnel kiln may start producing soon. The Company intends to diversify its activity as the demand for special refractories for specific uses has been increasing. The demand for firebricks and silica has been excellent. The shortfall in the income from silica products following a sluggish demand has been more than made up by the increased output of sillimanite bricks. The directors consider the current outlook satisfactory, and expect to maintain profits at a high level.

A record output of 102,425 tons was achieved in 1961. The profit has increased from Rs. 20.41 lakhs in 1960 to Rs. 26.19 lakhs in 1961, after raising depreciation from Rs. 6.72 lakhs to Rs. 7.56 lakhs. A taxable ordinary dividend of 18 percent has been maintained. It is covered more than four-and-a-half times and offers a yield of 9.8 percent at the present price of Rs. 18.45 a share. Taxation absorbs Rs. 13 lakhs (against Rs. 8.96 lakhs), development rebate reserve Rs. 87,500 (against Rs. 1.15 lakhs), debenture redemption reserve Rs. 1 lakh (the same) and general reserve Rs. 2.35 lakhs (against Rs. 1.25 lakhs). The carry-forward is Rs. 34,654, against Rs. 33,170 brought in.

Guest, Keen, Williams to Expand

The ordinary shares of Guest, Keen, Williams, Ltd have become sluggish around Rs. 41.60, but investors are likely to be encouraged by the statement of the chairman, Sir Raghavan Pillai, made at the annual general meeting in Calcutta last Thursday. (Details are printed on a later page in this week's issue of Capital.) Sir Raghavan takes a fairly optimistic view about the outlook of the Company and outlines its expansion programme. The Government has approved a substantial ex-

pansion of the capacity of the steel-making plant from 12,000 tons to 45,000 tons a year with a corresponding small increase in the rolling capacity. The expanded plant may start production in 1964. The Company will benefit from the increased steel supply. A number of new lines are being developed, and an agreement has been made with Sandvikens Jernverks Aktiebolag of Sweden for manufacturing hollow alloy steel bars for rock drills subject to the approval of the Government. Plans are also being made to manufacture several types of fastenings hitherto not produced in India. The implementation of the various expansion schemes will be helped by a foreign exchange loan of about £1.5 million which Guest, Keen and Nettlefolds Ltd of the U.K. has agreed to give.

Pointing to the rise in sales in 1961, Sir Raghavan says that the year has been one of rapid progress and consolidation. The beneficial effects of expansion have begun to show, and the coming results may reflect them more clearly. The new rolling mills in Calcutta works have been operated to full capacity, and they are now supplying mild steel rods to the Bhandup works. In rolling bars for outside sales, the mills have had to rely on the raw materials produced by the Company's own steel-making furnaces, in addition to the small supply received from the major steel producers in India. The raw material shortage has, therefore, affected the sales of the steel division. The bright steel bar shop has started producing and the good working of the department is expected to be reflected in higher earnings during the current year. The engineering division is diversifying its activity. When the raw material from Hindustan Steel is available, the working of the crossing sleeper department will improve. The production of bolts, nuts and rivets has increased. But the working of the Calcutta works was affected by the power shortage. The capacity of the Bhandup works for producing machine screws has been extended.

Active steps are being taken to promote export of the Company's products. There has been a rise in the profit during 1961, and a taxable ordinary dividend of 14 percent has been paid. The

taxable ordinary dividend was 16 percent for 1960, but the share capital was doubled to Rs. 4 crores by issuing rights shares of Rs. 10 each at a premium of Rs. 18.50 a share on 12th November, 1960.

Indian Standard Wagon Does Well

The ordinary shares of the Indian Standard Wagon Co. Ltd have spurred to Rs. 206 mainly because of the Company's decision to issue bonus shares in the proportion of one new share for each one held by capitalising reserves. The confidence is also reinforced by the excellent results for the year ended March 1962. The profit has risen from Rs. 44.4 lakhs in 1960-61 to Rs. 67.96 lakhs in 1961-62, after providing Rs. 6.3 lakhs (against Rs. 7.39 lakhs) for depreciation. A taxable ordinary dividend of 28.5 percent has been maintained, which offers a yield of 3.5 percent at the present price. As the dividend is covered more than six times, there should be no difficulty in maintaining it on the increased capital when the bonus shares are issued. Taxation absorbs Rs. 42 lakhs (against Rs. 24.5 lakhs) and development rebate statutory reserve Rs. 45,660 (against Rs. 23,252). General development reserve is allocated Rs. 5.29 lakhs (against Rs. 30,990) and general reserve Rs. 7.07 lakhs (against Rs. 1 lakh). The carry-forward is Rs. 78,603, against Rs. 53,466 brought in. The directors say that substantial reserves are necessary for completing the modernisation schemes. The par value of the share is Rs. 25 each.

New Dooars, Choonabhutti Tea

The reports of two Dooars gardens—the New Dooars and Choonabhutti Tea Companies of the Andrew Yule group—show that their profits have fallen during the past year. New Dooars has cut the taxable ordinary dividend to 20 percent from 35 percent, and it absorbs Rs. 2.80 lakhs. At the present price of Rs. 296 a share, the yield is 6.3 percent. The profit has declined from Rs. 9.76 lakhs to Rs. 4.53 lakhs, after transferring Rs. 1.73 lakhs (against Rs. 1.54 lakhs) to depreciation. Taxation absorbs Rs. 1.63 lakhs (against Rs. 4.19 lakhs). The carry-forward is Rs. 55,177, against Rs. 59,842 brought in. The crop was affected by bad weather and fell to 7,847 quintals from 8,122 quintals in the previous season. The average sale price declined from Rs. 5.28 to Rs. 4.31 a kilogram. Estimates during the current year have been made for a crop of 7,500 quintals.

The profit of Choonabhutti Tea has fallen from Rs. 6.08 lakhs to Rs. 2.24 lakhs, after raising depreciation from Rs. 1.02 lakhs to Rs. 1.32 lakhs. The taxable ordinary dividend has been reduced from 32.5 percent to 20 percent, which absorbs Rs. 1.80 lakhs. It offers a yield of 7.6 percent at the present price of Rs. 262 a share. Taxation absorbs Rs. 80,000 (against Rs. 2.42 lakhs) and the carry-forward is Rs. 87,572, against Rs. 96,041 brought in. The production fell from 5,333 quintals to 5,142 quintals, and the average sale price from Rs. 5.15 to Rs. 4.45 a kilogram. A crop of 5,300 quintals, it is estimated, will be raised during 1962.

Standard Coal Pays Less

The Standard Coal Co. Ltd, which is now mainly an investment Company, has earned a profit of Rs. 1.85 lakhs during the year ended December 1961, against Rs. 2.18 lakhs in 1960. The taxable ordinary dividend has been cut from 15 percent to 10 percent. It is covered more than twice and offers a yield of 6.3 percent at the present price of Rs. 16 a share. Taxation is allocated Rs. 88,735 (against Rs. 1.03 lakhs). The carry-forward is Rs. 38,908, against Rs. 20,718 brought in. The total market value of investments amounted to Rs. 34.38 lakhs at the end of December 1961.

Indo-Burma Petroleum Profit Falls

Sales of the Indo-Burma Petroleum Co. Ltd improved to Rs. 1.89 crores during the year ended December 1961, from Rs. 1.77 crores in 1960, but the profit has fallen from Rs. 1.01 crores to Rs. 63.36

lakhs, after raising depreciation from Rs. 4.51 lakhs to Rs. 5.25 lakhs. The directors say that the profit margin is likely to remain low. A taxable ordinary dividend of 25 percent, including an interim of 10 percent, has been paid. It works out to a yield of 8.8 percent at the present price of Rs. 28.50 a share. The taxable ordinary dividend was 30 percent for 1960. Taxation absorbs Rs. 31.33 lakhs (against Rs. 43.25 lakhs), development rebate reserve Rs. 58,073 (against Rs. 85,015) and ordinary capital of Rs. 1 crore, divided into shares of Rs. 10 each, is backed by reserves of more than Rs. 2.61 crores.

British Paints Earns Less

British Paints Ltd has maintained the taxable ordinary dividend at 12.5 percent for the year ended December 1961, although the share capital has meanwhile been raised from Rs. 28.37 lakhs to Rs. 50 lakhs. The dividend offers a yield of 5 percent at the present price of Rs. 25.12 a share and is covered more than twice. The profit has declined from Rs. 13.58 lakhs in 1960 to Rs. 13.05 lakhs in 1961 in spite of a substantial rise in sales. The profit has fallen due to increased production costs. Taxation is allocated Rs. 6.4 lakhs (against Rs. 6.82 lakhs) and general reserve Rs. 1.75 lakhs (against Rs. 3.33 lakhs). The carry-forward is Rs. 19,940, against Rs. 20,721 brought in.

In order to cover the increase in production costs, the price of paints has had to be raised. As the sale of synthetic resins is more remunerative, steps have been taken to raise their production. The directors say that the collaboration arrangement is still being discussed with the Government. Energetic moves have been made to promote the export of British Paints' products.

Williamson Magor Tea Results

The results of the tea Companies of the Williamson Magor group for the year ended December 1961 are now available. The Soom Tea Company has decided to issue bonus shares in the proportion of one new share for every two held by capitalising reserves because the present issued capital does not reflect the actual capital employed in the business. The taxable ordinary dividend has been cut from 50 percent to 40 percent, including an interim of 20 percent. The dividend absorbs Rs. 1.20 lakhs and works out to a yield of 8 percent at the present price of Rs. 50.25 a share. The profit has amounted to Rs. 2.67 lakhs (against Rs. 2.87 lakhs). Dividend equalisation account is allocated Rs. 15,000 and development rebate reserve Rs. 8,000. The carry-forward is Rs. 1.80 lakhs, against Rs. 1.44 lakhs brought in. The crop was 166,630 kilograms, compared with 152,998 kilograms. The average sale price declined from Rs. 7.44 to Rs. 7.38 a kilogram. Estimates for a crop of 159,700 kilograms have been made during 1962 at a cost of Rs. 5.97 a kilogram. The estate is situated in Darjeeling district.

The Nagri Farm Tea Co. Ltd (another Darjeeling garden) has made a profit of Rs. 2.86 lakhs (against Rs. 2.71 lakhs). The taxable ordinary dividend has been cut from 30 percent to 25 percent, including an interim of 10 percent. It absorbs Rs. 74,975 and offers a yield of 9.8 percent at the present of Rs. 25.44 a share. Building reserve is allocated Rs. 25,000 (the same) and repairs and renewals reserve Rs. 25,000. The carry-forward is Rs. 1.68 lakhs, against Rs. 1.25 lakhs brought in. There was a crop of 220,390 kilograms, compared with 216,630 kilograms. The average sale price rose from Rs. 6.80 to Rs. 7.14 a kilogram. The 1962 crop estimate is placed at 199,600 kilograms at a cost of Rs. 6.48 a kilogram.

The Dimakusi Tea Co. Ltd, an Assam garden, has cut the taxable ordinary dividend from 25 percent to 20 percent, including an interim of 10 percent. The dividend absorbs Rs. 94,680 and works out to a yield of 8.7 percent, at the present price of Rs. 23.12 a share. The profit has amounted to Rs. 2.20 lakhs (against Rs. 2.72 lakhs). The carry-forward is Rs. 1.82 lakhs, against Rs. 1.46 lakhs brought in. The crop was 301,383 kilograms, against 283,650 kilograms and the average sale price fell from Rs. 6.19 to Rs. 5.81 a kilogram. The

1962 crop has been estimated at 308,000 kilograms at a cost of Rs. 4.96 a kilogram.

The profit of the Dufflaghur Tea Co. Ltd (an Assam garden) has improved from Rs. 3.75 lakhs to Rs. 3.87 lakhs. A taxable ordinary dividend of 25 percent, including an interim of 10 percent, has been maintained, absorbing Rs. 1.75 lakhs. The yield is 8.7 percent at the present price of Rs. 28.75 a share. General reserve absorbs Rs. 25,500, and renewals reserve Rs. 50,000 (the same). The output rose from 388,343 kilograms to 464,799 kilograms, but the average sale price fell from Rs. 6.18 to Rs. 5.77 a kilogram. Estimates for a crop of 454,000 kilograms have been made during 1962, at a cost of Rs. 4.83 a kilogram.

The profit of the Seajuli Tea Co. Ltd (an Assam garden) has declined from Rs. 1.99 lakhs to Rs. 1.31 lakhs. The taxable ordinary dividend has been cut from 22.5 percent to 15 percent, absorbing Rs. 37,350. At the present price of Rs. 22.50, the yield works out to 6.7 percent. Repairs and renewals reserve is allocated Rs. 25,000 (the same). The crop increased from 203,964 kilograms to 242,697 kilograms, while the average sale price fell from Rs. 6.24 to Rs. 5.56 a kilogram. The crop for 1962 has been estimated at 220,000 kilograms at a cost of Rs. 5.26 a kilogram.

Structural Engineering to Raise Capital

The extraordinary general meeting of Structural Engineering Works Ltd on 28th May, empowered the Company to increase its capital to Rs. 2 crores by the creation of 45,000 new ordinary shares of Rs. 100 each and 55,000 unclassified shares of Rs. 100 each. Additional funds are needed to finance the various expansion schemes which, it is estimated, will involve a total capital outlay of over Rs. 1.50 crores. The Company has already received the Government's permission to issue 45,000 equity shares of Rs. 100 each, at a premium of Rs. 5 a share in the proportion of one new share for each one held. It might be mentioned that the Company had sought permission to issue rights shares at par, but the Government has sanctioned the issue only at a premium, which, however, is negligible. The Rs. 100-paid share of Structural Engineering is currently quoted around Rs. 180. The Company proposes to manufacture Cochran boilers and heavy types of pressure vessels in collaboration with Cochran and Co. Annan Ltd of Scotland. Prestressed and reinforced cement concrete pipes are to be manufactured in collaboration with Noreno of Norway. Besides, the Company proposes to install a galvanising plant in Bombay for the fabrication and supply of transmission towers and also an additional plant and equipment at the Calcutta works. All these schemes are estimated to cost about Rs. 1.58 crores, of which Rs. 23.67 lakhs has already been spent. The new rights issue, including the premium of Rs. 5 a share, will provide Rs. 47.25 lakhs. Negotiations are in progress for a loan of Rs. 60 lakhs from the Industrial Credit and Investment Corporation of India. The balance is to be arranged from bankers and other financial agencies. Besides these manufacturing schemes, the Company has also on hand contracts for over Rs. 2 crores which include orders for the Dhuvran power project of the Gujarat Government and the heavy electricals plant in Bhopal.

Colour-Chem Results Impress

The directors of Colour-Chem Ltd have raised the dividend for the year ended March 1962 from Rs. 8 to Rs. 12 a share. The higher dividend is on an increased capital of Rs. 1.25 crores. The total distribution, therefore, amounts to Rs. 15 lakhs, compared with Rs. 8 lakhs in 1960-61. The substantially larger distribution is fully justified by the Company's impressive performance during the year. The preliminary report shows that it has made a gross profit of Rs. 95.90 lakhs, which is 106 percent more than the 1960-61 figure of Rs. 46.54 lakhs. Out of the proposed dividend of Rs. 12 a share, Rs. 9.20 is expected to be free of tax—being paid out of a special reserve—and the balance of Rs. 2.80 will be subject to tax. The net dividend, therefore, will work out to Rs. 11.16, compared with Rs. 8 in 1960-61. After providing Rs. 8.48 lakhs (against Rs. 10.62 lakhs) for depreciation,

Rs. 3,804 (against Rs. 7.82 lakhs) for development rebate reserve and Rs. 41.50 lakhs (against Rs. 9.50 lakhs) for taxation, the net profit amounts to Rs. 45.86 lakhs, against Rs. 18.59 lakhs in the preceding year. Adding Rs. 9,028 being the adjusted balances of special reserve and Rs. 32,400 being the surplus of the previous year, the disposable surplus amounts to Rs. 46.28 lakhs. Allocation to general reserve has been raised from Rs. 9 lakhs to Rs. 26 lakhs and Rs. 4 lakhs (against Rs. 2 lakhs) has been set aside for dividend equalisation reserve.

The directors have been advised that out of the year's profit, Rs. 11.78 lakhs is expected to be exempt from tax under Section 84 of the Income Tax Act, 1961, and they propose to transfer this amount to a separate reserve. It is proposed to use Rs. 11.50 lakhs out of this special reserve for payment of dividend. An application is being made by the Company to the income tax authorities under Section 197 (3) of the Indian Income Tax Act, 1961, to certify the figure for exemption. The proposed dividend claims Rs. 15 lakhs. After making certain minor adjustments, there remains a balance of Rs. 91,291 to be carried forward. The Rs. 100-paid shares of Colour-Chem, which had been marked up from Rs. 450 to Rs. 520 over the past few weeks, were sold down to Rs. 475 in the last week's panicky sell-off, following the news of the crash in the world stock markets, but the quotation recovered quickly to around Rs. 500.

S.I. Viscose Progress Report

The working of South India Viscose for 1961 shows a net profit of Rs. 1.11 lakhs, which is being carried forward to the next year. The directors state in their fourth annual report that the Company has provided depreciation of only Rs. 17.96 lakhs out of the full amount of Rs. 71.05 lakhs as computed according to the income tax rules. South India Viscose produced 1,849 tons of staple fibre during the year. Although the machinery proved its capacity for an extra 10 percent production, this could not be achieved due to the inadequate supply of wood pulp. The production of rayon yarn was not more than 148 tons due to the difficulty in securing high-grade wood pulp. Sulphuric acid production amounted to 2,939 tons and that of carbon disulphide to 612 tons. Against the allotment made by the Textile Commissioner, 1,880 tons of staple fibre were sold during the year. There were no sales of rayon yarn as the orders for distribution were received late. The sulphuric acid and carbon-disulphide were mainly consumed in the manufacture of staple fibre and rayon yarn. The directors state that on 31st December, 1961, the number of shareholders of the Company was 6,454, who held 480,944 shares. Of these 15 were institutions holding among themselves 296,272 shares. The Italian collaborators have been allotted 3,722 shares, and another 5,334 are yet to be allotted as the terms of the collaboration agreement are inconsistent with the directions of the Government of India. The 100-paid shares of S. I. Viscose, which had touched a high of Rs. 197 in April, are now quoted around Rs. 179.

Travancore Cements Profit Falls

Although the directors of Travancore Cements have maintained the dividend for 1961 at 6 percent, less tax, the working results of the Company are far from satisfactory. Sales are down from Rs. 71.30 lakhs to Rs. 64.22 lakhs, and the profit after providing for depreciation and other charges but before taxation, is also lower at Rs. 4.99 lakhs, compared with Rs. 5.22 lakhs in 1960. The unsatisfactory results are attributed to a smaller turnover, stoppage of production of grey clinker for about two months and large unsold stocks of white clinker. Sales of white cement, however, recorded an increase of about 26 percent over the 1960 figure. The directors have provided Rs. 6.22 lakhs (against Rs. 5.90 lakhs) for depreciation. Adding Rs. 51,000 brought forward from the previous year and Rs. 3.75 lakhs transferred from the deferred taxation reserve, the available surplus amounts to Rs. 9.25 lakhs. The directors have set aside Rs. 6 lakhs for taxation and Rs. 9.440 for rehabilitation and modernisation reserve. The dividend on ordinary shares absorbs Rs. 3 lakhs, leaving a sum of

Rs. 15,547 to be carried forward. The Company had no taxable income till 1959 as a result of initial and additional depreciation and development rebate allowance under the income tax rules. The directors state that the Central Government has fixed the cement price payable to the Company from 1st November, 1961, at Rs. 95 a tonne out of which Rs. 2 a tonne, less tax, has to be kept as a separate fund for rehabilitation, reserve, etcetera. The revised price is Rs. 12.82 a tonne higher than the previous rate. The Rs. 10-paid share of Travancore Cements is currently quoted around Rs. 8.60 cum-dividend offering a gross yield of about 7.5 percent.

Alembic Chemical Profit Down

Although the sales of Alembic Chemical Works Co. Ltd in 1961 recorded an increase of about 8.8 percent from Rs. 2.61 crores to Rs. 2.84 crores, the gross profit fell by about 10.8 percent from Rs. 46.75 lakhs to Rs. 41.68 lakhs. The Company's working results were adversely affected mainly by the stoppage of sales of antibiotics in the last quarter of 1961 due to defects noticed in the process of filling vials. All the stocks of filled vials were frozen and further filling was resumed only towards the end of the year. After providing Rs. 18.05 lakhs (against Rs. 12.52 lakhs) for depreciation, and Rs. 8.25 lakhs (against Rs. 10.20 lakhs) for taxation, the net profit amounts to Rs. 13.69 lakhs, against Rs. 20.91 lakhs in 1960. Allocation to development rebate reserve has been reduced from Rs. 7.15 lakhs to Rs. 4.58 lakhs. The directors have withdrawn Rs. 3.85 lakhs from dividend equalisation reserve in order to provide for the proposed dividend of 14 percent (the same as in 1960) on the increased capital, which absorbs Rs. 13.07 lakhs, against Rs. 11.90 lakhs in the previous year. The preference dividend accounts for Rs. 86,000. The equity capital of the Company was increased from Rs. 85 lakhs to Rs. 95 lakhs and the new shares were entitled to dividend for a period of ten months.

The directors feel that the temporary setback in the profits does not justify any cut in the dividend on increased capital, particularly when the current year's results are expected to be good. The working results for the first three months of the current year, it is said, have been encouraging. The Company has secured a foreign exchange loan of Rs. 16.30 lakhs from the Industrial Credit and Investment Corporation of India for the purchase of capital equipment for its penicillin and yeast expansion programmes. The necessary import licences are awaited. Against an equity capital of Rs. 95 lakhs, the Company's reserves and surplus amount to Rs. 59.74 lakhs. The gross block amounts to Rs. 2.67 crores, and it has been written down to Rs. 1.70 crores. The Rs. 100-paid share of Alembic Chemical is currently quoted around Rs. 230.

J. K. Cotton Repeats

The directors of the Juggilal Kamlapat Cotton Spinning and Weaving Mills Co. Ltd have maintained the ordinary dividend at 12.5 percent for the year ended December 1961. The preliminary report shows that the Company has not done as well as in 1960, with the gross profit down by about 20 percent from Rs. 91.91 lakhs to Rs. 73.39 lakhs. The provision for depreciation has been pruned from Rs. 72.62 lakhs to Rs. 32.30 lakhs, but the allocation to development rebate reserve has been raised from Rs. 10 lakhs to Rs. 16 lakhs. There being no tax liability, the net profit amounts to Rs. 25.09 lakhs, against Rs. 9.29 lakhs in 1960. The Rs. 10-paid share of the Company is currently quoted around Rs. 20.52, offering a yield of about 6.8 percent.

Associated Rubber to Issue Bonus Shares

The Associated Rubber Industries Ltd has fared very badly in 1961. Although sales have declined only slightly from Rs. 38.30 lakhs to Rs. 37.32 lakhs, the gross profit is down from Rs. 8.05 lakhs to Rs. 4.68 lakhs. The directors attribute the disappointing results to a number of factors. The production pattern had to be

adjusted following the transfer of synthetic rubber cots and aprons manufacture to Inarco Ltd in which the Company holds 50 percent of the capital. Raw material costs have risen due to the imposition of the excise duty. Import duties and packing and freight charges have also increased. A cess of 30nP a kilogram on raw rubber has been imposed; there has been reduction in prices of dipped latex products and keen competition from large manufacturing units. The installation of new footwear machinery for the production of moulded shoes also affected the normal production programme. The directors state that the profit margin for each unit of production is small in footwear, but it is one of the few items capable of mass production. It is hoped that, once this line is properly established, it will contribute its reasonable share to the Company's earnings.

Out of the year's profits, the provision for depreciation has been raised from Rs. 1.75 lakhs to Rs. 2.39 lakhs, and a sum of Rs. 91,000 (against Rs. 28,000) has been transferred to development rebate reserve. Taxation accounts for Rs. 50,000, against Rs. 2.12 lakhs. The preference dividend absorbs Rs. 75,000, against Rs. 67,000. No allocation has been made to debenture redemption reserve, which received Rs. 1.10 lakhs in 1960. There remains a balance of Rs. 10,768 to be carried forward, against Rs. 5,157 brought in. The directors have passed the dividend on ordinary shares, but have announced a bonus issue in the proportion of one share for every ten held. They state that the Company's sales of footwear to the U.K. and West Germany are steadily increasing. The management is taking steps to widen the range of industrial rubber goods, the market for which, it is expected, will expand with the increasing tempo of industrialisation in the country. Difficulties in getting import licences for new equipment and the shortage of capital resources, however, limit the rate of expansion in the line. With the installation of new footwear machinery, the Company is better equipped to face competition in export markets. The production of synthetic-rubber cots and aprons at the Thana factory of Inarco Ltd is steadily increasing, and the Company, it is expected, will receive its first dividend from its investment in Inarco in 1963.

India Reinsurance Fares Well

The India Reinsurance Corporation reports encouraging results for 1961. The net profit after providing Rs. 3.50 lakhs (against Rs. 2.80 lakhs) for taxation, records an appreciable increase to Rs. 9.80 lakhs from Rs. 6.54 lakhs. The dividend has been stepped up from 6 percent to 8 percent, absorbing Rs. 8 lakhs, leaving a sum of Rs. 2.58 lakhs to be carried forward, against Rs. 78,370 brought in. In his statement to shareholders, the chairman, Mr. A. D. Shroff, says that 1961 was on the whole as favourable as 1960 for general insurance business in India. There was a significant increase in the premium income and the chairman attributes this to the various steps taken by the Corporation in the past to improve the reciprocity obtained by it and to develop a portfolio of non-reciprocal business of good quality. In spite of a huge loss, estimated around Rs. 75 lakhs, due to a serious fire in a Bombay textile mill, the overall fire loss ratio in India for 1961 was highly satisfactory. Mr. Shroff says that in view of the excellent experience of fire business in India over a period of years, the Tariff Committee has decided to reduce the fire tariff rates according to experience on different classes of risks in such a way as to bring about an average reduction of about 15 percent. This reduction is to come into force from 1st July. Mr. Shroff adds that there was no major loss either on the hull or cargo side, and that the hull business showed the usual level of high profit. Motor, workmen's compensation, engineering and personal accident business showed satisfactory results, and the profit on burglary, cash-in-transit, third party, solvency and credit business was extremely good. Aviation business also showed high profit.

The gross premium income of the Corporation in all departments amounted to Rs. 5.06 crores, against Rs. 3.80 crores in 1960. After processing this premium and after fulfilling the statutory and retrocession obligations, the Corporation wrote a net premium of Rs. 2.59 crores, against Rs. 1.90 crores in the previous year. The total net claims paid and outstanding amounted to Rs. 1.21 crores, against Rs. 96.16 lakhs. In the fire department, the gross premium amounted to Rs. 3.02 crores and the net premium written was Rs. 1.14 crores, against Rs. 83.20 lakhs. Net claims paid and outstanding totalled Rs. 48.90 lakhs, against Rs. 37.67 lakhs. The reserves increased by Rs. 15.40 lakhs to Rs. 57 lakhs. The gross premium of the marine department amounted to Rs. 1.10 crores. The net premium was up from Rs. 41.57 lakhs to Rs. 59.68 lakhs. Net claims paid and outstanding amounted to Rs. 38.90 lakhs, against Rs. 30.77 lakhs, and the reserves increased by Rs. 18.10 lakhs to Rs. 59.68 lakhs. In the miscellaneous department, the gross premium amounted to Rs. 93.15 lakhs. The net premium rose from Rs. 65.59 lakhs to Rs. 85.16 lakhs. Net claims paid and outstanding amounted to Rs. 33.61 lakhs, against Rs. 27.71 lakhs. The reserves increased by Rs. 9.78 lakhs to Rs. 42.58 lakhs. The total departmental reserves for fire, marine and miscellaneous business totalled Rs. 1.59 crores, against Rs. 1.16 crores, showing an increase of Rs. 43.29 lakhs over the year. Mr. Shroff says that during the year, the Corporation explored possibilities of expanding operations in Australia, south-east Asia and the Far East, and it was felt that there was scope for securing "desirable business" in these areas. The Corporation has set up two branch offices in Australia and developed connections in other territories.

Apollo Mills Turns the Corner

The shareholders of Apollo Mills who have gone without a dividend for five years—they have not enjoyed any capital appreciation either as the Rs. 2-paid share is still quoted around Rs. 2.24—will not perhaps have to wait much longer before their investment begins to bear fruit. The Company did well in 1961, and it has been able to wipe out all the losses carried forward from earlier years. In 1961, the Company's sales rose by about 18 percent from Rs. 2.02 crores to Rs. 2.38 crores, and the gross profit improved by nearly 12 percent from Rs. 25.77 lakhs to Rs. 28.88 lakhs. After providing Rs. 4.76 lakhs (against Rs. 5.13 lakhs) for depreciation and Rs. 3,298 (against Rs. 1,737) for development rebate, the net profit amounts to Rs. 23.83 lakhs, against Rs. 19.01 lakhs in 1960. A sum of Rs. 5 lakhs has been transferred from rehabilitation and development reserve. After taking into account the debit balance of Rs. 29 lakhs and making necessary adjustments, a sum of Rs. 1.35 lakhs is being carried forward. The directors propose to increase the capital of the Company by a further issue of 2.5 million equity shares of Rs. 2 each, subject to the sanction of the Controller of Capital Issues and shareholders' approval. These funds are required for financing the immediate and some long-term programmes of modernisation and renovation. With the implementation of these schemes, the mills will become an up-to-date unit having all facilities including bleaching, mercerising, dyeing, and printing. One hot air stentering machine and one drying range have already been received from West Germany, and an order for a complete printing plant has been placed with an indigenous manufacturer in order to use the printing quota allotted to the mills.

Higher Profit for Jyoti

Jyoti Ltd has done well in 1961, with its sales up by about 28 percent from Rs. 1.34 crores to Rs. 1.72 crores, and the gross profit rising by nearly 19 percent from Rs. 15.13 lakhs to Rs. 17.97 lakhs. Dividend has been maintained at 12 percent, less tax, but since it is on the increased capital, it involves a larger distribution of Rs. 5.68 lakhs, against Rs. 4.80 lakhs in 1960. After providing Rs. 4.01 lakhs (against Rs. 3.58 lakhs) for depreciation, Rs. 1.84 lakhs (against Rs. 43,000) for development rebate reserve, and Rs. 4.95 lakhs (against Rs. 4.70 lakhs) for taxation, the net profit amounts to Rs. 6.24 lakhs, against Rs. 5.65 lakhs in the previous year. The directors have allocated Rs. 50,000 (against Rs. 70,000) to the gratuity reserve and Rs. 10,000 (the same) to the reserve for doubtful debts. The proposed dividend absorbs Rs. 5.68 lakhs (against Rs. 4.80 lakhs), leaving Rs. 11,756 to be carried forward, against

Rs. 15,090 brought in. The directors state that the Company's order-books are satisfactorily filled. It was unable to meet fully the demand for switch-gears and switchboards due to restricted imports of specialised components. Some of the components are now going to be manufactured by the Company and others will be produced by the suppliers. The Company has entered into collaboration arrangements with Gilbert Gilkes and Gordon Ltd of Kendal, U.K., for the manufacture of high-head and low-head turbines in large sizes. It has also entered into a collaboration agreement with Messwandler Bau for the manufacture of instrument transformers required for the production of switchboards. The Rs. 100-paid share of Jyoti Ltd is currently quoted around Rs. 207.50.

Universal Fire Insurance Earns More

Universal Fire and General Insurance Co. Ltd reports satisfactory results for the year ended December 1961. The total net premium income after deducting reinsurance in the various departments—fire, marine, accident and miscellaneous—amounts to Rs. 41.22 lakhs, compared with Rs. 38.66 lakhs in 1960. The year's working has resulted in a profit of Rs. 4.22 lakhs, compared with Rs. 3.13 lakhs in the previous year. The dividend has been maintained at 20 percent subject to tax. Allocation to the reserve for taxation has been raised from Rs. 1.10 lakhs to Rs. 1.80 lakhs, and general reserve gets Rs. 1.20 lakhs, against Rs. 80,000. After providing for the proposed dividend, there remains a balance of Rs. 21,494 to be carried forward, against Rs. 30,374 brought in. The net premium income of the fire department is up from Rs. 24.48 lakhs to Rs. 26.64 lakhs. Claims paid and outstanding amount to Rs. 9.73 lakhs, and the profit from this department has improved from Rs. 2.75 lakhs to Rs. 3.82 lakhs. The net premium income in the accident and miscellaneous department has increased only slightly from Rs. 12.74 lakhs to Rs. 12.87 lakhs. Claims paid and outstanding amount to Rs. 6.85 lakhs, and the claims ratio works out to 53.21 percent, compared with 47.23 percent in 1960. There is a loss in this department amounting to Rs. 44,100, but it is substantially less than the 1960 figure of Rs. 78,208. The net premium income of the marine department is higher at Rs. 1.70 lakhs, compared with Rs. 1.43 lakhs. Claims paid and outstanding amount to Rs. 83,633, and the loss in this department has risen from Rs. 20,632 to Rs. 36,390. The departmental and general reserves have increased from Rs. 21.34 lakhs to Rs. 23.96 lakhs. The Rs. 10-paid (face value Rs. 50) share of the Company is currently quoted around Rs. 14.52 cum-dividend, offering a gross yield of nearly 16 percent.

Bonus Issue from Modern Mills

The directors of Modern Mills have decided to increase the capital of the Company by a bonus issue on the basis of one new share for every six held. With this, the Company's paid-up capital will increase from Rs. 46.47 lakhs to Rs. 54.22 lakhs, and the number of shares (Rs. 50-paid) will go up from 93,947 to 108,438. For the purpose of issuing bonus shares, the Company will use the amount of Rs. 2.80 lakhs in the share premium account and draw Rs. 12.69 lakhs from general reserve. It is unlikely to have any difficulty in maintaining the dividend at 12 percent on the increased capital. The Rs. 50-paid share of Modern Mills is currently quoted around Rs. 76, the highest price recorded this year being Rs. 84.

General Radio and Appliances Does Well

General Radio and Appliances Ltd, which was converted into a full-fledged public company in June 1961, reports encouraging results for 1961. Net sales are up by about 20 percent from Rs. 2.23 crores to Rs. 2.42 crores, and the gross profit has risen from Rs. 11.13 lakhs to Rs. 12.25 lakhs. The dividend has been maintained at Rs. 2 a share, less tax, but it involves a larger distribution because of the increase in the capital from Rs. 20 lakhs to Rs. 28 lakhs. The new 75,000 shares allotted on 17th August, 1961, are entitled to a dividend of 75nP a share. The 5,000 shares

allotted on 4th October will receive 50nP a share. The total dividend distribution amounts to Rs. 4.59 lakhs, compared with Rs. 4 lakhs in 1960. Allocations include Rs. 52,723 (against Rs. 42,037) for depreciation, Rs. 5.86 lakhs (against Rs. 4.80 lakhs) for taxation and Rs. 9,952 (against Rs. 1 lakh) for general reserve. After providing for the proposed dividend, there remains a balance of Rs. 1.09 lakhs to be carried forward, against Rs. 66,862 brought in.

Radhakrishna Mills Sales, Profit Up

Radhakrishna Mills of Coimbatore reports satisfactory results for 1961, with sales up by about 19 percent from Rs. 1.90 crores to Rs. 2.26 crores, and the gross profit rising by 9 percent from Rs. 28.58 lakhs to Rs. 31.17 lakhs. The directors state that the favourable trade conditions enabled the Company to earn decent profits. Radhakrishna Mills was also able to do well in the export field, its sales fetching Rs. 25,693 under the export incentive scheme. After providing Rs. 5.38 lakhs (against Rs. 5.54 lakhs) for depreciation and deducting other charges, the net profit amounts to Rs. 23.75 lakhs, against Rs. 21.08 lakhs in 1960. Appropriations include Rs. 3.73 lakhs (against Rs. 1.90 lakhs) for bonus to staff and operatives, Rs. 11.51 lakhs (against Rs. 10.90 lakhs) for contingency reserve, and Rs. 61,000 (against Rs. 73,000) for development rebate reserve. Dividend has been raised, although only slightly, from 12 percent to 12.5 percent, subject to tax, and this absorbs Rs. 7.88 lakhs, leaving a sum of Rs. 3,497 to be carried forward, against Rs. 2,429 brought in. The directors state that combining machinery of the value of Rs. 3.4 lakhs was commissioned during the year. The gross block amounts to Rs. 1.21 crores, and this has been written down to around Rs. 44 lakhs. The Rs. 25-paid share of Radhakrishna Mills is quoted around Rs. 38.50.

Share Offer by Jhelum Spinning

A new Company known as Jhelum Spinning and Weaving Mills Ltd is likely to enter the market shortly to raise capital required for the spinning mill which it is setting up in Kathus in Jammu and Kashmir State. The erection of the building and machinery has already started, and if all goes well, production will start before the end of 1963. The mill, which will manufacture cotton yarn, will have 12,500 spindles to start with. This is expected to be raised to 25,000 spindles in due course. The promoters hope that the mill will be permitted to produce staple fibre also. The Company will have an authorised capital of Rs. 1 crore, of which Rs. 40 lakhs will be issued in the beginning. The issued capital is made up of Rs. 30 lakhs in equity shares of Rs. 10 each, and Rs. 10 lakhs in 9.3 percent cumulative preference shares of Rs. 100 each. The promoters, directors and their friends will take up equity shares worth Rs. 12.5 lakhs, and the balance of 175,000 equity shares of Rs. 10 each and 10,000 preference shares of Rs. 100 each will soon be offered for public subscription.

Outlook for Elphinstone Mills

The preliminary report on the working of the Elphinstone Mills for 1961, released along with the announcement of the dividend, showed that the Company had done very well during the year. Sales rose by about 27.7 percent to Rs. 2.89 crores from Rs. 2.27 crores, and the gross profit recorded an increase of nearly 32 percent to Rs. 48.78 lakhs from Rs. 36.93 lakhs. The dividend which had been increased from 14 percent to 18 percent in 1960, was further raised to 22 percent in 1961. But investors in the Company's shares have done much better than the increases in the dividend would suggest. The Rs. 50-paid share of the Company rose from Rs. 55 to Rs. 126 in 1961, and made a new high of Rs. 142 this year. The latest quotation is not much lower at Rs. 134. In their full report, the directors take a rather cautious view of the outlook for the Company which is in line with the prospects for the industry as a whole. They state that the cotton supply position remains critical and the increase in the ceiling prices of cotton

for the 1962-63 season will adversely affect the Company's earning capacity if cloth prices are not raised. The proposed abnormal increase in the excise duty on processed cloth is also likely to affect the Company's profit margin, unless the duty is reduced or the burden is allowed to be passed on to the consumer. The wage bill will also increase as a result of the increase of Rs. 2 a month in the basic wage of workers from January 1962. Machinery of the value of Rs. 14.83 lakhs was installed in 1961, and machinery worth Rs. 9.63 lakhs, including 48 automatic looms and a mercerising range, have since been erected and operated, but the automatic looms are having teething troubles. Orders for further machinery have been placed. The proposal to purchase the entire block of the Moon Mills at a cost of Rs. 35 lakhs was put through in August 1961, and the directors have now drawn up a scheme of modernisation of these mills to be financed partly from its existing resources and partly from an additional loan from the National Industrial Development Corporation. The application for a loan has been made. The Company has already a borrowing arrangement with the Corporation for Rs. 44.38 lakhs, of which it has availed itself of Rs. 26.23 lakhs up to the end of 1961.

Seshasayee Industries Shows Loss

The working of Seshasayee Industries Ltd for the year ended December 1961, shows a loss of Rs. 8.97 lakhs. This includes depreciation on the Company's block and interest paid on borrowings, totalling Rs. 6 lakhs which reduce the trading loss for the year to Rs. 2.97 lakhs. The directors state that considerable development work was carried on during the year. The insulators and other products manufactured by Seshasayee Industries have been well received. The Company has now taken up a scheme for expanding capacity to 3,000 tons from the present 1,200 tons, and the necessary equipment has been ordered. To finance this expansion, a fresh capital issue of Rs. 40 lakhs in equity shares was made. The expansion of the machine shop is expected to be completed by the end of 1962 or early 1963, while that at the ceramic section is expected to be completed before the end of 1963. The Company has achieved commercial production of all the items of H.T. insulators. All these items are reported to be in good demand.

W.I. Tanneries Cuts Dividend

The Western India Tanneries Ltd has fared badly in the year ended December 1961. Sales have fallen from Rs. 56.47 lakhs to Rs. 54.50 lakhs, and so has the gross profit from Rs. 5.96 lakhs to Rs. 5.65 lakhs. The dividend has been reduced from 24 percent to 20 percent, subject to tax. All this came about due to the difficult labour situation towards the end of the year. Production had to be drastically curtailed in November and December as the labour union had served a strike notice. The directors, however, point out that a settlement for three years has been signed and that this would entail an increase of about 10 percent in the wages with effect from 1st January, 1962. After providing Rs. 35,211 (against Rs. 35,465) for depreciation, Rs. 3,000 (against Rs. 5,200) for development rebate reserve and Rs. 2.45 lakhs (against Rs. 2.30 lakhs) for taxation, the net profit for 1961 amounts to Rs. 2.28 lakhs, compared with Rs. 2.70 lakhs in the previous year. Allocations include Rs. 79,290 (against Rs. 94,385) for general reserve and Rs. 10,000 (the same) for gratuity reserve. The proposed dividend will absorb Rs. 1.40 lakhs, against Rs. 1.68 lakhs in 1960, leaving a sum of Rs. 7,407 to be carried forward, against Rs. 7,988 brought in.

Sanitaryware from Neiveli Ceramics

Neiveli Ceramics and Refractories Ltd, a new Company incorporated in May 1960 for the production of sanitaryware, glazed wall tiles and stoneware pipes, will soon enter the market to raise funds. The project, it is estimated, will involve a total capital outlay of Rs. 75 lakhs. The Company has been licensed to produce 1,800 tons of sanitaryware, 1,800 tons of glazed wall tiles and

3,000 tons of glazed stoneware pipes. The factory will be located in Vadalur, near Neiveli, where raw materials will be available from the Neiveli lignite mines. The Company has already got a pilot plant producing 15 tons a month of sanitaryware. This will be integrated with the main plant as soon as it is set up. Trial production after the installation of the main plant, it is expected, will begin by about the middle of next year, and the Company hopes to reach full production by the end of 1963. The Company has secured the technical and financial collaboration of a West German firm which is a subsidiary of the well-known Keramag A.G. The foreign collaborator will take up shares of the value of Rs. 1.77 lakhs. Another West German firm, Tranz Kirchfeld GmbH, which has agreed to supply the plant and machinery for the project, is also likely to subscribe for Rs. 2 lakhs worth of equity shares. Neiveli Ceramics will have an authorised capital of Rs. 1 crore consisting of 700,000 equity shares and 300,000 9 percent cumulative preference shares, both of Rs. 10 each. The issued capital will comprise Rs. 42 lakhs in equity shares and Rs. 3 lakhs in preference shares. The details of the capital to be offered to the public are not known, but it is likely that equity shares of the value of Rs. 31 lakhs will be offered for public subscription. Of the total capital outlay of Rs. 75 lakhs, Rs. 45 lakhs will be provided by the capital issue, Rs. 10 lakhs by a loan from the Industrial Credit and Investment Corporation of India and the balance by bank borrowings.

Progress of Premier Fertilisers

During the year ended December 1961, Premier Fertilisers Ltd started the construction of factory buildings. The erection of machinery was also taken up during the year. The expenditure for construction work amounted to Rs. 1.08 lakhs. The income earned during the year, after making provision for development rebate and taxation, amounts to Rs. 49,734 which is carried forward. The report says that all the imported and indigenous items of plant and machinery have been received although there was considerable delay in receiving the indigenous items due to the transport bottleneck. The directors, however, expect the factory to go into production in about a couple of months' time if everything goes according to schedule.

Rights from Bhavani Mills

The working of Bhavani Mills Ltd for the year ended December 1961, shows a net profit of Rs. 2.76 lakhs, after meeting all expenses and providing Rs. 93,221 for depreciation. From this, 11,091 is deducted being the loss brought forward from the previous year. The previous years' depreciation amounts to Rs. 41,571, and loan expenses to Rs. 1,500. The arrears of preference dividend for 1960 amount to Rs. 4,159. The interim preference dividend at 3.33 percent absorbed Rs. 2,092. The interim dividend at 3 percent on ordinary shares account for Rs. 14,780. Development rebate reserve gets Rs. 1.25 lakhs. The proposed final dividend on preference shares will absorb Rs. 2,152. The proposed final dividend of 9 percent on equity shares will take Rs. 48,185. The proposed additional dividend at 0.66 percent on preference shares for 1959 will absorb Rs. 1,243. After transferring Rs. 20,000 to general reserve, a sum of Rs. 609 is carried forward.

The directors state that the working of Bhavani Mills has improved considerably during the year. They expect the Company to make steady progress in the coming years. The directors have decided to make a further issue of equity capital to the nominal value of about Rs. 3.65 lakhs. These shares are to be issued in the proportion of three shares for every two held by the existing shareholders.

Haileyburia Tea Cuts Dividend

A fall in the profit of the Haileyburia Tea Estates Ltd for the year ended December 1961, has compelled the directors to reduce the dividend to 22½ percent from 15 percent in the previous year. The net profit amounts to Rs. 2.98 lakhs, after providing Rs. 1.61 lakhs for depreciation, Rs. 2.80 lakhs

for taxation and Rs. 51,000 for development rebate reserve. The net profit for the previous year was Rs. 4.20 lakhs after providing Rs. 1.34 lakhs for depreciation, Rs. 78,000 for development rebate and Rs. 4.30 lakhs for taxation. With Rs. 32,987 brought forward from the previous year, the total comes to Rs. 3.31 lakhs. Out of this, the proposed 5 percent dividend on preference shares amounts to Rs. 14,000. The proposed dividend of 12½ percent on equity shares, subject to deduction of tax, accounts for Rs. 3.13 lakhs. The balance of Rs. 4,027 is carried forward.

The total crop for the year amounted to 860,196 kilograms, against 829,390 kilograms. The cost of production was higher at 323 cents a kilogram, against 304 cents in 1960. The net average sale price was 441 cents a kilogram, against 460 cents a kilogram in 1960. The estimated crop for the year ending December 1962 is 883,000 kilograms.

Virudhunagar Textile Maintains

The working of Virudhunagar Textile Mills Ltd for the year ended December 1961, shows a net profit of Rs. 5.99 lakhs, after providing for all expenses including depreciation and development rebate. Out of this, Rs. 2.74 lakhs (against Rs. 1.83 lakhs) has been provided for taxation. The dividend on 5 percent tax-free preference shares accounts for Rs. 15,659. The ordinary dividend is proposed to be maintained at 10 percent absorbing Rs. 1.22 lakhs. The proposed 10 percent dividend on deferred shares accounts for Rs. 773. After on setting off the balance of profit against the loss brought forward, there is a loss of Rs. 8,551 which is carried forward. The directors say that the higher excise duty on cloth will prove to be an unbearable burden as the additional sum payable amounts to Rs. 6 lakhs a year.

More from Balarama Varma Textiles

Following a rise in the profit for the year ended December 1961, the directors of Balarama Varma Textiles Ltd have raised the dividend to 10 percent from the previous year's 9 percent. Sales of yarn have risen to Rs. 76.23 lakhs from Rs. 60.06 lakhs. The net profit for the year amounts to Rs. 6.69 lakhs, after meeting all expenses and providing Rs. 3.23 lakhs for depreciation. Adding Rs. 13,798 brought forward from the previous year, the total available for appropriation comes to Rs. 6.83 lakhs. Out of this, the directors have provided Rs. 3.65 lakhs (against Rs. 3 lakhs) for taxation and Rs. 1 lakh (against Rs. 50,000) for general reserve. The proposed dividend of 10 percent, subject to deduction of tax, will absorb Rs. 1.94 lakhs. The balance of Rs. 23,328 is carried forward.

During the year, the mill worked for 303 days in multiple shifts. The installed capacity at the close of the year was 17,856 spindles and the average number of spindles worked was 17,133. The directors state that yarn of lower counts continued to be sold at the rates fixed by the Cotton Mills Federation. The profit margin for finer counts has been low, and the prices of Indian cotton rose during the close of the year. The mills' products continued to be in demand in the market.

Peermade Tea Pays More

The Peermade Tea Co. Ltd has reported a higher profit for the year ended December 1961. This has enabled the directors to raise the total dividend to 25 percent from the previous year's 22½ percent. The 1961 crop has established an all-time record. The cost of production during the year was much lower than that of the previous year. But the average sale price too was lower year. The net profit for the year was 5.82 lakhs, against Rs. 4.89 lakhs. The directors attribute the higher profit to the increased crop. Furthermore, there was a capital profit of Rs. 33,363 arising from the sale of land. With the amount brought forward from the previous year, the total in the profit and loss appropriation account amounts to Rs. 6.32 lakhs. This includes some unclaimed dividends, interest on debentures and tax provision no longer required. The actual amount brought in from last year amounted to Rs. 37,065, excluding the above un-

claimed dividends and interest and tax provision no longer required. Out of this, the directors have transferred Rs. 1,176 to development rebate reserve and Rs. 23,355 to capital reserve. General reserve gets Rs. 1 lakh (the same). The preference dividend at 6.75 percent, subject to deduction of tax, amounts to Rs. 10,147. The interim dividend on ordinary shares at 7½ percent, subject to deduction of tax, absorbed Rs. 1.28 lakhs. The proposed final dividend at 17½ percent, subject to deduction of tax, will absorb Rs. 2.98 lakhs. The balance of Rs. 72,279 is carried forward.

The 1961 crop amounted to 1,083,565 kilograms and exceeded the previous record of 1959 by 43,327 kilograms. The crop for 1960 was 1,005,181 kilograms. The all-in-cost of production was 371.54nP a kilogram, against 384.07nP a kilogram in the previous year. The average sale price was 420nP a kilogram, against 428.93nP a kilogram in the previous year. The estimated crop for 1962 is 1 million kilograms.

Binod Mills Pays More

The working of Binod Mills Co. Ltd, Ujjain, shows an impressive improvement in 1961 over the previous year's results. This has enabled the directors to step up the dividend for the second year in succession from 12.5 percent to 20 percent. In 1959, the Company paid only 7.5 percent. Sales in 1961 have recorded a small increase from Rs. 3.25 crores to Rs. 3.38 crores, but the gross profit has shot up about 50 percent from Rs. 33.46 lakhs to Rs. 50.36 lakhs. After providing Rs. 9.81 lakhs (against Rs. 6.79 lakhs) for depreciation and Rs. 21 lakhs (against Rs. 13 lakhs) for taxation, the net profit amounts to Rs. 19.55 lakhs, against Rs. 13.65 lakhs in 1960. With Rs. 37,439 brought in and adding another Rs. 2.56 lakhs as the net adjustment on account of exceptional items of income and expenditure, the disposable surplus amounts to Rs. 22.48 lakhs. The directors have set aside Rs. 62,500 (against Rs. 31,630) for development rebate reserve. The proposed dividend absorbs Rs. 12 lakhs, leaving a sum of Rs. 9.85 lakhs to be carried forward. The Company has been permitted to install 17,500 spindles and 380 looms in a new mill called the Bimal Mills. The project, it is estimated, will cost Rs. 2.25 crores. Of this, Rs. 59 lakhs, it is proposed, will be raised from the market, subject to the sanction of the Controller of Capital Issues.

Motor-car Equipment from Prestolite

A new public company called Prestolite of India Ltd has been formed to manufacture electrical components for motor vehicles such as ignition coils, voltage regulators, lamps, horns, horn relays, distributors and miscellaneous electrical replacement parts. The factory will be located near Delhi. Most of these items are at present imported. Prestolite is the trade mark of the Electric Autolite Company of the U.S.A., with whom an agreement for technical and financial collaboration has been concluded. The Central Government has approved the collaboration arrangements. The American Company will subscribe to equity shares in Prestolite of India Ltd to the extent of 44 percent of the issued capital. It will cover the entire foreign exchange requirements for importing plant and machinery for the project. Prestolite of India Ltd will have an authorised capital of Rs. 1 crore, divided into 750,000 equity shares of Rs. 10 each and 25,000 preference shares of Rs. 100 each. The present issue will be 400,000 equity shares of a total value of Rs. 40 lakhs. Of this, the Electric Autolite Company will subscribe for shares worth Rs. 17.50 lakhs. Land has already been purchased in Faridabad and construction of the factory will start shortly.

Gujarat Financial Corporation

The Gujarat State Financial Corporation reports better working results for the year ended March 1962, with its profit going up to Rs. 3.11 lakhs from a mere Rs. 42,179 in the previous year. A sum of Rs. 1.41 lakhs (against Rs. 19,600) has been provided for taxation. After taking into account the sum of

Rs. 1,962 being excess provision for taxation in 1960-61, and allocating Rs. 31,151 to special reserves, there is a balance of Rs. 1.41 lakhs. As this amount is insufficient to provide for the guaranteed dividend of 3½ percent which requires Rs. 2,62,500, the State Government is being requested to pay the balance of Rs. 1,21,447 by way of subvention for 1961-62. The subvention received in the preceding year was Rs. 69,220. The capital of the Corporation was raised to Rs. 1 crore in September 1961, which enabled the Corporation to sanction loans up to 10 percent of its paid-up capital to a single industrial unit, that is, up to Rs. 10 lakhs. The Corporation received 74 new applications for loans amounting to Rs. 120.67 lakhs. One application for an additional accommodation of Rs. 5 lakhs was received from an existing concern. Some 42 applicants were sanctioned loans of the value of Rs. 72.11 lakhs, and 13 applications for Rs. 23.85 lakhs were rejected; 29 applications for a total amount of Rs. 53.55 lakhs were under consideration as on 31st March, 1962. Of the sanctioned loans amounting to Rs. 72.14 lakhs, paper-making industries claimed a major share at Rs. 16.18 lakhs. These were followed by industries manufacturing electrical machinery, apparatus, etcetera, which received loans worth Rs. 13.68 lakhs. Textiles, including spinning and pressing, claimed Rs. 10.30 lakhs.

Production of Chemicals Rises

In his presidential address at the annual general meeting of the Indian Chemical Merchants Association in Calcutta last week, Mr. D. P. Kajaria said that there was a substantial rise in the indigenous output of various chemicals last year. The production of caustic soda, soda ash, ammonium sulphate, calcium carbide, bleaching powder, etcetera, was higher than in 1960. But the increased output has fallen short of indigenous requirements; so many essential chemicals have had to be imported. But due to the Government's restrictive import policy, chemical imports have been curtailed. Mr. Kajaria said that imports were reduced from Rs. 41 crores in 1959 to about Rs. 36 crores in 1961. The inadequate supply is largely responsible for the prevailing high prices of some chemicals.

The Government has had to restrict imports due to foreign exchange difficulties, but this has caused hardship to those engaged in the chemical trade for a long time. Mr. Kajaria said that imports of a large number of items are being allowed by actual users only. "I do not question the justification of this. But I strongly feel that the import policy should be more purposive and should not result in established importers being squeezed out of their vocations in life. I would urge upon the Government to frame the import policy in such a manner that the services of established importers in effecting the permissible imports into the country are used effectively." The president said that numerous chemicals which were previously imported by the trade have been canalised through the State Trading Corporation on the plea of price stabilisation and equitable distribution. Since the Corporation's interference has led to a rise in prices, the normal trade channels should be allowed to import such items as camphor and mercury, he said.

U.P. Planning Board

The U.P. Government has been the first to announce its decision to set up a State Planning Board in accordance with a recent circular of the Minister. The selection of the remaining members, however, might pose some problems, judging by a brief debate on the subject in the U.P. Legislative Assembly. The Opposition members have demanded that they, too, should be represented on the Planning Board since planning is supposed to be above Party. The Chief Minister merely replied that members will be appointed on the basis of ability and qualification. The Opposition was quick to retort that possibly the Government should distribute the remaining seats on the Board to candidates defeated in the general elections or to other favourites of the Party.

While State planning boards have generally been welcomed in principle, their functions and

powers will have to be clearly defined if future sources of misunderstanding are to be avoided. In fact, if the planning boards are to develop in the directions now intended there will have to be some devolution of work from the Planning Commission, in so far as planning subjects at the purely State level are concerned. Pointing out the limitations of State planning, the third plan for U.P. says: "The State plan is concerned primarily with the creation of social overheads and economic overheads, the direct productive investment being left to the Centre and the private sector. In the field of agriculture, the State Government creates certain facilities which will have to be availed of by millions of cultivators. Similarly, in the field of industry, the rôle of the State Government is essentially promotional. A large part of the State plan is devoted to education, health and other facilities." To the extent that State planning boards are given near-autonomy to deal with these subjects, the Planning Commission may have to cut down its swollen staff or, alternatively, loan their services to the State boards. In any case, the latter should take care not to imitate the Planning Commission by becoming the head of a vast and formidable bureaucracy.

Inter-bank Agreement Modified

The controversy over the maximum interest on deposits payable by the State Bank subsidiaries, which seemed to threaten the existence of the inter-bank agreement, ended on 31st May. The Indian Banks Association conceded the demand of the subsidiaries that like any other Indian bank, they, too, should be classified on the basis of their deposits, which would enable them to take advantage of the differential interest rates. Under the revised agreement of 19th May, the exchange banks and the State Bank subsidiaries had been bracketed with big banks—banks having deposits of Rs. 50 crores or more—irrespective of their deposits. While the exchange banks raised no objection, the State Bank subsidiaries strongly opposed the revised agreement which denied them the right to quote more than the standard rates of interest, a right which they had exercised since the agreement first came into existence some three and a half years ago. The argument that the special status of the State Bank subsidiaries was sufficient to enable them to pay lower interest rates than their competitors could hardly have satisfied them particularly when the trend in their deposits had not been encouraging. The Indian Banks Association has done well in avoiding a serious rift between the private and public sector banking companies by agreeing to modify the revised agreement of 19th May.

Under the new agreement which came into force on 1st June, the subsidiaries of the State Bank of India with deposits ranging between Rs. 10 crores and Rs. 25 crores, will be entitled to quote ½ percent more than the standard rates on term deposits. Further, they can quote at their discretion an additional ½ percent only when there is another "small" member of the inter-bank agreement operating in the area or "to prevent or counteract a decline in deposits". The chairman of the State Bank of India, it is said, has assured the Indian Banks Association that the subsidiaries will not use their discretionary powers to pay the additional ½ percent to snatch away deposits from private commercial banks. Of the eight subsidiaries of the State Bank, one bank has deposits of more than Rs. 25 crores, while the deposits of the others range between Rs. 10 crores and Rs. 25 crores. The new agreement, which came into force from 1st June and will be effective till 31st March, 1964, classifies member banks into four categories—large, medium, small and smaller. Banks incorporated outside India and Indian banks with deposits of over Rs. 50 crores, fall in the first category. The second category includes banks with deposits ranging between Rs. 25 crores and Rs. 50 crores; the third category consists of banks having deposits between Rs. 10 crores and Rs. 25 crores. Banks with deposits of Rs. 10 crores and less fall in the fourth category. Out of the 38 member banks, there are as many as 21 banks in the first category, five in the second, ten in the third and two in the fourth.

Under the agreement, the large banks are required to pay rates not higher than those specified

under the agreement and these rates are called the standard rates which are the same as those which have been in existence for quite some time. Medium banks are allowed to pay ½ percent more than the standard rates, while small banks are permitted to pay ¼ percent more than the standard rates, that is, ¼ percent more than the rates payable by the medium banks. There is no ceiling on interest rates payable by the member banks in the fourth category—that is the smaller banks. The higher rates that can be quoted by banks in the second, third and fourth categories are subject to revision if they adversely affect the interests of the larger banks to an appreciable extent. It is too early to assess the effect of the inter-bank competition for deposits resulting from the operation of the revised agreement from 1st June. It is only the medium banks and the State Bank subsidiaries which really stand to gain from the facility of attracting more deposits through the inducement of higher interest rates because the difference between the maximum rates payable by small banks and the standard rates remains unchanged at ¼ percent. Perhaps the small banks paid the maximum permissible interest rates only to some selected customers. Competition from the medium banks and State Bank subsidiaries might compel the small banks to offer higher interest to almost all their depositors. The implications of different interest rates payable by different banks both for inter-bank transfer of deposits and for securing fresh deposits can be easily exaggerated. But the new agreement will have served a good cause if it can focus bankers' attention on the pressing need for improving the quality of their service to customers. Streamlining of customer service can have a more significant bearing on the volume of deposits than the inducement of higher interest rates. With the growth of deposits, some banks might soon move into the next higher category and when that comes about, these banks will be faced with the uncomfortable problem of how to effect the necessary cut in their deposit rates.

COMMERCIAL INTELLIGENCE

THE establishment of a Bureau of Commercial Intelligence has been persistently advocated in the columns of Capital for a long time back, and it is with satisfaction we note that the Governor-General in Council has his plan now more than outlined, and ready to be brought into active existence on an early day. As has been observed before, there will be no difficulty in elaborating the machinery of the office. There are now plenty of models in existence elsewhere in other countries. The one matter of supreme importance is to fix upon the right man who will continually infuse the inspiration of life throughout the whole department and all its ramifications. No one knows this better than the Viceroy himself. In the Circular Commerce in India, the qualifications of a Director-General are duly set forth in the following terms: "The Director-General will require an exceptional degree of activity and quickness of apprehension, and he will have to be constantly and keenly on the watch to prevent the work of his office from degenerating into routine." It is just a pity that the same qualities had not been demanded before some other Directors-General had received their appointments. The Director-General of the Commercial Bureau must be (as described in the circular) "an expert adviser of Government in commercial matters," and one also who will "approach his task in a sympathetic spirit, and be able to secure the active co-operation of the commercial public." As it will take some time before the Indian Civil Service can evolve such a man with the necessary commercial training and experience behind him, it would be well for the Government to search in the first instance, for the best equipped man they can find amongst the Indian Chambers of Commerce. If they could secure the services of Sir Patrick Playfair as the first head of the Bureau, he would fulfil the conditions laid down and give the machinery a good start, and that, too, with the confidence and with the co-operation of commercial India. Mr. E. N. Baker would make a good Director of the Commercial Branch, with a view of eventually succeeding to the headship of the Bureau after he had acquired the necessary experience. As for the Director of Statistics, any smart young civilian could fill that billet.

A Ditcher's Diary

EVERY TIME SOMEONE SPEAKS OF THE *chhota barsaat*—and who didn't in the last few days in Calcutta?—I am reminded of a friend who lived in what he insisted on calling Chhota Russell Street. On the soggy streets of Calcutta the argument has, I suppose, been settled whether the *burra barsaat* is or is not upon us already; and again it is not easy to decide which is the lesser evil: to sweat in heat or to suffer in rain. There is something malevolent in the Calcutta monsoon. Over the years I have noticed that, usually, it rains just when it will inconvenience the maximum number of people—just when people have to go to work or return home. At least for two centuries the best hours of work have been debated in this country, from the point of view of traffic, weather and efficiency, all three of which are related. Forget air-conditioning, which unfortunately is still available only to a fortunate few; and I suggest that at this time of year if a man's efficiency is 100 at 8-30 a.m., it is down to about 40 by noon and at 3-30 p.m. it is no more than zero. For a variety of reasons you then stagger office hours. I have a suspicion that the rains will then come precisely at those revised hours. Wordsworth and some other romantics have inculcated in many of us the concept of a kindly and benign Nature. Nothing could be farther from the truth, at least in these parts of the world. It was Aldous Huxley, I think, who pointed out that Wordsworth's worship of nature was possible only because he lived in temperate England, where Nature's teeth and claws have long since been removed. In the jungles of Borneo or Africa Wordsworth would have written of a very different kind of Nature. Also in Calcutta, I am sure. Imagine Wordsworth as a clerk in Writers' Building; fancy him on his way home, perhaps in Tollygunge. He leaves his desk at 5 p.m., catches a tram at Dalhousie Square if he is lucky. By the time he is at Esplanade, there comes a nor'wester. After dust, the down-pour; by the time he is near the bridge, all traffic is at a standstill. You can, by now, see a large hole in the canvas of English poetry. No, I am convinced that weather is the one thing one never gets used to. Maybe it's the same every year, nuclear tests or no; but it seems worse. As a photographer is said to have told Marlene Dietrich, "Madam, ten years ago I was ten years younger". She had complained that in a decade-old picture she looked much more beautiful.

I SEE THAT THE TIMES MARKED THE OPENING OF THE recent triennial Congress of the Federation of Commonwealth and British Chambers of Com-

merce in London with a special twelve-page supplement. My understanding is that there were plenty of other kinds of celebration of the occasion and that, along with others, the Indian delegation (organised by the Associated Chambers of Commerce) received a most cordial welcome in London and as much hospitality as they could manage, from both official and private sources. It is never easy to measure precisely and exactly the achievements of these vast international gatherings, but that they do lead to positive results is, I think, to be inferred from the fact that otherwise busy men are prepared to devote much time and energy to their preparation. The membership of the Federation embraces eight associations of chambers of commerce and more than 300 individual chambers. In the broadest and most general way, the objectives of the Federation are the expansion of Commonwealth trade, both as between its members and with the outside world. Inevitably a key topic at the recent Congress was the problems which might follow Britain's possible entry into the European Common Market, which is perhaps beginning to look less of a certainty than it seemed some time ago. I have little doubt that the Assocham delegation convincingly presented the Indian point of view on this highly contentious matter. If only to enable this to be done, India's participation in the Congress has been amply justified.

IN *The Ascent of Everest*, THE CHAPTER ON THE last lap of the climb is naturally contributed by Sir Edmund Hillary; and he writes, "The weather for Everest seemed practically perfect". A few pages later Sir John Hunt adds: "The weather seemed perfect". The Swiss, who climbed Everest twice three years later, would have said the same thing. (I shall say nothing about the Chinese effort which, as stated at the time, was assisted by the fact that the mountaineers were members of the Communist Party; and the worst weather is scared of such men.) The Indian expedition now on its weary way back to the plains has rightly been praised for its magnificent attempt. It needs to be clearly understood that a team that could stay for three nights at a height of more than 28,000 feet was not lacking in courage and endurance of the order that Everest demands; and if Everest remained beyond reach it was only because that "bitch goddess" of high altitudes, the weather, stood between the top and the luckless Indian expedition. Everest has been robbed of much of its pristine mystery; even to Major Dias the peak is not the magic it was to Irving, Mallory, Tilman

or Shipton. It is to be hoped that the autumn project will have better luck, for let us not pretend—in spite of all the ballyhoo about climbing for climbing's sake—that it wouldn't have been nicer if two Indians could belong to the "Top People". But I wish mountaineering could be stripped of nationalism. The difficulties of a heterogeneous expedition are obvious enough. I know of a keen Marwari climber who had to be dropped from an expedition because he was a vegetarian; and there can be nothing but pity for a German mountaineer roped with a Korean, neither speaking the other's language, on the brink of a parlous precipice. It still seems to me that there would be less excitement, less chauvinism—and, so, less national disappointment—if national expeditions could be banned. I am sure India will agree, at least after an Indian team has succeeded in getting to the top. King Mahendra of Nepal is now engaged in all sorts of dubious political experiments; the young monarch obviously thinks he has something to contribute to history. I make a gift of my idea to him. His Foreign Office can lay it down that all future expeditions must be of more than one nation, preferably applying through the U.N. Perhaps this will be an abridgement of Nepal's sovereignty? Even at 29,200 feet, there's no getting away from petty nationalism.

ADOLF EICHMANN'S INGLORIOUS LIFE WAS ENDED last week not dramatically but theatrically. Not as though anyone has the slightest sympathy for the Nazi butcher; far from it. Even those who do not believe in capital punishment must wonder what else could meet the crimes of Eichmann. That is not the point at all. Nor can I agree with those who say that since there are not a few Nazis, only firmly in disguise, who are now in positions of power and would have acted exactly like Eichmann if asked to do so, there was no particular reason for hanging Eichmann. You do not let off a thief you have caught just because you have not been able to catch every single thief alive. The argument that Eichmann's crimes were committed when Israel did not exist, let alone its special law, is not very convincing either. If there is no international body to punish crimes of this order, some country has to do it; and why not Israel? Now that Eichmann is finished, there is no need to delude ourselves that everything is all right. Nobody need take it very seriously that Eichmann said he was dying firm in his belief that he had done nothing wrong. What I suggest is that in the world today there are far too many people who sincerely, if less fanatically, believe the things Eichmann believed in. It is quite possible that Eichmann did not merely carry out orders, that he added to his routine chore a personal zeal. But are we sure that there are not many around who, at a pinch, would carry out orders in essence and in consequence not vastly different? I have heard it said in defence of animal sacrifice before Hindu

gods that the animal represents the baser passions of the devotee who, by sacrificing the animal, is purifying himself. Is it possible that a world which claims to be rational is similarly deceiving itself with the occasional hanging of an Eichmann or someone else? It is this self-righteousness which I find disagreeable, possibly dangerous. In the most unexpected quarters I have seen evidence of unconscious anti-semitism; and not all Jews are poor haters. In India, with so much talk of national integration, unsuspected animosities linger in many who are loudly liberal. It is the little Eichmanns in each one of us that are not so easily hanged as the ogre whose ashes are now lost in the Mediterranean.

MOST OF US, I AM SURE, ARE AT LEAST VAGUELY aware of the crucial rôle which electricity has come to play in our lives. But to visualise the manifold benefits it brings is different; we take them for granted, and hesitate to think what a power failure can mean. The latter remark might seem somewhat out of place in a review of the excellent Siemens film, *Pulse Beat of Our Time*, the English version of which was shown to an invited audience at the New Empire a few days ago. Originally produced for the information of the 200,000 employees of the Company all over the world, the film vividly explains what is meant by coaxial cables, semi-conductors and such other technical paraphernalia that signified little to me until the other day. Pictures have been taken on locations ranging from the Andean heights of Colombia to the deserts of Arabia. The rôle which electrical engineering plays nowadays in transmitting information over radio, television, telephone and teleprinter, in land, sea and air transport, and in the myriad other ways that contribute to better living by relieving men of heavy, unpleasant work, is brought home effectively. The scenes are not confined to the outside of generating plants, factories and so forth; things which can be seen only in a laboratory under a microscope or by simulated slow motion have been intelligently presented too. The background music is claimed to be something new, although I had a feeling that some day Indian manufacturers too will emulate the example of Siemens for the benefit of wider audiences.

SIR JAMES JONES, WHO DIED IN SCOTLAND LAST week, combined a shrewd business instinct with a warm and humane personality. Educated in Edinburgh, he served in the first World War before joining the Calcutta branch of James Finlay and Company in 1919. During the twenty-five or so years he was in this country, he played a leading rôle in the affairs of the tea industry. But the achievement for which he will perhaps be remembered best was during the tragic days of the second World War in 1942, when the exodus of Allied soldiers and civilian refugees from Burma was approaching its climax before the onslaught of the Japanese invasion. Thousands of men, women and children—tired, ill-clad and under-nourished—braved the dangers of a long trek through the jungles of the Indo-Burmese frontier in their desperate bid for succour and safety. As chairman of the Indian Tea Association from 1941 to 1943, Sir James not only organised a massive effort to help the stricken refugees; under his inspiration, teams of planters and labourers constructed a new road into Burma in the incredibly brief period of two months, apart from building many airstrips in Assam with their own equipment and supplies. In *Forgotten Frontier*, Geoffrey Tyson has told brilliantly the story of an achievement for which Sir James was largely responsible, and which later, in 1946, won him his knighthood. But it was typical of the man that he never regarded the honour as purely personal; he accepted it as a tribute to the courage and the resourcefulness of those who had laboured under his leadership. Sir James left India in 1945 to join the board of James Finlay in Glasgow. He became chairman of the Company in 1957, from which position he retired in September last year.

THE DITCHER

GUEST, KEEN, WILLIAMS, LIMITED

CHAIRMAN, SIR R. PILLAI'S STATEMENT

Statement by the Chairman Sir Raghavan Pillai on the occasion of the 32nd Annual General Meeting held in Calcutta on 31st May 1962.

It is with especial pleasure that I welcome you to this, the 32nd Annual General Meeting of your Company and, for me, the first at which I have the privilege of meeting and addressing you.

The Directors' Report and Accounts have been in your hands for some time, and with your permission, I shall take them as read.

Board of Directors

You will all today miss a familiar figure—that of Sir Henry Williams, who, to our great regret, resigned from his post as Managing Director at the end of March this year. As Managing Director, and throughout his association with your Company, he served the interests of the Company with singular devotion and ability, and brought distinction both to himself and to the Company by his achievements in other fields of activity. The Company owes much to his foresight and initiative during a period of rapid development and modernisation, and I am sure it will be your wish that I should, on behalf of us all, express to him our appreciation and thanks as well as our cordial good wishes for the future.

I have also regretfully to report to you the retirement from the Board of Mr. R. Callow who was Chairman from 1953 to 1961. It is a matter of personal disappointment to me that his retirement should have come so soon, and I would like to place on record our indebtedness to him for the valuable assistance he has throughout given us and for his wise guidance of the affairs of the Company.

Sir Henry Williams is succeeded by Mr. W. Morrice, and application has been made to the Government of India for approval of Mr. Morrice's appointment as Managing Director from April 1.

It is the intention that Mr. M. M. Malkani and Mr. R. A. Binns, who are at present managers of major sales departments, should join the Board, and this is the subject of resolutions later at today's meeting.

Production and Current Developments

1961 has, for your Company, been a year of technical progress and consolidation. The major plant expansions that have been executed in recent years are now approaching maturity, and this is reflected in a rise in sales and trading profit. But it will be understood from the Accounts that the maximum benefit of recent developments has not yet been enjoyed to its fullest extent and some of the newer items of production plant are still being worked up to the desired level of productive efficiency.

Calcutta Works: The new rolling mills at Calcutta were fully in operation at the beginning of 1961. Output has been rising steadily, and is continuing to improve. A noteworthy advance occurred early in the year when the responsibility for supplying mild steel rods to Bhandup Works was successfully undertaken by the new mills. Before this the wire rods, which were the main item of raw material for Bhandup Works, had to be imported. In the supply of special steel billets, and in rolling bars for outside sale the mills had to rely for raw material on the output of the Company's own steel-making furnaces—which fortunately operated at a very high level of efficiency—supplemented by the meagre quantity that could be spared by the major steel producers in India. This limited sales in the Steel Division which showed little improvement over the previous year's figure in spite of the rise in the total tonnage of bars rolled.

The supply of raw material in the category of mild steel billets, however, has greatly improved, and the position during the latter months of the year was generally satisfactory.

A new production shop came into being during 1961 for the manufacture of bright steel bars, and the plant was in production before the end of the year. Despatches of finished bars did not start early enough for the year's trading results to be affected appreciably, but this department will contribute to the Company's earnings during the current year.

In the Engineering Division, which mainly embraces railway track, signalling and wagon materials as well as automobile components, output of forged items showed some improvement and emphasis is being given to the development of new lines which demand a higher standard of quality and precision. This evolution is proceeding successfully, assisted by current additions to toolmaking facilities, and our country's new and growing engineering industries can rely on the continuance of this technical advancement.

The output of certain products destined for the railways was limited by a temporary lack of demand, and in the case of the crossing sleeper department it was not possible to operate the plant with any degree of efficiency owing to raw material shortage. This special material is however planned for production in India in due course by Hindustan Steel Ltd.

In spite of increased competition both production and sales of bolts, nuts and rivets in the Fastenings Division were stepped up in 1961, and the efforts of the works management are now aligned on the further improvement of plant maintenance and productive performance.

Operations in Calcutta Works were disrupted by the power crisis, which, as many shareholders will recall, occurred early in 1961, and earnings were adversely affected to an appreciable extent.

Bhandup Works: The level of production of the light fastenings made at the screw works at Bhandup and the sales of those products were the highest achieved since output in that unit first started in 1953. During the year a substantial expansion of capacity for making machine screws was established and consolidated and the manufacture of self tapping screws was started. Whilst the output of this works constitutes only a small element of your Company's turnover it is an up-to-date unit of which we can be justifiably proud.

Exports

I am pleased to report an increase in the Company's contribution to India's export earnings. Disregarding the export of a large quantity of fasteners in 1960 in abnormal conditions of world demand, which could be regarded only as a windfall, the Company's export and sales rose almost threefold in 1961, and the sales organisation is being adjusted by the establishment of a centralised

export section to handle the increased volume of business.

Operating Results and Dividends

You will have noted in the Accounts that total sales amounted to Rs. 10,65,88,480 compared with Rs. 9,68,62,652 in the previous year. It will be understood from my earlier remarks that the increase would have been considerably larger had it not been for the shortage of certain categories of raw materials.

The Company's trading profit before tax, Rs. 83,83,644, shows an increase of Rs. 11,70,884 over the previous year's figure, and the total net surplus on the year's trading before tax, including enhanced dividends from subsidiary companies, amounts to Rs. 1,04,26,264, compared with Rs. 87,72,760 for 1960.

Provision for taxation however is considerably higher than for 1960 when a larger value of new plant was capitalised and greater tax benefit was derived from Development Rebate. The surplus after taxation is therefore Rs. 63,07,072 for the year under review, an increase of only Rs. 1,40,337 over the previous year's figure.

It would be appropriate to mention at this point that additions to fixed assets, whilst less than the previous year's figure of Rs. 1,65,24,647, remained at a high level and amounted to Rs. 1,05,48,241 in 1961.

The amount of Rs. 12,21,405 is statutorily transferred to Development Rebate Reserve, and featuring in appropriations for the first time is the transfer of Rs. 5,00,000 to a Sinking Fund which has been created under the terms of the Trust Deed covering Debentures issued in 1958.

Bearing in mind the continuing improvements to production facilities which have been made in the past two years, which can be expected to contribute to earnings in the future, and having regard to profits retained in past years, it has been considered appropriate to transfer Rs. 11,23,813 from General Reserve. An interim dividend of Re. 0.60 per share has already been paid and your Directors now recommend a final dividend for the 52 weeks ended 30th December, 1961 of Re. 0.80 per share.

Before concluding my remarks on the Accounts I feel that I should draw your attention to the current Budget proposals for increased corporate taxation. If these proposals are enacted an additional tax liability of Rs. 2.7 lacs will accrue on the Company's profits in 1961.

Subsidiary Companies

Sankey Electrical Stampings Ltd., your Company's major subsidiary, achieved a considerable increase in turnover during the year and has in hand plans for further substantial expansion of capacity and diversification of the industries served.

Nettlefolds of India Ltd., the wholly owned subsidiary which was formed in 1953 to market the products of the Bhandup Works is being wound up, it being considered that the need for

a separate selling company no longer exists. The sales organisation now becomes a part of your Company's selling structure.

The Future

Turning now to the future, I am glad to tell you that the Government of India have approved the Company's plans for the substantial expansion of the steel-making plant from 12,000 tonnes to 45,000 tonnes per year and an associated small increase in rolling capacity. This assured supply of special steels which can be made under the Company's direct control will undoubtedly be of great benefit particularly in view of the current trend towards precision and high specification products. The project is still in the stage of detailed planning, but the present indication is that initial production will start in 1964.

A number of new lines are in the process of development, including various categories of special steel bars and rods, and an agreement has been concluded with Sandvikens Jernverks Aktiebolag of Sweden covering the manufacture of hollow alloy steel bars for rock drills, subject to Government approval. Plans are also being drawn up for making several types of fasteners hitherto not produced in India to a satisfactory standard of quality.

In the context of development I should like to pay tribute to the unfailing and invaluable assistance that is rendered by the Company's technical consultants and associates. Guest, Keen, & Nettlefolds Ltd. Apart from making available their immense fund of technical knowledge they have recently agreed to assist your Company and its subsidiary in their needs for foreign exchange by placing at their disposal a sterling loan of some £11 million to be utilised for the import of essential plant and equipment. This facility is at present being considered by the Government of India.

The growth and improvement of the Company's production units, which has reached a peak over the past two years, is a constant and continuing process, and, whilst the energies of the Company's management are at present mainly directed to bringing recent development projects to a full revenue earning state, attention is being given to the refocussing of existing manufacturing facilities in sympathy with the changing needs of India's industries and simultaneously to promoting the birth of new ventures.

In India today industry must be bold in meeting the challenge of technological change and progress, inspired by the promise of future rewards to be shared with the community rather than by the hope of immediate monetary gain. Those obligations your Company is constantly striving to fulfil, and it will be the endeavour of your Directors to ensure that the Company is progressively more able to contribute to, and share in, the expanding prosperity of our country.

The successful working of an organisation such as ours depends on the loyal and co-operative effort of its personnel. I am happy to say that the staff and all employees of your Company have maintained their tradition of loyal service, and I should like to thank them, on behalf of us all, for their continued good work.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

WISE MOTORISTS RELY ON BURMAH-SHELL

CABINET RUMOURS, SHORTAGE OF FUNDS PUSH DOWN PRICES

Wednesday Evening.

THE downward trend in the Calcutta stock market has gathered momentum during the past week. The shortage of funds has begun to make its influence felt. The recent new issues have blocked large sums because many of them have been substantially over-subscribed. As the refunds to those who are not allotted shares will not be made for some time, support for the existing shares is likely to remain at a low level. In spite of the end of the busy season, the carry-forward charges at Wednesday's settlement were slightly higher, reflecting the growing shortage of credit. As the new Government loans will be floated soon, support from the Life Insurance Corporation will remain poor.

Lyons Range has, meanwhile, been disturbed by some adverse developments. The hang-over of the Wall Street slump continues to worry operators. The sudden slump, followed by a quick recovery and then by another downward drift, has created a great deal of uncertainty. Whether the erratic movements on Wall Street foreshadow the onset of an economic depression is being debated. The pessimists say that the depression cannot be far off, because the stock market discounts the future six months ahead.

While there is hardly any reason for taking an alarmist view, caution is necessary, considering that profits are being squeezed by rising production costs. Indian industry is not immune from this malady. The latest company reports show that profits have not risen in proportion to the increase in turnover because production costs continue to rise.

The growing tension between India and China over the border question is restraining stock market activity. Indo-Pakistani relations too are far from cordial because of the Kashmir question. Lyons Range is getting worried over rumours of differences among members of the Central Cabinet. Rumours of the likely return of Mr. T. T. Krishnamachari to the Cabinet have also caused concern because the stock market associates him with heavier taxation.

There is growing concern over the foreign exchange situation as the Aid-India Club meeting has adjourned without finalising the total aid to India during 1962-63. As this country's foreign exchange reserves have declined to a precarious level, it looks as if imports may have to be curtailed further. If industry is not permitted to import more raw materials and spare parts, considerable capacity may become idle.

In its despondent mood, the stock market has ignored the increase in the production of the Indian Iron and Steel Company during May. The price of Indian Iron shares has declined to Rs. 25.42 due to selling pressure induced by disappointment over the delay in the announcement of the new retention prices. Except for Indian Standard Wagon which have been firm due to the issue of bonus shares, engineering shares have generally fallen. Texmaco, Burn and Jessop have been sold at lower prices. Bharat Ball Bearing, newly enlisted, are being frequently transacted.

Prices of miscellaneous shares have moved down due more to the absence of support than to selling pressure.

Dunlop Rubber and Indian Aluminium are being taken on rumours of rights shares. Angelo Brothers have improved on hopes of a higher dividend. National Tobacco have fallen on paying a lower dividend while Shaw Wallace are being sold on making a smaller profit.

Assam Sillimanite are being supported because the Company will soon issue ordinary shares worth Rs. 29 lakhs, divided into shares of Rs. 10 each, for public subscription at par. In addition to quarrying and shaping sillimanite, the Company has started producing refractories for blast furnaces.

Paper shares have closed below their best levels. Attention has been concentrated mainly on Orient, India Paper Pulp, Shree Gopal and Bengal.

Coal shares have declined in sympathy with the general trend. Business has been largely confined to Burrakur, Bengal, East Indian, Central India and Amalgamated. Although the price of coal is likely to be raised soon, investors believe that the increase will benefit the collieries only marginally.

Interest in jute shares has declined because investors are watching what minimum price will be fixed for raw jute during the next season. Birla, Howrah, Anglo-India, Nuddea, Budge Budge and Bally have fallen.

Cotton mill shares have been neglected because the outlook during the current year is being assessed carefully. Increased production costs are likely to affect the profits. Bharat Commerce, Bowreah, Elgin and J. K. Rayon have declined.

Support for bank shares has declined and prices are fractionally lower. United Commercial, United Bank and Punjab National have been dealt in. Electric company shares have been steady and Calcutta Electric have been supported.

Sugar shares are being freely offered, but buyers are difficult to locate. S. K. G., Belsund and Carew have weakened. Dyer Meakin Breweries are being taken because the Company has obtained permission to issue bonus shares in the proportion of one new share for each one held.

Tea shares have been transacted cautiously due to the uncertain marketing outlook for the new season's tea. Soom have been steady due to the issue of bonus shares. Betjan are being wanted on paying a higher dividend.

Government securities have been steady, but turnover has been small. Some institutional support has been forthcoming for short and medium-dated stocks. The 3 percent Conversion loan 1986 is being quoted around Rs. 71.05.

Tata Steel Output

Messrs Tata Industries Private Ltd, managing agents for the Tata Iron and Steel Company Ltd, report that the approximate production of iron and steel at the steel works in Jamshedpur during May 1962 was: iron 146,400 tons; steel ingots 145,600 tons; semi-finished steel for sale

37,000 tons; and finished steel 78,600 tons.

Indian Iron Production

The production and despatch figures of the Indian Iron and Steel Company for May 1962 are as follows, the figures for the previous month being given in brackets:

Production :	(In tonnes)
Pig iron	112,269 (109,726)
Steel ingots	85,155 (83,396)
Salable steel	68,574 (47,646)
Despatches	51,033 (47,603)

Bombay Market

SUBDUED MOOD AT THE CLOSE

CABINET RUMOURS UPSET OPERATORS

Wednesday Evening.

THE Bombay stock market closed the past week in a subdued mood. Although the new account started on a steady tone, operators were cautious because the carry-forward charges were slightly higher due to the shortage of funds. The shortage occurred because considerable money has been locked up in recent issues. At the close, sentiment deteriorated and share prices declined on a broad front due to tired long liquidation, combined with bear pressure. Any rally due to short-covering proved temporary.

Cotton mill interests were worried over the current working. The growing shortage of cotton, combined with rising production costs, called for caution. Informed quarters think that profits during the current year will not be as much as in 1961. Investors in steel shares were disappointed over the delay in announcing the new retention prices of steel. Sentiment was also affected by various political developments, such as rumours of changes in the Central Cabinet. The infructuous conclusion of the Aid-India Club meeting has rendered the foreign exchange situation extremely difficult. It is feared that imports may have to be cut further. As a result, many industries may face shortages of raw materials and spare parts.

Tata Steel declined to Rs. 148, but the fall was partly arrested by the publication of the higher production figures of the Company for May. Indian Iron fell to Rs. 25.75 on pressure from Lyons Range. Engineering shares lacked support, and Tata Locomotive were available at Rs. 358. Alcock Ashdown fell to Rs. 327 and Mukand Iron to Rs. 26.20. Larsen and Toubro were sold down to Rs. 32.15 and Mahindra and Mahindra to Rs. 19. Motor-vehicle shares turned quiet, and Hindustan Motors were available at Rs. 29.44. Premier Automobiles declined to Rs. 131.

Cotton mill shares showed widespread losses. Bombay Dyeing fell to Rs. 68.60 and Century to Rs. 645. Gokak were about steady at Rs. 214, but Morarjee lost at Rs. 406. Kohinoor were offered at Rs. 303, Simplex at Rs. 174 and Svadeshi at Rs. 274. Tata Mills were maintained at Rs. 71 on rumours of the Company's amalgamation with other mills in

the same group. Standard declined to Rs. 1,003 and Finlay to Rs. 306. India United ordinary were steady at Rs. 21.53, but Apollo lost at Rs. 214.

Miscellaneous shares moved down in sympathy with the general trend, and support was conspicuous by its absence. Sugar shares were easier, and Belapur were available at Rs. 229. Phalton came down to Rs. 191 and Walchandnagar Industries to Rs. 156. Mining shares were subdued, and Shivrajpur Syndicate declined to Rs. 35 on a discouraging outlook. Steamship company shares were quiet because the increase in coastal freights is not expected to compensate for the rising operational costs. Scindia Steam lost at Rs. 12.56 and Great Eastern Shipping at Rs. 12.84. Cement shares were easier, and Associated Cement lost at Rs. 159. Digvijay were about maintained at Rs. 203. Bombay-Burmah reacted to Rs. 673 on profit-taking. Rayon shares were easier, and National Rayon moved down to Rs. 530. Baroda moved down to Rs. 137. Indian Dyestuff were nevertheless steady at Rs. 536.25 and Colour-Chem at Rs. 400. Synthetics and Chemicals reacted to Rs. 226 on profit-taking. Sellers predominated in Coat Tyre at Rs. 176.25. Business passed in Tata Oil at Rs. 89 and in Voltas at Rs. 296.

Bank shares lacked interest and prices were somewhat lower. Bank of India were indicated at Rs. 111.50 and Central Bank at Rs. 62. Insurance shares were steady, and New India Assurance were dealt in at Rs. 71.

Electric company shares met with scattered support, and Ahmedabad were placed at Rs. 89.80. Bombay Suburban were dealt in at Rs. 103.50 and Tata Power at Rs. 1,102.50.

Madras Market

LITTLE INTEREST IN CLEARING SHARES

INVESTORS TURN TO NEW ISSUES

Tuesday Evening.

THE Madras stock market was quiet during the past week and trading was thin. Operators took little interest in clearing shares due to the declines in the Calcutta and Bombay stock markets. Investors were busy subscribing to new issues. The existing scrip suffered from a shortage of funds. There was concern over the growing shortage of transport and power.

Business in Government securities was nominal because the flotation of the new Government loans was being awaited. Bank shares lacked support, but selected electric shares were taken on yield considerations. Sugar shares were easier as the price of the commodity declined further. In the planting section, tea shares were subdued due to discouraging auction results. Coffee shares were sold freely due to fears of excessive supplies in world markets. Rubber shares were neglected because the international price of the commodity showed a downward tendency. Cotton mill shares were not fancied because the supply of cotton was becoming difficult. Among miscellaneous shares, support was confined to selected chemical and cement shares on expansion prospects.

Among bank shares, Canara Banking Corporation were dealt in at Rs. 75.25 and Indian at Rs. 177. Indian Overseas came to hand at Rs. 167 and

State Bank of Travancore at Rs. 113. Among electric company shares, business was done in Negapatnam at Rs. 12.10 and in South Madras at Rs. 10.15. West Coast were placed at Rs. 16.12 and Ellore at Rs. 22.

In the sugar section, Deccan were easier at Rs. 10.10, but E.I.D. were maintained at Rs. 39.25. The latter Company will soon issue 27,700 new ordinary shares of £1 each to Dalton and Company of London for raising funds for expansion. United Breweries were easier at Rs. 82, but Mysore were steady at Rs. 53.40. India were sold at Rs. 9.65 and K.C.P. at Rs. 22.

Among planting shares, Blue Mountain were transacted at Rs. 2.45 and Ochterlony at Rs. 3.80. Peermade met with scattered support at Rs. 20.40 on paying a higher taxable ordinary dividend of 25 percent, including a final of 17.5 percent. Cochín Malabar were easier at Rs. 7 and Consolidated Coffee at Rs. 18.35. Cowcoody came to hand at Rs. 4.19 on paying an interim taxable ordinary dividend of 10 percent. Kalpetta were sold at Rs. 11.87 on the issue of 49,000 ordinary rights shares in the proportion of one new share for every two held. Periakaramalai were placed at Rs. 3.44 and Parkside at Rs. 23. Kil Kotagiri were dealt in at Rs. 5.07 and Nilgiri at Rs. 9.10. Twyford were freely offered down to Rs. 9.65 and United Nilgiri were available at Rs. 21.12.

In the textile group, Buckingham were taken at Rs. 265 and Bangalore Woollen at Rs. 243. Bhavani were transacted at Rs. 11 on the issue of 36,529 rights ordinary shares at par in the proportion of two new shares for every three held. Coimbatore Spinning were placed at Rs. 76 because the Company has issued rights ordinary shares at a premium of Rs. 15 a share, in the proportion of one

CAPITAL, 7th June, 1962.

new share for every five held. Lakshmi reacted to Rs. 157 and Madura to Rs. 37. South India Viscose recovered to Rs. 179, but Travancore Rayon were easier at Rs. 40. Mettūr were steady at Rs. 400, as were Radhakrishna at Rs. 38.50.

Among miscellaneous industrials, Aluminium Industries lost at Rs. 24 and Ashok Leyland at Rs. 8.65. Business passed in Binny at Rs. 364.85 and in Kirloskar Electric at Rs. 23.75. Dalmia Cement were steady at Rs. 13.20 and India Cement at Rs. 6.13. Madras Rubber were dealt in at Rs. 23 and Mettūr Chemical at Rs. 13.05. Travancore Electric Chemical Industries declined to Rs. 85 on the issue of 10,000 rights shares. Standard Motors were steady at Rs. 16.62, as were Spencer at Rs. 23.75. Parry's Confectionery were supported up to Rs. 5.45, but Mysore Paper reacted to Rs. 13.70. Tube Investment were taken at Rs. 290 and Textool at Rs. 178. Enfield were quiet at Rs. 12.10 and General Papers at Rs. 10.70.

Magic and Romance
of LE MANS
**SAFER,
MORE DURABLE
TYRES FOR YOU!**

Olivier Gendebien driving the winning Ferrari, equipped with Dunlop tyres, at the 1961 Le Mans 24-hour race

Year after year cars with Dunlop tyres have been driven to victory in the world's most spectacular motoring classic—Le Mans. Racing merely magnifies the demands that you put on your tyres: a sure grip on the road, maximum safety at all times, and durability. Dunlop's unequalled success on the racing tracks of the world gives them the experience to make safer, more durable tyres for your car.

London Market

ERRATIC TREND IN PRICES

MARKET INFLUENCED BY WALL STREET

London, 6th June.

THE most erratic conditions for many years were experienced in the stock market during the past week. After the previous Monday's plunge on Wall Street, jobbers in London slashed their prices by several shillings on Tuesday, but they were unable to stave off the selling that followed. On Wednesday, an equally remarkable trading session took place, but this time it was an upswing which recovered nearly all

the previous day's losses. As before, Wall Street provided the main impetus. After these violent fluctuations, the market settled down to quieter conditions. However, on Monday when business was resumed after the week-end, the whole market drifted lower in very quiet trading conditions. The gold reserve figures for May and the reduction in the hire-purchase deposit from 20 percent to 10 percent failed to stimulate the market, which came under the influence of a fresh plunge on Wall Street, and most sections declined further.

After some irregularity, the gilt-edged market turned distinctly dull, following the appearance of a new £40 million London County Council medium-dated 6 percent loan. Bank and insurance shares receded and property shares were generally lower, but hire-purchase finance issues rallied after the credit relaxations. South African gold shares showed some resistance to the easy conditions prevailing in other sections of the market, and recorded useful gains. Base metal shares were dull, and small losses predominated in oil shares. Teas and rubbers were extremely quiet.

Books

THE ECONOMY OF ORISSA

Techno-economic Survey of Orissa. (Compiled and published by the National Council of Applied Economic Research, New Delhi. Price Rs. 20, pages 309.)

The National Council of Applied Economic Research conducted a survey of Orissa in 1959-61 at the request of the State Government. The book contains a detailed appraisal of the forest, fisheries and mineral resources of the State as well as of engineering and metal-based industries, chemical industries and small-scale manufacture, etcetera. It suggests the broad lines of development of the State's natural resources as well as of industries which could be based on them. The time perspective is generally ten years ending 1970-71. The book contains sufficient technical and economic data to enable the Government and private entrepreneurs to take preliminary decisions on establishing specific industries.

CAPITAL, 7th June, 1962.

The Council recommends an investment of Rs. 140 crores a year, made up of 39 percent for factory industries, 22 percent for agriculture, 13 percent for power, 4 percent for mining and the balance for other fields. Of the total investment suggested, about 77 percent will be in the public sector, the share of the Centre being 48 percent. A sum of Rs. 110 crores will be for private investment in industry. The State's income will grow at the rate of 14 percent a year, and the per capita income will double by the end of the period and catch up with the all-India level if the suggested rate of investment is undertaken. The Council recommends the establishment of a new steel plant in Bonaigarh. The construction of giant steel plants and big dams may appeal to Ministers and politicians, but the taxpayer will prefer the fuller use of the Rourkela and Hirakud projects before other showpieces are established. The book contains 89 useful tables, besides charts and maps. Information has obviously been collected from many sources, and it is available conveniently to readers within the compass of a single volume.

PLANNING PROBLEMS

Resources for the Third Five Year Plan. (Compiled and published by Indian Merchants Chamber Economic Research and Training Foundation, 76 Veer Nariman Road, Bombay 1. Price Rs. 5, pages 148.)

Inflation in a Developing Economy. (Compiled and published by Indian Merchants Chamber Economic Research and Training Foundation, 76 Veer Nariman Road, Bombay 1. Price Rs. 4, pages 121.)

The Indian Merchants Chamber's Economic Research and Training Foundation aims to encourage research on economic problems and arrangements for training in practical business management. *Resources for the Third Five Year Plan* makes an objective assessment of the resources position. It also discusses the basic factors affecting the creation and mobilisation of resources in the economy. In devising the techniques for raising more resources through additional taxation, deficit financing or other means, it is stated that the welfare aspects of public expenditure have been almost neglected.

Inflation in a Developing Economy explains the nature of the inflationary process—whether inflation as a policy is conducive to economic growth, how it works, how to avoid it and at what cost.

INDUSTRIAL VENTURE

Problems of Starting an Industrial Enterprise. (Compiled by the Indian Institute of Public Administration, Bombay Regional Branch, Sachivalaya, Bombay and published by the Popular Book Depot, Lamington Road, Bombay 7. Price Rs. 10, pages 263.)

The Bombay branch of the Indian Institute of Public Administration organised a seminar on the problems of starting an industrial enterprise. This volume contains the proceedings of the seminar and the contributions it made to the understanding of the practical problems involved. Although the present reviewer approached this work with misgivings, he soon discovered its high quality and usefulness. The book begins with the speech of Mr. Mehta, followed by the inaugural address by Mr. Chavan. There are 17 background papers which show considerable insight. The book is also noteworthy for its excellent reporting and editing, but there are many printing mistakes.

CAPITAL, 7th June, 1962.

New Delhi

Foreign Exchange Reserves Fall: Absence of New Aid Offer Causes Concern

(FROM OUR NEW DELHI CORRESPONDENT)

THE meeting of the Aid-India Club in Washington, the Parliamentary debate on the demands for grants of the Central Ministry of Defence, and the talks between the United Kingdom and the European Common Market countries on the export of manufactured goods from Australia, Canada and New Zealand if Britain joins the E.C.M., were the highlights of the past week.

The Aid-India Club adjourned sine die without making any further commitments. This was not totally unexpected. Enquiries show that the success of earlier meetings was mainly due to the enthusiasm for India's rapid economic development shown by the U.S. administration. For all practical purposes, the U.S.A. has become the "whip" at the Aid-India Club meetings. For obvious reasons, the United States had cooled off lately, so it did not show the same enthusiasm at the last meeting of the Club as it did before. The result is disturbing for India, as far as the foreign exchange position is concerned. The members of the Aid-India Club were expected to bridge the gap of \$220 million in matching aid. Two new members joined the Club at the last meeting—namely, the Netherlands and Austria—while Belgium attended as an observer. West Germany did not offer any fresh aid, nor did the Netherlands.

Drastic Remedies

It is undeniable that India's foreign exchange position is serious. Her foreign exchange reserves have declined to Rs. 101 crores—only a few crores more than the minimum required for the paper currency reserve. It is hoped that such countries as the United Kingdom, the U.S.A. and West Germany, which alone had offered India untied aid in the past, will come forward to help her in her critical situation, pending the meeting of the Aid-India Club. In the absence of such aid, India will be compelled to have recourse to some drastic remedies. It now appears that in her long-term interests, frequent meetings of the Aid-India Club should have been avoided. India, it may be added, is looking forward to the meeting of the Club next autumn to secure foreign aid for the remaining three years of the third plan. True, this country does not accept aid with strings. But it should remember that a borrowing country has to create the climate for getting loans. Unfortunately, this aspect of the problem is often ignored.

Russian Jet Aircraft

The debate on the defence estimates and the series of interpellations have secured for the Defence Minister, Mr. Krishna Menon, the unanimous support of Parliament for his proposed deal with Russia to purchase M.I.G. supersonic fighter aircraft. This is one issue on which both the Press and the public have supported Mr. Menon who has apparently played his cards adroitly. Officially, the proposal has been so far considered neither by the Defence Committee of the Central Cabinet nor by the Cabinet itself. With the support Mr. Menon has been able to get for his deal, he can go ahead with it if he so desires.

But there are obvious snags. First, the possession of jet fighter aircraft by themselves will not make India safe. Besides, they will need a complicated and modern ground organisation to handle them. Secondly, India has been used to Western aircraft. Russian aircraft will not only need different spares but intensive training of pilots and the crew. Lastly, there is a need for massive aid—not in Russian roubles but in dollars, sterling and deutschmarks which India needs for implementing her third plan. The last meeting of the Aid-India Club has shown that even the talk of getting Russian arms can have adverse effects, making India's position difficult, at least for the time being. It is, therefore, presumed that all these factors will be considered before a final decision is reached.

India, U.K. and E.C.M.

New Delhi has been unhappy over the talks between the U.K. and the E.C.M. countries on the tariffs on manufactured goods, if the U.K. were to join the E.C.M. On the one hand, Britain and at least four members of the E.C.M.—West Germany, France, Italy and Belgium—have been providing financial assistance to this country. On the other, attempts are being made to place restrictions on the export of Indian goods to these countries, which alone will enable India to repay her obligations. New Delhi is, therefore, unhappy that the European Common Market countries will not make the necessary adjustments in their negotiations with the United Kingdom to permit such underdeveloped countries as India to expand their trade on favourable terms.

Synthetic Textiles

The cotton shortage at home is compelling India to manufacture mixed varieties of textiles such as man-made fibre mixed with cotton, wool or silk. Manjushree Industries Ltd has been licensed to manufacture rayon pulp from natural gas in Assam. This material can be woven by itself or with cotton or other very good wool-like fabrics. The capacity of the unit will be 54,000 tons a year. Besides, Mariwalas are being given a licence to manufacture a similar synthetic fibre from castor oil. The firm will have French collaboration, while Manjushree Industries Ltd is having Japanese collaboration. Imperial Chemical Industries is already licensed to manufacture Terylene. The other schemes licensed are:

Name of Schemes	Location	Capacity
Gwalior Rayons	Mysore	45,000
Greater Mysore Rayon-Grade Pulp and Paper Mills, Bangalore	Mysore	30,000
West Coast Paper Mills Ltd, Bombay	Mysore	27,000
Sundatta Foods and Fibres, Bombay	Mysore	3,000
Rohtas Industries Ltd, Dalmianagar	Assam	60,000
Travancore Rayons Ltd, Rayonpuram	Kerala	3,600
Cellulose Products of India, Ahmedabad	Gujarat	7,200
Orient Trading Company, Admedabad	Gujarat	3,600
J. K. Cotton Spg. and Wvg. Mills, Co. Ltd, Kanpur	Uttar Pradesh (Kanpur)	3,000
Purshotam Lal Jhunjhunwala, Bombay	Maharashtra	3,600
National Rayon, Bombay	Mysore	20,000

Due account has been taken of the foreign exchange position and the demands of other industries or projects with higher priority. The planned output of the industry is 215 million lbs by 1966. The following are some of the other units which have been licensed or recommended for licence to manufacture viscose filament:

Name of the unit	Location	Nature of scheme	Existing capacity (million lbs)	Capacity after the scheme has been completed (million lbs)
Indian Rayon Corporation	Gujarat	New Unit	—	8
South India Viscose Ltd	Madras	-do-	—	8
Baroda Rayon	Gujarat	-do-	—	6
Century Rayon	Maharashtra	Expansion	9.6	14.9
J. K. Rayon Corporation	Kanpur	-do-	4	8
Travancore Rayons	Kerala	-do-	7.2	11.2

Three schemes with a total capacity of 15 million lbs a year have so far been licensed under the Industries Act for manufacturing acetate filament. These are the following: (1) Sirsik Ltd. has been given a licence to expand its existing capacity from 4 million lbs to 8 million lbs a year. (2) Modi Spinning and Weaving Mills has been given a licence to set up an acetate rayon plant in Modinagar, Uttar Pradesh. The capacity of the plant is expected to be 8 million lbs a year. (3) Modern Mills has been recommended a licence to spin 3 million lbs of acetate yarn from indigenous cellulose acetate flakes proposed to be manufactured by a sister concern of the Company. The plant is proposed to be located in Harihar, Mysore.

When these schemes are implemented, the capacity of the industry will increase to 19 million lbs.

Making Cuprammonium

Licences under the Industries Act have been granted for manufacturing cuprammonium for the first time in India to the following firms: (i) Modern Mills Ltd for setting up a new unit in Harihar, Mysore, with an annual capacity of 5 million lbs and (ii) Swadeshi Cotton Mills for installing a plant in Bangalore with a capacity of 8 million lbs a year. Out of these, the Capital Goods Committee has so far agreed to release foreign exchange for the scheme of Modern Mills. When the

schemes are implemented, the capacity for cuprammonium will be 13 million lbs.

Two new units with a total annual capacity of 9 million lbs have been licensed under the Industries Act for manufacturing staple fibre. The details of the schemes are as follows: (i) South India Viscose Ltd has been granted a licence for manufacturing 8 million lbs of viscose staple fibre in Mettupalayam, Madras. The scheme is expected to be completed shortly. (ii) Modern Mills has been recommended a licence for manufacturing 1 million lbs of acetate staple fibre from cellulose acetate flakes in Harihar, Mysore. The scheme is, however, yet to be cleared by the Capital Goods Committee since the plant and equipment have to be imported. When these schemes are implemented, the total manufacturing capacity for staple fibre will

increase from 48 million lbs to 57 million lbs.

Heavy Electrical Plant

The Central Minister of Heavy Industries, Mr. C. Subramaniam, and the Secretary to the Ministry, Mr. Swaminathan, paid their first visit to the heavy electrical plant in Bhopal last week to investigate the reasons for slow production in the unit. As a result of their visit, a number of steps are being taken which will have an all-round effect on public sector units. Imports of raw materials and components are being speeded up. In order to deal with chronic indiscipline and inefficiency, an incentive scheme is being introduced, linking wages to productivity. Instructions are being issued to deal promptly with grievances of labour—both real and imaginary—emphasis being on speedy decisions. All contractors employing labour have obligations to provide houses for their labour, and this is now being enforced. Side by side, the problems of the private sector are not ignored. To deal with the transport problem, it is suggested that industrial units, such as cement factories, should own and operate their own road transport.

The Government is not oblivious of the fact that one of the biggest bottlenecks in industrial expansion is the paucity of trained designers. The training arrangements at the engineering colleges also need to be improved to bring them into line with similar institutions in the West. Meanwhile, Mr. Swaminathan is engaged in holding individual discussions to speed up the commissioning of projects.

Rourkela Steel Expansion

The Secretary to the Central Ministry of Steel, Mr. N. N. Wanchoo, said at a Press conference last week: "One of the main objects of the Indian delegation in visiting Bonn was to discuss with the West German Government the measures necessary for bringing Rourkela into full production in the light of the advice given by the German experts, who had visited Rourkela as part of the delegation led by Mr. Solven of

the German Economics Ministry. The general findings of the experts are to the effect that the maintenance of the plant has been below par and that full production could not be achieved in a number of sections because of either lack of adequately qualified technical personnel or some deterioration in the quality of the raw materials used. The deficiencies in the transportation system within the plant have also been stressed. There is also recognition in the report that some part of the equipment supplied by the German firms had not performed fully to expectations.

"Among the main measures recommended are the building up of adequate stocks of spare parts so as to improve maintenance, some additions to the workshop equipment and in the transport facilities, and the recruitment of an extra number of technical personnel from abroad, about 40 or 50, in addition to what Hindustan Steel had already decided upon. A rough estimate of the cost of these measures is about 50 million Deutschmarks or Rs. 6 crores, of which approximately three-fourths is for the building up of spare parts and wages of personnel to be employed, neither of which

is of a 'capital' nature. The other equipment to be purchased does not amount to a very large sum. By and large, there was agreement on the measures to be taken, although details of these measures and the estimates of cost have to be worked out further.

"The delegation also discussed in a general way the question of placing orders for the expansion of the Rourkela plant, tenders for which have already been received. It is expected that these orders would be placed shortly.

Bokaro Study

"As for discussions in the United States concerning Bokaro, the delegation appreciated that if the loan-giving agency wished to have an independent economic study conducted, which is not unusual for large projects of this nature, we could not object to such a study, even though we felt that we had sufficient material in the preliminary report prepared by our own consultants to answer most of the points raised. Accordingly, the main task of the delegation was to ensure that the techno-economic study team should reach India quickly and start its work without further delay. The aid authorities promised that the study team will reach India early in June. (The latest information is that the team will be arriving by about 21st June). The team will be led by the U.S. Steel Corporation, though that Corporation is not precluded from employing other engineering firms with the concurrence of the American aid authorities.

"As for the scope of work of the team, it has been agreed that the techno-economic study will confine itself to appraising the suitability of Bokaro as a good site rather than conduct a wider enquiry into other possible alternative sites. This will narrow down the work of the study team and will also result in saving time. The study team will examine the processes which have been recommended for Bokaro, the availability of raw materials and transport, and the general economics of the project. The data available in the preliminary project report, prepared by Dastur and Company, and the further data available with Dastur and Company and other organisations of the Government, will be fully used in conducting the study. It has not been possible to lay down a fixed time schedule for the com-

pletion of the work of the team since, according to the American authorities, a good deal will depend upon the amount of information which we on the Indian side can make available to the team.

"It is, however, expected that the total time required for the study team is, in any case, unlikely to exceed seven months. Messrs Dastur and Company who have been appointed by the Government of India as the general consultants of the Department of Iron and Steel, as also their special consultant for preparing a detailed project report for Bokaro, will be closely associated with the Government and the study team. The actual decision on financial aid for the project will be taken after the study team has submitted its report.

"There has been some speculation in the past as to whether there is to be an equity participation by American firms in the Bokaro project. It was clarified during the discussions that at present there is no such proposal for any equity participation.

"As far as the United Kingdom is concerned, the visit was mainly with the purpose of establishing contacts and to study the working of the Iron and Steel Board in that country, since a demand has occasionally been voiced here that we should set up such a Board in this country also."

Consortium of Suppliers

Mr. Wanchoo said that Hindustan Steel is thinking in terms of a consortium of suppliers for the expansion of the Rourkela steel plant in order to avoid the earlier mistake of dealing with individual suppliers, which was largely responsible for the lack of co-ordination. Mr. Wanchoo added that "the continued use of I.S.C.O.N. for the expansion of Durgapur in some form is not ruled out. In fact, the tenderers had been asked to give their quotation individually and through I.S.C.O.N., in order to ascertain the financial implications of working through a consortium." Mr. Wanchoo said that it takes nearly three years from the date of calling tenders for a steel plant to go into full production. There has been a delay of almost a year in calling tenders for expansion of the Rourkela and Durgapur steel plants, and these units may not achieve full production by 1966.

Revising Coal Target

Private collieries have offered to raise an additional 7 million tons of coal during the third plan period. The Government of India has tentatively accepted the offer for the purpose of allocating the World Bank loan. The third plan coal production target was fixed at 97 million tons representing an increase of 37 million tons over that for the second plan. Out of the additional 37 million tons, private collieries have been assigned a target of 17 million tons. The present offer by the private sector is in addition to the allotted target. The Government of India is, however, considering whether the third plan coal target needs revision.

Road Transport Bodies

The nationalised road transport undertakings in the States, according to the Central Government, should be run through road transport corporations set up under the Road Transport Corporations Act, 1950, in which the State Government concerned, the Central Government and, if possible, private operators may participate. The State Governments have been accordingly advised to set up road transport corporations for the management of the State road transport undertakings. Such corporations have already been set up in Andhra Pradesh, Bihar, Gujarat, Maharashtra, Mysore, Punjab and West Bengal.

CAPITAL, 7th June, 1962.

The Madhya Pradesh Government and the Tripura administration propose to set up such corporations shortly. The Governments of Uttar Pradesh and Rajasthan are considering the question of setting up such corporations in their States. The Government of Madras proposes to consider this question when it takes up large-scale extension of nationalised road transport services. The Governments of Assam and Orissa have stated that they do not propose to set up road transport corporations.

Box Wagon Requirements

Eighteen thousand and twenty-five "Box" wagons, 1,468 for steel plant requirements and 16,557 for other traffic, are required for the additional traffic at the end of the third plan. About 450 of them are being produced each month.

Import of Gas Turbine Units

The following applications for licences for importing gas turbine generating units are being examined by the Government:

Particulars of import proposal	Name of the State Electricity Board/ Government
1 No. 9,000 kW hydel set	Assam State Electricity Board (Union project)
12 Nos. 150 kVA each	Mysore State Electricity Board
1 No. 700 kVA	Punjab State Electricity Board
2 Nos. 150 kVA each	Jammu and Kashmir Government
2 Nos. 688 kW	
2 Nos. 300 kW each	Assam State Electricity Board
6 Nos. 250 kW each	Rajasthan State Electricity Board

Yen credit is assured for the 9,000-kilowatt hydel set for Assam.

Steel Exports

A quantity of 70,369 tons of steel valued at Rs. 2.74 crores in 1960-61 and 58,815 tons valued at Rs. 2.23 crores during the 11 months ended February 1962 were exported from India. The principal markets were the United Kingdom, Pakistan, Italy and Egypt. Germany and the Netherlands also imported Indian steel in 1960-61. While the Netherlands did not import any steel during 1961-62, the share of Germany dwindled from 9,052 tons in 1960-61 to 11 tons in 1961-62. A quantity of 322,312 tons of scrap valued at Rs. 5.57 crores was exported during 1960-61 and 267,633 tons valued at Rs. 6.09 crores during the first 11 months of 1961-62. Japan was the major customer for scrap, importing 587,804 tons during the 23 months ended February 1962.

Rourkela Sintering Plant

The following firms have submitted their tenders for the Rourkela sintering plant: Messrs Simon Carves Limited, London; Koppers Export, G.m.b.H., West Germany; Head Wrightson Iron and Steel Works, England; Lurgi-Krupp, West Germany; G.H.L., West Germany; McDowell Company Inc., U.S.A.; and Gammon India (Private) Ltd., India. The total value of the plant is Rs. 3.76 crores, excluding the cost of spare parts.

Importing Luxury Cars

Air-India is negotiating a barter agreement with the Chrysler Corporation of the U.S.A. for importing luxury tourist cars. The Corporation will use the transatlantic flights of Air-India. In exchange, Air-India will receive luxury cars, which will be allotted to travel agents and others by the Department of Tourism.

Recruiting U.K. Personnel for Overseas Service on New Conditions

(FROM OUR LONDON CORRESPONDENT)

NEW countries just starting out on an independent career need the services of experts to help them on their way. Unfortunately, they are seldom able to afford to employ foreigners, at least on the terms and conditions which are regarded as satisfactory to those who had served in these areas while they were still the responsibility of a "mother" country. Filling this gap has been a major problem as Britain has extended independent status to former colonial territories. Although it has not been completely solved, at least the transition has been made more gradual, and in consequence, less disastrous than has been the case in some countries where political aspirations have run ahead of economic strength and scientific skills. It is obvious that some long-term solution of this problem must be found, and it is interesting to note that Britain, with a proud record of past achievement in this sphere, is showing the way. That is the purpose of a White Paper (Cmd. 1740, price 2s) which has just been presented to Parliament by Mr. Vosper, Secretary of the new Department of Technical Co-operation, setting out in detail the Government's policy for recruitment for overseas service.

Changing Needs

The document formally marks the end of the old conception of a whole-time overseas service, managed and paid by the Government. It lays down the basic principle that "most recruitment in future for service overseas within the sphere of the Department of Technical Co-operation should be for limited periods which form part of a career based primarily in Britain or in the service of a British institution." Changing needs in the developing countries have caused this break with the past. The White Paper states that until 1958 the Colonial Office recruited men and women for service with the Governments of overseas dependent territories at the rate of about 1,300 a year. In 1961, the number of recruits was 581. At one time, administrators and policemen formed a large part of the service; in 1961, the largest single category of appointments was teachers, of whom there were 168. There were also 66 nurses, 45 engineers, 47 doctors, 35 administrators, and about a score each of agricultural officers, geologists, land surveyors, and legal and police officers. The department states that there will be a continuing demand for a wide variety of specialists from the U.K. on short-term contracts, loan or secondment. The need is to persuade employing bodies in this country that it will be an advantage to release members of their staffs for spells of service abroad, and to provide an example by Government action.

The Government has rejected the proposal of the Select Committee on Estimates, made in 1960, that a pool of officers in the permanent employ of the U.K. should be established. The White Paper gives several reasons for this decision. Among them it states that such a service, even if it offered continuous employment, could not offer the prospect of a career since it is naturally and inevitably the aim of all the countries concerned to fill senior appointments with local people as soon as possible.

It is estimated that something over 20,000 people, recruited by the Government, are at present serving overseas. Of these, 13,000 are in dependent territories, nearly 7,000 in Commonwealth territories, 150 in foreign countries, and about 400 serving with U.N. agencies.

Voluntary Service

The White Paper mentions the value of voluntary service in the developing countries, for periods of about two years or less, by young people who had just taken their degrees, by school-leavers, or other young people in the same age groups. The White Paper states that little has been done with graduates, but it is generally believed that there are substantial numbers of students in universities and technical colleges who would be willing to go abroad for short periods of voluntary service after graduation. A new body, to be known as the Voluntary Societies Committee for Service Overseas, has been established with Dr. J. F. Lockwood, Master of Birkbeck College, as chairman. It will start work at once on planning a campaign for the recruitment of graduates as volunteers for the summer of 1963. Until this campaign is in full blast (by the autumn), the Department of Technical Co-operation will seek graduates for voluntary service overseas. It is planned to send 50 graduates to Africa on a pilot scheme for teachers. The Government will pay for return passages and terminal grants, and will meet other costs. Voluntary service is to remain the responsibility of the voluntary bodies, but the Government grants to these bodies, which at present total £17,500, will be more than doubled this year. To send a school-leaver overseas costs about £500 a year, and a graduate would cost about £1,000. Besides the efforts of Government departments, it is hoped that nationalised industries and statutory boards may help. Local authorities employ a wide range of men and women, and it may be necessary to lend them for work abroad. The report recognises that much help has been provided from these sources in the past. "But the need continues," it adds, "and it will be necessary to discuss with the authorities concerned ways in which the arrangements which exist can be improved."

In the private sector, there is also scope for developing arrangements on similar lines, so that individual employees can be released for assignments under Government auspices. Discussions on this are to be held with the Federation of British Industries and certain big employers. The latter are urged to recognise the value of service abroad. It should be taken into account in considering employees for promotion. It may be "troublesome and inconvenient" for employers to lend staff, but if the Government's responsibilities for finding suitably qualified people for the service abroad are to be fulfilled, the difficulties must be overcome. Goodwill will be needed from employers and individual employees. There will often be important indirect benefits for employers. Wider experience and contacts will be gained by staff who serve overseas, and a British connection with other countries maintained. "The possibility of being selected for an overseas appointment may even increase the attrac-

tiveness of service with a British employer."

In practically all dependent territories, and particularly in Africa, there is no longer scope for further pensionable appointments. A full-scale review of this problem is almost complete, after consultation with all colonial Governments. It is likely that even the remaining limited recruitment on permanent and pensionable terms will be stopped. The need now is for people to serve overseas on temporary terms, either on contract or on loan from employment at home. Most contract recruitment has been based on an initial engage-

ment for a term of three years, often renewable by mutual agreement. The Department of Technical Co-operation concludes that contracts for seven to ten years might be attractive where a continuing need was seen for qualified people.

The report puts forward a constructive alternative. The basic principle of future recruitment within the Department of Technical Co-operation's sphere will be that appointments should be for periods forming part of a career based primarily in Britain or in the service of a British institution. Application of this principle must necessarily differ widely between professions. No single solution will meet the varied circumstances. But the major thread running through them all will be that people should find it easy, and preferably advantageous professionally, to work overseas for a limited period. Formal terms of appointment will be either contract, loan or secondment. An appendix to the report details action being taken or contemplated over the main professional categories needed abroad.

THE SENDRA COAL COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta, on Wednesday, the 27th June, 1962 at 4 P.M. for the following purposes:—

- To consider the Profit & Loss Account of the Company for the year ended 31st December, 1961, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
- To declare the Dividend recommended by the Directors.
- To appoint Auditors and to fix their remuneration.

As Special Business

- To appoint a Director in the place of a retiring Director and in this connection to consider and if thought fit, to pass the following resolution as of which a special notice as prescribed by Section 281 of the Companies Act, 1956 has been given to this Company.

"That Mr. S. B. Bose who has attained the age of 74 years and who retires from the Board by rotation be and is hereby re-appointed a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

- To consider and if thought fit, to pass the following resolution:

tion which will be proposed as a special resolution.

"That in conformity with Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956, authority be and is hereby accorded to the continuance of a payment to the Directors of the Company of a commission (to be divided between them in such a manner as they shall from time to time determine) of 1% of the net profits of the Company in each financial year over the period of five years extending up to and including the financial year of the Company ending on 31st December, 1966."

The Share Transfer Register of the Company will be closed from the 20th June, 1962 to the 27th June, 1962, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO., (PRIVATE)
LIMITED,
Secretaries.

Chartered Bank Buildings,
Calcutta, 25th May, 1962.

NOTES:—

- A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- The Dividend, if declared, will be paid on or after 16th July, 1962 to those shareholders so entitled whose names appear in the Company's books on the 27th June, 1962, or to their mandates. No application for Dividend Warrants will be necessary.

Explanatory Statement for the Special Resolutions above.

Item No. 4 above.

In the Special Notice given to the Company of the intention of a member to move this resolution, it has been stated that as the services of Mr. S. B. Bose aged 74 years, have proved most useful to the Company, he having considerable experience and personal knowledge of the affairs of the Company, should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956 shall not apply to him.

Item No. 5 above.

The remuneration of your Directors is regulated by Article 97 of the Articles of Association of the Company and Section 309 of the Companies Act, 1956. The Directors of the Company are entitled to be remunerated for their services by a fee of Rs. 200/- per meeting to be divided amongst those present at such meeting of the Board and a commission of 1% of the net profits of the Company in each financial year, the latter having been permitted for five years expiring with the Company's financial year which ended on 31st December, 1961.

It is proposed that the Directors should continue to be remunerated in the manner prescribed in Article 97 of the Articles of Association of the Company that is by way of fees for meetings attended and a commission of 1% of the net profit of the Company up to and including the financial year of the Company ending on 31st December, 1966.

Each Director of the Company is interested in the Special Resolution to the extent of the remunera-

tion proposed to be paid to him. The Directors of your Company hold shares in the Capital of your Company as hereunder:—

Mr. P. Prashad holds 101 Ordinary Shares
Mr. S. B. Bose holds 100 Ordinary Shares
Mr. P. K. Mukerji holds 10 Ordinary Shares
Mr. D. N. Kapur (Alternate Director to Mr. R. G. Edwards) holds 100 Ordinary Shares.

THE BORREA COAL COMPANY LIMITED

At a meeting of the Board of Directors held on Thursday, the 31st May, 1962, the following dividends were recommended to be paid for the year ended 31st December, 1961, subject to deduction of tax.

On $\frac{6}{8}$ per cent Cumulative Preference Shares at the rate of 8.45 per cent per annum in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960.

On Ordinary Shares at the rate of 15 per cent per annum.

DUNCAN BROTHERS & COMPANY LIMITED

NOTICE

NOTICE is hereby given that the Sixty-third Annual General Meeting of the Shareholders of Duncan Brothers & Company Limited will be held at the registered office of the Company, 31, Netaji Subhas Road, Calcutta, on Friday, the 29th day of June, 1962, at 11-30 a.m. to transact the following business:

1. To consider and adopt the audited accounts for the year ended 31st December, 1961, and the Reports of the Board of Directors and the Auditors.
2. To declare dividends on the Preference and Ordinary Shares.
3. To elect a Director.
4. To appoint Auditors for the current year and to fix their remuneration.

AS SPECIAL BUSINESS

To consider and, if thought fit, to pass, with or without modification, the following resolutions:

5. As a Special Resolution: That the authorised capital of the Company be increased from Rs. 2,70,00,000 to Rs. 2,80,00,000 by the creation of 10,000 6% Redeemable Preference Shares of Rs. 100 each.
6. As a Special Resolution: That Article 5 of the Articles of Association be deleted and the following Article substituted in place thereof:—
"At the date of adoption of this Article, the capital of the Company is Rs. 2,80,00,000 divided into 2,25,000 Ordinary Shares of Rs. 100 each, 45,000 Preference Shares of Rs. 100 each and 10,000 Redeemable Preference Shares of Rs. 100 each. The said Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 4 per cent per annum tax free on the capital for the time being paid up thereon. The said Redeemable Preference Shares shall confer the right to a fixed cumulative preferential dividend at the rate of 6 per cent per annum free of income-tax payable by the Company but subject to deduction of tax under Section 194 of the Income Tax Act, 1961 or any statutory modification or enactment thereof prescribed under the Finance Act currently in force. The Preference Shares and the Redeemable Preference Shares shall confer the right in a winding up to payment off of capital and arrears of dividend, whether declared or not, upto the commencement of the winding up in priority to the Ordinary Shares, but shall not confer any further right to participate in profits or assets, nor confer any voting rights save as provided in Section 87 of the Companies Act, 1956.

The Register of Members and Share Transfer Books of the Company will be closed from 18th to 29th June, 1962, both days inclusive.

By Order of the Board,
S. K. MITRA,
Secretary.

Calcutta, 4th June, 1962.

- Note: A member entitled to attend and vote at the meeting may appoint a proxy to attend and, on poll, to vote on his behalf. The proxy need not also be a member of the Company.

A blank form of proxy is enclosed which should reach the Company not later than 11-30 A.M., on 27th June, 1962.

An Explanatory Statement has been attached with the Notice sent to the Shareholders.

CAPITAL, 7th June, 1962.

Redeemable Preference Shares at par at any time or times after the thirtieth day of June, 1969 on giving not less than six months' previous notice in writing specifying the date of redemption and, in the case of partial redemption, the number of shares to be redeemed and the date of drawing hereinafter referred to. The particular Redeemable Preference Shares to be redeemed shall be determined by means of drawing and such drawing shall be conducted by the Board at the office in the presence of a Notary Public and also of such of the holders of the said Redeemable Preference Shares who care to attend.

7. As an Ordinary Resolution: That subject to the approval of the Central Government and with effect from 1st November, 1962 Mr. K. P. Goenka be and is hereby re-appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an agreement to be entered into between the Company and Mr. Goenka, a draft whereof has been submitted to this meeting and for the purpose of indemnification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr. Goenka in terms of the said draft.
8. As an Ordinary Resolution: That subject to the approval of the Central Government being received and with effect from 1st April, 1962, Mr. N. C. Lance be and is hereby appointed a Managing Director of the Company upon the terms and conditions as to remuneration and otherwise to be specified in an Agreement to be entered into between the Company and Mr. Lance, a draft whereof has been submitted to this meeting and for the purpose of indemnification signed by the Chairman thereof and that, accordingly, the Directors be and are hereby authorised to enter into the agreement with Mr. Lance in terms of the said draft.

CAPITAL, 7th June, 1962.

(Continued from foot of previous page)

- (A) Repayable at par by 1986 by annual drawings on 1st July each year. May repay the issue in full after 30th June, 1961 on 6 months' notice.
- (B) Repayment at par on 31st Dec. 1964 with the option of repayment on 31-12-54 or any subsequent interest date at a prem. of 2%.
- (C) Rs. 56,00,000 to be redeemed at par annually by drawing.
- (D) With option to redeem any part at 101% after 31-12-64 and at 100% after 31-12-66.
- (E) Rs. 80 Lacs will be redeemed annually by drawings from 1st May, 1964 onwards. The Co. has option to redeem all Debentures at 101% on 1st May, 1953 on 6 months' notice.
- (F) Option to redeem all or any of the Debentures at a premium of Re. 1/- per cent by giving one month's notice on the 31st December, 1954 or any subsequent interest date.
- (G) May be redeemed on 30th June, 1957 at a premium of 1% or on 30th June, 1962, at a premium of 1%.
- (H) May be redeemed at a premium of Rs. 20/- per debenture (i.e. 2%) if redeemed earlier than 31st Dec., 1953 on 3 months' notice.
- (I) The Company has option to repay all or any at par by giving notice for 6 months expiring on any interest date after 30th Sept., 1955. At any time on or after 1st Oct., 1957 the holders may convert each note of Rs. 500/- into 25 ordinary shares to take effect on 1st Oct. in each year on giving 15 days' notice prior to such day.
- (J) May be redeemed at 101% at any time after 31st March, 1963 and at 100% on any time after 31st March, 1955.
- (K) Rs. 1,600,000 Debentures will be redeemed at par annually by drawing from 1-9-65. Any Debenture outstanding on 1-9-68 will be redeemed on that date with option to redeem all Debentures at 101% on 1-9-64.
- (L) Any time on 6 months' notice.
- (M) At par in September 1969.
- (N) May be redeemed at the end of 1955 or thereafter at 101%.
- (O) Option to repay at par on or after 31st May, 1951.
- (P) Redeemable at par on 31st Dec., 1972 with option to redeem at par at any time on 6 months' notice after 30th June, 1958. At any time after 31st Dec., 1948 each note of Rs. 500/- may be converted into two ordinary shares of Rs. 100/- each ranking for dividend from 1st January following.
- (Q) With option to redeem annually Rs. 2,00,000/- at par after 31-3-58 by drawing or by purchase in the open market.
- (R) May be redeemed annually at par by drawing after 31-3-63. 10th year also the whole issue at 101% on or after 1-1-67.
- (S) (Option to repay at par one month's notice). At any time after 31st October, 1956.
- (T) (Option to repay at par on 6 months' notice) after 1-1-67.
- (U) (Option to repay on 3 months' notice). At any time after 31st December, 1956.
- (V) May be redeemed at par on 30-6-56 or any subsequent interest date on one month's notice.
- (W) After giving six months' notice.
- (X) Rs. 5,00,000 will be redeemed each year from and after 1954.

* These Debentures are registered and are transferable by transfer Deeds.

JOINT STOCK COMPANIES' PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

FOREIGN EXCHANGE CRISIS
THREATENS THE PLAN

THE statement which the Central Finance Minister, Mr. Morarji Desai, made in the Lok Sabha last Friday about India's foreign exchange situation was, to say the least, extremely disturbing. Mr. Desai tried hard to give the impression that there was cause for hope, courage and good cheer. But statements are one thing, facts quite another—and not a hundred speeches can alter the reality that the foreign exchange crisis now facing this country is one of the worst, if not the worst, in its history. The latest return of the Reserve Bank of India, for the week ended 8th June, shows the central bank's external reserves down to Rs. 182.63 crores. Under the present law, the Bank is expected to hold at least Rs. 200 crores in gold and foreign exchange as backing for the paper currency; for this purpose, it has to supplement its Rs. 177.76 crores of gold holding with about Rs. 82 crores of foreign securities. The actual working balance for external transactions is thus barely Rs. 20 crores—at a time when the net outflow of foreign exchange has been averaging nearly Rs. 3 crores each week. Mr. Desai has, no doubt, implied that the actual foreign exchange reserves are bigger than these figures might indicate. According to him, the Government has certain working balances apart from the Reserve Bank's. Secondly, the paper currency reserve can be cut. And, thirdly, more can be borrowed from the International Monetary Fund. The implication seemed to be that the situation, therefore, is by no means as desperate as it might appear.

The assertion, however, is true only in a very limited sense. Mr. Desai quietly omitted to mention that the Government's working balances, as distinct from the Reserve Bank's, are really quite negligible. The paper currency reserve can be cut arbitrarily to whatever figure the Government likes, but no such cut can fail to affect confidence in the currency. A further credit could perhaps be obtained from the International Monetary Fund, but how large it will be and how readily it will be given, remains to be seen; the Fund is known not to be among the warmest admirers of India's financial policies. Reliance on one or all of these measures is thus apt to be either doubtful or dangerous; and Mr. Desai's statement gave the impression that he is understandably keen to avoid resorting to them for as long as he can. There is, therefore, a fourth possibility—which he did not discuss—on which India's hopes now mainly rest. It is that certain western countries might soon sanction untied credits for supporting the balance of payments. The U.K., it is reported, is about to give a credit of about Rs. 12 crores, and other countries might follow suit if they wish to save India the embarrassment of having to adopt desperate measures. The credits would be welcome; but one is left wondering why it has taken so long to negotiate them when they are, after all, merely part of the aid that was promised a year ago.

It is arguable that India is an old hand at stumbling through foreign exchange crises, and to stumble through another one this year will not be an altogether novel venture. But Mr. Desai was less than frank in telling the country plainly what

the longer-term implications of the present situation are. As a shrewd politician, he probably feels that a mere four months after the general elections is not the right time to announce that the third five year plan—the major plank of the Congress Party's platform—is going haywire. So, instead, he has chosen soothing words, which are, notable more for bravado than for candour by saying: "I would emphasise that there is no cause for feeling that the plan has been, or should be, slowed down. On the contrary, if anything, there is greater need now for speed." Mr. Desai pointed out that external assistance has already been promised for a large number of important projects in the third plan. Among them are "the expansion of the three public-sector steel plants, the machine-building and heavy electrical projects, the bulk of the power projects in the plan, a substantial portion of the requirements for railways, ports, oil, coal, fertilisers and other key sectors of the economy." In addition, "a very large number of plan projects need only small amounts of foreign exchange and depend mainly on indigenous supplies for their completion."

What Mr. Desai chose not to mention is that even in the case of these projects, although the foreign aid may have been assured, serious delays have occurred in implementation. A number of the major third plan targets, therefore, are not likely to be achieved by 1965-66, including those for such crucial sectors of the economy as steel, cement and fertilisers. Furthermore, the Finance

Minister in his statement quoted only the figures concerning foreign exchange requirements originally mentioned in the third plan document: Rs. 1,900 crores for plan projects, Rs. 200 crores for components and "balancing equipment" Rs. 500 crores for servicing external debts previously incurred, and Rs. 600 crores of P.L. 480 assistance. He quietly passed over the fact that the estimate for the cost of plan projects has now gone up by about Rs. 200 crores, which means that if India is not going to ask for so much extra foreign aid, she will have to cut down the plan by that amount. Mr. Desai is entitled to what satisfaction he likes about the foreign aid promised for the projects he mentioned. But it is worth noting that most of them are in the public sector, and almost nothing has been said about the fate of many major projects in the private sector, on which too the successful completion of the plan depends.

The latest import restrictions, by themselves, are in fact likely to ensure that the plan will not be completed in the

duction will slow down, if not stop altogether. Thereafter, many schemes will tend to be deferred until the uncertain future when the foreign exchange situation improves. To suggest in such

DEPENDING LESS ON IMPORTS

THE import cuts just proposed by the Government of India can help to reduce the drain on the foreign exchange reserves only in the short run. The cuts cannot be allowed to be permanent: on the contrary, the longer they are continued, the greater will be the damage to the economy. The long-term solution lies in expanding exports. The success of export promotion, however, depends as much on Indian efforts as on the foreign demand for this country's products, which latter can be influenced only slightly and indirectly. The possibility of reducing the dependence on imports deserves to be examined constantly. As the planners are aware, a first step in any economic development programme involving large foreign exchange outlays is to examine which of the traditionally imported commodities can be manufactured within the country. In a memorandum submitted to the Central Ministry of Commerce and Industry, the Federation of Indian Chambers of Commerce and Industry has drawn the Government's attention to the fact. The Federation has expressed the opinion that a study of the import data will indicate clearly the direction in which industrial policy should be reoriented.

But, as the Federation admits, certain items have to be imported because they are essential, and sources of supply within the country are inadequate. Various non-ferrous metals, and sulphur, belong to this category. In fact, their imports may have to be raised as the economy grows. Also, some commodities will have to be imported so that Indian industries can keep abreast of the latest developments abroad. This is true of both machinery and consumer goods, particularly the former. In a developing economy, the demand for various commodities can only be approximately estimated for future years. Hence some imports of essential items may become unavoidable since domestic output may fall short of demand. The Federation has pointed out that in 1960-61, out of imports totalling Rs. 1,070 crores, capital goods, including spare parts and components, accounted for approximately Rs. 327 crores, intermediate goods were Rs. 503 crores, consumer goods Rs. 200 crores, and unclassified items (mostly consumer items) Rs. 40 crores. According to statistics compiled by the Chief Controller of Imports and Exports, it is stated that imports of what can really be termed as capital goods amounted to only Rs. 153 crores, with spares and components accounting for nearly Rs. 174 crores. As far as capital goods proper are concerned, the country may have to continue importing them in increasing quantities as economic development proceeds.

However, the import of all the items now purchased abroad need not be continued indefinitely. As traditional goods begin to be made within the country, new goods will have to be imported in larger quantities. Facilities for manufacturing machines will have to be set up so that capital goods imports are limited to the latest types of equipment which the country is not in a position to make immediately. The Federation has urged that the import policy should be biased in favour of machine tools to make capital goods rather than in favour of capital goods themselves. But the trouble is that setting up and operating a machine tool plant efficiently involves much time and expense. Meantime, machinery imports may have to be increased in order to keep the development process going. This is what the Indian Government has been attempting to do. On this point, the third five year plan says: "It is essential to press forward with the establishment of basic capital and producer goods industries—with special emphasis on machine-building programmes—and also with the acquisition of the related skills, technical know-how and designing capacity."

In particular, more energetic efforts are necessary to manufacture more of the spare parts and components which are now imported, although total imports of components may even so rise. At

circumstances that the third plan will continue intact is misleading: economic progress will suffer a setback from which it may take a long time to recover.

present, imports are being allowed for assembling complete products or for replacement purposes. The Central Government has, of course, made it a condition in granting many industrial licences that dependence on imported components is progressively reduced and ultimately eliminated according to an approved programme of manufacture. It will obviously be difficult to lay down a maximum of three years during which components will be allowed to be imported, as the Federation has suggested. The requirements of some industries are more complex than those of others, so a uniform time limit cannot be applied for all products. Ancillary industries making components remain undeveloped; where they exist the quality of their products also is poor. The Federation has pointed to certain specific items which, it thinks, do not need to be imported because they can be made within the country. Among them are industrial diesel engines, and conveying, hoisting, excavating and road construction equipment. Unfortunately, however, controversies over the

public versus the private sector and the Government's ideological predilections have tended to hamper the granting of industrial licences to set up manufacturing facilities. The case of diesel locomotives, cited by the Federation, is only one example where imports continue because the Government does not want to permit production in the private sector.

Among intermediate goods, the biggest single item of import is iron and steel. While imports of many varieties could have been reduced by better planning at the three public-sector steel plants, there are a few special steels which may have to be imported in increasing quantities even after the proposed alloy and tool steel projects are implemented. Some types of special steels are required in small quantities, and their production cannot be undertaken until the demand rises. The Federation has emphasised that the import policy must be conceived of in two parts. One must take care of the immediate requirements of the economy, and the other the import of machine tools and machinery which will progressively curtail the import of items needed for operational requirements. The trouble, of course, is that at present there is no room for manoeuvre which such a policy will call for. However, the points made by the Federation should serve as a reminder to the Government on the priorities that might be observed in further restricting imports, now that the step has become unavoidable.

THE IMPORTANCE OF PRICES

A SIMPLE comparison suggests one reason why the British Government's policy of "containing" wages has failed. The Government intended that the increase in wages should not exceed 2½ percent in a year; the official index of the cost of living increased nearly 1½ percent in a single month, (April). Retail prices in Britain have risen erratically in the last year or two, but they have always tended upward and often risen faster than wages. Workers may not study official statistics, but they (and their wives) can easily perceive that they need more money to maintain their standard of living. Governments' policies on prices are curiously inconsistent. In Britain, the authorities are very price-conscious where their own purchases are concerned, but they seem unaware of the importance of price where consumers' spending is concerned. There are sound economic arguments for raising prices to absorb purchasing power if purchasing power is excessive and more or less static. But to apply such arguments in the present situation is a serious error of psychology.

The means of economic regulation—whether by indirect methods such as credit control or by direct methods such as taxation—have been discussed for many years. The sectors of economic regulation—investment, consumption, wages, profits and prices—have been comparatively neglected in these discussions; but they are not less important. Governments are, anyway, reluctant to declare their intentions in this aspect—if, indeed, their intentions are ever clarified in their own minds. The British Government has tended, consciously or subconsciously, to regulate the economy through profits. It has a firm (though not an infallibly effective) policy on wages and salaries in the public sector, but it does not directly influence negotiations on wages and salaries in the private sector. It has assumed, apparently, that if profit margins are diminishing and profits are tending downward, employers will firmly resist demands for increases in pay. Recognising that such demands cannot be resisted if labour is scarce, it has adopted some policies that cause moderate unemployment of labour—within politically permissible limits.

Britain's Chancellor of the Exchequer, Mr. Selwyn Lloyd, asserted recently that his wage-restraining policy had on the whole succeeded. But, in fact, when he defended himself against the charge that the policy had failed, "the 2½ percent line" had been breached in no less than 77 industries and trades. Experience in the industrial countries generally (the United States is an important example) shows that not even large-scale unemployment can restrain the rise of wages

when the cost of living is rising. When he presented the Budget last April, Mr. Lloyd seemed to have accepted the fact that incomes were rising faster than production. His simple remedy for this disorder was to take money from consumers by indirect taxation. Additional taxes that were imposed temporarily last July were made permanent, and some new taxes were introduced. The effect of these imposts was to accentuate the rise in prices that had already provoked demands for more pay. Such a policy, though possibly justifiable theoretically, is incompatible with the policy of "containing" incomes.

A government's ability to control prices is debatable; in any case, direct price control is out of favour. But a government can, of course, deliberately raise prices by fiscal means, and the British Government has done so. In Britain, makers of chocolates and sugar confectionery have taken advantage of the new tax on their products by raising their prices more than the amount of the tax; and the Government has raised no objection. The Government has campaigned directly against wages and indirectly against profits, and ignored prices. It may be argued that, although producers are free to raise prices, their profits have declined. It is true that in most industrial countries, prices have not risen as much as costs. But prices have risen enough to raise costs, through demands for more pay. In Britain, the Government and other public bodies must bear much of the responsibility for the rise in the cost of living, not only by taxation but also by big increases in charges for fuel, power and transport. And, of course, the Government must bear full responsibility for its own excessive spending, which continuously injects inflationary purchasing power into the economy.

The policy of absorbing surplus spending power by raising prices has generated inflation rather than suppressed it, and it has now become necessary to "rethink" the whole process. One factor that must be taken into account is the basic redistribution of incomes. Wage-earning on an "affluent society" expect and demand a rising standard of living, and they are not content with increases in wages that merely counterbalance increases in prices. A responsible government will moderate this tendency, but a realistic government will not resist it by increasing taxation as a normal act of policy. But to impose on profits all the burden of increasing wage costs is an equally questionable policy, for much of a nation's new capital is derived from profits. A serious social argument against a policy of rising prices is that it operates against pensioners and others with fixed incomes; they cannot organise them-

selves into pressure-groups as wage-earners (and even salary-earners) can organise themselves into unions. The only permanent solution of the problem (when unproductive spending has been

reduced to the minimum) is increasing national wealth. But the policy of "absorbing" increases in incomes is not intended to promote economic growth.

Current News and Comment

Bird-Heilgers Coal Results

The results of the coal companies in the Bird-Heilgers group, for the year ended December 1961, have been published. The raisings of the Borrea Coal Company were 201,993 tons, compared with 201,253 tons in 1960, and despatches were 205,128 tons, against 200,239 tons. The directors say that it has not been possible to drive the new surface inclines to 18 seam in Aralgoria due to difficulties over land acquisition. The offers of output made to the Government have had to be considerably revised because of the acquisition of certain areas by the Central Government under the Coal Bearing Areas (Acquisition and Development) Act, 1957. The profit has risen from Rs. 4.67 lakhs in 1960 to Rs. 5.26 lakhs in 1961, after transferring Rs. 99,875 (against Rs. 89,058) to depreciation. The taxable ordinary dividend has been repeated at 15 percent, which is covered nearly five times and offers a yield of 5.6 percent at the present price of Rs. 28.87 a share. Development rebate reserve is allocated Rs. 3,700 (against Rs. 44,610), general reserve Rs. 1 lakh (the same) and bad and doubtful debts reserve Rs. 25,000. The carry-forward is Rs. 33,647, against Rs. 31,361 brought in.

The Ondal Coal Company has earned a profit of Rs. 94,079 (against Rs. 59,606), after transferring Rs. 7,812 (against Rs. 8,400) to depreciation. The taxable ordinary dividend has been raised from 6 percent to 7.5 percent, which is covered more than one-and-a-half times. The yield is 5.2 percent at the present price of Rs. 15 a share. General reserve is allocated Rs. 11,167, leaving a carry-forward of Rs. 45,060, against Rs. 35,298 brought in. The market value of the investments of the Company for which quotations are available amounts to Rs. 13.74 lakhs.

The Sendra Coal Company has cut the taxable ordinary dividend from 5 percent to 3.5 percent which absorbs Rs. 44,940. The yield works out to 4.6 percent at the present price of Rs. 7.69 a share. The profit has declined from Rs. 95,177 to Rs. 78,390, after providing Rs. 326 (against Rs. 344) for depreciation. Taxation absorbs Rs. 48,021 (against Rs. 44,517). The carry-forward is Rs. 1,540, against Rs. 1,111 brought in. The scheme for amalgamating Churulia Coal with Sendra Coal has been sanctioned by the Calcutta High Court. Under the scheme, all the assets and liabilities of Churulia Coal have been transferred to Sendra Coal, and one ordinary share of Rs. 10 each of Sendra Coal has been issued for every three ordinary shares of Rs. 4 each of Churulia Coal. The market value of the investments of Sendra Coal for which quotations are available, together with the unquoted investments as valued by the directors, amounts to Rs. 13.34 lakhs. A sum of Rs. 15,000 has also been transferred from general reserve to the profit and loss account.

In their report, the directors of the Karanpura Development Company point out that 13,590 bighas of land have been acquired by the Central Government in the Karanpura coalfield and claims for 10,908 bighas have so far been submitted to the National Coal Development Corporation. As a result of the notification under the Mines and Minerals (Regulation and Development) Act, 1957, the royalty income of the Company has been affected along with other firms in the coal industry. The notification has, therefore, been made the subject matter of a reference to the Government as a prelude to a bipartite conference on the whole royalty issue. Coal raisings amounted to 1.6 million tons, and nearly an equal amount was despatched. The profit has risen from Rs. 3.24 lakhs to Rs. 4.09 lakhs. The taxable ordinary dividend of 5 percent has been maintained, which is covered more than four times. It offers a yield of 3.1 percent at the present price of Rs. 16.31 a share. Taxation absorbs Rs. 2.60 lakhs (against Rs. 1.77 lakhs), development rebate reserve Rs. 13,600

(against Rs. 3,000), and general reserve Rs. 1 lakh (the same). The carry-forward is Rs. 1.40 lakhs, against Rs. 2.55 lakhs brought in. Depreciation is allocated Rs. 26,406 (against Rs. 7,403), before arriving at the profit figure.

Balmer Lawrie Maintains

In their report for the year ended December 1961, the directors of Balmer Lawrie and Co. Ltd say that the Assam Pulp Mills project has had to be abandoned due to certain difficulties in arranging for the loan capital. Consequently, the Company's investment in Assam Pulp Mills has had to be written off. The overall results for 1961 are more or less the same as those for 1960 because of a rise in the trading profit and due to the credit taken for the balance of provision for contingencies to the extent it is no longer required. The flour mills managed by the Company faced labour troubles. Balmer Lawrie owns nearly 94 percent of the share capital of Bridge and Roof (India) Ltd, and it has made an offer to acquire the remaining shares of the latter from the other members. The offer is open until 31st July, 1962. The British India Electric Construction Co. Ltd has fared well. The technical collaboration agreements with Johnson and Phillips Ltd and the Electric Construction Co. Ltd are being finalised. It is proposed to raise the issued share capital of British India Electric Construction. Balmer Lawrie's profit in 1961 has amounted to Rs. 27.20 lakhs, after transferring Rs. 2.12 lakhs to depreciation and Rs. 14.08 lakhs to taxation. The profit in 1960 was Rs. 28.03 lakhs, after providing Rs. 1.85 lakhs for depreciation and Rs. 13.04 lakhs for taxation. The taxable ordinary dividend has been maintained at 25 percent, including an interim of 7 percent. It is covered more than one-and-a-half times and offers a yield of 9.1 percent at the present price of Rs. 274 a share. Development rebate reserve is allocated Rs. 44,747 (against Rs. 42,335), and general reserve Rs. 7 lakhs (the same).

Same from Shaw Wallace

Shaw Wallace and Co. Ltd has maintained the taxable ordinary dividend at 15 percent for the year ended December 1961. This is covered more than five times, and the yield works out to 6.3 percent at the present price of Rs. 23.75 a share. The profit is, however, lower at Rs. 58.19 lakhs compared with Rs. 82.84 lakhs in the previous year, after raising depreciation from Rs. 17.38 lakhs to Rs. 19.37 lakhs. Taxation absorbs Rs. 40.59 lakhs (against Rs. 42.99 lakhs), general reserve Rs. 1 lakh (against Rs. 15.75 lakhs) and development rebate reserve Rs. 3.67 lakhs (against Rs. 1.49 lakhs). The carry-forward is Rs. 21,315, against Rs. 7 lakhs brought in. The fall in profit is mainly due to higher production costs and transport charges and plant break-downs at the glue factory in Calcutta. The sale of fertilisers rose from 135,625 tons to 183,464 tons, and the prospects are, that the sales will increase. The superphosphates and sulphuric acid factory worked to capacity, but the profit margin has remained low due to greater competition. The production of agri-culture spraying and dusting equipment has increased. The glue factory in Madras has worked satisfactorily, but the Calcutta factory has had break-downs. Efforts are being made to obtain normal production from the latter plant in the near future. The output of the Timpale Company of India has improved and a record production of 77,045 tons was reached during the year. The coal companies are doing well and have plans to expand their output. The flour mills have suffered due to labour troubles. Walker and Creig (Coonor) Ltd has been reorganised and is expected

to do better. The distilleries have done well. Although the Indian Yeast Co. Ltd has accumulated a loss of Rs. 7.01 lakhs, this is mainly due to the initial difficulties of production. These difficulties are being overcome. As the demand for yeast is expected to improve, the outlook for this Company is good. The directors say that the project for a complex fertiliser plant to be set up by Shaw Wallace and Rallis India in collaboration with the State Mines of Holland, is making progress.

Prospects for Bengal Paper

A taxable ordinary dividend of 27.5 percent has been declared by the Bengal Paper Mill Co. Ltd for the year ended December 1961 on the increased capital. It is covered more than two-and-a-half times, and offers a yield of 7.7 percent at the present price of Rs. 35.81 a share. The taxable ordinary dividend was 32 percent for 1960. The ordinary shares of Rs. 25 each of the Company were first sub-divided into shares of Rs. 5 each. Then bonus shares worth Rs. 9 lakhs were issued by capitalising reserves. Subsequently, the shares were consolidated into ones of Rs. 10 each. The profit has amounted to Rs. 41.43 lakhs, against Rs. 40.78 lakhs in 1960, after raising depreciation from Rs. 10.05 lakhs to Rs. 13.62 lakhs. Taxation is allocated Rs. 22.13 lakhs (against Rs. 18.17 lakhs), capital reserve Rs. 10,000 (the same), general reserve Rs. 1.23 lakhs (against Rs. 4 lakhs), and development rebate reserve Rs. 4.36 lakhs (against Rs. 2.69 lakhs). The carry-forward is Rs. 1.49 lakhs, against Rs. 1.41 lakhs brought in. The production of paper rose from 18,395 tons to 19,327 tons. The output would have been higher but for the shortage of raw materials, chemicals and transport. The directors say that the industry has asked the Government to raise the selling price of paper in order to cover the increase in production costs. The expansion and modernisation schemes of the Company are making satisfactory progress. Orders for machinery from the U.S.A. and the U.K. have been placed. The schemes, it is expected, will be completed in the second half of 1963.

Macneill and Barry Does Well

In their report for the nine months ended December 1961, the directors of Macneill and Barry Ltd say that as the Company has become a subsidiary of Inchcape and Co. Ltd, London, since 22nd December, 1961, the financial year has been changed from 31st March to 31st December. This has been done to facilitate the preparation of Inchcape and Co. Ltd's consolidated group accounts. The present accounts of Macneill and Barry have, therefore, been drawn up for a period of nine months only. The profit compares favourably with that of the previous financial year. It amounts to Rs. 35.11 lakhs, of which taxation takes Rs. 14.50 lakhs. A taxable ordinary dividend of 8 percent has been declared, absorbing Rs. 12 lakhs. General reserve is allocated Rs. 4 lakhs and development rebate reserve Rs. 7,800, leaving a carry-forward of Rs. 3.39 lakhs. Depreciation is allocated Rs. 2.31 lakhs before arriving at the profit figure. The dividend income on Macneill and Barry's investments shows an all-round rise. The working of Kilburn and Co. Ltd—a wholly-owned subsidiary—has produced satisfactory results. Macneill and Barry disposed of its harbour boating fleet to its subsidiary Company—Fraser and Co. Ltd—at a written down income tax value. The development programme of the Company is making progress, and two manufacturing companies have been registered. Other projects are in various stages of completion. Kilburn and Company has also taken steps to expand its activities.

Rights from East Indian Coal

In a circular letter to shareholders, the directors of the East Indian Coal Co. Ltd say that they are considering raising the Company's output following the completion of the current development programme in 1963. Further development of the existing group of collieries in the Jharia field seems likely to prove unremunerative on the basis of the present price structure since apart from the neces-

sity of deepening the existing pits, the cost of increasing the surface handling and loading facilities and providing greatly increased railway siding capacity will be considerable. The directors have, therefore, recently authorised expenditure on prospecting in the Company's properties in the Mugma field where quarrying operations on a limited scale have been carried on since 1959. If certain seams are proved, it is proposed to sink shafts and inclines to develop these mines within the next few years.

The Company feels that an opportunity has arisen to acquire a substantial portion of the issued share capital of the Bhulanbararee Coal Co. Ltd, the properties of which are contiguous to East Indian Coal's Bararee and Jealgora collieries. A detailed investigation of the feasibility of developing the Bhulanbararee colliery to give an output of about 400,000 tons a year has been undertaken by East Indian Coal's Chief Mining Engineer. While mining conditions are likely to be difficult, the directors believe that the property can be further developed. Apart from its potential development value, the Bhulanbararee Coal Company possesses a valuable aerial ropeway and sand scraper station on the river Damodar, the control of which is of great importance to East Indian Coal in supplementing at a reasonable cost its own sand-gathering and ropeway capacities which have proved rather inadequate for supplying sand to Bararee and Jealgora collieries. The directors have accordingly completed arrangements for purchasing 61,321 shares of the Bhulanbararee Coal Company, representing 85.46 percent of its issued share capital.

East Indian Coal's recent offer of debentures worth Rs. 50 lakhs was fully subscribed. The proceeds are being used to reduce the Company's indebtedness to the Hongkong and Shanghai Banking Corporation. The latter has undertaken to make further advances to help complete the current development programme. The Company's debt to its bankers on this account is expected to be paid off by the end of 1964. The purchase of shares in Bhulanbararee Coal, the necessity to repay loans given to the Company by the previous directors and shareholders, and the development requirements of the collieries, including the Bhulanbararee property, during the next three years, make it desirable that resources be further augmented. Subject to statutory consents, it is accordingly proposed to offer rights ordinary shares in the proportion of three new shares for every five held at a price of £1 13s or Rs. 22 a £1 share. The premium, therefore, works out to 13s or Rs. 8.67 a share. Applications for permission are being submitted to the Controller of Capital Issues, New Delhi, and the U.K. Treasury.

The new shares will not rank for every dividend for the year ended April 1962, but will rank *pari passu* in all other aspects with the existing ordinary shares. The dividend which will be recommended by the directors for that year will, it is expected, be announced early in August, and will not be less than Rs. 2.50 a share, subject to deduction of tax. The directors hope that, with the further increase in production planned during the coming year and subject to the availability of electric power and transport, it should be possible to maintain at least the same rate of dividend on the increased capital.

Shree Gopal Paper Repeats

The paper production of Shree Gopal Paper Mills Ltd increased from 20,246 tons in 1960 to 30,260 tons during the year ended December 1960. The output of the pulp mill also rose. When the remaining equipment of the pulp mill is installed and the soda recovery section starts working to capacity, the output of paper, it is expected, will rise to nearly 110 tons a day. The stationary section has done well, but the working of the *vanaspati* factory has been hampered by the increased price of oilseeds. The profit has improved from Rs. 56.21 lakhs to Rs. 58.84 lakhs, after raising depreciation from Rs. 34.63 lakhs to Rs. 62 lakhs. The taxable ordinary dividend has been repeated at 17 6/7 percent; it is covered more than two-and-a-half times. The yield works out to 6.6 percent at the present price of Rs. 27.25 a share. Taxation absorbs Rs. 22.50 lakhs (against Rs. 2.58 lakhs) and development rebate reserve Rs. 6.75 lakhs

(against Rs. 49.50 lakhs). The carry-forward is Rs. 1.58 lakhs, against Rs. 57,232 brought in.

National Tobacco Cuts Dividend

The National Tobacco Company of India Ltd has produced disappointing results for the year ended December 1961. The taxable ordinary dividend has been cut from 16 percent to 7 percent. It is covered more than two-and-a-half times, and offers a yield of 4.4 percent at the present price of Rs. 15.94 a share. Sales have fallen to Rs. 8.74 crores from Rs. 9.64 crores, and the profit has dropped sharply to Rs. 17.89 lakhs from Rs. 59.06 lakhs, after providing Rs. 6.76 lakhs (against Rs. 5.91 lakhs) for depreciation. Development rebate reserve is allocated Rs. 3.55 lakhs (against Rs. 3 lakhs), and taxation Rs. 7.45 lakhs (against Rs. 25.33 lakhs). A sum of Rs. 3 lakhs has been transferred from taxation provision no longer required. The carry-forward is Rs. 11.39 lakhs, against Rs. 9.34 lakhs brought in. The directors consider the outlook uncertain as the tax burden on the industry is considerable. The prices of many brands of cigarettes have had to be increased due to this factor alone; so it is difficult to forecast the trend of demand. The unsatisfactory results in 1961 were also due to greater competition. The value of exports of unmanufactured tobacco fell in 1961, but the overseas demand for this commodity showed an improvement early in 1962.

Less from Equitable Coal

The directors of the Equitable Coal Co. Ltd take a fairly optimistic view of the prospects for 1962. Production has so far been maintained at a satisfactory level, and despatches were satisfactory during the first four months of 1962. The fall in output from 1.9 million tons in 1960 to 1.8 million tons in 1961, was due to the shortages of transport, electric power and explosives. There was, however, a relatively bigger rise in the raisings of inferior coal. Colliery expenses have increased, but this has not been neutralised as the price policy of the Government continues to be restrictive. The loss in production from the Bhutgoria colliery and from the Koithee seam of the Charanpur colliery has been fully offset by the increased output from the Selected Baraboni colliery. The acquisition of this new colliery has enabled the Company to pursue a phased programme of extraction from the Ponati and Koithee seams at the Bhanora colliery and from the overlying Rana seam of the Selected Baraboni colliery.

The directors point out that the Company's expansion programme during the third plan centres on opening a new colliery in Mouza Khotidih. Although the technical and financial feasibilities of this venture have been approved, legal complications have delayed the granting of a licence. The profit has declined from Rs. 12.38 lakhs in 1960 to Rs. 10.14 lakhs in 1961. The taxable ordinary dividend has been cut from 15 percent to 10 percent which is covered more than twice and offers a yield of 3.5 percent at the present price of Rs. 28.50 a share. Taxation absorbs Rs. 5.33 lakhs (against Rs. 35,002), development rebate reserve is allocated Rs. 1.77 lakhs (against Rs. 3.55 lakhs), and debenture redemption sinking fund Rs. 1 lakh (the same). A sum of Rs. 50,000 has been transferred from general reserve. The carry-forward is Rs. 33,594, against Rs. 1.11 lakhs brought in. Depreciation has been allotted Rs. 18.24 lakhs before arriving at the profit figure.

Burmah-Shell Refineries Earns More

The Burmah-Shell Refineries Ltd reports encouraging results for 1961. The throughput of the refinery during 1961, at 2,911 million metric tons, showed an increase of 67,768 metric tons over 1960. The production could have exceeded 3 million metric tons if there were no restrictions on the import of crude oil. A quantity of 49,016 tonnes exported during the year. The Company's income from refining recorded an increase of Rs. 45 lakhs from Rs. 12.32 crores to Rs. 12.77 crores, and the gross profit improved by Rs. 35.40 lakhs to Rs. 7.30 crores. The dividend on

CAPITAL, 14th June, 1962.

the increased capital has been stepped up from 20 percent to 25 percent, absorbing Rs. 3.63 crores, against Rs. 2.76 crores. After providing Rs. 1.71 crores (against Rs. 1.71 crores) for depreciation, Rs. 4.40 lakhs (against Rs. 4.12 lakhs) for development rebate and Rs. 3.06 crores (against Rs. 2.61 crores) for taxation, the net profit amounts to Rs. 2.48 crores (against Rs. 2.58 crores). No provision has been made for general reserve, which received Rs. 1 crore in 1960. A sum of Rs. 9 lakhs has been transferred from tax equalisation reserve, against Rs. 76 lakhs in the previous year. After providing for the proposed dividend, a sum of Rs. 8.19 lakhs is being carried forward, against Rs. 1.13 crores brought in.

Esso Standard Refining Fares Well

The Esso Standard Refining Company of India Ltd (known as the Standard-Vacuum Refining Company of India Ltd until 31st March, 1962) had a record year in 1961. There was an all-round increase in production, sales and profit. An average of 40,945 barrels of crude oil a day was processed in 1961, compared with 38,876 barrels a day in 1960, resulting in a total production of about 2,264.8 million litres. Out of this, 2,052.2 million litres were sold in India, compared with 2,177.8 million litres in the previous year. The balance of 176.6 million litres consisting of motor gasoline and asphalt, surplus to the requirements of India, was exported to New Zealand, Australia and Indonesia. The Company earned foreign exchange amounting to Rs. 1.99 crores from these exports. Since the refinery went into operation in 1954, the total foreign exchange savings, including export earnings, are estimated at Rs. 26.01 crores. The directors state in their report that the Company received the first shipment of Ankleshwar crude oil in February 1962. Facilities for bulk asphalt loading were also completed during the year. The Company has received a licence for the manufacture of hexane and the plant is being constructed. The directors hope to be able to supply hexane in the latter half of 1962. The Company's sales in 1961 totalled Rs. 36 crores, compared with Rs. 34.06 crores in the previous year. The closing stocks are placed at Rs. 2.10 crores, against Rs. 1.88 crores. The gross profit has risen by about 27.4 percent from Rs. 3.29 crores to Rs. 4.19 crores. After providing Rs. 92.30 lakhs (against Rs. 91.85 lakhs) for depreciation, Rs. 1.445 crores (Rs. 1.05 crores) for taxation and Rs. 5 lakhs (against Rs. 2.25 lakhs) for statutory development rebate, the net profit amounts to Rs. 1.77 crores, against Rs. 1.29 crores in 1960. Appropriations include Rs. 5.70 lakhs (against Rs. 5.20 lakhs) for self-insurance reserve, Rs. 1.7 crores (against Rs. 125.18 lakhs) for general reserve No. 2 and Rs. 50,000 (the same) towards debenture issue expenses. Provision for taxation in 1961 excludes Rs. 13.29 lakhs transferred from reserve for deferred taxation, compared with Rs. 10.31 lakhs for 1960. In view of the increase in tax rates proposed in the Finance Bill, 1962, the Company will need to provide an additional Rs. 17 lakhs for 1962. The dividend on ordinary shares has been skipped. The Company paid Rs. 2.40 a share in 1960; it was paid out of profits which were exempt from tax under Section 15C.

New India Assurance Results Impress

The full report on the working of the New India Assurance Co. Ltd in 1961 shows that the Company has done extremely well, although the dividend has only been maintained at Rs. 5.70 a share (including a cash bonus of Rs. 1.20 a share), subject to tax. The aggregate net premium income is up by about 17 percent from Rs. 10.87 crores to Rs. 12.65 crores; the claims ratio is down from 52.6 percent to 50.3 percent, and the gross profit has risen impressively by about 84 percent from Rs. 69.74 lakhs to Rs. 1.28 crores. The substantial increase in the Company's business represents successful efforts to make good the loss of life business. In a statement circulated to shareholders along with the annual report, the chairman, Mr. A. D. Shroff, says that the Company has been able to build up an effective and active organisation during the past five years, and he can look forward to the future with confidence. The field staff has been gaining underwriting experience, and the

CAPITAL, 14th June, 1962.

management is able to exercise more effective control in accepting risks and in minimising claims.

The premium income of the fire department is up by Rs. 35 lakhs from Rs. 4.07 crores to Rs. 4.42 crores, resulting in a profit of Rs. 72.8 lakhs. The premium income of the miscellaneous department shows an increase of Rs. 1.09 crores from Rs. 4.70 crores to Rs. 5.79 crores, earning a profit of Rs. 51.1 lakhs, against a mere Rs. 1.2 lakhs in 1960. The marine department, however, suffered a loss of Rs. 20.7 lakhs, against a profit of Rs. 15.2 lakhs, in spite of an increase of Rs. 34 lakhs in the premium income from Rs. 2.10 crores to Rs. 2.44 crores. Net claims paid and outstanding amounted to Rs. 6.36 crores, compared with Rs. 5.71 crores in 1960, giving a ratio of 50.3 percent to net premium income (Rs. 12.65 crores), against 52.6 percent in the preceding year. The claims ratio of the fire department fell from 43.4 percent to 37.3 percent, and that of the miscellaneous department from 55.5 percent to 50.2 percent. The experience of the marine department, however, was not favourable, with the claims ratio rising from 63.7 percent to 74.1 percent. The expense ratio of the miscellaneous department was down from 34.2 percent to 33.6 percent and that of the marine department from 26 percent to 24.8 percent. The expense ratio in the fire department, however, recorded a small increase from 43.9 percent to 44.5 percent.

The gross profit of Rs. 1.28 crores includes a profit of Rs. 14.3 lakhs made on the sale of investments. In the previous year also, the Company made a profit of 15.14 lakhs on such sales. After providing Rs. 59 lakhs (against Rs. 10.72 lakhs) for taxation, Rs. 5 lakhs (against nil) for exchange reserve, and Rs. 20.6 lakhs (against nil) for general reserve, the balance of the profit, inclusive of the carry-forward from the previous year, amounts to Rs. 46.5 lakhs. The proposed dividend will absorb Rs. 42.7 lakhs, leaving a balance of Rs. 3.8 lakhs to be carried forward. The year's operations have augmented the Company's total funds by Rs. 1.21 crores and they now amount to Rs. 12.40 crores, compared with Rs. 11.19 crores at the end of 1960. The Company has been called upon to pay tax on the amount of Rs. 51.57 lakhs received by way of compensation from the Life Insurance Corporation. A provision of Rs. 5.30 lakhs has been made this year, but the Company is going on appeal against this decision.

Commenting on important developments in general insurance business in India, Mr. Shroff says that the efforts of the Executive Committee of the General Insurance Council to devise effective measures to place general insurance business on a sound footing are bearing fruit. The administrative machinery is being reorganised and enlarged to ensure compliance with the Code of Conduct by all insurers. It has also been decided that no insurer should attract the field workers of another insurer by offering higher remuneration than that obtaining in existing employment or higher than what was permissible under the Code of Conduct. Mr. Shroff has also pointed out that a mutual assistance pool for a period of three years is being established to enable every insurer operating in India to readjust his working to the requirements of the Insurance Act and the Code of Conduct within the shortest possible time.

Colour-Chem Pays More

The preliminary figures of the working results of Colour-Chem Ltd for the year ended March 1962, released along with the dividend announcement, showed that the increase in the dividend from 8 percent to 12 percent on the capital increased by the one-for-four rights issue, was well justified by the spectacular rise of 106 percent in the gross profit from Rs. 46.54 lakhs to Rs. 95.50 lakhs. The proposed dividend is covered nearly three-and-a-half times. The full report which is now available indicates that the Company's sales rose by as much as 110 percent from Rs. 1.12 crores to Rs. 2.36 crores. The adjustment of closing and opening stocks reveals that the Company's output was worth about Rs. 2.29 crores. The proportion of total expenses to total production is down from 60 percent to around 55.3 percent. The directors state that the Company's factory worked efficiently throughout the year and production was maintained in line with the availability of raw materials. The

shortage of raw materials which at one stage threatened to curtail output, has been overcome for the present. This has been possible by securing some import licences under export promotion schemes and a rupee-payment import licence. The directors hope that further relief in these directions may be forthcoming. However, the present foreign exchange shortage will continue to hamper efforts to attain full production until some of the important raw materials become indigenously available. The Company has made satisfactory progress in the implementation of its phthalocyanine blue project for which additional capital of Rs. 25 lakhs was raised last year. Buildings are being constructed and orders for machinery have been placed with foreign suppliers. The first consignment has been received and the balance, it is expected, will arrive in the course of the year. The directors hope to start production of this item some time in the first half of 1963. The production of some other items is also being planned, but the foreign exchange limitations tend to circumscribe the Company's activities. The Rs. 100-paid shares, which had been marked up from Rs. 427.50 to Rs. 520 by about the end of April, have recently slipped to around Rs. 485, in sympathy with the general weakness in the market.

Outlook for Khandelwal Ferro Alloys

Khandelwal Ferro Alloys Ltd has earned a higher gross profit of Rs. 14.91 lakhs in 1961, against Rs. 2.22 lakhs in 1960. But the two results are not comparable because in 1960 the factory was in production only for two months, the first furnace having been commissioned in November 1960. The results for 1961 represent the working of the first furnace for a full year and that of the second furnace for nearly six months—the latter was commissioned in July 1961. The Company's production of ferro-manganese in 1961 amounted to 16,359 tonnes, against a mere 1,510 tonnes in the previous year. After providing Rs. 16.06 lakhs (against Rs. 5.73 lakhs) for depreciation, including extra shift allowance on plant and machinery, the year's working has resulted in a net loss of Rs. 1.15 lakhs. Together with the loss brought forward from the previous year, a total loss of Rs. 4.76 lakhs has been carried to the balance-sheet. An expenditure of Rs. 4.21 lakhs has been capitalised. Although the Company is entitled to development rebate, no reserve for development rebate has been created as the present earnings are insufficient. Arrears of dividends on cumulative preference shares at the end of 1961 totalled Rs. 9.13 lakhs.

The Rs. 100-paid share of the Company, which had been bid up to around Rs. 115 in February, is currently quoted around Rs. 81. From what the directors state in their report for 1961, it is difficult to take a very optimistic view of the outlook. Although both the furnaces have been tuned to work satisfactorily, the factory has not been able to attain full production on account of the power shortage. It requires 16 MW for the furnaces and auxiliary purposes whereas the available power supply is 7.5 MW on a firm basis and 3.5 MW on a contingent basis. The directors also blame the high rate charged for power as a factor inhibiting the cheap production of ferro-manganese. They also point out that while the raw material supply position is satisfactory, the disposal of the finished product poses a special problem. The steel plants in the country can absorb only a small portion of the total output of ferro-manganese in India. The bulk of the commodity has, therefore, to be exported. The directors have emphasised the need for suitable barter arrangements so that the product can be marketed abroad at reasonable prices. As for the tube mill project contemplated by the Company, they state that the proposal for a loan of \$2 million from the International Finance Corporation has been approved in principle by the Government of India.

Standard Motor Reduces Dividend

Standard Motor Products of India Ltd has reported a drop in sales and profits during the year ended December 1961. The directors have reduced the ordinary dividend to 7 percent from 9 per-

cent in the previous year. The net profit for the year amounts to Rs. 17.99 lakhs, before providing for development rebate and income tax. This compares with the previous year's profit of Rs. 19.02 lakhs. With Rs. 2,974 brought forward from the previous year, the total available for appropriation is Rs. 18.02 lakhs. Out of this, the directors have provided Rs. 2 lakhs (against Rs. 3.75 lakhs) for development rebate reserve. The dividend on the 6½ percent tax-free preference shares will absorb Rs. 4.46 lakhs and the ordinary dividend Rs. 3.29 lakhs. Taxation provision gets Rs. 8.25 lakhs (against Rs. 6.60 lakhs). The balance of Rs. 1,937 is carried forward.

The directors say that the Standard Herald was introduced during the year. Since there is a great demand for a four-door Herald, the Company will manufacture a limited number of Standard Companion Estate cars with the permission of the Government. The introduction of the four-door Herald has been delayed since the application for licence for importing capital goods made in June 1960 was partially granted only in October 1961. The introduction of the four-door saloon may be expected in 1964. The directors add that the change of models dislocates production. In the earlier stages, the introduction of the Herald had to contend with several bottlenecks in relation to the supply of indigenous components, although they are now being removed. The production of motor-cars during the year was 3,409, against the anticipated target of 4,500.

Standard Motor at present manufactures only motor-cars and its scheme for manufacturing one-ton vehicles is still in the development stage. The directors say that the present prices of motor-cars affect the profit margins due to the high cost of production. Every indigenous component the Company uses costs about 100 percent more than the corresponding imported ones. The price of the India-made component is not controlled, but the Company has to make increasing use of Indian components to conserve foreign exchange and to reach a higher degree of self-sufficiency. The directors say that labour costs are rising every year due to tribunal awards. So production costs have increased resulting in falling profits and lower dividends. The directors hope that the Government will realise the necessity and urgency to revise the price structure of motor-cars and allow a reasonable margin of profit. Sales amounted to Rs. 3.49 crores, against Rs. 3.90 crores for the previous year.

F.A.C.T. Earns More, Pays Same

Fertilisers and Chemicals, Travancore, Ltd has reported a higher profit for the year ended December 1961. An increase of 33 percent in turnover compared with 1960 and the beneficial effects of the first stage of the Company's expansion which were felt during the year, are some of the bright features of the year's working. The profit before providing for depreciation, development rebate reserve and income tax, amounts to Rs. 95.65 lakhs, compared with Rs. 75.95 lakhs for the previous year. Out of this, the directors have provided Rs. 38.76 lakhs (against Rs. 25.10 lakhs) for depreciation and Rs. 22.75 lakhs (against Rs. 23.55 lakhs) for development rebate reserve. Provision for income tax amounts to Rs. 1.5 lakhs (against nil). After making these appropriations, there is a net profit of Rs. 32.64 lakhs (against Rs. 27.3 lakhs). With Rs. 26.13 lakhs brought forward, the total amounts to Rs. 58.77 lakhs. Out of this, Rs. 5 lakhs is transferred to reserve for taxation. The taxable dividend on equity shares is proposed to be maintained at 6 percent, absorbing Rs. 20.76 lakhs. The balance of Rs. 33.01 lakhs is carried forward.

The directors state in their report that the Government reduced the retention price of ammonium sulphate by Rs. 14 a metric ton. Prices of superphosphate and ammonium chloride had to be cut considerably to meet market conditions. The directors add that only 50 percent of the capacity of the ammonium phosphate plant could be used on account of the shortage of ammonia. Apart from a power cut, there were a few interruptions in the production schedule on account of the integration of plants installed under the expansion programme. In spite of these factors, the

turnover for the year increased to Rs. 4.11 crores from Rs. 3.09 crores in 1960. Production figures for the year show an encouraging trend, most of the products showing a rise over the previous year. The output of N.P.K. mixtures, at 19,509 tons, was the highest achieved by the Company.

Dealing with the expansion programme, the report says that a major portion of the first stage of the Company's expansion was completed by the end of 1960. The electrolytic hydrogen plant capable of achieving an output of 10,000 tons of nitrogen a year could, however, work only to two-thirds of its capacity due to the power shortage. The second stage of the expansion programme involving the replacement of the existing firewood gasification plant with an oil gasification plant based on naphtha, and increasing the capacity to 30,000 tons of nitrogen a year, is expected to be completed by the middle of the current year. Arrangements for commencing trial runs of the plant in June are complete, and it is hoped that regular production will be achieved in the last quarter of the current year. Referring to the third stage of expansion, the directors state that this programme envisages raising the factory's capacity to 70,000 tons of nitrogen a year. In addition, the Company will be able to meet the demand for N.P.K. mixtures estimated at 300,000 tons a year. The programme, scheduled to be completed by 1953-64, will involve a capital outlay of about Rs. 10 crores.

Assam Sillimanite Share Offer

Assam Sillimanite Ltd is engaged in quarrying and shaping sillimanite from the Khasi Jaintia hills in Assam. It has also started the production of refractories at its plant in Ramgarh in Bihar. As the demand for this product has been rising, the Company proposes to build another factory in Ramgarh in two stages. When the first stage is completed, capacity will be 29,000 tons a year. In the second stage, it is designed to add a further capacity of 17,000 tons a year. The cost of the first stage is estimated at Rs. 91.61 lakhs, and that of the second at Rs. 47 lakhs. In order to raise the necessary finance, the share capital of the Company has been raised from Rs. 30 lakhs to Rs. 1 crore. Shares worth Rs. 29 lakhs are being taken by the International Finance Corporation. The technical collaborators—Vereinigte Grossalmeroder Thonwerke Grossalmerode of West Germany—will take up shares worth Rs. 6 lakhs, and existing shareholders have taken up shares of the value of Rs. 6 lakhs. The remaining Rs. 29 lakhs worth of shares, divided into ordinaries of Rs. 10 each, are being offered for public subscription at par. The list opens next Monday. (Details of the issue are printed on a later page in this week's *Capital*). The entire public issue has been underwritten. The International Finance Corporation has agreed to lend about Rs. 44 lakhs for completing the first stage and Rs. 21 lakhs for completing the second stage. The prospects for the Company are being assessed optimistically as the domestic production of refractories, it is expected, will remain short of requirements for some years to come.

Coimbatore Spinning Pays Again

The working of the Coimbatore Spinning and Weaving Co. Ltd for the year ended December 1961, shows a profit of Rs. 16.99 lakhs, after meeting all expenses. Out of this, depreciation gets Rs. 4.95 lakhs (against Rs. 3.51 lakhs). This leaves a net profit of Rs. 12.04 lakhs, compared with Rs. 2 lakhs for the previous year. After transferring Rs. 5,075 from store reserve, the amount available for appropriation is Rs. 12.09 lakhs. From this, the directors have transferred Rs. 25,000 to contingency reserve. They have recommended a dividend of 10 percent subject to deduction of tax (against nil). The dividend will absorb Rs. 2.08 lakhs. A sum of Rs. 9.74 lakhs has been used for writing off the net loss brought forward from the previous year. This leaves Rs. 2,222, which is carried forward.

The working of Coimbatore Spinning is considered satisfactory since the profits earned have enabled the directors to wipe out the huge brought-forward loss and also to declare a dividend after several years. The directors state that they have started replacing the old machinery in order to

keep pace with technological developments and to maintain competitive capacity. Under the export incentive scheme, the Company has to its credit about Rs. 10 lakhs for importing machinery. The Company is arranging for further bank accommodation and for deferred credit.

More from Motilal Mills

Although the dividend has been raised from 7 percent to 9 percent, subject to tax, the working results of Raja Bahadur Motilal Poona Mills Ltd for 1961 show that the Company has not done as well as in 1960. In spite of a small improvement in sales from Rs. 1.55 crores to Rs. 1.59 crores, the gross profit is down from Rs. 22.60 lakhs to Rs. 18.03 lakhs. The setback in the profit is attributed to the high prices of cotton, stores, dyes and chemicals and the unsatisfactory conditions in the cloth market. This explanation is unlikely to convince many because the textile industry in general did very well in 1961. After providing Rs. 8.88 lakhs (against Rs. 7.87 lakhs) for depreciation and Rs. 3.10 lakhs (against Rs. 1.89 lakhs) for taxation, the net profit amounts to Rs. 5.15 lakhs, against Rs. 11.53 lakhs in the previous year. Allocations include Rs. 1.94 lakhs (against Rs. 4.97 lakhs) for development rebate reserve, Rs. 30,000 (the same) for dividend equalisation reserve, and Rs. 35,676 (against nil) for general reserve. The proposed dividend absorbs Rs. 2.54 lakhs, against Rs. 1.97 lakhs in 1960. The directors state that the Company's engineering division has been making steady progress. The drafting machines manufactured in this unit, it is claimed, have been received well. Further steps are being taken to develop this division and also to start the manufacture of other important engineering items. The Company has received a licence to install 10,200 spindles, for which orders have been placed. The directors have given up the idea of setting up a paper manufacturing unit for which an industrial licence had been obtained.

Share Offer by Satellite Engineering

Satellite Engineering, Ltd., which was incorporated in Gujarat in April to undertake the manufacture of fluorescent starter switches, miniature filament bulbs, motor-vehicle pistons and other allied products, proposes to enter the market some time in July to raise capital. The Company has an authorised capital of Rs. 30 lakhs. The issued capital will be Rs. 10 lakhs in equity shares of Rs. 10 each, of which shares of the value of Rs. 5 lakhs are being offered for public subscription. The Company has signed a technical collaboration agreement with Messrs W. and E. Kupfer Ltd, under which it will use the well-known brand name B.G. on starter switches. A general technical assistance agreement for the manufacture of pistons has been concluded with Messrs Meteor Pistons of Italy. The Company has already begun production of fluorescent starter switches. The plant has a production capacity of 89,600 dozen starter switches a year on a single-shift basis, and the Company expects to use the plant to its full capacity. Miniature filament bulbs will be produced soon after the receipt of raw materials and some additional equipment which, subject to unforeseen circumstances, are expected within six months. The piston plant will go into operation in 1963. The factory will be located in Kathwada near Ahmedabad.

Wellman Incandescent India

A new enterprise called Wellman Incandescent India Ltd has been formed in Calcutta by the Wellman Smith Owen Engineering Corporation Ltd and the Incandescent Heat Co. Ltd of the U.K. The Wellman Smith Owen Engineering Corporation Ltd is a leading manufacturer of steel plants, furnaces and cranes. The Incandescent Heat group of Companies specialise in industrial furnaces and heat treatment equipment. The Indian Company will have at its disposal the know-how of its parent Companies and will be in a position to offer to the Indian market industrial furnaces fired by any type of fuel and electricity, for all forms of treatment of ferrous and non-fer-

rous metals and a full range of mechanical handling and other allied equipment largely from indigenous sources. Steps are also being taken to enable the Indian Company to export its products to the neighbouring countries. Fifty percent of the capital of the Indian Company will be taken up by the sponsors and the balance will be issued between the directors and friends of the Indian Company and the public. The percentages to be taken up by the directors and their friends and to be offered to the public, as well as some other consequential details, are yet to be finalised. The Central Commerce Ministry has agreed in principle to the terms of the collaboration agreement. Negotiations with the Government are now in the final stage.

Rohit Pulp Mill in Production

In their report for 1961, the directors of Rohit Pulp and Paper Mills state that the mills were ready to go into production in February 1962, but there was an unexpected delay in bringing the high-tension power line to the mill site by the Gujarat Electricity Board. The full requirements of power to run the mills continuously for 24 hours have been obtained since April, and the factory has gone into production. Although the full production capacity has not been achieved as yet, a satisfactory quantity of pulp is being produced. In the next two months, the Company hopes to operate the plant to its capacity. The quality of the pulp turned out by the mills, it is claimed, is satisfactory, and it has been well-received in the market. The Company has plans for doubling the present capacity. A Japanese expert is at present working at the mills to finalise details about the machinery required for the expansion. The Company has applied to the Government for the necessary import licences. Two licences for a value of Rs. 1.02 lakhs have already been received, and the directors are hopeful of getting further licences in due course. The Government has been approached for permission to manufacture specialised papers. The directors state that the Company does not experience any difficulty in obtaining indigenous raw materials for its mills, and that it has been regularly receiving import licences for spares, consumable stores, felts, wires and also for bleached sulphite wood pulp. The profit and loss account for 1961 shows a loss of Rs. 1.07 lakhs, after providing Rs. 10,754 for depreciation. This, together with the loss of Rs. 29,991 brought forward from the previous year, makes a total loss of Rs. 1.38 lakhs, which is being carried forward.

Nenmeny Rubber Earns Less

The working of the Nenmeny Rubber and Produce Co. Ltd for the year ended December 1961, shows a net profit of Rs. 81,295, after providing for taxes and depreciation. The previous year's profit was Rs. 1.05 lakhs. With Rs. 79,805 brought forward, the total amounts to Rs. 1.61 lakhs. The directors have recommended a dividend of 7.01 percent on preference shares, absorbing Rs. 21,030. The proposed dividend of 15 percent on equity shares (against 15 percent) will absorb Rs. 50,250. The balance of Rs. 89,820 is carried forward.

The rubber crop for the year amounted to 227,290 kilograms. The crop for 1962 is estimated at 238,600 kilograms. The average price realised was 346p a kilogram. Thirty-five acres in Nenmeny and 30 acres in Eldorado have been given out for slaughter tapping for three years, as rubber trees in these areas are old. The entire area will be replanted in 1964 with high-yielding rubber trees under the Rubber Board's subsidy scheme.

Southern Industrial Corporation

The working of the Southern Industrial Corporation Ltd for the year ended December 1961, shows a net profit of Rs. 61,953, after providing for depreciation, taxation and other charges. The net profit for the previous year was Rs. 44,761. With Rs. 3,028 brought forward from the previous year and Rs. 1,091 being taxation provision for the previous year no longer required, the total amounts to Rs. 66,072. The directors have proposed a divi-

dend of 5 percent, subject to deduction of tax, absorbing Rs. 63,750. A sum of Rs. 888 is transferred to development rebate reserve. The balance of Rs. 1,434 is carried forward. The directors state that the "Otto Suhner" project has been taken in hand. The production of speedometer cables was begun in the early part of 1962.

Profit for Sri Sarada Mills

The working of Sri Sarada Mills Ltd for the year ended December 1961, shows a net profit of Rs. 3.70 lakhs, after providing Rs. 24,551 for depreciation, and Rs. 5,527 for development rebate reserve. The directors have recommended a dividend on preference shares for 1957, absorbing Rs. 9,598. The balance of the profit is set off against the carry-forward loss of Rs. 12.23 lakhs which gets reduced to Rs. 8.63 lakhs. The directors' report says that the weaving section continues to remain closed.

Higher Profit for McDowell

The working of McDowell and Co. Ltd for the year ended December 1961, shows a profit of Rs. 7.92 lakhs, against Rs. 2.8 lakhs for the previous year. The year's profit includes Rs. 3.42 lakhs being the profit on sale of investments. Depreciation provision gets Rs. 1.37 lakhs (against Rs. 84,704) and taxation Rs. 2.62 lakhs (against Rs. 12,325). After making these provisions, there is a net profit of Rs. 3.94 lakhs (against Rs. 1.83 lakhs). With Rs. 14,953 brought forward from the previous year and Rs. 321 and Rs. 510 being the excess provisions for doubtful debts written back and the transfer from unclaimed dividends, respectively, and also with other provisions written back, there is a total of Rs. 4.26 lakhs for appropriation. Out of this, development rebate reserve gets Rs. 10,000 (against Rs. 1.31 lakhs). A sum of Rs. 1.5 lakhs is transferred to general reserve. The interim dividend at 3.9 percent and the final dividend at 3.9 percent, subject to deduction of tax, on preference shares, amount for Rs. 31,200. The proposed dividend at 12½ percent on ordinary shares, subject to deduction of tax, on the increased capital (against 30 percent on the old capital), will absorb Rs. 2 lakhs. The balance of Rs. 34,494 is carried forward. The directors state that 4,010 equity shares of Rs. 10 each in United Breweries Ltd were acquired at par in the name of the Company's bankers. The shares were disposed of at a profit of Rs. 3.42 lakhs over the average purchase price.

Dealing with the Company's operations, the directors' report says that while the teething troubles were overcome in the distillery department and the unit was operated at its full rated capacity, difficulties in securing regular raw material supplies prevented continuous operation. The proposed increase in the installed capacity has been kept in abeyance pending the improvement in the supply position. Plans for the installation of a plant for the collection and bottling of carbon dioxide could make no progress, the manufacturers in East Germany having indicated that they would not be able to deliver the plant before 1965. A number of improvements were made in the distillation unit so as to reduce the cost of production and improve the quality of the extra neutral alcohol produced. Regular supplies of neutral alcohol are being made to pharmaceutical manufacturers. Referring to liquors, the report says that cognac and pure grape brandy imported from France and bottled in Shertallay continued to be in good demand, and sales increased appreciably. Arrangements were concluded for the bottling of Cinzano—the world-famous vermouth—and initial despatches will be made shortly. Sales of India-made foreign liquor manufactured in Shertallay commenced in December, and the products were well received in the market.

Janardana Mills Earns Less

During the year ended December 1961, Janardana Mills Ltd earned a net profit of Rs. 3.7 lakhs, after meeting all expenses and providing Rs. 1.25 lakhs for depreciation. The net profit for the previous year was Rs. 4.43 lakhs, after providing Rs. 94,450 for depreciation. Adding Rs. 29,615 transferred from dividend equalisation reserve and Rs. 50,485 from general reserve, the total available for

appropriation is Rs. 4.5 lakhs. Out of this, bonus for previous years accounts for Rs. 1.08 lakhs. Taxation provision amounts to Rs. 93,570 (against nil). The directors have maintained the dividend at 9 percent, subject to deduction of tax, absorbing Rs. 80,100. A sum of Rs. 1.64 lakhs has been adjusted towards the loss carried forward from the previous year. Sales of finished products amounted to Rs. 65.84 lakhs, against Rs. 61.34 lakhs.

Bombay State Financial Corporation

The activities of the Bombay State Financial Corporation expanded considerably during the year ended March 1962, reflecting the growing tempo of industrial activity in Maharashtra State. The Corporation disbursed loans amounting to Rs. 1.35 crores—Rs. 52.53 lakhs more than in 1960-61. This is the largest amount disbursed in any year since its inception in 1953. In order to meet the growing demands, it had to raise additional resources in January 1962 by issuing 4½ percent bonds of the value of Rs. 1.10 crores redeemable in 1972. Of this, a sum of Rs. 60 lakhs has already been used for disbursing loans. The directors state in their report that if the present rate of expansion in industrial activity is maintained, the Corporation may have to raise further resources in a short while. In 1961-62, it received 597 loan applications for a total sum of Rs. 6.44 crores of which 185 applications for Rs. 1.79 crores were sanctioned, bringing the total amount sanctioned since the beginning to Rs. 8.29 crores. Of this, a sum of Rs. 8.26 crores represents loans sanctioned to 539 concerns and Rs. 3.75 lakhs was subscribed to the debenture issue of one concern. The total amount disbursed so far comes to Rs. 4.63 crores, representing 71 percent of the total effective commitments amounting to Rs. 6.49 crores. Repayments of loans in 1961-62 totalled Rs. 33.51 lakhs, against Rs. 25.97 lakhs in the preceding year. The balance outstanding on the loan account on 31st March, 1962, was Rs. 3.02 crores. Income earned by way of interest on loans came to Rs. 15.41 lakhs, against Rs. 15.96 lakhs in 1960-61. The profit earned was substantially lower at Rs. 6.09 lakhs, against Rs. 9.57 lakhs. After providing Rs. 3.06 lakhs against (Rs. 2.07 lakhs) for taxation, Rs. 62,000 (against Rs. 51,057) for special reserve, a sum of Rs. 2.41 lakhs (against Rs. 7 lakhs) is carried to the balance sheet. The guaranteed dividend of 3½ percent requires Rs. 3.5 lakhs. The shortfall will be met by a subvention from the State Government. The Corporation did not take any subvention in the previous year as the profit was supplemented by transferring Rs. 5.02 lakhs from the reserves and interest suspense account. The total subvention secured by the Corporation since the beginning amounts to Rs. 29.68 lakhs. The dividend for 1961-62 is being paid on a reduced capital of Rs. 1 crore. The capital has been reduced by the reconstitution of the Corporation, and payment will be deferred until the scheme for reconstitution after the amendments suggested by the Central Government is approved by shareholders. The scheme will have retrospective effect from 1st April, 1961, instead of from May 1960, as originally provided in the scheme. It provides for the reduction of capital from Rs. 2 crores to Rs. 1 crore and the conversion of the remaining shares into bonds carrying 4½ percent interest.

Punjab Financial Corporation

The Punjab State Financial Corporation reports satisfactory progress in its operations during the year ended March 1962. There was a net profit of Rs. 6.62 lakhs, compared with Rs. 5.30 lakhs in the previous year. After providing Rs. 2.99 lakhs for taxation, Rs. 62,000 for special reserve and Rs. 1,000 for statutory reserve, there remains a balance of Rs. 3 lakhs, which is sufficient to take care of the guaranteed dividend of 3 percent. After meeting this liability, there is a surplus of Rs. 337, which is being paid to the State Government in partial discharge of the subvention liability. The total subvention received so far amounts to Rs. 10.25 lakhs. The directors have expressed the hope that in the coming years not only would the Corporation draw no subvention, but it would be able to return larger amounts to wipe off the entire subvention liability in due course. In 1961-62, the Corporation received 104 applications for a total

loan of Rs. 2.97 crores, of which only 56 applications for Rs. 1.44 crores were accepted; 39 applications for Rs. 1.22 crores were under consideration at the end of the year. Loans disbursed during the year amounted to Rs. 89.20 lakhs, against Rs. 56.65 lakhs in the preceding year. In addition, the Corporation was able to disburse an amount of Rs. 9.25 lakhs under the agency arrangement, bringing the total disbursements to Rs. 98.45 lakhs. The amount of interest due on the loans during the year totalled Rs. 9.67 lakhs, of which Rs. 9.14 lakhs was actually received. In view of the rapid rate of disbursement, the Corporation used up all its liquid resources by the end of December 1961 in spite of raising additional resources by issuing a second series of bonds. It, therefore, had to borrow from the Reserve Bank to meet its commitments. By the end of March 1962, it had taken Rs. 20 lakhs, against the limit of Rs. 30 lakhs sanctioned by the Reserve Bank. The directors have decided to issue a third series of bonds for Rs. 50 lakhs, which has been approved by the Bank. The State Government placed a sum of Rs. 10 lakhs at the disposal of the Corporation in 1961-62 under the agency agreement, bringing the total amount up to now to Rs. 40.50 lakhs. In all, 35 applications for agency loans were sanctioned for a total amount of Rs. 14.95 lakhs. The actual total disbursement figure stood at Rs. 22.78 lakhs at the end of March 1962.

Export of Cotton Textiles

The committee of the Indian Cotton Mills Federation decided at its meeting in Bombay last week to implement the recommendations of the Cotton Textiles Consultative Board concerning the annual export obligation of each mill. The Board had fixed in May the annual export obligation of each mill at 12½ percent of the turnover of cloth and 3 percent of that of yarn with reference to the balance-sheet of any year which ended on a date between 30th June, 1961 and 29th June, 1962. The export obligation for the half-year July-December 1962 will be 50 percent of this. The obligation can be fulfilled by a mill by exporting its own products in full or by exporting its own goods in part and by arranging with another mill to export the balance on its behalf. The committee of the Federation also decided that "those mills which fail to fulfil their full obligation should contribute to the export effort by paying to the Export Promotion Fund of the Federation a sum equal to one-eighth of the value by which their export performance falls short of their obligation." It is estimated that the total export obligation of the mills in a full year will be around Rs. 65 crores. In 1961, the textile industry's earnings through the export of cloth and yarn amounted to Rs. 49.6 crores. In view of the increase in excise duty on staple fibre from 75p to Rs. 1 a kilogram under the 1962-63 Budget proposals, the committee, in consultation with the Textile Commissioner, has revised the schedule of ceiling prices for staple fibre yarn as follows: (1) 20's: Rs. 29.75 a bundle of 10 lbs of hank yarn, (2) 30's: Rs. 32.25, (3) 40's: Rs. 35.25, and (4) 44's: Rs. 36.45. The differentials for intermediate counts, doubled yarns and yarn on cones, will remain unchanged.

Tax Relief Urged for Motor-car Makers

In his presidential speech at the annual general meeting of the Western India Automobile Association, held recently, Mr. Dayabhai V. Patel urged the Government to facilitate the rapid growth of the motor-vehicle industry if the third plan target of 100,000 vehicles a year is to be achieved. (This target consists of 30,000 cars, 60,000 commercial vehicles and 10,000 other vehicles.) In 1961, the industry has been unable to maintain the tempo of 1959 and 1960. Against an increase of 36 percent in 1959 and one of 43 percent in 1960, the increase in the overall production of motor-vehicles in 1961 was only 5 percent. Mr. Patel said that the W.I.A.A. had from time to time recommended various incentives for the development of the industry, including a reduction in the tax burden and the grant of adequate foreign exchange to enable the manufacturers to import essential raw materials and components to step up output and to improve the quality in the process. But unfortunately, there appeared to be no long-range policy

to place the industry on a firm footing. "The motor-vehicle industry," said Mr. Patel, "is in an infant stage in our country, and the Government has a duty to see to it that its growth is not throttled by excessive taxation." One reason for the high prices of motor-vehicles is the exorbitant taxes at various stages of manufacture and sale. Increased production alone could break the vicious circle of scarcity and high prices of motor-vehicles and at the same time, enable their export to neighbouring countries. Mr. Patel added that if, for any reason, production could not be raised immediately, scarcity conditions should be removed by the import of second-hand vehicles which are equivalent in make to those manufactured in the country. Increasing the number of vehicles by itself would be useless and a waste in the absence of extensive and good roads. But even the revised allocation of Rs. 300 crores for roads in the third plan was too small, when compared with the figure of Rs. 500 crores recommended by the chief engineers. In spite of periodic assurances, Mr. Patel pointed out, the Bombay-Ahmedabad road had not yet become a modern highway for fast mechanised traffic, nor had the West Coast road planned to connect Bombay with Cape Comorin become an accomplished fact. The West Coast road should be expedited now that Goa has become part of India. Mr. Patel said. He described the Government's small car project as the easiest way to kill the industry which was being slowly built up over the past decade. He hoped that no one would resurrect this intrinsically unsound venture.

Land Taxation in U.P.

The work of the anti-tax campaigners in U.P. led by the Socialist Party of Dr. Ram Manohar Lohia, may have been helped by the reported split in the State Cabinet over what taxes are to be increased or imposed. The Budget speech of the Finance Minister, Mr. Kamalapati Tripathi, disclosed a deficit of Rs. 13.5 crores. But he did not announce any new taxes, presumably because the Cabinet had not been able to agree on any before the Budget was introduced. Agreement seems far from sight even now. While winding up the general debate on the Budget, the Chief Minister, Mr. C. B. Gupta, referred to the possibility of an increase in land revenue. Since then, it has become a live issue in this predominantly agricultural State. The farmers constitute about 75 per cent of the electorate, and the Government would certainly find it politically inexpedient to alienate them by an increase in land revenue. But at the same time, there is also no other way out. The three principal sources of the State's income are land revenue (Rs. 22 crores), sales tax (Rs. 14 crores) and excise (Rs. 7.6 crores). Increases in excise revenue cannot be contemplated as long as Uttar Pradesh is wedded to a policy of Prohibition. Sales tax has in the past been increased several times. In fact, even foodgrains are subject to a multi-point levy. Land revenue, on the other hand, has not been increased at all, although a lot of money has been spent on irrigation and community development. Agricultural income tax has been mentioned as one way out, but it is not likely to bring in any great yield after the abolition of the zamindaris and the fixing of land ceilings. At the same time, when the zamindaris were abolished, the law stipulated that rents from the *bhumidhars* will not be increased for the next 40 years. The undertaking was obviously given for uniting the tenants against the zamindars. But the Government now finds itself in a dilemma. It cannot increase land revenue without amending the Zamindari Abolition Act, and this would expose it to charges of breach of faith.

Flood Control in Ganga Region

The consensus of opinion expressed at the Ganga Region Seminar which concluded in Naihati recently, was in favour of "one river, one plan". Delegates from U.P., Punjab, Bihar and West Bengal attended the seminar, which was inaugurated by the Central Minister of Irrigation and Power, Hafiz Mohammed Ibrahim. Opinion

on the construction of marginal embankments along rivers as a flood protection measure was divided. Some delegates felt that these embankments only created problems for others by shifting danger from one point to another. Others, however, felt that they provided considerable protection. Still others maintained that every scheme for flood control had its good and bad points, and that each should, therefore, be considered individually. As for soil conservation, flood forecasting systems, afforestation, etcetera, the seminar has suggested the setting up of a Ganga Region Survey Committee to evolve a comprehensive plan for the region as a whole. Representatives of all the States were unanimous that Central allocations for flood control were totally inadequate. The Central Minister, however, questioned the statement. According to him, many States refused to accept all the money offered by the Centre because they could not spend the funds within the appointed time. Although floods in India were as old as the rivers, it was only in 1954 that a national programme on flood control was first thought of. In 1957, the Centre appointed a committee on flood control which submitted its report towards the end of 1958. This committee reviewed and generally endorsed the works started in 1954, and laid down

A SURVEY OF INDIAN INDUSTRIES

With the issue of CAPITAL dated 28th June, 1962, will be published a "Survey of Indian Industries," running to more than 90 pages. It will contain authoritative articles on the problems and prospects of many of India's leading industries such as aluminium, industrial machinery, shipping, petroleum and power. The article on the steel industry has been contributed by Sir Jehangir Ghandy. There will be surveys of such light industries as radios and lamps, matches, soap, yeast, salt, power alcohol and cigarettes. There will also be articles on alloy and tool steel, iron ore, wool-combing, air-conditioners, cameras and packaging. The supplement will be supplied free to registered subscribers and will be available to others at Rs 5 a copy (postage extra). Enquiries may be addressed to the Manager, CAPITAL, 5, Mission Row, Calcutta 1.

the lines on which work should proceed in future. "Since the Committee submitted its report," Hafiz Ibrahim said, "we had three flood seasons, namely, 1959, 1960 and 1961. Each of these seasons brought new areas under water—even the areas which were traditionally known to be free from floods." Emphasising the point that flood control has got to be a continuing and possibly endless programme, he cited the example of the U.S.A. where Rs. 2,200 crores has been spent on 391 flood control projects over a period of 28 years. Yet some parts of the U.S.A. suffered severe flood damage in 1955. Since then, the Americans have framed a further programme for spending Rs. 3,600 crores on 648 new projects.

Industrial Co-operatives in U.P.

Some 3,605 industrial co-operatives in Uttar Pradesh, having 169,396 members, earned a profit of Rs. 41.43 lakhs during 1960-61, according to the annual report of the Co-operative Department. There has been a rise of more than 150 per cent in the number of these co-operatives in the State since 1955-56, when there were 1,436 societies with a membership of only 91,787. The share capital of these societies increased from Rs. 20.24 lakhs in 1955-56 to Rs. 1.15 crores in 1960-61, and their working capital from Rs. 1.8 crores to Rs. 4.56 crores. According to the report, most of the new societies relate to trades coming within the scope of the Khadi and Village Industries Commission. Such societies form more than 50 per cent of all industrial co-operatives in Uttar Pradesh at present. Altogether, 1,837 societies were under the scope of the Khadi and Village Industries Commission in 1961, 1,288 under the Handloom Board, 183 under the Handicrafts Board, 32 under the Silk Board, and 265 under the Small-scale Industries Board.

CORRESPONDENCE SUBSIDISING SUGAR EXPORTS

(TO THE EDITOR OF "CAPITAL")

Sir,

The Food Minister of the Central Government, after his return from the world tour on his mission to promote exports from India, declared with pride that he had been successful in placing sugar for the first time in the list of exportable items from India; but it is hardly realised at what great cost to the investing public this business is being done. The following instance will clearly show how heavily the shareholders of the sugar manufacturing companies are being taxed, and if this process goes on for some time, there is no doubt that these companies will suffer in no distant future, causing extreme hardship to the shareholders. In the report of the directors of the Cawnpore Sugar Works Ltd for the year ended 31st October, 1961, it is observed that "the Company suffered losses amounting to approximately Rs. 10,84,000 due to export of sugar at prices far lower than the production costs." Being a shareholder, I have obtained from the Company the following further information in regard to this matter: "The total value of the sugar exported is Rs. 37,30,245.91 whereon a loss of Rs. 10,84,733 has been incurred. The percentage of loss comes to 29.08. In accordance with the Sugar Export Promotion Act, 1958, export of sugar to the extent of the quota apportioned was compulsory. In the event of failure, the Company would have been liable to pay Rs. 17 a maund as penal duty on the export quota allotted to it."

One can easily imagine what effect such measures produce in the minds of the investing public. Can they be blamed if they feel no incentive to save? In the interest of the investors, it will be greatly appreciated if you will kindly draw the attention of the Government to this unjust taxation in any manner you think best.

Yours etcetera,
PROTIVA GUPTA

Calcutta, 1st June.

STRIKE THREAT BY CARTERS

THE Commissioner of Police will require all the tact and wisdom and decision of character he possesses if the whole internal traffic of Calcutta is not to be paralysed and dislocated by a strike of the carters almost immediately. We all remember the inconvenience caused by the last strike. These lowly and patient workers went on and on with their work suffering continually from grinding and oppressive treatment; their complaints were unheeded, until they could bear their grievances no longer, and then, as a last resort, they struck. These men were entirely right in the course they adopted. No one would listen to their complaints, far less attempt to remedy them, until Calcutta woke up one morning and found that one of the wheels had dropped suddenly out of the machine and the whole traffic brought to a dead stop. Then the carters found themselves and their grievances to be the very centre of interest in the city. The rest of the story is soon told. A Government commission looked into the matter; the grievances were found to be substantial; remedies were promised, and under these promises the carters allege they were hoaxed into resuming their work. We are now face to face with another strike, which may yet be averted if the authorities concerned are capable of taking prompt and wise action. In a temperately worded memorial forwarded to the Commissioner of Police, the carters tell their piteous story, not in any vague and general fashion, but in a very definite and pointed manner. They specify thirteen different grievances in minute detail. They threaten nothing, but everybody knows that if these alleged grievances are not promptly looked into, and all matters put right where they have been proved to be wrong, then some fine morning soon we will find the streets to be as clear of traffic as on a close holiday. If the situation is to be saved, there must be a real redressing of real grievances. The men allege they have been hoaxed once. They decline to be hoaxed for the second time.

A Ditcher's Diary

YOUNG, A HARIJAN, A FORMER CHIEF MINISTER, Mr. Nehru's choice—why, almost everything is in Mr. Sanjivayya's favour. Except one. Which is that the office of Congress president no longer means much. Hence his predecessor's almost unseemly impatience in getting back to Andhra and Chief Ministership. Hence the pathetic search for a new president, until Mr. Sanjivayya, lately unemployed, could be found. In all this, I see nothing but inevitability, a course none is powerful enough to reverse. It is not a matter of serious regret that power now resides in the Government and not in the Party. Ditto the vanished glory of the Party's presidentship. What is happening is that power is now being diffused in the various State capitals. The time may already have arrived when even a Cabinet Ministership attracts but few. It is difficult, for instance, to see Dr. B. C. Roy accept a Central Ministership with any enthusiasm. Not even Mr. Atulya Ghosh may be unduly keen, although he is not a member of the State Government yet. It is not true that New Delhi counts for nought; that will not be as long as Mr. Nehru is there. But our politicians are statesmen at least in this limited sense that they look to the future—to their political fortunes tomorrow. It is a Council of Elders, composed of all the Chief Ministers and some Party chiefs (State), who will be the arbiters of India's destiny in a not-too-distant future; and, it is easily calculable, ambitious politicians are wise to stay home instead of getting lost in New Delhi. Mr. Nehru is probably pleased with himself that a south Indian is India's President, a Muslim her Vice-President; another south Indian president of the Congress; thus is India's unity assured. What is to be noticed is that these offices are mainly decorative as are the Governors who come from other States. No majority, religious or regional or linguistic, has yet parted with the essence of power or given much evidence of any intention of sharing power with the others. Stripped of hypocritical verbiage about national integration, this is the stark reality of Indian politics today.

THE STORY OF THOSE TWO ARMENIAN YOUTHS sentenced to death in Russia, those who had attempted to hi-jack a plane to get away to the West in choice of freedom, may put ideas into some heads in this country, instead of being the deterrent it is intended to be in Russia. The latest restrictions on travel abroad are so severe that I

shall be surprised if there is no hi-jacking of I.A.C. planes; and the blame will be Mr. Morarji Desai's. It is not the effort to conserve foreign exchange that raises the gorge of many. It is rather the certain knowledge, firmly based on experience, that wangles and smart alecs will travel exactly as freely as they have done before, and get away with it. Even when they get caught, support from high quarters and the law's delays will combine to ensure escape from punishment. The bigger the offence, the surer the escape. It is as sure that the restrictions will be applied indiscriminately to the ordinary citizen, that unfortunate Indian who today has no patron and so is deprived not only of favours but also of minimum rights. Nor is my irritation assuaged by the example set by members of the Government. Mr. Krishna Menon, I see, will soon be on his way to New York for the futile Security Council debate on Kashmir. Or perhaps the real purpose is to tell Mr. B. K. Nehru what Mr. Krishna Menon thinks of him? For the settlement of such personal scores, foreign exchange is easily found. I also note with apprehension that Mr. Humayun Kabir has again started talking about the India Office library. I shall be surprised if another trip to London is not presaged by that. An External Affairs Ministry official, I find, has just given himself a grand tour of the Middle East to make the astonishing discovery that India is loved in that part of the world. Mention of these examples—only a few of the many I can think of offhand—may not endear me to New Delhi, or even perhaps to some "exporting" gentry; but the cynicism with which the Government's declared intentions are viewed in the country at large should be known and taken to heart, for in that pervasive cynicism I discern an explosive element.

FEW MEN COULD HAVE MEANT MORE TO LOVERS OF the stage and screen in Bengal than Chhabi Biswas, whose tragic death in a car accident occurred on Monday. As an actor, his capacity for prodigious hard work was no less remarkable than his versatility; he took part, I am told, in about three hundred films and a hundred performances on the stage. And yet, at 61, he possessed an energy which younger men would have envied, and which offered the promise that many years of fruitful activity still lay ahead of him. In his earlier days in the cinematic world, he appeared invariably in the part of an aristocrat, perhaps a zamindar or a business tycoon; and it is said that, at the time,

the criticism was sometimes heard that he was suited only for what one might describe as "glamorous" rôles. Not long afterwards, however, Mr. Biswas gave the effective answer to such criticism: he showed that he could depict the lives and foibles of ordinary humble men with the same ease and spontaneity. His finest achievement, perhaps, was as the hero in *Kabuliwala*, a film which won the Grand Prix in Berlin. But in other films, less known internationally, he was almost equally effective as the headmaster of a school, or a clerk in a Calcutta mercantile firm, or even a servant. To all these rôles he brought a distinctive interpretation which is the hallmark of true dramatic genius. Among the finest tributes to his histrionic ability was the fact that Mr. Satyajit Ray, who has no partiality for popular, established actors, invited Mr. Biswas to act in *Jalsaghar*, *Devi* and *Kanchanjanga*. Mr. Biswas could move his audiences to tears or laughter, as the occasion demanded; and the essence of his success lay in the sincerity of purpose with which he played the rôle he had been chosen for. Often does one see the spectacle of actors, tempted by wealth, promote themselves to producer-directors of doubtful calibre and go for box-office successes. But not the least of Mr. Biswas's finer qualities was that he remained true to his genius. And for that fidelity he was rewarded by a fame and affection which not many others in his profession have been able to earn.

EACH YEAR, THE ARRIVAL OF THE MONSOON IN Calcutta is accompanied by house collapses. Each year, the same story is heard that the Corporation issued the notice, but landlords or tenants sped off to the courts for an injunction to restrain action. The Corporation seeks to save its conscience by pointing out that it gave the warning; the landlords seek to save theirs by saying that the rent control system had left them with no money for the annual repairs, and that in any case, however dangerous the building, the tenants would not have vacated, the shortage of accommodation in this city being as acute as it is. Nevertheless, I wonder if there is any city in the world where callousness about this problem is quite as shocking as in Calcutta. The toll of casualties resulting from the collapse of dilapidated buildings runs to several scores year after year; the newspapers dutifully report the events; the authorities rush in with such explanations and excuses as they may be able to assemble; and then all is forgotten until tragedy recurs. I have some sympathy for landlords and tenants in the dilemma they face. Rack-renting may be common enough in this city, but I firmly believe that the dishonesty of it is a direct offshoot of rent control—in the sense that rents fixed around the prewar level simply cannot yield an honest land-

lord the return he needs for the proper maintenance or reconstruction of his building. As for tenants, I admit that their condition is more pitiable: the usual choice they face is between staying on in the room or two they have, however dangerous it may be, or sleeping on the streets. The long-term answer to the problem, of course, is to accelerate new construction in and around the city; I have a feeling that there has been a faint improvement in this respect over the past couple of years, although the pace of building is still nowhere near what is required. But land values in the metropolitan area being what they are, it seems evident that, if the poorer classes are to benefit, the construction would have to be State-sponsored, State-subsidised and, as far as transport facilities allow, in the suburbs. While some concrete, long-term schemes of this sort are necessary, I cannot see why the Corporation should meanwhile sleep over the problem of saving people from the danger of house collapses. If the law's delay prevents the demolition of buildings, cannot the law be changed? And is it not the Corporation's responsibility to ensure that it is? Furthermore, if the delay sometimes extends to three or four years, cannot the City Architect exercise his discretion and give notice of demolition so much the earlier?

A RATHER IRRITATED MR. NEHRU ASKED THE LOK Sabha on Monday: "Should we live up to the Chinese charges of aggressiveness?" Not many in the House perhaps suspected that Mr. Nehru's impatience might not have been caused by the members' persistent questioning alone. On 31st May, *The Times* carried a leading article called "Grim Game of Chess", which I read a few days ago with bewildered disquiet. Towards the end, the editorial said, "Meanwhile military moves in Aksai Chin seem bound to lead to some clash before long. They are a part of Indian measures—otherwise undisclosed—which aim not merely to display Indian firmness but to effect a Chinese withdrawal. It is a grim game of chess even if it is kept to the board". It may well be that I read too much in an editorial in a distant daily; and the External Affairs Ministry will no doubt tell me that I did. I remain insufficiently convinced, without necessarily questioning the wisdom of whatever it is that New Delhi may be up to. India has said often enough that she will allow no further encroachments by the Chinese; she has also demanded, almost as often, withdrawal by the Chinese from positions on Indian territory. Mr. Nehru has said, as *The Times* editorial reminds readers, that some Indian posts are now behind the Chinese lines. And, of course, there is evidence that in both Ladakh and the north-east, India has strengthened her position immensely in recent months. This is as far as we know for certain. With these facts, it is dangerously easy to put two and two together and arrive at a total of 22. Having given that clear warning, I wonder whether the country has been told even what it can be with no danger to security. There is a clear transition between India holding on to her positions and India trying to effect a Chinese withdrawal. The latter cannot be a wholly defensive operation. There is no reason why the initiative should always be left with the Chinese; and after the affronts with which they have responded to India's friendship, the latter may feel fully justified in taking any measures she decides on. But in a situation so tense—for reasons that are more military than political—the possibilities frankly worry me.

LET THE DICTIONARIES SAY WHAT THEY LIKE, LET Mr. Nehru use it if he must, I will not hear of "dynamising" exports. The word is ugly. More, it can so easily be misprinted as "dynamiting"; and then where will our exports be? Nor do I like the heading DEAD LEOPARD DISCOVERED IN COKE OVEN. Somebody seems almost disappointed that the beast wasn't discovered alive! A budding poet, requesting early return of his MSS if they were not acceptable because he had "other irons in the fire", was told by an angry editor: "Remove irons, throw poems". I say, "Remove leopard, throw 'dynamise'."

THE DITCHER

This announcement is not a Prospectus, and persons interested in the matter are requested to apply for a copy of the Prospectus for full details.

ASSAM SILLIMANITE LIMITED

Having its Registered Office at A. T. Road, Gauhati, Assam.

The Capital Structure of the Company is:

AUTHORISED:	Rs. 1,00,00,000
Divided into	...

Share Certificates will be issued within 4 months from the date of allotment.

The Company commenced business on 25th day of October 1951 and had been principally engaged in the mining and prospecting of Sillimanite and other refractory materials from the Khasi Hills in Assam. It has recently also undertaken extensive prospecting for refractory clays and minerals.

SCOPE AND PROSPECTS

The main aim of the Refractory Project, which the new issue is to help finance, is the establishment of a plant at Ramgarh, in Bihar, for the manufacture, on a large scale, of a special type of Sillimanite and other refractory bricks and shapes to meet the demand of India's growing needs. The Prospectus contains inter alia details of the land acquired by the Company and details of the pilot plant already in operation.

FOREIGN TECHNICAL COLLABORATION

The Company have entered into a Technical Collaboration agreement with the Vereinigte Grossalmeroder Thonwerke, Grossalmerode, West Germany and full details are given in the Prospectus.

INTERNATIONAL FINANCE CORPORATION (WASHINGTON) PARTICIPATION

The Company have entered into an agreement with the International Finance Corporation—Washington, whereby, the International Finance Corporation—Washington will lend the total foreign exchange requirements of the project amounting to Rs. 44 lakhs, for the first stage, and 21 lakhs for the second stage. Full details of the agreement are given in the Prospectus.

THE CALCUTTA MONEY MARKET

FAIR INCREASE IN ADVANCES

Wednesday, 13th June.

THE aggregate level of advances has shown a fair increase in the Calcutta money market during the past week. Most of the rise is accounted for by the iron, steel and engineering industries. But there have also been slight increases in the case of cotton mills, and for the storage of foodgrains and seeds. Jute advances have declined, but sugar credit is unchanged. In the inter-bank market, conditions have been fairly tight; the call rate has generally been quoted at 4½ percent, although occasionally it has been up to 4½ percent.

The exchange market has been dull. There have been a few bills relating to shipments of the new season's tea, but the supply of gunny bills has been very poor. Remittance has been on a limited scale. The trend in sterling has generally been easier.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 1st June, 1962, shows Demand and Time liabilities at Rs. 924.84 crores (Rs. 32.79 crores on account of borrowings from banks) and Rs. 1,245.25 crores (Rs. 13.34 crores), compared with Rs. 924.85 crores (Rs. 30.63 crores) and Rs. 1,240.95 crores (Rs. 13.35 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have fallen by Rs. 2 crores and Rs. 5.83 crores to Rs. 50.15 crores and Rs. 80.02 crores, respectively. There is a rise of Rs. 3.60 crores to Rs. 586.91 crores in investments. Advances and bills discounted, at Rs. 1,438.87 crores, show an increase of Rs. 6.16 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6 percent and 66.3 percent, against 6.4 percent and 66.2 percent.

TREASURY BILL MATURITIES

Details of 91 days bills outstanding with the public on 15-6-62.

Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
15-6-62	16-9-62	2,00,000	Rs. 2.500%
8-6-62	9-9-62	2,00,000	Rs. 2.540%
25-5-62	2-9-62	2,00,000	Rs. 2.590%
18-5-62	19-8-62	2,00,000	Rs. 2.590%
11-5-62	12-8-62	2,00,000	Rs. 2.580%
4-5-62	5-8-62	2,00,000	Rs. 2.580%
27-4-62	28-7-62	2,00,000	Rs. 2.580%
19-4-62	20-7-62	2,00,000	Rs. 2.640%
12-4-62	13-7-62	2,00,000	Rs. 2.640%
6-4-62	7-7-62	2,00,000	Rs. 2.610%
30-3-62	1-7-62	2,00,000	Rs. 2.585%
23-3-62	24-6-62	2,00,000	Rs. 2.585%

Vital supplies for growing industry!

Wherever in India new projects, new industries, new enterprises are being launched, you will find the quality goods and services supplied by Voltas. Industrialists have learnt from experience that quality machinery and equipment are indispensable for efficient operation in industry. They have learnt too that the merchandise distributed by Voltas—whether it be a mighty hydraulic press or a minute spindle—is absolutely dependable in quality and performance.

Briefly, Voltas' activities comprise:

- **Marketing and Distribution of goods:**
Representing leading manufacturers, both foreign and Indian, Voltas supplies a wide range of goods—Electrical, Mechanical, Air Conditioning and Refrigeration, Textile and Paper Machinery, Agricultural and Construction Equipment, Machine Tools, Pharmaceuticals, Chemicals, Bulk Vitamins, Plastic Raw Materials, Processed Foods.
- **Manufacture and Development:**
Air-Conditioners, Water Coolers, Switchgear, Farm Implements, Drilling Machinery... and the list is growing!
- **Service:**
Voltas after-sales service is a by-word in India. Voltas sales are fully backed by its nation-wide service and spare parts organisation.

Where quality equipment is demanded **VOLTAS IS THERE**

Stocks and Shares

MARKET DULL: IMPORT CUTS, RETURN OF T.T.K. CAUSE CONCERN

Tuesday Evening.

IT has been a miserable week for the Calcutta stock market. Turn-over has declined considerably and has been confined largely to speculative shares. Fluctuations have been erratic and governed by bouts of buying and selling. Business in cash scrip has been limited as support has been conspicuous by its absence. Hence any small selling has reduced prices out of proportion.

The news background has been discouraging, so operators have been inclined to lighten their commitments as far as possible. The action of the Aid-India Club in deferring a decision on further aid to India has begun to make its influence felt. The Government has already enforced further cuts in imports, which are considered drastic. Although the official claim is that the working of existing industries will not be hampered, it is doubtful whether the Government can ensure the necessary supply of raw materials and spare parts. Lyons Range is disturbed and is wondering whether the import cuts are likely to be temporary. Unless India manages to get sufficient foreign aid in the near future, the economy is bound to suffer a serious setback. The country's foreign reserves now are about the lowest in many years. The prospects of increasing exports in the immediate future are being discounted. In the circumstances, the situation calls for close observation. Investors, therefore, cannot be blamed if they are not able to take an optimistic view at the present time.

Lyons Range is disappointed over the token tax reliefs announced by the Central Finance Minister in his reply to the debate on the Finance Bill in the Lok Sabha. The reductions in some of the excise duties are considered marginal in character, and they are likely to be of little help to industry.

There is also a great deal of concern over the growing tension between India and China on the border issue. Apart from the political implications, India is being forced to spend larger sums on defence. The forthcoming U.N. Security Council meeting on Kashmir is being awaited with great interest. The appointment of Mr. T. T. Krishnamachari as a member of the Planning Commission has created fresh uncertainties. It remains to be seen whether he succeeds in making the economic policy of the Government even more leftist.

As things stand, it looks as if a good portion of industrial capacity may have to remain idle due to the shortage of raw materials, power and transport. Apart from the shortage of raw materials, the inadequate supply of coal and various grades of steel has begun to be felt. As most existing industries have managed to offset the shrinking profit margin by increased turnover, the prospect of larger capacity having to remain idle is causing worry. In the circumstances, investors will be well advised to moderate their estimates of dividends and growth prospects, at least for some time to come.

Although the trend has generally been downward, a sharp fall in share prices in the near future is not foreseen for two reasons. The first is that steel shares, which constitute the main speculative counter, are expected to benefit soon by the long-awaited announcement of new reten-

tion prices. The stock market also thinks that the forthcoming report of the Indian Iron and Steel Company for the year ended March 1962, will be excellent. The books of the Company will be closed from 23rd July to 13th August, 1962, and the dividend announcement is expected soon.

Indian Iron have closed at Rs. 25.96. Engineering shares have been subdued and prices have fallen all round. Texmaco have enjoyed speculative support in the belief that the working during the current year has been satisfactory. Indian Standard Wagon have been steady due to the issue of bonus shares. Burn, Jessop and Guest, Keen, Williams have declined. Bharat Ball Bearing are being sold freely, but Indian Steel and Wire Products have been steady on influential support.

Miscellaneous shares have generally moved down because support has been lacking. At lower levels, Dunlop Rubber, Orissa Cement and Alkali and Chemical have attracted scattered support. Angelo Brothers are being fancied on rumours of a higher dividend. Tobacco shares have weakened, and National Tobacco are being sold freely on a disappointing dividend. Calcutta Electric have attracted attention on prospects of a rise in the profit due to higher charges for power. The stock market is

also expecting that the Government will soon raise the "standard return" for electricity companies. Steamship company shares have been neglected because the recent increase in coastal freights does not compensate adequately for the rising operational costs.

The earlier improvement in paper shares due to rumours of an increase in the price of the commodity proved temporary, and prices have slipped back at the close. Interest has been largely confined to Orient, Bengal, India Paper Pulp and Titaghar. Sirpur have met with pressure due to the issue of rights shares.

Coal shares have become sluggish because it is rumoured that the Government may fix ceiling prices, instead of permitting a straightforward rise in coal prices. East Indian have been steady on prospects of a rights issue. Burrakur, Bengal, New Beerbhoom, Central India and Amalgamated have declined. Equitable have been sold on cutting the dividend.

Except for selected scrip, jute shares have drifted downwards. Gondalpara have been fancied due to the issue of rights and bonus shares. Bally, Fort Gloster, Cheviot, Kamarhaty, Anglo-India and Budge Budge have been steady. Birka and Howrah

London Market

QUIETER TREND IN INDUSTRIALS

RISE IN GILT-EDGED AND GOLD SHARES

London, 13th June.

THE stock market was a great
deal quieter during the past week

following the wild fluctuations of the
previous week. Indeed, the chief
effect of the previous week's upset
was on the volume of business which
was at a much reduced level in in-
dustrial equities. By contrast, gold
shares continued their advance on a
broadening demand and recorded
further widespread and substantial
gains, while gilt-edged securities
moved ahead after being subdued for
several days by the news of a £40
million London County Council stock
issue. Confidence in industrials was
severely shaken by the previous
week's events and buyers were
holding off, but at the same time,
there was not much selling, with the
result that business in industrials
was at the lowest level of the year.
Prices for the most part fluctuated
within narrow limits, but the un-
derlying tendency was towards some-
what lower levels. The outstanding

CAPITAL, 14th June, 1962.

feature of the week was provided
by South African gold shares. With
industrials out of favour and suspi-
cions that the exchange value of the
dollar might not be maintained, gold
shares forged strongly ahead and
fresh gains extended to several shil-
lings. Many prices were at the year's
best levels. Dollar stocks were lower
in sympathy with Wall Street. Bank-
ing and insurance shares receded, but
hire-purchase finance issues were
well maintained, following the cut
in the hire-purchase deposit from 20
percent to 10 percent. Coppers gen-
erally were quiet, but attracted buyers
from time to time. Tin shares eased
under the influence of a lower price
for the metal. In a quietly firm oil
share market, British Petroleum was
a good feature. Rubber and Tea
shares were neglected and recorded
very little change.

CAPITAL, 14th June, 1962.

New Delhi

Mr. Desai Outlines Steps to Conserve Foreign Exchange: Imports Cut

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Minister, Mr.
Morarji Desai, made a statement
in the Lok Sabha on India's foreign
exchange situation on Friday. The
following are extracts from the
statement:

"We have been less successful in
obtaining and using external assist-
ance required for financing imports
necessary for our developing econ-
omy. Throughout last year, we had
to make large payments outside the
credits available to us for machinery,
components and other developmental
requirements, as well as in discharge
of our debt obligations. As a result,
in spite of an increase in exports and
reduction in imports, our sterling
balances during the year went down
by Rs. 8 crores, even after a net
drawing on the I.M.F. of Rs. 58 cro-
res. Part of this deterioration was,
as explained in the *Economic Survey*,
due to a worsening of our invisible
account. In part, it also reflects the
fact that assistance in a readily us-
able form could not be mobilised to
the extent necessary.

"At the consortium meeting held
a year ago, it had been recognised
that further commitments of external
assistance during the first two years
of the plan would be necessary to
enable us to meet our immediate re-
quirements, as well as to start on new
projects. It was with a view to pro-
viding this additional assistance that
the consortium met in Washington
at the end of last month. It is our
understanding that while commit-
ments of additional assistance were
offered, as the total amount fell short
of what the consortium itself had
considered to be reasonable and
necessary, the meeting was adjourned
to meet again after some weeks.

"What we, for our part, have to
consider are the steps and measures
we should take in the light of this
development. Hon'ble members
would, I am sure, agree with me that
while we should entertain every hope
that the members of the consortium,
who have already endorsed the ob-
jectives and targets enshrined in our
plan, would make the requisite
amount of assistance available to us,
we have to fashion our policies im-
mediately in such a way as to ensure
that over the year, as a whole, we
would not allow our sterling balances
to decline.

Sterling Balances Fall

"Our sterling balances stand
around Rs. 100 crores at present,
against Rs. 128 crores on 1st April,
1962. We have, in addition, Rs. 118
crores of reserves in the shape of
gold, as well as certain working
balances maintained by the Govern-
ment which are not part of the
Reserve Bank's balances. Although
the Reserve Bank is required to
maintain a minimum of Rs. 200 cro-
res in gold and foreign exchange in
its issue department, this requirement
can be relaxed by the Government.
As a member of the International
Monetary Fund, we have a second
line of reserves to fall back upon, if
necessary. While our reserves are
thus much larger than our sterling
balances, clearly our aim should be
to avoid any net drawal on them
over the year as a whole. Our
earlier policies had been formulated
on certain expectations of additional
external assistance after the consor-
tium meeting. As things are, we

must adopt measures which will have
this result, whatever the ultimate
outcome of the consortium meeting
may be and whatever the consequent
burdens on the economy.

"I should like now to outline
briefly the steps we are taking and
propose to take to deal with the
situation. First and foremost, we
shall have to redouble our efforts to
increase our exports. My colleague,
the Minister of International Trade,
is concentrating his entire energies
on this task, and we shall adopt what-
ever measures are necessary to
achieve this objective. Export pro-
motion, however, needs a production
base oriented towards it. Our agri-
cultural production has a major con-
tribution to make in restoring a
better balance in our international
payments. Part of our difficulties
this year is due to the poor cotton
crop we had. Greater attention must
be paid to crops like cotton, oilseeds,
etcetera, which have a major bearing

on our export drive. And the kind
of success we have already had in
relation to raw jute production must
be achieved in other fields as well.

Use of Aid

"A speedier use of the assistance al-
ready promised to us would also help
in easing our situation. Hon'ble
members will recall that last year we
had received promises of assistance
during the current year, and we are
currently negotiating with the coun-
tries and institutions concerned with
a view to ensuring that in keeping
with the understanding already
reached, as much as possible of this
assistance is disbursed during the
current year. In our present circum-
stances, we will also have to impose
cuts in all imports, whether Govern-
ment or private, which are at pre-
sent being permitted against free
foreign exchange. Although the im-
port policy has been tightened on a
number of occasions, I do believe

that, under the circumstances, a fur-
ther tightening is both feasible and
desirable.

"Finally, we have to rectify the un-
favourable trend in invisibles. For
this, we shall have to plug all the
loopholes through which foreign ex-
change, which should normally be
earned by the economy, is being
diverted to illegitimate purposes.
One of the loopholes has been the
fact that people have been free to
travel abroad even when no foreign
exchange has been released to them
by us. The Reserve Bank has been
asked to issue new regulations to
close this source of leakage by
stopping journeys of this kind.
Simultaneously, changes are being
made in the regulations governing
travel for purposes like business and
education with a view to effecting
sizeable savings. More intensive mea-
sures to counter smuggling of all
kinds are also under consideration."

Cut in Imports

Following the statement of the
Finance Minister in Parliament, two
official announcements were made.
By one notification, a blanket cut of
50 percent was imposed on all imports
by established importers. The noti-
fication is as follows: "Established im-
porters will be granted quota or addi-
tional licences and other types of
licences equal to 50 percent of their
entitlement calculated in terms of
the policy announced in the current
Red Book. The minimum value of

How
BIG
is
Remington?

The largest typewriter manufacturer in India. The largest
in the world. Our Howrah Factory is the largest
in Asia... we could give you an awful lot of statistics,
but statistics leave out some very important things.

Our Howrah Factory is laid out over 1,80,000 square
feet: that's a statistic, but it says nothing of the fantastic
difficulty of pioneering in large scale typewriter
manufacture.

We have 26 branches and a network of service stations,
so that you can buy a Remington typewriter anywhere
and get a Remington service man in any part of the
country. A fully trained man. Many years of organi-
sation went into that.

More statistics: a Remington typewriter has 1,845 parts
and more than 3,700 different press tools, jigs, fixtures
and special toolings are needed to make them. The

parts are made from 24 varieties of materials in 251 sizes
and thicknesses, including special alloy steel in 53 sizes.
More than three-quarters of these materials undergo
heat-treatment.

Just these few statistics meant setting up our own Tool
Room and Heat-Treatment Section in the Howrah
Factory, training Tool Room labour and initiating
research among local industries for the production of
alloy steel. It meant training a full Assembly Depart-
ment for highly specialised skills from rivet-spinning
and type soldering to electroplating and stove-enamel-
ling and many more. It even meant training type-
aligners to be always accurate to within .003 of an inch.

We are rather proud that the finished typewriter from
the Howrah Factory truly saves Foreign Exchange
without sacrificing an iota of quality.

WELLMAN INCANDESCENT FORM AN INDIAN COMPANY

The Wellman Smith Owen Engineering Corporation Ltd.
and The Incandescent Heat Company Ltd.
have formed a company in India.

The new organisation will be known as

WELLMAN INCANDESCENT INDIA LTD.

This new step has been taken by the Wellman Incandescent
combine for the purpose of manufacturing in India heavy
industrial equipment including Steelworks Plant, Furnaces
and Ovens, Cranes and other Mechanical Handling
Equipment which have hitherto been imported into India.
Thus the formation of the new company implies not
only a saving in valuable foreign exchange but also the
birth of a new heavy industry in the country.

Calcutta Bombay Madras New Delhi

licences to which established importers are eligible in terms of the provisions contained in Para 31 of Section I of the Red Book or elsewhere will be reduced by 50 percent. The value of licences granted on an annual basis or in two half-yearly instalments will be subject to a 50 percent cut. Licences already granted to established importers for the current period will be called back for reduction in value. Established importers should immediately return the licences granted for the current period to the concerned licensing authority for amendment in value, without entering into any further commitment for the supply of goods against such licences. The cut will not be applicable to licences to be granted to established importers under aid from the U.S.A.

"A cut will also be applied in licensing the requirements of actual users from free resources. The extent of cut will be decided in each case on merits, subject to the availability of foreign exchange. A 50 percent cut will be applied in the entitlement of licences to be issued to consumer co-operative societies in terms of the provisions contained in Appendix 41 of the current Red Book. The position will be reviewed by the end of September 1962 and supplementary licences will be issued wherever necessary, subject to the availability of foreign exchange."

Travel Restrictions

By another notification, the Government made the following announcement:

"With immediate effect, no person in India who wishes to travel abroad, can obtain a ticket from a shipping company or an airline without producing a clearance in writing from the Reserve Bank of India. A directive to this effect has been issued by the Reserve Bank to all shipping companies and airlines operating in this country."

Departmental instructions are being issued to impose a similar cut on imports on Government account. It is also proposed to scrutinise invoices in order to plug leakage of foreign exchange.

The Finance Minister's statement has highlighted a cardinal defect in the third plan. The willingness of friendly Western countries to provide financial assistance, not only for new projects but also for maintenance imports was the most essential prerequisite for the success of the third plan. But the question asked here is why this wisdom of planning on an annual basis to avoid drawing down foreign exchange reserves had dawned only after the last meeting of the Aid-India Club. It is doubtful whether the Central Finance Ministry has fully analysed the effects of its policy on Air-India before a blanket ban was placed on foreign travel. The results of the policy on the finances of Air-India may be more damaging than the expected saving from the ban on foreign travel. It may affect the pooling arrangements between Air-India and B.O.A.C., it is feared here.

Unhelpful Attitude

Beyond telling the West of its unhelpful attitude at the Washington meeting of the Aid-India Club, the Finance Minister made no positive announcement indicating the steps the Government has taken or proposes to take to ease the coal and transport shortages which are retarding production and exports. Some indications were, however, available last week as to how the Rs. 71 crores raised through additional taxation will be used. The Government will sacrifice crores of rupees in imposing prohibition over the whole country by 1966. Mr. Humayun Kabir, Minister of Scientific Research and

Cultural Affairs, has also outlined a programme for building theatres.

Mr. Gladstone used to say that the main function of the Finance Minister should be to save candle ends. But under the welfare State, the tendency for economy has been obliterated. This apart, production cannot be raised or exports increased unless the Government takes quick decisions on important policies. The proposals of Burmah-Shell and Esso to establish rupee companies in India were made about a month ago. But the Government has not indicated the date on which discussions with the oil companies will be started. Almost three weeks have gone, and the Government has still not announced the decision about raising the price of coal, which would have provided some incentive to increase coal production. A proposal to link Sindri with the metre-gauge railway was mooted by Mr. T. T. Krishnamachari when he was the Central Finance Minister. This link would have moved coal to Rajasthan and even to some parts of Uttar Pradesh and Delhi, and gypsum from Rajasthan to Sindri. No attempt has yet been made to examine the project, let alone trying to implement it.

In concluding his statement, the Finance Minister said that "there comes a point in the history of every nation when it must demonstrate that it is prepared to take whatever action that may be necessary to pursue the paramount objectives so vital to its ends of dignity and purpose." The country has responded to such appeals on previous occasions. But it is time the Government showed that it is anxious to use the hard-earned public money on productive projects and not on wasteful showpieces.

Board of Trade Meeting

The Indian Board of Trade was inaugurated last week. Its 11-point agenda included an export plan for 1962-63 with an export target of Rs. 720 crores, against the actual or likely exports of Rs. 665 crores in 1961-62. The other items on the agenda were the establishment of export houses, enlarged and liberalised credit facilities for exports, and quality control. In a note circulated to the Board, it was explained that the main problems in raising exports are to increase production, reduce costs and maintain high quality. The problem of cost reduction is a somewhat long-term one but has to be tackled from now on when considering export promotion schemes or providing export incentives. It can perhaps be dealt with more appropriately by the Planning Commission and the Department of Economic Affairs, but it needs immediate attention. To ensure increased production, it is necessary that there is no shortage of raw materials. The latter should even be imported if they are required for production for export. The local raw materials are either too expensive or cannot be supplied expeditiously in the right quality and quantity.

Steel Supply

Some steel items are in short supply and expensive. But supply to export industries must receive the topmost priority. Supply should be expeditious, at internationally competitive prices, and of the types required, preferably by direct import by exporters. This will form only a small portion of India's steel imports. Another important bottleneck is the supply of hard coke. Industrial production has been adversely affected because of the shortage of hard coke; and production for export, requiring only about 30,000 tons a year, has been seriously jeopardised. Imported hard coke will be expensive, but prices should be pooled for this purpose.

Transport is a serious bottleneck for raising the export of iron and

manganese ores and coal. Although iron ore supply can be increased immediately and there is a good world demand for it, railway transport is unable to cope with it. The quantity of iron ore moved for export in 1961 was actually less than in 1960. While firm contracts for 4 million tons of iron ore are on hand, only 2.2 million tons could be moved by rail and about 700,000 tons had to be moved by road. Transport should be available cheaply enough, and it will be worth while to provide some subsidy on this account. Decisions have already been taken to move a number of commodities at 50 percent of the normal freight charges, the latest to benefit being manganese ore, but the principle will have to be extended to a larger number of goods. In particular, the movement of manganese ore to ferro-manganese factories (the major portion of whose production will be exported) and that of ferro-manganese for export should both be at concessional freight rates. Instead of refunds, the freight rate structure for goods booked and certified for export should be recast on the basis of the concessions granted. Mineral ores—particularly iron ore and manganese ore—are available in plenty, and their export will earn much foreign exchange in the short-term.

Agricultural Commodities

The other group of articles which can be exported in large quantities in the short-term are agricultural commodities. In the export of groundnut and linseed oils, India has been priced out of foreign markets. Their production over the years has increased, but internal prices of groundnut oil are about 40 percent higher than international prices.

Pulses, the export of which has been restricted, should be freed for export. Production in the past five years has increased from 5 million tons to 6.4 million tons, and if 100,000 tons or 200,000 tons are earmarked for export, no particular harm will be done to the internal economy. Similarly, onions, potatoes, chillies, garlic and some other commodities should be freely available for export, as also good quality rice like Basmati rice. The production of cotton needs to be raised, so it should be accorded a very high priority. It will be a "serious failure" if India cannot provide even 17.5 yards of cloth a head. The consumption of cotton this year is likely to amount to about 5.7 million bales or more. There is at present a shortage of 750,000 bales or 1 million bales a year, so cotton production of several crores has to be imported which could be saved if the production targets were realised. Newly irrigated areas need to be actively diverted to cotton.

There is a possibility of much greater production of marine products as well as meat and meat products. Unfortunately, the higher production of fish has been primarily absorbed by the domestic market. This is a potential field for public sector operation, and proposals for establishment of two public sector fisheries and one piggery, mainly for exports, are being examined. Simultaneously it may be necessary to establish installations at ports for the storage of such commodities as oils, alcohol and molasses.

Wherever prices have to be reduced to enable exports to take place, meticulous calculations about costs, etcetera, will hardly help. Broadly speaking, exports will have to be made as attractive as, if not more made as attractive than, internal sales. In this field the "carrot" will give results along with the "stick"; where necessary, the incentive system will have to be fairly flexible and quick. Procedural difficulties will have to be completely removed; some have already been removed. There are

many incentive systems. Some take the shape of linking supplies of raw materials or entitlements with exports so that increased production as well as higher exports are simultaneously achieved. Where export products are made primarily out of indigenous materials, cash incentives are more appropriate. "Incentives" have to be paid for either by the consumer of the group of commodities concerned or by the community as a whole.

Export Obligation

Official circles apparently think that an "export obligation" on the part of each manufacturer will serve to spread the sacrifice evenly and will take away the "pull" of the internal market which today the "manufacturer-exporter" has to resist as compared with the "non-exporter manufacturer" who exploits the sheltered internal market and who does not share the sacrifice and harder work involved in exports. "Export obligation" could be transferable so that when a manufacturer is not able to produce the right quality, he can buy from others. In due course, he will also produce the right quality for export. "Compulsory exports" may have to be introduced in due course through some legislative measure, if necessary, it is stated. Apart from incentives, export services are being better organised to serve export industries. They cover exhibitions, fairs, services of commercial representatives abroad, etcetera. It is proposed to establish an "Indian Exhibition and Fairs Society" to participate in and to

encourage fairs and exhibitions abroad.

It is proposed to establish a training institute in international trade so that personnel in adequate numbers will be available both in the private and public sectors who have specialised in applied commerce and international trade techniques and who know more than two or three foreign languages. Export finance problems are also being taken up. A proposal to set up an "Export Credit Guarantee Corporation", for extending guarantees for margins, etcetera, and for rediscounting facilities through the State Bank and other scheduled banks, is being considered. The problem of liberalised and well-spread export financing facilities, both short-term and long-term, is also under the Government's consideration. Broadly speaking, India may even have to "invest to export".

Central Selling Agencies

Central selling agencies are necessary in many fields, it is stated here. Iron ore is being sold only by the State Trading Corporation. Ferro-manganese producers have agreed that the S.T.C. should also handle ferro-manganese. The producers of manganese are also likely to agree to a centralised sales agency. Film producers have now agreed, in principle, to the establishment of a central export agency. As for shellac—an important export commodity—a centrally controlled selling agency will help to earn a better return in foreign exchange. In order

to avoid speculative forces, the export of groundnut and linseed oils may also be canalised through the State Trading Corporation. Buffer stock agencies and State operations in stockpiling will help regulate prices at moderate levels, ensuring steadier prices for the export of finished products as well as of primary products. The reorganisation of trade missions abroad and international trade information and exchange services will have to be undertaken.

costing £712,450, inclusive of the cost of spares and incidental expenses.

Producing Power Cables

Aluminium Cables and Conductors (Uttar Pradesh) Private Ltd., Calcutta, has entered into a collaboration agreement with Messrs V.E.B. Kablewerk Oberspree of Berlin and Messrs A. G. Limex of East Germany for manufacturing paper-insulated power cables.

Mr. Sandys in India

The U.K. Commonwealth Relations Secretary, Mr. Duncan Sandys, will arrive in New Delhi on 15th June. He will be accompanied by Sir Arthur Snelling of the Commonwealth Relations Office. Mr. Sandys will first have talks with the Central Finance Minister, Mr. Morarji Desai, on the question of untied aid for India. The United Kingdom has

Barges for Calcutta Port

After inviting tenders on a global basis, the Calcutta Port Commissioners have placed an order with Simons Lobnitz Ltd., a Scottish firm, whose offer was the lowest, for the construction of two diesel-propelled hopper barges of 1,400-ton capacity.

always shown its awareness of this country's foreign exchange difficulties. Mr. Sandys is expected to offer immediate untied aid to ease the present critical situation. On Saturday, Mr. Sandys will meet Mr. Nehru. Thereafter, he is expected to begin talks on the European Common Market, which will be continued up to Sunday. On Monday, Mr. Sandys will meet representatives of the Associated Chambers of Commerce and the Federation of Indian Chambers of Commerce and Industry to explain Britain's views on the E.C.M. He will leave for Pakistan on Tuesday en route to London.

Developing Goa

The Italian firm, Messrs Finsider, which wholly owns one iron ore mine in Goa and another in partnership with a German firm, has shown its eagerness in developing Goa. It is prepared to offer financial and techni-

cal assistance for development projects there, including port facilities and a steel plant of about 100,000 tons capacity to be operated with electric power.

Bokaro Steel Plant

There has been talk in the lobbies over the possibility of Italian-U.S. collaboration in building the Bokaro steel plant. Reference is made to the statement of Mr. C. Subramaniam, Central Minister of Steel and Heavy Industries, that the Bokaro plant will be built, with U.S. aid if available, and without it if necessary. The U.S. team for the techno-economic survey of Bokaro is expected shortly. Meanwhile, the Russians have indicated their willingness to finance the project. The possibility of Italian-U.S. collaboration is suggested in case the U.S. steel industry finds it difficult to fit in with the Indian pattern of public sector projects.

London

Working of the U.K. Export Credits Guarantee Department Defended

(FROM OUR LONDON CORRESPONDENT)

THERE has been much criticism, mostly uninformed, of the working of the U.K. Export Credits Guarantee Department. This is mainly the outcome of the idea that the E.C.G.D. exists as a prop for the unadventurous, whereas it should be visualised as a sensible safeguard in the vigorous and imaginative development of overseas sales. Fortunately, realisation of this latter important rôle has been spreading recently, with most gratifying results such as the increasing use of E.C.G.D. facilities with simultaneous improvements in cover, the lowering of premium rates, and a general speeding up of operation with greater flexibility and competitiveness on lengths of credit. These features of the Department's activities over the year ended 31st March, 1962, are brought out in the annual report, but to comprehend them without a guide is by no means easy. That is why this correspondent, for one, welcomed an informative statement by Mr. A. E. Percival, Secretary of the Department, when the report was made available at a recent Press conference.

British exporters, he declared, are "able to compete pretty well these days on the terms of the credit they have got." The often-heard complaint that foreign exporters obtain better credit terms proves "groundless in nine cases out of ten." In most instances, it was generally a case of the British exporter getting something off his chest, said Mr. Percival. He described as "irresponsible" statements made by British traders that better terms were offered to foreign exporters on the basis of what they had been told by agents. "In a considerable number of cases we have got at the facts, and the allegations have not been true," he said.

Financial Results

Firstly, the financial results. The provisional figures for the financial year ended 31st March show a satisfactory trading year for the E.C.G.D. under what it calls "commercial" business. Actual exports insured rose by 12 percent, from £720.8 million to £805.7 million. Liabilities outstanding at the end of the year were 15 percent higher than a year ago at £739 million, against £640 million. (These figures take into account not only amounts outstanding at the end of the year on actual exports insured, but also liabilities on insured contracts under which exports have yet to be made.) The cumulative reserve increased during the year by some £7 million to some £35 million. Claims paid were almost the same as in the previous year, at £4.1 million (provisional). Recoveries, at £2.1 million, were the lowest for nine years, due to the end of receipts under the Anglo-Brazilian agreement: some £600,000 was recovered concerning Turkish claims, under the inter-governmental agreement for the discharge of commercial debts by 1971 and some £400,000 for earlier exchange delays in Colombo.

Although premiums were reduced, as announced in April 1961, and in the event, the average premium on business on up to six months' credit, fell from 8s 6d to 7s 9d percent, and the average on specific medium-term business from £3 10s to £3 percent, the total premium received during the year amounted to £8.6 million, com-

pared with the final figure of £7.4 million for the previous year. This was due partly to the increase in short-term insured exports from £580 million to £663 million, which resulted in an increase of some £100,000 in premium in this field. The main increase, however, lay in the medium-term field and was due partly to the time-lag which occurs in such business between receipt of premium at the outset of a contract and subsequent declaration of the insured exports, and partly to the receipt during the year of some £2 million of premium for business insured in an earlier year.

"National interest" business rose from £21.7 million to £39.5 million, the bulk of this increase being in specifically-insured medium-term contracts, and the cumulative reserve was increased from £4.4 million to £6.1 million. Claims paid were unusually low at £500,000 and reco-

veries were also low at £130,000. In the "commercial" business all but £2 million of the increase took place in exports on up to six months' credit, which rose from £579.6 million to £662.6 million, whereas business on over six months' credit was little changed at £143.1 million, compared with £141.2 million in the previous year. Even allowing for the additional £18 million of medium-term business in the "national interest" account, the increase in insured exports on these longer terms is modest, and the main increase in insured exports has clearly come from the acquisition of new policyholders in the comprehensive field, the number increasing during the year from 5,124 to 5,631 (which excludes the 859 new small exporter policies sold).

The increased balance of £35 million must be seen in proper perspective. In the first place, it has to be viewed in relation to mounting

liabilities, which increased during the year by £99 million to £739 million. These potential liabilities are not mere bogeys. Shortage of foreign exchange leading to claims can affect the whole of its business in a market within a single year—as has happened several times in the past—and the total surplus is exceeded by potential liabilities on any one of three markets. Nor are these by any means the safest markets: £56 million at risk in a market which is graded in the lowest of four categories of risk, and £49 million in a market in the next category.

Earned Balance

In the second place, it is also important to appreciate the make-up of this total £35 million balance. Only part of it can be regarded as "earned", since premium is received at the outset of a transaction on a risk which may have years to run. Some £13 million consists of premium received on liabilities which have not yet run off. This part of the cash balance must be regarded as allocated to a "suspense account". The earned balance is, therefore, £22 million. Of this total, the business transacted from 1930 to March 1953, accounts for some £16 million, while some £6 million is surplus earned since April 1953. The Department has already reduced the premium rates to an extent which will greatly retard, if it will not eliminate, this low rate of surplus accumulation.

MODERN DIVINING ROD

Operated by skilled men, seismic surveys can probe the earth to track underground rock structures that may contain petroleum. Shock waves created by small charges of dynamite travel down, hit the rock formation and bounce back again, to be recorded on the surface by sensitive instruments which produce an X-ray picture, as it were, of

the earth's crust. If the picture looks favourable, the next step is to drill a test well.

Geological and geophysical techniques have made oil exploration less of a leap in the dark than it used to be, yet even with scientific aids like the seismic survey it is the drill alone that gives certain knowledge of the presence or absence of oil.

The Third Five Year Plan Bird-Heilgers' part in it...

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs.1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy : stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and tops the list of Bird-Heilgers exporting activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

GUNNIES FIRM DESPITE RISE IN MAY STOCK FIGURES

THE stock figures for May issued by the Indian Jute Mills Association have come as a surprise to the trade. The total increase they show is 23,800 metric tons. Hessians have risen by 9,000 metric tons, sacking by 11,100 metric tons and "other goods" by 3,700 metric tons. It had been generally expected that there would not be an overall increase of more than 6,000 tons or 7,000 tons, mostly in sacking, while hessian stocks would be almost unchanged. The stock figures were published late on Friday evening, when the gunny market was fairly tense. Within a few minutes, therefore, prices declined by 1 percent or 1.5 percent. From a careful study of the actual shipping instructions issued for May shipments, as also the bookings made with the various steamer companies, the trade felt that the stock figures were inflated. This was true, in the sense that some mills were unable to despatch their goods due to an acute shortage of barge. Further, two or three May steamers were delayed, and hence the cargo intended for these steamers also did not leave the mill premises. Normally, such contingencies might have been allowed for when computing the stocks, but due to the excise duty muddle, the mills had to give out the actual stocks in their godowns. Prices, however, closed at higher levels than last week due to steady demand.

Production to be Maintained

This reading of the situation was confirmed by the decision of the I.J.M.A. committee at its meeting on Tuesday to continue the present maximum level of production in the mills for a further period of one month from the end of June to the end of July. The committee considered the situation in the jute goods market and noted that, while the stocks of manufactured goods at the end of May showed a substantial increase over those of the previous month, this was due to delays in the despatch of goods from the mills due to complications over the excise regulations and especially an acute shortage of boats resulting from the stoppage of work by the Hooghly pilots earlier in the month. Although end-May stocks were thus inflated, the offtake of jute goods had been well maintained.

Raw Jute Steady

Due to rumours of incessant rains during the past week in India as well as in Pakistan, the sentiment in the jute market has become bullish. It is said that the excess of rain is likely to damage the fibre in its initial stages. In some areas, it is reported, the stems of the plants are already turning yellow. On the basis of these rumours, the fibre market has remained steady throughout the week.

However, reliable reports received from Pakistan indicate that the condition of the standing crop there is very satisfactory. In quality, it is superior to the 1961-62 harvest. Contrary to Calcutta rumours, reports from Pakistan indicate that ideal weather continues there. It is stated that the conditions have been so favourable that the lowland crop, which was previously reported to have been damaged, is now likely to be reclaimed to some extent. Some sources even estimate that the final output may be 7 million bales. A

more accurate forecast should be available in the near future.

Accumulated Loom Hours

The large balances of accumulated loom hours in the Indian jute industry have declined from 9 million at the beginning of this year to 3.4 million at the end of May. The quick liquidation has been possible by re-designing the mills' method of working, in order to ensure the maximum production to meet the revival of demand this year.

Howrah Mills Strike Ends

The two-month-old strike at the Howrah Mills has been finally resolved. Resumption of work by this mill is of some significance as it concentrates on 40in. 100z. hessian. Additional supplies to the extent of 3,000 bales are expected by the end of June.

THE JUTE MARKETS

Manufactured Goods : The upward trend continued throughout the past week, and a marked feature was the revival in sacking. At the opening, August futures were quoted at Rs. 52.90 for 40in. 10oz. hessians and Rs. 122.35 for B Twills. Apart from the setback caused by the release of the I.J.M.A. gunny stock figures, hessians rose steadily to Rs. 53.90 and sacking to Rs. 126.90. Short-covering in ready hessians continued from day to day. Spot 40in. 10oz. hessians commanded a price of Rs. 62.50 to Rs. 63 for shipment on May steamers. The tight supply position caused worry to the shorts in the June position. Panicky covering resulted in a further increase in the premium for June 40in. 10oz., which recorded a high of Rs. 7.75 over August futures—and the increase of Rs. 5 within a month. The increase in premium was due not only to short-covering, but also to business placed by the Argentine and, to some extent, by the U.S.A. The former paid up to Rs. 59.25 for June 40in. 10oz. hessians of any mill make. As hessian prices continued to rise, it looked as if the disparity between sacking and hessians could not continue for long. Without any confirmation of overseas business, speculators began making purchases of B Twills, particularly August futures. They argued that B Twills were cheap compared with hessians, and if hessians were to remain steady, B Twills must appreciate.

The Argentine bought about 2,000 to 3,000 bales of hessians for June shipment. Reports were current that, if prices continued to rise above the recent levels, Argentina may drop out of the market. She was already said to be enquiring about other sources of supply, one of which may be Brazil. The U.S.A. did not make any large purchases, but importers who had missed the market earlier made scattered purchases, particularly for near delivery. It was estimated that the average business from that country was about 700 bales to 800 bales a day. Latest reports from the U.S.A. indicated that stocks there were moving very slowly; 40in. 74oz. and 40in. 10oz. hessians were said to be freely available at east coast ports below their comparable June replacement prices.

with buyers few. Burlap, it was said, had reached a price where other packaging materials had a definite superiority, so U.S. offtake would decline. Nevertheless, the bulls felt that as long as there was no genuine increase of stocks in the ready position, the undertone would remain steady, in spite of erratic fluctuations. There was not much interest from Continental consumers during the past week. In sacking, there were unconfirmed rumours of a large order for 9,000 bales from the Ghana Cocoa Board. The shipment period was not known; some sources reported July-September, while others said October-March. At the close, another large transaction involving 12,000 bales of A Twills was reported, but no confirmation was available whether it was for export or local consumption. The latter appeared more likely as the delivery period was stated to be October-December, when local demand is high. There were also rumours of a large Government order for 30,000 bales for

Raw Jute: The raw jute market was steady during the past week. June futures opened at Rs. 30.24, to close at Rs. 31. A new feature was the opening of September futures, where initial business was transacted at Rs. 33.20 a maund. This price was, of course, considered to be quite

I.J.M.A. STOCK FIGURES FOR MAY

While the following statement shows the actual stocks of jute goods held by mills at the end of May 1962, they do not give a true picture of the stock position. Due to the detention of boats resulting from the stoppage of work by the

Hooghly pilots earlier in May, there was still an acute shortage of boats at the end of the month, so the clearance of jute goods from mills was seriously delayed. Stocks of goods held by mills at the end of May

were, therefore, much larger than they would normally have been. So the end-May figures given in the following statement are in no way comparable with those of previous months.

Description	31st May, 1962 *		30th April, 1962		Increase over (+) or decrease from (-) previous month		31st May, 1961	
	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons	000 Metres (Lakh Yds.)	000 Metric Tons

THE FOREIGN JUTE MARKETS

FIBRE CONTINUES TO FALL

(FROM OUR DUNDEE CORRESPONDENT)

THERE were further falls in raw jute prices during the past week, although all prices did not come down at the same time. The fall was in one grade one day and in another the next. Mill Lightnings, for instance, came down by £2 a ton to £97, but Mill Hearts remained unchanged at £87, while Grade Hearts fell by 10s to £76. Grade Tossa-2/3 by £3 to £118, but fours by only £1 to £97. Continental Tossa-2/3 by £1 to £95 and fours by £1 to £81, c.i.f. U.K.-Continent, June-July shipment. Very little business was done for shipment of old crop jute, so the fall in quotations was of no avail.

Sellers were depressed as they failed to attract buyers, but a few sales were reported in new crop fibre at £95 for Mill Lightnings and £85 for Mill Hearts for August-September shipment, c.i.f., U.K. The volume of business done in new crop jute on this market so far this season, it is reported, is not more than 10,000 bales. But this appears to be purely guesswork. It may actually be a good bit higher. Spinners cannot be blamed for being cautious in their purchase of fibre, as at the moment they are using jute which cost them much more than they are getting in return on the sale of yarns, cloth and bags. Not much business was done in Thai jute during the past week. But a good deal has already been done around the present quoted rates of £71 for A grade, £55 for B grade and £45 for C grade delivered Dundee, while a small volume of business has been done in jute cuttings at £53 for S.N.C. and £43 for N.C., June-July.

Calcutta goods continued to rule at a fairly satisfactory level of prices. A sale of Samnuggur ordinary shares was reported at 9s 6d here. Hessians were quoted at 87s 9d for 40in. 10oz. and 64s for 74oz., June, August, 80s and 61s 3d September, and 78s and 57s October-December, with B Twills at 190s 6d, 190s, 189s 6d, 188s and 186s 6d for the respective positions of shipment, f.o.b., Calcutta. Dundee yarns and cloth were steady and unchanged. Business was confined to quick delivery, sufficient to keep employers busy.

PHS-H 1422

RENEWAL OF WORLD TEA PACT URGED

THE need for the renewal of the International Tea Agreement has been emphasised by Sir John Muir in his annual report as chairman of the Consolidated Tea and Lands Co. Ltd. The company has estates in India, Pakistan, Ceylon and Africa. The report will be considered at the annual general meeting in Glasgow on 28th June. After referring to a record crop for the group of over 28.5 million lbs, Sir John says: "Climatically, 1961 was generally a satisfactory year for tea, although less favourable financially since costs increased and average prices for the year were appreciably lower than in 1960. This applied to all growths, and the average price paid in the London auctions during the past 12 months was about 3½ below the average of the preceding 12 months."

"The world output in 1961, at 1,481 million lbs, exceeded the crop of the previous year by 108 million lbs, of which 71 million lbs was contributed by India alone. Against this background, it is surprising to find that the latest figure available of stocks in London, including teas about to be

landed, was actually 14 million lbs lower than at the corresponding date of last year—at 147,760,000 lbs, against 161,620,000 lbs. The whereabouts of the extra tea produced is something of a mystery. Some tea must be in the 'pipeline', but a great part must actually have been consumed, which gives some grounds for hoping that while, as forecast by the Food and Agriculture Organisation of the United Nations, yields are rising steeply, consumption may be increasing to a greater extent than was visualised."

Consumption Prospects

The chairman says that "the tea industry is certainly not in a position to face a lower scale of prices than those now ruling, particularly for plain teas, and if production continues to rise, we must hope that consumption will increase proportionately. My predecessor, Sir James Jones, advocated for a long time the renewal of the International Tea Agreement as a safety measure to be applied in a time of crisis, and I see nothing in the present situation which lessens

the need for a fresh agreement. Each producing country seems to be awaiting simultaneous initiative from the others, and we shall certainly get no agreement while all concerned remain so diffident. Any worsening of market conditions will, accordingly, find the industry throughout the world quite unprepared to meet the situation," Sir John says.

AVERAGE TEA PRICES AT U.K. SALES FALL NORTH INDIAN OUTPUT RISES

(BY A SPECIAL CORRESPONDENT)

IN 1961, Indian tea exports to the U.K. amounted to £62 million, while British imports of all commodities from this country were valued at £145 million. India is now pressing for the duty-free entry of her tea into the European Common Market. It is possible that an *ad valorem* duty of between 18 and 25 percent may be eventually fixed. Some reports suggest that duties in West Germany now come to 150 percent, but this estimate looks exaggerated.

U.K. tea stocks for the week ended 6th June were slightly lower at approximately 126.3 million lbs, compared with 127.8 million lbs a week

CAPITAL, 14th June, 1962.

ago. Deliveries in the same week were 8 million lbs, while landings were only 6½ million lbs. Heavy shipments from the north Indian gardens are not likely to reach Britain for another two months, but current freight bookings are satisfactory. The average price in public auctions in London was 50.17d a lb in the past week. At the same date last year, the price was 50.97d a lb.

Better Price for East African Tea

East African teas appear to be improving in quality. It was reported that invoices sold last week in London at steadily improving prices. Another noteworthy feature was the rise from 1d to 3d a lb in low quality growths. North Indian old crop teas were somewhat irregular, with south Indian varieties mostly steady.

North Indian Tea Crop

The north Indian tea crop figures at the end of May this year were 54, 176, 150 lbs compared with 50, 282, 218 lbs at the same time in 1961 and 47, 213, 770 lbs in 1960.

More Tea Grown in China

It is learnt that Szechuan province in China has doubled the area under tea since 1949. The New China News Agency reports that the area under tea in Kweichow has trebled.

Employment on Ceylon Plantations

The Ceylon Parliament is considering a Bill to provide for the compulsory employment of local people on plantations in preference to foreigners. The measure, if enacted, will grant powers to the Labour Minister to decide what class of estates shall employ nationals and their proportion for each plantation. In April it was decided that 50 percent of new recruits should be Ceylonese citizens. It is reported that at present, there are nearly 400,000 Indian workers in the tea industry and 40,000 in rubber. The number of Ceylonese is given as 104,000 for tea and 80,000 for rubber.

Increasing Tyre Output

The third plan visualises a demand of 100,000 tons for rubber, but it is now expected to rise to 140,000 tons. This is due to the marked expansion in tyre production, which, it is expected, will soon increase to 3.7 million from 1.35 million tyres at present. Latest plans provide for a capacity of 5.2 million tyres a year. Considering the present impediments to the expansion of road transport, it is a little difficult to know if there will be an internal market for the proposed supply, even if the part of the planned output is meant for export.

Exports and High Prices

In his address at the first meeting of the Indian Board of Trade, last week, the Central Minister of International Trade, Mr. Manubhai Shah stated that the major impediment to this country's exports is uncompetitive prices. "We are priced out in agricultural as well as industrial commodities", he stressed. On this question, a senior member of the Calcutta tea trade recently commented as follows: "There is a great deal of goodwill towards India in the U.S.A. as well as Canada. They will certainly try and buy more Indian tea, but basically our costs of production are too high compared with Formosa, Indonesia and even Ceylon. The high-grown Ceylon may be more costly, but when it comes to cheap teas, they are much cheaper than ours as they have no internal market like India". In view of these comments, which must be based on facts, it appears that the tea retailed to individual consumers in America is made up of 20 to 25 percent good quality teas and 75 to 80 percent inferior

CAPITAL, 14th June, 1962.

grades. So one is again compelled to ask why the average retail price is reported to be as high as \$2.26 a lb in the United States?

BUILDING CASHEW BUFFER STOCKS

S.T.C. TO HELP PROCESSORS

(BY A SOUTH INDIAN CORRESPONDENT)

THE State Trading Corporation of India has agreed to help the cashew processors in getting their raw materials at reasonable prices. It will keep buffer stocks of raw cashewnuts in order to avoid unhealthy price fluctuations. The stocks would be released as and when necessary. The import of cashewnuts through normal trade channels would, however, continue as usual.

This is the outcome of the recent negotiations between the Kerala Minister of Industries and the Central Minister of International Trade. The former went to Delhi last week with a proposal for setting up a separate trading corporation for the cashew-processing industry in India, with its share capital contributed mostly by cashew factory owners. It was to import raw nuts from Africa for distribution among the processors on an equitable basis, and for supplementing the activities of individual shippers in selling processed nuts abroad. This proposal did not find favour with the Central Government. To meet the cashew processing industry's raw material requirements, the State Trading Corporation will be asked to keep a buffer stock of raw nuts, and release it as and when necessary to control price fluctuations. As for export, the proposed second State trading corporation for agricultural products will assist the cashew industry in selling its products abroad.

Better Demand

The cashew market now shows signs of improvement. Overseas buyers, including the U.S.A., Canada, Britain, East Germany, Czechoslovakia and Italy, have been recently buying Indian cashew kernels at the higher prices of 45 to 46 U.S. cents a lb, compared with 42 to 44 U.S. cents a few weeks ago. According to some trade estimates, the U.S.A. has already taken 700,000 cases of 50 lbs each so far this year, against the 1.1 million cases for the whole of last year. Russian purchases are also running ahead of last year's figures, according to these estimates. The new interest shown by foreign buyers for dessert pieces is also considered encouraging. The demand for this type at around Rs. 170 a cwt is keen. The demand for cashew kernel is also said to be better as a shortfall is feared in the Italian almond crop, and the prices of Brazilian nuts have been rising gradually. The improvement in kernel prices and reports of damage to the cashew crop in certain areas of Africa, it is said, are the reasons for a marked rise in raw nut prices. African nuts have recently been quoted at the higher rate of Rs. 650 to Rs. 700 a ton.

Problems of Coffee Planters

Difficulty in regard to finance both for normal working as well as for development is being experienced by most coffee planters in south India. Coffee Board payments from the pool have been made under great strain, and payments are slowed down when the crops are large and the need for finance is great. The Coffee Board is working on a plan to provide a total credit facility of Rs. 10 crores, which is nearly half the value of the total crop. The chairman of the Coorg Planters Association, Mr. Somanna, discussed this problem of finance in his recent address to the Association's annual meeting. He

said several suggestions for phasing payments to growers had been made, but they depended upon phasing the sales by the Board which again was dependent upon market conditions rather than on the financial needs of the growers. He agreed that it would be foolish to sell coffee because payments had to be quickened just when the market was least responsive to sales.

Even producers who are financially well placed are in need of large resources for development. Financing of development has met with difficulty because planting is treated as agriculture and not as an industry.

The chief of the Coorg Planters Association is of the opinion that the Coffee Board, jointly with the Central and State Governments, should consider new ways and means of financing development. Credit facilities for long-term development may be channelled through a land mortgage bank as has been done in the case of rubber in Kerala.

Labour Situation Better

The chairman of the Kanan Devan Planters Association, Mr. Tewson, paid a tribute to the Government of Kerala for the manner in which it has been dealing with labour problems. He said in the course of his

recent address to the annual general meeting of his association: "I find the Government's labour department is more inclined to listen to both sides in a dispute and not to forward so many ridiculous and time-wasting cases to conciliation and arbitration. A case promptly dealt with by a manager with the help of the labour department and the unions produces a sense of mutual respect and confidence, whereas renewal of long-forgotten and hopeless cases leads to frustration and time-wasting." In his district which is the largest planting district in Kerala, the labour situation was satisfactory during the past year.

Specialized ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

For more than half a century McKee engineers have specialized in the design, engineering and construction of steel-producing facilities. Our comprehensive mine-to-metal services include every phase of the work necessary for any steel-plant project, from preliminary studies to completed plant ready for initial operation.

The McKee Organization has executed contracts in 49 countries including India. Among these are some of the world's largest and most modern completely integrated steel plants and hundreds of individual units, including blast furnaces, open hearth shops, rolling mills, agglomerating, sintering and pelletizing plants. Most recent examples of large-scale integrated plants are the new Somisa plant at San Nicolas, Argentina and the C.S.N. plant at Volta Redonda, Brazil.

To the steel industry of India the McKee Metals Division offers the services of its large, well-qualified staff with a fund of sound, practical experience and specialized knowledge that is unmatched anywhere in the industry.

A 'PHONE CALL TO-DAY MAY CUT YOUR CONVEYOR BELTING COSTS TOMORROW

This certainly did point the way to greater economy for one large group of companies having factories scattered all over the country.

On request, Dunlop Service personnel carried out an exhaustive survey of the conveyor belts in use and submitted detailed proposals which enabled the total number of belt constructions to be reduced from 42 to 20.

In several instances the proposals incorporated lighter and more economical belt constructions which reduced installation and replacement costs. Further, fewer constructions of belts were required to be carried in stock and thus inventories were reduced.

Why not phone Dunlop to survey your conveyor installation? There is no obligation whatsoever.

COMPANY AND PUBLIC NOTICES

THE UNITED COMMERCIAL BANK LIMITED

Registered Office:

2, INDIA EXCHANGE PLACE,
CALCUTTA-1.

NOTICE

NOTICE IS HEREBY GIVEN that a GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 11th day of July, 1962, at 4 P.M. to consider and, if thought fit, to pass, with or without modification, the following resolution which will be proposed as an ordinary resolution:

"Resolved that"

(a) 200,000 new ordinary shares of Rs. 100 each in the authorised capital of the Company be issued at a premium of Rs. 25 per share on the footing that such new ordinary shares shall rank in all respects *pari passu* with the existing ordinary

shares in the Company save and except that in respect of the financial year of the Company ending on 31st December, 1962 they shall be entitled to such rate of dividend as may be determined in proportion to the amount of capital for the time being paid thereon and to the period commencing from the date on or before which the amount payable with the acceptance of the offer in respect thereof is required to be paid to the Company under sub-clause (b) following;

(b) the said 200,000 new ordinary shares be offered in the first instance, subject to the approval of the Reserve Bank of India wherever necessary, for subscription, for cash to those members of the Company whose names shall appear on the Company's share register on the 18th day of August, 1962 in the proportion of one new ordinary share for every two existing ordinary shares then held by such members and so that a sum of Rs. 12.50 n.p. per new ordinary share taken up together with

the sum of Rs. 25 for premium in respect of each new ordinary share shall be paid to the Company in cash with the acceptance of the offer, and, on allotment, a further sum of Rs. 37.50 n.p. per new share shall be payable to the Company on or before 31st January, 1963;

(c) such offer be made by notice as hereinafter mentioned and that any member receiving such offer shall be entitled either to take up by paying therefor all or any of the new ordinary shares so offered to him or to renounce (upon signing a renunciation in such form as shall be prescribed by the Board of Directors) his right to all or any of such new ordinary shares in favour of a nominee or nominees; Provided that such nominee or nominees shall be a member or members of the Company or be approved of by the Board of Directors and that such nominee or nominees shall sign an acceptance of the shares so renounced in such form as shall be prescribed by the Board of Directors and that any such renunciation by a member and acceptance of such nominee or nominees shall be effective only if made upon forms to be supplied by the Com-

CAPITAL, 14th June, 1962

pany and lodged duly completed with the Company within the time specified together with the sum of Rs. 37.50 n.p. per share in cash (being the proportionate payment of Rs. 12.50 n.p. per share plus the premium of Rs. 25 per share);

(d) subject to the approval of the Reserve Bank of India wherever necessary, the said offer be made to the said members by notice specifying the number of shares to which they are entitled and providing that the offer if not accepted within 30 days from the date of offer, or within such extended time as may be allowed by the Directors, shall be deemed to have been declined and specifying that the payment for such shares at the rate of Rs. 37.50 n.p. for each new ordinary share so offered shall be made in full with the acceptance of this offer and before allotment;

(e) any new ordinary shares not taken up by the said members in response to the above offer shall be available for subscription by the members of the Company who take up their rights in full and who desire to apply for additional shares but so that the right to apply for additional shares shall not be renounceable in favour of any other person and the allotment of any such additional shares shall be subject to any condition which may be imposed by the Controller of Capital Issues and, in the case of a non-resident member, further subject to the approval of the Reserve Bank of India;

(f) the Certificates in respect of the new ordinary shares shall be completed and kept ready for delivery within six months after allotment thereof.

Note:

1. A Member entitled to attend and vote at this Meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.
2. The transfer books of the Bank will be closed from Monday, 13th August, 1962 to Saturday, the 18th August, 1962, both days inclusive.

EXPLANATORY STATEMENT REQUIRED BY SECTION 173 OF THE COMPANIES ACT, 1956.

With a view to further strengthen the capital resources of the Company and in order to increase the ratio of paid-up capital and reserves to total deposits, the Directors propose to raise the subscribed capital of the Company by the issue of 200,000 new ordinary shares of Rs. 100 each in the manner set out in the resolution, for which sanction of the Controller of Capital Issues has been obtained.

The meeting of the members has been called to consider and pass the above ordinary resolution for the issue of new shares.

The new shares shall rank in all respects *pari passu* with the existing ordinary shares in the Company except that in respect of the Company's financial year ending 31st December, 1962, the new shares shall confer on the holders the right to such rate of dividend as may be determined in proportion to the amount of capital paid-up thereon and period of payment as specified above.

None of the Directors is interested in the aforesaid resolution except as shareholders of the Company. The General Manager is not in any way interested in the said resolution.

By Order of the Board,
S. T. SADASIVAN,
General Manager.

CALCUTTA, 21st JUNE, 1962.

Vol. CXXXXVIII No. 3715

INDIA AND THE EUROPEAN COMMON MARKET

THE Indo-British talks held in New Delhi during the past few days on the question of how the U.K.'s entry into the European Common Market will affect this country appear to have yielded a fair measure of agreement. Perhaps it was too much to expect that they would lead to unanimity—not so soon anyway—considering that the difference between the Indian and the British approach to the problem is fundamental. The U.K., it is believed, thinks that a few Indian exports should continue to be allowed to go into Britain duty-free. But on the rest the Common Market's external tariff should begin to be applied gradually as soon as the U.K. joins the E.C.M., which may be in January 1963. Thereafter, if Indian exports suffer, the position can be reviewed. After a period of three years (that is, by 1966), the enlarged E.C.M., including Britain, would negotiate comprehensive trade arrangements with India (and also with Pakistan and Ceylon). India, on the other hand, feels that the transitional period of three years is too short. Indian goods should be allowed to enter the British market duty-free and quota-free, as at present, until 1975, or at least till 1970. Only at one of these later dates would the comprehensive trading arrangements be negotiated; until then the trade with Britain and the E.C.M. would be subject only to annual reviews. As India has suggested in her memorandum to the E.C.M., the common E.C.M. external tariff should be zero for primary products, semi-processed and some processed products which now enjoy the right of quota-free and duty-free entry in the U.K. The products suitable for free entry would include items like tea, spices, vegetable oils, coarse grey cloth, jute manufactures, coir products, hand-knotted carpets, East India kips, finished leather and leather manufactures. If the E.C.M. is unable to grant duty-free entry to some Indian goods, these goods should be allowed to go into the U.K. on the same terms as Moroccan and Tunisian goods go into France.

A major problem which no doubt featured at the New Delhi talks relates to the E.C.M.'s "associated territories." The discriminatory preferences awarded to a number of French-speaking African nations by the Common Market still figure among India's official criticisms of that institution. At the start, it seemed that the extent and the seriousness of those preferences were being exaggerated. Fortunately, events, so far at least, have not changed that impression: after years of wrangling, the Six have still not agreed on what favours they will extend to their African associates in the new five-year contract that is due to come into operation next year. In the first week of June, once again, the Six failed to reach a compromise and have postponed their next meeting till the end of the month, putting off the Africans with a promise of a Euro-African conference in July. Accord has been impossible because some members of the Six are as opposed to the principle of discrimination as are outsiders like India. The determined opposition of these countries (Holland and West Germany) has already had this important result, that in any compromise solution likely to be attained this summer the degree of tariff pre-

ference in favour of the associates will be much reduced. The advocates of tariff preference have been forced, step by step, to agree to accept direct financial aid as a substitute for commercial advantage. That is, the tendency of the bargaining has been to "buy-off" the African associates with lump sums of money, in lieu of the perpetual right to sell their produce in Europe over a lower tariff barrier.

This solution is of course welcome in certain ways from India's point of view. The commercial advantage of the associates was disturbing only in the event that their produce entered Europe free of duty, while equivalent Indian produce paid the full external tariff. That danger has been reduced. Henceforth it is a question of a relative advantage for the Africans: their produce will pay duty, but a lower one than Indian and other commodities. If the differential is kept within reason, the disadvantage suffered by outsiders may not be great—because African produce is notoriously of lower quality. Low-grade African fibres or foodstuffs paying, say, 4 percent *ad valorem* may not be formidable competition for superior grade Indian produce paying 5 percent or 6 percent, or even 8 percent. That is the order of the "threat" now envisaged, because the most generous suggestion advanced by the European backers of the associates is that their produce should benefit from a reduction of between 25 percent and 50 percent of the common external tariff. The goods in question, incidentally, are certain fruits (bananas, pineapples, coconuts), drinks (tea, coffee, cocoa), spices (pepper, nutmeg, cloves, vanilla) and some tropical woods.

It has to be admitted that this does constitute at least a minor menace to India's exports, especially when added to the fact that production costs in Africa's colonial economies are lower than in this country. It is also objectionable in principle. The defenders of the E.C.M. have three answers to that. Firstly, they point out that the associates too often pay for this advantage, and for the other benefits of association with the Common Market, by reducing their tariffs on goods from western Europe, at the rate of 15 percent yearly starting in July 1963, and by progressively abolishing import quotas. This is what Mr. Khrushchev was referring to lately when he said that association with the Common Market made industrialisation impossible in Africa. That is perhaps false, because the agreement allows the Africans to invoke the "infant industries" argument to protect their industrialisation; but it is true that India would be ill-placed to complain of concessions made by the Common Market to its associates if she were unwilling to match those concessions in the way they are doing. Secondly, a much more important point of principle is the limitation of imports of tropical produce into Europe, not by tariffs, but by sumptuary taxes, which affect certain goods (such as tea) from whatever source they come. Apart from protesting that Indian tea is disadvantaged in relation to African common tea, this country has to press equally strongly for a reduction of the savage excise duties that strike all tea, Indian and African alike, and which are a much greater part of the ultimate price

than Customs duties. Thirdly, objection to the principle of discrimination is being maintained by Holland and West Germany more effectively than India could do from the outside.

That is why it is not yet certain that the differential of 25 percent to 50 percent in Africa's favour will find its way into the new association contract. The Dutch and West Germans will continue to argue at the end-June meeting that the margin of preference should be reduced to the very minimum. The E.C.M. Commission and the French, who are the associates' advocates in Brussels, have been obliged to concede that commercial preference should be replaced by extra financial aid, and the coming conference is likely to centre on the amount of that aid, rather than on the principle of more-aid instead of favoured-trade. The Six are in agreement on the form their assistance to the African associates should take: industrial and social investments, technical help, and co-operation in marketing. They differ on the value of that aid: Holland suggests \$680 million over five years, West Germany and Benelux \$780 million, France \$890 million, and the E.C.M. Commission a generous \$1,000 million. This haggling would have been settled by now were it not that an irrelevant complication has arisen. Whatever the total sum, the Six make contributions in proportion to their means, as revealed by each member's economic progress. Now, it happens that since the last share-out of responsibilities was made, Italy has known faster growth than all

idea of special associate status for certain countries only, London has come around to the view that it would be advantageous to secure that status for such of her former African colonies as desire it (not all do). For roughly the reasons given above, the British Government now believes that the arrangement would not do much harm to outsiders, but that it could be useful to several African States that are not liable to attract much interest from the World Bank and the U.S.A. and are unwilling to seek Russian assistance. So Britain is known to favour the more generous sum of financial aid suggested by the E.C.M. Commission, while agreeing with the Dutch that frank commercial discrimination should be kept to a minimum. The question is to be finally settled before Britain is a member of the Common Market, so her influence is that of an outsider. At least it serves to neutralise the influence of another outsider, the United States, which has taken the extreme view that the Common Market has no moral right to grant any group of nations associate status.

The final shape of "associate status" will not be known until early next month, when it will be seen

MR. DESAI TRIMS HIS BUDGET

THE modifications in the Central Budget proposals which the Finance Minister, Mr. Morarji Desai, announced last week while moving the Finance Bill for 1962-63 in the Lok Sabha, have not come as a surprise. Mr. Desai had already indicated that he was likely to give only marginal concessions. The changes he has announced will involve a loss of revenue of only Rs. 77 lakhs in a year. But, as he has explained, the actual scope of the modifications amounts to more than this figure because the revenue from the measures proposed earlier had been under-estimated. There is, however, one statement in Mr. Desai's speech that is both grimly amusing and a warning to the tax-paying community. "It gives me great satisfaction," he said, "to find that the need for taxation of this order has been universally accepted. It shows the intense desire of the people to get on with the planned development of the country and their determination not to mind unavoidable sacrifices called for in the process." Mr. Desai probably knows that it does nothing of the kind. The fact is that a small section of the community pays most of the taxes; it has been bullied into meek acceptance of any taxes that may be imposed and to look forward with resignation to a heavier burden each year. If the people at large live up to Mr. Desai's high opinion of them, the States will not hesitate to revise the archaic system of land taxation, under which 70 percent of the population contributes very little to the total tax and developmental effort. Finance Ministers in the States evidently do not share the Central Finance Minister's estimate of the willingness of the people to accept additional tax burdens.

In spite of the anomalies that were pointed out in the new direct taxes, Mr. Desai has chosen to ignore most of the representations. He has, however, allowed losses assessed up to the assessment year 1961-62 to be carried forward for eight years, since they had acquired this right. Such losses will be allowed to be carried forward for the remaining period as losses on short-term assets or long-term assets, as the case may be. Mr. Desai has also decided to permit future losses on long-term capital assets to be carried forward—but only for four years. Certain amendments are proposed in relation to the income tax so as to clarify various provisions. According to one of them, the share of a partner in the tax paid by a registered firm need not necessarily be regarded as unearned income. Another amendment makes it clear that the whole of a business loss will be carried forward for being set off against the business profits of subsequent years, where the assessee has no income under any other head in the year in which the loss is incurred. These changes are not expected to affect the receipts one way or the other.

The principal concessions Mr. Desai has announced relate to the new excise levies. The Finance Minister has explained that the estimate of the additional revenue from the new duties on cotton textiles had to be based on statistics available with the Government, since it is not possible to hold open enquiries on such matters at the

whether the 16 African States accept the bargain proposed by the Europeans. When the terms of associations are set out, black on white, it is hoped that the bogey of "discrimination in favour of Africa" will turn out to be very much over-rated. To the extent that the Africans appear to have made a good deal, one will have to recall that they have done nothing but secure compensation for the substantial benefits their exports enjoyed when they were French colonies: totally protected markets in France, guaranteed prices, long-term contracts, stabilisation funds, etcetera. Because Indo-French trade was small, Indian exporters did not at that time worry about being handicapped by the internal preferences of the franc zone. But they will feel more handicapped when the Africans exchange the commercial benefits in France for trade advantages, albeit limited, in the whole of the E.C.M. area. India's concern is to secure something comparable for herself in such export lines as textiles—that is, to ensure that if and when she loses favoured access to the British market, she obtains a countervailing advantage in western Europe as a whole.

time of framing the Budget. He has, in effect, conceded that the yield from the new duties was under-estimated in the Budget, although not to the extent claimed by the trade. The rate for mercerised and water-proofed cloth has been reduced from the proposed 25nP a square metre to 10nP for coarse and medium B categories and to 15nP for others. Handloom and powerloom fabrics processed by units not in any way connected with a spinning or weaving mill, will be taxed at four-fifths the standard rates. All such independent units have also been given the benefit of exemption for the first 20,000 square metres of cloth bleached, dyed or printed by them in any month. Cloth certified to be genuine *khadi* by the All-India Khadi and Village Industries Commission will be exempted from the processing duty even where such processing is done by power. To afford relief to the handloom sector, the Finance Minister has decided to exempt all single cotton yarn, whether bleached or grey, as well as unprocessed (gray) folded cotton yarn, if issued in hanks, up to 40 counts. Since the major portion of the yarn used by handlooms is below 40 counts, this should give them substantial relief. Mr. Desai has also decided to permit powerloom factories with 50 to 300 looms to pay duty at half the standard rates up to 28th February, 1963, and at three-fourths the standard rates up to 29th February, 1964. The full rates will become applicable only thereafter giving them some time to get adjusted to the new situa-

tion. Corresponding reliefs for smaller powerloom units have also been given. In spite of the concessions, due to the recent reappraisal of the quantity of cloth that is mercerised, it is thought that the revenue of Rs. 12.10 crores, estimated at the time of presenting the Budget, will be realised.

On considerations similar to those applicable to cotton textiles, woollen fabrics produced on handlooms or powerlooms will be charged only two-thirds of the standard rates of duty. The duty on indigenous newsprint, which is inferior in quality and higher in price than the imported variety, has been reduced from 22nP a kilogram to 5nP a kilogram. As if to compensate for this minor concession, Mr. Desai has decided to levy a countervailing import duty on foreign newsprint, leaving the newspaper industry probably no better off. The Finance Bill has reduced the duty on patent and proprietary medicines from 10 percent to 7½ percent. Mr. Desai has further reduced the levy to 2½ percent on certain drugs like penicillin, streptomycin, quinine, insulin, etcetera, which are commonly used as basic remedies for the prolonged treatment of endemic diseases. The excise duties proposed on certain acids and gases have an indirect impact on the cost of production of some chemical fertilisers. The Finance Minister has, therefore, decided to impose a nominal duty of Rs. 25 a tonne on ammonia and carbon dioxide used in the manufacture of fertilisers. Coal tar has also been totally exempted from the excise duty. The rate on telecommunication cables and winding wires has been cut from 15 percent to 5 percent. It should be mentioned that the Government is perhaps the biggest consumer of these items. Some reliefs to small-scale producers of acids, plywoods and re-rolled steel products have also been given.

In addition to the specific tax concessions announced, the Finance Minister has said that steps are being taken to simplify procedures, particularly relating to ad *valorem* assessments. This is sought to be achieved either by fixing specific rates or the tariff values of the taxed items. The net effect of the concessions in excise duties, it is estimated, will be a loss of revenue of Rs. 1.16 crores in a full year. After taking into account changes in the direct taxes and the levy of the countervailing duty on imported newsprint, the net loss in revenue will be about Rs. 77 lakhs. However, it is a good sign that the Finance Minister has shown his willingness to examine representations, at least about the indirect levies. One can be pardoned for the feeling that, were Mr. Desai's loyalty to the Congress goal of socialism not questioned by the more extremist members of his Party, he might have shown some willingness to examine the representations on the proposed direct taxes with fewer doctrinaire inhibitions.

PROGRESS OF GENERAL INSURANCE

A STUDY of the business and trading results of general insurers in India during 1960 has just been published in the *Indian Insurance Year Book 1961*. It reveals no major departure from the experience of the previous few years. Nor is there any noticeable change in the nature of the business written in and outside India. The results thus throw an interesting sidelight on the pattern of economic growth in this country since the economic climate is reflected, even though inadequately, in the business written by general insurance companies. The gross premium written direct in India registered a significant rise from a little over Rs. 33 crores in 1959 to over Rs. 38 crores in 1960. In 1959, there was a rise of about Rs. 4 crores over 1958. The rising trend is likely to be maintained, and by the end of 1962, the gross figure may near the Rs. 50-crore mark. Even after allowing for the inflation that has reduced the purchasing power of the rupee, all-round economic progress is indicated by these figures. According to the Controller of Insurance, the index of industrial production rose by 18.4 points in 1960, compared with an increase of 12.2 points in 1959 and of 2.4 points in 1958. The index of general insurance business registered a rise of 11.8 points in 1960, against a rise of 11.1 points in 1959 and of 6.4 points in 1958. Thus, the index number of general insurance business in India stood at 146.8 in 1958, as against the

index number of industrial production of 139.7 in that year; the figures rose to 169.7 and 170.3, respectively, in 1960.

The proportion of fire insurance business in the total gross premium written direct in India by Indian insurers has fallen from 44 percent in 1955 to 34 percent in 1960, while that of non-Indian insurers was 47 percent in both years. In 1959, it was 38 percent for Indian insurers and 48 percent for non-Indian insurers. The proportion of miscellaneous insurance business done by Indian insurers has gone up from 32 percent in 1955 to 45 percent in 1960, as against 24 percent and 28 percent, respectively, for non-Indian insurers. The proportion of marine insurance business of Indian insurers has fallen slightly from 24 percent in 1955 to 21 percent in 1960, while for non-Indian insurers the proportion was 29 percent in 1955 and 25 percent in 1960. From this it is clear that the off-take is remarkably high for Indian insurers in miscellaneous insurance business. Non-Indian insurers, on the other hand, have equally remarkably maintained a steady lead in the proportion of fire insurance business, which is the only profitable class of business in India. Of the gross premium written direct outside India by Indian insurers the proportion of fire business has decreased from 38 percent in 1955 to 27 percent in 1960. The propor-

tion of marine insurance business has dropped from 33 percent to 23 percent in the same period, while that of miscellaneous insurance business has gone up from 32 percent to 50 percent. It should be remembered that the total gross premium written direct inside and outside India by Indian insurers is about Rs. 36 crores, of which over Rs. 16 crores constitutes miscellaneous business.

The wisdom of having an inordinately high proportion of miscellaneous insurance business in a portfolio of ever-expanding business but with a dwindling proportion of fire insurance, has been debated. There has been remarkable expansion in the number of public and private carrier vehicles operating in India in recent years. The insurance of this class of business is of dubious value since the claims ratio is notoriously high. The search for business has led Indian insurers into the uncharted fields of credit and guarantee insurance. In foreign business, since Indian investments in industries overseas are insignificant, Indian insurers are at a disadvantage and, therefore, their foreign portfolio is composed, to a large extent, of "leftovers". The decrease in the proportion of fire insurance in Indian insurers' business does not mean that the amount of fire business has fallen. The gross fire premium written direct in India by Indian insurers has increased steadily between 1955 and 1960. Their share in fire business outside India fell in 1959 but it has gone up again in 1960, and is slightly over that of 1955. The growth, however, has been slow.

The net premium income of Indian insurers has also shown a steady rise over the years. From Rs. 17 crores in 1955, it has increased to Rs. 33 crores in 1960. This is a remarkable achievement, and the fact that Indian insurers have a net premium income of Rs. 33 crores, as against a little over Rs. 27 crores in gross premium written direct in India and over Rs. 8 crores written direct outside India, shows that insurance is not likely to be an item of invisible import. Although no definite opinion can be pronounced without examining the detailed revenue account, the trend is encouraging. The proportion of the net premium income spent to meet claims during 1960 was 40 percent for Indian insurers and 17 percent for non-Indian insurers in fire insurance business. In marine business, the percentages were 69.7 and 47.9 for Indian and non-Indian insurers, respectively. In miscellaneous business, the ratios were 54 percent and 47.3 percent. The expenses of management for Indian insurers were 43.4 percent, 26.5 percent and 38.3 percent in fire, marine and miscellaneous insurance, respectively, as against 52.5 percent, 37.8 percent and 46.5 percent for non-Indian insurers. The balance of results was 12.9 percent, minus 0.4 percent and minus 2.2 percent in fire, marine and miscellaneous business for Indian insurers, as against 27 percent, 6.3 percent and 0.1 percent, respectively, for non-Indian insurers.

During the period 1955 to 1960, the claims experience of non-Indian insurers has been better than that of Indian insurers in all classes of general insurance business. Non-Indian insurers paid a higher percentage as commission in all classes of general insurance business during that period except for fire insurance in 1958 and 1959. The expenses of management of non-Indian insurers also accounted for higher percentages of the gross premium written direct in India than those for Indian insurers during that period in all classes of general insurance business, except in 1957 for miscellaneous insurance business. Yet non-Indian insurers operated on a more profitable basis than Indian insurers during these years. The unhappy position of Indian insurers, despite the smaller commission charged and the lower expenses of management, is attributable to the poor underwriting results in terms of claims, which are much higher than those for non-Indian insurers. More business is not enough. In general insurance, judicious rejection of risks is as important as judicious acceptance.

Great care has been taken by the Controller of Insurance in analysing compliance with as well as contraventions of the regulations relating to limitation of expenses. In the aggregate, the experience of all groups of insurers over the period from 1958 to 1960 shows that, whereas the actual expenses exceeded the basic limits in both 1958

and 1959, there was a marginal saving in 1960. This general trend is on the whole satisfactory, but since linking of expenses with gross direct premium written in India has been repeatedly shown to be of doubtful value, no undue importance need be attached either to compliance in 1960 or to contraventions in 1958 and 1959. The

total assets of the general insurance business of Indian insurers amounted to Rs. 64.04 lakhs on 31st December, 1960, as against Rs. 57.04 lakhs on 31st December, 1959, and Rs. 51.93 lakhs on 31st December, 1958. Ordinary shares of Indian companies claimed 19.1 percent of the total investments.

Current News and Comment

Jardine Henderson Tea Results

The results of the Jardine Henderson group of tea companies during the year ended December 1961 are available. The Rydak Tea Syndicate Ltd (a Dooars garden) has cut the taxable ordinary dividend from 25 percent to 20 percent, which absorbs Rs. 2.99 lakhs. The yield works out to 7.1 percent at the present price of Rs. 28.12 a share of Rs. 10 each. The profit has fallen from Rs. 5.76 lakhs in 1959 to Rs. 4.76 lakhs, after transferring Rs. 2.68 lakhs (against Rs. 2.41 lakhs) to depreciation. Taxation absorbs Rs. 2.20 lakhs (against Rs. 1.85 lakhs), leaving a carry-forward of Rs. 69,439, against Rs. 14,335 brought in. The crop rose from 854,415 kilograms to 921,964 kilograms. The fall in the profit is largely due to the decline in the average selling price. The 1962 crop is estimated at 1 million kilograms.

The profit of the Baradighi Tea Co. Ltd (another Dooars estate) is lower at Rs. 6.62 lakhs in 1961, compared with Rs. 9.71 lakhs in 1960, after providing Rs. 1.55 lakhs (against Rs. 1.61 lakhs) for depreciation. The taxable ordinary dividend has been reduced from 30 percent to 25 percent, which absorbs Rs. 3 lakhs. The yield is 9.5 percent at the present price of Rs. 26.19 a share of Rs. 10 each. A sum of Rs. 2.81 lakhs is transferred to taxation (against Rs. 3.98 lakhs), and general reserve receives Rs. 1 lakh (against Rs. 2 lakhs). The carry-forward is Rs. 46,983, against Rs. 75,258 brought in. The crop was 724,364 kilograms, against 721,568 kilograms. The average selling price declined from Rs. 5.20 a kilogram to Rs. 4.69 a kilogram. The 1962 crop is estimated at 682,400 kilograms.

The Central Cachar Tea Co. Ltd has raised the taxable ordinary dividend from 5 percent to 7.5 percent, which absorbs Rs. 82,500. This offers a yield of 9.7 percent at the present price of Rs. 77.50 a share of Rs. 100 each. The profit has amounted to Rs. 2.39 lakhs, compared with Rs. 1.42 lakhs, after providing Rs. 82,223 (against Rs. 82,248) for depreciation. Taxation is allocated Rs. 1.32 lakhs (against Rs. 52,000), and general reserve Rs. 50,000 (the same). The carry-forward is Rs. 36,282.

against Rs. 63,690 brought in. The crop rose from 380,752 kilograms to 545,645 kilograms. The 1962 crop is estimated at 541,552 kilograms.

The Dessai and Parbutia Tea Co. Ltd (an Assam garden) has paid a taxable ordinary dividend of 10 percent, after an interval of four years. This absorbs Rs. 84,000 and works out to a yield of 6.6 percent at the present price of Rs. 151 a share of Rs. 100 each. There is a profit of Rs. 5.42 lakhs, after providing Rs. 78,710 (against Rs. 81,340) for depreciation. In 1960, the Company incurred a loss of Rs. 1.96 lakhs. The carry-forward is Rs. 18,168, against a debit balance of Rs. 4.39 lakhs brought in. The crop increased from 376,082 kilograms to 543,624 kilograms and the average selling price was Rs. 5.68, against Rs. 5.70 a kilogram. Estimates for 1962 have been made for a crop of 515,318 kilograms.

Orissa Cement Pays the Same

Orissa Cement Ltd has repeated the taxable ordinary dividend at 15 percent for 1961, but its net value to shareholders will be higher because 81.6 percent of the distribution is being paid out of the profits which are exempt from income tax. Presiding at the annual general meeting of the Company held in Rajgangpur, Orissa, last Monday, Mr. J. Dalmia says that the current ex-works price of cement which has been fixed by the Government since 1st November, 1961, is subject to adjustments due to changes in production costs resulting from official action or rises in electricity or fuel charges. (A fuller version of the speech is printed on a later page in this issue of *Capital*.) The Company has, therefore, asked the Government for an increase in its retention price on the basis of this escalator clause. As the Government is usually reluctant to raise the price with retrospective effect, the claim for a rise in the price should be settled promptly if the firm concerned is to be compensated adequately.

Discussing the prospects for the refractory industry, he takes a cautious view about the demand

for refractories as the steel-making capacity in the country has fallen behind targets. During the next few years, the requirements will be met fully by the existing installed capacity. In fact, the production of refractories may show a surplus. Mr. Dalmia says that refractory consumption by the steel producers has declined due to the rapid changes and improvements in furnace-operating techniques. With the growing preference for the L.D. process of steel-making, the demand for refractories is likely to fall. An important factor hampering the working of the refractory industry is the reluctance of many States to permit the despatch of their mineral deposits to areas outside their boundaries. A composite refractory plant located in one State must have free access to raw materials from all sources if it is to operate efficiently.

Alexandra Jute Cuts Dividend

Alexandra Jute Mills Ltd has made a profit of Rs. 2.58 lakhs during the year ended December 1961, after providing Rs. 2.99 lakhs (against Rs. 3.25 lakhs) for depreciation. The 1960 profit was Rs. 12.79 lakhs. The taxable ordinary dividend has been cut from 44 percent to 15 percent, which absorbs Rs. 90,000. The yield is 4.9 percent at the present price of Rs. 305 a share of Rs. 100 each. Taxation absorbs Rs. 1.48 lakhs (against Rs. 6 lakhs) and development rebate reserve Rs. 19,900 (against Rs. 13,600), leaving a carry-forward of Rs. 1.40 lakhs, against Rs. 2.22 lakhs brought in.

Less from Katras Jherriah Coal

Raisings of the Katras Jherriah Coal Co. Ltd totalled 324,426 tons during the year ended January 1962, compared with 350,536 tons in the previous year. Despatches were 337,490 tons, against 369,222 tons. The fall in output is due to mining difficulties at the Laikidih deep colliery. The position has improved since then and the colliery is now producing very high-grade coking coal suitable for the steel industry. At the Seepore colliery, raisings have been obtained from the Koithi seam incline. This open-cost working should help to maintain output for some years to come. The profit has fallen from Rs. 12.01 lakhs in 1960-61 to Rs. 8.30 lakhs in 1961-62, after providing Rs. 1.45 lakhs (against Rs. 1.39 lakhs) for depreciation. The taxable ordinary dividend has been cut from 40 percent to 25 percent. It is covered more than twice, and offers a yield of 5.1 percent at the present price of Rs. 48.75 a share of Rs. 10 each. Taxation absorbs Rs. 4.25 lakhs (against Rs. 6.01 lakhs), development rebate reserve Rs. 27,447 (against Rs. 57,118) and general reserve Rs. 70,000. The carry-forward is Rs. 1.12 lakhs, against Rs. 1.39 lakhs brought in.

Ceat Tyres May Pay Next Year

The chairman of Ceat Tyres of India Ltd, Mr. A. D. Shroff, told shareholders at the Company's recent annual meeting that they could look forward to a maiden dividend for 1962, if no adverse developments occurred in the meanwhile. The chairman had to qualify his statement because of the worsening foreign exchange situation. With the Company's production dependent on the import of certain raw materials, the foreign exchange position is of great significance to the Company. Important raw materials required by the tyre industry, such as synthetic rubber (S.B.R. type), carbon black, rubber chemicals, reclaimed rubber, rayon and rayon chord and valves for inner tubes, will, however, be shortly manufactured indigenously, although they will not be cheaper than imported products. Mr. Shroff said that the Company's expansion programme, aimed at raising the production from 350 metric tons to 1,000 metric tons a month, was progressing satisfactorily. Buildings are ready and the machinery has started arriving. The Company will be able to produce 500 tonnes a month by October and the 1,000-tonne capacity is likely to be reached by early 1963. The directors expect the annual turnover to rise to around Rs. 10 crores, when the Company is able to produce 1,000 tonnes

CAPITAL, 21st June, 1962.

an all-time high of Rs. 61 in April, have come down to Rs. 55.50 in sympathy with the general recession in equity values. Yet in spite of the recent setback, Gwalior Rayons are still quoted around the highest level recorded in 1961. This reflects investors' confidence in the Company's future, and this confidence is based on the impressive performance year after year. Although the dividend for the year ended March 1962, has again been stepped up by a mere 25nP from Rs. 2.25 to Rs. 2.50 a share, subject to tax, the preliminary report released along with the dividend announcement shows that the Company has done exceedingly well, with both sales and gross profit setting new records. Sales are up by about 14 percent from Rs. 10.59 crores to Rs. 12.06 crores, and the gross profit has increased by 15 percent from Rs. 3.79 crores to Rs. 4.36 crores. The ratio of gross profit to sales is slightly better at 36.1 percent, compared with 35.8 percent in 1960-61. After providing Rs. 43.60 lakhs (against Rs. 41.33 lakhs) for depreciation, Rs. 9.56 lakhs (against Rs. 7.33 lakhs) for development rebate and Rs. 15.15 lakhs (against nil) for taxation, the net profit amounts to Rs. 3.50 crores, against Rs. 3.11 crores in the previous year. With Rs. 42.93 lakhs brought in, the disposable surplus amounts to Rs. 3.93 crores. From this the directors have set aside Rs. 2.70 crores (against Rs. 2.05 crores) for general reserve and Rs. 25 lakhs (against nil) for dividend equalisation reserve. The provision for redemption reserve has been maintained at Rs. 15 lakhs. The proposed ordinary dividend absorbs Rs. 62.50 lakhs, against Rs. 56.25 lakhs, and the preference dividend accounts for another Rs. 12.92 lakhs. After making all these appropriations, there remains a balance of Rs. 7.40 lakhs to be carried forward. With the Company's dispute over its liability for income tax and super tax still not settled, the directors have made only a small provision for tax from the year's profit, but have carried a sizable amount to the general reserve. The directors report that the construction and erection work of the wood pulp plant in Birlakutam near Kozhikode is nearing completion. The trial runs, it is expected, will start in the last quarter of this year and regular production a little later. The Company's foreign collaboration arrangements for the manufacture of rayon machinery has been approved by the Government, and the application for a licence to import the machinery and equipment needed is being considered by the authorities.

Andhra Cement Repeats

Andhra Cement Co. Ltd has maintained the dividend at 10 percent for the year ended December 1961, although its profit is lower compared with that of the previous year. The net profit amounts to Rs. 10.82 lakhs, after charging Rs. 9.85 lakhs for depreciation, compared with the previous year's net profit of Rs. 11.23 lakhs, after charging Rs. 10.86 lakhs for depreciation. Adding Rs. 13,916 brought forward from the previous year and Rs. 73,704 transferred from the rehabilitation fund and also Rs. 4.11 lakhs being the income tax refund, the total available surplus is Rs. 15.81 lakhs. Out of this, taxation provision gets Rs. 3.5 lakhs (against Rs. 2.3 lakhs) and development rebate reserve Rs. 75,000 (against Rs. 1.2 lakhs). The dividend of 6 percent on tax-free preference shares (7.8 percent gross) amounts to Rs. 19,407. The proposed ordinary dividend of 10 percent will absorb Rs. 7.1 lakhs. A sum of Rs. 75,000 is transferred to deferred taxation reserve, while Rs. 2.45 lakhs is adjusted towards expenditure not relating to the year. After making these appropriations, there remains Rs. 2,498 to be carried forward.

The directors refer to some difficulties which stood in the way of more profitable working. Production during the year suffered due to various factors, the main bottleneck being the continued coal shortage. Facilities for augmenting supply by the sea-cum-rail route were not extended to the Company. The directors add that the Tariff Commission examined Andhra Cement's cost structure for fixing the price. There were also labour troubles which were finally settled in August 1961. They have drawn the attention of shareholders to the rising cost of raw materials and other items of manufacture. In spite of the Tariff Commission's recommendation to give retrospective effect to the revised price, the latter was brought into force by the Government only from

CAPITAL, 21st June, 1962.

1st November, 1961. This is said to have adversely affected the working results. Andhra Cement has now made satisfactory arrangements for the supply of other raw materials, and if coal is made available adequately, it will be possible to achieve the rated capacity.

Bonus from General Industrial

The General Industrial Society Ltd, popularly known as the Gondalpara Jute Mill, has decided to issue bonus shares by capitalising reserves in the proportion of one new share for each one held and to issue rights ordinary shares at a premium of Rs. 3.50 a share in the proportion of two new shares for each one held. It has also decided to issue 12,500 cumulative redeemable preference shares of Rs. 100 each. The proceeds of the issues will be used to finance various expansion schemes. The Bharat General Textile Industries Private Ltd, with 12,064 cotton spinning spindles, was acquired by General Industrial Society and an industrial licence has been obtained to install a further 6,000 spindles. The renovation, modernisation and expansion of the unit has been undertaken and the factory, it is hoped, will show satisfactory results in the near future.

The profit of General Industrial Society has declined from Rs. 7.84 lakhs in 1960 to Rs. 6.51 lakhs during the year ended December 1961, after increasing depreciation from Rs. 5.28 lakhs to Rs. 6.01 lakhs. The taxable ordinary dividend has been cut from 40 percent to 10 percent. It is covered more than four times and offers a yield of 1.8 percent at the present price of Rs. 55.12 a share. Taxation absorbs Rs. 2.5 lakhs (against Rs. 3.73 lakhs) and development rebate reserve Rs. 1.2 lakhs (against Rs. 17,585). The carry-forward is Rs. 1.88 lakhs, against Rs. 14,067 brought in. The working of the jute mills was affected by the raw jute shortage, but the directors hope that the working will improve during the current year due to the abundant supply of fibre. The Company has installed 15 broad-looms which have started production. The cast iron foundry could not work up to its rated capacity due to the raw material shortage.

Indian Dyestuff Pays Slightly More

The directors of Indian Dyestuff Industries have stepped up the dividend for the year ended March 1962 from Rs. 6 to Rs. 7 a share (Rs. 100-paid), subject to tax. The net dividend is likely to be a little higher than Rs. 4.90 a share because a sum of Rs. 5.87 lakhs has been withdrawn from the tax-exempt dividend reserve. The proposed increase of only Re. 1 a share looks small when there has been a 29 percent increase in the gross profit. The increased dividend is covered nearly three times. The preliminary figures about the Company's working results during 1961-62 show that the gross profit has gone up by Rs. 17.66 lakhs from Rs. 60.76 lakhs to Rs. 78.52 lakhs. Sales figures have not been released, but enquiries show that they too have increased by about 14 percent from the previous year's figure of Rs. 1.88 crores. After providing Rs. 4.91 lakhs (against Rs. 3.31 lakhs) for depreciation and Rs. 33.70 lakhs (against Rs. 24 lakhs) for taxation, the net profit amounts to Rs. 32.57 lakhs, against Rs. 27.84 lakhs in 1960-61, which has been supplemented by a transfer of Rs. 5.87 lakhs from the tax-exempt dividend reserve. The disposable surplus, therefore, comes to Rs. 38.44 lakhs. Allocation to the general reserve has been raised from Rs. 12.30 lakhs to Rs. 25 lakhs, but no provision has been made for the tax-exempt dividend reserve, which received Rs. 3.40 lakhs in the previous year. The increased ordinary dividend absorbs Rs. 10.97 lakhs, against Rs. 8.99 lakhs, and the preference dividend accounts for another Rs. 2.42 lakhs, against Rs. 1.99 lakhs. The latter dividend for 1961-62 includes an additional payment of 50nP a share against the previous year's account. There was an addition of Rs. 16.23 lakhs to the fixed assets during the year, raising the total to Rs. 60.07 lakhs. The depreciation provided so far amounts to Rs. 20.56 lakhs, and the net value of the assets to Rs. 39.52 lakhs. The Rs. 100-paid share of Indian Dyestuff has come down from Rs. 578.75 to Rs. 488.75 over the past few weeks. Even at the reduced price, the share

offers a very poor gross yield of only about 1.4 percent.

Share Offer by Panyam Cements

Panyam Cements and Mineral Industries Ltd is offering to the public 25,000 equity shares and 10,385 9.3 percent (taxable) redeemable cumulative preference shares, both of Rs. 100 each. The preference shares are redeemable at the option of the Company and on three months' notice after 10 years, but in any event not later than 12 years from the date of allotment. Additional funds are needed to finance the Company's expansion programme, which, apart from the installation of an extra plant with a daily capacity of 300 to 330 tonnes of cement, will cover semi-mechanisation of limestone quarries with the crushing plant located at the loading station itself, and the installation of an overhead travelling crane in the storage yard of the factory. The new plant, which will raise the factory's total production capacity to 500 tonnes a day, it is expected, will go into commercial production in the second quarter of 1963. The expansion programme, it is estimated, will cost nearly Rs. 1.20 crores, of which Rs. 97 lakhs is likely to be spent on plant and machinery.

Atlas Cycle Maintains Dividend

Atlas Cycle Industries Ltd reports satisfactory results for the year ended December 1961. Production of bicycles showed a small rise from 204,480 to 206,139. Sales were up by nearly 9 percent from Rs. 2.77 crores to Rs. 3.02 crores. The gross profit recorded an increase of 5 percent from Rs. 18.08 lakhs to Rs. 18.98 lakhs. After providing Rs. 5.01 lakhs (against Rs. 5.21 lakhs) for depreciation and Rs. 8.25 lakhs (against Rs. 5 lakhs) for taxation, the net profit amounts to Rs. 5.73 lakhs, compared with Rs. 7.87 lakhs in 1960. The dividend has been maintained at 15 percent, but allocations to reserves have been reduced from Rs. 4.24 lakhs to Rs. 2.01 lakhs. The directors state in their report that the bicycles produced by the Company continue to be in good demand on account of their quality, finish and durability. Although there is a slump in the bicycle trade, and a large number of factories are reported to be in difficulty, the performance of Atlas Cycle Industries continues to be encouraging, with sales showing a steady improvement.

Ganges Rope Does Well

As Ganges Rope Co. Ltd has become a subsidiary of Inchcape and Co. Ltd, London, the financial year of the Company has had to be changed from 31st March to 31st December in order to facilitate the preparation of consolidated group accounts. The present results of Ganges Rope, therefore, cover the nine months ended December 1961. The business of the Company has expanded greatly, and profits have improved. A taxable ordinary dividend of Rs. 15 a share for nine months has been declared, which is equivalent to the 20 percent paid for the year ended December 1960. The dividend absorbs Rs. 2.10 lakhs. The trading profit has amounted to Rs. 5.99 lakhs, after providing Rs. 88,268 for depreciation. Taxation absorbs Rs. 2.60 lakhs, development rebate reserve Rs. 1.17 lakhs and general reserve Rs. 1 lakh. The carry-forward is Rs. 46,218.

Higher Profit for Elphinstone Mills

In his chairman's address at the annual general meeting of the Elphinstone Spinning and Weaving Mills Co. Ltd, held in Bombay last Monday, Mr. N. K. Jalan discusses the satisfactory results achieved by the Company during the year ended December 1961. (A fuller version of the speech is printed on a later page in this issue of *Capital*.) The trading profit has risen from Rs. 36.93 lakhs in 1960 to Rs. 48.78 lakhs in 1961. The taxable ordinary dividend has been raised from 18 percent to 22 percent. The expansion and modernisation programmes have made satisfactory progress. The Company has bought the block assets of the Moon Mills. The scheme for rehabilitating this unit

with the latest equipment has been submitted to the National Industrial Development Corporation in order to obtain a loan.

Mr. Jalan says that the leather cloth division has done very well, but there has been a setback in the production of this department during the current year due to the shortage of imported chemicals. The increased excise duty on leather cloth has also affected sales. Mr. Jalan stresses the importance of liberalising the export incentive scheme for promoting exports. Commenting on the growing shortage of raw cotton, he emphasises the need for increasing domestic production. As the yield of raw cotton is low, active steps should be taken to improve it by supplying better seeds and fertilisers to cultivators. Scientific methods of cultivation should also be encouraged. He opposes the move to raise the ceiling prices of cotton during the next season as that would disturb the existing price structure of cotton cloth and yarn.

Same from Walford Transport

Walford Transport Ltd has earned a profit of Rs. 5.25 lakhs during the year ended December 1961, compared with Rs. 5.1 lakhs in 1960. The taxable ordinary dividend has been maintained at 30 percent. This is covered nearly twice and offers a yield of 7.9 percent at the present price of Rs. 3.81 a share. Capital reserve is allocated Rs. 2.31 lakhs and development rebate reserve Rs. 5,034, leaving a carry-forward of Rs. 1.56 lakhs, against Rs. 1.61 lakhs brought in. The directors say that in spite of the shrinking profit margins, the results have been maintained due to a bigger turnover. The heavy workshop in Calcutta is being expanded to increase its capacity.

Prospects for Amar Dye-Chem

The statement of the chairman, Mr. A. K. Doshi, at the recent annual general meeting of Amar Dye-Chem Ltd that the Company is making a fresh application to the Controller of Capital Issues for increasing the capital by Rs. 90 lakhs in order to finance the expansion schemes, failed to enthuse the shareholders. But this is scarcely surprising. The dyestuff industry is passing through a difficult period due to excessive stocks of imported products and sluggishness of demand. The change in the import policy and the abolition of the tariff value on imports of amarthols and fast bases have affected the Company's sales. Mr. Doshi said that Amar Dye-Chem's sales during the first five months of the current year have been lower than in the corresponding period of last year. Besides, the production of T.P.M. dyes has been delayed on account of the difficulty in getting the import licences for certain equipment in time, and the Company is likely to start production of these only next year. The production of fast bases had to be curtailed on account of large-scale imports from rupee payment countries through the State Trading Corporation and also against export promotion schemes. The Company, it is said, is unable to produce and sell the Scarlet G and Red G.L. bases, the two new products added recently to its production programme, as the production cost is much higher than the landed price of the imported material which is available in plenty. It is not proposed to start the production of these two items until the imported stocks have been absorbed.

Referring to the question of production costs, Mr. Doshi said that the prices of indigenous products were higher as the raw materials were two or three times more expensive than in world markets. In addition, the industry has to bear a heavy excise burden. The Company's production costs are likely to rise further as a result of the increase in excise duty on acids and gases. But it has not raised its prices. On the contrary, the Company has had to cut the prices of a few products in order to meet competition and improve sales. It has opened a special export department and has obtained orders worth Rs. 1 lakh in the current year. But this will not yield any profit because the orders have been booked at lower prices. Mr. Doshi informed the shareholders that the earlier proposal for issuing fresh capital of Rs. 80 lakhs had to be dropped because of the

Government's insistence on a heavy premium. The decision to renew the application has been inspired by the Finance Minister's plea that industry should rely more on equity capital than on borrowings. The expansion programme the Company has on hand will be spread over a period of two to three years, and it is expected to involve a capital outlay of about Rs. 2 crores. The management proposes to undertake the manufacture of various intermediates which will make the Company independent of imports. The Rs. 100-paid share of Amar Dye-Chem had touched a high of Rs. 388.75 in February and is currently quoted around Rs. 307.50, which is only slightly above the year's low of Rs. 300.

Jagatjit Cotton Profit Up

Jagatjit Cotton Textile Mills Ltd shows excellent results for the year ended January 1962. Sales rose from Rs. 2.79 crores in 1960-61 to Rs. 3.78 crores in 1961-62. The profit has risen from Rs. 35.90 lakhs to Rs. 61.43 lakhs, after transferring Rs. 17.52 lakhs (against Rs. 15.78 lakhs) to depreciation. The dividend has been maintained at 15 percent, taxable. This is covered more than ten times and offers a yield of 5.5 percent at the present price of Rs. 27.50 a share. Taxation is allocated Rs. 30 lakhs (against Rs. 10.5 lakhs), development rebate reserve Rs. 1.9 lakhs (against Rs. 9.6 lakhs) and general reserve Rs. 22.5 lakhs (against Rs. 9 lakhs). The carry-forward is Rs. 62,549, against Rs. 75,191 brought in.

The impact of the increased excise duty on cloth and yarn, the directors think, will hamper diversification of production. The working of the cotton mills during the current year may not be as good as in 1961. Production costs have increased while cloth and yarn prices have been more or less steady. The price of cotton has risen due to the shortage of supplies. Steps have been taken to modernise the equipment. Jagatjit Cotton has been granted an industrial licence to install a further 10,000 spindles. The directors have finalised an agreement to buy Banaras Cotton and Silk Mills Ltd from the liquidators for Rs. 24 lakhs. They hope to take charge of the mills shortly. Land has been acquired to set up a modern saw ginning plant in Abohar.

Lansdowne Jute to Stop Manufacturing

The directors of Lansdowne Jute Co. Ltd have decided to stop manufacturing jute goods because they do not think that the Company will earn sufficient profits to be able to resume the payment of ordinary dividends. The Company had to pass the ordinary dividend during the past six years. The working has been seldom profitable since the partition in 1947. A net loss of more than Rs. 22.32 lakhs was incurred between 1st January and 30th September, 1961. In addition to the unsettled conditions in the industry itself, the unsatisfactory results are attributed to the delay in modernising the equipment due to lack of finance. Besides, heavy interest charges have had to be paid because of the shortage of internal resources. The Company had its share of labour disputes and unrest also.

In order to improve the Company's financial position, the directors propose to sell the loom-hours of Lansdowne Jute, hire out its machinery to other Companies under the Bird-Heilgers group, and dispose of the remaining machinery. The land and buildings of the Company may be profitably used by leasing them out on satisfactory terms. Some vacant land, suitable for industrial development, may be sold. The Company will, however, continue in business. The directors are, meanwhile, considering steps to reduce Lansdowne Jute's indebtedness as early as possible. In order to obtain the approval of shareholders to these proposals, a general meeting will be held on 14th July, 1962.

Simplex Mills Pays Again

The directors of Simplex Mills Ltd have recommended a dividend of 22 percent, that is, Rs. 11 a share (Rs. 50 paid), subject to tax, for

the year ended March 1962. The Company's shares are thus back again on the dividend list after a year's break. In 1960-61, the directors skipped the dividend in order to conserve resources for the Company's rehabilitation and modernisation programmes, but the shareholders were rewarded by a one-for-five bonus issue. The dividend proposed for 1961-62 is on the increased capital of Rs. 60.48 lakhs. The dividend last paid for 1959-60 was Rs. 7.50 a share, subject to tax, on a smaller capital. The Company's working results for 1961-62 show a distinct improvement over the previous year. The gross profit has recorded an impressive increase of about 61 percent from Rs. 34.42 lakhs to Rs. 55.43 lakhs, in spite of a slight setback in sales from Rs. 3.32 crores to Rs. 3.23 crores. After providing Rs. 16.14 lakhs (against Rs. 16.20 lakhs) for depreciation and Rs. 11.50 lakhs (against nil) for taxation, the net profit amounts to Rs. 27.79 lakhs, against Rs. 18.22 lakhs in the previous year. The provision for development rebate reserve has been stepped up from Rs. 2.80 lakhs to Rs. 13.90 lakhs. The proposed dividend will absorb Rs. 13.30 lakhs. A sum of Rs. 70,000 has been used for writing off

A SURVEY OF INDIAN INDUSTRIES

With the issue of *CAPITAL* dated 28th June, 1962, will be published a "Survey of Indian Industries," running to more than 90 pages. It will contain authoritative articles on the problems and prospects of many of India's leading industries such as aluminium, industrial machinery, shipping, petroleum and power. The article on the steel industry has been contributed by Sir Jehangir Ghandy. There will be surveys of such light industries as radios and lamps, matches, soap, yeast, salt, power alcohol and cigarettes. There will also be articles on alloy and tool steel, farm machinery, wool-combing, air-conditioners, cameras and packaging. The supplement will be supplied free to registered subscribers and will be available to others at Rs. 5 a copy (postage extra). Enquiries may be addressed to the Manager, *CAPITAL*, 5, Mission Row, Calcutta 1.

a part of the debenture issue expenses. Additions to plant, machinery and buildings were made during the year at a cost of Rs. 18.38 lakhs, and orders outstanding for machinery at the end of the year amounted to Rs. 61.73 lakhs. At its current quotation of Rs. 169 cum-dividend, the Company's share offers a tax-free yield of about 4.8 percent.

Good Results from New City

Shareholders of the New City of Bombay Manufacturing Co. Ltd, who have gone without a dividend for four years, may not have to wait much longer before their investment begins to bear fruit. The Company did well in 1961, and the directors' report holds out the promise of a still better performance in the current year. In the year ended December 1961, its sales of cloth, yarn and waste increased by 56 percent from Rs. 1.25 crores to Rs. 1.95 crores, and the gross profit shot up by as much as 96 percent from Rs. 5.62 lakhs to Rs. 11.01 lakhs. Apparently, the programme of renovation and rationalisation initiated by the former managing agents (W. H. Brady and Company) and accelerated by the present board of directors, has begun to yield results. In 1961, the Company installed machinery of the value of Rs. 25.44 lakhs, and a further sum of Rs. 30 lakhs is likely to be spent in the current year. Orders for new machinery worth Rs. 3.18 lakhs have already been placed. The directors expect the Company to show better results in the current year although they have expressed some anxiety about the continued shortage of cotton. With Rs. 2.45 lakhs brought forward from the previous year and adding Rs. 14.873 being excess provision made in previous years written

back, the disposable surplus amounts to Rs. 13.61 lakhs. The directors have set aside Rs. 5.09 lakhs for depreciation for 1961 and Rs. 3.11 lakhs for development rebate. The balance of Rs. 5.41 lakhs is not sufficient to meet the arrears of depreciation up to the end of 1960, which add up to Rs. 12.47 lakhs. The directors have, therefore, withdrawn Rs. 7.50 lakhs from the reserve for the rehabilitation of machinery and plant no longer required to clear arrears of depreciation. After making various appropriations, there remains a balance of Rs. 43,904 to be carried forward. The Rs. 100-paid share of New City is quoted around Rs. 180.

Periyar and Pareekanni Rubbers Loses

Periyar and Pareekanni Rubbers Ltd has reported a net loss of Rs. 1.02 lakhs for the year ended December 1961. The loss is attributed to the payment of gratuity and other benefits to workmen as well as compensation paid to workers of the Neriamangalam division of the Periyar estate due to its acquisition by the Government. The sum of Rs. 17,360 brought forward from the previous year has been used for the payment of dividend on preference shares for the year ended December 1961, absorbing Rs. 15,000. The balance of Rs. 2,360 is credited to the profit and loss account. A sum of Rs. 18,500 has been transferred to taxation reserve. General reserve of Rs. 10,000 has also been transferred to the profit and loss account. After these adjustments, the net loss stands at Rs. 1.08 lakhs, which is carried forward.

On account of certain good offers for the purchase of the Company's Pareekanni estate, the directors decided in June 1961 to sell that property in parts. Accordingly, an area of 732.14 acres—out of a total area of 844.10 acres—was sold for a total price of Rs. 11.03 lakhs. Furthermore, at the request of the Kerala Government, the Company gave it advance possession of 188.855 acres, comprising the Neriamangalam division, for the establishment of the phyto-chemical project under the public sector. The directors say that compensation for the area will be paid by the Government in due course. The remaining areas of the Pareekanni and Periyar estates and the whole of the Thuruthummal paddyfields are now owned by the Company. The total crop for the year amounted to 115,992 kilograms, against 165,310 kilograms in the previous year. The decline in the crop is attributed to the sale of the Pareekanni estate.

LAW IN BENGAL

IF any Public Corporation or Company had a monopoly for the supply of an article indispensable to the well-being of the public; if their published accounts showed that on an average of 5 years they made a profit of 30 percent on the supply of the article; and if it could be further shown that the quality of the article supplied was most inferior, and that the public after giving their orders had to wait for years before they got their goods; surely a case would be made out for Government interference and the withdrawal of the monopoly from the Corporation who had so grossly abused it. This at present is the state of things in the administration of the law in Bengal, we leave out the word "justice" as superfluous. The Government here have a monopoly of law and justice. That it is a very paying business goes without saying; in 1890 the receipts in Bengal were Rs. 1,40,65,500 and the expenses Rs. 93,52,522, leaving a profit on the year's transaction of Rs. 47,13,068 or 66 percent. Under these circumstances one would imagine that it would be the aim and object of Government to make the administration of law and justice as speedy as possible, and to give litigants the very best judges that money in reason could secure. But what do we find? The Courts of law choked with cases, the judges distinctly inferior, the delay intolerable, and the justice extremely doubtful. Surely it is time that the Government awakened from slumber and realised the state of affairs. The present position is very unjustifiable and scandalous. It amounts to a denial of justice. It denies honest men their dues. It encourages dishonesty and fraud.

A Ditcher's Diary

AS AT THE OPENING OF THE BELGRADE CONFERENCE OF neutrals, the Anti-Nuclear Arms Convention in New Delhi would have concluded its labours on Monday to the accompaniment of a fine nuclear blast if the projected test had not been postponed—because of the weather around Johnston Island. I do not know how much the convention cost the Gandhi Peace Foundation; if the cost of travel had to be paid for some of the foreign delegates, part of the expense may have been in foreign exchange. Now, I respect pacifists—without necessarily agreeing with them on all points. I would like to live in a World Without The Bomb, by which name, I read somewhere, there is to be another conference in Accra. But I just do not see what good these windy conferences do to man or beast. Personal appeals by the participants, to the nuclear Powers, would have achieved no more and no less. And the time chosen was perhaps the worst, from India's point of view. I am sure the rest of the world is just cussed in not seeing that India's domestic and foreign policies are purely non-violent, but only a few weeks ago Mr. Krishna Menon told the world that the Government of India was not wedded to non-violence. He added that, if it were, it would not have maintained its armed forces at such tremendous expense. Dr. Rajendra Prasad displayed his characteristic courage, and perhaps something besides, in recommending unilateral disarmament by India. There was nobody to remind him that, until only a few weeks ago, he was not only India's President but also, according to the Constitution, the Commander-in-Chief of India's armed forces. And while all this talk was going on in New Delhi, a British Secretary of State was having a hard time of it trying to persuade the Government of India not to buy those non-violent M.I.G.-21 fighters from the Soviet Union. It is this sort of obvious contradiction between preaching and practice that has earned India the accusation of hypocrisy; and I am unable to blame only India's critics. I think India is perfectly entitled to strengthen her defences to the best of her ability; to do otherwise would be suicidal folly. India is not entitled, at the same time, to moralise to the rest of the wicked world. The New Delhi convention did nothing for peace; it did distinct harm by exposing Indian missions abroad to a great deal of avoidable embarrassment.

THE UNSAVOURY CONTROVERSY BETWEEN MR. Humayun Kabir and Professor J.B.S. Haldane has not, in my view, done much credit to either. I

do nevertheless feel that Professor Haldane has so far had the better of the exchange; he might indeed have done scientists in this country a considerable service by pointing to the way they are apt to suffer through the insensibility of the bureaucracy. The pettiness of the points in dispute, and the falsehoods they seem to have inspired, is astonishing, considering the status of the personalities involved. I am prepared to concede that an equable temper may not be among Professor Haldane's better known qualities; and that the absence of chairs, or of tables, or of proper repairs to the building in which he wanted to organise his research, may have aroused an unnecessary excess of ire. There is still no answer to his testimony that, because of the lack of facilities, several months have been wasted, and the genetics and biometry unit he was supposed to organise shows little sign of coming into existence. In the circumstances, the Professor has done the right thing by resigning, although I am not optimistic enough to believe that the decision will lead to noticeable improvement in the methods, or manners, of the Ministry of Scientific Research and Cultural Affairs. The Government cannot have forgotten the stigma it suffered as a result of Dr. Joseph's suicide one and a half years ago. Dr. Joseph's drastic decision to die by his own hand was a direct consequence of the heartlessness of the bureaucracy; a string of enquiries and possible remedies were promised at the time, but I cannot see that there has been any radical change in the general state of affairs. Indian scientists who work abroad are sometimes told, implicitly, that they are lacking in patriotism in that they do not choose to serve their own country. Can their choice be very surprising when they know that they would have to spend their time here surrounded by red tape, or playing departmental politics—in fact, doing almost everything except furthering the cause of science? Professor Haldane enjoys the eminence to make his protests heard. Would lesser mortals have any alternative but to suffer in silence, as Dr. Joseph did?

THERE ARE FEW THINGS I DREAD MORE THAN THE passions of an anonymous mob out to watch a football game; and you may be sure that I shall not be a referee on the Calcutta Maidan even after the police and the clubs have restored order as they have promised to do. Not many go to the Maidan at this time of year to see two teams play a clean game; that's not exciting enough, and excitement is what most people are after. (More in

the manner of the spectators in ancient Rome than many think.) Their chief aim is to see their favourite side win; and if the referee is not obliging enough, so much the worse for him. Over the years I have watched how sport, football in particular, has derived inspiration from, and provided inspiration for, nationalism, then communalism and finally factionalism. When Mohun Bagan won the I.F.A. shield in 1911, it was a boost to Bengali nationalism; in some minds, the event ranks with Tagore's receipt of the Nobel Prize for literature two years later. In the late 'thirties came provincial autonomy; with it a predominantly Muslim Ministry in Bengal. Mohammedan Sporting was then in the ascendant—as was the Muslim League. The bonds between the two were closer than is now remembered. So much, then, for the health-giving aspect of sport. I have written here before of the earnest American students who come hither in increasing numbers to write their doctoral theses in what they call political science. Subject: the essence of Indian politics. And they meet presidents of district Congress committees and others. My practice has always been to advise them to go to the Maidan, to the nearest college union, to the "shadow" village panchayat which still rules life in India. Those who thought I was being frivolous about their earnest pursuit should see that the president of the West Bengal Congress is this year also the president of the Indian Football Association. This election merely made manifest a connection that had always been there, latent. And a study of the I.F.A. and other sports bodies will reveal the same intrigues, the same corruption, the same divisive forces and the same regional and other rivalries as are to be found, just under the surface, in Indian politics.

WHERE, I WONDER, COULD MR. NEHRU FIND evidence to support his statement that the Chinese seem more willing now to settle the Sino-Indian boundary dispute? The general impression the Government had given was that relations between the two countries had deteriorated seriously in recent months, one reason for the deterioration being that Peking's bellicosity and rudeness had shown no signs of decreasing. The Indian Army has perhaps established more outposts along the northern frontier than New Delhi cares to disclose, and Peking has reason to be worried if some of these, as reported, are behind the ones built by the Chinese on Indian territory. If, in consequence, India can claim that the military balance has moved in her favour, there is still nothing to show that strategic, or other, considerations are compelling the Chinese to become more conciliatory. On the contrary, as it now emerges, a mere seven days before Mr. Nehru made his statement, the External Affairs Ministry over which he presides sent a

strong note protesting against the Chinese continuing to encroach on Indian territory, and against their having established five new military bases over the past year or so. The evidence available earlier was no more comforting: the insolent response to India's offer concerning the use of the Aksai Chin road for civilian traffic; the flirtation with Pakistan about the delimitation of China's boundary with the part of Kashmir now under Pakistani occupation; and the deliberate harassment of the personnel of the Indian trade agencies in Tibet before their withdrawal. A ray of hope existed once that China's mood would soften under the impact of her serious economic difficulties, resulting from the failure of successive grain harvests. Instead, Peking has responded to the situation in a way not untypical of dictatorial régimes: by stepping up its propaganda against supposed enemies abroad, and thus diverting popular attention to the external "threats." I am not unaware of the difficulty which democratic statesmen like Mr. Nehru face in having to provide spontaneous answers to the large variety of questions they are asked at Press conferences: the answers, perhaps inevitably, tend sometimes to be an amalgam of hard facts and wishful thinking. It might, however, serve the country's interests better if Mr. Nehru could identify the one from the other more clearly for his audiences, especially when discussing Sino-Indian relations.

AS I PERFUNCTORILY FOLLOWED THE RECENT exchanges between Calcutta's medical students and Authority (in the shape of the Vice-Chancellor and the Chief Minister), it occurred to me that things might have been rather different if law students, instead of medical students, had been involved. Why, one of the thwarted examinees would have gone straight to the Supreme Court and obtained an injunction. The University would have been called upon to explain what right it had to prevent the complainant from sitting for his usual examination because of something some other students might or might not have done. I am sure there is an Article in the Constitution to protect innocent individual victims of collective punishment. With the courts out of the picture, students and Authority engaged themselves in an exercise in semantics; and if you now know the great difference between an apology and an expression of regret, you are a wiser man than I. The students behaved abominably in imprisoning (which expression needs no quotes, for that is precisely what the students did) the Vice-Chancellor; and it is a little glib to say that every time educational authorities have to call in the police, it is an admission of failure on the part of the former. I cannot help feeling, however, that student-teacher relations in Calcutta have now so deteriorated that, at some point, the authorities must be tough. They were on this occasion; and it is to be hoped that student leaders will next time think twice before trying to dictate their terms to the University. Dr. B. C. Roy is justly famed for "thinking big". What appears to have escaped his attention is that mere multiplication of universities is no answer to the country's educational malady. Indeed, to create too many universities is to spread the butter of quality too thinly on too many slices of bread. What with the linguistic uncertainty and student indiscipline, educational standards are going down daily at an alarmingly rapid rate; and nobody any longer takes a degree seriously—particularly after the third class has been abolished. Dr. Roy appears to have set his heart on mere numbers; and I do not envy the students of West Bengal. They work, or agitate, for a degree they know to be just about useless.

DITCHER

CAPITAL, 21st June, 1962.

THE ELPHINSTONE SPG. & WVG. MILLS CO. LTD.

MR. N. K. JALAN'S ADDRESS

Chairman's address by Mr. N. K. Jalan at the Annual General Meeting of the Elphinstone Spg. & Wvg. Mills Co. Ltd., on the 20th June, 1962.

It gives me great pleasure to welcome you all to this Forty-third Annual General Meeting of the Company, and with your permission I shall take the Report and Accounts for the year 1961 which have been in your hands for some time now, as read.

In the year under review, the gross trading profit was Rs. 48,78,086/- as against a profit of Rs. 36,92,770/- for the year ended 31st December, 1960. I hope you will consider the working results of the year to be very satisfactory especially in the face of a number of unfavourable circumstances in the working caused by the very difficult availability of cotton and the consequent high prices that had to be paid towards the end of the year, increased labour charges, and the increased cost of stores, etc.

Taxable dividend on Ordinary shares has been raised to 22% from 18% paid for 1960 and 14% for 1959, commensurate with the profits made in the respective years.

Modernisation

The management has continued its programme of modernisation of the mills during the year under review. The Spinning Section is being modernised with the installation of High Drafting Equipments of the latest type, conversion of existing Ring Frames to longer lift of spindles, application of Pneumafil and installation of Overhead Travelling Cleaners. For balancing purposes we had applied for 5200 spindles but I am sorry that we have been allotted only 3200 spindles though spindles are being given to new comers. Orders have been placed for 10 New Warp Ring Frames comprising 4480 spindles incorporating such of the latest improvements as the indigenous manufacturers could offer. 3 new High Speed Draw Frames are under installation at present and further 2 are due to be delivered shortly.

It may be mentioned in this connection that in other parts of the world modernisation is taking place with bigger lift frames of 10" to 12" and one process working. In Japan, the cotton mills have perfected the continuous process in which cotton is put in the Blow Room and yarn is automatically obtained at the delivery point. If we are to compete in the world markets, it is imperative that we should operate on the basis of the latest technological and scientific developments taking place throughout the world.

Since it seems difficult for the Indian Textile Industry to have complete modernisation and automation with the machinery presently available from indigenous sources, the Government should allow importation of latest machinery introduced in the world markets today at least until such time as our Indian Manufacturers are in a position to produce machineries of the latest designs, so that the cotton textile industry, which is one of the largest earners of foreign exchange for the country, may prevail in the overseas markets. As mentioned by me in last year's report, the Government should take more effective steps to arrange for manufacture within the country machineries of the latest type, design and modifications.

One set of Barber Colman Spooler and Warper has now been installed. 48 Automatic Crankless looms of latest type in replacement of plain ones and

one Mercerising Plant have been put in commission. The erection of a Screen Printing Plant is also nearing completion.

Order has been placed for one High Speed Sizing Machine and an Automatic Warp Tyeing Machine is due to be received. Application for import licence for a Singeing Machine has been made and putting up of a continuous Bleaching Plant is under consideration.

Expansion

The purchase of the Block of Moon Mills was completed during the year under review. The Scheme of rehabilitation of this unit with the latest

Mr. N. K. Jalan

types of spinning and other required machinery has been submitted to the National Industrial Development Corporation for the purpose of a loan from them. The application is now being processed.

Leather Cloth Division

The working of this Division remained satisfactory during the year under review and production and sales registered a 50% rise over the preceding year.

During the current year, however, there has been a set-back in the production and sales of this Division. On account of the further restrictive policy of the Government for issuing import licences for the required chemicals used in the production of leather cloth, the locally manufactured chemicals have to be purchased at prohibitive prices. Besides, the recent raising of excise levy on leather cloth has tremendously affected the offtake of this product and this levy, it is feared, will make the working of this Division even more difficult.

Exports

In spite of the best efforts your mills could export cloth only to the extent of about 14% of the production of the year against 27% in the preceding year.

India could export only about 575 million yards worth Rs. 46 crores of cloth in 1961 as compared to 692 million yards worth Rs. 54 crores in 1960 and 810 million yards valued at Rs. 53 crores in 1959.

The Cotton Textiles Consultative Board, at its meeting held on 15th May, 1962, recommended that the export obligation of every mill should be 12½% of its turnover of cloth and 3% of the turnover of yarn with reference to the balance sheet of any year which ends

1005

tivation of this type of cotton in the country.

Buffer Stock

Besides, the creation of a buffer stock of cotton as wisely advocated by the Union Minister Shri S. K. Patil is an obvious necessity. The operation of a buffer stock agency can go a long way in preventing prices from falling to levels which are unremunerative to the growers and at the same time provide a reserve stock to cushion the industry against any future shortage of cotton.

It is also necessary to think of possible substitutes for cotton as one more step towards easing the too frequent difficult cotton supply position. Import of staple fibre in larger quantities would be cheaper and more beneficial. Lately, consumer preference in India and other countries has turned in the direction of mixed blends in cloth to render the process of substitution even easier.

By way of an incentive to cultivators and as a partial acceptance of the plea of the trade, ceiling prices of cotton have been decided by the Government to be raised for the crop of the next season. It is doubtful whether this is a step in the right direction. It appears to be a serious error to disturb the stability of cotton prices by pushing them up. The increase in the prices will only accentuate the inflationary pressures in the country which are otherwise being brought under control after a long period of time and it will defeat the very purpose which the higher prices aim to achieve through its inevitable effect on cloth and yarn prices. Even the export of cloth and yarn may be affected further on account of the likely rise in prices of the finished products.

Tariff Commission

The question of cloth and yarn prices has been referred by the Government of India to the Tariff Commission. It is to be hoped that the Tariff Commission will make a pragmatic approach to the needs of the industry to make larger profits to enable it to plough back substantial portions thereof into its Scheme of rehabilitation, modernisation and expansion.

Again the depreciation allowances granted to the industry are inadequate taking into account the fact that these rates of the depreciation allowance were fixed a long time ago. The Tariff Commission, therefore, while examining the cost structure of the industry, should take into consideration this factor seriously and fix the rates of depreciation allowances in such a manner as may enable the industry to finance the scheme of rehabilitation and modernisation speedily.

The real solution for the problem, however, is for the Government to create suitable conditions for increasing production which unfortunately is on the decline during the past few months and promoting healthy competition.

Bonus

An ad-hoc provision has been made in the accounts of the year for Rs. 6 lacs towards bonus payable to workers and staff.

Bonus has been paid so far for the year up to 1958 and all negotiations for a settlement by the Association with the representative union of workers having failed, the cases for bonus for the years 1959 and 1960 are pending before the Industrial Court.

Government of India has appointed a Bonus Commission to study and make recommendation on the question of bonus as applicable to all industries. It is strongly urged, however, that bonus should be directly related to productivity.

Prospects for the Current and Future Years

In the past, from this very platform I have referred to the highly rigid cost structure of the cotton textile industry and the greatest disability of the inflated cost which this industry has been

suffering from for long. Although the prices of yarn and cloth have not been permitted to be revised upwards, prices payable for cotton have gone up considerably. Apart from the increase of Rs. 2/- in the basic wages of workers effected from January, 1962 in addition to the increase of Rs. 8/- given in the basic wages from January, 1960 in implementation of the recommendation of the Central Wage Board, the Dearness Allowance payable to the workers and staff has been continuously on the upward march. Merging of Dearness Allowance in wage, and consequential increase in Provident Fund Contribution has also increased the cost of production. The employer's contribution to the Employees' State Insurance Scheme has been doubled from 1% of the total wages to 2% with effect from April, 1962. The Power Supply Company has proposed to levy a surcharge of 10.5% on their existing tariffs with effect from July, 1962. Prices of mill stores have also gone up.

The capacity to plough back profits has been further affected by the reduction in the rate of Development Rebate from 25% to 20% with effect from 1st April, 1961 and the proposal in the Budget for increase in the Corporation tax by 5% from 45% to 50%.

The enhanced rates of excise levies on cloth and yarn in the Budget are calculated to act very much adversely on the industry.

It will, however, be appreciated that in spite of all these heavy odds confronting us, your Company has been continuously modernising and rehabilitating its machinery in the mills as well as in the Leather Cloth Division and I hope that these improvements will help the Company to partly set off the incidence of higher cost of production.

In conclusion, I have to sincerely thank my colleagues on the Board and to express my appreciation to the executives, staff and workers of the Company for the valued co-operation extended by them during the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Summary of the speech of the Chairman, Mr. J. Dalmia delivered at the Twelfth Annual General Meeting of the Company held at Rajgangpur (Orissa State) on 18th June, 1962.

Friends,

I extend to you all a very cordial welcome to Rajgangpur on the occasion of the 12th Annual General Meeting of your Company. The accounts for the year 1961 and the Report of your Directors have been circulated. Though your Directors have decided to maintain the dividend on equity shares at 15%, the net value of the dividend to the shareholders will be better, compared to the previous year as 81.60% of the dividend is being paid out of tax exempt profit.

The current Ex-works prices of cement fixed by Government effective 1st November, 1961 are subject to adjustments from time to time for variations in cost arising from any governmental action or increase in the charges for power or fuel. The representation made by your Company for grant of increase in its retention price on the basis of the escalator clause, has been pending with the Government, since over four months. If price increases are not given retrospective effect, as Government is generally reluctant to do, the industry is left to suffer during the intervening period. It is, therefore necessary, to make the escalator clause meaningful and of real benefit to the industry, that an efficient method is evolved so that requests for price increase based on the escalator clause get prompt consideration and expeditious disposal.

Demand for Refractories

I would now like to deal with some aspects of the refractory industry. Last year, I had referred to the uncertainty regarding the pattern and quantum of the future demand of refractories

ORISSA CEMENT LIMITED

CHAIRMAN, MR. J. DALMIA'S REVIEW

due to the uncertainty of the consumption rate of refractories per ton of steel produced. Recently the consumption rate of refractories for steel production is being placed at a much lower level than before. The forecast of the demand for refractories by the end of the Third Five Year Plan was based on the steel production capacity reaching a target of 10 million tons per annum by that time. This expansion is, however, well behind schedule and it is expected that the 10 million tons capacity may not be achieved until 1966-67. As a result of this, the operational requirements of refractories by the steel industry must be co-related to an annual steel production of only about six million tons until such time as this expansion is effected. As a result of the foregoing two factors, the forecast of the total annual demand of refractories has had to be altered radically. The estimates made by the refractories panel place the annual requirement of all kinds of refractories upto the period 1963-64 at 6.35 lakh tonnes and the anticipated annual production by then, at 10.51 lakh tonnes. In the case of both of fireclay and silica refractories the anticipated production far exceeds the estimated consumption by 1963-64.

Basic Refractories

With regard to basic refractories, it would be found that on the basis of 6 million tons annual production of steel the production of basic refractories will work out to approximately 27 lbs. per ton of steel, which is much on the high side. In this connection, mention might be made that due to the rapid changes and improvement in the furnace operating techniques, the consumption of basic refractories is going down at a very fast rate. Reports have been received from the U.S.A. about a consumption figure as low as 3 lbs. per ton of steel. However, this low figure is resulting from a considerable advance in operating conditions and technique of the running of the furnaces, and the same yardstick cannot be applied immediately to Indian conditions. The approximate figures for Indian conditions with the modern plants which we are having, would lie between 10 and 17 lbs. per ton of ingot steel. Further, it is to be noted that the demand for basic refractories might not go up proportionate to the expansion schemes for production of steel which we are likely to have in future because of the growing preference for the L.D. process for the manufacture of steel which requires very little quantity of basic refractories. This point has also to be borne in mind while assessing the future requirement of the Fourth Five Year Plan, due to further expansion of the steel industry. Under the above circumstances, it is felt that by the end of the Third Five Year Plan, with the completion of all the expansions of the basic refractories capacity which are in hand, the likely annual capacity would be in the neighbourhood of 1,50,000 tons against an estimated requirement of maximum 1,00,000 tons. There should, therefore, be no apprehension about any shortfall in the

Fresh Capacity

The present situation emphasizes the need of very careful planning in the creation of fresh capacity for refractories. As mentioned above, even in 1966-67 when the steel production would reach a level of 10 million tons per annum, the demand for refractories would be met fully by the indigenous capacity—rather, in the case of firebricks as well as basic bricks, there could still be substantial surplus capacity which could be utilized for the constructional requirements of the steel plants in the Fourth Five Year Plan. Further, due to gradual conversion of all open hearth furnaces into all basic furnaces there is likely to be sufficient surplus capacity in the silica bricks due to which a part of the capacity of silica bricks can very conveniently be switched on to the manufacture of basic bricks, thus increasing further the capacity for production of basic refractories.

State Restriction on Mining

I wish to refer to the tendency of certain States to refuse the mining of their deposits of minerals required by the refractory industry for use outside their boundaries. While the underlying principle of developing industries in their own territories is doubtless laudable, such parochial restrictions should not be imposed on an industry which is of national importance and which caters to the needs of such an all-India industry, as steel. While a composite refractory plant can be set up at only one site, chosen for various considerations, the raw materials for such a plant have to be obtained from all parts of India. It is hoped that the Government of India and the State Governments will take due regard of this and make it easier for this important industry to obtain its requirements of essential raw materials.

Industrial Peace

I am glad to report that industrial peace continues to be maintained at your Rajgangpur Works and the relations between the Management and the workers have been and remain cordial. I am, however, disappointed at the delay in the study of workloads which was decided upon by the Government of India while accepting the recommendations of the Central Wage Board for the Cement Industry. Out of 34 cement factories in the country, so far workload studies have been undertaken at only 3 plants. The study of workloads would provide valuable data for increasing productivity in the industry. Since the Wage increases recommended by the Cement Wage Board were not linked to an increase in labour productivity, the burden of the rise in wage bill had fallen on the consumers by way of higher cement price. This was done despite the policy of the Government of India that increase in wages should flow mainly from increased productivity. The study of workloads will help at least in future, to consider demands for wage revisions alongside possible increases in productivity. I would, therefore, urge that due importance should be given to the workload study programme and it should be activated and extended to all the plants without further delay.

Before I conclude, I wish to express our sincere appreciation of the hard work and co-operation of all the employees of your Company which have contributed in no small measure to the progress which your company has made.

N.B. This does not purport to be a report of the proceedings of the General Meeting.

THE CALCUTTA MONEY MARKET

FAIR DECREASE IN ADVANCES

Wednesday, 20th June.

THERE has been a fair decrease in advances in the Calcutta money market during the past week. Most of the fall is accounted for by the iron and steel and engineering industries. Cotton and sugar credit has also declined, but the funds given to the jute mills remain around the level of a week ago. Advances for the storage of foodgrains and seeds have increased slightly. In the inter-bank market, conditions have been easier and the call rate has fallen to 3 percent.

The exchange market has been more active. There has been a fair supply of gunny bills and, in addition, a small number of tea bills. Remittance has been on a moderate scale. The trend in sterling has been mixed.

Rs. 124.51 crores, of which advances to scheduled banks against usance bills amounted to Rs. 3.64 crores (Rs. 5.51 crores). Ways and means advances stood at Rs. 113.67 crores, against Rs. 111.32 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 8th June, 1962, shows a drop of Rs. 4.16 crores to Rs. 571.23 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 6.66 crores and Rs. 13 lakhs to Rs. 228.31 crores and Rs. 8.96 crores, respectively. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 48 lakhs to Rs. 294.99 crores. Cash and balances are, in consequence, shown at Rs. 25.03 crores, or Rs. 3.62 crores less.

BULLION WAS QUIET IN CALCUTTA LAST week, and support from upcountry was negligible. Silver was quoted at Rs. 252.25 today for ready delivery, and the rate for forward was Rs. 215.24. The London and New York prices were 84½d and 101.50 cents.

Gold was easier in sympathy with silver. The price was Rs. 148.

DURING THE WEEK ENDED 15TH JUNE, Government of India Treasury bills for Rs. 140.64.50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 19th June. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.370 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.510 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 25th June.

IT IS STATED THAT 91-DAY INTER-MEDIATE Treasury bills will be sold from 20th June to 23rd June at Rs. 99.391 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 13th June to 16th June amounted to Rs. 43 lakhs.

ACTIVE NOTES FELL BY Rs. 10.26 crores to Rs. 2,131.04 crores according to the statement of the Reserve Bank of India for the week ended 15th June, 1962, while the total note issue was Rs. 66 lakhs larger at Rs. 2,161.07 crores. Notes held in the Banking Department consequently rose by Rs. 10.92 crores to Rs. 30.03 crores. Deposits of the Government of India increased by Rs. 4.73 crores to Rs. 57.43 crores, but other Government accounts fell by Rs. 3.14 crores to Rs. 5.17 crores. Balances of commercial banks at Rs. 87.14 crores showed a rise of Rs. 2.08 crores. Balances held abroad fell by Rs. 93 lakhs to Rs. 9.02 Rs. 2.44 crores smaller at Rs. 171.92 crores. Other loans and advances declined from Rs. 129.66 crores to

Stocks and Shares

MARKET DEPRESSED: MODEST RECOVERY IN SPECULATIVE SHARES

Wednesday Evening.

EXCEPT for a modest recovery in selected speculative shares at the settlement on Wednesday, the Calcutta stock market has been depressed during the past week. The improvement in Indian Iron and Hindustan Motors has been partly due to technical considerations and, in the case of the latter, partly because of the higher taxable ordinary dividend of 12.5 percent declared by the Company for the year ended March 1962, against 12 percent for 1960-61. Hectic speculation has taken place in Indian Iron, and the price has fluctuated widely due to alternate bouts of buying and selling. The price dropped sharply early in the week due to substantial liquidation. Taking advantage of the general weakness, short-sellers have also been aggressive. Hence the recovery at the close is not surprising. Besides, sellers have become cautious because the ordinary dividend of the Company is likely to be announced soon—a notice for the closure of the books has already been given. Although the delay in the announcement of the new steel retention prices has almost exhausted the patience of operators, it cannot be ignored that the time of announcement has drawn nearer.

The stock market is not particularly inspired by the fact that the carry-forward charges have not been different from those of the past settlement, because it does not look as though the stock market will derive much benefit from the end of the busy season.

Business has been mainly confined to speculative shares. There was selling pressure in investment shares. Although their prices have fallen out of proportion to the actual sales, support has been conspicuously absent. Investors have been staying out, as the outlook is uncertain. It has to be seen to what extent the further import cuts will affect the working of existing industries. In any case, it is difficult to take a hopeful view of the prospects for the time being. The working of many industries is already hampered by the growing shortages of coal, raw materials, spare parts and transport. Industry may find it difficult to maintain profits during the current year.

The Life Insurance Corporation is believed to have bought a fair amount of ordinary shares, but further support from this institution is not likely, as the new Government loans will be floated soon. A section of the market has started debating whether the decline in prices has made current yields sufficiently attractive for fresh purchases. As the trend of interest rates is likely to be upwards, one has to assess the yield in a cautious manner. There is no doubt that during the past few months yield considerations were ignored due to the exaggerated estimate of growth prospects. In view of the growing shortage of foreign exchange, the growth prospects of many shares have to be scaled down. In the circumstances, the near-term trend can scarcely be upwards.

Indian Iron have closed around Rs. 25.65. Engineering shares have generally fallen. Texmaco have recovered somewhat at the close due to short-covering. Indian Standard Wagon have reacted on profit-taking. Jessop, Braithwaite and Bharat Ball Bearing are being neglected at current prices.

Coal shares have become sluggish because investors are disappointed

over the small increases in coal prices announced by the Government. As they are not enough even to cover the increased production costs, collieries will find it difficult to obtain finance for expansion. This apart, the fixing of ceiling prices for inferior coal may, it is feared, promote undesirable competition. Burrakur, Bengal, Equitable, Amalgamated and Western Bengal have declined. East Indian have been about steady due to the prospect of a rights issue. Katras Jherriah have been quoted lower due to the cut in the ordinary dividend.

Support for jute shares has declined and prices have been marked lower. The rise in the price of raw jute, combined with the fact that the prices of new crop are being quoted higher than those of the old crop, has induced caution. Howrah, Birla, Anglo-India, Burrakur and Cheviot have slipped back. Gondalpara have been maintained due to the issue of bonus and rights shares. Titagur, Victoria and Samnugger have been subdued due to the passing of the dividend.

Miscellaneous shares have declined all round, although the closing prices have been slightly above the lowest covered on paying a higher taxable ordinary dividend. Dunlop Rubber, Indian Aluminium and Orissa Cement have gained on replacement buying. Phillips Carbon Black have been steady on prospects of a rights issue as the Company has been permitted to issue new ordinary shares at a premium. Rallis have been weaker although the Company has decided to subdivide the Rs. 100 ordinary shares into shares of Rs. 10 each.

Paper shares have recovered somewhat at the close. Attention has been concentrated on Orient, Bengal, India Paper Pulp and Titagur. Sirpur are being freely sold due to the issue of rights shares.

Cotton mill shares have been easier on a predominance of sellers. Elgin, Bharat Commerce and J. K. Rayon have fallen. Bowreah and Dunbar have been weaker. Bank shares have been selectively bought. United Bank and United Commercial have been steady. Electric company shares have met with scattered support and interest has been taken in Calcutta Electric.

Tea shares have been quiet and buyers have become more discriminating. Selected Assam gardens, which have declared good dividends for 1961, have been steady. Betjan are being quoted higher. Hasimara, Hantapara and Tezpor have been weaker.

Government securities have been steady and banks have bought small quantities of short and medium-dated stocks. Their prices are fractionally higher. Although long-dated loans have been neglected, business has been done in the 3 percent Conversion loan 1986 around Rs. 71.05.

Bombay Market

MARKET DISTURBED BY IMPORT CUTS

CLOSING PRICES LOWEST FOR SOME TIME

Wednesday Evening.

THE downward trend in the Bombay stock market gathered fur-

ther momentum in the past week. Except for temporary rallies due to short-covering, the closing prices were about the lowest for some time. Bulls sold clearing shares heavily, and the sharp decline in cash scrip indicated the nervousness of investors. The new account started in a tame fashion. Although the carry-forward charges were about the same as in the past settlement, they were considered disappointing because it was thought that they would be lower due to heavy selling. In spite of fair support from the Life Insurance Corporation, the pressure did not abate. Whenever there was a rise, fresh selling was attracted.

The stock market was disturbed by further cuts in imports which, it was feared, would accentuate the shortage of raw materials and spare parts needed for the working of industry. Reports of further Chinese intrusions into Indian territory caused a great deal of concern. The inordinate delay in the announcement of the retention prices of steel added to the weakness.

Tata Steel declined to Rs. 145.25 on rumours of a rights issue at a premium. The report on the project for manufacturing alloy and tool steels was ignored. Indian Iron improved to Rs. 25.55 at the close due to support from Lyons Range. Engineering shares were depressed, and Tata Locomotive declined to Rs. 354. Alcock Ashdown were offered at Rs. 325 and Larsen and Toubro at Rs. 324.5. Among motor-vehicle shares, Hindustan Motors were about steady at Rs. 19.64 on paying a higher taxable ordinary dividend. Premier Automobiles were quiet at Rs. 130.50.

Prices of cotton mill shares showed widespread losses due to nervous selling induced by fears that profits during the current year would be smaller than in 1961. Century fell to Rs. 626 on substantial liquidation by a prominent operator. Bombay Dyeing were quoted at Rs. 67.90 and Kohinoor at Rs. 306. Svadeshi moved down to Rs. 275 and Simplex to Rs. 169. Gokak were available at Rs. 199 and Morarjee at Rs. 407. Standard were placed at Rs. 975 and Finlay at Rs. 304. India United ordinary came to hand at Rs. 21.92 and Apollo were sold down to Rs. 226.

Miscellaneous shares moved down on a predominance of sellers. Among sugar shares, Belapur weakened to Rs. 227 and Phalton to Rs. 100. Mining shares showed mixed trends. Shivrajpur Syndicate were weaker at Rs. 34.75, but B. B. Petrol attracted support at Rs. 1.90. Steamship company shares were quiet, and Scindia Steam fell to Rs. 12.32. Great Eastern Shipping were quoted lower at Rs. 12.64. Cement shares were also quiet, and Associated Cement were available at Rs. 157. Digvijay were dealt in at Rs. 203. Bombay-Burmah reacted to Rs. 672. Rayon shares turned very quiet on fears that the further cuts in imports would affect the supply of raw materials. National Rayon were pressed down to Rs. 513. Gwalior Rayon lost at Rs. 57.50, but Baroda Rayon recovered to Rs. 140 at the close on replacement buying. Chemical shares were quiet too, and Indian Dyestuff fell to Rs. 70. The stock market imposed margins on sellers of the scrip. Tata Chemical were dealt in at Rs. 16.04 and Colour-Chem lost at Rs. 470. Tata Oil were sold at Rs. 79.50 on prospects of a rights issue in the proportion of one new share for every two held at a

substantial premium. Voltas were quiet at Rs. 282. Cent Type weakened to Rs. 160 and Synthetics and Chemicals to Rs. 219.

Bank shares lacked interest and prices were lower. Bank of Baroda declined to Rs. 99 and Central Bank came to hand at Rs. 118. Insurance shares were steady and business passed in New India Assurance at Rs. 70.80.

There was scattered support for electric company shares, and Bombay S. suburban were dealt in at Rs. 102.25. Ahmedabad were placed at Rs. 69 and Tata Power at Rs. 1107.50.

Madras Market

PRICES DECLINE ON A BROAD FRONT BUSINESS CONFINED TO CLEARING SHARES

Tuesday Evening.
DULL conditions prevailed in the Madras stock market during the past week and turnover declined to almost a trickle. What little business passed was mainly confined to clearing shares. Operators were nervous and sold freely. As a result,

prices declined all round. Business in investment shares was virtually neglected, because most of the floating funds were locked up in new issues. The stock market took a serious view of the foreign exchange situation. Operators were reluctant to extend their commitments until indications of an improvement in the foreign aid outlook became available.

Business in Government securities was small and selected State loans were bought. Bank shares lacked support due to the issue of rights shares. Selected electric company shares met with scattered support. The trend in sugar shares was mixed due to the uncertain outlook. Tea shares were sold freely as auction prices were discouraging. Coffee shares were selectively taken on prospects of an improvement in prices due to a smaller output. Rubber shares lacked support. Cotton mill shares declined on a predominance of sellers; the future outlook for the industry was not considered encouraging. Business in miscellaneous shares was small.

Among banks, Indian were transacted at Rs. 176 and Indian Overseas at Rs. 164.50. State Bank of Travancore were dealt in at Rs. 118 and Canara Bank at Rs. 75.25. Among electric companies, Salem-Erode were steady at Rs. 14.90 and Ellore at Rs. 22. Cochin were placed at Rs. 12.25 and Vellore at Rs. 14.50.

In the sugar section, Deccan were easier at Rs. 10, but E.I.D. were maintained at Rs. 39.50. Mysore rose to Rs. 53.40, but United Breweries were neglected at Rs. 82. India were quiet at Rs. 9.55 and K.C.P. at Rs. 22.

Among planting shares, Blue Mountain declined to Rs. 2.40, as did Cochin Malabar to Rs. 7. Balanor were dealt in at Rs. 13.75 on declaring a taxable ordinary dividend of 12 percent. Coorg were taken at Rs. 4.95 on paying a taxable ordinary dividend of 15 percent. Oucherlony weakened to Rs. 3.73 and Periakaramalai to Rs. 3.30. PIA FIRST AGAIN—

**FILMS WHILE YOU FLY,
WHATEVER YOU
PAY FOR YOUR TICKET**

Now, planes of PIA's intercontinental Boeing fleet are showing the world's best new films on their Karachi-New York-Karachi routes. Only PIA offer this new kind of jet-flight relaxation to all passengers, first and economy class.

And film don't interfere with PIA's cabin service, still as good as any in the world. Whatever you pay for your ticket, you get jet speed and comfort, record-breaking punctuality—and now the world's best new films to help you relax.

No wonder more and more experienced jet travellers are saying PIA are great people to fly with...

Great people to Fly with

"SCCO"

These brushes are invaluable for buffing and cleaning exceptionally
severe scaling or rust from structural work, also specially adapted
for weld cleaning and other tough scaling propositions and rough
Castings. "TWISTKNOTS" may be operated at considerably
higher speeds than ordinary wire wheels and a comparatively light
pressure increases both the efficiency and life of the brush in
addition to lightening the work of the operator.

London Market

INDUSTRIALS FOLLOW WALL STREET TREND

GILT-EDGED FIRM

London, 20th June.

THE performance of Wall Street was the dominating influence in the stock market over the past week, although it did not completely align itself. In fact, resistance developed after a particularly sharp break on Wall Street. Subsequently, the London market was quick to respond to a rally on Wall Street immediately before the week-end and although, on balance, widespread losses were recorded, these usually were quite small. Business throughout the week was on a modest scale with little selling and a certain amount of cheap buying going on from time to time. The May overseas trade figures and the latest survey of industrial trends were discouraging. Similar was most of the company news during the week. The tone of gilt-edged securities remained generally firm helped by the substantial premium established by the new £1 million London County Council issue. The current flood of new issues of fixed interest securities restrained interest at times, but prices were well maintained. Industrial equities recorded extensive falls reflecting Wall Street trends, but developed a steadier tone later and held steady at lower levels. Banking, insurance, H.P. finance and property shares all lost ground, although here again the falls were not large. Dollar stocks were marked down in line with their U.S. counterparts. Gold shares, after making headway, fell back steadily on profit-taking. This reflected the renewed weakness in the metal price. Oils drifted lower before rallying sharply in response to favourable comment. Rubbers and teas were quiet throughout.

New Delhi

Mr. Sandys Discusses M.I.G. Deal: India Opposed to U.K. Proposals on E.C.M.

(FROM OUR NEW DELHI CORRESPONDENT)

THE visit to New Delhi of Mr. Duncan Sandys, U.K. Secretary of State for Commonwealth Relations, had three objects: (1) to offer immediate financial assistance to India in order to ease her critical foreign exchange position; (2) to convey to the Indian Government the reaction of the West to the proposed M.I.G. deal with Russia; and (3) to elucidate the U.K. Government's package proposals to the European Economic Community vis-à-vis India, Pakistan and Ceylon. As reported, the U.K. has already offered India £5 million from the tied aid on which an agreement was signed earlier this month. This amount will now be offered as untied aid, with a view to stabilising India's foreign exchange reserves. There is an understanding that the amount of untied credit offered from the tied aid will in due course be restored to the project for which it was earmarked. The Central Finance Minister, Mr. Morarji Desai, it is believed, urged Mr. Sandys to persuade his Government to increase aid to India at the forthcoming meeting of the Aid-India Club. It will be recalled that the U.K. had recently offered additional aid worth \$14 million. Mr. Sandys had prolonged discussions with Mr. Nehru and Mr. Desai on the proposed M.I.G. deal. He is believed to have pointed to the likely repercussions on members of the Aid-India Club if the deal is finalised. Meanwhile, the Russian Ambassador suddenly left for Moscow on Saturday, presumably in connection with the M.I.G. deal.

Attitude of India

As far as the European Common Market is concerned, Mr. Sandys came to India to know this country's reactions to the U.K. Government's package proposals, and not to negotiate any new agreement with it. After outlining the interim tariff arrangement, the package proposals had suggested that the enlarged European Economic Community would declare its readiness to negotiate a comprehensive trade agreement with India. The discussions held between the Indian and British delegations have helped to narrow down the differences considerably. While India recognises that she will ultimately have to fit into the pattern of the Rome Treaty, she would prefer the duty-free entry of Indian goods into the U.K. as at present till a comprehensive trade agreement is reached. India is, therefore, opposed to the package proposals. Nor is she prepared to agree to a time limit for reaching a comprehensive trade agreement with members of the E.E.C. The memorandum submitted by Mr. K. B. Lal, India's Ambassador to the European Common Market organisation, has had a favourable impact, resulting in signs of leniency towards India. India would like to take the fullest advantage of the changed climate. The status quo, it is pointed out, will provide India with a better bargaining counter, while the British package proposals will prejudice India's long-term negotiations with the E.E.C.

The Indo-British talks on the European Common Market concluded on Monday. Mr. Sandys met representatives of British and Indian business interests on the same day. He is believed to have told the Government

of India that Britain has no desire to stand in India's way, and that that country may plead its case before the European Economic Community in order to get a better deal. Britain will be pleased if Indian goods are allowed duty-free entry into the U.K. in case the E.E.C. agrees to modify its terms for India. Britain, Mr. Sandys said, will support India's demand. On this understanding, the talks have concluded. The venue of the discussions will now shift to Brussels where India will plead her own case. It is understood that the Central Finance Minister, Mr. Morarji Desai, during his visit to London commencing on 2nd July, will meet the U.K. Chancellor of the Exchequer, Mr. Selwyn Lloyd, to plead India's case for larger aid commitments at the forthcoming meeting of the Aid-India Club.

Safeguarding Exports

Before leaving for Pakistan on Tuesday, Mr. Sandys told a Press conference that his talks with Mr. Morarji Desai, the Central Finance Minister, on India's balance of payments position had been informative and were a prelude to the further talks which Mr. Desai would have next month with Mr. Selwyn Lloyd, the U.K. Chancellor of the Exchequer. On this problem, no decisions were called for and none were taken. When Mr. Sandys returns home, he will make his report to the U.K. Chancellor of the Exchequer. The main purpose of his visit to India was to exchange views on Britain's approach to the European Economic Community. Mr. Sandys explained the attitude the U.K. is likely to adopt in its negotiations with the E.E.C. There was general agreement on the main objective, namely, to safeguard India's export trade and how this could be done within the framework of the Rome Treaty. Mr. Sandys added that Britain was fully alive to the problems of her Commonwealth partners and treated them as her own problems. He suggested that like other members of the Commonwealth, India should plead her case individually with each member of the E.E.C. While in London, Mr. Desai will decide whether there is need for such an approach after the next ministerial meeting of the "Six". Answering a question, Mr. Sandys said that Britain apprehended no weakening of the Commonwealth if she is able to safeguard the trading rights of its members.

Proposed M.I.G. Deal

Mr. Sandys made the following statement on India's proposed M.I.G. deal: "It is a well-established practice that Governments do not make public statements about discussions between them on matters relating to the supply of arms until those discussions are completed. For a number of years, Britain has supplied India most of her military equipment and it has been the regular practice to have close consultation between the two Governments concerning any new requirements. From my talks with Mr. Nehru, I am satisfied that before any decision is reached, the Indian Government intends—in accordance with this practice—to discuss with the British Government its latest requirements for fighter aircraft. I have made it clear that we

are willing to hold these discussions as soon as the Indian Government is ready. We must naturally await these discussions before making any precise proposals." Mr. Sandys added that it is entirely for India to decide what aircraft she needs and from where to purchase them.

West German Credit

West Germany has offered 100 million deutschmarks as untied free credit to India to ease her critical foreign exchange position. Like the British offer, this is not additional credit but part of the credit of 500 million deutschmarks originally offered at the first meeting of the Aid-India Club for the second year of India's third plan.

Mr. Desai to Visit Europe

The Central Finance Minister, Mr. Morarji Desai, will leave for London on 1st July. He will stay there for three days. After spending a day in Brussels and two days in Bonn, he will reach Geneva on 8th July for one week's stay, attending the session of the U.N. Economic and Social Council. He will spend three days each in Paris and Rome before re-

turning to India. Mr. Desai is apparently paying a visit to member-countries of the Aid-India Club, in order to persuade them to give more untied assistance to India at the forthcoming meeting of the Club in Washington.

New Aluminium Venture

The collaboration agreement between Mr. Murarji Vaidya and Reynolds International of the U.S.A. has been finalised, it is learned. Almost a year ago, Mr. Vaidya was granted an industrial licence to manufacture 30,000 tons of aluminium fabrications a year in Hubli, Mysore. According to the agreement now reached, the project will be implemented through a public limited company in whose equity capital Reynolds will hold a 40 percent share, Mr. Vaidya and his associates 11 percent, the Government of Mysore 10 percent and the Government of Maharashtra 5 to 10 percent. The balance of the holdings will be offered to the public. The Company will have ten directors, including four representing Reynolds, one each representing the Vaidya group and the Governments of Mysore and Maharashtra, and three representing the public. The foreign exchange expenditure will not exceed Rs. 1.2 crores. The Vaidya group will receive a promoter's fee not exceeding Rs. 5 lakhs in cash or equity shares.

Accounting in State Units

The need for building up an efficient accounting system in public undertakings has been emphasised by the Government of India. The essential requirements for the efficiency of an undertaking, it is stressed, are its accounts and finance departments. A system of controls and internal

checks should be evolved to eliminate chances of error and fraud.

Pig Iron from Private Sector

The Government of India has approved four projects for manufacturing pig iron in the private sector. These include the schemes of Birla Gwalior Private Ltd and Kalinga Industries, both of whom are working in collaboration with Koppers International of the U.S.A., which will meet the foreign exchange requirements for plant and machinery against its participation in equity loan capital. The third project will be undertaken by Kamani Engineering Corporation Ltd. The application of Andhra Cement Ltd has also been approved in principle.

Co-ordination in Cabinet

Mr. T. T. Krishnamachari has been appointed a Minister without portfolio in the Central Cabinet. His special assignment is to co-ordinate the activities of the various Ministries and remove the bottlenecks as far as possible. Mr. Krishnamachari is planning to set up an organisation which will get progress reports from various sectors of the Government, analyse them and bring to the notice of the Central Cabinet causes which are holding up progress in a certain sector. His immediate concern is with the transport, coal and power shortages. The Central Ministries of Railways and Mines and Fuel are being brought together to discuss these problems across a table, in order to reach speedy decisions. A watch will be kept on how the decisions are implemented.

Third Plan Shortfalls

A frank appraisal of the implementation of the third plan in the first 15 months was made last week by Mr. Gulzarilal Nanda, Central Minister of Planning, Labour and Employment. He was addressing the Consultative Committee of the Lok Sabha attached to his Ministry. He frankly admitted that there are much larger gaps in the economy than could be anticipated. The achievements in the sphere of agriculture, fertilisers, power, transport and coal are not up to the mark, Mr. Nanda said. The additional area which benefited from minor irrigation schemes was 1.67 million acres, against the plan target of 12.8 million acres in 1965-66. The area which benefited from soil conservation increased only by about 1 million acres, compared with the plan target of 11 million acres in 1965-66.

Against the total nitrogenous fertiliser supply in 1961-62 amounting to 490,000 tons estimated in the third plan, the actual availability was about 296,000 tons, made up of 140,000 tons from internal production and 156,000 tons from imports. The fertiliser supply in 1962-63 is estimated at 404,000 tons, against the original target of 525,000 tons in terms of nitrogen.

Mr. Nanda concluded by saying that the Central Government had asked the States not to recommend new industrial licences requiring more than 2,000 kilowatts unless "they are in a position to make the necessary power available under their approved third plan programme."

Synthetic Drugs Factory

A contract was signed here last week by Indian Drugs and Pharmaceuticals Ltd—a Government of India undertaking—and Technoexport of Russia for establishing a synthetic drugs factory in Sanatnagar, near Hyderabad. The factory, which is to go into production towards the end of the third plan period, will produce drugs of the sulphur group and vitamins. It will have a rated capacity of 850 tons a

year. Plant, equipment and technical know-how will be provided by Russia.

Sulphur from Pyrites Ores

Based on successful preliminary laboratory tests, some test trials were conducted at the works of Messrs Orkla of Norway with Amjhore pyrites ores for producing sulphur. The report on these tests has shown that it is not certain whether the Orkla process is suitable for treating Indian ore. Efforts are, therefore, being made to find another commercially suitable process for manufacturing sulphur from Amjhore pyrites.

Bill for Port Trusts

The Government has decided to create port trusts for Visakhapatnam, Cochin and Kandla. A Bill will soon be introduced in Parliament for this purpose. The provisions of the Bill will generally follow those of the Port Trusts Act applicable to the ports of Calcutta, Bombay and Madras.

Manufacturing Cameras

National Instruments Ltd has signed an agreement with a Japanese firm, Nippon Kogaku Company, for establishing a camera factory in Durgapur, West Bengal. A contract for the supply of part of the equipment at a cost of Rs. 9.2 lakhs has been signed with Messrs Mitsubishi Shoji Kaisha Ltd. Production, it is hoped, will start from the third quarter of 1963.

Hindustan Cable Expansion

The expansion of the Hindustan Cable Factory in Burdwan, it is expected, will be completed in the latter half of the 1963-64 financial year. The following types of telecommunication cables will be manufactured: underground dry core telephone cables, plastic insulated telecommunication cables, switchboard cables and wires, and copper wires. The proposed capacity of the factory will be as follows: dry core telephone cables: 32 kilometres a year on double-shift basis; plastic insulated cables: 25 million metres; and copper wire drawing: 1,500 tons a year on double-shift basis.

Tea Exports Down

The total amount of tea exported during the half-year commencing on 20th November, 1961—the date from which the system of allotment of export quotas was suspended—was 88.9 million kilograms, compared with 90.04 million kilograms and 87.5 million kilograms during the same periods of 1960-61 and 1959-60, respectively. A tea delegation from Iraq is likely to visit India during the autumn this year.

Taxation under Third Plan

Against the third plan target of additional taxation by the States amounting to Rs. 610 crores, levies imposed by the States in 1961-62 yielded only about Rs. 17 crores in that year and will yield an aggregate

	Grades	Quantities	Delivery period
Czechoslovakia:	65/63	500,000 long tons firm	April 1962 to March 1963
		50,000 long tons (at sellers' option, subject to availability)	
	60/57	150,000 long tons firm	April 1962 to March 1963
	62/60.01	(Minimum quantity to be supplied in 60/57 grade is 100,000 long tons)	
		Total value of firm quantity approximately	Rs. 3.31 crores
Hungary:	65/63	50,000 long tons firm	July 1962 to December 1962
		50,000 long tons (at buyers' option to be exercised by 30th June 1962)	
		Total value of firm quantity approximately	Rs. 28 lakhs

CAPITAL, 21st June, 1962.

amount of about Rs. 100 crores over the plan period.

New Industrial Schemes

The following new major industrial schemes have been included in the third plan for the States of Mysore, Madras and Kerala:

MAJOR NEW INDUSTRIES IN THE PUBLIC SECTOR	
Scheme	Approximate investment (Rs. crores)
CENTRAL GOVERNMENT:	
Mysore: Watch factory	2.5
Madras: (i) Raw film project (near Ooty)	8.0
(ii) Boiler plant, Tiruchit.	12.0
(iii) Surgical instruments plant, Guindy	6.2
(iv) Newell high temperature carbonisation plant	25.0
Kerala: (i) Second shipyard, Cochin	20.0
(ii) Phyto-chemical plant, Neria-mangalam	6.2
STATE GOVERNMENT:	
Mysore: Sulphuric acid plant in Ingaldahl based on pyrites to produce 25 tons of acid a day	0.25
Madras: (i) Multi-purpose food plant	0.15
(ii) Pilot iron and steel plant based on Salem magnetite and Newell lignite	0.75
(iii) Steel re-rolling mill with a capacity of 20,000 tons a year	1.00

Caustic Soda Requirements

The existing requirements of soda ash and caustic soda are estimated as follows:

	(Metric tons a year)
1. Soda ash	280,000
(i) Light	50,000
(ii) Heavy	—
Total	330,000
2. Caustic soda	225,000

The indigenous production of soda ash and caustic soda is as follows:

	1961	1962
	(In metric tons)	(Estimated) (In metric tons)
1. Soda ash	176,638	220,000
(i) Light	—	6,000
(ii) Heavy	176,638	226,000
2. Caustic soda	119,854	130,000

The following further capacities have been licensed for manufacturing soda ash and caustic soda during the third plan period:

	(In metric tons)
1. Soda ash	310,000
2. Caustic soda	288,000

Exporting Iron Ore

The following table will show the grades, quantities and delivery period for iron ore agreed to be supplied to Czechoslovakia and Hungary:

	Grades	Quantities	Delivery period
Czechoslovakia:	65/63	500,000 long tons firm	April 1962 to March 1963
		50,000 long tons (at sellers' option, subject to availability)	
	60/57	150,000 long tons firm	April 1962 to March 1963
	62/60.01	(Minimum quantity to be supplied in 60/57 grade is 100,000 long tons)	
		Total value of firm quantity approximately	Rs. 3.31 crores
Hungary:	65/63	50,000 long tons firm	July 1962 to December 1962
		50,000 long tons (at buyers' option to be exercised by 30th June 1962)	
		Total value of firm quantity approximately	Rs. 28 lakhs

CAPITAL, 21st June, 1962.

London

Changing Over to the Metric System in the U.K.

(FROM OUR LONDON CORRESPONDENT)

QUITE apart from the question whether or not Britain joins the Common Market, considerable interest is being shown behind the scenes, and a lot of discussion is going on as to whether she should adopt the metric system as well as decimal coinage in the long-term interests of her future trade with world markets. As far as decimal coinage is concerned, the Chancellor of the Exchequer has set up a committee to enquire into the method and cost of making the change, and a large volume of evidence is being collected on what will inevitably prove to be a complicated and costly move. The Association of Certified and Corporate Accountants, for instance, has dealt with the pros and cons of a number of units, from £5 to 8s 4d as a basis, and plumps for the latter. All other proposals, it points out, would involve having a smallest effective unit which will be larger than the present penny, and this would be inflationary. The only disadvantages the Council finds in the 100d unit are that large values would be difficult to identify against the present scale, and that there might be some loss of international prestige. It feels that as the adoption of the 100d would mean an exact convertibility at all levels from the old currency to the new, a limited amount of notice is all that would be necessary. Coins representing 5d, 10d, 20d, and 50d would have to be introduced, but existing coins could be used for an interim period alongside the new ones. A subsidy should be given to companies and organisations having to convert equipment because of decimalisation.

Basic Unit

The National Association of British Manufacturers, on the other hand, reporting to the same committee, advocates that a 10s unit should be the basis of a decimalised British currency. Divided into 100 cents, the 10s unit would have the advantage of one cent, equal to 1.2d, being a small enough unit to be workable, but at the same time not requiring more than the two places of decimals used on accounting machines in other decimal countries. The Association points out that the advantages of the 10s-cent system have already been recognised in three of Britain's major export markets—South Africa, where it has been adopted, and Australia and New Zealand, where it has been recommended. The pound could still be used as a unit in international currency, being equal to two 10s units. The new basic unit would need a new and special name, and the Association suggests a "noble" or "royal." The cent would be equal to 1.2d and would replace the penny. The shilling, equal to 10 cents, would be retained, the 6d would remain as a 5-cent piece, and the half-crown and florin as 25 cents and 20 cents. The 5s piece could be resurrected at 50 cents, and the three-penny piece and halfpenny abandoned.

The Association rejects the "pound-mil" and "pound-cent" systems because their disadvantages would outweigh their advantages. It thinks that the conversion to decimal currency should be completed in five years. Two or three years should be used for preparation, and the balance as a transition period during which both old and new coins would be in use. At the end of the five years, the old currency should be completely withdrawn. A figure of between

£128 million and £135 million is accepted by the Association as a fair estimate of the cost of replacement of existing accounting machines, but it says that this is only a portion of the total cost, which it is impossible to assess before a decision is taken on the system to be used and the timetables to be adopted. There will be substantial administrative costs as well as the expense of providing duplicate machinery, delays in handling transactions, time of training and other incidentals, and the cost of preparing new notes and coins. Some institutions, such as commercial banks, the Association suggests, would have to switch over to the new system as soon as it was introduced. The time needed to supply duplicate accounting machinery to these concerns would be a major factor in fixing the date for the introduction of the new currency. An early decision on compensation would be necessary as this could determine the rate of replacement and conversion of accounting machinery. Priorities would also need to be established for the supply of new accounting machinery to firms.

Growing Support

Meantime, it is evident that an increasing volume of opinion in the U.K. regards a change to the metric system as essential and even inevitable. The costs and the difficulties will be formidable, but they will increase rather than diminish as time goes on. To clarify thinking on the subject, the British Standards Institution set up a special committee to consider various aspects of the matter and the action to be taken, and its findings have now been made available in the form of a statement aimed at guiding the public approach to the question.

From the point of view of the U.K.'s export trade as a whole, the use of the metric system and of metric standards will be increasingly demanded by her trade not only with Europe—whether or not she is a member of the Common Market—but also, and perhaps even more significantly, with markets in the developing countries as providing growing outlets for future trade. These countries lean towards the metric rather than the foot-pound system. In view of this, and in spite of the continuing importance of the U.S.A. and Commonwealth markets, a decision within a relatively short time in favour of the change, to be made over a defined period, is increasingly advocated. Clearly, the time required for a change would vary from industry to industry and would have to be planned and phased according to their needs, but it is only on the basis of a firm assumption of a general move, which nothing less than a Government directive could induce, that most individual industries could or would take any decisive action, or

even discuss the problem realistically with their customers and suppliers. Only on this basis could replacement of tools and plant be planned economically.

A major question is whether a decision to change should be made dependent on parallel decisions by the "inch-using" Commonwealth countries and the U.S.A., with whom there has for long been close co-operation on basic engineering practice. Many of those who support a change in principle make this a condition; others argue the contrary and in particular suggest that the U.K. should not wait for a decision from the U.S.A., which, because of its relative self-sufficiency, can afford to go much more slowly than Britain can. There appears to be considerably greater interest in the matter in the U.S.A. now than for some time. Certainly, it would be very desirable to have consultations with the U.S.A. and the Commonwealth. Some Commonwealth countries are considering the possibility of a change and would welcome a clear lead from the U.K.

Essential Steps

One of the first essential steps in making a change would be the encouragement of metric and decimal thinking. This would be one result of any early decision to adopt a decimal coinage, which should be followed promptly by an appropriate education programme. One consequent measure which might follow quickly would be the use of parallel inch-lb and metric scales in new weighing and measuring equipment and similarly, of course, of inch-lb and metric measures in relevant British standards.

The action to be taken by the British Standards Institution on the assumption of a change to the metric system within, say, 15 to 20 years, would be on the lines indicated below; some of the steps will in any event be necessary in relation to the increasing use of metric measures by some sections of industry, and the proposals should be looked at with that in view: (1) a plan for the translation of British standards into the metric system should be drawn up; (2) greater efforts should be made to secure a single international recommendation for dimensional series, even if this meant in some cases acceptance of a metric series; (3) where two series now exist in international recommendations, the B.S.I. should publish the metric series as a British standard as well as the inch series, for use by those who wish to work to metric in a transitional period; (4) in other cases where metric standards are urgently needed in particular industries, they should be prepared and issued as a matter of priority; (5) in the first stage, British standards not issued in full metric form should show metric as well as inch-lb values; some more precise conversions might be required than is at present the practice.

ARGENTINA SUSPENDS PURCHASES AS HESSIAN PRICES RISE

THE initial Argentine purchase quota sanctioned for June was 9,000 bales, out of which so far only 3,000 bales have been bought. These purchases caused prices to shoot up. As a result, the Argentine Government has suspended further purchases for June, for the time being. Market circles, however, expect that the June loader will eventually carry a minimum of 7,000 bales made up of short shipments or shut out of the May loader, and the fresh purchases. To gain more time, the Argentine has requested the steamship company not to sail the June loader before 20th July. It is believed that if the prices return to around Rs. 58 for 40in. 10oz. hessians, further purchases to the extent of 3,000 bales or 4,000 bales may be made. The purchasing programme for July-August shipment remains unaltered.

Raw Jute Stagnant

Although raw jute opened on a steady note due to the excessive rains during the previous week, the earlier reports about damage to the crop are now being discounted. The continuance of sunny weather with intermittent rain has weakened the undertone of the market. Trading in September futures opened at Rs. 33.10, but on heavy bear-selling, prices fell at the close to Rs. 31.76.

The softer trend in the fibre market has been accentuated by the decision of the committee of the Jute Buffer Stock Association at its meeting last Thursday not to make further purchase allocations for the present. Reviewing the progress of the buffer stock operations, it pointed out that purchase quotas have already been issued for 1,125,000 maunds of jute, worth over Rs. 2.8 crores. The situation will now be watched carefully, and buffer stock purchases will be resumed as soon as conditions warrant them.

A Press note issued by the J.B.S.A. says that the present buffer stock has been built up in spite of many difficulties. The Association was required to begin buffer stock operations not only before it was itself properly organised to do so, but also before arrangements for financing the purchases had been made. The buffer stock is being financed by advances from the State Bank of India; but the procedure is extremely complicated, involving a great deal of documentation. Against purchases already made to the value of over Rs. 2.8 crores, a sum of only Rs. 16 lakhs has so far been paid. Even for the first instalment of buffer stock purchases, made as long ago as mid-April, payments are still outstanding. The jute sellers, and in some cases the mills, have thus been waiting up to two months for their money.

Storage Accommodation Scarce

Another difficulty with which the Association has had to contend is that of storage accommodation. In addition to the 1,125,000 maunds of buffer stock jute, the mills are also holding the equivalent of more than five months' consumption of jute on their own account. For lack of godown space, some of this jute has been stored out-of-doors in the mill compounds. With the arrival of the monsoon, the problem has been greatly accentuated. Despite these problems, the buffer stock is being built up as planned, and jute prices in India are being maintained at levels far above those prevailing in Pakistan, where

new crop jute is now being quoted at only Rs. 19 a maund (basis Bottoms). With supplies of raw material plentiful and with overseas demand for jute manufactures buoyant, both the production and export of jute goods are continuing at a high level. Notwithstanding a prolonged strike in one of the larger mills, the output of jute manufactures in May totalled 99,700 tons—the highest production in any month since January 1958—and the industry is operating at such pressure that there is now a shortage of workers. During the first five months of 1962, production has amounted to 475,600 tons, which is the highest recorded in the first five months of any year since 1956. Exports have totalled 350,000 tons, the largest quantity exported in the first five months of any year since 1955.

Progress of the Crop

Despite heavy rain in certain areas, river levels in Pakistan continue to be normal for the time of year. In India also, the crop is progressing satisfactorily. The plants are now said to be about three feet high.

New Pakistani Jute Policy

At a meeting held in Dacca last week, it was announced that the minimum export prices for various grades would be increased by £2 or £3 for each quality for the whole of the next season, effective 1st July. Presumably there will be no reduction in these prices during the whole of the year. The Pakistani authorities hope that, in this way, a fair return to the cultivator can be ensured. The effect of increasing the minimum price may well be that other countries will pay a higher price, but it remains to be seen whether it will have the desired effect on local prices in Pakistan. The new crop jute is at present reported to be quoting at Rs. 19 a maund, which can by no means be considered a satisfactory return to the cultivator. Pakistan is planning to set up a Buffer Stock Agency on the same lines as the Buffer Stock Agency operating in India to support fibre prices.

Customs Problems

The Customs authorities have recently started to exercise stricter control when passing shipping bills. It is reported that when the bills are presented, the Preventive Officer compares the f.o.b. value quoted on the bill with the f.a.s. price which prevailed on the date of the sale. If the former is found to be lower than the latter, shippers are asked to explain why the sale was made below the f.a.s. price. The basis of formulating the f.a.s. price, as far as the Customs authorities are concerned, is the daily price list published by the brokerage firms. Where specialities are not quoted, the prices are judged in relation to 40in. 10oz. hessians and B Twills, depending on whether the quality is hessian or sacking. But the trade knows that there is no hard and fast rule for judging premiums and discounts, as these vary frequently from time to time. A shipper must necessarily operate according to his holdings and his market views. Therefore, if the Customs authorities insist on a price only in relation to the market, the whole gunny trade is likely to be jeopardised. Also, it is a well known fact that ed. Also, it is a well known fact that overseas business often has to take place at rates at least 2 percent below the market. For instance, some shippers may be holding June 40in. 10oz. hessians at a premium of Rs. 3 over August futures. If the premium

now is Rs. 7, the shipper will discount in order to book his profit.

On the one hand, the Government has been urging that exports of jute goods must be increased at all costs, especially as the Pakistani mills are making inroads into Indian markets. On the other hand, unnecessary difficulties are being created by the Customs. This state of affairs cannot be satisfactory. Shippers may be faced with an unpleasant situation in relation to their overseas buyers where, against a genuine sale, the Customs refuse to pass the papers. There is no law which forbids shippers to take a view on the market or to trade on the basis of differentials existing for different positions.

Gunny Output Increases

The total production of gunnies in May was 99,700 tons. The number of hours worked was 208, compared with 200 hours in April and 178.5 in May last year. Though hessians are more remunerative to the mills, the increase in hessian production was only 300 tons, while sacking output rose by 2,000 tons, and other goods by 400 tons. The offtake of hessians is at the moment in excess of the mills' production. Some traders say that the manufacture of lighter-weight hessians has increased due to the high premiums they command. Therefore, although the yardage manufactured may have been more, it is not reflected as an increase in tonnage.

THE JUTE MARKETS

Manufactured Goods: The market opened on a quiet note due to lack of business at the higher levels. The undertone continued quiet when delays in the Argentine purchases became known. Simultaneously, heavy speculative selling caused a decline. From an opening of Rs. 52.94 and Rs. 125.10 for 40in. 10oz. and B Twills, respectively, in the August futures, prices dropped to Rs. 52.62 and Rs. 123.30. At the lower levels, substantial buying interest from shippers confused bazar operators. Panicky short-covering in hessians lifted prices rapidly to Rs. 53.94, while B Twills were steady in sympathy at Rs. 124.40 in August futures. Fluctuations during the week were quite erratic in hessians, as a rise or fall of 1 percent to 2 percent within a matter of hours was frequent. The differentials between the ready and forward positions widened again showing that the main interest was still in the near position. January-March 40in. 10oz. hessian, which was only Rs. 4 below July-September at the beginning of the month, is now being quoted at a discount of Rs. 5.75. Ready hessians, for June delivery, were traded at over Rs. 60. The premium for June B Twills over August futures, declined from Rs. 2 to 75nP. July B Twills were quoted higher than June. The mills took advantage of rises in the market to sell their goods in the forward positions. They were reported to be 90 percent sold for October-December for hessians, while in sacking their sales were spasmodic.

Business was poor in both sections, particularly in sacking. Strangely enough, the bookings for west Africa for June shipment were said to be 20,000 bales, while the July steamer for the same destination was also declared to be fully booked. A second steamer was visualised by certain quarters. In hessians, the U.S.A.

made hand-to-mouth purchases, averaging about 200 bales to 300 bales a day. No interest was shown in the forward positions, even though the discounts had become more attractive. Continental buyers were out of the market. Reports received from the U.S.A. indicated that, after the buying spree during May, it was unlikely that any substantial purchases would be made for the next 45 days, the more so as the stock markets in that country had been very unsteady. If the present decline in U.S. stock markets were an indication of things to come, a recession in the burlap trade in the next six months was considered likely.

Latest available quotations are as follows:

	June	July	July-Sept.	Oct.-Dec.
40in. 7oz.	42.10	41.75	40.85	39.00
40in. 8oz.	45.10	44.75	43.85	41.75

S. T. SADASIVAN,

GENERAL MANAGER.

about the market, and prices, consequently, were irregular. A very wide range of quotations for each and every grade of jute was seen on the market each day, and it was really difficult to strike a happy medium. The fact that both old and new crop jute is being quoted, added to the irregularity. Most prices rose during the week. Old crop Mill Lightnings were quoted around £102 to £100 a ton. Mill Hearts at £93 to £90 and Grade Hearts £82 to £81 a ton for June-July shipment, c.i.f., U.K.-Continent. Grade Tossa-2/3 fell from £118 to £115 for the old crop, but four went up from £97 to £102 a ton, with Continental Tossa-2/3 rising from £95 to £97 and four from £81 to £81 10s June-July shipment c.i.f., U.K.-Continent.

In the new crop, there were offers of Mill Firsts at £115, Mill Lightnings at £99 to £103, closing at the lower figure. Mill Hearts at £91 to £93 and Grade Hearts at £81. August-September, with Grade Tossa-2/3 from £114, four from £202, Continental Tossa-2/3 from £98 and four £81 10s, c.i.f., U.K.-Continent, September-October.

Calcutta goods were firm, but closed easier at 90s for 40in. 10oz. and 63s 9d for 7½oz. June, 87s and 62s July, 82s 6d and 60s August, 79s and 60s 3d September and 70s 6d and 56s 9d for October-December for the

respective positions of shipment, f.o.b., Calcutta.

Good business was done in jute yarns and spinners were now very well placed with orders for delivery over the next two to three months at least. Indeed, it was difficult to secure hessian yarns for weaving during that period, and there were some manufacturers who left it over too long before purchasing. Prices were all very firm with no sign of the fall that had been expected only a week ago. There was a definite scarcity of jute yarns, in spite of overtime working in many of the mills. Manufacturers were busy. They also booked a considerable amount of business.

I.J.M.A. PRODUCTION FIGURES FOR MAY

The Indian Jute Mills Association reports the total production of jute goods for May as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
4,674 metric tons (4,004 tons)	
1,20,95 thousand metres (1,32,3 lakh yds.)	95.8 lakh nos.
(b) Sacking	
45,982 metric tons (45,256 tons)	
9,87,46 thousand metres (10,79,9 lakh yds.)	
4,81,9 lakhs nos.	

CAPITAL, 21st June, 1962.

2. Gunny Cloth

(a) Hessian	
32,642 metric tons (32,126 tons)	
11,16,24 thousand metres (12,20,7 lakh yds.)	

(b) Sacking

991 metric tons (975 tons)	
19,74 thousand metres (21,6 lakh yds.)	

3. Other Manufactures

15,409 metric tons (15,166 tons)	
----------------------------------	--

4. Total Production (All kinds)

99,702 metric tons (98,127 tons)	
----------------------------------	--

Summary	(000 metric tons and 00,000 yds.)

Hours worked	208.0	200.0	178.5

N.B.—These statistics are based on replies received and represent all members of the Association and Calcutta, with estimates for two non-member mills. The figures in brackets are in British units.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in May was exceptionally good. It was 3 million yards over April and 16 million yards higher than May last year. Last month's bag cut-up was 53.1 million yards and piecegoods deliveries 19.5 million yards, compared with 42.6 million and 14.6 million yards, respectively, in May 1961. For the first five months of this year, the estimated consumption increased by 52 million yards over the same period of last year. The May figures reflect sales made earlier in the year at lower prices. At the recent higher level of prices, current sales are lower than normal. U.S. spots and afloats declined by 16 million yards. At 234 million yards, 139 million yards were spots and 95 million yards were afloats. Appearing below are two tables which include the May figures —(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry:

U.S. burlap consumption (as reported to T.B.M.A.) (million yards)	1962	1961	U.S. burlap consumption (estimated industry total) (million yards)	1962	1961

TEA SALES IN U.S.A. SET NEW RECORD

IN his message to the annual report of the U.S. Tea Council for 1961, Mr. Edward C. Parker, chairman, says that in 1961, U.S. grocery store tea sales to the consumer soared to an all-time high of 89 million lbs. This represents a gain of 3 percent over 1960 and justifies the conviction that an intensive promotional campaign will help increase tea consumption in the U.S.A. Total tea sales in 1961 were up 28 percent over 1950. Loose tea, which accounted for 59 percent of total sales in 1950, was down to 32.7 percent in 1961. Tea bags had increased their share of sales from 41 percent to 59.4 percent while instant tea, which was of no consequence in 1950, accounted for 7.9 percent of the business in 1961. Mr. Parker says that it has been the industry's view for several years that instant tea will play a vital role in the future. During the past four years, grocery store sales alone increased from 2 million to 7 million lbs. "It is true that there is a strong seasonal peak for instant tea sales with the advent of summer and iced tea, but in 1961 there were also some important indications that the convenience feature of the instant product might be gaining new users during the cold weather months." For example, sales during the period October-November 1961 were two-and-a-half times those of the same period in 1959. It is impossible to measure accurately the tea sales to the out-of-home market, the chairman says, but it is safe to assume that total sales in the United States last year exceeded the artificially high former record figure of 112 million lbs sold in 1954 when coffee prices exceeded a dollar for each lb.

Advertising Campaign

Dealing with the promotional campaign, the Council's annual report says that the first phase of this year's advertising campaign used humour as the catalyst for making hot tea an acceptable drink. Later in the year, a testimonial type campaign with important sports figures endorsing hot tea as the drink for healthy, active people was adopted as the technique for arousing interest and persuading people to drink more hot tea. Both of these campaigns ran in the regional editions of *Life*, *Look* and the *Saturday Evening Post*. A very important project which was prepared in 1961 for launching early in 1962 was the preparation of a physical fitness booklet which includes information on exercise, diet and general nutrition. It will be distributed initially through a magazine circulated to most of the high school athletic coaches in the country.

tially through a magazine circulated to most of the high school athletic coaches in the country.

Appeal for Iced Tea

An unusual feature of the 1961 campaign was that the overall general appeal for iced tea continued to aim at the same market and audience as the hot tea campaign. Everyone believes iced tea is the best summertime refresher, and the major reason why people should drink more of it is that it is low in calories. "Since we are a nation of weight watchers the thought that 'you can watch your weight while you quench your thirst' in the summertime made a particularly strong appeal for iced tea," the annual report says.

Activities of the Tea Centre

The past year marked the first full year of operation of the tea centre as an integral part of the joint campaign for tea. The window and other displays for hot and iced tea, which were developed by the tea centre, were specifically designed to repeat the main advertising and publicity themes. At the same time, the history and romance of tea were projected daily by a professional tea taster who gave demonstrations and short lectures every afternoon. There were 86 separate, planned and organised functions carried on in the tea centre in 1961. Attendance by groups more than doubled over the same period in 1960, and "it is felt that with each passing month the tea centre more firmly spreads its influence among community leaders", the annual report concludes.

TEA EXPORT SALES DISAPPOINT

DUSTS FETCH BETTER RATES

(BY A SPECIAL CORRESPONDENT)

CALCUTTA tea auctions have proved disappointing judging from the three sales of this season which have been held up to now. The bulk of the offerings have come from Darjeeling. Bids have been generally below valuations, and many lots have been withdrawn. The next tea sales in Calcutta will be held on 26th June. Meanwhile, fairly favourable growing weather is reported, and production in north India is ahead of last year's. South India also shows a higher out-

put. It is interesting to note that at the Colombo tea auctions, high-grown teas have been selling at lower rates, good medium teas have been moving down, and lighter sorts have fallen by 10 to 20 cents a lb.

The present arrangement of fortnightly sales will continue for the time being. Darjeeling gardens have had a bad time, but published market reports up to 14th instant notwithstanding, the opinion is held in some circles that the opening market for other teas is quite strong, although it is too early to judge the entire position due to the limited nature of the offerings. The Dust tea sale on 15th June confirmed this view as there was a distinct hardening in prices when offerings met with a strong and active demand at higher rates, particularly towards the close. There was further improvement in the demand for fibrous, secondary types which sold well, confirming the tea traders' forecast that the new fiscal arrangements would benefit common qualities.

Darjeeling Garden Prospects

As few Darjeeling gardens can work at a profit under the current conditions, the prospects do not look hopeful. Meantime, it is understood that the Central Tea Wage Board is trying to rationalise the wage structure so as to fix wages for some years to come, and, if possible, stabilise the cost of living. So far, the Government's main attention has been given to increasing the cost of production by adding to wages and labour amenities. However, the Tea Association of India has made a representation to Mr. Manubhai Shah, Central Minister of International Trade, for the removal of the handicaps of the tea industry in order that exports might be increased. The points raised include the excessive taxation by the Central and State Governments and the high costs of transport and production generally.

Labour trouble is reported from Jorhat district and a lockout has been declared on the Missamara tea estate in Golaghat. At this time of year, the loss may be serious. Floods have hit Cachar gardens and some Assam areas. This will cause delay in despatches.

Promoting Exports

Mr. Manubhai Shah has already referred to the urgency of increasing exports. With reference to tea, his Ministry, it is reported, is considering the immediate introduction of a systematic replantation programme, together with the supply of fertilisers through the Tea Board. Such action will have little effect on tea exports unless the suggestions of the Tea Association are accepted.

After the recent foreign tour by the Indian tea delegation led by the chairman of the Tea Board, it is

reasonable to expect that practical proposals have been submitted to the Government but here again, the whole question of increasing India's exports depends on price. The Minister in charge has admitted that India is being priced out of world markets in agricultural and industrial products. The Indian Chamber of Commerce, in its survey of India's export trade, stresses that "top priority should be given to problems confronting traditional exporting industries."

Co-operative Tea Factory

A scheme has been finalised in south India by which small tea growers in the Nilgiris will have manufacturing facilities in a co-operative factory, for which a loan of Rs. 3 lakhs, it is reported, has been given by the Tea Board. It is proposed to extend the scheme to Palampur and Teekoy in Kerala.

Pakistan Cuts Tea Export Duty

The Pakistani Government has followed India's lead by reducing its export duty on tea from 25 paise a lb to 15 paise.

NORTH INDIAN TEA CROP REPORTS

The following is a summary of crop and weather telegrams received from different districts for May 1962:

Upper Assam: Weather wet; crop prospects generally are favourable; red spider blight lifting in most districts except Nahorkatiya where it is severe.

Central Assam: Weather generally wet and temperatures below average; outturn good; immediate prospects good; red spider prevalent in Golaghat and looper in Jorhat.

Lower Assam: Good rain has fallen generally and crop prospects are now brighter; immediate prospects good; red spider prevalent in Mangaldai.

North Cachar: Weather satisfactory; outturn normal; immediate prospects fair; red spider prevalent in north Cachar.

South Cachar: Weather favourable but rainfall deficient in Hallakandi; outturn to-date is considerably below last year; immediate prospects fair; red spider blight prevalent.

Eastern Doonars: Good rain has fallen generally and prospects are now brighter; outturn good; immediate prospects fair.

Central Doonars: Weather favourable but severe hailstorms reported with damage to crop in Binnaguri; red spider blight prevalent.

Western Doonars: Weather seasonable; outturn about normal; immediate prospects fair; red spider blight prevalent.

Darjeeling: Weather unfavourable; outturn poor; immediate prospects fair; hailstorms are reported but little damage done; red spider blight prevalent; thrips severe generally.

Teral: Rainfall and outturn normal; crop prospects good; red spider blight prevalent.

Your average executive spends more than half his waking hours away from home. He is away working for his employer, helping you make a success of your enterprise.

You value the diligence of these men and you endeavour to reward them accordingly.

The LIC can show you a new tax-light way to do so. It is through the Group & Superannuation Schemes. These Schemes possess three unique advantages:

1 Your executives can receive a part of their emoluments tax-free to build up retirement benefits and maximum family security

2 This may not involve any extra cost to the employer

3 The employer gets tax-relief on what he pays towards the Scheme

For further information, please contact the nearest LIC Divisional Office and have a word with the Manager. He will be delighted to give you full particulars.

Vol. CXXXVIII No. 3716

74th YEAR OF ISSUE

HESITANT TREND IN THE STOCK MARKETS

SHARE prices have fallen substantially in the Indian stock markets during the past few weeks. The trend cannot be very surprising, since the earlier rise was to a large extent speculative in nature. The rise was inaugurated by the Central Budget for 1962-63 which Mr. Morarji Desai had presented on 23rd April: operators were pleased to discover that the additional taxes proposed were only Rs. 70 crores, and not the Rs. 100 crores they had feared. The fact that a large proportion of the extra revenue would come from direct taxes was calmly accepted. It was assumed that as industry continued to expand, turnover and profits would rise, and the heavier burden would, therefore, be borne without much difficulty. At the same time, it was thought that the profitability of certain major industries would be improved before long. Hopes were widespread that the retention price of steel would be raised, and so would the prices of coal and paper. The tea industry was expected to benefit from the Budget concessions for tea exports, and, in the case of the Calcutta stock market, the prosperity of the jute industry provided valuable support. The fundamental change in investor sentiment during the past month is due to the fact that many of these hopes and assumptions have had to be revised. It is no longer taken for granted that the vigorous growth of industrial production will continue. On the contrary, the main fear now is that the expansion of industry might slow down, or stop, and that an increasing proportion of the installed capacity might be rendered idle. In the circumstances, investors say, the growth prospects of even the better-class companies need to be reassessed with great caution.

Two developments are mainly responsible for the sharp change in sentiment, and their impact has been the greater since they have occurred almost simultaneously. One is the panicky selling which suddenly started a month ago on Wall Street, and which quickly spread to the London stock exchange and the Continental bourses. The other is the sharp deterioration in India's foreign exchange position, as a result of which another drastic and unexpected cut in imports has become necessary. Some commentators have argued that the fall on Wall Street should not have affected the Indian stock markets so badly. The latter are insulated against foreign influences by the existence of strict exchange controls. Furthermore, the drop on Wall Street is to a considerable extent due to domestic factors whose relevance to the Indian situation is, at best, remote: President Kennedy's quarrel with the steel producers; the sudden realisation that the growth prospects of the U.S. economy as a whole are limited; and the hesitant trend in many sectors of U.S. economic activity. In fact, however, there are good reasons why the stock markets in this country should have reacted in the way they have done. The changes on Wall Street, although partly speculative, reflect the U.S. economic sentiment, and any prolonged deterioration there might well presage a recession in the United States. In that case, India's exports to the U.S.A. would suffer; and more important, the chances of getting adequate foreign aid from

that country, and from the West generally, would become very slim indeed.

Among the major reasons for the Wall Street débâcle is the renewed emphasis among U.S. investors on equity yields rather than on growth prospects. Indian investors have taken the cue, and started wondering whether the growth prospects of companies in this country too have not been more than fully discounted. In recent months, the shares of many first-class concerns have risen so high that the yields they offer are often well below 4 percent, or even 3 1/2 percent. It is true that a number of these concerns have been expanding rapidly, and so investors have been hoping that their profits and dividends will increase. But the major doubt which has now arisen is whether that rapid expansion can continue. The foreign exchange crisis has forced a sharp cut in imports, on which the concerns depend for at least a few of their vital requirements of raw materials, spare parts or machinery. The older concerns which have taken steps over the years to build indigenous sources of supply may not suffer too badly. But many of the younger companies which have attracted investors via the new issue market, and which have started by depending heavily on imports of raw materials or machinery, will be seriously affected. Their growth prospects, in particular, are being carefully re-examined.

Apart from the foreign exchange crisis and the import cuts, the Indian stock markets are slowly waking up to the fact that the supply of investible funds is not very large. The busy season having ended, the market for short-term finance has eased. But large sums remain blocked in subscriptions to new issues, thanks to the incorrigible tendency of various promoters to delay returning subscription money as long as they can. Because the Government's borrowing programme will be launched soon,

the Life Insurance Corporation is unlikely to buy equities on a substantial scale for some time to come. Nor is much money likely to be forthcoming from the banks. They know that they will have to support the new Government loans more vigorously, this year, even though they may not like the idea. Already, it is reported, the law might be amended in order to compel them to increase their gilt-edged investments. The banks have presumably taken the hint, and begun to mobilise their resources accordingly. The siphoning off of their funds from the stock market, or from industrial financing, into the gilt-edged market will have considerable influence on the trend in equities.

The high hopes which existed some time ago about an improvement in the profitability of certain major industries have now had to be revised. The delay in announcing the increase in steel retention prices has disappointed operators, although vague hopes still survive that the steel companies will be able to raise their dividends. The increase in coal prices has fallen far short of what was expected. An announcement concerning an increase in paper prices has only just come; but it remains to be seen to what extent the money required for expansion plans can now be raised. All these developments have brought a reminder that in the case of the numerous industries whose prices are controlled, it will not be easy to raise the money they need for expansion. At the same time, the deterioration in India's political relations with China and Pakistan gives investors good reason for caution. On the one hand, it implies that defence expenditure is likely to increase, leaving so much less money for economic development. On the other hand, it has led to talks concerning the purchase of M.I.G.-21 jet fighters from Russia—all of which might have serious repercussions on the amount of foreign aid that the western countries are prepared to offer India. The evidence suggests that the trend of the stock markets will remain hesitant and uncertain for some time to come. If the next meeting of the Aid-India Club sanctions more liberal assistance, and the recent import cuts can be restored, a recovery in equity prices is likely. But the recovery cannot be strong since many other major difficulties, such as the shortage of coal, transport and power, will remain.

HIGHER COAL PRICES

TRADING in coal company shares on the Calcutta stock exchange has lately become sluggish. This is because investors are disappointed that the increases in coal prices announced by the Central Government a few days ago are too small. It is feared that the price rises just sanctioned will not cover even the increase in production costs. As a result, the shares of Burrakur, Bengal, Equitable, Amalgamated, Western Bengal and Katras Jheriah have declined. Only East Indian scrip have been fairly steady since the Company has decided on a rights issue and has applied to the Controller of Capital Issues for permission. With a drop in coal shares, it is going to be increasingly difficult for coal-mining companies to find the resources they need to fulfil the third plan production target. Recently there have been reports that the target will be raised from 97 million tons to 104 million tons, and that the additional quota will be assigned to the private sector. Coal companies have shown their willingness to raise the extra quantity, provided they are helped by

the Government in finding the resources they require, especially by an adequate increase in prices. But the increases just sanctioned are so small that it is doubtful whether the money needed for expansion can be raised.

The price increases granted by the Government range from 38nP a ton for inferior coals to Rs. 1.50 a ton for superior grades of coking and non-coking coals. The maximum increase is granted to non-coking coal of Selected A grade and coking coal of A, B and C grades.

adversely affect companies engaged in deep-mining, whose production costs are higher and whose prices can, therefore, be undercut by other companies more fortunately placed. The industry had also asked for a uniform price increase of Rs. 5.43 a ton for all grades, including grade III. It argued that the increase in wages according to the Das Gupta award has not been neutralised to the extent of 34nP a ton. Amenities for labour and other expenses imposed by the Coal Mines Regulations involve an extra Rs. 1.25 a ton. The additional burden on account of salaries is 30nP a ton, cost of stores 6nP a ton, power, royalty, cess and other allied charges Rs. 1.88 a ton, and depreciation, etcetera, Rs. 1.70 a ton. The producers had pleaded for a profit margin of Rs. 2.50 a ton, against the Rs. 1.75 allowed when the prices were earlier fixed, to give a net yield of 12 percent on investments, compared with the 11 percent permitted previously. On an earlier occasion, when the price of coal was revised, the grades were reclassified. As a result, instead of getting an increase, coal of grade II and below suffered a cut in price. This was presumably done because of the official opinion that such coal is mined under relatively easy conditions, a view which is not shared by the mining industry. It is expected that as time goes on, there will be a larger demand for inferior coals for use in washeries as well as in many new industries. But the small price rise now sanctioned is unlikely to ensure a steady rise in output.

Mr. K. D. Malaviya, the Central Minister of Mines and Fuel, is said to be keenly aware of the industry's difficulties. But it appears that he has not been able to overcome the opposition of the coal-consuming Ministries, especially the railways. The fact that some Government departments and Government-owned enterprises are among the largest users of coal, is allowed to stand in the way of the long-run progress of the industry. The coal producers have pointed out that in 29 industries, the expenditure on coal works out to an average of only 1.81 percent of total production costs. Hence,

OUTLOOK FOR U.K. ECONOMY

THERE is necessarily some lapse of time between the completion of a questionnaire and the publication of its results. The latest questionnaire of the Federation of British Industries was completed at the beginning of June and the results were published in the middle of the month. The time-lag seems moderate, in relation to a long-range survey; but the first half of June included a further serious relapse on the New York Stock Exchange and a further relaxation of the deflationary policy in Britain; and it included also—the point seems trivial, but the event was quite effective—the belated start of the summer weather that many retailers need. Thus the replies of the 666 firms that answered the F.B.I.'s questionnaire might have been modified, one way or the other, if the survey had been made a week or two later. The London Stock Exchange seemed more concerned with the behaviour of Wall Street than stimulated by the turn of policy at home, and it is generally supposed that the stock markets reflect the moods of industry and trade.

The results of the F.B.I.'s survey were, anyway, inconclusive. Compared with four months earlier, when the preceding survey was undertaken, nearly a quarter of the firms were less optimistic about business and not quite a fifth were more optimistic; but at least the proportions of pessimists and optimists were, respectively, smaller and larger than four months earlier. More important, however, are industry's intentions; and the plain fact is that in the prevailing state of trade, industrialists intend to reduce their capital spending. Nearly half the firms covered by the latest survey expect to authorise less capital spending in the next 12 months than they authorised in the last 12 months. Already (so the latest estimates of the Board of Trade confirm) industry's capital spending is diminishing: in the manufacturing sector it was 3 percent less in the first quarter of 1962 than in the fourth quarter of 1961. Apart from some increase in retail trade, which is partly seasonal and intermittently attributable to the weather, there is no evidence of the upturn in Britain's business trend that the Government has frequently

even a substantial increase in coal prices will raise costs only slightly in a number of industries. Coal costs form a larger proportion in the case of steel and cement, and a sizeable rise in coal prices may raise the cost of many plan projects, but the coal industry cannot be asked to subsidise other industries or the third plan.

Mr. Malaviya has claimed that he is willing to help coal-producers in other ways. For instance, he has assured collieries that if they are unable to find finance for their expansion plans, aid will be provided through State-sponsored agencies. The volume of such assistance has, unfortunately, not yet been indicated, nor the mode of administering it. Mr. Malaviya has similarly formulated the idea of production bonuses to supplement the basic price. But this will require the levy of a cess on top of the present selling prices to create a pool from which bonus payments can be made.

Meanwhile, the committee appointed to go into the question of coal-grading has come to the conclusion that all coal should be graded according to calorific value. At present, classification is based on ash and moisture content. The committee, which was appointed in January, has classified all non-coking coals within the range of 5,500 B.T.U.s to 12,500 B.T.U.s in slabs of 500 B.T.U.s. The industry, it is reported, broadly approves of this basis of grading. The steel industry may, however, oppose the inclusion of coking coals in this scheme of classification, since the ash content of the coal it uses is important to it. It is understood that the Central Fuel Research Institute also supports the all-inclusive grading scheme. However, the committee has not been able to reach unanimous conclusions on such matters as the mode of sampling to determine the grade. This is important since the price depends on the grade. It is to be hoped that the committee will conclude its deliberations soon and that its recommendations will persuade the Government to take a more realistic view of the industry's problems.

predicted, and many anxious industrialists and traders believe that the Government has again miscalculated. The Budget of last April, though presented as neutral, was in fact somewhat deflationary, and subsequent developments do not show any good reason for further deflationary action at that time.

The *Economist* has recently published a comparison of the periods 1957-58 and 1961-62 and has suggested that no lessons have been learned from the earlier experience. In the crisis of 1957, Bank rate was raised to 7 percent; but it was subsequently revealed that the balance of payments was improving before the rise. In the crisis of 1961 Bank rate was again raised to 7 percent and again it was subsequently revealed that the balance of payments was improving even previously. Both crises were caused mainly by an outflow of "hot money"; and on both occasions this movement of short-term funds was associated with speculation in favour of the German mark. The reduction of Bank rate to 4½ percent in 1958 occurred 11 months after the rise to 7 percent in 1957; the reduction to 4½ percent in 1962 occurred ten months after the rise to 7 percent in 1961. The relaxation of the credit squeeze also was timed similarly, in both cases ten months after the restrictions were imposed. The Treasury might argue that the results of the Government's policy in 1957-58 were so favourable that it was proper to repeat that policy; but few economists or bankers or business men would agree. The trend of business was needlessly depressed; and counteraction was needlessly delayed. An expansive Budget should have been presented in 1958; it was deferred until 1959. An expansive Budget, many analysts are now convinced, should have been presented in 1962; it has been deferred until, presumably, 1963.

In the meantime, Britain's economic trend is precariously balanced, and the recent behaviour of Wall Street may be enough to turn it downward. In conflict with the adverse psychology of Wall Street are the moderate increases in Britain's exports and in Britain's retail trade. But psychology is an important factor in industrial investment and

the weakness of the stock markets may aggravate the decline in capital spending. The latest evidence, particularly the heavy fall in net new orders for machine-tools (after many significant cancellations), suggests that the decline in capital spending may be severe enough to turn the trend of total industrial production downward. Even consumption is subdued by capital losses in the stock market. The Government is apparently unperturbed by these gloomy possibilities. In 1962, it is interested primarily in consolidating the recovery of sterling. In 1963, it will be concerned primarily with its plans for a general election. Then will be the time for economic expansion. But expansion cannot be generated quickly; alternatively, it may have begun in 1963 (as it had in 1959) and an expansive Budget may be dangerous in 1963 (as it was in 1959). It is, anyway, a disturbing thought that the Government's actions tend to accentuate rather than to moderate the economic cycle, which, one is supposed to believe, does not operate in the postwar era.

RECENT TRENDS IN LIFE INSURANCE

THE Controller of Insurance included for the first time a review of the life insurance business transacted by the Life Insurance Corporation in the *Indian Insurance Year Book, 1960*. This has been followed up in the *1961 Year Book*, which has just been published. The review is brief, and provides a contrast to the trouble taken by the Controller to analyse the contraventions of and compliances with the rules relating to the limitation on expenses of general insurance. The Controller should consider whether the time spent in analysing these compliances and contraventions cannot be more usefully spent on a more detailed review of life insurance. According to the latest *Year Book*, there was an increase of 87.4 percent in the sums assured in 1960 over 1955. The increase in 1955 over 1950 was 83.9 percent. The number of policies in 1960 was 41.6 percent more than in 1955, but the increase in 1955 over 1950 was 59.2 percent. The Controller goes on to say that the smaller rise in the number of policies after nationalisation is compensated by the larger increase (32 percent) in the average sum assured with a policy in 1960 over that in 1955, compared with the increase of 16 percent in 1955 over 1950. From this, he concludes that since nationalisation, a higher proportion of new life insurance business has been obtained from persons in the higher income groups than before.

The comparison of the sums assured in 1955 and 1950 with those in 1960 is of doubtful value, since the value of money has fallen steadily over the years, as reflected in the rise in commodity prices. If, as stated, life insurance business is drawn increasingly from persons in the higher income groups, one of the purposes of nationalising life insurance seems to have been defeated. Spokesmen of the Life Insurance Corporation have repeatedly talked about its efforts to spread the message of insurance to the masses of India. This was, in fact, one of the reasons for nationalising life business. The rural bias of the Corporation is also well known. It is, therefore, surprising to read that a larger proportion of new life insurance business is now obtained from persons in the higher income groups. The new business of the Corporation in 1960 was Rs. 498 crores; it was about Rs. 600 crores in 1961. The target for 1962 is reported to be Rs. 725 crores. It would be interesting to analyse the distribution of this business among the various income groups.

The net rate of interest realised on life insurance funds in 1960 was 3.55 percent when the income tax refund is taken into account. When the refund is excluded, the rate works out to 3.53 percent. The rate, exclusive of refund of tax, was 3.5 percent in 1955. Thus, there has been almost no change in the interest yield after nationalisation. There has, however, been some improvement in the expense ratio. The total expenses of management formed 28.44 percent of the net premium income in 1960, while the ratio for 1955 was 31.95 percent. The proportion of lapses (less revivals) to the mean gross direct business in force (sum insured), in so far as the Indian busi-

ness is concerned, was 7 percent in 1950, compared with 6.3 percent in 1959 and 5.3 percent in 1958. In 1955, it was 8.2 percent. It is clear that the lapse ratio has improved somewhat after nationalisation, but it shows a rising trend since 1958. This is disquieting. Policyholders with fixed incomes and increasing commitments are evidently

finding it difficult to maintain their policies, in the face of a general rise in prices. As the inflationary pressures are expected to increase during the third plan period, they are bound to add to the problems of the insured. The Corporation may, therefore, find it increasingly difficult to keep its lapse ratio down.

Current News and Comment

Gillanders Tea Group Does Well

The Gillanders Arbuthnot group of tea companies have done well during the year ended December 1961. The Betjan Tea Company (an Assam garden) has raised the taxable ordinary dividend from 40 percent to 45 percent, absorbing Rs. 2.88 lakhs. At the present price of Rs. 35.37 a share of Rs. 10 each, the yield works out to 12.7 percent. The profit has, however, fallen to Rs. 5.37 lakhs, against Rs. 6.36 lakhs in 1960, after providing Rs. 1.11 lakhs (against Rs. 91.607) for depreciation. Taxation is allocated Rs. 2.53 lakhs (against Rs. 2.44 lakhs), and development rebate reserve Rs. 12.050 (against Rs. 31.786). The carry-forward is Rs. 80.681, against Rs. 74.551 brought in. The crop was 408,263 kilograms, compared with 415,786 kilograms. The average sale price fell from Rs. 6.82 a kilogram to Rs. 6.56 a kilogram.

The profit of Ananda-Bag Tea Co. Ltd (also an Assam garden) has fallen to Rs. 4 lakhs from Rs. 4.88 lakhs, after transferring Rs. 1.02 lakhs (against Rs. 78,390) to depreciation. The taxable ordinary dividend has been raised from 30 percent to 32.5 percent, absorbing Rs. 2.28 lakhs. This offers a yield of 10.5 percent at the present price of Rs. 30.87 a share of Rs. 10 each. Taxation absorbs Rs. 1.82 lakhs (against Rs. 2.25 lakhs), leaving a carry-forward of Rs. 85.679, against Rs. 84.181 brought in. The crop declined from 321,178 kilograms to 311,077 kilograms and the average sale price from Rs. 6.85 a kilogram to Rs. 6.58 a kilogram.

The Jutlibari Tea Co. Ltd (another Assam garden) shows a profit of Rs. 5.83 lakhs, against Rs. 6.32 lakhs, after providing Rs. 1.04 lakhs (against Rs. 83,469) for depreciation. The taxable ordinary dividend of 30 percent has been maintained, absorbing Rs. 2.70 lakhs. The yield works out to 9.4 percent at the present price of Rs. 32 a share of Rs. 10 each. Taxation is allocated Rs. 2.69 lakhs (against Rs. 2.62 lakhs) and general reserve Rs. 25,000 (the same). Plant improvement and buildings reserve receives Rs. 50,000 (against Rs. 40,000), leaving a carry-forward of Rs. 76,945, against Rs. 81,331 brought in. The crop rose from 506,565 kilograms to 539,472 kilograms, but the average sale price fell from Rs. 6.52 a kilogram to Rs. 5.99 a kilogram.

The Tengpani Tea Co. Ltd (an Assam garden) has maintained the taxable ordinary dividend at 30 percent, which absorbs Rs. 2.40 lakhs. It offers a yield of 8.6 percent at the present price of Rs. 35 a share of Rs. 10 each. The profit is Rs. 4.62 lakhs, against Rs. 5.02 lakhs, after transferring Rs. 1 lakh (against Rs. 81,631) to depreciation. Taxation is allocated Rs. 2.11 lakhs (against Rs. 2.16 lakhs) and development rebate reserve Rs. 10,455 (against Rs. 19,543). The carry-forward is Rs. 67,501, against Rs. 48,105 brought in. The crop was 348,111 kilograms, against 339,133 kilograms, and the average sale price fell from Rs. 6.86 a kilogram to Rs. 6.59 a kilogram.

Metal Box Expands and Diversifies

There has been fair support for the ordinary shares of the Metal Box Co. of India Ltd around Rs. 64.75, mainly because of the growth prospects. The Company has expanded and diversified its activities. In his review circulated along with the report and accounts for the year ended March 1962, Mr. K. C. Mahindra, chairman, mentions that the Company has recently obtained permission from the Government to manufacture treated and laminated papers and boards and produce containers from them. (A fuller version of the review is printed on a later page in this issue of *Capital*).

The diversification will help improve and develop packaging systems. As the factory in Worli near Bombay has been fully developed, it has been decided to build another factory in a neighbouring area in Deonar. The construction work is likely to be completed next year.

Commenting on the results for 1961-62, Mr. Mahindra points out that the increase in sales from Rs. 9.70 crores in 1960-61 to Rs. 10.50 crores in 1961-62 is not as high as was expected. The profit margin has declined due to rising production costs and bigger export efforts. The restriction of production has prevented the Company from raising output and efficiency. The capacity for tin containers cannot be increased because the Government is inclined to permit expansion only for those who manufacture goods as well as their packaging. Whether the uneconomic fragmentation of the packaging industry will contribute to industrial growth needs to be examined carefully.

The Calcutta factory has worked well and the production of industrial components and machinery has been satisfactory. A wide range of machines is being produced. In spite of increased competition, the Company has been able to export more of its products during 1961-62. Mr. Mahindra stresses the importance of good packaging for export promotion. In fact, bigger prawn exports from India have been made possible due to good packaging, he adds. More had to be paid for tinplate in 1961-62 because most of the supplies from the Tinsplate Company in Jamshedpur and the Rourkela steel works had to be transported by road, at greater cost. Supplies from the U.S.A. under the D.L.F. loan were even costlier. Although the stocks of tinplate were satisfactory at the beginning of the current financial year, the future supply from Rourkela is uncertain. There are sufficient stocks of steel sheet for the orders on hand, but bigger production of industrial components will depend on the availability of imported steel sheets. The Company has also been using aluminium sheets and slugs to a considerable extent.

The profit has declined from Rs. 1.23 crores in 1950-61 to Rs. 1.14 crores in 1961-62, after providing

Rs. 16.71 lakhs (against Rs. 16.10 lakhs) for depreciation. A taxable ordinary dividend of 25 percent, including an interim of 9 percent, has been repeated. It is covered nearly thrice and offers a yield of 3.9 percent at the present price of Rs. 64.75 a share of Rs. 10 each. Development rebate reserve is allocated Rs. 4.20 lakhs (against Rs. 3 lakhs), taxation Rs. 58.10 lakhs (against Rs. 60 lakhs) and general reserve Rs. 10 lakhs (against Rs. 15 lakhs). The carry-forward is Rs. 29.83 lakhs, against Rs. 28.86 lakhs brought in. The expenditure on fixed assets was Rs. 40.28 lakhs, of which Rs. 29.37 lakhs was spent on plant and machinery.

Kesoram Industries Maintains

Kesoram Industries and Cotton Mills Ltd has earned a profit of Rs. 51.36 lakhs during the year ended March 1962, after providing Rs. 69.43 lakhs (against Rs. 71.51 lakhs) for depreciation, Rs. 13.33 lakhs (against Rs. 3.47 lakhs) for development rebate reserve and Rs. 36 lakhs for taxation and Rs. 1,097 for investment reserve. The profit was Rs. 81.81 lakhs in 1960-61. Bringing in Rs. 2.45 lakhs, there is a balance of Rs. 53.80 lakhs. The taxable ordinary dividend has been maintained at 12 percent on old shares and *pro rata* dividends have been paid on the 1,825 new shares on which only application money has been received by the Company. The dividend absorbs about Rs. 23.99 lakhs and offers a yield of 4.1 percent at the present price of Rs. 29.37 a share. General reserve is allocated Rs. 19.52 lakhs. The carry-forward is Rs. 43.454.

North West Coal Pays More

The North West Coal Co. Ltd has raised the taxable ordinary dividend from 13.5 percent to 20 percent for the year ended December 1961. It is covered more than two-and-a-half times, and offers a yield of 10.1 percent at the present price of Rs. 19.75 a share of Rs. 10 each. The profit has improved from Rs. 56,721 in 1960 to Rs. 1.44 lakhs in 1961, after increasing depreciation from Rs. 22,855 to Rs. 76,237. Taxation absorbs Rs. 60,000 (against Rs. 20,000) and development rebate reserve Rs. 27,960 (against Rs. 18,924), leaving a carry-forward of Rs. 15,045, against Rs. 13,463 brought in. Raisings increased from 108,779 tons to 180,370 tons and despatches from 111,858 tons to 182,608 tons.

Rights from Dharamsi Chemical

Dharamsi Morarji Chemical Company Ltd, which issued bonus shares last year in the proportion of four for every ten held, will soon make a

rights issue to finance its 300-ton a day sulphuric acid project, estimated to cost about Rs. 65 lakhs. Addressing the shareholders at the Company's annual meeting last week, the chairman, Mr. Pratapsinh R. Morarji, said that the announcement will be made as soon as the details of the issue are finalised. The Company has obtained an import licence, and an agreement has also been signed with a private party in the United States for a loan equivalent to \$400,000 to meet the foreign exchange requirements. The factory will be located in Ambarnath, adjoining the Company's existing factory. Replying to shareholders' questions, the chairman confirmed market reports that the management is thinking of setting up a new factory for the manufacture of explosives with foreign collaboration. He assured them that they would be given a share in the new undertaking. Mr. Morarji announced that the income-tax authorities have accepted the Company's contention that no tax need be deducted from the dividends for 1961. Accordingly, the shareholders will be paid the entire amount of Rs. 8 a share on the old scrip and Rs. 2 on bonus shares.

Reviewing the Company's working in the current year, the chairman said that production and despatches at both the factories have been quite satisfactory in spite of the setback suffered in sales of superphosphate in Maharashtra State. With the commissioning of the Kumbhari factory, the Company is able to cater to a very large area in such a way that delivery prices compare favourably with those of local mills. Steps are being taken to promote the sale of superphosphate, but the market in this commodity at present favours buyers. The Government of India recently sanctioned an increase of Rs. 12 a ton in the price of superphosphate, but the Company has asked for a further increase, following the levy of excise duty on sulphuric acid and jute bags. The Company has sold and despatched during the current year more than 10,000 tonnes of superphosphate, which is 50 percent of the total sales anticipated in the first year from the Kumbhari factory. Further orders are in hand for about 4,000 tonnes which would also have been despatched by now had it not been for the difficulties in procuring wagons. The Company is said to have secured two export orders for 5,500 tons of ammonium sulphate. The first export shipment is ready to go. The chairman expressed the view that the foreign exchange difficulties will not affect the Company's production because rock phosphate imports continue to come under barter arrangements with Egypt, Tunisia, Morocco and Jordan, which have bilateral trade agreements with India. The other important raw material, sulphur, is being imported from the U.S.A. and is financed by a loan from the Development Loan Fund. The Rs. 50-paid share of Dharamsi Chemical, which had touched a high of Rs. 200 in May, was recently marked down to Rs. 170, but has since recovered to around Rs. 185.

Burma Corporation Shows Loss

Burma Corporation (1951) Ltd has incurred a loss of £178,080 during the nine months ended March 1962, after providing £78,915 for depreciation. Capital expenditure amounted to £37,665. Ore extracted was 116,068 tons.

Share Offer by Hind Mills

C. Parikh and Company, Bombay, which recently acquired a controlling interest in Hind Mills Ltd, proposes to offer shortly 35 percent of the equity capital and 50 percent of the preference capital of the Company to the public. The offer is subject to the approval of the Bombay Stock Exchange. The present paid-up capital of the Company is Rs. 70 lakhs, consisting of 500,000 equity shares of Rs. 10 each and 20,000 5-percent tax-free cumulative preference shares of Rs. 100 each. Out of the equity shares, 51 percent will be taken up by the Ahmedabad Jupiter Spinning, Weaving and Manufacturing Co. Ltd and 14 percent will be retained by the directors and their friends. The balance of 35 percent—175,000 equity shares—is being offered to the public at Rs. 23.25 a share. Out of the preference capital, 10,000 shares will be taken up by institutional investors and the remain-

ing 10,000 shares will be sold to the public at par. In 1960-61, the Company made a net profit of Rs. 18.46 lakhs, compared with Rs. 4.08 lakhs in the preceding year. This enabled it to wipe out the loss of Rs. 11.14 lakhs brought forward from the previous year and also to step up the dividend from 3 percent to 6 percent. The Company's mills have 77,000 spindles and 1,360 looms, besides dyeing, bleaching and finishing facilities.

Fitters Tools from Usha Forgings

Usha Forgings and Stampings Ltd has been incorporated in Delhi to manufacture of a wide range of fitters' tools such as double-end nut spanners, rose nails, pliers, machine dies, pipe and screw wrenches and spanners from chrome vanadium steel. The factory will be located in Baddarpur, near Delhi. The plant will have an annual capacity of 500 tons on a double-shift basis. It will also be capable of producing small precision forged components required for the railways, motor-vehicle and other engineering industries. The project has been sponsored by Messrs Ram Krishan Kulwant Rai and is estimated to involve an outlay of Rs. 55 lakhs in the initial stages. The cost of imported machinery is placed at Rs. 14 lakhs. Technoexport of Czechoslovakia will supply the entire imported machinery on rupee-payment basis and also provide the technical know-how without any additional charge. The Company will have an authorised capital of Rs. 1 crore. The issued capital will be Rs. 17.50 lakhs made up of Rs. 11.50 lakhs in equity shares of Rs. 100 each, and Rs. 6 lakhs in 9.3 percent cumulative redeemable preference shares of Rs. 100 each. The directors and their friends will take up equity shares of the value of Rs. 5.86 lakhs. The balance is likely to be offered for public subscription towards the end of the year. When the Company is in full production, it will produce tools worth about Rs. 50 lakhs annually, thereby effecting considerable saving in foreign exchange.

Plastic Machines from Engel India

A company called Engel India Machines and Tools Ltd has been incorporated in Calcutta in order to manufacture plastic injection moulding machines and moulds. Technical collaboration has been arranged with the well-known Austrian firm of Maschinenfabrik Ludwig Engel K. G., which has agreed to supply the necessary plant and machinery. The Company proposes to have a share capital of Rs. 50 lakhs, out of which 50 percent will be offered to the public for subscription at an early date. The necessary land for building the factory near Calcutta has been acquired.

Progress of Oil India

Reviewing the progress of Oil India Ltd, Mr. Khandubhai K. Desai, chairman, said at the third annual general meeting of the Company last week in Duliajan that with the wells which have so far been drilled and those to be completed by the end of 1963, Oil India would be in a position to meet its commitment of supplying nearly 3 million tons a year to the refineries in Barauni and Gauhati, as well as to the Assam Oil Company's refinery in Digboi. (A fuller version of the speech appears on a later page of this week's *Capital*). This would mean a saving of Rs. 20 crores a year in foreign exchange. Oil India's reserves are at present estimated at 45 million tons of oil and 720 million cubic feet of gas, and the programme of work has been drawn up on this basis. But exploration has been held up in the new concession areas, since the Assam Government has been refusing to issue a licence pending a settlement of the royalty issue. If more oil is discovered in the new areas, it would be possible to consider the expansion of both the Nunmati and Barauni refineries. Mr. Desai pointed out that the Company's prospecting programme does not involve any foreign exchange expenditure as this has been underwritten by the Burmah Oil Company, the Government's partner in Oil India.

The chairman said that achieving the production target is very important, but of equal importance is the project to lay pipelines from Nahorkatiya to Barauni over a distance of 720 miles. The

first stage of the project up to Nunmati could not be completed in time due to abnormally heavy rains in the middle of 1961, which led to suspension of work. It was, however, completed by the beginning of March this year, and the pumping of crude to the Nunmati refinery has started. Meanwhile, arrangements were made to build up crude stocks at Nunmati by means of railway tank-wagons to enable the refinery to go on stream as scheduled on 1st January this year. Progress on the second stage of the project is satisfactory, and it is hoped that the whole line will be ready by the time the Barauni refinery is commissioned early in 1963. The pipeline system, said Mr. Desai, traverses difficult terrain, cuts across three State boundaries, and is the second longest in the east (including the Middle East). It will be one of the most modern and automatic, he added. As for using the gas produced along with oil from the Company's wells, the Assam Government, which is keen on fostering gas-based industries in the State, has set up a committee to go into market availability, consumer demand, capital costs of storage equipment and selling price. Oil India is represented on that committee.

West Bengal Financial Corporation

Although the activities of the West Bengal Financial Corporation have considerably expanded and the profits have correspondingly improved during the year ended March 1962, the annual report is disappointing since the Corporation has done little to promote small-scale industries. It has become a fashion for the chairman to express pious hopes about the development of these industries at each annual general meeting. But seeing that many genuine small entrepreneurs are thwarted by shortage of funds, it is curious that the Corporation does not receive a sufficient number of loan applications from them. If a serious enquiry is made as to why the applications are so few, it will no doubt be found that small industries have refrained from approaching the Corporation because its terms are too rigid.

To begin with, small industries can hardly offer security acceptable to the Corporation. The Corporation has indicated its willingness to relax this rule in the case of genuine parties, but it remains to be seen how far it will put it into practice. Small-scale industries face many other difficulties. Their production costs are substantially higher than those of bigger units, so they have no opportunity of building up funds out of current earnings. They do not possess the equipment, raw materials and marketing facilities which big units do. In the circumstances, the increase in the rate of interest from 6½ percent to 7 percent on the Corporation's loans will prove burdensome to them. The Corporation has been forced to raise the interest rate, it is claimed, because it has to obtain funds by issuing bonds at a higher cost.

The State Financial Corporations Act, 1951, has been amended to enable the Corporation to lend up to Rs. 20 lakhs to a public limited company or a co-operative society. Formerly the ceiling was Rs. 10 lakhs for all applicants. But the State Financial Corporations must ensure that their attention is not diverted from small concerns to big ones because of this change. The amending Act provides for the establishment of a special reserve fund. The whole or a portion of the dividends accruing to the State Governments and the Reserve Bank on the share capital of the Corporations held by them may be transferred to this fund, but the total amount held in it should at no time exceed 10 percent of the paid-up share capital of the Corporations. The West Bengal Corporation, as all others, has been authorised to borrow money from the Reserve Bank against the security of its own bonds for a period of not more than 18 months up to a limit of 60 percent of its paid-up share capital. It is now entitled to avail itself of the refinancing facilities offered by the Refinance Corporation for Industry. The amending Act also authorises the Corporation to accept deposits from the State Government, a local authority or any person, repayable after a period of not less than 12 months instead of five years as before. These measures are timely because they will help reinforce the resources of the Corporation whose outstanding commitments in the form of loans sanctioned but awaiting disbursement stand at Rs. 1.15 crores,

while its cash resources amount to only Rs. 37.50 lakhs. In order to encourage the flow of institutional credit to small-scale industries, the Corporation has recently been appointed as the agent of the State Government for sanctioning and disbursing loans under the Bengal State Aid to Industries Act.

The profit of the Corporation has improved from Rs. 5.98 lakhs in 1960-61 to Rs. 6.94 lakhs in 1961-62. Taxation absorbs Rs. 2.73 lakhs and reserve fund Rs. 70,696. The balance of Rs. 3.50 lakhs is being used to pay the guaranteed dividend of 2.5 percent. This is the first time that the Corporation has paid the guaranteed dividend without a subvention from the State Government, the total subvention received so far being Rs. 11.87 lakhs. Loans worth Rs. 1.25 crores were sanctioned in 1961-62, of which disbursements were only Rs. 75.68 lakhs. An amount of Rs. 50 lakhs was raised by issuing bonds carrying interest of 4½ percent and repayable in 1974. An encouraging feature is that concerns financed by the Corporation have generally done well, and their repayments have been regular and punctual.

Tata-Ebasco Consulting Services

The Tata group of power companies—Tata Hydro-Electric Power Supply, Andhra Valley Power Supply and Tata Power—and Ebasco India Ltd have joined hands to set up an Indian firm of engineering consultants to be known as Tata-Ebasco Consulting Engineering Services. Ebasco India Ltd is a wholly-owned subsidiary of Ebasco Services Incorporated of New York, U.S.A., the well-known consulting engineers, management consultants and constructors, who have operated such services in over 60 countries, including India. The partnership between Tatas and Ebasco will be on a 50-50 basis. Each partner will contribute Rs. 12.50 lakhs towards the working capital in the currency of its country. The object of the new firm is to build up quickly a sound Indian consulting organisation in the power engineering field. It will provide services which will range from making preliminary studies and feasibility reports, to preparing complete designs and, where necessary, supervising the construction of generating plants and other facilities for the production, transmission and distribution of electric power for large inter-connected systems, as well as for industrial units. Technology in higher pressure and temperature ranges of the most modern and efficient large capacity thermal plants will be made available, particularly through the American partner's extensive experience in the field. The new firm, it is said, has already offered its services to some of the State electricity boards and the Tata Iron and Steel Company. It will help in conserving substantial amounts of foreign exchange normally paid out for foreign consultant services of this nature.

More from Karikode Rubbers

The working of Karikode Rubbers Ltd for the year ended December 1961, shows an improvement over the previous year. The dividend is increased to 7½ percent from the previous year's 4 percent. After meeting all charges, including depreciation and taxation provision, the net profit amounts to Rs. 29,154 (against Rs. 15,765). With Rs. 1,124 brought forward from the previous year, Rs. 30,278 is available for disposal. Out of this, the preference dividend absorbs Rs. 9,000. The proposed 7½ percent dividend on ordinary shares, subject to deduction of tax, will absorb Rs. 15,000, leaving Rs. 6,278 to be carried forward.

The directors say that under the Rubber Board's subsidised scheme, the Company replanted 34.89 acres during the year. The estate expenditure amounted to Rs. 1.29 lakhs, against Rs. 1.33 lakhs. On account of the reduction in this expenditure and the increase in crop obtained, the cost for 50 kilograms has come down to Rs. 84 from Rs. 110 in the previous year. The total crop amounted to 76,905 kilograms, against 62,559 kilograms.

Manar Estates Pays Less

The directors of Manar Estates Ltd have recommended a dividend of 5 percent, taxable, for the

year ended March 1962, against 10 percent for the previous year. The Company has earned a net profit of Rs. 56,840. Out of this, general reserve gets Rs. 13,000 and taxation provision Rs. 17,000. The proposed taxable dividend of 5 percent will absorb Rs. 17,500. This leaves Rs. 9,340 to be carried forward.

The total tea crop for the year amounted to 105,801 kilograms, against an estimate of 70,000 kilograms. The coffee crop amounted to 19 tonnes, against an estimate of 23 tonnes. The shortfall is due to heavy rains. The tea crop for 1962-63 has been estimated at 100,000 kilograms and the coffee crop at 12 tonnes.

First National City Bank

The 150th anniversary of the First National City Bank was observed on 16th June. The bank began its operations in a modest building on Wall Street on 16th June, 1812. The bank has maintained an uninterrupted record of dividend payments each year since its foundation. Its capital funds have reached \$800 million. Deposits, which totalled less than \$500,000 in the early days, have soared to more than \$8,000 million. The small staff that manned the bank's original two-storey structure, has evolved into a worldwide organisation of 20,000, including 7,000 employees at 87 branches in 30 foreign countries and 13,000 at home, including those in 91 branches in Greater New York. In the 150 years of its existence, the bank has changed its name on two occasions. It became the National City Bank of New York in 1865. After it merged in 1955 with the First National Bank of the City of New York, it changed its name to First National City Bank of New York. This year, the name has been shortened to First National City Bank. The bank has been serving trade and industry in India since 1903. Its Bombay and Calcutta branches are fully equipped to handle all types of foreign exchange and commercial banking transactions. A third branch will be opened in Madras shortly.

Sanitary Ware from Neiveli Ceramics

Neiveli Ceramics and Refractories Ltd, a joint venture of the Seshasayee group and Kermag A.G., of Ratingen, West Germany, will shortly enter the market to raise Rs. 25 lakhs in equity capital. The Company will have an issued capital of Rs. 45 lakhs, divided into 30,000 9-percent cumulative preference shares and 420,000 ordinary shares, both of Rs. 10 each. The entire preference capital has already been subscribed by various insurance companies. Of the ordinary shares, the directors, managing agents and their associates will take up shares worth Rs. 8.23 lakhs and Kermag A.G. shares worth Rs. 3.77 lakhs. The Life Insurance Corporation has agreed to subscribe for shares worth Rs. 5 lakhs. The remaining 250,000 shares worth Rs. 25 lakhs will be offered, for public subscription. The entire public issue has been underwritten. Neiveli Ceramics will set up a factory in Vadalur, South Arcot district, Madras State, to manufacture 1,800 tons of high-quality sanitary ware annually. The project is estimated to cost Rs. 75 lakhs. In addition to Rs. 45 lakhs in share capital, the Industrial Credit and Investment Corporation of India has agreed to give a loan of Rs. 20 lakhs, of which about Rs. 15 lakhs will be in foreign exchange. The balance of Rs. 10 lakhs needed for working capital will be met from bank borrowings. The Company already has a pilot plant in operation and has secured the import licences for importing machinery and equipment worth Rs. 15 lakhs from West Germany.

Herdillia Chemicals

Herdillia Chemicals Ltd, a new company to manufacture heavy organic chemicals in India which will shortly be formed in Bombay, will be a joint venture of Nowrojee Wadia and Sons (Private) Ltd, Hercules Powder Company of Welington, U.S.A., and Hercules Powder Company and Distillers Co. Ltd of the U.K. Distillers will be the larger foreign investor in the project, but a majority of the equity shares will be held by Indian nationals. While some of the raw

materials required in the manufacturing process will have to be imported, it is hoped that an appreciable quantity will be available from within the country by the time the plant is completed. The Central Government has already granted a licence under the Industries Act.

Investment Centre 'Makes Good Start'

The Indian Investment Centre, which was set up last year by the Central Government to act as a liaison body between foreign investors and Indian entrepreneurs, has got off to a good start. While it was formally set up in February 1961, the head office in New Delhi came into full operation only in September and the New York office started functioning from about the middle of November. During this brief period, the Centre has received as many as 1,190 enquiries of various kinds from Indian entrepreneurs, and about 170 from foreign investors. In his speech at the first annual general meeting, the chairman, Mr. G. L. Mehta, said that as a result of the assistance given by the Centre, three proposals from Indian business men for collaboration with foreign firms in setting up joint ventures, and one proposal from a foreign enterprise for a joint venture with an Indian partner, have matured. The proposals from Indian industrialists relate to grinders, insulators and lightning arrestors, and steel forgings. The foreign collaborator for the first industry is from the U.K. and for the other two, from the U.S.A. The project of a foreign firm which has matured, relates to wood-working machinery from a U.S. enterprise. Negotiations are in an advanced stage in the case of eight other Indian proposals. Foreign firms have also shown interest in eight more proposals. Five corporations from the U.S.A. have come to an understanding with their Indian partners, and agreements embodying the terms of collaboration were awaiting the Central Government's approval. Five other proposals received from foreign parties are being negotiated. In addition, six foreign corporations have indicated their interest in coming to India and are making detailed enquiries concerning suitable Indian partners for joint ventures and the location and size of the projects. These enquiries cover a wide range of industries, including electronic small tools, piston pumps, plastic injection moulding machines, industrial control equipment, precision castings, earth-moving equipment, rubber contraceptives, generators, heavy chemicals and insecticides, machine tools, wood-working machinery, aluminium foils and glass-lined equipment.

During the year ended 31st March, 1962, 43 companies from the U.S.A., eight from the U.K., three from West Germany, two from Switzerland and one company from the Netherlands requested the Indian Investment Centre to help them in finding suitable Indian parties for joint ventures. Enquiries have also been received from consulting firms in India as well as in the capital-exporting countries for setting up ventures jointly. Mr. Mehta said that "there is a growing interest among foreign firms in the economic and industrial development of this country and the climate is, on the whole, favourable." The foreign investors seem impressed with the country's political stability, its financial integrity and the vast potential market. Mr. Mehta outlined in some detail the Indian Investment Centre's method of dealing with enquiries from Indian and foreign entrepreneurs. After complete information has been received in a checklist sent by the Centre to Indian business men, the project is examined by its technical advisers and foreign experts to assess its technical soundness and financial viability. Special emphasis is laid on the economic size of the proposed unit, estimated capital outlay, particularly the estimated cost of fixed assets, sources of finance, the estimates of cost of production and the margin of profit. After the proposal is processed by the Centre, it is sent abroad. As a rule, enquiries are sent overseas from entrepreneurs who either hold an industrial licence or a letter of intent from the Government. The Centre does not circulate a proposal simultaneously to a number of firms in the same country. It forwards proposals to three or four countries at the same time, but retains the confidential approach to one firm at a time in each country. This method, it is said, has proved effective and response from foreign firms is obtained in a much shorter time. Mr. Mehta disclosed that

the Centre has formulated a programme of industrial surveys and feasibility studies of specific industries which enjoy high priority in the third plan. The Centre will soon constitute an advisory committee to implement the programme, in co-operation with other competent organisations.

Problems of Small Battery-makers

Explaining the problems of small-scale battery-makers in a talk with Pressmen last week, Mr. A. C. Roy Chowdhury, president of the Association of Small-scale Battery Industry, said that due to a variety of factors, these manufacturers are facing critical times at present. Taking advantage of the tariff protection granted in 1955, numerous small-scale battery-making, repairing and rebuilding firms have sprung up. There are now approximately 1,300 such units in the country, compared with 13 large-scale firms. Some 90 per cent of the small firms are rebuilders and repairers, and they employ more than 5,000 workers. About 63 per cent of these operate in West Bengal. In 1955, the then Central Finance Minister exempted units employing not more than five persons from paying the excise duty, but since last April an excise duty on battery plates has been imposed under a Central Government notification, which they have to pay. The industry has already made several representations to the Government to remove the duty, but the official response has been disappointing. Similarly, the legal requirement that they should maintain their accounts is rather hard on an average small battery-maker whose literacy level is inadequate for the purpose and who has not the means to employ people to do the work for him. Finally, the disinclination of the Calcutta Electric Supply Corporation to supply "direct" current for battery charging is another serious problem. A rectifier has to be used to do the job with "alternating" current, and that requires capital investment which is often beyond the means of these small entrepreneurs.

Tax Rates and Capital Formation

At its meeting last week, the Informal Consultative Committee of members of Parliament attached to the Central Ministry of Finance discussed the effect of the enhanced corporation tax on small-scale industries and on capital formation in the private sector. The Committee appears to be of the view that the increase in the rate of income tax from 20 per cent to 25 per cent, which brings the total corporation tax to 50 per cent, is not likely to affect capital formation. A note submitted to the meeting stated that the profits of companies have shown an appreciable upward trend during the past few years. The rate of increase in profits exceeds that of the paid-up capital of the companies concerned as well as the rate of growth of industrial production. Between 1955 and 1959, the corporate profits of 1,601 companies included in a study made by the Reserve Bank, rose by 37.2 per cent, while the paid-up capital recorded an increase of only 25.4 per cent, and the index of industrial production rose 24.5 per cent. The trend, it is said, has been maintained in 1960. It is pointed out that the present situation in which there is a protected market for many industries increases the profitability of companies. The companies, therefore, have all the funds necessary for their expansion. The Reserve Bank's study suggests that there has been a tendency to distribute a larger proportion of the profits as dividends: profits distributed as dividends, after tax, has gone up from 57 per cent in 1955 to 63 per cent in 1959. In 1957, it was as high as 75 per cent.

The Committee feels that the funds required for expansion can be readily found from profits and also by expanding the capital base in view of the larger dividends distributed. It is also pointed out that the income tax law provides a number of incentives for the promotion of the corporate sector in the industrial field. These include (1) the tax holiday for five years given to new industrial undertakings for profits up to 6 per cent of the capital employed, (2) the development rebate of 20 per cent and (3) complete exemption from super tax for dividends received by a company from any Indian company engaged in one of the specified basic industries. The recent increase in the rate

of company tax will not apply to export earnings. In the case of companies in which the public are not substantially interested the statutory minimum percentage of profits to be distributed as dividends has been reduced by 5 per cent (except in the case of investment companies) to enable them to retain the same percentage of profits as before. The rate of tax applicable to inter-corporate dividends has also been reduced.

The Consultative Committee is of the view that it is not possible to assess the effect of the increase in the rate of income tax payable by companies on small-scale industries. To a large extent, industries which are run on a small scale and with relatively little capital are owned by individuals and partnerships. The increase in the rate of company income tax will not affect such enterprises. There may be a few cases where small-scale industries are run by companies. Even in such cases, the enhanced corporation tax is unlikely to cause any great hardship in view of the increasing profitability in the industrial field, whether large-scale or small. Besides, Indian companies in which the public are substantially interested and whose total income does not exceed Rs. 25,000 pay super tax at 5 per cent below the rate applicable to other Indian companies.

Freight Relief for Furnace Oil

Most industries are unable to secure their normal requirements of coal, and this has led to frequent hold-ups in production. Industrial units in the southern and western regions, in particular, have been the hardest hit, being far removed from the coalfields as well as the ports. The Central Government has been considering for some time ways and means of removing their difficulties. The Central Finance Minister, Mr. Morarji Desai, stated in his April Budget speech that the cost of transporting furnace oil would be reduced in order to facilitate its use by industrial units located at some distance from ports. The Central Government has now announced that, from 1st July, consignments of furnace oil booked by rail from Bombay, Okha, Kandla, Mormugao, Cochin, Madras, Vishakhapatnam and Calcutta will be charged only half the normal freight, subject to a minimum of Rs. 5.99 a tonne. Preference in change-over from coal to furnace oil will be given to those industries which have a high priority for coal allotment. Industrial units intending to use furnace oil instead of coal have been asked to intimate their requirements to the oil marketing companies. Applications will soon be invited for the import of burners needed for the change-over. The Government has also decided to permit the import of additional quantities of furnace oil, within the limits of the foreign exchange resources available.

The freight concession is welcome, even though it is not sufficient to bridge the gap between the price of coal and that of furnace oil. The plea made by the Federation of Indian Chambers of Commerce and Industry for reducing the excise duty on furnace oil so as to bring down its price to a level comparable to that of coal will be widely endorsed. But, if the industry can be assured of adequate and regular supplies of furnace oil, its higher cost may not prove to be a big handicap. It is not only that fuel forms a small proportion of the total cost of production in some industries, but the disadvantage of higher prices of furnace oil is likely to be largely offset by the gain from uninterrupted production. Industrial units will, however, have to make suitable adjustments in equipment in order to effect the change-over. In preparing their plans for such adjustments, units in Gujarat will also need to bear in mind the prospects of supply of gas as fuel from the oil-fields in Cambay and Ankleshwar.

Cotton Sales Tax Rise Resented

The cotton textile industry in Bombay is greatly perturbed over the increase in sales tax on cotton, cotton yarn and waste, mill stores and other items in the Maharashtra Government's Budget for 1962-63. The enhancement of the tax on raw cotton and yarn from 1nP to 2nP in the rupee will raise the burden from Rs. 61 lakhs to Rs. 1.21 crores and the increase relating to other items, it is

estimated, will yield an additional Rs. 49 lakhs to the State exchequer. In a memorandum to the State Finance Minister, the Millowners Association, Bombay, says that the additional burdens, which have now been imposed on the cotton mill industry in the State, are "the most unreasonable and are, in fact, calculated to weaken its competitive ability, both in the home market and abroad." The Association has pointed out that the industry is already suffering from an abnormal rise in the prices of cotton and other staple commodities which go into the production of cloth and yarn. Only recently, the Central excise was sharply increased, while the cost of electricity has gone up, following the imposition of a surcharge of 10.5 per cent on the power tariff. In the circumstances, any further increase in costs will harm the industry, especially when all-out efforts are being made to step up exports. The Association adds that while cloth and yarn prices have remained stationary because of voluntary price control, production costs have continued to rise, with the result that the profit margin has been squeezed. Heavy additional burdens will inevitably make further inroads into the return on investment, and this is likely to discourage the flow of capital. The memorandum says that the State Finance Minister has underestimated the State's share from the Central excise revenues. According to the latest Central Budget, the number of "sharable commodities would stand increased to 35." Maharashtra's share from the revised Central excise revenue of Rs. 65 crores on cotton cloth alone is estimated at Rs. 75 lakhs a year. But the State Finance Minister has taken credit only for Rs. 74 lakhs as Maharashtra's share of the Central divisible taxes.

The views expressed by the Millowners' Association are widely endorsed. In a communication addressed to the State Government, the Indian Merchants Chamber says that the steep rise in the sales tax on industrial raw materials is not advisable as it will result in cost inflation, and thus have serious repercussions on the further growth and development of industries as also export possibilities. Measures which tend to push up industrial costs negate the various facilities and incentives—fiscal and other—which are being given to industries to stimulate exports. Already, the rates of sales tax on a number of commodities are much higher in Maharashtra than in other States. The additional burdens proposed in the 1962-63 Budget will further widen the disparities in sales taxation. This will not only cause considerable inconvenience and hardship to trade and industry, but it would tend to encourage the diversion of trade from the State.

U.P. Jute Industry in Trouble

The president of the U.P. Merchants Chamber, Mr. Purushottamdas Singhania, told a Press conference in Kanpur recently that the Central Finance Minister, Mr. Morarji Desai, has summarily rejected the U.P. jute millowners' representations for concessions to the jute industry in the State. According to Mr. Singhania, Mr. Desai remarked that "it was none of his concern if the industry in any region ceased to function because of the disadvantages it faced, and that it was better, and in keeping with the times, if such units ceased to exist, notwithstanding the unemployment of nearly 6,000 workers such a closure might entail." Mr. Singhania had led a deputation of U.P.'s jute millowners to the Finance Minister. There are three jute mills in the State with 20,000 spindles and 800 looms and giving employment to about 6,000 workers. Natural disadvantages already operate against U.P. mills to raise the cost of production by Rs. 95 a ton on the manufacturing side, compared with the units in West Bengal. According to Mr. Singhania, with the excise levies of Rs. 125 and Rs. 250 a ton on sacking and hessian, respectively, affecting production for internal consumption and with the West Bengal units adopting production patterns more suitable for exports, U.P.'s mills are threatened with extinction. The output of U.P. units is 80 per cent sacking and the rest hessian; almost all the sacking is consumed within the State. To add to the disadvantages, some 15,000 tons of jute goods enter India from Nepal, particularly the markets served by U.P.'s mills, and these imports are free of duty. The delegation suggested to Mr. Desai

that he might consider the question of giving rebates to the extent of about 80 per cent of the duty on the sale of jute goods by U.P. mills in the home market. Another suggestion was that an equalisation fund be constituted to obviate the railway freight disadvantages faced by these units. The levy of additional excise duty on jute goods to replace sales tax, both Central and State, and the imposition of Customs duty on Nepalese jute goods entering India, were also suggested. All these suggestions were rejected by Mr. Desai.

Advertising Conference in London

The fifth annual conference of the European Market Association of Advertising Agencies will be held this year in London on 13th and 14th September. Delegates from most of the 32 countries are expected to participate in the conference which will take place at 5, Chesterfield Gardens, headquarters of the U.K. member-agency, Rex Publicity Ltd. The conference will review developments in trade between member-countries and formulate policy to expand inter-country marketing and advertising liaison. A feature of the meeting this year will be the presentation of an annual award to the agency submitting the advertisement which has visually communicated its message most successfully. The trophy is a golden globe—the symbol used by the E.M.A. members to indicate their association with the group.

European Common Market Criticised

The annual conference of the All-India Manufacturers Organisation held in Bombay last week, adopted three resolutions on the European Economic Community and its effects on Indian industries, prerequisites for successful implementation of the industrial targets of the third plan, and productivity and rational approach. The two-day conference was attended by about 500 delegates from all over the country. In his address the chairman, Mr. G. V. Puranik, urged the need to tackle pressing problems such as the gap between installed capacity and actual production of steel and shortage of supplies of the required grades of pig iron, coal, coke, M.S. sheets and wires, alloy steel, etcetera. He urged that the planned targets for basic industries like steel and cement should be raised and that the private sector of the coal industry should be permitted to expand further. Mr. Puranik emphasised that as in western countries, Indian manufacturers should have a continuous and integrated cost reduction plan. It is also necessary to pay greater attention to the quality of the products. Trade unions have a significant rôle to play in this. He stressed the need for better co-ordination between the Centre and the State Government to eliminate delays in the announcement of policies and their implementation. A proper pricing policy for basic raw materials has become essential in order to keep down the prices of finished goods, so as to be able to compete in foreign markets. Mr. Puranik suggested that it would be desirable to have export promotion councils for selected regions as the U.S.A. and Europe, with which India has a large adverse trade balance and where markets are expanding fast. He opposed foreign collaboration for establishing consumer or light industries, unless these required technical knowledge of a high order.

The conference favoured, in principle, the setting up of a regional economic co-operation organisation, but said that it should not be an exclusive club but operate as much in the interests of the region as in the interests of world trade. It felt that the European Common Market was "prejudicial to international economic co-operation and development" as it was based on high tariffs against those outside the community. In the event of Britain joining the E. C. M., the Commonwealth countries would not only lose their preferential access to the U.K., but "reverse preferences" would also be created. The conference, therefore, urged the Government of India to ensure that Britain's Indian exports and also to see that Indian products entered the E.C.M. without being discriminated against. It suggested the formation of an economic community of the under-developed countries of

Asia and Africa in order to promote greater utilisation of raw materials and stabilisation of their prices and to organise co-ordinated sale of commodities like tea, coffee, rubber and tin.

Inaugurating the conference, the Governor of Maharashtra, Dr. P. Subbarayan, appealed to the industrial community to maintain harmonious relations with their employees. Without industrial peace, production will lag behind the country's requirements. Dr. Subbarayan called upon manufacturers to co-operate with the Indian Standards Institution and become quality-conscious, because quality products alone can help the country compete in world markets. He regretted the growing tendency on the part of industry to look to the Government for solutions to all their problems. Addressing the plenary session, Mr. S. K. Wankhede, Maharashtra's Minister of Industries, urged manufacturers to make full use of installed capacity, cost and management accounting and statistical quality control in order to step up exports.

Balance-sheets of State Concerns

The annual reports and balance-sheets of all public undertakings, in which the Central Government's shareholding is 51 per cent or more, are presented to Parliament in accordance with the provisions of the Companies Act, 1956, or the special statutes. But no combined balance-sheet is prepared at present. Considerable interest has, however, been recently shown in this form of presentation of the performance of Central Government undertakings as a whole. Early this year, the Reserve Bank of India published a combined balance-sheet of 50 selected Government companies for 1957-58, 1958-59 and 1959-60. But this study was confined to a factual analysis of the data relating to their assets and liabilities. Some economic and financial journals have also made similar attempts. The Informal Consultative Committee of Parliament attached to the Central Ministry of Finance, which discussed this subject at its meeting last week, took the view that while a combined balance-sheet would no doubt present a composite picture of the working results of the undertakings as a whole, such a form of presentation has an inherent limitation in so far as it combines undertakings in diverse stages of development and dealing with activities of different kinds. For example, the mere inclusion of Hindustan Steel (in which Rs. 606 crores have been invested), whose performance as a whole is still unsatisfactory, is likely to distort the whole picture. That would not be fair to other undertakings with satisfactory results. Again, it would not be quite correct to include large investments in concerns which are in the process of being set up. In order to present an accurate and fair picture, it might be desirable to classify undertakings into different groups. This method will also facilitate comparison with other undertakings of a similar nature. In response to the interest which has been evinced in Parliament and outside, the Government has decided to prepare an annual report on the financial and economic working of all the undertakings. This report is currently under preparation in the Finance Ministry, and is likely to be ready in a couple of months.

Industrial Bottlenecks in U.P.

Except for mutual charges and counter-charges levelled by the Government and industrialists, the Naijni Tal conference of entrepreneurs convened by the U.P. Chief Minister, Mr. C. B. Gupta, seems to have yielded nothing tangible. There was general agreement about the shortages of power and coal, but charges of redtapism against the Government were rebutted by Mr. Gupta, who pointed to the large number of licences obtained by private parties who later did nothing about it. In the first year of the third plan, private parties obtained licences worth Rs. 100 crores, but how many of them would be implemented still remains to be seen. During the first and second plan periods, a large number of licences secured by U.P. industrialists had to be ultimately cancelled and the Central Government acted within its rights in allocating the industries to other States. The conference, which

was attended by 76 industrialists split up into different sub-committees, two of which have already submitted their reports. The sub-committee on land acquisition has recommended the setting up of an organisation in the Industries Department with full powers to deal with applications from industrialists for land acquisition for industrial purposes. It has also recommended the amendment of the Zamindari and Land Reforms Act with a view to enabling any entrepreneur to purchase land by private negotiation, without any restriction on area, for industrial purposes.

In the report of the sub-committee on power, Mr. B. B. Lal, Power Commissioner for U.P., has claimed that electricity rates in the State are the lowest in India, although the expense ratio is higher. But at the conference itself, protests were voiced against the proposal to enhance the electricity rates. One of the industrialists even threatened to go to the courts to enforce agreements with the Government if the rates were raised. It would also appear from a disclosure made by Mr. H. N. Bahuguna, Deputy Minister of Labour, that the State Government has actually charged higher rates for Rihand power from the aluminium factory. The Central Aluminium Committee had recommended in 1956 that Rihand power could be supplied to the plant at Rs. 114 a kW at 100 per cent load factor. But, in terms of the agreement, the factory has to pay Rs. 156 a kW. Mr. Ramchand Kilachand said at the conference that the synthetic rubber factory in Bareilly would be ready for production in September, but there is no assurance yet of coal for the plant. Giving an instance of what he called the unfavourable climate in the State, Mr. G. M. Modi said that goods manufactured in Meerut had to be transhipped from one lorry to another for being moved to Delhi, which is only a few miles away.

Farm Efficiency in U.P. Falls

The Prime Minister, Mr. Nehru, has said that eastern U.P. is a "great headache" to him. The region is not the only backward area in the State. There are low-income communities in the hill regions and in Bundelkhand. But eastern U.P. is politically explosive not only because of the density of its population, but also because it is a stronghold of socialist politicians preaching extra-constitutional methods. The density of population in eastern U.P. is 844 a square mile, compared with 557 a square mile for the whole State and 281 a square mile for the whole country. The population is almost entirely rural, dependent largely on agriculture, which is threatened alternately by floods and drought. The acute poverty of this area imposes a heavy burden on the State's financial resources, and relief operations have to be arranged frequently. According to the Planning Commission, one of the objectives of planning is to reduce the proportion of the population dependent on agriculture from its present level to about 60 per cent. At the time of the 1951 census, the agricultural classes in India constituted 69.8 per cent of the country's population. The corresponding figure for U.P. was 74.2 per cent, reaching as high a figure as 86 per cent for eastern U.P.

Judging by the increasing inefficiency of its agriculture and the slow pace of its industrialisation, there is no possibility in the near future of any significant shift of population from agriculture to industry in U.P. A telling commentary on the State's backward-looking agriculture is provided by the Budget speech of the Finance Minister for the year 1956-57. He said: "When the first five year plan was formulated, agricultural production in the State was 7.84 million tons. A target of an additional 983,000 tons was fixed in the plan. As against this, production would rise to 12.45 million tons by the end of 1956, which means we have achieved an excess of 3.63 million tons over the target." Actually, however, there is hardly any room for congratulation because the State was producing 11.37 million tons of food-grains in 1910-11 from 31.37 million acres, according to the 1948 report of the Agriculture Reorganisation Committee. From that level to 7.84 million tons at the beginning of the first plan is certainly a most disastrous drop, especially when viewed against the growth of population in the meanwhile. It is small wonder, therefore, that in spite of official claims of exceeding targets on the food

front, the people have less to eat. The report of the Agriculture Reorganisation Committee also pointed out that in 1945-46, with an average of 33.36 million acres, compared with 31.37 million acres in 1910-11, the output was only 9.03 million tons.

Gold Production at New Peak

World gold production in 1961 is estimated by the Union Corporation at 35 million ounces, excluding the Russian output. This compares with a production of 33.9 million ounces in 1960. The rise is entirely due to a larger South African output, which accounted for 65.6 percent of the world total. Estimates of the 1961 gold output in each producing country are reproduced for the first time in the annual bullion review of Samuel Montagu and Company, the London bullion merchants. Statistics of U.K. exports and imports of gold last year—also given in the review—show that Britain imported almost twice as much gold in 1961 as in 1960. The main reason was the sharp rise in gold imports from the U.S.A. from 7.7 million ounces to 21.6 million ounces, arising mainly from the support of the London gold market by the Bank of England on behalf of the U.S. authorities. Russian gold shipments to Britain also doubled, from 3 million ounces in 1960 to almost 6 million ounces last year. Arrivals from South Africa rose from 17.1 million ounces to 20.4 million ounces.

In a comment on the bullion market in 1961, Samuel Montagu stress the virtual withdrawal of the central banks as buyers for most of the year—except in June, July and August. This abstinence followed an informal agreement, reached after the violent upheaval of October and November 1960, not to purchase gold in the London market at prices above the gold import point of \$35.20 a fine ounce. "Individual opinions may vary as to the desirability of a multilateral advance in world gold prices, but the European central bankers were not slow to realise the inherent danger of a sustained rise in the free gold market price far above the U.S. official price, forcing a unilateral reduction in, or even abandonment of, the gold parity of the U.S. dollar. If this were to happen, there might be an unhappy repetition of the long period of international economic chaos which followed on the separate repudiations of their existing gold parities by the pound sterling in 1931 and the U.S. dollar in 1933." When some central banks converted some foreign currency holdings into gold later in 1961, they did so not in the market but directly at the Bank of England, which partly recouped itself by large gold imports from the U.S.A.

Trend of Commonwealth Trade

The Commonwealth's share of rising world exports fell in 1960 while imports remained steady, says a memorandum published by the Commonwealth Economic Committee recently. It shows that exports in 1960 (£9,800 million) accounted for 24.1 percent of world exports (excluding those of the Sino-Soviet bloc). In 1959 the proportion was 25.5 percent. The annual export rate for the first six months of 1961 was 23.6 percent. Commonwealth imports (£11,700 million), however,

remained at just over 27 percent of the world total. The first six months of 1961 showed little change. Exports from each of the individual Commonwealth countries rose somewhat between 1959 and 1960, except for Australia, which had a slight fall. The Committee says: "The high export performance of Commonwealth countries in 1959 and 1960 was not good enough to sustain on its own the heavy rate of importing common to most members in 1960, a task rendered even more difficult by the discouraging price trends for many primary products." In the United Kingdom, Australia, Pakistan, Ghana, Malaya and Nigeria, the value of imports reached record levels. The Governments took measures to safeguard the payments position and the import boom was generally checked in the first half of 1961.

Trade between Commonwealth countries themselves (£3,658 million) expanded appreciably in 1960, representing a slightly higher proportion of their total exports than in 1959. But it represented a further slight decline in the proportion of their total imports. Britain took nearly one-quarter of Commonwealth exports, but between 1957 and 1960 their share in the U.K.'s total imports dropped sharply from 36 percent to 32 percent. U.K. exports to other Commonwealth countries also fell during this period from 38 percent to 36 percent of the U.K. total. Yet the relative importance of the U.K. to other Commonwealth countries as a market and supplier has, on average,

A SURVEY OF INDIAN INDUSTRIES

With this issue of CAPITAL is published a "Survey of Indian Industries," running to 96 pages. It contains authoritative articles on the problems and prospects of many of India's leading industries such as aluminium, industrial machinery, shipping, petroleum and power. Sir Jehangir Ghandy has contributed the article on the steel industry. There are surveys of such light industries as radios and lamps, matches, soap, yeast, salt, power alcohol and cigarettes. There are also articles on alloy and tool steel, farm machinery, wool-combing, air-conditioners, cameras and packaging. The supplement is supplied free to registered subscribers and is available to others at Rs. 5 a copy (postage extra). Enquiries may be addressed to the Manager, CAPITAL, 5, Mission Row, Calcutta 1.

diminished little between 1957 and 1960. The general trend towards diversification of Commonwealth markets and suppliers continued. The trade of the Commonwealth as a whole with all main non-Commonwealth trading partners expanded, but exports to the United States fell by 7 percent. The Commonwealth share in U.S. imports and exports remained at 35 percent. U.S. exports to the Commonwealth rose by almost a fifth between 1959 and 1960. In 1960, they totalled \$6,866 million. Trade with the European Common Market accounted for 14 percent of Commonwealth exports and 12 percent of imports. Exports from the U.K. to the Common Market rose from £512 million in 1959 to £562 million in 1960. U.K. imports from the latter—as in the rest of the Commonwealth—were growing fast, from £559 million in 1959 to £662 million in 1960.

Cut in Nickel Prices

A further example of "co-ordinated" pricing was the simultaneous announcement by the International Nickel Company of Canada and the Falconbridge Nickel Mines, the two biggest nickel companies in the world, of a reduction in their prices from £660 to £642 a ton. Inco, by far the biggest producer outside the Soviet bloc, does not vary its prices to conform with short-term variations in the market, and the reduction of the price—after an increase of £60 a ton in the middle of last year—is the more significant because every other change in the price since the prewar era has been upward. Nickel, like every other important metal except tin, is now in ample supply, and it is appropriate that the change in its position should be reflected in its price.

Tin is still a difficult problem. The fall in its price which began about the middle of March, was

reversed early in May, but not before it had taken the quotation down from above £970 to below £910 a ton. A fairly rapid recovery of some £10 a ton was apparently connected with the International Tin Council's approach to the U.S. Secretary of State regarding releases from the U.S. stockpile. The Council feels that it should be fully informed of the U.S. authorities' intentions and fully consulted before these intentions are put into effect. Meantime, month after month, the market is unable to establish a rational basis for dealing. It assumes that appreciable quantities of tin will be released from the stockpile, but it can only guess what quantities and what prices may be involved. And, of course, within the Council, producers' and consumers' ideas of an appropriate scale of prices do not exactly accord.

The price of copper, by contrast, continues on an even level, a little below £235 a ton. But the stability is still artificial, the price being regulated by producers. In fact, the past three months' price has reflected the Rhodesian strike, and the end of it. Rhodesian labour troubles affected zinc and lead in some degree, but these metals are not, on the whole, attracting much attention.

More interesting is the position of quicksilver, although its price has been steady since early March. The price declined gradually and only slightly in 1960, but it fell heavily last year under the influence of Russian selling. A partial recovery this year, from £59 to £62½ a flask, reflects the withdrawal of this influence. But the recovery cannot continue, because in this case too, releases from the substantial U.S. stockpile are a potential depressing influence.

MILITARY EDUCATION

IT is difficult to believe that much good will accrue from the recommendations of the Committee on Military Education which has just sent in its report. If the British Military Officer be as incompetent as he is often made out to be, it is certain that the individual is not so much to blame as is the environment which surrounds him. And what on earth is the good of blaming an environment. You might as well blame a Corporation. The thing to do is to alter the conditions of military service radically, but the Committee have not had the courage to go beyond suggesting reforms which in one shape and another, have from time to time been already urged. The whole matter is one of vital interest for India, for quite apart from the fact that our Army Bill is the heaviest item in the Budget, every British officer in India comes out from Home; and it is not very consoling to find that we must perforce pay for an article about which criticism just now seems to have so much to say. It is not a little staggering to learn that the Artillery Cadets at Woolwich learn the rudiments of gunnery on obsolete pieces of ordnance of a type which they never would be required to work on service. It is equally staggering to understand that at Sandhurst the Cadets pipeclay their own belts, but that their rifles are cleaned by a servant. Then, again, it seems that cadets have no inducement to work, and instructors no inducement to teach. They are not even instructed in revolver or rifle shooting unless they join a club and pay a subscription of £1 a term. Nor are they instructed in drilling a squad or company, or in the duties of the several grades of Non-Commissioned Officers. This last little bit of criticism is not entirely convincing as to the intelligence of the Committee on this particular point. A knowledge of the duties of Non-Commissioned Officers is not to be picked up in a Military College. And these are the kind of academics which have been educating the brains of our Army for years! But why should the civilian feel surprised at a matter which has surprised nobody else. Every Officer in the Army, who has of late years passed through Woolwich or Sandhurst, must have known perfectly well the ridiculous shortcomings of the school he left behind him. But it has taken a big war and a mass of angry criticisms to bring the question to the front. The first thing that should be done with Sandhurst and Woolwich is that the Principals thereof, so-called Governors, and Head Masters and Professors of incompetence should be sent about their business; that is whatever they like to lay their hand to except teaching, for evidently here they have failed utterly.

A Ditcher's Diary

FOR ONCE MR. KRISHNA MENON MAY HAVE BEEN right. The last Security Council debate on Kashmir was certainly one of the most "got-up" things we have witnessed in recent years. The West's behaviour was, to say the least, very odd. Mr. Adlai Stevenson's disquisition on the Soviet Union's hundredth veto had as much to do with Kashmir as the Corporation of Calcutta has to do with Algerian freedom; and it was not very honest of the West to get Ireland to sponsor the resolution. It was yet another instance of American hamhandedness in conducting foreign relations that, just before the debate in the Security Council, Washington was full of indignation that India had been considering the purchase of M.I.G. 21s from Russia and that, for that crime, aid to India must be cut. If India cannot count on western support in the Security Council on a matter that she considers her vital interest, surely she has to rely on the Russian veto. And for this situation, over which not everyone in Delhi is wholly happy, the West has largely to thank itself. But having successfully, and rightly, nullified the Security Council resolution, India has no reason at all to be self-satisfied. Mr. Nehru must ask himself why Ireland was persuaded to introduce the resolution, why the delegates from Ghana and the United Arab Republic were distinctly cool in their support to India. Quite apart from the possibility that Pakistan may now take the Kashmir question to the General Assembly, where enthusiastic and universal approval of the Indian case is by no means to be taken for granted, New Delhi must wake up to the evident tendency that on Turtle Bay India is not exactly winning friends and influencing people. To put this down solely to the West's villainy or to India's failure in the technique of diplomacy or publicity is to evade an unpleasant issue which has deeper implications. The prickly personality of Mr. Krishna Menon explains a great deal, but not all, of India's unpopularity. I am, for instance, quite prepared to believe that Ireland hated being "told" by Mr. Menon what she should do in the Security Council. Nor would I put it past Mr. Menon that in teaching the Ghanaians and the Egyptians the rudimentary rules of English grammar, he hurt their amour-propre. There must be more to it than that. What? It is for Mr. Nehru to do some rethinking on—well, on Kashmir, on his whole foreign policy, and, I might as well say it, on Mr. Menon.

THE THOUGHT HAS SOMETIMES OCCURRED TO ME THAT there cannot be many groups of people in this subcontinent who have been the recipients of more well-meaning, if irrelevant, homilies than the refugees. Discussing the recent communal troubles

in Malda and Rajshahi, Mr. Nehru took the liberty of suggesting the other day that the refugees who have just come over from East Pakistan should have stayed where they were and "asserted their rights." Could the Prime Minister, one wonders, seriously have meant what he said? His implication seemed to be that to flee a country because of communal or political persecution is an act of cowardice; to which the corollary might perhaps be added that the sooner you flee, the more cowardly you are. Yet, as far as I am aware, this is not what Mr. Nehru told the refugees who had crossed the borders in earlier years, some of whom are now comfortably installed in high positions in both Congress and Government. The refugees who have come now can at least claim so much to their credit—that they braved the dangers of living in a hostile environment for fifteen years before deciding to leave their traditional homes and move to India. The decision could not have been an easy one; such decisions never are. The one thing of which we may be sure is that cowardice could not have been at the root of it. I appreciate the Government's impatience over the fact that the refugee problem in the east, unlike in the west, shows no signs of coming to a final conclusion: the minority community in East Bengal is still large enough to make it possible that the outflow of refugees from there might increase sharply should communal unrest recur. But I cannot concede that this is a situation in which New Delhi's patience, or convenience, is of any relevance whatsoever. It may be true that progress in rehabilitating the refugees who came from East Pakistan earlier has been slow, and the Government consequently has enough on its hands already. But the fault there is at least partly its own, and has to be paid for. Mr. Nehru is entitled to preach what idealism he likes to persecuted minorities; but the preaching might be more to the point if it took some account of the facts of political life in Pakistan—as the refugees know it.

AFTER PROTRACTED SILENCE, WHICH AT TIMES seemed almost conspiratorial, the Calcutta Metropolitan Planning Organisation appears to have decided to go in for publicity in a big way. No project with which Americans are associated could long be left untouched by Madison Avenue. But there are risks. I have already seen stories of differences between some in the C.M.P.O. and the West Bengal representative, Lieutenant-General D. N. Chakravarti. The stories were not altogether baseless; in fact the name of a replacement had been heard. These "temperamental differences", Mr. Nehru's classic evasion in the Thimayya resignation affair, will probably be sorted out, although

the General has powerful backers. But intrigue, once in, hardly ever leaves an institution completely; and I have a suspicion that some of the recent stories were "inspired leaks". To use the Press for furtherance of group or personal interests is a dangerous game; and neither the American part of the C.M.P.O. nor its Indian wing should attempt to play it lightly. And the basic problem of the C.M.P.O. has not even begun to be solved, which is that no plan can be executed until the Corporation of Calcutta and the 30-odd other corrupt and incompetent municipalities have been superseded for at least 20 years. I have seen no evidence so far that Dr. B. C. Roy has the political courage to do that; and the others in power may not have even the intention to do any such thing. What the C.M.P.O. needs is an apparent contradiction: full political backing with full freedom from political interference; and I do not know that, apart from Dr. Roy, any Bengali politician of importance takes any interest in the C.M.P.O. The World Bank and the U.S. Government seem prepared to help with the foreign exchange needed; but, while intrigue or indifference goes on in Calcutta, New Delhi can no doubt think up other uses for the funds offered. But here is Calcutta dying on its feet; and nothing short of a comprehensive plan such as the C.M.P.O. may produce will save this city. All publicity must be aimed at educating the people, who must then be given an opportunity to say that they have had enough of politicians in civic management. While this can be done only in Calcutta, Mr. J. K. Galbraith will have plenty to do in New Delhi before anything begins to be done about this city.

KINGS ARE A VANISHING RACE: MINISTERS A growing one. If I do not bemoan the former, I am not always exhilarated by the latter. In a Delhi newspaper last week I began to read: "King Theodras, followed by Queen Mimiwab and Prince Philos, stormed out of their cage with a roar as the new enclosure at the Delhi Zoo was opened on Thursday by the Union Minister of Food and Agriculture, Mr. S. K. Patil". So now you know the kind of royalty and ministers I was talking about. Kings, queens and princes must be in a bad way indeed. Nor may elephants be doing better, for I find in the same story that Dr. Ram Subhag Singh, who has not got even Cabinet status, was also one of the "special" guests on the occasion and that he too was received by an elephant which "saluted the Ministers with a trumpet, garlanded them, played on the mouth organ and danced". Now I do not think I am unduly sentimental about animals. But, surely, a line has to be drawn somewhere. The events reported with such glee seem to me to be obvious instances of cruelty to animals. I well understand that, for various favours, many men and women have to do all sorts of things to please ministers. But why animals too, and such majestic animals as lions and elephants at that? And cruelty did not end there. Mr. Patil, I read, recalled his visit

to Tanganyika's reserved park when Prince Philos "climbed up the top ledge of the den, faced the speaker and seemed to be listening". Short of plugging his ears with cotton wool, he could not help listening; and Philos has my sympathy. But the report goes on: "He wants to know about his brothers in Africa, Mr. Patil wisecracked". The speaker, I can see, expected horse laughter from the lion; and the human part of his audience must have rolled in the aisles. I remember an observation in "Goodbye, Mr. Chips": the teacher made some feeble joke, and the captive audience in the classroom simply had to laugh. Such, alas, is also the fate of people, who out of compulsion or some perversity go to hear politicians speak. There is nothing inherently criminal in "trying to be funny", which phrase is usually used pejoratively. But, as a Times fourth leader had it some years ago: attempts to be funny "had better be successful, too". What the lions and the elephants felt was probably best summed up by Queen Victoria: "We are not amused".

ONE THING WHICH CONTINUES TO BOTHER ME, as someone interested in good administration that would allow very little room for the grinding of personal axes, is the continued hostility and suspicion displayed by India's legislators towards the civil servants. The prejudice is a hangover from the days before independence, but one would have thought that enough years had passed for it to have faded away. Evidently this is not the case, judging from the criticism heard in the Lok Sabha recently of the appointment of Mr. H. M. Patel to head the Narmada Valley Authority. The explanation that the post is honorary did not satisfy members; nor did the point that the Central Government had nothing to do with the appointment. The Prime Minister himself had to speak up on the subject; and I noted with regret that he did not make the obvious point which frankness demanded, that supposed involvement in the Mundhra affair is not to be considered a permanent and insurmountable bar to public service. It was on the basis of such an assumption, I imagine, that Mr. Nehru invited Mr. T. T. Krishnamachari to rejoin the Central Cabinet; and the latter accepted. It did, therefore, strike me as somewhat odd that members of Parliament, having understandably welcomed the return of Mr. Krishnamachari, were quick to object to Mr. Patel's rather less important appointment. It is not my concern to analyse here the relative errors or responsibilities of the various individuals who suffered in consequence of the Mundhra affair. I am prepared to concede that the conclusions drawn by the Chagla and other enquiries were—as Mr. Nehru suggested—sometimes inconsistent, even contradictory. But the question is whether, at the time, some sort of a principle was established; and, if it was, whether re-election to Parliament, particularly when it is unopposed—as it was in Mr. Krishnamachari's case—is reason enough to modify the principle. It may be true that surrounded by mediocrity, Mr. Nehru feels the need to have brilliant men like Mr. Krishnamachari by his side; but once the precedent is set, is there any reason why Mr. Patel's talents should be allowed to rust? India needs good Ministers; her need for good administrators is no less.

SIR RONALD MORRISON, INDEPENDENT CHAIRMAN of the British Iron and Steel Federation, told this story of a Scottish Q.C. noted for his alcoholic capacity, who was elevated to the Bench. The local newspaper, anxious to do full justice to the appointment, really "went to town" with umpteen inches of eulogistic copy and photographs of the gentleman at work and at play. Unfortunately the general effect of the publicity was somewhat marred by the heavy type headline which read "New Scottish Judge". There was a great bru-ha-ha locally about this regrettable misprint. The publisher carpeted the editor, who passed on his wrath via the sub-editor to the man who set the type. This didn't satisfy the Q.C., who was determined that "something must be done", and finally he sought advice from the Lord Advocate, Court of Sessions. After long and weighty deliberation, this august gentleman gave his opinion: "Do nothing. Sit tight!"

THE DITCHER

THE METAL BOX COMPANY OF INDIA LIMITED

REVIEW BY THE CHAIRMAN, MR. K. C. MAHINDRA

The Twentieth Annual General Meeting of The Metal Box Company of India Limited will be held on Wednesday, the 18th July, 1962, at 59C, Chowringhee, Calcutta.

The following is a copy of the Review by the Chairman, Mr. K. C. Mahindra, which has already been circulated to members.

Sales

Your Company's sales have grown steadily over the past year: from Rs. 970 lakhs in 1960-61 to Rs. 1053 lakhs in the year under review. This increase of 8½% as compared with 11% last year was not quite as high as expected. However, I see no reason for discouragement or alarm. I would rather interpret the relative shortfall as a useful reminder of how closely our fortunes are linked with those of our customers. Our sales figures are a remarkably accurate barometer of the affairs of the consumer-goods industries. In 1961-62, the high prices of groundnut oil made vanaspathi too expensive for some people who had become accustomed to buying it; less toilet powder was bought after an excise duty was imposed in March, 1961; in many instances our customers' output was limited by shortages of raw materials, and, as a result, some of those who buy industrial components from us took less than we had expected. Besides, there were rises in costs, particularly affecting raw material. I shall refer to them later. Our customers' problems which adversely affected our sales volume, our greater efforts in export fields and rising costs have caused profit margins to narrow. The solution, insofar as it is within our own control, rests in increased efficiency and increased productivity. I believe that Metal Box measured by any standards, is an efficient manufacturing organisation and that our pursuit of greater efficiency is relentless. There is, however, a limiting factor, the volume of production. Technological progress demands the application of the latest processes and methods to an increasing volume if we are to remain a low cost producer. But in the case of tin containers our productive capacity is not being increased. Government's policy over the licensing of any expansion of existing units or the formation of new ones continues to favour the man who produces both the goods and the packages for them. I cannot believe that Government can continue to turn a blind eye to the obvious long-term consequences: uneconomic fragmentation of the industry, stagnation in technical development and, above all, a high-cost container for the masses of the people. All around us, industrialists are appealing to be allowed to produce more in order to meet their ever increasing costs. How can the price-line be held so long as Government deliberately fosters the emergence and growth of uneconomic methods?

Our largest contribution in the export field is an indirect one: supplying packaging materials, to international standards of quality, for goods packaged and exported by Indian manufacturers. It is our conviction that every well-packaged Indian product is a potential earner of foreign exchange. This belief is substantiated by the export from India last year in Metal Box packages of goods worth over Rs. 4 crores to more than fifty countries spread all over the globe. Many of these packages were designed to meet the specific needs and tastes of highly competitive overseas markets. My report last year highlighted the part our Company was playing in India's prawn exports. Amongst the other exports the success of which has been assisted by the high quality standard of our containers, are cashew nuts, vanaspathi, vegetable oils, fruit, toiletries, confectionery and biscuits. Here is an important area of achievement at a time when the diversification of India's ex-

port pattern is a matter of great urgency.

Exports

In other fields, I am glad to be able to say that we are, indeed, getting on with the job. To conserve foreign exchange, for example, we have extended the manufacture in Calcutta of industrial components and machinery required for can-making and closing, which had to be imported hitherto, and we have made a successful effort to step up our direct exports of packages, machinery, hardware and publicity media. Since we first entered the markets of South East Asia, competition, notably from Japan, has intensified. Despite this, our exports were 36% higher than last year and their value during the year was over Rs. 25 lakhs. We are now one of the first five exporters of engineering goods. The growth in our direct exports, made possible only by constant touring and by offering very low prices, has had its effect on our profits. Nevertheless, we are resolved to maintain a steady growth and hope to achieve a substantial increase in our exports in the current year.

Our largest contribution in the export field is an indirect one: supplying packaging materials, to international standards of quality, for goods packaged and exported by Indian manufacturers. It is our conviction that every well-packaged Indian product is a potential earner of foreign exchange. This belief is substantiated by the export from India last year in Metal Box packages of goods worth over Rs. 4 crores to more than fifty countries spread all over the globe. Many of these packages were designed to meet the specific needs and tastes of highly competitive overseas markets. My report last year highlighted the part our Company was playing in India's prawn exports. Amongst the other exports the success of which has been assisted by the high quality standard of our containers, are cashew nuts, vanaspathi, vegetable oils, fruit, toiletries, confectionery and biscuits. Here is an important area of achievement at a time when the diversification of India's ex-

port pattern is a matter of great urgency.

To those who participate in the closed economy of India, marketing consumer goods abroad may well be an unfamiliar and novel experience. It has not taken long for the fact to be brought home that, when exporting quality packaging designed to meet the customers' requirements in a particular market is not an expensive frill but a business necessity.

Raw Materials

An important feature in the year's trading was the increased cost of tinplate. Supplies from the Tinplate Company and Rourkela have often had to be despatched by road rather than by rail at greater expense. Most imported supplies now arrive under D. L. F. from America. In earlier years, tinplate came more cheaply from Japan and the U.K. We have also had to resort to Russian supplies in non-standard sizes at prices even higher than the American. Supplies, albeit at a price, have been reasonably available throughout 1961/62.

Stocks at the commencement of the new financial year, though slightly less than the previous year, can be considered satisfactory. But the outlook for the current year is clouded by the uncertainty of production at Rourkela which is struggling with the problems involved in starting up a major steel enterprise. In areas where we can make a contribution we are co-operating closely with this new source of supply and it is gratifying to note that the quality of our first consignment of Rourkela tinplate was promising. Quantitative difficulties, however, may take long to overcome and, having regard to the length of time taken to plan imports, it is important that D. L. F. or other imports should continue to be made available on the same scale as last year.

Deep-drawing mild steel sheet was in satisfactory supply throughout the year. The production of our industrial components is assured for the present orders on hand; but beyond that, production will depend on the availability of imported sheet steel of the special quality required for this type of work.

The Company's consumption of aluminium sheet and slugs, whilst showing a small increase over the previous year,

continued to be limited by the availability of Indian-made supplies and by their high price. With the completion of the Indian Aluminium Company's expansion programme, and the commencement of production by Hindustan Aluminium during this year, it is hoped that consumers of this valuable packaging material will benefit from additional supplies at a lower price.

The increased excise on foil, now Rs. 600 per tonne, is a discouraging levy on a material which we use exclusively for the tamperproof sealing of tinplate containers and for the development of new laminates for heat-sealed consumer-packages intended for the mass markets.

Research, Design and Development

The year under review has seen continued success in the efforts by our Research Division to develop high-quality ancillary materials of indigenous manufacture. Recent successes in collaboration with our suppliers include a range of process resistant decorative materials for collapsible tubes and, on an experimental basis, for processed food cans; an enlarged range of high-gloss flexographic inks which enables us to produce Diathene bags to a quality comparable with any polyethylene printing anywhere in the world; and improved light-resistant inks for use in packages and advertising media liable to continuous exposure to daylight. The Canning Advisory Service offered by Research Division to food canners has continued to expand. Considerable development work has been carried out on complex aspects of plastics production and technology.

Normal product design work continued successfully throughout the year and a number of new products within the scope of our existing machinery were added. The Technical Development Section has made further contributions over the year in the design of new packages, industrial components and machinery. Package development work is primarily directed towards improved pilferproof containers capable of being manufactured and, as far as possible, closed at high speeds. An outstanding development introduced during the year under review was the aluminium 'No-pilfer Diaphragm' designed primarily to seal confectionery containers and make them tamperproof. The use of this development eliminates the need for imported tapper tinplate. We have also developed prototype machinery for addition to our range of sealing equipment for customers, re-designed some of our existing plant, and designed new machinery to accelerate production speeds.

As an important development aimed at providing greater facilities to prawn

Our fleet of nineteen modern freighters offers fast, regular and dependable service between

INDIA—U. K. & THE CONTINENT • INDIA/EAST PAKISTAN—SOUTH AMERICA

INDIA STEAMSHIP CO., LTD.

"INDIA STEAMSHIP HOUSE", 21, OLD COURT HOUSE STREET, CALCUTTA-1

Managing Agents: — LIONEL EDWARDS (PRIVATE) LTD.

exporters, we opened in December 1961 our Kerala Service Installation in Cochin which includes a reforming unit. At Calcutta No. 1 a high speed Open Top can-making line of the latest design has been installed to replace obsolete equipment. In the Plastics Works at Calcutta No. 2, machinery for the manufacture of heat-sealing laminates, extrusion-coated products and moulded bottles is being installed. Manufacturing trials are currently in progress and we expect to go into regular production shortly.

Also at Calcutta No. 2 steady progress has been maintained in machinery

building; currently we are making a range of twenty-five different machines. The fact that some 10% of our output of these machines was exported is an indication of the high standards achieved.

Your Company has recently received permission from the Government of India to manufacture treated and laminated papers and boards and containers made therefrom. Our entry into this field will enable us, using Indian raw materials, to offer precision-made cartons finished to that high standard of quality which is essential for export markets. It will also enable us to

develop packaging systems involving the use of tamperproof functional cartons capable of holding semi-solids and possibly liquids, and providing an airtight seal. This product diversification is a result of the Company's sustained efforts to provide its customers with a complete packaging service. In this, as with all our endeavours, both old and new, we owe much to our associates in the United Kingdom. The new line of laminated papers and boards and containers made therefrom will be substantially assisted by the valuable contribution which our associates can make, and your Company will materi-

ally benefit from their long experience in what to us will be a new field of activity.

In Bombay, with the completion of an additional floor on the administrative block, our present site in Worli is now fully developed. We have, therefore, purchased some twelve acres of land at Deonar 9 miles from Worli. Here, Bombay No. 2 Factory will be built in order to relieve congestion, make room for carton manufacture and improve working conditions at Worli. Preliminary planning has been completed and construction should commence shortly.

Employee Relations

Good relations between management and employees have continued except for occasional signs of restlessness in Calcutta and Faridabad. The past year was marked by the establishment of representative committees of employees to strengthen bipartite negotiations in all units. To facilitate understanding at all levels management has widely circulated an unequivocal statement of the Company's personnel policy.

I am glad to report that after three years of unsatisfactory relations in Madras, this last year has seen a marked improvement. The terms and conditions of union recognition have been settled and a five year agreement resolving differences has been signed. The second three year agreement on Prosperity Bonus with employees ended with the payment of last year's bonus. Fresh negotiations were started late in 1961 and they have now been concluded in a new three year agreement.

We have continued to put emphasis on the training of staff and progress has been made in integrating outside courses available both in India and abroad with facilities within the Company. Two of our Indian officers were given special technical training by our associates in the U.S.A., the Continental Can Company Inc. Sixteen Indian officers were sent for training with Metal Box in the U.K. Seventy-four managers have already undergone the Company's residential course in management and one hundred and fifty-four foremen and supervisors have attended non-residential full-time courses organised by the Company. In time, every member of the Company's management cadre will have participated in a programme of formal training. Our in-company courses have benefited from a visit of the head of Metal Box's Education and Training Division in the U.K., Mr. D. G. Sanders. You will be interested to learn that following his visit, our associated companies in neighbouring lands have decided to send their managers to India to participate in our courses.

Aside from formal schemes of training, we have charged management in all our units with the important responsibility of on-the-job training and we have generally improved the planning of the career development of our more promising employees. There is, as a result of this training activity, a perceptibly increasing awareness of sound management practice at all levels.

I thank the employees of the Company for their co-operation and for the fine sense of responsibility which they have contributed over the past year to our progress in the face of some formidable difficulties.

Retirement

Sir Robert Barlow, who has been a Director of the Company since its formation in 1933, has retired from the Board. I am sure you would wish me to place on record our deep appreciation of the invaluable services rendered by Sir Robert Barlow in the last thirty years. It was his genius that spearheaded the development of the packaging industry in India and if it had not been for his inspiration and foresight this Company could never have aspired to its present position in the Indian economy.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

OIL INDIA LIMITED

THE CHAIRMAN REVIEWS PROGRESS

Speech delivered by Mr. Khandubhai K. Desai, M.P., Chairman, Oil India Limited, at the Third Annual General Meeting of the Company held at Dullian, Assam, on 22nd June, 1962. Gentlemen,

The Report of the Board of Directors gives you an idea of the financial position of your Company and explains in some detail the extent of its operations during the year 1961. I shall refer briefly to some of the salient features in this report later, but I think it is important in the first place for us to realise their context against a more general background.

Consumption of Petroleum Products

The consumption of petroleum products in a developing economy like India is bound to grow at a rate faster than what has been generally estimated in the past. We are at the present moment still dependent to a very considerable degree on imports both of crude and of products and this is again dependent on the availability of foreign exchange for such imports. This is of particular relevance at a time like this, when all else is overshadowed by the continuing foreign exchange crisis with which this country is faced. At present we are spending about Rs. 80 crores every year in foreign exchange on imports of crude oil and petroleum products. It is well to remember this fact when considering or discussing the large scale programme of oil exploration that has been launched during the last few years by the Government of India. In the public sector the Oil and Natural Gas Commission propose to spend about Rs. 200 crores on exploration and production operations, and they aim to achieve a production target of about 3½ million tons per year during the final year of the Third Five Year Plan. I would like to take this opportunity to congratulate the Oil and Natural Gas Commission on the signal successes they have already achieved in the Gujarat Region, and to pay our tribute to the dedicated and unremitting efforts they are making to increase India's oil potential.

Oil India to Produce 3 Million Tons of Crude Oil by 1963

As far as the programmes of your own Company are concerned Oil India's reserves stand at about 45 million tons of oil and 720,000 million cu.ft. of gas at present and with the existing number of wells drilled by Oil India so far and those to be completed by the end of 1963, Oil India would be in a position to meet its commitments of supplying nearly 3 million tons a year to the Refineries at Gauhati and Barauni and the Assam Oil Company Refinery at Digboi. This total production of 3 million tons would mean a foreign exchange saving of more than Rs. 20 crores a year. If we are fortunate to discover oil in the new concession areas in respect of which an exploration licence is pending with the Assam Government, this in turn would greatly assist not only in saving on further imports of crude, but in further expansion of the Refineries at Gauhati and Barauni. This is a matter therefore which should have priority specially as Oil India's prospecting programme does not involve any foreign exchange expense as the latter has already been underwritten by the Burmah Oil Company, Government's partner in Oil India. We had originally planned to start work in the new area in October 1961. Unless the exploration licence is granted promptly it would not be pos-

sible to start the work even in the coming cold weather and any further delay would seriously impede progress in the vital field of oil exploration and development.

Our annual report gives you some idea of the facts and figures of oil drilling and operations during the year 1961.

Transport of Crude Oil Through Pipeline

While the achievement of our production target is all important special mention should also be made of the transport problem, viz., the construction of the 720-mile long Oil India pipeline from Nahorkatiya to Barauni. The completion of the first stage of this pipeline to Gauhati was delayed due to abnormally heavy rains in the middle of 1961, which led to the suspension of work. However as soon as this was foreseen arrangements were made to build up stocks of crude at Gauhati Refinery by means of railway tankwagons to enable the Refinery to commence operations as scheduled on 1st January, 1962. The first stage of the pipeline was actually completed by the beginning of March and pumping of crude oil to the Refinery had commenced. We take this opportunity to congratulate The Burmah Oil Company (Pipe Lines) Limited and the contractors for having done a good job under difficult circumstances. Progress on the second stage from Barauni to Gauhati is satisfactory and we are hopeful that the whole line will be ready when the Barauni Refinery goes on stream early in 1963. This pipeline system traversing a difficult terrain, cutting across three state boundaries is the second largest in the East (including the Middle East) and will be one of the most modern and automatic.

Oil India's Organisation Takes Shape

The year 1961 as you would see has been a momentous one in the history of this young organisation. The Second Supplemental Agreement brought Government's shareholding on a par with that of The Burmah Oil Company, thus giving it parity on the Board of Directors. The first task to which the newly re-constituted Board addressed itself was the setting up of a separate organisation for Oil India.

As from 1st January, 1962, we took over on Oil India's payroll all the staff required—executive, clerical and labour—engaged on Oil India's work who had hitherto been employees of the Assam Oil Company. The organisational set-up, provision for future recruitment, the devolution of powers and duties to the Managing Director and to the officers in the field and other allied matters have been charted out and are now in actual operative effect. This transition I am glad to say has been effected without any friction, and I would like to take this opportunity to convey our grateful thanks for managing Oil India's affairs to Assam Oil Company and for their co-operation since then.

Problems We Had To Face

Like any other industrial undertaking however, Oil India has had its own share of difficulties during the year. The new Board was faced almost immediately with a strike by the Contractors' labour—but this was fortunately settled in a brief time.

Land Acquisition

Another serious problem that arose was the question of land acquisition

for further drilling in our existing concession areas. It is not always possible to acquire land under the Land Acquisition Act 1894 or Rule 119 of the Assam Land & Revenue Regulations. Therefore we had to resort to private negotiations in certain cases. We were however caught on the horns of a dilemma, as we found that adherence to existing procedure for acquisition of land entailed much time and uneconomical use of drilling outfits; although land could be obtained more quickly by private negotiation, prices spiralled and our continuing to pay high prices became impossible not only because of the excessive cost to the Company but also because of the overall effect on land prices for other industrial ventures within the State. We have sought the co-operation of both the Government of India and the Government of Assam in this regard and we trust that with their assistance some solution can be found to this problem.

Utilisation of Natural Gas

The utilisation of natural gas produced along with oil and by itself has presented problems of planning. The Assam Government have now set up a Committee on which Oil India is represented, which would go into these questions regarding market availability of gas, the demands from various consumers, the capital costs involved in storage equipment, the price at which the gas is to be sold, etc. It is gratifying to note that the Assam Government is very keen on fostering and developing gas-based industries in the State.

Royalty

Another important matter to which I would like to refer is the Royalty question. I earnestly trust that there would be an early settlement of this question, as this would enable us to proceed more expeditiously with our development programmes.

Financial Position

As far as our financial position is concerned, I do not think it is necessary for me to go into this in any detail as this is fully set out in the report before you. As you would see the financial picture shows that the net surplus after providing for depreciation, taxation and development rebate amounts to Rs. 1.15 crores which is being transferred to the general reserve. Taking into account that we are still

in the development stage and our sales in 1961 were limited to about 300,000 tons I think this can be considered reasonably satisfactory.

In conclusion I would like particularly to thank my colleagues from the Board for their co-operation and assistance. From the very beginning it was realised by both partners in Oil India (the Government of India and the Burmah Oil Co.) that the successful working of Oil India with two equal shareholders would depend primarily on a basic understanding and agreement on matters concerning the formulation of policy at the Board level, combined with a certain amount of give and take on both sides. I am glad to say that this system has worked smoothly and successfully. The Board has functioned as a homogeneous team and I trust it would continue to function on the same lines in future. This has been due to the spirit of co-operation shown by both the partners and to their understanding of the common objective—namely, to make this new venture a success.

Finally, I would like, on behalf of your Company to express my appreciation to the staff and workers of Oil India who have given their full loyalty to this new organisation and who have spared no pains to contribute to its successful working. In this connexion I must pay here a tribute to Shri M. J. Condon, the previous Managing Director of Oil India, who was instrumental in evolving a basis for the Government and The Burmah Oil Company to work together and in making the transition smooth. I would also like to place on record my appreciation of the excellent team work done by our present Managing Director, Shri J. C. Finlay and the Financial Director, Shri Govindan Nair, which has rendered possible the setting up of Oil India on its feet.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

Advanced ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

The dictionary defines engineering "as the art and science by which the mechanical properties of matter are made useful to man in structures and machines." In the McKee Organization it is much more than that—it is a constant, unflagging effort toward advanced design, increased plant efficiency, improved construction and greater economy.

The results of that effort are readily apparent in the many contributions to the progress of steel-making made by the McKee Metals Division in more than half a century of specialized, world-wide engineering and construction for the steel industry.

Pioneering by McKee engineers in the fields of plant design, ore beneficiation, automation and production methods have been invaluable to the industry. Recent examples are McKee's work in pelletizing and in the first successful application of gas injection in blast furnaces.

McKee can deliver this kind of advanced engineering and construction to the steel industry in India and back it with an unmatched fund of practical experience and specialized knowledge.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY

WESTERN KNAPP ENGINEERING

Represented in India by
DR. B. S. GILANI
29, Jor Bagh, New Delhi 3

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION
Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING
Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

Money

THE CALCUTTA MONEY MARKET

CALL RATE DROPS

Wednesday, 27th June.

THE general level of advances has shown a fairly substantial fall in the Calcutta money market during the past week. The decline is accounted for mainly by the iron and steel and engineering industries. Jute and sugar credit, however, is also slightly lower. There has been a minor increase in advances given for the storage of foodgrains and seeds, but cotton credit remains the same. In the inter-bank market, conditions have been comfortable and the call rate has dropped to 1½ percent.

The exchange market has been extremely dull. There have been hardly any tea bills and only a few gunny bills. The demand for remittance has been keen. Sterling has eased in relation to all the major currencies except the Danish kroner.

BULLION WAS QUIET IN CALCUTTA during the past week. Silver fell from the previous week's level of Rs. 252.25 to Rs. 250.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 214. The London and New York silver prices were 84½d and 101.50 cents.

Gold was easier in sympathy with silver and the price was Rs. 148. The sovereign at Rs. 100.25 showed a loss of Re. 1.

DURING THE WEEK ENDED 22ND JUNE, Government of India Treasury bills for Rs. 69,92,75,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs. 2 CRORES OF 91-day Government of India Treasury bills were opened on 26th June. The total amount offered was Rs. 4,25,00,000. Tenders at Rs. 99.400 percent were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2,400 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 2nd July.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 27th June to 29th June at Rs. 99.416 percent. Sales can be stopped at any time without notice if the Government thinks it necessary. Sales of these bills from 20th June to 23rd June amounted to Rs. 6,36,00,000.

THERE WERE DECLINES OF Rs. 34 crores to Rs. 2,097.04 crores in active notes and of Rs. 22.96 crores to Rs. 2,138.11 crores in the total note issue, according to the return of the Reserve Bank of India for the week ended 22nd July, 1962. The contraction of the currency was adjusted by reducing rupee securities of the paper currency reserve by Rs. 24.99 crores to Rs. 1,813.23 crores. This was done by transferring securities to the Banking Department in which investments rose by Rs. 22.11 crores to Rs. 194.03 crores. Deposits of the Government of India increased by Rs. 12.44 crores to Rs. 69.77 crores due to satisfactory tax collections, while other Government accounts fell by Rs. 46 lakhs to Rs. 4.71 crores.

Balances of commercial banks at Rs. 98.62 crores showed a rise of Rs. 11.48 crores. Balances held abroad improved by Rs. 64 lakhs to Rs. 9.66 crores. Other loans and advances fell from Rs. 124.51 crores to Rs. 122.13 crores, of which advances to scheduled banks against usance bills were Rs. 93.50 lakhs (Rs. 3.64 crores). Ways and means advances stood at Rs. 124.51 crores, against Rs. 118.67 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 15th June, 1962, shows a drop of Rs. 2.47 crores to Rs. 563.76 crores in total deposits. Investments in Government securities are down by Rs. 7 crores to Rs. 221.31 crores, while other authorised investments remain unchanged at Rs. 8.96 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased, have declined by Rs. 2.08 crores to Rs. 292.91 crores. Cash and balances are, in consequence, shown at Rs. 25.37 crores, or Rs. 34 lakhs higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 15th June, 1962, shows Demand and Time liabilities at Rs. 904.80 crores (Rs. 29.51 crores on account of borrowings from banks), compared with Rs. 13.93 crores (Rs. 27.63 with Rs. 902.75 crores (Rs. 27.63 crores) and Rs. 1,260.29 crores (Rs. 15.06 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have risen by Rs. 5.11 crores and Rs. 8.47 crores, Rs. 55.86 crores and Rs. 85.37 crores, respectively. There is an increase of Rs. 3.58 crores to Rs. 575.01 crores in investments. Advances and bills discounted, at Rs. 1,437.29 crores, show a drop of Rs. 5.99 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.5 percent and 66.1 percent, against 5.9 percent and 66.7 percent.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

Stocks and Shares

TURNOVER DROPS: TRANSACTIONS MAINLY IN SPECULATIVE SCRIP

Wednesday Evening.

THE Calcutta stock market has been dull and quiet this week. Turnover has declined considerably because operators are reluctant to extend their commitments due to various uncertainties. In a market in which support is absent, even small selling has caused share prices to decline out of proportion. Transactions have been concentrated on speculative shares and have largely been of a jobbing nature.

It looks as if the market is facing a shortage of funds. Although money has become easier, and the call rate has fallen below 2 percent due to the advent of the slack season, there is no evidence of an increased flow of bank funds into the stock market. As a result, the carry-forward charges at each settlement continue to remain at a fairly high level. Judging from present indications, the banks are not likely to be interested in investing more funds in stocks and shares. There are two reasons for this: the banks' resources are fully employed in more remunerative industrial advances, and they are likely to invest as much as possible in the forthcoming Government loans.

Lyons Range is, for the time being, concerned over certain developments. The first is the growing tension between India and China over the border. Although a war between the two countries is ruled out, India's expenditure on defence will continue to rise. The trend of the U.N. Security Council debates on Kashmir is not considered favourable to this country. Secondly, the near-term outlook for the corporate sector is not very encouraging. Reports of substantial power cuts in Madras State have induced caution. The shortages of coal, transport and power are growing. As a result, idle industrial capacity has increased. This apart, the production costs of various industries have risen due to higher labour and raw material costs. The latest company reports show that these factors have reduced profits. In the circumstances, companies will find the increase in corporation tax very burdensome.

An important factor contributing to the apathy of investors is that the growth prospects of several industries are being reassessed in the light of the present difficulties. It may be observed that the improvement in the stock market during the past couple of years has been mainly due to the growth prospects of certain shares. As long as the shortages of transport, raw materials and equipment continue, industrial growth is bound to be restricted. This is why the recent statement in the Lok Sabha by Mr. Gulzarilal Nanda, Central Minister of Planning, has made no impression. Although he is confident that the third plan will not be pruned, it is difficult to see how all the projects can be executed unless the necessary foreign aid is forthcoming. Foreign countries have not yet agreed to give India all the aid she requires during the plan.

Reports that the U.K., the U.S.A. and West Germany will give India untied credits out of the foreign aid already allocated, in order to help her surmount the present payments difficulty, have been welcomed. But the stock market thinks that the move will have only a temporary effect. If India cannot earn more foreign exchange by raising exports, she will find it difficult to finance the maintenance imports. As things

stand, the prospects of increasing exports are not too bright. Unless Indian industries are given positive incentives for promoting exports, little progress is likely to be made in this direction.

Indian Iron have closed at Rs. 26.18. Selling in this scrip has been restrained by the proximity of the forthcoming dividend for the year ended March 1962. If there is a satisfactory increase in the retention price of steel, the results of the Company should be good. Lyons Range is inclined to take an optimistic view of the coming dividend. Engineering shares have lacked interest, and only small business has been transacted. Attention has been concentrated on Texmaco, Jessop, Guest, Keen, Williams and Braithwaite. Indian Standard Wagon have declined due to profit-taking. Indian Steel and Wire Products and Jay Engineering have enjoyed influential support. Bharat Ball Bearing have fallen.

Turnover in miscellaneous shares has declined sharply, and fluctuations have been narrow. Indian Copper have been steady on hopes that the electrolytic project will be completed soon. Hindustan Motors have been steady on producing good results, but Orissa Cement have reacted on profit-taking. Jardine Henderson and Angelo Brothers have met with scattered support due to hopes of higher dividends. Calcutta Electric have been steady on rumours of an increase in the standard return of electric companies. Rallis have been sluggish in spite of the decision of the Company to subdivide the shares of Rs. 100 each into shares of Rs. 10 each. Assam Sillimanite have been steady as its recent issue has been fully subscribed.

Paper shares have improved slightly due to an increase in the prices of paper and paper board. Business has been largely confined to Orient, Bengal, Titaghur and India Paper Pulp. Shree Gopal have been steady on interested support. United Bank and United Commercial have been taken. Among sugar shares, Dyer Meakin Breweries are prominent due to prospects of a bonus issue. Carew, S. K. G. and Champaran have been sold freely.

Coal shares have been sluggish because investors are disappointed by the recent small increase in coal prices. East Indian have, nevertheless, been firm due to prospects of a rights issue. Burrakur, Bengal and Western Bengal have been easier.

Although the prices of jute goods have been firm, jute shares have fallen out of favour due to the uncertainty concerning the price of fibre during the next season. Scattered interest has been taken in Birla, Budge-Budge, Fort William, Fort Gloster and Northbrook. Nuddea, Barnagore and Anglo-India have slipped back.

Cotton mill shares have turned quiet on a predominance of sellers. Investors are getting worried over the growing shortage of raw cotton and rising production costs. Bharat Commerce, Elgin, J. K. Rayon and Dunbar have declined.

Turnover in tea shares has been small. Except for scattered support extended to companies producing quality teas, prices have generally fallen. Betjan, Tyroon and Dibrugarh have been steady, while Hasimara, Hantapara and Grob have fallen.

Although turnover in Government securities has been negligible due to

the prospect of new Central Government loans being floated in the near future, prices of all loans have hardened, partly due to official support. Banks have shown scattered interest in short and medium-dated stocks. The 3 percent Conversion loan 1926 has hardened to Rs. 71.15.

Bombay Market

PRICES DROP DUE TO BULL LIQUIDATION

SMART RALLY IN TATA STEEL

Wednesday Evening.

EXCEPT for a smart rally in Tata Steel at the close of the past week, the Bombay stock market was quiet. Share prices declined on a broad front due to tired bull liquidation. As many clients defaulted in meeting their commitments, brokers have generally had to face difficulties. They are being forced to sell shares in order to reduce their commitments. But it is believed that there would be no payment difficulty in the market.

Taking advantage of the weaker market, bears were somewhat aggressive. Reports of a further decline on Wall Street, combined with the growing tension between China and India, induced caution. Tata Steel recovered sharply at the close due to rumours of an early announcement of new steel retention prices. Reports that the Company has been permitted by the Government to set up a plant for producing ferro-silicon helped attract replacement buying.

Tata Steel closed at Rs. 148 and Indian Iron at Rs. 25.90. Engineering shares were generally dull, but replacement buying improved. Tata Locomotive to Rs. 355.50. Alcock Ashdown were sold at Rs. 324 and Premier Construction at Rs. 158. Mukand Iron were easier at Rs. 25.85 and Larsen and Toubro at Rs. 32.50. Among motor-vehicle shares, Hindustan Motors were supported on paying a higher dividend, while Premier Automobiles were sluggish around Rs. 130.50.

As it is claimed profits during the current year would be lower than in 1961 due to increased production costs, cotton mill shares were sold freely. At the close, Century recovered somewhat to Rs. 628 and Bombay Dyeing to Rs. 67.60. Kohinoor were dealt in at Rs. 299.50 and Standard at Rs. 974. Khatau were taken at Rs. 475 and Svadeshi at Rs. 268.50. Business passed in Simplex at Rs. 167 and in Morarjee at Rs. 400.50. India United ordinary came to hand at Rs. 22.08 and Apollo at Rs. 2.20. Elphinstone declined to Rs. 122 due to the cautious speech of the chairman.

Miscellaneous shares moved down in the absence of support. Among cement shares, Associated Cement were placed at Rs. 157.50 and Digvijay at Rs. 205.50. Mining shares showed mixed trends. B. B. Petrol rose to Rs. 1.96 on rumours of capital refunds, while Shivraipur Syndicate were subdued at Rs. 35.50. Sugar shares were quietly steady and Belapur were placed at Rs. 229. Phalton were sold at Rs. 100.50 and Walchandnagar Industries at Rs. 156.50. Steamship company shares were quiet, and Scindia Steam were offered freely down to Rs. 12.12. Great Eastern Shipping were sold at Rs. 12.56. Fears of cuts in imports of rayon yarn

induced pressure in rayon shares. National Rayon slipped back to Rs. 516.50 and Baroda Rayon to Rs. 134. Gwalior Rayon were about steady at Rs. 60.50. Bombay Burmah fell to Rs. 666. Chemical shares were quiet and Tata Chemicals were available at Rs. 16. India Dyestuff recovered to Rs. 485 at the close. Business was done in Synthetics and Chemicals at Rs. 224 and in Ceat Tyres at Rs. 177.50.

Bank shares attracted little interest. Bank of India were transacted at Rs. 112.50 on the issue of rights shares. Central Bank of India came to hand at Rs. 61. In the insurance group, New India Assurance were wanted at Rs. 71.

Among electric company shares, Ahmedabad were indicated at Rs. 89 and Bombay Suburban at Rs. 103.25. Tata Hydro were taken at Rs. 113.

Madras Market

TURNOVER DECLINES SHARPLY INVESTORS WORRIED OVER POWER CUT

Tuesday Evening.
THE Madras stock market was sluggish during the past week and turnover declined sharply. The

trend was generally downward due to selling pressure. Investors were worried over the cut in power supply. At the close, there was a modest recovery due to replacement buying, induced by firmer advices from Calcutta and Bombay.

Government securities lacked interest, because the new Central loans are expected to be floated soon. Bank shares were generally neglected, but scattered support was forthcoming for good electric company shares. Sugar shares showed mixed trends. Selected tea shares were bought on good crop reports, but rubber shares were not fancied. Coffee shares met with scattered buying due to a smaller crop. Cotton mill shares were not favoured as production costs have increased. Interest in miscellaneous shares was at a low ebb.

In the banking section, Canara Banking Corporation were done at Rs. 75.25 as the recent rights issue is believed to have been fully subscribed. Indian Overseas were dealt in at Rs. 164.50 and Indian at Rs. 176. Among electric company shares, Cochin were steady at Rs. 12.25 and Vellore at Rs. 14.50. West Coast came to hand at Rs. 16.12 and Negapatnam at Rs. 12.10.

In the sugar section, E.I.D. were bought at Rs. 39.50 on declaring an interim dividend of 7.5 percent, while Deccan were easier at Rs. 9.95. Mysore were steady at Rs. 53.40, but India were sold down to Rs. 9.55. United Breweries were transacted at Rs. 82 and Travancore at Rs. 7.35.

Among planting shares, Blue Mountain reacted to Rs. 2.41 and Cochin Malabar to Rs. 7. Balanor were placed at Rs. 13.75 on declaring a taxable ordinary dividend of 12 percent. Coorg came to hand at Rs. 4.95 on announcing a taxable ordinary dividend of 15 percent. Consolidated Coffee were easier at Rs. 18.45 and Ouchterlony at Rs. 3.65. Periakaramalai were sold down to Rs. 3.28, but Highland attracted support at Rs. 13.40 on paying a taxable ordinary dividend of 15 percent. Peermade were steady at Rs. 20.45, as were Parkside at Rs. 23. Tekoy were sold at Rs. 5.45 and Tropical at Rs. 18.75. Kil Kotagiri were about steady at Rs. 4.92 and Nilgiri at Rs. 9.10.

In the textile section, Buckingham were taken at Rs. 266 and Bangalore Woollen at Rs. 245. Janardana were placed at Rs. 76.50 on paying a taxable ordinary dividend of 9 percent. Lakshmi were steady at Rs. 158 on declaring a taxable ordinary dividend of 25 percent. Madura were dealt in at Rs. 36.10 and Mettur at Rs. 400. South India Viscose recovered to

Rs. 169.70 and Travancore Rayon to Rs. 38.65. Tirumurti were taken at Rs. 142 on paying a taxable ordinary dividend of 15 percent. Ramakrishna were bought at Rs. 250 and Sarada at Rs. 96.

Among miscellaneous industrials, Aluminium Industries recovered to Rs. 24, but Ashok Leyland were sluggish at Rs. 8.45. Dalmia Cement improved to Rs. 13.50 on declaring a taxable ordinary dividend of 12 percent. India Cement were placed at Rs. 6.19 and Mettur Chemical at Rs. 13.05. Mysore Paper were transacted at Rs. 13.70 on maintaining the taxable ordinary dividend at 15 percent. Ogale Glass came to hand at Rs. 6.35 on declaring a taxable ordinary dividend of 10 percent. Textool were sold down to Rs. 153.33, but Tube Investment were steady at Rs. 286. Spencer were wanted at Rs. 23.18, as were Standard Motors at Rs. 16.62. Seshasayee Paper recovered to Rs. 8.05 and Madras Rubber to Rs. 22.30. Enfield were quiet at Rs. 12.10 and F.A.C.T. at Rs. 8.25. Kirloskar Electric were steady at Rs. 23 and Madras Aluminium at Rs. 19.

WITH WALL STREET

GOLD SHARES RISE

London, 27th June.

THE stock market succumbed to the renewed and continuous weakness which developed on Wall Street during the past week, and extensive and substantial losses were recorded in equity sections. Only gold shares were firm. There was nothing to absorb the persistent small selling. On the week, losses in equity shares ranged to several shillings and many prices were at their lowest levels since the autumn of 1959. The latest industrial production figures and overseas trade data were not encouraging, nor was most of the company news, but a slightly helpful influence was provided by the balance of payments figures showing a surplus for the first quarter of the year. The appearance of a £400 million Exchequer issue had a dampening effect on the gilt-edged market, but even so, the tone was reasonably satisfactory. Although steady following the late rally which developed on Wall Street on Monday, industrial equities recorded substantial falls on the week. Losses of 1s to 2s were general, while there were considerably larger falls in places. Banking and insurance suffered sharp falls and property shares were weak throughout. The Jenkins report on company law, which recommended that banks and insurance companies may continue to be exempted from disclosure of their hidden assets contributed to the weakness. On the recommendation that the exemption be withdrawn from shipping companies, the shares concerned moved up, but the gains were not fully maintained. Gold shares returned to favour and recorded gains. Other mining sections, however, were on the dull side. Oils fluctuated within narrow limits, while teas and rubbers also moved narrowly. Dollar stocks were substantially lower in sympathy with Wall Street.

New Delhi

Shell and Esso Refineries May Be Allowed
to Raise Throughput

(FROM OUR NEW DELHI CORRESPONDENT)

IN view of the foreign exchange crisis, it is expected that the Government of India will permit the Burmah-Shell and Esso refineries to use fully their installed capacity of almost 6 million tons, which would save over \$6 million in foreign exchange annually. Originally, the installed capacity of the three refineries, including Caltex, was 3.9 million tons a year. To meet the foreign exchange crisis five years ago, the Companies were permitted to expand the throughput capacity to a total of 6 million tons a year. Since then, they have further expanded their capacity by 1 million tons. As part of his strategy against the oil Companies, the Central Minister of Mines and Fuel, Mr. K. D. Malaviya, had early in 1962 pegged the combined throughput of the three refineries to the 1960 level of less than 6 million tons. This, however, resulted in an increase in the import bill for petroleum products in short supply, such as furnace oil, kerosene and diesel oil. *Prima facie*, Mr. Malaviya has gained his point because last month Esso and Burmah-Shell expressed their willingness to replace the special refinery agreements by the usual licences under the Industrial Act. The prevailing foreign exchange crisis has, however, forced the Minister to revise his stand and allow expansion of the refinery throughput.

production of pig iron using Neiveli lignite and Salem iron ore. As the latter is of poor quality and requires beneficiation, the terms of reference were subsequently extended to include the consideration of other iron ores which might be found suitable. Recently, the Government has sent a team of observers to East and West Germany and Norway in accordance with the recommendation of the technical committee. The team will specially observe the working of low-shaft furnaces in West Germany. Meanwhile, as recommended by the committee, the Madras Government is undertaking preliminary site surveys for the plant and its various units. The committee's recommendation that a firm of consultants should be appointed for the preparation of a project report is being considered.

Bokaro Plant

Mr. Subramaniam informed the Consultative Committee that a team of experts sent by the U.S. Agency for International Development, to undertake a techno-economic survey of the projected Bokaro steel plant, has arrived in India. It is hoped that it will complete its work within seven months. The team will examine the processes which have been recommended for Bokaro, the availability of raw materials and transport, and the economics of the project. It will take nearly three-and-a-half years to complete the Bokaro steel plant after the submission of the report. The plant will have an initial capacity of one million tons of ingot steel and 350,000 tons of pig iron. An Indian firm of consulting engineers has been entrusted with the preparation of the detailed project report. It took up the work early in May, and the report will be submitted within 20 months.

Belgian Steel Team

Some Belgian steel interests are now in India seeking collaboration with some of the five licensees who have been permitted to set up pig iron plants in the private sector. As already reported, the Italians have also shown interest in these projects.

Scrap Export Ceiling

A ceiling of 360,000 tons has been fixed for the export of scrap against the import of steel. Imports are allowed to the value of two-thirds of the foreign exchange earned on export. Requests have been received for removing the ceiling. It is not, however, considered advisable to do so, considering the estimated availability of scrap in the country. Besides, it is better to export and earn some free foreign exchange rather than use the export earnings solely for steel imports. The scrap policy will, however, be reviewed in the light of the report of the Scrap Investigation Committee, which is now being considered by the Government.

Steel Plant for South

The Central Minister of Steel and Heavy Industry, Mr. C. Subramaniam, told the Informal Consultative Committee of Parliament attached to his Ministry that it might be possible to set up a steel plant based on Salem iron ore and Neiveli lignite in south India. The Government of India has appointed a technical committee to examine the proposal. The committee has been directed to consider the

Foundry-forge Plant

The Government is considering setting up a second foundry-forge plant in the public sector. The detailed scheme has not yet been prepared.

Overlicensing of Imports

The following questions were asked in the Lok Sabha last week:

the answers were given by Mr. Manubhai Shah, Minister of International Trade.

MR. INDRAJIT GUPTA: What measures are being taken to avoid overlicensing in the case of import licences? May I know whether the Government's attention has been drawn to the fact that, whereas Rs. 450 crores was allocated for import licences for the private sector during the whole of the third plan, in the very first year of the plan itself, licences worth Rs. 400 crores have been issued?

MR. SHAH: Those figures are not at all correct. Overlicensing is avoided for the simple reason that the targets of the plan have been considered and deliberated upon several times before they are arrived at, and it is within the target capacity that the industries are allowed licences. If, for any particular reason, the rate of growth or the national priorities are altered during the third five year plan or the subsequent plans, then we again reconsider the matter and either upgrade or downgrade the target. It is within the targets that the whole thing is operated.

MR. GUPTA: The hon. Minister has not answered the second part of my question.

MR. SHAH: I said that the figures were not correct. Neither was any firm allocation made for the private sector, nor are the amounts mentioned by the hon. member accurate.

MR. M. K. KUMARAN: In the light of the recommendations of the Mudaliar Committee, may I know whether the Government has taken steps to decentralise the licensing of several items? As for newsprint, may I know whether it has accepted the recommendation of the Mudaliar Committee? In view of the difficulties experienced by newspapers published from distant places, may I know whether the Government will reconsider the position and accept the recommendation of the Mudaliar Committee?

MR. SHAH: The Mudaliar Committee did make recommendations in quite a different context of the national economy. Subsequently, in the following months, as the House is aware, a much more stringent situation has arisen. Therefore, the Government does not contemplate any further decentralisation at all.

Issue Sidetracked

The issue, it will be seen, has been sidetracked. As early as 8th March, 1962, this correspondent reported as follows: "Authentic figures are now available of the total amount of foreign exchange involved in the industrial licences which were granted during the first nine months of the third five year plan, that is, during the period ended December 1961. The figure is Rs. 400 crores, while the total foreign exchange allocation for the entire five years is Rs. 450 crores. Of the licences issued, a certain number involving Rs. 199 crores in foreign exchange were cleared by the Capital Goods Committee during this period. Of this, Rs. 50 crores to Rs. 60 crores was directly negotiated out of foreign credits, such as the D.L.F. loans, Swiss aid, etcetera. There has obviously been excessive licensing—planned or otherwise—in the case of chemicals, forgings and

castings, and man-made fibres." These figures were not challenged when a member of the Planning Commission, Mr. T. N. Singh, referred to them at a meeting of the Industries Advisory Council.

The issue raised in the Lok Sabha was whether there was overlicensing in the sphere of imports. The Minister's reply was that licensing was within the target fixed by the Planning Commission. But, in the first place, there has been overlicensing in relation to certain industries. Secondly, even if the licensing was within the target laid down by the plan, in some cases, within the first nine months of the plan the target was reached. The economic consequences of Mr. Manubhai Shah's work as the Central Minister of Industries till recently are now being felt. As already reported, "show cause" notices have been issued to a number of licence-holders, and in several cases the licences have either been surrendered or cancelled.

Board of Trade Meeting

The second meeting of the Board of Trade will be held in Calcutta on 6th July. The Central Minister of International Trade, Mr. Manubhai Shah, will preside. The meeting will have an eight-point agenda. The export possibilities of jute goods, cotton textiles and tea will be specifically examined. The meeting will also consider the question of expanding credit facilities for exporters. There will be preliminary discussions on the preparation of cost reduction programmes, with special reference to the principal export industries and commodities. The other questions the Board will discuss are the setting up of free trade zones, public recognition for outstanding export performance, and widening of the scope of commercial education in the country. It will also review the working of the commercial sections of Indian embassies abroad.

S.T.C. Concludes Trade Pacts

The State Trading Corporation has concluded link trade arrangements with trading houses in Switzerland, France, West Germany, Austria, Belgium, Sweden, Finland, Tunisia and Jordan. The total value of the trade envisaged under these agreements is Rs. 20 crores either way. Exports under these deals to-date are of the order of only Rs. 7 crores.

Increasing Exports

The more important new commodities, whose export the Government is trying to encourage, are the following: Sugar, ferro-manganese, cement, metals (iron and steel), engineering goods, chemicals and allied products, footwear, plastic goods, woollen manufactures, confectionery and biscuits, animal casings, *vanas-pati*, sports goods, and power alcohol.

Trade Delegations

India is likely to send trade delegations to Czechoslovakia, Hungary, Yugoslavia, Poland, East Germany, Rumania, Bulgaria, Russia, and Pakistan to discuss the existing trade agreements with these countries. Trade delegations may also be sent to other countries in Africa, west Asia and south-east Asia. Trade delegations from a number of countries in west Asia and Africa are expected in India in 1962. In addition, several export promotion councils and commodity boards propose to send delegations to various countries as well as invite delegations from foreign countries to visit India.

Producing Steam Turbines

Birla Brothers have submitted a scheme to the Government for manufacturing steam turbine generators in collaboration with Westinghouse Corporation of the U.S.A. The pro-

Key to Planning & Prosperity

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national.

Saving in the form of Bank Deposits provides resources for the National Plan.

United Bank of India Ltd.

HEAD OFFICE: 4, CLIVE GHAT STREET, CALCUTTA

with branches all over India and East Pakistan, and correspondents in all important trade centres the world over.

offers complete banking service

ject is estimated to cost about Rs. 6 crores, of which Rs. 4.5 crores will be in foreign exchange. The Government has not yet considered the scheme. The location of the factory is still being considered. The manufacture of heavy electrical equipment is reserved for the public sector under the Industrial Policy Resolution of 1956. The Government has appointed an *ad hoc* technical committee to assess the demand for heavy electrical equipment. The question whether further capacity should be created in the private sector for manufacturing heavy electrical equipment will be decided after examining the committee's report in the light of the existing capacity in both the public and private sectors and the capacity being planned and developed in the public sector.

Manufacturing Transformers

The terms of collaboration between Messrs Hitachi Transformers and Electricals (Kerala) Ltd, Trivandrum, and Messrs Hitachi of Japan have been approved by the Government of India. The firm has been permitted to produce transformers up to 50,000 kVA.

Ball Bearing Projects

The ball and roller bearing scheme of East Asiatic Company is in an advanced stage, it is learned. The Company is a Danish enterprise, which is planning the project in collaboration with a U.S. firm. Meanwhile, Russia has been requested to prepare a techno-economic survey of the ball and roller bearing project of the Government of India.

Bhilai Refractory Plant

The Refractory Manufacturers Association has lodged a protest with the Government of India against its plan to set up a refractory plant in Bhilai with Russian collaboration, on the ground that there is already adequate capacity in the country to meet the current demand. The Government does not accept this contention, it is learned.

Motor-car Manufacturers Hit

Almost all motor-car manufacturers in India have made representations to the Central Ministry of Heavy Industries against the cut in their foreign exchange allocation, leading to increased difficulty in importing components. The cut, it is pointed out, will accentuate the shortage of commercial vehicles. The Government is examining their case, it is learned.

Vickers Offer Viscounts

Representatives of Vickers were in New Delhi last week. They offered the Government some second-hand Viscounts. They pointed to the comparative economies of Viscounts over jet aircraft in the matter of price, cost of operation, etcetera. Trans-Canada and B.E.A. may be prepared to sell some of their Viscounts, it was disclosed.

U.K. Investor Interest in India

Mr. Bowes-Lyon of Eazard Brothers—the well-known financiers of London—was in Delhi last week. He was investigating the possibility of institutional British investors taking an interest in British collaboration in Indian ventures. He has been told that investment and know-how will be welcomed in the structural, castings, forging and machine tool industries.

Petro-chemical Industry

Dr. Heeny of the French Institute of Petroleum will shortly arrive here to advise the Central Ministry of Mines and Fuel on the petro-chemical industry in general and the Kane report on the industry in particular.

CAPITAL, 28th June, 1962.

Plantation Problems

Problems concerning the three plantation industries—tea, rubber and coffee—were discussed at the meeting of the Informal Consultative Committee of Parliament attached to the Central Ministry of Commerce and Industry in New Delhi. The Committee was informed of the various measures taken to encourage tea production. Under a scheme known as the tea plantation finance scheme, the Government of India has decided to give a loan of Rs. 5 crores to the Tea Board. The amount is to be used as a revolving fund and loans given out of it to tea estates for purposes of replantation, extension or replacement of old areas. Under the scheme, any garden having not less than 20 acres under tea is entitled to receive assistance. The export duty on tea has been reduced from 44p a kilogram to 25p a kilogram and a drawback of excise duty at the flat rate of 15p a kilogram at the point of export is now allowed. Tea can now be exported without any quantitative restrictions. In all trade agreements with foreign countries, tea exports are stipulated.

The coffee acreage has been going up by about 4,000 acres and the output by about 3,000 tons a year. Output at the end of the third plan is expected to be 80,000 tons. In 1960-61, it was 67,925 tons.

The Committee noted that the gap between rubber production and consumption in the country is widening on account of the development and expansion of the rubber products manufacturing industries. In 1961, 21,693 tons of rubber was imported. Steps are being taken for increasing rubber output. A scheme for replanting 70,000 acres of old low-yielding rubber lands with high-yielding strains in ten years is being implemented from 1957. There are also loan schemes to help existing small growers. Two licences had been issued—one for manufacturing general-purpose synthetic rubber (S.B.R.) with a capacity of 30,000 tons in Bareilly and the other for producing Cis-1,4 polybutadiene in Assam with a capacity of 20,000 tons. (This is a new type of rubber. It has a low heat build-up and requires less natural rubber for compounding.) It is also proposed to manufacture about 15,000 tons of reclaimed rubber in India by the end of the third plan period. The Bareilly plant is expected to go into production by the end of 1962. The other plant is likely to take some more time.

Acquiring Mogul Line

The face value of shares of the Mogul Line was Rs. 100 a share. The Government of India, however, acquired them for Rs. 367.62 a share and paid about Rs. 2.95 crores for 80,180 shares as follows:

	(Rs.)
Cost of purchase of 80,180 shares by the U.S.C. from the P. and O. at Rs. 360 a share	2,88,64,800
Exchange, due to payment in sterling	50,200

London

Solving Commonwealth Trade Problems in the Common Market

(FROM OUR LONDON CORRESPONDENT)

PROSPECTS of an early agreement on Britain's entry into the European Common Market have substantially improved. This is as a result of new proposals drafted by the "Six" in response to proposals put forward by Britain. These go a long way towards providing adequate safeguards for Britain's trade with Australia, Canada and New Zealand, and with the Asian and African Commonwealth countries.

Officials negotiating on behalf of the Six tabled the following "draft solutions" at a three-day meeting with their British counterparts in Brussels last week:

(1) A protocol should be added to the Rome Treaty recognising that the Commonwealth preferential system covering exports to Britain of cereals and other products from the "white" Commonwealth countries and tropical food from the African Commonwealth countries should be replaced by a system of worldwide agreements which would safeguard the trade indefinitely. The preferences or equivalent safeguards would continue until the worldwide agreements are negotiated. The proposal, it is said, would meet the fears of Australia and Canada that they would face economic crises due to the ending of preferences by 1970.

(2) Immediately after Britain and the Six have agreed on the terms of the former's entry, some 25 nations, including the ten members of the enlarged Common Market, the Commonwealth, the United States and Latin America, should be invited to an "economic conference of the free world." Most of the negotiating delegates expect that Britain's entry into the E.C.M. will be ratified by Parliament by July 1963. It is suggested that the conference should be held as soon as possible after the ratification.

Negotiation with India

(3) Agreements should be negotiated with India, Pakistan and Ceylon to establish a system of "close economic co-operation" between them and the Common Market. This co-operation, it is expected, will come into full effect by 1966. It is now apparent that the Common Market countries are prepared to reach general trade agreements with India, Pakistan and Ceylon, if Britain joins the European Economic Community. In a paper submitted at the Brussels negotiations, they have said that this would take account of the development plans and financial problems of the three countries. The Six are ready to declare their willingness to conclude such agreements before Britain joins. The agreements would take effect in 1966, at the latest. Apart from the recognition of the development plans and financial problems of these countries—something most of the Six have already done in their generous participation in aid to India—there are no concrete assurances. There is evidence, however, that the Six have all but decided to make an important concession to India and Ceylon by reducing their 18 percent tariff on tea to 1 percent, or even possibly nil. Britain has asked for this, and there has been no strong objection from the Six. Commonwealth tea enters Britain duty-free. India alone earns £90 million a year from it. Free entry into all of Europe would help

India and Ceylon greatly. Since they are the main producers, it would presumably far outweigh any losses arising from the end of the 5 percent preference in the British market. The Six may also be ready to drop their duties on spices and cashewnuts since these, like tea, are not produced either in Europe or in the French Community.

Textile Tariff

None of these, however, was mentioned in the paper. The Six stated merely that proposals for jute goods, processed foods, and tropical produce would be added later. The only important item on which they committed themselves was cotton textiles, on which they rejected an appeal by India and Pakistan for a postponement of the first application of the common external tariff to Britain. This could be foreseen, because

Britain herself had abandoned this position. On joining the E.C.M., 30 percent of the common external tariff of 18 percent on cotton textiles would be applied by Britain, and the Six suggest that this should be increased to 60 percent 18 months later. (The British suggestion is that this should happen after the effect on a year's trading could be seen, which is about the same thing.)

To meet the British suggestion that the tariff should go up only if imports are not being damaged, the Six have proposed an interesting formula. It is that the Common Market Commission (which is a non-national body of policy-making civil servants) should make an annual report to the Council. If trade declined, they could at any time make recommendations to the Council, including an increase of quotas where it was applicable. If the Council failed to

agree to the recommendations within three months, the Commission could authorise Britain to suspend the tariff or to open a duty-free quota to cover the loss.

This agreement would put the initiative in this transition period on the Commission, with its European outlook, rather than on particular countries with industries to protect or on Britain, which presumably has a special interest in the welfare of India and Pakistan. It also recognises that, in this period, the maintenance of outlets for Indian textiles at their present level is a British rather than a European responsibility. Justifiably, perhaps, if shortfalls are to be met, they will continue to be at the expense of Lancashire rather than of Milan.

Tropical Products

So far so good. But it is disappointing to find that the Council of Ministers of the Common Market countries has failed to reach agreement on the difficult question of tariffs on tropical products generally. Instead, this has been referred back to the experts for further study. There had been hopes that the Six might reach an agreed position on this in preparation for the negotiations with their associated African territories, but this is now unlikely. The whole question of associated

ma. VOL. 660

CAPITAL, 28th June, 1962.

overseas territories has been complicated by the British application for membership. Under the system of association, the former French colonies (plus some former Dutch territories and Somalia) have entered into what is accepted in G.A.T.T. as a free trade area. Their goods enter freely into Europe.

While exports from these territories do not compete with home-grown European produce, their favoured position on the European market is obviously of great interest to other tropical countries. The extent of their advantage over others is determined by the level of the common European tariff. It is in the interest of the former French colonies that Europe's tariffs should be high, and in the interest of other countries (especially South America) that they should be low. The associates are also interested in the level of aid.

Under the present agreement of association, which expires at the end of this year, the tariff level has been fairly high, and the development fund has come to a total of \$531,250,000. The argument is about just how important tariff cuts will be and the level at which the development fund will be set for the next five years. While the African countries have been asking for about \$1,000 million, the French have favoured \$800 million and the Dutch about \$800 million.

British entry into the market is likely to reduce the value of association if it means a new batch of African and West Indian associates sharing the benefits of free entry into Europe. Of course, the value of association would be increased if Britain was obliged to offer the former French territories free entry while accepting the common tariff against important competing Commonwealth territories. Presumably, however, this prospect of reverse preferences against the Commonwealth is one of those conditions which the U.K. Government is unwilling to accept.

U.K. Publicity Drive

Apart from these day-to-day developments, it is evident that the Government is launching a publicity drive to bring the Common Market and Britain's proposed entry to the attention of the public. In a Party political broadcast on television the other night, Mr. Macmillan and Mr. Heath devoted themselves to explaining many points. Mr. Macmillan said the question of Britain's entry was one of the greatest issues of the day. It was a national issue which would affect "our lives and those of our children", and also Britain's position in the world. Mr. Heath described in more detail the reasons for the Government's efforts to enter the Community and the effects of membership. "I believe," he said, "that in the modern world we can best use our influence by becoming a part of the European Economic Community if we can make satisfactory arrangements to do so. We have weighed this long and carefully. We have not been rushed into it. These developments have been going on now for over ten years. We have not been pushed into it by the U.S.A. or by any other country."

Mr. Heath said that the Government had accepted the concept of a common agricultural policy, but had asked for special safeguards to be made for British agriculture. As to Commonwealth trade, Mr. Heath said: "It is not a question of choice between the Commonwealth and Europe, or a conflict between the two. What we are trying to do is to arrange the pattern of trade with our Commonwealth countries to fit into the system established in Europe with the common tariff."

WEST AFRICAN PURCHASES RAISE SACKING PRICES

THE demand for hessian has been strong during the past two months, while enquiries for sacking have been comparatively few. But the market has received a fair boost since it became known last week that during the period of selling pressure, West Africa had made large purchases for June-July shipment. In the case of other buyers, particularly Australia, the business done each day is known throughout the market. But West African buying takes place through a few shippers, and there is no report of the business done until much later. The West African purchases were revealed only when June bookings for two steamers became definite; and two steamers seemed likely to be booked during July also. A new feature, meanwhile, was the Russian entry into the sacking market.

The reported purchase of 70,000 bales by West Africa (from India and Pakistan together) has changed the mood of the market radically. The purchase is the more encouraging since June, July and August are normally lean months for local sacking purchases. These developments, combined with the Argentine's sudden decision to start buying hessian again early this week, has caused much excitement.

At a meeting held in Calcutta last Saturday, the Central Minister of International Trade, Mr. Manubhai Shah, assured full support to the jute industry in its efforts to increase production and step up exports. The Minister's attention was drawn to the inroads made by Pakistan into India's traditional export markets. The Minister indicated that the Central Government would consider suitable measures to counter Pakistani competition when it became really serious. At the moment, it appears that, between India and Pakistan, the total output is not sufficient to meet the overall world demand, which has increased sharply. The jute industry, it is believed, was told that it should demonstrate how it is trying to increase production. The Minister was assured of the mills' desire to raise output, but it was pointed out that the power supply was not sufficient. An increase of 10 MW in the daily supply would be the minimum required to increase production. Mr. Shah asked the industry to help give the farmer a fair price for raw jute, as this was necessary to ensure a steady supply of fibre. The problem of maintaining reasonable floor prices for raw jute was also discussed with the industry's representative.

Jute Exports to East Europe

The first contract has at last been signed for the export of raw jute from Calcutta to the east European countries. It is reliably learnt that sales of 10,000 bales to Poland and Czechoslovakia have been finalised. Negotiations are also in progress with other east European countries for the export of lower-grade jute. Evidently these countries are buying only small lots at a time. Although the west European countries had also shown interest in buying Indian jute some time ago, no serious move has been made, as they are not prepared to pay the price asked by the authorities. As far as east European countries are concerned, the purchases are being paid for from surplus rupee accounts; as such, the price does not present the same problem.

The Srivastava Committee has been appointed to find out ways and means of increasing exports of jute manufactures. There have been meetings between the Jute Fabric Shippers Association, the Indian Jute Mills Association and the State Government, but nothing concrete has materialised yet. Questionnaires have been issued to elicit the trade's been issued on various aspects. It is hoped that, in their efforts to increase exports, the authorities will also ensure that shippers are not harassed by Government departments like Customs and excise in effecting shipment of their contract goods.

Trade Agreement with Pakistan

A review of the trade agreement between Pakistan and India, which expires on 20th March, 1963, has revealed that, against the ceiling provided for jute cuttings for the two years of the agreement, there is an unutilised balance of Rs. 80 lakhs. Together with the ceiling of Rs. 40 lakhs for the current year, this makes a total of Rs. 120 crores for which India should buy jute cuttings from Pakistan in non-convertible Indian currency to fulfil her obligation under the agreement. It thus appears that India still has to buy about 150,000 bales from Pakistan.

Raw Jute Prices in Pakistan

A move has been initiated in Pakistan for fixing minimum prices for raw jute in order to help growers in that country. Further details about the price level proposed are not available at the moment. Meanwhile, reports received from Pakistan while, reports received from Pakistan indicate that the crop there will be larger than was expected a month ago. One reliable source suggests that it will be 7 million bales. The that it will be good, but the crop quality will be poor. River may be about three weeks late. Levels continue to be normal, and levels continue to be an excellent crop. But one circumstance lent crop. But one circumstance which might cause harm would be the lack of steeping water, which was responsible for damaging the quality of the 1961-62 crop.

U.S.A. Reduces Duty

A Press release states that a reciprocal tariff agreement has been signed by the U.S.A. and India. Duties have been reduced by the U.S.A. on certain imports from India. The release states that an important concession has been made to India by a reduction in the duty on jute manufactures, but the exact details are still awaited. The present U.S. import duty on cordage twine is 3½ cents a lb, on coarse yarns up to 9 cents, on fine rovings 2 cents to 7 cents, on cotton bagging 6 cents a square yard, on hessian bags 1 cent a lb plus 5 percent ad valorem, and on webbing and jute carpets 35 percent ad valorem.

THE JUTE MARKETS

Manufactured Goods: The market opened firm last Thursday on hearing about the West African purchases for June-July. Starting from Rs. 123.75, B Twills rose sharply, with minor fluctuations, to touch Rs. 131 at the close; 40in. 10oz. hessians were marked up to Rs. 57.20 from an opening of Rs. 53.76. Although the actual amount of overseas business for sacking during the past week was not much, the market began to think of the potential demand. The offtake by West Africa for June and July was considered to be more than sufficient to

take care of the surplus B Twills presently available in the market. The discount for June B Twills a week ago was 75nP, but they were traded at a premium of Rs. 3.50 over August futures at the close this week. July-September B Twills were equally firm, commanding a premium of Rs. 3.50 over futures.

The shipping instructions revealed that Russia had made bookings for the shipment of cornsacks to Odessa. According to reliable market information, a few thousand bales were purchased by Russia some time in March-April this year, with the intention of carrying out tests to see if bags manufactured from sacking would suit their requirements. The market thought that this was a new factor which could become important in the months to come if Russia decided to divide her purchases between hessians and sacking. It would help improve sacking prices, compared with hessians, as Russian purchases had provided one reason for the firmness of the hessian market. The Chilean Nitrate Corporation bought 2,000 bales for July shipment, while Rangoon bought the usual quota of 2,000 bales for June-July-August shipment. Formerly, Burma used to buy large quantities on a tender basis, but recently she has adopted the policy of inviting offers every Thursday, when the authorities decide whether or not the price level warrants purchases. A further tender will be held during the first week of July for various sacking qualities. The Middle Eastern countries, which had stayed out of the market for some time, were believed to be likely to come in for their seasonal requirements in the near future. Khartoum issued notices for two tenders during the first two weeks of July, totalling about 7,000 bales of jute goods for July-September shipment. It was rumoured that Nigeria was negotiating further large orders for up to 20,000 bales. The trade anxiously awaited the Cuban delegation's arrival, and hoped that both Cuba and Australia would buy. It was said that, in sacking, Pakistan was 95 percent sold for July-September, so a major part of the business for these months would come to India. In short, the outlook for sacking appeared to have brightened considerably.

In hessians, with a steadily rising market, business was placed daily by the U.S.A. and Canada. There was a change in the buying policy, as comparatively heavy purchases were made for January-February-March 1963 shipment. The major part of the purchases were made by Canada, the total business being estimated at about 10,000 bales. Purchases made for nearer deliveries were much less. The U.K. Jute Control too was very active. The total business placed for

July-August-September shipment was over 5,000 bales. Small orders were placed by Australia, while Continental markets appeared happy to sit out and watch the price levels increasing daily. The climax of the week was Argentina's panicky re-entry for June purchases. On Tuesday, 3,000 bales to 4,000 bales of 40in. 10oz. hessians were reported to have been bought. The steamer having been delayed until 20th July, pressure was concentrated on 15th July delivery, where business was freely transacted up to Rs. 63.50, with sellers reserved. Much speculation took place on how much more Argentina would buy for this shipment. She had suspended purchases earlier at the level of Rs. 58.50 as the price was considered too high. Perhaps this week's purchases are an indication of a basic change in her buying policy. The market conclusion is that stocks of hessians in the Argentine must be low.

THE FOREIGN JUTE MARKETS

YARN AND CLOTH TRADE ACTIVE

(FROM OUR DUNDEE CORRESPONDENT)

QUITE a change came over the jute industry last week after the new Pakistani E.P.C. minimum prices were announced over the previous week-end. The former tendency in raw material prices generally, and particularly in Tossa, brought out considerable business in jute yarns and cloth, and, of course, bags. The whole industry had been waiting for something like this too happen, and most buyers participated in the business that was placed with spinners and manufacturers. Quotations for raw jute were most irregular, but this is generally the case at this time of year when both old and new crops are being offered. On some days, the prices for old and new grades were on much the same level, but during the closing days of the week, there was some difference. Mill Firsts were fairly freely offered at £115 for new crop (old £116), with Mill Lightnings at £102 and £101 5s, respectively. Mill Hearts at £94 and £95, and Grade Hearts at £81 for both. Grade Tossa-2/3 was at £115 for old crop and £114 for new, fours at £102 and £101 10s, and Continental Tossa-2/3 at £97 15s and £98 10s, respectively, c.i.f., U.K.-Continent, June-July shipment for old crop and August-September new (while jute) and September-October (dark).

Dundee spinners were credited with buying a large quantity of the raw material, mainly in new crop. No doubt this was inspired by the activity in the jute yarn market where delivery was becoming a big problem. There was a scarcity of yarns on account of the lack of spinner-workers. Some manufacturers were compelled to work short time because of the yarn shortage. Many of the buyers were spinner-manufacturers. As a result, spinners have been very busy and some are quoting for delivery as far forward as October-November, while practically all widths and weights of hessians have been sold forward for the next two to three months. Prices are very firmly maintained and producers declare they should be dearer.

Calcutta goods ruled very firm and dearer at 91s for 40in. 100z. hessians and 63s 9d for 7½oz. June, 88s and 63s 6d July, 83s 6d and 61s 6d August and September, and 79s 6d and 59s 9d October-December, with B Twills at 191s 3d, 192s, 190s 6d and 188s 3d for the respective positions of shipment, all f.o.b., Calcutta.

Plantation Topics

INCREASING CASHEW NUT OUTPUT AND EXPORTS

(FROM OUR SOUTH INDIAN CORRESPONDENT)

INDIA earns foreign exchange to the tune of Rs. 30 crores annually through the export of spices and cashew kernel. With a view to increasing these earnings, it is proposed to develop new markets and to step up the production of these crops, said Dr. Ram Subhag Singh, Central Minister of Agriculture, while inaugurating the first meeting of the newly-constituted Indian Central Spices and Cashewnut Committee in Trivandrum this week. The Minister said that due to their keeping qualities and high value a unit of weight, spices were ideal for overseas trade. India is the largest producer of cashew and spices, but the potentialities have not been fully exploited. This question had been engaging the attention of the Government for some time past and it was now its "considered and settled policy" that the development of these crops should be accelerated by "every means". He enumerated several Government schemes for the development of these cash crops. A provision of Rs. 1.90 crores has been made in the third plan for the development of cashew cultivation. It was proposed to plant 800,000 additional acres with cashew in Maharashtra, Orissa and Mysore. With a view to facilitating the collection of raw nuts, planting will be concentrated on waste lands rather than in forest areas. Research schemes are in progress in Kerala, Mysore, Andhra and Maharashtra, to improve the cashew crop.

Schemes for the development of pepper were taken up during the second plan in Kerala, Mysore and Assam, and these will be extended during the current plan to West Bengal and Maharashtra, the Minister said. A sum of Rs. 35 lakhs has been earmarked for this purpose. The third plan target is to plant 16,760 additional acres with pepper. Research schemes are also in progress. Research on cardamom was started in Kerala and Mysore during the second plan. This will be extended to West Bengal during the present quinquennium. There is a provision of Rs. 12.9 lakhs in the third plan for ginger development schemes. The Minister assured the "fullest support" of the Central Government for any comprehensive scheme the Spices and Cashewnut Committee might prepare for the development of these crops.

Failure of Kerala

Dr. Ram Subhag Singh made a pointed reference to Kerala's failure to reach the target for fresh cashew cultivation. "Kerala State, in spite of its eminent suitability for cashew cultivation and its importance in the processing industry, has fallen far short of expectations. Legislation relating to land ceilings and the preferential treatment accorded to rubber, which actually encourages the landowner even to remove existing cashew plantations for replacement by rubber, are points to ponder over. It appears essential to create conditions in which landowners will take to cashew cultivation," the Minister observed. In his opinion, over-dependence on the U.S. market is a weakness. He, therefore, suggested promotional drives to expand the market for cashewnuts in other countries, including Europe. A diversified overseas market was necessary for placing Indian cashew kernel on a sound footing, he said. He wanted the cashew processing industry to pay more attention to the extraction of

cashew shell oil, a by-product for which the demand is increasing.

Dr. Singh said a striking feature common to all spices is the instability of prices. In the west, spices form a minor item in the family budget and many of the younger generation have not acquired a taste for these as spices were in short supply during the last war. Even though the world population and per capita income have increased substantially, pepper consumption has declined. In the eastern countries, spices are, however, consumed in relatively larger quantities as they help the relatively monotonous diet to become more palatable. With a rising standard of living, consumption in the east might increase, the Minister added.

Exemption from Sales Tax Urged

The Cashew Export Promotion Council has urged the need for exempting raw cashewnuts as well as processed kernel from sales tax as an export promotion incentive. A memorandum to the Kerala Government submitted by the Council last week explains how the incidence of the tax on the one hand, and the disparity in the rates of levy by different State Governments on the other, act as a drag on the cashew industry. Cashew kernel has to compete with various other edible nuts in the world market. In order to increase and sustain consumption, it is necessary that the cashew processing industry in India should be able to offer kernel at reasonable prices. While the cost of the raw materials and labour charges still form a major part of the cost of the finished product, the final price is inflated by various Government levies on this commodity at different stages. Therefore, in the interest of boosting exports, these levies should be revised, and wherever possible, appropriate remission made to help exporters.

According to the Council's memorandum, a single-point sales tax of 4 percent is levied in Kerala on raw cashewnuts and cashew kernel, and the tax is collected from the last purchaser within the State. In Mysore, the tax on these items is only 2 per-

cent. No tax is payable by manufacturer-exporters in Madras. This disparity in rates affects adversely the cashew manufacturers and exporters of Kerala. The levy of the 4 percent sales tax, the memorandum says, is solely responsible for preventing the growth of export houses dealing in cashewnuts. It has also prevented existing firms in India dealing in dried fruits, from handling cashew kernel for inter-State trade or for export in small quantities to areas like the Persian Gulf, Japan and Malaya. Similarly, the tax burden prevents several exporters who are mainly dealing in other commodities from developing a side business in cashew kernel. It says that the emergence of such exporters is necessary for the healthy development of the cashew industry and to push up exports.

The cashew industry employs about 100,000 workers directly and about 25,000 workers indirectly in ancillary industries. The foreign exchange earnings from the export of cashew kernel and cashew shell liquid amount to about Rs. 20 crores annually. About 75 percent of the firms in the industry are located in Kerala.

Till 1960, the world demand for cashew kernel was in balance with supply, but in 1961 the production of kernel outgrew the demand and resulted in a crisis in the processing industry, leaving a carry-over of 10 to 15 percent of production worth about Rs. 2 crores to Rs. 3 crores. India's largest buyer of cashewnuts has always been the U.S.A. where consumption has remained fairly steady for the last few years at about 1.2 million cases (27,214 metric tons). Raw cashewnut production in India is steadily rising due to increase in acreage. The crop in Africa also is steadily growing. Although the Indian cashew processing industry is capable of handling a bigger supply, it is faced with the problem of finding markets for a larger output. Moreover, on account of the tax burden, the cashew manufacturer-exporter is unable to accept bulk orders beyond his own production capacity since any such acceptance would involve purchase of kernel from other manufacturers, in which case the tax will have to be paid. The tax on cashew kernel, therefore, necessarily restricts the exports of the manufacturer-exporter, which, the memorandum says, is detrimental to the drive for selling more abroad.

The memorandum refers to the disparity in the wage structure between units in Kerala and those outside. It says that in view of this and

the definite advantage a manufacturer-exporter outside Kerala has in the matter of taxation, there has been a tendency for the industry to migrate to other States. Unless a positive effort is made by the State Government to remove the wage disparities, the tendency is bound to increase resulting not only in stagnation of the industry in Kerala, but also in a gradual reduction of its employment potential.

The Cashew Export Promotion Council has launched a publicity campaign in collaboration with the India Tea Advisory Committee, London, for the promotion of Indian cashew sales in the U.K. Samples of Indian roasted and salted cashew kernel are being distributed free among school-children, and also at special functions arranged for the purpose of popularising the commodity in Britain. The U.K. is the second largest traditional market for cashew kernel, 99 percent of her total imports of this commodity being supplied by India. Cashew kernel is primarily used in the confectionery and chocolate industries in the U.K.

Earnings from Pepper Exports

Pepper has been active for the past few days with a fairly strong demand from American grinders. Garbled ready has changed hands in Cochin at Rs. 320 a quintal during the past week. July delivery was quoted at Rs. 331 a quintal and August at Rs. 336 a quintal. Export figures suggest that shipments this season will be as good as last season's. The latest figures cover up to the end of March. From the start of the current season, which began in November, to the end of March, shipments were to the tune of 1,13,000 tons, compared with 9,383 tons during the same period of the previous season. It is reported that there were setbacks in exports during April and May. The Sarawak crop has started moving, and overseas buyers might shift their interest to Sarawak and other Far Eastern countries which are now offering their fresh crops. However, India is likely to export as much as 18,000 tons during the current season (the same as last season) in spite of a possible lull period ahead. It is, however, likely that the export earning from pepper will fall this year as the prices realised are lower than those of the previous year.

Prospects for Rubber Industry

The Indian rubber industry's export potential, in the opinion of Mr. K. M. Philip, president of the Indian Rubber Industries Association, is

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

New DeLuxe Champion Car Tyres

BEST TODAY—STILL BETTER TOMORROW

"immense." It can export as much as Rs. 50 crores worth of goods annually during the next seven or eight years, when production is expected to touch about Rs. 500 crores a year. Mr. Philip said this while addressing the annual general meeting of his association last week. He said that the tyre production target was likely to be raised from 3.7 million tyres to 5 million tyres during the third plan, and expansion licences would be granted to those who could export 10 percent of their output. If this scheme was implemented, the country might be exporting 500,000 tyres by 1965 valued at Rs. 10 crores. For the successful working of the export scheme, he suggested that all manufacturer-exporters should be offered the difference between the home and export prices as an export incentive. The incentive offered at present was hardly sufficient to meet export losses. It could be liberalised without the Government incurring any additional expense. At present, manufacturers are paying the difference between the Indian and the imported prices of raw rubber to the Rubber Board, to be used for the rehabilitation of small plantations. This amount could in future be used for granting export incentives, he suggested. He recommended that both an export promotion council and a development council should be set up for the rubber industry. Emphasising the need for a development council, Mr. Philip said that rubber consumption had increased by over 300 percent from 1950 to 1960. During the next ten years, it was likely to move up to 250,000 tons in 1970, from a level of 17,000 tons in 1950. The expansion would be possible only if adequate supplies of natural and synthetic rubber were made available to the manufacturing industry. Whether the increased raw material requirements should be met by growing more rubber in India or by imports or by manufacturing synthetic rubber in the country on a large scale, could be dealt with only by a development council, he said.

PLEA TO ABOLISH ALL TAXES ON TEA

IMPORTANCE OF HOME MARKET

(BY A SPECIAL CORRESPONDENT)

THE chairman of the Haileyburia Tea Company, Mr. Subramanyam, agrees that the restrictions on the internal consumption of tea are misconceived and are not in the real interest of the industry. He says that the "the internal market remains the mainstay for common teas, and unless quality teas can be offered at competitive prices, India's exports will not improve". He suggests that the Government should give more encouragement to the industry by abolishing all export duties, freezing wages and granting subsidies in special cases. Acting on such lines should not prove too costly to the Government, for, in addition to earning valuable foreign exchange, individual companies would generally show larger taxable profits. So whatever is lost by the complete abolition of the export duty, may well be recovered from income tax and other assessments.

The importance of a good internal demand is shown by the 1961 results of tea gardens. Ceylon, without a large home market, had to depend more on exports and sold cheaper, on the average, than India did. The Indian tea companies, of course show smaller profits generally, but had there been no internal demand, the bottom would have fallen out of the market for this commodity. The whole of the tea trade is agreed on this issue. Yet a New Delhi report states that a Parliamentary committee is calling

for restrictions on the home consumption of both tea and coffee in order to leave more for export. Apparently, these gentlemen are not aware that the world is already oversupplied with coffee, and if the F.A.O. forecast is correct, the situation for tea may also become precarious.

Rising Production Costs

While Mr. Manubhai Shah, the Central Minister of International Trade, said nothing about his plans for promoting tea exports while he was in Calcutta last week, the Central Finance Minister and the chairman of the Tea Board attended a silver jubilee meeting of the Assam Tea Planters Association in Jorhat on 24th June. They described at length the Government's intentions. Mr. N. K. Dutta, chairman of the Assam Tea Planters Association, dealt with the problems of the industry. The relations between labour and management in Assam were satisfactory, notwithstanding the six strikes which took place in member-gardens in 1961. Speaking about production costs, Mr. Dutta said that "in spite of the tax concession that we have just received by way of less duty on tea exports, our cost of production compared with that of other tea-producing countries is still extremely high. This is because of the high cost of labour, price of coal and fertilisers, and now the higher price of plywood and aluminium, increased railway and steamer freight, taxes on sales, carriage entry and what not. Now that tea, as the most important foreign exchange earner, is receiving attention from both the Central and State Governments, may we expect some relief from this unbearable tax burden?" he asked. Mr. Dutta asked for the total abolition of export and excise duties to give a greater impetus to export promotion.

Good Demand for Export Teas

There was a good demand for export teas at Monday's auction in Calcutta, but Darjeeling teas continued to disappoint.

U.K. Tea Stocks Fall

U.K. tea stocks continue to fall. As at 15th June, the figure given was 123.6 million lbs, compared with 125.9 million lbs in the previous week. The average price for the week was 49.42d a lb, compared with 49.38d a lb in the corresponding week of last year.

Cochin Tea Sales

Cochin sales realised higher prices and most categories were well supported.

Reducing Coffee Surplus

World coffee producers will meet during July in order to try and conclude a working agreement between producers and consumers to reduce the world surplus. This looks a sensible attempt which should be followed by the tea-producing countries also.

Rubber Shortage Problem

A few years ago, there were only two big companies manufacturing rubber products. Today there are ten firms in the field, planning to produce tyres for lorries which are to be put on the road during the next five years. The new producers are making provision for export also. Development in this industry is handicapped by the high internal cost of the raw materials. The situation is complicated. The manufacturers need cheaper raw rubber, but the controlled price of the domestic product is already too low to encourage further planting. Yet a much greater internal supply is essential because imported rubber uses up foreign exchange. It takes some years to bring young rubber trees into production. As the output of tyres is to be stepped up during the current plan period and as there is already a dangerous shortage of foreign exchange it is difficult to see how this part of the plan programme can be implemented in full.

COMPANY AND PUBLIC NOTICES

THE BISHNAUTH TEA COMPANY LIMITED

NOTICE is hereby given that the Annual General Meeting of the Members of The Bishnauth Tea Co., Ltd., will be held at the Registered Office at No. 4, Mangoe Lane, Calcutta, at 11-00 in the forenoon of the 23rd day of July, 1962, for the following purposes:

1. To consider the Revenue and Profit and Loss Accounts for the year ended 31st December, 1961, the Balance Sheet as at that date and the Reports of the Directors and Auditors.
2. To declare a Dividend.
3. To appoint a Director in place of Rai Bahadur H. P. Bama who retires by rotation and who being eligible offers himself for re-election.
4. To appoint Auditors and to fix their remuneration.

SPECIAL BUSINESS

(1) As Special Resolution:

To consider and if thought fit to pass with or without modification the following Resolution which will be proposed as a Special Resolution:

"That Mr. K. A. Evers be and is hereby appointed a Director whose period of office shall be liable to determination by retirement of Directors in rotation."

Special Notice as required by Section 261 (2) of the Companies Act 1956 has been received by the Company from a member expressing his intention to propose the Resolution for the appointment of Mr. K. A. Evers as Director as a Special Resolution. The Notice states that the sanction of a Special Resolution becomes necessary for the appointment of Mr. K. A. Evers as Director as Mr. Evers happens to be Director and Member of Messrs J. Thomas & Co., Private Ltd. who by Special Resolution have been approved as Brokers for the sale of the teas produced by the Company and who may therefore be deemed to hold an office of profit under the Company.

(2) As Special Resolution:

To consider and if thought fit to pass with or without modification the following Resolutions which will be proposed as Special Resolutions:

"That the arrangement sanctioned by Special Resolution of the Company in General Meeting on 17th March, 1959, whereby Messrs. George Williamson & Co., a partnership firm who maintain an office at 21, Mincing Lane, London, E.C. 3, England (for the purposes of their business of management and administration of seventeen Sterling Tea Companies of which they are appointed Secretaries) continued to act as Agents for the purchase in the U.K. of goods from time to time required by the Company be and is hereby renewed for a further period of 3 years with effect from 1st April, 1962, on the same terms namely that they shall be paid a remuneration by way of

commission at the rate of up to two per cent on the invoiced price of such goods and that no further sums whether by way of reimbursement of expenses or otherwise be paid to them as such Agents as aforesaid; and that this appointment may be terminated by either party giving to the other not less than one month's previous notice in writing of intention so to do. The expenses incurred by Messrs. George Williamson & Co., in maintaining their London Office are in the nature of salaries and wages of personnel, insurance, rates and taxes, fuel, light, maintenance and repairs of the premises, office furniture and equipment and items incidental thereto of which one sixtieth part represents the proportion which may reasonably be attributed to the services rendered and work done on behalf of the Company as such Agents as aforesaid."

(3) As a Special Resolution:

(a) That subject to the approval of the Central Government the Company do hereby approve of the renewal of the contract (which was sanctioned by Special Resolution of the Company on 29th May, 1958, and which expires on 28th February, 1963) between the Company of the one part and Williamson Magor & Company Limited, the Managing Agents of the Company of the other part on the same material terms namely that:

(1) Williamson Magor & Company Limited shall provide the Company at its request with all services usually rendered by a shipper in connection with the shipping of teas of the Company from India to the United Kingdom and elsewhere.

(2) The services to be provided by Williamson Magor & Company Limited shall include the transport and handling of tea chests, repairing of damaged tea chests, re-packaging, documentation, loading, unloading and reservation of the cargo space necessary in connection with the shipping of teas of the Company.

(3) Williamson Magor & Company Limited shall be entitled to be reimbursed by the Company in respect of all expenses including hire of transport, weightment, loading and labour charges incurred by them on behalf of the Company in connection with the shipping of teas as the Board of Directors of the Company shall determine to be or to have been incurred on behalf of the Company.

(4) The Company shall pay to Williamson Magor & Company Limited in respect of the services rendered remuneration at or after the rate of two per centum on the actual expenses incurred reimbursed to Williamson Magor & Company Limited by the Company.

(5) The remuneration payable to and the reimburse-

ment of expenses incurred by Williamson Magor & Company Limited shall be payable or reimbursed as the case may be on the last working day of each month.

(6) Any dispute or difference between the Company and Williamson Magor & Company Limited shall be referred to arbitration in accordance with the Indian Arbitration Act, 1940.

(b) Any contract made in conformity with this resolution shall be valid for a maximum period of five years from the 1st day of March, 1963, unless previously terminated by either party giving to the other one month's notice in writing.

(c) It is hereby expressly declared that any sum received by Williamson Magor & Company Limited from the Company whether directly or indirectly by way of remuneration, commission, expenses, or otherwise under the provisions of this resolution shall not be or be deemed to be remuneration paid by the Company to Williamson Magor & Company Limited as the Managing Agents and Williamson Magor & Company Limited shall not be accountable therefor under the provisions of Section 363 of the Act.

4) As a Special Resolution:

(a) That Subject to the approval of the Central Government the Company do hereby approve the renewal of the contract (which was sanctioned by Special Resolution of the Company on 29th May, 1958 and which expires on 28th February, 1963) between the Company of the one part and Williamson Magor & Company Limited, the Managing Agents of the Company of the other part on the same material terms namely that:

(1) Williamson Magor & Company Limited shall provide the Company, at its request, with suitable accommodation at Calcutta for the storing and warehousing of the teas of the Company.

(2) Where the accommodation is not the property of Williamson Magor & Company Limited the Company shall pay to Williamson Magor & Company Limited such portion of the rent and outgoings, if any, paid by Williamson Magor & Company Limited in respect of such accommodation as may from time to time be mutually agreed upon, or, failing such agreement, as the Board of Directors of the Company shall from time to time determine to be fairly and reasonably attributable to the accommodation so provided.

(3) Where the accommodation is the property of Williamson Magor & Company Limited the Company shall pay to Williamson Magor & Company Limited such reasonable warehousing rental or charge and such proportion of the outgoings payable by Williamson Magor & Company Limited in respect of such accommodation

as may from time to time be mutually agreed upon, or, failing such agreement, as the Board of Directors of the Company shall determine to be fairly and reasonably attributable to the accommodation so provided.

(4) Any dispute or difference between the Company and Williamson Magor & Company Limited relating to the terms of any contract made in conformity with this resolution shall be referred to arbitration in accordance with the Indian Arbitration Act, 1940.

(b) Any contract made in conformity with this resolution shall be valid for a maximum period of five years from the 1st day of March, 1963, unless previously terminated by either party giving to the other one month's notice in writing.

(c) It is hereby expressly declared that any sum received by Williamson Magor & Company Limited from the Company whether directly or indirectly being remuneration by way of rent, warehousing charges, outgoings, expenses shall not be or be deemed to be remuneration paid by the Company to Williamson Magor & Company Limited as the Managing Agents and Williamson Magor & Company Limited shall not be accountable therefor under the provisions of Section 363 of the Act.

The Share Transfer Books and Register of Members of the Company will be closed from the 13th July, 1962 to 23rd July, 1962, both days inclusive.

By Order of the Board,
THE BISHNAUTH TEA COMPANY,
LIMITED,
WILLIAMSON MAGOR & CO., LTD.,
V. S. VIJI,
Secretary,
Managing Agents,
Calcutta, 27th June, 1962.

Note: (1) A member entitled to attend and vote at the Meeting is entitled to appoint a proxy to attend and vote in his stead. A proxy need not be a member of the Company.

(2) An Explanation Statement as required under the Companies Act, 1956 has been forwarded to the members of the Company.

(3) The Dividend, if declared, will be paid on or after 30th July, 1962, to those Shareholders whose names appear on the Company's books on 23rd July, 1962, or to their Mandatees. No application for Warrants will be necessary.

THE METAL BOX COMPANY OF INDIA LIMITED

NOTICE OF ANNUAL GENERAL MEETING

NOTICE is hereby given that the Twenty-ninth Annual General Meeting of the Company will be held at the Registered Office, 59C, Chowringhee Road, Calcutta, on Wednesday, the 18th day of July, 1962, at 12-30 p.m. for the following purposes:

1. To receive and consider the Statement of Accounts for the year ended 31st March, 1962 and the Reports of the Directors and Auditors thereon.
2. To declare a Dividend.
3. To elect Directors.
4. To fix the remuneration of the Auditors.
5. To transact any other ordinary business of the Company.

Special Business

The consideration of the following Resolution which will be proposed as a Special Resolution:

"That the consent of the Company be accorded by this Special Resolution with effect from 1st November, 1961 to the holding by Mr. T. M. Rama Aiyangar, an Alternate Director, of an office or place of profit under the Company as General Manager, Delhi."

Explanatory Statement and Note

The consent of the Company by Special Resolution is requisite to the holding of his office or place of profit by an Alternate Director of the Company.

A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member. Proxies, in order to be effective, must be received by the Company not less than 48 hours before the Meeting.

NOTICE is hereby given that the Ordinary Share Register of the Company will be closed from 2nd July to 18th July, 1962, both days inclusive.

By Order of the Board,
F. P. GILBERT,
Secretary,

TEA COMPANIES

O., P., and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES—Contd.

O., Po., C. and Dd. indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

no time like the

Almost forty years ago GKW pioneered the manufacture of railway track and signalling equipment in India. We were also the first Indian producers of a comprehensive range of precision-made fastenings. During India's first two five-year plans we also became the first company to make tungsten carbide for dies and tools; the first to make safety pins; and the first to make self-tapping

screws. Today in Calcutta we are rolling electrically melted steels in the most modern mills of their kind in the East, producing, amongst other things, practically all India's requirements of railway and automobile spring steels. We are the largest manufacturers of threaded fastenings in the East, and we produce forgings as various as grinding balls for the cement industry and

components for Diesel engines. GKW Training Schools are well-equipped and well-staffed; in them we are helping to train India's engineers of the future.

This is only part of the GKW story; but it may give you some idea of what we are doing now to ensure that India's third five-year plan succeeds in its aim of making India more self-sufficient.

GKW

Greaves—Helping India's Economy

India speeds ahead towards self sufficiency through the co-operation of Engineer, Administrator and Labourer. Through these years of activity, Greaves Cotton have contributed their every effort towards India's goal and shall continue to serve India's vital needs through the wide range of their services.

A TRUSTED NAME

Planning TOWARDS A BETTER PORT

As the life-line of Eastern India's trade and commerce, the Calcutta Port faces recurring problems every year. The emphasis on industrial progress in the Second Five-Year Plan period has considerably changed the type of cargo to be handled. Steel and mechanical equipment, heavy machinery and huge plant form a considerable bulk of the import. On the export front it is coal or ore.

To-day's well-equipped Port needs be made into a better Port to-morrow. But this is possible not by more equipments alone. The Calcutta Port needs most the whole-hearted co-operation from all fronts,—from those who use and also from those who serve it.

**MEN & MACHINES MAKE
A BETTER PORT**

CALCUTTA PORT COMMISSIONERS

Issued by the Commissioners for the Port of Calcutta

OUTSTANDING INDUSTRIAL EQUIPMENT

HOLMAN CLIMAX Pneumatic Plant and Equipment

Air Compressors, Rock Drilling Equipment and Pneumatic Tools.

Repairs carried out at site saving costly replacements and production losses.

"METALOCK" Precision Cold Repairs to Fractured Machinery

Platt Bros. (Sales) Ltd., Prince Smiths & Stells Ltd., Parks Cramer (Gt. Britain) Ltd., Complete Spinning Plant for Cotton, Synthetic, Woollen, Worsted and Waste Mills, Sellers & Co., (Hudds.) Ltd., Carpet & Textile Dyeing and Finishing Machinery.

TEXTILE MACHINERY Of international repute

"The Engineer's Choice"
Vertical or Horizontal, Standard or Packaged, Coal or Oil Fired.
Duties up to 30,000 lbs. per hour.

COCHRAN BOILERS For Industries and Technical Institutions

Andrew Barclay Sons & Co., Ltd., Scotland.
Renowned for :
Diesel Hydraulic and Mechanical Shunting Locomotives and Automatic Brake Gearing for Colliery Winding Engines.

LOCOMOTIVES AND COLLIERY WINDING SAFETY DEVICES

High Head and Submersible Pumps and Motors.
Hydro Electric Plant.
Electric Drives for Continuous Process Mills.

HARLANDS Pumps, Turbines and Drives

Edgar Allan & Co., Ltd., Sheffield.
High Speed and Special Alloy Tool Steels.
Tungsten Carbide Tipped Tools.
Full Range of Crushing and Screening Plant and Cement Manufacturing Plant.

TOOL STEELS Cutting Tools and Crushing Plant

John Folkes (Lye Forge) Ltd., England.
Forgemasters of Carbon and Alloy Steels
up to 30 tons weight and 42 inches diameter.

FORGINGS For Shipbuilding, Sugar, Steel and Heavy Engineering Industries

Steel Output Lagging Behind Capacity: Prospects for Further Expansion

MORE than any other, the steel industry is at the very core of the planning for industrial development. Not unnaturally, public interest in the industry's problems is intense, sometimes uncomfortably so for the steel works which, for one reason or another, are lagging behind their scheduled targets. While this is a penalty that anyone standing in the limelight must pay, Indian public opinion has good reason for its concern. Out of the total third plan outlay of Rs. 1,520 crores on organised industry and minerals in the public sector, Rs. 534 crores or 35 percent is earmarked for the expansion of the three State steel plants, and the erection of the fourth in Bokaro. The total foreign exchange component of public sector industrial projects is quoted at Rs. 690 crores, of which steel alone accounts for Rs. 253 crores or 36.5 percent. Since there is a scarcity of resources, what

was widespread that Rourkela achieved during 1961-62 only 29 percent capacity utilisation, and Durgapur 45 percent. At both plants, only two of the three blast furnaces were in operation, although at both plants, the third had been ready for commissioning for some time. At the end of the year, production at all plants was picking up, the March rate of salable steel output being over 100 percent at both Burnpur and Jamshedpur, 98 percent at Bhilai and 61 percent at Durgapur. Rourkela was still doing no more than 35 percent.

In the current year, total steel production in the country is officially expected to be 3.92 million tons, while requirements are estimated to rise to 5.4 million tons (as against the availability last year of about 4.2 million tons). This would necessitate imports to the extent of almost 1.5 million tons, if all demands were to be met in full, requiring a foreign exchange expenditure of the colossal sum of Rs. 135 crores (the Planning Commission's assumption is that each ton of imports costs Rs. 900). Since imports at this level are clearly beyond the nation's capacity, shortages will persist, hampering the growth of steel-based industries.

By

SIR JEHANGIR GHANDY

is allocated to steel is inevitably at the cost of some other industry or sector. The choice was, however, deliberately made in favour of steel, in recognition of the push that accelerated growth in this industry may be expected to give to the rest of the economy. The public is, therefore, entitled to demand that the results should be proportionate to the sacrifices entailed in the lavish provision of resources for the steel industry.

So far, the results have been slow in coming. In the financial year just ended, actual production of salable steel from the country's steel works was 3.15 million tonnes, or 4.23 million tonnes of crude steel. One year after the end of the second plan, the industry has come only two-thirds of the way towards fulfilling the target set. Imports during the year were only a little short of 1 million tons, involving a drain of foreign exchange to the tune of Rs. 88 crores. In drawing up the foreign exchange balance-sheet for the third plan, provision was made for steel imports of the value of Rs. 238 crores. Some 36 percent of this allocation has been used up in the very first year, even before the steel-based development visualised under the third plan has begun to gather momentum.

Capacity Utilisation of New Plants

It is not the purpose here to draw invidious comparisons, but the fact remains that the private sector output (in terms of salable steel) was only 12.8 percent short of installed capacity, against a deficiency of 52.4 percent in the public sector plants. But one should not miss in this comparison the fact that the entire capacity in the public sector was newly built and was still suffering from teething troubles. Even so, disappointment

the last plan, Dugda was commissioned in December 1961, while Bhojudih should start any day now. The last of the five, Pathardih, is still under construction.

It is not intended to under-estimate the difficulties that Hindustan Steel has had to contend with in creating new washing capacity. Before machinery and equipment could be ordered, the washability characteristics of the coals to be washed at each plant had to be carefully determined by detailed laboratory tests. Even before the testing could begin, the allocation of collieries to each plant had to be finalised, which took some time as the movement pattern required the study and concurrence of the railways. Again, building washeries was only one of the many responsibilities assumed by Hindustan Steel. Not unsurprisingly, it found it difficult to give them the continuous attention which a separate agency might have been able to provide. Yet, the fact remains that the delay over washeries has hurt all steel plants, including the three run by Hindustan Steel.

Coal Requirements of Private Plants

Taking the cue from these difficulties, the Government has now decided to let the private sector producers make themselves self-sufficient in coal by fuller utilisation of their captive coal reserves. As a corollary to this, both producers are being encouraged to put up new washing capacity. This is a distinct departure from the policy rigidly followed earlier, when the Ministry was firmly of the view that the washed coal requirements of the Burnpur and Jamshedpur works should be met from central washeries to be set up by the Hindustan Steel Ltd. In fact, the output of Bhojudih and Pathardih was specifically earmarked for them in the light of this decision. Indian Iron has, under this new dispensation, undertaken to increase raisings from captive mines from 260,000 tons to

2.2 million tons. Foreign exchange has been assured by a loan of Rs. 9.28 crores (\$19.5 million) to the Company to put through the integrated scheme. A project, similar in many ways, is being considered by Tata Steel to augment its washing capacity which will permit raising production from its captive colliery from the present level of 1.7 million tons to as near self-sufficiency as possible. The total capital outlay including a thermal power station is tentatively estimated at Rs. 24 crores or 25 crores.

Some time in the future, these two producers should, therefore, become largely independent of market coal. But, for the present, both they and Hindustan Steel must look to the mining industry to meet their needs. As is well known, the output of coking coal, about 13 million tons up to Grade I at the end of the second plan, has shown an insignificant rise in the past year. In addition, the quality of raisings has tended to fall. The steel industry, gravely concerned over the rising percentage of ash in coal, jointly evolved in 1951 an incentive scheme in consultation with mining interests enhancing the differential between the quality grades and the poorer ones. In February this year, the Government gave effect to this scheme but modified it in several important ways. The steel industry had agreed to pay a higher price for quality as established by actual sample tests of coal as received. At first, the Government appeared to have accepted the principle of payment by results, but unfortunately, it resiled from the position later. Apparently, sampling has no legal validity and cannot supersede the price payable on a consignment of coal on the basis of the Coal Board's grading of the supplying colliery. The point has been repeatedly made by the steel industry that payment on the basis of grading is in many cases quite unrealistic, because supplies constantly exceed the pre-

scribed ash limits. Redress through an appeal to the Coal Board against the suppliers' grading would remedy matters no more now than in the past. The mining industry takes the stand that its agreement to accept payment on sample results formed part of an integrated scheme which visualised higher differentials than the Government has thought fit to allow. In fact, by reducing the price payable for lower grades, the Government, it is claimed, has defeated the basic purpose of augmenting the industry's resources which was the starting point of the formula jointly evolved by mining interests and the industry. This intra-mural controversy between the Government and industry need not concern one here; all that need be said is that payment by sampling having been abandoned, the steel industry is now obliged to pay more for coal without any of the benefits it had hoped for.

Difficult Limestone Position

The supply position of limestone is, if anything, more difficult than that of coal. With the gradual exhaustion of the better deposits, the percentage of insolubles has been on the increase, causing serious difficulties in both iron and steel-making operations. Obviously, the need is for a long-term programme of prospecting to prove the deposits that are believed to exist in several areas of the country, such as Andhra, Bihar, Madhya Pradesh and Mysore. Some of these are ruled out, at least at the present time, because of their inaccessibility or distance from the steel plants. Secondly, some effort to conserve flux grade stone is also called for, because, unlike the metallurgical industries, the demands of others are not so exacting and could be met satisfactorily by poorer grades. Thirdly, the issue of leases needs to be regulated to ensure that properties with better quality stone are not wastefully exploited. Finally, the beneficiation of poorer grades might be attempted along the lines of the experimental work done by the National Metallurgical Laboratory. The process recommended involves crushing the stone and beneficiating it by froth flotation. The National Metallurgical Laboratory claims that the percentage of insolubles can be brought down from as much as 17 percent or 14 percent to 4 percent or 2 percent. The beneficiated fines will have to be aggregated into pellets for use in open hearths, and the possibility remains open of adding it direct in the sintering process to produce what is known as self-fluxed sinter.

The need for beneficiation is also being felt in relation to iron ore. The country undoubtedly has extensive deposits of some of the richest ore (60 percent iron content and above) available to the metallurgical industry anywhere, but several technical difficulties exist. In the first place, the run of the mine ore contains a high proportion of fines which cannot be used directly in the blast furnaces. Secondly, most Indian ores tend to have a high alumina content, which creates serious operational problems. As long as output was limited, manual mining methods served the industry well, making it possible to pick and choose the ore to be raised. This degree of flexibility is impossible in large-scale mechanised mining. Hence, the emergence of high alumina as a fac-

tor of some importance in recent years. Here again, the problem is by no means insuperable, and the solution may lie in sizing and washing the ore to reduce the gangue, followed by wet screening.

The Problem of Raw Materials

None of these raw material problems can be solved overnight. In fact, the industry has to learn to live with them, instead of throwing up its hands in despair. Other steel industries, less favourably placed than India's, have grown and thrived. Take the example of Japan which had to import in 1960 all but 8 percent of the 16 million tons of ore used by her steel industry. For coking coal, she was dependant on overseas sources for 40 percent of her requirements. Britain has built up a large steel industry using as much as she can of her lean home ores, with an average iron content of 30 percent. Overcoming handicaps calls for ingenuity and involves, of course, additional capital investment. This, indeed, is the crux of the matter. Placed as it is with prices pegged at levels where adequate re-

ceived, and possess the production potential claimed for them. Any plant anywhere has to reckon with its share of teething troubles, although experienced and skilled operation can help to minimise them. A wide strip mill, like Rourkela's, is a highly complex unit and has the added disadvantage of being the first such in India. An L-D steel-making shop may basically have the same operational characteristics as one employing Bessemer converters, but the day-to-day problems are likely to be quite unfamiliar. Gaining experience of operation is a function of time which can be abridged only to a limited extent. It seems clear that, at present, there is no alternative but to import operating know-how at the supervisory and managerial levels. Recent Press reports suggest that this is the line of action proposed to the Government by the West German Ministry of Economics for rehabilitating Rourkela, as Sir Eric Coates had suggested earlier in relation to Durgapur. The country should accept all the help it can get because in the long run this would be cheaper (and, of course, much quicker as well) than trying to

as had to be done during the second plan. Such foreign exchange as can be made available for overseas training can best be used on refresher courses for more experienced men preparatory to investing them with larger and unfamiliar responsibilities. The attention being given to personnel requirements does not inspire confidence that the appropriate lessons have been drawn from current experience. If the industry should find itself again in a quandary at the end of the third plan, it would be tragic.

By and large, industry in India tends to be deficient in maintenance—a fact highlighted in the reports of several N.P.C. productivity teams. In a steel plant, poor maintenance imposes grievous penalties in terms of loss of production and the very high cost of obtaining replacements. Very often, a break-down in any one section will tend to tell upon the productivity of the plant as a whole because operations are closely inter-linked. This facet of the industry appears to have been inadequately understood by the authorities of Hindustan Steel, at least in the top echelons. The evolution of maintenance procedures, and their implementation, was in any case not easy for the new plants because of the shortage of experienced personnel. To some extent, the defaults in this sphere have been aggravated by dilatory purchase procedures, resulting, as is well known, in "cannibalism"—new equipment in stock being taken, piece by piece, to keep the installed one running. Anywhere, the efficient timing of the purchase of spares with the normal rate of wear and tear is a demanding exercise, and requires considerable expertise. If to this is added the delay arising from financial red tape, the position can well become impossible.

Delegation of Authority

In relation to new plants, the final and perhaps the most serious handicap is the inadequate delegation of authority from New Delhi and the board of Hindustan Steel to the management at the plant level. It is heartening that Mr. C. Subramaniam, so shortly after taking over as Minister, should have seen the need for a thoroughgoing reorganisation. Without the devolution of responsibility that Mr. Subramaniam has proposed, it is difficult to imagine how speed and flexibility in decision-making can be achieved, without which rapid progress will be impossible.

I also agree with Mr. Subramaniam's plea that Parliament should voluntarily restrain its interest in matters of detail because this diminishes the sense of responsibility in public corporations and slows up decision-making until the last little detail has been checked and rechecked and often a reference made to New Delhi to obtain its advance concurrence. The managements of the undertakings should be given the freedom to make mistakes. If they make too many, they can always be dismissed. It is pertinent to recall here the warning sounded some time ago by Professor Galbraith, not as the U.S. Ambassador but as an economist vitally interested in the success of India's planning: "Even a fairly brief stay at the actual sites of the new steel mills reveals numerous faults, and further difficulties are on the way. Competent executives are

A view of the blast furnaces at the Bhilai steel works

turns are well-nigh impossible to earn, innovation and new technological developments are extremely difficult to finance. For example, the Jamshedpur steel plant needs to undertake a long-range programme of development and upgrading of its iron ore properties in Noamundi and Joda at an estimated capital outlay of Rs. 7 crores.

A real challenge lies in the months ahead if, notwithstanding the limitations imposed by raw material supplies, steel production is to be raised rapidly to make the metal available in quantities that the economy needs. This will call for a very large effort on many fronts. In the case of the private sector plants, the success will greatly depend on the sympathy and understanding with which the Government views their problems. For instance, the deterioration in coal supplies may necessitate larger inputs of coal than provided for in earlier planning. If existing coking capacity is inadequate, fresh expenditure of foreign exchange may be needed to augment it.

In the case of the H.S.L. plants, I am convinced that they suffer from no inherent defects of design which rule out the early attainment of their rated output. All three are well con-

learn steel-making by trial and error. But bringing these men without conceding to them any authority over plant operations is unlikely to work. If they are made responsible for achieving certain production targets, they should not be divested of the authority for decision-making in the production sphere.

Need for Foreign Technicians

In case it hurts the country's self-esteem to have to depend on foreign personnel, there is the example of Russia which imported American technicians in large numbers in the 'thirties, and of China, which, more recently, had to rely upon Russian assistance. A false sense of prestige should not deter India, but the Government should, at the same time, insist on attaching Indian understudies, handpicked for each job, to take over from the foreign technicians as early as feasible. Also, keeping in view the future requirements, the authorities should take advance action to recruit men needed for the expanded plants. They should be put through condensed theoretical courses where necessary and started on in-plant training as far ahead as possible. With five major integrated steel works now operating, there should be no need to send fresh recruits abroad

20 YEARS 1942 - 1962

This year we will be completing the twentieth year of our prosperous existence. During these years, miles of our Wires and Cables have made many industrial projects of the two Plans and wiring of important Buildings. The production of our renowned NICCO Cables is backed with the technical advice of our collaborators, the British Insulated Callender's Cables Ltd.

Surely, the increasing confidence placed in us, the first national enterprise to make Cables a speciality, is a most cherished asset in our continued progress.

NICCO products are manufactured strictly according to appropriate ISI Specifications

frustrated and angry over the centralisation of purchasing, personnel and financial decisions in New Delhi. These delays are a source of discouragement to the younger engineering and technical personnel who should be showing great enthusiasm. The result is poor morale where it should be high.

The third plan also noted that the executive machinery should be strengthened to function effectively on its own responsibility, and urged that there should be no interference with its decisions in its own sphere. Mr. Subramaniam touched the core of the problem in his widely noted statement to Parliament in mid-May, and it seems to me that a degree of optimism would be justified on the strength of it.

Future Tasks

Looking beyond the immediate future, it is of crucial importance that productivity in the steel industry should improve so that India regains her place as one of the world's lowest cost producers. On her success in this endeavour must rest her hopes of making steel an effective lever of economic growth. A large and growing steel output would by itself confer none of the advantages that are hoped for in relation to international trade in steel or steel-based products if it were permanently burdened by high costs. Output a head in the steel industry is low today. Whereas historical circumstances may explain this disability in the older plants, there is no justification for beginning badly in the new ones. By comparison with the standard force recommended in the original planning, they are greatly overstaffed. Neither the brief report the Ministry issued this March, nor the latest annual report of Hindustan Steel, furnishes any information on the present manning, and no precise figures can, therefore, be cited. Some reports suggest that Hindustan Steel considers present overstaffing a kind of preparation for personnel requirements flowing from expansion. I hope it works out that way, but the danger of starting with bad practices is that workmen and supervisors alike tend to get set in the bad ways.

Apart from attempting to improve labour productivity, there is also the need to keep under constant review the possibilities of introducing technological innovations which may help to raise productivity of existing capital equipment. In open-hearth furnaces, for example, the rate of output can be improved by the use of oxygen to accelerate heating and melting. Gains of as much as 25 percent to 30 percent have been reported by using oxygen for flame enrichment as well as by introducing it directly into the furnaces through roof lances. An effort on these lines is under way at Jamshedpur where two furnaces have been changed to roofs built with the more refractory basic bricks able to withstand the higher temperatures following from the use of oxygen. Roof lances have been ordered for all seven furnaces in Jamshedpur's new steel-melting shop. The tonnage oxygen plant, now on order, should be installed by the middle of 1963. It is expected, therefore, that all furnaces will have been converted for the use of oxygen by the end of that year. Other open-hearth steel-making shops may wish to follow suit (as

Bhilai will in her third plan expansion), once the supply of tonnage oxygen and basic bricks is assured. At the present time, only a tiny fraction of the total production of refractories is of this quality. Tata Steel's associate plant, Belpahar Refractories, has started making chemically-bonded, steel-clad basic bricks under licence. Jamshedpur will thus not have to depend on imports. Other refractories manufacturers have similar plans in view.

Advanced Technology

The use of oxygen is but one example of the way in which new technology can be fruitfully applied. In the planning of steel development, the maximisation of the production potential of existing plants should receive at least the same priority as the creation of new capacity. By the same token, increase of capacity where possible by the addition of balancing equipment should also be encouraged, regardless of whether it is in the public or private sectors. If plants should wish to raise blast furnace or open hearth capacity in course of the normal, periodic rebuilding—as happens all the time in any steel industry—this should not only be permitted but encouraged, because it will help to make steel expansion a continuous process. It is preferable to taking long and uncertain leaps from time to time. The same argument would apply to modernisation of old plants, which will, in the nature of things, increase capacity at the same time as cutting down production costs. All these constitute part of the normal process of growth, witnessed in any industry anywhere.

Thinking about the future, the importance of long-range planning needs to be stressed. Steel has an uncomfortably long gestation period, the Planning Commission now allowing for seven years from the selection of a new steel nucleus to the completion of the plant. Since steel plant construction will, for some time to come, depend on foreign aid to pay for im-

ported plant and equipment, an allowance has to be made for the time it takes to negotiate credits, a point that hardly needs to be stressed at present with all the uncertainties over Bokaro fresh in our minds. Incidentally, the first step on this project was taken towards the end of 1958. It follows, therefore, that while we are still struggling to bring second plan capacity into full production, and pushing third plan expansion through, a different part of the brain has to start thinking of what we need to do in the fourth plan. The exercise sounds as if it is more than ordinary mortals can cope with, but then this is a necessary penalty of the speed with which we wish to see the economy grow.

Data for Concrete Planning

Planning for steel at long range involves not merely extrapolation of demand, but also a disciplined technical exercise to collect data on which concrete planning decisions can be made. The National Resources Committee has happily taken the first step in this direction by calling for a technical assessment of raw materials. In course of time, this will have to be followed up by complementary studies on transport, availability of water and power at a number of alternative locations so that the choice between competing claims can be made on a rational basis. In line with this effort, it would be useful if technological alternatives were evaluated so that the choice may be made not on the spur of the moment, but in an orderly and well-considered manner. All this amounts to a great deal of work; if it is to be carried out with despatch and with a sense of purpose, there is need for a central planning agency for the steel industry. In this context, one might note that the Iron and Steel Board in the U.K. performs, in its different circumstances, many of the tasks arising from long-range planning.

There is no cause to apprehend that the planning agency will become a body of super-technocrats making major decisions based on abstruse

technical considerations. All that the agency will do is to lay before the planners a body of data to facilitate better-informed policy decisions. For instance, the question of location cannot be settled in purely technical terms; the policy concerning balanced regional development may conceivably prevail over locational advantage.

Concentration of Industry

At this point, the fact of the concentration of the steel industry in eastern India may be quickly noted. Of the first two plants in India, one was based on ore (Jamshedpur, 40 miles from the Gorumahisani ore mine), and the other on coal (Burnpur almost the same distance from Jharia). Of the three new plants, Bhilai and Rourkela are ore-based, while Durgapur stands in the heart of the coal belt. The fourth plant in Bokaro will be based on coal. What, one may ask, should be the next move? It will be rash to attempt a firm answer because of the many considerations involved. Clearly, however, serious thought will have to be given to the claims of west and south India on both economic and technical grounds. A sea-based plant in Goa, capitalising on the fine natural harbour and the wealth of ore in the vicinity, is not an idea to be lightly dismissed. Nor need the utilisation of Salem ores with Neyveli lignite be indefinitely deferred, even if the initial capacity of such a plant has to be small because of technological uncertainties. Too often, questions such as these are being passionately debated at the non-technical level. A planning agency, so constituted as to insulate it from unwholesome pressures, can make an important contribution to the solution of the problems.

The country has now reached a stage of development in steel where one may legitimately expect both planning and implementation to become more precise and sophisticated. Where is the need to make slogans out of steel when the industry can go ahead faster and more surely by a less flamboyant but more practical approach?

Ballabgarh today in the eyes of a fascinating past

BALLABGARH, a village 21 miles from Delhi, has borne silent testimony to an exciting history for centuries. Situated on the Panipat plains, it witnessed the rise and fall of dynasties, fell under the hoofs of Babur's on-coming horses, saw the swords flashing as Nadir Shah plundered.

Amidst such a fascinating past, Ballabgarh today throbs with the activity of the giant Rs. 6-crore Goodyear factory in production. The factory houses the exclusive 3-T Process plant developed

by Goodyear in USA and manufactures a wide range of tyres and tubes. This factory is the 59th in the long line of Goodyear factories spread internationally. It is the youngest and the most up-to-date, taking advantage of the wealth of experience, resources and technical skill that goes with the name of Goodyear.

The Ballabgarh factory is the edifice of Goodyear's progress. It is also the edifice of the efforts of a major industry to serve a fast developing nation.

PROJECTS FOR MAKING ALLOY AND TOOL STEELS SERIOUSLY DELAYED

AT the end of the third plan, India hopes to be producing 100,000 motor-vehicles. This will require 290,000 tons of rolled steel of all descriptions, of which special steels will account for 43,000 tons.¹ Assuming conservatively an average price of Rs. 2,100 a ton,² the import bill for special steels alone will be over Rs. 9 crores. The rapid growth of machine-building and engineering industries is described as a key task of the third plan. By 1965-66, it is hoped that India will be making 60,000 tons of machine tools valued at Rs. 30 crores. On the basis of U.S. data, this will call for a special steel input of 8,400 tons of the value of Rs. 1.76 crores. Taking all industrial machinery together, the manufacturing programme now visualised will require over 66,000 tons of special steels worth around Rs. 14 crores. These figures highlight the importance of developing the production of alloy tool and special steels within the country if the growth of heavy engineering industries is not to add intolerably to the burden of maintenance imports. As the third plan acknowledges: "The current heavy demand for imports of these high-

wards from the industrial targets set in the third plan, and making a marginal provision for stocks, the demand is estimated to go up to over 200,000 tons in 1965-66. Looking beyond the third plan, and calculating again from the development targets tentatively in view for 1971-72, India should be consuming 400,000 tons of special steels by then (see table I). These figures do not take into account the demand for spring steels or electrical grade silicon steels which can "ordinarily be produced in open-hearth furnaces" of an integrated steel works. By definition, therefore, these quantities of special steels will have to come from plants specifically set up for their manufacture.

Estimates of Demand

The estimates of the Planning Commission are corroborated by independent studies. The National

TABLE II

REQUIREMENTS OF VARIOUS CATEGORIES OF ALLOY, TOOL AND SPECIAL STEEL (TONS)			
Categories	1960-61	1965-66	1970-71
Free cutting and low alloy steels	27,000	73,100	136,300
Stainless steels	12,000	41,500	77,200
Electrical steel sheets	29,000	59,000	110,000
Alloy steels, including spring steel and alloy constructional steel	33,000	87,700	163,600
Die steels, high-speed steels and magnet steels	6,000	14,600	27,300
Total	107,000	275,900	514,400

By
A SPECIAL CORRESPONDENT

priced but essential raw materials of the engineering industries is a serious problem on maintenance account. The manufacture of tool, alloy and stainless steels has, therefore, to be assigned very high priority in the third plan from the point of view both of the requirements over the five-year period and of the probable long-term growth of demand for these products.³

TABLE I

ESTIMATE OF SPECIAL STEEL REQUIREMENTS, 1960, 1965 AND 1970 (IN TONS OF ROLLED STEEL)			
Consuming sector	1960	1965	1970
Transport equipment	27,424	52,800	94,115
Electrical equipment	1,110	7,140	20,610
Industrial equipment	11,895	6,758	128,416
Small-scale industries	2,090	3,300	5,550
Other manufacturers—specified	13,174	30,095	55,800
Defence	5,200	9,750	16,900
Agriculture	4,000	7,500	13,000
Spares	6,489	17,734	33,434
Construction	400	750	1,300
Miscellaneous unspecified consumers	6,489	17,734	33,434
Stocks	3,914	1,811	20,125
Total special steel	82,185	215,372	422,628

In broad terms, present requirements of special steels are assessed at about 82,000 tons. Calculating back-

¹ Figures based on Demand for Steel, Special Steel and Pig Iron, India 1960-70; a study made by the Perspective Planning Division, Planning Commission.

² Total special steel inputs April-November 1961 were 35,300 tons valued at Rs. 7.86 crores, giving a value of Rs. 2,131 a ton.

Council of Applied Economic Research, which undertook a survey of the steel demand over the next decade at the instance of the Metals Committee of the Council of Scientific and Industrial Research, approached the problem differently, and included within its definition "free cutting and low alloy steels" and "electrical steel sheets." It estimates demand in 1965-66 at 275,900 tons (see table II) which, discounting the categories excluded by the Planning Commission, comes down to 153,800 tons. The Tata Iron and Steel Company, vitally interested in demand projections as the sponsor of a major special steel project, is inclined to agree with the Planning Commission's estimates of the demand. As its principal spokesman, Sir Jehangir Ghandy, said: "Although we need relatively small quantities, alloy steels are so high-priced—an average of Rs. 4,000 a ton—that their manufacture in India would result in large foreign exchange savings. In recognition of this, the Government has called for a project report for an alloy steel plant of 40,000 tons for an alloy steel plant of 40,000 tons ingot capacity, with provision for future expansion up to 80,000 tons. A study of trends abroad indicates an alloy steel consumption of approximately 5 percent to 8 percent of ordinary finished steel, on which

basis our requirements would be in the neighbourhood of 300,000 to 500,000 ingot tons, basing ourselves on the lower figure of 6 million tons of consumption. If we approach the problem in another way by computing the alloy steel content of various industrial targets of the third plan, we arrive at an estimate corresponding fairly closely to the earlier figure. It would seem necessary, therefore, to plan for a much larger capacity in alloy steel than at present envisaged."

At the present time, the production of special steel is negligible (see table III on page 17). The bulk of it comes from the defence establishments which have, been making special steels, mainly for their own consumption, for over three decades. The rest of it is produced in small electric furnaces. The need for developing indigenous production has been felt since the end of the second World War. Tata Steel, which undertook the manufacture of small quantities of special steels during the war, had acquired "a modicum of know-how" in this field. Among the 110 varieties produced in those years were bullet-proof armour plate for armoured cars, high-speed steels, nickel-chrome steels and stainless steels. Manufacture was organised, however, on an improvised basis. A new half-ton frequency induction furnace was employed along with two existing electric arc furnaces for steel-making. Forging hammers were procured to cog ingots, billets and even finished bars. Auxiliary heat-treating equipment was rigged up, and a plant put up to extract vanadium from vanadium-bearing iron ore.

The whole exercise was undertaken to meet an emergency, and ordinary commercial considerations were suspended. When the war ended, and the supply of special steels from overseas was restored, the Jamshedpur experiment came to a halt, though very small quantities are still being produced to meet the steel-works' own maintenance requirements. The experiment had, however, proved that Indian raw materials were available to justify setting up an alloy tool and special steel plant. It was clear from this wartime experience that production on an economic basis required that it should be undertaken in a separate plant and not in an integrated steel works. Tata Steel considered establishing independent production facilities and "negotiations were almost concluded with a leading manufacturer in the U.K., but the project did not materialise." No reasons have been officially disclosed, but it is gathered that the generally unfavourable climate for industrial investment in the early '50s came in the way.

Ambitious Second Plan Programme

A more hopeful outlook emerged with the formulation of an ambitious

programme for the steel industry's four-fold expansion during the second plan period. The private sector, called upon to double capacity at Jamshedpur and Burnpur, presumably had its hands too full to venture into special steels, requiring not only sizable additional investment, but also the deployment of highly skilled and experienced manpower. The Tata scheme of the early '50s remained pigeon-holed, but the Government decided to set up a 25,000-ton plant in the public sector. The original idea was to develop the production of 15,000 tons of stainless steels and 2,000 tons of tool alloy steels at the Mysore Iron and Steel Works, but later the view emerged that a separate plant would be preferable. A French team and a British team were invited to submit preliminary project reports, which were received in 1958. But, at that point, a decision was taken to entrust the work to the Indian firm of engineering consultants, M. N. Dastur and Co. (Private) Ltd. After several months, during which details were settled, a formal agreement with the consultants was signed in December 1959. With the idea perhaps of expediting the project, a detailed project report was commissioned straightaway even before major decisions on the location of the plant, production capacity and product-mix had been firmly taken.

Plan for Bigger Public Sector Plant

The Indian consultants started with an assessment of the country's requirements of special steels, perhaps the first ever attempted. This pointed to the need for a much bigger plant than the Government had in view. According to the consultants, the demand was likely to go up to 215,000 tons by 1965-66, exclusive of electrical steel sheets, spring steels, etcetera, whereas the Ministry had in August 1959 put forward an estimate of 50,000 tons. They asked, therefore, that the initial capacity of the plant should be raised from 40,000 tons to 80,000 tons of ingots (equivalent to a finished output of 48,000 tons) with provision for ultimate expansion to 300,000 tons. This was agreed to by the Government, subsequent to the commissioning of the report.

In the designing of the plant, the main emphasis was laid on permitting "a rational and rapid expansion without interference with current production". Provision has also been made for future diversification of production to include carbide tips, alloy steel tubes, uranium, titanium and super-alloys. Primary mills (blooming, and sheet bar and billet mills) are designed for the ultimate production of 300,000 tons since, as the consultants explain, "these high-cost units cannot be economically duplicated". Others like the bar and sheet mills are, however, designed for the initial production only, as these are economic unit sizes. The consultants have preferred everywhere to rely upon "only proved and

well-established processes", because they consider it desirable to do so "until the techniques of producing alloy steels of consistent good quality have been thoroughly mastered".

In formulating the initial product-mix, the consultants have favoured standardisation. Hundreds of different steels are now imported into India in varying sizes and with different chemical analyses. To get this wide range down to manageable proportions, rationalisation is necessary to make indigenous manufacture possible. Work to this end was undertaken by the Alloy Steels and Special Steel Sectional Committee of the Indian Standards Institution. This effort had the support of the steel industry and consumers, and was later to be endorsed by the consultants.

Sir Jehangir Ghandy aptly sums up the problem as follows: "It is not suggested that all the numerous varieties manufactured by different suppliers should be taken up for production. In fact, such an approach should be discouraged. Small variations of alloy contents very often do not materially affect the properties of steels and yet are sometimes insisted upon by consumers used to a particular specification. What is necessary is to standardise on certain grades and to minimise the diversification which only leads to uneconomic production. A study has been made by the Indian Standards Institution which has prepared a list of rationalised steels recommended for manufacture in India. The production schedule for commencing manufacture should be drawn up on these lines."

Raw Material Base

The basic raw materials needed to sustain alloy and tool steel production are steel scrap and ferro-alloys. Some of the scrap required for charging in the furnaces would be that arising within the plant itself in the course of finishing operations, but the larger part would need to be purchased from outside. An assessment by the Scrap Investigation Committee appointed by the Government of India indicated a net surplus of 300,000 to 350,000 tons of good melting scrap after allowing for the consumption of existing scrap-based steel-makers. For use in an alloy and tool steels plant, mild steel scrap could be readily obtained from an integrated steel works, a factor commonly influencing the location of the former. Clean and freshly generated scrap from a few known sources is preferred, as it is difficult to analyse scrap collected from a variety of sources. Another possible source of purchased scrap may be the engineering industries processing alloy and tool steels into different products, and the endeavour should be to persuade them to segregate this scrap and return it to the steel plant.

The alloying elements are obtained usually by additions of ferro-alloys. The quest for self-sufficiency in alloy and tool steels cannot, therefore, proceed unless the manufacture of ferro-alloys is established and extended. At the ferro-alloys symposium held earlier this year in Jamshedpur under the auspices of the National Metallurgical Laboratory, Mr. B. B. Engineer offered the following estimates of ferro-alloy requirements,

assuming a special steel output of 200,000 tons:

TABLE IV ESTIMATED DEMAND FOR FERRO-ALLOYS	
Ferro-chrome (65 percent chrome)	26,000 tons
Ferro-silicon (50 percent silicon)	6,000 tons
Ferro-manganese (75 percent manganese)	3,000 tons
Electrolytic manganese (99 percent manganese)	6,500 tons
Ferro-tungsten (70 percent tungsten)	2,500 tons
Ferro-molybdenum (70 percent molybdenum)	450 tons
Ferro-vanadium (50 percent vanadium)	300 tons
Others	250 tons
Total	45,000 tons

Ferro-manganese Manufacture

As Mr. Engineer points out, some ferro-alloys—particularly ferro-manganese and ferro-silicon—are also needed for mild steel production. Manufacture of ferro-manganese had commenced during the first World War in the Kulti blast furnaces of the Bengal Iron and Steel Company, and was taken up shortly afterwards by Tata Steel, both attempting to make themselves self-sufficient. Production of standard grades started, however, only during the second plan when a number of units were established using electric smelting techniques. In 1961, the total installed capacity of such units was 158,000 tons. During the third plan, it is hoped that the installed capacity will go up to 200,000 tons, to realise which licences have been granted for a total capacity of 256,000 tons. No difficulty should, therefore, arise in meeting the very small requirement of the alloy and tool steel industry.

Ferro-silicon is produced only at the Bhadravati works of Mysore Iron and Steel. Production in 1961 was 9,157 tons, and additional smelting facilities are being installed to raise output to 20,000 tons. The latest annual report of the Department of Iron and Steel states that the installation of one furnace was completed in December 1961 and "the second furnace is nearing completion". Demand is estimated to go up to 40,000 tons by 1965-66, to meet which licences have been approved for 32,200 tons. Adequate raw materials are available within the country for production of this order. Some 16,000 tons of ferro-chrome capacity have likewise been licensed, but there is a large gap still to be covered to meet the estimated demand of 40,000 tons to 45,000 tons by the end of the third plan.

Production of Ferro-silicon

Ferro-tungsten—not hitherto manufactured except in limited quantities in Jamshedpur during the war-time experiment—is the principal alloying material used in high-speed steels. Proved deposits of tungsten ore do not so far exist, but two areas—Degana in Rajasthan and Bankura in West Bengal—are considered promising. At the Jamshedpur ferro-alloys symposium, Dr. B. R. Nijhawan, director of the National Metallurgical Laboratory, disclosed that work was in progress to produce ferro-tungsten from Degana ores. Other countries, short of tungsten, have developed substitute steels using molybdenum to cut down the tungsten additions. But this alternative is not too promising as no deposits of molybdenite have yet

been located, although the mineral is believed to occur in the Chotanagpur region of Bihar, Madurai, the Khasi hills of Assam and the Godavari district of Andhra. Ferro-vanadium, used in these alloy steels which are required to withstand shock and vibration, could conceivably be manufactured in India, as some 20 million tons of vanadiferous iron ores are known to exist. The National Metallurgical Laboratory is at present working on pilot-scale experiments to recover a vanadium concentrate from the ores of Singhbhum and Mayurbhanj.

Nickel, needed to augment resistance to corrosion and heat in alloy steels, is a metal for which India has to depend entirely on imports. To an extent, nickel can be substituted by electrolytic manganese in the manufacture of stainless steels by a process developed at the National Metallurgical Laboratory. This will be in keeping with the endeavour in every country producing alloy and tool steels to develop a series of "alternatives" or "substitute" steels to overcome shortages of particular alloying elements. As Sir Jehangir Ghandy says: "We should pursue a similar line of effort in developing alloy and tool manufacture in India. Due to the non-availability of metals like nickel, and cobalt, it will be necessary to concentrate on the manganese chromium and chrome-manganese steels". Referring to the

work already done at the National Metallurgical Laboratory in this field, Sir Jehangir makes the plea: "Further research should be specially directed towards the development of alloy and tool steels with an indigenous base".

From this brief survey of the raw materials base, it will be seen that a major effort has yet to be made to underpin the manufacture of special steels by adequate production of ferro-alloys. The National Metallurgical Laboratory's recent symposium has made an important contribution by focussing attention on this weakness in long-range planning.

Serious Delays

At the present time, the third plan programme for alloy and tool steels has clearly not made much headway. A recent assessment by the Industry and Minerals Division of the Planning Commission notes that "if things remain as at present, no more than a tiny fraction of the output target may materialise by 1965-66". The Hindustan Steel plant in Durgapur has made little progress. The detailed project report was submitted in July 1960. After technical examination by a special committee, it was approved by the Government and the go-ahead given to the consultants in March 1961. Today, after the lapse of more than one-fifth of the time allowed for construction, the position is that tenders for site-levelling and structural fabrication

BHARAT ELECTRONICS LTD.
JALAHALLI P.O. BANGALORE-13.

have yet to be awarded. Equipment enquiries have not so far gone out, and a part of the land required for the project remains to be acquired. In the judgment of the Industry and Minerals Division, construction "might spill over largely into the fourth plan".

No official explanation is available for this delay. It is understood, however, that procedural difficulties which leave little scope for decision-making at the project level are holding up progress. Theoretically, "the overall responsibility (for) work on the plant site is that of the consultants", but in practice, decisions can be taken neither by the consultants nor by the project's general manager, but must go up to Hindustan Steel's headquarters in Ranchi or New Delhi. A high-level review of the project is now under way. It is to be hoped that the decentralisation of responsibility favoured by Mr. C. Subramaniam, the new Minister for Steel and Heavy Industries, will bring some benefits to this key project.

Production from Ordnance Factories

Very little has been publicly said about the plans for increasing special steels production in Defence establishments. In fact, Mr. Menon refused to disclose to Parliament where the additional capacity will be located. This was curious because the third plan explicitly refers to the Ordnance factories in Ishapur

and Kanpur in this connection. The Defence sector, it is expected, will contribute about 50,000 tons for civil consumption out of the total third plan target of 200,000 tons.

According to the Department of Iron and Steel, 261,000 tons of capacity had been licensed by 1961-62 spread over 15 schemes, including presumably the Durgapur plant and civil supplies from Defence establishments. On this assumption, 160,000 tons of capacity have been licensed in the private sector, the largest single project being the proposed

49,000-ton Tata plant in Jamshedpur. The progress of the private sector schemes has been equally disappointing, only two having made any headway—the Mahindra and Mahindra project (15,000 tons) and Shri V. Pandurangiat (7,000 tonnes). The Tata project, it is believed, has been held up as satisfactory arrangements for foreign collaboration have yet to be concluded. Negotiations with Crucible Steel of the United States, which were at one time reported to be fairly advanced, fell through. It is understood that talks are now in

progress with a U.K. group which is working on a project report.

Quite clearly, all these schemes in the public and private sectors will have to be speeded up if anything like self-sufficiency is to be achieved in the foreseeable future. The delays which have already occurred rule out the realisation of this aim by the end of the third plan, the impact of which will be felt in the inflation of maintenance imports to meet the rising requirements of special steels as the production of industrial machinery and equipment increases.

TABLE III
SPECIAL STEEL CONSUMPTION : 1954-60
(As rolled steel)

Year	Special steel (in tons)			Total consumption	Total steel (Finished in '000 tons)			Total consumption	Special steel as percent of total steel
	Production (1)	Imports as raw steel (2)	Imports as components (3)		Production (1)	Imports as raw steel	Imports as machinery and equipment		
1954	1,190	6,510	23,160	30,860	1,230	216	462	1,910	1.6
1955	1,070	11,050	33,350	45,470	1,241	400	667	2,308	2.6
1956	1,980	30,570	43,400	75,950	1,293	854	864	3,016	2.5
1957	1,960	16,221	51,600	69,781	1,263	1,361	1,093	3,657	1.9

Raising the Production of Industrial Machinery Under the Third Plan

MACHINE-BUILDING is essential for rapid industrial progress. At the beginning of the second plan, India built some machines and machine tools. At the beginning of the third plan, machines worth at least Rs. 160 crores a year were produced. But about Rs. 200 crores worth of industrial plant and machinery were imported in 1960. This indicates the magnitude of the problem. Machinery and equipment are needed for the maintenance, rehabilitation, replacement and modernisation of the existing units of production, for the expansion of capacity in existing units; and for the creation of fresh capacity in existing as well as new lines.

Cotton Textile Machinery

Cotton textile machinery includes (a) spinning machinery, namely, blow-room lines, carding engines, drawing frames, combers, flyer frames, ring frames, etcetera, (b) weaving machinery, namely, warp winding, pirn winding, warping and sizing machines, looms—both plain and automatic—etcetera, (c) processing and finishing machinery, namely,

By Out

NEW DELHI CORRESPONDENT

jiggers, printing, mercerising and bleaching machines, various types of washing, polymerising, and calendaring machines, etcetera.

The Indian textile machinery manufacturing industry started with the manufacture of ring frames and looms. Later, the manufacture of carding engines and some other items are now being manufactured indigenously, namely, blow-room lines, draw frames, speed frames, high-speed frames, and warping machines, and a number of wet processing machines such as winches, cloth-printing machines, agers, automatic jiggers, hot air stenter, mercerising and singeing machines, continuous plant and polymerising machines. Fresh schemes for manufacturing new items with foreign collaboration such as automatic looms and sizing machines are now being implemented. Recently, indigenous capacity has also been created to manufacture components of ring frames like top arm drafting parts, ball-bearing top rollers, ball-bearing jockey pulleys, roller-bearing inserts, etcetera.

Findings of a Survey

A survey conducted by the Small Industries Service Institutes in Bombay and Madras, showed that in 1956 about 447 small-scale units accounted for an annual output of about Rs. 3 crores worth of spare parts of cotton textile machinery. Spare parts covered in the survey report related to the following groups: (1) spinning frames, (2) winding and preparatory equipment, (3) looms, including accessories like dobbies, and (4) finish-

ing and processing machinery. Regionwise information on the number of units and the estimated capacity and production of spare parts is given below:

Region	Number of units	Capacity (Rs. crores)	Production (Rs. crores)
Western region (Bombay, Madhya Pradesh and Mysore)	400	3.93	2.62
Southern region (Madras, Kerala and Andhra)	20	0.32	0.23
Eastern region (West Bengal, Bihar, Orissa and Andhra)	17	0.28	0.18
Northern region (Punjab, Uttar Pradesh, and Rajasthan)	447	4.54	3.03

In 1959, the number of units was reported to have increased to 467 with an annual installed capacity of Rs. 4.85 crores worth of spare parts. The value of the production in 1959 was estimated at Rs. 4.51 crores. In addition, a number of industries, having either foundry or machinery shops in this only, assisted production in this small-scale sector. Also, about 35 or 40 textile mills in the western region manufactured spare parts in their attached workshops to meet their urgent requirements. Spare parts and components are also manufactured by the textile machinery manufacturing units, in addition to complete machines, and by a few more units, which are specifically licensed under the Industries (Development and Regulation) Act to manufacture such items. Together these manufacturers, it is estimated, produce spare parts and components worth Rs. 6 crores or Rs. 7 crores a year. The total annual output of indigenous textile spares and components of all the three sectors is roughly estimated at Rs. 14 crores or Rs. 15 crores.

Specialised Equipment

Specialised equipment like variable speed motors, oil pressure gear boxes for stepless variations of speeds, P.I.V. types of stepless variation speed units, different kinds of gauges and instruments, special kinds of blowers, pump and suction equipment, and various kinds of electric or steam heater, manufactured by specialised units, are imported from abroad. Because of the limited requirements and the complexity and intricacy of the machines, indigenous manufacturers have not yet taken in hand the production of some items. They are: (1) production of some items, (2) special automatic winding machines, (3) fully automatic winding machines, (4) special types of automatic looms, (5) single spindle automatic pirn winders, (6) vacuum stripping plant, (7) flat grinding machines, (8) flat milling machines, (9) yarn gassing machines, and (10) yarn and fabric testing machines.

There is scope for standardisation in textile machinery so that its

large-scale manufacture could be undertaken economically. A committee was appointed to indicate broadly the specifications of the machinery demanded by the mill industry, so that a phased programme of production could be worked out by the manufacturers. The committee has recently finalised its report.

Textile machinery is required (i) for rehabilitation and modernisation and (ii) for new undertakings or expansion of the existing units. During the third plan period, it is proposed to license 3 million spindles and 25,000 automatic looms. Licences for a further 1 million spindles may also be granted later. Taking the capacity of the indigenous textile machinery manufacturers into consideration, the indigenous production target for 1965-66 has been envisaged at about Rs. 20 crores a year in terms of value. The corresponding capacity target has been set at Rs. 22 crores.

Making Jute Mill Machinery

The production target for jute mill machinery was placed at Rs. 2.5 crores in terms of value by 1960-61. During the second plan period, the capacity for the regular manufacture of jute mill machinery was confined to one type of sliver spinning frames and broad looms, besides the occasional manufacture of copwinders to order. Britannia Engineering Co. Ltd and Texmaco virtually discontinued the production of jute mill machinery before the end of the second plan, and a new unit—Oriental Electric and Engineering Co. Ltd—was licensed to manufacture broad looms. Although schemes for the indigenous manufacture of other items of jute mill machinery were being discussed, no capacity was actually established during the second plan. The manufacturing capacity as on 31st March, 1961, was as follows:

Item	No. of manufacturing units	Annual capacity (Nos.)	Value (Rs. lakhs)
1. Light yarn sliver spinning frames	1	360	180 (on treble shift basis)
2. Broad looms	1	144	65 (on double shift basis)

Year	Sliver spinning frames	Broad looms
	No.	No.
1956-57	78	—
1957-58	146	—
1958-59	186	—
1959-60	300	74
1960-61	279	87

The actual production of jute mill machinery during the second plan period was as follows:

During the second plan period, a few other units were engaged in manufacturing spare parts, components and stores required by jute mills. Some of the units were licensed under the Industries Act and were regularly manufacturing wooden store items like bobbins, shuttles and card clothings as well as steel parts like card pins, gill pins, reeds, and

combs. Some of these items of stores and spares were also made in the small-scale sector. The modernisation of the jute industry during the second plan period has been mainly confined to the preparatory and spinning stages. Up to 31st March, 1961, a total of 293,970 modern sliver spinning spindles—248,434 on the fine side and 45,536 on the coarse side—had been installed and were working in 59 mill companies. This means that 84 percent of the working looms were being fed by sliver spun yarn at the end of the plan period. During the plan, about 989 light yarn spinning frames accounting for 98,900 spindles were manufactured and no import of light yarn sliver spinning frames was permitted.

Ad Hoc Committee

The Central Ministry of Commerce and Industry appointed an ad hoc committee in January 1959, to assess the requirements of modern jute mill machinery and to explore the possibilities of their manufacture in India to the maximum extent possible. The committee, in its report, stressed the urgent need to complete the process of modernisation, and suggested that the existing units, with large idle capacities, should be asked to take up the manufacture of the main items of machinery required. The firms manufacturing jute mill machinery are also manufacturing other items of industrial machinery.

In the jute textile industry, no additional capacity for the third plan period is envisaged except the installation of two 150-loom units in Assam. Machinery will, therefore, be required mainly for the modernisation and rehabilitation of the existing mills. The third plan target for jute goods production has been set at 1.3 million tons a year. This can be achieved by progressive unsealing of the looms not being worked at the close of the second plan. The requirement of modern preparatory and spinning machinery for 1965-66, estimated on the lines indicated by the ad hoc committee, will be as follows:

Machinery	Nos.	Estimated value (Rs. lakhs)
Finisher cards	10	14.35
Second drawing frames	20	8.65
Finisher drawing frames	60	23.50
Sliver spinning frames	215	109.50

Third Plan Targets

As for post-spinning machinery, it is difficult to assess at this stage the exact annual requirement, but it may be estimated to be within Rs. 1 crore. On the basis of the foregoing, the third plan capacity and production targets for jute mill machinery can be placed at Rs. 2.5 crores a year.

In the third plan, the Indian jute industry is expected to take up the

TON-MILES?

AS SIMPLE AS ARITHMETIC

"Ton-miles?" said the surprised
shankarawalla, "never heard of it."
The poor shankarawalla was, no doubt,
right. But the statistician
would not leave him alone.
"Certainly, you do," said he.
"Every time you are lifting a load
and taking it somewhere,
you are increasing your ton-mileage.
As simple as arithmetic,"
explained the statistician.

"A ton of goods, carried over a mile—
that is a ton-mile.
Take the Railways, for instance.
During 1960-61, the last year
of the Second Plan, they did about
54 thousand million ton miles—
more than what they had promised
in 1955. Now they are getting ready
to do 96,000, 000, 000 ton-miles
by 1965-66, the last year
of the Third Plan."

EASTERN RAILWAY

modernisation of its equipment for the post-spinning stages. Old winding equipment is expected to be largely replaced by new high-speed machines, and additional pre-beaming equipment will be installed to increase productive efficiency. For the modernisation of the weaving process, the choice would be either (a) rendering the existing flat-bed looms semi-automatic by the use of cop-changers and warp-stop-motions, (b) replacement by automatic circular looms, or (c) replacement by automatic shuttleless looms. Leading mill groups have for some time now been experimenting with these three methods of loom automatization, and are expected to be in a position to draw up their modernisation programmes. The phasing of the programme will depend on the availability of foreign exchange, the indigenous production of modern jute mill machinery and the probable impact of loom automatization on employment.

Besides fine yarn spinning frames, broad looms and copwinders, whose production is now well established, plans for the indigenous production of a number of other machines have been finalised. These include coarse yarn spinning-frames, drawing-frames, cone-winders, pre-beamers, cop-loaders and shuttleless looms. Virtually the whole range of machines needed by the jute industry for modernisation is thus expected to be available from indigenous sources by the middle of the third plan. The output of spares and stores for the industry will also be raised. Taking into account the new licences issued under the Industries Act and the additional capacity being established in the country, the following table gives the expected manufacturing programme during the third plan period:

Product	Capacity on single shift basis (annual) (Nos.)	Value of output (Rs. lakhs)
Preparatory and spinning:		
Light yarn spinning frames	120	61.20
Heavy yarn spinning frames	48	28.80
First drawing frames	24	7.08
Second drawing frames (Light yarn)	24	9.96
Finisher drawing frames (Light yarn)	48	19.78
Finisher drawing frames (Heavy yarn)	24	9.20
Post-spinning:		
Broad looms	78	31.02
Cone-winders	48	13.44
Pre-beamers	24	20.64
Dressing machines	12	25.68
Automatic looms ("one neck")	360	43.20
		270

Sugar Mill Machinery

The second plan laid down a provisional production target of Rs. 2.5 crores worth of sugar mill machinery for 1960-61. It is the equivalent of five sugar plants with a crushing capacity of 1,000 tons a day. This is expected to be required annually for replacement purposes after

1960-61. The urgency of accelerating sugar mill machinery manufacture was realised when in the wake of the foreign exchange crisis of 1957, it was found difficult to provide for the import of sugar mill machinery. The Government then took the decision to regulate the future growth of the sugar industry in step with the indigenous availability of plant and equipment. Under the impetus of demand for indigenous machinery generated by this major policy decision and the assistance provided by the Government in various ways, namely, the release of foreign exchange for capital goods and imported components, the standardisation of mill capacity for new sugar plants and facilitating the formation of consortiums, the sugar mill machinery manufacturing industry made rapid progress. At the end of the second plan, the following firms were in production:

Firm

Walchandnagar Industries, Poona
K.C.P. Ltd, Madras
Binny's Engineering Works, Madras
New Indian Development Corporation, Pimpri
Indian Sugar and General Engg. Co., Ambala
Texmaco, Belgharia

In addition, 17 firms were in a position to undertake the manufacture of general items, vacuum pans, evaporators, centrifugals, castings, and structural items. Their aggregate capacity comes to Rs. 2.8 crores. The total installed capacity at present thus comes to Rs. 14.4 crores worth of sugar mill machinery. The year-wise production is given below:

Year	Rs. crores
1956	0.3
1957	1.6
1958	2.0
1959	2.8
1960	4.2

Imported Components

The main components which were allowed to be imported in connection with the first batch of orders for the manufacture of complete sugar machinery plants undertaken in 1960, were boilers, turbo alternators, air compressors of higher ranges, motors of 300 horse-power and above, heavy castings, centrifugal components, brass tubes and reduction gear units. The six major manufacturers who are producing machinery in collaboration with foreign parties, have formed themselves into two consortiums for manufacturing and supplying complete sugar mill plants. The installed capacity of the sugar industry by the end of the second plan was 2.25 million tons, and the plan was 2.25 million tons, and the target for 1965-66 has been envisaged at 3.5 million tons. To secure the required increase of 1.25 million tons in sugar capacity, 95 plants with a daily crushing capacity of 1,000 tons each are required. Since 10 per cent of these plants are already being installed in new factories, the net requirement is 85 plants, which corresponds to Rs. 68 crores worth of machinery. This estimate is exclusive of the replacement and modernisation requirement which is quite sizable on account of the backlog. The magnitude of the demand

for replacement is being studied. The new capacity requirements have also come up for review as a result of the high level of production recorded in 1960 with the capacity then available.

Production Target

Against the background of the various considerations discussed above, the production target for sugar mill machinery in 1965-66 has been fixed at Rs. 14 crores and the corresponding capacity at Rs. 15 or Rs. 16 crores. This will be equivalent to 17 complete sugar plants with a crushing capacity of 1,000 tons a day, their indigenous content will be about 85 per cent. A licence was given in 1960 to Triveni Engineering Works, Allahabad, for undertaking the manufacture of milling plant, mill gears, centrifugals, engines and turbines for milling, and power

the target, was estimated at about Rs. 40 crores for the whole plan period. Assuming a uniform rate of expansion, the annual requirement of machinery was placed at Rs. 8 crores. The yearly need for replacement from 1960-61 onwards is estimated in terms of four cement plants with a daily capacity of 500 tons each. To meet this, a provisional target for cement machinery worth Rs. 2 crores was set for the second plan. At the beginning of the second plan, there was no unit in the country for producing complete cement plants, though four establishments attached to cement works were producing selected items of equipment of relatively minor importance. In the last five years the indigenous production of such items and spare parts—which also include an important item, clinker coolers—was as follows:

Machinery produced	Capacity (Rs. crores)	Year	Number of units in operation	Value of output (In Rs. lakhs)
Two complete plants, gears and general items	3.6	1955	4	34
Two complete plants	1.6	1956	4	42
Two complete plants, except centrifugals	1.6	1957	5	62
Two complete plants, including centrifugals	1.6	1958	5	64
Two complete plants, except centrifugals	1.6	1959	6	64
Two complete plants, except centrifugals	1.6	1960	6	63

The installed capacity in 1960 was equal to Rs. 1.10 crores worth of machinery a year on a double shift basis, the unitwise break-up being as follows:

Firm	Annual capacity (Rs. lakhs)
A.C.C., Shahabad	90
K.C.P. Ltd, Madras	5
Rohtas, Dehri-on-Sone	5
Orissa Cement, Orissa	5
Dalmia Dadri, Punjab	5
	110

generation. The firm will have the technical collaboration of Booker's Engineering Ltd, London, and will manufacture sugar machinery worth Rs. 1.5 crores. With the implementation of this project, the capacity is expected to be more or less in balance with the target envisaged. The principal raw materials required for the 1965-66 production target are given in the following table:

	(In tons)
Steel	20,000
Special steel	2,000
Non-ferrous metals	800
Fire bricks	1,100

Producing Cement Machinery

A capacity target of 16 million tons for the cement industry was envisaged by the final year of the second plan. The value of machinery (excluding electrical items), taken at about 50 per cent of the fixed investment of Rs. 82 crores for achieving

The requirements for expanding the capacity of the cement industry during 1956-61 were almost entirely met through imports. Plans for fostering the capacity for manufacturing cement machinery were initiated only in the later years of the second plan, with the result that the schemes under implementation are yet in the construction phase and the production target, set for the second plan has remained unfulfilled. The actual investment in establishing new capacity is estimated to have

The world over, people of taste prefer INDIAN COFFEE for its distinctive aroma

From the world's finest Coffee Plantations in India, where ideal conditions for growing superior Coffee exist, INDIAN COFFEE goes to cheer up millions of Coffee lovers in France, Italy or Germany, in U. K., U. S. A., or U. S. S. R. - In fact all over the World!

The expansion of Indian Coffee industry has been rapid in the last decade as can be seen from these figures:-

PRODUCTION HAS NEARLY TREBLED in the last eight years: from 23,943 tonnes in 1952-'53 to 67,925 tonnes in 1960-'61. The target of production by the end of the Third Five-Year Plan is 80,000 tonnes.

CONSUMPTION IN INDIA HAS INCREASED from 26,000 tonnes in 1955-'56 to over 35,523 tonnes in 1960-'61.

EXPORT HAS GONE UP FIFTEEN TIMES since 1952: from only 2,200 tonnes in 1951-'52 to 32,271 tonnes in 1960-'61.

Future Demand

Projections of the future demand have to take into account the overall requirements, inclusive of the replacement demand in the third plan period, and also the likely average rate of annual growth of the cement industry in the subsequent plan period. Based on the capacity for cement production installed by 1960-61 and the target for the third plan, an additional cement capacity of 6 million tons has to be built up over the five-year period. The capacity due for replacement is estimated at 15 million tons, representing the plants in existence even before the second World War. Of this total, the share of the Associated Cement Companies is placed at 1 million tons, which would be taken care of under its programmes of modernisation and expansion during the third plan period. On this basis, the balance of the replacement demand in the third plan period has been placed at 500,000 tons of cement-making capacity.

The overall demand for cement machinery, on account of new capacity to be built and the replacement programmes to be carried out in the third plan period, thus comes to 6.5 million tons. If this programme is phased uniformly, the annual demand for machinery would be about 1.3 million tons in terms of cement capacity, which will be equal to six and a half plants with a daily capacity of 600 tons each. The fourth plan is likely to visualise an addition of 10 million tons of installed cement capacity. Assuming a progressive rise in the rate of growth, from a growth in capacity of about 1.5 million tons a year in the initial years, the annual addition might rise to 2.5 million tons in 1970-71. Even assuming that cement machinery manufacture might expand in the fourth plan period in step with the rise in demand for plant and equipment, it is important that the capacity available at the end of the third plan should be adequate to take care of the cement machinery requirements in 1966-67. It is also necessary to make some allowance for slag cement manufacture, for which the machinery requirements are of a smaller magnitude.

The requirements of cement machinery should, therefore, be visualised in terms of six or seven plants with a daily capacity of 500 tons or 600 tons each in 1965-66. This assessment of demand may need re-examination with a view to raising the capacity and output if, as a result of delay in the installation of cement plants in initial years, the additional capacity to be built in the later years of the third plan turns out to be larger than now assumed. The expansion of capacity for cement machinery should provide for meeting the estimated requirements in full from indigenous sources as well as achieving an indigenous content of 90 percent by 1965-66. In this context, the standardisation of plant and equipment should receive early attention. Furthermore, in view of the saving in fuel consumption which would be secured through the adoption of the dry process, the feasibility of adopting this process in locations far removed from coal areas should be explored.

A.V.B. Project

The A.C.C.-Vickers-Babcock (A.V.B.) cement machinery project in Durgapur has been licensed to produce the following items: excavating and drilling equipment, rolling stock (B.G. tipping wagon of 350 cubic feet and 200 cubic feet), crushing plant, grinding mills, rotary kilns and clinker coolers, conveying and transport equipment, dust collecting equipment, thickeners, slurry mixtures, fans, blowers, etcetera, cranes, especially grab cranes, and reduction gear boxes and miscellaneous equipment. To support the manufacturing activities of the project, the workshops of the Associated Cement Companies Ltd in Shahabad have also been undergoing substantial expansion. The annual supply of complete cement plants from the A.V.B. organisation is expected to be four plants with a capacity of 500 tons a day each, from this year. The annual licensed capacity of the project in Durgapur and the Shahabad workshops are placed at Rs. 6 crores of equipment.

K.C.P. Ltd. Madras, has been licensed to undertake the manufacture of complete cement plants in Tiruvottiyur, Madras, in collaboration with Fives Cail Ltd of France. The approved capacity of the firm

for cement machinery is two plants a year. Licence has also been given to Sahu Jain Ltd to undertake the manufacture of two plants a year. This firm will collaborate with Messrs F. L. Smith and is expected to commence production in 1964. Orissa Cement Ltd, Rajgangpur, Dalmia Cement Ltd, Dalmiapuram, Madras, and Rohtas Industries Ltd, Dalmianagar, Bihar, have also got a combined installed capacity of Rs. 15 lakhs worth of general items of cement machinery. The implementation of these schemes will facilitate the achievement of the third plan target.

The major items to be procured from external sources for cement machinery manufacture would be: electric motors of 250 to 800 horsepower, grey iron castings, control instruments and reduction gear boxes in the case of some parties. Until the control instruments, heavy electrical motors and heavy castings are available from indigenous sources

items before the end of the third plan. The requirements of steel are estimated at 16,000 tons, out of which 70 percent will be in the form of flats and sheets, 20 percent as structurals and 10 percent as bars and rods.

Paper-making Machinery

On the basis that the entire range of machinery for a paper mill with a daily capacity of 50 tons will be manufactured in the country, a target of Rs. 4 crores worth of paper-making machinery was set for the second plan. Till recently, paper plants were not manufactured in the country, and there were only two firms producing some spare parts on a jobbing basis. Production in 1960, which has been estimated at Rs. 9,000, points to a major shortfall in the target. Capacity was, however, developed by the end of the second plan by implementing the following schemes which were in varying stages:

Firm	Type of machinery	Annual capacity (Rs. lakhs)
T.E.L.C.O., Jamshedpur	Large plants with a capacity of 50 tons a day	195
Paper Mill Plant and Machinery Manufacturers Ltd, Bombay	Small and medium plants with a capacity of 10 tons to 3 tons a day	50
Rohtas Industries Ltd, Dalmianagar	—do—	40
Paper and Pulp Conversions Ltd, Poona	—do—	16
Eastern Paper Mills Ltd, Calcutta	A small plant with a capacity of 2 tons and the board mill plant	15
Garlick and Co., Ltd, Bombay	Accessories and components	39.4
Port Engg. Works Ltd, Calcutta	—do—	10
Dynacraft Machine Co., Bombay	—do—	1
Berry Brothers, Sukchar (West Bengal)	—do—	4
		370.4

(for this purpose plants are being established in the public sector, namely, the heavy electrical equipment project and the precision instruments projects), the demand for these items will have to be met through imports. The achievement of an indigenous content of 90 percent, set as the third plan target, will require the timely development of production facilities for these

The installed capacity of the paper industry, which stood at 410,000 tons at the start of the third plan, is expected to be raised to 820,000 tons by 1965-66. This increase will be secured mostly through setting up paper plants with a capacity of 50 tons or 10 tons a day or multiples thereof. The average rate of capacity expansion will be about 80,000 tons to 85,000 tons of paper a

year. The expansion of capacity for paper can be continued on this scale on the basis of the proposed production targets for machinery, namely, four plants with a daily capacity of 50 tons and four plants with a daily capacity of 10 tons. The growth of the paper industry during 1966-71 will be much faster. Planning, may, therefore, have to be on the basis of units with a capacity of 100 tons a day, against the standard size of 50 tons a day adopted in the current plan. To provide for the demand for such bigger plants as well as of newsprint mills and chemical pulp plants which will have to be installed in the next plan period, schemes will have to be formulated well in time before the end of the third plan. The third plan target is expected to be achieved by a judicious phasing of the schemes listed in the table on this page.

The Tata-Johnson units (T.E.L.C.O. in collaboration with A. Johnson and Company of Sweden) is expected to be in a position to deliver two and a half plants with a capacity of 50 tons a day by the end of 1962. Utkal Machinery Manufacturing Co. Ltd and Bertram Scott, Ltd, have each planned to supply one plant with a capacity of 50 tons a day by about the same time. In other words, from the beginning of 1963, it will be possible to arrange the supply of four and a half plants a year of 50-tons-a-day capacity from indigenous sources. As for the smaller plants, Rohtas and Paper Pulp Conversion have each already produced a small-scale plant. Paper Mill Plant and Machinery Manufacturers and Eastern Paper Mills have also supplied one paper plant of 5 tons and five board mill plants, respectively. Subject to the booking of firm orders in time, the following deliveries are stated to be feasible from the end of March 1962:

Rohtas Two paper plants with a capacity of 3 tons and two paper plants with a capacity of 5 tons each

Paper Pulp Conversion Two plants of 3-ton capacity each and one plant of 5-ton capacity

Paper Mill Plant and Machinery Manufacturers Five plants of 5-ton capacity each and two plants of 10-ton capacity each

Heavy Machine-building Plant

The heavy machine-building plant is a major industrial complex which is being planned on the model of the huge works established in Russia for the production of machinery and equipment. It is physically integrated with the foundry-forging plant which will supply a wide range of castings and forgings for the production of various types of machinery. The responsibility for the execution of these two projects in Ranchi and of the mining machinery plant in Durgapur has been assigned to the Heavy Engineering Corporation—a Government company set up at the end of 1958.

Following the 1956 Russian aid offer of 500 million roubles for the second plan, the Government of India took a decision to go ahead

with the heavy machine-building plant for producing 45,000 tons of iron and steel plant equipment a year and the mining machinery plant with an annual capacity of 30,000 tons for producing coal-mining machinery. The ultimate level of development visualised under the former kept in view as the long-term goal, even in the initial stages, an output of 80,000 tons a year which would facilitate an annual rate of expansion of 1 million tons for the iron and steel industry and provide some further equipment to meet partially the machinery requirements of the fertiliser and mineral oil industries. Similar long-term expansion requirements of the mining machinery plant were also borne in mind. In the formulation of the third plan, the future developments under the two projects came up for review in 1959 and the Government decided to execute simultaneously the work on the 45,000-ton stage and 80,000-ton stage of the heavy machine-building plant and the 30,000-ton stage and the 45,000-ton stage of the mining machinery plant. This decision was of special significance in the context of the requirements of the iron and

steel and coal-mining industries in the fourth plan. The product-mix in the first and second stages of these two projects will be as follows:

Heavy machine-building plant:	First stage (Figures in tons)	Second stage (Figures in tons)
Coke ovens and by-product equipment	6,000	7,700
Blast furnace equipment	4,000	5,500
Steel-making equipment	5,000	7,000
Crushing and grinding equipment	2,100	3,150
Crane equipment	4,400	6,570
Rolling mill equipment	20,000	34,500
Spare parts for metallurgical equipment	1,500	1,080
Mining equipment	—	880
Excavators	—	4,950
Press forging equipment	—	1,360
Heavy oil drilling rigs	—	5,500
Miscellaneous heavy machine parts and assemblies	2,000	1,810
	45,000	80,000

Mining machinery plant:

Description of items	First stage (Total weight in metric tons)	Second stage (Total weight in metric tons)
Coal cutters	1,182	1,715
Loaders	842	1,371
Conveyors	14,991.5	22,500
Trolley and battery type electric locomotives	1,300	1,300
Haulages	2,114.6	3,816
Electric winders	466.9	1,167
Main axial fans	821	1,170
Booster fans	20	60
Pumps	754.3	945
Ball mills	324.5	—
Sand pumps	11.7	72
Automatic gauge keps for use in vertical shafts	115.5	—
Safety detaching hooks	—	2,000
Light drill rigs for exploration drilling	—	25
Spare parts	7,055.5	—

25 percent of total weight of articles

The heavy machinery plant in Ranchi and the coal mining machinery plant in Durgapur under the Heavy Engineering Corporation will be commissioned only by about the middle of the third plan. The foundry-forge plant in Ranchi will be developed in three stages. The tentative production programme is given below:

	1st stage	2nd stage	3rd stage
	(In terms of tons)		
Grey iron castings	25,000	38,300	38,300
Maximum piece weight of above	50	100	100
Steel castings	29,000	56,000	45,000
Maximum piece weight of above	50	60/75	125/165
Steel forgings	18,500	27,700	69,700
Maximum piece weight of above	30	30	100

The total capacity expected to be created in the public sector on the basis of the plans finalised so far is as follows:

	Grey iron castings	Steel castings	Steel forgings
	(In terms of tons)		
Foundry-forge project, Ranchi (three stages)	38,000	45,000	69,000
Goal mining machinery plant, Durgapur	11,000	6,000	7,000
Hindustan Machine Tools, Bangalore	6,000	—	—
Steel plants, Durgapur, Bhilai, and Rourkela	75,000	15,000	—
Chittaranjan Locomotive Works	3,000	10,000	—
Heavy power equipment plant (with aid from Czechoslovakia)	21,000	3,000	—
Heavy electrical plant (with Russian aid)	2,000	2,200	—
Others (including foundries attached to railway workshops)	6,000	—	—
Total	1,58,500	83,200	76,700

STRONGER THAN STEEL

There are metals stronger than steel, but steel is still the master metal because it helps build something stronger than all—a nation's economy.

India's annual steel production capacity has risen four times in five years—from 1.5 million ingot tons in 1956 to 6 million tons today. In providing this firm foundation for the country, Hindustan Steel has played a leading role, building three one-million-ton integrated steel plants at Rourkela, Bhilai and Durgapur. And in the coming years, Hindustan Steel plans to expand the capacities of these three plants and build two more—one at Bokaro and an Alloy Steels Plant at Durgapur. By 1966 Hindustan Steel will increase its capacity to produce 7 million tons of ingot steel a year.

In the bid to make the national economy stronger, Hindustan Steel will play its part.

Slow Progress in Manufacturing Agricultural Machinery: Simpler Tools Needed

BECAUSE of many limiting factors, the mechanisation of Indian agriculture has lagged far behind that of industry. Since farm mechanisation raises a number of controversial issues politically, economically and industrially, the development of the agricultural machinery industry in India has been necessarily slow. It is only recently that the need for improving existing agricultural implements has been felt. In the past decade or so, attempts have been made to produce scientifically-designed implements and simple machines to help the farmer to raise his working efficiency.

Forms and patterns of farm mechanisation vary from one region to another. They depend on a host of factors such as terrain, climate, rainfall, soil conditions, existing farming practices, land usage systems, surpluses and shortages of agricultural labour. In many parts of India,

holding might show increase in productivity through mechanisation, whereas his neighbour with even more land, might find it a liability. The tractor is merely a machine. It cannot think; it cannot act; and it can be made productive only by efficient management." The important point the manufacturers of agricultural machinery should always bear in mind is that the Indian cultivator is indeed a very simple person. He is not in the least bit mechanical-minded. Literacy standards in the

villages being poor, only the simplest of mechanical devices and the least costly to operate and maintain, are acceptable to him. Also, the tendency to cling to age-old habits and traditional practices goes against modernisation. The manufacturers of agricultural machinery have had to contend with this factor, more than any other, in popularising their products. There can be no attempt to force the pace, and wherever it has, changes, even in the simplest forms, have come about merely because the pre-

vailing conditions have warranted it, or because the cultivators in a particular area have themselves accepted it as essential.

Mechanising Agriculture

In certain western countries, the total mechanisation of farming has led to substantial increases in food production, but it would be wrong to assume that large-scale mechanisation would produce the same results in India. To determine whether large-scale mechanisation of farming

By

A SPECIAL CORRESPONDENT

mechanisation has been introduced, and the proponents claim to have derived all its benefits and virtues. Equally vehemently, the opponents question this claim, and assert that the resultant displacement of labour has, on the contrary, led to greater rural unemployment. The truth really lies somewhere between the two viewpoints. While it is clear that farm mechanisation is not wholly feasible under all conditions, it is equally evident that under certain conditions, it could raise efficiency. Where there is a paucity of labour and in areas where there has been a shift in the population from agriculture to industry, or where there are large farm holdings, or again where lengthy agricultural operations are hampered by limitations of time, mechanisation is not only necessary but essential for raising agricultural production. Moreover, in many large-scale agricultural schemes involving heavy earth-moving operations such as land reclamation and soil conservation, mechanised cultivation is not only quicker but also more economical in the long run. In India where the majority of cultivators own small, uneconomic holdings, and where the financial resources of the farmer are limited, the use of comparatively heavy and complicated machinery would prove both expensive to run and to maintain, and would neither be practical nor economic.

The Human Factor

The most important aspect of mechanisation in Indian agriculture today, and one which does not quite receive the attention it merits, is the human factor. It has been correctly observed that "one man on a 50-acre

CANNED FOR CONVENIENCE After a tiring day's work how pleasant it is to relax, sipping your favourite fruit juice from a chilled small can! How convenient these 5½ oz cans are! They are easy to handle and take less storage space ■ Poysha, one of the leading tin container makers in the country, pioneered the manufacture of these cans. This made possible a greater utilisation of our fruits and vegetables and helped create a new export item. First marketed a year ago, hundreds of thousands of these containers, made by Poysha, have already been used by leading canners to export fruit juices to the Middle Eastern countries ■ Poysha are thus helping India develop new industries and also earn valuable foreign exchange.

Road, Bombay 33-DD

is actually profitable under all conditions, the F.A.O. carried out several studies. In a publication which contains its findings, the following observation is significant: "The success of mechanisation in highly developed farming countries has led a number of governments to conclude that they could solve their food production problems by following similar lines. But, almost without exception, the rapid introduction of tractors and the equipment that goes with them into countries long dependent on animal power, has been very expensive and anything but successful. Some governments, because of the poor results achieved, are reviewing the whole matter of power mechanisation, and a few are even advocating a return to, or continuation of, the traditional primitive tillage methods."

In India, where the topography and terrain vary from region to region, and where soil conditions differ sharply, even within a specified unit of land, mechanisation might not work successfully in all areas. So far only on large holdings, mechanised cultivation in varying degrees has been practised, and tractor power has been used in haulage, tillage, and other allied operations. But such large holdings are mostly confined to agricultural institutes in the public or private sectors, to co-operative farms, to areas where a certain amount of collectivisation is practised, and where large-scale capital investment presents little or no problem.

Need for Small Equipment

There is, however, a very large gap between large-scale farm mechanisation of this sort and the very small investment which the average peasant can afford to make. This gap persists as the manufacturers of agricultural machinery have yet to provide the small-scale mechanical equipment which the Indian farmer with medium-sized holdings can adopt without much financial difficulty. Improved bullock-drawn implements, designed and based on tractor-drawn types, are available to him today. These have been proved to have greater efficiency in the field. Yet there is a certain reluctance to change over due to the fact that the new implements do not bring about a significant saving in the time factor involved in their operation.

The agricultural machinery industry in India is still in the process of evolving and testing prototypes of small diesel-powered machines which would prove not only easy to handle but would be within the average farmer's financial means. The evolution of such prototypes is receiving the constant attention of the manufacturers, but nothing concrete has so far been placed on the market. The authorities, too, are rightly cautious about the introduction of such machines, as they would ultimately lead to the further displacement of farm labour. It is, therefore, not likely that a small powered machine will be available for the use of the agriculturist in the foreseeable future.

Far greater attention has been devoted by the manufacturers to the development of suitable pumps and irrigation machinery, which is in constant demand. With the progress of rural electrification, the production and sale of electrically-operated

pumps have risen appreciably. Many firms have placed on the market various types of pumps which are suitable under differing agricultural conditions. Some far-sighted manufacturers have followed up their sales with adequate supplies of spares and ample "after-sales-service" facilities. They have been remarkably successful in allaying the initial fears and suspicions of the cultivators, and thus have been able to increase sales in the rural sector greatly. But in many cases, where the initial costs of installation and maintenance have proved high, the adoption of these time and labour-saving devices has been disappointing.

Agricultural Engineering

Agricultural engineering is now receiving increasingly greater atten-

tion in India. Almost every Government agricultural institute has devoted an entire section to the designing and testing of cheap, light implements of the bullock-drawn variety. One institution in the private sector—the Allahabad Agricultural Institute—has even gone so far as to subsidise a separate factory under its own schemes, to produce on a mass scale some of the bullock-drawn implements which have, after many trials, proved successful and acceptable in the area, and their local sales, although discouraging at the start, have considerably increased during the last few years. The success of these implements is primarily due to the fact that much thought and planning has gone into their designing. The result has been something which has not only appealed to

the cultivator financially, but has also brought to him visible material benefits on being put to practical use in his fields.

Indigenous Implements

India is a very large country and a variety of indigenous implements are used in different parts. It is quite possible that the implements which are peculiar to one region may also prove successful when introduced in another. It is, therefore, necessary to hold a thorough survey of the indigenous implements used all over India, preferably through an authoritative body like the Indian Council of Agricultural Research. This would lead to greater flexibility in adaptation to varying conditions and to a more widespread use of the available types of implements. For example,

Imagine a world without
salt!

Can you imagine how poor the world would be without salt? Your food would lose its savour; there would be no paper to write on; no leather for shoes; no glass to replace the broken window panes; no medicine for the ailing.

In olden days man used common salt as an article of currency and commerce, but the scientists of today have turned it to richer and more varied uses. Out of it they produce such basic heavy chemicals as soda ash, caustic soda, bicarbonate of soda, magnesium chloride and bleaching powder. These chemicals are used in the manufacture of paper, leather, glass, soap, textiles, pharmaceuticals, and other useful commodities.

From the boundless sea as its ore mine, Tata chemicals recover salt and other marine products to convert them into alkalis and heavy chemicals so essential to Indian industry.

in north India, that is in Uttar Pradesh, Bihar and Punjab, the *thakar* is not used, while it is common in Bombay, Rajasthan, Andhra Pradesh and Madhya Pradesh. The *thakar* is a useful bladed implement which can be pulled by an ordinary pair of bullocks and which can be used for harrowing, and other field operations. A miniature form of the *thakar* is also used for inter-cultivation between rows of plants, and it is quite possible that this implement will be useful to farmers in other areas. In addition, useful bullock-drawn implements designed and used in other Asian countries are now being adapted, with suitable modifications, to Indian conditions. The Japanese paddy weeder is an excellent example. Although this was introduced in India only as recently as five years ago, it is estimated that as many as 45,000 of these weeders are in use in the country today. Similarly, the Burmese satoon, which is used for puddling paddy fields in Burma, has been successfully introduced, in a slightly modified form, in Madras.

Simplification of Work

Mechanisation of agriculture is not quite the same thing as mechanisation in the sphere of industry. From a simple point of view, it can be successful only when machines are worked by skilled operators. Agricultural chores may be divided into two distinct types: those performed indoor and admit of mechanisation as in a factory, and those done outdoor which are not suited to mechanisation. While in the former type, considerable simplification is brought about through mechanised processing, in the latter, the objectives cannot be pursued without solving the problem of costs and efficient operation, and this type of mechanisation may actually raise more problems than it sets out to solve. Hence the application and employment of work simplification process can only be made with caution, and the consequences must be weighed carefully.

Scope for Industry

In spite of these and many other limitations, the scope for the development and manufacture of simple agricultural machinery and improved varieties of bullock-drawn implements in India is vast indeed. Changes which are taking place in the agricultural sphere themselves warrant the use of improved and more efficient equipment. In many instances, the farmer who was content to carry on with traditional implements, is beginning to look for cheap and workable replacements which will not only simplify his field operations but will also bring about a substantial saving in expenditure and time. Whether or not he will take kindly to the improved range of farming equipment which is currently being offered to him, will depend almost wholly on how such equipment is placed before him. Indian farmers have been criticised for being conservative, but farmers all over the world are conservative in varying degrees. When it comes to making investments of a new nature in mechanised equipment of which he has limited knowledge, any farmer will question the working efficiency and economics of the machinery. But wherever improved implements have been suggested to him, and wherever he has actually witnessed

working demonstrations of these and has been convinced of their value, he has not hesitated to adopt them. In Uttar Pradesh alone, it is estimated that over 90,000 bullock-driven sugarcane crushers are in use today. These were introduced hardly two or three decades ago. Similarly, in Bombay, lakhs of mouldboard ploughs are in use, simply because they have been found suitable, from every aspect, for the hard, black cotton soils.

The success of a number of engineering firms who have taken to the production and marketing of small-scale agricultural equipment, has been due, to a large extent, not so much to the fabrication and distribution of new equipment as to the redesigning and improvement of existing agricultural implements in use in different parts of the country. Not much scope exists in India at present for the formation of agricultural machinery firms or unions which may be willing to loan out mechanical equipment to farmers on a contract basis, as is commonly done in the U.K. The demand for this type of temporary usage in India is somewhat limited. However, if this were done it could possibly lead to greater popularity though the gradual use of a specific implement, and eventually

help in overcoming local resistance to its outright purchase.

Agriculture and Technology

India's progress in agriculture today largely depends on the use of more modern and efficient technology. It also depends on a changeover to newer methods of production. As far as agricultural mechanisation is concerned, it is necessary to strike a happy medium between traditional habits and present necessities. The approach to mechanisation will need to be made, therefore, for some more time in a cautious and planned way. But the mind should not be entirely closed to mechanisation. The agricultural machinery industry in India, although still in its infancy, compared with some of the other manufacturing industries in the country, is going ahead with the fabrication and marketing of various types of agricultural equipment, and with its own privately-sponsored programmes for training farmers in the art of skilfully operating the machines. In other words, the industry is faced not only with problems of increased production, distribution and supply, but also of creating a greater demand for its products.

prestressed concrete for clear space construction

Durgapur Thermal Power Station

Prestressed Concrete Plank Roofing was adopted for the Durgapur Thermal Power Station because of its lightness thus reducing the cost of the foundation and superstructure. It also made rapid construction possible.

A conventional cast-in-situ roof was ruled out because

of the unusual height between roof and floor.

The roof area covered was 50,000 sq. ft. The job was completed in about twelve months.

An additional feature is thermal insulation with foam concrete blocks.

THIRD PLAN NEGLECTS SHIPPING: NEED FOR A BIGGER COASTAL FLEET.

THE new Government at the Centre, formed after the recent general elections, has to engage itself in the examination of the vital economic problems which demand urgent attention. One such important problem is that of shipping. The difficulties that face the shipping industry need to be examined afresh in order to formulate a definite course of action for the next five years, which is the tenure of the new Government. This is, therefore, a good and timely opportunity for stating some of the more important issues connected with the further development of shipping.

During the past five or six years, Indian shipping has made a fairly steady, although by no means spectacular, progress. At the end of the first plan, the total Indian fleet in operation was about 480,000 gross tons. This increased to very nearly 900,000 gross tons by the end of the second plan, thus more or less fulfilling the target which had been set for shipping under the plan. As far as the third plan is concerned, in spite of its vital importance to the national economy, shipping finds itself faced

verse. The third plan envisages the expansion of Indian tonnage from about 900,000 gross tons at the beginning of the plan to a little less than 1,100,000 gross tons by the end. This means the net expansion of only 40,000 gross tons a year. Comparing this with the expansion of about 100,000 gross tons a year during the latter part of the second plan, one finds, instead of an acceleration in the pace of development, a process of retardation. Indeed, during the first year of the current plan, the net addition to Indian shipping has been only 70,000 gross tons.

This is, however, only one side of the picture. The other side is provided by reports of a large volume of tonnage having been ordered by a new company with the assistance of a loan of about Rs. 20 crores, which is to be advanced by the Shipping Development Committee. This company alone would add about 180,000 gross tons, almost fulfilling, in terms of tonnage, the third plan target. The development, which has attracted attention in Parliament and the Press, has created a situation in which the existing shipping companies might find themselves unable to decide what their future plans should be for the acquisition of further tonnage. A clear statement on the scope for expansion still available to the existing shipping companies, whether in the public sector, has, therefore, become essential. On the basis of such a statement, shipping companies could draw up their own programmes for further development of tonnage.

The acquisition of shipping tonnage cannot, however, be haphazard. In

A 30-ton electric crane at work at Hindustan Shipyard

fact, the National Shipping Board has given full consideration to the question of the type of tonnage which should be acquired in order to serve the needs of the country's international sea-borne trade. The foreign trade of India may be broadly divided into three categories from the point of view of ocean transport. The first category consists of such trades or cargoes as are covered by the term "liner traffic". Very roughly, about one-third of India's trade falls under this category, and the cargo consists of such items as machinery, jute, tea, oilcakes and textiles. Cargoes of this nature move by liner vessels which operate as part of the Conference system governing the liner trades in different sectors. The second category of trade consists of bulk cargoes such as foodgrains, iron ore, manganese ore and fertilisers. These move by tramp vessels. Broadly, about one-third of India's overseas trade falls in this category. The rest of the foreign trade consists of oil cargo, both crude and refined. In order to cater for such a variety of cargo, it is essential to have a balanced fleet, that is, a fleet consisting of an adequate number of cargo liners, tramp vessels and tankers. The present composition of the merchant fleet has to be examined in order to ascertain the achievement of Indian shipping in each sector of foreign trade. This is necessary for fixing priorities for the future development of tonnage.

Performance in Liner Trades

In the liner trades, Indian shipping has done well. Regular and scheduled services are now being provided by the Indian shipping companies, in-

cluding the State Shipping Corporation, in the following sectors: India-U.K.-Continent; India-U.S.A.; India-Poland; India-Russia; India-Far East-Japan; India-Australia; India-West Africa; and India-South America. The liner routes are, therefore, fairly covered, although there are still some routes which are either inadequately served at present or are not served at all. For instance, the Indian tonnage on the India-U.S.A. run is still inadequate. Moreover, the Pacific coast of the U.S.A. is not yet touched by Indian liner vessels. The performance of Indian shipping companies on the routes on which they are operating already, is fairly satisfactory, although in some sectors substantial expansion is still necessary. For instance, in the India-U.K. trade, the Indian lines are at present carrying only 30.25 percent of the traffic. There is a strong case for improving the position of Indian shipping in this sector.

Lack of Statistics

An examination of the performance of Indian shipping in each sector of the liner trades is, however, handicapped by the absence of reliable statistics and one is, therefore, obliged to resort to "approximations". But from such data as one can get, it appears that out of a total volume of 7 million to 8 million tons of cargo carried annually by liner vessels in India's foreign trade, about 2 million tons were carried by Indian shipping companies operating in the liner trades during 1961. This means that Indian shipping was able to carry about 25 percent of the entire general cargo or liner trade of the country. This is satisfactory if regard is had

Finishing touches being given to s.s. Indian Industry

New avenues of progress

The rapid development of India's road transport has opened up new avenues of progress. Diesel trucks, lorries and buses now link every part of the country...carry goods and people to once-remote areas. With the growth of road transport has grown demand for High Speed Diesel Oil. Today over 1 million tons are consumed.

By the end of the Third Plan the country's needs will increase by 117.2%. There can be no question that the first priority should be the exploration and production of indigenous crude oil; the second priority must be to expand refining capacity in India. Oil is essential to economic growth, and Burmah-Shell believes that

885C-45

for the fact that Indian vessels are carrying less than 10 percent of the country's total foreign trade. At the same time, the objective of Indian shipping should be to carry about 50 percent of the country's total foreign trade of the general cargo variety. This does not mean that in every single sector, Indian shipping should have a 50 percent share. In fact, the declared policy of the Government is that in those sectors where, apart from the national lines, third flags are also in operation, the former should have a minimum of 40 percent share each, the balance being left to third parties. Where, however, third flags are not participating or they are participating only to a small extent, the remaining trade should be apportioned on the basis of equality between the two national lines concerned. This appears to be a fair and reasonable approach to the problem of liner traffic, and it is on this basis that the performance of Indian shipping in each liner route should be assessed. Where the existing share available to Indian shipping is inadequate, efforts should be made to augment it.

Tramp Trade Disappointing

Next to liners, one has to consider the performance of Indian tramps. During 1960-61, Indian tramp vessels lifted only about 266,000 tons of cargo out of a total trade of about 8 million tons. This amounts to only 3.3 percent of the total tramp trade of the country. Here the performance is disappointing. With such a large trade in bulk commodities as India has, the tramp fleet clearly needs substantial and quick strengthening. It is from this angle that the acquisition of bulk carriers for the movement of foodgrains, ores, etcetera, has to be encouraged and welcomed. The vessels acquired for this purpose must, no doubt, be suitable for trading in Indian conditions. The bulk carriers which have been ordered by a new shipping company may well meet a pressing need, provided the specifications of the vessels are such as to enable their operation from and to Indian ports. The acquisition of the bulk carriers should enable the country to show a distinct improvement in the transport of bulk cargoes in national tonnage. The acquisition of tramp vessels or bulk carriers by other shipping companies also has to be similarly encouraged, having regard to the possibilities of profitable

employment. An authentic announcement of policy by the Government on the incentives to be given for the acquisition of tramp vessels is imperative.

As for the oil trade of India, approximately 8 million tons of crude oil and oil products have to be imported from abroad. Until recently, there was no overseas tanker under the Indian flag. One super-tanker was purchased some months ago, but the conditions of its purchase and the arrangement for its manning and operation have evoked adverse comment, and not without justification. It is doubtful whether the acquisition of this tanker can be regarded as a real addition to the Indian fleet. The management of the tanker is still in the hands of the previous owners, and so is its manning, although Indian crews are available for employment. Apart from this, it has been reported that the State Shipping Corporation may soon place orders for the construction of a new super-tanker of about 30,000 tons. These two vessels would not, however, meet the requirements of the oil trade. Although the total volume of this traffic is about 8 million tons, it would not be realistic to expect that Indian tankers can carry all this cargo. But even if 50 percent of this trade is to be catered for by Indian tonnage, about seven to eight super-tankers would be required because one super-tanker can transport about 500,000 tons of oil a year. Here is a sphere in which substantial progress can be made by Indian shipping, but active encouragement and assistance from the Government, especially in negotiations with the oil companies, would be necessary.

Problems of Coastal Shipping

So far, only the problems of overseas shipping have been considered. Those of coastal shipping, however, are far more acute and pressing. The total tonnage on the Indian coast today is about 300,000 gross tons. Of this, about 40 percent will have to be scrapped within the current plan period. This tonnage will have to be replaced. A net addition of about 50,000 gross tons will also have to be made in order that coastal shipping may carry 2 million tons of coal and other cargoes, which must necessarily move by the sea route. In recent months, coastal tonnage has been under heavy pressure for the movement of a much larger quantity of

M.V. Jalavihar, a new ship built by the Yard

coal than in the past. While formerly, the total quantity of coal cargo made available to coastal shipping was only 1 million tons, this quantity was increased last year to 2 million tons. Although the National Shipping Board has been pressing since three years now for the allocation of more coal cargo to coastal shipping, this suggestion was disregarded until the situation became so difficult for the railways that resort had to be made to the sea route. While it may be useless to rake up the past, it is essential to be forewarned about the future. The replacement of old tonnage which has to be scrapped and the net addition required, add up to about 200,000 gross tons for coastal shipping. There is no clear indication yet about how so much tonnage is to be acquired. The Hindustan Shipyard is already fully occupied with orders for the construction of vessels for the overseas trade of the country. It is clear, therefore, that tonnage would have to be purchased from abroad, either second-hand or new. This can be done only if the necessary foreign exchange is made available.

It is true that foreign exchange is scarce and that its availability is extremely limited. At the same time, it is equally undeniable that if foreign exchange is not found for coastal shipping and this, too, very soon, an extremely serious situation would develop on the Indian coast. The tonnage would get gradually reduced with the result that the capacity of coastal tonnage to carry cargo would progressively diminish. As a consequence, the pressure on the railway system, heavy as it is, would become much worse. Coal is transported not for its own sake, but as a source of power to the industries and railways. The shortage in coal supplies can lead to serious consequences; of these, there have been examples in the recent past. Considering all this, it should be obvious that an immediate solution of the foreign exchange problem for coastal shipping is imperative. The answer seems to be to obtain a line of credit from a ship-building country. The important

point is that this matter can brook no delay. If orders have to be placed for new vessels, this has to be done soon since deliveries will take time. Moreover, once it is known that foreign exchange is available for the construction of coastal vessels, the shipping companies would be able to decide the type of vessels to be ordered. It was announced in Parliament last April that if the shipping companies in the private sector do not come forward to acquire more tonnage for transporting coastal cargo, the question of the Government Shipping Corporation entering this trade would be considered. A committee of the National Shipping Board has already come to the conclusion that the Government Shipping Corporation should enter into the coastal trade of India with owned tonnage. The idea apparently is that if the latter placed its vessels in the coastal trade, the Government would have a first-hand idea of the difficulties in this sector. This suggestion needs to be considered favourably.

Priorities

To conclude, there are several important issues connected with the development of Indian shipping which require immediate attention. Priorities have to be assigned to regulate the further addition of tonnage. In this matter, attention to coastal shipping must be given the highest priority. As far as overseas tonnage is concerned, the acquisition of tramps and tankers needs active encouragement and support from the Government. In the liner trades, the performance of Indian shipping has been fairly satisfactory, but in some sectors, substantial expansion is still possible and essential. Above all, a solution has to be found for the foreign exchange difficulties which are hampering the further expansion of India's merchant navy. Although the picture for shipping, as far as its further development is concerned, is none too bright, it is in a situation which calls for initiative, resourcefulness and determination on the part of the Government as well as of shipowners.

Hindustan Shipyard's design centre

MORE PIPES to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing the latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

ALUMINIUM INDUSTRY EXPANDING RAPIDLY

AMONG the important industrial targets of the third five year plan, the one set for aluminium provides for spectacular expansion from a production of 18,500 tons in 1960-61 to 87,500 tons by 1965-66. The figure of 87,500 tons is what appears in the official plan, but it is reported that the Government of India is now proposing to raise it to 120,000 tons. The one significant factor which appears to be behind this move is the decision of the Central Ministry of Commerce and Industry to substitute copper by aluminium wherever possible, especially in the electrical field. This latter industry alone is expected to consume 50,000 tons by 1965-66. It is a very bold decision.

By
A. L. SABHARWAL

not contemplated even by any of the highly industrialised countries, with the possible exception of France. The table below lists the capacity currently in production, shortly expected to go into production and licensed but not so far set up (figures in ingot tons) :

Name of company	Location	Currently in production	Shortly expected to go into production	Licensed but not set up	Remarks
Aluminium Corporation	Asansol, West Bengal	2,500			
Aluminium Corporation	Asansol, West Bengal		5,000		Expected to go into production in June-July 1962
Hindustan Aluminium	Rihand, Uttar Pradesh		20,000		Expected to go into production in June-July 1962
Indian Aluminium	Hirakud, Orissa	12,000			
Indian Aluminium	Hirakud, Orissa		8,000		Plant ready in November 1961 and expected to go into production in July 1962 when power is expected to be supplied by the State
Indian Aluminium	Alwaye, Kerala	5,000		5,000	Expected to be in production by mid-1963
Koyna Aluminium	Koyna, Maharashtra			20,000	
Bharat Aluminium	Mysore			30,000	
Madras Aluminium	Salem, Madras		10,000		Expected to be in production by 1964
Grand total				117,500	
Total		19,500	43,000	55,000	

In addition, it is reported that the Government of India is planning to set up a plant in the public sector in Madhya Pradesh in collaboration with Hungary and that Hindustan Aluminium's plant in Rihand may be allowed to expand to 50,000 ingot tons a year.

Pattern of Expansion

As now planned, aluminium plants are operating or are coming up in Kerala, West Bengal, Orissa, Uttar Pradesh, Maharashtra, Mysore and Madras. It is time to consider whether further expansion of capacity should be achieved by the addition of new units or by increasing

the capacity of the existing ones to their full potential, provided additional power is available at these locations. The degree of dispersal already achieved is unique, compared with other key industries in India. It meets the twin criteria of (a) wide dispersal and (b) regional development. To disperse the industry further may mean wastage of national resources which the country can ill afford.

Smelters must perforce be located near the sources of power, as about 2.54 kW-year of electricity is required to produce one ton of aluminium; but they offer very little in the way of employment. The aluminium industry employs the bulk of its labour in its rolling mills, and to get the maximum advantage, the latter should not, by and large, be located near smelters. For every ton of material produced, it is estimated, a rolling mill employs six times the labour force that a smelter does. Still more labour is required in the case of manufacturing plants such as utensil factories. If the practice as setting up rolling mills away from smelters is followed, it will have a three-fold advantage: it will (a)

additional capacity set up, but also in savings in the payment of technical fees and royalties, which are an important feature whenever new arrangements are entered into with foreign collaborators. Another factor which has a vital bearing on costs are the power rates. Considering that it takes about 22,000 kWh (units) to produce one ton of ingot, the element of electricity charges, at approximately 20 percent of the total cost of the metal, is very significant. Since power rates in India are appreciably higher than in other aluminium-producing countries, the cost on this account is further magnified. It, therefore, becomes necessary to ensure a long-term supply at rates which are both economical and definite. Unfortunately, in spite of such long-term agreements, levies and surcharges on power rates in the form of State Government electricity duties, are being imposed. These further inflate the metal cost in an unpredictable manner. Such a levy was recently imposed in Orissa.

Aluminium Project in Ghana

In contrast, it is appropriate to compare this situation with an industrial project in Ghana where the Volta River Authority has been set up for the construction and operation of a dam and power generating plant, and firm agreements have been signed with a consortium which proposes to set up an aluminium smelter. Guarantees have been given by the Government of Ghana that, while the power contract is in existence, it will not impose any tax or other fiscal charges on the use of electric power by the Volta Aluminium Company. The tenure of the contract is for 30 years and the rate for power has been fixed firm at 0.2625 U.S. cents a kilowatt-hour or Rs. 110 a kW-year (in contrast to Rs. 190 a kW-year for one of the plants in India).

Another interesting feature of the Ghana project may be mentioned. The Government of Ghana has agreed

that, for the first 30 years, levy of income tax on the Volta Aluminium Company will be based on the tax laws in effect on 2nd January, 1961, including the receipt of benefits under the provisions of the pioneer company relief. There is also provision for exemption of imported construction materials from Customs duties and exemption of the mining and processing of Ghanaian bauxite from mineral duties.

Apart from the relatively higher and uncertain power rates in India, a very substantial freight load is borne by aluminium producers on the 10 to 11 tonnes of raw material required for the production of one tonne of metal. The freight charges are high, not only because of the high tonnage of raw material required to be moved, but also because of the distances to be covered. Moreover, the processed or semi-processed raw materials, such as caustic soda and alumina, forming almost one-third of the total raw material requirements, bear a heavier freight charge according to the classification of commodities current on the Indian railways.

Licensing Bauxite Mining

Still another disturbing feature—and this is of considerable concern to both the present and the potential producers of aluminium—is the question of bauxite supplies, since approximately five tons of it are required to produce one ton of metal. It has often been said that India has a plentiful supply of ore. This is perhaps true, but it is equally true that the deposits of ore throughout India have not yet been thoroughly field-treated for quality and reserves. Aluminium producers are, therefore, anxious to carry out geological surveys of areas known to contain bauxite, but unfortunately large tracts of such land are in the control of persons who have no direct interest in using the ore. In other words, these deposits are controlled by "middlemen". The result is that the areas are closed for any prospecting

KAMANIS IN THE MARCH TOWARDS INDUSTRIAL SELF-SUFFICIENCY

Rapid industrialisation is the need of the day. Kamanis are proud to be active partners in the efforts to make India industrially self-sufficient.

Kamani Engineering Corporation Ltd.,
Kamani Metals & Alloys Ltd.,
Kamani Metallic Oxides Pvt. Ltd.,
Jaipur Metals & Electricals Ltd.,

or exploratory work. Very often there is a scramble for obtaining mining leases by private negotiation, which means paying out considerable sums of money. It is, therefore, essential that the State Governments should exercise great care in issuing prospecting licences or mining leases and grant them only to persons or companies who are directly engaged in the production of aluminium. This would ensure more effective use of the ore reserves, and at the same time contribute to the establishment of economic production units.

The price relationship between aluminium and competing materials cannot be settled by legislation which has its limitations. Therefore, to cite an example, while the substitution of copper by aluminium in the electrical industry is a development accelerated by Government policy, ultimately the metal will have to sell on its own. So the price should not be so high that its advantages will not be exploited on the score of unreasonably high initial cost.

Uses of Aluminium

The markets for aluminium vary from country to country depending on the degree of industrialisation and the standard of living. For example, in the U.S.A. the per capita use is about 24 lbs; in the U.K. it is 17 lbs, and in Canada 12 lbs. The comparable figure for Japan is 5 lbs, and for India 0.2 lb. The pattern of consumption also varies with the nature and degree of industrialisation. Thus, in the U.S.A., building and construction account for nearly one quarter of the total consumption and transport for nearly one-fifth, whereas in India, the electrical industry takes about one-half and utensils manufacture about one-third. In Europe, on the other hand, the transport industry accounts for one-quarter of the total consumption.

It is estimated that the consumption of aluminium in 1961 in all countries, excluding the communist bloc, increased by 180,000 tons or 4 percent over 1960. At the same time, there was an estimated decline in primary production by some 100,000 tons, or 2 percent. This indicates a considerable surplus capacity, a state of affairs which has existed for the past seven years. This is not all. Recently, a U.S. Senator announced

on President Kennedy's authority that the stock of aluminium in that country in excess of the "maximum objective" as required by the stock-

pile regulations, was 729,000 tons at the end of December 1961.

As a result of the heavy surplus capacity in the world, there has been a downward pressure on prices, the most notable change during the year being when the published price in the U.S.A. was reduced from 26 U.S. cents to 24 U.S. cents a lb or Rs. 2,513 a metric ton. The Canadian price at the same time was reduced to 22½ cents a lb or Rs. 2,359 a metric ton. It should be mentioned here that these are only the official prices and transactions take place at even lower rates.

Export Prospects

In India, considerable stress is being laid on export possibilities to the south-east Asian and Middle Eastern countries. While export possibilities do exist, the prices prevailing in these areas due to over-production in north America and Canada and the fierce competition among the exporting nations, places the Indian ingot and rolled products like sheets and circles in a very disadvantageous position. Another difficulty likely to be faced is the recent trend in some of these countries to set up rolling mills, which no

doubt will operate behind tariff barriers. Further, even the existing market for utensils which, until a few years ago, was an Indian preserve, is being rapidly lost; exports have dwindled to an insignificant tonnage. This is the result of practically every country setting up its own utensil manufacturing plants.

High Indian Prices

It is interesting to compare the aluminium prices prevailing within this country with those in the south-east Asian countries. As against the Indian domestic ingot price of Rs. 3,221 a ton, the metal is being sold in these countries at Rs. 2,356 a ton. As far as rolled products are concerned, circles were recently exported from India at Rs. 3,642 f.o.b. a metric ton, compared with the internal price of Rs. 4,960 a ton. These figures are merely being quoted for the purpose of drawing attention to the difficult task which the industry faces in export markets. Yet the Indian producers will have to make a determined effort to capture a portion of the business. With the various incentives now being offered by the Government, it is likely that some success may be achieved.

MORE AND MORE MATERIALS

HANDLING EQUIPMENT

With industrial acceleration in this country, our achievement in the field of Materials Handling Equipment is of great significance. All industries, big and small alike, are thinking in terms of automation for better management control, reduced handling costs, deadman safety, reduced fatigue, minimum maintenance and what not! The contribution of Carter Pooler & Co. Pvt. Ltd., the Pioneers in manufacturing "FLOCAR" Forklift Trucks in India, with 99% Indian materials and technology will be remembered by the people through ages to come.

The Company is also First in India in manufacturing "Hydraulic Pump" and "Control Valve" adaptable to Forklift Trucks, other Hydraulic Equipments and Machine Tools. How wonderfully we are serving the country along with you!

hamare bhai ko le jao

It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, refused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "Hamare bhai ko le jao." As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Tea processing Machinery,

does not have to import any of these complete products now. A note of caution is, however, called for. There is today in the market a glut of sub-standard lighting fittings and accessories. Due to their inferior workmanship and quality, they are creating a condition which eventually is bound to reflect adversely on the lamp industry as a whole. The quality of the products has to be guarded jealously.

Miniature Lamps

Besides G.L.S. and fluorescent lamps, a number of other varieties are also being manufactured under the category of miniature lamps. They include torch lamps, motor-car lamps and radio panel lamps. The estimated demand for these lamps is likely to rise from 30 million pieces by the end of 1961, to 45 million pieces by the end of the third plan. A few other varieties such as locomotive head lamps and train lighting lamps are also being made in India. The industry must, however, break new ground and make special lamps in the gas discharge series. The recent production of mercury vapour lamps is a very good start, and with the gradual introduction of other special lamps, the Indian industry will have come of age.

As far as the question of raw materials is concerned, a near self-sufficiency stage seems to have been reached. Items like brass caps, glass tubes and shells are now made indigenously. The production of glow switches for starters for fluorescent lamps and burners for gaseous discharge lamps will be taken up shortly. A factory in Bombay will soon start the manufacture of molybdenum wire and tungsten wire for electric lamps with the technical collaboration of N.V. Philips Gloeilampenfabrieken, Holland.

Progress of Radio Industry

The factors which have contributed directly or indirectly to the growth of the lamp industry are also, by and large, responsible for the steady progress of the radio industry in India. The efforts of All India Radio in making wireless listening popular deserve to be specially mentioned in this connection. From modest beginnings, A.I.R. today has developed itself into a national broadcasting system playing a vital role in a changing India—the role of

informing, educating and entertaining millions of Indians all over the country. The recent elevation of the portfolio of Information and Broadcasting to full Cabinet rank is recognition of the importance now attached to radio as a means of mass communication and entertainment. The silver jubilee of All India Radio, celebrated recently, coincided with the announcement of the development programme which it is planned to initiate in the first two years of the third five year plan. Under this scheme, 55 medium wave and two short wave transmitters are going to be installed at various centres all over the country. When implemented, this programme will ensure the coverage of regions not served by the existing network. This eventually will tend to raise the percentage of the population covered from 55 in 1951 to 74 and the percentage of the area covered from 37 in 1951 to 61. Small wonder, therefore, that the Indian radio industry today is well on the road to self-sufficiency. A radio set is no longer considered a luxury, and even those who are in the low-income groups, do not hesitate to go in for one.

Starting with an annual production of 25,000 sets in 1948, the Indian radio industry has kept on raising production year after year. In 1951, nearly 220,000 sets were made in the organised sector comprising 20 manufacturing units all over the country. The small-scale units added nearly 80,000 sets to this figure. The industry was, therefore, in a position to meet the country's estimated demand for 400,000 receivers by the end of last year. This happy position led to the realisation by the industry that the tempo in the manufacture of radio components must be still faster, and that the industry must develop a robust indigenous character. A wide range of radio components like cabinets, loudspeakers, band change switches, potentiometers, gang condensers, carbon resistors, paper capacitors, ceramic capacitors, volume controls, vibrators, and chokes, are already being manufactured in the country.

The appearance of transistor radios has opened a new chapter in the industry's history. A transistor set enjoys a number of advantages over

An operation in the manufacture of G.L.S. lamps

a battery valve radio, such as (1) low power consumption and economy, (2) no heating-up period, (3) longer life, (4) greater efficiency, and (5) small dimensions, if needed. Transistor radios are already being made in the country, but real progress in this field will come only when transistors are manufactured in India. A beginning has already been made in this direction, and an agreement has recently been reached between the Government of India and N. V. Philips Gloeilampenfabrieken, Holland, providing for technical assistance by the latter for manufacturing transistors by Bharat Electronics Ltd, Bangalore.

Manufacture of Radio Valves

The manufacture of radio valves already undertaken by Bharat Electronics Ltd, Bangalore, in technical collaboration with N. V. Philips Gloeilampenfabrieken, Holland, is an important landmark in the career of the industry. Recently, Bharat Electronics celebrated the production of its one millionth radio valve, months ahead of schedule. Together with the availability of a large number of indigenously manufactured components, the radio industry is

now very near the stage when self-sufficiency in them will be reached. The production of valves is an event of great significance for radio manufacture in the country, and with transistors following, a solid foundation will have been laid for the electronic industry in India. The target of the third five year plan is one million radio receivers. It has opened up, therefore, a unique opportunity for Indian radio producers as a whole to expand their activities and fulfil the target.

There is a real dearth of trained personnel in the radio industry today. It should co-operate with the Government, the universities, the national laboratories and technical institutes in training the requisite technical personnel, who will eventually be called upon to man the various manufacturing and servicing units. India's electronic industry is opening new opportunities of which the younger generations should avail themselves. On the availability of technical personnel depends the progress of the electronic industry in India—a specialised industry calling for the services of personnel with specialised education and training.

Reorganising the Match Industry on More Efficient Lines

IT is now nearly 40 years since indigenous match manufacture protected by tariffs replaced European and Japanese imports, which amounted to some 15 million gross at the beginning of the century. Output within the country was 18 million gross by 1928 and rose to 29 million gross ten years ago. Production has since risen steadily to 45 million gross in 1961, at the rate of roughly 5 per cent a year. This derives not only from the population rise, but also increased overall per capita consumption which was 1.9 sticks a head a day ten years ago, and is now 2.12 sticks a head a day.

Two sectors of the match industry grew up side by side, the mechanised and the cottage. When they were jointly able to cater to the full demand, brisk competition developed. The mechanised sector gained its markets by consistent quality and efficient distribution, while the cottage sector appealed to the small shopkeeper by having a very much

By

AKBAR HYDARI

lower wholesale price. The consumer received his box at the same unit price. The mechanised industry provided ever-improving wages to industrial labour with all the additional benefits of latter-day legislation. Its 10,000 workers today enjoy perhaps the highest remuneration after the oil industry.

Growth of Cottage Units

The cottage sector was not subject to the Factories Act and, while individual earnings were extremely modest, it provided an additional income for indigent and partly unemployed agriculturists particularly in Madurai district of Madras State. Here natural conditions such as availability of timber in the neighbourhood and a dry climate for sun-drying were ideal for the purpose, and the traditional cottage match industry has always been located around Sattur and Sivakasi. All members of a family, including minors, participate, and it is questionable whether the handling of chemicals such as phosphorus should be permitted in such hands.

When the cottage sector felt the pressure from the mechanised units, there were bitter complaints to the authorities, who adopted the policy of assisting the former by all means not only to retain its share of the market, but to expand as much as possible. Differential excise duties were levied which granted substantial subsidies to cottage manufacturers varying according to output (B, C and D categories), while the mechanised sector (category A) continued to pay full duty. This helped in the early stages, but the difference between the wholesale rates of factory-made and cottage matches grew so wide as the years

Stacking match logs at the factory yard

passed that there was really no object in the excise rebate, which was promptly passed on to the middleman as cottage units undercut one another's already low prices. Their weakness has always been that they have never been able to agree among themselves on a uniform price policy or a co-operative selling organisation. Yet they can today underquote category A manufacturers by at least 50p a gross in the wholesale trade because of their sub-standard wages, negligible overheads and welfare expenditure, and more concentrated sources of timber supply.

The next step to aid the cottage units was to prohibit the expansion of the mechanised sector, which has not been permitted to increase its installed capacity since 1956. Excise rebates have thus come to be a point less drain on the exchequer to the extent illustrated below:

REBATES OF EXCISE DUTY ON MATCHES (Cases of 50 gross boxes of 50's)

Category of manufacturer and annual output	Rebate on a case
D (Not exceeding 139 cases)	
If splints made of bamboo	Rs. 67.50
Otherwise	Rs. 42.50
C (Not exceeding 1,390 cases)	
(i) On the first 278 cases	

Category of manufacturer and annual output	Rebate on a case
If splints made of bamboo	Rs. 55
Otherwise	Rs. 42.50
(ii) On the next 417 cases	
If splints made of bamboo	Rs. 40
Otherwise	Rs. 25
(iii) On the balance of 695 cases	Rs. 10
B (Not exceeding 11,111 cases)	
On the first 1,390 cases	Rs. 10
On the balance of 9,721 cases	Rs. 5
A (Exceeding 11,111 cases)	
On the first 11,111 cases	Rs. 5
On the balance	Nil

with ample scope, while the rivals' expansion has been kept in check. The output of the mechanised sector has indeed improved, but only by better use of installed capacity, and the rise has been far less marked than that of the cottage sector, which has more than tripled production—

from 89,000 50-gross cases of 60's in 1949 to 319,000 cases today. During this time, mechanised manufacturers have increased their output from 416,000 cases to only 434,000 cases. There are now indications that the traditional cottage group in south India may be reaching the limit of its capacity, which is determined by the availability of casual workers and economic sources of timber. Finance does not seem to be lacking and indeed many cottage factories are backed by well-to-do capitalists who extend their interests to small units in order to qualify for the excise rebates based on output.

Raw Material Supplies

In the prewar and war years, indiscriminate exploitation of easily accessible forest resources took place and little effort was made towards replantation. While match factories were once surrounded by the ample softwood resources near which they were built, they are today in many cases hundreds of miles away from their main raw material, and the situation is becoming alarming. Large manufacturers have repeatedly applied for permission to start plantations of their own, but without much success so far. Ceilings on land holdings have further complicated the issue. The raw material position in other respects is satisfactory. Match paper and potassium chlorate have long been manufactured indigenously, and only phosphorus, sulphur and potassium chloride (the base material for chlorate) have still to be imported. Amorphous phosphorus and sulphur are on the list of chemicals

to be produced locally in the near future, and potassium chloride may soon be recovered from the salt bitterns of sea water.

The time has now come when important issues concerning the industry's future must be faced squarely. If it is true that the Sattur-Sivakasi cottage sector cannot expand materially, and if the Government persists in its policy of reserving further capacity entirely for the cottage sector, some other similar manufacturing centres will have to be developed. Past experience has shown that attempts in this direction have not been a success. The Government has on several occasions sponsored the establishment of small cottage factories operated by refugees and the like, but they have almost invariably failed due to one shortcoming or another. It seems, therefore, that only where there is a tradition and naturally favourable circumstances such as in Madurai district, can the cottage match industry operate with any success. If this thesis is accepted, the Government must license new mechanised capacity in the near future as a shortage is already being felt. While the fostering of the south Indian cottage units may well have served a temporary economic purpose, an industry like this is not really adaptable to cottage methods and should be allowed to develop along modern and automated lines. If rationalisation and re-equipment is permitted, considerable savings to offset rising raw material costs can be achieved, and exports would be possible if conventional wooden matches are replaced by some other variety

A view of a mechanised match factory

able to compete with European products.

Whether additional mechanised capacity should take the form of expansion of existing units or establishment of new factories by different interests, is a matter which will certainly exercise the planners' minds. There is no doubt that existing large-scale manufacturers could economically extend their factories, and they have many years' experience to assist them. But the Government may wish to apply the principle of "the more the merrier", as has been done—and overdone—in other fields.

Effect of Duty Changes

Another matter which needs early attention by the authorities is the stabilising of the excise duty, stick count, and price structure. In past years, there have been numerous changes in all these matters. The excise duty has been rising steadily, permissible executions have been chopped and changed, usually to satisfy pleas from small manufacturers, and the result on prices has been most erratic. Besides Central excise duties, there are local sales taxes and octrois varying from State to State which encroach on the trade margin and tend to force box prices up to the next naya paisa. The 50's execution, it was expected, would be sold at 5nP a box, but the distributing trade found its margin at this price unacceptable and, as there is no intermediate coin, began retailing unit boxes at 6nP. The trade margin with box sales at 6nP is undeniably excessive in areas where there is little or no local taxation; in the Budget proposals for 1962-63, the Finance Minister has decided to "take away this unintended margin of middlemen" by raising the excise still further by 50nP a gross of 50's boxes. This will provide Rs. 2 crores for the exchequer. The Government has overdone its "bite", and while there may be no repercussion on box prices in low sales tax areas, in areas where such local imposts rise as high as 8 per-

cent, there is likely to be a repetition of the circumstances which forced the 50's box up to 6nP.

To check this kind of spiral, local taxes on matches must be abolished or merged into a uniform excise duty—which must in turn be halted now that it has reached such formidable proportions. A full 60 percent of the wholesale price of popular brands, and more than half the cost of a box, consists of excise duty alone, which, it is expected, will yield more than Rs. 20 crores for the current financial year. The diagram on the previous page illustrates the taxes, expenses, surpluses, etcetera, of a leading match company in 1961, expressed as percentages of the wholesale selling price. Excise duty prior to the new Budget proposals stood at 56.44 percent.

Timber Royalty

Finally, the Government can assist large manufacturers in holding the price line by not continually raising the emoluments of labour unless they are related to productivity, and by not allowing forest administrations to raise timber royalties unduly. These have shot up to astounding heights in recent years because of the increasing demand for timber. From Rs. 12.50 (a ton of 50 cubic feet) in 1943-44, average timber royalties rose successively to Rs. 25 a ton in 1948,

Rs. 36.50 a ton in 1949 and Rs. 50 a ton today, with rumours of further increases in the air. The f.o.r. factory cost of timber during the same period has gone up from approximately Rs. 120 a ton in 1943 to Rs. 200 now. It should be remembered that wastage in the process is high because of the basic unsuitability of tropical softwoods for match manufacture. The Government forest departments should be content with a reasonable return and there should be greatly intensified steps to reafforest and conserve timber resources.

The Andaman Islands are the best matchwood reservoir in the country and urgent measures are required to solve the chronic transport and shipping problems there so that the islands can realise their enormous potential for softwoods, not to mention valuable commercial hardwoods. Nepal is another little tapped source which could yield many thousands of tons, but so far it has not been possible to make satisfactory supply arrangements. A trade agreement covering timber with the Nepal Government would help private negotiations.

Transport of Raw Materials

Mainland rail transport, for this as for so many other industries, also needs improvement, as matchwood is perishable and must be promptly

despatched. About 120,000 tons are used annually, and each ton of timber lost costs the industry Rs. 200 and the exchequer six times that amount in excise duty. Even a drriage of 15 percent to 20 percent from delayed transport costs the manufacturer Rs. 30 a ton to Rs. 40 a ton. There is a good case for a higher rail transport priority, pleas for which have so far not yielded results.

If it is agreed that the mechanised sector should now share in the expanding market, experiments with modern alternatives to wooden match sticks and match boxes should be encouraged. The first step would be the manufacture of inner boxes out of cardboard, which today is an uneconomic proposition on a large scale because of the heavy excise duty on cardboard. This duty should be remitted on board used for match boxes which already pay a heavy excise duty. There is no doubt that unless cardboard is put into use in the near future, a very grave raw material crisis will occur as timber extractions simply cannot keep pace with the demand much longer and are incapable of feeding any substantially increased manufacturing capacity.

India has the raw materials to produce another modern variant, which is the wax match stick, consisting of rolled paper coated with candle wax and dipped with the head composition in the normal way. If the manufacture of this product can be established in the country, export possibilities will immediately appear. Today's wooden matches produced in India cannot be sold abroad because of the very poor quality of tropical woods compared with timbers such as aspen and poplar from temperate zones.

If the mechanised sector is permitted to develop and lead the technical advance towards more modern types of matches, a growing rôle can simultaneously be given to the cottage sector—not as manufacturers of the complete match-boxes (with the aforesaid handling of dangerous chemicals) but as ancillary suppliers to the large-scale industry. It would be of considerable benefit if the financial assistance at present frittered away in excise rebates could instead be diverted to small entrepreneurs operating in forest areas to produce veneers and splints for the large factories. Several such small enterprises exist already, and there is great scope for many more. Timber can be converted into semi-products near extraction areas and pressure on the railways eased by despatching splints and veneers rather than bulky logs. The large factories are ready to provide the know-how and a guaranteed market for such operations.

Failure of Cottage Units

The points of this article may now be summarised. The cottage match manufacturing capacity of the south is probably at its limit. So, in view of the failure of artificially established cottage units elsewhere in the country, the mechanised sector should be allowed to expand and may be directed to purchase as much of its semi-products as possible from small industries to be encouraged in forest areas. Further taxation on matches, both Central and regional, should be suspended, and the whole excise and taxation structure should be rationalised to provide for a standard execution or two with stable prices. Con-

sultation with manufacturers of all categories for their views and suggestions would be desirable for such purposes. Facilities should be granted to the large factories to become more efficient by rationalising their production and thus compensating for increased costs on account of raw materials, wages, welfare, housing and social security measures. They should, furthermore, be given facilities to introduce modern alternatives to the wooden match stick and box in order to enter the export market as well as cater for the quality trade within the country. The excise duty on cardboard should be remitted when cardboard is used for match-box manufacture, so that an early substitute for wood can be brought in. Intensive re-afforestation should be undertaken by the Government and encouragement given to those manufacturers who wish to start plantations of their own. The timber output of the

Andaman Islands should be developed as speedily as possible by providing adequate communications and transport, and the Government should use its good offices with Kathmandu to make Nepalese softwoods available for Indian match manufacturers.

All these are objectives which can harm neither the country's economy nor any of the interests concerned. For the economy, the indigenous manufacture of a commodity in everyday use would be expanded, with new possibilities of export. For cottage producers, there would be opportunities to complement large manufacturers all over the country. For large manufacturers, there would be the opportunity to bring to the consumer the advantages of developments elsewhere in the world, and the possibility of renewed growth—with all that it implies in economic benefits and revenues for the State.

FOR A PROGRESSIVE COUNTRY...houses, hospitals, schools...

During the Third Plan period, India will build about 26,00,000 new homes, 96,300 schools and 2,000 hospitals and dispensaries. These great social welfare schemes involve construction work on an unprecedented scale and enormous quantities of cement will be required for this vast building programme.

In order that more cement may be available for these welfare schemes and for the private consumer, the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this. **ACC and Sankar Brand Cements**

Demand for Yeast Increasing: First Indian Factory in Production

BAKERS' yeast as an article of commerce is a recent phenomenon in the long history of the baker's art. Bread has been described as the staff of life, and was specifically mentioned in the Lord's Prayer of the Christian religion, nearly 2,000 years ago. Throughout the world, bread has formed part of the daily diet of hundreds of millions of people, yet it is only within the last century that progress has been made in the isolation and development of yeast strains, especially suitable for use in bread-baking processes. The production of bakers' yeast on a large scale in the United Kingdom by the processes used today dates from the early 1930's. The production of commercial bakers' yeast by the "Vienna" process (a much less efficient one, now not used) in Scotland was initiated only a few generations ago, although the latter process was used from about 1860 in Europe. India's first yeast factory was officially opened on 8th February, 1962, and it has been shown that bakers' yeast of excellent quality can be produced

hops, but nothing can equal the regularity of action and the first-class flavour imparted by bakers' yeast produced in modern factories under fully hygienic conditions from carefully selected yeast strains. The main function of bakers' yeast is to ferment dough, causing it to "rise" by the production of bubbles of carbon dioxide gas of uniform size, so contributing to the volume of the finished bread, and ensuring that the bread shall be even in texture. The bread must have the required characteristics of smoothness of crumb and excellence of flavour. Loaves must be of attractive appearance and taste and should be such that they can be easily cut into slices.

The colour of yeast—whether in the compressed or dried granular form—has little influence on that of the finished bread, since it contributes only about 1/100th part by weight to the mixed dough. But uniformity and lightness of colour, especially in compressed yeast, are regarded as signs of purity and freshness. An important characteristic which must be possessed by commercial yeast is that it should not lose its fermenting power to any marked degree on storage or in transit from factory to bakery. Yeast strains which have keeping properties far superior to those of types formerly available, have been developed through careful and painstaking observation and research, especially in the laboratories of the largest producing firm in the United Kingdom. The preparation of yeast strains having the desired properties of vigorous, sustained fermenting power and excellent storage life is carried out under carefully controlled conditions, which include freedom from the possibility of bacterial infection and the selection of the most suitable nutritive substances for the growth of the yeast.

Raw Materials

Being a living organism, bakers' yeast requires food for its growth. Whereas almost any sugary or starchy material can be used, after suitable pre-treatment, as food for yeast, economic factors seem to favour the use of molasses, the by-product of sugar manufacture. An ample supply of molasses is available in India from the many sugar factories at a reasonable ex-factory price. In addition to its sugar content, molasses contains many factors promoting yeast growth such as vitamins and mineral salts. Although manufacturers in the United Kingdom prefer to use a mixture of molasses from sugar beet and sugarcane, it has been found in India that high quality bakers' yeast can be produced by using cane molasses alone. For its growth yeast also consumes extra nitrogen and phosphorus in addition to what is available in molasses. These elements are supplied as a nutrient solution of ammonium and phosphatic compounds prepared from indigenously manufactured materials.

The main reasons for the great increase in the efficiency of bakers' yeast, such as brewer's yeast and

A yeast technologist making a routine examination of the cells

A view of the compressors and conductors

A centrifuge in a yeast-making plant

The baking of bread is a skilled operation, and in order to attain and maintain a high standard of production, consistency of quality and performance of the bread-making raw materials are the prime requisites. This is true whether one is considering a large machine bakery or the domestic baking of bread. Bread can be made using leavening agents other than high-grade bakers' yeast, such as brewer's yeast and

yeast production by modern methods are, first, the yeast is "fed" at a rate proportionate to its rate of reproduction and growth. Secondly, fermentation is carried out in deep fermenting tanks with intensive aeration. Air is thus a raw material in yeast manufacture. Whereas it is free of cost in its atmospheric form, for yeast manufacture, dust and bacteria have to be eliminated by filtration, including high-tension electrostatic precipitation of suspended particles, and by sterilisation. Air has also to be compressed and cooled for passage into the fermenters. Such treatment adds to the cost of yeast and necessitates the provision of a reliable supply of electric power. In 1944, one authority in Europe estimated that 10 to 20 percent of the cost of yeast production was attributable to power consumption for aeration, although this percentage range obviously depends on many factors and local circumstances.

Manufacturing Process

India is thus self-sufficient in all raw materials needed for manufacturing yeast, and depends on her overseas collaborators at present only for the supply of a few grams of pure yeast culture every two months or so to initiate a new production cycle. An essential feature of every yeast manufacturing plant is its laboratory. This is divided into two main sections—the culture-room and the process control laboratory. In the former, the first stages of yeast propagation are carried out under the most stringent conditions of bacterial control to ensure the purity of culture. In the latter, routine tests to check on bulk fermentation conditions are done. As already mentioned, small quantities of yeast cultures are received in India from the United Kingdom every two months. These cultures have been grown in a research laboratory from a single cell of yeast removed by micro-manipulation techniques from a strain of yeast having the desired properties. This small amount of culture ultimately produces many tons of finished yeast in a short period. Its rate of reproduction and growth are both very high, the number of cells doubling each time. From the commercial point of view, the strain of yeast chosen must be one which will grow readily using the raw materials available as food, and will convert the food to yeast with high efficiency. The resulting yeast cells must be easily separated from the nourishing medium when "centrifuged", reform into a smooth suspension when mixed with water for use by the baker, and have the required power of rapidly fermenting the dough sugars until the process stops in the heat of the baker's oven.

The process of manufacturing bakers' yeast consists in transferring the ever-growing quantities of yeast culture through a succession of larger vessels until the full-scale fermenters are reached. In these vessels, the seed yeast is propagated under controlled conditions of temperature, acidity, aeration and availability of food. At the end of the fermentation, when the concentration of yeast cells in the liquid has reached the economic optimum—as determined by control laboratory tests—the yeast is concentrated into a fraction of the fermented bulk by means of high-speed centrifuges, and receives a series of washes to leave the pure yeast in a concentrated suspension

in water, known as yeast cream. The yeast cream is stored under refrigerated conditions in collecting tanks, from which it is pumped to the filtration plant where it is compressed, and thence either to a compressed yeast-packing machine or to a granulating and drying plant. In a granulating and drying plant, the compressed yeast is extruded, cut into lengths of the exact weight required, and wrapped in waxed paper automatically. In the granulating machine, the yeast is extruded in the form of vermicelli and fed to a rotating cylindrical dryer heated by means of warm air. The rolling action induces the formation of small spheres, and the drying action is continued until the moisture content falls to 8 percent, compared with about 70 percent in the compressed yeast. Blocks of compressed yeast are packed in large cartons, and the granular-dried yeast in tins. In granular-dried yeast in tins, the order to enhance the period during which the dried yeast retains its activity, the air in the tins is evacuated and replaced by nitrogen. Tests have shown that the storage life of yeast packed in a nitrogen atmosphere is about 2 percent greater than that packed in air, under similar conditions.

Climatic Conditions

Conditions of high atmospheric temperature and humidity, which obtain in most of the densely populated regions of India for many months of the year, pose problems which do not arise to an appreciable extent in temperate countries. These adverse conditions are largely overcome by the use of refrigeration techniques in both the processing and storage of yeast. Even in countries of the temperate zones, refrigeration for yeast is regularly practised, but in India its use is imperative. During its fermentation, yeast produces a large quantity of heat, much of which has to be removed by the artificially cooling the content of the fermentation vessel. In Britain, yeast factories are located near ample sources of cooling water available at low temperature. In the plains of India, artificially chilled water has to be produced for this purpose, since the natural water is not cold enough in most seasons.

The storage and shipment of bakers' yeast can only be done satisfactorily with the aid of refrigeration. Dried yeast packed in nitrogen-filled sealed tins has good keeping properties at normal atmospheric temperatures. Even so, the life of dried yeast can be greatly prolonged if it is stored at low temperatures—in the region of 35° Fahrenheit (2° Centigrade). For example, its effective life may be increased from about six months to a year or two under these conditions. Under Indian hot weather conditions, compressed yeast must be kept in a refrigerator until it is used, to ensure satisfactory results in baking. The need for refrigeration during processing and storage of yeast results in appreciably higher investment costs for equipment and higher running costs for power in India than in temperate countries.

Labour and Supervision

The pioneer yeast factory in India is operated entirely by Indian personnel, only one of whom, the manager, has seen another such factory. The fact that one man—given the benefit of instruction and training in the United Kingdom—could return

to India and, in a short space of time, pass on the new skills to a team of supervisors, chemists and workmen, is a tribute to the versatility and enthusiasm of India's industrial manpower. Technical difficulties were encountered in the early days, and a great deal of on-the-spot help was provided by highly experienced British yeast technologists. A continual interchange of ideas goes on between the Indian Yeast Company Ltd and the Distillers Company of the U.K., India thus receiving the benefits of the wide and continually developing management and technological experience of the latter. It is apparent that no difficulties need be anticipated on the score of availability of management and labour skills in the expansion of the bakers' yeast industry in India.

Bakers' yeast is marketed as compressed or as dried yeast. Although it is cheaper to produce the former, the latter can be stored and transported at ordinary atmospheric temperatures. As mentioned earlier, for satisfactory performance, compressed yeast should be stored under refrigerated conditions and used within a few hours of removal from the refrigerator. The drying of yeast under Indian atmospheric conditions necessitates the provision of extra equipment over and above that needed in temperate climates, since the air used has to be dehumidified before it enters the heating and drying plant. This is done by cooling it, using refrigeration, when the excess water in the entering air condenses, and the resultant air, now having a greatly enhanced drying capacity, passes to the yeast drying plant. Here the moisture content of the yeast is reduced from about 70 percent, which it contains as pressed yeast, to 8 percent. The yeast is formed into granules. The granules are packed in tins, which are evacuated, then refilled with nitrogen, and sealed.

The Growing Market

In 1945, the U.S. production of yeast was 135,000 tons, of which 16

percent was in the "dried" form. In the United Kingdom, the output was 50,000 tons, and it has increased substantially in the last few years. For bread making, the ratio of yeast to flour used is 1:100 in the United Kingdom, and somewhat higher in the U.S.A. It has been estimated that in Britain, North America, and western Europe, the per capita output amounts to about 2 lbs of yeast a year. If this ratio applied to India's population, the demand here would be in the region of 360,000 tons a year. At present, however, it is a minute fraction of this figure. Imports for 1960-61, before the Indian Yeast Company Ltd started manufacturing, were only about 640 tons expressed as equivalent of compressed yeast. The market is, however, growing as India's standard of living rises. It is planned to increase the annual capacity of the existing plant first to 1,200 tons, and then to 2,000 tons over the next few years. This expansion can be carried out with no further foreign exchange expenditure. It is anticipated that India's needs for bakers' yeast up to the end of the third five year plan can be catered for by this planned expansion of capacity.

Production Costs

It is evident from this discussion that numerous factors contribute to the higher cost of production in India than in countries from which imports have been obtained. The chief of these is the relatively small initial production necessitated by the present small demand. The output of a single factory in England is at the rate of 450 tons a week, whereas the Indian factory has at present a capacity of 16 tons a week of compressed yeast. The contribution of labour costs, overheads, laboratory services and so on, to the ultimate unit cost of production, is much less for a larger factory, and so overall production costs are higher in India. In addition to this, extra costs are incurred due to the greater consumption of electricity for refrigeration.

HEAD WRIGHTSON/FLUOR COOLING TOWERS

THE HEAD WRIGHTSON/FLUOR "COUNTERFLO" INDUCED DRAUGHT COOLING TOWER IS RECOGNISED THROUGHOUT THE WORLD AS A MOST EFFICIENT AND DEPENDABLE MEANS OF COOLING WATER. Output of Soap Increases, but Per Capita Consumption Remains Low

It is said that the level of soap consumption in any country is an indicator of the standard of living of its people. In the case of India, this is only partially true. The demand for soap, like that for any other consumer good, depends on a variety of factors, both economic and non-economic. India has a tradition for personal cleanliness. Taking a bath a day is common and in some parts, more than one bath is taken. The prevalence of the bathing habit in the country can be partly attributed to the climate and partly to the religious sanction that is attached to personal cleanliness. The same is the case with washing clothes.

Yet soap consumption in India is about the lowest in the world at 2.36 lbs per capita a year. In neighbouring countries like Ceylon and Malaya,

By

A SPECIAL CORRESPONDENT

the intake is much larger at 4.02 lbs and 8.05 lbs, respectively. The reasons for this may perhaps be that an average Indian relies mainly on the cleansing properties of plain water, whether it be for his person or his clothes. The use and availability of soap substitutes like *shikakai*, gram powders for the body and alkaline earths for washing clothes may be another factor making for low consumption of soap in the country. In the past, the use of soap was more an urban than a rural habit. This distinction is gradually disappearing, but in a country where

about 80 percent of the people live in the villages, it will take a lot more time before the distinctions completely disappear.

Three Categories

Economists classify consumer goods into three categories based on their nature, namely, necessities, luxuries and conventional necessities. The first two are easy to understand, but the third requires some explanation. Social conventions make certain types of purchases indispensable which are not essential for livelihood. They almost acquire the characteristics of essential goods, such as food and clothing. The criterion that can be used to distinguish the three varieties is human behaviour consequent on a rise or fall in incomes. A necessity tends to rise or fall less than proportionately with changes in income whereas luxuries show greater variation. The rate of change in a commodity expenditure due to a change in income is called the income-elasticity of demand. It has been found that the necessities of life like food and clothing are inelastic, and so are conventional necessities up to a certain level. Luxuries, on the other hand, have a very high income-elasticity.

Comprehensive and absolutely reliable data on family budgets are not available in the country, but all the existing information indicates the soap in urban India, and at least in some rural areas, has passed the stage of being a luxury and acquired the characteristics of a conventional necessity. The significance of this development is that soap has become a "must" item for those families

Soap being blown to ribbons inside a Mazzoni plant

which are using it now. With greater economic development, the trend promises to become fairly universal.

Assessment of Market

There are two ways of finding out the extent of the market for any commodity. One can start with the production side, adjust for stocks and arrive at consumption. Alternatively, an estimate of consumption can be made directly finding out consumer spending through family budget surveys. Given reliable statistics, either one or the other should be adequate. But keeping in mind the limitations of available data both from the Government and industry, it is better to work out both sides of the equation and arrive at as accurate an estimate as possible.

Soap has been an item in the various family budget surveys conducted by the Government and industry. The most comprehensive of these is the National Sample Survey which was started in 1951, and is currently doing its 18th round. It has estimated that the total consumer spending on soap both for washing and toilet purposes, was around Rs. 60 crores in 1952. Last year Hindustan Lever Ltd conducted a family budget survey of its own, covering 10,000 households both in urban and rural areas. Specially trained investigators were employed on the survey, which is perhaps the first of its kind done by industry dealing exclusively with detergents. According to this survey, the annual expenditure on all soaps (both washing and toilet) works out to Rs. 108 crores a year in India. Allowing for a probable error of 10 percent, the total market for soaps

can reasonably be put at Rs. 100 crores.

	Washing soaps	Toilet soaps	Total
	(Rs. crores)		
Urban	49	20	69
Rural	28	11	39
Total	77	31	108

The Rs. 77 crores expenditure on washing soap includes the amounts spent on washing powders and N.S.D.s. Similarly, the toilet soap figures include spending on washing soap used for toilet purposes.

Difference in Price

Converting what the consumers have paid for their soap purchases into tonnages to compare it with production has some difficulties because of the difference in prices for the various qualities as also the variations in price even for standard branded goods which the consumers say they have paid. This latter has come out clearly in the family budget survey mentioned above. In addition, there are the differences in taxes, trade profits, etcetera. Roughly, the Rs. 100 crores annual expenditure on detergents indicates a tonnage around 450,000, taking all grades of soap into account.

Looking at the market from the supply or production side, it is seen that soap supply in the country is from two sources—the organised sector and the small units. The former is large industry using power, while the latter consists of small soap-makers scattered all over the country producing anything from 25 tonnes to 100 tonnes a year. If

"MUKAND
IS STEEL"

Year	Organised sector	Small units	Soap market (Metric tons)		Total	Population (millions)	Per capita (kilogram)
			All soaps	N.S.D.'s			
1955	100,584	180,857	281,441	48	281,489	387	0.727
1956	112,020	202,194	314,214	195	314,409	395	0.796
1957	113,388	226,579	339,967	312	340,279	403	0.844
1958	125,436	254,013	379,449	290	379,739	412	0.922
1959	132,084	284,494	416,578	1,314	417,992	421	0.993
1960	139,692	320,056	459,748	1,537	461,285	430	1.073

comprehensive production figures were available pertaining to both these sectors, the task of cross-checking would have been easy. But production statistics are available only for the organised sector, consisting of 90 units, and no official estimate of small-unit soap production is available.

Production of Small Units

Hindustan Lever Ltd has done a number of surveys over the past four years to establish as closely as possible the production levels of the small units. The method followed in this production survey was as follows: One town in each population strata from each district of India was taken at random as the sample of towns to be visited by the investigators. Senior field staff specially trained for the purpose visited each of these towns, met all the small-unit soap-makers in the place and tried to establish the town consensus about the small-unit soap production. It was found that, while there can be errors in arriving at quantities produced by individuals, there was an accepted town production figure. This was cross-checked by interviewing the local traders who deal with this kind of soap.

Putting together all the available information on production, the total detergents available in 1960 were estimated at 450,000 tonnes. At an estimated population of 430 million, this would mean a per capita annual consumption of 1,073 kilograms.

Forecasting Future Demand

At best, it is hazardous to forecast the level of future detergent consumption. The task is made even more difficult due to the lack of adequate statistical and other information. Broadly, the following factors have to be taken into account, and it will be possible to make an estimate of consumption in future: (1) increase in population, both rural and urban; (2) migration of population from rural to urban areas in search of employment opportunities and education; (3) increase in national income; (4) gradual monetisation of the entire rural sector of the country; (5) changes in the pattern of living in the villages due to greater contact with towns; (6) improvements in water supply; (7) spread of literacy in the country; (8) improvement in health services and a greater realisation of the use of soap as a cleaning agent; (9) increase in the consumption of cloth in the country; and (10) change in cloth washing practices.

Of these factors, some can be quantitatively measured, some cannot be, and some are more important than the others. Taking into consideration all the possible information one has in hand, the consumption of soap in the country by 1965 is likely to go up to 680,000 tons on working

up to a per capita consumption of about 3 lbs a year.

	(Metric tons)	
	1955	1965
Organised sector	100,584	193,040
Small units	180,857	467,383
All soaps	281,441	660,423
N.S.D.'s	48	20,000
Total	281,489	680,423

Similarly, one can think of soap consumption in the country reaching a level of about 6 lbs by 1975. This estimate is based on the knowledge at present both of the soap market and of the economy. It is possible that the estimate given here is rather conservative, and the actual level reached might turn out to be even larger. Even at this level, it will be

|--|---|

PURPOSES FOR WHICH LOANS ARE SANCTIONED

Purchase of new or second hand machinery, renovation or modernisation or replacement of worn-out or obsolete machinery, purchase of land for factory site, and construction of factory buildings.

IMPORTANT TERMS AND CONDITIONS OF LOANS

SECURITY: First charge of all the fixed assets such as land, buildings, plant and machinery and fixtures. Raw materials, stock-in-process and finished goods will not be mortgaged and will, therefore, be available for raising working capital from elsewhere.

MARGIN: Generally 50% of the value of total assets including those to be acquired with the loan. This margin may be reduced to 40% in case of industrial concerns importing plant and machinery under the U.S. Export-Import Bank Loans or other foreign currency loans (tied credits) taken by Government from foreign governments or financial institutions abroad where the cost of imported plant and machinery is 60% or above of the total capital cost of the project. The margin may be further reduced to 35% in special cases.

INTEREST: The current rate of interest for rupee loans is 7% per annum subject to a rebate of 1% for punctual repayment of instalments of principal and payment of interest. D.L.F. loans carry interest at 8% p.a. less a rebate of 1% p.a. for prompt payment (net 7% p.a.) plus an extra 1% p.a. to provide for incidental expenditure.

REPAYMENT: Rupee loans are repayable within a period not exceeding 25 years to suit borrower's convenience. D.L.F. Loans are repayable within a period not less than 5 years and not more than 15 years from the date of the disbursement of the final instalment of the loan. Repayments shall not, however, commence earlier than one year from the date of the final disbursement of the loan.

observed that soap consumption is barely keeping pace with what neighbouring countries, even less developed Asian countries, are currently consuming. One can say that it is not only desirable to achieve a per capita consumption of 6 lbs by 1975, but reaching such a level is necessary.

recommended that any increase in soap-making capacity in the organised sector should be granted only to those manufacturers who have already installed plant for the recovery and distillation of glycerine.

Non-soapy Detergent

The new factor which has come into the detergent market is the non-soapy detergent whose consumption is fast increasing from about 48 tons in 1955 to over 3,000 tons in the current year. By the end of the third plan, i.e., 1965-66, the Planning Commission has set the target at 20,000 tons. Not only is N.S.D. an advance in detergent technology and washing habits, but as no vegetable oil is used for making it, it will help to release edible oils for human consumption. Some 20,000 tons of N.S.D. with a detergency equivalent of over 30,000 tons of soap will enable the country to save 20,000 tons of oil a year. If the experience of other countries which have introduced N.S.D. is a guide to India, one can look forward to a rapid expansion of the N.S.D. market which will benefit both the industry and the consuming public.

Problems of Expansion

It has already been mentioned that the supplies of soap come from two sources—the organised sector and small units. Some of the problems faced by both these sectors are common; some are special to each of them. Looking at the common problems, the most important is the availability of raw materials like oils, chemicals, perfumes and packing materials at reasonable prices. Vegetable supplies in India are hardly keeping pace with the demand for it, and it is expected that the total demand for vegetable oils for edible and industrial use by the end of the third plan will be about 3.1 million tons, and this can be met only if the country is able to implement the agricultural expansion programme visualised under the third plan. Past experience, especially in the early part of the second plan, makes one a little sceptical about the possibility of achieving the target set for vegetable oils.

	1960-61	1965-66
(In '00,000 tons of oil)		
Five major oilseeds	16.08	23.52
Others including coconut, cottonseed, etcetera (current production estimated)	4.00	7.00
	10.08	30.52

Local Substitutes Needed

As far as the other raw materials are concerned, they depend to some extent on the import position, and with the increasing foreign exchange difficulty, it is necessary that local substitutes for these should be found as fast as possible. In addition to securing the raw material supplies, the organised sector has a further difficulty about capacity. Taking this as a whole, the present capacity of the industry is adequate to meet the total demands for better class detergents in the country, but this capacity is distributed in such a way that those concerns which can rapidly increase the market are not able to avail themselves of the opportunity. More rational and efficient distribution of capacity will be necessary if the industry is not to be bogged by production limitations in the future.

Using By-products

While considering the future expansion of soap capacity in the organised sector, the position of by-products should also be kept in mind. The most important by-product of the soap industry is glycerine which is in demand both locally and abroad. In spite of its value, not all organised soap manufacturers recover glycerine, not to speak of the small units. This valuable commodity is allowed to be wasted. It is strongly

Making Wool-tops in India: New Combing Facilities Set Up

WOOL-COMBING is not new to India. For many years, there has been combing machinery in the country, and published figures show no less than 43 noble combs of uncertain age as having been installed in the prewar years. However, the economics of wool-combing have hitherto had a depressing effect on this activity, and apart from Raymond Woollen Mills and, notably, the British India Corporation which has for long made a percentage of its own tops, the production of wool-tops in India has been negligible. The reason is that it has generally been cheaper for a spinner to buy a ready-made top combed at one of the large overseas plants than to buy wool and comb it on his own machinery. With the high capital cost of the plant, especially if proper scouring facilities are installed, it must be intensively used, since it is not economical to comb wool unless a high level of activity is maintained.

With the necessity of conserving foreign exchange, wool-combing in India has now taken on a new significance. The consumption of imported wool by spinners is restricted to the value of their import licences, and if the combing process is done in India and paid for in rupees, it fol-

By

A SPECIAL CORRESPONDENT

lows that for a given licence value, a spinner is able to import more raw material. With spinning capacity idle due to the raw material shortage, spinners are now beginning to import greasy wool which costs less in terms of foreign exchange than finished tops. Two French combing units comprising carding engines, preparers and a total of 13 rectilinear combs have been set up in Ludhiana. These units are combing imported scoured wools and hand-washed indigenous wools into wool-tops for the spinning of hosiery yarns. Other small combing units have been licensed, and some may go into production during 1962.

New Company

A development of great significance to the Indian worsted and hosiery industry is the establishment of Isaac Holdens (India) Ltd with a licensed wool-top capacity of 10 million lbs a year. The Government of India foresaw the need for an efficient wool-combing plant serving the whole industry and the establishment of Holdens' mill springs from the reference to this subject made by the Government in the second five year plan. Holdens does not make wool-tops on its own account, but accepts wools from overseas top-makers and from spinners in India for conversion into wool-tops at a fixed charge payable in rupees. Being commission combers only and not comb-spinners, the Company

operates impartially and is not in the position of competing with its customers. Holdens has already installed two four-bowl scouring machines, 18 carding engines, three sections each of six noble combs and for French combing three Thibaut cards, a Fleissner backwash, ten Schlumberger combs, giving a total installed capacity of 6.5 million lbs a year. Later this year, a new high-pressure dye plant and a recombing unit will be erected.

Briefly, the process of wool-combing consists of converting sorted greasy wool into wool-tops and by-products by scouring, carding, backwashing, preparing, combing and washing, but the processes are not as simple as this brief outline suggests. To scour greasy wool so that the clean wool, after its passage through the four washbowls, leaves

The Noble combing section of a wool-combing mill

wool tops

from India's
commission combers

Noble Combing

French Combing

Isaac Holdens (India) Limited, a Duncan enterprise, in collaboration with the world famous wool combers Messrs. Isaac Holden & Sons Ltd., Bradford, U.K. is India's first commission wool combing plant offering French and Noble combing.

ISAAC HOLDENS (INDIA) LIMITED

Managing Agents—DUNCAN BROTHERS & CO., LTD., 31 Netaji Subhas Road, CALCUTTA-1

NAS/IH-355

A view of the French combing section

the dryer with just the right amount of fatty matter and moisture for further processing, is an art. The roller settings and speed of the carding machines must be specially set to suit the length and style of the different types of wool, and the rollers must be covered with card clothing appropriate to the quality of wool.

Backwashing

Backwashing must be so controlled as to deliver to the backwash gill a sliver of a specific weight containing an exact amount of moisture and Grade A combing oil. From the backwash gill, the sliver passes through two preparers and is then punched into a ball ready for combing. Combing, in which the long fibres are straightened and the short fibres removed, is a difficult operation requiring the co-related adjustment of machine parts to produce a combed sliver of wool to a given ratio of noil by weight. The finer the quality of wool, the more the care needed, particularly if a high ratio of top to noil is required. Short indigenous wools are also difficult to comb because of the tendency of brittle fibres to fly. After the comb-

ing operation, the combed sliver passes through a can box of finisher gill where condition is applied at a controlled rate by the adjustment of change wheels. The weight of the sliver is also controlled in preparation for the final process. From the can box, the conditioned sliver passes through the second finisher, which usually incorporates an auto-leveller unit, and the finished top winds itself on the balling head to a specific weight and dimension.

Regular Tests

Throughout the process, tests are carried out at frequent and regular intervals to ensure that a standard quality is produced and that the finished top is exactly to the customer's requirements. A well-equipped laboratory staffed for 24 hours a day is maintained for this purpose. The tests made include those for oil and fatty matter content, moisture content, neps and vegetable fault and fibre diagrams are prepared. In addition to these process tests, the moisture content of each bale of finished tops is ascertained in order to ensure that the customers receive the correct weight of wool in the specified condition. For despatch, each top is wrapped in paper and then a number of tops are packed in paper-lined jute bags which are pressed to an economic size in order to effect the maximum saving in rail freight.

Rajasthan wools, until recently, categorised as purely carpet wools, are now being successfully combed in India for the first time, and the resultant tops are being used in the manufacture of hosiery products. The market indications are that the demand for combed Indian wools is far in excess of the combing capacity at present available. Holdens has done the pioneering work in making the combing of Indian wools a success, but it is still awaiting import licences to enable it to import machinery with a capacity of 3.5 million lbs suitable for Indian wools.

That the greasy wool required for combing should be sorted has been mentioned, and it is essential that this operation is meticulously carried out by expert sorters in order to ensure that the finished top is regular and contains only a specified quality of fibre. Every bale of wool, therefore, is opened and every fleece examined and divided into the appropriate quality grade. The final sorting and blending is supervised at Holdens by members of the Bradford Sorters Society.

Saving in Foreign Exchange

India's wool-combing activity will increase and instead of importing wool-tops, more and more greasy wool will be imported to be combed in the country. By importing greasy wool, there will be a saving of foreign exchange equal to the differential between the cost of the imported wool-top and the greasy wool. The by-products could also be sold in India, thereby saving further foreign exchange or exported to earn foreign exchange. When this development is completed, and is accompanied by greater consumption of indigenous wool, there should be increased spindle and loom activity with more work and a higher standard of living for operatives in the wool textile industry in India.

POWER ALCOHOL OUTPUT INCREASING, BUT PRICES NEED TO BE RAISED

THE Indian alcohol industry owes its origin to the shortage of petrol during the second World War. Till recently, it used to supply power alcohol for mixing with petrol. During wartime, the Government encouraged the establishment of distilleries for producing power alcohol. During the last phase of the second World War, a number of distilleries were set up, and their entire output was consumed as motor fuel. But in recent times, with increasing availability of petrol, the use of alcohol for admixture has become less important. This has opened new uses for alcohol. So a number of industries based on alcohol are coming up. The Planning Commission rightly pointed out in the *Programmes of Industrial Development: 1956-61* that "the use of alcohol as motor fuel can by no means be regarded as the most useful or economic outlet for this product. While its consumption as motor fuel has to be permitted and even encouraged in the immediate future as a means of fostering the development of the alcohol industry, a steady and permanent demand for alcohol has to be

By

J. S. MEHTA

found in the establishment of industries using alcohol as their raw material. In the absence of any proved deposits of crude petroleum of any significant magnitude, alcohol, along with coal distillation products, is the most readily available raw material for starting an organic chemical industry in the country. In due course, the establishment of industries consuming alcohol will make it less necessary to find an outlet for it as motor fuel."

Rising Production

With the advent of independence and especially after the initiation of the first five year plan, there has been an all-round development of various industries. The production of alcohol has made steady progress, as will be seen from the following figures:

Year	Alcohol (in million bulk gallons)			
	Power	Rectified	Denatured	Total
	alcohol	spirit	spirit	
1951	5.67	5.00	1.63	12.30
1952	7.72	4.60	2.10	14.62
1953	8.12	4.38	2.44	14.94
1954	8.01	4.63	2.84	15.48
1955	10.43	5.16	2.99	18.50
1956	10.27	2.21	3.38	15.86
1957	10.14	5.01	3.47	18.62
1958	8.82	6.15	3.93	18.90
1959	7.44	7.78	4.42	19.64
1960	10.76	7.50	5.49	23.75
1961 (up to September)	9.84	8.05	6.48	24.37

From the above figures, it will be seen that, within a short period, alcohol production has almost doubled. The increase in the production of industrial alcohol has been

more rapid than that of power alcohol. It is mainly due to the fact that industries using alcohol as raw material have been established recently under the second plan and many more are to be established in the future. The Alcohol Committee appointed by the Government of India in 1955, suggested in its report the second plan targets for various alcohol-based industries, including synthetic rubber, plastics, polythene, paints, chemicals, acetate rayon, etcetera. According to these targets, the total consumption of alcohol for such industries was estimated at 31.6 million gallons. But these expectations have not materialised. Meantime, the demand for alcohol for industrial purposes is less than production, so the mixture of power alcohol with petrol to the extent of 20 percent is still in vogue. But in a few years' time, the demand for alcohol for industrial purposes is bound to go up and it may even exceed the output.

This is particularly true if account is taken of the alcohol-based industries, which are being set up now. When the synthetic rubber factory in Bareilly in U.P. and the unit in Barabanki for manufacturing butyl alcohol start functioning, the entire alcohol produced in the country will be used for industrial purposes. In its initial stage, the synthetic rubber factory in Bareilly alone is expected to consume about 12 million gallons of alcohol a year. The factory is expected to commence production towards the end of 1962 and its requirement at the end of the third five year plan is estimated at 18 million gallons. Other big consumers are Alkali and Chemical Corporation of India Ltd and Union Carbide (India) Ltd who between them require 3 million to 4 million gallons a year. Besides, alcohol produced in India has good export prospects. In the recent past, a considerable quantity has been exported to the United Kingdom—the principal buyer of Indian alcohol. In 1960, about 1.8 million gallons were exported to the U.K.

Third Plan Targets

Considering all these factors, the Planning Commission has fixed a production target of 60 million gallons and a capacity target of 72 million gallons of alcohol for the third five year plan, against the capacity target of 40 million gallons and the actual production of about 23 million gallons at the end of the second five year plan. The production target fixed for the third plan, besides meeting the internal demand, is also expected to leave a residue for exports. It is to leave a residue, that with the development of alcohol-based industries in the country and the increasing demand for alcohol abroad, there is considerable scope for the future development of the industry. But the industry is at present faced with a number of problems, and its prospects largely depend on how it will be able to face these difficulties. The Government's future policy will

show whether it is earnest in solving these problems.

For instance, it is necessary to unify the various State enactments, with a view to evolving an all-India policy for the industry. The State Governments have imposed control on industrial alcohol under the State excise and Prohibition laws. These laws are not uniform, and each State is free to make its own excise and Prohibition rules. Most of the laws against alcohol, treating it as an intoxicant and not as a chemical. They often present difficulties in operating continuously a fermentation and distillation plant and so adversely affect operational efficiency. Furthermore, alcohol cannot be moved from one place to another except under an excise permit in accordance with excise rules in force at both places. In certain States, where there is Prohibition, even the use of rectified spirit for industrial purposes is not allowed, except under excise supervision and that too at the cost of the user. In some States, even denatured spirit is not permitted to be used for lighting a stove, except under a permit. The procurement of such permits often involves considerable hardship and time, which the consumers can ill afford, so they often

prefer to go without spirit. Even medicinal and toilet preparations containing alcohol are subject to these restrictions. The restrictions adversely affect the consumption and production of alcohol products. In the case of power alcohol, the position is still worse, as there is dual control by both the Central excise and the State excise staff. It is necessary that the various State enactments affecting the industry are unified and an all-India pattern of regulation is evolved.

Maximum Prices

Apart from these rigid restrictions, the Government's price policy for industrial and power alcohol also presents a formidable difficulty. The Central Government has fixed the maximum prices for these commodities, the price for power alcohol being 20mP a litre, ex-distillery, and 19nP a litre ex-distillery for rectified spirit, plus an amount not exceeding 8nP a litre based on the actual cost of transport of molasses to the distillery during the previous year, plus the cost of denaturing, in case the alcohol is supplied after denaturing. The industry considers this price to be inadequate and has been urging an upward revision. The present prices have been fixed on the recom-

National Tobacco Company of India Limited

mentation of the Alcohol Committee. The industry contends that, besides providing an inadequate return of 6 percent on the block, the Committee proceeded on certain assumptions which were not actually realised. In effect, therefore, the actual cost of production is much higher than that assessed by it. For instance, against the assumed average production capacity of 1 million gallons of alcohol a year, the actual capacity achieved was only 800,000 gallons. Against the assumed working period of 300 days, the actual period was about 260 days. The average recovery was also lower at 1.9 gallons a maund of molasses, against the assumed figure of 2 gallons.

Another important item listed by the industry justifying an upward revision of alcohol price is an increase in the cost of coal. The Alcohol Committee allowed 11nP a gallon towards the cost of coal, assuming the price of coal f.o.r. distillery at Rs. 35 a ton and the consumption of coal at the rate of 7 lbs a gallon of alcohol. This might have been the position in 1955 when the Alcohol Committee made its assessment of the cost of production of alcohol. Since then, the railway freight on coal as well as its price have gone up from time to time, and the present cost of coal, f.o.r. distillery, amounts to more than Rs. 45 a ton. Due to the supply of lower grades of coal, the rate of consumption is much higher at about 10 lbs to 11 lbs a gallon. As a result, the actual cost of coal for each gallon of alcohol produced works out to 21nP a gallon. The other items on which higher allowance is claimed by the industry are salaries and wages, including overheads, interest charges and contingencies.

Fair Price

According to the industry, the fair price for alcohol works out to Rs. 1.31 a bulk gallon, exclusive of freight and transport charges on molasses which are allowed separately up to

a maximum of six annas a gallon as recommended by the Alcohol Committee. The break-up figures are as follows (based on the average production of 800,000 gallons a year and the recovery of 1.9 gallons for each pound of molasses):

maund of molasses	Rs.
Molasses (exclusive of transport charges)	0.13
Power and fuel	0.21
Chemicals	0.05
Wages and salaries	41.2
Repairs	0.05
Depreciation	0.23
Overheads	0.10
Interest on working capital	0.04
Return on block	0.33
Contingencies	0.05
Selling price :	1.31 a bulk gallon

Against the claim of the industry for a price of Rs. 1.31 for each bulk gallon of alcohol, the Government has fixed a ceiling price of 90nP (20nP a litre). Considering the importance of the alcohol industry as supplier of an essential raw material, the Government should reconsider the industry's cost structure, so as to ensure that it is able to fulfil the production and capacity targets laid down under the third plan. On this will depend the prospect of a large number of alcohol-based industries planned during the plan period.

Coal Shortage

While these handicaps render the industry's working difficult, the problem of inadequate supply of coal constitutes a serious bottleneck. The coal shortage has resulted in frequent closures of distilleries. It has also undermined the operational efficiency of the plants. Although the industry's production capacity has increased, the supply of coal has not been fully provided for. Lower grades of coal now supplied raise fuel consumption. But coal allocations made to the industry are wholly inadequate. For example, in the case of Uttar Pradesh, against a demand of 100,000 tons a month in 1961, only 325

A fermentation tank

wagons (53 percent of the demand) were allocated. Against this allocation, the actual average movement was only 231 wagons a month due to the non-availability of wagons. With such meagre supplies of coal, distilleries were not able to work to their full capacity and had to remain closed for a long time during 1961. The distillery in Pilkhani remained closed for 136 days, while those in Mansurpur and Captainganj did not work for 114 and 113 days, respectively. It is calculated that 713 working days were lost by distilleries in Uttar Pradesh alone during 1961 for want of coal. Under the circumstances, it is only natural that the industry should expect an increase in coal allocation. But on the contrary, the Government has recently announced a cut in the coal allotment to the U.P. distilleries and from July this year only 228 wagons of coal a month are allotted to them. Similar cuts have been made in the coal quotas of distilleries in other States as well. This is something extraordinary. Between 1961 and 1962, there has been no deterioration in the availability of either transport or coal to justify this cut.

regulations enforced by the State Governments. Similar difficulties exist for transporting alcohol. The inadequate supply of tank-wagons on metre-gauge railways often results in undue delay in the movement of alcohol to consuming centres. Such delays have also affected supplies at ports for exports. At present, there is no facility for transshipment of alcohol from broad-gauge to metre-gauge tank-wagons in Shakurbasti (Delhi), with the result that alcohol meant for export cannot be lifted from distilleries located on the broad-gauge railways for onward movement to Kandla port. The larger national interests demand that the transport difficulties are removed to ensure free and speedy movement of alcohol. Alcohol exports are vital to the country's development as well as for ensuring that there is no lack of balance between supply and demand during the initial stages of the development of alcohol-based industries. It is, therefore, hoped that the Government will take early steps to raise the supplies of tank-wagons on the metre-gauge railways and to provide for necessary transshipment arrangements in Shakurbasti.

The industry has been pleading for help from the Government, but with no result. For some time past, the use of furnace oil as a substitute for coal has been engaging the attention of the Government. But the cost of furnace oil far exceeds that of coal and its use in an industry like alcohol, where the existing controlled prices are already unremunerative, will make working even more uneconomical. If furnace oil has to substitute coal, it is necessary that it should be supplied at a cheaper price. For this purpose, the Government should allow concessions in railway freight on the one hand and withdraw the excise duty on the other.

Transport Difficulties

The industry is experiencing difficulties not only in the movement of coal but also in transporting its main raw material—molasses—and the finished product. There is considerable delay in the movement of molasses from sugar factories to distilleries due to the shortage of tank-wagons, especially on the metre-gauge sections. Inter-State movement is rendered difficult by various

The third five year plan, as already stated, visualises a capacity target of 72 million gallons and a production target of 60 million gallons of alcohol. It is estimated that from one ton of molasses, about 50 gallons of alcohol can be produced. On this basis, to make 60 million gallons of alcohol, 1.2 million tons of molasses will be required. It is interesting to note in this connection that in the 1950-61 season, the total production of molasses amounted to 1.22 million tons. The availability of molasses at the end of the third plan may be well above 1.5 million tons, depending on sugar production in the country. Even after allowing about 300,000 tons of molasses for other uses like cattle feed and manufacture of yeast, its supply is expected to be adequate for meeting the full requirement of the alcohol industry. Therefore, given the necessary facilities, it should be possible for the industry to achieve the production target. What is needed is a realistic Government policy to see that the impediments to the smooth working of distilleries are removed expeditiously.

ROLE OF PACKAGING INDUSTRY IN EXPORT PROMOTION

THE need to diversify Indian exports is no longer disputed. even though the effort that this requires is sometimes resisted on the plea that much larger immediate gains should be forthcoming by devoting the same attention to traditional exports. But if planning implies a sense of perspective, one should surely be looking ahead at the same time as one pursues immediate goals. At the present time, the bulk of India's export earnings come from tea, jute goods and cotton textiles, followed at some distance by hides and skins, and oilseeds. But as Sir Donald Macdougall and others have emphasised, these items are unlikely to have anything like the growth rate which alone would enable India to double her export earnings in the next ten years—the national target. In fact, the market for jute goods and cotton textiles may tend to shrink because of competition from substitutes and bulk handling in one case, and the emergence of local manufacture in the order. Hence the need to diversify exports.

It is now widely accepted that a concerted attempt must be made to develop the export of manufactures

bears such a sticker? The connotation is one of handicraft. What is the most prominent thing in their mind associated with India? To many the thought of monkeys seems first and then the brahmini bulls and sacred cows. An incorrect image has somehow been built combining such things with handicrafts. This is a traditional image of the people doing things by hand as they did 300 years ago. There is no part of the image that is modern; there is no concept of the growing industrial capacity, of the growing schools and colleges, of research laboratories and technical institutions."

As a first step in the country's marketing strategy, this image must be changed. A large part of the responsibility must necessarily devolve on India's official public relations activities abroad. The general impression is that the required degree of professional competence in itself, but it needs to be urged in that business and industry have a real stake in India's external projection, and it will be a mistake to think of it in purely political and diplomatic terms.

A favourable image of India is important but it will only provide a setting for the individual efforts of exporting units or industries. They, in their turn, will have to ensure for their products the best chance of acceptance by learning something of the marketing skill which competitors display. Proceeding from a study of consumer preferences in the matter of colour, flavour or texture, product design and quality, the exporter will have to make a genuine effort to adapt to market requirements right down to the final step of packaging his products correctly, attractively and durably. Speaking to Indian exporters at a recent New Delhi seminar, a marketing expert from the U.S.A. said: "I have seen many Indian goods beaten to death in the international markets, just as good in quality as foreign goods, because your packaging was atrocious."

Special Needs of Exports

The reference here is to the "correct" package size corresponding to the tastes and consumption habits of the consumer; attractive presentation using locally acceptable decoration, colours and styling; and signs, colours and styling which finally protect the contents against damage, intentional or otherwise. In many instances, the exporter will have to design special packaging for his overseas markets. Buying im-

To assist him, the package manufacturer had to develop a new size of biscuit container outside his domestic range, develop a completely new pilfer-proof seal (and provide sealing equipment) and devise a special pictorial design for a predominantly Chinese clientele.

Exporters of traditional products would be well advised to look to packaging to help counter the increasingly competitive situation in overseas markets. There can perhaps be no more ready means of establishing a quality image for Indian products in general than through a more imaginative approach to the presentation of our traditional items. Here, packaging can make the "Made in India" label a symbol of quality. Take tea and cashewnuts, two major dollar earners. Consider the impact of these two products when packaged directly for the consumer in containers designed to convey an image of prestige, of dependable quality, with a dash of the still exotic appeal of things Indian. The American housewife associates Ceylon, not India, with her tea—an association expertly conveyed through the Press, television and point-of-sale promotion of bright, stylised tea packages carrying distinctive

brand names. We in India appear to be missing some wonderful marketing opportunities, which could go a long way in establishing a ready, favourable bias not only towards traditional imports from India, but extending to every packaged item from this country. A housewife used to buying packaged Indian tea or cashewnuts can be expected to trust at once the quality of Indian biscuits or of Kerala prawns.

A Complex Operation

Theoretically at least no one will disagree that packaging as the final step in marketing is exceedingly important. But agreement rarely proceeds beyond this general statement because it has yet to be realised in some quarters that modern packaging is a technically complex capital-intensive operation. Indeed, packaging is frequently dismissed as a simple activity, apparently well suited for the small-scale and cottage sectors. In our protected market, it is not entirely surprising that the highly specialised functions of the package tend to go by default. A shoddy pack may still survive at home (though here too the situation is changing rapidly). Overseas, it is destined to gather dust on retail

if India is to achieve some degree of balance in her payments position. Her capacity to do so depends on her ability to compete successfully with the traditional suppliers of these products—the industrially advanced nations of the West—who have built up a reputation for quality as well as market connections over long years. In other words, she has to compete not only in price and quality, but also in marketing skills, for export goods will never sell on price alone. Periodic reviews of India's export performance have brought home the need for augmenting the competitive strength of exports through suitable fiscal incentives, a point once again emphasised in the admirable report of the Mudaliar Committee. The importance of improving and maintaining the quality of exports is also realised: pre-shipment inspection and certification are being discussed in that context. Unfortunately, the need for developing marketing finesse has not yet sufficiently impressed itself on the official mind, notwithstanding the studies made by the National Productivity Council teams, export delegations and the like.

Changing the Image

In the first place, Indian manufactures have to contend with the image of this country popularly held abroad. To quote from the report of the N.P.C. team on marketing and distribution:

"What is the image of the 'Made in India' label, if the product

Demand for Petroleum Rising: Increased Output Planned

THE demand for energy increases rapidly with the economic development of a country. Energy is needed for household purposes such as lighting, heating and cooling; for transport, whether it is by road, rail, sea or air; by industry, to drive machines which produce consumer goods; by agriculture; and by a host of other sectors of the economy. Statisticians have established a positive correlation between the consumption of energy and the level of national income. This means that, in general, a higher national income will mean a larger consumption of energy.

Apart from the fact that high standards of living lead to a rise in the consumption of energy, an interesting aspect is the evolution that has taken place in the various forms of energy used. Thus, for the world

By

M. M. MALHOTRA

Chief of Statistics Division, Petroleum Information Service

as a whole, between 1900 and 1960, the contribution of coal has declined from 96.3 percent to 48 percent; that of petroleum has increased from 3.7 percent to 31.3 percent; that of natural gas from 0 percent to 12.4 percent; and that of hydro-electricity from 0 percent to 8.5 percent. In 1960, the world consumption of energy was estimated at 4,500 million tonnes of coal equivalent with a world population of 2,900 million, giving a per capita consumption of 1.6 tonnes. The world demand for energy has been increasing at the rate of 5 percent while the demand for hydrocarbons rose by 7.8 percent in 1959 and 9 percent in 1960. It is interesting to note that the U.S.A., which has 6.2 percent of the world's population, consumed in 1959 38 percent of the world's energy; and western Europe with 10 percent of the world's population consumed 19 percent of the world's energy.

Energy Demand Pattern

Future estimates of the world demand for energy show that by 2,000 A.D., the annual demand for energy may be of the order of 30,000 million tonnes of coal equivalent with a world population of 4,000 million which means a per capita consumption of 7.5 tonnes. By 1985, the energy balance-sheet of the world may be as follows:

	(Percent)
Petroleum	40
Coal	28
Natural gas	16
Nuclear energy	14
Others (hydraulic and solar)	2
Total	100

At present, India's pattern of energy consumption shows heavy

dependence on non-commercial fuels such as dung. The National Council of Applied Economic Research estimated India's demand for energy in 1950 at 125 million tons of coal equivalent, of which non-commercial equivalent, of which non-commercial fuels accounted for 70 percent. In 1960, the energy demand was estimated at 179 million tons of coal equivalent. By 1975, the figure is expected to be of the order of 407 million tons of coal equivalent, of which non-commercial fuels may be about 22 percent. The Council estimates that the commercial forms of energy—that is, coal, hydro-electricity, petroleum and nuclear power—will increase at an average rate of 10 percent a year while the total demand for energy (commercial and non-commercial) will rise by 5 percent a year.

Nevertheless, projections made by various authorities in the field show that petroleum will increasingly have to meet the energy requirements of India. The Oil Advisory Committee estimated in March 1961 that the demand for petroleum products in 1965-66 would be 14 million tonnes. Others such as Mr. W. B. Metre, in his speech on the "review of work in oil exploration and planning for self-sufficiency in oil", delivered at the Indian Science Congress in the Roorkee in 1961, estimated that the minimum and maximum estimates of the petroleum demand in 1970 would be 16.4 million and 20 million tons; in 1975, 24.1 million and 38 million tons; and in 1980, 35.9 million and 72 million tons. The projections beyond 1970 may not be very reliable. Nevertheless, they do indicate the

petroleum demand that is likely to arise and provide a working basis on which to plan.

Industrial Policy Resolution

Since petroleum is bound to play an important part in India's economy,

the Government has taken an increasing interest in the development of the industry. In the Industrial Policy Resolution of 1956, mineral oil is listed in Schedule A. This means that the future development of the industry will be the exclusive

A group gathering station in Pilodra and three "separators" which separate the oil from the gas

responsibility of the State. An Oil and Natural Gas Directorate was established; in August 1956 this was converted into a Commission under the chairmanship of Mr. K. D. Malaviya, the Minister. In October 1959, the O.N.G.C. became a statutory independent Commission by an Act of Parliament. Its functions are to plan, promote, organise and implement programmes for the development of petroleum resources, to produce and sell petroleum and petroleum products, and to perform such other functions as the Central Government may assign to it. The Commission has its headquarters in Dehra Dun and at present has three directorates: geology, geophysics and engineering. In December 1956, the Commission employed roughly 300 people. By December 1960, the staff strength rose to 3,800 and at present it is about 6,200. This rapid growth of staff and activities has been warranted by the fact that India has roughly 400,000 square miles of sedimentary area which may be oil-bearing. Of this area, about 142,000 square miles are in the Ganga valley; 68,500 square miles in the Cambay-Cutch region; 50,000 square miles in Punjab, Himachal Pradesh, and Jammu and Kashmir; 46,500 square miles in Rajasthan; 30,000

square miles in Assam; and the balance spread over the Madras, Andhra and Travancore coasts and the Andaman and Nicobar Islands.

At this stage, some explanation is required as to why sedimentary regions are favourable for the accumulation of petroleum. Nowadays, the popular theory is that petroleum originated from the remains of living organisms in the favourable environments of shallow seas, such as the Persian Gulf and the Gulf of Mexico, where the water was rich in animal or vegetable life, usually microscopic marine organisms. On dying, these organisms sank to the bottom of the sea and were covered in a slow process by fine silt brought down by rivers. The strata in which this organic matter is entombed are called "source-beds". With the passing of years, the mud accumulation became thicker. Pressures and temperatures increased and, aided by bacterial action, the dead organic matter was transformed into oil. The droplets of oil and bubbles of gas were then squeezed out of the source-beds and were accumulated in sediments such as sands and porous limestones which are called "reservoir rocks". This process, according to geologists, took millions

and millions of years. The geologists have a time scale by which they measure the age of the earth as follows: the Pleistocene epoch lasted 1 million years; the Pliocene, Miocene, Eocene epochs 60 million years; the Cretaceous, Jurassic and Triassic periods about 50 million years each.

In India, oil is principally found in periods dating back from 30 million years to 70 million years during which time the characteristic forms of life were mammals. The map on this page shows the regions of India which were under water during this period and which were favourable places for the microscopic organisms.

Nature of Crude Oil

The conventional crude oils are qualitatively a brownish-green to a black liquid, with specific gravity ranging between 0.810 to 0.985 and a boiling range from 75° Fahrenheit to 700° Fahrenheit. Depending upon its nature, the crude will yield varying proportions of gasoline, kerosene, diesel oils and residues. The gravity of the crude will vary from field to field and even according to the producing horizon, but generally it is

possible to classify crudes according to the field. Thus the Digboi crude of Assam has about 0.842 specific gravity; the Nahorkatiya crude varies between 0.940 and 0.849; in Gujarat the Cambay crude varies between 0.84 and 0.87, while the Ankleshwar crude is much lighter, with a specific gravity between 0.798 and 0.803.

Oil and gas are not found by flashes of genius but are products of rigorous observation and tenacious, dogged and often dreary intensive work and study. The petroleum geologist must have knowledge of such sciences as structural geology, sedimentation, stratigraphy, palaeontology, mineralogy, petrology, geomorphology and the like, to locate petroleum. The finding of hydrocarbons is statistical in character and is based on the principle of continuous exposure to situations and circumstances under which hydrocarbons are known to occur. The essential ingredients of any successful exploration programme are money, time and technical skill. In the short time of five years, the O.N.G.C. has successfully marshalled and trained geologists, geophysicists, drillers and a host of other workers to carry out its programme. At the end of December

1961, there were 18 geological parties, 13 seismic parties, nine gravimetric parties and four electrologging parties working throughout India. These parties operate in the field during October to June, and then return to their base for collating and tabulating the data.

Geophysical Techniques

In geophysical exploration, various surface and sub-surface techniques are used. The surface techniques which are used include gravimetric measurements where the force of gravity is measured at various points, and an inference on the type of strata is made. The magnetometer measures sediments having different magnetic properties, while the seismograph measures vibrations artificially created which are reflected or refracted differently by the various strata below. The sub-surface techniques are various logging methods such as electrical logs, micrologs, laterologs, induction logs and micro-laterologs which measure the resistivity and the spontaneous potential of the formation. A typical seismic party of the O.N.G.C. consists of a party chief, an observer, a computer, a geophysics assistant, shooters, drillers, surveyors and drivers. Each party, on average, might have three truck-mounted rigs to drill holes to place the charge that produces the vibration; a few water tankers which are truck-mounted; and four or five light vehicles. The party carries its own seismograph with amplifiers and frequency filters. The seismograph is linked up with a number of geophones which are placed 100 feet apart, each having a good earth coupling. Sandstones are good reflectors and will have a different trace compared with other sediments.

Similarly, the gravity and magnetic parties have three to four vehicles each and go about on a pre-determined course to pick up their readings. All this information is then sent to the headquarters in Dehra Dun for detailed study. There specialised sections exist on palaeontology which studies ancient animals, the remains of which exist as fossils; palynology, the study of pollen and spores (reproductive parts) of plants that existed millions of years ago, and petrology, the study of the mineral and chemical composition of rocks. Thus in the palaeontology section, experts study the various foraminifera that are entombed in rocks which help determine whether the area was marine, fresh water, deep water, or mid-ocean. In the Ankleshwar region, the foraminifera are characterised by unicellular nummulites which range in size from a fraction of a millimetre to ten centimetres. In regions such as the Siwaliks, where there are not many marine and animal fossils, palynology helps to identify the sediments. The size of the pollen ranges between 50 mu and 150 mu, one mu being one thousandth of a millimetre.

Thus, one may sum up by saying that the geological and geophysical studies, which are undertaken, involve considerable expense. Expert knowledge is vital to a successful exploration programme which reduces the risks that are found in completely random drilling. Statistics based on U.S. experience show that the success ratio in 1953 was 1:10 in random drilling, 1:7 with

geological work, 1:6 with geophysical work, and 1:5 with combined geological and geophysical work. In the final analysis, only the drill can prove the existence of oil.

Oil Traps

Oil is generally found in traps which may either be structural through folding, faulting or doming of uniformly stratified rocks; or stratigraphic where differences in sedimentation or other unconformities may hold the oil; or a combination of both structural and stratigraphic factors may form the trap. The most usual trap is an anticline where beds are upfolded into an arch-like form. Drilling for oil is an art in itself. Some of the important parts of a drilling rig include a drill-pipe and drilling bits; supporting string and hoisting gear; ing equipment and hoisting gear; rotating gear, drilling fluid circulating system; prime movers and transmitting system; safety equipment. In January 1962, the O.N.G.C. had 20 deep rigs, four structural rigs and six

workover rigs, which is a remarkable increase over the one deep rig it had in 1957-58. Simultaneously, the meterage drilled has increased from 1,853 in 1957-58, which was done at Jwalamukhi, to 43,950 in 1960-61, of which 48 percent was drilled in Cambay, 32 percent in Ankleshwar, and the rest in Assam and the Jwalamukhi-Hoshiarpur region. In the nine months April 1961 to December 1961, the total meterage drilled was about 48,420, of which 48 percent was in Ankleshwar and 31 percent in Cambay and the rest in the Sibsagar region of Assam, the Hoshiarpur region in Punjab and Gandhinagar in Gujarat. As a result of this drilling, the O.N.G.C. has been very lucky in finding oil, which is now beginning to pay off by conserving India's valuable foreign exchange that would otherwise have been spent on importing crude.

Wells Drilled by O.N.G.C.

Up to 28th February, 1962, the O.N.G.C. has drilled 24 wells in

Cambay, Gujarat, of which ten were oil producers, ten gas, three were dry and one was under test. In Ankleshwar, 32 wells had been drilled, of which 22 had oil, one gas, three were dry and six under test. In Ahmedabad, three wells had been drilled, of which two struck oil and one was under test. In the Sibsagar region, three had been drilled, of which two found oil and one was dry. In Punjab, four wells had been drilled; one had gas, two were dry and one was under test. The first well that struck oil in Ankleshwar was spudded in February 1960 and was completed in April 1960 to a depth of about 1,970 metres. Thus in a matter of two years, the O.N.G.C. has drilled 32 wells, most of which are exploratory wells that demarcate the extent of the field, as opposed to development wells which are drilled to exploit the field. As pointed out previously, Ankleshwar oil is of good specific gravity.

AIR-INDIA

the total solids content of sea-water. A typical analysis of sea-water from the Bombay coast is:

	Percent dry basis
Sodium chloride	78.00
Magnesium chloride	9.10
Magnesium sulphate	7.50
Calcium sulphate	3.05
Potassium chloride	2.14
Calcium carbonate	0.10
Magnesium bromide	0.08
Rest	0.03
	100.00

Favourable Factors

It will be seen that the sodium chloride in sea-water is associated with 22 percent other soluble salts. However, in practice, it is possible to obtain high concentrations of sodium chloride in common salt because of fractional crystallisation. A well-designed marine salt works will have a large reservoir or brine pond where sea-water is taken in at high tides or by pumping and stored, a series of condensers where the sea-water evaporates gradually, and the crystallisers where further evaporation takes place and salt is crystallised. The liquid remaining is called

bitterns and is either discharged as waste or used for the recovery of by-products. Factors favourable to salt production are high temperature, low relative humidity, cloudless skies, low rainfall, high wind velocity and low soil permeability. The well-laid-out salt works in Saurashtra, which enjoy most of these advantages, can produce an average of 200 tonnes salt a hectare, and well over 250 tonnes a hectare in good years. This should be compared with the national average of 75 tonnes a hectare.

Salt-making in India

Salt manufacture in India dates back to ancient times. Old Sanskrit texts mention the organisation of the industry and the revenues collected by the rulers. The Hindu kings, the Moghuls, and the Marathas, all treated salt as a source of revenue, with manufacture and sale controlled by monopoly arrangements. Under the British, a duty was imposed on salt and its manufacture in India discouraged. The large Bengal market became entirely dependent on imports. In 1926, subsequent to agitation by Indian leaders for making this country self-sufficient in salt, the Government of India

granted permission for the commodity to be manufactured in Bengal, the west coast of India, and other places. The modern period of the Indian salt industry can be considered to have started in 1927, when an Indian business man started a salt works in Mithapur which was laid out on scientific lines.

An outstanding event in the history of the industry was Mahatma Gandhi's *satyagraha* in Dandi in 1930. He selected salt manufacture for his civil disobedience campaign since the duty laid an unfair burden on poor villagers. This *satyagraha* resulted in the Gandhi-Irwin Pact of 1931, whereby villagers were permitted to make salt on a small scale, provided they did not transport it outside the village for sale. From 1931 to 1938, the industry was protected by an import duty and showed considerable gains in production. During the second World War, it suffered heavily from unrestricted imports until 1943, when the Government of India restricted imports to the extent of India's deficit only.

With the advent of independence, in 1947, the salt duty was abolished. A cess on the commodity was charged

at 2 annas a Bengal maund for private salt works and 3½ annas a Bengal maund for Government-owned works. Privately-owned works under ten acres in extent were exempted from cess. With this encouragement, India achieved self-sufficiency in 1950. To prevent undesirable manipulation of market prices in Calcutta, the Government of India required 10 percent of the salt arriving by sea in Calcutta to be bonded in Government *godowns* (stores) from 1950 to 1955, and again from 1960 onwards. This stock would be released for sale by the Salt Commissioner in emergencies, but normally it is rotated as fresh consignments come in.

Rising Exports

From 1952 onwards, India has exported salt in increasing quantities, earning valuable foreign exchange. The main exporters have been the manufacturers in the Saurashtra-Kutch region who make high-grade salt, attractive to the buyers, mainly the Japanese chemical industry. The Saurashtra-Kutch producers have gone in for exports partly because their normal sales in the Bengal market have been reduced since 1957 by the growth of the salt industry in Tuticorin, which enjoys an advantage of Rs. 6 a tonne over the Saurashtra-Kutch industry in coastal freight to Calcutta. Cess and royalty are not payable on salt for export. In the period 1st January, 1960 to 30th June, 1961, 550,000 tonnes of salt were exported to Japan, earning foreign exchange amounting to £550,000.

Recently, Japan has agreed to purchase 500,000 tonnes of salt from India during the next two years at a price of 22s a metric tonne f.o.b. Such continued interest from that country's industry in Indian salt speaks well for the future. The Indian industry can continue earning valuable foreign exchange, provided it offers salt at a competitive price, and maintains the proper quality.

In 1955, individual holdings under ten acres were exempted from cess even though they may be part of a large co-operative society. In 1956, encouragement was given to medium-scale salt works (ten to 100 acres) by reducing their cess to 1 anna a Bengal maund. The encouragement given to the salt industry by the Government since independence has resulted in a very rapid rise in production, especially in the small-scale works which enjoy exemption from the cess.

PRODUCTION IN SMALL, MEDIUM AND LARGE SALT WORKS

Area	1948 ('00,000 tonnes)	1957
Over 100 acres	14.20	23.50
Between ten and 100 acres	4.66	5.28
Under ten acres	4.86	7.87
	23.72	36.65

Increasing Production

At present, the cess rate is Rs. 3.50 a tonne, for both Government and privately-owned salt works larger than ten acres. The following table gives the all-India salt production in recent years:

Year	Production '00,000 tonnes
1957	36.6
1958	42.0
1959	31.8
1960	34.4
1961	34.8

The 1961 production in individual States is as follows:

	Production Tonnes	Percent
Rajasthan	244,900	7.0
Himachal Pradesh	4,300	0.1
Maharashtra	382,600	11.0
Gujarat	1,731,900	49.8
Mysore	8,500	0.2
Madras	535,000	15.4
Andhra	198,200	5.7
Kerala	1,100	—
Orissa	44,100	1.3
West Bengal	5,400	0.2
Unlicensed (all India)	324,600	9.3
	3,480,600	100.0

Problems of Producers

In 1958, the Government of India appointed a committee, under the chairmanship of Mr. Manubhai Shah, to enquire into certain problems of the salt industry. The committee concluded that "as the salt industry has reached a stage of overproduction, further haphazard growth or expansion of salt works in the country should be immediately halted and increasing emphasis laid on a long-term policy for: (1) production of larger quantities at lower costs; (2) greater utilisation of salt for industrial purposes and diversification of production; (3) intensive efforts for export; (4) improvement in quality or standard of purity, particularly for specialised industries and export markets, and for edible purposes generally; (5) greater bias in favour of co-operatives as they are the proper agency for working numerous small areas throughout the country and developing their production and employment potentialities; (6) scientific and systematic development of small-scale production of salt which requires small capital investment, but provides large employment, and (7) increasing attention to wages and welfare of salt labour."

Some of the detailed recommendations of the committee based on the above policies have been implemented by the Government, while others are being studied. It is hoped that they will be implemented soon.

The third five year plan targets for the salt industry for 1965-66 are: capacity 6.6 million tonnes and production 5.5 million tonnes. The distribution of the production target, as furnished by the Salt Commissioner, is:

	(In million tonnes)
Industrial requirements	2.3
Edible purposes	2.8
Export	0.5
Total	5.6

The target for capacity is 20 percent more than that for production. A large margin between capacity and production is required because the output is subject to the vagaries of annual rainfall. The Indian Standards Institution has laid down the following quality standards for common salt: I.S. 253-1950 edible common salt; I.S. 593-1954 common salt for hide curing; I.S. 594-1954 common salt for fish curing; and I.S. 797-1955 common salt for chemical industries.

A large proportion of the common salt produced in the country does not meet the I.S. requirement for edible common salt. This results from the improper practice of solar evaporation. Half the production of 1965-66,

it is expected, will be used for the chemical industry and exports (for foreign chemical industries). This will demand even greater purity. Future increased sales by manufacturers will depend on their ability to make salt of higher purity.

Future trends will be towards increasing productivity as competition is bound to increase. There are two aspects to productivity in a salt works: (a) the productivity a unit area, which may be increased by having a well-laid-out salt works, keeping the correct ratio of condensation to crystalliser area, and by minimising seepage losses; and (b) labour productivity; currently, all the salt manufactured in India is harvested manually which requires a large amount of seasonal labour. In other countries, mechanical salt harvesters are used, with large savings in labour cost. Tata Chemicals is experimenting with a mechanical salt harvester

in Mithapur. If such a machine proves successful under Indian conditions, the entire lifting operations of large salt works will be revolutionised. Recently, the Government of India invited Mr. Febvre, a salt expert from La Compagnie des Salins du Midi, France, to visit several salt works all over India for advising the industry on mechanisation. Mr. Febvre has completed his visit and his report is awaited with interest.

By-products Recovery

Every tonne of salt produced yields about one tonne of bitterns, which typically contains the following quantities of chemicals:

	(In kilograms)
Sodium chloride	131.6
Magnesium chloride	86.0
Magnesium sulphate	49.9
Potassium chloride	19.5
Bromine	1.7

These products, if recovered economically, represent as much value in rupees as the salt harvested originally. At present, in India, only Tata Chemicals and the Pioneer Magnesia Works recover the by-products. The total quantities of the recovery are small; compared with the quantities of salt harvested. There is a considerable market in India for these by-products and their derivatives. In addition to their sales value, they strengthen the competitive position of the salt works in which they are manufactured because they cushion the effects of fluctuations in the price of salt. Economic manufacture of these by-products may be undertaken by the larger saltworks. Smaller units, adjacent to each other, may pool their bitterns for processing at a central co-operatively run plant. By-products recovery will probably become a significant factor in the near future.

Indian Ships— an investment in India's Prosperity

Shipping is of vital importance to the economic life of a nation. Overseas trade and commerce can only thrive and expand on an adequate merchant navy. National Shipping earns and saves foreign exchange for the country. This invisible export plays a great part in promoting national prosperity besides securing the life line through transport of essential supplies and requirements.

The splendid merchant fleet of INDIA STEAMSHIP CO., LTD., is regularly, speedily and efficiently carrying cargo to many important ports of the world. The Company's mighty freighters and efficient shore organisations are maintaining a very high standard of service and advancing our stature as one of the seafaring nations of the world.

FAST INCREASE IN CIGARETTE CONSUMPTION

THE cigarette manufacturing industry has experienced almost unbroken expansion since it was started in India, and can look forward to even brighter prospects ahead. This optimism is founded on the well-known and close relationship between industrial development, standards of living and the smoking of cigarettes, but the forecast must nevertheless be hedged with a number of qualifications. From the purchase and treatment of the leaf tobacco, and throughout the processes of manufacture and selling cigarettes, an enormous accumulation of skill, experience and research is required. The industry has a long and proud record. It is one of the most modern, dynamic and efficient enterprises in the country, conferring benefits on many sections of Indian society and contributing to economic advancement of the country. It supplies a large and continuously growing revenue for the Central Government—some Rs. 22 crores in Customs and excise duties alone in 1958-59, since when it has gone up— with a relatively small cost of collection. It creates a large direct and

smoking, is grown almost everywhere in northern India, and experiments are being conducted to see to what extent this plant also can be used in cigarettes. As a result of the pioneering efforts, tobacco is now fourth in importance in India as a cash crop and eighth in importance in exports. India is the third largest producing country in the world, after the U.S.A. and China, and the fifth largest exporter. In approximate figures, 250,000 acres are planted with Virginia tobaccos annually, producing 150 million lbs; a further 100,000 acres of Burley and native tobaccos suitable for cigarette manufacture are grown every year, yielding 70 million lbs. Some 100 million lbs are exported, yielding Rs. 15 crores in foreign exchange. All exports must be passed by a Government tobacco grading inspectorate using Agmark labels. The emphasis in the third five year plan is on improving the quality, and the industry is co-operating with the Indian Central Tobacco Committee in discouraging planting of tobacco on undesirable low-lying and saline soils.

Beginnings of Manufacture

Until 1906, all cigarettes and pipe tobaccos consumed in the country were imported, but in that year the first factory was built in Monghyr, Bihar, by the Imperial Tobacco Company of India Ltd. The Company now also has tobacco factories in Calcutta, Bombay, Bangalore and Saharanpur. The cigarette manufacturing industry is highly mechanised, but requires a high degree of skilled knowledge to obtain the exact and unvarying quality the consumer demands and is entitled to expect. All these factories have been completely modernised since the war. The Company also has its own printing factories in Monghyr and Madras, the latter being fully air-conditioned, equipped with modern machinery and considered to be one of the best-equipped printing factories in Asia. Other factories for cigarettes and pipe tobaccos are located in Calcutta, Bombay and Hyderabad, a total of 15 for the country.

The industry has encouraged the indigenous production of all its requirements of materials by purchasing local products even when imported products were available, and by providing technical skill and research facilities. The Imperial Tobacco Company's imports of all but decreasing quantities of unmanufactured tobacco and machinery are now negligible, although the growing trend towards filter-tipped cigarettes cannot be fully met due to the shortage of filters until these can be manufactured in India. Tribeni Tissues Private Ltd, formed to make high quality cigarette paper in a mill near Calcutta, now supplies practically all the requirements of cigarette manufacturers in India, and also makes other tissue papers. Its exports in 1961 were worth Rs. 53 lakhs. Assistance was recently given to the formation of Molins of India

Of the two principal varieties of tobacco plant, *Nicotiana Tabacum*, the only kind at present used in the manufacture of cigarettes, is grown mainly in Andhra, with some in Gujarat, Mysore and U.P. *Nicotiana Rustica*, used for other forms of

Ltd, a Company with a factory near Calcutta to produce spare parts and, later, complete machines for the cigarette industry. Encouragement has been given to the indigenous production of paper and board for containers, tissue-backed foil for wrapping, heat-sealing trayophane and fibre-board containers; encouragement is now being given to the production of filter-tips. By such means, it is proposed to save foreign exchange and create more employment.

The cigarette industry, being highly mechanised, sets a high standard in conditions of work. The Imperial Tobacco Company of India has over

economic advancement. The overall average consumption of cigarettes in India at present is about eight a person a month, compared with 13 in Nepal, 17 in Ceylon, 69 in Malaya, 128 in Singapore, 176 in the U.K., and 217 in the U.S.A. It is worth noting that the anticipated expansion of demand for cigarettes need not be at the expense of biris or other forms of tobacco consumption. The sale of biris is also expanding and can continue to do so. In this connection, information is produced below concerning the consumption of tobaccos in India cleared for domestic use, including those used for cigarettes and pipe tobaccos, as supplied to the Indian Central Tobacco Committee:

	1957-58 Million lbs	1958-59 Million lbs	1959-60 Million lbs	1960-61 Million lbs
Total for cigarettes and pipe tobacco	72.2	76.9	84.1	93.0
Biri tobacco	147.0	151.6	145.7	160.2
Snuff tobacco	8.8	10.4	11.6	12.4
Cigar and cheroot tobacco	43.4	47.6	45.3	44.5
Hookah tobacco	98.0	95.0	95.9	95.0
Chewing tobacco	116.0	130.8	129.2	134.5
Total	485.0	512.3	511.8	539.6

11,000 employees and the Indian Leaf Tobacco Development Company over 30,000 during the buying season. Besides those directly employed, however, the industry provides indirect occupation to hundreds of thousands of farmers, distributors, wholesalers, retailers and advertisers, besides suppliers, carriers and subsidiary industries.

Sales Double in Eight Years

The cigarette industry, an important part of Indian industry as a whole, necessarily co-ordinates its plans with the country's five year plans which contemplate an increased flow of goods and services. Apart from an apparently natural growth in cigarette consumption in recent years of approximately 10 percent annually, as the economy expands and living standards improve still further, it can be expected that there will be an even greater expansion of demand for all tobacco products. It is the function of the tobacco industry to meet this increased demand, both to meet the requirements of the customer and to avoid the risk of short supplies and unstable prices. As the table below shows, total sales have more than doubled in the last eight years.

ESTIMATED TOTAL MONTHLY SALES IN INDIA AND PERCENTAGE INCREASE EACH YEAR									
Year	1953-54	1954-55	1955-56	1956-57	1957-58	1958-59	1959-60	1960-61	1961-62
Sales in millions	1,570	1,720	1,850	2,070	2,210	2,350	2,620	2,940	3,210
Percentage increase		10	8	12	7	6	12	12	9

Today, approximately 3,200 million cigarettes are manufactured and smoked in India each month. Yet the average rate of consumption is still very low, compared with the rate in industrially advanced countries and even compared with other countries at a comparable stage of

Cigarette manufacturers require large and efficient selling organisations to meet the requirements of distributing a perishable commodity in a wide range of brands and prices so as to be available to consumers everywhere at all times in the freshest possible condition. It is estimated that throughout the country, there are over 100 different brands of cigarettes sold at prices ranging from 8nP to more than Re. 1 for ten cigarettes. The transport of the products necessitates a complex system of communications by rail, road, air, coastal steamers, inland waterways, vans, bullock carts and bicycles.

The basis of a cigarette manufacturer's business is a very small margin of profit on very large sales, at the same time leaving a fair margin of return to distributors, wholesalers and retailers. This requires a high standard of business ethics in the trade. All manufacturers must be flexible in operation to anticipate the changing preferences of consumers, and most manufacturers maintain a reputation of honesty to the consumer by maintaining high and consistent standards of quality, achieved by careful selection of materials, correct pro-

cesses of manufacture and efficient after-sales service in order to ensure freshness of stocks.

Heavy Tax Burden

More than most industries, the even growth of the cigarette industry depends on a reasonable climate

of taxation. Since tobacco excise was introduced in 1943, it has been increased rapidly until it is very high compared with other countries at a similar level of economic growth, and now constitutes the largest single element in the cost of production. Direct Customs and excise duties represent over 60nP in the rupee on the more expensive cigarettes and nearly 40nP in the rupee on the cheapest brands. Although the cigarette industry is itself highly competitive, the principal competition comes from other forms of smoking. Less than 20 percent of the tobacco grown in India is consumed in the form of cigarettes and pipe tobaccos, the remainder being consumed in the form of biris, cigars and cheroots, hookah and chewing tobacco, and snuff. The most important taxation factor to the cigarette industry, therefore, is to have long periods without any changes in excise duties. Frequent changes affect overall consumer demand for cigarettes and may even reduce the total revenue yield to the Government. If, however, the Government does consider adjustment necessary, it must be done with care and discretion, both to ensure maximum revenue and in the interests of farmers, manufacturers, retailers and the consuming public. The manufacturers are always willing to put their expert and comprehensive knowledge and experience at the Government's service in the overall interests of the country and the public as a whole.

In 1957, the Central Government requested the States to withdraw sales taxes on tobacco products and in their place imposed additional Central excise duties. Although this did not decrease the taxation burden, it was a move which had been advocated by manufacturers for many years and was welcomed as a contribution to the stabilisation of prices throughout the country. Unfortunately, the entire benefit of this move is now threatened by State sales taxes on certain materials, and in some places is nullified by the levying of octrois and terminal taxes by municipalities on raw materials or on finished products, which disturb the balance of a carefully constructed excise and distort the pattern of trade. Both the raw materials and the finished products, on which the Central Government levies consolidated excise duties, should be outside the taxable scope both of States and municipalities. It is estimated that 25 percent of all cigarettes sold in India are purchased in the form of a single cigarette, and retail prices must, therefore, be intimately related to the coinage. If the Centre does not check both the move to levy State sales taxes on certain materials and the tendency of municipalities to introduce or increase octrois, the barriers to the free movement of goods and the resultant distortion of retail prices may deny the consumer the brand of his choice and may result in an overall reduction in Central revenue.

Competition and Costs

A growth in consumption of 10 percent annually requires a doubling of output in seven years. Ideally, this should be met by the building of a new factory nearly every year. However, in view of the country's foreign exchange difficulties, the cigarette industry is on the Ministry

of Commerce and Industry's list of industries which are banned from substantial expansion. For the same reason, the industry has the greatest difficulty in obtaining the essential replacement imports of machinery and spare parts. Consequently, present production capacities are being extended to the limit and the industry has so far been able to meet the increased demand, but this state of affairs will ultimately shorten the life of present machinery, and obviously cannot be continued indefinitely.

It is imperative that if exports of unmanufactured tobacco are to be increased, or even maintained, the increased, or even maintained, must be quality of Indian tobacco must be improved in order to maintain its competitive position in world markets. More and cheaper fertilisers are required and the Government of Andhra Pradesh must support the efforts of the Indian Central Tobacco Committee to prevent growing of tobacco on unsuitable soils which yield tobaccos that deteriorate rapidly in storage.

The rising cost of labour and of raw materials is a problem facing

many industries today, but there are factors which make the problem especially acute for the cigarette industry. The further increase in excise duty in the April Budget, an estimated increase in raw tobacco prices of 3 percent this year, the recent increase in the rate of employers' contributions under the Employees State Insurance Act, the utterly inequitable proposal to increase the rate of contribution for the cigarette industry under the Employees' Provident Funds Act based on an arbitrary assessment of the industry's capacity to pay, the increased cost of road transport on account of the shortage of railway wagons and the difficulties of inter-State movement of lorries, the conversion of factories to oil-firing necessitated by the shortage of coal—all these are examples of the constant tendency towards rising costs. With the competition of other forms of tobacco consumption, it is not always possible to increase prices to meet rising costs. But, working as it does on very low profit margins, this can cause serious difficulties to the industry which finds itself

trapped between the millstones of competition and costs.

Scope for Exports

Exporting manufactured tobaccos is not so straightforward, and is fraught with the difficulties of meeting accelerated sales drives by other countries, rising import levies, and increasing degrees of self-sufficiency now being attained in most neighbouring countries. Thus, most leading exporters, including the U.K. and the U.S.A., have been affected by shrinkages in volume. Judging from the problems that the industry and other exporters of cigarettes and manufactured tobaccos in this country have to face, it appears that there is more scope in relying on the export of traditional forms of unmanufactured tobaccos than finished goods. Nevertheless, with the principal qualifications of consistent taxation, availability of machinery, and steady costs of labour and raw materials, the industry can anticipate an assured and growing market and can look forward to the future with confidence.

Output of Airconditioners Rises: Imports of Components Restricted

TO a layman, airconditioning means a refrigerator or a room airconditioner or a water cooler. In this article, it is proposed to trace the progress of the airconditioning industry in India and the part it plays not only in making available a pleasant and cool atmosphere in offices and residential buildings, but also its contribution to the growth of various industries, especially the food products industry. Food products, meat, fish, etcetera, can be stored in the cold storage for long periods without taste or freshness being lost in the process. Potatoes are a major staple food consumed all over the globe. They pose a serious problem for storage. The ideal conditions for the storage of various types of potatoes can vary depending on various factors like the seed, the soil and the quality of the potatoes grown. Even the ideal cold storage conditions have to be precisely controlled so that the percentage

About ten years ago industrialists in India considered the manufacture of airconditioners and other refrigeration products as an impossible and impracticable project. In recent years, this idea has begun to change due mainly to the Government's determined efforts to promote engineering industries. India had to depend on imports of airconditioning units, and these were obtained at prohibitive prices. So people could not afford to purchase these articles. The imports were a drain on the exchequer. Later, under the five year plans, facilities were offered to industrialists to put up manufacturing plants in India with foreign collaboration for manufacturing air-conditioning products.

Rapid Growth

The growth of the airconditioning and refrigeration industry in India in recent years can be gauged from the following. About 40 firms have been licensed under the Industries (Development and Regulation) Act to manufacture airconditioners, water coolers, commercial refrigeration equipment like bottle coolers, ice-cream cabinets, food freezers, etcetera, refrigeration plants and components such as compressors, condensing units, cooling towers, chillers, condensers and airconditioning machinery. Besides, many units come under small-scale industry, so they are registered with the Directors of Industries of the different State Governments in India. These small-scale industries being still in their infancy, their output is not large enough to warrant the compilation of statistics. The progress of manufacture of important components in recent years has been commendable and the industry has cut its imports which were a drain on the foreign exchange resources.

The excise revenue serves as a good example of the scope for the industry. Based on the eight-month

A view of the airconditioner assembly line

period (April 1961 to November 1961), a revenue of Rs. 57.16 lakhs has been shown under this head. Airconditioning and refrigeration machinery of all sorts account for Rs. 28.03 lakhs while refrigerators and parts for Rs. 29.13 lakhs. This is, of course, against the estimated revenue under these items in the Budget amounting to Rs. 48 lakhs.

Export Pool Proposed

The Ministry of Commerce and Industry is trying to promote exports. An export pool is proposed to be formed. The contributions made by the members of the Airconditioning and Refrigeration Industries' Export Pool to the proposed pool will be admissible as deductions in the assessment of members. On the other hand, the assistance received by members from the pool against the loss that may be incurred by them in exporting the products will be treated as revenue receipts and will be taxable in the hands of members. This is a very bold step in the history of the industry in India. But it must be borne in mind that manufacturers, with their teething troubles, may not be in a position to make all the products of exportable quality. Also, they should be in a position to offer prompt after-sales service. Meanwhile, the Government has enforced a cut in imports, but might be willing to restore the cut on the basis of export performance.

There is a great need for well-trained mechanics, operators, machine men, maintenance and service men, production engineers, design engineers and other highly-trained personnel. The industry is unable to obtain highly skilled personnel. The foreign exchange shortage prevents it from sending its employees to collaborators' factories abroad. This aspect should receive serious consideration from both the Government and industrialists.

Correct statistics are not readily available from the Government. Even in the matter of granting manu-

facturing licences, the authorities do not wish to supply the required information. Unless the Development Wing promptly guides the industry with statistical data, the progress will naturally be retarded. On the other hand, the Government expects every firm to disclose its production figures, although competitors are reluctant to give statistical information as they consider it a trade secret. But if the industry is to progress, this problem has to be solved. The available statistics confirm that the industry is making rapid progress. Production, compared with 1956-57, has increased by 284 percent in 1960-61. This shows that there is a great demand for refrigeration and airconditioning products in the home market.

The industry is well organised and progressive. Its optimism arises from the fact that a country like India with its warm climate and enormous distances affords wide scope for expansion. One can pleasantly recall Mr. Manubhai Shah's address to the Refrigeration Council last year in which he asked the industry to go into every village and put a refrigerator there.

Some Difficulties

Like most other industries in India, airconditioning has its share of difficulties. Some of them are as follows: (a) the shortage of foreign exchange resulting in import cuts of important raw materials, (b) dependence on foreign countries for vital components, (c) the lack of an organised and dependable ancillary industry, and (d) the high cost of production. The major grievance of manufacturers is the regulation relating to the levy of excise duties on refrigeration and airconditioning products with the result that a much wider range of processes come under the levy than is normally justified.

There are certain basic raw materials on which foreign countries have carried out prolonged research. Reference should be made to serrated aluminium strips and copper tubing,

which had hitherto been imported from abroad, for the manufacture of condensers, evaporators, chillers, steam coils, heat expansion coils, direct expansion coils, etcetera. Due to the ban on imports of aluminium strips, the industry is finding it difficult to bring down the cost of production with the use of strips supplied by indigenous manufacturers. The suppliers cannot be blamed since it will take years of research to obtain the standard quality, more or less similar to that supplied from abroad. The industries which are using substitutes from indigenous sources, are faced with the problems resulting from the high percentage of material usage and spoilage—all these adding to the cost of production.

Teething Troubles

The industry should be allowed to stabilise itself on a firm footing before being hamstrung by import restrictions and other Governmental levies. It should be given full facilities for a period of five years to solve

its teething troubles. The Government can then come along with its demand for the due share to the exchequer. Unless the present licensing policy is tempered with an appreciation of the difficulties of the industry, many years will elapse before India can claim to have achieved self-sufficiency in the air-conditioning and refrigeration industries. Before levying various taxes, both Central and State, it would be preferable to consider the type of industry, the price of its product, the demand in the market and the production capacity. As for import restrictions on standardised raw materials, the authorities would do well to examine the resources of indigenous manufacturers and assist them in all ways to achieve the standard of quality more or less similar to that supplied from abroad. The industry's opinion on the quality of indigenous products should be considered sympathetically before deciding on import restrictions for important raw materials.

PRODUCTION IN QUANTITIES

Industry	No. of existing units	Annual installed capacity	1956-57	1957-58	1958-59	1959-60	1960-61	1961 Apr.-Dec.

5 EXCLUSIVE ADVANTAGES

with a **2 TON**
FEDDERS-LLOYD
AIR CONDITIONER

Engineered and designed by experts, the 2-ton FEDDERS LLOYD incorporates the latest research conducted on air-conditioning, and is the only air-conditioner of this capacity marketed in India. Its superb performance and inexpensive running make its quality of the highest order. Ideal for offices, banks and all types of establishments, the 2-ton FEDDERS LLOYD is world's largest-selling air-conditioner. And remember—backed by one-year free after-sale-service, it maximises your comfort with its FIVE distinctive advantages:

- Saving of over Rs. 1000.00 on cost:**
One 2-ton FEDDERS LLOYD costs you less by over Rs. 1000 than two 1-ton units—and still performs a better job.
- Less space for installation:**
Due to compact shape and bigger capacity, it needs no extra space for installation and circulates maximum cool air with minimum outlets.
- No False-ceiling required:**
With its 'eye-level' Control, it avoids wastage of cooling air on the unusable overhead room atmosphere—thus eliminating the necessity of false-ceiling.
- 75% saving on electric bills:**
In comparison with other competitive makes, its electric consumption is lower by about 75%...and it gives you greater inflow of cool air due to its large capacity.
- No 3-phase 440V wiring required:**
You can operate your air conditioner on the home supply—no necessity of special 3-phase 440V wiring.

Manufacturing Cameras and Photographic Materials

WITH rapid industrial progress in India during the past ten years, scientific photography is required to render technical assistance to the engineer, the doctor and the technologist. In all these spheres, photography plays an important rôle, and highly specialised photographic equipment is necessary at every stage. Again, photography has proved useful as a visual aid for the spread of education. Besides, it is a very engaging pastime. As India continues to develop, it will need more and more photographic goods and equipment. Due to the foreign exchange shortage, the country does not have the resources for importing photographic materials. It must, therefore, start manufacturing them without delay.

A start has recently been made by New India Industries Ltd. The firm has started manufacturing Agfa cameras at its factory in Baroda. For this factory, Agfa of West Germany invited Indian technicians to study the precision manufacturing

the most up-to-date findings of science and technique. The development of the photographic industry is characterised by a constant endeavour to attain the highest standards of quality and precision. This has not been easy. Although modern industry has at its disposal manufacturing, measuring, and auxiliary instruments, and although new techniques are being evolved which facilitate work considerably, it has not become easier for the present generation to attain the traditional goal, namely, to market products which are of the highest quality in every aspect. On the contrary, "due to keener competition and the many more demands which the international market makes on photographic instruments and materials, manufacturers have now to make greater efforts to produce goods of very high quality."

Importance of Research

Improvements in method can only be achieved on the basis of intensive and planned research. Progress requires exact, scientifically-based experiments by academically-trained experts. One cannot think of a modern factory manufacturing photographic products without its own well-equipped research laboratory. The work in the laboratories and design centres is now largely the result of teamwork.

At the beginning of each production stands the idea, the chemical formula, the optical calculation, or the technical construction drawing. The production schemes evolved by scientists are often the result of months or years of research work, often costing millions. But this expenditure is indispensable as the quality of the final product is in the first place a proof of the value of the idea on which the particular product was based. From the original idea to the manufacturing process, there is a long way to be covered. First of all, the idea has to prove its practicability in the shape of a prototype. Hundreds, and often thousands, of experimental formulae have to be worked out in chemical laboratories, experimental batches made, chemical and sensitometric tests carried out, changes and modifications introduced, until the perfected formula can eventually be handed over to the production unit.

Manufacturing Process

A team of highly-qualified technicians trained in producing precision instruments has to manufacture samples in the testing workshop, which will then be carefully checked and measured by specialists and subjected to the severest tests. In many cases, the prototype will have to be adapted in order to improve the performance of some of the parts or the whole product, or in order to meet the exigencies of the manufacturing process. The testing of a prototype, during which absolute measurements have to be ascertained, always

A camera factory: a woman worker at the machine

Another step in the manufacturing process

A section of the factory

Finishing touches are being given to cameras made in India

takes weeks or months, according to the complexity of the examination and the scale of tests. Finally, after the sample has been approved by a panel of experts—including commercial personnel—extensive preparations for production begin. The entire manufacturing process has to be planned by specialists, down to

the smallest detail, in order to ensure that production will run smoothly. Even after preparations are finalised, actual production cannot commence, as experience shows that each large manufacturing series has its own "teething troubles". They are often time-consuming and expensive, not least because this small series—called

the "zero series"—is not permitted to be marketed, but is subjected to practical tests and rigorous controls. Only after this last hurdle has been cleared, and all improvements incorporated, can large-scale manufacture commence.

The same pattern will be repeated in India at the new factory which is nearing completion in Greater Bombay. The joint venture of Agfa and New India Industries will give India its first precision factory for manufacturing photographic papers. When the new paper manufacturing plant goes into production, its output will go a long way towards meeting India's requirements of basic photographic materials. Step by step, India will manufacture an increasing number of products, and in a few years may be among the largest producers of photo goods in Asia.

Bright Prospects

While the prospects for the photographic industry in India are bright, manufacturers here have to face great difficulties which are not normally experienced in other countries. For example, truly dependable component camera lenses in India are not being produced, so

these have to be imported for quite some time to come. Even the highly tempered springs required for the manufacture of dead accurate camera shutters are not available in this country. This is a grave limiting factor which is hampering the growth of the photographic industry here. If sufficient foreign exchange is not available for importing essential parts, a large percentage of the installed capacity of the factories in India will lie idle.

Even for the manufacture of photographic sensitised materials, some raw material has yet to be imported. For example, there are only two or three countries in the world which manufacture the base paper required for the production of photographic bromide papers. The humid tropical climate of India is ill-suited for manufacturing photographic materials, with the result that the entire factory has to be centrally air-conditioned. These limiting factors naturally raise the cost of production, which makes it difficult for Indian manufacturers to compete in international markets. The Government should consider these factors and give necessary facilities to the industry to enable it to expand rapidly.

In different fields of industry—Paper & Board, Cement, Chemicals, Fertilisers, Plywood, Asbestos-cement, Vulcanised Fibre, Sugar, Vanaspati, Jute Fibre, Paper-making Machinery, Coal, Cycles, Railways, News-papers & Publications—Sahu Jains continue their pioneering efforts towards industrial development.

Poor Returns Hamper Electric Power Expansion

THE electric power industry in India is keenly aware of the harm which power shortages can cause to the country's economy. But the industry itself can do little to prevent the occurrence of the shortages. The present organisational set-up of the industry rests on (1) the Damodar Valley Corporation, (2) the quasi-autonomous State Electricity Boards and (3) the licensees. The D.V.C., constituted under a special Act, is beset with problems of inter-State rivalry and has, as a result, fallen very much short of the ideal of being a full-fledged river valley authority conceived on the lines of the U.S. Tennessee Valley Authority. The State Electricity

of the State Governments. They are under the statutory obligation not to conduct their operations at a loss. But almost all of them have incurred losses as far as commercial accounting goes.

This situation has been sought to be explained away by the stock argument that the Boards' obligations towards rural electrification make their operations uneconomic. Yet an experienced observer would feel that deeper causes are responsible for the Boards' malaise. Is it a matter of personnel manning the Boards? Or is it due to political pressures that the Boards have to go in for grossly uneconomic investment? If social obligations are to be undertaken by the Boards, the bill should be met as part of social costs. Or is it due to the fact that the Boards are unwilling to follow economic maxims? For instance, in formulating the annual budgets, it is not uncommon for some Boards to give greater consideration to the creation of employment opportunities than to achieve efficiency and economy. Is then the experiment of State Electricity Boards, as visualised in the Electricity (Supply) Act, a failure? Most of them have been in operation for periods of less than five years, and it may, therefore, be too

By

R. P. AIYER

Boards, constituted under the Electricity (Supply) Act, are supposed to adopt the best features of both Government and commercial enterprise. But this ideal has remained unrealised. Instead, the Boards have tended to remain under the control

SIEMENS
INDIA

POWER FOR PROGRESS

The Siemens Organisation makes significant contributions to every aspect of the electrical industry.

Siemens offer a wide range of equipment to generate, convert and convey electric power—to scale power down into the microwatt range and to step it up to the megawatt range.

All these Siemens products are backed by over a century's experience in all spheres of electrical engineering.

Equipment manufactured in India in collaboration with independent Indian Enterprises, under Licence Siemens Germany, includes Motors, Transformers, PVC Wires and Cables, Paper Insulated Cables, Switchgear, Meters, etc.

early to arrive at such a radical conclusion. Even so, the authorities should dispassionately consider the prevailing situation in order to arrive at a solution.

Vanishing Sector

At one stage, the licensees' sector was regarded as a "vanishing sector." The provisions dealing with licensees' finances were evidently framed on this basis in the Electricity (Supply) Act. When the "statement of objects and reasons" of the Electricity (Supply) Bill said that the financial provisions were intended to enable a licensee "to raise funds in the market necessary for the proper continuity of his public duties", it was thought that the Act would constitute a charter, under the shelter of which the power companies could—by attracting money from the investor—perform more than their share of public duties. But experience has shown that the financial control has proved to be more draconian than was originally visualised. This trend became evident when in 1956 the Electricity (Supply) Act was further amended. The net effect has been a greater squeeze on the licensees' undertakings. Another hurdle which has bedevilled the industry is the time lag in Parliamentary enactments to legalise changes in the law conceded to be necessary by the executive arm of the Government. There can be no difference of opinion that a public utility enterprise should be subject to some form of regulatory control. But the crucial question is whether it is possible to provide a return to the investor which can be regarded as reasonable and continue to be so even in changing circumstances.

When the return to the investor was linked to Bank rate (with a margin of 2 percent), it was thought that the formula offered a measure of flexibility so as to ensure that an investor would continue to get a return which might be considered reasonable in spite of a change in money market conditions. This rule has worked to the disadvantage of the industry since the Government of India has held down Bank rate in order not to depress the value of securities and raise the cost of borrowing. A three-tier interest rate structure has been introduced, by which the Reserve Bank charges progressively higher rates for bigger slabs of credit advanced to scheduled

banks. The direct result of this has been an increase in the cost of money. The electric supply industry has not the means to meet the higher cost of finance except out of the already low reasonable return.

The 1959 change in the tax pattern whereby the grossing up of dividends

was abolished, has meant a reduction in the net return which the investor used to receive. Whereas in the case of other industries (which, by and large, enjoy a protected market), the dividends could be, and have been, increased to make good some loss because of the deduction of tax from dividends at the prescribed rate, the electricity supply industry has been left with no means to act in a similar manner. On this account alone, the "standard rate" would need to be increased by 1 percent. If one were to add to this the need to increase the return by 1 percent because of the de facto increase in Bank rate, the "standard rate" will have to be raised by 2 percent. Even so, one would only attain parity with conditions obtaining prior to 1959.

Determining Fair Return

It would be appropriate at this stage to highlight some of the considerations involved in determining a fair rate of return in a public utility. These are in general the cost of capital inflation, the size of the company, the capital structure, future capital requirements, the incentive needed for attracting capital, the general credit position of the company, regulatory lag and some compensation for attrition and erosion of earnings. Are doctrinaire considerations con-

cerning power development in the public sector *versus* the private sector retarding progress? The Prime Minister's statement that it is better for the public sector to embark on new projects than take over old ones is often overlooked. The lack of incentives notwithstanding, what is regarded as the private sector of the electric supply industry has large-scale potentialities for adding to India's power capacity. In spite of the "squeeze" it faces, it is being sustained by the hope that the authorities cannot continue to ignore the legitimate claims of the industry.

Development Prospects

Having considered some of the problems faced by the industry, whether it is operated by State Electricity Boards or licensees, one is led to consider the prospects for power development. Some of the questions which occur in this connection are: (a) Will electricity costs increase in the future? (b) What are the prospects of an increase in efficiency in converting raw energy into electric energy? (c) When will nuclear power be comparable in cost to conventional power?

The cost of electrical energy in the future will largely depend on the

Transformers, Motors, Control Gear, Pumping Sets,
Isolating Switches, Switch Fuse Units, Busbar
Connectors, Industrial Lighting Fittings and Traction
Equipment, all conforming to I. S. and B. S. Specifications.

pricing policies which undertakings will be obliged to adopt, considering the various factors which determine the cost of supply. Another major factor is the cost of equipment, and since more and more indigenous components are now being used, the future equipment costs should tend to rise. While the State Electricity Boards are new to the business, the executives who operate the licensees' sector of the industry have a fund of experience, and know how to run the industry in a successful manner. Technological advances resulting in higher thermal efficiency have potentialities for holding costs, but there is a limit to gains attainable by effecting improvements to the steam cycle, as further progress hinges on metallurgical development. Dealing with this aspect, Sir Christopher Hinton, chairman of the U.K. Central Electricity Generating Board, indicated recently that "the limit is of the top temperature one uses in the heat cycle. The limitation of the temperature that we can use arises largely from metallurgical developments; as these developments enable us to use higher temperatures in the heat cycle, we can hope for higher efficiencies". However, there are

limits in this direction, since one has to contend with rising coal costs and other operational expenses.

Nuclear Power

As far as the development of nuclear power is concerned, India is committed to the installation of a 300-megawatt station in Tarapore, Maharashtra. There is a proposal to add further capacity to the Tarapore station. A committee is also engaged in selecting sites for installing further nuclear power plants. Advocates of nuclear power point to the difficulties in moving coal as an important argument for developing nuclear power in areas far away from collieries. While there is some substance in this, one should unhesitatingly agree that atomic energy has yet to prove competitive in relation to conventional fuels, notwithstanding the enormous technical development which has taken place in this field. There are no two opinions that nuclear power in the context of the present technological development is expensive. Meanwhile, there is speculation that, within another ten years, nuclear power will be comparable to conventional power, and this time the prophets may prove right. By then the western region of India—to mention one area—will require power on a large scale, which must perforce be coal or oil-based.

Price of Oil

Oil-based power stations in their turn will have to contend with an uneconomic price, and furnace oil as a fuel could only be a practical proposition if its price is fixed at a level which is not above the present cost of coal. This will call for an imaginative approach on the part of the Central Government. The latter should withdraw the excise duty on furnace oil used by thermal power stations. The revenue lost by the withdrawal of the duty would be more than made good by tax potential in other industries which would be developed through the additional power. Not a day passes without the Press highlighting the power shortage in one part of the country or another. No meeting of industrial or trade organisations concludes without emphasis on the need for raising the third plan power target. It has been urged that industries be allowed to install their own generating plants to meet their power needs. This may be a short-term remedy, but national interests demand that it would be more appropriate to permit the public utilities to augment their power capacity, as they could go in for units which are economically justifiable.

The electric supply industry in India has still many problems to solve. The idea that power development is the primary responsibility of the State Electricity Boards needs reappraisal. The straitjacket within which the licensees' undertakings have been encompassed would require to be loosened without any further loss of time. The amendments to the Electricity (Supply) Act, which are now being considered by the Government of India, afford opportunity for rethinking on these matters. It can only be hoped that out of the legislative efforts now under way will emerge an instrument which will tend to accelerate power development during the next decade.

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.
