The damage which these conflicts have done has already been serious, and it is important to remember that they are not confined to eastern India alone. The delay, estimated to be of at least a year, in Oil India's exploration programme has occurred at a time when there is a desperate need to search for indigenous sources of crude oil in order to save foreign exchange. The dispute over coal mining led West Bengal to take legal action aimed at preventing the National Coal Development Corporation from opening a new mine in the Raniganj field. Dr. Roy's recent speech will undermine confidence further, especially in the private sector of the coal industry, at a time when confidence is essential for the success of plans for relieving the acute shortage of the commodity. The damage done by the delay in rationalising tea taxes cannot be precisely calculated, but the Governments involved know that it is considerable. It will be even greater if the Assam Government, merely to spite West Bengal, proceeds with its idea of starting a new tea auction centre in Pandu, and thus disrupts the established pattern of trade in a major export commodity. Disputes such as these might have mattered less if they were infrequent and isolated outbursts affecting relatively unimportant sectors of the economy. But that is not the case. Recent trends indicate that defiance among the States has been growing; voluble representatives are still readily sent to disseminate platitudes at national integration conferences, but the same representatives do not hesitate, on returning home, to continue to press their parochial interests.

It is arguable that the situation has grown worse primarily because the general elections are approaching. Provincialist tendencies in India being what they are, the Parties in power in the States feel that to exploit those tendencies is an essential part of the effort to ensure success at the hustings. It is also arguable that the jealousies have been accentuated in recent months by the deliberations of the Finance Commission. The

be viewed in this light. It is unlikely ever to be realised, but it would require much less foreign competition than the President has threatened for U.S. industry to be shaken out of its present relative lethargy. No doubt it will recover its former energy, but the challenge of the Common Market will have played a smaller rôle than the stimulating action of the U.S. Government. A decade from now, the U.S.A. may or may not be trading much more freely with western Europe, but it will certainly have a larger and more active public sector in its economy.

storm surrounding the allocation of the divisible pool of Central revenues rises and subsides with almost quinquennial periodicity; and invariably leaves a trail of dissatisfaction behind. Although the Commission's report has not yet been published, Mr. A. K. Chanda and his colleagues know that, far from satisfying everybody, they may be lucky if they manage to satisfy anybody. But while there is perhaps little that can be done about these factors for the time being, it is important for the Centre to recognise that, in the economic sphere, its own policies have played a major part in accentuating the jealousies. This is true not only in the sense that, in a highly centralised form of planning, the States are often deprived of the revenues and responsibilities they ought to get. It is true also in the sense that the aim of "regional balance" in economic growth, instead of soothing conflicts, has been increasing them. In other words, when partiality has been shown to one State in, say, the location of industrial projects, it has strengthened the jealousies of other States which, rightly or wrongly, feel that they have not been similarly favoured. Such feelings have been particularly strong in Assam and West Bengal, which may be one reason for the recent eruptions of defiance in these two States.

The latest eruptions, it is true, have not centred precisely on the question of industrial location or regional balance. But it would be an error to take them as anything less than symptoms of a general attitude which holds that these States are being unfairly treated. In West Bengal's case, for

instance, there is genuine resentment over the fact that steel- and coal-based industries are being dispersed over the whole country, whereas the proximity of the raw materials should make this State an ideal location. In Assam's case, the motives are more mixed, and the resentment perhaps less genuine, considering that it has won its case for locating the Nummati refinery and that it does not have much else by way of raw materials for starting new industries. But a valuable lesson the Centre could draw from the episodes is that the policy of regional balance calls for serious rethinking. The way it is being implemented now not only lacks economic justification; the political justification for it is beginning to look thin too.

The major defect in the implementation of the policy of regional balance is its preoccupation with heavy or large-scale industries. The location of spectacular projects has often been given away to the wrong States, merely because they have been particularly vociferous or because the political "pull" they exercise in New Delhi is strong. Only 4½ months ago, the sites of seven major industrial projects were announced simultaneously; the Government took special pride in mentioning that each of the seven was to be in a different, relatively under-developed State—thus making it clear that economics had, at best, been only a secondary consideration. There have been more such announcements subsequently. The time has, therefore, come when both the Centre and the States need to be reminded that partiality in the location of industrial projects is beginning to give rise to political controversy which does more damage than can be offset by the supposed economic benefits that may result. The "multiplier effect" of large industries is fairly limited: the proof lies in the fact that Punjab, with almost none, is far more prosperous than, say, Orissa, with some. Regional balance thus cannot be achieved by depriving States like West Bengal (or Bihar) of the industries they ought to get. It can be achieved only by ensuring that economic development in a particular State is based mainly on the resources of nature and talent available to that State. Otherwise it leads to the growth of inefficient and high-cost industries, which strain the transport system and are unable to compete in either export or domestic markets. Worst of all, it leads in time to the eruption of inter-State jealousies on wider economic issues in a way that threatens progress at its roots.

U.K. INTEREST-RATES DECLINE

THE British monetary authorities have been criticised for their reluctance to bring Bank rate back to the level—5 percent—from which it was raised last July. They recognised, of course, that the rate of 7 percent to which it was raised then was exceptional, and when the crisis—or threat of crisis—had receded they began the readjustment. By early-November the rate was down to 6 percent, but in the following months the authorities seemed to feel that a further cut would be misinterpreted as a relaxation of economic control. As long ago as last October the new Governor of the Bank of England, Lord Cromer, hinted that the interest-rates established in Britain in the past decade were too high. During the war and for some years after it—until late-1951, when Bank rate was cautiously raised from 2 percent to 2½ percent—British interest-rates were artificially low. In the opinion of many people in the City of London—including, apparently, the Governor of the Bank—the subsequent upward trend was carried too far.

A good reason to establish a low average short-term rate in Britain is the heavy cost of servicing the overseas sterling balances at a high average rate. As it is urgently necessary to economise payments to other countries, it might be thought that the authorities would keep this cost as low as possible. It can be further argued—though opinions on this matter are not unanimous—that the British economy, whose growth has been notoriously slow, needs the stimulus of low interest-rates, both short and long. These are national problems, whereas the modern fashion in finance is to think internationally. It is evident that the trend of interest-rates in most developed countries is now downward; and the British authorities' reaction to this trend has been, to say the least, tardy. The stabi-

lity of international finance is threatened by their cautious policy.

The one major country where interest-rates are inclined upward is the United States. There, by contrast with Europe, business is expanding, perhaps, too fast, and the authorities are apprehensive of inflation. The outflow of funds from the United States in recent months has caused anxiety, for the dollar is no longer impregnable. The Secretary to the Treasury, Mr. Douglas Dillon, has warned that it may be necessary to raise short-term interest-rates in his country—even though such action might push up longer-term rates, too. The British authorities must take some responsibility for this predicament. If they had taken every opportunity to bring their own rates down the attraction of funds from the U.S.A. to the U.K. would have been lessened. And a rise in U.S. rates might stabilise U.K. rates at a higher level than the U.K.'s own interests require.

However, interest-rates are not determined simply by act of policy. It has been from time to time stated authoritatively in Britain that Bank rate reflects the state of the market and that the long-term interest-rate emerges from the interaction of supply and demand in the capital market. It should not be deduced that the authorities do not influence the rates, whether short or long. It is obvious that policy is a major factor in the money market, and its influence in the capital market, though more tortuous, is sometimes strong. But the forces of supply and demand assert themselves in some degree. The downward trend of interest-rates in continental Europe reflects the easing of economic activity in the region. Finances are becoming more liquid; money is not scarce. In West Germany deliberate policy also

is involved: the authorities see inflationary implications in abundant foreign money and accordingly make West German rates less attractive. (This is an aspect of the flow of funds that might receive more attention in Britain.) Authoritative opinion in France seems to favour official assistance to the downward trend of rates, to establish an era of cheap money.

A significant development in Britain this year is the rise in prices of Government bonds. After years of decline in their values these investments were so discredited that this important sector of the capital market could no longer function normally. After repeated disappointments, as prices began to rise and soon fell back, many holders abandoned their Government stocks, with the intention never to invest again in this market. The financial institutions did not, of course, jettison their holdings, but they were noticeably reluctant to add to them. But this year the mood has changed. Big investors are convinced that the trend of interest-rates is downward, and that, therefore, prices of Government stocks—still very low by normal standards—must rise; small investors remember the higher prices of some years ago and see opportunities of appreciation from the

Current News and Comment

Bonus from Hindustan Lever

The Rs. 10-paid shares of Hindustan Lever, which rose from Rs. 41.50 to Rs. 59.70 in a year, shot up last week from Rs. 60 to Rs. 72. The shares rose on influential buying, and the bonus issue announcement on 7th February suggested that the buying was of an informed nature. The bonus shares are being issued in the proportion of 12 new equity shares for every 25 held. The proposed issue, which is subject to the Government's sanction, is intended to bring Hindustan Lever's issued capital into closer relationship with the capital employed in business. While the paid-up capital amounts to Rs. 5.57 crores—all in equity shares of Rs. 10 each—the capital employed in business as on 31st December, 1960, amounted to Rs. 10.06 crores. Against the paid-up capital of Rs. 5.57 crores, of which Rs. 3.29 crores was raised by capitalising reserves, reserves and surplus total Rs. 4.48 crores, made up of a capital reserve of Rs. 62.62 lakhs and a revenue reserve of Rs. 3.86 crores. The proposed bonus issue will require Rs. 2.67 crores to be capitalised from reserves, raising the paid-up capital to Rs. 8.24 crores. The new equity shares will rank equally for all purposes with the present issued equity shares except that they will not rank for the dividend for the year ended December 1961. The new shares will be allotted to holders of the existing shares registered in the books of the Company on 10th May, 1962. In the case of aggregate fractions arising from the allotment, the directors propose to sell them and distribute the net proceeds among ordinary shareholders.

Along with the bonus issue announcement, the directors have declared the dividend for the year ended December 1961, which has been maintained at Rs. 2.60 a share, subject to tax. The preliminary figures indicate that Hindustan Lever's performance in 1961 has not been encouraging. After providing for depreciation and allowing Rs. 1.93 crores (against Rs. 2.08 crores) for taxation, the net profit for 1961 is shown at Rs. 2.25 crores, against Rs. 2.50 crores in 1960. The proposed dividend will absorb Rs. 1.44 crores. The shares of Hindustan Lever, which were bid up to Rs. 72 on bonus issue prospects, receded later to around Rs. 68 on profit-taking.

Larsen and Toubro Prospects

The shares of Larsen and Toubro, which displayed considerable strength for quite some time on sustained support, shot up last week from Rs. 40.50 to Rs. 44.50. The spurt was caused partly by a rights issue announcement; the main cause was the chairman, Mr. H. Holck Larsen's encourag-

ing observations on the Company's performance during the current financial year and the promise of a brighter future with the implementation of the various expansion schemes. The occasion was provided by the shareholders' visit to the Company's plant in Powai, Bombay. The chairman told shareholders that the value of output at the Powai works is likely to be of the order of Rs. 2.15 crores in 1961-62, against Rs. 1.13 crores in 1960-61. The figure for 1962-63 was placed around Rs. 2.50 crores. The total turnover in 1961-62 is expected to exceed Rs. 5 crores, against Rs. 3.50 crores in 1960-61. Mr. Larsen said that almost full self-sufficiency in indigenous raw materials has been achieved in manufacturing motor starters and switchgears. The latter compare favourably with the imported products. The drilling machinery and diamond bits factory is in full production, and the manufacture of taper plug valves is expected to commence in May or June. Larsen and Toubro has been licensed to set up a plant in collaboration with Eutectic of Switzerland for manufacturing one million runnine feet of special low temperature welding rods a year. The outlay on the project will be about Rs. 3 lakhs or Rs. 4 lakhs. Production is expected to start in September.

The Rs. 4-crore heavy engineering project of Utkal Machinery Ltd—an associate of Larsen and

present levels. The governing factor in these changes is not really a mood but a comparative abundance of capital. In Britain, particularly, bank-credit is still restricted, and some companies are hindered by lack of finance; but most companies' requirements have been reduced. Last year new issues of stocks and shares depressed values, but this year the flow of new issues is weaker. Prices of ordinary shares have risen (despite evidence of declining profits): yields on ordinary shares a facet of interest-rates—have declined.

It may be that the world's need of development capital is still in excess of the supply, but the developing countries—which are, anyway, developing more cautiously in the 1960s than they did in the 1950s—are providing more capital from their own resources, and international financial institutions are providing capital on a big scale. As capital-accumulation increases in the developed countries these countries may be seeking outlets for their capital, later in this decade, in a less receptive world. It is arguable that the downturn in interest-rates represents not a temporary change of trend but an adjustment to permanently lower levels.

Toubro—will go into production in March. It is expected to yield an annual turnover of about Rs. 5 crores in 1963-64. Three West German firms—Gutehoffnungshutte, J. M. Voith and Heinrich Koppers—are collaborating in the project and are contributing Rs. 40 lakhs each. Larsen and Toubro's share is also Rs. 40 lakhs while the Industrial Credit and Investment Corporation of India is taking up Rs. 20 lakhs worth of equity shares. The I.C.I.C.I. has also given a loan of Rs. 80 lakhs and the Refinance Corporation Rs. 40 lakhs. The factory, which is being set up in Kansbahal near Rourkela, will manufacture a wide range of heavy engineering plants, including blast furnaces, steel-works plants, pig casting machines, sintering plants and ropeways, coke ovens and by-products recovery plants, low temperature carbonisation and gasification plants, chemical plant and equipment for fertiliser, refinery and petro-chemical installations and plant and equipment for the production of pulp, paper and cardboard.

The directors of Larsen and Toubro propose to raise fresh capital amounting to Rs. 55 lakhs by issuing rights shares in the proportion of one new share for every two held. The Company has applied to the Government for the necessary sanction. Whether the Government will permit Larsen and Toubro to issue rights shares at par or it will insist on a premium remains to be seen. The additional capital is needed to finance the various expansion and diversification schemes which the Company has on hand.

I.C.I.C.I. Pays More

Investors in shares of the Industrial Credit and Investment Corporation of India who have suffered on account of the depreciation in the value of their holdings—the Rs. 100-paid share is quoted around Rs. 82—might derive some comfort from the directors' decision to raise the dividend for the year ended December 1961 from 5.75 percent to 6.50 percent, subject to tax. The increased distribution has been made possible by the Corporation's improved performance during the year. The preliminary figures, released along with the dividend announcement, show that after providing for depreciation and taxation, I.C.I.C.I. has made a net profit of Rs. 46.52 lakhs, against Rs. 35.67 lakhs in 1960. The allocation to reserves has been raised from Rs. 9 lakhs to Rs. 12.50 lakhs, bringing the total reserves to Rs. 85.30 lakhs, against a paid-up capital of Rs. 5 crores. The Corporation's operations have continued to increase with the growth of funds. At the end of 1961, the net assistance of all types—loans, direct subscriptions and underwriting—sanctioned by the Corporation to private industry amounted to about Rs. 42 crores, of which Rs. 19 crores was in foreign exchange. The corresponding figure at the end of 1960 was Rs. 31 crores, of which Rs. 12 crores was in foreign exchange. The number of companies which received

financial assistance was 166, against 117 at the end of 1960. Of these, 91 companies received rupee assistance and 75 foreign exchange loans; 33 companies were granted both rupee and foreign exchange assistance.

Electric Construction to Diversify

The Electric Construction and Equipment Co. Ltd has reported encouraging results for the year ended October 1961. Sales are up by about 41 percent from Rs. 1.19 crores to Rs. 1.67 crores and the gross profit by 41 percent from Rs. 13.18 lakhs to Rs. 18.64 lakhs. Apart from higher sales, closing stocks have risen by about Rs. 22.44 lakhs to Rs. 1.07 crores, indicating increased production which seems encouraging in the face of difficulties the Company had to face concerning power and raw material supplies. After providing Rs. 5.75 lakhs (against Rs. 4 lakhs) for taxation, Rs. 3.65 lakhs (against Rs. 2.48 lakhs) for depreciation and Rs. 1.84 lakhs (against Rs. 99,000) for development rebate reserve, the net profit for 1960-61 amounts to Rs. 7.40 lakhs, against Rs. 5.71 lakhs in the previous year. The dividend has been maintained at 10 percent, but this is on the doubled capital. Electric Construction had increased the subscribed capital from Rs. 30.47 lakhs to Rs. 60.94 lakhs through a rights issue in the previous year. The dividend absorbs Rs. 6.10 lakhs, against Rs. 3.05 lakhs in 1959-60. A sum of Rs. 1.50 lakhs (against Rs. 3 lakhs) has been allocated to general reserve, leaving Rs. 8,374 to be carried forward, against Rs. 17,282 brought in.

Electric Construction's plant to manufacture paper-covered and cotton-covered copper wires with a capacity of 240 tons a year, is said to have been working satisfactorily. A transformer manufacturing unit has been established in Visakhapatnam. Land has been purchased in Budge Budge, near Calcutta, for establishing a lift and switchgear factory. Negotiations are said to be progressing for setting up a factory in Hyderabad for the production of 60,000 single-phase and 18,000 poly-phase house service meters a year in technical collaboration with Veb Electro Apparate Werke of East Germany. Electric Construction is trying to secure the collaboration of Schindler and Company of Switzerland, for manufacturing lifts in Budge Budge. Talks are also going on for securing technical collaboration from Tokyo Shibaura Electric Company of Japan for producing a wide range of electric motors. Considering the various schemes, electric construction has a great growth potential. The Rs. 10-paid share of the Company is currently quoted around Rs. 14.47, offering a gross yield of about 7 percent.

Mysore Sugar Prospects

The chairman of the Mysore Sugar Co. Ltd discussed the prospects for the sugar industry in India at the recent annual general meeting. He also indicated a solution to the problem of accumulated stocks which, he said, lay in creating increased internal consumption by a suitable reduction in the price. The chairman said that because of the existing cost structure of the industry, producers are unable to take any initiative in reducing prices. Only the Government can help stimulate consumption by reducing the existing high rate of excise duty. This will not result in any serious decline in the revenues, for the fall will be more than offset by an increase in consumption. It is also necessary to reduce the price of sugarcane, since the incidence of the latter works out to about 70 percent of sugar cost before adding taxes. Dealing with decontrol, the chairman said that the present slump in sugar prices is to be attributed to it. At the present time, when the cost has gone up due to the Wage Board award, the incidence of export loss, etcetera, there is a need to maintain a suitable price level by eliminating unhealthy competition among the factories. But it is a happy feature of decontrol that internal consumption has increased.

The chairman clarified the position concerning the bonus issue which has been in the air for some years past. He told shareholders that the question of a bonus issue has been "thoroughly examined

in the light of the present sugar position." In the context of the difficult situation of the industry, the chairman said, a decision on this issue would be taken at the opportune time.

Nil from Kirlampudi Sugar

The Kirlampudi Sugar Mills Ltd has passed the ordinary and preference dividends for the year ended June 1961. The working results show a gross profit of Rs. 5.03 lakhs. After providing Rs. 4 lakhs (against Rs. 4.13 lakhs) for depreciation, the net profit for the year amounts to Rs. 1.03 lakhs (against Rs. 7.33 lakhs). With Rs. 40,774 brought forward from the previous year, the total available for appropriation is Rs. 1.49 lakhs. Out of this, the directors have transferred Rs. 38,788 to development rebate reserve. The balance of Rs. 1,09,991 is carried forward.

During the year, the factory worked for a longer period than is usual. It crushed more cane than in the previous year, namely, 139,393 tons. The recovery of sugar was, however, lower than in the previous year due to the poor sucrose content in sugarcane on account of adverse climatic conditions and the extension of the working season to the hot months of May and June. The fall in recovery and the decline in sugar prices reduced the profit for the year. The directors' report says that sugar prices have declined by about Rs. 12 a bag. It adds that there has been an improvement in the Company's working during the current year. But it is pointed out that the sugar industry is passing through a severe strain due to the accumulation of stocks caused by a sharp rise in production and the lack of demand. The directors, however, hope that the situation will improve soon. Kirlampudi Sugar's sales during the year declined to Rs. 98.71 lakhs from the previous year's Rs. 1.04 crores. The closing stock is higher at Rs. 77.03 lakhs (against Rs. 52.30 lakhs).

Insecticide Plant from Cyanamid

The vice-president of Cyanamid International of America, Dr. Robert C. Swain, said at a Press conference in Bombay on Sunday that his Company has completed plans to set up a 1-crore insecticide plant in Bulsar (Gujarat State) in collaboration with Atul Products Ltd. The plant which will be operated by Lederle Laboratories (India) Ltd—an affiliate of Cyanamid International of America—will produce 300 tons of malathion a year on a double-shift basis. Production would be raised to 1,000 tons a year in the course of four or five years. Malathion is said to be one of the safest and most widely used insecticides. The project would help save some Rs. 1.50 lakhs of foreign exchange a year. The construction and operation of the plant is estimated to cost about \$2 million. The plant will go into production early in 1963. Atul Products will supply 24 percent of the capital requirements of the project, but its share would be increased in due course. Lederle Laboratories (India) Ltd is already collaborating with Atul Products in manufacturing a wide range of chemicals and pharmaceuticals. The latter's 10-ton antibiotic fermentation plant for the basic production of aureomycin, achromycin and ledermycin was inaugurated on Tuesday by the Governor of Gujarat, Mr. Mohdi Nawaz Jung.

Sandoz Plant for Dyestuffs

The Sandoz factory in Kolshet, Thana, is being expanded to undertake the manufacture of dyestuffs and intermediates used by the textile industry. The Company is already engaged in manufacturing a wide range of pharmaceuticals and holds a licence for making leucophor—an optical bleaching agent. The present extension to the factory will cover mainly the manufacture of dyestuffs and intermediates. Dr. Arthur Löcher, managing director, laid the foundation-stone of the new project on Saturday. The project has been licensed to manufacture 540 tons of dyestuffs and intermediates a year. Of the 58 items to be manufactured, 47 items will be produced for the first time in India. Payments for the import of raw mate-

CAPITAL, 15th February, 1962.

rials necessary for its 58 products will be met by exporting a part of the output. The value of such exports is expected to be about Rs. 20 lakhs a year. The factory is expected to go into production in 18 months. When the plant is in full production, the foreign exchange saving in terms of reduced imports of dyestuffs will be of the value of about Rs. 80 lakhs a year. The total value of dyestuffs consumption in India is estimated around Rs. 15 crores, of which about 50 percent is met through imports. The plant for the project will be of the latest design, prototypes of which have already been erected in the firm's factories in Switzerland, France, Spain and Brazil. The experience gained from these machines will be incorporated in the installation of the plant in Kolshet.

Noble Paint to Expand

It is reliably understood that the Government of India has approved the proposal of Noble Paint and Varnish Co. Private Ltd, Bombay, for setting up a factory in Madras State for manufacturing 1,050 tons of paints and enamels, 36,000 tons of varnishes and 420 tons of distempers a year on a two-shift basis. The capital equipment for the project is estimated to cost Rs. 3.75 lakhs, of which Rs. 2 lakhs will be needed for imported machinery. In addition, Noble Paint would also require Rs. 3.14 lakhs worth of imported raw materials a year. It has agreed to meet the foreign exchange requirements for importing raw material and capital equipment either by imports through the State Trading Corporation or by exporting its finished products. The existing annual capacity for paints, enamels and varnishes in the organised sector of the industry is about 85,000 tons and the current output is around 50,000 tons. The Paint Panel of the Development Council for Oils, Soaps and Paints has estimated the production and capacity targets for surface-coating materials by the end of the third plan period at 160,000 tons and 190,000 tons, respectively. There is thus a gap of about 110,000 tons to bridge for attaining the third plan target of production. Of the additional 110,000 tons of paint production during the plan period, the Government of India wishes to reserve at least 35,000 tons for new units and expansion of the industry in the underdeveloped areas (places other than Bombay and Calcutta). The balance of 75,000 tons in output will be encouraged wherever production can be achieved economically and expeditiously in order to satisfy the growing consumer demand and also to promote exports.

Reclaimed Rubber from Jatia Cotton

Reliable reports indicate that the Government of India has approved the scheme submitted by Jatia Cotton Mills Ltd, Calcutta, for manufacturing 2,400 tons of reclaimed rubber a year on a three-shift basis. The project will, however, be implemented by a new enterprise because the Company Law Administration is strongly opposed to the diversification of activities by an established company. The sponsors of the project propose to adopt the high-pressure process, and the product made by this process would be acceptable to the rubber products manufacturing industry. The scheme does not involve any foreign collaboration. The cost of capital equipment is estimated around Rs. 12 lakhs, of which Rs. 10 lakhs will have to be spent on imported machinery. The firm has given an undertaking to the Government that it would not require any imported processing chemicals. It proposes to obtain a foreign exchange loan from the Industrial Credit and Investment Corporation of India to cover the cost of imported equipment. The proposed selling price of the finished product at about Rs. 950 a ton compares favourably with the c.i.f. price of the imported material.

Dr. Paul Lohmann (India)

The foundation stone of the factory of Dr. Paul Lohmann (India) Ltd was laid in Dum Dum on Sunday by Mr. Rudolf Lohmann. Speaking on the occasion, Mr. Ranadeb Chaudhuri, director, said that the West German collaborator is a specialist in the field of chemical salts manufac-

CAPITAL, 15th February, 1962.

ture. Besides meeting a large portion of the local demand in West Germany, it exports about 60 percent of its products. Mr. Chaudhuri recalled that when Dr. Paul Lohmann (India) Ltd approached the market for raising funds, the capital issue was over-subscribed many times. "It indicates that the investing public has realised the importance and growth prospects of the industry." The Company has obtained a licence from the Government of India for manufacturing more than 50 varieties of chemicals, which are required for various industries like pharmaceuticals, cosmetics, food products, confectionery, electroplating, electrical, photographic, rubber, textile and paper. With the help of the West German firm's advanced technology and research facilities, the Company in India "is confident not only to be able to meet the demands of our country, but also to be able to export and earn foreign exchange which is so very vital for the successful implementation of the third five year plan."

Indian Yeast Factory Opened

The factory of the Indian Yeast Co. Ltd was formally opened by Mr. M. J. Marshall, Senior Trade Commissioner for the U.K. in Calcutta, last Thursday. In his speech at the inaugural ceremony, Mr. S. M. Smith, chairman, said that the Company was incorporated in March 1960, and came into being as a result of negotiations between Shaw Wallace and Co. Ltd of Calcutta and the Distillers Co. Ltd of London and Edinburgh. The latter will provide technical and financial collaboration for the project. The yeast factory commenced trial production at the end of March 1961, and went into commercial production on 1st May, 1961. But due to various difficulties, and to the fact that the process of production had to be adapted to Indian climatic conditions, full production has only recently been possible. For many years, bakers' yeast has been imported into India. But now that the factory is in full production, "we are confident that we can supply not only the total requirements of yeast for the baking industry in this country, but also cater for a considerable increase in demand." The factory uses molasses as its basic raw material. The chairman said that none of the materials used by the factory has to be imported, so there will be a substantial saving of foreign exchange. The demand for bakers' yeast will grow as the people become more prosperous. The Indian Yeast Company, Mr. Smith said, has plans to expand its productive capacity to meet the anticipated increase in demand.

During the past year, the Company carried out an extensive market survey, and it is confident that the demand for yeast will continue to rise. Mr. Smith said that about 3,000 bakeries are at present operating in India; they consume about 4 million lbs of wheat flour a week for baking bread. Indian Yeast has a mobile bakery which is to tour the country to help improve the standard of baking by using yeast to make better bread. In some parts of India, it is still the practice to use imported hops, but such production is uneconomic, so it does not get the best value from the flour used in baking bread. In his speech at the inaugural function, Mr. S. C. Stewart, managing director of the yeast division of the Distillers Co. Ltd, said that the factory, although small by comparison with plants in the U.K. and the U.S.A., has been built to the highest standards and includes all the latest techniques used elsewhere in the world.

Chloramphenicol from Dey's Medical

The Government of India, it is understood, has approved the scheme submitted by Dey's Medical Stores Manufacturing Private Ltd, Calcutta, for manufacturing 18 tonnes of chloramphenicol a year. At present, Dey's Medical is importing the chemical in bulk. The firm now wants to manufacture this drug to meet its own requirements as well as supply to other processors in India. It proposes to manufacture chloramphenicol from para-nitro acetophenone to start with and ultimately from p-nitro ethyl benzene. The Swiss firm of Lamar Ltd will collaborate in the venture. The scheme involves a royalty payment of 3 percent on the selling price of bulk chloramphenicol. The Swiss

firm will supply the complete plant at a global price of £58,000 on the following terms: (1) 10 percent of the payment at the time of shipment, (2) 20 percent on arrival of the shipment in Calcutta, (3) 20 percent after production starts, (4) 20 percent after the second year and (5) the balance of 30 percent against shares of the new Company. It is said that the new enterprise will grant Lamar Ltd the option to acquire within five years another 15 percent of the shares. The foreign collaborators have guaranteed that the plant will have a minimum life of 20 years if looked after properly.

The Company will need Rs. 12 lakhs worth of imported raw materials a year whereas the value of indigenous raw materials is estimated around Rs. 5 lakhs a year. Raw materials will be imported from sources which will offer them at favourable rates. The scheme of Dey's Medical is expected to result in substantial foreign exchange saving when it is implemented—roughly around Rs. 20.5 lakhs. The value of chloramphenicol imported during the year ended March 1961, amounted to Rs. 63.63 lakhs. The third plan target for chloramphenicol is 50 tons a year. The capacity licensed so far—excluding Dey's Medical—is 23.6 tons. Of the five Companies, which have already been licensed to manufacture chloramphenicol—only Parke Davis has set up a factory which has a capacity of 10 tons a year. Lamar Ltd which is collaborating with Dey's Medical has undertaken to start production not later than 16 months after the date of shipment of the equipment.

Tata-Finlay Enterprise

Tata Sons Private Ltd and James Finlay and Co. Ltd are jointly setting up a new enterprise, to be known as Tata-Finlay, to package and market tea in India. The Government of India has already approved the proposal. The first tea packaging plant of the new Company will be located in south India. The success of the new venture seems assured, since it combines James Finlay—the largest producers of tea in India—with the experience of the Tata organisation in marketing consumer goods.

General Insurers Warned

It is reported that the Controller of Insurance has issued yet another threat aimed at checking the evils of rebating and illicit inducements prevalent in the general insurance business. At the last meeting of the executive committee of the General Insurance Council, it is believed, he said that he would be bound to report general insurers to the Central Government if they did not put their house in order. He warned the trade that rates might be drastically reduced, so that no margin of profit would be left which could be conceded to agents and the insured. According to him, large sums of money—"black" money—were in circulation on which no tax was paid, resulting in a loss of revenue to the Central Government. This could not continue.

Since the Controller's threat was issued, Bombay insurers have been busy discussing ways of checking the evils. But they know only two well that each of the various methods has over the years been repeatedly and elaborately explored. The latest discussions have ranged far and wide. On the one hand, proposals have been put forward for extending the "non-diversion agreement" to companies which do not yet participate in it. On the other, the merger of smaller insurers with their bigger counterparts has been suggested. Not all the suggestions are altruistic from the point of view of the sponsors. It may not be going too far

if one suspects in the deliberations certain self-interested tendencies. It has been argued that the Indian system of rebating was based on the old practice of uncontrolled commissions earned by managing agency houses with their principal agencies, on business channelled to the companies in which they had a large financial interest. This double earning suited them well, particularly with the artificially restricted number of principal agents. Over the years, the tendency towards higher commissions thus created spread, sometimes regardless of the restrictive provisions of the laws and regulations.

The Controller of Insurance would be a little out of date if he does not bear in mind the historical background, and if he sticks to his theoretical bias. One symptom of the bias is the strange belief that by drastically reducing rates, rebates and malpractices can be eliminated. The assumption apparently is that under the pressure of competition, part of the trading surplus, if not the whole, is conceded to agents and the insured in the form of illicit inducements and rebates. This concession he wishes to legalise by a reduction in rates. But he ignores the fundamental fact that by a compulsory and uneconomic reduction, he would be conceding amounts many times larger than the companies reportedly concede at present. Indeed, in this way, he would be contributing to the ruin of the trade. If he is prepared to give legal sanction to the concessions by reducing premiums, he might as well remove many of the restrictive provisions of the law and allow the business to function in a freer climate. That, in any event, would be less dangerous and less harmful. The threat to report insurers to the Central Government can have only one consequence. On many matters, the Government has an unpredictable mind. The fact is that illegal inducements can be traced as much to the terms of the Insurance Act as to history. By not recognising this point, the Government would be taking only a superficial view. Any action taken on such a view would be short-sighted and would be an indictment of the authorities themselves.

Coal Shortage Affects Industry

Several industries in different parts of India have been experiencing difficulty in getting adequate and timely supplies of coal. This has hindered expansion and even maintenance of the level of production. Recently, the problem has assumed a serious proportion in certain centres situated away from the main coal-producing region and some of the manufacturing units there have been facing the unhappy prospect of being forced to close down or to curtail output. The All-India Association of Industries has sent a memorandum to the Central Government in which it has discussed the coal crisis and the fuel problem of industries. The inadequacy of transport facilities is said to be the main reason for the coal shortage. For 1961-62, the railways allotted only 5,979 wagons for the movement of coal, against the requirement of 7,183 wagons. The allocation has not only been insufficient but also irregular. The authorities are considering the problem but the various measures so far taken such as coal dumps, transport of coal by sea-cum-rail routes to meet the requirements of the industries in the southern and western regions, the policy of compelling the industrial units located near the coalfields to move a substantial part of their coal requirements by road, have failed to make any appreciable impact on the situation. In fact, they have given rise to the fresh problem of increased transport costs. The Association has emphasised the need to take effective steps to ease the transport problem. It has been estimated that wagon requirements for the movement of coal during the third plan period will rise year after year from 7,183 in 1961-62 to

All these measures will take time to produce results. For solving the problem of coal shortage in the immediate future, the Association has urged the use of furnace oil in place of coal. The Government is already exploring the possibility of using furnace oil in place of coal by cement factories which are located away from coalfields. The Association points out that some measures would be necessary to make the use of fuel oil in place of coal a feasible proposition because of the higher price of furnace oil. Substitution is not possible until the price of furnace oil is reduced. For this, the Association has suggested the abolition of excise duty on furnace oil which amounts to Rs. 43.63 a tonne. Another aspect which would need consideration would be that of replacement of the equipment for burning coal by oil burners and fittings. Such replacement could be encouraged by granting appropriate relief in taxation to the industrial units concerned. Furthermore, the increased use of furnace oil will necessitate additional crude oil imports for refining within the country. The Association says that foreign

Corrected for seasonal fluctuations, *Capital's* Index of Industrial Activity increased by 0.8 points during May 1961. There were rises in tea, yarn, cloth, cement, coal, pig iron, paper, motor-cars, bicycles, electricity and railway ton-miles. Sugar, jute, finished steel and tyres also fell.

May I draw your attention to the second paragraph on page 100 of your issue dated 18th January, 1962 by The Ditcher. The writer has criticised the sales organisation of the Publications Division, whereas actually he seems to be complaining against the Manager of Publications, Central Publication Branch, Civil Lines, Delhi 6, which is an entirely different organisation. So far as this Division is concerned, no symbol numbers are allotted to publications, nor do we have a Depot at Hastings Street in Calcutta. Our Regional Distribution Office is located in the A.I.R. Building, Eden Gardens, Calcutta.

(The Ditcher writes: "The confusion between the Central Publication Branch and the Publications Division is regretted. The burden of the criticism, however, is applicable as much to the latter as to the former.")

CONVOCACTION Day at the Calcutta University is always a great function, and on Saturday last it was exceptionally so. The Chancellor came down with the loins of his mind girt up in holiday attire, and after the six or seven hundred B.A.'s and when, and the others had been liberated he got up to face the audience, he looked like a young upstart David armed with sling and few smooth stones from the brook, ready to give battle to any number of opposing foes. And he did it. The smooth stones were no novelties. Everyone was well acquainted with them; had, in fact, seen and handled them all many times before. But it was a new thing in India to witness them being slung with such merciless precision and with such dynamic force that they were on Saturday afternoon by the grey and all with such perfect ease and grace. The little giants were evidently astonished, and as each bullet found its billet, there was a mental muttering of its unrecorded exclamation of Goliath of Gath when acknowledging receipt of David's pebbles, "Dear me! such a thing never entered in my head before," "Words have weight when there is a man behind them," and there was a man in the Senate Hall that afternoon. The budding warriors were told to find proximity and hair-splitting, and to go for the broad handling of a case in its larger aspects. Aspirants for Government service were advised to be self-reliant and thorough, and then said the Viceroy, "there is nothing in the world to prevent an Indian from rising to the topmost rungs of the ladder in the practical callings." The embryo teachers were instructed that in their profession they were to insist on the turning out of trained thinkers rather than animated phonographs who simply reproduced with admirable precision that which the recording instrument of their memory had received.

20th February, 1902

I AM NOT IN THE LEAST SURPRISED THAT THE somewhat sudden release of Francis Gary Powers has set our so-called Kremlinologists agog. This is not the kind of decision calculated to gladden the heart of Mr. Mao, and somebody, perhaps Mr. Khrushchev himself, apparently thinks that it is time to tell Peking where it gets off. There is nothing inherently implausible in the thesis, which I am sure contains an element of truth. But Peking's displeasure can be the subject of only very limited

rejoicing in the free world, for I am certain that there are misgivings in Paris and Bonn too, if not also in London. Those who remember Winston Churchill's disquiet every time President Roosevelt had talks with Stalin to the exclusion of the British Prime Minister will understand the European feelings generated by the recent exchanges between Messrs Gromyko and Thompson in Moscow and Adzhubei and Messrs Kennedy and Rusk in Washington. What can these boys be up to? It is perhaps true that the cold war can be ended only by a Russo-U.S. settlement, a consummation devoutly to be wished for. A large and unwieldy conference leads nowhere, but it is not a pleasant thought for non-Americans and non-Russians (which includes Indians, of course) that the future of the world is to be determined by those two peoples alone. Between the two of them they can perhaps destroy mankind in a matter of minutes; but if the human race is to live it wants to do so on its own terms instead of those laid down exclusively by Moscow and Washington. To come back to Powers, I am not sure that I altogether envy him. The grilling he must now be going through in his home country may not compare favourably—or, do I mean unfavourably?—with the treatment he received in Russia.

SOMEONE TOLD ME THE OTHER DAY THAT, THE grievances of the Sikhs in Punjab being mainly psychological, the commission of enquiry set up by the Government of India should have been headed by a psychiatrist rather than a jurist. I do not suppose he was wholly serious; but the one thing the Das Commission has not succeeded in doing is laying the ghost. With characteristic inconsistency, Master Tara Singh and the Akali Dal boycotted the Das Commission; and after that it was irrelevant what sort of a report the Commission produced or what sort of a resolution the Government of India adopted on it. For myself, I am convinced that, by and large, the Sikhs are doing pretty well for themselves not only in Punjab but throughout the country. As the Das Commission concedes, there may have been one or two odd cases of individual discrimination here and there; these might have occurred even if the persons concerned had been hindus or anything else. I have a notion that Master Tara Singh's real complaint is not against the Government of India, or that of Punjab, but against his own people who, being a practical community, are caring less and less for Punjabi and thus sending their children to schools where Hindi and English are taught. This, I am told, in effect means that future generations will be unacquainted

with parts of the *Granth Sahib*, which I am informed is written in more languages than one. The militancy of the champions of Hindi is by now a familiar phenomenon ; and the language has powerful friends at court. I see no reason to conceal or minimise the harm the more ardent advocates of Hindi have already done to themselves and India—with more to come. That the cause of Hindi, at some points, is a part of the campaign to revive the more orthodox brand of hinduism also seems to me more than probable. The Sikhs are not the only ones to be worried, in spite of the political overtones of the Akali agitation. Mr. Nehru perhaps likes to think that, once the Das Commission has exonerated his Government, there is nothing much left of the Sikh problem. He may be mistaken. It is the Government of India's failure to be truly secular in daily practice that is at the root of the problem ; and the Sikhs are ill advised to fight as a community. They should strive to make the State completely secular ; and this is where the dominant community has to make the first gesture to the minorities.

THE LATEST EXERCISE IN KALDORIAN ECONOMICS has, I understand, reference to the present mood in British Guiana. There, the Cambridge economist has been advising Dr. Cheddi Jagan, chief Minister of the soon-to-be-independent British colony, from which the Duke of Edinburgh began his current two-month tour of south America British Guiana, which has a population of less than 750,000 and an area of 83,000 square miles (which makes it about the size of Hyderabad) is almost entirely dependent on a single commodity, namely, sugar, for both internal and external solvency. Sugar is the great foreign exchange earner and giver of wages and employment. Rightly or wrongly, the industry has been developed by foreign capital and foreign enterprise to which emigrant Indians have made their contribution since the colony was finally ceded to Britain by the Dutch in 1814. One might have supposed that, for the present at least, it would be wise for Dr. Jagan to recognise the hard facts of life and, however reluctantly, to accept the need for continuing foreign participation in Guiana's major export industry. Instead of which I understand he has fallen headlong for the fiscal blandishments of Professor Nicholas Kaldor, and that the first "independence" budget—introduced only a few days ago—has really alarmed foreign investment and its expatriate personnel. One recognises that in a tiny pocket-handkerchief State of the size of British Guiana the problem of raising revenue must be very difficult indeed, and that the generally wealthier foreigner presents the authorities with a tempting target. But granting all that, it seems to me quite unnecessary, and in the long run, very unwise, to rely on the versatility of Professor Kaldor to supply the more complicated and refined techniques for mulcting foreign enterprise. Perhaps one of the signs of returning reason in Ghana

is that its Government has intimated that it is not interested in having further advice from Professor Kaldor, and there must be many people in this country who wish that his theories, which are quite unacceptable in the United Kingdom, had never been heard of in New Delhi.

I WISH I KNEW MORE ABOUT WHATEVER IT IS THAT may be going on in East Pakistan. Field-Marshal Ayub Khan is not the only military ruler to have got into political difficulties lately; General Ne Win in Burma, President Nasser in Egypt (why does he call it the U.A.R. still?), General Aboud in Sudan, even General de Gaulle in France, have looked bewildered when the people, who had been fed up with corrupt and incompetent parliamentary régimes, turned sourly against their saviours with the sword, as Professor Toynbee calls them. President Ayub's problem is the more difficult because of a nearly total lack of rapport between the people of East Pakistan and those of West. For historical reasons the latter's is the dominant rôle; but the former are many more in numbers and the disparity is not undone by "basic democracy", whatever that means. The military régime perhaps wanted to clear the decks before announcing the new Constitution; but it is the contents of that document which should have been examined before protesting against whatever it was that there was protest against. I do not believe that Mr. Suhrawardy's arrest explains the whole trouble. More bonds have to be devised between the easterners and the westerners, for religion is apparently not enough to evolve patriotism.

A STORY PUBLISHED IN THE LONDON *Financial Times* the other day caught my eye through its reference to our illustrious contemporary, *The Hindu*. It was quoting certain comments made by the F. B. I. Review, the journal of the Federation of British Industries, on recent denunciations of British industry made by "top executives of two large British companies" which appeared in the Indian newspaper. One of the executives was quoted as stating that inefficient firms and indolent managers were making profits on an easy British home market, and the other as having launched a full-scale attack on British export goods—their design, packaging and so on. The F.B.I.'s reaction seems to have been that such outspoken behaviour was letting the side down; and that even if there were faults, it was better not to mention them in public. It also added that anyway the comments were untrue because they were too general. I could not disagree more on all counts; and this is a point of view on which I received considerable confirmation only the other evening after a chat I had with a cold-weather visitor to Calcutta who is both well known and influential in Indo-British industrial and financial circles. His comments on British industry were scathing. He referred to the nepotism which exists in the top managements of many companies, of the extent to which the establishment is established and the old-school tie is still the only "open Sesame". Directors, he pointed out, were sometimes in their seventies and well beyond their peak of vigour or imagination; it was often more important to a company to have a title on its board than to have talent. British industry, he maintained, had no respect for education as a virtue in itself; sometimes British representatives and managers could not hold their own educationally or culturally even with their opposite numbers on the other side of the Iron Curtain. There was too little understanding of the art of labour relations; salesmanship was unprofessional and the attitude towards customers often too casual; not enough competitive spirit enthused top management; and the general attitude towards foreign competition tended to be one of scorn and indifference. No doubt the F. B. I. would have regarded my informant's comments as too general. But to me they made a lot of sense. There is a great deal wrong with British industry at the moment, or else the British economy would not be in the state it is. When there is obviously so much dirt about, I see no point in the F. B. I.'s opinion that it should be swept under the carpet.

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS

Applications are invited on the basis of a Prospectus copies of which are available from the Registered Office of the Company, and from the brokers and bankers hereunder named. A copy of the prospectus, having attached to it the documents required by Section 60 of the Companies Act, 1956, has been delivered for registration to the Registrar of Companies, Delhi.

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in giving this Consent the Central Government do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A Licence has been obtained from the Central Government for establishing a new industrial undertaking at Ranchi, (Bihar State) of which a copy is open to public inspection at the Registered Office of the Company. It must be distinctly understood that in granting this licence the Government of India do not take any responsibility for the financial soundness of this Undertaking or for the correctness of any of the statements made or opinions expressed in regard to it.

Certificate for Commencement of Business No. T. 3362 dated 27-7-1961 has been issued by the Registrar of Companies Delhi. (The Company is incorporated under the Companies Act, 1956).

Applications have been made to the Delhi and Calcutta Stock Exchanges for permission to deal in Preference and Equity shares of the Company. The Subscription List will open at the commencement of banking hours on 26-2-1962 and will close at the close of the banking hours on 7-3-1962 or sooner as the Directors may decide, but in no case will the list close before the close of the banking hours on 28-2-1962.

Face value of Preference shares is Rs 100 each, and of Equity shares Rs. 10 each. Preference shares carry a fixed cumulative preferential dividend of 9.3% free of Company's Income Tax but subject to deduction of tax at the prescribed rate. The Preference shares shall be liable to be redeemed at par at the option of the Company wholly or in part at any time or times, after the expiry of 12 years but not exceeding 15 years, from the date of issue, at six months' notice. Shares are being offered at par. No shares will be issued for consideration other than cash.

TERMS OF PAYMENT

The amounts payable in respect of each share comprising the present issue are as follows:—

	Preference	Equity
	Rs.	Rs.
On application	50	5
On allotment	50	5
	100	10

APPLICATION & ALLOTMENT OF SHARES

Applications must be for 50 Equity shares or multiples thereof, or for 5 Preference shares or multiples thereof, and in all cases must be accompanied by a remittance of the amount payable on application.

Applications for shares should be made on the printed form accompanying the prospectus and must be completed in accordance with the directions contained therein and delivered before the closing of the Subscription List to any branch of the Bankers to this issue, mentioned in the Application form.

The Company was incorporated on the 28th December, 1960 with the objects mentioned in its Memorandum of Association, and particularly to undertake the manufacture, *inter alia*, of Ball Bearings, Roller Bearings and Tapered Bearings and to deal in the same.**PROSPECTS**
Ball and Roller Bearings have extensive use in industrial field. They are used to overcome friction and as such are essential components of all moving machinery and appliances. India's annual demand for Bearings at the end of third 5-year Plan is estimated at fifteen million. The Company has obtained a Licence from Central Government under the Industries (Development & Regulation) Act, 1951 for manufacture of 2.5 million Ball and Roller Bearings per year. It will concentrate on precision Bearings required for Electric Fans, Fractional Horse-power Motors, Machine Tools, etc.

The plant is expected to be installed during 1962, and full capacity is expected to be attained by 1964. Orders for major part of the plant have been placed.

Bearings are a high priority item for industrial purposes. The Company will, therefore, make substantial contribution of foreign exchange to the country by way of saving on import of Bearings and depending upon domestic requirement, by exporting its products.

High Carbon Chromium alloy steels which form the main raw material for Bearings are currently imported but their manufacture is expected to commence in the country.

Government of India have issued an Import Licence of the value of Rs. 50 lacs to the Company for import of equipment from U.S.A. under D.F. credit No. 157 and has agreed to issue another Import Licence of the value of Rs. 15

lacs on the same basis. With modern equipment and proposed technical collaboration with the Fafnir Bearing Company of U.S.A. the Directors expect that the Company's products will be of a premium quality.

TECHNICAL COLLABORATION
The Company has negotiated with the Fafnir Bearing Company of New Britain, Connecticut (U.S.A.) for obtaining technical know-how and the right of use of their patents, etc. Fafnir is one of the leading manufacturers of Balls and Bearings in U.S.A. and its collaboration with the Company will be of great help in achieving high quality and efficiency standards.

It is envisaged that Fafnir will assist in installation of the plant and will supply know-how for manufacturing and quality control, etc. during the course of the collaboration. It will also train Company's personnel and will send its experts to the Company's facilities when needed. The Agreement will in the first instance be for ten years.

TAX BENEFITS
According to present tax laws, the Company shall be entitled to benefits in respect of Development Rebate, and shall enjoy tax holiday for five years in respect of profits upto 6% on the capital employed under Section 84 of the Income Tax Act, 1961.

The shareholders shall also be exempt from tax on dividend paid from the Company's profit exempt under Section 84 and from Wealth Tax on their holdings for five years under Section 5(1)(xx) of the Wealth Tax Act, 1957.

Shareholders which are companies shall also be exempt under Section 99(1)(iv) of the Income Tax Act, 1961 from payment of super tax on dividends received from the Company.

LOCATION OF THE FACTORY
The factory will be located at Ranchi in Bihar. The Company has purchased about 28 acres of land in village Ratn, at a distance of about seven miles from Ranchi on Ranchi-Daltonganj Highway. Power and water will be available at the site. The site has been selected having particular regard to climatic requirements for a Bearings factory.**MINIMUM SUBSCRIPTION**
The minimum subscription on which the Directors will proceed to allot shares is Rs. 41,95,000, being the full amount of the public issue.**FINANCIAL REQUIREMENT**
The requirement of funds is estimated to be approximately as follows:—

Cost of land, buildings, plant, etc. Rs. 1,19,30,000

Preliminary and Issue expenses, underwriting commission, brokerage, financing expenses, etc. 3,30,000

Working Capital 64,00,000

Provision for contingencies 5,00,000

Total Rs. 1,91,60,000

SOURCES OF FINANCE
The financial requirements are proposed to be met as follows:—**Share Capital**
Already subscribed Rs. 24,00,000

Present issue 51,00,000

75,00,000

Loan from Industrial Finance Corporation 60,00,000

Cash credits, etc. from Banks 32,00,000

From current earnings 25,00,000

Total Rs. 1,92,00,000

The Industrial Finance Corporation of India has sanctioned a long-term loan of Rs. 60 lacs secured by mortgage of fixed assets of the Company, on its usual terms.

The amount represented by 'current earnings' comprises of part of the provision for Depreciation and Development Rebate, and the surplus for the initial years over which the capital outlay will be spread.

PROFITS
On the basis of costs and realisations as far as they can be estimated at present, the Directors are of the opinion that in the absence of any adverse circumstances, the Company should have sufficient earnings after providing for Depreciation, Development Rebate and the dividend on Preference shares, to pay reasonable dividend on Equity shares and to build reserves for future development.**TAX BENEFITS**
According to present tax laws, the Company shall be entitled to benefits in respect of Development Rebate, and shall enjoy tax holiday for five years in respect of profits upto 6% on the capital employed under Section 84 of the Income Tax Act, 1961.

The shareholders shall also be exempt from tax on dividend paid from the Company's profit exempt under Section 84 and from Wealth Tax on their holdings for five years under Section 5(1)(xx) of the Wealth Tax Act, 1957.

Shareholders which are companies shall also be exempt under Section 99(1)(iv) of the Income Tax Act, 1961 from payment of super tax on dividends received from the Company.

UNDERWRITING COMMISSION & BROKERAGE
A commission of 2½% of the face value will be paid to the Underwriters in respect of the Preference shares underwritten by them.

Brokerage will be paid to recognised brokers, and to Banks in respect of applications bearing their stamps at the rate of 1% of the face value of Equity and Preference shares offered to the public and allotted. Brokerage at the same rate will be paid to the underwriters in respect of such Preference shares as they may be required to subscribe for in terms of the underwriting arrangements.

Money

THE CALCUTTA MONEY MARKET

SHARP RISE IN ADVANCES

Wednesday, 14th February.

ADVANCES have increased sharply in the Calcutta money market during the past week. All the main sources of demand show an increase, including the jute and sugar mills and the engineering and iron and steel industries. Call for accommodation against foodgrains and seeds storage shows the biggest increase of all. The smallest improvement is in the requirements of the cotton mills. In the interbank market, conditions are very tight even at the enhanced call rate of 5 percent.

Activity has been restricted in the exchange market due to a fall in the supply of gunny bills. Tea bills were on offer on the limited scale of the previous week. Demand for remittance has been keen throughout. In the London exchange market, the pound has strengthened sharply against the Canadian dollar and closing quotations show gains against all major currencies.

BULLION WAS STEADY IN THE PAST week due to renewed buying. Silver advanced from the previous week's level of Rs. 247.75 to Rs. 248.50, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 211.50. The London and New York prices were 87½d and 103½ cents.

Gold also rose in sympathy with silver. The price increased from Rs. 140.50 to Rs. 142.50. The sovereign at Rs. 98.50 showed a gain of 25n.

DURING THE WEEK ENDED 9TH FEBRUARY, Government of India Treasury bills for Rs. 19,72,75,000 were sold in favour of the Reserve Bank.**TENDERS FOR Rs. 2 CRORES OF 91-DAY** Government of India Treasury bills were opened on 13th February. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.360 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.545 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 19th February.

It is stated that 91-day INTERMEDIATE Treasury bills will be sold from 14th February to 17th February at Rs. 99.381 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 7th February to 10th February amounted to Rs. 15 lakhs only.

RISES OF Rs. 47.80 CRORES TO Rs. 2,052.56 crores in the total note issue and of Rs. 41.11 crores to Rs. 2,034.79 crores in active notes were notable features of the return of the Reserve Bank of India for the week ended 9th February, 1962. The currency expansion was covered by increasing rupee securities of the paper currency reserve by Rs. 50 crores to Rs. 1,689.20 crores. In the Banking Department, deposits of the Government of India fell by Rs. 18.16 crores to Rs. 49.94 crores while other Government accounts rose by Rs. 4.23 crores to Rs. 21.52 crores. Balances of

commercial banks at Rs. 75.53 crores showed a decline of Rs. 8 lakhs. Balances held abroad again fell by Rs. 1.57 crores to Rs. 9.59 crores. The investment portfolio declined by Rs. 45.24 crores to Rs. 196.68 crores partly due to a transfer of securities to the Issue Department. Other loans and advances rose from Rs. 158.86 crores to Rs. 168.64 crores, of which advances to scheduled banks against usance bills amounted to Rs. 25.76 crores (Rs. 17.86 crores). Ways and means advances stood at Rs. 58.18 crores, against Rs. 60.76 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 2nd February, 1962, shows a rise of Rs. 1.71 crores to Rs. 548.73 crores in total deposits. Investments in Government securities are up by Rs. 1 crore to Rs. 242.03 crores, while other authorised investments are down by Rs. 3 lakhs to Rs. 9.25 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have risen by Rs. 5.22 crores to Rs. 274.85 crores. Cash and balances are, in consequence, shown at Rs. 23.01 crores or Rs. 2.82 crores less.**THE STATEMENT OF THE POSITION OF** scheduled banks for the week ended 2nd February, 1962, shows Demand and Time liabilities at Rs. 862.92 crores (Rs. 23.20 crores on account of borrowings from banks) and Rs. 1,174.27 crores (Rs. 14.61 crores), compared with Rs. 866.33 crores (Rs. 23.13 crores) and Rs. 1,170.78 crores (Rs. 15.36 crores), respectively. Cash and balances with the Reserve Bank have declined by Rs. 1.77 crores and Rs. 4.05 crores to Rs. 44.97 crores and Rs. 75.82 crores, respectively. There is a rise of Rs. 74 lakhs to Rs. 596.75 crores in investments. Advances and bills discounted and purchased have increased by Rs. 19.40 crores to Rs. 1,342.03 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 5.9 percent and 65.9 percent, against 6.2 percent and 64.9 percent.**TREASURY BILL MATURITIES**

THE EAST INDIA DISTILLERIES & SUGAR FACTORIES LTD.

The Board of Directors of The East India Distilleries & Sugar Factories Limited, at a Meeting held in Madras on 6th February 1962, recorded their profound regret at the death of Mr. C. R. Srinivasan, Chairman of the Board, and appointed Mr. G. N. Noel-Tod, O.B.E., previously Vice-Chairman and Managing Director, to be Chairman and Managing Director, until the approach of the time of his retirement from service in India will necessitate another appointment.

Mr. Noel-Tod's service with the Group extends to nearly thirty years. He is a Director of a number of other companies in India, including Kiroloskar Oil Engines Ltd., Kiroloskar Electric Co. Ltd., Hercules Insurance Co. Ltd., W. J. Bush Products (Private) Ltd. and the various companies in the E. I. D./Parry Group.

The REAL POWER of AVB...

Vast Technical Resources... Modern Workshops...

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools... here is the *real power* of AVB. The essential combination to generate *real industrial power*.

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry... by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. 6" ram-type horizontal mill and boring machine: This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India
2. Numerous capstan and turret lathes: Upto 36" diameter swing and central lathes upto 42" diameter.
3. 28/60 vertical model hydrotel milling machine: With 360° profile milling equipment.

BONUS AND RIGHTS ISSUE NEWS LIFTS MARKET

Wednesday Evening.

SUPPORT for selected shares has increased appreciably in the stock market during the past week due to good corporate news. Some companies have decided to issue bonus or rights shares. The Titagur Paper Mills Co. Ltd has applied for permission to issue ordinary bonus shares in the proportion of one new share for every two held by capitalising Rs. 50 lakhs from reserves. It has also decided to issue ordinary rights shares in the ratio of two new shares for every three held at a premium of Rs. 5 a share. East Anglia Plastics proposes to issue ordinary rights shares at par in the proportion of three new shares for each share held. The Huldibari Tea Association Ltd will issue bonus shares in the proportion of one new share for each share held by capitalising reserves.

The recent reports of many companies show that profits have increased along with turnover. Attention has been concentrated on some of the new shares which were recently promoted to the forward list. Indian Iron, the main speculative scrip, have nevertheless been hesitant, partly due to technical considerations and partly because of the uncertainty concerning the announcement of the new retention prices of steel. At today's settlement, there has been a slight decline in turnover, but selling pressure is absent. The moderate carry-forward charges appear to indicate that the technical position has become healthier.

In spite of the satisfactory working of the corporate sector, operators are inclined to proceed cautiously in view of the general elections. The stock market has been disturbed by some election speeches, especially those recommending a larger dose of socialism. But many feel that no fundamental change in economic policy is likely, because nobody would wish to interrupt the present progress of the economy. At the same time, it is advisable to take a cautious view of the Central Budget which will be presented to the new Parliament, as it is expected to contain fresh proposals for taxation. The hope is that the extra revenue will be raised by indirect rather than direct taxes.

Activity is likely to be restricted during the next few weeks because the credit shortage will be accentuated. The requirements of the busy season are increasing fast and banking resources are already more than adequately employed in financing industrial and trade needs. Large funds will be siphoned off by new share issues. Apart from the fact that there is a long queue of new companies waiting to offer their shares for subscription, many existing companies will be raising funds by issuing rights shares. The support from the Life Insurance Corporation remains only marginal in character. At the same time, the prices of good shares are expected to be steady mainly because of the shortage of scrip. Holders are reluctant to sell as they fear that they may not be able to buy back at lower prices.

Indian Iron have closed at Rs. 25.28. Among engineering shares, Guest, Keen, Williams have improved on rumours of a bonus issue. Indian Standard Wagon have reacted on profit-taking. Jessop, Burn, Braithwaite, Dalmia Iron and Kumardhubi have been steady. Texmaco have fluctuated on speculative manipulations.

There have been many bright features in the miscellaneous section.

Titagur Paper have risen sharply on the prospect of bonus and rights issues. Orient have gained on expansion plans and Bengal have been supported. East Anglia Plastics have improved on the news that the Company will issue ordinary rights shares in the proportion of three new shares for each held at par. Dunlop Rubber have been steady on talk of a rights share issue. Dr. Paul Lohmann have attracted attention on the news that the construction of the factory has started. Indian Aluminium, Indian Cable, Rohtas and Indian Copper have been steady. Hindustan Motors have fluctuated on speculative manipulations. Kesoram Industries and Jay Shree Industries have been steady. Martin Burn have gained on dividend prospects. National Insulated Cable have improved on influential buying. British India Corporation have risen on interested support. Metal Box, Philips India, Isaac Holdens, S. S. Duncan and Union Carbide have been steady. Cement shares have gained and support has been forthcoming for Orissa Cement and Jaipur Udyog.

Selected jute shares continue to meet with support on the view that mills are making satisfactory profits on the manufacture of gunnies. Among the prominent scrip are Birla, Fort Gloster, Northbrook, Union, Anglo-India, Ganges, Bally, Nuddea, New Central and Howrah.

Cotton mill shares have been buoyant on the publication of some good reports relating to the working during 1961. Bowreah and Dunbar have improved on rumours of bonus issues. Elgin, Cawnpore Textiles and Bharat Commerce have been supported. J. K. Rayon are quiet on selling pressure.

There is virtually no interest in coal shares and fluctuations have been narrow. Stray business is being done in Burrakur, Bengal, Central India and Amalgamated. Punch Valley have fallen.

Bank shares have been steady and business has been done in United Commercial and Punjab National.

Sugar shares have declined on a predominance of sellers. The fall in the price of sugar has disturbed investors. Carew, S.K.G., Dyer Meakin Breweries and Belsund have weakened.

Fairly satisfactory auction prices have induced support for selected tea shares. Investors think that quality producers will show good profits for 1961. Huldibari have improved on issuing bonus shares. Hasimara are being supported on prospects of a bonus issue. Tezpur, Betjan, Dibrugarh, Banarhat and Tyroon have gained.

Government securities have been dull and nominal business is being transacted. Prices of dated loans show little variation. The 3 per cent Conversion loan 1986 is being quoted around Rs. 71.

Bombay Market

EARLIER RECOVERY NOT MAINTAINED

BONUS ISSUE PROPOSED BY HINDUSTAN LEVER

Wednesday Evening.

THE Bombay stock market reacted at the close due to tired long liquidation. There was a substantial

improvement earlier during the past week because of broadening enquiry induced by good corporate reports. The decision of some companies to issue bonus or rights shares created cheerfulness. Operators were encouraged by the fact that the cotton mill industry had earned bigger profits in 1961 than in the previous year. The assurance that the Government would try to import sufficient cotton to relieve the shortage was welcomed. At the close, share prices declined on pressure when the stock market authorities imposed automatic margins on some shares because their prices had risen by more than 10 per cent over the last making-up prices. There was also a general inclination to reduce commitments before the general elections.

Tata Steel closed at Rs. 141.25 and Indian Iron at Rs. 25.15 on pressure from Lyons Range. Among engineering shares, Tata Locomotive declined to Rs. 359 on profit-taking and Alcock Ashdown were available at Rs. 362. Premier Construction came to hand at Rs. 193, but Larsen and Toubro were steady at Rs. 43.50 on prospects of rights shares. Mukand Iron were dealt in at Rs. 28 and Mahindra and Mahindra came to hand at Rs. 21 because the Company will issue ordinary rights shares. Motor-vehicle shares were quiet, and Hindustan Motors declined to Rs. 20.56. Premier Automobiles were transacted at Rs. 141.

The closing prices of cotton mill shares were below the best levels touched earlier. Century reacted to Rs. 605 and Bombay Dyeing to Rs. 69.80. Kohinoor were done at Rs. 321 and Simplex came to hand at Rs. 172.50. Gokak were transacted at Rs. 225 and Morarjee were taken at Rs. 414. Svadeshi were placed at Rs. 298 and India United ordinary were wanted up to Rs. 21.08. Apollo were sold at Rs. 2.62 and Dawn came to hand at Rs. 168. B. R. Cotton were sold down to Rs. 83, but Standard were supported at Rs. 1.145. Swan were fancied at Rs. 442.50 and Phoenix came to hand at Rs. 255.

Miscellaneous shares moved in line with the general trend. Sugar shares were quiet, and Belapur were available at Rs. 251. Phalton were transacted at Rs. 114.50 and Walchandnagar Industries were sold at Rs. 153.50. Mining shares were quiet, and Shivrajpur Syndicate declined to Rs. 43. Sellers predominated in steamship company shares, and Scindia Steam were available at Rs. 12.72. Great Eastern Shipping were indicated at Rs. 12.68. Cement shares were steady, and Associated Cement were bought at Rs. 152.50. Digvijay were placed at Rs. 200. Bombay Burmah reacted to Rs. 659 on profit-taking. Among rayon shares, National Rayon closed lower at Rs. 554.50. Gwalior Rayon were bought at Rs. 55 and Baroda Rayon were supported at Rs. 157 on issuing rights shares. Chemical shares were quietly steady, and Tata Chemical were placed at Rs. 18.80. Indian Dyestuff rose to Rs. 556.25 and Polychem to Rs. 233.75. Synthetics and Chemicals were bought at Rs. 217.50. Alembic Chemicals rose on issuing bonus and rights shares. Ceat Tyre were quiet at Rs. 202.50, but Hindustan Lever rose to Rs. 68.30 on issuing bonus shares. Voltas were steady at Rs. 304, as were Wimco at Rs. 311. Tata Oil were dealt in at Rs. 84.50 and Permanent Magnets improved to Rs. 190. Kirloskar Oil Engines were higher on issuing bonus shares.

THE I.C.I.-Courtaulds bid situation was the dominating influence in the stock market during the past week. Developments here affected not only the shares immediately concerned, but the rest of the industrial market and the gilt-edged market. The event of the week was the publication of the long-awaited profit statement by the I.C.I. with its news of an "alternative" offer of the convertible loan stock for Courtaulds shares. This effectively raised the I.C.I. bid to be around 50s and Courtaulds, in response, moved up about 7s. Business in Courtaulds was on an enormous scale on the day fol-

lowing the news, but contracted subsequently, particularly from Monday when for technical reasons dealings were for cash instead of for the account. I.C.I. were fairly active throughout, but the price showed little change at around 54s 6d. The recent sustained and substantial advance in the gilt-edged market was halted and then reversed by this news which meant that if the I.C.I. bid was successful, there might well be an almost unlimited supply of a first-class very attractive fixed interest security—namely, the I.C.I. loan stock—to divert money away from gilt-edged stocks. With Courtaulds and I.C.I. almost monopolising attention in the industrial market, industrials generally were rather subdued and prices for the most part moved within narrow limits with the general undertone fairly satisfactory. Gold shares were very quiet and prices inclined to drift lower. Coppers also were on the dull side, but tins held fairly steady. Oils were featureless. Teas also attracted very little attention while rubbers fluctuated within narrow limits in quiet conditions.

to ten years, depending on the results of a further drilling programme. Considerable geological data on the deeper areas of the Sawang mine must be collected from a deep drilling programme which could take two or three years. Then it would be possible to plan a deep mine project.

6. It is recommended that a programme of exploratory drilling be drawn up in order to prove fully the coking coal reserves in the whole of the Bokaro coalfield. This applies particularly to the lower seams, namely, Bermo and Kara seams, and to an extensive area to the north and north-east of the Jarandih mine. It is probable that of the extensive reserves which are almost certain to be proved, considerable quantities might be exploited through open-cast mining.

7. In order to realise the increased production capacity coal cleaning plants will be required in Jarandih and Sawang and for the plans already in hand for Kathara. These plants will deal initially with open-cast output but eventually will be required to treat deep-mine production as well. They should, therefore, be sited in such a manner as to satisfy the dual purpose.

It was made clear that the U.K. National Coal Board team was concerned solely with technical assistance. It was mentioned that capital assistance for the development proposed for the Bokaro coalfield could probably be met from existing U.K. credits. As for nationalisation, it is pointed out that, while negotiating a loan of \$35 million for the private sector, the Government assured the World Bank that nothing would be done (during the period when the loan is not repaid) which would have an adverse effect on the incentive to raise additional coal to the targeted level.

Power Programme

A broad outline of the power development programme for the fourth plan is being prepared by a team of officers of the Central Ministry of Irrigation and Power, the Planning Commission, and the Central Water and Power Commission. The team consists of Mr. P. P. Agarwal, joint Secretary, Central Ministry of Irrigation and Power, Mr. Balwant Singh Nag, Adviser, Planning Commission, and Mr. K. P. S. Nair, Member (Power), Central Water and Power Commission. It will assess the power requirements during the fourth plan, so that preliminary steps might be taken well in time. The ground work for the planning of power schemes in the fourth plan is also being taken up. This decision has been taken in response to one of the main recommendations of the Sachdev Committee. The latter was appointed for studying the power requirements of Bihar and West Bengal, including the D. V. C. area, during the third plan. The report says:

"The Committee has assessed the power requirements of West Bengal, Bihar and the D.V.C. area during the third five year plan period and the likely shortages, and has recommended the steps that might be taken to meet such shortages. It will be observed that, by and large, no new plant that has been sanctioned or may be sanctioned during this plan period will come into being before 1964. The power position in this entire region is likely to be acute and will particularly affect the Calcutta area, the coalfields and important industries like the heavy engineering plant. Throughout the greater portion of the plan period, there will be shortage. Many of the plants in commission have been running continuously with a certain risk to the equipment for want of spare capacity.

"The Committee considers that such a state of affairs should not be allowed

to occur during the fourth plan period. The load conditions in this area are advancing rapidly, and the requirements will have gone up very appreciably by the beginning of the fourth plan. The Committee, therefore, recommends that it is imperative to go into the question of power requirements during the fourth plan period almost immediately. It will be helpful if the new power plants to be installed during the fourth plan could be sanctioned by end of 1962, so that all preliminary steps could be taken in good time and the period of power shortage in the early years of the fourth plan reduced to the minimum. Unless this is done, we visualise serious shortage of power during the early years of the fourth plan period.

Import Licence

"While looking into the question of difficulties and delays in the commissioning of power plants, the question of the delay in obtaining the necessary foreign exchange and import licences, etcetera, for the import of essential equipment and spare parts has been highlighted before us by the various authorities concerned. No import licence can be sanctioned unless necessary clearance has been obtained from the Development Wing of the Central Ministry of Commerce and Industry. This generally takes considerable time. The Committee recommends that a wholetime officer should be appointed under the Central Ministry of Commerce and Industry (Development Wing) to deal with all such requests in relation to power plant requirements, in direct consultation with the Central Water and Power Commission and the Ministry of Irrigation and Power. It should be the responsibility of this officer to ensure that all such requests are promptly dealt with and necessary clearance given within a matter of a few days. The Committee trusts that the Ministry of Irrigation and Power will establish a procedure in consultation with the Ministry of Commerce and Industry and the Department of Economic Affairs, Ministry of Finance, under which all requests for foreign exchange and import licences can be cleared within a fortnight to three weeks of the application having been forwarded by the Central Water and Power Commission.

"The Committee is aware of the difficulties that are being faced in the matter of procurement of the proper grade of coal for the types of plant that are already installed. The difficulties of transport accentuate the problem of obtaining proper grades of coal. Discussions are occasionally held between the Railway Board, the Coal Board and the power supply authorities, as represented by the Central Water and Power Commission, concerning this problem. We would recommend the setting up of a standing committee for the purpose to deal with these problems as they arise from time to time.

"During our discussions, we found that there were some serious differences in the approaches of the participating Governments and the Damodar Valley Corporation in the matter of power development within the valley and outside it. Bihar has interest in power development, which is financially a paying proposition, but very little or none in irrigation and flood control. West Bengal is greatly interested in flood control and irrigation, but there has been acute differences between them and the Damodar Valley Corporation over the question of settlement of dues.

Differences in Approach

"In the matter of generation of power, West Bengal would like the Damodar Valley Corporation to restrict its activities to supplying power to areas within the valley, except for loads which have already been committed outside. Even for commit-

ments of loads outside the valley, West Bengal has some reservations. The Damodar Valley Corporation has, in its turn, pointed out that there have been considerable arguments and delays over the sanctioning of its additional power generating units on the part of the participating Governments. We feel that such differences must inevitably lead to friction and want of smooth and harmonious working when consultations with the participating Governments are necessary and there are basic differences in approach in some important matters.

"It is necessary that in the light of the difficulties mentioned above, and the existing provisions of the Damodar Valley Corporation Act, the entire working of the Damodar Valley Corporation should be reviewed by the Central Government in consultation with the Governments of Bihar and West Bengal so as to evolve suitable procedures as would make for smooth and harmonious working. One of the suggestions made to us is that the Central Government should directly take over the existing installations of the Damodar Valley Corporation both for power and irrigation and flood control, and administer them in the best interests of the valley, as also of the two State Governments after necessary financial arrangements have been worked out and accepted. Some other suggestions have also been made but we trust that the entire matter will be speedily gone into and difficulties resolved as soon as possible.

"The troubles experienced with the turbo-generator plant, the 'slagging' problem in the boiler plant and the defects in the coal mills are of a nature which could hardly be categorised as 'teething' troubles. On the contrary, they appear to us to be instances of serious defects in design. It would appear that the manufacturers have not had sufficient past experience of the successful designing and putting into satisfactory service 75-megawatt plants of the required specifications and have been engaged in making experiments for now 15 months in Bokaro and nine months in Durgapur to rectify various defects. This has naturally resulted in a huge financial loss to the Damodar Valley Corporation by way of sale of power and a great deal of inconvenience to all concerned.

Main Conclusions

"We have discussed these difficulties at great length with the engineers of the Damodar Valley Corporation and our conclusions would be as follows:

"1. If the order had to be placed with Messrs M.A.N. for the turbo-generator plant, with due regard to price considerations and ethics of our tender system, the Committee considers that an order for at least two units for Durgapur could have been on the basis of the three-cylinder design with standard steam conditions, of which Messrs M.A.N. are understood to have adequate past experience. They had originally tendered for the three-cylinder design, although they had put in subsequently a bid for the two-cylinder machines, as specifically called for by the Damodar Valley Corporation. It is our view that the two-cylinder design developed by them to meet the requirements of the Damodar Valley Corporation has given rise to design problems, which apparently have a bearing on the troubles that have been experienced with thrust bearing, necessitating long continued experiments to remedy the defects.

"It has been stated that the space considerations in Bokaro necessitated a two-cylinder machine. Space considerations in Bokaro are understandable, but the Damodar Valley Cor-

poration had two choices: (i) accepting a two-cylinder design with likely difficulties that might arise, necessitating long-drawn-out experiments; or (ii) extend the power house already built (and this could not have been impracticable) in which case the three-cylinder machine would also have been suitable for Bokaro, so that all the three units could be identical three-cylinder machines. It appears to us that the best choice for the Bokaro extension could have been a 50-megawatt machine, preferably of I.G.E. manufacture and identical to the three old machines. The Committee, however, does not propose to make any further observations concerning this, as it is understood that the price quoted by General Electric Company was exorbitant, and it was not prepared to bring it down.

"2. Having had satisfactory experience with the Raymond Coal Mills for the three old Bokaro units, it is not understood why the Damodar Valley Corporation did not go in for Raymond type mills for Bokaro's fourth unit, but deviated from the same by accepting Loesche mills of a different design. Had Raymond type mills been purchased for Durgapur as well, the acute troubles that are being experienced with Loesche mills could have been avoided.

"3. As for the boiler plant, it should be stated that the Damodar Valley Corporation's original recommendation was in favour of boilers manufactured by Messrs Stein Rubain of France. This firm is a licensee of Messrs International Combustion Engineering of the U.S.A. and is known to have special experience in building large boilers suitable for burning low-grade fuel. The offer of Messrs Stein Rubain was not accepted because it was on the high side. Fresh tenders were called, but this time Messrs Stein Rubain did not quote. Finally, it was decided to place orders with Messrs M.A.N. It would appear that Messrs M.A.N.'s design resulted in a smaller volume plant."

The Recommendations

The following are the Committee's recommendations: "The present unfortunate experience of the Damodar Valley Corporation concerning the 75-megawatt thermal units should serve as a lesson to all power project authorities in the country. These large units with high steam conditions have their complications of design and operation, and the operating problems multiply when boiler plant has to use a very inferior grade of fuel. With a view to minimising difficulties in securing satisfactory service and trouble-free operation of these plants, the Committee would venture to make the following recommendations:

"(a) For the turbo-generator plant, every effort should be made to purchase standard plant and equipment, well tried out in other parts of the world over a number of years. Utmost emphasis should be laid on 'prototype' experience in design and material, even though less than efficiency may be somewhat less than that claimed by the manufacturers of plants not well tried out over a period of satisfactory service. If the selection of plant on this basis involves the payment of a higher cost, it would be judicious to accord necessary price preference on the score of extensive experience of the manufacturer and proven reliability of his products.

"(b) Extensive experience and proven reliability are factors to be given the highest consideration in selecting other vital equipment such as boiler feed pumps, coal mills, water treatment plant, etcetera, and need be, necessary price preference

should be accorded in the matter of purchasing such equipment.

"(c) As for the boiler plant, it is difficult to secure standard plant of prototype design and material as the characteristics of fuel available in other parts of the world would, in certain aspects, be different from those available in India. In the case of boiler plant, it is recommended that a judicious selection of plant should be based on the following considerations and again a substantial price preference should be accorded, if necessary:

"(i) Extensive past experience of the manufacturer in building boilers of required and higher capacity. If dry bottom boiler plant is required, the selected supplier must have adequate and proven experience for boilers of dry bottom type with well-ried firing system. The same remarks apply if the wet bottom type of boiler is required.

"(ii) If the required boiler plant has to use very inferior grade of fuel, whether of high ash content or low volatility or both and with other difficult fuel characteristics, the qualification at (i) above will have to be coupled with the need for extensive experience of the manufacturer in the design and successful service of boilers for burning such low-grade fuels.

"(d) It is recommended that some form of standardisation should be adopted by all project authorities in the country in selecting the size of units. It is further proposed that the Central Water and Power Commission should undertake a worldwide survey, by reference to all well-known manufacturers, and prepare a list of plants of standard design and steam conditions, for the various sizes of units as above in different countries, the extent of proven satisfactory service of such units, the manufacturers who have specialised, proven experience in building boiler plant using inferior grade of fuel and other relevant data. If necessary, a delegation of thermal engineers could undertake a study tour of selected installations abroad. This list should be circulated to all power project authorities in the country."

The Committee carefully considered the priorities to be accorded to consumers in the event of any unforeseen breakdown resulting in power shedding in the system. The priorities, as accepted by the Committee, are as follows:

Priority I: Railway traction, coal production and pumping in coal mines, iron and steel production, including alloy steel, aluminium smelting and electro-metallurgical industries, fertilisers and electro-chemical industries, defence productions, cement, food products, water works, hospitals, broadcasting and street lighting.

Priority II: Copper smelting, rolling, etcetera, mica mining and processing, steel re-rolling and steel fabrication, paper mills and chemicals, jute mills, and all domestic and commercial services.

Priority III: All other primary and secondary industries.

Telephone Network

Large-scale expansion and modernisation of India's telephone network is being undertaken by the Indian Posts and Telegraphs Department. New and modern switching components are required for a number of applications in the network. It has, therefore, been decided to choose a modern telephone switching system which will be suitable for adoption in India. The system should also be such as can be manufactured economically in the near future.

The switching system should provide for: (a) Modern local exchange

systems which permit full flexibility in the numbering scheme and in cable planning, and which are capable of providing greater facilities to the subscribers and to the administration; (b) transit and trunk exchanges which permit full automatic working over large areas and ultimately over the entire country; and (c) automatic branch exchanges of different sizes, subscriber line concentrators, rural automatic exchanges, etcetera.

The problem of providing a sufficient number of long-distance telephone circuits is being tackled on a wide front. The following schemes have been taken up:

(i) An extensive re-transposition programme of the existing open-wire lines and the use of a number of different types of systems, namely, Stackable three-channel, eight-channel and 12-channel open-wire carrier telephone systems. The implementation of the programme in the course of the next five years would increase the circuit mileage three or four-fold and the number of circuits several times. Work in this connection is already on hand.

(ii) Two large cable schemes: have also been taken on hand: (a) a co-axial cable scheme on the Delhi-Calcutta route; the following routes, covering a distance of about 4,000 kilometres, are planned to be completed during the next five years: Delhi-Ahmedabad-Bombay, Bombay-Madras-Coimbatore, Delhi-Amritsar and Bombay-Nagpur. (b) Cables are being laid along 3,000 kilometres of being laid along a wide area in connection with the railway electrification project. The cables laid along these routes provide a number of pairs for carrier working.

Cable Schemes

These two cable schemes will link towns and cities over a large part of the country. The co-axial cable provides for a 960 channel telephone system to link the important centres and eight carrier intercity pairs to the link the smaller places along the route with these centres. Large blocks of circuits will also be provided on the cables being laid along the electrified tracks.

In addition, extensive use of small diameter co-axial cables and of microwave systems is proposed. The present method of communication is unsatisfactory from many points of view. So, purely as an interim measure, two steps have been taken. These are: (a) introduction of the single-link operator dialling and other improvements to the manual exchange positions to enable speedy handling of transit calls. This programme is being implemented; and (b) where the traffic justifies, and the circuits are available such as on the co-axial cables or on the paired cables, the introduction of subscriber trunk dialling using step-by-step techniques, between the large cities. The charging scheme is on the basis of bulk billing.

Three-man Committee

The problem of modernising the telephone network and of providing a suitable switching system has been under study for a number of years. The Government had set up a three-man committee, consisting of Messrs P. M. Agarwala, Jagdish Prasad and C. P. Vasudevan. The Committee in its report says: "Our thinking has been in terms of introducing certain automatic working as soon as possible, to enable the subscribers to dial directly subscribers in the near-by areas. This, it is considered, would provide the greatest benefit at the lowest cost. The charges in these cases would be based on the bulk billing methods. For calls over longer distances, due to difficulties inherent in bulk billing, and to avoid

the difficulties of automatic ticketing in the earlier stages, the general approach is to have operators at the outgoing exchanges complete the calls directly using multi-link dialling facilities. The charging in these cases will be on the basis of tickets prepared by these operators."

The Committee visited Germany, Sweden, Denmark, Holland, the United Kingdom, Belgium, France and Japan to study the latest developments. It issued a questionnaire to the I.T.N.T. of the U.S.A., L.M. Ericsson of Sweden, Siemens of West Germany, Nepon Telephone Company of Japan, Philips of Holland and the present collaborators, Automatic Telephone and Electrical Company of the United Kingdom. In about two months' time, these Companies, it is expected, will suggest the most suitable type of switching system for India, which could work along with the country's existing system, and the cost of both quantitative and qualitative expansion of such a system.

Cable Factory Expansion

The State-owned Hindustan Cables Ltd will expand its production to Rs. 2 crores worth of cables a year by March. Orders for doubling its capacity to Rs. 4 crores worth of cables a year by 1964 have already been placed. The expansion plans include a copper wire drawing plant, plastic cable making plant and certain other ancillaries. The present factory is further being expanded to produce Rs. 8 crores worth of cables a year to meet all the requirements of India. Meanwhile, the Central Minister for Industries, Mr. Manubhai Shah, had been thinking of a second cable project with Swedish collaboration.

The snag is that the present agreement with British Standard Telephone and Cables Ltd, which runs for 20 years, has been working satisfactorily. The British firm will act as consultants, and India, under the agreement, can buy plant and machinery from anywhere. The agreement also provides for the U.K. Company being given the right of first refusal, in the event of any expansion of the factory or the starting of a new unit by the Government.

There is a great shortage of power cables. Hindustan Cables Ltd, which has secured an industrial licence will, it is expected, manufacture them shortly in collaboration with British Standard Telephone and Cables Ltd. There are three other units in the field, namely, Indian Cable Company, Asian Cables Ltd and Cable Corporation of India. The large consumers of power cables are Government or municipal bodies.

Bhilai Steel Expansion

A contract for the supply of equipment and materials for expanding the Bhilai steel plant from 1 million to 2.5 million tons of steel ingots a year was signed here last week. Under the contract, Russia will depute specialists for rendering technical assistance in the designing, construction, erection and commissioning of the plant. She will also provide facilities for the training of Indian engineers in her metallurgical works. The Rs. 54.2 crore contract is in accordance with the agreements of 12th September, 1959, and 12th February, 1960, between the two Governments under which Russia extended about Rs. 180 crores as credit to India for financing certain specified projects under the third plan. In addition to the supply of equipment and materials for expanding the Bhilai steel plant, the contract covers the expansion of the Rajhara iron ore mines and the limestone quarries in Nandini. These were originally developed for supplying raw materials to the Bhilai steel plant and are now being expand-

ed to meet the additional raw material requirements.

Sugar Exports

The Government of India has come to an understanding with the Indian Sugar Mills Association concerning sugar exports in 1962, it is learnt here. The Association will continue to handle exports as in the past. The Government has now decided to release 100,000 tons of sugar for export.

Agricultural Implements

The position concerning the supply of iron and steel for making agricultural implements is to be reviewed at a meeting of the representatives of the Central and State Governments and Union Territory administrations, to be held here on 15th and 16th February. The meeting will consider, among other things, the recommendations made by a special study team, which was appointed by the Central Food and Agriculture Ministry last year to go into the entire question. One of the recommendations is that a few steel re-rolling mills in different parts of the country should be earmarked for making supplies exclusively for the production of agricultural implements. Also, at the time of finalising the production programmes of the main producers, the Iron and Steel Controller should ensure that the "sections" commonly required by agriculturists are rolled regularly and in adequate quantities. "Since agriculture is considered basic to all industries," the study team has also proposed that the "core project priority", which was accorded to supplies for the agricultural quota in October 1960 but withdrawn nine months later by the Iron and Steel Controller, should now be restored.

Tecalemit Enterprise

The formation of a rupee subsidiary of Tecalemit Ltd—the well-known British lubrication engineering firm—is being discussed here by the Company's managing director, Mr. P. R. Scutt. After his talks here, Mr. Scutt will visit Calcutta, Bombay, and probably Madras and Bangalore in connection with the project. It is likely that the new enterprise will be established in Calcutta and will have Indian capital and partners. Tecalemit Ltd has been manufacturing more and more products for the Indian market through sub-contractors in India, and these now represent 60 percent of the total sales in the country.

Mr. Scutt is to approach the Government of India for a manufacturing licence covering the bulk of the Company's products. "As part of our contribution to the granting of a licence, we have undertaken to set up this new Company which will be registered in India, and the capital of which will be in rupees. A considerable proportion of the shares will be made available to Indian nationals, although we expect to be the majority shareholders for some time to come," Mr. Scutt said.

NAMES AND DATES

The following have been elected to the Committee of the Bengal Chamber of Commerce and Industry for 1962-63. President, Mr. H. Mackay Talack of Macneill and Barry Ltd; vice-president, Mr. A. R. Foster of Imperial Chemical Industries (India) Private Ltd; members, Mr. F. A. Collet of the Imperial Tobacco Co. of India Ltd, Mr. J. W. Easson of Gillanders Arbuthnot and Co. Ltd, Mr. J. V. Jardine Paterson of Jardine Henderson Ltd, Mr. H. K. S. Lindsay of the Metal Box Co. of India Ltd, Mr. A. I. Murison of James Finlay and Co. Ltd, Mr. A. D. Ogilvie of Andrew Yule and Co. Ltd, Mr. D. C. B. Pilkington of Bird and Co. (Private) Ltd, Mr. S. M. Smith of Shaw Wallace and Co. Ltd and Mr. I. G. Thomson of the Chartered Bank.

London

Modest Rise in National Output Predicted for Current Year

(FROM OUR LONDON CORRESPONDENT)

A RISE of 3 percent, or slightly more, in national output this year is predicted by the National Institute for Economic and Social Research in its *Economic Review*. In the second half of last year, national output is estimated to have fallen by about 1½ percent, partly because consumers spent less and partly because of reduced stockbuilding. But, with present demand prospects, output in the first half of the current year might recover this loss; and in the second half, it might rise by a further 1½ percent or 2 percent. As there was virtually no net increase in production in the 18 months from the middle of 1960 to the end of last year, the Institute's forecast implies what it calls "an annual growth rate of about 1½ percent in two-and-a-half years."

The forecast is based on a number of assumptions. Consumer spending in real terms might rise by only 1½ percent or 2 percent during the year, since the rate of savings which fell sharply at the end of last year should recover. Wage awards may average 4 percent or 5 percent for about half the work force, raising the wage-rate index by about 3½ percent and total disposable incomes by 4 percent or 4½ percent. Prices are expected to rise by about 1½ percent. In these circumstances, the squeeze on profit margins is expected to continue, at least in the first half of the year. In the middle of last year, the Institute points out, margins were lower than at any time in the last decade.

The investment boom is ending. The rise in public investment is not expected to offset a possible downturn in manufacturing investment towards the end of the year. On the other hand, stocks may begin to expand again before long. The most striking forecast is that exports may rise by 8 percent or 9 percent during the year (lifting total 1962 exports to about 4 percent or 5 percent above total 1961 figures). This estimate is

based on the well-known prospects of world trade, the improvement in the U.S. position and so on.

The Institute does not seem confident that the Government will in fact let up. By the end of 1962, it says, the margin of spare plant capacity in the economy may be as ample as it is now and unemployment may be higher. Similarly, it describes the motor-car industry's expectation of a 10 percent rise in home sales this year as "much too optimistic unless credit restrictions are relaxed." This suggests that the Government might keep credit tight, and presumably continue other restrictions—in spite of a substantial rise in exports. It would mean that official policy is aiming deliberately at a substantially higher unemployment rate as part of the effort to moderate wage increases.

Price of Faster Growth

Once again, the Institute argues the case for faster economic growth. It points out that Britain no longer has a higher real income a head than France or West Germany. The Chancellor's statement suggesting that personal income a head should not rise more than 2½ percent this year implies a rate of growth of about 3 percent. "If Britain's growth is not accelerated she will probably be some way down the scale of European countries by the end of the decade." The real question is whether the U.K. can find some way of expanding more rapidly without unbalancing her external accounts. The Institute has now come round to the view that this cannot be done simply by expansionist Government policies. Faster growth depends on a large rise in exports and this will only happen if British goods are strongly competitive. Thus competitiveness is an essential element in growth, and the Institute (still looking at the economy as if out of a window in White-

hall) states that this element is "amenable to policy."

The important step, the writers think, is to get on to a higher rate of growth in the first place; after that, it will become easier to maintain the pace. They feel that the Government's attempt to introduce a wages policy and a planning mechanism is on the right lines, and that a third policy should be devoted to promoting higher investment and higher savings. But the Institute still hankers after short cuts. "There is a good deal to be said for devaluing (the currency) while there is spare capacity and when the immediate demand prospects overseas are fairly favourable."

After the Pay Pause

The Government's effort to produce a policy to follow the end of the "pay pause" has taken the form of a White Paper (*Incomes Policy: The Next Step*) released last week. It deals mainly with wages and salaries, and tries to persuade employers and unions that they must adopt an entirely new set of criteria for wage negotiations. The T.U.C. gave it the chilliest possible reception right away. Mr. Selwyn Lloyd, faced by the outright refusal of the unions to have anything to do with his intermediate phase of wage restraint, has been driven back to exhortation—but it has little chance of success. The basic argument is that to keep the rate of growth of incomes within the long-term rate of growth in national production, industry must give absolute priority to "general economic considerations," instead of relying on traditional criteria for wage-fixing—cost of living, productivity or profits in the particular industry, labour shortage, or comparability with earnings elsewhere. The reference in the White Paper to the need for "continued restraint in profits and dividends" appears only as a brief postscript to the wage policy. The Government takes the view that it has treated profits severely enough to satisfy any union demand for fairness. Corrective fiscal action is threatened if aggregate profits rise excessively.

Gold Reserves Rise

The gain of £33 million in the gold reserves during January is as good as was expected. This is a strong season for commercial receipts and London has been attracting short-term money again. Not only did the Continental banks rebuild their balances here, after reducing them as usual before the end of the year, but there was a certain amount of U.S. and other investments mainly in gilt-edged. The rise of £33 million in the reserves compares with a fall of £85 million in December, but £67 million of that drop was due to the annual service on the North American loans. The real December outflow of £18 million has thus been more than made good.

Sterling has been in demand since the turn of the year. The rate would have risen a good deal more lately if the Bank of England had not intervened to hold it down. Too much must not be made of this glow of health, because it is partly seasonal and partly the after-effect of the shot in the arm the U.K. got from the I.M.F. last August. A big debt still

CAPITAL, 15th February, 1962.

remains to be paid back. Again, a cut in Bank rate can hardly be delayed much longer and when interest rates drop, London will become less attractive for foreign money.

Retail Sales Recovery

After the steady fall between August and November, retail sales recovered sharply in December. Seasonally adjusted, the index of the value of sales (1957 equals 100) rose by nearly four points to the record level of 118. The previous peak of 117 was reached in July and August. Higher prices accounted for part of the value increases. But the seasonally adjusted index of the volume of sales was also substantially higher at 112, against 109 in November. The Board of Trade, however, is cautious in its interpretation of the December recovery. It states that it is not yet certain that the recovery represents a genuine change in the underlying trend. In part, the December upsurge may represent a reaction from the slower spending during the autumn which followed the increase in trading in the summer. Food and non-food shops shared in the recovery. The volume of sales in the non-food shops showed the larger percentage increase. Within this group, each of the main types of shop—clothing and footwear, durable goods, showed a rise compared with November. The increase in the sales by durable goods shops, although small and probably not significant in view of the large month-to-month fluctuations in trading, was the first since the sharp decline from the peak levels reached last July.

Hire-purchase Debt Down

Hire-purchase debt fell by £4 million in December to £927 million, from £931 million at the end of November. This change was the outcome of a rise in the debt to household goods shops and a sharper fall in the amount due to finance houses. For household goods shops, the amount outstanding rose by £6 million in December to £309 million. The amount owing to finance houses fell by £10 million to £618 million. In both cases, the change on the month was greater than could have been expected from normal seasonal influences. An increase in business by household goods shops is usual in December. But the latest new business figure is 3 percent higher than that for December 1960.

At the finance houses, new business in December fell by nearly one-quarter compared with December 1960. The biggest fall in new credit given was in commercial vehicles, down by 30 percent, and for motor-cycles. New third down on the month. New credit for used cars was more than 10 percent down, but for new cars rose by nearly one-fifth. A year earlier, on 31st December, 1960, the total hire-purchase debt was £935 million.

Hire-purchase activity in the motor-vehicle trade recovered last month from the four-year "low" reached in December, but was still about 25 percent below the level of a year ago. According to *Hire-Purchase Information*, the total number of contracts in the month was 75,876, compared with 64,458 in December and 101,504 in January 1961. The figure for new cars showed up well at 10,257, against 7,249 in December and 9,861 in January last year. The total for used cars, at 37,867, was also up on December, but fell short of the January 1961 figure by nearly 16,000. Contracts for commercial vehicles showed a broadly similar pattern, but the figures for motor cycles, although slightly better than in December, were well down on a year ago. Contracts for new machines totalled 3,192, against 4,785 in January 1961, and for used machines 6,980, against 11,677.

JANUARY GUNNY STOCK FIGURES CREATE MORE OPTIMISM

THE publication last week of the I.J.M.A. jute goods stock figures for January 1962 has prompted many questions about the outlook for the jute industry. Are there any grounds for bullishness, and if so, what are they? It has been suggested that the present is a period when demand is expanding without everybody recognising it. Certainly, no one in the industry or in the Government would have suggested six months ago that, if the mills were to work all their machinery 48 hours a week, they would be able to find an outlet for their production, whatever the price. In fact, it was thought in some quarters that, if the mills were to adopt such a policy, they would be compelled to restrict production again because of their inability to store all the additional goods, and perhaps also because of financial losses.

Actual Experience

The actual experience has been entirely different and the unforeseen has happened, as is proverbially the case in the jute trade. The earlier hand-to-mouth buying policy in world markets—particularly in the U.S.A.—has led to an enhanced demand for jute goods now. Stocks, instead of increasing to unmanageable proportions, are less than they were six months ago. They are little more than they were in September 1961, when the statistics reflected the effects of restricted output by block closures with a large percentage of machinery entirely idle.

Nor is there any evidence that the low level of stocks in Calcutta is offset by bigger stocks abroad, for the stocks in the U.S.A. bore as small a ratio at the end of 1961 to the monthly consumption as in previous years. Furthermore, burlap stocks in the U.S.A. at the end of 1961 were the lowest for that period since 1958. There are grounds for optimism, then, about the outlook for the future. According to reliable sources, the I.J.M.A. mills have, on average, sufficient raw jute to last them up to the end of June or the beginning of July. So their jute position is secure, and there can be no question of a shortage between seasons.

Purchase Quotas

In spite of the healthy fibre stocks held by member-mills of the I.J.M.A., the quota sub-committee of the Association continues to issue sizable quotas for purchase each week. During the current week, the total for purchase is about 700,000 maunds, against a reported all-India import figure of about 500,000 maunds. It is mainly because of the mills' support for the minimum quota scheme that raw jute prices have not collapsed. Fibre rates in many cases are now quoted above the minimum prices, particularly for Tossa. During the past week, a rumour gained ground in the market which also had a bullish influence. This was to the effect that the official estimate of the crop had been placed at 7.2 million bales. There has been no confirmation of the rumour whatsoever, but as the figure suggested is very much lower than that generally accepted, the market has reacted speedily.

Upcountry markets in India are unchanged. The main fibre in demand is still Tossa, and business in this category is generally at 50nP or Re. 1 above the minimum rates. Over the past few weeks, all grades of mesta have been virtually neglected by the mills, and sellers are now very keen for business. To achieve this, they have resorted to combined sales of

mesta and Tossa, so that balers requiring Tossa have to take almost an equal quantity of mesta at the same time. It is now very nearly impossible to buy Tossa alone, particularly the Middle grade. Several large stockists of jute have recently become reserved and in some cases hold very bullish ideas.

The Pakistani markets are steady. This is mainly a reaction from the low levels recently recorded, as very little business has been reported at the higher rates. Pakistani cuttings in particular are very steady, and business has been recorded there for shipment to Calcutta, the landed price of which works out to between Rs. 100 and Rs. 102 a bale. There is some interest in Calcutta for cuttings against revaluated licences and cotton bagging licences.

Marketing Co-operative

It is reported that a co-operative society for marketing jute has recently been formed, operating through the Jute Commissioner's office. Mills have been approached by the Jute Commissioner to give support to this society. They have been asked to buy jute from it direct, and representatives of that office have been calling on mills with this in view. Many mills have purchased small quantities, but it is understood that the assortments offered, and the quality of the jute, are not comparable with that which mills can obtain through their normal sources. Many feel that the Jute Commissioner's office should not be used in ventures of this nature. It is to be hoped that no discrimination will be made when that office is considering applications for, or revalidation of, import licences from mills which have not purchased jute from the society.

I.J.M.A. Gunny Stocks

Total stocks of jute goods at the end of January, as reported to the I.J.M.A. by its members, amounted to 60,200 tonnes. This was 4,800 tonnes more than at the end of December 1961. Hessian stocks increased by 500 tonnes to 16,600 tonnes (27.6 percent), sacking by 1,600 tonnes to 30,400 tonnes (50.5 percent), and "other goods" by 2,500 tonnes to 13,200 tonnes (21.9 percent). In January 1961, total stocks were 54,700 tonnes, 33.7 percent being Hessians, 54.2 percent sacking and 12.1 percent "other goods". The percentage of "other goods" in January 1962 was a new high for the group.

THE JUTE MARKETS

Manufactured Goods: The jute goods market was dominated by speculative activity, and violent fluctuations were recorded in both sections. Last Thursday, prices showed an improvement in heavy goods, which rose by Rs. 1.25 in the goods, which rose by Rs. 122.50, near position to open at Rs. 32. Hessians were unchanged at Rs. 32. Friday was a holiday, and on Saturday, both sections showed a marked recovery as there had been only a small rise in the industry's stocks of small rise in the industry's stocks of jute goods during January 1962. Sacking jumped up to Rs. 126.50 and 40in. 100z. Hessians to Rs. 52.25. The market became very excited, aided by some heavy local covering. Conditions eased slightly over the week-end, and on Monday, rates in both end, and on Tuesday only small fluctuations took place.

Opening quotations on Wednesday morning were as follows:

	Feb.	March	Apr.-June	July-Sept.
40in. 7½oz.	41.75	30.25	37.00	35.75
40in. 8oz.	45.25	42.25	39.75	38.50
40in. 100z.	53.15	51.00	48.75	47.50
B Twills	125.50	123.34	121.25	120.50
Heavy Ceess (Plain)	125.00	124.00	121.25	120.50
A Twills	135.00	133.00	145.50	145.00
Liverpools	145.50	145.00	145.00	137.50
Cornacks	131.00	127.25	125.00	123.00

Raw Jute: In sympathy with the finished goods market, the fibre market showed some improvement at the opening, and only the lower grades of mesta were indicated at below the minimum price. Upcountry markets ruled steady, and Tossa agencies in particular reported business above the minimum rates. A quota of about 700,000 maunds was issued during the week, and mills bought steadily every day. Tossa continued to be in good demand, and latterly this fibre was purchased in conjunction with mesta, as this was the only way in which buyers could obtain any quantities of Tossa. Conflicting reports about the size of the current crop caused many sellers to become reserved, and the continued steadiness of the goods market helped stabilise jute prices. Imports in upcountry markets showed signs of falling off, which was another bullish factor.

Opening quotations on Wednesday morning were as follows:

THE FOREIGN JUTE MARKETS

LABOUR TROUBLES END

(FROM OUR DUNDEE CORRESPONDENT)

THE labour troubles in Dundee are at last over. At a prolonged meeting of the Jute Wages Council, complete agreement was reached concerning the wage increases, which are to come into effect from 2nd April next. A rise was granted to the lowest-paid workers in the industry. Men on the minimum rates of pay will have their earnings raised from £7 17s 9d to £8 5s 3d and women from £5 7s 5d to £5 13s 5d. It is three months since unrest in the Dundee jute industry started, but due to the recent settlement, work in all establishments will be carried on satisfactorily from now on. Some amount of damage might have been done to the local industry since some customers went over to the Continent for getting supplies of years and cloth which could not be bought from Dundee in time.

The raw jute market in Pakistan is being maintained at an unchanged level, but shippers are still eager to do business at well under the E.P.C.

levels, amounting to as much as £10 a ton in some cases. A fair business is reported to have been done with the Continental dealers during the past few days. Meanwhile, Mill Lightnings have been sold, for instance, down to £117 a ton, (the E.P.C. rate £127 10s), with Mill Hearts down to £93 (£99 10s) and Grade Hearts £81 (£85 10s) for February-March shipment, c.i.f. U.K.-Continent. Grade Tossa-2/3 is quoted at £137 (the E.P.C. rate £138 15s), fours at £120 (£125 10s) and Continental Tossa-2/3 £100 (£104 10s), same shipment. Spinners in Dundee have shown little interest in buying fibre, but the steadier tone in the market should lead to some buying. Spinners and manufacturers are busy enough meantime, and the settlement of the labour dispute means that mills and factories will be able to wipe out the back-log.

Calcutta goods were dearer last week. Prices rose to 79s 9d for 40in. 100z. and 63s for 7½oz. February, 76s 3d and 58s 6d March, 73s 3d and 55s April-June and 71s 9d and 53s 6d July-September, with B Twills at 188s, 188s, 184s 3d and 183s 6d for the respective positions of shipment, all f.o.b. Calcutta. The prices for jute yarns and cloth remain unchanged but firm.

I.J.M.A. PRODUCTION FIGURES FOR JANUARY

The Indian Jute Mills Association reports the total production of jute goods for January as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
3,459 metric tons	(3,464 tons)
1,05.66 thousand metres	(1,15.6 lakh yds.)
89.7 lakh nos.	
(b) Sacking	
46,446 metric tons	(45,712 tons)
10,12.23 thousand metres	(11,07.0 lakh yds.)
5,37.7 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
35,469 metric tons	(34,909 tons)
12,30.49 thousand metres	(13,45.7 lakh yds.)
(b) Sacking	
568 metric tons	(559 tons)
11.07 thousand metres	(12.1 lakh yds.)
3. Other Manufactures	
10,745 metric tons	(10,375 tons)
4. Total Production	
(All kinds)	
96,687 metric tons	(95,159 tons)
Summary	
	(600 metres and 60,000 yds.)
	Jan. '62 Dec. '61 Jan. '61
Hessian	13,36.15 12,77.75 10,69.32
	(14.61) (13.97) (11.69)
Sacking	10,23.30 10,53.01 10,11.98
	(11.19) (11.52) (11.07)

* Assuming Sundays as holidays, the number of working hours is the same. But due to staggering of holidays some mills worked longer hours in December than in January. N.B.—These statistics are based on replies received and represent all members of the Association and Gagalbhai with estimates for two non-member mills. The figures in brackets are in British units.

overseas market, it has certainly indicated the feeling among dealers that the bottom of the market has been reached. Arrivals from upcountry centres continue to be small with even fewer buyers due to the shortage of finance. Tossa prices continue to be more attractive to primary sellers, and the proportion coming in is considerably larger than white. The prices converted to c.i.f., Continent, at which one can buy a limited quantity, are well below hedge market parities. The approximate quotations are in the region of £93 for Export Lightnings and £75 for Export Hearts. Tossas are also available cheaply at about £96 for outport Tossa 2/3. Some balers with a certain amount of finance are buying slowly at these prices. In fact, it was the increased activity of one of the larger balers in Narayanganj which created the present slightly firmer conditions in the market. The steadiness of cuttings caused this grade to

be the first to react. So cuttings, which were freely available at Rs. 75, are now scarce at Rs. 80 or Rs. 82. There has also been some business in Export Lightnings and Export Hearts at about the overseas market rates.

In the overseas market, there are many sellers at prices well below the E.P.C. rates but with no buyers. There is no doubt that the consuming markets need to purchase increasing quantities. But encouraged by cheap offers, they are waiting for a cut in the E.P.C. prices. This is, after all, a reasonable expectation. Unfortunately, it is not known if this would happen. The prices of Export Hearts, outport Tossa 4 and S.M.R., are unlikely to be reduced, since to change the minimum prices requires the cutting of so much red tape that the action would only take place after a very long time. If the E.P.C. rates are to reflect the prices in the overseas market, it is necessary

to reduce the rates for Export Lightnings and outport Tossa 2/3s to the minimum. On this, it would appear, the Government and the P.J.A. Committee are unable to agree. But renewed activity in the local market will encourage the authorities to hang on a bit longer hoping that the market will rise to the last E.P.C. levels. If the E.P.C. rates had been raised and lowered regularly with the fluctuations in the market, it is unlikely that the present situation would have arisen or that buyers would have been encouraged to wait for even lower prices.

Cuttings are at present being quoted—especially for shipments to America—below the E.P.C. prices. With Cuba no longer selling sugar to the U.S.A., the supply of Cuban sugar bags has dried up. So the U.S.A. must become a regular buyer of large quantities of cuttings to make gunny bags. Furthermore,

as Pakistani cuttings remain cheaper than Indian jute, it is quite likely that after the election in India, more licences will be given to Indian buyers, which should strengthen the market of this grade in Pakistan.

Very soon the land will be prepared for the sowing of the new crop. Because of the present level of prices, growers will be inclined to sow less than last year. There is still time, however, for prices to increase sufficiently to induce growers to sow a larger crop. Tours upcountry have led to reports that the crop is 7.5 million bales and that as much as 40 percent still remains to be marketed. This latter report is supplemented by a view that the growers will keep about 10 percent in hand as a carry-over. Earlier, there were reports that the crop is between 7.5 million or 7 million bales and that about 30 percent of the crop remains still to be disposed of.

We raise our hats to them!

We of Remington Rand today raise our hats to the Remington service mechanics of the early 1900's. When called out on a job they were often away from home for months at a time. Transportation was crude and when journeying into the interior by bullock cart they had to face the dangers and hazards of jungle and desert.

Not so today! Remington Rand has been continually growing through the years, and there are now 30 fully staffed branches strategically placed throughout India. This complex organi-

sation has been set up to ensure that a Remington Rand service engineer is always available at short notice, no matter how remote the area.

Our motto — PROGRESS WITH THE TIMES! Our factory at Howrah is the largest of its kind in Asia. As India grows commercially and industrially, the demand for typewriters and other office equipment grows correspondingly. Negotiations are under way to double our present output so that we may contribute further to the prosperity of the New India.

Plantation Topics

RELIEF FOR RUBBER ESTATE WORKERS RECOMMENDED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE wage board for the rubber planting industry has recommended an interim relief of 15p in the daily wages of rubber estate workers. This is a unanimous recommendation of the board. Now it is for the Central and State Governments to take steps for implementing the recommendation. Meanwhile, the wage revision in Kerala has become complicated, since the State Government has taken the preliminary steps to revise the existing minimum wages in plantations. The labour unions feel that if the State Government goes ahead with its proposal, workers will get more than 15p as recommended by the wage board. So they are hesitant in accepting the recommendation. Although the State Government has not yet said anything publicly, there are indications that it is not keen on going ahead with its original proposal to revise the wages by exercising its powers under the Minimum Wages Act in view of the interim award of the wage board. If it goes ahead, it would be deemed to be an attempt to undermine the wage board. Meanwhile, there are indications of a softening in the attitude of labour. According to available reports, they are not likely to resort to direct action to force the State Government to honour its earlier commitment.

Gratuity for Workers

According to an agreement signed last week, plantation labour in Kerala will get gratuity at the rate of 15 days' wages for every year of completed service. The minimum period of service required to qualify a worker to claim gratuity from his employer is ten years. Those who are incapacitated through accidents or diseases need not put in the ten years' service to get gratuity. In their case, one year's service would be sufficient. The agreement is the result of prolonged negotiations. It will benefit nearly 200,000 workers.

Loans for Small Holders

The Rubber Board has announced the details of its scheme to give interest-free loans from its pool fund to small holders for new planting of rubber. Under this scheme—just approved by the Government of India—only small holders, as defined in the Rubber Act, who have registered their holdings with the Board will be eligible for the loan. Such loans will be granted up to a maximum of 2,000 acres in any one year and will be limited to Rs. 750 an acre for new planting to raise the existing holdings to 15 acres in a contiguous plot with a view to making them economic holdings. The loan will be distributed in six annual instalments. It will be repayable in instalments from the tenth year of planting.

Rubber Growing in Andamans

It appears that the Rubber Board has at last become active concerning its proposal to start rubber cultivation in the Andaman and Nicobar Islands. It is sending a team of officials there for preparatory work to start a 2,000-acre rubber plantation. Mr. K. M. Philip, chairman of the Indian Rubber Industries Association, says that it would not be possible to run plantations on a profitable basis in small plots of 20 or 50 acres, so he pleads for larger holdings. Mr. Philip thinks that private enterprise will be able to exploit the opportunities which the Andamans offer. His views are backed by experience in rubber planting in south

India where rubber plantations range in size from a fraction of an acre to 3,000 acres. During the past ten years, the number of small holders has increased by 324 percent. The area held by them has increased much faster than that under big estates. It cannot be disputed that larger the size of an estate, the better will be the chances for introducing improved methods of cultivation, estate operation and management.

The future of the rubber planting industry depends on its capacity to meet the competition from synthetic rubber in the matter of price. It is only through cutting down the cost of production and raising the yield of an acre that this challenge from synthetic rubber can be met. There is also the need for raising production quickly to make India self-sufficient in rubber. The internal consumption of natural rubber in 1961-62 will amount to 62,000 tons, but the indigenous output will be only about 27,000 tons, necessitating the import of 35,000 tons. It is time the authorities thought seriously whether they should approach the new planting programmes both in the Andamans and in Kerala, where the State Government is sponsoring a 200,000-acre rubber planting scheme as part of its third plan, with a doctrinaire attitude for encouraging the small holder or with the sole objective of placing them on a scientific basis and making them bear early fruit. India's present requirements demand the recourse to the latter which is more sensible under the prevailing circumstances. The experience with the Kerala scheme shows beyond doubt that unless greater preference is given to larger holdings and steps are taken to associate experienced planting companies with it, it will inevitably fail. The progress achieved so far by patronising the small holder is far from satisfactory.

Recovery in Cashewnuts

There has been a mild recovery in the cashew market during the past few days. This is attributed to the revival of orders from Russia and some other communist countries. The latter have recently bought about 2,000 tons of kernels for April-May shipment. Kernel prices have improved by 2 (U.S.) cents to 44 (U.S.) cents a lb in the course of the past few days. America which continues to be the largest buyer of Indian cashewnuts is, however, keeping away from the market, probably on account of the disparity between the prices of cashewnuts and other edible nuts like almonds. Russia's willingness to pay more and buy substantial quantities at the enhanced rates is now a matter of comment in the market. Some exporters say that the Russian purchases are not fully consumed in that country and part of the Indian cashew kernels bought on rupee account is occasionally resold at considerable discount on the purchase price.

PROSPECTS FOR TEA COMPANIES LOWER PROFITS FORECAST

(BY A SPECIAL CORRESPONDENT)

THE current season will probably show a fall in total proceeds from tea sold in Calcutta of between 5

percent and 10 percent. This does not sound too serious until one realises that 10 percent of the gross receipts may represent 50 percent of the profit margin. That is serious, especially for companies with estates in Cachar and Terai as well as some Darjeeling gardens with poor yields. Best Assam properties should show moderate profits. The Darjeeling prices this year are on average Rs. 6.49 a kilogram, against Rs. 6.89 a kilogram last year. Doars teas may finish around Rs. 4.30 a kilogram or less against 4.90 a kilogram. The difference of 60p will clearly affect the profit margin, so the dividends might have to be reduced. The immediate outlook for tea producers is, therefore, somewhat obscure, because larger yields should result in cheaper costs.

Tariff Preferences in E.C.M.

The U.K. is reported to be working for a free trade area with the E.C.M. and its associates. This sounds encouraging. Britain has urged that tariff preferences should be considered separately for each product. The recent meeting of the E.C.M. also considered the creation of an effective international price stabilisation scheme. For this purpose, coffee was mentioned, but why not tea? The indications, therefore, point to a difficult year followed by a period of expanding world markets for tea. Although the members of the E.C.M. are interested in manufacturing their own tea for consumption within Europe, it will still take four to six years before they can overload the new European markets.

Further evidence that the European Common Market countries are becoming interested in tea comes from Ceylon. The Government of Ceylon is reported to have signed an agreement with a German firm to erect a factory to produce instant tea. This is interesting since compressed packets and powders have been under experiment since 1905 but, in the past, these products rarely tasted like good tea. Experiments are now being carried on in India on these lines.

Raising Exports

Very little reliable information about export promotion is available from New Delhi these days, but it seems safe to say that new moves are being made to boost exports. Figures recently published clearly indicated that as far as tea is concerned, the dollar markets should show much more favourable results. Ceylon has made substantial progress at India's expense, and tea consumption in North America is still small. There is great scope for expanding that market, but the most essential pre-requisite for Indian teas is that they must be made competitive. The solution to this problem, therefore, depends on the Central Government. A rebate of excise duty on all teas shipped to North America would probably be opportune. The reward would be about Rs. 15 crores to Rs. 20 crores more of hard currency a year. This extra foreign currency would help to import the much-needed replacement parts for tea machinery.

Prospects for Cachar Gardens

The chairman of the Indian Tea Association, after touring Assam and visiting the Doars, was recently reported from Silchar as saying that even Cachar tea could contribute more to India's economy if the Central and Assam Governments would help. The tea industry in Cachar has special problems and difficulties which do not exist in other areas of Assam. But in spite of these, it produces over 40 million lbs of tea annually, employs 80,000 workers, earns Rs. 6 crores a year in foreign exchange and gives to the Governments every year more than Rs. 1 crore in taxes. A survey now being conducted by the Association has shown that in three out of the

last five years, tea gardens in the district as a whole had worked at a loss. This state of affairs cannot continue indefinitely, but it shows how essential it is to grant reliefs to tea estates in Cachar. The excise duty for Cachar gardens was doubled by the Central Government after a year in which the crop was reduced by 25 percent because of the drought. Besides, the State Government unilaterally decided to increase last year the district's wages when the Wage Board was meeting to decide this point.

Need for Relief

After a perusal of the chairman's recent addresses to planters, there can be no doubt that the industry is fully alive to its dangers. After India's experience with jute and sugar and the obvious fact that Indian tea has lost dollar and sterling markets to the advantage of Ceylon, the importance of granting relief to the industry cannot be ignored. Meanwhile, the goose that lays the golden eggs is dying.

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for January 1962:

Upper Assam: Weather cold; rain-fall has been deficient in some parts; immediate prospects fair; the season will probably be an early one.

Central Assam: Temperature continues abnormally low; useful rain has fallen recently; prospects fair.

Lower Assam: Weather cold; very dry in Nowgong; immediate prospects fair.

North Cachar: Weather abnormally cold; rain badly wanted.

South Cachar: Weather seasonable; dry weather and red spider blight prevalent in Hailakandi.

Eastern Doors: Weather abnormally cold in Kalchini where outturn poor; the season is closed.

Central Doars: Weather seasonable.

Western Doars: Weather abnormally cold in Nagrakata; good rain has fallen in Dam Dim where the prospects are now brighter.

Darjeeling: Weather seasonable.

Terai: Weather colder than usual; red spider present; the season has closed.

COCHIN TEA SALES

At Dust Sale 6, 275,000 kilograms of tea were on offer. There was a good demand. Plain and low mediums were 10p to 20p easier. Mediums and best liquorings were steady while unorthodox grades were irregular.

At Sale No. 7, 376,000 kilograms of tea were on offer. There was a strong general demand. Prices were fully firm to dearer, except for plain and medium broken which were irregularly easier.

"CAPITAL" INDEX OF INDIAN INDUSTRIAL ACTIVITY**

The Capital Index of Industrial Activity (Base: 1953) has now been brought up to May 1961. Compared with the preceding month, there were increases in tea 35.31 points, yarn 1.21 points, cloth 2.29 points, cement 7.40 points, coal 1.98 points, pig iron 4.39 points, paper 10.94 points, motor-cars 2.07 points, bicycles 23.13 points, electricity 10.25 points and railway ton-miles 14.24 points, while decreases occurred in sugar 188.77 points, jute 1.25 points, finished steel 6.10 points and tyres 19.54 points.

Combining all the factors, the Capital Index of Indian Industrial Activity increased by 0.3 points during May 1961.

Calcutta Markets

BETTER DEMAND AT TEA EXPORT SALE

DUST PRICES IRREGULAR

AT Sale No. 35, held on 12th and 14th February, there was a better general demand for the 73,761 chests on offer at the Export auction, with buyers following quality closely. There was less enquiry for orthodox Fannings which were a strong feature in recent weeks. Plain broken were up to 10nP easier with similar Fannings an irregular feature. Cleanly sorted grades in this category sold well but the poorer sorts were easier. Medium B.O.P.s received more support than in the past week and were dearer with quality. Good orthodox Assam Fannings were generally irregular and were often easier by up to 20nP and sometimes more as the sale progressed. Best C.T.C. broken were a strong feature and were generally dearer but similar Fannings were up to 15nP easier except for a few selected autumnal grades which were dearer. Medium C.T.C.s were 15nP to 20nP easier. Secondary grades sold well at 10nP below last rates. Legg-cut teas were well supported. Darjeelings received a selective enquiry, and there were a number of withdrawals. Whole leaf teas were in demand, the cheaper varieties being firm to dearer. Tips sold well.

Quotations

	1962	1961
Clean Plain Pekoe	4.10 to 4.30	5.20 to 5.50
Plain B.P.	3.60 to 3.90	4.60 to 4.70
Plain Fannings	3.90 to 4.40	4.80 to 4.90
Medium Assam C.T.C.	5.20 to 5.40	4.70 to 4.90
B.P.	5.10 to 5.40	4.90 to 5.10
Best Assam C.T.C.	5.80 to 6.40	5.80 to 6.20

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

Year of Issue	NAMES	Amount Issued In 100's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 14-2-62 Rs.	A year ago Rs.	Year of Issue	NAMES	Amount Issued In 100's Rs.	Rate per cent	Paid-up per Share Rs.	Market Quotations 14-2-62 Rs.	A year ago Rs.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

INDUSTRIAL PROBLEMS OF EASTERN INDIA

THE speech delivered by the President of the Bengal Chamber, Mr. N. Stenhouse, at the annual general meeting of that body last Friday, reiterated many of the points raised in his address to Assocham last December. That is not surprising; the problems which affect industry throughout India are all to be found in concentrated form in the highly industrialised eastern region. Mr. Stenhouse referred to them as problems of development. He was only partially right. So many of the difficulties afflicting this area at the moment could be cured if only the Central and State Governments were to pay the necessary attention to them. There is no contradicting the fact that progress cannot be attained without bottlenecks, shortages and complications developing. But it is not to be denied either that government has too frequently been unwilling to do anything about these when they have been pointed out. The result is a state of chaos which it is all too easy to dismiss as an inevitable feature of progress, even though it is clearly slowing down the rate of economic growth. That is the stage which has been reached in eastern India. The situation now calls for careful and sympathetic official attention. The proposal made by Mr. Stenhouse for a three year plan, to follow the current third five year plan, and designed to correct all the anomalies which have arisen so far, will probably not recommend itself to the Government; such schemes lack electoral glamour. Besides, something ought to be done now if the third plan's targets are to be even approximately attained.

A more acceptable proposition, now that the election is practically over, might be to redraft the third plan itself. There is a good precedent for this; the second plan had to be drastically revised to match the availability of foreign exchange. And when the third plan was introduced, it was promised that it would be reviewed annually in the light of experience. Now the time has come to link action with intention and redraw the plan so as to correct the mistakes made in neglecting transport and electric power, to mention only the two most important factors. The consolation, if one is needed, is that the existing third plan targets will not be reached anyway due to the present maladjustments, so nothing is really being sacrificed. If, however, the necessary adjustments can be made to the plan, then there is every reason to hope that an accelerated rate of progress will be achieved by the beginning of the fourth plan, and before the next general election. It is possible that the Central Government's mind is already working roughly on these lines. If it is not, then the proposition will certainly repay careful consideration.

Transport and power are not, of course, the only items on which government policy on matters concerning this area requires adjustment, as Mr. Stenhouse indicated. The problems of the Calcutta port are an important case in point. It is not yet certain whether the new channels through the Hooghly bars will be dredged in time to prevent a complete close-down for a limited period, or whether the worst that will happen will be a further reduction in draughts. The margin must in any case be a narrow one; the economic cost

will, of course, be considerable and could have been avoided. It is reassuring that the Government is reported to have decided to go ahead with the Farakka barrage without further delay. But decision is not necessarily implementation; and meanwhile the dangers of a complete silting of the Hooghly continue. The port is just another example of the lack of enthusiasm with which the problems of the eastern region are regarded in New Delhi, and the lack of official competence with which they are handled on the spot. Yet the consequences for India's export trade, as well as the development of the whole industrial concentration in this area, could possibly be disastrous.

The same conclusions would roughly apply to the subject of coal prices. Here there is no indictment of neglect, merely the absence of government foresight in demanding that the coal industry subsidise the rest of the economy. The rate of increase of coal production is falling, and a coal crisis, more severe than the one which featured the closing years of the second plan, is now virtually unavoidable. It is possible that the shortage of transport will in any case impose a ceiling on coal output expansion, and that therefore the question of prices will not be the primary limiting factor. If this is what is in the Government's mind, then it would do well to ask itself the question how the industry is to raise the capital required for its expansion under present circumstances. Already there is a danger that a proportion of the World Bank foreign exchange guarantee will be wasted because the coal companies, or most of them, are unable to find the matching finance. For the Government itself to find the funds would simply be to shift part of the burden of subsidising the economy from the shoulders of the coal industry to those of the taxpayers. The overall result would still be a distortion in the economy on much

the same lines as the one which, as Mr. Stenhouse pointed out, is at present taking place in industrial location. If distortion of the economy is the deliberate aim of policy however, then there is nothing further to be said.

The tax problems of the tea industry have made remarkably little impression on either the Central or the State Governments for a number of years. In consequence, foreign competition has increased and the growth of the industry's exports has been retarded. It would require an extreme optimist to predict that a sympathetic official response is any nearer at the present time than it has been for the past six years or so. Why, is a question which is difficult to answer unless it is the deliberate intention to forfeit the industry's export future to its current revenue-yielding capabilities. Perhaps only in the case of the jute industry is government policy not the primary limiting factor at the present time. Jute's main problem remains its raw material, but the future need for more rationalisation and modernisation must not be minimised. Here the Government's intentions are again the main factors in the situation.

In a planned economy such as India's, it is inevitable that any catalogue of the problems facing industry should read like a criticism of government policy. For this the various Governments have only themselves to blame. But the normal exasperation which might be felt in official circles at such an approach should not prevent the Governments from accepting full responsibility for doing what is necessary to put matters right. The present situation in the eastern region is not merely uncomfortable for industry, it is setting a real limit to expansion, and one which is no more welcome for being largely avoidable. Why the problems of this area always appear so persistent and intractable would itself make an interesting study. But the fact that they are can be deduced from the number of times the same ones recur in, among other things, the speeches of successive Presidents of the Bengal Chamber. The problems of this area and the many industries it contains continue to call for considerably more attention in New Delhi than they are getting, or appear likely to get in the foreseeable future.

BANK DEPOSIT RATES

A VIGOROUS controversy has been going on for some months now about whether, and in what way, the inter-bank agreement on the interest rates to be paid on deposits should be revised. A decision on the question was expected from the meeting of the Indian Banks Association held in Bombay last Friday. But the decision has for the time being been deferred. According to a Press note issued by the Association, a committee has been "appointed to consider a revision of the agreement", and it is expected to report back by the end of April. Meanwhile, the medium banks, who are pressing strongly for the revision, have the satisfaction of knowing that they have won the first round of a rather prolonged and somewhat bitter battle. This is in the sense that the Association has now publicly conceded that "in view of the changed circumstances since the formation of the agreement, some revision of the agreement is called for." At first sight, the appointment of the committee might appear to be a Parkinsonian device aimed at soothing frayed tempers before an approaching crisis. But in this particular case it

represents a justifiable, if temporary, compromise which should satisfy all sides. The crisis was incipient in the fact that the period of the notice which medium banks gave for withdrawing from the agreement is about to expire. To avert the precipitate withdrawal, the big banks have conceded the medium ones' demand "in principle". The latter, in turn, have been saved the embarrassment of actually withdrawing; their satisfaction is reinforced by the thought that, if they had withdrawn, the intervention of the Reserve Bank might have been invited. The small banks, in their turn, might be gratified that they are not to be reduced to the status of silent spectators in the fight between the bigger bulls; they too are to be represented on the new committee.

Appointing a committee, however, is one thing; solving the problem quite another—and it remains to be seen what degree of unanimity the new body will achieve. As matters stand, the views of the banks vary widely, and perhaps the only feature common to them all is that in each case the view offered is determined by the self-interest of the

particular bank which offers it. A great deal of jugglery is, therefore, going on in suggesting the right differentials for deposit rates between the various sizes of banks; and in suggesting the right basis for classifying "medium" banks. Under the existing agreement, which was introduced in August 1958 and which has been modified in minor particulars from time to time, no distinction is made between the medium and the big banks. Both are lumped together in the category of those having deposits of over Rs. 25 crores each, the small banks being the ones which have deposits of less than Rs. 25 crores each. The agreement prescribes a deposit rate differential of $\frac{1}{4}$ percent between the two categories; in other words, the small banks are allowed to pay $\frac{1}{4}$ percent more interest on the deposits they get than what their bigger competitors pay.

Various modifications to the agreement have now been suggested by different banks. For the purposes of classification by size, it is agreed that the category of small banks should remain as it is—those having deposits of less than Rs. 25 crores each. But a new category should be created for medium banks. Some say that it should include banks with deposits ranging from Rs. 25 crores to Rs. 50 crores; other say the range should be from Rs. 25 crores to Rs. 75 crores, and yet others say it should be from Rs. 25 crores to Rs. 100 crores. Depending on the definition chosen for medium banks, the big banks would then be those having deposits of over Rs. 50 crores, or over Rs. 75 crores, or over Rs. 100 crores. For the purpose of interest rate differentials under the agreement, the modifications suggested are almost as numerous. Some medium banks say that they should be allowed to pay $\frac{1}{4}$ percent more interest on deposits than the big banks do. But the big banks apparently feel that this would give the former too great an advantage in attracting deposits. It would probably also impel the small banks to demand a differential of $\frac{1}{4}$ percent over the medium banks, and thus $\frac{1}{2}$ percent over the big banks. As an alternative, therefore, it has been suggested that the differential should be $\frac{1}{4}$ percent between each of the three categories. In other words, the deposit rates paid by the big banks and the small banks would remain where they are; only the new category of medium banks would be allowed to pay $\frac{1}{4}$ percent more than they do now.

The definition of "medium" banks, and the deposit rate differential they should be allowed, are matters for the new committee to settle. An outside opinion on how they should be settled might appear superfluous in the present circumstances, since it is clear that the settlement, if any, will depend on banking politics rather than banking principles. There is no way of judging what precisely is the advantage that a big bank enjoys over a medium one, and whether that advantage can be neutralised by a $\frac{1}{4}$ percent or a $\frac{1}{2}$ percent interest differential. There is also no way of

judging which is the crucial point in the growth of deposits—Rs. 50 crores, or Rs. 75 crores or Rs. 100 crores—at which a bank begins to enjoy the advantage of being a "big" institution and loses the disadvantage of being a "medium" one. But there is at least a case for recommending that a wider "spread" of deposit rates should be allowed on an experimental basis; in other words, the small banks should be allowed to pay $\frac{1}{4}$ percent more than the medium ones, and the medium ones in turn should be allowed to pay $\frac{1}{4}$ percent more than the big ones. After a time, it would then be possible to find out broadly, by assessing the progress of each category of banks, what role interest rates play in the growth of deposits. Some big banks have been publicly proclaiming that the role of interest rates in this sphere is negligible. They will have an opportunity to prove their point by keeping their own interest rates relatively low. If they find that an interest rate differential of even $\frac{1}{4}$ percent leads to the diversion of deposits, they may discover that they have been barking up the wrong tree.

The latest controversy over deposit rates could, therefore, prove fruitful in the long run if it led to a practical test. The test would centre on the claim of the bigger banks that, for increasing deposits, what matter are not interest rates but

other factors, such as establishing new branches or offering additional services. In conformity with their argument, such banks could keep their own deposit rates low and reduce operational costs, thereby mobilising resources for branch expansion and extra facilities. At the other end of the scale, conversely, the smaller banks could increase their deposit rates and let operational costs rise, if they so wish. The various categories of banks would thus have a clear-cut way of showing which is the better method of attracting new deposits. The big banks might object that an interest rate differential of $\frac{1}{4}$ percent or $\frac{1}{2}$ percent confers too great an advantage on their smaller competitors. But, under this method, they would have a fair opportunity of neutralising that advantage by themselves offering the branch expansion and new services they have long been promising. It is a commentary on the current mood in banking circles that, at the Indian Banks Association meeting last Friday, some members are reported to have criticised others for introducing free remittance facilities, extremely limited though these facilities are. The criticism is a reflection of the widespread attitude to the introduction of new services in the Indian banking system. Time may show that the affection for the lowest common denominator of banking service and efficiency is the greatest handicap for the future growth of deposits.

GENEVA TEXTILE AGREEMENT

THE draft of the Geneva textile agreement represents the most widely accepted compromise on the question of liberalising world trade in cotton textiles. The agreement underlines the need for the progressive elimination of restrictions on textile exports. But it also provides certain safeguards in case exporting countries cause, or threaten to cause, disruption in the domestic industry of the importing country. The agreement calls upon participating countries not to intensify the existing restrictions or impose new ones. But where an importing country, which has not imposed any restrictions so far, fears a disruption of its domestic industry due to heavy imports, it is required under the agreement to ask for a restraint on the exports of the exporting countries. The procedure for seeking such a restraint lays down that the minimum level at which the exports may be pegged should be the average exports during the 12 months ending three months before the request for restraint is made. If restraint is needed for more than a year, there would ordinarily be an increase of 5 percent in the permitted exports during the next 12-month period, and a further increase of 5 percent in the third year. Normally at the end of three years, the situation of disruption would be considered to have ended as there would have been time for the adjustment

of the domestic industry to the new conditions in world trade in cotton textiles. No restraint would be placed on the exports of the countries not causing or threatening disruption.

In applying the long-term arrangement, it is laid down that importing countries will note the emphasis on the orderly expansion of trade in cotton textiles. As a matter of equity, they will give particular consideration to the need of the less-developed countries possessing the necessary resources, such as raw materials and technical skills, to have larger opportunities for increasing their exchange earnings from the sale in world markets of products which they can efficiently manufacture. The Geneva pact, which has still to be ratified by the 19 countries that participated in the meeting, will replace the short-term agreement of last July, and is expected to come into force from 1st October. Perhaps the outstanding feature of the pact is that the members of the European Common Market have agreed to increase their imports of textile goods from other countries, including India, by 100 percent in the next five years.

The general feeling is that the new international agreement on textile exports is about the best that could be achieved in the present circumstances. The U.K. reaction seems favourable. The British Cotton Board has expressed the hope that the Government will quickly ratify the agreement. Of course, the British cotton industry will measure the effectiveness of the agreement by the extent to which the opening of other western markets might ease the pressure which Lancashire is called upon to bear. The agreement has been welcomed in the U.S.A. There is a general expectation that, acting under the provisions, the U.S.A. will be able to freeze her imports of cotton products covered by the agreement at the present level for a year or two, and limit the annual increases thereafter to 5 percent. According to a White House announcement, the Geneva pact "will permit the American cotton textile industry to plan its production and to sharpen its competitive position with the confidence that foreign imports will not disrupt its activities."

In India also, the general feeling in official as well as textile trade circles is that the Geneva agreement will prove beneficial, although many will wonder how a measure which has been hailed by the importing countries can benefit an exporting country in a big way. Official circles think that the agreement will widen the markets for Indian textiles in foreign countries, particularly France and West Germany. The decision of the E.E.C. nations to double their imports of textiles from other countries is welcomed, but these nations are now importing only 60 million yards of

cotton textiles subject to quota restrictions, of which India accounts for nearly 25 percent. For the additional 60 million yards to be imported by the E.E.C. nations over the next five years, India will have to compete with other exporters like Japan and Hongkong. In the case of France and West Germany, which at present restrict textile imports, the actual extent of increased access, as

agreed to at the Geneva talks, will be determined by means of bilateral negotiations. While the Geneva textile agreement offers opportunities for larger exports, the extent to which these opportunities can be exploited will depend essentially on the competitive position of Indian cotton textiles. The prospects from this point of view are by no means very encouraging.

Current News and Comment

Titaghur Paper Bonus and Rights

There has been steady support for the ordinary shares of the Titaghur Paper Mills Co. Ltd during the past couple of weeks, and investor confidence has been reinforced by the directors' decision to issue ordinary bonus and rights shares. The Company has applied to the Controller of Capital Issues for permission to issue ordinary bonus shares in the proportion of one new share for every two held by capitalising reserves to the extent of Rs. 56 lakhs; and to issue ordinary rights shares in the ratio of two for three held at a premium of Rs. 5 a share. When the new shares have been issued, the ordinary share capital will rise by Rs. 1.30 crores to Rs. 2.40 crores. The bonus shares will have a paid-up value of Rs. 56 lakhs, and the rights shares Rs. 74.70 lakhs. The issue will help bring the ordinary share capital into greater balance with fixed assets, which amount to more than Rs. 4.87 crores. Considering that Titaghur Paper has impressive reserves of more than Rs. 3.53 crores, the decision to issue bonus shares by capitalising reserves is fully justified.

For the year ended March 1961, Titaghur Paper paid a taxable ordinary dividend of 20 percent, absorbing Rs. 22.40 lakhs out of a total profit of Rs. 43.97 lakhs. The outlook is fairly encouraging because the new mill in Orissa has started producing. During 1961, the total output of the Titaghur and Orissa mills, it is believed, was more than 56,000 tons. Although a section of the trade thinks that the supply of paper may be surplus in the near future, Titaghur Paper need have little worry about selling its products in view of the reputation it enjoys and the good service its customers get. Meanwhile, the factory in Titaghur, near Calcutta, has been renovated and modernised, and steps have been taken to improve the operational efficiency of the mills.

East Anglia Plastics Expanding

There have been wide fluctuations in the ordinary shares of East Anglia Plastics during the past fortnight or so. After rising sharply from Rs. 23.75 to Rs. 33.25, the shares have reacted to Rs. 29.75 on profit-taking. The market interest is mainly due to the news that the Company has decided to issue ordinary rights shares at par to existing shareholders in the proportion of three new shares for each one held. The foreign collaborators will be allotted 100,000 of the new equities in exchange for the technical service given by them. The proceeds of this issue will be used to set up a factory in Andhra Pradesh for the manufacture of cellulose acetate flakes, rayon grade pulp and basic materials for photographic films. The estimated cost of the project is Rs. 6 crores, and technical collaboration has been arranged with a reputed French company. It is also proposed to set up a factory for the manufacture of plasticiser from the coke oven by-product wastes at Durgapur. Technical collaboration with a West German firm has been arranged for this project. Meanwhile, the Calcutta factory of East Anglia Plastics has started producing cellulose acetate granules out of imported cellulose acetate powder and plasticiser.

Progress of State Bank

Banks did well in 1961 and the State Bank of India's results compare favourably with those of other banks. Although the dividend has been stepped up by only 25p from Rs. 22.75 to Rs. 23 a

share, the net profit has increased substantially from Rs. 2.18 crores to Rs. 2.71 crores. Progress was made both in the traditional business as well as in developmental activities. During the 1960-61 busy season, the State Bank's advances rose by Rs. 61 crores, against an increase of Rs. 53.7 crores in the previous busy season. In the case of other scheduled banks, the credit expansion of Rs. 137.8 crores was nearly as large as in the previous busy season. The State Bank's share in the total busy season credit expansion of all scheduled banks increased from 28.4 percent to 30.7 percent. Its credit at the end of 1961 was Rs. 249.3 crores, or 19.4 percent of the total scheduled banks' credit in India. Between April 1960 and April 1961, the advances to industry increased from Rs. 143.3 crores to Rs. 191.2 crores and those to commerce from Rs. 19.6 crores to Rs. 32.3 crores. Their proportion to the Bank's total advances thus rose from 68.5 percent to 70.3 percent and from 9.4 percent to 11.9 percent, respectively.

The State Bank's deposits at the end of 1961 stood at Rs. 511.7 crores, being down by Rs. 45.7 crores over the year. But the decline was due entirely to the transfer of part of the P.L. 480 funds. In fact, the deposit liabilities of the Bank exclusive of P.L. 480 funds showed an increase of Rs. 37.7 crores in 1961, which compares with the increase of Rs. 131.6 crores in the deposits of other scheduled banks. The Bank took several steps to attract more deposits. In addition to the acceptance of call and other short-term deposits, it raised the interest payable on various kinds of deposits. Over the year, the Bank's investments declined by Rs. 69.2 crores, as compared with a decline of Rs. 98.5 crores in 1960. The investment ratio thus fell from 51.4 percent to 42.5 percent. The volume of foreign exchange business handled by the Bank recorded a satisfactory increase. The rupee accounts maintained by foreign correspondent banks rose to 144, and the State Bank opened six more foreign currency accounts during the year. In addition to financing private sector transactions, it continued to provide financial facilities for the barter deals and other special arrangements entered into by the Government and the State Trading Corporation.

After fulfilling the statutory obligation to open

400 new branches within five years after its establishment on 1st July, 1955, the State Bank has continued its expansion programme. It has accepted the Karve Committee's recommendation, according to which the Bank and its subsidiaries are to open 300 new branches between July 1960 and June 1965 the respective share of the State Bank and its subsidiaries being 145 and 155. The Bank is optimistic about achieving the target. Until the end of 1961, it had opened 25 new branches and the subsidiaries had opened 67.

Good progress has been made in giving assistance to small-scale industries and in providing rural credit. The number of small industrial units assisted by the Bank during the year increased from 2,451 to 2,811; the credit limits sanctioned rose from Rs. 7.8 crores to Rs. 10.1 crores, while outstandings increased from Rs. 3.7 crores to Rs. 5.1 crores. The facilities granted to co-operatives also recorded an increase. The total number of advances granted to co-operatives increased from 527 to 550; the limits sanctioned and outstandings rose from Rs. 22.8 crores and Rs. 5.5 crores to Rs. 24.6 crores and Rs. 6.6 crores, respectively. There was a marked increase in advances granted against warehouse receipts, the credit limits sanctioned against such receipts rising from Rs. 2.2 crores to Rs. 4.5 crores in the case of the State Bank and from Rs. 80 lakhs to Rs. 2.7 crores in the case of its subsidiaries. Further progress is reported in the matter of providing medium-term finance and furnishing guarantees for deferred payments for plant and machinery by industries. The Bank did not obtain any fresh refinance facilities from the Refinance Corporation for Industry during 1961.

Bharat Ball Bearing Issue

The Bharat Ball Bearing Co. Ltd is setting up a factory in Ranchi to manufacture ball bearings, roller bearings and tapered bearings. The estimated cost of the project is Rs. 1.92 crores. The Industrial Finance Corporation will contribute Rs. 60 lakhs in the form of a loan. A sum of Rs. 51 lakhs will be raised by issuing preference and ordinary shares. The subscribed capital at present is Rs. 24 lakhs in ordinary shares of Rs. 10 each. Out of the present issue, 5,000 preference shares of Rs. 100 each and 40,500 ordinary shares of Rs. 10 each have been reserved for subscription by the promoters and their friends. The Company is offering 15,000 preference shares of Rs. 100 each for public subscription at par. The list opens next Monday. (The details of the issue were published in last week's *Capital*). The preference shares carry a fixed dividend of 9.3 percent, free of company tax, but subject to the usual tax deduction at source. These shares will be redeemed at par at the option of the Company after the expiry of 12 years but not exceeding 15 years from the date of issue, at six months' notice.

The factory is likely to be installed during 1962, and full capacity may be achieved by 1964. The Company has been given a licence to produce

2.5 million ball and roller bearings a year. It will concentrate on the production of precision bearings required for electric fans, fractional horsepower motors and machine tools. Although high carbon chromium alloy steel, which constitutes the main raw material for bearings, is at present imported, it is likely to be produced in India soon. The necessary import licences for bringing the equipment have been obtained. Technical collaboration has been arranged with the Fafnir Bearing Co. of the U.S.A. The prospect is considered satisfactory because the demand for ball and roller bearings will rise steadily with industrial progress. The demand, it is estimated, will be 15 million by the end of 1966. The directors think that the Company's products will be of high quality, and can be sold without any difficulty. They expect to make satisfactory profits when production begins. Bharat Ball Bearings will enjoy the usual tax benefits permitted to a new manufacturing concern.

E.I. Distilleries Pays the Same

According to the preliminary figures, the net profit of East India Distilleries and Sugar Factories Ltd for the year ended September 1961, subject to tax, amounts to £686,060, compared with £768,848 for the previous year. Adding the amount of £4,070 being the profit adjustments from previous year, the total comes to £690,130. Out of this, the provision for taxation is £324,113 (against £381,428). This leaves a net profit of £366,017. Deducting a sum of £14,625, being the interest of outside shareholders, and adding £126,694 brought forward from the previous year, the amount available for appropriation comes to £478,086. Out of this, the capital reserve gets £18,787 (against £11,660). A sum of £90,000 is transferred to general reserve (against £100,000). The dividend on the 9 percent preference shares accounts for £18,000. The interim dividend of 7-1/7 percent on the ordinary shares absorbed £78,572. The proposed final dividend of 14-2/7 percent on the ordinary shares will absorb £15,7143. The total dividend is maintained at 21-3/7 percent. The balance of £115,584 is carried forward.

Eastern Investments Profit Down

The working results of Eastern Investments Ltd for the year ended December 1961 show a small setback in the profit from Rs.18.28 lakhs to Rs.17.24 lakhs. The value of the investments for which market quotations are available, together with unquoted investments (as valued by the directors), exceeded the book value by Rs. 89.19 lakhs at the end of the year. A sum of Rs. 7.76 lakhs (against Rs.8.22 lakhs) has been provided for taxation and the allocation to general

reserve has been maintained at Rs.2 lakhs. The dividend is unchanged at 14 percent, subject to tax, and it is covered nearly 1½ times. The ordinary dividend absorbs Rs.7.17 lakhs. After providing for the preference dividend, there remains a balance of Rs.2.67 lakhs, which is carried forward, against Rs.3.49 lakhs brought in. The Company has received the Government's sanction for increasing its ordinary share capital from Rs. 51.26 lakhs to Rs.76.89 lakhs by the issue of 25,630 rights shares of Rs.100 each at a premium of Rs. 10 a share. The rights shares are being issued in the ratio of one new share for every two held. The Rs.100-paid share of the Company is quoted around Rs.146, offering a gross yield of about 8.5 percent.

Hindustan Electric, Brown Boveri

Shareholders of the Hindustan Electric Company will be pleased to learn that the collaboration and the technical assistance agreements between their Company and the Swiss firm of Brown Boveri and Company have been finally signed. According to the consent order of the Controller of Capital Issues, Brown Boveri was to subscribe only after the present issue of 20,000 new equity shares had been fully subscribed by the existing shareholders, the last date for subscription to the new shares being 22nd February. The intention of the Controller of Capital Issues in stipulating that the Swiss firm should take up its quota of 60,000 new equity shares only after this day is that should Brown Boveri subscribe immediately for its full quota, the Indian shareholding of 40,000 equity shares would at one stage be in a substantial minority. However, according to an understanding reached between the chairman of Brown Boveri and the chairman of Hindustan Electric, the Swiss firm could subscribe and pay for 30,000 equity shares by 8th February.

Brown Boveri has accordingly already subscribed for the shares and paid in Swiss francs the equivalent of Rs. 30 lakhs to the credit of Hindustan Electric in the Swiss Credit Bank. This deposit of Rs. 30 lakhs will earn an interest of 2 percent. The remaining 30,000 equity shares will be subscribed and the amount in Swiss francs will be similarly deposited to the credit of Hindustan Electric on the day the 20,000 equity shares to be issued to the Indian shareholders are fully subscribed by them. Furthermore, the Swiss firm has also been authorised by the Indian Government to subscribe for and purchase one share out of the 20,000 shares to be issued to the Indian public. Hitherto, Brown Boveri was represented by Voltas Ltd in India, and its electrical and mechanical equipment imports, averaging Rs. 1.5 crores to Rs. 2 crores a year, were supplied through Voltas. But as a result of the agreements now signed between Voltas, Brown Boveri and Hindustan Electric, the Hindustan Electric Company will commence the sale of Brown

Boveri's imported equipment from 1st March. It will also take over from Voltas the pending contracts, which will mean a welcome extension in the Company's trading activities.

Mettur Chemicals Rights Issue

The Mettur Chemicals and Industrial Corporation has asked the Controller of Capital Issues for permission to increase its paid-up capital by Rs. 60 lakhs by issuing equity shares of Rs. 10 each at par. The new shares, if sanctioned, will be offered to the existing ordinary as well as preference shareholders in the proportion of three for five. The present issued capital of the Company amounts to Rs. 1 crore. Additional funds are required for financing the huge expansion programme. The Company has already received necessary licences for increasing the manufacturing capacity for several chemicals, including ethylene dichloride, carbon tetrachloride, ethylene dibromide, titanium tetrachloride, methylene dichloride, caustic soda and bleaching powder. The Rs. 10-paid share of the Company, which touched a high of Rs. 15.25 in 1961, is currently quoted around Rs. 14.75.

Share Offer by Papchemi

The Papchemi Corporation proposes to set up in Kalyan (Bombay) a plant for the manufacture of 3,000 tons of pulp and 3,000 tons of writing and printing paper by using straw, paper waste and cotton rags as raw materials. The Corporation will enter the market soon to raise Rs. 12.50 lakhs of capital from the public. The authorised capital of the Company is Rs. 50 lakhs, made up of 40,000 equity shares and 10,000 unclassified shares, both of Rs. 100 each. The present issue consists of 25,000 equity shares, of which 4,500 shares have been subscribed by the promoters and their associates and another 8,000 shares have been reserved for them. The balance of 12,500 equity shares are being offered for public subscription. A sum of Rs. 25 a share is payable on application and a like amount on allotment. The remainder will be called later in two equal instalments. The Company is hoping for a loan of Rs. 15 lakhs from the Industrial Finance Corporation. It also proposes to raise Rs. 2 lakhs through borrowings and Rs. 3 lakhs through deposits from selling agents. Machinery and equipment worth Rs. 28.50 lakhs will be obtained locally.

National Pipes Fares Well

The working results of the National Pipes and Tube Co. Ltd for the year ended September 1961 show a considerable improvement over those for the previous year. The Company would have done still better if production had not been hampered by

the inadequate supply of power and raw materials. Turnover was larger because production increased with the operation of the additional processing plant installed during the previous year. But the additional capacity could not be fully used due to the insufficient supply of raw materials. The directors state that the Company was unable to implement fully the expansion scheme for the manufacture of hollow sections due to difficulties in securing an import licence for equipment. However, a foreign exchange loan has now been obtained and this may be of help in obtaining the import licence.

In 1960-61, the Company's sales rose by about 14 percent from Rs. 1.02 crores to Rs. 1.16 crores, and the gross profit improved by about 21 percent from Rs. 23.70 lakhs to Rs. 28.64 lakhs. After providing Rs. 2.09 lakhs (against Rs. 1.75 lakhs) for depreciation, Rs. 12 lakhs (Rs. 9.70 lakhs) for taxation and Rs. 9,205 (against 31,660) for development rebate reserve, the net profit amounts to Rs. 14.46 lakhs, against Rs. 11.93 lakhs in 1959-60. The dividend has been maintained at 20 percent (Rs. 2 a share), taxable, but it is covered more than 4½ times. The ordinary dividend absorbs Rs. 6 lakhs and the preference dividend accounts for another Rs. 71,500. The allocation to general reserve has been stepped up from Rs. 3 lakhs to Rs. 5 lakhs, but the amount taken to the dividend equalisation fund has been maintained at Rs. 2.5 lakhs. After making all the appropriations, there remains a sum of Rs. 67,385 to be carried forward, against Rs. 42,879 brought in. The Rs. 10-paid share of National Pipes is quoted around Rs. 29.50, offering a gross yield of about 7 percent. Against a paid-up capital of Rs. 40 lakhs, the Company's reserves and surplus amount to Rs. 31.69 lakhs.

Central Pulp Mills Project

More details are now available about the paper pulp project of the Central Pulp Mills Ltd which has been jointly sponsored by the four paper mills of western India—Paper and Pulp Conversions Ltd, Poona, Deccan Paper Mills Co. Ltd, Poona, Pudemjee Paper Mills Private Ltd, Bombay, and Gujarat Paper Mills Ltd, Ahmedabad. The factory will be located near Fort Songad, about 50 miles east of Surat, and the plant will have a daily capacity of 75 tons to 100 tons. The mill will produce bleached sulphate paper pulp by using bamboo, which is available in abundance from the neighbouring districts in Gujarat and Maharashtra. Stadler Hurter International Ltd of Canada, the technical consultant appointed by the Company, has confirmed the physical and economic soundness of the project.

The project is estimated to cost Rs. 6.43 crores, of which Rs. 5.09 crores is to be spent on plant and machinery. The four companies which are sponsoring the venture will subscribe Rs. 60 lakhs to Central Pulp's share capital; Rs. 2.40 crores is to be raised through a public issue, and Rs. 3.25 crores is likely to be raised from finance corporations against the mortgage of plant and equipment or on deferred payments spread over a number of years after the last shipment of equipment. A sum of Rs. 18 lakhs is expected from banks on a short-term basis. The sponsoring companies themselves will consume about 10,000 tons or 12,000 tons of pulp a year, with the result that the sale of about half the factory's output is assured. The rest can easily be disposed of in the open market because requirements of pulp are growing in the new small and big units which are rapidly springing up.

Rights Issue by Mahindra

Mahindra and Mahindra Ltd has received the Government's permission to raise Rs. 66 lakhs by the issue of equity shares of Rs. 10 each at a premium of Rs. 2.50 each. The new shares will be issued to the existing shareholders in the ratio of one share for every two held. It may be recalled that in 1961, when the Company sought permission to raise Rs. 44 lakhs through a rights issue, the Controller of Capital Issues had insisted on a premium of Rs. 3.50 a share. The premium has now been reduced presumably because the rights issue now to be made is for a much bigger amount. Apart from the rights issue, the Company has

received permission to issue debentures of the value of Rs. 50 lakhs to the Life Insurance Corporation. It is also negotiating with the Industrial Credit and Investment Corporation of India for a loan of Rs. 85 lakhs, of which Rs. 35 lakhs is to be in foreign currency.

All these funds are needed to finance the huge expansion programme and new lines of production. The Company proposes to raise the output of jeeps from 5,500 to 10,000 a year. It has secured a licence for setting up a tool, alloy and constructional steel plant with an annual capacity of 25,000 tons. The Government has also approved its proposal to set up a tractor plant with an annual capacity of 3,500 units in collaboration with the International Harvesting Co. of the U.S.A. At present, the Company's factories are situated in different places in Bombay. In order to centralise the manufacturing activities, these factories are proposed to be shifted to Kandivli, a suburb of Bombay, where the necessary land has already been acquired. The Rs. 10-paid shares of the Company are currently quoted around Rs. 20.88.

Share Offer by Star Textile

The Star Textile Engineering Works Ltd, Bombay, which is known for the quality of its specialised textile machinery, proposes to expand its production capacity of high drafting systems for ring and fly frames, fluted and knurled rollers for sizing, drying and finishing cylinders. The Company has already entered into an agreement with Vulcascot of London for the manufacture of Vulcascot precision cot grinding lathes and Vulcascot cot mounting machines. The Government's approval for this agreement is expected shortly. The erection of the new factory buildings in Dombivli (Thana district) has already commenced, and is likely to be completed in the third quarter of this year. The expansion programme is estimated to cost about Rs. 24 lakhs, of which Rs. 20 lakhs is being raised through the issue of fresh capital, bringing the Company's paid-up capital to Rs. 25 lakhs. Out of the proposed issue of Rs. 20 lakhs, all in equity shares of Rs. 100 each, the directors, their friends and the present shareholders are taking up shares worth Rs. 7.75 lakhs. The balance of Rs. 12.25 lakhs is being offered to the public at par.

The Company is already doing fairly well and its prospects should improve with the implementation of the expansion programme. The production and turnover have increased four-fold over the past six years. On a paid-up capital of Rs. 5 lakhs, the sales and profits for 1961 are expected to be of the order of Rs. 45 lakhs and Rs. 5 lakhs, respectively. The management expects the sales to rise to around Rs. 1 crore in 1963.

Kerala Hitachi Electricals Plant

Kerala Hitachi Electricals Ltd is mentioned as the likely name of a new Company which has been sponsored by Mr. N. J. Nair, managing director of Textile Supplies Syndicate (India) Private Ltd, Bombay, to undertake the manufacture of heavy electrical equipment. The new venture has been licensed to manufacture power transformers of up to 50,000 kVA in two stages within a period of 3½ years. The range of manufacture will reach 15,000 kVA during the first phase of the programme, which will be completed within a period of two years. During the second phase, which will be completed at the end of 3½ years, the range of manufacture will reach 50,000 kVA. The Company is claimed to be the first venture outside the public sector which has been permitted to manufacture power transformers. Hitachi Ltd of Japan, which is collaborating in the venture, will provide not only the technical know-how but also participate in the capital. Out of the total capital of Rs. 1.1 crores, the Japanese firm will contribute Rs. 27.5 lakhs, which will be used to the extent necessary for the import of plant and machinery; the balance will be subscribed in cash. The Kerala Government will also take up shares of the value of Rs. 27.5 lakhs, and the balance of Rs. 55 lakhs will be subscribed by the public.

According to the terms of the collaboration agreement, Hitachi Ltd will be paid a royalty of

2 percent, subject to Indian tax, on the net annual ex-factory value of the products manufactured, and also a technical assistance fee of 1 percent, subject to tax, on the net annual ex-factory value of the production. For computing the royalty and technical assistance fee, the value of the imported components will be deducted. The royalty on exports will be 5 percent, subject to Indian taxes. In addition, the Japanese firm will be given an engineering and design fee of Rs. 5 lakhs in yens in Japan, free of Indian tax. The Indian Company has guaranteed, with the full assurance of Hitachi Ltd, exports of 33½ percent of the value of the annual production including components, etcetera, of the factory from a date not later than one year after the commencement of production, or when production reaches international standard of acceptance, whichever is earlier. This guarantee will have been satisfied if the exports reach an average of 33½ percent over the period of the agreement. The factory will be located in Kerala. The production of other heavy electrical equipment will also be considered in course of time. The Japanese firm has agreed to offer technical assistance for the manufacture of other equipment such as switchgears, capacitors, motors etcetera. Textile Supplies Syndicate (India) Private Ltd will be the secretaries and treasurers of the new Company.

Bonus Issue by Godavari Sugar

Subject to the sanction of the Controller of Capital Issues, the Godavari Sugar Mills Ltd proposes to issue bonus shares in the ratio of two shares for every three held. The bonus issue is being made by capitalising Rs. 40 lakhs from the general reserve, which stands at Rs. 1.08 crores. In order to give effect to the proposal, the Company has decided to increase its authorised capital from Rs. 1 crore, made up of Rs. 80 lakhs in equity shares of Rs. 100 each and Rs. 20 lakhs in 7.8572 percent redeemable cumulative preference shares, to Rs. 2 crores, consisting of Rs. 1.80 crores in equity shares and Rs. 20 lakhs in preference shares. In 1931 also, the Company capitalised Rs. 20 lakhs to issue bonus shares in the ratio of one share for every two held.

Rights from Apollo Mills

Apollo Mills of Bombay is seeking permission from the Controller of Capital Issues for issuing 2.5 million equity shares of Rs. 2 each at par, in the proportion of one new share for each one held. The additional capital is needed to finance the modernisation and renovation programme, which is estimated to cost about Rs. 80 lakhs over a period of three years. To begin with, the Company proposes to replace 16,000 spindles at a cost of Rs. 35 lakhs. The present paid-up capital is Rs. 50 lakhs, all in equity shares, and it is not backed by any reserves. The losses suffered by the Company over the past few years add up to Rs. 22.25 lakhs and there are also arrears of depreciation amounting to Rs. 18.70 lakhs. The Rs. 2 paid share of the Company, which was quoted at a discount most of the time in 1961, is now around Rs. 2.74. The highest price recorded in 1961 was Rs. 2.24.

New Policy for Industrial Licences

The Government of India has recently been insisting that entrepreneurs wishing to start new ventures or expand the existing ones which involve foreign collaboration must furnish the complete collaboration agreement along with their applications seeking an industrial licence or a consent letter. The difficult foreign exchange position can hardly be the reason for the change in the Government's policy because in any case industrial licences were being issued subject to the terms of foreign collaboration being approved by the Government. It appears that many entrepreneurs, after having obtained industrial licences, took too long a time to complete the foreign collaboration agreements, with the result that the licensed capacity could not be expeditiously used and some of the more deserving applicants who submitted their proposals at a later date could not get their schemes approved since

VISIT GERMAN INDUSTRIES FAIR 1962

A future awaits you at Hanover Fair where World Industry meets from April 29th to May 8th 1962: Hanover—shop window of Industrial progress, where over 5,000 exhibits, German and foreign, keep pace with leading advances in light and heavy industry.

Groups exhibited include:
Mechanical & Electrical Engineering, Iron and Steel, Non-Ferrous Metals, Chemicals and Plastics, Rubber, Building materials, Precision Mechanics and Tools, Optics, Office Equipment, China, Ceramics, Glassware, Clocks and Watches, Jewellery, Hardware and Cutlery, Handicrafts, Gift Articles—and many others.

the requisite capacity had already been licensed. It is perhaps in order to overcome this difficulty that the Government has begun to insist that all formalities concerning foreign collaboration should be completed before an industrial licence can be granted or a consent letter is issued. But this policy has created serious problems for entrepreneurs and the Indian Merchants Chamber, Bombay, has drawn the Government's attention to the difficulties.

In its communication, the Chamber points out that foreign collaborators do not generally enter into agreements for collaboration until they are certain that an industrial licence will be available for the purpose of putting through the project. Even if the foreign collaborator enters into an agreement, the Indian industrialist will be placed in a very awkward position if ultimately no licence is granted. Moreover, the Reserve Bank does not consider allocating foreign exchange for enabling the Indian entrepreneur to go abroad for the purpose of negotiating with the foreign collaborator unless it is satisfied that the necessary licence or a consent letter has been issued by the Government for the proposed undertaking. Thus, as a result of the new policy, it has become extremely difficult for Indian entrepreneurs either to undertake new ventures or to expand existing ones which involve foreign collaboration. The Indian Merchants Chamber has urged the Government to continue the old policy. It has also drawn the Government's attention to the poor co-ordination between the different directorates of the Development Wing, with the result that many avoidable delays occur in the disposal of applications for industrial licences. The Government has been asked to clarify beyond doubt the jurisdiction of each directorate, so that it is possible to forward an application to the proper directorate.

Decree Against Mundhra

Mr. Haridas Mundhra, former chairman of the British India Corporation Ltd, Kanpur, has been ordered by Allahabad High Court to pay a sum of Rs. 6,65,492 to the Corporation as compensation. The order was passed by a division bench consisting of Mr. Justice Oak and Mr. Justice Dwivedi in two special appeals, one preferred by the Life Insurance Corporation of India, and the other by Mr. H. D. Mundhra against an order passed by Mr. Justice Upadhyaya, as company judge, on an application by the L.I.C. under sections 397 and 398 of the Indian Companies Act. The L.I.C. had appealed against the dismissal of its claim for compensation, and the order of the company judge appointing an interim board of directors for the B.I.C. instead of a special officer to conduct its affairs. Mr. Mundhra had appealed against the personnel of the interim board from which he and his brother, Mr. T. D. Mundhra, were excluded.

The Court held that the former board of directors of the Corporation was guilty of mismanagement, but the directors other than H. D. Mundhra, could not be ordered to pay compensation. Examining the question whether other directors could be held guilty of misfeasance, Mr. Justice Dwivedi said it was true that they made no enquiries about the nature and the rates of the purchased shares. On those matters, they could trust the judgment of their colleagues, especially Sir Robert Menzies, chairman and managing director, and Mr. Christie, deputy managing director. It was not proved that they and the managing director and the deputy managing director were in collusion with H. D. Mundhra, nor was it shown that the managing director and deputy managing director were not dependable persons. A director was in the position of an agent of the company charged with the obligation of carrying on its business. The nature of his duties was determined partly by statute and partly by the law of agency. As agent, he owed two duties to the company—the duty of loyalty and the duty of care. Breach of these duties, speaking generally, would amount to breach of trust and misfeasance. But a director would not be liable for the misconduct of another unless he joined with him in the perpetration of the wrong or had omitted to point out the wrong due to his remissness. About Mr. Narendrajit Singh, one of the directors, Mr. Justice Upadhyaya said he was satisfied that he should not remain on the interim

board of management. During his stewardship, the Corporation had been mismanaged and although the Court was exonerating him of misfeasance, he (Mr. Justice Upadhyaya) found it difficult to distinguish Mr. Narendrajit Singh's case from that of H. D. Mundhra in order to retain the one and discard the other.

The term of the interim board fixed for four years by the company judge was reduced to the beginning of January 1963. The Corporation had been under the supervision of the Court since 1958. Ordinarily, Mr. Justice Upadhyaya said, a company should not be kept long under the tutelage of a Court. The interim board should accordingly call a meeting of the Company in January 1963 for the purpose of electing a new board of directors. If for some reason it was found impossible to hand over charge to an elected board of directors, it would be open to the company judge to give directions for the continuance of the interim board. It may be recalled that the L.I.C. which had initiated proceedings against the B.I.C. holds 750,633 fully paid-up ordinary shares of Rs. 5 each and 15,283 preference shares of Rs. 100 each in the Corporation.

Kanpur Plant for Alloy Steels

Gangadhar Bajinath of Kanpur, a firm which controls the Bagla group of industries, has been granted an industrial licence for manufacturing 19,800 tons of silico-manganese alloy steels a year. The factory will be located in Kanpur, where suitable land is being acquired. The U.P. Government has agreed to meet the requirements of electrical energy. Negotiations for financial and technical collaboration with a leading alloy steel manufacturer on the Continent are in the final stages. The collaborators will supply the plant and machinery, erect the plant, and provide technical know-how for the next five years. They will also train Indian technicians in their works. The project is estimated to cost Rs. 2½ crores. A public limited company will be floated to undertake the project, and shares will be offered to the public in the near future.

Revised Hedge Contract for Cotton

The East India Cotton Association, Bombay, has proposed certain changes in the cotton hedge contract for August 1962 delivery. The amendments to the by-laws of the Association to give effect to the changes in the terms and conditions of the hedge contract have been circulated to members. Objections or suggestions, if any, to the proposed amendments will be considered at a meeting on 19th February. The principal changes are: (1) all descriptions of cotton will be tenderable up to 2/32in. off, except Cambodia (a) which will be tenderable only up to 1/32in. off; (2) the tendering differences between the basic cotton and other tenderable descriptions shall be fixed on the basis of the difference between the hedge contract rate and the spot rate of respective descriptions on the day of fixing the tendering differences by reducing the premium by 15 percent and increasing the discount by 15 percent if the rate for the August hedge contract is below Rs. 650 a three quintals, and by reducing the premium or increasing the discount by 7.5 percent if the rate of the hedge contract is Rs. 650 or above but below Rs. 670. If the rate is Rs. 670 or above, the tendering differences between the basic cotton (Moglai fine 25/32in.) and other tenderable descriptions, shall be fixed on the basis of the difference between the hedge contract rate and the spot rate of respective descriptions on the day of fixing the tendering differences and (3) the invoicing back rate and penalty shall not exceed the statutory ceiling. Some other minor amendments have also been proposed.

Shorn of technicalities, the proposed amendments are aimed at encouraging the tendering of cotton on the one hand and discouraging the weighing over of cotton on the other. In other words, the hedge contract is being made distinctly bearish in character to help the smooth functioning of the futures market. The wisdom of introducing modifications in the contract, which change its basic structure merely for keeping the futures

CAPITAL, 22nd February, 1962.

market alive, can be easily questioned. But it is doubtful whether the cotton futures market can function smoothly—howsoever bearish the hedge contract—in the prevailing conditions. In ready, all varieties of cotton—excepting Bengal Deshi—are quoted substantially above the statutory ceiling rates, and the premiums range up to Rs. 100 a three quintals. The tight supply position has compelled the authorities to introduce distribution control on a varietywise basis. When the supply of cotton is being strictly rationed, there is little meaning in allowing futures trading in the commodity. Futures trading in the March contract has been virtually at a standstill, and the proposed changes in the hedge contract (August delivery) are unlikely to improve materially the chances of futures dealings.

H.P.S. Groundnut Export Quota

The Government of India has released a further quota of 18,500 tons of H.P.S. groundnut for export on a first-come-first-served basis. In order to prevent the registration of bogus contracts and the cornering of quotas, exporters have been asked to furnish a 10 percent bank guarantee on the f.o.b. value of contracts as an earnest for completing the shipments. The quota now released brings the total quantity of H.P.S. groundnut allowed for export during this season to 38,500 tons. The previous quota of 20,000 tons—released not many weeks ago—was exhausted within a few days of the announcement presumably because of the large outstanding commitments in anticipation of the quota. Shippers seem to be fairly optimistic that they would be able to use the new quota within a reasonably short time mainly because of the sustained Canadian enquiry. Expectations are that Canada will import 8,000 tons to 10,000 tons while 5,000 tons to 7,000 tons will go to the U.K. The balance is likely to be taken up by the communist countries. While the recent spurt in groundnut prices has lifted the domestic prices a little above the current U.K. quotations, business with Canada is said to be still remunerative. Groundnut futures (May contract), which were quoted around Rs. 230 a 250 kilograms on 2nd February, were bid up to Rs. 242 on 9th February. Spot groundnut prices have also recorded a corresponding improvement.

The rise, however, is not due merely to the announcement of a further export quota—the quantity is too small to make any material difference to overall supply in India. The rise in groundnut prices with the progress of the season in spite of a record crop of 2.8 million or 3 million tons is due to sustained consumer enquiry and keen buying by *vanaspati* manufacturers. Soap factories have also been showing keen interest in groundnut oil because of the recent export incentive which permits them to export groundnut oil equal to their past year's consumption and obtain in exchange an import quota for an equal quantity of palm oil for their use. Although Indian groundnut oil is quoted about £26 a ton below world parity, soap manufacturers find the arrangement beneficial because of the low cost of palm oil abroad and the handsome premiums commanded by it here. The shipment from Bombay of 3,063 tonnes of groundnut oil in January, against only 722 tonnes in 1961, is attributed largely to the export facilities allowed to soap manufacturers. In view of the pressing need to earn foreign exchange, the Government need not be perturbed by the rise in domestic prices in deciding on export quotas for H.P.S. groundnut. The foreign demand for Indian H.P.S. groundnut should be fully exploited. Groundnut exports constitute only a small fraction of the total crop, and their effect on domestic prices can be easily exaggerated.

Sugar Prices and Production

A serious crisis has developed in the sugar industry due to the steady fall in prices. Over 30 factories in U.P. and many in Bihar have expressed the fear that unless the trend is reversed, they will have to close down. Their main criticism is that the Government has not honoured its undertaking at the time of decontrol that it would regulate releases in such a way as not to upset prices. The market has not been able to absorb much sugar, and traders are unwilling to maintain large

CAPITAL, 22nd February, 1962.

stocks. A further complication is the increasing preference by consumers for *khandsari*, which is cheaper. The preference for *khandsari* or *gur* will hamper all efforts to boost sugar consumption. The export prospects were never very bright, and they have been further dampened by the latest decision of the U.S.A. to give up the present quota system and buy sugar on a global basis. If the benefit of the difference between the buying price and world price is to be retained by the U.S.A. itself and not by the supplying countries, there is little prospect of Indian sugar going there. Besides, due to increasing competition, world prices are expected to show a further fall.

Under the circumstances, a solution can be found only by lowering the cost of production, which is not possible as long as the price of sugarcane is statutorily fixed. Of course, a tax reduction can also help, but it is the cost of the raw material which is the key factor. A committee of the Development Council for the Sugar Industry has recommended that the introduction of the system of payment for sugarcane by quality is a "must" for the survival of the industry. The recommendation has been circulated to the States for comment. Under the scheme proposed, a floor price for cane will be fixed, and payment will be made over and above the basic price depending on quality. The committee has suggested that a beginning might be made with south India where conditions are more favourable. But it is worth recalling that the principle of payment by quality is not entirely unknown even in Uttar Pradesh where the strongest resistance is expected. The schedule to the U.P. Cane Commissioner's notification of 1st June, 1955, and 22nd May, 1956, contained provisions for making deductions in the statutory price. For sugar recovery up to 9.5 percent, the factories were to pay the full minimum price to growers, but if recovery fell to 9.4 percent, a deduction of 6 pies or 3nP a maund was to be made. On the same basis, the schedule worked out deductions up to a recovery figure of 5 percent, for which a deduction of 15 annas was to be made. The arrangement had the approval of the Central Government. This shows that there need be no insuperable opposition to introducing a scheme for payment for cane by quality in any State, but no State Government can be expected to commit itself to the proposition until at least the general elections are over.

Shipbuilding Slump Continues

The figures published by Lloyd's Register of Shipping for the quarter ended December 1961 indicate that the world shipbuilding industry, in spite of a slight recovery in the previous quarter, is still in the midst of a slump. Steamships and motorships of 8,614,817 gross tons were being constructed by the end of December, which is 173,518 tons less than in the previous quarter. The largest postwar figure of tonnage under construction, Lloyd's Register points out, was 10.2 million gross tons (in September 1958). The countries whose tonnage under construction shows a decline are Britain, Sweden, Italy, the U.S.A., Poland, Yugoslavia, Denmark, Spain, Belgium and Australia, while increases were noted in Japan, West Germany, France, the Netherlands, Norway, Finland, Canada and India. Output is usually measured by the tonnage launched from shipyards and Japan consolidated her leading position last year by launching over 100,000 tons more at 1,835,000 tons, while Britain retained her second place among shipbuilding countries in terms of output. Lloyd's Register says that the tonnage commenced in Britain and Northern Ireland in 1961 was higher than in the previous year, but "this can hardly be significant in itself while the tonnage under construction is still falling". Steamships and motorships under construction in the U.K. at the end of December totalled 218 ships of 1,415,899 gross tons. This is 134,958 gross tons less than in the previous quarter and is the lowest figure since June 1945. It represents a fall of 40 percent from the higher postwar figure of 2,345,408 tons at the beginning of 1958, while the total of all countries abroad shows a fall of only 9 percent from the peak figure of 7,906,658 tons in September 1958. In the face of a decline in the volume of work, British shipbuilders welcomed the inflow of foreign orders towards the end of last year, but they were

seriously concerned over the reluctance of many U.K. shipowners to order new vessels to replace their aging tonnage. British shipowners traditionally supply U.K. yards with about 80 percent of their work, so no revival in foreign orders can compensate for a sharp fall in U.K. orders.

Marine Insurance Prospects

Speaking at the recent annual general meeting of the Institute of London Underwriters in London, the outgoing president, Mr. H. M. Macdiarmid, referred to the deterioration in the hull insurance figures. The 1959 underwriting year was free from major casualties, and induced a false belief that insurers had turned the corner. The temptation to be more lenient in rating led to a situation where insurers were left with inadequate premium for the risks they were running. The year 1960 proved a good deal worse than the average because of heavy casualties sustained in the closing months of 1960 and in the early part of 1961. Hull insurance, Mr. Macdiarmid said, has been operating on a narrow margin of profit. It only needs a few total losses of high value to put figures in the red. The losses include a number of vessels built within recent years. It is rather disheartening to read of many collisions and strandings, although many safety devices, including radar, have been fitted to modern ships. In insuring ships with complicated machinery, accidents are expected. But the growing number of them encourages the suspicion that accidents are often due to negligence. Many ships are still manned with inexperienced engineers. The solution, therefore, lies in attracting the right type of personnel, Mr. Macdiarmid said.

The cargo position, meanwhile, remains more or less the same. There is considerable talk about the freedom of insurance, and yet each year fresh barriers are put up in the overseas markets to restrict free enterprise. The nationalisation of insurance, Mr. Macdiarmid said, has adversely affected cargo accounts. Dealing with nuclear problems, the president said that the ultimate

aim should be to exclude all nuclear risks from marine policies, but until such time as there is an international agreement and legislation to give adequate compensation to an assured, it is the duty of underwriters to see to it that the assured is not left unprotected.

Referring to Britain's proposed entry into the European Common Market, Mr. Macdiarmid said that whatever might be the terms of joining it, the U.K.'s membership will cause important changes in the pattern of its import and export trade. British business has been international in character, and it is a matter of pride to British insurers that they have facilities to serve world commerce. By joining the European Common Market, U.K. insurers will face intensified competition. Studies of continental markets show that new branches and agencies are being established by continental insurance companies. They are eagerly seeking a share in the business which is already insufficient to satisfy their needs. Furthermore, certain liberalisation measures facilitate the transfer of business from one market to another in search of cheaper rates or wider cover. Mr. Macdiarmid, therefore, advised insurers to conduct their operations in the continental markets with sound underwriting principles. Underwriters in the "home" market—whether it be Belgium, Holland, West Germany or Italy—have valuable local knowledge to guide their quotations, and to cut rates would be to court disaster.

U. S. Business Conditions

The opening weeks of 1962 revealed some divergence of views between Washington and Wall Street about the shape of the business curve ahead, says the First National City Bank of New York in its latest monthly letter on U.S. business and economic conditions. In his messages to Congress, President Kennedy painted a bold picture of an economy thrusting ahead into a period of sustained expansion—a gross national product of \$570 billion this year, \$600 billion in 1963, and growing at a rate of 4½ percent a year through the 1960s. even though the Administration also forecast that corporate profits would improve by 23 percent this year, the stock market showed scepticism by retreating from the highs reached towards the end of 1961. This may have represented a reaction to wage settlements which, spreading through the labour markets, can prolong the profits squeeze that has been hampering U.S. economic growth these last five years. January retail trade in the south and midwest was hit by snowstorms, while the east, similarly affected a year ago, enjoyed balmy weather. Thus, year-to-year comparisons of sales ranged from sizable decreases in some sections to substantial gains in others. But overall improvement was indicated by the figures on department store sales for the country as a whole; these ran 4 percent ahead of 1961 for the three weeks ended 20th January.

The better level of retail trade achieved in the final quarter of 1961 induced enlarged flows of new orders as merchants sought to replenish depleted inventories. Meanwhile, some upturn in capital spending has added to demands. In steel, of course, the possibility of a strike at mid-year has given an additional stimulus to metal buying, although consumption has also been gathering strength. By late January, steel ingot production had risen to a rate equivalent to 125 million tons a year. Passenger car sales receded further in January from the peak reached in November, but the sales rate for the first 20 days still ran 19 percent ahead of 1961. Detroit, which had its hopes raised by the excellent initial response to the new models, cancelled plans to increase production over the December rate in order to prevent excessive accumulation of dealers' stocks, which went up to 910,000 on 20th January.

In his annual economic report, released on 22nd January, President Kennedy declared that "the economy has regained its momentum" and predicted "vigorous expansion." For 1962, he forecast a gross national product of \$570 billion, an advance of 9½ percent over the 1961 record of \$521 billion. Corporate profits before tax were seen as rising from last year's \$46 billion to \$56.5 billion. Looking further ahead, the President set a goal of "maximum" employment by 1963 with a G.N.P. of \$600 billion, corporate profits before tax of \$60 billion, and the unemployment rate (recently 6 percent) down to a "temporary target" of 4 percent. In common with most business economists, the President bases his expectation for expansion in the first half of 1962 on the assumption of a higher level of consumer spending (especially for durable goods), additions to Government spending, the need for larger business inventories, and growing expenditure for plant and equipment. Continued advance in the second half is premised on a further step-up in capital expenditures, as profits rise and operating rates begin to press on capacity.

Government Vehicles to Pay Toll

As a result of the Supreme Court's judgment that a Government undertaking is not *ipso facto* a public service, the U.P. Government Roadways will be liable to pay tolls like other private road transport organisations. The appeal was filed by a party who was the lessee of a right to collect tolls from persons and vehicles crossing the river by public ferry at Pipraghat in Ballia district. The question arose whether the appellant was bound to allow buses belonging to the Government to cross by ferry without collecting toll or whether he was entitled to claim abatement of rent from

the Government under provisions of the Northern India Ferries Act, 1878. He was informed by the State Government that its vehicles must be allowed to cross and recross without having to pay the toll. A single judge of the Allahabad High Court decreed that the lessee was entitled to claim toll from Government vehicles, but the decree was reversed by a division bench. The Constitution Bench of the Supreme Court has now allowed the claim of the lessee by reason of the fact that a commercial undertaking, if owned and run by the State, does not automatically become a public service. The mere fact that a certain activity may be useful to the public would not necessarily make it a public service.

While the Supreme Court has clarified the law on the subject, it is a matter for regret that many State Governments have not abolished tolls in spite of the clear-cut recommendations of the Taxation Enquiry Commission, which observed: "Tolls on vehicles and animals have been abolished in most progressive countries as their levy at different points inconveniences traffic and is a very great impediment to fast-moving traffic." After remarking that even in India some States have abolished tolls by paying an annual compensation to municipalities, the Commission stated: "With one reservation, we recommend the abolition of tolls wherever that has not been effected. The exception relates to new bridges costing over, say, Rs. 5 lakhs. For these, tolls may be permitted for a period, but in no case after the cost of construction has been recouped. The loss of revenue which the abolition of tolls will entail on certain municipalities, etcetera, will, we believe, be adequately made up if State Governments bring into force the arrangements we have suggested concerning payment to local bodies out of the receipts of the Motor Vehicle Tax."

U.K. Textile Machinery Exports

Lancashire cotton mills are probably placing more orders for new machinery than they were, say, two or three years ago, although no doubt less than the mechanists hoped when the U.K. Government's reorganisation plan for the industry was announced. Most of the machinery manufacturers are, however, well engaged, especially those who produce yarn-processing machines. It seems that overseas orders have made a big contribution towards the activity of many of them. There should be further benefit from the new arrangements for export finance for capital goods. Meanwhile, the expansion in the British textile machinery industry's export trade continued last year. The total value of textile machinery exports rose to £62.1 million, compared with £51.8 million in 1960 and with only £41.1 million in 1959. The volume of the trade has also increased steadily from 1,119,000 cwt. in 1959 to 1,344,000 cwt. in 1960 and to 1,538,000 cwt. last year. As in 1960, Russia was last year the largest overseas market, taking £8.1 million, against £6.6 million in the previous year. India retained second place, with £4.9 million, against £4 million, and West Germany again came third, with £3.8 million, against £3.6 million. While Australia was fourth with £3.1 million, against £2.6 million, Italy came fifth with £2.8 million, against £2.2 million, and there were higher figures than in 1960 for all the other European countries shown separately except Denmark and Poland. France's imports rose from £1.8 million to £2.6 million. Exports to Pakistan showed a similar increase, from £1.7 million to £2.5 million. New Zealand, Canada and Hongkong also took more but South Africa showed a decrease. There were big increases in shipments to Argentina and Brazil, while trade with the United States was little changed at £2.9 million, and elsewhere, Israel's takings were nearly twice those of 1960 at £1.4 million.

Machine Tools in U.K. Industry

Three out of every five of the 1.2 million machine tools in use in Britain are over ten years old, the age generally accepted as the international standard for obsolescence. These findings have been published in a report of a nationwide survey of manufacturing plants conducted by *Metalworking Production*. The study, which took a year to

make, showed that 59.2 percent of Britain's metal-working equipment was "over age," although this does not mean that all of it is past its useful life since many of the heavier machines can have a life of 20 or even more years and still give satisfactory service. Even so, the average age is a useful guide and shows that although there is little difference between British and American industry in the age of machine tools, Continental industry has more modern equipment than either of them. In terms of machine tools in use, the U.K. comes fourth, behind the U.S.A. with 2.9 million units, Russia with 2.4 million and West Germany with 1.3 million. France has 490,000 machine tools and Italy 362,811. The industries with the most modern machine tools in Britain were manufacturers of industrial engines and aircraft. The highest proportion of older machines was found in shipbuilding and marine engineering, telegraph and telephone apparatus, and textile machinery manufacturing. Metalcutting machines were, on average, a "good deal" newer than metalforming machines, nearly a third of the latter being over 20 years old. British-built machine tools represented 87 percent of the total in the metalcutting range, and 95 percent of all metalforming machines. But 40 percent of gearcutting and finishing machines and 25 percent of boring machines were of foreign origin. In the metalcutting range, there seems a marked trend towards British-made machine tools.

The president of the Machine Tools Trades Association, Mr. J. C. Snow, commenting on the survey, said: "It may be that the Government itself has some lessons to learn from this survey in the introduction of fiscal arrangements which will enable easier writing off of capital costs and induce a greater readiness on the part of industry to reinvest in more productive equipment." Meanwhile, *Metalworking Production* has almost completed a second survey to determine the likely home and overseas demand for machine tools over the next five to ten years. This study will be finished by about the middle of the current year.

STAGS IN THE INDIA OFFICE

PREMIUM hunting is an exciting pursuit, and the small India Office committee, who reduce the supply of Council bills or Gold Notes, transfers relatively to the demand with a view to secure a premium each time there is pressure in the Indian money markets, doubtless enjoy the pastime; but it is high time that a stop was put to this game in the interests of the Indian community in general and of borrowers in particular. The natural limit to a rise in exchange rates is specie import point, and the Exchange Banks are unwilling importers of capital at anything over this rate, because the expense is extreme. The Government of India have been exporting gold lately, and must export more if more is imported, so that the premium hunters in the India Office injure India in two ways whenever they succeed in forcing the Council bill rate above specie import point. They curtail the natural flow of capital to India, and they force the country to pay unnecessary remittance charges both on the import and the export of gold. This is one of those simple but serious mistakes in the manipulation of our currency machinery, which are bound to occur until the machinery is better understood by the amateur machinists who run it. The mistake in this instance arises from a failure on the part of the sellers of Council bills to realize that in their capacity as State officials it is their duty to look to the interests of the community as a whole, rather than to any book profit they can succeed in squeezing out of any section of the community. It should be obvious that the country as a whole must suffer when it is forced to pay unnecessary remittance charges both on the import and export of gold, and when its trade and industry is hampered by the curtailment of the imports of usable capital, whereas the transfer as a whole gains little or nothing by the transfer of exchange premiums from the pockets of the dealers in exchange to the coffers of the India Office or, say, to the pockets of the tax-payers. The country should be run on business principles, and the managers of any large business concern would be regarded as mad if they forced the concern to pay unnecessary remittance charges and hampered its finance with the object of transferring a little money from the pockets of a few of the partners to the general partnership fund.

A Ditcher's Diary

HAVING SURVIVED THE CONJUNCTION OF PLANETS, I am hopeful that sizable chunk of mankind, the people of India, may survive the country's third general election too. The parallel is by no means far fetched; while the former calamity turned out to be grossly exaggerated, or perhaps only premature, the latter ordeal is all too real and we are right in its midst. By Sunday it will all be over; and I am sure Mr. Nehru and Dr. Roy will be as relieved as the rest of us. The numbers involved are staggering: 494 Lok Sabha seats and 2,930 Assembly seats to be filled by as many candidates selected by 210 million eligible voters. One hesitates to recommend further expansion of the already big legislative chambers; but, quite frankly, the constituencies are far too big and straggling. Even if I were ever so foolhardy as to contest an election anywhere, I would not care to attempt such a thing in India. How can a candidate establish any kind of rapport with the people he seeks to speak for? I notice that my appeal for a dash of satire in West Bengal's election campaign has not gone completely in vain. There have lately been some mildly amusing poster cartoons. I am not at all sure, however, about the vote-gathering potentialities of posters and printed matter. Most voters cannot read anyway; and other visual appeals may amuse or anger without perhaps influencing much the voter's political choice. In the villages, I imagine, the herd instinct is still strong: you vote as your neighbours do. And this is where caste comes in. By all accounts, all Parties have selected their candidates with the caste character of constituencies very much in mind. After all, you contest an election to win it; and if the other Party has set the pace by emphasising caste you simply follow suit or are beaten. It is amazing how only a handful of people can pre-determine your course. One Party throws mud; and if you are to fight, you have to fight at that low level. Here it is difficult to say just which Party started being dirty and narrow-minded. It is the old story of which monkey first brought the lice; but the country's largest and best organised political Party cannot escape primary responsibility.

WITH THE BRILLIANT EXCEPTION OF DR. LUDWIG ERHARD to disprove the point, it is not easy to claim that academic economists never make good finance Ministers. But it is remarkably seldom they do, and Hugh Dalton, who died last week, is clearly in posthumous danger of finding his way into history as the most disastrous Chancellor of the Exchequer Britain has ever had. He was among the unluckiest too. I do not believe those few words which cost him his job were a deliberate attempt at political suicide; they seemed to

me the result of a moment's absent-mindedness probably brought on by over-work and worry. In any other country than Britain he might not have had to go at all. But it is as well he did; his mistakes had already cost the country enough, and to have spent the rest of his time in the office trying to justify or apologise for them, would only have made things worse. As a student, his book *Public Finance* was one of my constant sources of reference, and nothing could have been more orthodox in its approach. So when he threw his financial cap over the moon, I was not only astonished, I felt let down as well. The amusing thing is that the results of his follies eventually served as the best evidence in favour of his academic orthodoxy. But I wonder to what extent he was responsible for the policies he introduced. Cheap money was to the British Labour Party before it came to power what socialism was to the Congress; subsequently both policies were implemented in a blaze of triumph long after the circumstances justifying them had passed into history. The trouble was that in 1946 the British economy did not need stimulating, and Dr. Dalton's attempts to do so led to inflation, the dissipation of the American loan, the expropriation of those people who had invested their money in War Loan or British Government securities, the maintenance of war-time controls, and the beginning of a way of thinking about saving and hard work which has plagued Britain's economy ever since. Now, of course, there is once again a need for re-stimulation, although not perhaps on exactly the same lines as those used by Dalton. And one of the reasons the Conservative Government is so reluctant to take the necessary risks is because of the disillusionment which followed the failure of Dalton's experiment. No doubt by the time somebody finds the courage to apply the remedies Britain needs now, they will be out of date as Dalton's were in 1946. I think somewhere Keynes forecast that it would always be so.

WHENEVER I HEAR TALK OF COMPULSORY PRIMARY education for children in India, I am reminded that the season of electioneering hypocrisy is not yet over. The number of children to be found on the streets, begging for alms or shining shoes, is legion; and my impression may be wrong, but it is based on a sound suspicion that not only has the number of beggars in the city increased over the years, the proportion of children among them has risen considerably too. Begging, you may say, is a function of poverty and unemployment; and I would not hesitate to agree. But why the number of children in this profession—if "profession" be the right word—should have increased, is a point I have found somewhat intriguing. It is my disheartening suspicion that begging is becoming more

and more of an organised racket; it is becoming organised because it is proving, for the organisers, more and more lucrative; and the greater the number of children employed, the larger are the alms likely to be, given the susceptibility of the human heart to the pleas of youngsters in adversity. I had not fully realised the scope for begging as a business until I read of the estimate, made in the course of a radio symposium in Bombay, that the 25,000 beggars of that city manage to make as much as Rs. 10,000 a day. The average, *per capita*, you may say, is not much—a bare 40 naye paise each. But then it is to be remembered that the average *per capita* income in this country of people better employed is not much either—hardly Re. 1 a day. And, this being the important point, some beggars, or those who employ them, do much better than others; in Calcutta, a number of them are rumoured to be men of property. I am not among those who believe that begging can be totally eliminated. But I do believe that the recruitment of children, which appears to be increasingly becoming the practice in India, is a crime no country can afford to tolerate. It is not my contention that, overnight, schools can be built for the youngsters, or other pursuits found. But it is my conviction that the kidnapping and maiming of children, which is now an integral part of organised begging, has yet to attract the ruthless penalties the civilised conscience ought to dictate.

I SHALL BE GETTING MY FIRST VIEW OF THE INTERIOR of the new Rabindra Smarani National Theatre when I go to hear the London Philharmonic Orchestra perform there on 2nd March. By then, I suspect it will not be much nearer completion than it is now, and I am wondering how its unfinished acoustics will stand up to the demands which will be made upon them. Sir Malcolm Sargent and his players might find their visit to this city more memorable than they expect. But what strikes me most about this new structure—which is certainly larger than I thought it was going to be—is the abruptness of it. By that I mean the lack of any adequate introduction in the form of gardens, courtyards or even car parks. Allowing for the width of the road and the ultimate need to widen cut the corner, it gives the appearance of being almost as much "out on the street" as any 19th century London theatre. A building of this kind deserves something better, and I cannot see why, if space at that corner is so limited, it could not have been put somewhere else. As with the Birla Planetarium, it is going to add substantially to the traffic problems in an already congested part of the city. I heard the other day that the West Bengal Government is considering the idea of putting up a tourist hotel behind it and facing on to Chowringhee. If this is true, then the traffic problem will be even worse in a few years' time when the motor-vehicle population is larger than it is now. I am wondering what plans there are for coping with the future congestion, and I am afraid the

India today is caught up in the feverish activity of industrial advancement. Projects are planned... dams are being built... all through the night we hear the ceaseless hum of men and machines at work. In the world of today, the economic development of a nation is gauged by her machines... and the STEEL consumed by them. In dams and bridges, in the railway and automobile industry, in the manufacture of the thousands of consumer goods, STEEL is necessary—absolutely necessary! And so steel has come to be indicative of the economic development of a country, indicative of what a country is worth in cold hard cash.

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

BONUS ISSUE HOPES INDUCE SPECULATIVE BUYING

Wednesday Evening.

THE stock market has become cheerful and enquiries have broadened. The steadiness is inspired by the fact that some companies have issued bonus shares. Operators think that many more companies will do the same soon since the fiscal policy may change when the new Central Cabinet is installed after the general elections. Investors are not sure whether the bonus share tax will be maintained at the present level or increased. In the circumstances, shareholders of many companies have made strong representations asking their directors to consider issuing bonus shares before the tax is raised.

Some companies have decided to issue rights shares in order to raise funds for financing the expansion and diversification of activities. It is reported that the Government will permit further expansion in certain industries, such as tyres and tubes, so operators think that the companies concerned might issue rights shares in the near future. In spite of the substantial rise in some scrip during the past week, the support is still largely speculative in character. Investors are inclined to proceed cautiously because current prices appear to discount the prospects adequately.

A disturbing feature is that the prices of many new shares have been boosted too high. Although some new companies might do well, they will take a few years at least before they reach the stage when dividends can be declared. This apart, the shortage of transport, raw materials, coal and power cannot be ignored. In assessing the prospects for new shares, an investor has to make sure that the company concerned will not suffer from these shortages.

Sentiment has improved due to the belief that the Government might give more incentives in the form of fiscal reliefs in order to promote exports. The fact that exports touched a record figure during 1961 has created bullishness. But it is forgotten that the rise has taken place due mainly to higher prices rather than larger volume. Indian products on the whole remain uncompetitive in foreign markets.

The draft agreement negotiated by 19 countries at the recent meeting of the G.A.T.T. Cotton Textile Committee in Geneva has been welcomed. Under the agreement, it is hoped that no country will intensify the existing restrictions or impose new ones on imports of cotton textiles. India expects to benefit from the possibility of increased exports to Europe, especially France and West Germany. If her cotton textiles are made cheaper and their quality is improved, there should be an expansion of sales in foreign markets. In view of the prospects for bigger exports, cotton mill shares have become steadier.

Indian Iron have closed at Rs. 25.42. Among engineering shares, Guest, Keen, Williams have been firm on rumours of a bonus issue. Burn, Braithwaite, Kumardhubi and Dalmia Iron have been steady. Jessop have met with scattered support on maintaining the taxable ordinary dividend. Britannia Engineering are being quoted on an ex-rights basis.

There have been many bright features in the miscellaneous section.

National Insulated Cable have improved on prospects of a bonus issue. Among cement shares, Jaipur Udyog and Orissa Cement have been supported. In the managing agency group, Martin Burn have improved on maintaining the taxable ordinary dividend. Indian Copper have gained, and so have Indian Aluminium. Indian Cable, Rohtas and Hindustan Motors have been steady. Dunlop Rubber are being bought on rumours of a rights issue. Metal Box and Union Carbide have become firm. Interest is being taken in Hindustan Twyford and S. S. Duncan. Kesoram Industries are quiet while Jay Shree Industries have met with scattered buying. B.I.C. have reacted on profit-taking. New Asiatic Insurance and Ruby General have enjoyed influential buying.

Paper shares are steady. Titagur have welcomed the move to issue rights and bonus shares. Interest has been shown in Ballarpur and Bengal. Seshasayee have improved.

In the cotton mill section, Cawnpore Textiles and Bharat Commerce are up. Jay Shree Textiles have risen on a good report. Dunbar and Elgin are steady. J. K. Rayon have recovered on replacement buying.

Selected jute shares have been maintained. Interest is being taken in Birla, Fort Gloster, Northbrook, Anglo-India, Ganges, Nuddea, Union and Bally.

Coal shares have become sluggish and nominal business is being transacted. Burrakur and Bengal have been maintained. Pench Valley

have recovered on replacement buying.

Bank shares are steady and support has been forthcoming for United Commercial, Punjab National and United Bank.

Sellers predominate in sugar shares due to pessimism about the outlook for the industry. Carew, Belsund, Dyer Meakin Breweries and Cawnpore have weakened.

Satisfactory auction prices have induced support for selected tea shares. Huldibari are being taken on issuing bonus shares. Hasimara and Tyroon are being taken on talk of bonus issues. Interest has been shown in Tezpur, Dibrugarh and Betjan.

Turnover in Government securities is limited and fluctuations are narrow. Institutional support is conspicuous by its absence due to the increased monetary demand of the busy season. The 3 percent Conversion loan 1986 is quoted around Rs. 71.

PRESS NOTE ISSUED

By

THE GOVERNMENT OF INDIA
MINISTRY OF COMMERCE & INDUSTRY
DEPARTMENT OF COMPANY LAW ADMINISTRATION
NEW DELHI

It has come to the notice of the Government of India that a Society called the "All India Society of Corporate Accountants & Auditors" has been registered in Calcutta under the Societies Registration Act reportedly for training up students in the profession of accountancy. The Government would like to make clear that the Institute of Chartered Accountants of India constituted under the Chartered Accountants' Act, 1949 is the only statutory body the Members of which, namely Chartered Accountants, are, along with the Restricted State Auditors, entitled to be appointed as auditors of companies under section 226 of the Companies Act, 1956. The Society referred to above is not recognised either by the Government of India or by the Institute of Chartered Accountants and its members are not eligible to be appointed as auditors of companies under the Companies Act or to undertake any other audit work required by law to be done only by chartered accountants. As this Society has no statutory backing and its members no recognised status in the eye of law, public are hereby informed that engaging any member of this Society for performing any work which is statutorily required to be performed by a Chartered Accountant would result in non-compliance with the relevant provisions of law with the penal consequences thereof.

[Inserted by the Institute of Chartered Accountants of India, New Delhi.]

tired bull liquidation, combined with selling pressure. Operators were nervous because of the statement of the Prime Minister, Mr. Nehru, that all key industries ought to be in the public sector. The uncertainty concerning the general elections also restrained activity.

At the close, sentiment improved and share prices were lifted on replacement buying due to the flow of good corporate reports. Some companies had decided to issue bonus or rights shares and many others were expected to do the same. Cotton mill interests were inspired by the prospect of bigger profits for 1961. The agreement reached at the recent meeting of the G.A.T.T. Cotton Textile Committee in Geneva was interpreted bullishly. It was hoped that the agreement would help India to export more cotton textiles. The effort of the Government to import more cotton, in order to cover the shortfall in domestic production, was welcomed.

Tata Steel closed at Rs. 141.75 and Indian Iron improved to Rs. 25.50 on support from Lyons Range. Alcock Ashdown were quoted higher at Rs. 370 on talk of a new share issue. Premier Construction came to hand at Rs. 193 and Mahindra and Mahindra were taken at Rs. 21.24 on issuing rights shares. Larsen and Toubro were maintained at Rs. 43 on prospects of a rights issue. Tata Locomotive rose to Rs. 360 and Mukand Iron were dealt in at Rs. 28. Motor-vehicle shares were quietly steady, and business passed in Hindustan Motors at Rs. 20.84. Premier Automobiles were done at Rs. 141.

Cotton mill shares improved at the close. Rumours of a bonus issue lifted Bombay Dyeing to Rs. 72.10 and Century were taken up to Rs. 619 on replacement buying. Kohinoor were dealt in at Rs. 319.50 and Svadeshi came to hand at Rs. 303. Simplex were quoted at Rs. 174 and Phoenix were done at Rs. 268. Morarjee were wanted up to Rs. 418 and Standard were supported at Rs. 1,130. Apollo recovered to Rs. 2.50 on issuing rights shares. India United ordinary were transacted at Rs. 21.40 and Tata Mills came to hand at Rs. 82.

Sugar shares were depressed in the miscellaneous section, and Belapur were offered down to Rs. 231. Phalton were sold at Rs. 115 and Walchandnagar Industries were quoted lower at Rs. 153. Cement shares were steady, and business passed in Associated Cement at Rs. 152.50. Digvijay came to hand at Rs. 201 and Orissa Cement rose to Rs. 19.52. Steamship company shares were quiet, and Scindia Steam were offered freely at Rs. 12.64. Great Eastern Shipping at Rs. 12.64 lacked interest. Mining shares were quiet, and Shivrajpur Syndicate were dealt in at Rs. 43.50. Bombay Burmah rose to Rs. 652 on short-covering. Rayon shares were steady, and National Rayon recovered to Rs. 546.50 on replacement buying. Indian Rayon were quoted at Rs. 98 and Baroda Rayon at Rs. 154.50. Gwalior Rayon

were supported at Rs. 54.30. Chemical shares were steady, and business was done in Tata Chemical at Rs. 18.76. Indian Dyestuff rose to Rs. 562.50 and Colour-Chem to Rs. 495. Polychem were transacted at Rs. 233.75 and Synthetics and Chemicals were dealt in at Rs. 215. Ceat Tyre were quiet at Rs. 205, but Permanent Magnets met with support up to Rs. 185. Voltas were bought at Rs. 305 on investment account and Tata Oil were steady at Rs. 86. T. Maneklal improved to Rs. 720 on a higher dividend.

Bank shares were steady, and Bank of India were bought at Rs. 150. Central Bank came to hand at Rs. 69.80 and Bank of Baroda were done at Rs. 119.50. Insurance shares were quietly steady, and New India Assurance were transacted at Rs. 59.50. British India General were bought at Rs. 12.

Electric company shares met with scattered buying and Ahmedabad were steady at Rs. 96.50. Tata Hydro were done at Rs. 112.50 and Tata Power at Rs. 1,140. Bombay Suburban were transacted at Rs. 103.

Madras Market

APPRECIABLE FALL IN TURNOVER

CREDIT SHORTAGE WORRIES OPERATORS

Tuesday Evening.

THERE was an appreciable decline in turnover in the Madras stock market during the past week and fluctuations were narrow. Support from outside sources decreased and investors were inclined to proceed cautiously. The growing shortage of bank credit, combined with uncertainties concerning the general elections, restrained activity. Attention was concentrated largely on clearing shares. Selling pressure was nevertheless absent and the technical position improved with the lower carry-forward charges.

Business in Government securities was negligible and fluctuations were narrow. Selected bank shares met with support. Investors were inclined to buy good public utility issues due to higher yields. Sugar shares were sold freely at lower prices. In the planting section, sellers predominated. The outlook for tea, rubber and coffee was considered uncertain. Selected textile shares were in demand due to good working reports. Turnover in miscellaneous shares declined, but prices on the whole were steady.

In the banking section, Canara were done at Rs. 88 on paying a taxable ordinary dividend of 15 percent. Canara Industrial and Banking Syndicate were wanted up to Rs. 240 on declaring a taxable ordinary dividend

of 20 percent, including a bonus of 10 percent, but Pandyan reacted to Rs. 26 on reducing the taxable ordinary dividend to 7½ percent. London Market

IRREGULAR TREND IN INDUSTRIALS

TOBACCOS FALL

London, 21st February.

THERE was little to encourage buyers in the stock market during the past week, and sentiment was influenced more by the disappointing U.K. trade figures for January and by the less optimistic view of industry on the business outlook. The Imperial Chemical-Courtaulds struggle continued to claim most attention, and with the official and final terms of the bid now in the hands of Courtaulds' shareholders, the result was keenly awaited. There was a large two-way business in the shares of both Companies and small sellers appeared to have gained the upper hand in the case of Courtaulds. Industrials generally moved irregularly and at times followed disappointing company news. Tobaccos came under pressure in advance of the "health and smoking" report by the doctors and prices were fairly sharply lower. Stores lost ground under the influence of the disappointing results from the chain store, British Home Stores. Insurance shares were overshadowed by the severe hurricane damage in the U.K. and West Germany. Gilt-edged were a good deal quieter and moved narrowly in small trading. German bonds made some progress in a generally quiet foreign market. Gold shares remained very much in the hands of the professionals and moved erratically with a tendency to ease. Coppers were quiet, but tins were inclined to edge ahead.

Draft Declaration on Promoting Economic Co-operation in Asia

(FROM OUR NEW DELHI CORRESPONDENT)

AS already reported, the E.C.A.F.E. Secretariat has circulated the K. B. Lal committee's report among its Asian members. The following draft of a joint declaration has been sent round along with the report:

"The Governments of the countries of Asia, members of the United Nations Economic Commission for Asia and the Far East;

"Considering that the rapid development of the economy of their respective countries is essential for the improvement of general well-being of the Asian peoples, the promotion of their prosperity, and the maintenance of peace;

"Expressing their deep concern that the slow rate of growth of Asia's exports, the wide fluctuations in their volume and prices, the wide gap between export earnings and import requirements of Asian countries and the inadequate progress in the utilisation and development of Asian resources, constitute major obstacles to rapid economic development;

"Realising that closer economic co-operation among the countries of Asia is a pre-requisite for an accelerated rate of economic development, and for the mitigation of various difficulties facing them;

"Noting that other areas of the world are benefiting greatly from regional economic co-operation;

"Recognising that greater economic co-operation among Asian countries will promote and strengthen the growth of trade and economic co-operation with the rest of the world;

"Taking into consideration the current plans of economic development in Asian countries and the need and the urgency for greater regional co-operation in Asia;

"Determined to take practical measures for promoting regional co-operation in various fields including trade, industry, agriculture, transport and communications;

"Resolved to create the conditions and to establish the institutions necessary for the success of Asian economic co-operation;

Draft Declaration

"Do hereby declare

"first, that regional economic co-operation shall be animated by a spirit of goodwill, mutual respect for national sovereignty, and the desire to assist one another in furthering their respective developmental programmes, with due recognition of the importance and desirability of co-operation with countries outside the E.C.A.F.E. region;

"second, that the objectives of regional economic co-operation shall be:

"(1) to co-operate, subject to the requirements of their respective development plans, with one another, for the expansion of mutual trade and for the progressive reduction of tariffs and other trade barriers among themselves, with due regard to their obligations to countries within and outside the region;

"(2) to promote new lines of production and trade in industrial, agricultural and mineral products by means of exchange of information in long-range import requirements and export possibilities, as also joint studies of and mutual consultations on national development plans with

a view to encouraging efficient utilisation of resources of the region;

"(3) to assist one another, by means of appropriate measures, including long-term contracts and agreements, in the expansion of production and trade in agricultural and mineral products;

"(4) to co-operate in the formulation and execution of industrial projects, especially through the establishment of such units on a regional or sub-regional basis, paying special attention to the requirements of the industrially less advanced countries of the region, and to the possibilities of pooling the region's technical and financial resources;

"(5) to study problems of international commodity trade; to initiate in co-operation with international agencies concerned appropriate measures for safeguarding the interests of primary producers and augmenting their capacity to contribute to the expansion of international trade; and to adopt joint promotional measures for expanding commodity trade with other regions on a basis of mutual benefits;

"(6) to co-operate in the development of intra-regional transport and communication facilities; and in the promotion of joint or co-ordinated measures in this field;

"(7) to co-operate in ancillary fields such as banking, insurance, settlement of commercial disputes, and travel and tourism; and

"(8) to facilitate and co-ordinate within the regional framework sub-regional co-operation and sectoral arrangements in specific fields of economic endeavour.

"Third, that for the purpose of fulfilling the above objectives, an organisation for Asian economic co-operation shall be established, and that this organisation shall be under the direction of a Council of Ministers, comprised of plenipotentiaries of all member States and be assisted by the Secretariat of the United Nations Economic Commission for Asia and the Far East;

tal and vertical types of co-operation. For countries which are not in a position to achieve economies of scale and have yet to make appreciable progress in industrial development, co-operation will be of great value. Co-operation between countries in different stages of development will be equally essential, if intra-regional trade is to be developed in raw materials, agricultural and mineral, as also in industrial goods. As the less developed countries succeed in establishing processing and manufacturing units, their capacity to produce for export to the other countries of the region will develop appreciably, and, ultimately, when all the countries of the region become industrialised, of course, in different sectors and with possibly varying specialisations, horizontal co-operation will become a more important means of exchanging goods.

"Do accordingly agree to convene a meeting of ministers at an early date to take further steps in this matter."

Lal Committee Report

The K. B. Lal Committee report is largely in the form of suggestions. The following are some of the fundamental observations of the report:

(1) Individual countries in trying to solve their balance of payments difficulties by curtailing the import of goods produced in neighbouring territories are likely to set in motion a chain reaction which will eventually recoil on them and make their own task more and more difficult. A concerted effort is, therefore, called for to liberalise trade in regional products among regional countries so that both production and commerce, as also related economic activities, are freed from the cramping effect of restrictive regulations.

(2) While the creation of a full-fledged Customs union or a free trade area may not be immediately feasible, it should, nevertheless, be possible to set up a joint organisation to evolve measures that may be necessary in the field of tariff reductions, enlarged quotas and other facilities for expansion of exports which may be mutually agreed upon by the participating countries to secure an increase in intra-regional trade. Such aids and incentives would be justified on grounds of "infant" trade which needed special treatment.

(3) It is sometimes contended that since the countries in the region are in different stages of economic development, it is not easy for them to co-operate with one another. It is true that co-operation in western Europe is essentially of the horizontal type, namely, the industrially developed countries exchange among themselves a wide range of manufactured products. In Latin America, co-operation is being attempted in the first stage largely among developing countries on a horizontal basis, with provision for vertical integration. In the E.C.A.F.E. region, there is need of and scope for both horizontal and vertical types of co-operation.

(4) Experience in other regions shows that in taking on additional import quotas among the countries of the region, some countries will emerge with surpluses and others with deficits and these unbalances will require to be taken care of by some regional payments and compensation mechanism. It is not possible for the expert group to examine in detail the various technical aspects of the payments problem and the compensation mechanism. Nor is it possible to estimate the finances required for the compensatory mechanism unless reasonable estimates of the additional intra-regional trade and the emerging surpluses and deficits are available. However, the group is of the view that experience in western Europe and other regions in this matter has been most useful and can be drawn upon, with suitable modifications, to institute the multilateral compensatory mechanism needed for the E.C.A.F.E. region.

Intra-regional Trade

(5) It is desirable to promote intra-regional trade also by means of regional industrial units which would involve sectoral or partial integration in certain commodity markets and industries. The advantage of large-scale economies can be ensured by establishing industrial units in economical locations, with opportunities of marketing their products in other countries of the E.C.A.F.E. region. Some element of tariff-cum-quota preference can be applied with great advantage to the products of such regional or sub-regional industrial units. Such preference will enable the industrial unit to market its products at com-

petitive prices in spite of the difficulties during the infant stage. The advantage of an ensured larger market in several countries will attract investors and entrepreneurs from within and outside the region to invest their capital in those units.

(6) Countries which at present are mainly dependent on the export of agricultural and other primary products for their foreign exchange resources and on imports of manufactured goods and equipment and machinery from other countries within or without the region, will need to diversify their economies, organise the processing of domestic materials and increase their exports. Regional co-operation measures in the form of regional or sub-regional industries catering to multi-nation markets, the establishment of processing industries and long-term trade agreements and contracts can make a significant contribution in achieving the above ends.

(7) A factor retarding the development of new industries, even when other favourable conditions are present, is the relatively small size of the domestic market. This is true not only of countries with small populations, but also of large countries with very low levels of income. This is also true of industries which produce by-products or require semi-processed products of other industries. The inter-relationship among industries tends to be more and more complicated as the process of industrialisation proceeds,

and this necessitates larger and larger markets.

There is undoubted scope for selective action to ensure that advantage is taken of the economies of scale to establish industrial units in locations where production can be planned economically, provided the promoters are confident that facilities will be available to them for marketing their products in neighbouring countries or perhaps in the region as a whole. It should be possible for countries in the region by mutual agreement among themselves to provide access to their respective markets for the products of industrial units which are set up in different locations of the region.

(8) In the case of sugar, regional production and consumption are almost equal, but only half of the regional requirements are met from within the region. These possibilities broadly indicate the need of and scope for the co-ordination of targets of production of several agricultural commodities in the region.

Threat from Substitutes

(9) It is necessary for Asian countries to ensure that too great an incentive is not given to substitutes in western Europe and that Asian exporters are not placed in west European markets at a disadvantage in comparison with producers in other regions or territories. The organisations which are being set up in Latin America to co-ordinate commercial and economic policies are

likely to provide facilities for protecting their commodities on a regional basis. It seems, therefore, essential for Asian countries not only to safeguard their interests through regional measures but also to co-operate with global bodies to seek a fairer deal for primary producers and primary products.

(10) The establishment of freight study units is naturally the first step which could be taken up in order to ascertain the incidence of freight on the competitive position of a country's products in foreign markets. Such units could be set up in co-operation with the commercial organisation concerned with the various major export commodities. Most of the member countries of the region have to depend on foreign shipping lines for the movement of their cargoes and it is reported that they suffer considerable freight disadvantage in a number of commodities vis-à-vis the countries of other regions which have developed their own national shipping. Another factor hampering long-term development of trade has been the frequent changes in the freight rates. If intra-regional trade is to be developed, suitable machinery will need to be devised so that these problems are studied from the national as well as the regional angle, and wherever necessary, consultations with the foreign shipping lines are held. This could probably be achieved by setting up a regional shipping and freight committee which might be set up in the member countries. It

would also be necessary to bring about greater co-operation among the commercial interests in the region so that they are able to negotiate with the shipping lines. The experience of countries, such as Australia and the Netherlands, which have set up exporters' associations and shippers' councils, would be of interest in this matter.

Joint Shipping Line

(11) The advantage of having a fleet of small ships which could make short runs and call at minor ports and generally work economically towards promoting the trade of the region is obvious. For example, a service which takes cargo from Persian Gulf ports to Pakistan, India, Ceylon, Burma and Malaya and back could be conceived. Branch lines from Singapore to Hongkong and Japan or Djakarta and Australia could also be set up. It is possible that if left purely for commercial exploitation, the route may not at first appear quite remunerative, but if an intelligent assessment of cargoes between particular ports is worked out, the proposal might be feasible.

(12) A suggestion which would appear to merit serious consideration in this connection is the establishment of a joint shipping line by countries of the region. Considerable economies in the operation and pooling of resources can be secured thereby. Such a service would open up new channels of intra-regional transport and trade and facilitate a greater utilisation of shipbuilding and repair facilities available within the region.

(13) The proposed organisation for Asian economic co-operation is conceived as an executive agency for taking concrete measures and for implementing agreed programmes of action. One of its chief tasks will be to try to give practical shape to, and to put into effect, the conclusions which are reached as a result of studies by and discussions in different E.C.A.F.E. organisations. In view of the close links which are envisaged to subsist between the regional commission and the regional organisation it is obvious that the headquarters of this organisation should be located at the same place as the E.C.A.F.E. headquarters.

It will be essential to clothe the organisation with authority to make decisions binding on participating governments. Without such authority, the organisation may not be able to make any significant contribution to the growth of co-operation in the region. Provision may, however, be made to provide for remedies to members who, for good reasons, dissent from the organisation's decision in any particular matter. It is, however, to be hoped that because the field of work which is proposed to cover is so limited, the commitments expected of participating governments are so small and the objective to be attained is so much in the interest of all, that occasions to invoke such a provision will be few and far between.

Geneva Textile Pact

The draft of Geneva agreement has been well received here as it has the potentiality of stepping up exports of cotton textiles. The agreement envisages a bilateral agreement between member countries. It is anticipated that if the volume of exports is stepped up in one year, the importing country would allot a bigger quota for the following year. By and large, Indian textiles could stand qualitative competition. But their price is on the high side, and the Indian textile industry, in order to retain the existing market or expand it, will have to meet the loss itself, it is suggested here. It is hoped that the industry will seize

the opportunity offered by the draft agreement and push up its exports to the markets of Europe and the U.S.A. The example of the sugar industry, however, does not encourage hope.

India is totally opposed to the proposal of the U.S. Government to levy an import duty of 8.5 cents a lb on the cotton content of textiles. The draft agreement, it is explained, provides a remedy to deal with such cases. As a last resort, Article 35 of G.A.T.T. could be invoked. The levy may jeopardise the ratification of the agreement, if it is imposed earlier.

Visit of U.S. Aid Official

The newly appointed Assistant Administrator for the Near East and South Asia regions in the United States Agency for International Development, Mr. William S. Gaud, has just completed five days of talks with the officials of the Ministry of Finance and representatives of other Government of India Ministries and Departments concerned with the U.S. aid programme in India. In the discussions, Mr. Gaud was primarily interested in familiarising himself with U.S. A.I.D. operations in the area and in the progress of projects and programmes previously financed by the United States. Loan applications to make up the remainder of the U.S. commitment of \$545 million (approximately Rs. 257 crores) for the first year of the third five year plan were also discussed with the Ministries of Irrigation and Power and Commerce and Industry, and the Railway Board. Mr. Gaud also had exploratory talks with Mr. L. K. Jha, the Economic Secretary, Ministry of Finance, and Mr. N. N. Wanchoo, Secretary, Department of Iron and Steel, Ministry of Steel, Mines and Fuel, concerning possible U.S. Government financing of the Bokaro steel mill project.

Railway Steel Import

The Railway Board has arranged to import the following quantities of steel from the rupee payment countries: 30,000 tons of rails from Russia of which 10,000 tons have already arrived in India, 85,000 tons from Poland, 40,000 tons from Czechoslovakia and 55,000 tons from Yugoslavia, making a total of 210,000 tons. The steel requirements of the Indian railways during the current year are placed at 450,000 tons, of which categories only half is available from indigenous sources.

Using Yugoslav Credit

Broad allocations of the Yugoslav credit of \$40 million have now been agreed upon: \$10 million will be available for the purchase of ships, another \$10 million for power projects and the remainder will be utilised by the Ministry of Commerce and Industry and the private sector.

U.S. Cotton Imports

There is little chance of India getting cotton from the U.S.A. under P.L. 480 in 1962, the director of the U.S. "Food for Peace" programme, Mr. George McGovern, stated last week.

Motor-vehicle Manufacture

Due to the shortage of foreign exchange, the Government has advised the motor-car industry to lay greater emphasis on the manufacture of commercial vehicles, for which provision is being made during the next licensing period. The original allocation for the third plan period for the industry was Rs. 35 crores. The production of cars was to be stepped up from 20,000 to 30,000 a year by 1966. A re-assessment of the foreign exchange requirements of this industry on the basis of the original pro-

gramme is now placed at Rs. 70 crores.

I.D.A. Aid for Irrigation

India has asked for assistance from the International Development Association, an affiliate of the World Bank, for four irrigation and power projects. They are the Parambikulam project, a joint venture of the Madras and Kerala Governments, the Purna project in Maharashtra, the Tawa project in Madhya Pradesh and the Sone project in Bihar. The Parambikulam project, when completed, will irrigate 240,000 acres of land and produce 180,000 kW of power. The Tawa multi-purpose project will provide irrigation facilities for 787,000 acres and generate 42,000 kW of electricity. Purna also is an irrigation-cum-hydro-electric project. While it will irrigate 152,000 acres, it will generate only 15,000 kW. The Sone project will irrigate 307,000 acres in Bihar.

As a result of the discussions, assistance by the World Bank and the International Development Association for the multi-purpose Beas project in the Punjab, the Sone barrage project in Bihar and for a detailed survey to assess the power potential in the country, is practically now assured.

Loan to Shipping Company

A loan agreement was signed here last week between the Shipping De-

velopment Fund Committee and the Jayanti Shipping Company, the former agreeing to advance a loan of Rs. 20.25 crores for the construction of about 13 new cargo ships, on terms and conditions laid down in the loan agreement. The new ships will be acquired by the Company on deferred payment terms at a total cost of Rs. 22.5 crores. The Shipping Development Fund Committee, which is a statutory body constituted under the Indian Merchant Shipping Act, has agreed to give a loan not exceeding Rs. 20.25 crores to the Company, equivalent to 90 percent of the cost of the acquisition. The Committee has stipulated that the Company should raise its paid-up equity capital to Rs. 1.5 crores before it can become eligible for any portion of the loan. Thereafter, the Company will have to build its equity capital progressively up to Rs. 5 crores as further instalments of the loan fall due. The debt equity ratio of 4:1 will always be maintained by the Company. The Committee has also stipulated that the Company will convert itself into a public limited Company within a period of one year from the date of the signing of the loan agreement or immediately before the first instalment of the loan is due for payment, whichever is earlier.

The entire loan amount will be secured by first mortgage of all the ships to be built and will be repaid-

able in 18 years commencing from the date of payment of the first instalment of the loan. The State Bank of India will issue a guarantee to the shipyards concerned for the payment of 90 percent of the price of the ships in eight annual instalments. The effective rate of interest will be 3 percent. This is a concessional rate fixed by the Government for all loans granted by the Shipping Development Fund Committee for the acquisition of ships.

A nominee of the Shipping Development Fund Committee will function on the board of directors of the Company for the entire duration of the loan. The Company will comply with the provisions of Section 21 of the Indian Merchant Shipping Act, 1958, relating to the proportion of foreign participation in equity capital and the composition of the board of directors. In addition, the chairman or the managing director will be a resident Indian national. All the ships will be manned by Indian crew from the beginning. This will provide employment for over 700 seamen of various ranks.

A noteworthy feature of the order placed by the Company on the Mitsubishi Shipyard is that no payment for a ship is to be made to the Shipyard until the vessel is delivered. The first payment is 10 percent of the price of the ship and when this payment is made, the ship is in a

important beginnings

In December 1911, Bihar acquired the status of a separate province. This marked the dawn of a new phase in the history of this ancient state.

The birth of the new province synchronised with another epoch-making event. In December 1911, shattering the silence of the jungle hamlet of Sakchi, as Jamshedpur was then called, the newly-built Tata Iron and Steel Works roared into life and produced the first cast of pig iron. The commissioning of India's first iron and steel works helped to put Bihar on the industrial map of India and to set the country on the path to economic maturity.

In the course of fifty years, with the steel works as its nucleus, Jamshedpur has grown into a major industrial centre in India and the second largest city in the fast-developing State of Bihar...a city where industry is not merely a source of livelihood but a way of life.

Using Swiss Credit

Government approval has been accorded to import Swiss plant and machinery to be financed from the Swiss credit in the following cases: (1) The Mettur Chemicals and Industrial Corporation will import 22 caustic soda mercury cells valued at 1,395,100 Swiss francs and chlorine scrubbing and drying plant valued at 204,990 Swiss francs from Krebs. (2) From the same Swiss firm, Century Rayon Mills of Bombay will import 2,500,000 Swiss francs worth of caustic soda plant. (3) Another Indian undertaking, Fertilisers and Chemicals Ltd of Travancore, will import from Krebs and Company 110 kW switchgear valued at 497,500 Swiss francs. (4) The fourth client of Krebs and Company is National Newsprint and Paper Mills Ltd, which has contracted to import one chlorine and caustic soda plant valued at 2,493,800 Swiss francs. (5) Yet another Indian firm is Kanoria Chemicals and Industries Ltd, which has contracted to import through Krebs one complete cell plant and its auxiliary equipment valued at 2,610,000 Swiss francs. (6) Krebs and Company will also supply to Travancore and Cochin Chemicals Ltd, 11 mercury cells to manufacture caustic soda,

valued at 867,650 Swiss francs, and one complete plant for the manufacture of sodium sulphate with accessories valued at 320,000 Swiss francs. (7) Lastly, Doaba Co-operative Sugar Mills of Nawanshahr has contracted to import a 1,000 kW turbo set valued at 222,900 Swiss francs from Brown Boveri and Company.

Indo-U.K. Trade

The Indo-British trade during the year ended December 1961 disclosed an adverse balance against India of £1,865,000. Indian exports to the U.K. declined by £3,535,000 to £144,929,000 during 1961, compared with the 12 months of 1960. Major declines in exports were in tea, leather and leather goods, cotton yarn and woven fabrics and miscellaneous textile manufactures, the loss in the last two items being £2,758,000 over the 1960 figures. Tea exports also fell by £1,101,000. Imports from the U.K. were up by £1,311,000, compared with 1960. This was in spite of the fact that the imports of almost every article declined during the year, as compared with 1960.

Import and Export Bodies

The six-monthly meetings of the Import and Export Advisory Councils

will be held here on 5th and 6th March, the Minister for Commerce and Industry, Mr. K. C. Reddy, presiding. As was agreed in September last, the two councils will hold a joint session.

Industries Act in Kashmir

The Industries (Development and Regulation) Act, 1961, has come into force in the State of Jammu and Kashmir since 15th February, 1962. A notification to this effect has been issued. Industrial undertakings, with fixed assets not exceeding Rs. 10 lakhs, will be exempted from the provisions of the Act.

I.F.C. to Raise Capital

The Industrial Finance Corporation of India has been authorised by the Central Government to issue further 4,000 fully paid-up shares of Rs. 5,000 each (worth Rs. 2 crores). The shares of the Corporation are guaranteed by the Central Government as to the repayment of principal and payment of an annual dividend at the minimum rate of 4 percent. The Central Government and the Reserve Bank of India will each subscribe 800 shares and the remaining 2,400 shares are offered for public subscription to scheduled banks, insurance companies, investment trusts and other like

financial institutions as are registered in India under the Indian Companies Act and the co-operative banks in the following proportions:

Scheduled banks	1,000 shares
Insurance companies, investment trusts and other like financial institutions	1,000 shares
Co-operative banks	400 shares

Final Lok Sabha Session

It has been decided that the 16th and final session of the present Lok Sabha will commence on 12th March.

Making Coal Washeries

The Government of India has decided to give preferential treatment to the manufacturers of coal washeries given ordinarily to other indigenous manufacturers. At present, there is only one manufacturer in India, and equipment is obtained through global tenders. With the setting up of additional capacities in India, future tenders will be restricted to indigenous manufacturers. In order to meet the increasing needs of the steel plants for coking coal of good quality, the Government has planned to create additional capacity for the washing of coking coal to the extent of about 12.7 million tons a year under the third plan. Part of this washing capacity is being set up by Hindustan Steel, and part by the National Coal Development Corporation. Hindustan Steel's programme comprises setting up of a second unit at the existing Dugda washery with a capacity of 2.4 million tons, and the expansion of the Bhojudih washery which is expected to be commissioned shortly, by about 800,000 tons.

Of the washeries for coking coal, being planned by the National Coal Development Corporation, Kathara, with an input capacity of 3 million tons and Karanpura with a capacity of 2.8 million tons, are being financed from Russian and Polish credits, respectively. These washeries will be commissioned by about the end of 1964. The project reports for two other washeries, namely, one in Chalkari (500,000 tons), which will be an extension of the present Kargali washery of the Corporation, and the other in Swang (1 million tons) are expected to be ready by March and June this year, respectively.

The placing of orders for the supply of plant and equipment for these two washeries is likely to be done between July and December this year. While the washeries in Kathara and Karanpura are tied to foreign credits, those in Swang and Chalkari offer scope to indigenous manufacturers. Subject to price and delivery being reasonable, the indigenous manufacturers will be given preference over foreign suppliers.

Dugda Washery Expansion

The expansion of the Dugda washery offers similar scope to indigenous manufacturers. The National Coal Development Corporation proposes to set up two more washeries with input capacities of 1.5 million tons and 2.2 million tons, respectively, in Ramgarh and Sudamdih. Although the mines for these are being planned respectively with American and Polish technical assistance, the manufacture and installation of washeries for these projects will be by indigenous makers, subject to price, delivery, etcetera, being found reasonable. A few more coking coal washeries may be set up by the Corporation and the private sector steel plants. These will also be within the scope of supply by indigenous manufacturers, who will have preference over foreign suppliers depending on satisfactory price and delivery terms.

London

Rail Strike Averted: Unions Promised More Later in the Year

(FROM OUR LONDON CORRESPONDENT)

THE immediate threat of industrial unrest has been averted. The Prime Minister and Dr. Beeching, chairman of the British Transport Commission, have given the railway unions the firmest assurances they have yet received that if they accept the present offer of a 3 percent increase on 1st April, they can look forward to something more later in the year. The three unions concerned have decided that nothing will be gained by strike action.

The railwaymen rightly or wrongly, are regarded as setting the trend for wage claim settlements, so it is reasonable to presume that Mr. Selwyn Lloyd has scored a point in favour of his "guiding light" suggestion that 2½ percent is the scope for wage increases in the immediate future on the conclusion of the "pay pause." This may not prove to be the case, of course, but slight deviations are covered by his qualifications in the recent White Paper on incomes. Meantime, the breathing space is welcome, and the Chancellor has been improving the occasion by clarifying other points in the White Paper through question time in the House of Commons, and especially his attitude to profits and dividends.

Trade Figures Disappoint

Seasonally adjusted, the export-import gap widened in January from £39 million to £68 million. This is the worst figure since last May and is due to a sharp rise in imports from £350 million to £380 million, exports plus re-exports remaining almost unchanged at £312 million. After eliminating the normal seasonal variations, exports in November, December and January were 3 percent less than in the previous three months (August, September and October), and 2 percent less than the average for the whole of 1961. On the same basis, imports were 1 percent less than in the three months from November to January and the same percentage down on the average for the year 1961.

Taking the unadjusted figures, the crude trade gap increased in January to £78.6 million, against £26.9 million

in December, and £81.8 million in the same period of last year. Exports (f.o.b.) were £311.8 million, compared with £298.5 million in December, and re-exports were £12.2 million, against £12.9 million. Imports (c.i.f.) were £402.7 million, compared with £338.3 million in December. The figures undoubtedly are disappointing. The expected turn-up in exports is a long time in coming, while the sudden jump in imports is a reminder of the perennial threat lurking below the surface of the trade figures. However, judgment based on a single month's figures ought always to be reserved since they can easily be distorted by accidental influences. The Trade and Navigation Accounts, which will follow later in the month, may paint a picture slightly less disturbing than the provisional figures.

Development Council

Mr. Selwyn Lloyd, Chancellor of the Exchequer, has named in the Commons 11 of the 17 members of the "top tier" of the National Economic Development Council. In addition, Sir Robert Shone, Director-General of the Council's "second tier" of experts, has named his two key assistants. Members of the "top tier," in addition to Sir Robert, will be: Dr. R. Beeching, chairman of the British Transport Commission; Lord Robens, chairman of the National Coal Board; Professor H. Phelps Brown, of the London School of Economics; Sir Oliver Franks, soon to become Provost of Worcester College, Oxford, after being chairman of Lloyds Bank; Mr. F. A. Cockfield, Boots Pure Drug Co.; Mr. R. M. Geddes, Dunlop Rubber Co.; Mr. C. F. Harrison, English Sewing Cotton Co.; Mr. E. J. Hunter, Swan, ton Co.; Mr. E. J. Richardson; Mr. Hunter and Wigham Richardson; Mr. J. M. Lang, John Lang and Son; and Mr. J. N. Toothill, Ferranti. The Chancellor, the President of the Board of Trade and the Minister of Labour are ex-officio members.

On the second tier, the important job of Economic Director has gone to Sir Donald MacDougall. He has taken two years' leave from Nuffield

College, Oxford, where he is a Fellow, and will be full-time head of an economic research staff of about six. The other appointment is Mr. Frank Pickford as administrative Secretary. He comes from the Ministry of Labour. The leaders of the Trades Union Congress have chosen their six representatives for the Council. They include Mr. Frank Cousins, who led the opposition to Congress membership of the Council. The others are: Mr. Harry Douglass, general secretary, Iron and Steel Trades Confederation; Mr. William Carron, president, Amalgamated Engineering Union; Mr. Sidney Greene, general secretary, National Union of Railwaymen; Mr. Ron Smith, general Secretary, Union of Post Office workers; and Mr. George Woodcock, general secretary, Trades Union Congress. The six have been chosen for their industrial representativeness rather than their personal qualifications.

Income Policy Supported

The Governor of the Bank of England recommended "full support" for the Government's income policy and the National Economic Development Council when he spoke the other night at an Institute of Bankers' dinner in Birmingham. "These should bring us all to show good sense in our demands for money income and in our national effort so that our vision of the future may become a reality," Lord Cromer said his concern was that "our money should be honest" and that "those who save their money now should have no fear of being cheated when they have cause to realise their savings." It was also his concern "that, as a country, we should enjoy the full prosperity of which we are capable, and that the integrity of the pound sterling should be regarded as beyond question."

The Governor's diagnosis of inflation singled out "three intermingled causes" that had mattered most. "We have been too extravagant in our demands for higher incomes. Our readiness collectively to save has not matched our private and Government

borrowing, so that the very efficiency of our financial arrangements which have made possible this element of spending have contributed to inflation. And, thirdly, we have not been getting full efficiency and hence full value for money out of existing or new capital investment in industry." Inflation, the Governor said, "hampers our progress because it disorders our economy and impairs our whole competitive position in the world. It produces blatant inequities and social injustice...when money profits are too easy to obtain, the spur to efficiency gets blunted."

Asian Trade and E.C.M.

Sir Pierson Dixon, said at a meeting of the Common Market delegation deputies in Brussels that the industrialised countries of Europe had a moral responsibility to accept imports from the underdeveloped countries. He appealed for recognition of the problems of India, Pakistan, Hongkong and Ceylon, France and West Germany, he said, were joining with Britain in financing the growth of India's export industries, which were chosen as "forward-looking." India had developed exporting industries able to face all competition. She had lately exported diesel engines to the United States. The financing of Indian industry would be frustrated if imports into European countries were not allowed to expand. What was true of India was true of the other Asian countries.

Industrialisation and growing exports of industrial goods was the only solution to Asia's problem of poverty, growing population and economic underdevelopment. Sir Pierson said. The future of western civilisation might depend on Europe's willingness to weave this solution into its commercial fabric. The other delegations agreed to the formation of a special working party to set out in detail and analyse the facts about the export of manufactured goods from the Asian countries of the Commonwealth.

Brevities

Lord Lansdowne, Foreign Under-Secretary, will lead the British delegation to the eighteenth annual session of the Economic Commission for Asia and the Far East in Tokyo next month.

Sir Harold Bibby has given up the chairmanship of Martins Bank, which he has held for 15 years. He keeps his seat on the board. Sir John Nicholson, a deputy chairman, has been elected chairman.

SHARP RISE FOLLOWS RELEASE OF U.S. BURLAP FIGURES

STEADIER conditions appear to have returned to the jute goods market recently. But it is doubtful if they indicate the real trend, since the rise stems mainly from speculative activity. Bulls bought rapidly during the earlier part of the past week, following the publication of the U.S. burlap consumption and stock figures for January 1962. The situation was viewed with concern by the directors of the East India Jute and Hessian Exchange. They issued a warning that unless the outstanding position in jute goods in hedge trading for February 1962 delivery was considerably reduced by 19th February, they would be compelled to resort to emergency measures. The authorities were particularly concerned about the hessian section. Although the situation did improve, they decided to declare an emergency. From 20th February, it was notified, fresh transactions in Standard Contract No. 1 (hessian cloth contract) for February 1962 delivery was to be prohibited.

The U.S. burlap consumption figures for January are interesting, as there appears to be no specific reason for such a large increase. Some think that it may be due to adjustments, thus giving a false impression. At 88.2 million yards, the consumption constitutes a new high for the month of January, and at the same time, a new high for any month since 1953. It is 18 million yards more than in December 1961 and 15 million yards more than in January 1961. January is normally a fairly good month for consumption, but is not considered a peak month. Over the past nine years (excluding last month), the average consumption during January has been 70.4 million yards. So, in the opinion of many, it would be wrong to take too complacent an attitude about the future.

Ready Goods Scarce

It is not likely that the U.S.A. will rush in to buy hessians merely because of one month's record consumption, particularly in view of the recent increase in the production of the Indian mills. In the circumstances, there is more chance of her pursuing a hand-to-mouth buying policy, as the greater availability of goods should soon relieve any shortages. The current scarcity of ready goods in the Calcutta market is generally considered to be artificial; it has developed from the speculative activity of one or two large operators who are attempting to force prices up.

As a result of the activity in goods, somewhat steadier conditions seem to have returned to the fibre market. Mills continue to make purchases according to their quota, which is reported to be about 700,000 maunds for the current week. The main interest is still in Tossa grades, the prices of which have risen by Re. 1 or Rs. 1.50 a maund above the minimum. Very little has been put on offer, and some mills have resorted to buying combined offers of Tossa and mesta or white jute to obtain their requirements. Even so, the quantity on offer is small.

Mills have shown a marked reluctance to follow any rise in prices, but sellers point to the favourable trading returns at the current level of gunny prices and show an equal determination not to reduce rates. In the eyes of many manufacturers, the minimum price has become the maxi-

mum, which is not what was intended. There was a time when the minimum price was unrealistic. But the natural laws of supply and demand must be observed, and the question of how much jute there is still left to market out of the current crop looms large in many operators' minds.

It must be admitted, however, that it is galling for mills to have to continue buying jute to appease the Government, when they have more fibre on hand than they have had for a decade. The qualities which are scarce, such as Tossa, will inevitably command premiums and there is very little the mills can do about it. Nearly all grades of jute—and that includes most of the jungle varieties too—are now at the minimum price or above. The I.J.M.A. can congratulate itself on an unpleasant task satisfactorily carried out.

The time is fast approaching when the economists of Clive Row will be pushing fibre rates up or down according to the density and direction of the clouds passing over Calcutta. Signs of rain will tend to make prices cheaper, and the absence of rain will make prices dearer. Whatever happens, it is important that during the next few months rates are not allowed to slump to such an extent as to affect the sowings of the new crop. In other words, it looks as if minimum prices are here to stay, at least until after the new crop is well sown.

I.J.M.A. Gunny Production

During January 1962, mills reporting to the I.J.M.A. produced 96,700 tonnes of goods in 208 working hours. The production of hessians was 36,900 tonnes (40.2 percent), of sacking 47,000 tonnes (48.6 percent) and of other goods 10,800 tonnes (11.2 percent). Compared with the previous month, the output of hessians was up by 1,100 tonnes and that of other goods by 600 tonnes. On the other hand, the production of sacking dropped by 2,600 tonnes, the overall drop in output being 900 tonnes. The drop in output being 900 tonnes. The production of hessians was the highest since July 1959 and demonstrates the industry's attempt to alleviate the shortage of ready hessians.

Arrivals of Raw Jute

Arrivals of raw jute at Calcutta and mills' stations during January 1962 amounted to 809,000 bales, of which 773,000 bales came from India and 36,000 bales from Pakistan. The total is a new high for the month of January but is 87,300 bales less than the previous month's figure. Compared with January 1961, total arrivals are up by 208,000 bales. Arrivals so far up to 1962, are 4,252,250 bales, made up of 3,977,850 bales from India and 274,400 bales from Pakistan. During the corresponding period of the 1960-61 season, total arrivals were 3,307,300 bales—2,993,250 bales from India and 314,050 bales from Pakistan.

THE JUTE MARKETS

Manufactured Goods: At the opening of the goods market last Thursday, conditions were quietly steady, and there was no change in the quoted rates. Reports of small enquiries from overseas, particularly to Ghana, for sacking caused prices to rise. On Friday, B Twills advanced Rs. 126.25 in the near positions and Rs. 121.25 for July-September. There

was very little interest in hessians at this stage, but local covering pushed up ready 40in. 10oz. to Rs. 53.50. The publication of the U.S. burlap consumption figures for January caused a fresh wave of speculation to develop. By Saturday morning, ready hessians had jumped by Rs. 2 to Rs. 55.50. Heavy goods reacted in sympathy and rates advanced by 50p. Speculative activity eventually caused a reaction, particularly when the heavy outstanding position against February hedge contracts was pinpointed by the East India Jute and Hessian Exchange. The reaction was only temporary, however, and the losses recorded on Monday were recovered on Tuesday. An emergency was declared by the East India Jute and Hessian Exchange. It prohibited any fresh transactions in Standard Contract No. 1 (hessian cloth contract) for February 1962 delivery on 20th February.

Opening quotations on Wednesday morning were as follows:

	Feb.	March	Apr.-June	July-Sept.
40in. 7oz.	42.50	40.00	37.50	36.25
40in. 8oz.	46.25	43.25	40.50	38.00
40in. 10oz.	56.50	52.00	49.00	47.75
B Twills	128.50	124.25	122.50	120.50
Corn sacks	135.00	129.00	125.75	123.00
Heavy Ceers (Plain)	126.50	124.50	122.50	120.50
A Twills	154.00	153.00	148.00	145.50
Liverpools	148.50	144.50	140.00	137.50

Raw Jute: The fibre market was unchanged at the opening last Thursday when mills took up small quantities of jute. The upcountry markets were steady, and sellers were for the most part reserved, particularly for Tossa grades which commanded a premium of anything up to Re. 1. White jute and mesta continued to be offered at the minimum rates, but mills showed very little interest in mesta. Jute from jungle areas was still obtainable below the minimum rates at the beginning of the week, but later all varieties came up to the minimum levels or above. Arrivals in the upcountry agencies were small and sellers' ideas very reserved. A trickle of wagons was reported in Cossipore, and during the week, only about 50 wagons were placed.

Opening quotations on Wednesday morning were as follows:

	Landed at Mill Basis Bottoms	Rs. per 100 kgs.	Rs. a Md.	Shipment

THE FOREIGN JUTE MARKETS

CLOTH AND YARN FALL
(FROM OUR DUNDEE CORRESPONDENT)
The raw jute situation this season is becoming even more difficult to follow, and buyers of any com-

modity in the industry have had to make up their minds how to act. For instance, the E.P.C. levels in Pakistan were reduced last week by anything from £1 to £6 a ton, yet the lowest rates at which business could have been done here were raised. Of course, sellers were discounting the Pakistani prices by a very large margin, down to £117 being quoted for Mill Lightnings and £93 for Mill Hearts. These are now lowest at £121 10s and £96 10s, against the new E.P.C. rates of £121 5s and £99 10s for February-March shipment, c.i.f., U.K.-Continent. Other prices for raw jute are £146 nominal for Mill Firsts, £84 for Grade Hearts, £135 10s for Grade Tossa-2/3, £121 15s for fours and £99 15s for Continental Tossa-2/3, same shipment. Spinners here have bought very little, though no doubt regretting their lack of interest when prices were several pounds a ton cheaper. Continental spinners have been buying fairly steadily, now more freely.

The fall in E.P.C. prices resulted in a reduction of £5 a ton on most rates for jute yarns. The fine qualities were allowed to remain unchanged, but hessian descriptions were reduced from 17.49d to 16.92d a lb for 8 lbs "C.H.W." cops and from 18.64d 18.07d for "J.C.H." quality. The "J.C.H." quality is used for the better types of cloth and bags, but many manufacturers find that the "C.H.W." yarns are quite suitable and, naturally, this quality is most often asked for, although most manufacturers were rather sceptical when it was first introduced in the weft, and followed in the warp months later. Sacking 24 lbs weft was reduced from 13.96d to 13.38d a lb and rove from £123 for 48 lbs and £92 15s

for 200 lbs to £120 5s and £90, respectively, a ton. Cloth prices were at 14.49d for 40in. 10oz. and 12.23d a yarn for 8oz., compared with 14.87d and 12.60d, respectively.

Calcutta goods were again irregular, but the level of prices, it was said, was very good and profitable for the mills. Hessians were quoted at 80s 6d for 40in. 10oz. and 63s 6d for 75oz., February, 77s 3d and 59s 3d March, 74s and 55s 3d April-June and 72s 3d and 54s 9d July-September, with B Twills 191s 6d, 191s 6d, 188s 6d and 185s 3d for the respective positions of shipment, f.o.b., Calcutta.

THE PAKISTANI JUTE MARKETS

FOREIGN INTEREST POOR DESPITE PRICE CUTS

(FROM OUR Dacca CORRESPONDENT)

THE early firmness in the local market, probably in the expectation of renewed overseas buying interest following a cut in E.P.C. prices, has not been reflected in the foreign centres, with the result that the local market now appears a little uncertain. Arrivals in the interior and in the Narayanganj markets

remain small, but renewed buying activity has pushed prices up slightly. The higher prices being paid may well induce growers to release more of their stocks. The pucca baie market has also shown more activity, and prices for long jute and cuttings are being quoted well above the overseas rates. Cuttings have reacted with one large buyer mainly in the forward position. It is probably in anticipation of import licences being issued by India for these grades after the elections. There has been very little response from the London market, in spite of the reduced E.P.C. prices, but Poland, it is reported, has been buying steadily.

CAPITAL, 22nd February, 1962.

After lengthy discussions, the P.J.A. reduced E.P.C. figures considerably on 10th February. Even the higher grades were reduced, although very little business has taken place in them. The most important cuts have been of £6 in Export Firsts and of £2 in Export Lightnings and of £3 in Cuttings. S.N.C. and D.T.C. were reduced by £2 and T.C. by £4. Output Tossa 2/3 was reduced by £5, Dundee Tossa 4 and Dundee Tossa 2/3 by £4. Dacca Tossa 6 was reduced by £4 and Dacca Tossa 5 by £2. On 13th February, however, cuttings were again increased by £1. The reduction is certainly reasonable, but the general feeling is that Lightnings should have been reduced a further £2.

Quite reasonably, shippers and some London buyers expected that the long awaited drop in the prices would tempt buyers into the market, but this has not been the case. Probably, buyers feel that there should be further cuts in the most popular grades—Export Lightnings and Output Tossa. In fact, there is every likelihood that prices will begin to rise again shortly as it becomes apparent that the crop is not so very large, that the consumption of the Pakistani mills will be somewhere in the region of 2.1 million bales and that after the elections, India may well buy appreciable quantities.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in January was the highest in many years. In the light of the difficult market conditions, with comparatively high prices and shortages prevailing over the past several months, it is an impressive performance. It shows burlap's ability to increase its market in packaging and industrial fields in spite of many obstacles. At an estimated 88 million yards, bag cut-up was 67 million yards and piecegoods deliveries 21.2 million yards and 15.4 million yards, respectively, in January 1961. U.S. spots and floats in the month increased by 4 million yards. At 241 million yards, 111 million yards were spots and 130 million yards were floats. Appearing below are two tables which include the January figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association and (2) projected to represent the estimated consumption and stocks for the entire industry.

For more than half a century McKee engineers have specialized in the design, engineering and construction of steel-producing facilities. Our comprehensive mine-to-metal services include every phase of the work necessary for any steel-plant project, from preliminary studies to completed plant ready for initial operation.

The McKee Organization has executed contracts in 49 countries including India. Among these are some of the world's largest and most modern completely integrated steel plants and hundreds of individual units, including blast furnaces, open hearth shops, rolling mills, agglomerating, sintering and pelletizing plants. Most recent examples of large-scale integrated plants are the new Somisa plant at San Nicolas, Argentina and the C.S.N. plant at Volta Redonda, Brazil.

To the steel industry of India the McKee Metals Division offers the services of its large, well-qualified staff with a fund of sound, practical experience and specialized knowledge that is unmatched anywhere in the industry.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY
WESTERN KNAPP ENGINEERING

Represented in India by
DR. B. S. GILANI
29, Jor Bagh, New Delhi 3

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION

Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING

Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

UNITED STATES: CLEVELAND • NEW YORK • WASHINGTON • CHICAGO • SAN FRANCISCO • UNION, N. J.

Plantation Topics

RUBBER ESTATES ADVISED TO DO MORE REPLANTING

(FROM OUR SOUTH INDIAN CORRESPONDENT)

THE Governor of Kerala, Mr. V. V. Giri, told the first meeting of the newly constituted Rubber Board last week that unless immediate and effective measures were taken to increase the production of rubber in India, its future in this country would be uncertain. The yield from the estates has to be raised substantially, otherwise the natural product would lose ground to its artificial competitor. The Governor advised the growers to take advantage of the subsidy offered by the Rubber Board for replanting. Low-yielding and worn-out trees had to be replaced with high-yielding strains, he said. The Governor thought that the interest-free loan offered by the Board to small holders would enable the latter to enlarge the extent of their rubber areas and make them economic holdings.

It was decided at this meeting to explore actively the possibilities of starting the cultivation of rubber in the Andamans. An officer of the Board will be sent to the Andamans immediately for this purpose. The problem of the gap between indigenous production and the country's requirement in rubber was discussed at some length. The problem of import also came up, and it was decided to send a delegation to Malaya to explore the possibilities of importing more rubber from there. Another delegation of the Board will go to Malaya to study the rubber research works and other attractive features of the rubber growing industry in that country.

Outlook for Coffee

The Commonwealth Economic Committee's Tropical Products Quarterly throws some interesting light on the present international coffee situation. According to it, the world is producing a good deal more coffee than is actually drunk, a state of affairs which has been going on for some years. In consequence a chronic and perhaps permanent surplus has come into being. The present surplus is enough to meet two years' world requirements, it is stated. According to this publication, comparative figures of world production indicate that although well below the record figure of 1959-60, output for the 1961-62 season will be considerably in excess of the previous year. Taking the three East African territories together, 1961-62 production at 3,692,000 cwt. is not greatly in excess of the 1960-61 output (3,490,000 cwt.). But 1961-62 world production is expected to be 7 million cwt. more than that of the previous year, although it is still well below the record figure reached in 1959-60. The steady growth of Indian production will be noted, though there has been some falling away from the record crop of 1960-61 as a result of the heavy rains in the coffee-growing areas of south India in the second half of last year.

Brazil Leading Producer

Production and export figures show that Brazil continues to dominate the international coffee scene with Colombia a comfortable runner-up. The East African and Indian production combined is barely one-twentieth of the world output. In spite of the fact that the main producers are already carrying very large stocks, the world's exportable surplus in 1962, it is expected, will show a considerable increase on the previous 12 months without any obvious indication of a

corresponding rise in demand. The need for a comprehensive production agreement is clearly as great as ever. The International Coffee Agreement has been extended for a further year, that is, until September this year. Meanwhile, a co-ordinating and drafting committee consisting of the representatives of Brazil, Colombia, France, Italy, the Ivory Coast, Mexico, El Salvador, the U.K. and the United States is working on a draft of a long-term agreement on behalf of the Coffee Study Group.

The Tropical Products Quarterly is of the opinion that any new international coffee agreement should begin with a restrictive covenant concerning planting and production. But any such proposal would be most difficult to negotiate between a large number of producing countries at different stages of economic and political development. For some, it might prove administratively quite impossible, it is pointed out.

But all have a vital interest in the price of coffee which in turn depends on the quantities available for export. Those responsible for devising a new international agreement are quite rightly approaching this problem from this angle. They deserve the support not merely of producers, but also of the main consuming countries which, generally speaking, belong to the economically advanced and industrialised nations of the world.

PROSPECTS FOR TEA EXPORTS TO U.K.

RUBBER IMPORTS INCREASE

(BY A SPECIAL CORRESPONDENT)

IN 1960, due to the drought, north India produced only 530 million lbs of tea, compared with 562 million lbs in 1959. This season's output amounts to nearly 596 million lbs. It is reasonable to suppose that exports up to 31st December last would show a proportionate increase over the previous three years. Of course, they are higher than last year's, but 1960-61 was not a normal season. Figures published so far show that the exports of tea from north India from 1st July to 31st December, 1961, totalled as follows: 1961-62, 259 million lbs; 1960-61 249.3

TATA-JOHNSON

NEW RESOURCES FOR THE INDIAN PULP & PAPER INDUSTRY

TATA-KMW
Pulp & Paper Machinery

MADE IN INDIA

You can now obtain your pulp and paper machinery here in India—with a high indigenous content and incorporating the latest developments in the field.

Tata-Johnson produce pulp and paper machinery for large scale mills. Technical know-how is provided by Sweden's AB Karlstad Mekaniska Werkstad, KMW, century-old experts, AB Kamyr, and AB Rosenblads Patent, as well as the Cellulose Development Corporation (Celdecor), pioneers in modern methods of pulping bagasse and agricultural residue.

Machinery designed by these leading firms is manufactured at TELCO's well-equipped Jamshedpur works.

Tata-Johnson have on their staff pulp and paper specialists with international experience who now work in very close co-operation with the TELCO works engineers.

Projecting, Supply and After Sales Service by:—

TATA-JOHNSON LTD., JAMSHEDPUR

million lbs and 1959-60 276.6 million lbs.

It will be seen that over the three-year period, exports are not up but down from 276.6 million lbs to 259 million lbs. It is said that propaganda to increase the consumption in India has been restricted because exports are vital for India, but if foreign markets will not buy, what is the point of restricting internal con-

sumption? Exports to the U.K. are shown at 169 million lbs in 1961-62, and at 183.7 million lbs in 1959-60, so even India's best customer refuses to buy more at the current rates. It is not surprising that the commodity's price in Calcutta has fallen from Rs. 5.46 a kilogram a year ago to Rs. 4.74 a kilogram today.

Teas sold for consumption in India are given as 684,000 packages this

year at round Rs. 4.80 a kilogram, and 567,000 packages last year at around Rs. 5.12 a kilogram.

Lower U.K. Stocks

It is to be hoped that the fall in despatches to the U.K. have been caused in part by British buyers restricting purchases to bare requirements on a falling market. It may be noted that stocks in the U.K., as

on 15th February, showed a fall from 143.1 million lbs with 20.2 million lbs afloat, to 143.6 million lbs. The end-February stocks for the past three years compare as follows: 1960, 171.7 million lbs and afloat 22.6 million lbs, 1959, 192.2 million lbs and afloat 22.1 million lbs, and 1958, 129.9 million lbs and afloat 56.2 million lbs. It will be seen that U.K. stocks remain on the low side, and it is thought possible that heavy shipments from Calcutta will take place before the end of the season.

Another encouraging sign is that the price for teas sold in London last week, namely 52.54d a lb, compared with 54.04d a lb last year. It is only 1½d lower than a year ago, whereas Calcutta prices are lower by about 75nP a kilogram.

It will be seen that the U.K. stock position is short by some 30 million lbs, compared with the average held during the past three years, and north India's output has increased by only 34 million lbs over the same period. This writer has watched the vicissitudes of tea for many years. The swing from the 1952 depression to the 1954 boom was sudden and the present overall statistical situation appears to be improving.

Increasing Rubber Imports

India is losing valuable foreign exchange due to the necessity of importing raw rubber. As road transport develops, there will be a constantly growing demand for raw materials which will have to be imported. Even today, as the Lok Sabha Estimates Committee is reported to have observed: "no general survey to determine the suitability and availability of land for rubber cultivation in the country as a whole has yet been undertaken, although it is 60 years since rubber production was taken up on a commercial scale in India." It was tried out, unsuccessfully, in Bengal by the then Midnapore Zemindary Ltd.

The Committee feels such a survey was a prerequisite for planned development. While the Central Ministry of Commerce and Industry is said to admit the need for such a survey, apparently no positive steps have been taken by the Rubber Board to extend the area of rubber cultivation. The Board evolved a replanting scheme in 1949 to plant 80,000 acres, but that too was not started before 1957; the reason for delay is stated to have been finance, but whatever the cause, Ceylon and Malaya are reported to have fully implemented sundry programmes of similar nature by 1957. After dwelling on the "might have been" and "should have been," the Estimates Committee states that even now, replanting is being done with ordinary varieties of seedlings, whereas in a matter of such vast importance, high-yielding varieties should be made available.

From the comments so far made, there is no clue as to what measures the Rubber Board intends to take to ease the supply position now—or in the future—which, in view of the balance of payments situation and the necessity not only to conserve foreign exchange but to earn more, leaves the onlooker baffled by the ways of the authorities.

COCHIN TEA SALES

At Sale No. 8, 270,000 kilograms of tea were on offer. There was a strong demand. Best liquoring high-grown were irregular, and often below valuation. Mediums and good mediums were very strong and considerably dearer, particularly broken plains and low mediums which were fully firm to dearer. Unorthodox grades were irregular and sometimes dearer.

At Dust Sale 7, 235,000 kilograms of tea were on offer. There was a good general demand. Clean black leaf types were fully firm to dearer while unorthodox grades were rather easier. Others were steady.

Commodity Markets

BRITISH TEXTILE REVIEW

BATTLE OF THE GIANTS

THE verbal battle between Imperial Chemical Industries and Courtaulds has had some beneficial results, not the least of which is the new information that it has brought out. It is fair to say that Courtaulds was previously regarded as less progressive than I.C.I., and that its retorts to the challenge of the bigger combine have greatly enhanced Courtaulds' prestige. Among the post-war achievements listed by its research staff are Courtelle (the only British acrylic fibre), Tricel, Fibrolane, and Courlene; whereas the only new fibre discovered and developed by I.C.I., Ardil, was (in the words of the Courtaulds research staff) a costly and spectacular failure. I.C.I. is renowned as the producer of Terylene, which (though Courtaulds did not mention the fact) is a profitable and spectacular success; but Terylene was invented by Calico Printers Association, not by I.C.I. Courtaulds is not alone in believing that Courtelle is one of the fastest-developing fibres in the world. It is of mineral origin, formed by a polymeric combination of acrylonitrile and minor proportions of other constituents. One reason why Courtaulds resisted I.C.I.'s plan to absorb it was that acrylonitrile was obtainable from the United States at half the price charged by I.C.I. Mr. Paul Chambers, chairman of I.C.I., commented: "Everyone knows that when there is a surplus in the United States, it gets dumped all over the world." But Courtaulds can claim that as at present organised, it is the lowest-cost producer of acrylic fibres in the world. I.C.I. can retort that it could not export—as it did last year—nearly half its production of Terylene if it were not competitive.

One certain fact is that, whatever organisation is responsible for it, Courtelle will be further developed. It is about twice as strong as wool. Blended with wool, it prevents the natural fibre from shrinking. Knitwear made of Courtelle can be washed repeatedly without shrinking or felting. Knitted or woven, it provides warmth without cumbersome weight. It feels soft, dries quickly, is impervious to chemicals. And it presents no technical problems, as it can be spun or woven on existing systems with no special preparation or processing. A very varied range of Courtelle products was exhibited in London a few months ago and in Manchester last month. The displays showed that the fibre could combine the virtues of fashion and low cost. Acrylics are at present produced in Britain on a comparatively small scale. The main factor in the recovery of total production of manmade fibres in the U.K. in the second half of last year (to 293 million lbs, compared with 277 million lbs in the first half of 1961 and with 287 million lbs in the second half of 1960) was rayon staple fibre. Export orders were an important element in the recovery. The figures confirm earlier evidence that the emphasis of Britain's textile industry has shifted to man-made fibres.

Popularity of Cotton

It seems ironical, then, that a fibre particularly favoured by fashion now is cotton—and that it appeals particularly because it is a natural, not a man-made, fibre. Time was when cotton was regarded merely as serviceable, a poor substitute for linen or silk or, later, nylon. (It seems not many years since nylon was a luxury symbol.) Now cotton is favoured for

fashion because it is "the real thing". Wool, it should be observed, has never really lost that special prestige. However, when comparing modern cotton goods with those of earlier generations, one is comparing diffe-

rent things. Being "natural" is a virtue only if quality is right. Cotton would certainly not have re-established itself if it had been unable to meet the challenge of synthetic fibres on their own ground. Modern cottons

are drip-drying, crease-resisting, permanently-pleatable, with new textures and new finishes. These qualities would certainly not have been developed so fast if new fibres had not challenged the old ones.

MIDDLE CLASS COST OF LIVING INDEX NUMBER FOR CALCUTTA

(Base: August 1939)

THE Middle Class Cost of Living Indices, by groups, have now been brought up to January 1962. As compared with December, the Janu-

ary Index for Food shows a drop of 10 points, while those for Fuel and Lighting, Clothing and Miscellaneous remain unchanged at 291, 588 and 308 points, respectively.

Combining all the factors, the Middle Class Cost of Living Index for Calcutta shows that the cost of living dropped by 6 points during January 1962.

COMPLETE SHIP REPAIRS

FOR OVER HALF A CENTURY

The site of Garden Reach Workshops covers an area of 64 acres with half a mile of river frontage, slipway and dry-dock facilities suitable for inland water craft up to 2,000 tons and building berths for shallow-draft vessels up to 1,200 tons launching weight.

SHIPREPAIRS:

Garden Reach Workshops have provided complete Ship repair facilities at Calcutta for over fifty years and during the year ended 31-3-1961 handled a daily average of 30 Ocean-going vessels.

SHIPBUILDING:

Garden Reach Workshops have a wide range of Ship-building activities and specialise in the Designing and Construction of shallow-draft vessels including Harbour Tugs, Light Naval Craft, River Steamers, Flats, Water Boats, Barges, Pontoons and Whalers etc.

ENGINEERING:

The Company manufactures—among other things—Wharf Cranes, Light/Heavy E.O.T. Cranes, Industrial Furnaces, Colliery Haulages, Turbine Pumps, Electric Motors, Stators and Rotors, Switches, Vitreous-Enamelled Products, Car Hoists, Ferrous and Non-Ferrous Foundry Products. Where necessary the Company collaborates with renowned foreign firms in the U.K., W. Germany, U.S.A. and Japan.

FACILITIES:

Other established activities include complete Electrical,

Air-Conditioning and Refrigeration Contracting, Testing of Chains, Blocks and Wire Ropes, Saw-Mill and Timber processing, Steel, Lead and Copper Sheet Fabrication. All types of Joinery and Carpentry work is also undertaken.

FOREIGN EXCHANGE EARNED AND CONSERVED:

Total Foreign Exchange earned and saved in the year ended 31-3-1961 was over Rs. 2½ crores. Earnings on repairs to Foreign-owned ships totalled Rs. 55 lakhs. Savings on repairs to Indian owned ships and on other engineering activities totalled over Rs. 2 crores.

Calcutta Markets

GOOD DEMAND AT TEA EXPORT SALE

DUST RATES EASIER

AT Sale No. 36, held on 19th and 21st February, there was a good general demand for the 75,047 chests on offer at the Export auction, with buyers following quality closely. However, there was less enquiry for orthodox Fannings this week and prices tended easier. Plain broken and Fannings, particularly where stalk and fibre were present, were up to 20nP easier and sometimes more. Any well-made orthodox teas with bright liquors sold well, but the remainder were generally easier. The strongest feature of the sale were the best autumnal C.T.C.'s which met with keen competition and were often dearer; while Fannings received more support than last week. Medium and secondary sorts with autumnal liquors sold well and were generally

dearer particularly broken. Legg-cut teas were irregular. Darjeelings sold well, particularly those with quality. Whole leaf was irregular, the cheaper varieties generally being firm to dearer. Tip was well supported.

Quotations

	1962	1961
Rs. a kilo	Rs. a kilo	Rs. a kilo
Clean Plain Pekoe	4.20 to 4.40	5.20 to 5.50
Plain B.P.	3.50 to 3.80	4.60 to 4.70
Plain Fannings	3.70 to 4.10	4.70 to 4.30
Medium Assam C.T.C.	5.20 to 5.50	4.70 to 4.90
B.P.	5.10 to 5.40	4.90 to 5.10
Best Assam C.T.C.	6.00 to 6.50	5.80 to 6.20
B.P.	5.80 to 6.40	5.90 to 6.40

(Quotations are inclusive of excise duty.)

At the Internal Sale, the 30,521 packages of Dust on offer met with a good general demand at easier rates, except where teas met with competition when useful prices were realised. C.T.C. teas showed a decline of up to 20nP except for the best varieties which were fully firm to dearer. Orthodox descriptions

also eased and were up to 20nP below last rates. Legg-cuts followed a similar trend and, although irregular, were generally easier.

Quotations

	1962	1961
Rs. a kilo	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.90 to 4.50	4.70 to 4.90
Medium Assam Dust	4.30 to 4.95	4.80 to 5.20
Legg-cut Dust	4.60 to 5.10	5.05 to 5.40
Medium Assam C.T.C.	5.45 to 5.90	5.60 to 5.90
Dust	6.40 to 7.00	6.20 to 6.60

The 735 chests of Leaf on offer met with a fair demand.

FREIGHT RATES
MOVE DOWN

DUE to cut-backs in steel production in the U.K. and in some European countries, demand for ore imports have been reduced, and many ore carriers have been laid up. Unless there is a major improvement in demand, freight rates are likely to go lower soon. Although freights have not fallen to the lowest levels of the post-Suez depression, present rates in many cases are less profitable, as a result of which some dry cargo shipowners have also started withdrawing vessels from service. The rate for scrap from U.S. Atlantic ports to Japan by Liberty vessels is a lumpsum of about \$(U.S.)105,000, against \$(U.S.)145,000 paid June-July 1961. The Chinese charterers are fairly active, and they have succeeded in obtaining ships at lower rates.

The Baltic Exchange Chartering Committee took two ships for food-grains from the Pacific Coast to east coast India paying the lower rate of 55s. last paid 57s 6d. Burma rice charterers accepted two vessels to Colombo at 40s and 39s for February loading. Some 10,000 tons of iron ore from Marmugao to Rijeka was fixed at 32s. In Madras, five to seven days' delay on ore loading berth and three to four days for grain vessels is anticipated.

HIDES AND SKINS
STEADY

The market ruled quietly steady. Stocks were higher than in the previous week.

Bazaar Sales

(Between 13th February and 19th February, 1962)

Cowhides: Wet salted (Ord.) 21,000 pcs. on the basis of Rs. 12.50 to Rs. 13 and Rs. 14.50; Wet salted (Slaughtered) 16,500 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50; Wet salted (Ord.) 7,000 pcs. on the basis of 91nP a lb.

Goatskins: Wet salted (Patna, Daissee, Kustia) 106,100 pcs. on the basis of Rs. 300 to Rs. 365, Rs. 400 to Rs. 420 and Rs. 460 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinaipur-Murshidabad 11,700 pcs. on the basis of Rs. 350 to Rs. 370, Rs. 395 and Rs. 420 to Rs. 430; Purneah-Kissenganj 32,700 pcs. on the basis of Rs. 380 to Rs. 400 and Rs. 405 to Rs. 420; Patna-Pakur 1,800 pcs. on the basis of Rs. 300 to Rs. 320; Rs. 350 to Rs. 370 and Rs. 395 to Rs. 400; Patna-Muzafferpore 46,600 pcs. on the basis of Rs. 330 to Rs. 350 and Rs. 380 to Rs. 400; Muzafferpore-Maldah (heavy) 7,800 pcs. on the basis of Rs. 450 and Rs. 500 to Rs. 520.

Bazaar Stocks

(19th February, 1962)

Cowhides: Wet salted 151,500 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 44,500 pcs.; Assam-Dinaipur 50,000 pcs.; Assam-Dinaipur-Muzafferpore Patna-Purneah-Kissenganj 186,000 pcs.

BIRDS
are
stepping
up
it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

COAL COMPANIES

O, Po, F and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicate that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O, Po and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

Vol. CXXXVIII No. 3639

74th YEAR OF ISSUE

THE Cereals Committee of G.A.T.T., which groups the Common Market Six, Britain, the U.S.A., Argentina, Canada and Australia, met in Geneva from 12th February to "study and reflect upon" (i.e. to discuss without taking any decision) a proposal that could change the future of the British economy and the food prospects for countries like India. The proposal was put forward at the ministerial meeting of G.A.T.T. last November by the then French Finance Minister, M. Baumgartner, and was designed, in the author's words, "to put a stop to the ruinous price-war waged by the big agricultural producers, which leads them to subsidise food consumption in the countries that are their main industrial competitors". More plainly, the idea is for the Common Market to persuade the U.S.A., Canada, Australia and Argentina to sell their wheat at much higher prices to Britain and Japan, these latter being the industrial rivals whose food consumption is being "subsidised" by competition at dumping prices by the others. The large surplus of grain that would then appear when price competition ceased would be diverted from the cash-and-carry market to the Food For Peace programme; it would be given, or sold at special rates, to countries like India.

The plan has evident attractions for some nations—perhaps for most. India and the other developing countries would welcome a vast increase in the supplies of food at special prices, since they cannot afford to pay even the low prices that now result from competitive dumping on the world market. The U.S.A. which at present has to carry an immense budgetary burden to support grain prices, store surpluses and subsidise exports, would see advantages in a system that enabled it to sell much of its wheat at profitable prices, while devoting the rest to a world food pool of which the costs would be shared by all the western nations. Canada, Australia and Argentina would see many of their fears about the impact of the Common Market evaporate, for they would be able to sell their grain in western Europe at higher prices than today. They would bring their export prices into line with the internal prices ruling in the Common Market, and would then meet no quota obstacles or other impediments when they offered their grain to the enlarged Common Market including Britain, which will remain a net importer of wheat. The same system could eventually be extended to butter, meat and bacon, whereupon the difficulties created for New Zealand by Britain's entry into the Common Market would have been resolved. The temperate-zone Dominions of the Commonwealth, and Latin America, would stop competing in the disposal of their surpluses on the limited cash-market for food and, having secured their export revenues and farmers' incomes, would be willing to co-operate in the Food For Peace scheme. The Common Market Six, finally, would be content to see the principles of their recently adopted common agricultural policy extended to the whole of the western world.

There remains the case of the industrial nations that are not producers of surplus food. Britain, West Germany and Japan. Japan is not involved in the talks, which, besides, do not refer to rice;

her case is a special one and will be considered separately. As for West Germany, she has already accepted the scheme, by agreeing to the Common Market's joint farm policy, which will, in stages, oblige her to pay the ruling Common Market price for food. When she imports grain from outside, it will be taxed to bring it up to the level of internal prices. So West Germany is no longer, or will gradually cease to be, one of the industrial nations that are being subsidised by international competitive dumping of grain and other farm produce. Britain, it emerges, will be the victim of the project for she is the one major industrial nation that today buys temperate-zone food in the free markets at the low prices that result from the perpetual excess of supply over demand. Whereas butter is supported by governments in the Common Market at about Rs 8 a kilo, Britain buys it in the free market at Rs. 320 a kilo, thus realising an economy that enables her to subsidise her own farming community while keeping food costs for her industry at low levels. Whereas the cheapest wheat now grown inside the Common Market sells at Rs. 43 a quintal, Britain can buy it from Canada and Australia at \$62 a ton, which is about Rs 31 a quintal. And so on right through the list of food-stuffs. It is estimated that Britain economises around \$1,000 million a year by buying her food at world prices. This is the sum that the others call the "subsidy" they are giving British industry by dumping their surpluses on a market where Britain is the most important buyer. Naturally it is also the sum that they want to add to Britain's trade deficit, by making her pay prices fixed by exporters who have ceased competing.

The prospect is, of course, intimidating for the British Government. The problem of British industrial costs and exports has seldom been as disturbing as it is today, and London must feel that her allies could scarcely have chosen a worse moment to "gang up" on her by presenting a plan from which they will all benefit in varying degrees but which will deprive her of her major weapon in today's industrial competition, the cheapness of her food supplies. However, there are various circumstances that will incline the British delegation in Geneva not to take too negative an attitude. Firstly, by these means might be reconciled the conflicting political and economic demands of Britain's position as centre of the Commonwealth and candidate for the Common Market. An arrangement that secures the interests of Canada, Australia and New Zealand even after Britain enters the Common Market, and does so without antagonising the U.S.A. is not to be dismissed lightly, whatever its economic costs, since its political benefits would be enormous. It incidentally removes the fears of British agriculture and as a premium, opens up the prospect of cheap food supplies to the developing members of the Commonwealth, like India. In no other way can one imagine Britain entering the Common Market with the joint blessings of the old Dominions, Washington, her own farmers and the developing countries; on the political side nothing would be lost and much gained while the economic cost would have to be charged to whatever benefits Britain hopes to gain for her industry by membership of the

Common Market. These latter benefits must have been thought to be considerable for Britain to make her application in the first place.

Secondly, there is the fact that something similar to this arrangement would result from Britain's admission to the Common Market in any case. Now that the joint agricultural policy has been adopted by the Six, and, especially, agreed to by West Germany who is Britain's main industrial rival, membership will include acceptance of the farm policy of the Six. Britain, that is, will have to pay Continental prices for her food eventually, given a timetable for gradual increases such as West Germany has obtained. That farm policy foresees that food imported from outside, say, from Canada, will be taxed at the common external frontier to bring it up to internal prices. The proceeds of that tax will eventually go to subsidising exports of the Common Market's surpluses. So if she becomes a full member of the association, Britain will sooner or later have to pay higher prices for her food. More than that, can one conceive of Canada continuing to sell wheat in Europe at Rs. 31 a quintal, when she knows that the Common Market will place a tax of Rs. 12 on it (in order to bring it up to Rs. 43 a quintal, the Continental price) and will use that Rs. 12 to subsidise European exports in competitive dumping with Canadian wheat offered in other markets? Obviously, rather than subsidise her competitors, Canada will sell her wheat in Europe at Rs. 43 a quintal.

In other words, agreement or no agreement the Commonwealth Dominions in the temperate-zone and Latin American countries will tend to raise their selling prices to the Common Market level, rather than make a gift to Common Market exporters of farm produce. The illustration of wheat has been chosen, but something similar will happen to all temperate-zone food exports. Thus the question is not whether Britain as a member of the Common Market will or will not be able to continue buying cheap food; once she is in, her partners will insist she pay more for her food and her present suppliers will be charging higher prices. It seems to be an inescapable fact that food prices paid by the advanced industrial nations are going to be levelled upwards. When they are brought into line at a high level, obviously someone will be making super-profits: either Canada and Australia, when they sell at Rs. 43 a quintal grain they now dump at Rs. 31; or else, the Common Market when it places a tax of Rs. 12 on every quintal of grain imported. The real question, then, is how these super-profits are to be used. They could be used to intensify competitive dumping in what remains of the free cash market, or they could be used, by agreement, to finance the Food For Peace plan. All the western nations, including Britain herself if she were prohibited from buying in the cash market at dumping prices, would prefer the latter solution. The U.S.A., in her present difficulties, would certainly prefer it, because every time the U.S.A. subsidises the export of a ton of cheap grain to West Germany or Britain she is making them a gift that appears in the relative prices of exported manufactures, and is then obliged to seek their aid supporting the dollar and sharing the burden of development assistance. Washington is predisposed to accept the Common Market's plan, which amounts to putting all the industrial nations on the same footing as regards the cost of their food and then asking them to manage jointly a surplus fund of food which

ably. The chemical and polyethylene plant set up in Trombay, Maharashtra State, started producing from March 1961 and the output now has reached a satisfactory level. The capital expenditure for new plant and equipment and for the replacement of existing facilities amounted to Rs. 1.14 crores (against Rs. 2.20 crores). A substantial portion of the expenditure had to be incurred for building the chemical and polyethylene plant in Trombay.

Growing Activities of I. C. I. C. I.

The Industrial Credit and Investment Corporation of India Ltd has produced satisfactory results for the year ended December 1961. The profit has risen from Rs. 62.61 lakhs in 1960 to Rs. 74.27 lakhs in 1961. The taxable dividend has been increased from 5.75 percent to 6½ percent. Taxation is allocated Rs. 27.75 lakhs. Special reserve receives Rs. 11.50 lakhs and general reserve Rs. 1 lakh. The entire amount of Rs. 24.26 lakhs realised as the profit from investments has been transferred to capital reserve. Commenting on the growing activities of the Corporation during the past seven years of its existence, in his chairman's statement which has been circulated along with the report and accounts for the year, Mr. G. L. Mehta, explains how the Corporation has been helping industrial growth. (A full text of the statement is printed on a later page in this week's Capital). Apart from giving financial assistance to industry, the Corporation has actively helped the business community in running various industries. It has also been of great service to entrepreneurs in preparing project reports for the establishment of new industries.

Mr. Mehta says that the resources of the Corporation have been fully used, so serious efforts are being made to increase them. A loan of Rs. 60 lakhs has been arranged from West Germany. Negotiations have started with the World Bank for further substantial loans, which it is hoped, will be obtained in the near future. Mr. Mehta points out that many promoters are now inclined to keep the ordinary share capital small in proportion to their business requirements. The practice is not good for an industrial concern in the long run, because by financing its requirements by borrowing, a company burdens itself with interest charges. As the actual costs of an industrial project generally exceed the estimates, it is preferable to have a strong and fairly large share capital base, instead of relying heavily on loan finance.

This apart, a financing institution like the I.C.I.C.I. is not interested in holding investments for good. It strives for a quicker turnover of its resources by selling investments from time to time in order to finance new industries. Industrial concerns should, therefore, offer securities which are readily marketable. At present, investors are generally interested in ordinary shares. But it is expected that, in the future, preference shares and debentures with rights of participation in extra profits will become attractive. They will also be attractive when they carry the option of being converted into ordinary shares. Entrepreneurs should, therefore, concentrate their attention on raising funds by offering such securities.

Rights Issue by Ahmedabad Advance

The directors of the Ahmedabad Advance Mills Ltd have decided to increase the share capital of the Company by Rs. 10 lakhs by issuing 10,000 equity shares of Rs. 100 each. The new shares will be offered to the existing shareholders at par, in the ratio of one share for every four held. The issue is subject to the sanction of the Controller of Capital Issues. As the Rs. 100-paid share of the Company is quoted around Rs. 210, it remains to be seen whether the Government will permit the rights issue at par. The rights issue is being made in order to rectify, to some small extent, the imbalance between the capital structure and the fixed assets, which have steadily increased over the years with the renovation and modernisation of the plant and machinery. The fixed assets at the end of December 1960 stood at Rs. 128.56 lakhs. As for the capital, Rs. 40 lakhs was in equity shares, Rs. 10 lakhs in preference shares and Rs. 30 lakhs in de-

benture stock. Reserves were Rs. 46.97 lakhs and unsecured loans on 31st December, 1960, totalled Rs. 1.01 crores.

Chitavalsah Jute Incurs Loss

The Chitavalsah Jute Mills Co. Ltd has incurred a loss of Rs. 8.26 lakhs for the year ended July 1961, after raising depreciation from Rs. 6.81 lakhs to Rs. 7.74 lakhs. The dividends have been passed. Bringing in a credit balance of Rs. 39,326, there is a debit balance of Rs. 7.86 lakhs, which is carried forward. The directors report that the working was affected by the shortage and high price of raw jute. The Indian Jute Mills Association had to recommend a cut in production. This created labour troubles and mill efficiency declined. The directors, however, take an optimistic view of the current outlook. Bigger fibre supplies at reasonable prices have made working fairly profitable, and it is hoped to recoup the previous losses during the current year.

Higher Profit for Mahindra

The shares of Mahindra and Mahindra have recorded an impressive rise from Rs. 19.28 to Rs. 21.88 on hopes of good working results for the year ended October 1961 and a still better performance during the current year. The preliminary figures for 1960-61, which have been released along with the dividend announcement, fully justify market's optimism. Although the dividend has been maintained at Rs. 1.25 a share (12.5 percent), subject to tax, the directors have recommended the payment of 25p a share, less tax, by way of bonus, making a total gross distribution of 15 percent, against 12.5 percent for the previous year. But the small increase in the distribution to shareholders gives little idea of the impressive improvement in the Company's performance in 1960-61. While sales are up by nearly 13.3 percent from Rs. 13.63 crores to Rs. 15.42 crores, the gross profit has shot up by about 65.6 percent from Rs. 68.76 lakhs to Rs. 110.55 lakhs, indicating a marked improvement in the profit margin. The ratio of profit to sales has risen from 4.9 percent to 7.17 percent.

The provision for depreciation has been raised from Rs. 13.06 lakhs to Rs. 15.38 lakhs while development rebate reserve gets Rs. 60,000 (against Rs. 1.58 lakhs). Bonus to staff absorbs Rs. 21.54 lakhs (against Rs. 12.69 lakhs). Provision for taxation is Rs. 36.80 lakhs (against Rs. 19.60 lakhs). After making all these allocations, the net profit amounts to Rs. 36.23 lakhs, against Rs. 19.83 lakhs in 1959-60. With Rs. 1.10 lakhs brought forward, the disposable surplus amounts to Rs. 37.33 lakhs. The ordinary dividend, including bonus, absorbs Rs. 19.80 lakhs, and the preference dividend accounts for another Rs. 3.49 lakhs. A sum of Rs. 10 lakhs (against nil) has been taken to general reserve, and Rs. 50,000 has been set aside for research and development fund. The carry-forward amounts to Rs. 2.54 lakhs.

The directors have decided to issue 660,000 new ordinary shares of Rs. 10 each at a premium of Rs. 2.50 a share to the existing shareholders as on 20th March, in the ratio of one share for every two held. A sum of Rs. 7.50 a share is payable on application and the balance will be payable as and when called. The Government sanction for the issue has already been received. The directors state that the Industrial Credit and Investment Corporation of India and the Life Insurance Corporation have agreed in principle to give the Company a long-term loan of Rs. 1.35 crores, including a foreign exchange loan of Rs. 35 lakhs. The additional funds are required to finance the expansion programmes. The working of the Company in the current year is reported to be encouraging. Sales of jeeps during the first quarter ended January 1962 were 1,999 units, or 309 units more than in the corresponding period of the previous year.

Bank of India Profit Up

The preliminary figures for the working results of the Bank of India during 1961, which were announced along with the final dividend, showed that the Bank had fared better than in 1960. Although the

dividend was merely maintained at 20 percent, subject to tax, the Bank's profit rose from Rs. 103.37 lakhs to Rs. 110.31 lakhs. The directors' full report, and the chairman, Sir Cowasjee Jehangir's statement to shareholders, show that the performance in 1961 has been much better than the preliminary figures suggested. The profit figures for 1960 and 1961 are not strictly comparable. While the 1961 profit has been struck after providing for income tax and super tax in full, the 1960 profit was subject to a provision of Rs. 25 lakhs for taxation. The Bank's deposits rose from Rs. 109.44 crores to Rs. 125.02 crores, or by nearly 14 percent, against an increase of about 8 percent for all scheduled banks. The increase of nearly 17 percent in advances, from Rs. 83.86 crores to Rs. 98.53 crores, also compares favourably with the 9 percent increase in the advances of all scheduled banks. The chairman points out that the increase in the Bank's deposits roughly matches the growth in advances. As the resources have been employed in a productive manner, the rise in the cost of deposits and the increases in establishment costs have been well absorbed so far.

Advances have been diversified by increasing assistance to meet the medium-term needs of industry. With a view to increasing its working efficiency, the Bank has started an economic intelligence and statistics department. It has also established a development department to deal mainly with branch expansion and an organisation and methods unit to improve operational efficiency. The chairman says that the Bank, which has hitherto followed a very conservative policy for branch expansion, has now decided on a bold and imaginative programme. In 1961, 12 branches were opened and the figure for 1962 is expected to be over 24. A number of the new branches will be in areas of potential industrial growth. In order to improve the relationship between the Bank's liabilities and shareholders' funds, the directors have transferred Rs. 15 lakhs from the 1961 profits to the reserve fund, which raises the ratio of capital and reserves to deposits to 5 percent, against an estimated all-India ratio of below 4 percent. The Reserve Bank has prescribed that a ratio of 6 percent be reached in due course and the Bank of India hopes to achieve it soon. It has received the Government's permission for issuing another 200,000 equity shares of Rs. 100 each, Rs. 50 a share paid-up, for cash at a premium of Rs. 20 a share. The new shares will be offered to the existing shareholders in the ratio of one share for every three held, whether ordinary or "A" ordinary. Shareholders' approval will be sought at the annual general meeting scheduled for 15th March.

Canara Banking Syndicate Earns More

Although the directors have maintained the dividend at 20 percent, subject to tax, the working results of the Canara Industrial and Banking Syndicate for 1961 show a considerable improvement over those for the previous year. Deposits have risen from Rs. 18.87 crores to Rs. 24.63 crores, and the profit from Rs. 25.22 lakhs to Rs. 32.09 lakhs. The allocation to the general reserves has been raised from Rs. 7.50 lakhs to Rs. 11 lakhs, bringing the total reserves, including share capital, to Rs. 53.50 lakhs. The provision for taxation amounts to Rs. 12.25 lakhs (against Rs. 9.63 lakhs in 1960). Bonus to staff takes Rs. 2.25 lakhs (against Rs. 1.75 lakhs). The proposed dividend absorbs Rs. 6.52 lakhs, leaving a sum of Rs. 34,750 to be carried forward, against Rs. 27,708 brought in.

Gujarat State Fertilisers Plant

A new enterprise known as Gujarat State Fertilisers Co. Ltd has been registered in Ahmedabad to set up a huge factory for the manufacture of fertilisers. The plant will be located south-west of the two-million-ton refinery in the Koyli area, and is expected to produce annually 90,000 tons of urea, 125,000 tons of ammonium phosphate and 200,000 tons of ammonium sulphate. The Koyli refinery will provide the raw material, naphtha. The factory, which will be located in an area of 1,000 acres, will generate its own power requirements, which are estimated at around 26,000 kW. The project has been sponsored by the State Government in collaboration with prominent industrial-

CAPITAL, 1st March, 1962.

lists. It is estimated to cost about Rs. 28.2 crores, of which Rs. 23.5 crores will be spent on machinery and equipment and Rs. 4.7 crores will be required for the factory township.

The Company will have an authorised capital of Rs. 10 crores, made up of Rs. 3 crores in preference shares and Rs. 7 crores in equity shares, both of Rs. 100 each. The issued capital will be Rs. 5 crores, of which 49 percent will be subscribed by the Gujarat Government. The State Government has already provided about Rs. 2.5 crores for the project.

Union Bank Rights Proposal

Subject to the sanction of the Controller of Capital Issues, the directors of the Union Bank of India Ltd propose to increase the share capital from Rs. 60 lakhs to Rs. 1 crore by issuing 800,000 equity shares of Rs. 5 each at par. The new shares will be offered to the existing shareholders in the ratio of two shares for every three held. The Rs. 5-paid share of the Union Bank is quoted around Rs. 8.52, which is well above the 1961 high of Rs. 8.08.

Cables from Pyrotex India

Pyrotex India Ltd is a new Company which has been promoted by the Bombay Co. (Private) Ltd in collaboration with the well-known British firm of Pyrotex Ltd to undertake the manufacture of mineral-insulated metal-sheathed electric cables. It is claimed that the special cables, which will be manufactured for the first time in the country, will be fire-proof and corrosion-resistant, and will therefore provide an almost permanent type of wiring medium. The factory is proposed to be located near Poona. The total capital outlay on the project is estimated at around Rs. 55 lakhs, of which Rs. 21.50 lakhs will be spent on plant and machinery, Rs. 15 lakhs on buildings, Rs. 5.50 lakhs on technical know-how fees and Rs. 2 lakhs on land. The working capital requirements will be around Rs. 10.5 lakhs. The Company will have an authorised capital of Rs. 60 lakhs, of which Rs. 55 lakhs in equity shares of Rs. 100 each is to be issued. Half of the issued capital—Rs. 27.50 lakhs—will be allotted to the British firm which is collaborating in the venture, partly in cash and partly to cover the cost of plant and technical fees. The Bombay Co. (Private) Ltd will be allotted 6,500 shares, and the directors and their friends are likely to take up another 6,500 shares. The remaining 14,500 shares will be offered for public subscription in the near future.

Bombay Potteries Results Impress

The working results of Bombay Potteries and Tiles Ltd, for the year ended September 1961, more than justify the proposed increase in the dividend from Rs. 12.86 to Rs. 15 a share, both taxable. Production has increased from 1,848 metric tons to 2,217 metric tons. Sales are up by about 25 percent from Rs. 33.31 lakhs to Rs. 41.74 lakhs, and the gross profit has risen by nearly 33 percent from Rs. 13.60 lakhs to Rs. 18.45 lakhs. After providing Rs. 7.50 lakhs (against Rs. 6 lakhs) for taxation, Rs. 1.79 lakhs (against Rs. 1.07 lakhs) for depreciation and Rs. 1.54 lakhs (against Rs. 20,500) for development rebate reserve, the net profit amounts to Rs. 7.92 lakhs, against Rs. 6.33 lakhs in 1959-60. From the year's profit, the directors have set aside Rs. 2.60 lakhs (against Rs. 1.10 lakhs) for plant rehabilitation reserve, Rs. 1 lakh (against Rs. 1.10 lakhs) for general reserve and Rs. 50,000 (against Rs. 70,000) for dividend equalisation reserve. The dividend absorbs Rs. 2.69 lakhs (against Rs. 2.45 lakhs), leaving Rs. 7,488 to be carried forward, against Rs. 9,761 brought in.

The directors state that the machinery, furnaces and other equipment ordered from the U.S.A. have already arrived and the erection programme is progressing satisfactorily. The Company is looking for suitable land near the existing factory in Kurla for its expansion programme. It has secured a loan of Rs. 3.60 lakhs in foreign currencies from the Industrial Credit and Investment Corporation of India for importing from the U.K. and Germany

certain additional equipment which is required to improve the quality of the articles produced. The directors are also thinking of increasing the production of electrical porcelain, which is in short supply. They expect increasing competition in the coming years as the Government has allowed the existing units to expand and has also permitted the setting up of new units. The Rs. 100-paid share of the Company is currently quoted around Rs. 19½, offering a gross yield of about 8.6 percent.

Menthol from Bhavana Chemicals

Bhavana Chemicals Private Ltd, which has a paid-up capital of Rs. 10 lakhs, is setting up a factory in Baroda for the production of natural and synthetic menthol. The construction of the factory buildings will, it is expected, be completed by the end of March. The plant, which will have a production capacity of 82.5 tons of menthol a year, is likely to go into production in May. The Company has secured the technical collaboration of a West German firm, which will supply the machinery. The total value of the plant is believed to be around Rs. 8 lakhs, of which the imported component is placed at around Rs. 5 lakhs. Machinery of the value of Rs. 3 lakhs is to be obtained from the indigenous sources. Peppermint oil, which is the principal raw material, will have to be obtained from abroad and the import licence is expected soon. The Company proposes to set up an experimental farm in Bangalore for the production of peppermint grass in order to do away with the imported raw material in course of time. India's annual requirements of menthol, which is increasingly being used in the manufacture of drugs and pharmaceuticals, is estimated at around 75 tons.

Issue by Lodna Colliery

The Lodna Colliery Co. (1920) Ltd, it is reported, will be coming to the market with a public issue shortly. The issued capital at present is Rs. 87 lakhs, consisting of 870,000 ordinary shares of Rs. 10 lakhs, each. The new issue will consist of 230,000 shares of Rs. 10 each at a premium of Rs. 7.50 a share. The full amount of Rs. 17.50 (including the premium) is payable on application. The Company, whose managing agent is Turner, Morrison and Co., is now working five large collieries, three in Ltd, is now working five large collieries, three in the Ranigunj field and two in the Jharria field. It also operates a by-product coke plant and a washing plant. The development plans visualise an increase in production to 2.5 million metric tons a year by the end of 1965. The capital cost of the expansion programme is estimated at Rs. 1.26 crores. The present issue will partly meet the financial requirements of this programme, and the balance will be met from loans and from the Company's own resources. Lodna Colliery paid a dividend of 20 percent, less tax, for the year ended December 1960. The shares of the Company are at present not quoted on any stock exchange, but it is understood that arrangements will be made in due course to have them officially listed on the Calcutta Stock Exchange.

Thanjavur Textiles Share Offer

Thanjavur Textiles Ltd proposes to set up a spinning mill with 12,000 spindles in Thanjavur. The mill, it is said, will produce yarn of medium and fine counts. Orders for machinery have already been placed and the construction of the factory building is in progress. The mill is expected to go into production early next year. The capital outlay on the project is estimated at around Rs. 51 lakhs. The Company will have an authorised capital of Rs. 50 lakhs, made up of Rs. 40 lakhs in equity shares of Rs. 10 each and Rs. 10 lakhs in preference shares of Rs. 100 each. The issued capital will be Rs. 20 lakhs, all in equity shares. Out of this, the directors and their friends have been allotted 97,485 shares and the remaining 102,515 shares will be offered to the public.

Tea Output and Prices

Addressing the first annual general meeting of the Tea Packers Association of India in Calcutta

last week, Mr. K. Ghosh, president, said that in contrast to 1960-61 when fears of a shortage kept world tea prices at a high level, it was obvious for some time that there would be a bumper crop in 1961. In fact, the figures show an increase to 770 million lbs, or 66 million lbs, over the previous year. South India, too, has recorded a small increase. The crops in other producing countries, notably Ceylon and Pakistan, are higher, and the latest figure for the world crop as a whole shows a rise of 116 million lbs. This fact has had its repercussions on the Calcutta tea auctions, where prices on average have receded by 70p a kilogram, compared with the last season. Many in the trade doubt the wisdom of producing 900 million lbs of tea under the third plan, if every increase in output is to bring a fall in prices. But in Mr. Ghosh's view, the solution to the problem does not lie in cutting output, but in undertaking an aggressive selling campaign in foreign markets. For example, while rates were lower in the earlier part of the current season, since January this year increased support from the U.S.A., Russia and Egypt, coupled with revived confidence at home, has "lifted prices to more economic levels."

A realistic adjustment of taxation is equally essential to promote Indian tea exports. The existing system of levies imposes a heavy burden on the industry, and is also highly inconvenient. Central taxes are levied at three points—on the garden, at the time of export and at the time of packing for internal consumption. The system puts the packeter and the exporter at a disadvantage. State Governments take a heavy toll in the shape of not only sales tax, but in other ways such as the transit taxes in Assam and West Bengal. "This complicated pattern of taxation warps and diverts the normal flow of trade," Mr. Ghosh said. For example, the entry tax in West Bengal has been the cause of direct movement of tea from the gardens to many points in northern and western India on an increasing scale. This will sooner or later affect the status of Calcutta as an international tea centre.

Injunction against Cane Cess

The Civil Judge of Gorakhpore has issued an interim injunction restraining the U.P. Government from realising sugarcane cess amounting to more than Rs. 12 lakhs from the Diamond Sugar Mills, Pipraich. In moving the court, the management contended that the levy of the cess was invalid because of wrong enactments by U.P. State and also in view of the judgment of the Supreme Court which has held the State Act unconstitutional. The management also argued that Parliament had no power to revalidate an enactment which had become defunct and the U.P. Government could not ask the plaintiff to pay the cess under an invalid Act. Giving an interim injunction against the Government, the Civil Judge observed that although it was difficult to decide the constitutional issues raised, it was obvious that if the Government was not restrained from realising the heavy amount, the plaintiff Company might not be able to function because much of its finances would be taken away. If, due to want of finances, the Company was not able to produce an essential commodity, the cultivator who had to place his cane with the mill would also suffer a loss.

It may be recalled that it was on an appeal by the Diamond Sugar Mills that the Supreme Court had on 13th December, 1960, held that the U.P. Sugarcane Cess Act of 1956 empowering the Governor to impose a cess on the entry of cane into the premises of a factory, was unconstitutional. The Court accordingly directed the State not to levy or collect any cess from the Company. The main question was whether the impugned legislation was beyond the competence of the State legislature. The answer depended on whether the law fell under Entry 52 of the State List. Entry 52 read: "Tax on entry of goods into a local area for consumption, use or sale therein." The Court was of the opinion that the proper meaning to be attached to the words "local area" was an area administered by a local authority like a municipality or district board. The premises of a factory, therefore, were not a local area. As there was no other entry either in the State List or the Concurrent

List in which the impugned law could fall, there was no escape.

Export Promotion for Tea

Speaking from the chair at the annual general meeting of the Calcutta Tea Merchants Association in Calcutta last week, Mr. B. C. Biyani stressed the need for a carefully planned export promotion policy, as Indian tea is steadily losing ground in some of its main markets, particularly the U.K. There has to be a rational tax system and an aggressive sales drive to increase exports, seeing that Indian tea faces competition not only from rival producers, but also from beverages like coffee and beer. Mr. Biyani complimented the Tea Board for doing more effective propaganda abroad and for appointing tea advisers in some important buying centres. But he was of the view that the domestic market cannot be neglected as export prospects are becoming more uncertain with the increasing competition abroad. Tea consumption in India is growing fast, and is currently placed at 137 million kilograms (300 million lbs), he said. Among the producing countries of the world, India has the singular advantage of a big and growing market within her own frontiers. "This acts as a cushion against unexpected vagaries of export markets."

Discussing the prospects for tea exports to the European Common Market, Mr. Biyani said that the conditions on which the U.K. might join the E.C.M. still remain to be worked out. But India has to think seriously what she should do. The effect on trade with the U.K. cannot be judged with any degree of accuracy yet, but it is reasonable to forecast that "the climate for direct export to other E.C.M. countries may become somewhat more favourable by virtue of rationalisation of existing prohibitive duties and taxes on tea in these countries." Mr. Biyani suggested that the Indian Government should levy the lowest possible duties on tea exports to E.C.M. countries and the U.K. It should ensure that Indian tea does not suffer any disadvantage in competing with teas from other countries.

The Shortage of Cotton

"Indeed, we are in the midst of a crisis created by short supplies and the position appears alarming." This is how Mr. Madanmohan R. Ruia described the outlook for cotton in his presidential speech at the annual general meeting of the East India Cotton Association in Bombay last week. Nobody can dub him as an alarmist. For, in spite of strict distribution controls and compulsory surveys, all varieties of cotton, except Bengal Deshi, are fetching huge premiums (unofficially, of course) ranging from Rs. 40 to Rs 125 a candy. The current season started with a fairly large carryover of about 2.2 million bales. But the supply has been affected by the partial failure of the 1961-62 crop, which is now estimated at barely 4.3 million bales (this includes about 500,000 bales of Bengal Deshi, of which hardly 150,000 bales can be used in the country). Imports so far total 450,000 bales and another 500,000 bales have been licensed. But if the present trend of consumption continues—consumption of indigenous and foreign cotton in the first four months of the current season amounts to 19.24 lakh bales—the total consumption in 1961-62 is likely to be about 5.7 million bales. Obviously, the carryover at the end of the current season will be reduced to a precariously low level unless imports are increased substantially. But the prospects are far from encouraging. A U.S. Embassy spokesman in New Delhi has already let it be known that Washington has hardly any cotton to spare under P.L. 480. The Government of India has been trying to secure cotton from Russia, but the latest reports suggest that Russia might not be able to offer much help. The authorities are exploring the possibility of importing cotton and/or staple fibre from other sources but the shortage of foreign exchange will be a major handicap.

In any case, imports can at best only help tide over a temporary shortage because the country can ill-afford to pay for imports indefinitely. Already imports have been running at an extraordinary high level for the past two seasons, and this would

not have been possible but for the P.L. 480 facilities. The real solution lies in producing larger quantities of Indian cotton of the desired qualities. The yield of cotton in this country is extremely low, being a mere 93 lbs or so an acre, against 231 lbs in Pakistan, 446 lbs in the U.S.A., 542 lbs in Egypt and 604 lbs in Russia. This suggests that production can be increased through intensive cultivation, without having to bring more acreage under cotton. But the various measures taken in recent years to raise the yield—increased use of better seeds, fertilisers, pesticides and insecticides, increased irrigation facilities and improved methods of cultivation—have not yielded any notable results. This is scarcely surprising. Why should a farmer put in more effort and undertake greater expenditure to increase the production of cotton when the same effort and expenditure on producing other crops brings him a better return? The cotton trade has long been emphasising the need for removing the control over cotton prices, or, alternatively, for raising the ceiling prices substantially so as to provide greater incentives. Reliable reports indicate that, at the meeting of the Indian Central Cotton Committee on 28th February, a resolution was to be moved urging the Government to remove the control over cotton prices. It is reported that the move for decontrol carries the support of growers, traders and also a section of the textile industry.

Problems of Vanaspati Industry

In spite of the many serious problems the Indian vanaspati industry has had to face in the past, it has acquired a stature which makes it the largest food-processing industry in Asia and one of the largest in the world. But as Mr. P. L. Tandon, chairman of the Vanaspati Manufacturers Association of India, pointed out in his speech at the annual general meeting of the Association recently, the industry has grown at the cost of its profitability. Gross profits as a percentage of total capital employed, according to the Reserve Bank of India's study of 750 companies for the 1951-53 period, underline the poor economics of the vegetable oil industry. Against an average of 9.2 percent for all companies, the average for vegetable oil (including vanaspati) was only 2.5 percent, the lowest in the whole group. Mr. Tandon rightly pointed out that the profitability must improve if the industry is to enjoy healthy growth in the future. The low profitability is due to excessive capacity and the violent fluctuations in the prices of the principal raw materials, edible oils, which constitute over three-quarters of the cost of production of vanaspati. Huge surplus capacity was built up in the forties, and the industry has still not been able to bring about an equilibrium between capacity and effective demand. Against a capacity of 570,000 tons, the production of vanaspati amounts to around 340,000 tons. The large surplus capacity provides a temptation for manufacturers to cut prices in the hope that they will be able to produce and sell a little more, possibly not for profit but at least to cover overheads.

Mr. Tandon said that the establishment of surplus capacity in anticipation of an increase in demand is a frequent and even a desirable occurrence in a developing economy where production capacity has often to be established before a market has been developed. It is not the surplus capacity but the violent fluctuations in the prices of edible oils which constitute the vanaspati industry's major problem. It is interesting to note that groundnut oil in Bombay, which was quoted around Rs. 1,450 a ton in February 1959, recorded an all-time high of Rs. 2,350 a ton in June 1961 and is currently quoted around Rs. 2,000. As oil accounts for nearly 75 percent of the total cost of vanaspati, vanaspati prices have had to rise proportionately. This steep rise in prices, said Mr. Tandon, has undoubtedly built up consumer resistance and inhibited the industry's growth. Mr. Tandon pointed out that this situation benefits no one. The manufacturer fares badly. He is forced to vary his production schedules frequently, not according to the needs of the consumer but according to the influence of speculation in the groundnut oil market and dictates of the vanaspati dealers who speculate. The urgent need is for an adequate supply of raw material at cheaper and more stable prices. This cannot be achieved unless the yield

of groundnut is stepped up appreciably from the present low level of about 630 lbs an acre.

Power for Village Industries

The Khadi and Village Industries Commission has been considering for some time past the need to define its attitude towards the use of power—other than human or animal—for the development of the khadi and other village industries falling within its scope. Last year, it appointed a committee to "examine the scope for further investigation and research in the manufacture of tools, implements and equipment involving the use of mechanical power" and to "indicate the conditions subject to which the Commission should approve the use of power." The committee submitted an exhaustive report and has made a series of recommendations. The note containing the Commission's decisions on the committee's recommendations says that decentralised production of power from locally available sources of energy should be treated as a primary village industry. The sources of power may be waterfalls, or flowing streams of water, wind, the sun and organic matter so as to avoid dependence on outside sources. The Commission's decision is doubly significant from the point of view of the future of village industries in this country, since not only the use of power is permitted in them, but power development itself, it is proposed, will be brought into the orbit of village industries. For this, the Commission proposes to move the Government for an amendment of the Khadi and Village Industries Act.

While seeking to include this item in the schedule of industries under the Act, the Commission desires that the "development of hand and power-driven tools should proceed side by side so that each can be brought to perfection and used to fullest capacity." Field tests are likely to precede approval, by the Commission, of specific purposes for the introduction of power to assess their suitability under rural conditions. The Commission will also satisfy itself that the organisational pattern of production is such that the ownership of the power-driven tools vests in public institutions such as co-operatives, charitable institutions or panchayat authorities and that the benefits accruing from the use of power are shared with the artisans concerned. Assurance of increase in and diffusion of employment and preservation of self-employment and decentralisation are the basic considerations which will weigh with the Commission.

INDIAN COTTON

WE would earnestly invite the attention of the Government of India to the remarks of Mr. S. M. Johnson, in his presidential address to the Upper India Chamber of Commerce, upon the subject of the scientific culture of cotton. According to Mr. Johnson the average yield of clean cotton per acre in India is about 80 lbs., but the agricultural farm at Cawnpore has apparently discovered a system of cultivation by which the yield can be increased to, say, 300 lbs., and with a little extra attention, two crops can be secured in one year averaging throughout about 500 lbs., to the acre. Now, the effect of this discovery in India cannot be overestimated. Last year 3½ million cwt. of cotton were exported, but this was much below the average, which may be put probably at nearer 5 million cwt. The value of this is about 11 crores of rupees, and if the output of cotton can be increased six fold, it follows that the value of the exported cotton would be near 70 crores of rupees. This, however, is not all. India imports raw cotton and piecgoods to the value of about 30 crores of rupees; and if, as Mr. Johnson alleges, the quality of the cotton is also improved as well as the quantity, a considerable quantity of goods can be manufactured in this country, which at the present moment are imported. It is not too much to say, that this discovery, if properly engineered, would mean a revolution in the cotton trade of the world and we would press the Government in the strongest possible manner to go into this matter at once. Lord Curzon could do no greater service to the country than to improve the cultivation and output of cotton.

FROM

CAPITAL
6th March, 1962

A Ditcher's Diary

BRIEFLY ON WEDNESDAY MORNING I FOUND MYSELF an uncritical and total admirer of parliamentary democracy. I had earlier been distressed by thoughts of the wastefulness of it all, appalled by the vulgarity of the election campaign, and saddened by the appeals to the basest and most anti-national instincts of the electorate. Yesterday morning, as I read of Dr. B. V. Keskar's defeat at the polls by over 29,000 votes, I said to myself: the crores of rupees and megatons of human energy have not, after all, been wasted. In the news bulletin on Dr. Keskar's very own All India Radio he made the lead—for once with justification. I must add, although I may have imagined the undertone of quiet glee in the announcer's voice. As I read of the communist reverses in Calcutta and elsewhere I found my heart strangely unbroken. But there ends my satisfaction. Political analysts will soon come out with their learned theses on the long-term implications of the world's largest election. It has happened to me to meet more than one American precisely on this job; and we may be sure we shall hear a lot of pontifical nonsense. Let me state quite frankly that I simply do not understand the Indian electorate. It has been complimented often enough on its profound horse sense, on its instinctive collective wisdom. I see the point only very partially. The Indian people are perhaps sensible in opting for stability and continuity, in resisting the lure of unknown political forces promising the Kingdom of Lenin through violent change. Even that seems to me an incidental and fortuitous result of the quinquennial contest. The fact is that the average voter votes for his choice for entirely different reasons. He thinks little, if at all, of national issues, leave alone international ones. He perhaps thinks whether the tubewell in his locality has been working in the week preceding polling day; but I doubt whether he clearly sees any connection between his vote and the water-giving contraption. What I mean is that the average voter does not know that he is electing a Government, as indeed he is not. He is only sending to Parliament and the Assemblies a crowd of politicians who, once in, select a Prime Minister and some Chief Ministers who, once nominated, select Cabinets that will keep them in power. Thereafter the people have no say in anything.

I AM DELIGHTED THAT COLONEL GLENN DID NOT on his descent from outer space say that he owed his success to the Democratic Party or the system of people's capitalism. I need not remind you what Major Gagarin said. I have no doubt at all that it was a great feat: and some of the compari-

sons with the earlier Soviet achievements were rather unfair. Anyway, the failures were not Colonel Glenn's fault by any means. A word should perhaps be said in favour of the relative openness of the American project. Yet, was it really necessary, or wise, to televise those ten or 11 cancellations? All that premature ballyhoo came in handy for cartoonists hard up for ideas; but it did the U.S.A.'s reputation no good at all. I do not wholly share the contempt some intellectuals affect for Madison Avenue. Its commercial job it does supremely well, if somewhat noisily. A distinction has to be made between selling commodities and imparting ideas with a view to enhancing respect as distinct from profits. Colonel Glenn, I find, may be sent on a world tour. Let him be "sold" with a little more dignity than, say, Pepsi-Cola. Or better still, let the U.S. authorities refrain from sending him at all. The world has already seen its first spaceman; its second is bound to come as an anti-climax, the net results of which may merely be more expense, more traffic dislocation and even more tiresome communist boasting when the Russians bring off their next space "first".

AFTER WHAT I SAID HERE LAST WEEK ABOUT THE late Dr. Hugh Dalton, I scarcely feel I can disagree with Mr. Morarji Desai when he suggests that a Finance Minister should not be an "expert", although—and I mentioned Dr. Ludwig Erhard—one would not have to search far for the outstanding exception. And I would not care to dispute the implication that an expert is precisely what a financial journalist ought to be, nor Mr. Desai's view that it takes training to make him one. Personally I would put the need for a sound academic training in economics before a formal academic training in journalism, but that is one in the mechanics of journalism. These days is a because the financial journalist these days is a highly specialised individual indeed. Although considerably narrower, an accountant's training might do just as well, except for the fact that the literacy standards it demands are by no means as high. Mr. Desai, who was inaugurating the newly-formed Financial Journalists Association in Bombay, spoke about the need for "objectivity". I do not think that was what he really meant, because he also said that financial journalists should help create the conditions necessary for the achievement of a "socialist society". I cannot myself see why this should be the task of financial journalists, especially when they above everybody are in such a favourable position for appreciating just how much harm this subjective and politically-inspired aim is doing to the country's development.

An objective assessment of socialism in India would probably be that it is holding down the rate of per capita economic growth to a dangerously low 1½ percent a year when it ought to be much higher, but I doubt whether Mr. Desai would accept that as a true definition of the word. He also spoke of the duty to present a "correct" picture, but as a politician he knows all too well that there are many ways of representing the same set of facts. My view is that a financial journalist can but do his best with his own knowledge and predispositions, attributes which he has in common with all other experts, not excluding Finance Ministers. The last thing he should do is take seriously the homilies of Party politicians whose definition of objectivity is all too likely to be anything with which they themselves agree. I suspect that is what Mr. Desai has in mind when he doubts whether journalists who are considered successful in western countries would make a mark in India. The measure of journalistic success in the West is not the extent to which a journalist pleases the Ministers in power, and that is what it is in danger of becoming in India.

I INTEND NO SARCASM WHEN I SAY THAT SOME OF my best friends are Americans. As Miss Marghanita Laski has said, the next sentence has to begin with a "but". But I find the Americans' non-stop "nobody-loves-me" theme a bit tiresome. More than my native cynicism explains the view I hold that a certain immunity against foreign criticism is a good thing to have, or develop, especially for those who belong to mighty nations that shape not only their own destinies but also determine much of others'. I am looking forward to the report President Kennedy is expecting from his brother on the "problem" of students' alleged "anti-Americanism" in some parts of the world. It will be surprising if anything very new emerges. Some of the reasons for not loving the Americans are obvious and can easily be stated in American terms: "I don't like the guy that has got more dough than I; I don't like the punk that chucks his lolly about; I don't love the character that walks off with my girl friend, existing or potential; and, if I am not white, I don't adore the doll that might spit on me if I am a nigger in the South." All this, I daresay, will be put more elegantly when one Boston brahmin writes to his elder brother; but there, I suggest, you have the crux of the matter: money, sex abroad and segregation at home. Doling out more dough, especially in Asia and Africa, is an answer I support with certain qualifications; but it should be pointed out that no immediate popularity may result. There may, in fact, be greater resentment to begin with. The sex part of it I leave to Professor Kinsey, although his contribution will perhaps be a wagon-load of statistics signifying nothing. Coming to segregation, I remember that Mr. Robert Kennedy is not only the President's

PWT-83 2003

brother but also the U.S. Attorney General; and Civil Rights are his immediate concern. A more determined attack on the colour problem will earn my American friends some of the love they so insistently demand.

AS THE HOT WEATHER APPROACHES, THE LEAVES OF spring will wither away, and so, as is the annual custom, may the wakefulness of Calcutta's traffic police. By those who, like myself, have had the misfortune during the past few days to drive round the city a little more often than usual, the start of the rot may have already been noticed. Traffic conditions around Dalhousie Square are at the best of times not exactly ideal; and perhaps this past week the police have been exceptionally preoccupied with the business of helping at the hustings. But if some of the chaos I have chanced upon, in what is proudly described as the commercial heart of the city, is a foretaste of things to come, the advancing summer may be a season of unmitigated dread for many of us on the roads. I seem to remember that when the authorities introduced their new parking system for the Dalhousie Square area a year or two ago, they promised that it would lead to a smoother flow of traffic. In all humility, I seriously doubt that it has. The new parking rules may seem unexceptionable on paper, but they have caused considerable inconvenience to those who attend, or visit, offices in that area. What is worse, it appears that the rules can be flagrantly disobeyed by those who choose to do so, and this often right under the noses of the police. The remedy, you might say, is that the policemen, instead of picking noses, should be picking offenders; and I would heartily agree. But I still wonder if conditions can be improved without the imposition of stiffer and more frequent penalties. At the moment, some drivers reliably assume themselves to be luckier than others; they, or some babu in their office, may know the appropriate area in Lalbazar, all of which helps in the process of escaping with impunity. And yet I feel that stiffer penalties, actually enforced, may not be enough except in the case of parking offences. Traffic conditions in Calcutta are bad primarily because there is a hopeless jumble of slow and fast vehicles on the roads, and because jaywalking is becoming the nation's most popular urban pastime.

JUST OCCASIONALLY SOME NOTICE IS TAKEN OF WHAT I say in this diary, or at least appears to be. Months ago I complained bitterly that the hedge surrounding the Army's Maidan golf course was being allowed to grow too high and obscure the fine view of the fort from the Red Road—one of the last remaining horizons in Calcutta. Since then I have noted that the hedge has been kept properly trimmed to a reasonable level, and it is just possible that this is because somebody in authority at the fort was public spirited enough to take notice of what I wrote. If so, then I should like to express to him my sincere congratulations and thanks, then point out that there is further scope for his exertions if he is still in the mood. I have spoken before about the "military bustee" opposite the race course, and although I know it is probably beyond the powers of anybody at the fort to decree its removal altogether, I cannot see why the derelict and decrepit out-buildings should not be torn down and the ground returned to its original condition. But returning land to its original state never seems to have become an established military custom. The other day I almost broke an ankle on the debris left behind by a recent military encampment on that part of the Ellenborough Maidan behind the army camp and in front of what a friend of mine has dubbed as "Henderson-Brooks Nagar". Vehicles had left ruts six inches deep; tent sites had been surrounded by deep drainage trenches which had not been filled in when abandoned; and a brick saluting stand remained for the elements to demolish. I noticed all over the area that the concrete floors of hutments no doubt dating back to the war years were still more or less intact. I would not wish to put the Army's public spiritedness to too much strain. But why it cannot clean up after itself like any other responsible social animal beats me.

THE DITCHER

THE INDUSTRIAL CREDIT & INVESTMENT CORPORATION OF INDIA LIMITED

CHAIRMAN, MR. G. L. MEHTA'S REVIEW

The Annual General Meeting of the Shareholders of the Corporation will be held at the Registered Office of the Corporation, 163, Backbay Reclamation, Bombay 1, on Tuesday, 27th March, 1962, at 4 p.m. The following is the Statement by the Chairman, Mr. G. L. Mehta, circulated to the Shareholders with the Directors' Report and Accounts for the year ended December 31, 1961.

I have great pleasure in welcoming you and placing before you the Seventh Annual Report of the Board of Directors of the Corporation for the year ended December 31, 1961.

On January 5, 1962, ICICI completed seven years of operation. During this period, we have assisted 133 industrial concerns and in the process, have developed our own procedures. Industrial development is an inter-related process: no enterprise is self-sufficient. We, ourselves, come to realise this more fully as we build up our portfolio. Industrial development is a chain reaction and has a multiplier effect and we are gratified that ICICI's finance has been contributing to this growth in various ways.

The business of a development bank like ours is often taken to be merely that of providing finance for industrial projects. While this is true and the need for finance is the basic factor which brings together a development bank and its clientele, I feel that finance is not the only common ground in this relationship.

The process of development basically consists in drawing into industry a large number of people hitherto engaged in other occupations. It means that a trader or a landlord or a technician decides to become an entrepreneur, that an agriculturist or an artisan decides to become a factory worker. This is what happened in the industrially developed countries a century or two ago, and this is what has been going on in India for some decades, although the pace has been accelerated only during the last few years.

What is this recent upsurge due to? On the one hand, import cuts and redirection of channels of trade have closed traditional avenues of vocation for many businessmen. On the other with sudden curbs on imports, rewards in manufacturing activity have become more attractive; for much of the recent upsurge in industry is based on import substitution, where demand is assured.

Recently, however, the situation has been changing. The projects planned on the basis of the 1958 foreign exchange crisis are beginning to yield results, and gradually the supplies of many goods have started to catch up with the demand. The next phase of development will have to be based on the general growth of the economy and will require a much more acute consciousness on the part of the promoters. The search for worthwhile projects will have to be more painstaking, and quick and large profits more difficult to come by.

Appraisal of Applications

It is in this context that this Corporation's policies and procedures for appraising applications should be judged. I say this because there seems to be a misunderstanding in some quarters about the manner in which we process applications and the time taken in this exercise. I shall try to explain briefly how and why we act as we do.

What do we want to be assured about? First, about the market. Many promoters base their calculations on the prevalent shortages. However, the project planned by them may come into production two or more years later—which is the time relevant for considering the demand for the pro-

duct. Moreover, others are likely to have had the same bright idea, and consequently, the market situation in the future is not likely to be the same at the time the project goes into production as it is today. Hence, in assessing the market for a product, we take into account not only the present shortages (as evidenced by high market prices or long waiting lists with manufacturers) but also the likely growth in demand, the scope for further import restrictions and the probable increase in internal supply based on licences given and likely to materialise. Recently, we have taken steps to build up a market assessment cell in our Project Department, which we trust will go to strengthen our appraisals on the marketing side.

Another matter we want to be assured about is the cost of the project and the means proposed to be adopted to finance it. As regards the cost of a project, we have observed that there is generally a tendency to underestimate it. Promoters are prone to ignore a large amount of financial expenditure which is not for "hardware". Expenditure on buildings, machinery and equipment is more easily visible than pre-operative items. In fact, we have calculated that such financial expenditure often forms about 30 per cent of the expenditure on what I have called above the "hardware" of development. Similarly working capital needs tend to be under-estimated. It is for these reasons that we endeavour to obtain a detailed break-up of the cost of a project according to certain standard categories.

Small Equity Base

A simple rule which too many promoters tend to ignore is the need to arrange for the total financing of the cost of the project in advance. I referred, in my last Annual Statement to you, to the tendency of many promoters to keep the equity base small. While we try to consider each case individually and allow for a large debt element in the capital structure where necessary, we feel that a company, particularly a new one should have a strong equity base for several reasons: a large equity base keeps the burden of interest low during the unproductive period of the enterprise; and by keeping the borrowing capacity unimpaired it enables the enterprise to borrow when actual costs go above the estimates, as they normally do; moreover, in the more competitive conditions which are likely to come about, a strong equity base will strengthen the capacity of the entrepreneur to withstand competition and weather temporary adversities. Although such advice on the capital structure may not always be palatable to some promoters, in the long run, it is sure to stand them in good stead.

In this connection, I would like to refer to recent developments in the stock markets. After the spurt in 1960, the market for industrial shares has recently quietened down. For quite some time, preference shares have, owing to various factors, been almost orphaned on the market. As we seek to attract investment in industry, it will be necessary to offer investors securities which appeal to their requirements. Financial institutions whose eventual objective (even when they immediately take up shares or grant loans) is to dispose of their holdings on the market and thus to turn over their resources to be able to help newer industries are interested in seeing that promoters offer securities acceptable to the public. In the more discriminating times ahead it will be necessary to offer to investors securities like preference shares and debentures with varying features like participation in extra profits option to subscribe to or convert into ordinary shares and so on. Unless our entrepreneurs are willing to offer such terms, they will find themselves more

and more inhibited in their development plans by lack of finance.

Profitability of Concerns

As a financial institution whose profits are dependent on the prosperity of its client, we naturally look closely into the profitability of an enterprise before deciding on our assistance. One factor which governs profitability is the prospective market for the product to which I have alluded earlier. A second factor is obviously the cost of production of the article proposed to be manufactured. Our entrepreneurs have become so used to conditions of artificial scarcity brought about by import and licensing restrictions, that the need to produce at economic costs is not adequately recognised. Besides lack of cost control procedure, this is also due to a failure to spread overheads over the maximum possible output. The results are vividly reflected in our performance in the sphere of exports which has failed to keep pace with the requirements of the economy. The somewhat easier supply position in the markets for many products recently has made entrepreneurs more cost-conscious, and I trust this will help not only our exports but also the domestic consumer.

It is on an independent and careful assessment of all these factors that ICICI takes a decision for providing finance. This necessarily takes time which, in its turn depends a good deal on the thoroughness with which requisite information and data are supplied and relevant queries answered. On an average, we find that it takes 3 to 4 months from the preliminary approach by a client to come to a decision although in some cases it takes much less.

But the sanction of finance by ICICI does not end the relationship between the Corporation and its client—rather, it is only the beginning. Legal formalities have to be gone through, agreements signed, import licences obtained, and all the procedures involved in operating an industrial enterprise in a planned and complex economy gone through. The completion of legal formalities alone takes considerable time as the company has to satisfy various conditions, titles have to be examined and so on. On an average, we have found that it takes about six months after sanction is given, to enter into the Heads of Agreement with a company. This, however, is not a net loss of time as it is used to push ahead the project further in other respects.

Some of the formalities which have to be fulfilled before a loan is disbursed—for example, those connected with import control which is intended to prevent imports of goods which can be locally manufactured—cannot be avoided. We ourselves try to expedite decisions where we can. What is more, we try to adjust our procedures so as not to let them come in the way of expeditious carrying out of the project.

Disbursing Funds

Disbursement of funds is a slow process. Some who look at our liquid funds, perhaps, feel that we are not using our funds fast enough. This is not so. Money, for a development banker, is his raw material and he has to keep a sufficient stock of it to enable him to continue sanctioning finance. Moreover, unlike raw materials where supply is continuous, for a development banker the funds do not ceaselessly flow in—we cannot hope to approach the market for funds every now and then and for small amounts. Hence, we have to carry a stock of funds which will last us a year or more. By now you will find that our sanctions have more or less caught up with our resources of about Rs. 45 crores.

Even after all the legal and procedural formalities have been completed, and disbursements have started, it

takes quite a while to complete the utilization of funds and bring the plant to the stage of production. Machinery and equipment are not normally readily available across the counter; delivery periods for equipment are, or even more. This means that even when disbursement starts, it has to be spread over a period of two to three years. According to our estimates, out of our sanctions we can expect to disburse about 20 per cent in the first year, about 40 per cent in the second year and about 40 per cent in the third year. But this kind of time lag is inherent in the business of development banking.

I have spoken at length on all these aspects because the services we provide incidental to the provision of funds are no less important. We have familiarised entrepreneurs with modern practices of preparing project reports to assess the viability of projects. We help them to have a capital structure which in our view, would stand up to difficult times. We assist them with their problems with the Government and we watch over the progress of the project both during the construction and the operating years. We do so in a helpful and constructive spirit keeping the broad requirements of development in view. Over the years, we have found that our clients have come to understand and appreciate our procedures and the need for them. There is a growing interest among the investing public in industrial growth. The appearance of two financial dailies should help them to judge intelligently industrial prospects.

I should say in fairness that the emphasis which we have been laying over the years on the need to have a full and detailed appraisal of each project and on the desirability of having closer understanding at all stages among the different financing institutions participating in a project is being increasingly appreciated by the various agencies concerned. This is a healthy development in the sphere of industrial finance which should pave the way particularly for financing large-sized projects which could only be carried out with the joint efforts of a number of financing institutions, including the Life Insurance Corporation, commercial banks, investment trusts as well as development banks.

Total Assistance Provided

I had mentioned the total cost of the projects assisted by us in 1960, in my Statement to you last year. In 1961, of the gross assistance of Rs. 13.76 crores sanctioned, Rs. 11.94 crores is in respect of new projects. The total cost of these projects would be Rs. 65.49 crores (Rs. 48.66 crores for fixed assets and Rs. 16.83 crores for working capital). This cost will be incurred over the next two or three years. When the units reach full production, the turn-over of the projects would be about Rs. 54 crores. The companies will finance the cost of the projects by raising ordinary share capital of Rs. 16.72 crores, preference share capital of Rs. 0.81 crores, loans of Rs. 23.07 crores, and bank borrowings and cash accruals of Rs. 24.89 crores. Of the foreign exchange cost of Rs. 10.53 crores for the projects, ICICI has agreed to provide Rs. 7.40 crores.

In keeping with our increasing operations, we have been making efforts to increase our resources. In the third quarter of 1960, we were able to obtain from the Kreditanstalt of the Federal Republic of Germany, a loan of DM 5 million (about Rs. 60 lacs). Other institutions in India have also obtained loans from the Kreditanstalt. This is the first West German credit we have been able to secure and legal formalities for operating it are being worked out.

In September 1961, when I visited the United States, I initiated discussions for a further substantial loan from the World Bank. Since then, negotiations have been going on both with the World Bank and with the Government of India on various aspects of the loan. I am glad to report that these negotiations have reached an advanced stage. I take this opportunity to express our gratitude to the World Bank for their continued confidence in ICICI. I would also like to thank the Government of

India for its co-operation and assistance in our work.

ICICI's operations have been growing steadily, and as a result, the Corporation's profits before tax increased from Rs. 62.61 lacs in 1960 to Rs. 74.27 lacs in 1961. After providing for tax (Rs. 27.75 lacs), the balance carried to revenue appropriation account is Rs. 46.52 lacs in 1961 against Rs. 37.67 lacs in 1960. As required by Article 163 of the Corporation's Articles of Association, we have set aside Rs. 11.50 lacs out of this to the Special Reserve and Rs. 1.00 lac to the General Reserve. We have also transferred the entire amount of realised profit of investment being a sum of Rs. 24.26 lacs (net) to Capital Reserve. The Directors recommend a higher dividend at the rate of 6½ per cent as against 5.75 per cent last year.

Need for Budgetary Relief

In my last Annual Statement to you, I had referred to the need for budgetary relief to finance corporations in view of their important role in industrial development. The Government of India, in its last budget for the year 1961-62, was good enough to give finance corporations some relief in taxation. I should like to express our thanks to the Finance Minister for providing this relief, which will strengthen to some extent the financial position of finance corporations. However, I hope that in view of the increased role envisaged for finance corporations in future, the Government will see its way to provide some suitable incentive to strengthen their financial position.

For effective implementation of the Plan objectives, mobilisation of capital is required on a much larger scale than in the past. We who are charged with the responsibility of assisting the private sector have a heavy task in future and only through the co-operation of all concerned can we hope to accomplish it. I trust in this constructive endeavour we shall have your good wishes and support.

Before concluding, I should like to mention that towards the end of March a conference is being convened under the auspices of ICICI, of development banks in Asia, to discuss various problems of development banks operating in Asia. This conference will be the first Regional Conference of Asian Development Banks and I am sure that, besides the useful personal contacts that would be brought about, the deliberations of the Conference would help to focus attention on various important aspects of development banking in Asia and assist us in our day-to-day tasks.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

McTEAR ROTORVANE

CONTINUOUS TEA ROLLER

- Controlled fermentation,
- Stronger liquors,
- Replaces 3-4 batch rollers,
- Great saving in Power,
- Spares on quick delivery,

Machine invented by the Tocklai Experimental Station of
The Indian Tea Association, Calcutta and patented by the Association.

VOLTAS LIMITED

CHAIRMAN, MR. J. D. CHOKSI'S STATEMENT

The 7th Annual General Meeting of Voltas Limited was held at Bombay House, Bruce Street, Bombay, on the 26th February, 1962.

The following is the Statement by the Chairman, Mr. J. D. Choksi, which had been circulated with the Annual Report:

This statement on the Company's affairs rounds off a seven year span in this year of the gathering of the Constellations. Not a long period in the life of individuals, much less of corporations; but nonetheless in the ephemeral world of trade and commerce, to which we belong, where fortunes are made and lost every day, it is an innings of respectable dimension.

At this seventh mile's one, I propose to describe to you the organisation of the Company, how it works, and enumerate its many-sided activities so that shareholders may have a more clearly defined image of Voltas.

What is Voltas? What do they deal in? A typical answer is: "They are airconditioning people, of course!" This is true as Voltas has become a by-word for airconditioning and refrigeration. However, the important airconditioning and refrigeration department represents only 13% of our gross turnover.

I should describe our Company as firstly and primarily an importing and distributing house. We are not mere selling agents, or even sole selling agents, according to the normal understanding of that term. We purchase from manufacturers as principals and sell to clients in our own name. We normally hold ourselves responsible not only for selling a product, but also for its erection, where it is plant or machinery, and for elaborate after-sales service. This is an important side of our activities often overlooked. For a buyer, who acquires a piece of complicated equipment, it is important to have the seller provide after-sales service for many years. The legal restriction of a 5 year tenure of distributorship, therefore, is hardly appropriate in our case and should not be made applicable to organisations like ourselves since most plant and machinery have a longer life than 5 years and can best be served after sale by the manufacturers or their representatives. This is one of those instances where the Company Law ill serves the Indian importing house which performs services such as ours, and discriminates against the Indian import.

ing house in favour of his foreign rivals incorporated abroad.

Marketing and Distribution

Marketing and distribution, as far as we can foresee the future, must remain the most important part of our activities, because we are essentially a trading organisation. This trading organisation is divided into two main groups—one 'Engineering' and the other, for want of a better name, called the 'Marketing' group.

The Engineering group consists of 6 independent divisions, each of which handles a range of products which can be conveniently grouped or brought together into one division and handled as such by the staff of that division. Among these 6 independent divisions are the Airconditioning and Refrigeration division, the Agricultural & Construction Equipment division, the Mechanical division, the Electrical division, the Machine Tool division and the Textile and Paper Machinery division each with its own specialists and technicians serving our nation-wide centres and our clients in the remotest parts of the country.

The Marketing group consists of two main divisions—one dealing in Drugs and Pharmaceuticals and the other in Chemicals, Vitamins and miscellaneous items of general merchandise.

Each of the divisions to which I have referred, while making use of the Company's Central Services, such as Accounts, Publicity, Personnel, Marketing Services, Liaison and Warehousing operates on an all-India basis under the control of General Management. Each division is headed by a manager with wide operating authority, who is fully responsible for the business results of his division. The sales organisation of each division is tailored to satisfy the requirements of consumers. In some divisions, sales are made direct to the end users or consumers; in others, the services of dealers, wholesalers, retailers and stockists are utilised. The operation of some of these divisions depends on the provision of adequate personnel and facilities for continuous after-sales service where these are required, since in India reliable service facilities are few or non-existent. Some divisions maintain a fully equipped all-India service team division to serve the country-wide needs of our clients. The standing and reputation of our Company is due, in large measure, to the excellent after-sales service provided to clients, large and small, for a wide range of equipment.

Organisational Set-up

The central organisation just described, with its trading divisions, is supported by widespread regional service units and stations. For a marketing and distribution organisation of our size and complexity this is essential, if we are to reach every distribution point effectively. We have over the years created and built up a network of such regional facilities and services which, we believe, is second to none. Its focal points are the large branches at Bombay, Calcutta, Madras, Delhi and Bangalore, which in turn are served by regional offices, area offices, and service establishments within the territories of these branches.

The branches themselves are again sub-divided into administrative units and into product-wise trading sub-divisions. These operate under the control of the branch manager who is the chief representative in the area of the branch within the general framework of the policies laid down by general management and specific policies devised by the divisional managers in regard to the handling of their respective lines and products. Close co-operation is maintained in all important matters, between general management, branches and divisions to achieve speedy and quick service and smooth movement of the various complicated

CAPITAL, 1st March, 1962.

parts of the Voltas organisational machine.

Manufacturing Activities

I have given you a fair picture of the organisation covering our trading operations in the above paragraphs and I should now like to deal with the other major branch of our activities, namely, manufacture. I repeat what I have said on previous occasions that, in the context of our national Plans, the foreign exchange situation and the development of the Indian commonwealth of States within this Continent of ours, we are firmly convinced of the necessity of promoting local manufacture. We have endeavored to achieve this objective in one of three ways:

- by bringing about collaboration between foreign associates and suitable Indian manufacturers retaining for ourselves the distributorship of the locally made products in succession to the distributorship of the previously imported products;
- by either ourselves, or our parent body, Tata Sons, associating with other foreign principals as partners in manufacturing ventures;
- by undertaking certain lines of manufacture ourselves.

Local manufacture has made substantial progress. Many of our divisions have today achieved a position where more than 50% of their business is in products of Indian manufacture, as for instance, Pharma division (94%), Machine Tools (54%), Textile Mill-stores (63%) and Airconditioning (52%).

A programme for transfer and expansion of our facilities and lines of manufacture from the restricted area of Chinchpokli to the new Thana unit has been worked out.

A number of obstacles lie athwart the manufacturing field. A manufacturing licence granted today by the Government does not commit the Government to import essential components and raw materials provided in the phased programme submitted by the licensee's application for manufacture. Consequently, every manufacturer today, who has to rely on even a small amount of imported components and raw materials, lives in constant dread of his requirements being cut substantially if not banned altogether. This is hardly an inducement for the starting up of new enterprises. Even while one appreciates Government's difficulties in the matter of foreign exchange, some way must be found if the country is to progress into ever widening fields of industrial activity. We, for our part, would prefer to see a stricter control over the grant of licences for new manufacturing units, which depend on some extent on imports of components and raw materials, rather than have these licences granted at first instance and then come to grief later for want of essential components or raw materials which can only be imported.

Steady Progress

Your Company has made steady progress over the last few years both in the trading and manufacturing fields. In spite of severe import restrictions leading to the belief in some quarters that "import houses have had it", we are firmly convinced that there will always be room for a flexible, well balanced and well organised import organisation in India's economy. We refuse to consider our trading activities as a thing of the past or on the wane. On the contrary, we plan to consolidate and expand our position in this field. We hope to retain our pre-eminent position as importers and distributors and at the same time to strengthen our industrial base within the country. New fields, new products and an ever widening horizon with increasing pursuits and increasing activities—that is what sums up Voltas. We look forward to the future with well-founded confidence.

Once again, I will close by expressing our appreciation, on behalf of the Board and all of you, of the excellent services performed by one and all within the organisation during the year.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

CAPITAL, 1st March, 1962.

Money

THE CALCUTTA MONEY MARKET

LITTLE CHANGE IN ADVANCES

Wednesday, 28th February.

THE level of advances in the Calcutta money market has shown very little change during the past week mainly due to the fact that a heavy fall in the requirements of the engineering and iron steel industries appears to have cancelled out the normal seasonal increases elsewhere. The needs of the cotton mills have remained about the same, as have those of the jute industry. Call for accommodation against foodgrains and seeds storage has increased slightly along with the demand from the sugar mills. In the interbank market, conditions have become tight and the call rate has moved up fractionally to 4½ per cent.

There has been considerable activity in the exchange market during the past week due to heavier arrivals of gunny bills. There has been a substantial return of tea receipts from London, but the supply of fresh tea bills has dwindled further. Demand for spot remittance was less keen, but large forward purchases have been made. The pound showed a mixed trend in the London exchange market and fluctuated within narrow limits. Towards the close, further nominal gains were recorded against the Canadian dollar and the Swiss franc among others, but a slightly easier tendency was noted against the U.S. dollar and most important Continental currencies.

BULLION WAS STEADY IN THE PAST week. There was good upcountry support. Silver rose from the previous week's level of Rs 249.50 to Rs. 250, quoted today for ready delivery and the rate for forward delivery was quoted at Rs 212. The London and New York prices were 85-7/8d and 102 cents.

Gold also rose on better local buying. The price increased from Rs 143.50 to Rs 144. The sovereign at Rs. 99 showed a gain of 25nP.

DURING THE WEEK ENDED 23RD FEBRUARY, Government of India Treasury bills for Rs. 16,37,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR Rs 2 CRORES OF 91-DAY Government of India Treasury bills were opened on 27th February. The total amount offered was Rs 2,35,00,000. Tenders at Rs 99.355 per cent were allotted approximately 85 per cent. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs 2.580 per cent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 5th March.

IT IS STATED THAT 91-DAY INTERMEDIATE Treasury bills will be sold from 28th February to 3rd March at Rs. 99.371 per cent. Sales can be stopped at any time without notice if the Government thinks it necessary. These bills, sold from 21st February to 24th February, amounted to Rs. 15 lakhs.

THE STATEMENT OF THE RESERVE BANK of India for the week ended 23rd February, 1962, shows a fall of Rs. 6.89 crores to Rs. 2,027.42 crores in active notes, but the total note issue was

Rs. 47 lakhs larger at Rs. 2,053.24 crores. Notes held in the Banking Department consequently rose by Rs 7.36 crores to Rs. 25.82 crores. A decline of Rs. 3 crores to Rs. 123.86 crores in foreign securities of the paper currency reserve was offset by a rise of an equivalent amount to Rs. 1,692.20 crores in rupee securities. These changes were made by transferring securities to the Banking Department in which balances held abroad increased by only Rs. 1.96 crores to Rs. 11.96 crores. Investments declined by Rs. 3.28 crores to Rs. 193.93 crores. Deposits of the Government of India declined by Rs 6.63 crores to Rs. 52.70 crores and other Government accounts by Rs. 4.32 crores to Rs. 11.20 crores. Balances of commercial banks at Rs. 81.10 crores showed a rise of Rs. 4.93 crores. Other loans and advances fell from Rs. 162.26 crores to Rs. 160.75 crores, of which advances to scheduled banks against usance bills amounted to Rs. 21.27 crores (Rs. 22.17 crores). Ways and means advances stood at Rs. 66.65 crores, against Rs. 59.10 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 16th February, 1962, shows a rise of Rs. 9.32 crores to Rs. 553.12 crores in total deposits. Investments in Government securities are down by Rs. 4.96 crores to Rs. 230.17 crores, while other authorised investments remain unchanged at Rs. 9.23 crores. Advances, including loans, cash credits, overdrafts and bills discounted and purchased have increased by Rs. 1.44 crores to Rs 283.45 crores. Cash and balances are, in consequence, shown at Rs. 23.41 crores, or Rs. 1.01 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 16th February, 1962, shows Demand and Time liabilities at Rs. 862.63 crores (Rs 20.24 crores on account of borrowings from banks) and Rs. 1,78,07 crores (Rs. 13.86 crores), compared with Rs. 846.53 crores (Rs. 18.93 crores) and Rs. 1,75.55 crores (Rs. 13.26 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 1.33 crores and Rs. 88 lakhs to Rs. 47.98 crores and Rs. 73.86 crores respectively. There is a drop of Rs. 6.53 crores to Rs. 581.80 crores in investments. Advances and bills discounted at Rs. 1,360.96 crores show a rise of Rs. 4.18 crores. The ratios to total liabilities of cash and balances and of advances and discounts are, in consequence, shown at 6 per cent and 66.7 per cent, against 5.9 per cent and 67.1 per cent.

THE ANNUAL BULLION CIRCULAR OF Mocatta and Goldsmid (now a subsidiary of Hambros Bank) who have been official silver brokers to the Bank of England since the latter's formation in 1694, says: "There can now be no doubt that the events of the last few months have established London as the world's market in silver." An entirely new situation was suddenly created in the silver market when supplies of "free" silver from the U.S. Treasury to American industrial users were cut off. The London market could only respond by an abrupt rise in prices. "The immediate outcome is certainly test-

ing the capacity of the market to maintain orderly conditions in which all comers get a fair deal. It may still be too soon to say what part the London silver market may expect to play in a world which has at last renounced the use of silver as a monetary metal, except for the purpose of token coin." The firm reports that the market has settled down at a somewhat higher price level, and is being mainly supplied from speculative liquidation. For the future price trend, much will depend on further sales of silver from China, which are described as unpredictable. A similar view is expressed in a statement on silver issued by Samuel Montagu and Company which says that "the price structure of the silver market in 1962 largely depends on the amount of silver which the Chinese may intend to market and the manner in which it is handled, for at times their offerings may have to compete with speculative sales which may continue throughout the year." The Chinese Government is believed to have exported between 50 million and 60 million ounces of silver in 1961, of which something over 40 million ounces were shipped to Britain. These sales slowed down in October and ceased altogether in the third week of November just before the U.S. Treasury suspended its sales. Samuel Montagu suggests that after the large sales made in 1961, China is unlikely to withdraw completely from the market. "We

expect that continued selling from China will tend to damp down any excessive rise in the silver price." The silver price prospect is thus uncertain.

TREASURY BILL MATURITIES

Details of 91 days' bills outstanding with the public on 2-3-62.			
Issue Date	Maturity Date	Amount (000's Rs.)	Average Acceptance Rate
2-3-62	3-6-62	2,00.00	Rs. 2,590%

Hydro were done at Rs. 112.50 and Tata Power at Rs. 1145. Bombay Suburban were dealt in at Rs. 103.75.

Madras Market

LESS ACTIVITY DUE TO CREDIT SHORTAGE

PLANTATION SHARES EASE

Tuesday Evening.

THE Madras stock market was sluggish during the past week and fluctuations were narrow. Activity was restrained by the growing shortage of credit and outside support was lacking. Operators were also disturbed by reports of the power shortage. Business in Government securities was small. Selected bank shares were supported on prospects of rights issues. Electric company shares were firm due to strong investment buying. Sugar shares were sold freely because the latest reports of sugar companies showed that profits had declined. Planting shares fell as the prices realised for tea and coffee were not considered sufficiently remunerative. Rubber shares lacked interest as the improvement in production was very limited. Textile shares were dealt in cautiously due to the growing shortage of raw cotton. Miscellaneous industrials were quietly steady and buying was inspired by prospects of rights issues.

In the banking group, Indian came to hand at Rs. 180 and Indian Overseas at Rs. 181. Canara Industrial and Banking Syndicate were done at Rs. 240 and State Bank of Travancore at Rs. 121.50. Among public utility companies, Vellore were steady at Rs. 15.35 and West Coast at Rs. 15.25. Ellore were bought at Rs. 22 and Negapatnam at Rs. 11.62.

In the sugar section, Deccan were easier at Rs. 9.85 and E.I.D. were transacted at Rs. 36.25. Mysore declined to Rs. 53.40 and United Breweries to Rs. 82.25. India were sold at Rs. 10.30 and Kirlampudi at Rs. 71.

Among planting shares, Blue Mountain declined to Rs. 2.35 and Cochin Malabar to Rs. 7.27. Consolidated Devasa were offered at Rs. 17.62, but Devashola were bought at Rs. 30.30 on issuing bonus shares in the ratio of two new shares for every five held. Ouchterlony were dealt in at Rs. 3.93 and Periakaramalai at Rs. 3.35. Kil Kotagiri lost at Rs. 5.18 and Lucky Valley were done at Rs. 10.50. Mysore Coffee weakened to Rs. 5. but Non-such were steady at Rs. 23. Parkside were bought at Rs. 24, but Peermede were easier at Rs. 21.50. Swinton were quiet at Rs. 2.82 but Thirumbadi were steady at Rs. 1.67. United Nilgiri came to hand at Rs. 21.25 and Woodland were transacted at Rs. 7.85.

Among textile shares, Adoni were steady at Rs. 13.12 and Anglo-French at Rs. 142. Business passed in Bangalore Woollen at Rs. 245 and in Buckingham at Rs. 262. Coimbatore Cotton were wanted up to Rs. 221 and Kadri at Rs. 114. Lakshmi slipped back to Rs. 170, as did Madura to Rs. 40.60. Mettur were steady at Rs. 396 and Rajayalayam met with support up to Rs. 178. Rangavilas were done at Rs. 52 and South India Viscose gained at Rs. 189. Tirupati were supported up to Rs. 14.75 but Travancore Rayon were easier at Rs. 43.35. Vijayeswari were quoted at Rs. 168 and Vasanta at Rs. 310.

In the miscellaneous section, Aluminium Industries hardened to Rs. 24.25, but Madras Aluminium were sold down to Rs. 23. Ashok Leyland were dealt in at Rs. 9.20 and India Cement at Rs. 5.95. Dalmia Cement improved to Rs. 13.30 and Mettur Chemical to Rs. 13.22 on prospects of

a rights issue. Binny were steady at Rs. 310 and Enfield at Rs. 12.15. F.A.C.T. hardened to Rs. 8.25 and Madras Rubber to Rs. 20.75. Mandya National Paper were weaker at Rs. 8.75 and Madras Paper at Rs. 14.25. Parry's Confectionery were placed at Rs. 4.57 and Seshasayee Paper rose to Rs. 8.72. Spencer were steady at Rs. 23.37 and Standard Motors at Rs. 16.70. Business passed in Textool at Rs. 189.50 and in Tube Investment at Rs. 282. United Electrical met with support at Rs. 9.50, but United India Fire were sold down to Rs. 7.60.

THE WEEK'S TRANSACTIONS

[In the following list of stocks and shares in which transactions have taken place during the past week the figures indicate Opening Quotations, Highest for the week, Lowest for the week, Closing Quotations and Quotations for the corresponding Closing Date a Year Ago. The last-named is shown in parentheses and will not be given where such a quotation is not available.]

ever, was maintained at a reasonable level, even though it was to some extent swollen by the many deals in Courtaulds. Transactions for the account were restored in Courtaulds, and it became a case of dealing in assented and non-assented stocks to the I.C.I. loan stock offer. Some disappointing company statements were a restraining influence and the P. and O. slump in earnings came as a great shock. The English Electric statement had, however, been well discounted, and the shares, in

fact, made headway. There were poor statements from Hoovers and Hawthorn Leslie and there was little doubt that there were many others to follow, but investors still preferred to take the long-term view and refused to sell good class stock. The good output and export figures from the motor-car industry had a favourable influence on sentiment and leading motor-car shares were wanted. It was felt that a thriving motor-car industry could well bring a general industrial recovery and

this prompted a certain amount of selective buying. Gilt-edged were a good deal quieter and inclined to ease. Gold shares were a very quiet market, and although favourable Press comment just before the week-end was of some assistance, price movements were narrow and irregular. Coppers were overshadowed by the Rhodesian political situation, while tins fluctuated. Oils found little favour and drifted while rubbers were inclined to ease. Teas showed little movement.

NAMES AND DATES

The following were elected to the Committee of the Hire Purchase Association at its inaugural meeting held in Calcutta on 23rd February. President, Mr. R. P. Patodia; vice-presidents, Mr. G. N. Khaitan and Mr. P. N. Jaidka; members, Messrs Chandmall Agarwalla, M. D. Almal, N. J. Jalan, R. Krishnan, M. P. Modi, S. K. Rajgarhia and N. L. Todi. Mr. W. D. Bryden, secretary of the Bengal Chamber of Commerce and Industry, is the secretary of the Association.

FOR A PROGRESSIVE COUNTRY...houses, hospitals, schools...

During the Third Plan period, India will build about 26,00,000 new homes, 96,300 schools and 2,000 hospitals and dispensaries. These great social welfare schemes involve construction work on an unprecedented scale and enormous quantities of cement will be required for this vast building programme.

In order that more cement may be available for these welfare schemes and for the private consumer, the Third Plan has set the cement industry a target of 15 million tonnes of cement a year by 1966. And the increasing output of ACC and India Cements factories will help to achieve this.

THE CEMENT MARKETING CO. OF INDIA LIMITED
The Associated Cement Companies Ltd.
The India Cements Ltd.

Over 2,75,000 tonnes of ACC Cement have so far been used in Chandigarh

New Delhi

Power Needs of West Bengal and Bihar During Third Plan

(FROM OUR NEW DELHI CORRESPONDENT)

FURTHER details are now available of the Sachdev Committee's findings concerning the recent failure of power supply in West Bengal and Bihar. The Committee reviewed the power situation in West Bengal and Bihar, including the areas served by the Damodar Valley Corporation, in consultation with the engineers of the West Bengal State Electricity Board and the Bihar State Electricity Board. It assessed the power requirements in different parts of these two States during the third plan period in the light of the demands for energy which, it is anticipated, will develop by 1965-66.

The West Bengal State Electricity Board's memorandum on the proposed schemes to augment generating capacity in West Bengal, submitted to the Committee on 16th August, 1961, was considered in detail. In this memorandum, the State was divided into the following four "power" regions: (i) areas covered by the Damodar Valley Corporation; (ii) areas covered by the Bandel-Durgapur-Calcutta-Azimganj system; (iii) the Malda-Dinajpur area; and (iv) the north Bengal area.

In the areas covered by the Damodar Valley Corporation in West Bengal, both inside and outside the Valley, the Committee assessed the load demands as presented by the West Bengal State Electricity Board in its memorandum, in reconciliation with the corresponding estimate made by the Central Water and Power Commission according to its detailed load survey. The final estimate of loads by 1965-66, as accepted by the Committee, is given below:

Name of load	M.D. as anticipated by 1965-66 (MW)
(a) Inside the valley	
Licenseses:	
(i) Dishergarh Electric Supply	18.39
(ii) Seepore Electric Supply	24.20
West Bengal State Electricity Board's loads at Pandaveswar, Benachetty and Burdwan	16.00
Ropeway project, Seepore	6.50
Indian Iron and Steel Company	
(i) Kulti	9.00
(ii) Burnpur	9.00
Hindustan Steel, Durgapur	64.00
Hindustan Cables, Rupa-naryanpur	0.80
Chittaranjan Locomotives	14.40
National Coal Development Corporation loads	5.60
Panchet development scheme	20.00
Traction loads at Burdwan, Durgapur and Ramkanali	25.79
Aggregate demand	213.68
(Simultaneous demand 178.07 MW)	
(b) Outside the valley	
Licenseses:	
Calcutta Electric Supply Corporation	99.00 (firm)
W.B.S.E. Board's loads in Kharagpur, Midnapore and Purulia	22.40
Traction loads:	
(i) Howrah	10.50
(ii) Belmuri	10.00
(iii) Purulia	8.50
(iv) Kharagpur	7.00
(v) Kolaghat	9.50
Aggregate demand	166.90
(Simultaneous demand 155.58 MW)	

With a diversity factor of 1.2, the simultaneous demand in the area lying inside the Valley would be 178.07 MW. As for the load outside the Valley, the simultaneous demand works out to 155.66 MW, made up of 99 MW for the Calcutta Electric Supply Corporation and 56.66 MW for the remaining loads, with a diversity factor application of 1.2 on the latter.

As for areas covered by the Bandel-Durgapur-Calcutta-Azimganj system, this would cater for the power requirements of newly developing industries in Bandel and Durgapur regions as well as the tubewell irrigation loads and Farakka barrage construction, power in the Azimganj supply area and the Calcutta region (with the exception of 99 MW of bulk supply to be obtained from the Damodar Valley Corporation by the Calcutta Electric Supply Corporation). The anticipated demands for this region, as finally accepted by the Committee, are given below:

Name of load	M.D. as anticipated by 1965-66 (MW)
Group A—Durgapur system	
Coke oven, Durgapur	9.90
J.K. Industries (Aluminium), Asansol	15.00
B. and C. Machinery manufacturing Co. A.C.C. Vickers-Babcock group	6.00
Mining machinery project	16.00
W.B.S.E. Board's loads in Durgapur, Sonamukhi, Bankura, etcetera	6.00
Bulk supply to the Damodar Valley Corporation from the Durgapur power station of West Bengal	7.50
Small industries, refractories, etcetera	4.00
Korba scheme	6.50
Optical glass	3.00
Binani Metals	10.00
Miscellaneous industries	2.00
Sub-total	85.90
Fertiliser plant	40.00
Alloy steel plant	40.00
Aggregate Group A	165.90
Simultaneous demand	138.25
Group B—Bandel-Azimganj Area	
(1) Railway traction:	
(i) Eastern side of the river Hooghly	42.50
(ii) Bandel	10.00
(2) Tubewell irrigation	20.00
(3) Calcium carbide, Birlapur	10.00
(4) Gourepore E.S. including Gourepore-Rayon	26.00
(5) Farakka barrage	10.00
(6) Unforeseen	16.50
Group B aggregate	135.00
Simultaneous demand	112.50
Group C—Calcutta Area	
(1) Bulk supply to the Calcutta Electric Supply Corporation system comprising:	
(i) C.E.S.C. licensed area	167.00
(ii) Section 27 consumers	65.00

	MW
(iii) North Calcutta, south Calcutta, Howrah, Amta and Singur-Tarakeswar grids	33.00
	265.00
Grand total of simultaneous demand	515.75

D.V.C. Supply Area

The Damodar Valley Corporation claimed that the fertiliser plant and the alloy and tool steels plant loads really fall within its area of supply. The Committee, however, found that the fertiliser plant will be located within the Durgapur industrial belt and the Damodar Valley Corporation could not meet the alloy steel plant load by the end of 1963, when it was stated to be required. The Committee, therefore, decided to include these two loads under West Bengal's power system. Accordingly, the total simultaneous demand in the Durgapur-Bandel-Calcutta-Azimganj area by 1965-66 is estimated at 515.82 MW.

Malda-Dinajpur area: The anticipated loads in this area, as finally accepted by the Committee, are as follows:

Name of load	M.D. as anticipated by 1965-66 (MW)
(1) Tubewell irrigation	4.50
(2) Spinning mill	1.50
(3) Food preservation	0.50
(4) Bulk supply to English Bazar, Dinajpur, Balurghat, Raiganj, etcetera	4.00
Aggregate	10.50

The aggregate load of 10.5 MW in the Malda-Dinajpur area, on the basis of a diversity factor of 1.2, would result in a simultaneous demand of 8.75 MW by 1965-66.

North Bengal Area: The anticipated loads, as finally accepted by the Committee for this area, are detailed below:

Name of load	M.D. as anticipated by 1965-66 (MW)
Bulk supply to Darjeeling Kalimpong, Tindharia Japaguri, including rural loads	15.00
Tea gardens outside Darjeeling municipal area	5.00
Unforeseen	4.00
Aggregate	24.00

Assuming a diversity factor of 1.2, the aggregate load of 24 MW would result in a simultaneous demand of 20 MW.

Need of Calcutta Area

As for the present power situation in the Calcutta area and the demands anticipated there by 1965-66, the Committee met the representatives of the Calcutta Electric Supply Corporation as well as the representatives of the various chambers of commerce and industries in West Bengal besides the engineers of the West Bengal State Electricity Board. According to the load forecast submitted by the Calcutta Electric Supply Corporation, a basis of 9 percent annual increase has been adopted and the present demand of 406 MW (1960-61) was thus anticipated to grow to 640 MW in 1965-66. Taking into consideration the restrictions now imposed by the West

Bengal Government under Section 22B of the Indian Electricity Act in this area, and also the estimates of the Central Water and Power Commission and the West Bengal State Electricity Board concerning north and south Calcutta, Howrah, Amta and Singur and the area served by the Calcutta Electric Supply Corporation under Section 27, the Committee reckoned that the 1965-66 demand would be of the order of 670 MW in the Calcutta system, compared with the estimate of 640 MW by the Calcutta Electric Supply Corporation. The representatives of the chambers of commerce and industry, however, reckoned the present load in the Calcutta area to be of the order of 430 MW on an unrestricted basis, and estimated that by 1965-66 this demand would be 935 MW. Further, it felt that the conditions such as the fast growing population and certain other industrial developments, including the development of the port of Calcutta, called for planning for power development in the Calcutta area on the basis of a 1,000 MW demand target by 1965-66. The Committee, however, taking into account all possible factors, and, in particular, the power shortage position until the end of 1963, felt that the estimate of 670 MW for the Calcutta area by the end of the third plan period would be more realistic.

Bihar Loads

The final estimates of loads, as accepted by the Committee, in south Bihar and north Bihar regions, are as follows:

Name of load	M.D. as anticipated by 1965-66 (MW)
South Bihar	
A Inside the Damodar Valley	
Licenseses:	
(i) Sijua (J) Electric Supply	28.00
(ii) Dishergarh Electric Supply	10.70
A.C.C. Sindri	6.40
Sindri Fertilisers	10.00
Hindustan Steel, Bokaro	40.00
Bihar State Electricity Board	
(i) Ganeshpur	6.70
(ii) Digwadih	6.00
(iii) Bokaro	8.50
(iv) Tilaiya	5.00
(v) Ramgarh	12.00
(vi) Badjna	6.60
Multipurpose Engineering Works, Ramgarh or Rnachi	15.00
Refractory works, Ramgarh	2.50
National Coal Development Corporation loads	60.00
Traction loads:	
(i) Tilaiya	12.40
(ii) Nimiaghat	10.50
(iii) Maithon-Kumardhubi Ranchi	10.80
Unforeseen	15.00
Aggregate	260.10
Simultaneous demand	216.75
Name of load	
B Outside the Valley	
(a) Loads committed by the Damodar Valley Corporation for supply	
(1) T.I.S.C.O.	81.00
(2) I.C.C., Ghatsila	6.00
(3) Bihar State Electricity Board:	
(i) Sultanganj	10.00
(ii) Patna	15.00
(iii) Jamshedpur	8.00
(v) Barun	27.00
(iv) Gaya	6.00
(vi) Mosabani	1.00
(4) Traction loads:	
(i) Barun	10.00
(ii) Manikui	13.50
(iii) Gaya	9.50
(iv) Mosabani	6.50
Aggregate	193.50
Simultaneous demand	174.75

(b) (Loads beyond the Damodar Valley Corporation's commitment and to be supplied by the Bihar State Electricity Board)

MW	MW
(5) Tilaiya 5.00	(8) Dairy Products, Barauni 0.50
(6) Maithn-Sultanganj 19.40	(9) Cold storage 2.00
(7) Jamshepur 60.60	(10) Industrial Carbon 2.50
(8) Mosabani 5.60	(11) Drum manufacturing 1.00
(9) Gaya 7.75	(12) Railways at Barauni 10.00
(10) Patna 31.25	(13) Bulk supply to West Bengal at Katihar (firm) 5.00
(11) Barun-Pipradi 54.20	(14) Bulk supply to Nepal at Biratnagar 6.00
(12) T.I.S.C.O. 59.00	(15) Mokameh 25.00
(13) I.C.C., Ghatsila 4.00	(16) Fertiliser and unforseen 25.00
(14) Kenskosi 10.00	(17) Rural and town loads 36.70
(15) Hatia 50.00	
(16) Karamnasa 5.00	Aggregate Simultaneous demand 119.90
(17) Traction loads 36.10	
(18) Unforeseen industries 12.50	
Aggregate Simultaneous demand 360.40	
	310.16

The aggregate load on the Damodar Valley Corporation system inside the Valley is estimated at 260.10 MW, and the committed aggregate demand outside the Valley amounts to 193.53 MW, giving a total of 453.63 MW. Assuming a diversity factor of 1.2 on all the loads excepting the T.I.S.C.O. demand of 81 MW, the system demand by 1965-66, it is estimated, will be 391.50 MW on the Damodar Valley Corporation system. As for the loads outside the Valley, in south Bihar, which are to be supplied by the Bihar State Electricity Board, the aggregate is 360.40 MW. This aggregate load will result in a system demand of 310 MW with the application of a diversity of 1.2 on all the loads excepting item 12 above, which relates to a specific bulk supply demand of the steel mill.

Name of load	M.D. as anticipated by 1965-66 (MW)
(1) Oil Refinery, Barauni 15.00 (firm)	
(2) Railway Coach Factory 1.50	
(3) Steel re-rolling mills 4.00	
(4) Sugar mills 0.50	
(5) Paper mill, Darbhanga 3.00	
(6) Paper mill, Samastipur 3.00	
(7) Cotton mill, Samastipur 1.70	

North Bihar Requirements

The aggregate of 119.9 MW in north Bihar will result in a system demand of 104 MW by 1965-66, by considering the demands under items 1 and 13 as firm and not subject to diversification. The anticipated system demands by 1965-66 in the West Bengal, the Damodar Valley Corporation and the Bihar areas, on the basis of both fertiliser and steel alloy loads considered under West Bengal, are summarised below:

West Bengal	MW
Bandel-Durgapur - Calcutta-Azimganj area (including 405 MW in Calcutta)	920.75
Malda-Dinajpur area	8.75
North Bengal area	20.00
	949.50
Damodar Valley Corporation	MW
West Bengal territory:	
(i) inside the Valley	178.07
(ii) outside the Valley	155.58
Bihar territory:	
(i) inside the Valley	216.75
(ii) outside the Valley	174.75
	725.15
Bihar:	MW
North Bihar area	104.08
South Bihar area	310.16
	414.24

CARD CLOTHING

FOR COTTON & WOOLLEN TEXTILE MILLS EQUAL TO THE HIGHEST WORLD STANDARDS

Now for the first time manufactured in India by Indian owned industry on the latest imported machinery with the best quality imported foundation cloth and completely rust proof specially hardened and tempered 100% tinned high carbon imported steel wire, under the supervision of foreign experts.

Our manufacturing scheme is approved by the Government of India under the Industries (Development and Regulation) Act, 1951.

RAMPARTAP CHOPRA
Managing Director

After assessing the power shortages in West Bengal and Bihar, including the Damodar Valley Corporation area during third plan, the Committee has made various recommendations to meet them.

The power availability (in MW) during the third plan period in the the Bandel-Durgapur-Calcutta-Azimganj region is tabulated below:

Name of station	1961-62 Installed (MW)	1965-66 Firm (MW)
Durgapur	60	60
Bandel	60	210
Aggregate firm capacity less 12½ percent towards auxiliaries and losses	—8	—57
Net salable capacity	52	400
Add available capacity from the C.E.S.C. including bulk supply from the Damodar Valley Corporation	361/382	405
Total salable capacity	413/434	805

The anticipated demand in this region by 1965-66 is 921 MW and, therefore, the shortage will be 116 MW. The West Bengal State Electricity Board has put forward the following proposals for the augmentation of generating capacity during the third plan, in addition to their Bandel thermal power station scheme:

(i) Extension of the Durgapur thermal power station by a third 75 MW generating unit at an estimated cost of Rs. 6.77 crores.

(ii) Installation of a new thermal power station in Azimganj with two 50 MW generating units and necessary transmission lines at an estimated cost of Rs. 10.37 crores.

(iii) Extension of the Gouapore thermal power station by installing a packaged thermal generating unit of 15 MW at an estimated cost of Rs. 1.8 crores.

The Committee has carefully considered these proposals. Considering the anticipated power shortage in the Durgapur-Bandel-Calcutta-Azimganj region and with particular reference to the acute shortage in the Calcutta area, the Committee feels that steps should be taken to provide additional generating capacity over and above what has been accepted under the third plan of West Bengal. The Committee recommends the following for consideration:

(i) Installation of one 15 MW power plant in Gouapore, stated to be available from an east European country. This will take about two years for commissioning under a guarantee. It will help in reducing the shortage of power in 1963 to this extent.

(ii) Installation of a third 75 MW generating unit at the Durgapur coke oven power station of West Bengal. This should be completed and commissioned by 1964-65.

(iii) A new thermal power station proposed by the West Bengal Government in Azimganj, consisting of two 50 MW units each. The Committee understands that certain preliminary steps, such as the selection of the site, have already been taken by the West Bengal Government, and the latter feels confident that the commissioning of these units could be achieved by the close of the third plan, or at the latest by the beginning of the fourth. With the sanction and achievement of the works mentioned above, it should be possible to make available additional firm power of 122 MW as below:

	Installed capacity	Firm capacity
Gouapore	15 MW	15 MW
Durgapur	75 MW	75 MW
		(one 75 MW unit in Bandel has been kept out for overhaul)
Azimganj	100 MW	50 MW
		(one 50 MW unit kept out for overhaul)
Total	190 MW	140 MW

Estimated Cost

The Committee has considered the question of finding the necessary resources for the projects mentioned above. The cost of these works has been estimated by the West Bengal

Government at about Rs 19 crores. While the Durgapur extension will need a foreign exchange component of about Rs. 4.5 crores, the balance of the foreign exchange component for the other projects, it is proposed, will be met under trade agreements with east European countries. The Government of West Bengal assured the Committee that the total capital cost would be available by adjustment within the State ceiling laid down by the Planning Commission.

It will be seen that while the above projects, if accepted, will go a long way to meet the situation as will develop by the end of the third plan period, the shortage of power will continue until the end of 1963, when the two 75 MW units under erection in Durgapur will be commissioned. This shortage, the Committee is afraid, will have to be faced.

Planning is a continuous process, and it is urged that power planning for the fourth plan should be taken up from now. The target for power production was 5.7 million kW in 1961, and is placed at 13.4 million kW in 1966, 23 million kW in 1971, 45 million kW in 1976, and 50 million kW in 1981. It is already known that due to transport difficulties, it has been decided to locate a power station at the site of the coalfields. It should be clear that it is easier to transmit power than transport coal. It is also intended to operate power stations with diesel oil in the areas where coal is not available. Regional grids are another device in the plan to secure equitable distribution of power within a region.

Talks on Bokaro Scheme

The U.S. Ambassador, Professor Galbraith, told a Press conference last week that the talks for financing the Bokaro steel project would be shortly resumed. The Ambassador contradicted reports that there was any hitch in these negotiations, adding that his country was not only interested in carrying the project to its production stage, but also to its low-cost efficient production stage. This is the principal hurdle, it is learnt. According to the U.S. quota, a 1 million ton plant with American equipment would be at least 50 percent costlier than, say, the British or the German-sponsored plants in Durgapur and Rourkela. The increased cost of equipment will be reflected in the cost of end-products. It may mean the stepping up of the retention price of steel to the level which will secure a reason-

able margin of profit for the Bokaro steel works. The other alternative is to start the Bokaro project with 5 million tons capacity. The airy way in which the subject was treated by the U.S. Ambassador at his Press conferences creates a certain amount of anxiety.

As far as production from the Bokaro steel project is concerned, it is no longer to be expected during the third five year plan. The Steel Ministry is already having second thoughts on this project and is examining the possibility of starting with a 2-million ton plant, expandable later to 5 million or 6 million tons of capacity.

U.S. Grants for More Projects

Agreements have been concluded with the Government of India providing for American grants totalling Rs. 25.3 crores for five projects. The malaria eradication programme and a project to double India's grain storage capacity are the largest recipients of the grants announced. The three remaining projects are concerned with the training of engineers and craftsmen. The grants total \$8.4 million (Rs. 4 crores) in dollars and Rs. 21.3 crores in Indian currency. The latter amount has been appropriated from the sale proceeds of agricultural commodities supplied to India under the U.S. Food for Peace (P.L. 480) Programme.

The following are the details of the projects: (1) Malaria eradication: the Government of India's malaria eradication programme, which seeks to rid India of what is generally regarded as the country's worst medical problem, has received two U.S. grants totalling Rs. 11.3 crores. Of this, \$7.2 million (Rs. 3.4 crores) is in foreign exchange and will be used to purchase from outside India approximately 12,000 long tons of D.D.T. powder and 85 million tablets of chloroquine phosphate (an anti-malarial drug). The grant from U.S. P.L. 480 proceeds amounts to Rs. 8 crores, and will be used to reimburse the Government of India for rupee expenditures incurred on the programme.

Total U.S. assistance to the malaria control and eradication programmes amounts to Rs. 57 crores. The success of the programmes is shown by statistics collected by the Government of India which reveal that there is a fall of 88 percent in the number of malaria cases between 1953-54 (75 million cases), when the Malaria Control Programme was launched, and 1960-61. A further significant fall, it is believed, has taken place during the past year.

Modern storage of foodgrains: a grant of Rs. 10.3 crores has been given from U.S. P.L. 480 funds to the Government of India's programme to double the existing foodgrains storage capacity of 2.5 million tons during the third five year plan. The U.S. grant will meet the entire anticipated cost of the programme during the first two years of the plan. A 5-million ton grain storage capacity will contribute to the stabilisation of the prices of foodgrains. This will benefit both farmers and consumers.

Higher Technical Education

Higher technical education: during the third plan, the Central and State Governments have undertaken the establishment of 14 regional engineering colleges. These colleges are being located in Warangal (Andhra), Jamshedpur (Bihar), Nagpur (Maharashtra), Mangalore (Mysore), Allahabad (Uttar Pradesh), Durgapur (West Bengal), Bhopal (Madhya Pradesh), Silchar (Assam), Surat (Gujarat), Kozhikode (Kerala), Tiruchirappalli (Madras), Rourkela (Orissa), Jaipur (Rajasthan) and at

a town to be chosen in Punjab. The 14 colleges will have a total annual admission capacity of approximately 3,500 students. In addition to the basic branches of civil, mechanical and electrical engineering, the colleges will conduct degree courses in other specialised fields such as mining, metallurgy, chemical engineering, etcetera. The United States has given a grant of Rs. 2 crores from U.S. P.L. 480 sale proceeds to meet the expenses incurred on the colleges during the first two years of the third plan.

Craftsmen training: it is estimated that during the third plan, 1.3 million craftsmen will be required to meet the demands of fast growing industries. At the end of the second plan, there were 167 craftsmen training centres set up in different States under a programme sponsored by the Central Ministry of Labour and Employment. The third plan proposes to increase the number of these centres to 318. This will increase their admission capacity to 100,000 trainees from 42,000.

The United States has given a grant of Rs. 1 crore from U.S. P.L. 480 funds to meet the costs of this programme during the first two years of the third plan. By earlier agreements, the United States had made available \$1.4 million (Rs. 67 lakhs) in foreign exchange for the supply

of equipment to a number of craftsmen training centres in India.

The Indian Institute of Technology, Kanpur: this Institute is being developed into one of India's finest institutions of higher technological learning. A consortium of nine well-known American educational institutions was formed recently to aid the Kanpur Institute. The American consortium is comprised of the California Institute of Technology, the Carnegie Institute of Technology, the Case Institute of Technology, the Massachusetts Institute of Technology, Ohio State University, Princeton University, Purdue University, the University of California, and the University of Michigan.

The United States has given a dollar grant of \$1.2 million (Rs. 57 lakhs) to meet the cost of securing the services of one American programme director, and 20 professors and consultants. The grant will also provide for the training abroad of 30 Indian members of the staff of the Institute and for the purchase of certain commodities. The latest grant brings the total American contribution to the Institute to Rs. 2.2 crores, of which some 70 percent has been in foreign exchange.

Equipment for Power Projects

The Government of India is making a detailed study of the produc-

tion capacity of workshops in India, both in the private and public sectors, which are supplying major items of equipment required for irrigation and power projects in the country. These items include gates, hoists, penstocks, tubing, gantry cranes and transmission line towers, some of which are at present imported and involve expenditure of foreign exchange. The study will be undertaken by a group of officers including of Mr. P. P. Agarwal, Joint Secretary, Central Ministry of Irrigation and Power as chairman.

The study group will also draw up a phased programme, in the context of the needs of irrigation and power projects in the third plan, with the necessary financial implications, particularly in terms of foreign exchange, for the manufacture of items at present imported, to the extent to which indigenous capacity can replace them. It will also give recommendations on the balancing machinery, to be installed in selected public works departments and irrigation and power workshops in the States, so that these might be equipped for the manufacture of items of machinery, for which they are best fitted. Further, it will study what type of additional design and testing facilities should be provided for the manufacture of transmission towers and ancillary equipment. The

"IT SHOULD BE LIKE THE ONE
I BOUGHT FROM YOU
LAST YEAR!"

This is one of the oldest and most commonly used of standards. But it is certainly vague. And when you use it, you are never sure of getting your exact requirements.

This is where Indian Standards come in useful. Developed by the Indian Standards Institution, each standard helps you to easily specify your requirements, ensures quality of the product and good value for the money you spend.

ISI prescribes standards for industrial and consumer goods. Under its certification marking scheme, goods produced to relevant standards qualify for carrying the ISI Certification Mark. This is a third-party guarantee of the products' continuous satisfactory performance and service. The next time you buy anything, look for the ISI mark.

report of the study group, it is expected, will be ready in April 1962.

Machine Tool Order

An order for £400,000 worth of machine tools has been placed with the British Company of William Asquith Ltd by Heavy Electricals Ltd of Bhopal. The contract is for 35 machine tools, including heavy-duty boring, milling and radial drilling machines. All are to be made within the next 12 months. The machines, which weigh from 5 to 90 tons, are to be used in a new factory in Bhopal.

Prototype E.M. Unit

A British prototype electrical multiple unit is being brought out to India to compete with similar units sent out by Japan and a European consortium. The railways are planning to buy 200 such units. The decision will be reached after the performance of the three prototypes has been studied and compared.

Manganese Ore Exports

The State Trading Corporation has been able to step up the export of manganese ore to Norway and Sweden as is evident from the following figures:

Country	1956	1957	1958	1959	1960	1961 (up to November 1961)
	tons	tons	tons	tons	tons	tons
Norway:						
Total Imports	217,533	286,604	196,580	218,096	308,375	225,376
India's Exports	9,708	9,496	4,859	2,500	10,804	8,204
Sweden:						
Total Imports	29,000	39,314	72,574	85,728	54,100	87,486
India's exports	7,600	9,800	17,320	4,502	16,325	6,117

World Bank Mission

A World Bank economic mission is arriving early this month to assess India's foreign exchange requirements for the last three years of the third plan.

The mission will be led by Mr. Peter Wright and will include Messrs R. Pantanali, S. Plasscharri and R. Sadobe. It will appraise the economic progress India has made since Mr. Hoffman made his report, to enable the consortium of aid-giving countries meeting in Washington on

23rd May, to announce aid for the remaining years of the plan. A mission of the World Bank, headed by Mr. Stewart Mason, is already in India to select projects for financing by the Bank.

Another important visitor arriving in India for three weeks is the vice-president of the International Finance Corporation, Mr. Morton Rosen. It is expected he will explain the new policy of his organisation, which has decided to participate in equity capital. Mr. Rosen arrives here on 19th March to stay in India until 3rd April, including one week in New Delhi. He will be preceded by Mr. V. Hoffmann of the I.F.C., who arrives here on 4th March.

River Boards Act

It should be interesting to compare the legislative output of Parliament with the implementation and the results obtained. The River Boards Act of 1956 provides an example. This piece of legislation was to come into force on such date as "the Central Government may, by notification in the official Gazette, appoint." Years have gone by, and yet no Gazette notification has enforced the Act. The Secretary of the Ministry

of Irrigation, Mr. M. R. Sachdev, however, lifted the Act from the pigeonhole and addressed the various State Governments, seeking their consent to set up river boards, initially for the river basins of the Mahanadi, the Mahi, the Narmada and the Tapi.

Power Plant from Russia

A two-member technical delegation will leave for Moscow soon to finalise designs, contracts and orders for equipment for the Pathratu thermal power station in Bihar. The delegation, consisting of Mr. S. S. Kumar, chairman, Central Water and Power Commission, and Mr. P. R. Sundaram, chief engineer, Bihar State Electricity Board, will be in Moscow for a period of about two weeks. A director of the Central Water and Power Commission, who has already left for Moscow for finalising designs of equipment to be procured from Russia for the Neyveli thermal power station expansion scheme, will also join this delegation. The Russian authorities have agreed to supply plant and equipment for the Pathratu power station, which, under the third plan, will have five additional units of 50 MW each. There is, however, a possibility of installing three units of 100 MW each, and the delegation will discuss the proposal with the Russian authorities.

Discussing K. B. Lall Report

A special session, at ministerial level, of E.C.A.F.E. will be convened later in the year to discuss the K. B. Lall report and the draft declaration on the economic development of Asian countries. This is intended to enable the member-countries to examine the report and its implications with a view to reaching decisions. It has, therefore, been decided not to table the report at the forthcoming session of E.C.A.F.E. in Tokyo beginning from 6th March.

London

Industrial Activity Slows Down: More Export Credit Facilities

(FROM OUR LONDON CORRESPONDENT)

domestic trade, and increasing the cost of exports."

Help for Credit-exporters

More assistance for British capital goods exporters obliged to sell on lengthy credit terms has been announced by Mr. Erroll, President of the Board of Trade, in a written Parliamentary answer. It is hoped the new facility will especially help those pressed for finance. The new Export Credits Guarantee Department cover is being offered immediately to policyholders selling on three or more years' credit. The percentage of the price covered by the Department has been progressively raised to the present level of between 85 percent and 95 percent. This already compares favourably with that offered by any credit insurer overseas. This percentage may be increased to the full 100 percent on insured transactions involving three or more years' credit once they have run trouble-free for two years from the date of acceptance. This will apply to existing or future contracts. No charge will be made for the extra cover. Endorsements extending it will be issued at the Department's discretion at the two-year point.

It is intended to provide the facility, to be known as the full percentage facility, wherever the Department's experience is satisfactory up to that point, both in the relations between buyer and seller and in the Department's general experience in the market concerned. In such cases, the exporter will be provided with full payment, pro-secure of receiving full payment, recovery action if things go wrong. Markets for which the Department is withholding cover on new business, or operating a specially-reduced percentage of cover, will be excluded.

Insurance Credits

Final details have still not been worked out of the scheme under which the insurance companies will lend up to £100 million for export finance at a fixed rate of 6½ percent. This is because of their complexity, but it has not prevented the stop-

gap "agency" of the insurance companies from starting in business. It appears that the company which will replace the agency will have power to call for finance from the insurance companies as the situation demands and, more important, the term of the loans made by the companies to the company will match the length of the credit the company will give to finance the export contract. This would mean that the difficult problem of reconciling the insurance companies' wishes for a long-term investment (15 years at least) with the much shorter period for which the insurance will be passed on, would be solved by the insurance companies making a major concession, "in the national interest."

Prospects for Industry

For the first time since October 1958, more firms taking part in an enquiry into industrial and export trends by the Federation of British Industries, have reported a fall rather than a rise in output. As many as 59 percent of the firms are now working below what they call "a satisfactory full rate of operation." The margin of firms reporting a fall in output over those with a rise, was quite low, 27 percent, compared with 23 percent. But this contrasts with an upward balance of 7 percent, as late as last October. These estimates were made in reply to the four-monthly enquiry into industrial trends by the Federation. The 716 companies replying are representative of all industries. The impression of slackness in the economy is confirmed by the widespread easing of the labour market. Only 20 percent of the firms believe that a shortage of skilled labour is the most important factor likely to limit their output in the next four months. For some years, the scarcity of skilled men has been the chief limiting factor. Now, 63 percent of the firms say that it is the shortage of orders or sales that will probably limit output. Already, 41 percent of the companies have fewer orders than four months ago. Only 14 percent have more orders on hand. Even so, industry appears hopeful of a recovery in the next few months. On

balance, the firms expect new orders, output and employment all to be higher. They are even more hopeful about export prospects. A clear majority of companies expect exports to go up this year, especially in north America and Europe.

Wholesale Prices Steady

There were few significant changes in wholesale prices in January with the exception of some increases in prices of materials used in and the products of the food processing industries, the Board of Trade announces. Prices of manufactured products, excluding food and drink, had changed little for almost a year and were only 0.6 percent higher last month than in March last year. Average prices for the non-food manufacturing industries were little changed from the October level, and slightly lower than a year earlier. A rise in the price of raw rubber in January was offset by slightly lower prices for imported softwood. Dearer coal had brought a small rise in the fuel index. The increase in the provisional index of materials and fuel used in food manufacturing in January resulted from rises in the prices of raw sugar and home-produced meat for processing. There were also small increases in average prices of materials and fuel used in the chemical industries and in house-building materials. Lower prices for softwood and hardwood brought a fall in the index of materials and fuel used in the timber industries. The increase in the average prices of products of food manufacturers was largely a reflection of 5 percent rises in the prices of bacon and granulated sugar. The index for sales of timber was higher than in December, because of higher average prices for joinery and domestic furniture. On the other hand, average prices of home sales of iron and steel products fell slightly as a result of a fall in the prices of some finished steels.

Handy Angle (India)

Handy Angle, a subsidiary of Wagon Repairs, has signed a ten-year agreement with Tarshvadan J. Shah, of Bombay, to manufacture Handy Angle perforated sheets in India. A new Company, Handy Angle (India), has been formed under the chairmanship of Mr. C. C. Desai, a director of the Life Insurance Corporation of India. The Desai group will hold the controlling interest. A factory of 10,000 square feet is to be built in Bombay and production will start in September. It is planned to double the area within three years, and to build a steel cold rolling mill to supply the factory.

Pipework installations by **S&L**

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers and draughtsmen, many of them trained abroad, now provides,

- * fabrication of all types of pressure pipework,
- * fabrication of bent boiler tube, superheater elements and coils for all purposes,
- * the installation of piping system for all pressure and temperature conditions.

RUSSIAN BUYING OF INDIAN CASHEW INCREASES

(FROM OUR SOUTH INDIAN CORRESPONDENT)

ACCORDING to Russian official claims, consumption of Indian cashew in that country has been increasing. There should, therefore, be scope for increasing India's trade with that country in this commodity. Russia is comparatively a newcomer to the Indian cashew market, but she is now this country's second largest buyer of cashews. According to the latest available figures, she took 158,069 lbs of cashew kernels from India during the first ten months of last year, compared with 955,039 lbs imported by the United States. In the meanwhile, a section of exporters in India are suspicious about the larger purchases by Russia. According to them, Russia sells part of the quantity purchased from India on rupee account to other countries, occasionally at considerable discount. If true, this will have a bad effect on cashew deals in the free market.

The mild boost given to cashew prices by the recent orders from Russia and other communist countries has been short-lived, and the prices are again on the decline, according to reports from Quilon. The rates for processed kernels have fallen back to 42 (U.S.) cents a lb, and even at this rate, buying enquiries are lacking. Unless America, the largest buyer, enters the market in a big way, the cashew market will remain inactive.

Quality Standards for Coir Goods

The Coir Board has urged the coir manufacturers increasingly to adopt the quality standards, prescribed by the Indian Standards Institution in the manufacture and sale of their products. This advice is contained in

a recent notification. The Board has adopted so far I.S.I. standards for coir fibre, mats and ropes. Quality control, it is expected, will help the industry in augmenting exports. The Kerala Minister for Industries, Mr. Damodara Menon, said last week that the Government and the Coir Board were considering how to prevent the present steady decline in coir products exports, especially those of mats and mattings. With this end in view, the Kerala Government was taking steps for the mechanisation of one-third of the matting sector of the manufacturing side of the coir industry in Kerala. Workers displaced as a result of such mechanisation would be assured of alternate employment, he said.

The Minister was addressing a meeting in connection with the opening of a Coir Board show-room in Ernakulam. Presiding over the meeting, the Coir Board chairman, Mr. Sarma, suggested that for the stability of the coir industry, particularly the manufacturing sector, it was essential that an internal market should be progressively built up. So far, the Indian coir products had depended almost entirely on foreign markets. Coir manufactures like mats and mattings were subject to severe competition there, and consequently, the exports of coir goods, particularly coir mattings, had fallen considerably in recent years. He said the export of coir and coir goods earned, on average, Rs. 8 crores to Rs. 9 crores a year. The value of the entire production of coir in India might not exceed Rs. 18 crores a year. The output of coir of all sorts amounted to 150,000 tons, of which just over 77,000 tons were exported. Of these, coir yarn constituted 55,000 tons, while just over 22,000 tons represented various types of manufactures, including cordages and ropes.

Rubber Holding Fragmentation

The Kerala Governor, Mr. Giri, has suggested two ways to halt the growing fragmentation of rubber holdings in the State. Legal steps should be taken, if possible, to prevent this tendency on the part of the rubber growers, he said. Secondly, as a more positive measure to tackle the problem of uneconomic holdings, he suggested that co-operation should be tried wherever practicable. Facilities should be made available through service co-operatives to encourage small cultivators to come together so that they could reap the advantages of large-scale cultivation, while retaining individual ownership. The percentage of rubber area cultivated by small growers in Kerala has increased from 44 in 1955 to 58 in 1959. More than 50 percent of these small holdings were less than 5 acres in extent, and they are considered to be uneconomic holdings.

Rubber planting in the public sector in Kerala has exceeded the target set for 1960-61, according to an official publication. As against a physical target of 4,000 acres, actual planting during the year was to the tune of 4,500 acres. According to the present programme, the Government proposes to bring under cultivation 20,000 acres by the end of the third plan. These plantations under State ownership will be in Kodumon and Kalady, and it appears that they are coming up well.

The Kerala Government has an ambitious rubber planting scheme for the third plan period, which envi-

sages the planting of rubber on an area of 107,000 acres. Part of this will be on private land and the rest on the reserve forest areas owned by the Government. In the private sector, cultivation will be made with loan and other assistance from the Government. Under the scheme to assign Government lands to educated unemployed and landless persons for rubber cultivation, 1,169 persons have been allotted lands at the rate of 3½ acres each during 1961-62. All of them excepting a few, have completed the planting operations. Loans amounting to Rs. 9.59 lakhs were also disbursed to these allottees and they are given technical advice and other help too. On the whole, 8,500 acres have been planted with rubber under the scheme in the public and private sectors so far. As for the financial assistance to be provided to private individuals for rubber growing on their own holdings through the co-operative land mortgage banks, the preliminaries are in progress, says the publication. The Government has sanctioned the clearance of an additional area of 4,440 acres of forest land for the rubber plantation programme for 1962-63, which will be distributed to private individuals. The clearance work is in progress.

WAGE RISE ADDS TO TEA COSTS

NEW WAYS OF ATTRACTING CONSUMERS

(BY A SPECIAL CORRESPONDENT)

THE first essential for safeguarding the future of the Indian tea industry is an immediate reduction in its costs. But at the last meeting of the Wage Board, an interim wage increase for labour of north Indian tea estates was recommended. It is reported that the increase might have to be retrospective from 1st December, 1961, at an extra cost to the industry of Rs. 30 lakhs. The Consultative Committee of the Tea Producers Associations do not consider that there is any justification for such an increase in wages.

A special meeting of the Export Promotion Committee of the Tea Board was attended by several representatives of the tea trade in the U.S.A. The details of the meeting have, however, not been made available. This is the second visit from American tea trading interests in a comparatively short period. On the last tour, the chairman of that committee was reported as stating that the U.S.A. could secure teas suitable for its market cheaper than the Indian varieties. It is, therefore, interesting to note that the January issue of the Assam Review quoting tea costs a lb in New York at the following:

Ceylon		
Fine leaf	94 cents	
Medium	78 cents	
Fine broken	75 cents	
Indian		
Fine leaf	80 cents	
Medium	70 cents	
Fine broken	75 cents	
Java		
Medium	62 cents	
Fine broken	56 cents	

(African types are not quoted.)

Tea in U.S.A

These rates suggest that the price may not, after all, be so important as quality. But this reasoning is hardly supported by the development in the U.S.A. of instant iced tea. It is, of course, appreciated that boiling a kettle of water and infusing tea there-after, does take time, and the aim of the producer should be to offer what the customer wants, that is, a tonic beverage easily prepared. Furthermore, the difficulties which have

checked the development and sale of tea pellets, powder and other convenient methods such as tea bags appear to have been overcome by recent scientific discoveries, for there is a concerted move to increase consumption on the above lines in Europe as well as America. India and Ceylon are also reported to be working on similar lines. This is evident by the collaboration of the Government of Ceylon with a West German firm. Machinery has been ordered and is due this March. The factory, it is expected, will begin production by about July or August this year.

There are also tea tablets under examination in India. Meanwhile, a factory in Scotland is reported to have mastered the problem of instant tea and can now produce a beverage comparable with the best natural brews.

World Coffee Supply

Although the world coffee output is excessive, the immediate supply position is not so pressing. Due to recent disasters in Uganda and other African territories, ready deliveries were reported to be meeting with a strong enquiry from the U.S.A. The problem of Brazil will engage the attention of members of the International Coffee Agreement at their forthcoming meeting. The fact that the I.C.A.'s policy has been partly successful in maintaining the rates despite surplus output deserves the attention of tea producers as the International Tea Agreement has not been renewed since March 1955, and, as has been pointed out by the representatives of the trade—the fall in the commodity prices this year clearly demonstrates the advisability of working out a scheme of control, to be made operative if the situation again tends to get out of hand. For the moment, however, the supply and demand situation looks like improving somewhat as stocks in the U.K. have been allowed to come down and will have to be replenished. The commodity prices are still too low, but they are better than two or three months ago.

Decline in Tea Exports

The fall in Indian tea exports was emphasised by the president of the Calcutta Tea Merchants Association at the annual meeting on 23rd February. India's share in her traditional British and U.S. markets has been declining, although the latter's total imports have either been steady or have increased. Ceylon and other tea producing countries are stealing a march over India in these markets.

Mr. A. S. Bam, chairman, of the Tea Board, said that total exports of tea from India last year came to about 452 million lbs (valued at Rs. 124 crores), against 430 million lbs (worth Rs. 121 crores) in 1960. Taking into account larger supplies from other producing countries like Ceylon, east Africa and Pakistan, India's position has not been unsatisfactory, Mr. Bam thought.

The Tea Board chairman also stated that certain measures of direct assistance to the industry had been initiated to improve the quality and production of tea and the competitive capacity of the Indian tea in export markets. The Government had just released an additional 10,000 tons of sulphate of ammonia. It was committed to meet the industry's full requirements of nitrogenous fertiliser from next year.

COCHIN TEA SALES

At Sale No. 8, 271,000 kilograms of tea were on offer. There was a good but irregular demand. Cleaner and black leaf descriptions were fully firm to dearer. Others were irregularly easier.

STORAGE PROBLEMS OF THE JUTE BUFFER STOCK AGENCY

MANY people have been wondering how and when the Jute Buffer Stock Agency is going to operate. It is understood that the committee for this purpose has been formed; and Government announcements—whether meant as election propaganda or otherwise—indicate that the intention is to commence purchases at an early date. The undertaking is to buy jute, if necessary, in order to maintain prices and ensure that growers get not less than the parity of the minimum rates in Calcutta.

No doubt the authorities desire to have the necessary machinery in existence so that it can commence operations at once if the contemplated emergency should arise. But there is at present no indication that any emergency exists. Prices are well maintained in the mofussil—with one or two notable exceptions—at levels higher than the parity of the minimum prices. Indeed, values have recently shown a tendency to rise. It is reported that growers have only small stocks; that fair quantities are being held by stockists, dealers and others; and that the latter are all content to continue holding these stocks in the hope of higher prices. There is a good demand as a result of the increased production by mills and the I.J.M.A.'s minimum quota scheme, and they could all sell their stocks if they so desired, but they prefer to hold on. There is, therefore, no need for the Government to intervene by buying jute to maintain prices.

Plans Well Advanced

It is known, however, that plans are well advanced should the necessity arise. Apart from the difficulties about finance, the first consideration is that purchases should be made in such a way that the benefit is passed on to the grower by stimulating the purchases of others, thus reducing the quantity pressing for sale; and by providing a market where the growers can sell their jute at the proper rates. The greatest difficulty which can be foreseen at present is the lack of storage accommodation in mills and press houses, and the frequent bottlenecks in transport, particularly by rail. The only way in which growers can be assisted is by enabling them to sell their jute in neighbouring hats at satisfactory prices. That can be done if facilities exist for moving the jute and storing it. It must be realised, however, that in order to influence the markets throughout the districts, the quantity bought would have to be large. Where is the Government to store it all? It may be assumed that the buying would be done through normal trade channels, and that those buying on behalf of the Jute Buffer Stock Agency would also store the jute on its behalf. That, however, would soon put the buyers out of the market, because the quantity they could buy and store is normally limited.

It is even more limited at present because many godowns are reserved by the Government for food storage, and the rest are full of the very large stocks the mills are already carrying. There is little accommodation in the press houses, and outside storing space is small. It seems, therefore, that Government buying cannot help unless an outlet is provided for the jute bought. It may be argued that Government buying can immobilise enough jute to maintain the market.

But if it blocks the normal trade channels, it may be worse than useless.

Buying Manufactured Goods

It has been suggested that, instead of buying jute, the Government should buy manufactured goods, or insist on fuller production, in order to stimulate the buying of jute by mills. There are certain advantages and disadvantages in that course. The advantages are that the storage accommodation in mills is better than any available elsewhere, and there would be a greater guarantee for the quality of the goods. The cost would be less, because the mills store goods free of cost to their customers—within reason. Even if the Government had to pay for insurance, the ultimate cost would probably be less than the outlay on purchasing jute. On the other hand, even if the buying of manufactured goods stimulated the buying of jute—as no doubt it would—the jute bought would have to be accommodated somewhere, but the mills cannot store much more than they hold at present. They can, of course, buy forward, which might solve the problem of storage.

Steady Flow of Business

It is reported that there has been a fairly steady flow of business from overseas during the past week. But prices, particularly for near delivery, have reacted. Hessians have suffered a setback following the fixing of a maximum price by the East India Jute and Hessian Exchange for the settlement of February contracts. But speculative buying has continued to hold up the market, and at times excited conditions have prevailed. The bazaar has absorbed a large quantity of fresh orders, as there have been large declarations of options for changes in contracts for goods already sold by mills.

Mills have continued to buy raw jute against their quota which for the current week is smaller than firm previous weeks. Prices remain firm. The main strength of the market lies in the mofussil, where quality jute is scarce while demand is good. High premiums are being paid, and the premium for Middles in some areas

has gone up to Rs. 5 over Bottoms. Prices in general are higher than they were a week ago, and sellers are reserved. The exception is in the mesta varieties, which have been neglected recently, and sellers are keen to dispose of their holdings.

THE JUTE MARKETS

Manufactured Goods: The market was quiet at the opening last Thursday. Rates fell due to the continuance of the emergency declared by the East India Jute and Hessian Exchange, and due to difficulties about settling day. B Twills dropped by Rs. 2.50 to Rs. 124 for February shipment and Rs. 118 for July-September, while 40in. 10oz. Hessians fell by Rs. 1.50 to Rs. 55 for the near and Rs. 47.35 for the forward position. Prices began to move up slowly on rumours of a Government order for B Twills. This set off a fresh wave of speculative buying, which pushed B Twills up to Rs. 126.25 and Hessians to Rs. 57 by Saturday morning. There were reports of fresh overseas enquiries, particularly for heavy goods, which after the week-end advanced a further Re. 1. Hessians were quiet but prices were maintained in sympathy with sacking.

Opening quotations on Wednesday morning were as follows:

	Ready	March	Apr.-June	July-Sept.
40in. 10oz.	42.50	40.30	37.75	36.25
40in. 8oz.	46.50	44.60	46.73	39.60
40in. 10oz.	57.00	53.00	49.65	47.75
B Twills	128.00	127.50	125.25	122.75
Heavy Cees				
(Plain)	128.00	129.00	128.00	122.75
A Twills	154.00	154.50	150.00	146.50
Liverpools	150.50	147.50	143.00	140.00
Cornacks	138.00	138.50	128.50	125.50

Raw Jute: Small daily business was done by mills against quotas. The main interest was again in high-grade jute, for which varying premiums were paid. Tossa was in good demand, fetching up to Re. 1 above the minimum price. Arrivals up-country showed little change, and on an all-India basis, they remained at about 65,000 maunds a day. Mills

still neglected mesta and large quantities were on offer. Wagon arrivals in Cossipore increased to 150 last week, the restrictions on bookings to that centre having been relaxed.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms	Rs. a 100 kgs.	Rs. a Md.	Shipment
Assam	80.38	30.00		
Northern	79.04	29.50		
Punna Desal	73.68	27.50		
Dolisee Selected	87.07	32.50		
Assam Tossa	84.39	31.50		
Mesta:				
Assam-Northern	72.34	27.00		Mar.-April
Dolisee	72.34	27.00		
Desal	73.68	27.50		
Jungli	66.98	25.00		
Pakistani N. C.	105.00	a bale

or less keeping its end up by the occasional stiffening of the E.P.C. prices in Pakistan, such as the rise of £2 a ton last week on Outport Tossa-2/3, £1 on Mill Hearts and also ordinary Cuttings. There were some

sellers offering very poor marks of Mill Lightnings and other grades, but spinners did not even consider the prices mentioned. For instance, down to £116 10s was quoted for Mill Lightnings, compared with the usual

rate of £121 10s, while Mills Firsts were simply nominal in the absence of offers and Mill Hearts were quoted at from £97, and Grade Hearts from £84 a ton, c.i.f., U.K.-Continent. Grade Tossa-2/3 was offered at £136, four from £120 and Continental Tossa-2/3 from £103, c.i.f., February-March. There were extremely few offers of good quality jute and prices were nominal. Crack marks of Firsts, Lightnings or Hearts are unheard of nowadays, and the spinners who used to spin yarns from these are never asked for them, and they formerly did a large business in them. The improvements in spinning, as well as in the fibre, enable spinners to produce yarns which are so much better than they used to be that they serve the purpose quite well. Gone are the days when buyers were fussy about the quality of their purchases.

The Calcutta goods market again fluctuated somewhat, and the firmer tendency of the past few days evaporated, bringing prices back to levels even lower than they were at the beginning of the week. Hessians were up to 86s 6d for 40in. 10oz, and 65s 9d for 7½oz. February, and 79s 9d and 61s 3d for March, but at the close they went down to 83s 6d and 63s 9d February and 77s 6d and 60s March. B Twills went up to 195s 3d and fell to 190s for February.

Dundee jute yarns were in good demand, as prices had been reduced in the previous week, and spinners have now been comfortably placed with orders for two to three months ahead, while manufacturers have been much better off than before. Hessian yarns were at 16.92d a lb for 8 lbs cops and also "C.H.W." spools, with "J.C.H." at 18.07d in both cases.

THE PAKISTANI JUTE MARKETS

FIBRE FIRM ON KEENER BUYING

(FROM OUR Dacca Correspondent.)

THE market was firm in the past week, and prices paid for cuttings were slightly higher than those in the previous week. Nearly £3 a ton more was paid upcountry for loose jute, which was available in a larger quantity. The increase in the supply was partly due to the better prices being paid, but probably because of the approaching Id holidays. The higher prices paid for loose jute were mainly due to the fact that the number of buyers increased proportionately much more than the arrivals. Strangely enough, balers' interest lay mainly in the lower grades, both in white and tossa, which arrived in a smaller quantity than the market required.

In the Narayanganj market, considerable business continued to be done in cuttings, and Rs. 85 was reported paid, although most buyers were unwilling to pay more than Rs. 82. There was some business in Hearts and Outport Tossas, with a limited amount of business in premium marks of Lightnings. In spite of the increased activity, the market did not really move up very much, which suggested that there were fairly heavy stocks still unsold, with some balers short of specific grades.

The London market responded slightly, but continued to resist any increase. Here again the interest was limited to Export Hearts and Outport Tossas, and business was even reported above E.P.C.s, whereas Lightnings and other grades were still being offered below E.P.C.s.

Although in the overseas markets, prices did not really go up very

much, the increased activity there and the slightly renewed interest from foreign buyers induced the Pakistan Jute Association to increase the E.P.C. prices in certain grades. Outport Tossa moved up by £4 to £91 f.o.b. and cuttings moved up by £2 to £44 for N.C. and £43 for T.C. Lightnings moved up £1 to £86 f.o.b. Although some sales at discount prices were reported as far forward as October shipment, there was no indication for the time being that cuttings would fall. Export Hearts already at a minimum were very much in demand, since the standard appeared to be higher this year and the tendency in this grade was most certainly upward. Outport Tossa 2/3, too, was very much in demand. Furthermore, the Tossa crop has obviously been less than expected so that there is very little chance of the price falling or even remaining where it is at present. The slight rise in Dundee Tossa-4 in the overseas markets, was probably mainly due to the shortage of the Tossa crop, and, therefore, due to reduced offers. But it is unlikely that this grade will go up very much higher. The same applies to Export Lightnings to some extent. Demand for it has considerably fallen off and there is no shortage of this quality.

It is unfortunate that the growers, encouraged by better prices, are reported to be once again adding moisture to the jute, while the crop is already bad enough in quality. During the first half of February, E.P.C. registrations were extremely low. The total registrations amounted to 60,126 bales. India was the largest buyer with 14,005 bales, the U.K. bought 11,091 bales, the U.S.A. and Yugoslavia 7,000 bales each, and South Africa bought 4,200 bales. Russia, it is reported, has bought 500 bales.

RECORD TRADE IN WHEAT EXPECTED

The outlook for 1961-62 indicates some alleviation in the world wheat situation, with trade likely to reach record levels and stocks declining substantially for the first time in four years, the International Wheat Council said in London recently. The Council's session from 20th November to 1st December was attended by delegates from 33 member-countries and also by observers from the U.N. Food and Agriculture Organisation and the European Community. "These prospective improvements in the world supply-demand position," the Council said, "are, however, almost entirely due to weather factors which resulted in a sharp fall in production in 1961 in Canada, smaller crops in the United States and many countries of western Europe and the increased import requirements of mainland China."

While it is too early to forecast the level of wheat production in 1962, it should be noted that the conditions for winter wheat in the U.S.A. and western Europe are generally favourable. But in the hard spring wheat area of Canada and the United States, moisture reserves are exceptionally low. At the same time, the new U.S. production programme to reduce the wheat acreage could have important effects by way of smaller supplies. As a consequence, the large stocks which have overshadowed the world wheat market in recent years are likely to be closer to the world requirements, particularly as far as the quality wheats are concerned. The total trade in wheat of all member-countries, the Council said, was 38.8 million tons, out of a total world trade estimated at 42 million tons. Of the 38.8 million tons, commercial purchases by member importing countries from member exporting countries, at 14.4 million tons, were about a million tons less than in the 1959-60 crop year.

Engineering and Transport

INDIA AND U.S.A. NEGOTIATE TEMPORARY AIR PACT

(FROM OUR NEW DELHI CORRESPONDENT)

AN ad hoc agreement to break the deadlock is being negotiated between India and the U.S.A., under which Air-India International will fly a daily Boeing service to New York, besides another thrice a week from Delhi, with effect from 1st May. In return, the two U.S. airlines, Pan American and T.W.A., will fly 10 services a week through India—Pan American a daily service, and T.W.A. three services a week through Bombay.

The India-U.S. controversy has lost a great deal of its substance, because Air-India itself carries "Fifth Freedom" traffic to New York, and as such, cannot object to the U.S. carriers doing likewise. Then again, Air-India operates its services under a pool arrangement with B.O.A.C.

Under its summer programme, Air-India will operate a daily service to London, and, subject to the proposed ad hoc agreement, to New York, two services a week each to Tokyo and Nairobi, and one service a week to Sydney and Moscow. It will also replace its Super-Constellations by Boeings on the Delhi-Moscow route. Air-India will begin a service on 1st April with Comet IVs leased from B.O.A.C. on its routes to Singapore and Jakarta via Madras. The Comets will be operated by Air-India International until March 1963 when it is expected that Madras airport will have been developed for the handling of Boeing jet operations. From 1st March, Air-India will operate two freighter services to Kabul with two Skymasters taken on charter.

Facility for Air France Clients

Air France has introduced a new facility for its passengers. It is called "welcome service", under which an Indian girl gives all types of information to the passengers. A passenger with a tooth-ache, for example, is given the names of dentists in New Delhi, and the girl at the counter will quickly fix an appointment for the ailing passenger. She has card indexed answers to all the possible questions a passenger might ask.

Air France Jet Club

Air France has started a "jet" club. Its members, which will be selected by the airline itself, will be presented with a tie of Air France colours, a membership card, luggage labels and a buttonhole badge. This will enable the crew to give a V.I.P. treatment to the passenger concerned. Membership is not confined to the clients of Air France. Even friends of Air France are eligible for membership.

Pan American has had a similar club, the "Clipper Club", for some years. Club rooms have been organised along the global route served by Pan American. Here, the member passengers can rest while waiting for an aircraft and are given all facilities generally available at a club.

T.W.A. Summer Schedule

T.W.A. will offer 42 jet flights a week in each direction on the north Atlantic route under its summer schedule, serving London, Rome, Paris, Lisbon, Madrid, and the Middle and Far East. New services will include London-Chicago once a week, starting on 2nd June and a polar flight London-California, on 11th May. A twice daily jet service

between London and New York will begin on 12th May.

Aeroflot Claims More Traffic

In one of the rare disclosures of actual traffic figures, rather than percentages, an Aeroflot official reports that the Russian airline ports that the Russian airline carried 22 million passengers in 1961, expects to carry about 30 million this year and 200 million in 1960. Two new medium-range jets—the Tu-124 and An-24—will be introduced on Aeroflot service this year, replacing pistons. By 1965, the Russians hope to be transporting up to 95 percent of air passengers in the turbine aircraft, according to the Aeroflot chief, Mr. Yevgeny Logunov. Aeroflot already in service include Turbines already in service include the Tu-114, Tu-104, Il-18 and An-10, which service more than 100 air routes and carry more than 60 per-

cent of Aeroflot's passengers. The Tu-114, carrying 170 passengers, makes the 6,400-kilometer flight between Moscow and Khabarovsk in eight hours non-stop.

Russo-Guinea Air Pact

Russia and Guinea signed a bilateral air agreement on 15th January covering Aeroflot and Air Guinea services between the two countries.

Aeroflot Flight to Djakarta

Aeroflot is operating two services a week through New Delhi to Djakarta. It has, however, no traffic rights in India. In other words, it can lift no passengers from India.

Air-India-Czech Airline Pool

Air-India and Czechoslovakia airlines have a pool arrangement, for service between Bombay and Djakarta. The Czech airline gives 30 percent of its passenger earnings to Air-India on traffic originating on this sector.

Japan Airline Plans

This year, Japan Airlines plans to open a thrice-weekly service between Tokyo and Seoul with Convair 440s or DC-6Bs, to extend a thrice weekly 880 service to Singapore and

then on to Djakarta, and to open its southern route to Europe. Japan and Indonesia held talks on a bilateral air agreement about the middle of January. Garuda is planning to extend the current weekly Electra service between Djakarta and Hongkong to Tokyo. J.A.L.'s longer range plans call for a new route to Australia and a round-the-world service by 1964. Capacity on domestic services will be increased by 50 percent this year, with Tokyo-Osaka flights, for example, raised from the present 17 to 25 departures daily. J.A.L. will take delivery of a fifth DC-8 jet and its fourth and fifth Convair 440s this year.

India Interested in Caravelles

Air Vice-Marshal Lal has gone to Rome and Paris to select the model of Caravelle for service in India and negotiate the method and manner of payment.

B.O.A.C. Service to Mauritius

Last month, B.O.A.C. opened a through service between London and the island of Mauritius. This new service, which calls at Nairobi, and subject to Government approval, at Tananarive in Madagascar, operates weekly with Britannia aircraft.

BANKING ADVICE FROM

MANU THE LAW GIVER

Deposit banking in some form or the other existed in India in the second century A.D.

Manu, the law-giver, enjoined people to make deposits with bankers of good repute. "A sensible person should make a deposit only with a person of family, of good conduct, well acquainted with the law, veracious, having many relatives, wealthy and honourable."

The Union Bank of India, established in 1919, has enjoyed the highest reputation in reliability, strength and friendly transactions. The Union Bank prides itself on its unique *personalised service*, under which every depositor is treated as a Very Important Person.

The Union Bank Helps People

SERVICES OFFERED: Current, Savings Bank and Cumulative Deposit Accounts; Fixed Deposits and Three-year Cash Certificates; Inland Bills, Demand Drafts and Telegraphic Transfers; Letters of Credit and Guarantees; Foreign Bills and Remittances; Loans, Overdrafts and Cash Credits; Sale and Purchase of Government Securities and Shares and Safe Custody; Standing Instructions accepted; Credit Reports and Trade Information; Safe Deposit Vaults; TELEX contact with countries all over the world.

THE UNION BANK OF INDIA LIMITED
APOLLO STREET, FORT, BOMBAY 1.

ECONOMIC CONDITIONS OF FARM LABOUR

By S. Kesava Iyengar

DURING the last 50 years, there have been numerous *ad hoc* field socio-economic surveys in many sectors in different parts of India, but the main defect has been that there has hardly been any periodical re-assessment. But one important exception has been the Agricultural Labour Enquiry. It was conducted for the first time in 1950-51, again in 1956-57, and a third one in 1961. The Report on the 1956-57 enquiry was published early in 1961. In several ways, this Report showed a deterioration in the economic conditions of farm labour households in India, compared with 1950-51. This was rather against the general trend of economic progress. The Central Government immediately ordered a third enquiry: a secondary consideration might have been the suspicion that the data relating to 1956-57 were not correctly gathered or interpreted. The main findings of the second enquiry were noticed in the Press several months ago, but the object of this article is to discuss a few important issues which deserve special study by the staff of the third enquiry which is now on foot.

Wage Income

The average daily wage a casual male labourer went down from 109nP to 96nP during the intervening five years, and the fall was actually worse on account of the maldistribution of wage-earners among different wage ranges. The concept of an average wage is a myth. For men, the average daily wage was 109nP in 1950-51, but 13.5 percent of the samples got less than 62nP a day, and 21.1 percent got between 62nP and 87nP. About 38.3 percent got more than the average wage of 109nP, but those getting more than 187nP comprised only 7.7 percent. The range 162nP to 187nP accounted for only 4.5 percent. These figures clearly show that a skilled labourer did not earn much above an unskilled hand. In 1956-57, the distribution among different ranges was more inequitable. Only 24.77 percent got wages above the average level compared with 38.3 percent in 1950-51. In the range of 62nP and below, the percentage of samples rose from 13.5 to 21.49, signifying a higher level of sweating. In the range 62nP to 87nP, the percentage was only 22.23 against 21.1 in 1950-51.

Phone 23-3940, 23-4528.

The only mentionable increase was in the range 87nP to 112nP, but beyond 187nP, the percentage was only 3.72 (7.7 in 1950-51), showing that in spite of skilled labour having improved in quality, the recipients of higher-range wages dwindled in numbers. Table I categorically exposes the great fallacy involved in speaking of the average wage when such considerable percentages actually receive impossible wages much less than the average. The only conceivable conclusion is that 74.70 percent of agricultural male labourers got below the average wage in the second enquiry. The standard of life of this section could not but be far worse than sub-normal. Casual women labourers fared much worse, with 55.9 percent and 63.03 percent in the wage range of below 62nP, respectively, in 1950-51 and 1956-57.

at 112nP a casual male labourer in 1961 even in Zone III, the minimum rising to 137nP in Zone I, looks rather too high a jump. The intention of the authorities in fixing such a high legal minimum is laudable no doubt, but in practice such minima without reference to productivity and *de facto* wage levels, cannot be much more than wishful thinking.

Consumption Expenditure

Estimates were at current prices, but there was not much difference in the purchasing power of the rupee as between 1950-51 and 1956-57. The overall condition concerning consumption expenditure was definitely better after five years of planning, although much below the average national consumption level, but accompanied by lower wages and larger

TABLE I

RANGE OF AGRICULTURAL WAGE RATES (PERCENTAGE OF MANDAYS WORKED—CASUAL LABOUR)

	Men		Women	
	1950-51	1956-57	1950-51	1956-57
Wage range less than 62nP	13.5	21.49	55.9	63.03
do 62nP to 87nP	21.1	22.23	23.8	21.17
do 87nP to 112nP	27.1	30.98	10.7	11.10
do 112nP to 137nP	16.0	9.23	5.5	2.43
do 137nP to 162nP	10.1	9.49	2.2	1.20
do 162nP to 187nP	4.5	2.33	0.8	0.17
do 187nP and above	7.7	3.72	1.1	0.32
Average daily wage(nP)	109	96	68	59

The entire sector was below the national average income. The all India *per capita* income was Rs. 283.5, while the corresponding average for agricultural labour households worked at Rs. 99.09, the agricultural labour *per capita* income standing at 34.95 percent of the national *per capita* income in 1956-57. Thus, there were no rich men, not even middle class men, but only a handful of lower middle class households.

Minimum Wages

There is a lot of talk about fixing minimum wages which have no reference to facts, with no administrative machinery for implementation and verification. Also, wages differ widely among adjacent areas (with no effective checks against inter-migration). Table II illustrates the point:

TABLE II

LEGAL MINIMUM AGRICULTURAL WAGES IN ANDHRA PRADESH

Type of labour	Zone I*			Zone II*			Zone III*		
	Men	Women	Children	Men	Women	Children	Men	Women	Children
Farm servant (general)	1.60	1.23	0.80	1.28	0.91	0.64	0.96	0.53	0.48
Ploughing	2.00			1.75			1.50		
Ploughing (with plough teams)	4.50			4.00			3.00		
Transplanting or sowing	1.25	0.88		1.00	0.63		0.87	0.50	
Weeding	1.37	1.00		1.25	0.88		1.12	0.75	
Harvesting	1.62	1.25		1.37	1.00		1.12	0.75	
Other operations	1.37	1.00		1.25	0.88		1.12	0.75	

* Zone I consists of the districts of East Godavari, West Godavari, Krishna, Guntur, the taluks of Kavali, Nellore and Kovvur of Nellore district, and the taluks of Nizambad, Budhan and Bamswada of Nizambad district, with the exclusion of the following: the agency areas of East Godavari and West Godavari districts, Chintalapudi taluk in West Godavari district, Thiruvur and Jagavot taluks of Krishna district and Vinkonda, Palnad and Sathanapalli taluks of Guntur district.

Zone II consists of Cuddapah, Kurnool, Anantapur and Chittoor districts and the districts of Visakhapatnam and Srikakulam (exclusive of agency areas), Chintalapudi taluk of West Godavari, Thiruvur and Jagavot taluks of Krishna district, Vinokonda, Palnad and Sathanapalli taluks of Guntur district and the taluks of Nellore district with the exclusion of the taluks mentioned in Zone I.

Zone III comprises the districts of Hyderabad, Mahbubnagar, Medak, Nalgonda, Adilabad, Karimnagar, Khammam, Warangal and Nizambad district and the agency areas of the East Godavari, West Godavari, Srikakulam and Visakhapatnam districts.

From an average daily wage a casual male labourer of 87nP (A.P.) in 1956-57, and an actual minimum of anything below 62nP in the same year, the fixing of a legal minimum

The only silver lining in the cloud is the substantial rise in consumption expenditure *per capita* from Rs. 107 to Rs. 141. But this was accompanied by a reduction in the average house-

CAPITAL, 1st March, 1962.

hold income from Rs. 447 to Rs. 437! It is no surprise that indebtedness rose, in the percentage of indebted families from 44 to 63.9, and the average debt an indebted family from Rs. 105 to Rs. 138. The *per capita* income declined considerably among agricultural labourers in spite of an all-India rise in the *per capita* income from Rs. 246.3 to Rs. 283.5 (constant prices) during the five years.

Consumption Ranges

The situation was actually much worse because the range of difference in levels of consumption among agricultural labourers was very wide as among the different States. Table IV contains comparative figures:

TABLE IV

ANNUAL AVERAGE CONSUMPTION EXPENDITURE STATEWISE (PER CAPITA)

State	Average expenditure annual per capita consumption	
	1950-51	1956-57
U.P.	130	134
M.P.	87	133
Bihar	128	130
West Bengal	158	171
Orissa	77	116
Assam	166	258
A.P.	94	141
Madras	88	120
Kerala	106	117
Bombay	97	141
Mysore	93	152
Rajasthan	132	167
Punjab	154	211

In 1950-51, the gap between Orissa and Assam was as much as between Rs. 77 and Rs. 166, more than 100 percent higher. In 1956-57, Assam led with Rs. 258, while Orissa continued lowest with Rs. 116, the difference having been much more than 100 percent higher in Assam. As for the incidence of change as between 1950-51 and 1956-57, the best case was of Assam (from Rs. 166 to Rs. 258), the upgrading having been to the extent of more than 50 percent. On the other hand, the variation was least in the case of Bihar (Rs. 128 to Rs. 130). Further, even within each State, there are wide differences as among areas with good transport facilities, and out-of-the-way and inaccessible regions, as for example, between East and West Godavari districts and agency areas within these districts.

This wide gap in consumption expenditure between one State and another was accompanied by an equally wide gap in the average annual income of farm labour households between State and State. In 1950-51, the gap between Orissa and Punjab was as much as between Rs. 340 and Rs. 686, about 100 percent higher. In 1956-57, Assam led with Rs. 755, while Orissa continued lowest with Rs. 319, the difference having been much more than 100 percent higher in Assam. As for the incidence of change as between 1950-51 and 1956-57, the worst case was of Rajasthan (contiguous with Punjab) from Rs. 605 to Rs. 336, the downgrading having been to the extent of 41.63 percent. On the other hand, the variation was least in Madras from Rs. 371 to Rs. 375.

Sizes of Households

Table V on page 375 further illustrates the point that lower consumption ranges tended to be burdened with bigger households. The *per capita* consumption range of 50nP annually comprised 2.24 percent of total sample households, and the size of the average household was highest at 5.53, the smallest-sized household (2.61)

CAPITAL, 1st March, 1962.

occurring in the consumption range of Rs. 351 and above:

TABLE V
ECONOMIC LEVELS OF LIVING—1956-57

Annual consumption expenditure per capita (in Rs.)	0-50	51-100	101-150	151-200	201-250	251-300	301-350	351 and above
Percentage of households	2.24	25.25	31.52	19.88	9.77	4.68	2.92	3.74
Size of households	5.53	5.33	4.58	4.13	3.48	3.30	2.72	2.61

Progressive Deficit Budgets

Agricultural labour families comprised 30.39 percent of the total rural households in 1950-51, but went down to 24.47 percent by 1956-57. By itself, this reduction might not have been unhealthy, but when accompanied by a larger membership of the average household, more days of unemployment, less average annual household income, more *per capita* consumption expenditure and heavier debts, the inference cannot be disputed that, on average, the economic condition of this class was worse in 1956-57, compared with 1950-51. The figures collected were at current prices, but that does not make much difference. The general index of wholesale prices in 1956-57 was 105.1 (1952-53 equals 100), and the consumer index in the same year was 107 (1949 equals 100), but such a slight increase in prices must have affected rural areas to a very limited extent.

The steep decrease in self-employment from 65 days in the year to 33 (on average) rendered the situation worse because it meant more dependence on wage labour. The increase in the days of unemployment (average a year) from 82 to 110, impeded the growth in national income seriously, the *per capita* national income in general having risen from Rs. 246.3 in 1950-51 to Rs. 283.5 in 1956-57 at 1948-49 prices. On the other hand, the average annual income an agricultural household went down from Rs. 447 in 1950-51 to Rs. 437 in 1956-57, while the average deficit an agricultural labour household increased from Rs. 14 in 1950-51 (Rs. 447 income: Rs. 461 consumption expenditure), to Rs. 180 in 1956-57 (Rs. 437 income: Rs. 617 consumption expenditure). The annual increase in consumption expenditure on average by Rs. 166 is a good sign, but a reduction in annual income from Rs. 447 to Rs. 437 a household led to a consequent increase in the debt burden which was almost a national calamity: this deserves an exhaustive probe in the third enquiry.

Farm Labour and Co-operatives

Although co-operative farming may take some time to develop into the monolithic type, the start proposed for the third plan period is quite good and even from now, questions like the following would have to be discussed and decided on:

(1) Should agricultural labourers be admitted to co-operative farms as members, or employed only as wage-earners?

(2) If an absentee landholder (labourless) can become a member, does it not stand to reason that the landless labourer should also be entitled to membership?

(3) As for remuneration, should not the principle of profit-sharing based on co-partnership be accepted, and profit sharing gradually defined?

(4) Should not the difference between landholding and landless members be gradually abolished because it would be a case of pooling land and labour alike in a joint enterprise?

(5) Should not the principle of a national minimum be applied to agricultural labourers participating in co-operative farms, as a stepping stone to its enforcement in other sectors?

(6) Should not the policy of special encouragement to scheduled castes

and scheduled tribes (irrespective of economic conditions of individual households), based on the recognition of a caste system, be done away with, and special facilities offered to agricultural labour households (to whichever caste they may belong) which, as the two previous enquiries show, rank not only much below the national level, but even a subsistence level of the traditional type? No doubt there has been some discussion about this recently, but what is required is a categorical change in policy here and now.

U.K. INVESTMENTS IN THE U.S.A.

Interesting statistics have recently been published showing that Britain's direct holdings in the U.S.A. continue to grow, and the net worth of business assets owned and controlled by British firms is greater than ever before. The U.K. holds approximately two-thirds of all European holdings in the U.S.A. and in the past ten years for every £1 invested by the American interests in Britain—the U.K. has invested about 17s in the U.S.A. These are approximate figures of British investments in the U.S.A.: 1937, \$800 million; 1947, \$1,000 million; 1956, \$1,250 million; 1957, \$1,800 million; 1960, \$2,400 million (estimated). The U.S. Department of Commerce puts British investments at end-1959 at \$2,248 million. These figures do not include Canada, which are estimated at \$1,400 million.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953=100) rose by 0.2 percent to 124.6 during the week ended 10th February, compared with 124.3 (revised) for the earlier week. The index was also higher by 1.3 percent when compared with the corresponding week of the previous month, but was lower by 2.0 percent than that of a year ago.

GOOD BUYING AT TEA
EXPORT SALE

QUALITY DUSTS RISE

AT Sale No. 37, held on 26th and 28th February, there was a good general demand for the 74,242 chests on offer at the Export sale. Clean plain descriptions were fully firm and sometimes dearer, but where stalk and fibre were present, prices tended easier. "Tea for price", however, was well supported. There was a better demand for orthodox descriptions and prices for B.O.P.'s were generally dearer. Fannings grades were irregular and generally dearer, the best being appreciably so. C.T.C. descriptions were in demand at irregular rates with most interest centred on the better liquoring kinds. Legg-cut teas declined by some 10nP to 20nP. Darjeelings sold well at irregular rates, the flavoury kinds being generally dearer. Whole leaf, although irregular was well supported. Tips sold well.

Quotations		
	1962	1961
Clean Plain Pekoe	Rs. a kilo 4.20 to 4.40	5.20 to 5.50
Plain B.P.	3.50 to 3.80	4.60 to 4.70
Plain Fannings	3.60 to 4.10	4.70 to 4.90
Medium Assam C.T.C.	5.20 to 5.60	4.70 to 4.90
B.P.	5.20 to 5.60	4.90 to 5.10
Best Assam C.T.C.	6.00 to 6.50	5.80 to 6.20
B.P.	6.00 to 6.50	5.90 to 6.40
Best Assam C.T.C.	6.00 to 6.50	5.90 to 6.40
Fannings	6.00 to 6.50	5.90 to 6.40

(Quotations are inclusive of excise duty.)
At the Internal Sale, there was a good general demand for 29,933 pack-

ages of Dusts on offer. Medium C.T.C. Dusts were irregularly easier by 20nP and sometimes more with the secondary types generally selling well. The good C.T.C.s were well supported at generally firm rates, except for the occasional line which fetched lower prices. Orthodox varieties were in good demand, but prices were 10nP to 15nP below last rates. Legg-cut Dusts were irregular and often easier, except for the bright liquoring descriptions which tended dearer.

Quotations		
	1962	1961
Plain Orthodox Dust	Rs. a kilo 3.90 to 4.40	4.65 to 4.90
Medium Assam Dust	4.30 to 4.80	4.75 to 5.15
Legg-cut Dust	4.50 to 5.10	5.00 to 5.40
Medium Assam C.T.C.	5.40 to 5.80	5.50 to 5.90
Dust	6.30 to 7.00	6.20 to 6.60
Good Assam C.T.C.	6.30 to 7.00	6.20 to 6.60
Dust	6.30 to 7.00	6.20 to 6.60

(Quotations are inclusive of excise duty.)
There was a good demand for the 810 packages of leaf on offer. Prices were irregular.

LINSEED STEADY

The market was steady in the past week because of smaller arrivals of seeds from upcountry. Small business was reported, and mills were keen buyers daily for ready seeds as their stocks were small. The oil market was firm. The oilcake market was quiet and offtake was small in spite of lower prices quoted by sellers. The latest quotation is as follows: ready March Rs. 31 a maund.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks were higher than in the previous week.

Bazaar Sales
(Between 20th February and 26th February, 1962)

Cowhides: Wet salted (Ord.) 14,600 pcs. on the basis of Rs. 9.12 to Rs. 14.25; Wet salted (Slaughtered) 14,600 pcs. on the basis of Rs. 10.50 to Rs. 16.50 and Rs. 19.50 to Rs. 28.50.

Goatskins: Wet salted (Patna, Daissee, Kustia) 30,600 pcs. on the basis of Rs. 330 to Rs. 360. Rs. 380 to Rs. 400 and Rs. 500 to Rs. 520; Wet salted (he-killed) on the basis of Rs. 5 and (she-killed) on the basis of Rs. 4.75 a piece; Assam-Dinajpur-Murshidabad 10,200 pcs. on the basis of Rs. 350 to Rs. 360 and Rs. 389 to Rs. 420; Purneah-Kissenganj 5,400 pcs. on the basis of Rs. 380 to Rs. 400 and Rs. 410 to Rs. 420; Patna 2,300 pcs. on the basis of Rs. 290 to Rs. 321; Muzafferpore-Kissenganj 5,800 pcs. on the basis of Rs. 450 to Rs. 540.

COMPANY AND PUBLIC NOTICES

MARTIN BURN LIMITED
NOTICE

THE Annual General Meeting (being the Sixteenth Ordinary General Meeting) of the Shareholders of Martin Burn Limited will be held on Wednesday, 28th March, 1962, at 12 noon at the Registered Office of the Company, 12, Mission Row, Calcutta, to transact the following business:

1. To receive and adopt the Audited Accounts for the year ended 30th September, 1961, and the Directors' and Auditors' Reports thereon.

2. To declare a Dividend.
3. To appoint Directors.
4. To appoint Auditors and to fix their remuneration.

As Special Business

To consider the appointment of Mr. Romendra Nath Mookerjee as a whole-time Director of the Company for a period of four years with effect from the 1st March, 1962, and in this connection to consider and if thought fit to pass with or without modification the following resolution which will be proposed as an ordinary resolution:

"That subject to the approval of the Central Government pursuant to Section 269 of the Companies Act, 1956, this meeting approves the appointment of Mr. Romendra Nath Mookerjee as a whole-time Director of the Company with effect from the 1st March, 1962, on the terms and conditions contained in an Agreement dated the 19th day of February, 1962, and made between the Company of the one part and Mr. Romendra Nath Mookerjee of the other part a copy of which was laid on the table and signed by the Chairman for the purpose of identification or on such other terms and conditions as may be agreed upon with the Central Government and accepted by Mr. Romendra Nath Mookerjee."

The Ordinary Share Register and Transfer Books of the Company will be closed from 14th to 28th March, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.

By Order of the Board,
A. G. GIDLEY,
Secretary.

Calcutta,
1st March, 1962.

Note—The Dividend, if sanctioned, will be paid on or after 18th April, 1962, to those Shareholders so entitled whose names appear in the Company's Register of Members for Ordinary Shares on the 28th March, 1962, or to their mandatories. No application for dividend warrants will be necessary.

AN EXPLANATORY STATEMENT as required under the Companies Act, 1956, has been forwarded to the members of the Company.

UNITED BANK OF INDIA LIMITED
Regd. Office: UNITED BANK BUILDINGS4, CLIVE GHAT STREET, CALCUTTA
NOTICE

NOTICE IS HEREBY GIVEN that the next Annual General Meeting of the shareholders of UNITED BANK OF INDIA LIMITED will be held at the Registered Office of the Bank at the United Bank Buildings, 4, Clive Ghat Street, Calcutta, on Monday, the 26th March, 1962 at 11 a.m., to transact the following business:—

1. To receive the Directors' Report and Audited Accounts for the year ended 31st December, 1961;

2. To declare a Dividend;
3. To elect a Director in place of Dr. N. N. Law who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Dr. N. N. Law who has completed 74 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

4. To elect a Director in place of Sir Chunilal B. Mehta, Kt. who retires but offers himself for re-election and to consider and, if thought fit, to pass the following resolution as an Ordinary Resolution:

"Resolved that Sir Chunilal B. Mehta, Kt. who has completed 74 years of age be and is hereby elected and appointed a Director of the Company and it is specifically declared that the age limit of Directors prescribed under Section 280 of the Companies Act 1956 shall not apply to him."

Special notice of intention to propose the foregoing resolution has been received by the Company.

5. To elect a Director in place of Sri T. S. Santhanam who retires but offers himself for re-election;

6. To elect a Director in place of Sri B. N. Chaturvedi who retires but offers himself for re-election;
7. To appoint Auditors and fix their remuneration.

As Ordinary Resolutions

The following resolutions will be moved as Ordinary Resolutions:—

8. "By virtue of the discretion vested in the General Meeting by Section 228(3) of the Companies Act, 1956 as amended in 1960, it is hereby resolved that the accounts of the branch offices of the Bank may be audited otherwise than by the Company's auditor and it is further resolved that the Directors be and are hereby authorised to appoint from time to time persons qualified for appointment as auditors under Section 226 for audit of the branch accounts of such of the branches of the Company in India as they may deem fit or where branch offices are situated in countries outside India by persons

qualified to act as auditors of the accounts of such branch offices in accordance with the laws of those countries in consultation with the Company's Auditor and pay them such remuneration as the Directors may decide."

9. "Resolved that pursuant to the provisions of Section 293(1) (d) of the Companies Act 1956, as amended in 1960, the Board of Directors be and are hereby authorised to borrow from time to time such sum or sums of money as they may in their absolute discretion think fit up to Rs. 10 Crores notwithstanding that the amount borrowed may by this or together with any other sum or sums already borrowed and outstanding be in excess of the Company's paid-up capital and free-reserves, i.e., reserves not set apart for any specific purpose."

As Special Resolutions

The following resolutions will be moved as Special Resolutions:—

10. "Resolved that the Company consents to Sir Chunilal B. Mehta, Kt. holding appointment as Member, Local Advisory Committee of the Bank at Bombay notwithstanding his appointment as a Director of the Company."

11. "Resolved that the Company consents to Sri T. S. Santhanam holding appointment as Member, Local Advisory Committee of the Bank at Madras notwithstanding his appointment as a Director of the Company."

12. "Resolved that pursuant to provisions of Section 314 of the Companies Act as amended in 1960, consent of the Company be and is hereby accorded to the appointment of—

(a) Each of the following officers who is a relative of the Director of the Company mentioned against his name holding and continuing to hold his employment in the grade and in the scale of pay mentioned against his name together with the usual allowances, benefits, amenities and facilities applicable to other employees occupying similar posts and the Board is hereby permitted to promote Sri Pabitra Kumar Sen to the next higher grade and scale of pay, viz. TEA COMPANIES—Contd.

O. Po., C. and Dd indicate Ordinary, Preferred Ordinary, Contributory and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CALCUTTA, 8th MARCH, 1962.

Vol. CXXXVIII No. 3700

STIMULATING THE GROWTH OF BANKS

THE Indian banking system has been merrily celebrating the fact that its profits during 1961 have been an all-time record. But beneath the facade of joy, there is an undercurrent of anxiety: the nagging suspicion persists that such profits may not be maintained. Some of the special methods which have been adopted to boost profits have quite possibly by now reached the limits of their efficacy. Operating costs have been restricted by holding down the interest rates paid on deposits, but the inter-bank agreement under which this is done is showing signs of cracking. Advance rates have been maintained at a relatively high level, partly because the demand for credit has been strong and partly in response to the orders of the Reserve Bank. At the same time, the funds which have been available have been used more remuneratively: instead of going into Government securities, where interest rates are low, they have gone into the creation of credit for trade and industry, where interest rates are high.

The realisation is now dawning, however, that the depression of deposit rates cannot continue indefinitely, lest the growth of deposits be retarded, as may have been the case already. Nor can advance rates go on being jerked up artificially, lest the consequent rise in trade and industrial costs has serious inflationary implications for the whole economy. As for the diversion of funds from the investment portfolio to the advance portfolio, there are obvious limits to the process if the stability of the banking system is to be preserved; those limits are likely to be reached very soon, if indeed in some cases they have not been reached already. The three main levers which have hitherto been used for lifting bank profits thus seem, for the time being, to have been moved as far as they can be. At the same time, there is a serious threat that the years-old rise in banking costs might before long be renewed. Even if the inter-bank agreement on deposit rates survives with only minor changes, there may be the award of the National Banking Tribunal to be reckoned with before the current year is out.

It is against this background that special interest attaches to the farewell address delivered by Mr. P. C. Bhattacharyya as chairman at the annual general meeting of the State Bank of India in Bombay. (The address is printed in full on a later page of this issue of *Capital*.) The address was delivered on 27th February, two days before Mr. Bhattacharyya took over as Governor of the Reserve Bank of India; the observations, therefore, deserve particular notice in so far as they may herald a change in the central bank's thinking. Critics may complain that, with each foot on different rungs of the banking ladder, Mr. Bhattacharyya was less outspoken than he might have been. But the address did at least make it clear that, as Governor of the Reserve Bank, his major preoccupation will centre on the fact that the growth of deposits in the banking system as a whole has been disappointing. Mr. Bhattacharyya recalled that, in the second half of 1960, deposits declined, and they declined primarily because confidence suffered after the crash of the Palai Cen-

tral Bank. During the past year, the trend has fortunately been reversed, but not so strongly as to enable the banks to meet all the demands for their funds with which they are faced. One result has been that, although the credit given to trade and industry has risen, it is still not enough to meet genuine requirements. Another result—which appeared to worry Mr. Bhattacharyya more—is that the banks have not been able to increase their investments, and thus the Government's borrowing programme for the third plan might be jeopardised.

The position of the scheduled banks is shown in the accompanying table, and the basic trends which the statistics highlight are four. Firstly, deposits continue to rise, but not fast enough. Secondly, during the current busy season, most of the increase has gone into financing the require- ments of trade and industry. Thirdly, investments have been reduced. Fourthly, even so bank re- sources have been greatly strained; not only is the advance-deposit ratio at the rather high level of 66.4 percent, but the substantial amount of Rs. 32.2 crores has had to be borrowed from the Reserve Bank.

SCHEDULED BANKS			
	Latest (23rd February, 1962)	When busy season started (27th October, 1961)	A year ago (24th February, 1961)
Deposits (Rs. crores)	2,052.72	1,983.92	1,898.92
Advances (Rs. crores)	1,363.43	1,235.14	1,263.47
Investments (Rs. crores)	587.49	624.93	584.42
Advance-deposit ratio (percent)	66.4	61.9	66.5
Investment-deposit ratio (percent)	28.6	31.3	30.8

Mr. Bhattacharyya gave hardly any indication as to how the strain might be reduced. The Reserve Bank's policy hitherto has been to jog along in the hope that deposits will somehow go on increasing; that the demand for advances will be restrained by the mechanism of selective credit controls; and that any unsatisfied demand still remaining will be allowed to be met at penal rates of interest through the rediscounting facilities offered by the Reserve Bank. Since the end of the busy season will soon be in sight, this policy will perhaps be allowed to continue, except to the extent that the selective credit controls might be gradually relaxed in response to the changes in the commodity and share markets. But it is per- haps commensurate to hope that Mr. Bhattacharyya recognises that what is now in force is hardly a long-term policy; it is, at best, an expedient which is accept- able only in the exigencies of a busy season. Without a rapid increase in the resources the banks are independently able to attract (as distinct from those they sip off the Reserve Bank spoon), the strain will never be eased.

For the purpose of attracting those resources, one of two alternatives has generally been recom- mended. Some bankers say that deposit rates should be held down, so that bank profits can be increased and then those profits can be used for

branch expansion or for providing better services to attract new customers. Others say that deposits can be increased only if depositors are paid the competitive interest rates which market conditions might justify. So far, the emphasis has been almost entirely on the first of these alternatives. But Mr. Bhattacharyya's address indicated that it might now shift a little towards the second; in other words, the policy of holding down interest rates might be relaxed. He pointed out that the increase in interest rates on savings bank deposits, which the State Bank had introduced as an experi- mental measure, had shown "some good results." He was not in favour of an unlimited or continuous increase in deposit rates; but he did feel that "it is necessary to experiment with interest rates" and "it is also necessary to try other possible measures, such as better customer service and wider coverage of depositors." It may or may not be significant that Mr. Bhattacharyya's erstwhile charge, the State Bank, is not a signatory to the deposit rate agreement; State Bank subsidiaries are members, but that may be because they were allowed to classify themselves as small banks and thus pay 3 percent more interest than the bigger banks. It is also possible that Mr. Bhattacharyya's optimism about branch expansion is not exactly boundless. The State Bank's own programme has had to be slowed down in the interests of "con- solidation", which is another way of saying that there is an acute shortage of qualified staff to run new branches—a shortage that no doubt afflicts the other banks too.

Mr. Bhattacharyya is perhaps entitled to his experiments with deposit rates, as Mr. Iengar was to his. But it is doubtful whether adjustments in deposit rates represent a complete, or even a major, answer to the problems the banks now face. At most, they can be only a useful supple- ment to other, bolder efforts to reduce banking costs which, even after the bumper profits of 1961, remains the first prerequisite for the healthy growth of the banking system in the future. To reduce costs by improving efficiency is partly the job of the banks themselves. But it is a job in which the Government has to collaborate positive- ly, and that it will not do without strong pressure from the Reserve Bank. For years, the banks have been enervated by the steady rise in their establishment costs because, taking a cue from the Government, various tribunals have been ordin- ing wage increases for staff regardless of any im- provement in productivity. More recently, the Government itself has been milking the banks by paying them far less interest on gilt-edged securi- ties than what they could earn from commercial advances.

Mr. Bhattacharyya did not consider it neces- sary to mention the first problem, but he did men- tion the second—in words suggesting that he did not approve of the banks neglecting to invest in Government securities. He must know, however, that the banks may be making bigger profits than ever before, but they are still not making the profits which can enable them to subsidise their staff and the Government at the same time as they launch on ambitious branch expansion programmes and strengthen their own capital structure. If the subsidy to the gilt-edged market is to continue, the least the Government can do in return is to exempt from tax any transfers from profits to re- serves. If branch expansion is to be vigorous, a concerted effort to keep down establishment costs is necessary. Mr. Bhattacharyya's success in his new assignment may depend on the effectiveness of the answers he provides to these two problems.

ELECTION POST-MORTEM

IN Mahad, Maharashtra, two candidates polled the same number of votes. With the consent of the contestants, which was probably unconstitutional, the returning officer then proceeded to draw lots; and the Congress candidate was the luckier. This somewhat unusual instance suggests there might be a more or less democratic alternative to five-yearly general elections which, it can be argued, India cannot afford either politically or economically. And, as in Mahad, the result in sum may not be vastly different, meaning that the Congress will be returned to power with no Opposition to be taken very seriously. The idea of drawing lots for popular representation, wholly unlikely to be accepted in these supposedly enlightened times, is neither as frivolous as it may seem nor entirely original. Chance played a considerable rôle in Athenian democracy: officials were posted as chance decided, so that the politicians could not "square" them—certainly a necessity in India. Most candidates in the recent contest will agree that they lost, or won, largely because of chance. Why not, then, give chance's rôle in parliamentary democracy the recognition it deserves?

Those who believe that, for all its fantastic cost, a general election does India proud, do not really count the full cost. The Election Commission will in the fulness of time publish some information on how much the general election has cost the Government and the candidates. The figures will be so incomplete as to be meaningless. All the political parties publish some sort of audited accounts. As far as is known, election funds are separate and they are not publicly accounted for. Nor are political parties under any obligation to submit accounts of election expenses to the Election Commission. Unusual must be the individual candidates who do not treat the statutory ceiling on election expenses as a joke. In 18th-century England, wrote Sir Lewis Namier, "There were no Party funds from which to cover election expenses, and secret service funds did not go very far in this matter. Offices and sinecures (or contracts in the case of merchants) were therefore used to compensate faithful adherents of Government for their electoral expenses and to reward their services". In India today there are Party funds all right; and how they are raised cannot be elaborated for obvious reasons. But all the other corruption of earlier centuries obtains today in India.

Nor is this all, for the monetary cost of a general election, though absurdly high, is only a small part of the price the country pays for its otherwise admirable adherence to democracy. The political price paid, only in part for bills will continue to arrive right up to the next election, is immeasurably heavier. The first casualties of an election campaign in India are secularism and political decency; and the next is the nascent awareness of India. It was said about North Bombay that Mr. Krishna Menon's inability to address meetings in Hindi could be a point in favour of Acharya Kripalani. This is symbolic of the fact that at election time the country has no common language for all-Indian communication. The country simply falls apart; and India ceases to be one country, fortunately temporarily, but the cumulative effect of such strains on nationhood can be serious.

No Party need be singled out for criticism of its electoral behaviour. Such differences as there may have been between one Party and another were entirely of degree, not of kind. Where Muslims were in a majority, or constituted a substantial minority, all Parties tried to put up Muslim candidates, mostly succeeding in doing so. Reading the election results, one was struck by the fact that in a Midnapore constituency in West Bengal most of the contestants were Mahatos, a relatively "low" caste. Apart from refugee politicians, such as Mr. Mehr Chand Khanna, and some exceptions, such as Mr. Krishna Menon, no non-"son of the soil" dared contest a constituency outside the State of his origin or long residence. The all-India parties issued high-minded manifestos containing the loftiest patriotic sentiments. When it came to campaigning, parties and candidates relied almost exclusively on religious and/or parochial appeals. The great experiment with

democracy in India is rightly praised; it is in the interest of democracy itself to reckon the fact that the elections are not welding the nation or making its leaders more liberal.

The corrupting influence of these grilling contests on the administration is more enormous than the public realises. Not in recent months has Authority taken a single decision on anything without considering its possible rewards in terms of the election. Officials knew the minds of the Ministers; and only a few may have risked their prospects by recommending measures on their merit. It should be known that the demoralisation of a bureaucracy is usually enduring and self-expanding. The official who "prudently" selected sites for health centres or schools will never be honest again; and his example will be widely emulated, until little remains of an administration that once was proud of its high standards of efficiency and integrity. It is not suggested that a general deterioration of standards is inherent in democracy or unique in India; there is nothing so corrupt as a corrupt autocracy; but now is the time to create conventions that will make Indian democracy not merely the largest but also the least vulnerable against its many enemies.

It is no secret that business and industry in India took a very lively interest in the recent election. They had to; and it is not for the Congress to complain. It would be a sad commentary on the vigorous political Parties of India if it were said of them that they sold their souls (such as they are) to financial interests (no more nefarious than those political, religious or linguistic) simply because thence had come the fatter cheques for the electoral jamboree. It is quite unnecessary to pretend that no "strings" were attached to the aid extended. Even the love a mother showers on her child is not devoid of unconscious expectations of grateful returns. Corruption comes in only when specific donations are related to specific contracts or, since parties on the left do not function on love and fresh air, to specific cancellations of specific strikes. Like other groups in a plural society, business men and industrialists wish to see a particular kind of political order and are fully entitled to help its emergence. In India they have declared their preference for parliamentary democracy—with a healthy Opposition. And nobody has a right to cavil at this. For some of its mistaken tactics and Mr. Nehru's somewhat exaggerated criticism of it, the Swatantra Party has in some minds been closely linked with what are called capitalist interests. These latter are often critical of certain aspects of current planning, as they will continue to be. It is by no means certain, still, that they wanted a drastic change one way or the other. Mr. Rajagopalachari was wrong in stating that corporate donations to political Parties went to the Congress out of business men's fear of the ruling Party. A very shrewd appreciation of collective self-interest inspired most of the outbursts of corporate generosity.

Like the rest of the electorate, those who oil the country's industrial and economic wheels had a fair run for their money. Dr. Lohia did not quite succeed in giving Mr. Nehru the "jolt" he had promised. Elsewhere there were thrills galore. Dr. B. C. Roy, once hesitant about choosing a constituency, now has a seat to spare for a friend, which is more than can be said for Dr. Katju of Madhya Pradesh; or, for that matter, for Mr. Pratap Singh Kairon of Punjab. Mr. Krishna Menon's decisive victory in North Bombay certainly means something; what, few seem to know. Against the successes of the Dravida Munnetra Kazhagam in Madras, Swatantra in Rajasthan and Jan Sangh in Uttar Pradesh are to be set the failures of Jan Sangh in Delhi and of the C.P.I. in Calcutta and Assam. The election has done nothing to sort out the crazy quilt that is India. This generation has too much experience of better organised societies to wish for a different India.

In Rajasthan, Madhya Pradesh, Punjab and Gujarat—for diverse and complex reasons—things have not turned out quite as the Congress leadership had bargained for. This would have done little harm if the right moral had been drawn,

which is that the country as a whole is not prepared for a headlong jump into the unknown country of democratic socialism where democracy is as often a fugitive as socialism. Those who are impatient with the persistent conservative strain in the Indian national character do not defeat it by denying its existence, although this is no plea for a surrender to orthodoxy of any kind. Mr. Harekrushna Mahatab, 40 years a Congressman, recently wrote of the Congress's growing intolerance of divergent views on particular issues. While it may be true that the Congress has lost some of its popularity in the country for being all things to all men, its apparent dogmatism in certain directions may have been just as detrimental.

Democracy is an endless debate. Whether or not India will, or should, forever remain a democracy will not be determined by reason but by forces scientifically incalculable and hence belonging to the department of political astrology. As long as the popular will has a way of expressing itself, even if at five-yearly intervals, the mechanics of the election need to be adjusted to the resources of the country and the genius of the people. (This is, of course, no commendation for democracy's variants as devised by Presidents Nasser, Soekarno, Ayub or Nkrumah.) Why should it be impossible for a candidate of moderate means to stand for an average Assembly seat, let alone a Parliament one? Why cannot the Administration be freer of Party influence? If false votes of one Party are cancelled out by those of the other, as seems probable, why cannot impersonation and false registration be rendered obsolete? Again, the invocation is not to any abstract high principle but only to what in the long run is to the advantage of all.

Perhaps the upshot of India's third general election reflects something not very different. Pragmatically the country has decided that, in the circumstances, the Congress Party is likely to do the country the least harm. (This is high praise for a political Party anywhere, any time.) In West Bengal, it is said, the communists lost many hitherto "safe" seats because its slogan of an "alternative Government" scared many voters. Equally sensibly, the country decided that the Congress, after 15 years of virtually uninterrupted power, needed as many brakes and correctives as possible; and these have been provided in reasonable quantities. The Congress will sadly misread its renewed mandate if it ignores the implications of its reverses. The significance of its overall success, amid retrograde changes in so many neighbouring countries, hardly needs to be spelled out; but it should be remembered by every critic, at home or abroad, of this possibly transient but intensely interesting phase of India's long and continuous history.

PLEA FOR COTTON DECONTROL

INAUGURATING the meeting of the Indian Central Cotton Committee in Bombay last week, Mr. S. K. Patil, Central Minister of Food and Agriculture, proposed the creation of a buffer stock of cotton, as in the case of foodgrains, to meet unforeseen difficulties arising from adverse conditions. This is not the first time that Mr. Patil has made the suggestion, but nothing has so far been done about it. However, the proposal for building a buffer stock of cotton will be widely welcomed because such a stock can ensure a regular flow of supplies at reasonable prices and thus help maintain confidence in the cotton textile industry. But the important question is how to build buffer stocks. Not much comfort can be derived from Mr. Patil's assurance that he will do everything possible to get the assistance of friendly countries in giving concrete shape to his proposal. Recent efforts to procure cotton from the U.S.A. as well as Russia in order to tide over the present extreme shortage have been quite fruitless. The country's difficult foreign exchange position does not permit the commercial import of large quantities of cotton. Imports, therefore, will have to be arranged either under P.L. 480 (from the U.S.A.) or on a deferred payment basis. But the fact is there has been a fall in the world supply of cotton in the current crop year. With a shortage

in the domestic supply, this hardly seems the appropriate time to talk of building a buffer stock, although the need is very obvious. The Central Minister of Agriculture also suggested that the setting up of a high-level planning committee—consisting of representatives of the Ministries of Food and Agriculture and Commerce and Industry, which are concerned with the production and commercial aspects of cotton—would be of immense help in carrying through development plans for cotton speedily and smoothly.

All this sounds very well, but what one would have liked to hear from Mr. Patil is not what should be done but what has been done so far. The problem is by no means new. Cotton production in the first year of the third plan is lower than in the first year of the second plan. Not only that; the average for the last six years also works out to around 4.7 million bales only. Cotton production has to be increased. Mr. Patil said that the farmer should be enabled to produce more cotton and earn more from each acre sown. The view has gradually been gaining ground that cotton output cannot be increased substantially unless the farmer is assured that his cotton will give him an income that will be at least as much as the cultivation of other crops will give. The Indian Central Cotton Committee has, therefore, done well in passing a resolution proposing the abolition of ceiling prices for cotton from the new season. Moving the resolution, Mr. R. G. Saraiya said that decontrol is the only way to remedy the recurring unbalance between supply and demand; this alone can encourage farmers to increase the production of cotton so that the country can realise the target set in the third plan. The resolution carried the full support of the trade, farmers and the Directors of Agriculture of various States. It was opposed only by a small section of the cotton textile industry on the ground

that it would adversely affect the competitive position of Indian cloth in world markets. While this is true, maintaining price control on cotton cannot provide any answer to the basic issue of ensuring an adequate supply of raw material for the Indian cotton textile industry. The exporters' problem has to be tackled at a different level.

While the resolution favouring decontrol of ceiling prices on cotton has been passed by the Indian Central Cotton Committee, it is for the Government to take a decision and make an announcement before the 1962-63 season begins. Mr. V. Shankar, president of the Committee and Special Secretary in the Ministry of Food and Agriculture, touched on a vital point when he emphasised the need for changing the pattern of cotton production in tune with the pattern of cloth consumption. He called for co-ordinated and systematic efforts to help realise this objective. In fact, this may be the most difficult aspect of the cotton situation. India's mills need not only more cotton but primarily more of the medium and long-staple varieties, which are difficult to grow in the country. Price decontrol should, therefore, be accompanied by efforts to encourage the production of these types. Otherwise, the net result may be an unwanted increase in the cultivation of short-staple cotton to the detriment of the acreage under groundnuts, and continued shortage of the superior varieties. It is encouraging to note that the Committee has emphasised the need for reviewing the long-term aspects of cotton cultivation in view of the changing pattern of consumption of cloth. Apart from endorsing a recommendation that the Government of India should double the rate of cess on cotton to provide adequate funds, it approved proposals for seven new schemes and the extension of six existing schemes.

have decided to approach the Controller of Capital Issues for permission for issuing ordinary rights shares at a premium of Rs. 50 a share. The shares will be offered to the existing shareholders in the proportion of one new share for every three held. When the rights shares are issued, the ordinary share capital of Fort Gloster Industries will be increased by Rs. 21 lakhs to Rs. 83.84 lakhs, divided into shares of Rs. 100 each. Reserves are more than Rs. 82.45 lakhs, and fixed assets amount to Rs. 1.62 crores. During the year ended March 1961, the Company earned a profit of Rs. 12.98 lakhs, out of which a taxable ordinary dividend of 10 percent was declared, absorbing Rs. 6.30 lakhs.

In addition to the jute mill, Fort Gloster has recently built a cable factory. Steps have been taken to extend and diversify the production of cables. The Company has been given an industrial licence for manufacturing V.I.R. cables of larger sections, trailing cables for mines, inter-vehicular railway coupler cable, railway signalling cable and flexible cord. It has been granted another industrial licence for manufacturing paper-insulated underground cable. The proceeds of the new shares will obviously be used to finance these expansion schemes.

New Scheme of India Paper Pulp

Jute sticks, which have hitherto been regarded as waste, will now be used for making paper pulp. This is a development of far-reaching significance, since it will help India save considerable foreign exchange which has to be spent on importing paper pulp. Besides, it will benefit the jute growers. The credit for this development goes to India Paper Pulp Co. Ltd of Calcutta. Its research, initiated at the instance of the West Bengal Government and the Development Wing, concerning the use of jute sticks for manufacturing paper pulp has been successfully completed. India Paper Pulp has informed the Government of India that it is willing to undertake commercial utilisation of jute sticks for paper manufacture. It has asked for the Government's permission to increase the pulp production capacity from the present 9,000 metric tons to 16,200 metric tons a year using jute sticks. This expansion is being effected with a view to correcting the lack of balance between the capacity of the pulping and paper making sections. The estimated capital cost of the expansion is Rs. 46.8 lakhs which is proposed to be met partly from the Company's own resources and partly from the issue of debentures at the appropriate time. The scheme does not involve any foreign collaboration. The cost of capital equipment is estimated around Rs. 48.30 lakhs, of which the imported component is placed at Rs. 16.52 lakhs. India Paper Pulp will need about 16,500 tons of jute sticks for making the additional 7,200 tons of pulp. It is estimated that when this production is achieved, there will be a saving in pulp imports amounting to about Rs. 40 lakhs a year. Originally, the gap

Current News and Comment

Martin Burn Maintains

The ordinary shares of Martin Burn Ltd have been steady around Rs. 32.62 because the Company has maintained the taxable ordinary dividend at 27.5 percent for the year ended September 1961. At the present price, the dividend offers a yield of 8.4 percent and is covered more than one-and-a-half times. The profit has declined by Rs. 3.85 lakhs to Rs. 81.02 lakhs, after raising depreciation from Rs. 2.35 lakhs to Rs. 2.76 lakhs. Sales increased from Rs. 7.49 crores to Rs. 8.58 crores, but the lower profit is attributed to the decline in the managing agency commission from Rs. 61.74 lakhs to Rs. 51.13 lakhs, while the income from investments improved from Rs. 13.08 lakhs to Rs. 14.91 lakhs. Taxation is allocated Rs. 33.50 lakhs (against Rs. 35.50 lakhs) and general reserve Rs. 5 lakhs (the same). The carry-forward is Rs. 2.46 lakhs, against Rs. 2.60 lakhs brought in.

During the year ended September 1960, holders of convertible notes worth Rs. 32,000 exercised their option to convert their holdings into ordinary shares. This resulted in an increase in the ordinary share capital by 1,600 shares and a reduction of Rs. 32,000 in the outstanding convertible notes. Hence, the total number of ordinary shares subscribed on 1st October, 1960, was 1,471,225 and the amount of convertible notes outstanding at that time was Rs. 5.76 lakhs. The total reserve arising from the surplus on conversion is therefore, Rs. 17.12 lakhs. The convertible notes have since been redeemed in full.

Phillips Carbon Rights Issue

The directors of Phillips Carbon Black Ltd will apply to the Controller of Capital Issues for permission to issue 312,500 ordinary shares of Rs. 10 each at a premium of Rs. 3 a share. The shares will be offered to the existing shareholders in the proportion of one new share for every four held. The shares have improved to Rs. 27.12 as a result of this news. The subscribed ordinary share capital

Rights from Fort Gloster

between the pulp and paper capacity of the Company was to be met from the pulp which was to be produced by Assam Pulp Mills. But the latter's scheme has not made any progress so far.

Castings from Kesoram Industries

The diversification of Kesoram Cotton Mills, which necessitated a change in the Company's name to Kesoram Industries and Cotton Mills from last year, has not come to an end with the setting up of plants for manufacturing rayon yarn, transparent paper and spun pipes. Kesoram Industries has now asked for the Government of India's permission to set up a new undertaking near Calcutta for manufacturing malleable and alloy castings, including spheroidal and nodular. It wishes to set up a plant with an annual production capacity of 1,500 tons of malleable iron castings and 4,500 tons of alloy castings, including spheroidal and nodular. Plant and machinery is estimated to cost about Rs. 86 lakhs, of which Rs. 39 lakhs will be spent on imported machinery which is proposed to be obtained from the rupee-payment area. The Company will need raw materials of the value of about Rs. 27.50 lakhs a year, of which Rs. 3.50 lakhs will be required for importing nickel. All other raw materials will be available from indigenous sources. Negotiations are still being carried on for foreign collaboration. The demand for malleable iron castings is currently estimated around 100,000 tons a year. The capacity already licensed is placed around 92,976 tons of malleable iron castings and 6,600 tons of alloy castings a year. The installed capacity is still small—around 18,500 tons of malleable iron castings and 2,380 tons of alloy castings a year.

Share Offer by Barium Chemicals

Barium Chemicals Ltd is a new company, which has been formed to undertake initially the manufacture of all types of barium compounds and inorganic chemicals. Its plant will be located in Kothagudam (Andhra Pradesh), and will have an annual capacity of 2,250 tons of "blanc fixe" (pigment quality) 450 tons of barium chloride (technical quality), 25 tons of barium chloride (B. P. quality), 25 tons of barium sulphate (B. P. quality), 1,100 tons of barium nitrate, 600 tons of barium carbonate and 100 tons of barium hydroxide. In addition, it is expected that 1,800 tons of barium sulphide and 600 tons of sulphur will be recovered annually as by-products. It is also proposed to expand in future the range of products to meet the Company's own requirements of sulphuric acid with the waste hydrogen sulphide from the factory, and nitric acid by the purchase of ammonia from the Rs. 22-crore urea fertiliser project to be established near the factory premises. The principal raw materials for the Company's products, namely, barytes and coal, are available in abundance in the vicinity. Barium Chemicals has secured the technical collaboration of Messrs L. A. Mitchell, Manchester (U.K.), who will supply and erect the plant and provide the technical know-how, plant management and staff training. The total payment to the British firm will be Rs. 24.60 lakhs, of which a little over a half is to be paid in sterling and the balance of Rs. 11 lakhs in rupees. The plant is expected to go into production by the end of the year and it will be in full production in February-March 1963. The project, it is estimated, will cost about Rs. 53.60 lakhs, but it will help save Rs. 40 lakhs in foreign exchange now spent on the import of barium salts. Besides, the exports of the Company's products are expected to earn about Rs. 10 lakhs of foreign exchange a year.

The promoters think that the Company will be in a position to declare a dividend in the first year of its working because of the attractive profit margin. While the cost of production is estimated to be about one-third of that in the U.K. the present selling prices of the various items to be manufactured are quoted at a premium of Rs. 150 to Rs. 400 a ton over the landed cost of the imported products. The Company will have an authorised capital of Rs. 1 crore, of which Rs. 50 lakhs in equity shares of Rs. 100 each will be issued. Out of these 50,000 shares, the directors and their friends are taking up 10,000 shares. The

remaining 40,000 shares are being offered to the public. The subscription list will open on 9th March and close on 13th March or earlier at the discretion of the directors. The entire public issue has been underwritten. (Fuller details of the offer are published on a later page of this issue of *Capital*.)

Ravalgaon Sugar Maintains

The working of Ravalgaon Sugar Farm Ltd for the year ended September 1961, shows a fall in profit in spite of larger sales. While income from the sale of sugar, confectionery, dairy and agricultural produce amounted to Rs. 1.70 crores, against Rs. 1.62 crores in 1959-60, the gross profit declined from Rs. 12.86 lakhs to Rs. 10.18 lakhs as a result of the disproportionate increase in expenses from Rs. 1.49 crores to Rs. 1.60 crores. After providing Rs. 8.25 lakhs (against Rs. 7.46 lakhs) for depreciation and Rs. 13,659 (against Rs. 2.62 lakhs) for development rebate, the net profit amounts to Rs. 1.54 lakhs, against Rs. 2.22 lakhs in 1959-60. A sum of Rs. 2.70 lakhs has been transferred from investment reserve in order to pay the proposed dividends which have been maintained at the previous year's levels—10 percent, taxable, for ordinary and 7 percent, taxable, for deferred shares. The dividends absorb Rs. 4.38 lakhs, including Rs. 1.10 lakhs on preference shares. After making various adjustments, there remains Rs. 16,591 to be carried forward, against Rs. 12,211 brought in.

Sugarcane crushed during the season was 143,000 metric tons. Sugar produced was 153,000 bags at an average recovery of 10.48 percent. The confectionery plant produced about 1,653 tonnes and the candy plant 65 tonnes. The directors state that the crushing for the current season started on 16th November, 1961. There are indications of encouraging results for the season, but the position has been somewhat altered by the Government's restriction on sugar production. The issue of new debentures of Rs. 45 lakhs carrying an interest of 7 percent will be made shortly.

Perforated Sheets from Handy Angle

Mr. Harshavadan J. Shah of Bombay has entered into a ten-year agreement with Handy Angle—a subsidiary of Wagon Repairs Ltd of Birmingham—for manufacturing Handy Angle perforated sheets in India. A new enterprise known as Handy Angle (India) is being formed to implement the project. The Indian group will have a controlling interest in the new Company. It is proposed to build a factory of 10,000 square feet in Bombay this year. The promoters plan to build a steel cold-rolling mill to meet the factory's requirements for perforated sheets. The firm has plans for exporting its products to such neighbouring countries as Pakistan, Burma, Nepal and Thailand.

Progress of Henley Cables

In his statement to the shareholders the chairman of Henley Cables, Mr. A. D. Shroff, says that the project has made significant progress in the past 12 months. In spite of the shortages and inconveniences experienced, the directors have endeavoured to expedite the completion of the project. The installation of the plant is proceeding smoothly and the first production line will shortly be ready for trial manufacturing runs. Structural work on the main factory building has been completed and ancillary buildings are either complete or in an advanced stage of construction. The delay was occasioned by the necessity to redesign some of the buildings to meet the anticipated shortage of both water and electric power. The major part of the initial plant and machinery required for commencing production has already been received and with few exceptions, the shipment of the remaining plant is well in hand. Mr. Shroff says that in the first phase of production, Henley Cables will manufacture rubber and thermoplastic insulated cables. The outlook for the electric cable industry is considered encouraging in view of the proposed power target of 15 million kilowatts in the third plan, against the second plan target of 5.80 million kilowatts. The Government has

CAPITAL, 8th March, 1962.

asked cable manufacturers to use aluminium instead of copper for cable conductors in order to save foreign exchange. The use of aluminium as a substitute for copper involves many changes of technique. But Mr. Shroff points out that Henley Cables' plant will be capable of manufacturing both aluminium and copper conductors. The agreements relating to the know-how, technical aid and trade marks are being finalised. The delay has to some extent been due to the merger of the interests of W. T. Henley's Telegraph Works Co. Ltd with Associated Electrical Industries Ltd of the United Kingdom. The Associated Electrical Industries will fulfil the originally agreed obligations with the Company. The Rs. 100-paid share of the Company is unofficially quoted around Rs. 175.

More from Coimbatore Cotton

The working of Coimbatore Cotton Mills Ltd for the year ended December 1961 fully justifies the proposed increase in the dividend from 12 percent to 16 percent, both taxable. The Company has done well, with both sales and profit recording substantial improvement over those of the previous year. Sales of finished goods increased from Rs. 1.53 crores to Rs. 1.85 crores and those of waste were up from Rs. 1.81 crores to Rs. 2.78 crores. The gross profit rose by about 22 percent from Rs. 27.09 lakhs to Rs. 33.11 lakhs. The profit increased in spite of a rise in expenses on raw materials, stores, salaries and wages. Stores consumed increased from Rs. 5.84 lakhs to Rs. 7.88 lakhs. Raw materials cost Rs. 1.16 crores, against Rs. 1 crore in 1960. Salaries and wages were up by about Rs. 2.56 lakhs to Rs. 19.86 lakhs. After providing Rs. 10.20 lakhs (against Rs. 10.11 lakhs) for depreciation and Rs. 7.10 lakhs (against Rs. 2.30 lakhs) for taxation, the net profit amounts to Rs. 13.85 lakhs, against Rs. 13.05 lakhs in the previous year. The directors have set aside Rs. 1.61 lakhs for bonus for previous years. Gratuity reserve accounts for Rs. 77,335, against Rs. 28,000. The allocation to development rebate reserve has been pruned from Rs. 7.76 lakhs to Rs. 3.25 lakhs. A sum of Rs. 1.65 lakhs (against nil) has been transferred to dividend equalisation reserve. The proposed dividend absorbs Rs. 5.76 lakhs, against Rs. 4.32 lakhs, leaving nothing to be carried forward. The directors say that the balance of 4,000 spindles referred to in the last report was commissioned in 1961. Coimbatore Cotton has received all the eight American combers. The Rs. 100-paid share of the Company is currently quoted around Rs. 218 *cum* dividend.

Royalaseema Mills Pays the Same

The Royalaseema Mills Ltd reports a rise in sales and profits for the year ended December 1961. The dividend is maintained at the previous year's level of 15 percent. The net profit for 1961 amounts to Rs. 12.38 lakhs, after providing Rs. 2.77 lakhs for depreciation. The net profit for the previous year was Rs. 10.35 lakhs, after providing Rs. 2.48 lakhs for depreciation. With Rs. 7,071 brought forward from the previous year, the total available for appropriation comes to Rs. 12.45 lakhs. Out of this, taxation provision takes Rs. 7.36 lakhs (against Rs. 4.48 lakhs). A sum of Rs. 7,571 is transferred to development rebate reserve and Rs. 1.25 lakhs to general reserve (same). The proposed dividend of 15 percent, subject to deduction of tax, will absorb Rs. 3.35 lakhs. The balance of Rs. 15,823 is carried forward.

The directors' report says that the working results of the Company for the year can be considered satisfactory. Profits have improved despite the increase in the prices of cotton, stores and spare parts, the rise in wages following the implementation of the Wage Board recommendations, and the reduction in the prices of yarn. The Government of India has not so far allotted to the Company 28,800 spindles for the existing unit and 16,000 spindles for a new unit in Tadpatri or Nandyal, for which an application has been made. The Company also wants to modernise its machinery. Of the 21,200 spindles in its mill, 12,000 spindles are of Hova (Japanese) make, and were installed in 1950. A scheme for the progressive replacement of these old spindles has been drawn up. In the first phase, it is proposed to replace 12,000 spindles and install better high

CAPITAL, 8th March, 1962.

drafting systems and pneumafil. It has also been decided to replace the existing humidifiers in the preparatory and spinning departments by a more effective and efficient system of humidification.

The directors have obtained the permission of the Controller of Capital Issues for issuing 7,446 bonus shares of Rs. 100 each to the members of the Company in the ratio of one bonus share for every three equity shares held. The new bonus shares will rank equally with the existing equity shares and will be eligible for all dividends that may be declared for 1962.

Krishna Industrial Corporation

The Krishna Industrial Corporation Ltd of Madras has earned a profit of Rs. 3.68 lakhs for the year ended September 1961, after providing Rs. 24,538 for depreciation. The profit for the previous year was Rs. 4.29 lakhs, after providing Rs. 24,297 for depreciation. Adding the amount brought forward from the previous year and also Rs. 40,000 transferred from general reserve, the total available for appropriation comes to Rs. 4.18 lakhs. From this amount, the directors have provided Rs. 1.65 lakhs (against Rs. 2 lakhs) for taxation. The proposed dividend of 10 percent (the same as in the previous year) will absorb Rs. 2.52 lakhs, leaving Rs. 1,053 to be carried forward to the next year. Sales of carbon dioxide during the year have fallen to Rs. 5.29 lakhs from Rs. 6.91 lakhs with competition from new producers keener than ever before. Profits from this business have, therefore, fallen. The erection of the sulphuric acid and superphosphate plants in Nidadavolu is progressing satisfactorily; they are expected to be completed shortly. The directors state that the Company may have to look increasingly to this part of its activities for its main revenue.

Assam Hardboards Offer Soon

Assam Hardboards Ltd has obtained a licence from the Government of India to set up a hardboard factory in Gauhati, Assam, with a capacity of 15,000 tons a year. The factory is expected to start producing at the end of 1963. Foreign technical collaboration has been arranged with Columbia Hardboard Co. Inc., of the U.S.A. The prospects for the Company are quite bright because the demand for hardboard is increasing, especially for building purposes. It is estimated that, at the end of 1966, the demand will be more than 50,000 tons a year, while domestic production will be considerably below that. The location of the factory is considered suitable in view of the abundant supplies of wood and bamboo in Assam. Assam Hardboards will soon issue ordinary shares for public subscription at par. The subscribed capital at present is Rs. 9 lakhs, divided into ordinary shares of Rs. 10 each. The new issue will also include preference shares of Rs. 100 each. The estimated cost of the project is Rs. 1.40 crores, to which the Industrial Finance Corporation will contribute nearly Rs. 60 lakhs in the form of a loan.

Almag Forge and Foundry

Almag Forge and Foundry Private Ltd of Thana, Bombay, has entered into an agreement with the Wyman-Gordon Company of Worcester, Massachusetts, U.S.A., for setting up a modern forge and foundry in India. A new Company called Wyman-Gordon India Ltd, formed for this purpose, is now constructing the plant on a 30-acre site in Majwade, Thana. According to Mr. J. P. Koszarek, founder of Almag Forge and Foundry and managing director of the new Company, machinery purchased in the United States includes hammers ranging from 1,500 lbs to 12,000 lbs, two-inch and five-inch upsetters and other related equipment. Wyman-Gordon is providing technical assistance, but all operating personnel will be Indian, and ultimately the entire management will be in Indian hands.

Wyman-Gordon owns plants in Worcester, Massachusetts, and Harvey, Illinois, in the United States and operates the U.S. Air Force plant in

North Grafton, Massachusetts. It produces forging components for every major missile, rocket and space programme in the U.S.A. in addition to aircraft, motor-vehicle, farm equipment and other industrial forgings. It operates the world's largest closed-die forging press of 50,000-ton capacity, and was a pioneer in the forging of rail, motor-vehicle and aircraft components. Wyman-Gordon India Ltd will concentrate on providing parts for the motor-vehicle and aircraft industries. It will also produce forgings for agricultural equipment, for diesel locomotive manufacture, for the machine tool industry and for other industrial customers. It is calculated that the immediate savings in foreign exchange will amount to not less than Rs. 3.5 crores a year. In due course, there may be a substantial production for export.

World Bank Loan for I.C.I.C.I.

The World Bank has announced a loan equivalent to \$20 million (Rs. 9.5 crores) for the Industrial Credit and Investment Corporation of India Ltd to meet the foreign exchange requirements of projects financed by the Corporation. I.C.I.C.I. was organised with the advice and assistance of the Bank in 1955. It makes long and medium-term loans and equity investments and engages in underwriting activities. In addition, it provides technical advice and assistance in the establishment of new enterprises. In its seven years of operation, the Corporation has approved financial assistance totalling Rs. 42.7 crores to 133 industrial concerns, over half of which are new enterprises. Loans have accounted for Rs. 29.6 crores, of which 60 percent have been in foreign exchange. I.C.I.C.I.'s foreign exchange lending has increased to an annual rate of about \$20 million. Most of its foreign exchange resources have now been committed, and the new loan will provide the additional foreign exchange the Corporation is expected to need over the next year. Including the new loan and the \$40 million lent earlier by the World Bank, I.C.I.C.I.'s total resources amount to Rs. 54.5 crores.

Interest will be payable on each part of the loan at the Bank's current rate when that part is committed for one of I.C.I.C.I.'s projects. At that time, the Bank and I.C.I.C.I. will agree on an amortisation schedule for repayment of that part provide for semi-annual repayments on 15th April and 15th October and for final repayment of the entire \$20 million loan not later than 15th April, 1977. The loan is guaranteed by the Government of India. This is the World Bank's thirtieth loan in India and brings the gross total of lending here to \$846 million (Rs. 403 crores). Taking into account cancellations, sales of parts of loans, and repayments, the net amount held by the Bank is \$690 million (Rs. 329 crores).

Union Carbide Results

The gross sales of Union Carbide India Ltd totalled Rs. 9.50 crores during the year ended 25th December, 1961, against Rs. 8.23 crores in the previous year. Earnings before tax and after development rebate amounted to Rs. 83.21 lakhs (against Rs. 1.45 crores). The lower profits are due entirely to the provision of Rs. 65.50 lakhs (against Rs. 2.30 lakhs) for development rebate reserve in the profit and loss account. The higher development rebate charge arises from the commissioning of the Company's new chemicals and polyethylene plant in Trombay, Maharashtra, during the year. Provision for income tax absorbs Rs. 21.78 lakhs (against Rs. 61.38 lakhs). It is regretted that certain figures were incorrectly printed in the previous issue of *Capital*.

World Ship Output Still Falling

World output of new ships declined for the third year in succession in 1961. It totalled 7.9 million tons in that year, or 400,000 tons below 1960 and 1.4 million tons less than in the peak year, 1958. Lloyd's Register of Shipping, which gives interesting details about the shipping industry, however, describes the fall as "well con-

trolled", in view of the five-year-old slump in the shipping business. The loss in production was quite widely shared among the shipbuilding nations, with France, the United States, Britain and West Germany the principal sufferers. However, Japan continued to increase her production, Norway, Yugoslavia, Sweden and Finland being the other significant beneficiaries. The first three places among shipbuilders continued to be occupied by Japan, Britain and West Germany, which together built half the world tonnage added in 1961. While comparison with the prewar output is not very meaningful, it is interesting to note that since 1938, Japan has expanded her shipbuilding activities more than four times to reach an output of 1.8 million tons in 1961, whereas Britain shows only a small increase of 160,000 tons to 1.2 million tons.

Among the other points worthy of note, one is that 16 of the 17 largest ships of 32,000 tons and above built in 1961 were oil tankers. One of these, a motor-ship of 39,949 tons built by Japan, was the largest motor-ship ever built. Only three passenger liners of over 10,000 tons were built. Oil tanker production fell by over 800,000 tons, indicating that the production of other ships actually increased by over 400,000 tons. Nearly 3.2 million tons (40 percent) of the tonnage launched in 1961 was for export. The largest exporters were Japan, West Germany, Sweden, the Netherlands and Britain, in that order. The principal importers were Norway, Britain, Liberia and Greece. As a result, the largest addition to the existing fleet occurred in Britain (1.4 million tons), followed by Norway (1.2 million tons) and Japan (1.1 million tons).

U. P. Interim Budget

While presenting his caretaker Budget for 1962-63, the Finance Minister of U.P. estimated a revenue deficit of Rs. 10.9 crores for the coming financial year. He added that in these estimates, the figures of the State's share of Central taxes, as intimated by the Government of India, have been adopted. Since the report of the Finance Commission has not yet been published, the figures are tentative. In the original Budget for the current year, revenue estimates were placed at Rs. 145.63 crores and expenditure at Rs. 154.13 crores. There was thus a revenue deficit of Rs. 8.5 crores, against which it was decided to raise additional resources of Rs. 5.21 crores, leaving a revenue gap of Rs. 3.29 crores uncovered. The revised revenue estimates are now placed at Rs. 152.18 crores. The estimates of revenue expenditure have, however, risen from Rs. 154.3 crores to Rs. 156.67 crores. So there is still a deficit of Rs. 4.49 crores which is proposed to be covered by transferring the requisite amount from the revenue reserve fund. The State's share of income tax—after taking into account the collection of arrears—is expected to be Rs. 2.04 crores more during the current year. The increase is partly offset by a reduction of Rs. 1 crore in the estimates of Central grants-in-aid which is received as compensation for the loss in the income tax share caused by changes in company taxation. Another increase of Rs. 30 lakhs is anticipated in the State's share of Central excise duties. Extra receipts are also reflected under State excise, irrigation levy, taxes on motor-vehicles, betting tax and electricity duty. While the increase in revenue expenditure is largely accounted for by small salary increases to teachers, policemen and other categories of employees, the net capital expenditure, which was originally estimated at Rs. 41.67 crores, is now expected to decline by Rs. 10 crores to Rs. 30.71 crores.

The revenue receipts for 1962-63 are placed at Rs. 177.20 crores, representing an increase of Rs. 25.02 crores over the revised estimates of the current year. A White Paper, issued with the Budget, says: "A substantial part of this increase is of an unreal nature due to the rationalisation of classification of Government transactions which in terms of the decision taken by the Government of India will have effect from 1962-63." The State's share of income tax is expected to be about Rs. 2.33 crores less, but small increases are anticipated under estate duty and Indian excise. The Rihand dam will start supplying power in the Budget year. Receipts from the sale of electricity are estimated

at Rs. 1.5 crores. Since the Tariff Commission has raised the ex works price of Churk cement, increased receipts are also expected from this State enterprise. Revenue expenditure is placed at Rs. 188.10 crores, against the current year's Rs. 154.13 crores, indicating an increase of Rs. 33.97 crores, of which Rs. 17 crores is attributed to changes in the accounting procedures. Against the current year's estimate of capital expenditure of Rs. 41.67 crores, capital expenditure for the Budget year is placed at Rs. 36.38 crores, indicating a reduction of Rs. 5.29 crores. A market loan of Rs. 9 crores is proposed to be raised in the Budget year. Other floating loans totalling Rs. 14 crores are likely to be taken and repaid in full. Compensation bonds of the face value of Rs. 50 lakhs and rehabilitation grant bonds of Rs. 8 crores are likely to be issued next year. Furthermore, for the first time, in the Budget year the urban area compensation bonds of Rs. 1.25 crores and the land-holding ceiling compensation bonds of Rs. 1.5 lakhs are proposed to be issued. A sum of Rs. 5.05 crores for the principal portion of the equated instalments due on these bonds will be required in the Budget year and will be met from revenue.

Direct Taxes Defended

In his presidential speech at the annual general meeting of the Indian Merchants Chamber in Bombay recently, Mr. Vallabhdas V. Mariwala expressed doubt whether the private sector will be able to fulfil the task of mobilising resources of the order of Rs. 4,100 crores assigned to it in the third plan. He urged that the private sector should be assured of an adequate share in the general savings, and that the flow of resources should not be confined to the public sector. Mr. Mariwala emphasised the need for an objective appraisal of the implications of the taxation policy followed in the second plan period. With the present pattern and composition of savings in the economy, a taxation policy that impairs the growth of entrepreneurship and risk-bearing by the business and industrial community will not enable it to play its part satisfactorily in the rapid industrialisation of the country. There is need for building up domestic savings, and that is possible only with an increase in voluntary personal and corporate savings. Mr. Mariwala said that some taxes such as the expenditure tax, the wealth tax, the estate duty, the gift tax and the tax on bonus shares are not sufficiently productive but have an adverse effect on savings and investment; they have to be reviewed on considerations of practical need and equity.

Inaugurating the Chamber's meeting, the Central Finance Minister, Mr. Morarji Desai, said that with the time for presenting the Budget drawing near, he could not be expected to reveal the Government's mind on fiscal matters. His inaugural speech was essentially in the nature of a sermon preaching the philosophy of contentment and urging the business community to give as much importance to moral and human values as to material prosperity. Mr. Desai asked the business community to stop drawing a distinction between the private and public sectors because the two sectors are really complementary. The development of transport, power and even steel, on which the growth of the private sector depends, is beyond the capacity of the private sector. He pointed out that the interests of manufacturers, agriculturists and consumers are often at variance with one another and only through co-ordinated effort can these conflicting interests be reconciled. There is no question of reserving savings for the private sector for the simple reason that 85 percent of the savings come from private households which the private sector is free to tap. There can never be any arithmetical division of resources between the two sectors.

Referring to the plea for the abolition of the expenditure tax, the gift tax and the bonus issue tax, Mr. Desai said that these taxes were introduced mainly to build up an integrated system of taxation and to check evasion. The question of incentives should be approached from a moral standpoint. Prosperity without a moral basis destroys the nation. He asked the business community to imbibe the sacrificing spirit of those who fought for the freedom of the country without any consideration of monetary rewards.

CORRESPONDENCE

BANK DEPOSIT RATES

(TO THE EDITOR OF "CAPITAL")

Sir,

In your issue dated 22nd February, 1962, while reviewing the prevailing situation concerning interest rates on bank deposits and the controversy over the inter-bank agreement, you have suggested an experiment to be conducted, under which for a period of time smaller and medium banks should be allowed to pay a higher rate of interest on deposits than that paid by bigger banks. While your suggestion may have some merits from the viewpoint of a section of opinion, it is felt that such an experiment would be an unnecessary and costly affair, particularly so in view of the fact that we have the record of a similar situation as you suggest, in the recent past. It will be recalled that last year, after the Reserve Bank withdrew its circular on the maximum interest rates payable by banks on time deposits, not only was the inter-bank agreement revised but all banks—small, medium and big—raised their rates of interest. An analysis of the deposit situation found after these revisions were effected, should prove adequate to convince one about the relative inefficacy of interest rates in increasing the deposit resources of banks.

The higher rates of interest came into effect on 15th March. Aggregate deposits of all scheduled banks before this date, i.e., on 10th March, amounted to Rs. 1,742.26 crores, which dropped to Rs. 1,720.71 crores on 17th March. On 24th March, they rose again to Rs. 1,736.29 crores and remained stagnant till the end of the month. Thus, during the period between 17th March and 31st March, the banking system of the country acquired a mere Rs. 16 crores in deposits. However, one might say that a period of two weeks is too short to gauge the effect. Reviewing the situation further, deposits of all scheduled banks rose to Rs. 1,765.14 crores and more or less continued at the same level during the next two months, with a slight reduction during May. This increase of Rs. 30 crores after March is easily explained away by the huge amounts disbursed by Governments at the end of the financial year. Thus, out of Rs. 30 crores which the banking system acquired during April, it is not difficult to believe that a substantial proportion was as a result of Government disbursements and consequently the additional resources which should be attributed to the revision of the rate of interest would be insignificant. Movement of P.L. 480 deposits may add a complication, but we know that the growth of bank deposits, excluding P.L. 480 deposits, in the first half of 1961 at Rs. 98 crores was only a shade better than what it was in the first half of 1960 at Rs. 95 crores. This again goes to prove that if the interest rate increase of March 1961 was in any way influencing the rise of bank deposits, the increase in the first half of 1961 should have been much more than what it actually was.

It will, therefore, be seen that the people who have been pleading against the efficacy of interest rates as a means to increase bank deposits are not "barking up the wrong tree". On a common sense basis, it is not difficult to appreciate that money deposited with a bank is not an investment, but resources temporarily available which are awaiting spending or investment. Such bank deposits and investments should be considered as non-competing items. In this connection, it is noteworthy that the erstwhile chairman of the State Bank, after narrating the pleasurable experience of an increase in savings deposits as a result of increased interest rates, has warned against the limitations of this method of acquiring deposit resources. It is felt, however, that while feeling happy about the results, he was not oblivious of the fact that he was ignoring the impact of new branches opened during earlier years, which could show results only now. On this count, the quantum of increased deposits attributable to an increased interest rate would remain insignificant indeed.

More than this, you have confused the issue in a fundamental sense. It is not denied that within the banking system, a rate differential is not effective in leading to "diversion of deposits" from one institution to the other. What is required is the

growth of deposits of the banking system as a whole and not of certain institutions at the expense of others. The experiment suggested by you may succeed in achieving what you have in mind, viz., "diversion of deposits". It will certainly not result in appreciably increasing the deposits of the banking system as a whole.

However, this confusion is more widespread and you are not the only one to be obsessed by it. The two problems of addition to banking resources and the allocation of the resources between the institutions comprising the banking system should be viewed separately. As one of the methods to resolve the second of these problems, it is not disputed that the smaller banks need the differential. But there is another side to this. Such a differential is likely to militate against their own interest in as much as the principle that deposit rates vary inversely with the credit and strength of an institution is generally held. From this point of view, in their own interest it is not desirable for the smaller banks to plead for a higher rate of interest for themselves.

About announcement of services to customers, you seem to be confusing the issues again. The recent liberalisation of certain services announced by certain banks is not appreciated in general by thinking persons; this is not due to the fact that they oppose the introduction of such services, but that the services as extended are not likely to achieve the purpose, viz., cultivation of the banking habit. For, remittance facilities are used by those who already have a well developed banking habit and the schemes introduced by certain banks would only mean an extra benefit for such people without any gain in terms of the development of the banking habit. Branch expansion and the extension of services should have this specific aim in view, namely, to increase the coverage both geographically and functionally and bring more and more people within the folds of the banking system. For this purpose, it is very necessary that the various units in the banking system should view the picture in perspective rather than in their respective self-interest.

Yours etcetera,

T. R. SHAH

Calcutta, 2nd March.

SUGAR SURPLUS

It by no means follows that the abolition of bounties only will reduce the Sugar trade to a healthy level and to prevent unfair competition there must also be a reduction of duties. As we understand the matter, there are very heavy import duties on Sugar, in several continental countries, notably Austria and Hungary, which enable the Sugar Trust or Cartels to raise the prices of Sugar to such a figure that any surplus production can be shipped abroad and virtually sold at any price, the net return being all profit. If this be so, the Government of India should be careful how they deal with the existing duties. The Sugar crop this year is going to be a record one apparently; the following are some figures:

	1901-1902 Tons	1900-1901 Tons
America	2,516,000	2,235,500
Asia (exports)	857,000	784,000
Australasia	169,000	144,500
Africa	275,000	305,000
Spain	33,000	33,000
Total Cane	3,850,000	3,502,000
Beet:		
Europe	6,710,000	6,069,000
America	150,000	76,800
Total Beet	6,860,000	6,145,800
Grand Total	10,710,000	9,647,800

This means a surplus of over 1 million tons, the great bulk of which being beet will be dumped on Great Britain and India. Now, of course, if India were a non-producing Sugar country, we could view with indifference this threatened influx of cheap Sugar, but if the effect is to ruin the local industry, it is time some steps were taken to prevent this, notwithstanding the outcries of Cobdenites and Free Traders.

FROM

CAPITAL

A Ditcher's Diary

THERE IS A CERTAIN SAMENESS ABOUT ARMY take-overs, and not merely because General Ne Win has given what may be called a repeat performance. Like his opposite number in Turkey, General Ne Win collected some compliments when handing back power to politicians. The parallel does not end just because the latest Turkish coup failed while in Burma it has been a walk-over. I have a suspicion that, in both countries, the restoration of civil authority was only partial, and that once the soldiers have set an example the politicians never stop feeling that Big Brother is breathing down their necks. A little bit of healthy fear never did the average run of politicians any great harm: quite possibly, they fight shy of the more blatant forms of corruption. But the initiative is gone for ever; and this very hesitancy is used by the ambitious soldiers as an excuse for seizure of power. Because I do not believe that democracy is one of the bare necessities of life anywhere, least of all in these parts it is not necessary to shed too many tears for the people of Burma. Even a Mussolini made the trains run to time in Italy: General Ne Win, I understand, kept the streets of Rangoon reasonably clean. And U Nu may not be missed by many, although this crafty politician can be relied upon not to miss a trick when the present rulers slip up—as they almost certainly will. Last time the soldiers showed no political sagacity: and this time, I hear, the Revolutionary Council is not all that united. Indeed, by some General Ne Win is likened to Egypt's General Nguib; and the Burman Nasser is said to be Brigadier Aung Gyi. In the past it has generally been colonels who have pulled off the second coup; but the Burman brigadier has President Ayub Khan's example to cheer him up. In Burma the endemic political weakness stems from economic reasons. At one point the Government seemed to forget its primary business of governing, for all its energies were devoted to what others do better and governments simply cannot do at all: business. With its small population and plentiful rice, Burma could be a prosperous little country, given a modicum of good government and not much more business enterprise. The latter, mainly imported in the past, is not growing locally: and foreigners are suspect. The chief sufferers are the people of Burma themselves.

NOT HAVING SEEN THE WORLD HEALTH ORGANISATION'S full report, I would not know what definition it has chosen for that egregious euphemism, "happily married men," who, it says, escape road accidents rather better than their more independent

confrères. It may, indeed, be something of a mystery how this august and rather scientific U.N. body has managed to identify the species at all. Some cynics I know, not all of whom are given to frivolity, hold that the adverb and the adjective are mutually contradictory: the species therefore, does not exist, and the term, especially as applied to persecuted males, is a convenient figment of the feminine imagination. Statistics have before now served as hay for bovine moralisers: I would not be so rash as to count the World Health Organisation among the latter but, with due respects, I would resist the sly implications of its conclusion that deaths in road accidents are more numerous among single men—whether divorced widowed or unmarried—than among happy husbands. It does not require one to be a misogynist to recommend that a certain cynicism is necessary in entertaining claims about the supposed benefits that may arrive as a by-product of matrimony. Whatever the World Health Organisation may say there is no obvious connection between the acquisition of a spouse and proficiency at the wheel. Rather, common observation suggests that the quality of driving is apt to deteriorate directly in proportion to the number of women passengers a particular vehicle carries; and in proportion to their garrulity. Whether or not the driver in question is married to one, some or all of them, appears to make no difference at all. It is only in this context that I can have some sympathy with the WHO's otherwise rather intriguing assertion that deaf men make good drivers. But then I am reminded that if deafness includes not only the natural but also the simulated variety, Calcutta drivers could claim to be among the world's best. It seems a pity that the WHO report could not list blindness as an additional qualification for good driving; Calcutta could score there too.

NOW THAT MY STIFFNESE HAS WORN OFF, I CAN truthfully say how much I enjoyed the concert given by the London Philharmonic Orchestra in Calcutta last Friday. For a time it seemed that the exquisite discomfort of those wooden collapsible chairs would forever obscure any pleasanter recollections; but at this distance removed I can confirm that indeed pain has no memory. The performance was, as expected, quite brilliant, and Sir Malcolm Sargent is to be congratulated on what was achieved under most trying circumstances. He had arrived from Delhi: only that morning—where he had given a concert the night before—had held a rehearsal in the afternoon, and was due to take off for Hongkong the following morning at about 10 a.m. Sir Malcolm who, unlike most of us,

does not appear to have changed an ounce in the past 25 years, must have found the weight of a tail coat somewhat warm and cumbersome. I think the Calcutta School of Music and the British Council are to be congratulated on their initiative in bringing this fine orchestra to Calcutta. It is too seldom we here are able to listen to such musical excellence. The only serious criticism I heard of the performance was that the choice of programme might have been better. Perhaps the selection of Benjamin Britten and Vaughan Williams was inevitable under the circumstances, but I heard many voices, usually non-British, suggesting that it was a waste of good orchestral talent. I must confess that one thing which struck me was the small number of non-British voices there were to be heard. I am prepared to concede the right of the British community to patronise one of its own orchestras, and even to turn the occasion into something of a fashionable one. But I should have thought one of the primary objects of going to so much trouble and expense was to permit non-British and especially music-loving Indians, to experience something which it is not always easy to come by in Calcutta these days. If for this reason more tickets had been reserved for Indian residents, then I should have been the last to complain. After all, most of the British here do find themselves in London once in every three years or so. Such matters apart, I was glad when the acoustics of the new Rabindra Smarani National Theatre proved so much better than I expected; the only thing to spoil the effect was the sound of the occasional motor horn outside, an intrusion which I assume will be avoided altogether when the building is finished and properly air-conditioned. I was impressed by how well the place seems to have been designed, even if it is such a steep climb from the front rows up to the main exits.

POLITICIANS NEVER SEEM TO TIRE OF ADVISING others on how they ought to conduct their affairs. Journalists are a favourite object for such advice, and the third general election has provided a heaven-sent opportunity for all kinds of gratuitous remarks on how media of mass communication should help to educate the public on the problems of the day. Mr. Nehru seems to think that in order to do this properly newspapers must be free of "pressures" but I doubt if he means by this that they should have complete freedom from the kind of pressures which all newspapers in this country, and businesses as well, are under to conform to the Government's own line. If the election results indicate anything at all, it is that the Indian masses are beginning to show increasing discrimination in their choice of legislators. That the Press has played a notable part in this process is not something I would question. But the newspapers' rôle is a margin; one still. Literacy remains at a low level, and of those who can read, the number who can individually or collectively—

NATIONAL AND GRINDLAYS BANK LIMITED

CHAIRMAN, MR. J. K. MICHIE'S STATEMENT

The Annual General Meeting of National and Grindlays Bank Limited will be held on April 3 in London.

The following are extracts from the statement by the Chairman, Mr. J. K. Michie, circulated with the report and accounts:

The Balance Sheet and Accounts of the Bank now before you reflect in figures inter alia the outward results of the acquisition on 1st January, 1961 of the Eastern Bank and branches of Lloyds Bank Ltd. and these I am sure you will concur are encouraging. But what cannot be seen is the effort and co-operation by the staff throughout the combined business which has made the merger the success it undoubtedly is. The integration of staffs, methods and systems which have grown up separately and independently is a task requiring patience, goodwill and broadmindedness and if in one year we have not achieved "optimum" results, we are well on the way to that desideratum.

The total of our consolidated balance sheet as at the close of 1961 was £251,284,590 or approximately £70 millions more than at 31st December, 1960. Of this increase about £50 millions is attributable to the addition of Lloyds branches leaving £20 millions for "growth". Because of the merger, figures of deposits and advances are not readily comparable but as a consequence of the continued pressure for financial accommodation our liquidity ratio again fell slightly.

Higher Profits

Naturally our expanded business brought higher profits, the figure being £644,273 against £479,276 for 1960. This increase has enabled us after providing for a dividend of 14% on the increased capital to place £150,000 to Premises Account and allot £100,000 to Reserve Fund. Taxation I regret to say took an even higher percentage of our gross profits in 1961 otherwise our showing would have been somewhat better.

To bring our Reserve Fund more into line with our increased capital we decided to transfer a sum of £850,000 from our inner reserves thereby bringing our published reserves to the round figure of £4 millions.

An expanding banking business carries with it the obligation to have its liabilities backed by a sufficiency of capital and reserves. At the Extraordinary General Meeting which will follow the Annual General Meeting shareholders will be asked to sanction an increase in the authorised capital of the Bank from £5,702,925 to £9,000,000. If this is agreed to it is then the intention to make a rights issue, in the proportion of one share for every four held on 14th March, 1962, at the price of £1 5s 0d per share.

Your board expects to maintain a dividend at the rate of 14% on the increased capital.

India

The Reserve Bank rate remained unchanged at 4% although throughout 1961 call-money often cost considerably more and at the end of the year 5½% was being paid. This is a reflection of the continued steady pressure for Bank accommodation, principally by new and growing industries to which I drew your attention a year ago and there is no sign of a cessation. An illustration of this pressure is that during the eight months April 1st to November 30, 1961 consent was given to the formation of 258 companies including 53 of foreign origin with a total authorised capital of Rs. 160.61 crores. Inevitably this puts the banking system under continued strain, a strain which, with the encouragement of the Reserve Bank, has been met very successfully.

The process of merging weaker with stronger banking units has continued, public confidence has revived and there has been an increase in deposits over the whole field of scheduled banking.

A scheme for compulsory insurance of small deposits came into effect on January 1st, 1962 and although the cost will fall largely on Banks whose depo-

sitors do not require this protection it is hoped that they too will gain from the confidence which the measure will engender in the minds of the small depositor.

The Reserve Bank has strongly advised indigenous Banks to increase their inner reserves; at the same time it has shown every disposition to assist banking through its Bill Market Scheme and by the encouragement it continues to give to the spread of the banking habit.

During the year we have been given licences to open 14 new branches of which 4 are already in operation. Arrangements for the others are in train.

In spite of very considerable foreign aid India's external reserves have fallen by some Rs. 20 crores and this cannot but cause some anxiety. Until India's economy becomes self-propelling the buttress for her balance of payments deficiency must come from outside and the consortium of western nations responsible for providing the bulk of the external wherewithal for India's latest five year plan known as the "Aid India Club" will be considering her needs. The total so far proffered for the first two years is \$2,225 million but another meeting is to be held in May of this year to review the situation.

Agriculture must be regarded as the life blood of India and it is encouraging to see that the Planning Commission expect to see an increase in production of 24 million tons to a total of 100 million tons over the next five years. Sometimes it has been thought that agriculture ranked too low in the plans of a country much of whose population is so near the breadline but this would be a great step towards eliminating food shortages.

The jute industry had a much better year in 1961 and as a result of increased export demand the number of looms sealed was reduced to 7 per cent in January of this year, the lowest for many years. Due to the competition of lower cost goods principally from Japan and Hong Kong, India's exports of cotton piecegoods were considerably reduced, particularly to Australia and East Africa.

Tea also had a difficult year and prices particularly for common teas fell to low and in some cases barely

remunerative levels, a situation which still persists.

Pakistan

The State Bank rate remained unchanged at 4 per cent throughout 1961 and money continued to be tight.

The movement in the country's external assets during 1961 was an adverse one and strenuous efforts are being made to increase exports. However, during the year 1960/61 industrial production rose by 12.4 per cent which is a distinctly encouraging pointer and one which many older countries will envy. Agricultural production too was considerably increased.

Pakistan has been somewhat apprehensive about obtaining adequate aid for her current five year plan but a recent decision made in Washington by the western consortium steps to their contributions covering the second and third years of the plan by \$625,000,000. The Indus Basin Projects are now getting under way and a number of major contracts have recently been placed.

General

As you will have seen we are by no means without our problems but our overall chart shows we continue to grow. This also applies to our London business and I make no apology for drawing the attention of our shareholders and our overseas constituents to the various services which are available not only at Head Office but also at Parliament Street and St. James's Square.

The economy of this country continues to be balanced much too finely. The causes and problems involved have been fully commented on by other bankers whose institutions are affected more closely than is our own; but what does concern us are the possibilities of an economically unstable Britain and the repercussions on the countries in which we operate and on our own operations there. It is becoming increasingly evident that the countries more recently emerging into self-government tend to emphasise their independence not by stressing their association with Great Britain but rather by making other contacts, some regional, others geographically more widely spread. This is a natural and understandable phenomenon and how it affects Great Britain as a country and us as a Bank will depend

largely on how much or how little we as a nation can give these countries in financial and other kinds of assistance to enable them to gain their economic and political feet. The question of our entry into the Common Market is a part of this issue for many Commonwealth countries are a little apprehensive about not merely the economic but also the political consequences of our doing so. For that amongst other reasons it is important that we should know as soon as possible what are the terms on which it is open to Great Britain to join the European Common Market and so be able—I hope—to reassure doubting Commonwealth countries about their own future relations with us.

THE STATE BANK OF INDIA

CHAIRMAN REVIEWS PROGRESS

Speech of the Chairman, Shri P. C. Bhattacharyya, at the Seventh Annual General Meeting of the Shareholders held in Bombay.

Gentlemen,

I have much pleasure in welcoming you all to this Seventh Annual General Meeting of the State Bank of India. The Report of the Central Board of Directors including the Bank's Profit and Loss Account for the year 1961 together with the Bank's Balance Sheet as on 31st December, 1961 has already been circulated to you and has been taken as read.

Following the improvement in 1960, the traditional business of the Bank showed further progress during the year under review. Average advances were higher by about Rs. 50 crores. In India, the advances portfolio reached a peak at Rs. 276.97 crores compared to the peak of Rs. 215.67 crores in 1960. Also, the rise in the lending rates, effected as from October 1, 1960 pursuant to the Reserve Bank's directive had its full impact during the year. Nevertheless, the income from interest and discount showed a small reduction due to the decline in the investment portfolio, caused mainly by the transfer to the Reserve Bank of a further sum of Rs. 72 crores of the U.S.P.L. 480 funds.

It will be recalled that arrangements had been made for the transfer of these funds at Rs. 12 crores a month from July 1960 for one year. Simultaneously, there was also a reduction in the interest paid on deposits and the net position was in favour of the Bank.

Net Profit Rises

The net profit of the Bank, after making the usual and necessary provisions, increased from Rs. 218 crores in 1960 to Rs. 271 crores in 1961. This, I am sure, would be considered satisfactory. The increase in profits has enabled us to raise the appropriation to the Reserve Fund substantially—Rs. 75 lacs as compared to Rs. 25 lacs in 1960—as well as to declare a final dividend which, together with the interim dividend distributed during the year, amounts to Rs. 23.00 per share. The net dividend has been completely restored and even improved slightly. The higher appropriation to the Reserve Fund was necessary in order to comply with the request made by the Reserve Bank of India to adhere to the convention which is sought to be built up for strengthening the capital structure of commercial banks. The contribution to the Staff Welfare Fund has also been raised.

I had stated last year that the demand for bank credit was continually

rising and that there was need for making all out efforts to increase the deposits of banks. The experience of last year has confirmed this view. It gives some satisfaction to note that the stagnation which had been witnessed towards the latter part of 1960 soon disappeared and 1961 did show a rise in total deposits of all scheduled banks of about Rs. 169 crores excluding P.L. 480 deposits. This compares favourably with the previous good years. In our case too, the growth in normal deposits over the year was of the order of Rs. 38 crores, which, though somewhat less than in 1960, a year which was unusual, was better than in any of the earlier years. This rate of growth will, however, require to be considerably improved upon, if the banking system is to be geared to meet the demands made on it by the Third Five Year Plan. The Plan postulates that the banking system should not only be able to meet the increasing needs for financing trade and industry, but that it should also contribute to public borrowings to a substantial extent. This is not, however, happening in actual practice. In our case, the accretion to our normal deposits both in 1960 and 1961 had to be fully utilised for financing trade and industry. The same position, I believe, obtained with other banks. This is not

CAPITAL, 8th March, 1962.

wholly satisfactory. Not only might this affect the liquidity of the banking system in the future but the lack of the required support for the securities market would ultimately affect the development of the national economy adversely. It is necessary that the banking system should be able to invest a reasonable proportion of its additional deposits every year in new investments. The growth of deposits has therefore to exceed the increase in credit demands, if, as is so essential, the resources needed for financing industry, trade and commerce are not in any way to be curtailed. I would, therefore, emphasise again the need for the banking system to continue the drive for promoting banking habit in new areas and for generally increasing bank deposits with all the force at its command. Perhaps the situation demands a concerted effort to increase the deposits by all banks, in a co-operative manner. If this idea commends itself to other banks, we shall be happy to lend support to such a venture.

Interest Rates and Deposits

The question as to the extent to which an increase in interest rates leads to an increase in deposits is very much before the banks at this moment. In my speech last year, I had referred to the fact that, as an experimental measure, the rate of interest on savings bank deposits had been raised by us to see whether this would assist in attracting more deposits from rural and semi-urban areas. I am glad to report that this experiment has shown some good results. The accretion to savings bank deposits during 1961 was of the order

CAPITAL, 8th March, 1962.

of Rs. 8 crores, compared to Rs. 5 crores in 1960, and to an average of about Rs. 2 crores in the earlier years. There is, however, a limit to which deposits rates can be raised, as they have to be in line with the overall structure of interest rates in the country and also take account of the financial position of each individual bank. It is also obvious that a continuous increase in interest rates cannot go on resulting in an increasing growth in deposits. The truth, as usual, lies somewhere in between and just as it is necessary to experiment with interest rates, it is also necessary to try other possible measures such as, better customer service and wider coverage of depositors, if the desired growth in deposits is to be achieved.

One of the measures of customer service recently introduced by us has been referred to in the Annual Report. This is a special credit transfer system, which is intended to cater to certain personal needs of our customers in the lower and middle income groups. The scheme in its present form operates in a limited way. It would, of course, be reviewed in course of time to see how far its scope can be enlarged and whether it can be supplemented by other measures. The large branch expansion programme undertaken by us has already assisted in spreading the banking habit to some extent. We have now embarked on the Second Branch Expansion Programme. This should increase the coverage of our depositors still further. We have also, with the same end in view, made a beginning with the opening of additional suburban branches in big cities. These suburban branches would take the bank nearer to the homes of the people and enable the Bank to cater to well-knit, compact units of community at a more personal level. The existing congestion and pressure of work at the older branches would be eased at the same time resulting in better customer service at those offices as well.

Branch Expansion

The Annual Report refers to the recommendations of the Sub-Committee appointed last year under the Chairmanship of Professor D. G. Karve for determining the future branch expansion policy of the Bank as well as our Subsidiaries and details the decisions taken in pursuance thereof. It has been decided to take up the major part of the second branch expansion programme towards the latter part of the quinquennium ending June 30, 1965. This would enable us to consolidate the results of the first expansion programme as well as to recruit and train up, sufficiently early, the staff required for the second. We hope to avoid any strain on our staff resources in this manner.

The Annual Report also details the progress in respect of the other develop-

mental activities of the Bank, and it is unnecessary for me to recapitulate them here. Generally speaking, steady progress is being maintained in all fields. The credit advanced to small-scale industries has increased substantially and so has the assistance given to co-operative institutions. The working results of the Subsidiary banks have also shown further improvement in 1961. Their total deposits and advances have risen and their reserves have been strengthened. The State Bank of Mysore has declared a dividend of 10 per cent as compared to 9 per cent for 1960; the State Bank of Hyderabad and the State Bank of Travancore have maintained their dividends at 6 per cent and 5 per cent respectively; while the State Bank of Bikaner, the State Bank of Indore, the State Bank of Jaipur and the State Bank of Patiala which did not declare any dividends for 1960 have declared dividends of 6 per cent, 8 per cent, 6 per cent and 6 per cent respectively. In the case of the State Bank of Saurashtra no dividend was declared, as it was decided that its internal resources should be strengthened further before it started distribution of its profits.

You would have gathered from the Annual Report that we have established a Staff Training College at Hyderabad to impart training to the members of our Supervising Staff. The first course is already more than half-way through. We have designed the course in such a way that in addition to being trained in banking in the technical sense, the trainees will also receive instruction and guidance on a variety of subjects of general importance, by means of which they should in course of time turn out as bankers in the widest sense of the term. The College is at present housed in a rented building but planning for the construction of buildings of our own has been started. We have also put into operation a scheme for imparting to the new entrants in the clerical grade a short course of initiation and general training. In addition, as in the past, selected members of our staff are being sent for training at other institutions at home as well as abroad. I hope that all these steps will ultimately lead to an improvement in the quality of our staff and better service to our constituents.

Deposit Insurance Scheme

I would now refer to two important events that have occurred since the commencement of this year. Firstly, the Deposit Insurance Scheme has started functioning from the 1st of January this year. Originally, it had been decided that the deposits of the State Bank of India and its Subsidiaries would be excluded from the purview of the Scheme but that adequate contributions would be made by these banks to

the Scheme in the general interest of the banking system. Certain difficulties were encountered in implementing this decision and accordingly, the Scheme finally adopted covers our Bank as well as our Subsidiaries in the same manner as other commercial banks.

The other event of significance is the extension of our activities to Goa. Following the taking over of the administration of these territories by the Government of India, arrangements had to be made to meet the banking requirements of the Government and the population of these territories. We accordingly opened a branch of the Bank at Panjim, the capital of Goa, on January 2, 1962. We have since opened three more branches at Vasco-da-Gama, Margao and Mapuca and one in Daman. One of our officers has also been appointed to act as the Custodian for the purpose of taking over and administering the affairs of the branches of the Banco Nacional Ultramarino. The demand for these services came upon us all of a sudden and I am glad to say that we have been able to meet it with the utmost possible expedition.

The staff relations in the Bank have been generally good throughout the year. Our staff has continued to be active in organizing sports, social and cultural activities at the branches and the Local Head Offices. The Award of the Tribunal that had been set up to adjudicate on the staff demands is not yet out but is expected shortly.

Deposits and Advances

This is the last occasion when I have the privilege of addressing the shareholders, as I shall be laying down my office and handing over charge tomorrow. I trust, therefore, that you will bear with me if I make a brief reference to the development of the Bank during the period I have been associated with it. It was barely twenty months after the formation of the Bank on nationalisation of the erstwhile Imperial Bank of India, when I took over on the 1st of March, 1957. The experience and traditions inherited from the Imperial Bank no doubt played an important part in the smooth transformation. But I owe a great deal also to the parts played by my predecessors—Dr. John Mathai, who is unfortunately no longer with us, and Shri H. V. R. Iengat, his successor. The total deposits of the Bank in India then stood at Rs. 223 crores, having risen from Rs. 188 crores as at the inception of the Bank. Total deposits exclusive of the P.L. 480 funds now stand at Rs. 361 crores. The advances portfolio has also almost doubled itself and now stands at Rs. 272 crores. The form and content of the credit portfolio has also undergone a considerable change; it is now predominantly industrial, as advances to industry now comprise as high a proportion as 71 per

cent of the Bank's total advances as compared to 57 per cent in 1957. The services which the Bank is rendering to the private sector are illustrated by the fact that, of the total advances, about 92 per cent relate to this sector. The developmental activities also gathered good momentum during this period. There are now 959 offices of the Bank in India compared to 538 in December 1956 and 466 at the inception. This wide network of our offices is supplemented by 490 offices of the eight Subsidiaries which the Bank took over during the period. In addition, four minor State-associated banks were amalgamated. The Bank has thus grown from strength to strength. On the basis of deposits, the State Bank of India now ranks fifty-third, amongst the largest banks of what is called, the free world. It is my earnest hope that the Bank would continue to grow still stronger in times to come and discharge its obligations in all spheres, playing, as it has been, a major role in the development of the national economy.

All this has, of course, been possible only with the support and the wise counsel I have always received from the Directors on the Central Board as well as from Members of the Local Boards, and because of the team-work of the staff at all levels. I can but express my gratitude to the Directors and Members; in particular, I would like to thank Prof. D. G. Karve, the present Vice-Chairman, who is also relinquishing his office tomorrow, and the Managing Directors, especially Shri S. P. Puri who was associated with me for over four years and has only recently proceeded on leave preparatory to retirement. I must also thank all members of the staff at all levels for their co-operation, and, at the same time, congratulate them on the *esprit de corps* displayed. In the conquest of obstacles and the realisation of objectives, there is no alternative to hard work and single-mindedness. Much more has yet to be done to vouchsafe newer and wider horizons, and the need for hard work is at no time greater than during the coming phase of development not only of the Bank but of the country itself. I am sure, our staff will continue to strive and will meet the increasing demands that will be made on them in future with ingenuity and resourcefulness to achieve the objectives of this great institution.

Shri Venkatappaiah, who will be taking over from me tomorrow, is not new to the Bank, associated as he has been with us as a Director since its very inception. It gives me very great satisfaction that I shall be leaving this institution in his capable hands, and I am sure, he will receive full support and co-operation from all quarters.

Note: This does not purport to be a record of the proceedings of the Annual General Meeting.

THE STATE BANK OF INDIA—Cont'd.

REPORT OF THE AUDITORS

TO THE PRESIDENT OF INDIA.

We, the undersigned Auditors of the State Bank of India, appointed under Section 41(1) of the State Bank of India Act, 1955, do hereby report to the Central Government upon the Balance Sheet and Accounts of the Bank as at the 31st December, 1961.

We have examined the above Balance Sheet and the Profit and Loss Account and the Accounts relating thereto of the Central Office and the Local Head Offices at Bombay and Calcutta and the Returns submitted and certified by the Secretaries and Treasurers of the Local Head Offices at Madras and New Delhi, by the Manager, Pakistan Branches and by Branch Agents, which Returns have been incorporated in the above Balance Sheet and Accounts, and report (i) that in our opinion, the Balance Sheet is a full and fair one, containing all the necessary particulars and properly drawn up so as to exhibit a true and correct view of the affairs of the Bank, according to the best of our information and the explanations given to us and as shown by the Books of the Bank; (ii) that where we have called for any explanation or information such explanation and information have been given to us and have been satisfactory; (iii) that the transactions of the Bank which have come to our notice have been within the powers of the Bank; (iv) that the Returns received from the Local Head Offices at Madras and New Delhi and from the Branches of the Bank have been found adequate for the purpose of our audit; (v) that the Profit and Loss Account shows a true balance of profit for the period covered by such account; (vi) that, in our opinion the Balance Sheet and Profit and Loss Account are drawn up in conformity with the law; and (vii) that, in our opinion, Books of Account have been kept by the Bank as required by law.

The audit of the Books and Accounts of the Central Office has been carried out jointly by Messrs. S. B. Billimoria & Co. and Messrs. Ray & Ray. The audit of the Books and Accounts of the Local Head Offices has been carried out at Bombay by Messrs. S. B. Billimoria & Co. and at Calcutta by Messrs. Ray & Ray.

respective capacities have been obtained
and filed with the Registrar of Compa-
nies, Delhi and none of the said consents
has been withdrawn.

UNDERWRITING COMMISSION AND
BROKERAGE

In terms of the agreements arrived at
between the Company on the one hand
and the Underwriter on the other the
underwriters are entitled to an under-
writing commission of 2½% on the nomi-
nal value of the Capital underwritten by
them.

Brokerage at the rate of Re. 1/- per
Equity Share will be paid on all allot-
ments made in respect of applications
bearing the stamp of a Bank, a recog-
nised Broker, including the Brokers to
the issue. Brokerage on the same basis
is payable to the underwriters in addi-
tion to the Underwriting commission on
allotments in respect of applications
made or procured by them and bearing
their respective stamps.

OBJECTS OF THE COMPANY

The Company has been formed gene-
rally for the purposes set out in the
Memorandum of Association and, in
particular to manufacture barium com-
pounds and salts and the incidental by-
products.

COMMENCEMENT OF BUSINESS

The Company has obtained the Certi-
ficate dated 4.9.61 to commence business,
after filing a Statement in lieu of Pros-
pectus.

The Statutory Meeting of the Company
is convened on the 2nd March, 1962.

IMPORT OF MACHINERY

The Company is in possession of a
Cash Sterling Import Licence of the
value of £102,000 (Vide Import Licence
No. 991626/61 dated the 27th November,
1961) for the import of Machinery and
other Capital Equipment.

Firm orders for plant and machinery
required for the project have already
been placed with the foreign technical
collaborators and the necessary advance
and letters of credit for full value both
in Sterling and in Rupees have been
established in favour of the collaborators.
It is expected that the complete delivery
of the plant and machinery will take place
from nine to twelve months from now.

TECHNICAL COLLABORATION AGREEMENT AND PLANT AND MACHINERY

The Company has entered into a Tech-
nical Collaboration and Plant Supply
Agreement with L. A. Mitchell Limited,
Manchester (U.K.). Under this agree-
ment they have inter alia:

Guaranteed capacity and performance
of the Plant and Machinery.

Guaranteed the quality of the chemi-
cals produced to B. S. Standards.

Agreed to provide plant management
and staff training for a period of 18
months.

The Project is the first of its kind
in India. The plant as envisaged is ex-
pected to produce 4,550 tons of Barium
Salts & Compounds like Blanc fixe
(Pigment quality), Barium Chloride
(Tech quality), Barium Chloride (B. P.
quality), Barium Sulphate (B. P. qua-
lity), Barium Nitrate, Barium Carbonate,
Barium Hydroxide, etc. Further, for the
first time in India, 600 tons of superior
grade Sulphur will be recovered annu-
ally as by-product. The plant has addi-
tional capacity for 1,800 tons of Barium
Sulphate. Production cost of Barium
Sulphide, Barium Carbonate and Sul-
phide is expected to be amongst the
cheapest in the world. Consequently,
the Company is expected to be in a po-
sition to compete in the world market
for the sale of Barium Sulphide and
Barium Carbonate. These products are
utilised in the manufacture of Caustic
Soda, Paints, Glass and Ceramics. Phar-
maceuticals, Chemical Industries and
number of other Industries and also in

the manufacture of Ammunition and
Explosives.

The production is expected to replace
the present imports and the annual
foreign exchange saving and earning of
this project to the country will be about
£3,00,000/-.

The Company will also enjoy the Tax
benefits applicable to new industrial
undertakings.

MINIMUM SUBSCRIPTION

The minimum subscription in respect
of the present public issue on which the
Directors will proceed to allot is
Rs. 40,00,000. This is the total amount
of the present issue offered to the pub-
lic. Subscription of the amount is as-
sured, as the entire public issue has been
underwritten.

PRELIMINARY EXPENSES AND
EXPENSES OF ISSUE

The Preliminary Expenses incurred by
the Promoter, Sri P. N. Balasubrama-
nian, in respect of the procurement of
the Industrial Licence, Import Licence,
investigation of the project and registra-
tion of the Company, etc. amounted to
Rs. 1,50,000/- which amount has been
reimbursed to him by the Company.

The estimated amount of expenses of
this issue including underwriting com-
mission and brokerage is Rs. 1,75,000/-,
the same are payable by the Company.

CAPITAL OUTLAY

The capital required by the Company to reach the stage of production is
estimated as follows:—

Payment to L. A. Mitchell Limited, Manchester for supply
of Plant, Equipment, Erection, Technical Know-how,
Collaboration, Plant Management and Staff Training,
etc. set out in the contract dated the 12th October, 1961

Land, Development of Land, Buildings, other Civil Engi-
neering Works, etc. extra equipment and provision for
increase in process, duty, transport, etc.

Pre-Incorporation and Preliminary expenses

Expenses of this Issue:

Underwriting Commission Rs. 1,00,000

Brokerage Rs. 40,000

Other expenses Rs. 35,000

Working Capital Rs. 1,75,000

Total Rs. 53,60,000

Source of Funds:

Equity Shares Rs. 50,00,000

Borrowing from Banks, other sources, etc. Rs. 3,60,000

Total Rs. 53,60,000

AUDITORS' REPORT

The following is a copy of the Report
of the Company's Auditors, V. Sankar
Aiyar & Co., Chartered Accountants.
They have given their consent to the
issue of the Prospectus with the state-
ment included in the form and in the
context in which it is included. They
have not withdrawn such consent before
the delivery of the copy of the Prospec-
tus for Registration.

V. SANKAR AIYAR & CO.,
Chartered Accountants,
Scindia House,
New Delhi.
D/29th January, 1962.

The Barium Chemicals Limited,
186, Golf Links,
New Delhi-3.

Dear Sirs,
In accordance with the provisions of
Clause 24 of Part II of Schedule II of

the Companies Act, 1956, we report that
no accounts of the Barium Chemicals
Ltd. have been made up in respect of
any period since the incorporation of the
Company.

Yours faithfully,

(Sd/ V. Sankar Aiyar & Co.)
MANAGING DIRECTOR

Sri P. N. Balasubramanian has been
appointed as the Managing Director of
the Company under the Articles of Asso-
ciation. The appointment has been ap-
proved by the Central Government by
its letter dated the 5th December, 1961.
The Managing Director will be entitled
to a remuneration of 3% of the net pro-
fits of the Company. The Central Gov-
ernment has stated that the proposal of
paying a minimum remuneration of
Rs. 50,000/- per annum to him in the
event of absence or inadequacy of pro-
fits, may be submitted to them after the
present issue.

NATURE AND EXTENT OF
DIRECTORS' INTEREST

Sri P. N. Balasubramanian being a
Promoter and Managing Director of the
Company is interested in the reimburse-
ment of preliminary expenses and the
remuneration and sitting fees payable
to him as Managing Director.

The Directors other than the Managing
Director are interested to the extent of
the commission of 3% of the net profits

of the Company, which will become pay-
able to them on the special resolution
being passed at the Extra-ordinary Gen-
eral Meeting and the same being approv-
ed by the Central Government. Each of
the Directors is also interested to the
extent of the Shares subscribed, allotted,
or to be allotted to him in the Company
as also in the sitting fees receivable for
attending Board Meetings or Committee
Meetings.

Sri S. B. Bilimoria, a Director, is a
partner in the firm of Battivala &
Karani and is therefore interested in the
underwriting commission and brokerage
payable to them.

No payment has been made or is pro-
posed to be made to the promoters of the
Company except reimbursement of the
preliminary expenses incurred by Sri P.
N. Balasubramanian. No profits or bene-
fits have been given to any person or
promoters of the Company.

AUTOMOBILES KEEP ROLLING LONGER AT LESS COST ON **TIMKEN** REGISTERED TRADE MARK tapered roller bearings

SINCE Wherever wheels and shafts turn, there is a fight against friction. **1899** Helping you win this battle are Timken tapered roller bearings. They practically eliminate friction. Not just in cars, but in trucks, farm equipment, plant machinery—in almost every kind of machine in the world. ■ Timken Company engineers have been working since 1899 in partnership with engineers the world over. Their object is to help design machines that run smoother, run longer, run with less maintenance and cost less. ■ It's the high quality of Timken bearings that delivers this kind of performance. They're precision manufactured of nickel-rich steel and case-hardened to make them resist wear and take shock loads. Quality control from start to finish assures uniform performance. Bring your bearing application problems to the men who proved the tapered roller bearing design. The Timken Roller Bearing Company, Canton, Ohio, U.S.A. Cable: "TIMROSCO". Timken bearings manufactured in Australia, Brazil, Canada, England, France and U.S.A.

Money

THE CALCUTTA MONEY MARKET

CALL FUNDS TIGHTER

Wednesday, 7th March.

THE seasonal increase in advances has been resumed in the Calcutta money market during the past week. Most of the main sources of demand show increases, including the jute and sugar mills, and the engineering and iron and steel industries. The requirements of the cotton mills and call for accommodation against food-grains and seeds storage remain about the same. In the interbank market, conditions are tighter and the call rate has risen to 5 percent.

Conditions in the exchange market have turned dull due to a sharp drop in the supply of tea and gunny bills. Remittance demand has been keen throughout. In the London exchange market, the pound has been strong against all major currencies with the exception of the Danish kroner.

crores to Rs. 160.75 crores, of which advances to scheduled banks against usance bills amounted to Rs. 27.50 crores (Rs. 21.27 crores). Ways and means advances stood at Rs. 67.91 crores, against Rs. 66.65 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 23rd February, 1962, shows a rise of Rs. 3.76 crores to Rs. 556.88 crores in total deposits. Investments in Government securities are up by Rs. 5.04 crores to Rs. 235.21 crores, while other authorised investments remain unchanged at Rs. 9.23 crores. Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have declined by Rs. 2.55 crores to Rs. 280.90 crores. Cash and balances are, in consequence, shown at Rs. 27.34 crores, or Rs. 3.93 crores higher.

BULLION WAS STEADY IN THE PAST week due to the increased seasonal demand. Silver rose from the previous week's level of Rs. 250 to Rs. 252.75, quoted today for ready delivery, and the rate for forward delivery was quoted at Rs. 214. The London and New York prices were 85½ and 101.50 cents.

Gold also rose from Rs. 144 to Rs. 145. The sovereign was 25nP higher at Rs. 99.25.

DURING THE WEEK ENDED 2ND March, Government of India Treasury bills for Rs. 34,63,50,000 were sold in favour of the Reserve Bank.

TENDERS FOR RS. 2 CRORES OF 91-day Government of India Treasury bills were opened on 6th March. The total amount offered was Rs. 2 crores. Tenders at Rs. 99.350 percent and above were accepted in full. The total amount accepted was Rs. 2 crores, the average rate of acceptance being Rs. 2.585 percent a year. Tenders for Rs. 2 crores of 91-day Government of India Treasury bills will be received at all centres up to the close of business on 12th March.

IT IS STATED THAT 91-DAY INTER-mediate Treasury bills will be sold from 7th March to 10th March at Rs. 99.371 percent, subject to the conditions previously announced that sales can be stopped at any time without notice if the Government thinks it necessary. These bills sold from 28th February to 3rd March amounted to Rs. 3 lakhs only.

THERE WAS A RISE OF RS. 12.91 CRORES to Rs. 2,040.35 crores in active notes, according to the return of the Reserve Bank of India for the week ended 2nd March, 1962, while the total note issue was Rs. 1.42 crores smaller at Rs. 2,051.82 crores. Notes held in the Banking Department consequently fell by Rs. 14.33 crores to Rs. 11.49 crores. Deposits of the Central Government rose by Rs. 1.08 crores to Rs. 53.78 crores but other Government accounts declined by Rs. 92 lakhs to Rs. 10.28 crores. Balances of commercial banks at Rs. 76.73 crores showed a decline of Rs. 4.37 crores. Balances held abroad decreased by Rs. 1.10 crores to Rs. 10.86 crores. Investments at Rs. 193.93 crores showed a fall of Rs. 70 lakhs. Other loans and advances declined from Rs. 167.72

THE STATEMENT OF THE POSITION of scheduled banks for the week ended 23rd February, 1962, shows Demand and Time liabilities at Rs. 868.06 crores (Rs. 20.55 crores on account of borrowings from banks) and Rs. 1,184.66 crores (Rs. 17.29 crores), compared with Rs. 862.63 crores (Rs. 20.25 crores) and Rs. 1,178.07 crores (Rs. 13.86 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 43 lakhs and Rs. 1.25 crores to Rs. 48.42 crores and Rs. 75.11 crores. There is a rise of Rs. 5.60 crores to Rs. 587.40 crores in investments. Advances and bills discounted at Rs. 1,363.40 crores show an increase of Rs. 2.44 crores. The ratios to total of advances and discounts are, in consequence, shown at 6 percent and 66.4 percent, against 6 percent and 66.7 percent.

THE DIRECTORS OF NATIONAL AND Grindlays' Bank Ltd have recommended a final dividend for the year ended December 1961, at 7 percent, less income tax at 7s 9d in the £, payable on 5th April, 1962.

Turnover in Government securities has been limited, because institutional support has been virtually negligible. During the next few weeks, banks are not expected to take much interest, because their funds are being fully employed in trade and commerce. Prices of short and medium-dated stocks have been maintained. The 3 percent Conversion loan 1986 is quoted around Rs. 71.

Messrs Tata Industries Private Ltd., managing agents for the Tata Iron and Steel Company Ltd., report that the approximate production of iron and steel at the steel works in Jamshedpur during February 1963 was: iron 139,400 tons; steel ingots 138,300 tons; semi-finished steel for

S&L make it

S & L undertake fabrication and installation of the pipe-work, as well as the design work entailed in the engineering of the piping system. Our years of experience gained on projects so far completed in India, plus the extra attention that has made S & L so well-known for quality and dependability, assures you of complete satisfaction.

Bombay Market

RATES FALL ON BULL LIQUIDATION

HESITANT MOOD AT THE CLOSE

Wednesday Evening.

THE Bombay stock market closed in a hesitant mood. Earlier during the past week, share prices declined on tired bull liquidation. The uncertainty concerning the choice of Ministers of the new Central Cabinet called for caution. Reports of an Army coup in Burma induced short-selling, and Bombay-Burmah were particularly affected. Later, sentiment improved and share prices rose on replacement buying due to the decision of some companies to issue rights or bonus shares. At the close, sentiment again weakened on a Press report that Mr. T. T. Krishnamachari had indicated his support for the nationalisation of more industries.

Tata Steel closed at Rs. 139 and Indian Iron weakened to Rs. 24.76 on pressure from Lyons Range. Among engineering shares, Alcock Ashdown were steady at Rs. 333 on issuing rights shares. Premier Construction were bought at Rs. 192 and Tata Locomotive at Rs. 355. Mukand Iron lost at Rs. 27.50 on profit-taking. Larsen and Toubro came to hand at Rs. 42 and Mahindra and Mahindra were steady at Rs. 22.24 on paying a higher dividend. Motor-vehicle shares were quiet, and Premier Automobiles fell to Rs. 134.50. Hindustan Motors were quietly steady at Rs. 20.76.

Cotton mill shares turned hesitant at the close as the dividends declared by the Mafatlal group of mills did not come up to market expectations. Investors were getting worried about the shortage of cotton. Century closed at Rs. 618 and Bombay Dyeing at Rs. 70.20. Standard declined to Rs. 1,068 due to disappointment over the dividend. Kohinoor were lower at Rs. 314, as were Simplex at Rs. 171.50. India United ordinary improved to Rs. 21.04 at the close due to influential support. Swadeshi were done at Rs. 297, but Apollo were sold freely down to Rs. 2.28. Business passed in Tata Mills at Rs. 78.50 and in Morarjee at Rs. 425. Shree Niwas came to hand at Rs. 317.

In the miscellaneous section, sugar shares were quiet, and Belapur were available at Rs. 236. Phalton were offered freely down to Rs. 119 and Walchandnagar Industries were transacted at Rs. 158. Cement shares were steady, and Associated Cement were bought at Rs. 153. Digvijay improved to Rs. 204 on dividend prospects. Mining shares were quiet, and business passed in Shivrajpur Syndicate at Rs. 40.50. Sellers predominated in steamship company shares and Scindia Steam were sold at Rs. 12.28. Great Eastern Shipping were taken at Rs. 12.56. After an earlier decline, Bombay-Burmah recovered to Rs. 641 on short-covering. Rayon shares were quietly steady, and National Rayon were transacted at Rs. 540. Gwalior Rayon were dealt in at Rs. 54 and Baroda Rayon at Rs. 151.50. Chemical shares were steady, and Tata Chemical were wanted at Rs. 18.52. Indian Dyestuff were bought at Rs. 545 and Polychem were transacted at Rs. 230. West Coast Paper rose to Rs. 182 on reports of improved results during the current year. Cent Tyre weakened to Rs. 207.50, but Synthetics and Chemicals were supported up to Rs. 221. Voltas were weaker

at Rs. 284 on disappointment that the Company would not issue rights shares for the time being. Tata Oil were steady at Rs. 83.50 and Wimco were dealt in at Rs. 313.50.

Bank shares were firm, and Bank of India rose to Rs. 152 on prospects of a rights issue. Bank of Baroda gained at Rs. 122 on producing satisfactory results. Dena Bank were steady at Rs. 74 and Central Bank were wanted up to Rs. 72. Insurance shares were quiet, and British India General declined to Rs. 11.75. New India Assurance were done at Rs. 59.70.

Electric company shares met with scattered interest, and Tata Hydro were steady at Rs. 112.50. Tata Power were placed at Rs. 1,143.75 and Ahmedabad were done at Rs. 94. Bombay Suburban were transacted at Rs. 103.25.

Madras Market

TURNOVER DECLINES SHARPLY

SHORTAGE OF FUNDS CAUSES CONCERN

Tuesday Evening.

LISTLESS conditions prevailed in the Madras stock market during the past week. Turnover declined sharply. Operators were worried about the growing shortage of funds. Considerable sums were being diverted to new issues. The decision of some banks to increase lending rates dampened enthusiasm. Support from outside centres declined considerably.

Business in Government securities was small and fluctuations were narrow. Selected bank shares were supported on prospects of rights issues. Investment buying was forthcoming for good electric shares. Sugar shares met with scattered support after a long interval due to the declaration of satisfactory dividends. Planting shares lacked interest, with sellers predominating at lower prices. Textile shares were quietly steady on the prospect of dividends. In the miscellaneous section, chemical shares were fancied on expansion prospects.

Among bank shares, Indian were dealt in at Rs. 179 and Indian Overseas at Rs. 182. State Bank of Mysore were transacted at Rs. 154 and Canara Industrial and Banking Syndicate were placed at Rs. 185.50. Among electric company shares, Kumbakonam were steady at Rs. 11.50 and Salem-Erode at Rs. 15.25. South Madras were bought at Rs. 10.12 and Vellore at Rs. 15.35.

In the sugar section, Deccan recovered to Rs. 10 on declaring a taxable interim dividend of 7½ percent. E.I.D. hardened to Rs. 37 on replacement buying, and India came to hand at Rs. 10.30 on paying a taxable ordinary dividend of 10 percent. Business passed in Mysore at Rs. 53.40 and in United Breweries at Rs. 82.25.

In the planting section, Blue Mountain were quiet at Rs. 2.60 and Cochín Malabar were dealt in at Rs. 7.27 on paying an interim taxable ordinary dividend of 9 percent. Consolidated Coffee weakened to Rs. 17.77 and Coffee Lands to Rs. 14.75. Ouchterlony were sold freely at Rs. 3.93 and Periakaramalai at Rs. 3.30. Nonsuch came to hand at Rs. 22.75 on declaring an interim taxable ordinary dividend of 10 percent. Thirumbadi were steady at Rs. 1.70 on declaring a taxable ordinary dividend of 15 percent. Kil Kotagiri were steady at Rs. 5.15 and Malankara at Rs. 16.90. Parkside

were dealt in at Rs. 23, but Peermade were easier at Rs. 20.50. Rajendra shares were sold at Rs. 11.12 and Rajagiri at Rs. 18.94.

Among textile shares, Cannanore were firm at Rs. 160 on issuing 15,000 ordinary rights shares at a premium of Rs. 5 a share. Rayalaseema rose to Rs. 174 on issuing 7,446 bonus shares. Bangalore Woollen were steady at Rs. 245 and Buckingham at Rs. 262 on dividend prospects. Anglo-French were wanted at Rs. 141 and Balarama Varma were steady at Rs. 120. Kadri were supported up to Rs. 140 and Kothari were steady at Rs. 13.20. Lakshmi were done at Rs. 170 and Madura at Rs. 40.65 on producing good results. Mettur were indicated at Rs. 396 and Radhakrishna at Rs. 39.35. Rangavilas came to hand at Rs. 52 and South India Viscose met with support at Rs. 189.50. Travancore Rayon were quoted at Rs. 43.60 and Vasanta at Rs. 310.

In the miscellaneous section, Aluminium Industries were steady at Rs. 24.30 and Ashok Leyland at Rs. 9.35. Dalmia Cement improved to Rs. 13.30, but F.A.C.T. were easier at Rs. 8.05. India Cement improved to Rs. 6 and Madras Rubber to Rs. 20.62. Kirloskar Electric were supported up to Rs. 19.50 and business passed in Enfield at Rs. 124.5. Madras Aluminium were steady at Rs. 22.50 and Mettur Chemical were firm at Rs. 13.25 on declaring an interim taxable ordinary dividend of 7.50 percent. Travancore Ogale were transacted at Rs. 6.10 on paying a taxable ordinary dividend of 7 percent. Parry's Confectionery rose to Rs. 4.53 and Seshasayee Paper to Rs. 8.72. Spencer were steady at Rs. 24.25 on producing satisfactory results and Standard Motors were placed at Rs. 16.75. Tube Investment came to hand at Rs. 286 and Textool were indicated at Rs. 187.

Stricter Watch on Industrial Licensing Ordered

(FROM OUR NEW DELHI CORRESPONDENT)

AUTHENTIC figures are now available of the total amount of foreign exchange involved in the industrial licences which were granted during the first nine months of the third five year plan, that is, during the period ended December 1961. The figure is Rs. 400 crores, while the total foreign exchange allocation for the entire five years is Rs. 450 crores. Of the licences issued, a certain number involving Rs. 190 crores in foreign exchange were cleared by the Capital Goods Committee during this period. Of this, a sum of Rs. 50 crores to Rs. 60 crores was directly negotiated out of foreign credits, such as the D.L.F. loans, Swiss aid, etcetera. There has obviously been excessive licensing, planned or otherwise, in the case of chemicals, forgings and castings, and man-made fibres.

The Central Ministry of Commerce and Industry is deliberately planning for another foreign exchange crisis. Originally, it had a system of issuing "provisional" industrial licences, which were valid only after they had been cleared by the Capital Goods Committee. Even now, there is a list of "banned" industries, for which the targeted capacity has already been exhausted. But this list is revised every six months.

Explanation by Ministry

The Ministry claims that it has a case for what it is doing. First, no foreign collaborator is prepared to discuss terms with an Indian party unless the latter has an industrial licence. Although, on paper, licences involving Rs. 400 crores worth of foreign exchange have been issued, experience has shown that many of the licences do not materialise, the party concerned failing to get a foreign collaborator or facilities such as power and land. Then again, all these licences are issued on the condition that the terms of collaboration with a foreign firm are subject to the Government's approval. It may, however, be argued that, in some cases, there may not be a foreign collaborator at all. If this hurdle is successfully crossed or does not exist, the Ministry points out, there is the Capital Goods Committee, which alone can approve the grant of an import licence for plant and machinery. Also, the proposed undertaking, if it needs capital, will have to get the approval of the Controller of Capital Issues to raise the necessary finance.

It may be argued that the capital needed for a particular undertaking may not be big enough to require the sanction of the Controller of Capital Issues. It can be said that there are hundreds of industries which do not require any scrutiny by the Licensing Committee. It is also possible that an industrial licence may be only an export-oriented licence, the licensee earning the entire foreign exchange outlay by exports. In another case, there may be foreign participation in the equity capital, requiring no direct foreign exchange outlay. There is yet another side to the problem—the power shortages. One explanation of the Department of Fuel and Power for the present power shortages, for example, has been that effective planning and implementation of schemes was not undertaken during the early stages

of the second five year plan. It is primarily for this reason that the third plan target for power is being raised. The Ministry of Power is already busy drawing up plans for the next quinquennium. Then again, with the approval of the Planning Commission, the target for cement production has been raised. Yet in spite of this increased target, the Planning Commission itself admits that cement will be in short supply by 1 million tons in 1962-63.

It will be thus seen that the grant of a licence does not by itself ensure the creation of sanctioned capacity. Every industrial licence implies a great deal of planning, and the licensed capacity may not materialise even by 1966, or may not involve any foreign exchange expenditure. Although there is no intention to stop further licensing, the Government is determined to fit its licensing policy into the structure of the plan targets. It is equally determined to ensure the balanced utilisation of foreign exchange resources. The Central Ministry of Commerce and Industry, Mr. K. C. Reddy, has issued a directive that every licence approved by the Licensing Committee should be submitted to him for sanction before it is issued to the licensee. The terms of foreign collaboration and the decisions of the Capital Goods Committee are similarly subject to his approval.

Power Projects in Third Plan

About 7.38 million kilowatts of additional electric power—about 390,000 kilowatts more than the third plan target—is expected to be available in India by 1965-66. This is the result of a review of power schemes included in the third plan, which was undertaken by a team of senior officers set up by the Centre. The team consisted of Mr. P. P. Agarwal, Joint Secretary, Central Ministry of Irrigation, Mr. K. P. S. Nair, Minister of Power, Mr. K. P. S. Nair, Member (Hydro-electric), Central Water and Power Commission, and Mr. Balwant Singh Nag, Adviser (Irrigation), Planning Commission.

The appraisal by the team of annual benefits from the power schemes included in the third plan along with the targets (in million kW), is as follows:

Year	Third plan target	Appraisal by the team
1961-62	0.60	0.678
1962-63	0.73	0.711
1963-64	1.05	0.887
1964-65	2.07	1.989
1965-66	2.54	3.116

The team has suggested that a realistic schedule of all types of works for power projects included in the third plan should be drawn up by the States. Further, the States should undertake a periodic review of their progress with a view to discovering and removing any bottlenecks in implementing them.

The States have also been requested to complete, as early as possible, detailed investigations of projects—hydro-electric and thermal—to be taken up in the fourth plan. The team has mentioned some of the important factors delaying the programme of power development, and how these could be removed.

In view of the size of the power plan to be implemented, and having regard to the dependence of the project authorities on the Centre for co-ordination in the supply of steel, cement, coal, foreign exchange and import licences, as well as for assistance in the timely procurement of equipment from indigenous sources, it is proposed to undertake such periodical reviews in future as well. The third five year plan states that the "power shortage in different regions cannot be mitigated unless a strict watch is kept on the progress of the schemes, and every effort made to shorten the period of construction". In line with these observations, it was felt that arrangements should be made for a periodic review of power schemes.

In August 1961, a team of officers was formed, who, in the first instance, collected detailed information concerning the projects. This information related to the various stages of completion of the projects, the phasing of expenditure including foreign exchange expenditure; target dates of commencement and the completion of works, the drawing up of a priority list of component works concerning the issue of specifications, placing of orders, delivery schedules, etcetera. Later, the team visited all State headquarters, and held detailed discussions with the State authorities on the power projects included in the third plan.

Foreign Aid Prospects

The May meeting of the Aid-India Club will again not be a money-raising meeting, it is learnt here. It will largely be engaged in discussing the report of the World Bank's economic mission, which is arriving here this week. The representatives of the member-countries will report to their principals to enable them to determine the volume of aid they should be prepared to offer to India for the last three years of the third plan. Another meeting of the consortium will be convened later in the year to determine the aid for the remaining period of the plan.

Opinion is growing here that some Ministries have been frittering away foreign aid. The Swedish offer of 10,000 tons of printing paper, to be channelled through U.N.E.S.C.O. for books, is a case in point. The money could be more usefully used on other more pressing projects. Sweden has also indicated its intention to finance the setting up of a technical training centre for the paper-making industry. For reasons still undisclosed, the Government of India wants to locate this centre in Allahabad, while the suitable site in Uttar Pradesh should be in Saharanpur, where there is a paper mill using wood as raw material. The Ministry of Industry is planning to set up the heavy structural and vessels plate project in Wardha, which offers no worthwhile advantages of location.

Team from Montecatini

A three-man team from Montecatini is arriving here this week to discuss the terms of collaboration with Indian firms for the manufacture of explosives, polypropylene, and polystyrene and the development of titanium in Travancore. Earlier, the U.S. firm of du Pont had shown interest pri-

marily in the manufacture of explosives and also in man-made fibres.

Structural Steelwork Output

The production target for the steel structural industry during the third plan is as follows:

Present installed capacity	Projected capacity	Production target at the end of third five year plan
tons 400,000 150,000 (Actual 1960)	tons 700,000	tons 900,000

Structural steelwork can be broadly classified into three groups, namely, light, medium and heavy, as illustrated below:

Light: These are represented by tea garden factories, tank stagings, roof trusses, single beam columns, building, steelworks, light factory building and a few items of machinery requiring simple design and fabrication. This category of steelwork covers approximately 50 percent of the total demand.

Medium: These are represented by factory buildings, rail and road bridges up to 100 feet span, overhead travelling cranes, wharf cranes, sluice gates, and transmission towers. Works are well equipped with overhead travelling cranes. Good design and fabrication is necessary. This category of steelwork covers approximately 35 percent of the total demand.

Heavy: These are represented by large factory buildings, melting and bessemer shops of steel plants, large span road and rail bridges, large capacity cranes for workshops and cranes for steelworks. Works are well equipped with overhead travelling cranes and some special machinery. First-class design and fabrication is necessary. This category of steelwork covers approximately 15 percent of the total demand.

At present, there are 154 firms licensed to fabricate steel structural in the following categories:

Light steelwork	104
Medium steelwork	30
Heavy steelwork	20

In addition, a further 72 firms have been licensed; but these have not yet come into production. There is, therefore, licensed capacity available for the manufacture of medium and heavy structural, and to meet the target requirement of 900,000 tons a year (namely, Rs. 100 crores, in terms of value, approximately at the rate of Rs. 1,200 a ton). Capital goods requirements for the balance capacity of 500,000 tons which is to be installed during the third plan period, will be as follows (at the rate of Rs. 40 lakhs for every 12,000 tons of capacity):

(1) Major machinery required during the five-year period	Rs. 16 crores.
(2) Replacement-maintenance requirements of existing firms at Rs. 30 lakhs a year	Rs. 3 crores.

There is, however, an urgent need for setting up additional capacity for the fabrication of heavy steelwork required for the extensions to the three steel plants in Rourkela, Bhilai and Durgapur, the foundry-forge plant in Ranchi, railway bridges, etcetera, as the capacity of the existing firms who undertake such work is now fully booked for the next 18 to 20 months. The major problem in setting up new capacity for structural steelwork fabrication will be the shortage of skilled workmen and technicians.

Cranes: At present, there are seven firms manufacturing workshop

duty cranes, Goliath cranes and dock-side cranes, in addition to the fabrication of structural steelwork. The total annual production of these firms is approximately 3,000 tons (valued at Rs. 1.5 crores at the rate of Rs. 5,000 a ton). The indigenous components in these cranes are approximately 70 percent to 90 percent. Steelworks duty cranes of a capacity greater than 50 tons are not yet manufactured in the country. Hence there is plenty of scope for the manufacture of various types of cranes required for steelworks.

Although the installed capacity is 12,000 tons a year, production is hardly 3,000 tons, due to the non-availability of requisite steel sections and imported components. The third plan target is 50,000 tons a year (valued at Rs. 30 crores roughly). The capital goods requirements for this additional capacity could also be taken at the rate of Rs. 40 lakhs for every 12,000 tons of capacity and the same will come to about Rs. 1.6 crores. The maintenance requirements will be about Rs. 50 lakhs (at the rate of Rs. 1 lakh a year). The need for new units for manufacturing cranes coming into production at an early date is very great, as the demand greatly exceeds the capacity of existing manufacturers. This Committee recommends that the I.S.I. issue a standard specification for e.o.t. cranes at an early date.

Rolling Stock Output

This industry consists of railway coaches and wagons (namely, four-wheelers and eight-wheelers). The manufacture of these could be in one of the three gauges, namely, (i) broad gauge, (ii) meter gauge and (iii) narrow gauge. Elaborate designs, manufacturing and testing facilities are necessary for the complete manufacture of all components required for railway coaches and wagons in the private as well as public sectors. Enough capacity has already been licensed (which also includes the capacity which might become infructuous due to various reasons) and no additional units are required for rolling stock manufacture. At present, the imported materials required for the manufacture of rolling stock are: (i) ball-roller bearings; (ii) wheel and axle sets; (iii) tool and alloy steel; and (iv) electrical equipment for electric multiple unit coaches. The import of rolling stock has been banned for the past few years.

The total installed capacity at present is 33,000 coaches a year in terms of four-wheelers, which comes to approximately 264,000 tons a year, and this is also the target capacity by 1965-66. The actual production is, however, low due to the shortage of steel plates and sections. The annual maintenance machinery requirement of this industry is approximately Rs. 2.5 crores during the third plan period (at the rate of Rs. 50 lakhs a year).

Making Coal Washeries

Most of the work for the coal washeries can be undertaken by the structural firms; hence separate capacity for this manufacture has not been indicated. The existing and projected structural manufacturers (within the overall capacity of 900,000 tons a year) will be able to meet the requirements for coal washeries in the country. The main items of coal washeries consist of different types and sizes of conveyors, bins and bunkers, classifying screens, breakers and crushers, washing jigs, gravity separation apparatus, filters, pumps and piping, compressors and vacuum pumps, electrical or other power units, control devices, car haul, retarders and tipplers.

At present, there are two firms which are licensed for the manufacture of coal washeries in collaboration with foreign manufacturers.

There is thus further scope for other structural manufacturers to come into the manufacture of this item, provided individual design is made available. To be able to achieve a proper classification of coal, an accurate analysis of the coal to be dealt with would be as much a necessity as a careful lay-out design to include the equipment for coal washeries mentioned in the preceding paragraph. Obviously, the lay-out design would require proper investigation and experience and if these were made available, the large number of mechanical and structural fabricators in the country could undertake to produce various standardised items of the equipment. Very considerable skill and capacity for the manufacture of a varied type of industrial equipment are fortunately existent in the country, and it would be to the benefit of the country and the coal mining industry, if a suitable organisation is developed to design plant lay-out for coal washeries such as may be considered suitable for coal mined from different areas.

It is, therefore, suggested that a central design organisation for the manufacture of coal washeries should be established under the National Coal Development Corporation, Ranchi, and the Fuel Research Institute, Dhanbad, along with leading structural manufacturers, in order to undertake the design and manufacturing work. Detailed drawings will of course be done by the leading structural manufacturers. The total machinery requirements for the above four industries during the third five year plan would be as follows:

	C.G. required Rs. crores	Maintenance C.G. Rs. crores
A structural and		
D coal washeries	16.00	3.00
B crane	1.6	0.5
C rolling stock	—	2.5
Total	17.6	6.0

Misuse of Wagons

How the wagons supplied to the collieries under the management of the National Coal Development Corporation were not properly used and the resultant waste of public money is furnished by an "authentic source", which reports: "It is said that since its inception from 1956 to now, over 48,000 wagons have been either detained, kept behind for loading, etcetera, at the Corporation's collieries for which it had to pay about Rs. 10 lakhs to the Railways in the shape of penalty detention charges, etcetera. Although the Railways could not spare empties according to indents made by the Corporation's seven collieries, yet they failed fully to utilise the allotted wagons for actual loading. In the month of June, the indents were for 678 wagons, against which the Railways could supply 579 wagons, but collieries were able to load only 483. The average comes to about 63 wagons, detained daily over the specified period. In July, the position had not improved. Figures available up to 26th July, show that 80 wagons, on a daily average, were not loaded in time and detained. It shows that indents were for 542 wagons, against which 460 wagons were allotted, but were not fully utilised. The source shows that during June alone, Saunda Colliery detained 536 wagons, Giddi 448, Kathara 281, Saya 272, Bhurkunda 190, Bachhra 162 and Argada five wagons."

Textile Exports Decline

Mill-made cotton piecegoods exports during the period January-

September 1961, compared with the corresponding period of 1960, show a steep fall as will be seen from the following figures:

Period	Quantity (million yards)
January-September 1960	518.70
January-September 1961	423.07

Mill-made cloth exports for the whole of 1961 from Bombay port amounted to 522.61 million yards. On this basis, mill-made cotton piecegoods exports from all ports of India during the year may not exceed 574.87 million yards, compared with 694.83 million yards in 1960.

Cotton yarn exports also declined as will be seen from the following:

Period	Quantity (million lbs)
January-September 1960	10.52
January-September 1961	9.95

Indian cotton yarn exports by value during the period January-November 1961 totalled Rs. 28.78 million, compared with Rs. 33.71 million for the corresponding period of 1960.

Vegetable Oil Exports Down

Vegetable oil exports showed a downward trend in 1961, compared with the previous year. The value of exports in the ten months January-October 1961, amounted to Rs. 5.01 crores, compared with Rs. 10.69 crores in the corresponding period of 1960. The decline was mainly due to a fall in castor oil and linseed oil exports. No groundnut oil exports were allowed by the trade in 1961, on account of the wide disparity between the internal and international prices of groundnut oil. A small quantity of 329 tons of groundnut oils valued at Rs. 8 lakhs was exported in 1961, against tenders for 350 tons of groundnut oil accepted in November 1961.

The export of castor oil is not controlled. Its export in the ten months January-October 1961, were 22,473 tons valued at Rs. 3.7 crores. The U.K. and the U.S.A. are the principal buyers of castor oil from India, but the U.S.A. did not buy any castor oil in 1961. India has to face severe competition from Brazil oil in the U.S. and U.K. markets. Linseed oil exports have also fallen because of the high internal prices and severe competition from Argentina. As long as the prices of linseed oil remain at the present uncompetitive level, there is no possibility of increasing its exports.

Oilcake exports also declined in January-October 1961, compared with last year's exports, mainly on account of a fall in the sales of groundnut expeller cake, linseed oilcake and coconut oilcake. The internal prices of linseed oilcake are out of parity with the world prices of linseed oilcakes, as a result of which Indian exports have been poor. In the oilseeds group, h.p.s. groundnut is the main item of exports. These improved in 1961 under the scheme of licensing by all shippers, against the registration of contracts backed by bank guarantees. Some 50,000 tons of h.p.s. groundnuts were released for export in 1961, and the entire quantity was taken up. A fresh quota of 20,000 tons of h.p.s. groundnut has been released early this year for shipment up to December 1962. The export of nigerseed, kardiseed, seamumseed is allowed freely, but exports have not materialised on account of high internal prices.

Raw Wool Output

Raw wool production in India during 1961-62 is estimated at about 68 million lbs. The indigenous wool is mainly consumed by the carpet makers, the mills and the cottage and

CAPITAL, 8th March, 1962.

handloom units. As a result of various export promotion measures, carpet exports requiring larger quantities of wool are increasing. Due to the shortage of foreign exchange and the rising demand for woollen cloth and fabrics in the country, the mills are using more of indigenous wool. Their consumption, it is expected, will increase further as experiments made recently to use Indian wool for spinning worsted yarn have given good results.

Taking the overall requirements of the three sectors, India, it is estimated, will have only about 30 million lbs of wool available for export during the current year. Out of this, 15 million lbs (or 6.8 million kilograms) have been released for export during the October 1961-March 1962 licensing period. Some 13.2 million lbs or 6.9 million kilograms have been reserved for export on a contract basis, and 1.8 million lbs or 800,000 kilograms for export on a consignment basis. Exports are being licensed on the "first-come-first-served" principle. Individual exports on a consignment basis have been restricted to 100 bales, as in the past. With the increasing consumption of Indian wool by the indigenous industry, India will have less and less to spare for export in the coming year, unless wool production in the country increases substantially.

Open Coffee Auctions

Against the estimated production of 66,030 tonnes of coffee during the 1960-61 season, 67,587 tonnes consisting of 28,968 tonnes of Plantation, 10,278 tonnes of Arabica Cherry and 28,341 tonnes of Robusta have been received into the pool up to the end of November 1961. Out of an export allocation of 34,250 tons, 29,658 tons consisting of 17,821 tons of Plantation, 3,737 tons of Arabica Cherry and 8,000 tons of Robusta, have been released for export up to the end of November 1961.

The Marketing Committee of the Coffee Board, at its meeting held on 20th November, 1961, has placed the estimated production of the 1961-62 coffee crop at 49,000 tons. Out of this, 20,000 tons consisting of 17,000 tons of Arabica (namely, Plantation and Arabica Cherry) and 8,000 tons of Robusta, it is proposed, will be allocated for export. The Committee has further proposed that in view of the lean Robusta crop expected during 1961-62 (only about 17,000 tons, compared with 28,000 tons during the 1960-61 season), the remaining 3,000 tons of Robusta out of the export allocation from the 1960-61 crop may be ploughed back to the internal market during the 1961-62 season. From this year onwards, the Coffee Board will be switching over to open auctions for the sale of coffee for export. This replaces the existing method of sales through sealed tenders.

Coir Export Targets

The following targets of exports for coir have been proposed by the Coir Board for 1961-62:

	Quantity (quintals)	Value (Rs.)
Coir fibre	14,605	12,65,000
Coir yarn	566,775	5,37,85,000
Mats, matting, rugs and carpets	180,365	2,76,71,575
Coir rope	30,455	29,97,500

The actual exports of coir and coir products during the first six months (April-September) of 1961-62 are as follows:

	Quantity (quintals)	Value (Rs.)
Coir fibre	6,019	7,01,000
Coir yarn	248,421	3,23,97,000
Mats, matting, rugs and carpets	76,996	1,41,28,000
Coir cordage and rope	10,200	11,37,000

CAPITAL, 8th March, 1962.

Judging from the present trend in exports, it seems difficult to achieve the proposed targets. The reasons for the fall in exports are many and varied. Many European countries, particularly Holland and Germany, import coir yarn from India in considerable quantities and manufacture mattings from the imported coir yarn. These countries have the advantage of employing modernised methods of production. As for coir mattings, India has lost markets not only in Holland and West Germany, but also in other countries, chiefly due to the higher standard of living in the importing countries and the growing taste for more costly and attractive floor coverings. It looks as if the prospects of recapturing the lost markets are not bright.

Tea Output and Exports

Provisional estimates of tea production in 1961 put the figure at 348.75 million kilograms, compared with 320.40 million kilograms in 1960 and 325.96 million kilograms in 1959. The official figures for exports are available for the 11-month period ended November 1961. They show that both the quantity and value of tea exports from India increased from 168.08 million kilograms valued at Rs. 104.40 crores in 1960, to 180.85 million kilograms valued at Rs. 110.32 crores—an increase of 12.77 million kilograms in volume and Rs. 5.92 crores in value, in 1961.

Destination-wise, the following improvement has taken place in tea exports (figures in million kilograms):

	from	to
U.K.	103.56	108.19
Irish Republic	5.34	5.47
Netherlands	1.36	1.44
Russia	9.02	10.68
Afghanistan	2.89	3.08
Iraq	1.98	1.99
Iran	3.13	3.60
Turkey	1.92	3.37
Egypt	12.79	13.04
Sudan	3.63	5.84
U.S.A.	7.66	9.27

On the other hand, a decline in exports has taken place in the exports to Canada from 6.45 million kilograms to 5.88 million kilograms, West Germany from 1.54 million kilograms to 1.42 million kilograms, Australia from 2.28 million kilograms to 1.50 million kilograms and New Zealand from 560,000 kilograms to 490,000 kilograms.

According to British sources, tea imports during the calendar year of 1961, declined in value by £1,101,000, compared with the 1960 figure. Exports during December 1961 are provisionally estimated at 22.68 million kilograms valued at Rs. 13.30 crores. Thus, the final figure of tea exports during 1961 is likely to show an increase of 8.42 million kilograms, earning Rs. 2.5 crores of foreign exchange more.

With the increase in production in India and other tea producing countries, the prices of tea at auctions in India and London registered some decline during this period. This has been reflected in the unit value of tea exports during the 11 months ended November 1961, which has declined from Rs. 6.21 a kilogram in 1960 to Rs. 6.10 a kilogram. The unit value of exports during October and November 1961, were Rs. 5.95 and Rs. 5.86 a kilogram, respectively.

The Indian Tea Board launched in Edinburgh on 1st March, a £100,000 campaign to promote the drinking of more tea in Britain, with Scotland and the south of England as the main target areas. One of the biggest sales promotion programmes of its kind ever conducted by a Commonwealth country, it has been planned on behalf of the whole of the Indian tea industry.

Sir Percival Griffiths, adviser to the Indian Tea Association (London),

said at a Press conference that the campaign was necessary as "production is growing faster than consumption." The yield an acre was 50 percent higher than ten years ago. The campaign, which is aimed mainly at younger people, opened in Scotland, where tea consumption is lower than in England. It will include advertising, on a wide scale, window displays, competitions, and Indian "tea weeks". Mobile information units, staffed by Indian girls, will tour Scotland and the south of England throughout the year.

At least one store in each town will have a self-contained portable kiosk staffed by an Indian girl who will offer cups of tea to visitors. One

section of the kiosk will be covered with a colour map of the tea-growing territories. Schoolchildren will be shown films about the tea-growing districts of India.

Oil Prospecting Licences

The Government of India has directed the Assam Government to issue forthwith oil prospecting licences to Oil India Ltd, a joint enterprise of the Government of India and the Burmah Oil Company, and to the State-owned Oil and Natural Gas Commission, failing which the Central Government will issue the licences itself. The action has been taken under the Constitu-

tion, as oil is a concurrent subject, and under the April 1955 notification of the Petroleum Concession Rules, which delegated certain powers to the Assam Government on the specific condition that the latter should comply with the general or special directives issued by the Centre from time to time. The Assam Government has been refusing to issue prospecting licences to Oil India Ltd and the Oil and Natural Gas Commission for new areas, on the ground that its yield from the 10-percent royalty will be adversely affected by the new well-head crude price, which has been reduced from Rs. 70 a ton to Rs. 48 a ton. The State Government's action has delayed oil exploration in Assam by one year.

Advanced ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION

Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING

Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY

U.K. Urged to Join E.C.M.: No Difficulty for Sterling Area Foreseen

(FROM OUR LONDON CORRESPONDENT)

THE U.K. Treasury's *Bulletin for Industry* says with unusual directness that "it would be better for sterling and for the U.K. to join the European Economic Community rather than stay out." The reasons for this view are frankly set out: (1) membership should open up the possibilities of a higher rate of economic growth; (2) the use of sterling as a key currency and of London as a commercial and financial centre could be expected to increase; and (3) when forming its policies, the E.E.C. could be expected to take more account of sterling area interests if the U.K. were present. The Treasury does not, in fact, believe that anything in the Treaty of Rome would be incompatible with the continued working of the sterling area system. "Nor would the treaty require us to treat sterling area members less favourably than the 'Six'." Admittedly, the treaty will oblige Britain to co-ordinate her economic policies with other members and to participate in the E.E.C. Monetary Committee, which reviews the monetary and financial situation of member-countries. But this, the *Bulletin* maintains, is merely an extension of the system of consultation between Governments which is already a feature of O.E.C.D. Britain has, of course, already accepted far-reaching obligations concerning the exchange rates and convertibility as members of the International Monetary Fund.

Naturally, the *Bulletin* stipulates that the special needs of the Commonwealth must be safeguarded, but provided proper terms are obtained to allow Britain to join, membership should not stop her from continuing her present practice of consulting with the Commonwealth on economic policies. As for the effect on the U.K.'s balance of payments, the prospects are left open. "Whether on balance we gain or lose would depend ultimately on how well we can compete", but the opportunities for expanding our exports to the "Six" will be "enormous." So no doubt will be the opportunities for the "Six" in the British market. What the Treasury does not attempt to answer is how the change in Britain's agricultural policy with the abandonment of free food imports, may add to her total import bill. It is probably too soon to make even a provisional estimate, but the extra cost of imported food may well be the largest single item of risk in signing the Rome Treaty. The upshot of the U.K. Treasury's analysis is that in the monetary field, no radical change need be expected if Britain joins the European Common Market—nothing so radical, for instance, as have been the consequences of joining the I.M.F. 16 years ago. While London could certainly not become an important capital market for the region, it can expect to get a great deal of additional banking business, to find its unique bill market much more intensively used and to attract a steadily growing amount of portfolio investment.

The Pledge Fails

Seven months after his pledge to do his utmost to keep Government spending from rising more than 2½ percent "in real terms," Mr. Selwyn Lloyd, U.K. Chancellor of the Exchequer, had to confess recently that he had failed. The rise, even when

allowance is made for increases in the rates of pay and prices, thus expressing it "in real terms," is to be 4.6 percent. In money terms, it will be no less than 7.3 percent. For, on the basis of the Vote on Account published immediately after his statement in the House, the U.K. Chancellor will have to find in the Budget £384 million more than he did last April. If this is to be met entirely out of income tax, it will mean raising the standard rate by about 1s 4d in the pound.

Compared with 1961-62, the estimates for the ensuing financial year are up from £5,227 million to £5,611 million. The increase of £384 million is represented as being £245 million "in real terms." But had the Chancellor succeeded in hitting his target of last July, it would have been only £134 million. In other words, putting the most generous interpretation upon the figures, he has failed by £111 million. In spite of this failure, the Chancellor proceeded to give the Opposition what the latter would construe as another pledge: not to cut the social services.

Like many other Chancellors before him, Mr. Lloyd claimed that, but for "drastic pruning," the increase would have been much higher. His plea was that seven-eighths of the total is accounted for by six large increases. These are: agricultural support, £66 million; British Railways deficit, £43 million; defence, nearly £10½ million; grants to local authorities, mainly for education, including teachers' pay, £86 million; national health service, £27 million; roads, £15 million. The recital of these figures sounded like a challenge to the benches behind him. Perhaps aware that they were vulnerable on these points, Government supporters accepted the statement with surprising placidity. Perhaps, the greatest moderating influence on Conservative opinion is the belief that it is more prudent of the Government to persevere with the pay pause, as Mr. Lloyd said he intended to do, than to risk upsetting the workers by economies in the social services. Moreover, this restraint also disarmed some of the Opposition criticism as well.

Pattern of Exports

Details of Britain's overseas trade in January put a slightly better complexion on the basic figures released earlier, especially in relation to exports. Commenting on the dismal fact that in the three months November-January, exports—seasonally adjusted—were 3 percent less than in the previous three months, the U.K. Board of Trade points out that the fall can be attributed almost entirely to reduced sales of ships from the unusually high level of the earlier period. Exports to Australia were again recovering from the low level to which they had fallen in the middle of last year. The improvement in exports to North America continued with a 3½ percent increase on the previous three months.

A 1 percent fall in exports to western Europe reflected lower sales of ships. If ship sales are excluded, there were increases of about 2 percent in the total and of nearly 5 percent in exports to the European Common Market countries. An encouraging feature for investors in the motor-car industry is the 9 per-

cent rise in exports of vehicles in November-January, seasonally adjusted, over the previous three months. It must be kept in mind, however, that much of the export volume of private cars to the European market has been effected on thin profit margins.

Terms of Trade Steady

U.K. Board of Trade figures show no change in January in the overall import and export price indices or in the terms of trade. On the import side, there was a fall of one point in the index for basic materials, but this was insufficient to alter the rounded index of all classes. In the export categories, there were small increases in metals and textiles, but these were not large enough to move the general export price index. On the basis 1954 equals 100, export prices remained at 113 in January and import prices at 96.

Repayment to I.M.F.

For the third time since last autumn, Britain has made a partial repayment of the £535 million credit obtained from the International Monetary Fund last August to reinforce sterling against heavy pressure. The arrangements made on 4th August, 1961, were for a "drawing" in cash equivalent to £535 million and a one-year standby credit for a further £178 million. The drawing is due to be returned within three to five years. In October, the first repayment of £100 million was made, followed in November by £50 million. With the return of £75 million, almost half the cash credit has now been repaid. But the whole of the £225 million paid over has been added to the standby credit. If the inflow of funds into London, which has been the main cause of the strength of sterling since last summer, should be reversed, Britain could immediately draw on the standby credit to rebuild the reserves.

Engineering Orders

The combined order-book of the industries producing engineering and electrical goods is still shrinking. New orders declined further in December while deliveries continued well ahead of new orders. In the fourth quarter, the volume of deliveries was 5 percent more than a year earlier, and that of net new orders 5 percent less. The fall was in order from the home market which were 6 percent less than the year before; new export orders were at the same level. Unfilled export orders at the end of 1961 were still at an all-time peak. It is true that new export orders dropped in December but the U.K. Board of Trade comments that ordering in the Christmas month tends to be erratic and that this does not necessarily imply a marked change in demand for British capital goods overseas. The volume of exports in 1961 was no less than 11 percent higher than in 1960, but after a big increase in 1960 at the beginning of 1961, there was little change in the trend apart from seasonal movements.

As for the production of engineering and electrical goods, this was 3 percent more in December than a year earlier. For 1961, the output was 6 percent up on 1960, but most of the increase occurred in the first

CAPITAL, 8th March, 1962.

half of the year. The figures a typical of the present situation in the economy as a whole. The demand has flattened out at a high level and there must be a good deal of idleness, but expansion is likely to await a new rise in exports.

Car Output Rises

The output of motor-cars from British motor manufacturers improved in January to only a little short of the peak production figure of last year and, with the exception of the two months, June and July 1961, was the highest since September 1960. The average weekly output of 23,503 was more than 3,500 better than the December figure and compares with a figure for January 1961 of only 14,949. The weekly averages for June and July were 23,192 and 24,584, respectively.

Exports also increased substantially and were the highest since May 1960. The total number of motor-cars, including taxis, shipped abroad in January was 49,705, against 38,203 in December and 31,728 in January last year. The encouraging upturn in the fortunes of the motor-car industry was attributed by Mr. Stanley Clark, chief executive of the Society of Motor Manufacturers and Traders, principally to a demand for the new models now on the market.

Steel Prices Go Up

Iron and steel prices have been increased by an average of 25s a ton from Monday. The U.K. Iron and Steel Board has authorised increases ranging from 1 percent to 5½ percent in the prices of all the industry's products with the exception of alloy and stainless steels. The largest proportionate increase is in the price of steel sheets, which will be 60s a ton dearer. This will affect the motor-car industry particularly one of the country's largest users of steel sheet, and is expected to add about 35s to the cost of an average four-seater family car. A rise of 24s a ton in the price of steel plates will add about £4,000 to the cost of a 10,000-ton cargo ship costing £1 million. The industry has been asking for price rises for some time.

Fewer Unemployed

The number of unemployed fell by 7,248 in the four weeks ended 12th February, the U.K. Ministry of Labour has announced. This is the first tentative sign of the recovery in economic activity that the Government has been forecasting for some time. The total of 453,788 without work represents an unemployment rate of 2 percent—the same as in January. A year earlier, it was 1.7 percent. If school-leavers who found jobs are excluded, the number of wholly unemployed rose by 1,269, but this is a seasonal trend. The normal increase between January and February is about 3,000. The limited recovery is shown also by the decline in the number of unfilled vacancies. These fell by 25,140 to 213,445, compared with a normal seasonal decrease of 12,000.

Old Notes Called In

All £1 notes of the old series printed in green or blue on white paper and without the portrait of the Queen will be called in on 20th May. These notes were issued from 1926 to 1960. Up to and including 28th May, such notes will remain legal tender and may be used in the ordinary way. The public are advised by the Bank of England to pay any of these notes into their banking accounts without delay. The notes called in will not be legal tender after 28th May, but will still be exchangeable at the head office of the Bank of England. The Bank cannot undertake to exchange notes through the post.

CAPITAL, 8th March, 1962.

Jute

CHECKING THE MALPRACTICES IN SELLING LOW-GRADE JUTE

FOR a number of years, there has been considerable dissatisfaction in the trade about the growing practice of despatching jute from low-grade districts to places which have acquired a reputation for superior jute, and then selling it as the product of the latter stations. The problem is not new. Before partition, it was notorious that large quantities of Assam jute found their way to Narayanganj, Dacca, Ashuganj and Chandpur. The fibre was then shipped from these districts as if it had originated there. Some years ago, the Indian Jute Mills Association sought the co-operation of the carrying companies to put a stop to this practice. But there were many difficulties, since the carrying companies could not legally refuse to carry goods to the destination specified by the consignors. The same holds good for the railways these days. To some extent, the railways and the carrying companies could co-operate by refusing to give fresh rail receipts or bills of lading at the re-booking stations. But that would meet only part of the difficulty, because much of the jute is actually landed at the superior stations and rebaled there, frequently after judicious mixing with local jute.

The Remedy

Actually, the remedy lies very largely in the hands of the mills themselves. Previously, lists of jute offered for sale specified "jat", hard, soft, eastern, western, northern or Jungli. When making purchases, mills used to take a proportion of each class of jute, or of two or three classes, and pay prices accordingly. In more recent years, a craze has grown for buying only jute of a particular area. This has led to the malpractice of selling jute under the name of one station and delivering something else. Frequently, in the past few years, sales of jute from some of the more "popular" centres have been two or even three times more than the output of those particular centres. And where are the lists one used to see of low-grade jute from the jungli areas? No one ever offers any nowadays and no one would buy the fibre if it were offered. But jute is still grown in these districts and it still finds a market.

It follows that it is the mills who are deluding themselves. They are not, of course, paying the price of superior agency jute, because their purchases are often made at prices lower than that particular agency's fibre will fetch in the mofussil. This is not due to a disparity of prices between Calcutta and the mofussil, but because the jute they are getting is not the jute of that agency, but will only arrive at the mills via that agency. Their action does, however, have a tendency to create a disparity to the disadvantage of the growers. The worst examples occur in the case of mills which have their own buying agencies upcountry, and which, when jute landed at their mills lower than what their own agencies are offering and paying for jute ex-godown in the mofussil.

An Important Consideration

But, it may be asked, what happens when this jute arrives at the mills? Do the mills accept it at its face value? The fact of the matter is that some mill people cannot distinguish one agency from another. What they look for is light colour strength and cleanness. If these conditions are

satisfied, it is immaterial to many mills where the jute comes from. In these days, when jute is stored by mills for long periods, the originating district should be an important consideration, as some types store better than others.

The remedy, therefore, appears to lie in the hands of the mills themselves. If they could exercise more discrimination and pay the correct prices for jute of different districts, and if in their purchases they could take a certain proportion of the lower grades at the cheaper prices, it would go a long way towards rectifying matters. Actually, sellers would rather take lower prices for jungli jute, so long as the prices are reasonable, and despatch it direct from the station of origin, than go to the expense and trouble of sending it by a roundabout route. The mills would probably have to pay a little more for the superior agency jute, but they would be reasonably assured of getting what they are supposedly buying. Admittedly, even if the mills adopted the course suggested, the effect would not be felt at once. The malpractice has become too deep-rooted to be eradicated immediately, but probably one season would see most of it eliminated.

Gunny Market Steady

The Calcutta jute goods market has been very steady over the past week, and prices have shown a marked tendency to rise. Genuine overseas enquiries, particularly for hessians, have been good, and local speculative activity has forced prices up when demand has slackened. Many mills are short of spinning capacity to feed the looms, and there is a genuine scarcity of ready goods. This is particularly true of B Twills, as numerous mills have switched to the production of other fabrics which show a better return. For instance, heavy Cees show a premium of Rs. 30 a ton over B Twills, as much as Rs. 95 a ton more. Much of the production has, of course, been transferred to hessians, where the demand and the profit are much higher. But in spite of the increase in hessian production, there is still a shortage of ready hessians, and near delivery rates show a premium of about Rs. 120 a ton. There is not a great deal of interest in shipment after June, as consuming countries have to replenish stocks, which, according to all reports, have been allowed to fall to very low levels. Mills, however, are sellers for all forward positions with jute stocks secured, all business shows a sizable profit.

There has been very little change in the fibre market. Imports have averaged about 500,000 maunds over the past week and mill buying against quotas has kept pace. High-grade jute, and even ordinary Tossa grade jute, and even ordinary Tossa grade jute, is in very short supply, so it commands a good premium. Some mills, however, are prepared to pay only the minimum price. Consequently, the jute they receive against these low-priced contracts is inferior to the one they want. Even though the current crop is a bumper one, the amount of Tossa is very small, whereas there is a glut of mesta. This is obvious from mill purchases over the jetty, where mesta can be obtained and is being bought regularly at anything up to Rs. 3 a maund below the minimum price. As these purchases do not come under the category of T.S.D. contracts, there

is no control concerning the minimum price.

THE JUTE MARKETS

Manufactured Goods: Overseas buyers, particularly in the U.S.A., purchased fairly steadily throughout the past week, although not on a large scale. Prices at the opening last Thursday were quietly steady, with March B Twills at Rs. 128 and 40in. 10oz. at Rs. 54. Ready hessians were about Rs. 4 higher than the March price as the demand for along-side goods was strong. Speculative activity was heavy, and on Friday, hessians moved up by Re. 1 and sacking by Rs. 1.25, but profit-taking at the higher levels saw rates falling back on Saturday. The market was virtually unchanged after the weekend, except in sacking, which showed an advance of about 50nP. But, after that, conditions became excited on reports of fresh overseas business in both sacking and hessians. The demand for ready goods was still strong, and rumours of a Burmese tender calling for a good quantity of heavy goods for near delivery saw B Twill prices shoot up to Rs. 130.75. Towards the close, a reaction set in and prices eased.

Opening quotations on Wednesday morning were as follows:

	March	Apr.-June	July-Sept.
40in. 7½oz.	41.25	38.50	36.50
40in. 8oz.	40.75	41.50	39.25
40in. 10oz.	51.50	51.00	48.50
B Twills	130.50	127.00	123.75
Cornacks	137.50	130.50	126.50
Heavy Cees (Plain)	130.50	127.00	123.75
A Twills	150.00	151.50	148.00
Liverpools	151.50	145.00	141.00

Raw Jute: The only interest in the fibre market was in high-grade jute. Middles only commanded a premium of up to Re. 1 a maund, and even then only small quantities were available. Jute from first-class agencies was in very short supply, and sellers are asking 50nP more than the minimum rates. There was no interest in low-grade jute or mesta, although sellers were keen for business. As the restrictions on bookings to Cossipore had been lifted, there was a sharp increase in arrivals at that centre, and last week a total of 950 wagons arrived. This was above average for the time of year.

Opening quotations on Wednesday morning were as follows:

	Landed at Mills Basis Bottoms	Rs. a 100 kgs.	Rs. a Md.	Shipment
Assam	80.38	30.00	Mar.-April	
Northern	79.04	29.50	"

Daissee	72.34	27.00	"	
Desal	73.68	27.50	"	
Jungli	66.98	25.00	"	
Pakistani N. C.	100.00	a bale	"	

THE FOREIGN JUTE MARKETS FIBRE REMAINS IRREGULAR

(FROM OUR DUNDEE CORRESPONDENT)

PRICES in the Dundee jute market are still irregular, although an easier tendency prevails

in the raw jute market in Pakistan. Shippers are anxious to effect sales, but this results in a wide variety of prices being quoted for the various grades of jute offered. The easier tendency in fibre is sufficient to cause spinners to refrain from buying, so the market is quiet. Many shippers are, however, still quoting high prices, and the prices in Pakistan have not declined to the same extent as expected. No doubt, fibre supplies are now abundant, but they are mostly of an indifferent quality. Offers of inferior jute are being made at cheaper prices, but these are ignored by spinners.

Really good quality jute is still scarce. Mill Firsts and other superior qualities are entirely nominal in the absence of offers, while even Mill Lightnings are not freely mentioned. These are offered at from £117 to £123 a ton, but decent quality at not less than £121 10s. Mill Hearts are from £96 to £98, with £97 a fair average quotation and £84 for Grade Hearts, c.i.f. U.K.-Continent. For the same shipment, Grade Tossa-2/3 is quoted at from £135 for decent quality, fours from £120 and Continental Tossa-2/3 £105. March-April, c.i.f. It is believed that when the news of new crop sowings is received, there may be a change of ideas. If there is to be another big crop, one may expect cheaper prices, but any restriction on sowings might mean higher rates.

The Calcutta goods market is firm again. There is apparently a great shortage of goods for early despatch. Hessians are up to 82s for 40in. 10oz. and 62s for 7½oz. March 75s 6d and 57s 3d April-June and 72s 6d and 55s 3d July-September, with B Twills at 196s. 191s 8d and 186s 8d for the respective positions of shipment, all f.o.b., Calcutta.

Jute yarns and cloth are quieter as a result of the raising of prices by £5 a ton from 24th February. For 8 lb cops, the price was raised to 17.49d for C.H.W. quality and 18.64d for J.C.H. and 8 lbs spools at the same rates a lb, while cloth has risen to 14.87d for 40in 10oz hessian and 12.60d for 8oz a yard. Meanwhile, spinners and manufacturers are busy.

THE PAKISTANI JUTE MARKETS

FIBRE WEAKENS

(FROM OUR Dacca CORRESPONDENT)

THERE was an easier undertone in the market during the past week. Overseas buyers took full advantage of it. This might be due partly to increased arrivals because of the 1d holidays. But the weak tendency could well be the beginning of further price drops. Moisture in the slightly increased jute arrivals upcountry and in the baling centres has been becoming more apparent. This has been especially the case in Daulatpur where arrivals have been comparatively large, mainly from the north Bengal areas. Prices have not fallen off appreciably in the interior, but the slackening of overseas interest combined with larger arrivals, suggests that this is only a matter of days. Fairly widespread and heavy rains which are ideal for sowing conditions, will also help foster a bearish feeling in the market, even if it may not encourage growers to sow a large crop.

The Narayanganj market was rather inactive, and cuttings were being offered in increasingly large quantities at lower prices. Reports from Calcutta indicate that all mills there are well stocked and are not likely to buy more than 70,000 bales

of cuttings before the end of the season.

The London market which had begun to respond to the local steadiness took immediate advantage of the quieter feeling, and buyers were once again resisting, although some interest was being shown in Outport Tossas which were not freely available. E.P.C. figures for the end of February are not yet out, but unofficial reports indicate that they exceed 200,000 bales.

Apart from the moisture which is being found in all sections, the quality of white crop arrivals has deteriorated. This deterioration does not of course mean that there has been a larger arrival of Export Hearts, but it definitely means a lower standard of these goods as well as of Export Lightnings, mainly due to heavy soek and hard centres. In the case of tossa, however, only arrivals have fallen.

NAMES AND DATES

The annual general meeting of the Indian Jute Mills Association will be held at the Royal Exchange, Calcutta, on Saturday, 17th March, at 11-30 a.m. Mr. Morarji Desai, Central Finance Minister, has accepted an invitation to attend the meeting as the chief guest.

Books

JUSTICE FOR JUDGES: THREAT FROM THE EXECUTIVE

The Judiciary in Peril. (Published by Mr. Niharendu Dutt-Mazumdar, Senior Advocate, the Supreme Court of India. Price Rs. 2.50, pages 77.)

A High Court judge, as the Indian Constitution says, does not hold office at the pleasure of the President. The makers of the Constitution explicitly laid down this doctrine in order to ensure absolute judicial independence without which the life and liberty of a citizen in a democracy cannot be safeguarded. It was after five hundred years of struggle in England between the judiciary and the Crown that absolute judicial independence was achieved by the Act of Settlement of 1701, nearly a century after the bitter conflict between James I and Chief Justice Coke. There is no denying that India inherited a fine judicial tradition from England after the advent of independence. Indian judges, by and large, never complained of executive interference during the long history of British rule in this country. That fine tradition is now being tainted not only by glib talk

of the professional politicians who have scant regard for the judges and the sanctity of their office, but also by the prevailing contempt for the rule of law on the part of bureaucrats whose absolute powers have already corrupted absolutely. The true lovers of democracy in India are, therefore, alarmed at the rapid growth of what Lord Hewart called "the New Despotism." Not so long ago, a Chief Justice of the Supreme Court said that he would allow no judge of the Court to be appointed to an official commission unless the Government accepted its recommendations and showed the courtesy and esteem that he, as a judge, deserved.

This is apparently the premise on the basis of which Mr. Justice J. P. Mitter has protested against the official decision on his retirement. He is fighting for a principle, and it would be too short-sighted to think that he has a personal axe to grind. The booklet contains some official correspondence as well as articles and letters which were published in various newspapers in support of Mr.

CAPITAL, 8th March, 1962.

Justice Mitter's contentions. After a careful perusal of the arguments involved, the readers will inevitably gain an impression that even judges these days are anxious—and not without reason—to get justice.

ECONOMICS OF MR. NEHRU

The Impact of Jawaharlal Nehru on Indian Economy. By R. J. Venkateswaran. (Published by Oxford Book and Stationery Company, 17 Park Street, Calcutta 16. Price Rs. 8, pages 129.)

The first chapter of this book traces the growth of Mr. Nehru's economic ideas in pre-independence days and explains how he made India realise the importance of economic planning. The events leading to the acceptance by the Congress and Parliament of the goal of a socialistic pattern of society are described in the next chapter. Then follows an analysis of the impact of the first and second plans on the economic condition of the people. Mr. Venkateswaran contends that while the plans have benefited the country in various ways, they have not brought about an appreciable improvement in the living standards of the vast majority of the population. The subsequent chapters give a detailed account of Mr. Nehru's approach to agriculture, private and public enterprises, foreign capital, defence and administrative efficiency. An assessment is also made of the effect of planning on democracy and the unity of the nation. The concluding chapter explains how the success of the third plan is of crucial importance to Mr. Nehru's political future.

While the subject is an exciting one, the recital is pedestrian. The author has not succinctly shown the well-known traits of Mr. Nehru's character, his capacity to compromise on any issue, the lack of capacity for details and the inability to appreciate honest criticism. But important dates in Mr. Nehru's career are given. The book, by and large, gives a balanced account of Mr. Nehru's economic philosophy.

RIVER VALLEY PROJECTS

Administrative Aspects of River Valley Development. By Henry C. Hart. (Issued by the Indian Institute of Public Administration, New Delhi, and published by Asia Publishing House, Contractor Building, Nicol Road, Ballard Estate, Bombay 1. Price Rs. 6, pages 112.)

The book is a collection of five lectures delivered by Professor Hart at the Institute of Public Administration in 1958 on river valley development in India and the U.S.A. One is impressed by the author's intimate knowledge of the subject. But the right answers to some of the valley questions on multipurpose river valley projects are not to be found. For instance, the creation of irrigation facilities or power capacity is not strictly river valley development. The Rihand dam is the latest impressive showpiece of the ruling Party to add to the galaxy of other big ventures built over a period of years at immense financial and real cost. But these are not yielding a bare 2 percent return on the outlay. Would this be tolerated by U.S. politicians if it had happened, say, in Texas? The author suggests the creation of many agencies for the users' participation in river valley development. But none of these agencies are functioning in India, and this makes all the difference between the D.V.C. and T.V.A. The author says that a river valley project is a product of democratic administration. But India's river valley development agencies are not run by democratic institutions.

HOME CONSUMPTION OF TEA RISES

(BY A SPECIAL CORRESPONDENT)

WITH little new 1962 tea to be sold through the Calcutta auctions before end-May, one can assume that heavy crop deliveries will not be forthcoming until after the first half-year. It looks as if the bulk of the 1961-62 surplus will have passed into consumer stocks by then. The 1962-63 season will, therefore, depend on how consumption compares with new supply. Can the 1962-63 tea output be expected to continue to expand at the same pace as in the last season and will absorption catch up or go ahead faster? There appear to be some hopeful features. This year, purchases in Calcutta for internal consumption are up from (mid-February) 1,787,116 packages last year to 1,974,013 packages this season.

In India and Ceylon, efforts are to be made to popularise instant tea, the details of which have not yet been announced. It is not known how the new product will compare in price, although this is the point on which success seems to hinge.

Advertising in the U.S.A.

The home Scots are taking an interest in this business. Furthermore, traders in the U.S.A. appear to have awakened to the possibilities of developing tea consumption by intensive advertising. The fact that this beverage does not add to one's weight is a matter which may be of importance there. Besides the economy factor could become very important in the coming years. Today, there is already a large affluent population which may change over to tea on intensive advertising. Most of this reasoning applies to the European Common Market "Six" and probably also the "Outer Seven". But the changeover from coffee to tea will not be quite easy either in Europe or in the U.S.A. because the people there know how to make good coffee. Besides, it is reasonable to suppose that the coffee experts will do something to boost their beverage.

Admittedly, the people of the U.S.A. have the means to increase tea-drinking to a considerable extent. There is no doubt that the local trade representatives have awakened to the fact that the market there is awaiting development. But it will require considerable efforts, since coffee is the established drink, particularly in the south, and coffee vendors are trying hard to retain their markets in which they sell a selection of various "instant solutions".

The U.S. Tea Council

But the tea men are on the war-path too with "iced instant teas" in summer and the "hot refresher" in winter. These beverages are being canvassed among athletes and young people. The American Tea Council is spending lavishly on advertising. It has already printed 24 full page advertisements in *Life*, *Look* and *The Post*.

Meanwhile, *The World of Tea* indicates that in 1961, work on the "drink more tea" propaganda campaign produced a turnover of \$200 million of business. This has to be checked because at \$1 a lb (which is too expensive for a popular refresher), the figure would appear to represent 200 million lbs of tea, whereas as far as this correspondent knows the U.S.A. does not import 200 million lbs of tea a year. Meanwhile, according to figures given by *World Coffee* and

Tea (December 1961), the U.S.A. continues to increase its outlay on food which went up by 36 percent between 1950 and 1955 and again added another 27 percent increase during the 1955-58 period. The outlay was further raised by 2 percent in 1959, 4 percent in 1960 and probably by 4 percent more last year. Another hopeful sign is the statement that during the period 1950-60, the American consumer expenditure on tea rose 67 percent, whereas over the same period coffee sales were up by only 27 percent. But an increase of 27 percent in coffee no doubt represents much more in weight and money than the percentage increase shown by tea sales.

Raising Consumption

TELL US YOUR JOB—

AND WE'LL GIVE YOU THE TOOLS

The size, shape or complexity of a project doesn't overawe us. We have the tools to help build it with a minimum of time, labour and cost. For nearly 70 years, BATLIBOI have supplied Industry and Trade in India with goods ranging from complete power plants to hacksaw blades. We represent internationally known manufacturers from the United Kingdom, U.S.A. Czechoslovakia, France, Germany, Japan and many other countries. BATLIBOI also represent some of India's leading manufacturers of Machine Tools, Diesel Engines and various other types of machinery. Industry and Trade are vitally connected with the economic growth of any country, and BATLIBOI are vitally connected with Industry and Trade in India.

Glass—for Modern Living

JWTHP 5083

the U.S.A., the marketability of different types of tea may have a bearing on India. The use of tea bags has increased by 50 percent during the past ten years. Loose tea has been selling more during the past few years. Instant tea is gaining in popularity and now accounts for 6 percent of U.S. sales—about double the sales of two years ago.

Consumption is best in the eastern areas at 883 lbs a 1,000 people, and it is below average on the Pacific coast. If one compares the U.S. consumption with that of the U.K., where consumption runs around 9½ lbs a head, it will be agreed that there is a very large field awaiting development in America.

Darjeeling Tea for Hamburg

The Tea Board is reported to have arranged for the despatch of 3,000 lbs of Darjeeling tea to Hamburg flood victims through Air-India International. The delivery will be made through the Consulate-General of India in Hamburg. This is a gesture of sympathy, but a practical man may ask, "Why Darjeeling tea, instead of some other Indian tea?" To send good quality tea to Germany as a gift is a sound policy, but the best Darjeeling grade is something very special. In fact, few people outside the trade ever see it.

CALCUTTA TEA SALES IN JANUARY

DEMAND STRONG

FIVE Sales, 29 to 33, were held during January when a total of 336,684 chests was offered. Quality showed a seasonal improvement. Throughout the month, there was a strong demand, the main feature of the sales being the competition for Fannings, say Messrs Carritt Moran and Company Private Ltd in their monthly tea market review. Plain brokens were fully firm in the first half, and latterly improved in price by some 20nP, while similar Fannings showed advances of up to 45nP and sometimes more. Orthodox B.O.P.s sold well, and were dearer with quality, while the O.F. and P.F. grades were the strongest features. In the early sales, Fannings sold at firm to dearer rates, but in the last two auctions, prices were often up to 50nP above the previous week. The demand for C.T.C.s was also strong, and with improving quality, prices increased quite sharply. Legg-cut teas shared in the general improvement and were dearer. Darjeelings were well supported, and any flavoury invoices sold at enhanced rates. There was some irregularity in tip buying, but with fewer offerings in this category, there was more competition and prices were dearer. The demand for whole leaf grades improved, particularly the cheaper varieties, and all teas of this description were dearer.

Leaf appearance of Darjeeling was satisfactory for the time of year. Cup quality continued to show an improvement and there was a fair selection of autumnal teas on offer. Orthodox leaf appearance in Assam was fully maintained, while cup quality showed an improvement with a number of autumnal invoices on offer. C.T.C.s were generally rather brownish in the leaf with many invoices containing fibre. Liquors showed improvement and a number of autumnal teas were offered. The autumnal teas this year were generally a little disappointing and below average. Orthodox leaf appearance was similar to the previous month but liquors showed a seasonal improvement in Doars and Terai teas. C. T. C. and Legg-cut teas were again brownish and some invoices contained excessive

fibre. Liquors possessed some autumnal quality. Leaf appearance of Cachar and Tripura was of an average standard, while cup quality showed a seasonal improvement.

The 2,666 packages of leaf teas on offer in the five internal sales held during the month were absorbed at irregular rates. Five sales were held during the month and Dust offerings totalled 131,040 packages. Demand throughout was good and general. Clean C.T.C. Dusts were well supported with the brighter lines generally dearer. A feature of all the auctions was the strong enquiry for the secondary and fibrous descriptions, and these varieties generally sold well above brokers' expectations. In the opening sale, orthodox teas were irregularly dearer with the bright liquoring Assams selling at considerably enhanced rates. Thereafter, the orthodox Dusts tended to become somewhat easier, but towards the close of the last auction, they strengthened considerably and were much dearer. Non-wither Legg-cut descriptions sold extremely well and the bright teas appreciated in value in each of the five auctions held during the month. Quotations, however, remained steady for the last four sales.

(Inclusive of zonal excise duty.)

Export sales up to No. 27 totalled 1,764,917 chests at an average price of Rs. 4.75 a kilogram, compared with 1,562,348 chests at an average price of Rs. 5.49 a kilogram in the same period of last year. Internal sales at 7,643 chests of leaf and 644,393 chests of dust (Rs. 3.95 and Rs. 4.84) go against 12,822 chests and 530,026 chests (Rs. 4.39 and Rs. 5.25) in the same period a year ago.

COCHIN TEA SALES

At Sale No. 9, 332,000 kilograms of tea were on offer. There was an irregular demand. Low mediums, mediums and good mediums were strong and dearer. The plainest grades were barely steady while high-grown met with very selective demand. There were many withdrawals without bid.

At Dust Sale 9, 224,000 kilograms of tea were on offer. There was a good general demand, particularly for clean black types and high-grown which were dearer. The fibrous milled varieties were the weakest feature of the sale.

Calcutta Markets

GOOD DEMAND AT TEA EXPORT SALE QUALITY DUSTS RISE

AT Sale No. 38, held on 5th and 7th March, there was a good demand for the 60,456 packages on offer at the Export sale. With an increased quantity of end-of-season descriptions, buyers were selective with prices irregular. Plain brokens and Fannings sold readily, but where stalk and fibre were present were up to 15nP easier. Good liquoring orthodox B.O.P.s sold well, and there was a good demand for Fannings. The best C.T.C.s were firm to dearer with more competition for brokens. The remainder were up to 20nP easier. The more fibrous secondary descriptions were much easier and often difficult of sale. Whole leaf grades were well supported, but tip was easier.

Quotations	1962		1961	
	Rs. a kilo	Not quotable	Rs. a kilo	
Clean Plain Pekoe	5.20 to 5.50			
Plain B.P.	4.60 to 4.70			
Plain Fannings	4.60 to 4.90			
Medium Assam C.T.C.	4.70 to 4.90			
Best Assam C.T.C.	4.80 to 5.10			
B.P.	6.00 to 6.50	5.90 to 6.30		
Best Assam C.T.C.	6.00 to 6.50	5.90 to 6.40		

(Quotations are inclusive of excise duty.)

At the Internal Sale, there was a good general demand for Dust offerings which totalled 29,971 packages. Medium C.T.C. Dusts were well supported, but prices were irregular, except for the clean better liquoring sorts which sold well. Fibrous secondary kinds declined in value. The good C.T.C.s once again proved popular and were taken up at firm rates. Orthodox varieties were absorbed at a discount of 10nP to 20nP, while non-wither Legg-cut descriptions were irregular but generally easier by 15nP to 20nP and sometimes more. The bright lines, however, realised satisfactory prices.

Quotations	1962		1961	
	Rs. a kilo	Rs. a kilo	Rs. a kilo	Rs. a kilo
Plain Orthodox Dust	3.80 to 4.30	4.60 to 4.90		
Medium Assam Dust	4.20 to 4.70	4.70 to 5.10

Medium Assam C.T.C.	5.40 to 5.70	5.50 to 5.90		
Dust	6.30 to 7.00	6.20 to 6.60		

(Quotations are inclusive of excise duty.)

The 512 packages of Leaf on offer at the internal sale were sold at irregular rates.

FREIGHT MARKETS INACTIVE

DURING the last fortnight, the Chinese charterers dominated the freight markets, and lowered rates from all areas. Although the markets at present open on a wide range, they remain fairly inactive. There is no sign of any immediate improvement in the freight rates. Fixtures of foodgrains from British Columbia to China have been concluded at 44s March-April loading. Indian ore charterers paid \$(U.S.) 8 with 1,000 load f.o.b. and trimmed, 1,000 discharge at \$1.30 for 12,000 tons 5 percent manganese ore Visakhapatnam to Northern Range, when Marmagao-Holland paid 32s 6d f.o.b. and trimmed. In Madras, liner vessels and full ore loaders are still being delayed for two to three days, and vessels for lightening expect about one day's delay in berthing.

CAPITAL, 8th March, 1962.

In Calcutta, due to bore tides in the river from 6th to 10th March, no vessel is permitted to berth alongside river jetties nor any vessel with more than 18 feet draft is allowed to berth at the river moorings. This has caused some congestion in the port. Recently, the Port Pilotage Department issued an amended draft forecast for the month of March allowing about a general increase of 6 inches.

LINSEED FIRM

The market was firm during the past week, but turnover was limited. Arrivals from uncountry were small. Millers bought daily for ready and forward deliveries, but sellers were very reserved. The oil market was steady due to local demand and short supplies. The oilcake market was dull. Local demand declined and prices were marked down. The latest quotation is as follows: ready March Rs. 31 a maund.

HIDES AND SKINS UNCHANGED

The market showed little change. Stocks of hides were higher, but those of skins were less than in the previous week.

Bazaar Sales (Between 27th February and 5th March, 1962)

Cowhides: Wet salted (ord.) 8,000 pcs. on the basis of Rs.10.50 to Rs.13; Wet salted (Slaughtered) 23,000 pcs. on the basis of Rs.10.50 to Rs.16.50 and Rs.19.50 and Rs.28.50.

COMPANY AND PUBLIC NOTICES

PUNJAB MINERALS COMPANY LIMITED

NOTICE is hereby given to the members of the abovenamed Company that an Annual General Meeting of the Company will be held at the Registered Office, Chartered Bank Buildings, Calcutta on Friday, the 30th March, 1962, at 11 A.M. for the following purposes:—

- To consider and approve the Audited Accounts of the Company for the year ended 30th September, 1961, and to receive the Directors' and Auditors' Reports thereon.
- To appoint a Director in place of a retiring Director and in this connection to consider and if thought fit, to pass the following resolution of which a special notice as prescribed by Section 281 of the Companies Act, 1956 has been given to the Company—

"THAT Mr. S. B. Bose who has attained the age of 74 years and who retires from the Board by rotation be and is hereby reappointed a Director of the Company and it is hereby specifically declared that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

By Order of the Board,
P. PRASHAD,
Chairman.

The Share Transfer Register of the Company will be closed from 17th March, 1962 to 30th March, 1962, both days inclusive.

By Order of the Board,
P. PRASHAD,
Chairman.

Chartered Bank Buildings,
Calcutta, 23rd February, 1962.

EXPLANATORY STATEMENT

Item No. 2—In the Special Notice given to the Company of the intention of a member to move this resolution, it has been stated that as the services of Mr. S. B. Bose aged 74 years, have proved most useful to the Company, he having considerable experience and personal knowledge of the affairs of the Company, should continue to remain on the Board of Directors of the Company and that the age limit imposed by Section 280 of the Companies Act, 1956 shall not apply to him.

INSTITUTE OF APPLIED MANPOWER RESEARCH, NEW DELHI

The Institute has been set up as a Society for undertaking systematic research in applied manpower problems, e.g., assessment of the requirements of trained personnel for economic development, creation of employment opportunities for new entrants to the labour market, improved utilisation and development of the employed labour force.

Applications are invited from Indian Nationals or natives of Sikkim, Nepal or of former French or Portuguese possessions in India, for the following posts:

(a) 2 Heads of Research Divisions (Rs. 1,300-60-1,600). Candidates should have a degree of a recognised university with a good academic record, at least 5 years' experience of socio-economic research preferably in the manpower or related fields, e.g., economic and educational Planning, employment and training, public administration and management. Candidates will be expected to have knowledge of research methodology and application of statistical techniques to socio-economic investigations.

(b) 1 Statistician (Rs. 1,100-50-1,400). Candidates should have a Master's degree or equivalent qualification in Statistics, Mathematics or Economics with Statistics and at least 5 years' experience of statistical investigation and research in recognised institutions or Government departments or commercial concerns of repute.

(c) 4 Research Officers (Rs. 700-40-1,100-50/2-1,250). Candidates should have at least a second class Master's degree with a good academic record generally and at least 3 years' research experience, preferably in manpower or related fields.

(d) 4 Junior Research Officers (400-400-450-30-600-35-950). Candidates should have at least a second class Master's degree with a good academic career and about two years' experience of analysis and interpretation of data in the socio-economic fields.

(e) 4 Research Assistants (Rs. 325-15-475-20-575). Candidates should have a second class Master's degree or equivalent qualification with a good academic career and preferably some experience of analysis of statistical and other data in the socio-economic fields.

Allowances will be paid as admissible under Central Government rules. Higher starting salary may be given in deserving cases.

Candidates should give full particulars of age, educational career (Matriculation onwards) with details of subjects studied and division or class secured, research work done so far and publications, posts held with details as regards duration and salary, and minimum pay acceptable.

Apply to:

THE DIRECTOR, DIRECTORATE OF MANPOWER, MINISTRY OF HOME AFFAIRS, SOUTH BLOCK, NEW DELHI.

Last Date for Receipt of Applications
21st March, 1962.

DA—618(4), 61.

JOINT STOCK COMPANIES PREFERENCE SHARES

Dividends are cumulative and shares carry a Preferential claim on the property for the payment of capital and on the profits for dividend except in case of companies marked otherwise. Months against names of companies indicate approximately times of payment of dividends.

TEA COMPANIES

O., Po. and Dd indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

74th YEAR OF ISSUE

CALCUTTA, 15th MARCH, 1962.

Vol. CXXXVIII No. 3701

TAXES AND COMPETITION IN TEA

THE tea industry has an old reputation for standing prophets on their heads. Barely a year and a half ago, the main worry of the north Indian gardens was that their crops would be too small, because the pre-monsoon drought of 1960 had seriously harmed the growth of the bushes. It was also feared that the effects of the drought might last a good deal longer than a single harvesting season. But last year, with the help of favourable weather, production rose sharply. Not only was the earlier decline fully recovered, but a new all-time record was set up with a crop totalling no less than 771 million lbs (596 million lbs in north India and 175 million lbs in south India). Fears of overproduction have been endemic in the tea industry ever since the famous boom of 1954 fizzled out. They have been growing since March 1955, when the International Tea Agreement, under which the output and exports of the major producers were regulated, expired.

Even after the drastic decline in the north Indian crop during 1960, the fears did not vanish altogether because Ceylon, East Africa and Indonesia (along with south India) managed to pluck bumper harvests, with the result that ultimately world supplies were no smaller than in 1959. Furthermore, the U.N. Food and Agriculture Organisation issued a report predicting that if the trends in production continued, a huge surplus of tea would accumulate in world markets by 1965-66. In the circumstances, it is not surprising that thoughts of overproduction have once again returned more firmly to the minds of tea producers during the past year. They have been accentuated since the Indian Government ordained that the output target for the local industry under the third five year plan must be 900 million lbs, or nearly 130 million lbs more than the actual harvest of 1961. The question is being asked whether all this tea can be absorbed, considering that it is not only India but also her competitors who are planning for a sharp increase in production. The Indian Government thinks it can. The Indian tea industry, judging from Mr. I. F. Morris's address from the chair at the annual general meeting of the Indian Tea Association in Calcutta last Friday, thinks it cannot.

The trends of 1961 indicate that it may be the industry which has so far been right. Last year, the north Indian industry produced 66 million lbs more than in 1960, and all the major exporting countries together (including north India) produced 114 million lbs more. Some of this increase went to replenish stocks depleted after the shortage of 1960. Even so, because too much tea was on offer, prices fell substantially. The Calcutta auction statistics indicate that, for certain districts, the fall in average prices so far ranges anything up to 80 naye paise a kilogram, or 40 naye paise a lb. It is true that some districts and some gardens have fared better than others. It is also true, as Mr. A. S. Bam, chairman of the Tea Board, reminded the industry on an earlier occasion, that since December 1961 prices have been recovering. But the main beneficiaries have been the producers of quality teas, which unfortunately account for only a small proportion of India's total output. It

is conceivable that these producers will do as well or even better in 1961 than in 1960; from the revenue point of view, the increase in their crops may be sufficient to offset the fall in the prices they may have got. But for high-cost gardens (such as in the Darjeeling area) and for the producers of the commoner teas (such as in the Cachar area), the profit outlook is poor. Darjeeling has sold less tea at lower prices during the current season than in 1960-61. Cachar and the other common tea producers have harvested a good deal more, but have had to sell their harvests at substantially lower prices; their profits, therefore, will in all probability fall. This is the point which Mr. Bam and the Government represents need to bear in mind. In so far as the larger proportion of the Indian crop consists of the commoner varieties, the industry is worse off than before.

Nobody suggests that the tea industry should be guaranteed a steady and uninterrupted boom in its profits. As an agricultural industry, it has been, and will continue to be, prone to violent fluctuations of fortune. Even when the last International Tea Agreement was in force, which was generally described as a stabilising influence, the industry experienced, within the short span of five years, the worst slump and the biggest boom in its history. Unfortunately, the difference now is that over the years the Government's fiscal and labour policies have made the Indian industry's cost structure much more rigid than that of its competitors, and to that extent its ability to withstand temporary adversities has decreased. Ceylonese and East African producers, enjoying major advantages in the world tea trade, have made serious inroads into what should have been India's markets. At the same time, new exporters have been emerging, such as communist China and the Argentine, whose impact on world markets will be as strong as the growth of their industries or their need for foreign exchange. The Indian Government, therefore, cannot afford to sit back and watch the spectacle calmly while it haggles with State Governments

about rationalising the taxes they impose or with tea producers about reducing the taxes it imposes itself.

Years have passed since the Government started talking about merging the Assam carriage tax and the West Bengal entry tax into the Central excise duty. To this day, almost nothing has been done, except that the excise duty has been raised by the Central Budget for 1961-62 and Assam has been recommending the avoidance of the West Bengal entry tax by the subterfuge of starting a new auction centre near Gauhati. Still more years have passed since the Government started addressing homilies to the tea industry about increasing its exports. To this day, again, almost nothing has been done, except that last year's reduction in the export duty has been largely neutralised by the simultaneous increases in the non-refundable excise duty, and the export tariff still remains at the exorbitant level of 44 naye paise a kilogram. The Government is entitled to use fiscal measures to promote exports if it so desires. But is it too much to ask that it should be flexible and prompt in making changes, especially when the world tea market rivals the chameleon in changing its colours?

The expedient of depressing domestic consumption by making tea more expensive in the home market, and thus pushing exports forward, is plainly wrong. India alone among the major exporters has the advantage of a large domestic market on which the competitive power of the industry can be based. But, instead, she has chosen to increase the tea excise duties, which have not only reduced the economic strength of the industry, but have also made it less optimistic about plans to increase production—all of which must ultimately have an adverse effect on its exports. Government officials sometimes informally pool-pool talk of Ceylonese and East African competition by saying that in due course political factors will be a major disadvantage for the growth of the tea industries in these areas. But it may seriously be wondered whether it is on such dismal astrology that India's export hopes ought to rest. At a time when world competition is increasing, and when a vast new potential market might be opened by Britain's entry into the European Common Market, the first need is to help the Indian industry to produce and sell its tea more cheaply.

L.I.C. AMBITIONS DROP

THERE is no particular standard against which the achievements of the Life Insurance Corporation can be compared. This is because, in the peculiar set-up in this country, the L.I.C. has a monopoly of life insurance business. The boast that it has reached "an all-time high" of Rs. 608 crores of new business in 1961 would be meaningless if it could be established that India's present insurance potential is just around that figure, or alternatively that under a competitive régime it could not have been bettered. It is not necessary to suggest that this competition should be in the private sector. The stimulating effect of competition can be introduced even within nationalised life insurance. At best, therefore, the claim remains nothing more than an assertion, and the Estimates Committee was quite correct when it observed that, "in the case of a monopolistic and observed that, "in the case of a monopolistic and monolithic enterprise like the L.I.C., no comparable standards for measuring efficiency and perform-

ance are readily available." As a partial corrective, it suggested the setting up of "semi-autonomous zonal units", presumably with a view to introducing, in some measure, the stimulating effect of competition in the activities of the L.I.C. The suggestion has not been accepted so far. The L.I.C., therefore, remains what it was—a monopoly—and as in 1960, it has failed to reach the target it set itself in 1961 also. In 1960, the new business done was Rs. 498 crores, falling short of the target by Rs. 28 crores; in 1961, while the revised target was Rs. 655 crores, only Rs. 608 crores of new business has been done.

The Corporation has nevertheless registered an increase of 22.3 percent over 1960 in terms of completed business. In 1960, the increase was 15.9 percent over the 1959 figure of Rs. 430 crores. The rate of increase is to the credit of the Corporation, although there are grounds for believing that it

could have been better. Explaining the failure to reach its target, the L.I.C. has characterised 1961 as a difficult year, as there were natural calamities and disturbances in some parts of the country. But the excuse is meaningless, since in living memory there has hardly been a year in India when natural calamities did not play their part in upsetting the economic life of the community. Private insurers had to face similar difficulties when they were operating. The difficulties are, therefore, almost routine. In any case, in fixing the target, the authorities were entirely wrong if they based their calculations on a period free of any calamities.

The Corporation earlier had a programme for completing Rs. 1,000 crores of new business in the year 1963. But this has since been revised, and it is now announced that the targets are Rs. 700 crores for 1962 and Rs. 1,000 crores only for 1965. The change has been made largely because of difficulties in administration and servicing. When the Estimates Committee suggested the setting up of "semi-autonomous zonal units", it was virtually arguing for independent zonal corporations. A complacent comparison is sometimes made with the Metropolitan Insurance Co. of the U.S.A., and suggestions have emanated from some high officials of the Corporation that there is no reason why the L.I.C. should not be able to complete the amount of business which a single undertaking out of a large number can do in the U.S.A. But the difficulties inherent in the administrative set-up of the Corporation, the inefficiency which abounds in the various departments of the undertaking and the fact that there is an atmosphere of indifference in a business conducted by the Government are factors hindering expansion. The Metropolitan Insurance Co. does not face similar obstacles.

Against this background, the achievements of the Corporation are, on the whole, not too bad. The L.I.C. has been able to announce the introduction of Rs. 703 crores of new business and the completion of Rs. 608 crores in 1961, against Rs. 567 crores introduced and Rs. 498 crores completed in 1960. The foreign business of the L.I.C., however, has not made any headway because of what has been characterised as the political uncertainty prevailing in the countries in which the Corporation operates. The chairman has, however, announced that the Corporation's new London office, opened towards the end of 1960, has secured business worth Rs. 92 lakhs in 1961 and is likely to raise this figure to Rs. 1.25 crores in 1962. The L.I.C.'s premium income in 1961, on the basis of unaudited figures, may touch Rs. 110 crores, against Rs. 96.89 crores in 1960. He has, however, added that the expense ratio for 1961 will perhaps show a reduction to less than 12 percent—it stood at 12.90 percent in 1960.

According to the figures up to 30th November, 1961, over 284,000 policies (34.6 percent of the total policies issued) came under the non-medical scheme which was introduced throughout the country during the year. In the Southern Zone, 42.7 percent of the total policies issued were under that scheme, while in the Central Zone the proportion was 39.8 percent. The Corporation also has

in view the introduction, in stages, of what is called mass life insurance. The actuaries are giving final touches to the premium rates for this scheme. The chairman, it is reported, has stated that at the moment the Corporation is negotiating with a firm to issue its first mass insurance policy covering about 30,000 workers. Under the scheme, instead of issuing individual policies with different rates of premium depending upon the age at entry and the duration of the policy, the Corporation will issue mass policies to industrial and commercial establishments, army personnel and workers in Government departments, insuring them up to a standard amount. There will be no medical examination, and no proof of age will be required. Even the names of policyholders need not be known. The premium rates will be much lower than in other cases. As the scheme has not yet been finally announced, it would be premature to pronounce an opinion, but it has been suggested that the scheme will cover death benefits only and will be somewhat like the personal accident insurance offered by general insurers. Because of the continued criticism about the Corporation's inefficiency in serving policyholders, the L.I.C. is reported to be examining the proposal of an official study team for increasing the efficiency of its personnel and has decided to establish an Organisation and Methods Division to cut down red tape.

The L.I.C.'s total investments were Rs. 545 crores in 1961, against Rs. 476 crores in 1960. Of this, Rs. 236 crores were in Central Government securities, Rs. 117 crores in State Government securities, Rs. 49 crores in other approved securities, Rs. 14 crores in foreign Government securities, and the balance of Rs. 10 crores in shares. The ratio of the L.I.C.'s investments in the private sector to its total investments has been maintained at 22 percent. Carrying the message of insurance to the far corners of rural India was one of the primary argu-

ments for nationalisation. The Corporation has also emphasised all along the need for going more deeply into the rural sector. This emphasis is on the whole correct, because the rural areas are fast emerging as a force in the political and economic life of the country. Income is shifting from the so-called middle classes to artisans, skilled and semi-skilled workers and to agriculturists. The L.I.C.'s venture in this vast sector will be watched with interest. During the nine months ended September 1961, rural business accounted for only 29 percent of the total sum assured by the L.I.C. The ratio is likely to be the same for the full year.

The chairman has stated that the Corporation introduced a scheme for issuing "on-the-spot policies" in northern India. The need and value of insurance are explained by trained officials from mobile vans with audio-visual equipment. Prospective clients are examined on the spot by medical officers, and policies are given immediately. Although this method has proved fairly successful, the Corporation has decided to discontinue the scheme. The Janata policy, introduced in Bombay and Calcutta among industrial labour, is not making as much headway as was originally expected. Its contribution to the total business of the L.I.C. remains, therefore, of no consequence. Another plank of the Corporation's social service programme is to promote housing facilities, for which purpose it has a scheme for granting loans. However, experience has shown that the rules under the scheme are so stringent and so hedged with restrictions that they do little to promote house-building. Nevertheless, the chairman pointed out that out of Rs. 60 crores allocated by the L.I.C. for housing loans to State Governments at an interest rate of 5 percent a year, Rs. 26 crores have been committed so far. The shortage of building materials, and not funds, is the real problem.

THE EXPORT-IMPORT LINK

THE first-ever joint meeting of the Export Promotion and Import Advisory Councils, held in New Delhi recently, was notable for bringing forth a policy declaration from the Central Minister of Commerce and Industry, Mr. K. C. Reddy, on the importance of increasing imports of capital goods, machinery and raw materials for India's industrialisation. While this may represent a welcome change from the usual official thinking on the subject of bridging the payments gap by further import cuts, the crucial question is whether a mere declaration is enough. The almost direct dependence of many of India's growing exports on imported raw materials, intermediate products and components, has led to the formulation of various export promotion schemes, offering the inducement of preferential import licensing for export performance. The schemes have not produced the expected results, because they are too narrowly conceived; they do not always offer an exporter a chance to make profits on the domestic market if he is willing to export at a loss.

In the absence of any notable expansion in exports, or large "untied" credits from foreign lenders, Mr. Reddy may find it hard to stick to his pronouncement in actual practice. Nevertheless, it is worth pointing out that, in addition to the direct connection between imports of raw materials and exports of manufactured goods, the willingness of many countries to accept India's products is largely governed by this country's willingness to buy from them in return. Unfortunately, the main potential markets for India's exports are in the underdeveloped areas of the world, where also payments problems are becoming increasingly common. Since those areas can only export what may be described as "non-essential" items, continuing strict control on such imports into India prevents trade with them from expanding. If India could sell her own goods elsewhere, this would not be something to worry about. But, where she cannot, a more enlightened import policy towards these countries can help India to benefit on balance. It is worth recalling that a mission from faraway Argentina, which came to this country a couple of months ago to promote two-way trade, returned home disappointed due to the inflexibility of New Delhi's trade restrictions.

Mr. Reddy's speech was nevertheless notable for certain other things he said or implied. He indi-

cated that the Government would consider favourably the question of reverting to annual licensing from the present half-yearly system; also, it is likely that licences for capital goods will be uniformly available for a two-year period. The changes have presumably been recommended by the Ramaswami Mudaliar Committee. Among the other recommendations of the Committee which the Minister agreed with, the most important relate to export promotion. The export trade will watch with interest the forthcoming Budget for the promised relief in income tax on export earnings. The consensus of opinion at the meeting appears to have been that such relief should cover traditional export items also. Although, in the absence of details, it is not possible to be sure that the form of relief proposed is the best one, there is no question but that any relief or incentive should apply to the whole range of the country's exports.

It is painfully obvious that the traditional exports—in particular tea, jute goods and cotton textiles—have not been faring as well as they might have done. The country has to face stiff competition in all these items—from Ceylon and East Africa in tea, Pakistan in jute goods, and Japan and Hongkong in cotton textiles. Indian exporters will thus have to exert themselves to the full even to maintain their present ground in foreign markets. Tax reliefs and other incentive schemes can certainly help to improve their performance, to the advantage of the economy. In this connection, it is necessary to refer to the common refrain that costs of production in industries have to be cut if their competitive position is to improve. No doubt, a great deal remains to be done in this direction for many of the new export items, although in the case of some commodities, domestic demand is so consistently ahead of supply that cost reduction may not help to bring prices down. A serious effort nevertheless needs to be made to improve efficiency and reduce costs, especially in the export industries.

Mr. Reddy's defence of the rôle of the State Trading Corporation was quite understandable. It is true that a body such as this is in a favourable position to conclude deals with the monopolistic foreign trade organisations of the communist bloc. That must have been the reason for Sir Ramaswami Mudaliar's praise of its activities. But it does not necessarily imply that S.T.C. officials have

invariably been shrewd bargainers. On the contrary, apart from not having done as well as they could, they have in many cases fared considerably worse than private traders would. This, of course, is due largely to the inexperience of the officials in charge. Many of the mistakes could have been avoided by using the existing channels of trade in close co-ordination with the Corporation. But the S.T.C.'s desire to charge an overriding commission

on all trade which supposedly passes through it, discourages private traders from co-operating more closely. The Government has yet to make up its mind whether the S.T.C. has been set up to promote exports and handle other problems posed by trade with the communist bloc, or to maximise profits. It is to be hoped that the decision will be in favour of export promotion rather than commission-collecting.

The net profit for the year ended December 1961, amounts to Rs. 77.49 lakhs, after providing Rs. 32.94 lakhs for depreciation, Rs. 69.49 lakhs for taxation and Rs. 10.78 lakhs for development rebate reserve. The net profit for the previous year amounted to Rs. 78.92 lakhs, after providing Rs. 26.05 lakhs for depreciation, Rs. 71.72 lakhs for taxation and Rs. 6.38 lakhs for development rebate reserve. With Rs. 7.21 lakhs brought in and Rs. 1.50 lakhs being the provision for sales tax no longer required, the total for appropriation is Rs. 86.20 lakhs. Out of this, the directors have transferred Rs. 40 lakhs (against Rs. 40 lakhs) to general reserve. A sum of Rs. 7.50 lakhs (against Rs. 7.50 lakhs) is transferred to the National Industrial Development Corporation loan redemption reserve. The proposed gross dividend of 15 percent, against 15 percent in the previous year, will absorb Rs. 26.25 lakhs. The balance of Rs. 12.45 lakhs is carried forward.

Andhra Sugars Expanding

The report of Andhra Sugars Ltd for the year ended September 1961 says that sugar production in 1960-61 has been the largest in the history of the Company. The higher output has considerably offset the fall in the selling price of sugar. In the context of problems facing the sugar industry, the directors have planned an overall diversification of Andhra Sugars' activities. The Company has earned a net profit of Rs. 15.69 lakhs, after providing Rs. 8.94 lakhs for depreciation, against Rs. 13.42 lakhs, after providing Rs. 4.97 lakhs for depreciation. Adding to the profit Rs. 25.153 brought forward from the previous year, Rs. 6,690 being the excess provision towards bonus credited back, Rs. 15,623 being the refund of sugarcane cess paid in previous years, and transferring Rs. 1 lakh from dividend equalisation reserve, the total available for appropriation is Rs. 17.17 lakhs. Out of this, the directors have provided Rs. 5.70 lakhs (against Rs. 5.50 lakhs) for taxation and Rs. 3.35 lakhs (against Rs. 1.50 lakhs) for development rebate reserve. The dividend, subject to deduction of tax, on preference shares at 9.3 percent accounts for Rs. 2.50 lakhs. The proposed dividend of 16 percent (against 20 percent) on equity shares, will absorb Rs. 4.80 lakhs. The balance of Rs. 7,000 is carried forward. The dividend on the 6½ percent tax-free preference shares is being raised to 9.3 percent, subject to deduction of tax.

The sugarcane development schemes of Andhra Sugars are reported to have yielded good results, so there has been an improvement in both the quantity and quality of the cane supplied to the factory. The recovery has also been satisfactory, although the crushing season was extended up to the middle of May. The sugarcane crushed during the season amounted to 169,717 tonnes and the sugar produced was 173,430 bags with a recovery of 10.19 percent, against 108,524 long tons, 111,620

Current News and Comment

Sen-Raleigh to Diversify

Sen-Raleigh Industries of India Ltd has decided to issue 650,000 ordinary shares of Rs. 10 each at a premium of Rs. 4 a share. The proceeds will be used to finance the expansion of the bicycle output and the diversification of activity. During the year ended September 1961, sales of Sen-Raleigh improved by Rs. 39.85 lakhs to Rs. 3.98 crores mainly due to the increased production of components. In spite of a well-filled order-book, the bicycle output suffered due to the shortage of components following import restrictions and the failure of indigenous producers to supply them in time. The position has, however, improved since then.

The profit has declined from Rs. 24.49 lakhs in 1959-60 to Rs. 21.56 lakhs in 1960-61, after raising depreciation from Rs. 20 lakhs to Rs. 22.60 lakhs. Reserve for the repayment of loan is allocated Rs. 3.75 lakhs (against Rs. 2.75 lakhs), development rebate reserve Rs. 1.28 lakhs (against Rs. 1.18 lakhs) and taxation Rs. 10.08 lakhs. The taxable ordinary dividend has been maintained at 8 percent. It is covered more than three-and-a-half times and offers a yield of 3.5 percent at the present price of Rs. 22.56 a share. The carry-forward amounts to Rs. 7,622, against Rs. 1.17 lakhs brought in.

E.I. Distilleries Earns Less

The working of the East India Distilleries and Sugar Factories Ltd for the year ended September 1961, shows a net profit of £690,130 before providing for taxation, compared with £774,536 in the previous year. Out of this, provision for taxation amounts to £324,113 (against £381,428), leaving £366,017. Deducting £14,625 being the profits of subsidiary Companies attributable to outside shareholders' interests, and adding £126,694 brought in, the total surplus available for appropriation is £478,086. Out of this, development rebate reserve gets £18,787 (against £11,660) and general reserve £90,000 (against £100,000). The total dividend of 9 percent on preference shares accounts for £18,000. The interim dividend of 7-1/7 percent on ordinary shares absorbed £78,572, and the proposed final dividend of 14-2/7 percent will absorb £157,143. The total dividend for the year is maintained at 21-3/7 percent. The balance of £115,584 is carried forward.

Both the quantity of cane crushed at 392,151 tonnes and sugar produced at 34,117 tonnes constitute a record for the factory, compared with 350,179 tonnes and 31,260 tonnes, respectively, in the previous year. The average recovery was 8.70 percent, against 8.92 percent, the fall being mainly due to the longer duration of the season and the larger quantity of sugarcane crushed. Out of the total sales of 33,910 tonnes, 5,941 tonnes was exported, the price realised on the exports being £110,053 less than what would have been realised from internal sales. The directors say that this has adversely affected the profitability of sugar manufacture and sales during the year. Sales of spirit, carbolic acid gas and chemicals remained at satisfactory levels.

In the ceramics division, the thrift kiln at the Ranipet factory had to be closed for overhaul. This led to the loss of about three months' production. An excise duty was levied on ceramics from 1st April, 1961. In the fertilisers division there has been a satisfactory increase in sales of mixtures, but these could have been greater if

Madura Mills Repeats

In spite of lower yarn prices the turnover of Madura Mills Co. Ltd during 1961 showed an increase over 1960. The modernisation and expansion schemes are progressing. The Serampore factory commenced production in June 1961. The total capital expenditure during the year amounted to Rs. 1.06 crores while outstanding commitments were Rs. 1.54 crores. The latter does not include the cost of installation of 450 automatic looms planned in the near future. Considering the proposed heavy capital expenditure, the directors are thinking of issuing debentures this year. It is stated in the report that the Indian cotton crop has suffered seriously this year, but Madura Mills is making every effort to ensure supplies with a view to maintaining full production throughout the year. The report adds that the question of rationalisation of workloads has now been referred to an umpire appointed by the Government. The decision is expected to be received and implemented this year. Madura Mills' export record continues to be good. Exports are continuously receiving the management's attention, the report says.

bags and 10.20 percent, respectively, during the previous season. The 1961-62 crushing season started on 27th November, 1961, and is progressing well. But Andhra Sugars will not be able to crush as much quantity as in the last season due to the 10 percent cut imposed by the Central Government.

The sulphuric acid and superphosphate plants went into production in February 1961. Andhra Sugars produced 15,272 tons of superphosphate and sold 12,434 tons. The product has been well received in the market and the plant is now in full production. The Company has made considerable progress in setting up the industrial alcohol plant and the acetic acid and acetic anhydride plants. The machinery required has been received at the site, and erection work is being completed. The plant is expected to go into initial production within the next three months. Andhra Sugars is building a caustic soda-chlorine plant in Kovvur, which is likely to go into production by the end of 1962. It has received an industrial licence for expanding the caustic soda-chlorine plant. The directors are now negotiating with foreign suppliers for plant and equipment.

Andhra Sugars has promoted a separate enterprise (Andhra Foundry and Machine Company Ltd, Hyderabad) for establishing a spun pipe and malleable pipe fittings unit under the industrial licences issued to it by the Government of India. The report says that the latter has also issued an industrial licence to the Company for establishing a fertiliser factory in Kothagudem for the production of 200,000 tons of urea a year. This unit is expected to cost about Rs. 25 crores. The Government of India has asked Andhra Sugars to promote a new enterprise for undertaking the project. The directors say that considerable progress has been made in obtaining foreign collaboration, and steps are being taken to form the new Company.

Belsund Sugar Cuts Dividend

The Belsund Sugar Co. Ltd has reduced the taxable ordinary dividend from 18½ percent to 10 percent for the year ended September 1961. It is covered more than one-and-a-half times and offers a yield of 7.3 percent at the present price of Rs. 10.31 a share. The profit has declined from Rs. 6.59 lakhs in 1959-60 to Rs. 5.72 lakhs, after increasing depreciation from Rs. 2.15 lakhs to Rs. 3.15 lakhs. Taxation is allocated Rs. 2.92 lakhs (against Rs. 2.80 lakhs) and development rebate reserve Rs. 1.57 lakhs (against Rs. 60,956). There is a carry-forward of Rs. 3,552, against Rs. 1,234 brought in.

The decline in profits is due to various factors. Recovery declined from 9.47 percent to 9.14 percent due to the extension of the crushing period. The implementation of the Wage Board recommendations increased the remuneration for labour. Besides, Belsund Sugar incurred a loss of Rs. 3.19 lakhs on exporting sugar. Production, however, rose from 3.5 million to 5.1 million maunds. During the current season, the output is expected to amount to 4.4 million maunds because the Government of India has fixed the production target at 10 percent below the 1960-61 output. The directors say that the overproduction of sugar has created problems concerning finance and storage. The fall in the price of the commodity since decontrol in September 1961, is likely to affect results.

More from United Bank

The United Bank of India Ltd has produced satisfactory results for the year ended December 1961. The taxable ordinary dividend has been increased from 4.30 percent to 6 percent, absorbing Rs. 16.07 lakhs. The profit has risen from Rs. 14.63 lakhs in 1960 to Rs. 20.50 lakhs, after taxation. The reserve fund is allocated Rs. 4.11 lakhs, leaving a carry-forward of Rs. 2.40 lakhs, against Rs. 2.08 lakhs brought in. The Tezpur Industrial Bank Ltd and the Cuttack Bank Ltd were amalgamated with the United Bank during 1960-61. Deposits rose by Rs. 7.13 crores to Rs. 58.87 crores. Cash is Rs. 2.51 crores higher at Rs. 8.10 crores. Investments are up by Rs. 92 lakhs to Rs. 17.71

crores and advances by Rs. 5.99 crores to Rs. 37.61 crores. The bank's subscribed share capital is Rs. 3.18 crores.

Lodna Colliery Share Offer

Lodna Colliery Co. (1920) Ltd will shortly offer 230,000 ordinary shares of Rs. 10 each at a premium of Rs. 7.50 a share for public subscription. (Fuller details are published on a later page of this issue of *Capital*). The present paid-up capital is Rs. 87 lakhs, divided into ordinary shares of Rs. 10 each. The new shares will not participate in the dividend which may be declared for the year ended December 1961.

Lodna Colliery is one of the leading coal companies in India. It is at present working five large collieries—two in the Jharia field and three in the Ranigunge field. It also operates a by-product coke plant and a washing plant. Total raisings were about 1.9 million tons during the year ended December 1960. Reserves of the collieries now being worked are estimated at 124 million tons. Except for temporary interruption of working due to technical factors, the results of Lodna Colliery have shown steady improvement during the past few years. The net profit amounted to Rs. 33.18 lakhs during the year ended December 1960, and a taxable ordinary dividend of 20 percent was paid, absorbing Rs. 17.40 lakhs. The preliminary results for the half-year ended June 1961, are encouraging. Sales have amounted to Rs. 2.2 crores, and the net profit is about Rs. 27.53 lakhs. The profit for the second half of 1961 is likely to be maintained at about the same level as in the preceding half-year.

Lodna Colliery has made plans to increase production to about 2.5 million tons a year at the end of 1965. The cost of expansion is estimated at Rs. 1.26 crores. In addition to the proceeds of the new share issue, a sum of Rs. 40 lakhs is likely to be obtained by borrowing from the appropriate Government agency for aerial ropeways and stowing equipment. An amount of Rs. 45.75 lakhs will be provided from internal resources.

In 1946, Lodna Colliery issued bonus shares by capitalising Rs. 58 lakhs out of reserves. In 1961, the ordinary shares were sub-divided into shares of Rs. 10 each. The balance-sheet figures are impressive. Reserves exceed Rs. 80 lakhs and net fixed assets are Rs. 1.42 crores. Current assets are satisfactory. Considering the present financial position and expansion which Lodna Colliery has undertaken, the new issue should meet with warm response.

Share Offer from Assam Hardboards

Assam Hardboards Ltd is setting up a factory in Gauhati, Assam, for manufacturing hardboards. It has been licensed by the Government of India for producing 15,000 tons a year, but the factory is being built in such a way that there is scope for further expansion when required. Assam Hardboards will export 20 percent of its production, at least during the first ten years of its working. The factory's location is considered suitable. The Government of Assam has assured the Company of adequate wood and bamboo supplies—the main raw materials for producing hardboards. Foreign collaboration has been arranged with Columbia Hardboard Co. Inc. of the U.S.A., which has also agreed to subscribe to the ordinary share capital.

The cost of the project is estimated at Rs. 1.40 crores. The present subscribed capital of Assam Hardboards is Rs. 9 lakhs, divided into ordinary shares of Rs. 10 each. To raise further finance, the Company is issuing 10,000 redeemable cumulative preference shares of Rs. 100 each, carrying a taxable dividend of 9.3 percent, and 410,000 ordinary shares of Rs. 10 each. Out of this, the Assam Government has agreed to subscribe for 5,000 preference shares. The directors and their friends will take up 64,000 ordinary shares. The foreign collaborator has agreed to subscribe for 100,000 ordinary shares. The remaining 5,000 preference shares and 246,000 ordinary shares are being offered for public subscription at par. The Life Insurance Corporation has been given a firm allotment of

50,000 ordinary shares against its underwriting arrangement. (Fuller details of the issue are printed on a later page in this week's *Capital*.) The Industrial Finance Corporation may give a long-term loan of Rs. 60 lakhs to Assam Hardboards.

Production is expected to begin by the end of 1963. The outlook for the Company is considered to be optimistic. The demand for hardboards—especially from the building industry—has increased steadily during the past few years. At the end of 1966, it is expected to exceed 50,000 tons a year, but production will be much smaller than total requirements. Under the circumstances, Assam Hardboards should be able to sell all its products. The directors expect to make good profits and pay reasonable dividends in due course. As a new industrial undertaking, Assam Hardboards is entitled to the usual tax benefits.

Progress of Asian Cables

In their report for the nine-month period ended September 1961, the directors of Asian Cables Corporation Ltd state that rights shares have been issued to the existing shareholders and the actual scrutiny of applications and allotments has been taken up. Since the factory was opened in November last, it has achieved steady progress in training operatives and in establishing standard production schedules. An appreciable quantity of cables produced has been used in the electrical installations in the factory. The directors say that the Corporation has secured advance orders to cover about six months' production. As soon as the test reports and certificates are received, the products will be released to the market.

The Corporation's working during the nine-month period shows a loss of Rs. 48,331, against a profit of Rs. 11,756 in the preceding period, after providing Rs. 21,262 for taxation. With Rs. 11,765 brought in, a debit balance of Rs. 36,566 is carried forward. The arrears of depreciation total Rs. 34,558. Capital assets of the Corporation have increased to Rs. 59.08 lakhs during the period.

Iron Pipes from Assam Tubes

Assam Tubes (Private) Ltd, which has been licensed for manufacturing 12,000 tons a year of ½ in. to 3 in. galvanised iron pipes on a double shift basis, will soon convert itself into a public Company. It is expected to enter the market shortly to raise capital for the project. Meanwhile, Assam Tubes has approached the Government of Assam for participating in the capital. When in full production, the plant will produce 20 million feet of pipes a year. It is also designed to produce furniture, bicycle, roller and mechanical tubes, as well as heavy wall conduit tubes. The project will be a major industrial venture of Assam.

Empire, Nellimarla, Presidency Jute

In their reports for the year ended July 1961, the directors of the McLeod group of jute companies take a fairly optimistic view about the current working. Adequate raw jute supplies are available at reasonable prices, so the industry's working is likely to be profitable. The prospects are considered to be even more promising. During the year, the working has been adversely affected by the acute raw jute shortage. The cutbacks in production due to the sealing of looms and the reduction in working hours, combined with increased wages under the recommendations of the Central Wage Board, increased the unit cost of production.

The profit of the Empire Jute Co. Ltd amounted to Rs. 1.88 lakhs in 1960-61, against Rs. 4.16 lakhs in 1959-60, after providing Rs. 4.52 lakhs (against Rs. 4.82 lakhs) for depreciation and Rs. 1.70 lakhs (against Rs. 3.90 lakhs) for taxation. The taxable ordinary dividend has been reduced from 12.50 percent to 7.50 percent. It is covered more than thrice and offers a yield of 3.9 percent at the present price of Rs. 19.06 a share. Development rebate reserve is allocated Rs. 19,700 (against Rs. 1.42 lakhs), leaving a carry-forward of Rs. 48,572 against Rs. 70,285 brought in. Further modernisa-

CAPITAL, 15th March, 1962.

tion of the spinning and beaming machinery has been carried out with a view to improving efficiency.

The profit of the Nellimarla Jute Mills Co. Ltd has risen from Rs. 2 lakhs to Rs. 5.54 lakhs, after providing Rs. 5.33 lakhs (against Rs. 5.27 lakhs) for depreciation. The taxable ordinary dividend has been doubled to 6 percent. It is covered nearly three-and-a-half times, and the yield works out to 5 percent at the present price of Rs. 12 a share. Taxation absorbs Rs. 2.50 lakhs and development rebate reserve Rs. 77,100 (against Rs. 1.64 lakhs). The carry-forward is Rs. 59,869, against Rs. 43,020 brought in. The directors say that the modernisation of the preparing and spinning departments is being carried out.

The Presidency Jute Mills Co. Ltd has earned a profit of Rs. 1.18 lakhs, against Rs. 2.67 lakhs, after providing Rs. 3.04 lakhs (against Rs. 3.32 lakhs) for depreciation and Rs. 1 lakh (against Rs. 1.16 lakhs) for taxation. The taxable ordinary dividend has been reduced from 8 percent to 6 percent, absorbing Rs. 1.50 lakhs. The dividend offers a yield of 5.6 percent at the present price of Rs. 5.37 a share. Development rebate reserve is allocated Rs. 5,400 (against Rs. 1.18 lakhs). The carry-forward is Rs. 4,940, against Rs. 23,417 brought in. Further modernisation of the spinning machinery is being carried out.

Thirumbadi Rubber Pays More

The working of the Thirumbadi Rubber Co. Ltd for the year ended September 1961, shows a net profit of Rs. 1.28 lakhs, against Rs. 2.23 lakhs in the previous year. Adding Rs. 14,829 brought forward from the previous year and Rs. 5.24 lakhs being the profit on the sale of the Calicut Estate, the total amount available for appropriation is Rs. 6.67 lakhs. Out of this, provision for taxation is allocated Rs. 73,000 (against Rs. 1.22 lakhs). The additional provision for taxation for previous years is Rs. 3,903. A sum of Rs. 4.75 lakhs is transferred to rehabilitation and development reserve. The proposed dividend of 12 percent, subject to deduction of tax, will absorb Rs. 1,09,836. A dividend of 7 percent was declared in the previous year. The balance of Rs. 5,034 is carried forward.

The Calicut Estate was sold during the year for Rs. 15.50 lakhs. After deducting the acreage of the Calicut Estate, the total acreage of the Company's properties as at 30th September, 1961, amounts to 2,453.22, including roads and jungles, etcetera. Out of this, the acreage of mature rubber amounts to 1,038.66 and that of immature rubber to 146.05. The total rubber crop for the year amounted to 245,549 kilograms, against 323,807 kilograms. The all-in-cost a kilogram amounted to Rs. 3.31, against Rs. 3.39. The average price realised amounted to Rs. 3.76 a kilogram, against Rs. 4.06 a kilogram. The 1961-62 crop is estimated at 180,000 kilograms to be produced at an all-in-cost of Rs. 3.19 a kilogram. This does not include the crop from 300 acres of old seedling rubber. The crop from this area is estimated at 110,000 kilograms. Thirumbadi Rubber has undertaken a seven-year rehabilitation and development programme. It involves the replanting of 100 acres of old rubber and the planting of 50 acres of virgin jungle annually from 1961-62. It has been decided to finance the programme out of the sale proceeds of the Calicut Estate.

Urmi Cheese Issue Soon

The lists for public subscription to the Rs. 25-lakh issue of equity shares of Rs. 10 each by Urmi Cheese and Chemicals Ltd will open shortly. The Company is setting up a Rs. 60-lakh project for manufacturing dairy products and chemicals with Czech collaboration. To finance it, Urmi Cheese is issuing half of its authorised capital of Rs. 1 crore. The promoters, directors and their friends are taking up shares worth Rs. 25 lakhs. The factory site in Mandya, near Bangalore, is said to have been selected because of suitable climatic conditions and the availability of milk at reasonable rates. Moreover, Mandya is believed to be ideal for animal breeding. The plant will have a production capacity of 27 tons of cheese a month, 14 tons of

butter a month, 2,000 litres of ice-cream a day and 9 tons of casein and 8 tons of calcium lactate a month. Urmi Cheese is scheduled to go into production early next year. It has a two-phase manufacturing programme. Initially, it will set up a fully integrated plant for manufacturing specialised varieties of cheese. Later, it will produce condensed and concentrated milk, baby food, skimmed milk powders and allied dairy chemicals like calcium lactate, casein, casein glue, casein hydrolysate, protein and protein hydrolysate, which are used by the pharmaceutical, paper, plastic, textile and leather industries.

Urmi Cheese has finalised negotiations for the supply of plant and machinery by Strojexport, Czechoslovakia. The Government of India has sanctioned the import of plant and machinery from the rupee-payment areas for a total value of Rs. 9.68 lakhs. The Company has entered into a technical assistance agreement with Skoda (India) Private Ltd, Bombay—the agents for Strojexport. The capital outlay on the project is estimated at Rs. 59.68 lakhs.

Oriental Power Share Offer

Oriental Power Cables Ltd, Indore, will enter the market next month to raise Rs. 36.5 lakhs in equity shares of Rs. 100 each by way of public subscription. It is issuing, in all, a capital of Rs. 1.05 crores—Rs. 75 lakhs in equity shares and Rs. 30 lakhs in 9.5 percent cumulative redeemable preference shares of Rs. 100 each. The promoters, directors and their friends are subscribing equity shares worth Rs. 22 lakhs and preference shares of Rs. 3 lakhs. The preference issue of Rs. 30 lakhs is underwritten by the Industrial Finance Corporation for Rs. 3 lakhs, the Life Insurance Corporation for Rs. 10 lakhs, the Rajasthan Government for Rs. 10 lakhs and by others for Rs. 7 lakhs. Equity shares of Rs. 5 lakhs are underwritten by the Industrial Finance Corporation, Rs. 3.5 lakhs by the L.I.C., and Rs. 5 lakhs by the Rajasthan Government.

Oriental Power is to undertake a Rs. 2.50-crore project for manufacturing wires, cables, lines, cords and conductors (paper insulated and plastic coated V.I.R. descriptions) of all categories, including belted types, H types, S.L. types, H.S.L. types and P.V.C. insulated types. Initially, 600 miles of paper-insulated power cables will be produced each year. The cables are used for transmitting electricity of 1,100 volts to 3,300 volts and more. Production is to start in June next year. Sumitomo Electric Industries Ltd, Japan, is the Company's technical collaborator. The capital outlay is proposed to be met out of the capital issue of Rs. 1.05 crores, a medium-term loan of Rs. 85 lakhs from the I.F.C. and borrowings from other financial agencies amounting to Rs. 60 lakhs. The plant is to be installed on a 500-acre plot in Kotah, Rajasthan, where adequate water power and transport facilities are available. Somaiya Bharkatiya (Private) Ltd will be the managing agents of the Company.

Coonoor Tea Earns Less

The Coonoor Tea Estates Ltd has earned a lower profit during the year ended September 1961. The net profit amounts to Rs. 84,608, against Rs. 1.47 lakhs. With Rs. 32,888 brought forward from the previous year and with Rs. 7,500 being the excess provision for taxation made in previous years no longer required, the total available for appropriation is Rs. 1.25 lakhs. Out of this, the dividend on preference shares at 6 percent, subject to deduction of tax, accounts for Rs. 8,681. The total dividend of 15 percent for the year, including the proposed final dividend of 7½ percent, accounts for Rs. 84,986. The balance of Rs. 24,732 is carried forward.

Coonoor Tea completed the year with a crop of 394,039 lbs of made tea, against the previous year's record crop of 404,655 lbs. The lower crop was accompanied by a fall in prices at the Cochin auctions. This has led to a considerable fall in the profits compared with the previous year. Although the crop for the season is lower than in the previous season, it is the second highest on record. The estate cost of production for the year

was Rs. 1.63 a lb. The net average selling price for tea was Rs. 2.17 a lb, against Rs. 2.32 a lb. The 1961-62 crop is estimated at 400,000 lbs of made tea which will cost 145.38nP a lb.

Vaikundam Rubber Pays the Same

The working of the Vaikundam Rubber Co. Ltd for the year ended December 1961, shows a profit of Rs. 5.54 lakhs, after providing for depreciation, contingencies and gratuity. The net profit for the previous year was Rs. 5.68 lakhs. Adding to the profit Rs. 903 brought forward from the previous year, Rs. 1.161 being the excess provident fund refunded, Rs. 73,232 being the excess provision for taxation in previous years no longer required, and Rs. 8,000 being the excess provision for contingencies in the previous year, the total available for appropriation is Rs. 6.37 lakhs. Out of this, the directors have provided Rs. 2.03 lakhs, against Rs. 2.30 lakhs for taxation. The additional provision for gratuity for previous years amounts to Rs. 27,500. A sum of Rs. 81,000 (against Rs. 79,000) is transferred to general reserve and Rs. 52,600 (against Rs. 52,400) to rehabilitation reserve. The balance of Rs. 9,228 is carried forward. Vaikundam Rubber has maintained the total dividend at 30 percent, absorbing Rs. 2.64 lakhs.

The total crop for the year amounted to 584,700 lbs, against 581,200 lbs. The all-in-cost of production was 51.62nP a lb, against 55.66nP a lb. The average sale price was 143.60 a lb, against 150.41 a lb. During the year, the directors decided to use funds which were surplus to requirements to purchase shares in other planting companies. Total investment in shares and Government securities is estimated at Rs. 5.55 lakhs. The 1962 crop is placed at 600,000 lbs.

Osmanshahi Mills Disappoints

In spite of a sizeable increase in the sales of cloth, yarn and waste, amounting to Rs. 2.21 crores, against Rs. 2.08 crores, the Osmanshahi Mills Ltd has suffered a financial setback during the year ended September 1961. The gross profit has declined from Rs. 7.77 lakhs to Rs. 4.16 lakhs. The dividend has been passed once again. The shares of Osmanshahi Mills have been off the dividend list since 1957. The net profit amounts to Rs. 17,714, against Rs. 3.17 lakhs in the previous year, after providing Rs. 3.47 lakhs (against Rs. 3.92 lakhs) for depreciation and Rs. 15,000 (against Rs. 18,000) for development rebate reserve. Credit has been taken for Rs. 1.85 lakhs being the refund of income tax relating to previous years. Provision for arrears of depreciation amounts to Rs. 2.03 lakhs (against Rs. 3.17 lakhs). The carry-forward is Rs. 900, against Rs. 951 brought in. It is estimated that depreciation up to September 1961, written off from fixed assets according to the Income Tax Act, is inadequate to the extent of about Rs. 64.39 lakhs (against Rs. 66.42 lakhs), excluding initial depreciation of about Rs. 19.40 lakhs (against Rs. 19.40 lakhs). The arrears of depreciation computed in accordance with the provisions of Section 205 (2) (a) of the Companies Act work out to about Rs. 30.60 lakhs, against Rs. 25.34 lakhs in the previous year.

The directors state in their report that the trading conditions were good throughout the year. But Osmanshahi Mills suffered a setback on account of the burning down of its generator. This led to the complete closure of the mills from 15th November, 1960 to 24th January, 1961. The directors regret that they could not make any progress in implementing the rationalisation scheme and in fixing workloads. The outlook is no better than in the past year, for the failure of the current season's cotton crop, which has already led to a rise in prices, will affect the current year's profit unless there is a corresponding revision in the selling prices of cloth.

Kumergode Estates Profit Up

The working of Kumergode Estates Ltd for the year ended October 1961, shows a profit of Rs. 1.33 lakhs, against Rs. 2.32 lakhs in the previous year. With Rs. 14,690 brought forward from the previous

year, the total surplus available for appropriation is Rs. 1.48 lakhs. Out of this, the directors have provided Rs. 38,780 (against Rs. 75,520) for taxation and Rs. 15,000 (against Rs. 75,000) for general reserve. The proposed dividend of 17½ percent, subject to reduction of tax (against 20 percent), will absorb Rs. 70,000. The balance of Rs. 24,066 is carried forward.

The coffee crop for the year amounted to 182,301 metric tonnes, against 193,192 metric tonnes. The all-in-cost a metric tonne amounted to Rs. 2,196, against Rs. 2,190. The entire coffee crop for the season was delivered to the Coffee Board and was awarded 260,754 points. The 1961-62 crop is estimated at 130 tonnes.

Prospects for Permanent Magnets

The directors of Permanent Magnets Ltd state in their first annual report that the factory will soon go into production. The Company has acquired 41,928 square yards of land in Borivili, a suburb of Bombay. The construction work started in October last and is expected to be over by the end of March 1962. Nearly 30 percent of imported machinery has already arrived in Bombay, and the balance is expected by the end of this month. Indigenous machinery—orders for which have been finalised—would be delivered in time for erection. Mr. Antonio Scvesi, managing director of the Centro Magneti Permanenti—the Company's French collaborators—was in Bombay in February to check up on the construction work as well as on the orders for machinery. He has also planned the production programme. The Maharashtra Government has allotted power supply to the Company from the Koyana project. The Company is making intensive market research concerning the demand for permanent magnets in India, and has found it to be large. The directors point out that they would have to consider the possibility of expanding the production capacity immediately after the commencement of production.

During the year, Permanent Magnets incurred an expenditure of Rs. 1.05 lakhs and earned Rs. 25,810. Of the total expenses, Rs. 91,184 is capitalised under the "expenditure during construction account", and the balance of Rs. 13,796 is shown in the profit and loss account. The directors have provided Rs. 11,700 for taxation. There is a surplus of Rs. 314 in the revenue account, which is carried forward.

Pig Iron for Foundries

In his speech from the chair at the conference of the Indian Foundry Association in New Delhi recently, Mr. K. Agarwalla said that the foundry industry is facing difficulties in getting adequate supplies of suitable pig iron and hard coke, with the result that production is seriously hampered. The Government has enhanced the price of pig iron from time to time. The recent increase of Rs. 25 a metric ton has added to the foundry industry's cost of production. Mr. Agarwalla said that the price of pig iron was increased by Rs. 20 a ton in 1953 and then again by Rs. 62 a ton in 1956. Since the high price of foundry-grade pig iron is acting as a handicap, it is necessary to reduce the price to give a fillip to the industry's expansion. The increase in foundry capacity during the third plan, the chairman said, is of crucial importance for implementing the machinery manufacturing programmes. The third plan has fixed a target of 1.2 million tons of grey iron castings and 200,000 tons each of steel castings and forgings. Capacity for 45,000 tons of steel castings, 38,000 tons of grey iron castings and about 70,000 tons of steel forgings will be created in the forge shop in Ranchi. Further capacity will be available in foundries attached to the Durgapur Bhilai and Rourkela steel plants, as well as in the Bhopal heavy electricals project, the Durgapur mining machinery project and Hindustan Machine Tools. As for foundries in the private sector substantial new capacity is likely to be created due to the expansion of the motor-car industry as well as the manufacture of textile, cement, sugar and paper machinery. Mr. Agarwalla said that the number of iron and steel foundries now working in India

is about 2,000 with an approximate total installed capacity of about 1.4 million tons. The industry has started producing heavy castings for the machine-building industry and is earning substantial foreign exchange by exporting castings even to industrially developed countries.

Ruling on Sugar Bonus

The Allahabad High Court has held that the U.P. Sugar Cane Commissioner is not justified in ordering the payment of a bonus to workmen based on the recovery of sugar from sources other than sugarcane. The appeal against the Commissioner's order was filed by a sugar mill in Bareilly which was required to pay bonus to its workmen at the rate of 6 annas a maund of sugar it had produced. The High Court held that the omission to exclude from his consideration sugar produced from other sources led the Commissioner to conclude that recovery in the case of the petitioner's factory was 9.02 percent and that it should, therefore, be required to pay bonus at the rate of 6 annas a maund. A perusal of the Government order showed that bonus was to be determined on the basis of recovery from sugarcane only, and not from other sources. Whereas the recovery from sugarcane ranged from 8.5 percent to 9.02 percent, the recovery from other materials like *gur* and *khandasari* was much higher, ranging between 60 percent and 70 percent. Their lordships observed that, according to the impugned order of the Commissioner, bonus was payable by the petitioner on the total sugar output, including production from *gur* and *khandasari*. The order was accordingly invalid. The Court, however, rejected the petitioner's contention that the bonus which the Government had directed it to pay was "profit bonus" and upheld the claim of the Government that it was a "production or incentive bonus", as it was based on the recovery percentage of sugar. According to the Supreme Court in an earlier case, bonus could be included within the terms and conditions of service of workers, and any direction to pay bonus could be treated as a direction relating to such terms and conditions. It will be recalled in this context that the same petitioner had challenged the Government's right to give retrospective effect to its bonus order. Although his appeal was allowed in the Allahabad High Court, the Supreme Court reversed that judgment on an appeal by the U.P. Government.

CORRESPONDENCE

BRITISH INDUSTRY

(TO THE EDITOR OF "CAPITAL")

Dear Mr. Ditcher,

You have got us so very wrong in your contribution to *Capital* of 15th February. The editorial in the *F.B.I.* Review, to which you refer, was intended to highlight the harm that can be done when guileless and well-intentioned criticism is proffered within, for example, the confines of a management conference, and then quoted abroad, out of context, to the detriment of British industry as a whole. It never has been nor is it ever likely to be the policy of the *F.B.I.* to stifle criticism. Indeed we welcome constructive criticism when it is properly annotated with full chapter and verse, so that we can take it up and draw it to the attention of the appropriate industry or trade association. We welcome opportunities of putting right anything that is obviously wrong. What we do strongly object to, however, is a barrage of general and ill-considered criticism—especially when it comes from somebody on "our own side".

The British resident abroad and, alas, sometimes the British traveller is the worst enemy of Britain and things British. To grouse, carp or criticise is a British national tradition. While this recreational pastime can be viewed with tolerance and indulgence at home, it is more difficult to condone or understand abroad. For not very obvious reasons, British business communities in the East tend to become slaves to the herd instinct and foregather nightly at cocktail parties at one of which you no doubt met your cold weather visitor to Calcutta. These gatherings unleash

torrents of criticism and abuse of Britain and things British. While much of this may be discounted as a peculiarly British brand of humour, it is often misunderstood by the eavesdropping nationals of the host country. Even though these strictures may be uttered in the sincere hope of correcting faults or from a misplaced sense of patriotic duty, when broadcast, as they inevitably are, they invariably do far more harm than good. They certainly delight Britain's industrial competitors.

I ask you, Mr. Ditcher, have you ever heard a German or an American or a Frenchman, when travelling abroad, running down his country or his own industry so blatantly and so harmfully as your visiting fireman, whom you quote with such evident relish? Every Indian business visitor to this country, and I have had the pleasure of meeting quite a number, is a good ambassador for India and takes just pride in his country's industrial progress. I have never heard an Indian visitor to Britain run down Indian industry. We are not ashamed of the world-wide export performance of British industry. Indeed we are proud of it. The figures speak for themselves. They were £3,330 million in 1959, £3,554 million in 1960, and £3,682 million in 1961. Therefore, some of your friend's "unprofessional" salesmen must have been doing something in a fairly rugged competitive spirit. It is unjust to blame British industry for the present state of the British economy. If the balance of payments figures are examined, it will be found that the deficit is very largely caused by factors beyond the control of British industry—increasing imports and heavy Government expenditure abroad, to mention but two.

In spite of these factors, we are by no means complacent and there is a growing volume of evidence that indicates we may not be progressing as fast as we should. It is for this reason that the *F.B.I.* took the lead in urging the British Government to embark upon long-term planning to ensure a higher rate of economic growth. The *F.B.I.* hopes to play its full part in supporting the National Economic Development Council now that it has been formed. The dirt, Mr. Ditcher, is spread by your own carpet sweeper. Our own carpets are well aired and beaten and now, as a point of interest, are adorning thousands of homes in Germany and indeed throughout Europe. Alas, we are prevented from exporting them to India.

Yours etcetera,

A. Sr. J. SHUTTLEWORTH,

Chief Information Officer,

Federation of British Industries

London, 28th February.

PORT TRUST CHARGES

WE notice that the Vice-Chairman of the Calcutta Port Trust proposes to reduce the wharfage rate on Bulk Oil from one rupee to twelve annas per ton, and to make other reductions in import charges, amounting in all to about Rs. 1,10,000 per year. It seems to us that these reductions are really nothing more or less than a fraud on the Act. The Commissioners, whenever there is a deficit in the accounts, are empowered to apply to the Lieutenant-Governor, who will then sanction a Special Toll of four annas per ton is now being levied with the result that instead of a deficit a surplus has been created. But the Commissioners have now, by a species of legerdemain, changed the name of Special Toll to River Dues, and they evidently intend to retain the illegal River Dues and by reducing the charge on goods, to justify their existence as a means of making up a deficit which their own action has created. This is no doubt ingenious but hardly honest. We understand that legal opinion has been given to the effect that the concession granted to coasting steamers of only paying Dues so many times a year, is illegal, and that in fact the Commissioners have been making a present to the coasting and inland steamers which they were not entitled to make. We should be glad to know what action will be taken to recover the Dues so given up.

FROM

CAPITAL

20th March, 1962

A Ditcher's Diary

IT WAS, I THINK, DEAN INGE WHO ONCE SAID THAT THE resemblance between the journalist and the savage lies in the fact that both are prone to mistake the exceptional for the important. At the risk of suffering such a comparison, I would still say that Dr. Rajendra Prasad's valedictory to Parliament on Monday was not only unexceptional, but also rather unimportant. It is not that I am unaware of the dilemma which constitutional heads of States face in modern times; major pronouncements of policy seem, invariably, to be reserved for prime ministers, and the rest are expected merely to echo them. The only divergence from this rule in Dr. Prasad's address, and a minor one at that, appeared to be in his reference to the efforts to promote the learning of Sanskrit—a subject which Mr. Nehru, I believe, considers so unimportant as to mention it only rarely. That Dr. Prasad has the interests of the Hindi-speaking people, and the Sanskrit-reading *élite*, close to his heart, is perhaps by now well known. I am, however, still not quite sure that the establishment of a Sanskrit institute in Tirupati, or, for that matter, the achievement of independence by the inhabitants of faraway Western Samoa, are the grand events that deserve to be spotlighted in a Presidential address to the Indian Parliament. I know of cynics who would say that Presidential addresses these days are, after all, little more than a formality; the choice of subjects, therefore, need not strain the speaker's discrimination unduly, as long as the customary dispensation of courtesies is maintained. In my opinion, however, this is a sphere in which cynicism is hardly justified; the endeavour instead should always be to concentrate, selectively, on the main problems which the country and its elected representatives would like to hear more about. There were parts of Dr. Prasad's speech on Monday where he achieved this quite admirably; and as far as the elected representatives were concerned, the praise of their services could not have been entirely unwelcome, even if it was at times slightly embarrassing for its richness. It is about the richness of the address on other counts, primarily as a statement of the Government's policies, that many may have remained in doubt.

A LETTER ADDRESSED TO ME AND PUBLISHED ON another page of this issue of *Capital* has cheered me more for its evidence that our old friend Tony Shuttleworth is, as the Americans might say, still in there pitching for British industry, than for the attitude of injured *amour propre* it seems to reveal. I am glad to hear that the Federation of British

Industries does not object to criticism. But it is likely to have to go on putting up with it on the general level; for detailed chapter and verse I doubt if anybody these days has the time unless it is a Royal Commission. Views are apt to be vague and half formed on most subjects discussed by laymen; to insist they should be otherwise would silence the whole human race. I appreciate that Mr. Shuttleworth is only concerned about British industry. But I really do not think he need worry. To delight a foreign competitor is not on all fours in terms of patriotism or possible effect with giving encouragement to the enemy in time of war, and eventually the proof of British competitive capacity is in the eating—or more correctly in the selling. That is why I am still not reassured, despite Mr. Shuttleworth's figures. I grant his increase in exports. The questions I should like answering are: was this in line with the general increase in world trade and did Britain retain her proportionate share; to what extent was it due to fortuitous circumstances such as the revaluation of the Deutschmark; was it adequate to accommodate Britain's increased spending abroad (this, after all, is the acid test of flexibility in British industry); to what extent does it represent new export items and not old-established ones; and so on? Without putting the matter into perspective, one cannot get the true picture and Mr. Shuttleworth's out-of-context figures can be as misleading as Calcutta's cocktail party gossip. Incidentally, I did not meet my cold-weather visitor over cocktails, nor were any Indian or non-British business men present at the time. Knowing the person I was quoting, and being aware of his reputation, I am quite sure that he would not have been so forthcoming if there had been. Which is one of the reasons why his words made so much impression on me, apart from the fact that they squared with my own experience. And have I heard any Germans, Americans or Frenchmen running down their countries when travelling abroad? Well, yes, I have. Some time ago, before the Goa affair of course, I heard an American of international standing say to a group of assembled Indians that Mr. Nehru should go more often to the United States to give Mr. Kennedy some much-needed insight into international affairs. I cannot see the British going as far as that.

IT WOULD PERHAPS BE AN EXAGGERATION TO SAY THAT the third World War has been deferred somewhat because the western Powers declined to walk into Mr. Khrushchev's trap of yet another summit

in Geneva this week. Walked into the parlour they have, if only through their Foreign Ministers. It is amazing how often the pace of any debate is set by your opponent, how often your retort is shaped by the nasty question your adversary has hurled at you. Although I do not expect Moscow to agree, most others will that the West is at least as anxious for a sensible accord on disarmament as the Kremlin clamorously claims to be. I am quite prepared to concede that Mr. Khrushchev wants disarmament of a sort; he has his problems as much as anyone else. But his studied indifference to the question of control and inspection is explainable only in two ways. He either thinks that the free society of the West will never keep a secret and he will anyway know what is going on there without inspectors, or that he can keep his many divisions (and perhaps an array of nuclear weapons too) while the West dismantles its defence under the vigilance of its inquisitive peoples. The old marxist argument that capitalist economies will collapse without arms production is now at a discount even in communist circles. Gone are the days of Varga and Co., although none should pretend that a sudden closure of all units with defence orders will have pleasant consequences for all. But, even if it be true that a communist economy is capable of less painful adjustments, simply because it is irrational and artificial anyway and cares but little for the consumer or the worker's freedom of choice, it is by no means obvious that a communist society will survive long the absence of tension that will follow disarmament. It is because Mr. Khrushchev is able to tell his people, without fear of contradiction (for that is not permitted internally and the foreign voice is rarely heard), that the capitalist West is poised against the Soviet Union that he is able to impose the inhuman discipline no one would tolerate in the West for five seconds. Quite apart from all this, is disarmament feasible at all? I remember Sir George Thomson writing in the *Spectator* some years ago that, in a not-too-distant future, hydrogen bombs might be produced in soap factories. It has already been claimed, as proof of the superiority of the communist economy, that soap production has gone up in Russia in the last 40 years by goodness knows how many hundred percent since Gosplan.

MR. HASHIM BIN HASSAN OF MALAYA CAN CONFIDENTLY expect to be frequently quoted in Press clubs the world over for a long time to come, to the accompaniment of some horse laughter. This gentleman told a Delhi assembly recently that "a journalist who drinks is most unreliable". I can well believe it that this applies to some of my colleagues; but the big difference remains that while a journalist needs the aid of alcohol to be occasionally unreliable, a politician is usually unreliable even when sober. The late Mr. Robert Benchley once said something to the effect that the man who drinks cannot walk straight. In the

strictly physical sense this is sometimes true; but I just do not see why, other things being equal, the effects of alcohol should be different on similar constitutions if one belongs to a journalist and the other to, say, a politician. And what does Mr. Hassan mean by a reliable journalist? One that writes what is convenient for politicians in power? The story is told of Abraham Lincoln that, during the Civil War, somebody complained to him of the drinking habits of his trusted General Grant. The President demanded to know the name of the brand of whisky—perhaps I should have written whiskey—the General drank so that he could send a case of the same brand to each of his other Generals that they might fight half as well as Grant. The journalist in Malaya responsible for Mr. Hassan's immortal remark deserves a similar gift from all journalists of the world. The wrath of politicians is one of the most precious rewards in a journalist's life. I would begin to be worried the day some politician took it into his head to call me "reliable". Maybe that would drive me to excessive drink, for I would cease to consider myself a journalist.

IT ALWAYS GIVES ME MODEST SATISFACTION to know that consumers' associations are being set up, as indeed one has just been in New Delhi. I cannot, however, avoid the feeling that, considering the scarcity of even the daily necessities of life with which one is becoming increasingly familiar, it requires a certain optimism and courage to launch upon ventures such as these. The idea is basically not novel; such organisations are quite common in the West. But I think it is necessary to point out that an Indian association should not expect, or even attempt, to play the rôle its counterparts do in Britain or the U.S.A. There, with an abundance of things to choose from, the principal task is to advise consumers about which goods are well-produced, reasonably-priced and so on. The Indian consumer is faced with quite a different situation. He is lucky if he is offered even a small range of products; and to insist on quality and fair prices will in all probability get him nowhere. The Government's import policies being what they are, the Indian manufacturer's attention to quality is not exactly conscientious; in the circumstances, it is permissible to wonder whether a consumers' association can really accomplish much. The first need is that there should be restored to the consumer some freedom of choice; and the second, perhaps, is that the association should see to it that one really gets what one is supposed to be buying. The statute book, after all, contains enough laws and regulations to punish those who indulge in adulteration, cheating and other nefarious but rather popular activities. The trouble is that enforcement is slack, because it pays the officials charged with the task to look away. It takes a few deaths in a single day—resulting from the mixing of poisonous substances in an article of daily diet—to spur the authorities to fitful activity. And, of course, the much-maligned news-papers have to publish the news before any action is taken. The number who succumb to slow poisoning will, I am afraid, remain unknown. This is an aspect to which a consumers' association can, I believe, pay close and continuous attention. It is perhaps unfortunate, in this context, that a Minister should have been chosen to head the Delhi association. A non-official might, I feel, think less of enforcement difficulties and more of the harm wrought by the indifference of officials with an easy conscience.

THE PROPRIETRESS OF AN INN NAMED *George and The Dragon* pulled the back door open in response to a knock.

"Could you spare a poor man a bite to eat?" said the tramp, who stood shivering outside.

"No!" she said, and slammed the door in his face.

After a few seconds the knock was repeated. The woman opened the door and, before she could say a word in the tramp, still standing outside, asked quietly, "Now could I have a few words with George?"

THE DITCH

ANNOUNCEMENT REGARDING THE PROPOSED ISSUE OF CAPITAL

ASSAM HARDBOARDS LIMITED

(Incorporated on 25th March, 1960, under the Companies Act, 1956)

REGISTERED OFFICE: 9, EZRA STREET, CALCUTTA-1.

AUTHORISED CAPITAL

25,000 Cumulative Preference Shares of Rs. 100/- each	Rs. 25,00,000
7,50,000 Equity Shares of Rs. 10/- each	Rs. 75,00,000
	Rs. 1,00,00,000

ISSUED AND SUBSCRIBED CAPITAL

8,000 Equity Shares of Rs. 10/- each, Rs. 5/- paid up, payment having been made in cash by the subscribers to Memorandum and Articles of Association	Rs. 80,000
82,000 Equity Shares of Rs. 10/- each, Rs. 5/- paid up, payment having been made in cash by Directors and their friends	Rs. 8,20,000
	Rs. 9,00,000

PRESENT ISSUE

10,000 9.3% Free of Company's tax but subject to deduction of taxes at source at the prescribed rates Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 10,00,000
4,10,000 Equity Shares of Rs. 10/- each	Rs. 41,00,000
	Rs. 51,00,000

OUT OF THE PRESENT ISSUE

- (1) The Government of Assam have agreed to subscribe for and will be allotted 5,000 9.3% Free of Company's tax but subject to deduction of taxes at source at the prescribed rates Redeemable Cumulative Preference Shares of Rs. 100/- each for cash Rs. 5,00,000
- (2) The Directors and their friends have agreed to subscribe for and will be allotted 64,000 Equity Shares of Rs. 10/- each for cash Rs. 6,40,000
- (3) Columbia Hardbord Co. Inc. of Seattle, Washington, U.S.A. have agreed to subscribe for and will be allotted 1,00,000 Equity Shares of Rs. 10/- each for cash Rs. 10,00,000

NOW OFFERED AT PAR FOR PUBLIC SUBSCRIPTION

5,000 9.3% Free of Company's tax but subject to deduction of taxes at source at the prescribed rates Redeemable Cumulative Preference Shares of Rs. 100/- each	Rs. 5,00,000
2,46,000 Equity Shares of Rs. 10/- each	Rs. 24,60,000
	Rs. 51,00,000

Out of 2,46,000 Equity Shares offered for public subscription, the Company has agreed to the firm allotment of 50,000 Equity Shares of Rs. 10/- each of the nominal value of Rs. 5,00,000 to Life Insurance Corporation of India.

The subscription list will open at the commencement of Banking hours on Thursday, the 22nd day of March, 1962 and will close at the close of Banking hours on Saturday, the 31st day of March, 1962 unless closed earlier at the discretion of the Directors but not before the close of Banking hours on Monday, the 26th day of March, 1962.

Applications for Equity Shares are to be for 25 or multiples of 25 Shares. Applications for Preference Shares are to be for 5 or Multiples of 5 Shares.

	On Application	On Allotment
Amount payable per Equity Share	Rs. 2.50	Rs. 2.50
Amount payable per Preference Share	Rs. 25.00	Rs. 25.00

Application forms along with copies of the prospectus setting out all relevant details relating to the proposed issue of shares as required by law can be had from the Registered Office of the Company or from any of the Bankers, Brokers or Underwriters to the proposed issue whose names and addresses are given below.

PROSPECTUS

Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in giving this consent the Government of India do not take any responsibility for the financial soundness of any scheme or for the correctness of any of the statements made or opinions expressed with regard to them.

A copy of this Prospectus having attached thereto the documents specified below has been delivered to the Registrar of Companies, West Bengal, for registration as required by Section 60 of the Companies Act, 1956.

Application is being made to the Calcutta Stock Exchange for permission to deal in the Equity Shares of the Company and for an official quotation.

The Subscription List will open at the commencement of banking hours on Friday the 23rd day of March, 1962, and will close at the close of the banking hours on Friday the 30th day of March, 1962 or earlier at the discretion of the Directors, if the issue is fully subscribed but not before the closing of banking hours on Monday the 26th day of March, 1962.

LODNA COLLIERY COMPANY (1920) LIMITED

(Registered as a Joint Stock Company under Act No. VII of 1913.)

SHARE CAPITAL

Authorised: Rs. 1,20,00,000 divided into 12,00,000 Ordinary shares of Rs. 10 each.

Issued, Subscribed and fully paid-up. Rs. 87,00,000 divided into 8,70,000 Ordinary shares of Rs. 10 each.

LOAN CAPITAL

The Company has no mortgages, debentures or other loan capital outstanding but has overdraft facilities with the National & Grindlays Bank Ltd., Calcutta (secured by the hypothecation of the Company's stocks of coal and stores present and future book debts and as collateral security, the title-deeds of the Company's leasehold properties). As at the close of business on Monday the 5th day of March, 1962, the amount owing to the Bank on this account was Rs. 25 lacs.

PRESENT ISSUE

2,30,000 shares of Rs. 10 each at a premium of Rs. 7.50 nP per share.

Payable in full on application.

Application for shares must be for a minimum of 50 shares and in multiples of 50 shares.

The shares will rank *pari passu* with the existing Ordinary shares of the Company except that they will not entitle the holders to any dividend that may be declared in respect of the year ending on 31st December, 1961.

HISTORY AND BUSINESS

The Company was formed in 1920 to acquire and take over the undertaking properties and assets of the Lodna Colliery Company Limited and has since been carrying on business as colliery proprietors. The Company is at present working five large collieries, two in the Jharia field and three in the Raniganj field. Ancillary to its Jharia Collieries the Company operates a by-product coke plant and a washing plant. The total raisings during the financial year ended 31st December, 1960 were about 1.9 million metric tonnes. The reserves of the collieries at present being worked are estimated to yield 124 million metric tonnes extractable coal.

DEVELOPMENT

Under the Third Five Year Plan it is estimated that very large tonnages of

additional superior grade coking and non-coking coal will be required. The Company's development plans envisage an increase of output to 2,400,000/2,500,000 metric tonnes per annum by the end of 1965.

FINANCE

Capital expenditure required to achieve the planned production over the period of the 3rd Five Year Plan is estimated at Rs. 128,00,000/-. The present offer of 230,000 shares of Rs. 10/- each at a premium of Rs. 7.50 nP, which share will furnish Rs. 40,25,000/- which amount is also taken as being the amount of the minimum subscription received for the purposes of this offer. The balance of Rs. 85.75 lakhs of the capital expenditure is proposed to be raised as follows:-

By loans available from the appropriate Government Agency for aerial ropeways and stowing equipment the installation of which at two of the Company's collieries is an integral part of development plans .. Rs. 40,00,000

By plough back from the Company's resources over this period .. Rs. 45,75,000

LODNA COLLIERY COMPANY (1920) LIMITED—Cont'd.

AUDITORS' REPORT

The Directors,
Lodna Colliery Company (1920) Ltd.,
6, Lyons Range,
Calcutta-1.

B4, Gillander House,
Calcutta.
23rd February, 1962.

Dear Sirs,

We have examined the books and accounts of Lodna Colliery Company (1920) Ltd., which we have audited for the five financial years ended 31st December, 1960 and report that the Profits of the Company are as set out below. These Profits have been arrived at after charging all expenses of working and management including provision for Normal Depreciation on the basis allowable for taxation and after making such adjustments as are, in our opinion, appropriate.

	Year ended 31st Decem- ber 1956	Year ended 31st Decem- ber 1957	Year ended 31st Decem- ber 1958	Year ended 31st Decem- ber 1959	Year ended 31st Decem- ber 1960

Net Profits ..	15,61,887	23,77,382	31,83,532	23,13,430	18,25,070

The Initial Allowances, Development Rebate and Double Depreciation Allowance which are not included as follows:-

Initial Depreciation Allowance ..	1,247	Discontinued			
Development Rebate ..	2,65,859	2,93,159	2,49,924	4,08,802	5,31,897
Double Depreciation Allowance ..	3,99,523	4,34,776	Discontinued		
In arriving at the above Profit no charge has been made for Wealth Tax Liabilities, which are as follows:-	76,333	90,993	1,11,260	Discontinued	

The Company's trading results in 1960 were affected by adverse mining conditions in two major units necessitating the re-organisation of the ventilation system and causing a temporary stoppage of production.

An adjustment of Rs. 2,22,448/- has been made in Colliery Expenses in respect of the year ended 31st December 1960 for cess recoverable in respect of the period 1st September, 1960 to 31st December 1960 in accordance with the sanction recently received from the Coal Board. As the claim has only recently been admitted, the amount will be taken into the books in 1961.

We also report that the assets and liabilities of Lodna Colliery Company (1920) Ltd., as at 31st December 1960 which is the last date to which the Company's accounts were made up prior to the date of this report, are as set out below. These assets and liabilities have been arrived at after making such regrouping as, in our opinion, are appropriate.

Advances—Considered irrecoverable adjusted as per contra ..		8,957			46,781
					3,06,522
					1,71,05,114

Notes:—Contingent Liabilities—

- There is a contingent liability on account of a guarantee given by the Company in respect of a Bank Overdraft granted to the Indian Mining Association upto a limit of Rs. 1,80,000/-.
- There are certain claims against the Company not acknowledged as debts the extent of which cannot be ascertained.
- Estimated amount of contract remaining to be executed on Capital Account and not provided for Rs. 1,01,150/-.

"CAPITAL" STOCKS AND SHARES INDEX*

The Capital Stocks and Shares Index (Base: 1939) has now been brought up to January 1962. As compared with December, the January indices for Government securities

and preference shares show drops of 0.3 points and 0.5 points, respectively. There were increases in banks 3.1 points, cottons 8.6 points, jutes 0.3 points, papers 1.3 points, while de-

creases occurred in coals 2.1 points, minings and oils 4.0 points, cements 1.7 points, engineering 1.1 points, sugars 0.7 points and miscellaneous 1.5 points. The index for tea remain-

ed unchanged.

Combining all the factors, the Capital variable yield securities index remained unchanged at 276.6 points during January 1962.

UNDERTONE BECOMES CAUTIOUS: INDIAN IRON DROP

Wednesday Evening.

THERE has been an appreciable decline in turnover in the stock market during the past week. Lyons Range has become cautious due to various uncertainties. As a result, any discouraging news has reduced share prices out of all proportion to its real significance. Indian Iron—the barometer of the stock market—have had to bear the brunt of the pressure because they are influenced by sentiment rather than general economic considerations. Speculators are now busy debating who will be the Ministers in the new Central Cabinet. Whatever the composition of the Government, it looks as if official economic policy is not likely to change very much, considering that the economy is working fairly satisfactorily. With the substantial contribution which the private sector has made to economic development during the past few years, it will probably be encouraged further. Meanwhile, the market has become jittery on the report that Mr. V. K. Krishna Menon, the Defence Minister, has indicated the possibility of extending the nationalisation of industry. It seems rather premature to attach much significance to such statements, although they do accentuate the nervousness of operators.

The Railway Budget, presented to Parliament on Tuesday, has had virtually no effect, because this Budget, as well as the Central Budget which will be presented soon, are "lame ducks". The existing Parliament will merely "vote on account" for the next three months or so. Fresh Budget proposals will be formulated when the new Parliament assembles. In its preoccupation with various uncertainties, Lyons Range has ignored the effect of the reduction of the U.K. Bank rate to 5½ percent. The move is likely to benefit the Indian economy, albeit marginally, because India will pay smaller interest on sterling loans and there will be less inclination to transfer short-term funds to the U.K. for earning higher interest.

At the clearing on Wednesday, prices have been marked down because operators are anxious to reduce their commitments. The effect of dearer money has begun to show in the slightly higher carry-forward charges. An important feature is that there is little selling pressure in good shares. In fact, some of them have even improved due to the shortage of scrip. Burn and Alkali Chemical, for instance, are in demand at higher prices. There has been keen support for many new shares. Tack and Nail are being quoted at a substantial premium in the market. India Carbon have greeted their listing by a marked improvement in the price. Hope's Metal Windows are being quoted at a considerable premium too.

Indian Iron have closed at Rs. 24.56. Except for Burn, which have improved, engineering shares have generally declined. Guest, Keen, Williams, Jessop, and Indian Standard Wagon have reacted on profit-taking. Binani Metals and Dalmia Iron have fallen. Kumardhubi are about steady. Texmaco have improved on short-covering.

Turnover in miscellaneous shares has declined appreciably and prices have fallen. After an earlier improvement, Dunlop Rubber have reacted on profit-taking. Indian Copper, Indian Cable, Indian Aluminium, Hindustan Motors and Rohtas have declined. Profit-taking has reduced

Orissa Cement, Jaipur Udyog and Kesoram Industries. Alkali Chemical have been firm on expansion prospects. Rallis have become steadier, but Union Carbide are easier. British India Corporation have met with influential buying. Interested support has helped New Asiatic Insurance. Imperial Tobacco are steady on paying a second interim dividend, but National Insulated Cable have become quiet. India Steamship are being sold freely. S. S. Duncan and Hindustan Twyford have met with scattered support.

Among paper shares, Orient have become steadier on expansion hopes. India Paper Pulp have hardened on a report that the Company has been permitted to manufacture more pulp out of jute sticks. Ballarpore are being fancied on prospects of a higher dividend. Titagur have reacted on profit-taking.

•Bharat Commerce have been firm in the cotton mill section due to the announcement of a taxable ordinary dividend of 15 percent, against 5 percent. J. K. Rayon, Jay Shree Textiles, Elgin and Dunbar have fallen.

After an earlier rise, selected jute shares have declined at the close. Interest is being taken in Northbrook, Birla, Fort Gloster, Nuddea, Anglo-India, Barnagore, Kankarrah and Fort William. Gourepore have reacted on profit-taking. The Company has decided to issue bonus shares in the proportion of one new share for each one held.

Coal shares lack interest and stray business is being done. Scattered support has been forthcoming for Burrakur, Bengal and East Indian. Pench Valley have weakened on a predominance of sellers.

Bank shares are steady and United Commercial have hardened on prospects of a rights share issue. United Bank and Punjab National are steady.

In the sugar section, Dyer Meakin Breweries have gained on rumours of a bonus issue. An improvement in the price of sugar has helped reduce the selling pressure in other sugar shares such as Belsund, Ramnugger Cane and Carew.

The decision of some companies to issue bonus shares has helped selected tea shares. Hasimara, Huldibari, New Terai and Pahargomia are being taken on prospects of bonus issues. There is interest in Tyroon, Dibrugarh, Tezpur and Betjan.

Business in Government securities has been small because banks are not interested for the time being. Prices of dated loans have been generally maintained. The 3 percent Conversion loan 1986 is being quoted around Rs. 71.

Bombay Market

SHORTAGE OF COTTON HITS TEXTILES

EASIER TREND BEFORE SETTLEMENT

Wednesday Evening.

THE Bombay stock market showed mixed trends during the past week. Prices of some shares hardened on news of bonus or rights shares, or of diversification of activities. Turnover on the whole declined and operators were cautious

in view of various uncertainties. There was a general inclination to lighten commitments until the composition of the new Central Cabinet is announced. At the close, sentiment weakened on selling pressure due to the coming clearing. Cotton mill interests were worried over the growing shortage of cotton. The decline in exports of piecegoods during February called for caution. Dalal Street on the whole was disturbed because some thought that the policy of the new Central Cabinet would be more socialistic. The imposition of automatic margins on some shares, such as West Coast Paper and Alcock Ashdown, restrained support.

Tata Steel were quoted at Rs. 138.75 and Indian Iron declined to Rs. 24.56 on pressure from Lyons Range. In the engineering section, Alcock Ashdown were bought at Rs. 336 and Tata Locomotive were dealt in at Rs. 358. Premier Construction came to hand at Rs. 182 and T. Maneklal improved to Rs. 830. Business passed in Larsen and Toubro at Rs. 41.90 and in Mukand Iron at Rs. 27.75. Mahindra and Mahindra were transacted at Rs. 19. Motor-vehicle shares were quiet, and Premier Automobiles declined to Rs. 134.50. Hindustan Motors were quiet at Rs. 20.55.

Prices of cotton mill shares declined on balance. Bombay Dyeing were sold freely down to Rs. 69.60 on disappointment that the Company would not issue any bonus shares for the time being. Century reacted to Rs. 620 on profit-taking. Khatau declined to Rs. 485 on selling pressure, but Phoenix were steady at Rs. 286. Finlay came to hand at Rs. 377 and Svadeshi were transacted at Rs. 298.50. Simplex were placed at Rs. 178 and India United ordinary were steady at Rs. 21. Standard were sold at Rs. 1,075 and Morarjee at Rs. 435. Apollo were offered freely down to Rs. 2.28.

In the miscellaneous section, sugar shares recovered on rumours that the Maharashtra Lands Ceiling Act would be modified. Belapur were wanted at Rs. 244.50 and Walchandnagar Industries at Rs. 123. Mining shares were quiet, and Shivrajpur Syndicate were available at Rs. 41.50. Steamship company shares were sold freely without attracting much support. Business was done in Scindia Steam at Rs. 12.32 and in Great Eastern Shipping at Rs. 12.56. Cement shares were steady. Associated Cement were wanted at Rs. 154.50 and Digvijay at Rs. 202.50. Chemical shares were steady, and Tata Chemical rose to Rs. 18.24. Indian Dyestuff were maintained at Rs. 547.50, as were Polychem at Rs. 228.75. Bombay Burmah recovered to Rs. 644.50 on replacement buying. Rayon shares were quiet, and National Rayon fell to Rs. 547.50. Baroda Rayon were taken at Rs. 150 and Gwalior Rayon came to hand at Rs. 54.30. Hindustan Electric jumped to Rs. 28 on talk of expansion with foreign collaboration. Permanent Magnets improved to Rs. 196 on reports that the Company has been permitted to import raw materials. Ceat Tyre were quiet at Rs. 192.50. Business was done in Voltas at Rs. 286.50 and in Tata Oil at Rs. 85.50. Hindustan Lever were firm at Rs. 70.50 on prospects of a bonus issue.

Bank shares were steady, and Bank of India were wanted up to Rs. 152. Central Bank were placed

at Rs. 71.50 and Dena Bank at Rs. 74. Bank of Baroda hardened to Rs. 122. Insurance shares were quiet, and New India Assurance were available at Rs. 60.

There was scattered support for electric company shares, and business passed in Ahmedabad Electric at Rs. 93.80. Bombay Suburban were taken at Rs. 103 and Tata Power at Rs. 1137.50.

Madras Market

BULL TREND DUE TO CREDIT STRINGENCY

SLIGHT RECOVERY IN SUGAR SHARES

Tuesday Evening.

SLUGGISH conditions prevailed in the Madras stock market during the past week. Limited business was transacted and fluctuations were narrow. Operators were hesitant and inclined to await the formation of the new Central Cabinet before extending their commitments. There was evidence of a shortage of funds and the decision of many banks to

increase their lending rates restrained activities.

Business in Government securities was nominal and prices of dated stock showed little change. Bank shares were quiet on profit-taking. Scattered support was forthcoming for selected public utility companies. Sugar shares recovered slightly on the announcement of some dividends. Planting shares lacked interest because it was thought that the prices of tea and coffee were not sufficiently remunerative. Cotton mill shares were selectively bought on good corporate reports. In the miscellaneous section, attention was concentrated on chemical shares due to talk of expansion.

In the banking section, Indian were done at Rs. 180 and Indian Overseas at Rs. 181.50. Canara came to hand at Rs. 86 and Andhra at Rs. 100. Punjab National were quoted at Rs. 22. Among public utility companies, Negapatnam were steady at Rs. 12 and South Madras at Rs. 10.12. West Coast were dealt in at Rs. 15.75 and Vellore at Rs. 15.35.

Among sugar shares, Deccan were quoted at Rs. 10 and E.I.D. recovered to Rs. 36.75. Mysore were steady at Rs. 53.40 and United Breweries at Rs. 82.25. K.C.P. were done at Rs. 22.95, but Kothari were easier at Rs. 7.25.

In the planting group, Blue Mountain declined to Rs. 2.58 and Consolidated Coffee to Rs. 17.77. Cochín Malabar were placed at Rs. 7.27 on paying a taxable interim ordinary dividend of 9 percent. Chembra were taken at Rs. 3.55 and Devon were offered freely down to Rs. 13.50. Teekoy were quiet at Rs. 5.35 and Travancore Rubber at Rs. 13.12. Ouchterlony were easier at Rs. 3.93 and Periakaramalai at Rs. 3.31. Kil Kotagiri were steady at Rs. 5.50 and Lucky Valley at Rs. 10.12. Nilgiri were quoted at Rs. 8.30 and Nonsuch were bought up to Rs. 22.75. Peer-made were transacted at Rs. 20.50 and business passed in Parkside at Rs. 23. Swinton were quiet at Rs. 2.82 and Twyford at Rs. 10.60.

Among textile shares, Adoni were steady at Rs. 13.10 and Balarama Varma at Rs. 120. Buckingham were bought at Rs. 263 and Bangalore Woollen at Rs. 254 on dividend prospects. Cannanore were steady at Rs. 148, as the Company decided to issue 15,000 ordinary shares of Rs. 100 each at a premium of Rs. 5 a share. Lakshmi were done at Rs. 169 and Madura at Rs. 40.65. Travancore Rayon hardened to Rs. 44.25 on dividend hopes, and business was done in South India Viscose at Rs. 187.50. Kothari were quoted at Rs. 13.15 and Loyal were steady at Rs. 49.50. Premier were wanted up to Rs. 320 and Rayalaseema were bought at Rs. 174. Sarada were quiet at Rs. 91 and Vijayeswari at Rs. 167.

In the miscellaneous section, Madras Rubber improved to Rs. 21 on declaring a taxable ordinary dividend of 6 percent on the increased capital, but Madras Cement were quiet at Rs. 91 on passing the dividend. Aluminium Industries reacted to Rs. 23.77 due to profit-taking and Ashok Leyland were dealt in at Rs. 9.35. Dalmia Cement were steady at Rs. 13.30, but F.A.C.T. declined to Rs. 8. India Cement were bought up to Rs. 6 and India Forge were quiet at Rs. 5. Kirloskar Electric were steady at Rs. 19.25 and Binny at Rs. 314. Mettur Chemical improved to Rs. 13.25 on paying a taxable interim ordinary dividend of 7.50 percent, including 1.25 percent for silver jubilee. Parry's Confectionery declined to Rs. 4.43, but Standard Motors were steady at Rs. 16.75. Spencer were dealt in at Rs. 24 and Seshasayee Paper were quiet at Rs. 8.56. Textool came to hand at Rs. 187 and Tube Investment were

CAPITAL, 15th March, 1962.

done at Rs. 286. W.I. Plywoods were quoted at Rs. 204 and Mysore Paper were easier at Rs. 14.23.

THE WEEK'S TRANSACTIONS

New Delhi

No Automatic Licensing of Industries on Free List

(FROM OUR NEW DELHI CORRESPONDENT)

THE Central Finance Ministry, it is reported, has advised the Ministry of Commerce and Industry not to issue industrial licences automatically for new units even from the free licensing list, if the foreign exchange requirements exceed Rs 10 lakhs. All applications for industrial licences involving foreign exchange expenditure of more than Rs 10 lakhs, irrespective of whether or not they are on the free list, will, in future, have to be examined and approved by the Licensing Committee. Side by side, the Committee has been advised to make a careful examination of every project with particular reference to its essentiality and the availability of power and transport in the context of its requirements, before giving approval.

It was reported in last week's issue that licences involving foreign exchange worth Rs 400 crores, were issued during the first nine months of the third plan period, and that licences involving Rs 190 crores have already been cleared by the Capital Goods Committee. In the latest analysis, all industrial licences are like post-dated cheques and the Central Government has a moral responsibility to honour them. Even if "infant mortality" is placed at 25 percent, licences involving foreign exchange worth Rs 300 crores will have to be financed out of the total foreign exchange allocation for the private sector for the whole period of the present plan. Then again, on the basis of the licences issued, the target capacity for a particular item may appear to have been exhausted. This could shut out a genuine entrepreneur.

Fostering Competition

It is claimed that, through licensing, the Government has ensured healthy competition in certain industries, particularly in consumer goods. The licensing of a new unit to manufacture wrist watches, while there are already four including one in the public sector, is cited to illustrate the point. Overlicensing in the chemical industry, which includes units in the public sector, is also justified on similar grounds. On the same principle, the Government should have fostered competition in another consumer goods industry, namely, sewing machines. For reasons still to be explained, an application for the manufacture of industrial sewing machines, for which there is no capacity as yet to meet the domestic demand, was turned down. The latest proposal to be considered is to ban the import of 11 components needed for the manufacture of domestic sewing machines in the small-scale sector in Ludhiana. These components, it may be added, are not yet manufactured in India, and there is, therefore, no question of saving foreign exchange by using indigenous components.

A fourth unit to manufacture industrial laminates was recently licensed on the ground that the foreign collaborator, Formica International Ltd, was an internationally reputed concern for the manufacture of this product. During the second plan period, an application seeking collaboration of an equally internationally reputed concern for the manufacture of sewing machines, namely, Singers, was turned down. From these examples, it will be seen

that the Planning Commission has a strong case for demanding a careful scrutiny of the whole licensing system in order to evolve a policy, which would help the development of industries on sound lines.

Trade through Aid

There is considerable concern among foreign interests, particularly in Britain, over the diversion of trade to the U.S.A. through the latter's aid programme. Aid was recently given to India to enable her to import from the U.S.A. certain industrial and agricultural raw materials to meet current shortages. Another loan is expected. India of course, has no choice in the matter. Her industrial production will be seriously affected unless the raw materials which are in short supply are imported. She has no foreign exchange reserves to finance these imports, and the much advertised export drive has so far failed to pro-

duce satisfactory results. As the only alternative to trade is aid, India has to import her industrial raw material requirements from those sources which give aid for this specific purpose. Consequently, traditional suppliers like the U.K. which cannot provide much credit, are in danger of losing their markets.

Locomotives with U.S. Loan

Foreign exchange totalling Rs. 16.7 crores for the purchase of 125 diesel locomotives for the Indian railways is being provided by the U.S. Government through a loan granted recently. The loan covers the purchase of 100 broad-gauge locomotives of 2,600 horse-power, and 25 meter-gauge locomotives of 1,400 horse-power, in addition to spare parts.

Price Support for Wheat

It is understood that the Central Government has decided to give

price support to wheat at the next harvest, by guaranteeing a rate of Rs. 13 a maund for fair average quality white wheat delivered at specified mandis. If the need arises, it is learnt, the Government will make arrangements for the purchase of wheat tendered at this price.

Developing Narmada Valley

A central organisation, to be called the Narmada Valley Authority, should be formed for developing the water resources of the Narmada valley. It should be on the lines of the Tennessee Valley Authority in the U.S.A. and could be entrusted with the work of preparing and implementing irrigation and power schemes in the valley. This is the main suggestion, which emerged at a conference of senior officers from Madhya Pradesh, Gujarat, Maharashtra and Rajasthan, held in New Delhi recently.

During the discussions at the conference, it was pointed out that the Punasa project comprised four main power works—in Punasa with a power potential of 400,000 kW, in Burwaha with 200,000 kW, in Harinpal with 370,000 kW, and in Navgam with 500,000 kW. Punasa, Burwaha and Harinpal are in Madhya Pradesh, and Navgam is in Gujarat. The total estimated cost of developing these sites is about Rs. 50 crores, excluding

the transmission system, and that on all sites about Rs. 200 crores.

I.D.A. Loan for D.V.C.

A loan of \$(U.S.) 18.5 million or Rs. 8.82 crores to the Damodar Valley Corporation from the International Development Association was negotiated last week. It will be used to raise the total installed capacity of the D.V.C. power system by 140,000 kW, and to help in the expansion of its transmission network in West Bengal and Bihar. The existing generating capacity of the Damodar Valley Corporation power system is 479,000 kW, of which the Tilaiya power station accounts for 4,000 kW; the Bokaro thermal power station for 225,000 kW, the Maithon hydel station for 60,000 kW, the Panchet hydel station for 40,000 kW, and the Durgapur thermal station for 150,000 kW.

Under the I.D.A. loan, another hydrogen-cooled turbo-generator, with a maximum continuous capacity of about 140,000 kW, will be added to the Durgapur thermal station. The additional transmission lines to be erected, will cover about 17 miles—about five miles of 132 kV double circuit line and about 12 miles of 33 kV line. The sub-stations in Durgapur, Bokaro, Chandrapura, Sindri, Kalipahari, Ramgarh, Luchi-pur, Ramkanali, Burdwan, Oyaria and Maithon will also be modified and extended. A central load

despatch and system control station will be constructed in Maithon under the expansion project.

Power Projects in Third Plan

The following is the list of power projects included in the third five year plan:

Additional capacity ('000 kW)
(H—Hydro)
(T—Thermal)

Programme or project

Projects covered by aid:

Tungabhadra-Nellore (Andhra)	T. 30
Upper Sileru (Andhra)	H. 36
Barapani stage I (Assam)	H. 120
Barapani stage I (Assam)	H. 36
Barauni (Bihar)	T. 30
Panniar (Kerala)	H. 30
Chambal stage I (M.P.)	H. 23
Chandni (M.P.)	T. 10
Birsinghpur (M.P.)	T. 60
Kunda stages I and II (Madras)	T. 60

Wage Board for Coal Miners

The Central Labour Ministry, it is understood, has conceded the demand of colliery workers for a wage board to review and re-examine their wage structure. The Board is likely to be set up early next month. It will have an independent chairman and, besides the representatives of employers and workers, will include an economist. The move to set up a wage board at an early date follows the strike notice given by the Colliery Mazdoor Sangh, which has demanded that the miners' consolidated pay should be raised from the present Rs. 78.39 to Rs. 125 a month.

Stabilising Pepper Prices

In order to stabilise the selling prices of pepper, exploratory talks were recently held between the major producing countries, namely, India, Indonesia and Sarawak, and the representatives of the pepper marketing area in the East, namely, Singapore, under the auspices of the

CAPITAL, 15th March, 1962.

E.C.A.F.E. The trend of the talks showed that there was a possibility of the formation of an international pepper council for stabilising the prices of the commodity at a higher level. The matter is being further pursued.

Quality Control for Exports

The most important recommendation made by the ad hoc Committee on Quality Control and Preshipment Inspection is that legislation should be enacted for empowering the Government to impose quality control and preshipment inspection on export goods and for setting up an export inspection advisory council for the formulation of guiding policies on matters concerning quality control. The recommendation has been accepted by the Government, and steps to implement it are in progress. The Committee has made a number of other recommendations relating to the imposition of quality control on speci-

fic export commodities, namely, vegetable oils, oilcakes, myrobolam, carpets, brassware, cashew kernel, pepper, cardamom, chillies and walnuts. These have also been accepted and action to implement them is in hand.

Paying in Rupees

It is pointed out that some misunderstanding exists in the public mind concerning the implications of paying for imported goods and/or services in Indian rupees. All payments to foreigners and foreign concerns made in Indian rupees are, in the last analysis, payments in foreign exchange, and the impression that such payments do not result in expenditure of foreign exchange is based on a wrong understanding of the matter. Even when rupees are not converted into a foreign currency directly, they are used by the foreign party for financing exports from India or for availing itself of services in

India, for both of which he would normally have remitted foreign exchange. In other words, in all such cases, the foreign exchange that would have been otherwise earned by exports or services is lost to the country. Thus, although at first the transaction takes place in terms of Indian rupees, the final result is that India pays for the goods and services supplied by the foreign party in foreign exchange. Under the Foreign Exchange Regulations Act and the rules made under it, it is compulsory to obtain the necessary sanction from the Reserve Bank before any obligations are accepted, payments made or commitments to that effect entered into with a foreign party, and this applies equally whether the payment is to be made in a foreign currency or in Indian rupees.

As far as transactions with Russia, Poland, East Germany, Czechoslovakia, Hungary, Yugoslavia, Rumania

and Bulgaria are concerned, the Indian Government has entered into agreements with these countries for all payments, on both sides, to be made in rupees only, and the regulations require that all commercial contracts should be concluded on that basis. Under the trade agreement with the Egyptian region of the U.A.R. and Afghanistan, trade with these countries should also be conducted in rupees. A limited payments arrangement on these lines also exists with Burma and Pakistan. The above trade agreements and special arrangements are intended to provide for trade between India and the country concerned on a balanced basis. As imports involve reciprocal export obligations, only essential imports can be permitted under the trade agreements and special arrangements. It is also emphasised that these countries cannot be used as intermediaries for importing goods from or exporting goods to a third country.

One of the first typewriters ever sold in India the old Remington Standard No. 7 is now virtually a museum piece. Although a good efficient machine in its day, progress and 'Old Father Time' have passed it by.

Today at the Remington Rand factory at Howrah, (the largest in Asia), new sleek typewriters are rolling off the production line. Already over 1,00,000 machines have been manufactured in India by the Indian Company.

85% of the components of Remington typewriters are manufactured at this factory—with Indian raw

materials—by Indian Staff.

Each part of each machine is made to exact universal specifications so that every part is interchangeable no matter where the machine was manufactured.

40 years ago the Remington organisation pioneered the adaptation of Indian languages to their typewriters and today Remington Rand produce typewriter keyboards in 8 regional languages. The blue prints for further languages are under preparation and these typewriters will go into production soon.

some grades. Good quality jute is still sparingly offered, and prices are more or less nominal because of the paucity of offers. Mill Lightnings are, however, more freely offered. The dealers who were holding off for higher prices have shown a tendency to reduce their terms. Prices are quoted at from £116 10s to £122 for March-April shipment, with Mill Hearts from £95 15s and Grade Hearts from £83 10s. Grade Tossa-2/3 is offered at from £134 10s, four from £119 and Continental Tossa-2/3 £102, same shipment, c.i.f. U.K.-Continent. Spinners, meanwhile, are reluctant to purchase, so sellers are having a lean time. Some of them are even inclined to discount the E.P.C. prices substantially.

The quality of jute now being shipped is reported to be rather poor. Reports about Tossa jute are better and it is mostly white jute that is poor. Prices for good marks of Daissee are mentioned at £122 10s and Grade at £99. There is still no mention of new crop prices, but enquiries are being made about them and what they are likely to be.

Calcutta goods have had a lively time. Prices have risen to 83s 6d for 40in. 10oz. hessians and 63s for 7 1/2oz. March, 78s 3d and 59s 3d April-June and 74s and 56s July-September, with B Twills up to 203s, 196s and 191s 6d for the respective positions of shipment, all f.o.b., Calcutta.

Business in jute yarns and cloth is quiet and few fresh orders are being received by either spinners or manufacturers. All producing firms are, however, busy with past orders, and there is a definite scarcity of labour for both spinning and weaving. Prices rule firm and unchanged for all yarns and goods.

I.J.M.A. PRODUCTION FIGURES FOR FEBRUARY

The Indian Jute Mills Association reports the total production of jute goods for February as follows:

Description	Quantity
1. Gunny Bags	
(a) Hessian	
1,916 metric tons	(1,836 tons)
61.31 thousand metres	(67.1 lakh yds.)
55.7 lakh nos.	
(b) Sacking	
42,002 metric tons	(41,339 tons)
9,32.22 thousand metres	(10,19.5 lakh yds.)
4,65.6 lakh nos.	
2. Gunny Cloth	
(a) Hessian	
35,809 metric tons	(35,302 tons)
12,45.09 thousand metres	(13,61.7 lakh yds.)
(b) Sacking	
609 metric tons	(599 tons)
12.09 thousand metres	(13.2 lakh yds.)
3. Other Manufactures	
11,836 metric tons	(11,649 tons)
4. Total Production	
(All kinds)	
92,232 metric tons	(90,775 tons)
Summary	
(000 metres and 00,000 yds.)	
Feb. '62	Jan. '62

DRAFT OF WORLD COFFEE PACT PREPARED

(FROM OUR SOUTH INDIAN CORRESPONDENT)

EXPORT curbs by producing countries, limitation of imports from non-members by consuming countries, incentives for curtailing production and the reduction of world coffee stocks, are the important features of a long-term international coffee agreement recently drafted by a committee of experts from ten countries. It has been drafted at the instance of the World Coffee Study Group. The 32 member-countries of the latter are due to meet shortly to study the draft text which also proposes the creation of an international coffee fund for financing agricultural diversification in coffee-producing areas, the reduction of coffee stocks by producers and other such programmes as may be approved by the council established under the agreement. Resources for the fund are to be derived from a levy on all coffee entering into international trade. Provision is also made for a campaign to promote consumption with funds raised through an assessment against member-exporters. If the study group agrees that the draft provides an acceptable basis for negotiations, it is hoped that the agreement will be approved by August so that it can come into force from 1st October—the beginning of the 1962-63 coffee year.

The principal instrument of the agreement is the export quota to keep supply in line with demand. This is to be determined for each of the producing member-countries for each of the first three years of the agreement. The aggregate of the annual quotas is to be equal to the estimated aggregate of world imports during the period. The quotas established for subsequent years will take into account changes in consumer preference for various types of coffee, the results of price and production policies adopted by exporting countries and the council, and the degree of success achieved in equalising the production and consumption of coffee. The basic quotas may be increased or reduced in accordance with estimated world imports. Importing members will have to undertake to co-operate with exporting members in their plans for restricting the production of coffee and for diversification of their economies.

Open Auctions

The introduction of open auctions for India's export coffee seems to have given a fillip to trade interests abroad. In the first export auction, which was held a few weeks ago, buyers offered substantially higher prices than those quoted in closed bids in 1961. The sale attracted a number of foreign buyers whose presence may have had some effect on bidding. Some of them think that Indian coffee can hold its own in the world market if it receives better publicity and is available in an adequate quantity. If Indian coffee is to be popular in the world market and is to command a special premium, it is necessary to maintain its quality and supplies.

Pepper Prices Recover

Pepper prices have recovered substantially during the past few days. This is attributed to better foreign demand, especially from the U.S.A. It is reported that stocks in America have been depleted substantially. America has been buying black pepper from India at the rate of 36 1/2 (U.S.) cents a lb, but recently Indian

shippers have raised the price to 37 1/2 (U.S.) cents, because of higher advances from Singapore. It is felt that there is scope for a further rise, since the Singapore quotation is still higher by 4 cents. Singapore, therefore, offers no competition to India at present. Exporters think that the U.S.A. will be forced to buy more from India, probably at higher prices, due to the increased demand from grinders and higher prices in Singapore. But the latest report from New York indicates that American buyers will resist a steep increase.

Another development in India's favour is the recent reduction of the freight rate from \$50 to \$40 a ton of 1,000 kilograms for exporting pepper,

ginger and turmeric from the Malabar coast to the U.S.A. This is expected to induce buying orders for black pepper from America. The report that the Indian crop will be lower than in the previous season is also acting as a bullish factor. The latest quotations from Cochin are: black pepper garbled ready Rs. 330, March Rs. 336, May Rs. 349 and ungarbled ready Rs. 320. Quotations are in terms of quintals. These are higher by about Rs. 10 a quintal than the prices which were quoted a month ago.

Zonal Excise Duty on Tea

The chairman of the Tea Trade Association of Cochin, Mr. R. J. Watson, suggested the abolition of export duty, cess and sales tax on tea and their replacement by an all-embracing zonal excise duty collected at one point with a view to selling more tea in a world market where production exceeds demand. This is necessary, he said, if the export target of 610 million lbs is to be achieved by the end of the third plan. Mr. Watson made these points while addressing the recent annual

general meeting of the Association in Cochin. The chairman pleaded for a partial rebate in the excise duty on exported tea. He urged the producing countries to undertake a joint sales campaign in all consuming countries. India should give the lead in this programme. It needs only an infinitesimal increase in the per capita world consumption today to absorb the continuing increase in tea production, Mr. Watson said. Referring to the possible entry of Britain into the European Common Market, the chairman expressed the hope that when the former concluded its negotiations with the latter, tea would be imported into the E.C.M. countries duty-free and without restrictions on quantity. A lower excise duty, he said, would make Indian teas more competitive. This will not reduce the Government's revenues drastically. At the same time, it would increase India's foreign exchange earnings. It would also cut the cost of collection of the present multifarious taxes and duties.

cialist to Gujarat to study the possibilities of arecanut cultivation in the State. The Committee, which met recently in Bombay, has also constituted a working group to consider the possibilities of using arecanut husk for producing wrapping paper. It decided that the Government of India should be moved to revive the central supervisory body for arecanut for scrutinising the annual State plans and reviewing the achievements of targets every year. The Committee approved a scheme costing Rs. 61,000 for making an investigation into a new yellow leaf disease of areca palm in Mysore State. The proposal for extending the scheme for the control of *Anabe* disease of areca palm in Mysore State was also approved. While presiding over the meeting, Mr. V. Shankar, Special Secretary to the Central Ministry of Food and Agriculture, said that the annual turnover of the arecanut trade in India is about Rs. 50 crores. The country has an annual shortage of 400,000 quintals of arecanut and it would have to cut down imports and increase domestic production. It is proposed to spend about Rs. 59 lakhs on the development of the commodity during the third plan. There has been a small addition of 30,000 acres to the arecanut acreage in spite of a sizable shift in its cultivation in Assam and Mysore.

Developing Coconut Plantations

While presiding over a meeting of the Indian Central Coconut Com-

mittee, Mr. Shankar pleaded for developing coconut plantations in the country. India is at present faced with the need of importing copra worth about Rs. 12 crores a year, although she was an exporter of copra and coconut oil in the past. The meeting approved the proposal to increase the present production of hybrid seedlings from 2,000 to 4,000. It also approved a model scheme for intensive development of coconut areas in blocks comprising 1,000 acres each.

PRICES RISE IN TEA AUCTIONS ABROAD PRODUCTION OF QUALITY GRADES URGED

(BY A SPECIAL CORRESPONDENT)

WITH the Congress back in power for another five years, tea producers are hoping to receive the official consideration due to them for providing valuable foreign exchange for the country through exports. The earnings, as has been stated in previous issues, can be increased only if the price of tea for overseas buyers is reduced. Otherwise, the law of supply and demand may soon take a hand. Meanwhile, the world markets are far from overstocked. Prices of tea throughout India and in Colombo have shown some revival during the

CAPITAL, 15th March, 1962.

past two months, and London is at present bidding strongly for quality teas.

Internal Consumption

India has definitely absorbed more tea this year. It is to be hoped that the authorities will soon realise the importance of the internal market. The Coffee Board is busy with an intensive programme to encourage coffee drinking, but why cannot the tea people do likewise? Whatever the Government may do, the trade itself should try its best to promote internal consumption. Tea has a great advantage over coffee from the economic point of view, as it makes about four times as many cups, weight for weight. Another favourable factor is the higher purchasing power of the people together with the fact that the population is increasing by leaps and bounds, so even at the existing per capita offtake, the internal consumption will rise by quite a few million lbs within a few years. The same trend should operate in Pakistan, Ceylon and Indonesia.

Transport in Tea Gardens

The planting community has been well served in the matter of transport. But during the last season, local Governments requisitioned tea garden vehicles rather frequently. So one of the members of the Indian Tea Association is reported to have said: "We appreciate that in the event of an emergency, the authorities have to seek assistance from the public providing transport. But we hope that the authorities realise that tea gardens do not maintain vehicles for the sole purpose of lending them to the Government at periodic intervals."

Producing Quality Teas

There still appears to be some confusion among correspondents on the subject of quality. A recent article noted that incentives to exporters is the only way to promote exports and produce quality teas, but actually on 50 percent to 70 percent of the existing tea acreage, quality teas cannot be produced, except possibly by some fluke in climatic conditions. By careful attention to plucking and manufacture, the best can be made of medium and poor types, but quality itself is often elusive. Some Darjeeling teas achieve it with second flush and autumnal growth. Upper Assam produces much good teas and a few Dooars factories sometimes make one or two invoices of very useful teas. But the average estate just will not produce quality teas. The Indian Tea Association's scientific station in Toklai has paid great attention to this problem and may, in fact, have made some progress by selecting special tea seeds or clones for new planting.

Tea Acreage and Output

India's main plantation interests are in tea, coffee and rubber. The following figures have recently appeared in print:

	Production in million lbs	
	1945-46	1955-56
Tea	476	637
Coffee	40	68
Rubber	39	50

The area under tea in India in 1959 was given by Calcutta sources as 630,550 acres in north India and 186,808 acres in south India. In 1960, production from the same areas was 536.1 million lbs and 169.1 million lbs, respectively. In 1955, the area under tea, according to these statistics, was about 792,000 acres.

Useful Suggestions

The chairman of the Indian Tea Association, Mr. I. F. Morriss, after touring Assam, the Dooars and Cachar, at which centres he discussed some of the problems worrying tea planters, made many useful suggestions to the authorities on how to improve production and exports while presiding over the annual

general meeting of the Association on Friday in Calcutta. He referred to the excess production predicted by the U.N. Food and Agriculture Organisation, and the third plan target of 900 million lbs. It is time, he said, that the Central and State Governments realised the necessity to expand the internal consumption of tea.

Campaign in Scotland

The Tea Board prefers to try and induce the U.K. to drink an extra ounce of tea a head. In this context, the following news about Scotland is interesting. The Scots drink less tea than the English or the Welsh, so the Indian Tea Board is to spend £100,000 this year to try to increase the consumption of tea in Scotland. The Scots take about five cups of tea a day, against seven cups a day by the Welsh and the English. Efforts will be made to increase the consumption of teenagers who are said to be drinking less tea than their parents. But if £100,000 is spent on propaganda in this country, it will probably help sell ten to 20 times as much tea as will result from the foregoing experiment. It is doubtful if the whole business will give this country a full £100,000 of extra foreign exchange in 1962 or 1963 whereas what India needs now is American dollars. It is, therefore, time that the move was switched over to the U.S.A.

Tax Adjustments

Mr. Morriss referred to the need for tax adjustments to raise Indian exports. The industry and the Government should work together. The bonus agreement, the chairman said, is based on the principles that bonus is only payable when profits are made, that labour is entitled to an agreed share of the profits, and that the share of the individual workman depends on his regular attendance. The Association is not reconciled to a system which gives bonus to workmen who assault managerial staff, and who by illegal strikes, endanger the profits upon which bonus depends. Referring to wages, Mr. Morriss said: "In this, union leaders and Governments have failed to heed the advice of the Soviet Prime Minister, who recently observed, not that wages and productivity should march hand in hand, but that productivity must always be one jump ahead of wages". The industry is carrying a permanent strength of six men where only five are needed. Besides, medical arrangements are better than any available to plantation labour elsewhere and housing conditions are receiving the constant attention of the management. Family planning is also advocated.

Developing the Home Market

Dealing with the problem of demand and supply, Mr. Morriss said that the Indian tea industry would be unable to develop a steadily expanding export market without a broad and secure domestic market. The basis for a higher output and larger exports lies in a growing home market, and "unless the present teenage generation in India is constantly encouraged to drink tea, the danger will be that other beverages, for which advertising is very much on the increase, will become more popular than tea, as has happened in certain other countries, notably America and Australia".

NORTH INDIAN TEA CROP REPORTS

The following summary of crop and weather telegrams has been received from different districts for February 1962:

Upper Assam: Good rain has fallen generally except in Panitola where the weather is too hot for the time of year; crop prospects are now brighter; hail

stones are reported from Doom Dooma but little damage has resulted; the season will probably be an early one.

Central Assam: Weather seasonable except in Moran where the cold is interfering with outturn; prospects favourable.

Lower Assam: Weather conditions favourable for the time of year; immediate prospects fair.

North Cachar: Weather dry; red spider blight prevalent in north Cachar; the season will probably be an early one.

South Cachar: Good rain has fallen generally except in Longai; crop prospects are now brighter.

Eastern Dooars: Weather dry and rain badly wanted; red spider blight prevalent in Kalchini.

Central Dooars: Weather dry.

Western Dooars: Weather seasonable; immediate prospects fair.

Darjeeling: Good rain has fallen generally, and prospects are now brighter; red spider blight prevalent.

COCHIN TEA SALES

At Sale No. 10, 351,000 kilograms of tea were on offer. The demand was irregular and selective. Plain and low mediums were 10nP to 20nP easier while mediums and good mediums were fully firm to dearer. Nilgiris were neglected. The unorthodox grades were considerably easier.

At Dust Sale 10, 227,000 kilograms of tea were on offer. There was a good but irregular demand. Plain low mediums and mediums were easier while good mediums, black leaf and high-grown were strong and dearer. The unorthodox grades were irregular and sometimes easier.

TATA-JOHNSON AND THE PAPER INDUSTRY

Although the pulp and paper industry is expanding rapidly, its output barely meets demand. Many new large-scale plants are therefore necessary. Importing machinery for these plants would be a heavy drain on foreign exchange reserves. A better plan: indigenous production of the machines.

Tata-Johnson's entry into the field is timely. Tata's, collaborating with A. Johnson & Co., a leading Swedish combine, have promoted Tata-Johnson Ltd. The company manufactures pulp and paper machinery with a high indigenous content and incorporating the latest developments in the field.

Technical know-how is provided by Sweden's AB Karlstads Mekaniska Werkstad (KMW), AB Kamyr and AB Rosenblads Patent, as well as the Cellulose Development Corporation (Celdecor), pioneers in bagasse pulping.

Machinery designed by these leading organizations is manufactured at TELCO's well-equipped works with the close co-operation of Tata-Johnson specialists in Jamshedpur.

hamare bhai
ko le jao

It happened some years ago in the steel melting shops at the Jamshedpur works. A large ladle, carrying 75 tons of molten iron, suddenly crashed to the ground with a deafening noise from an overhead crane. The spattering sparks and red-hot metal seriously injured a number of brick-layers working at what seemed to be a safe distance. The air was rent with the frenzied shouts of the men and the hissing of steam.

The first ambulance could remove only five of the injured to the hospital. General Manager Keenan could take only three more in his car. He chose the three who had a better chance of survival than the rest. One of these men, a Hindu worker, however, re-

fused to go. "Do not take me away", he said. Disregarding his own agony, he feebly nodded towards a half-burnt Muslim colleague, and said: "Hamare bhai ko le jao." As Keenan recalls, "The Hindu who was in pain and danger of death remembered, not that the Mohammedan was of a different faith, but that he was his brother."

This feeling of comradeship, born of the common bond of labour, is the spirit that characterises Jamshedpur, where industry is not merely a source of livelihood but a way of life.

Calcutta Markets

GOOD BUYING AT TEA EXPORT SALE

DUSTS EASIER AT CLOSE

AT Sale No. 39, held on 12th and 14th March, there was a good general demand for the 45,123 chests on offer at the Export auction. Clean bright liquoring orthodox descriptions and the best C.T.C.'s were firm to dearer, while the remainder were very irregular with the poorer Fannings generally easier. As there were insufficient quotable teas on offer, no quotations are given.

At the Internal Sale demand for the 30,016 packages of Dust was good and general, but the market eased considerably towards the close of the auction. Medium C.T.C. Dust with clean leaf appearance were well supported and were often firm, but the fibrous teas were much easier and sometimes proved difficult of sale, particularly towards the close of the auction. Good liquoring C.T.C. descriptions were keenly competed for, and realised satisfactory prices. Orthodox types opened up to 20mP lower, and they eased further as the sale progressed. Flavoursy Darjeelings sold extremely well. Legg-cut varieties were irregular, but generally easier except for the few bright lines which sold well.

Quotations	Rs. a kilo
Plain Orthodox Dust	3.70 to 4.20
Medium Assam Dust	4.10 to 4.50
Legg-cut Dust	4.20 to 5.00
Medium Assam C.T.C.	
Dust	5.30 to 5.70
Good Assam C.T.C.	
Dust	6.30 to 7.00

(Quotations are inclusive of excise duty.)
The 380 chests of leaf teas at the Sale were taken up at irregular rates.

GRAIN CHARTERING IN FREIGHT MARKETS

FOR the first time in weeks, the centre of chartering activities in the freight markets moved during the past week from the Chinese to the River Plate and Australia where grain charterers were busy. Western States Australia to Antwerp-Hamburg range paid 62s 6d when coal from Australia to Japan paid 36s. Burma rice shippers concluded a number of fixtures to Cuba and Ceylon with April laydays at 55s and 38s 6d f.i.o. and stowed, respectively. Iron ore from Marmagoa to Japan has paid 42s f.i.o. and trimmed which is 2s 6d more than last paid. According to an unconfirmed report, the Shipping Corporation has recently accepted a vessel for 7,200 tons 10 per cent coal Calcutta-Madras at the unchanged rate of 40s. f.o.b., owners' trimming and discharge. There is no further improvement in the berthing of vessels at Madras. The news of 40 Hooghly pilots submitting their resignations from 1st April is causing anxiety to the local shipping interests.

LINSEED QUIET

The market was quiet in the past week. The price declined appreciably following improved offers from upcountry for ready and forward supplies. There was more offering in view of new crop supplies. The oil market was quiet and prices fell sharply in sympathy with seeds and other vegetable oils. The oilcake market was dull. Offtake dropped

and prices sagged. The latest quotation is as follows: ready March Rs. 77.70 a quintal.

HIDES AND SKINS STEADY

The market was quietly steady. Stocks of skins were higher, but those of hides were less than in the previous week.

Bazaar Sales

(Between 6th March and 12th March, 1962)

Cowhides: Wet salted (Slaughtered) 7,500 pcs. on the basis of Rs. 10 to Rs. 17 and Rs. 19 to Rs. 29.
Goatskins: Wet salted (Patna, Daissee, Kustia) 29,900 pcs. on the basis of Rs. 290 to Rs. 320, Rs. 360 to Rs. 380 and Rs. 475 to Rs. 480; Wet salted (he-killed) on the basis of Rs. 4.75 and (she-killed) on the basis of Rs. 4.50 a piece; Assam-Dinajpur 15,800 pcs. on the basis of Rs. 280 to Rs. 350 and Rs. 360 to Rs. 375; Purneah-Kissenganj 8,000 pcs. on the basis of Rs. 370 to Rs. 380 and Rs. 410; Patna (Ord.) 10,300 pcs. on the basis of Rs. 220 to Rs. 225.

Bazaar Stocks

(12th March, 1962)

Cowhides: Wet salted 163,000 pcs.
Goatskins: Wet salted (Patna, Daissee, Kustia, Killed) 56,000 pcs.; Assam-Dinajpur 71,500 pcs.; Muzafferpore-Patna-Pakur-Purneah-Kissenganj 196,500 pcs.

SHELLAC QUIETLY STEADY

During the week ended 13th March, the tone of the market was quietly steady. The range of quotations was as follows:

	Rupces a package.

COMPANY AND PUBLIC NOTICES

THE UNITED COMMERCIAL BANK, LIMITED

Registered Office:
2, India Exchange Place, Calcutta-1.

NOTICE

NOTICE IS HEREBY GIVEN that the NINETEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 11th day of April, 1962, at 4 P.M. to transact the following business:—

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1961 and Profit & Loss Account for the year ended 31st December, 1961;
2. To declare a dividend;
3. To appoint two Directors in the place of Mr. A. C. Law and Mr. T. S. Rajam who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;
4. To appoint a Director in place of Mr. M. L. Dahanukar who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:—

"Resolved that Mr. M. L. Dahanukar, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him"

5. To appoint a Director in place of Mr. P. D. Himatsingka who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:—

"Resolved that Mr. P. D. Himatsingka, who has attained the age of 72 years, be and is hereby re-appointed a director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him"

6. To appoint Auditors for the current year and to fix their remuneration.

Special Business

7. To consider and, if thought fit, to pass, with or without modification, the following resolutions which will be proposed as ordinary resolutions:—

(a) That, subject to the consent of the Controller of the Capital Issues being received, 200,000 new ordinary shares of Rs. 100 each in the authorised capital of the company be issued at a premium of Rs. 25 per share on the footing that such new

ordinary shares shall rank in all respects *pari passu* with the existing ordinary shares in the company save and except that they shall not participate in any dividend in respect of any period ended on or prior to 31st December 1961; and that they shall be entitled in respect of the year ending 31st December 1962 to half the rate of dividend that shall be payable on the existing shares;

(b) That the said 200,000 new ordinary shares be offered in the first instance, subject to the approval of the Reserve Bank of India wherever necessary, for subscription for cash to those members of the company whose names shall appear on the company's share register on the 11th day of April 1962 in the proportion of one new ordinary share for every two existing ordinary shares then held by such members and so that half, namely Rs. 50, of the full nominal amount of each new share taken up together with the premium, *viz.* Rs. 25 in respect of each new ordinary share shall be paid to the company in cash with the acceptance of the offer and before allotment.

(c) That such offer be made by notice as hereinafter mentioned and that any member receiving such offer shall be entitled either to take up by paying therefor all or any of the new ordinary shares so offered to him or to renounce (upon signing a renunciation in such form as shall be prescribed by the Board of Directors) his right to all or any of such new ordinary shares in favour of a nominee or nominees; Provided that such nominee or nominees shall be a member or members of the Company or be approved of by the Board of Directors and that such nominee or nominees shall sign an acceptance of the shares so renounced in such form as shall be prescribed by the Board of Directors and that any such renunciation by a member and acceptance of such nominee or nominees shall be effective only if made upon forms to be supplied by the company and lodged duly completed with the company within the time specified together with the sum of Rs. 75 per share in cash (being the proportionate payment of Rs. 50 per share plus the premium of Rs. 25 per share).

(d) That, subject to the approval of the Reserve Bank of India wherever necessary, the said offer be made to the said members by notice specifying the number of shares to which they are entitled and providing that the offer if not

accepted within 30 days from the date of offer shall be deemed to have been declined and specifying that the payment for such shares at the rate of Rs. 75 for each new ordinary share so offered shall be made in full with the acceptance of this offer and before allotment.

(e) That any new ordinary shares not taken up by the said members in response to the above offer shall be available for subscription by the members of the company who take up their rights in full and who desire to apply for additional shares but so that the right to apply for additional shares shall not be renounceable in favour of any other person and the allotment of any such additional shares shall be subject to any condition which may be imposed by the Controller of Capital Issues and, in the case of non-resident member, further subject to the approval of the Reserve Bank of India.

Note: 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member of the Company.

2. (a) The transfer books of the Bank will be closed from Monday, the 26th March, 1962 to Wednesday, the 11th April, 1962, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 12th April, 1962, to those Members whose names appear on the Company's Register on the 11th April, 1962.

(c) Dividend Warrants will be posted to the Members at their Registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

Explanatory Statement Required by Section 173 of the Companies Act, 1956.

The item of Special Business to be transacted at the Annual General Meeting to be held on the 11th April, 1962 is to consider and pass Ordinary Resolutions for the issue of new ordinary shares.

With a view to further strengthen the capital resources of the Company and in order to increase the ratio of paid-up capital and reserves to total deposits, the Directors propose to raise the subscribed capital of the Company by the issue of 200,000 new ordinary shares of Rs. 100/- each in the manner set out in the Resolution.

None of the Directors is interested in the aforesaid resolution except as shareholders of the Company. The General Manager is not in any way interested in the said resolution.

By Order of the Board,

S. T. SADASIVAN,
General Manager.

Bombay,
9th March 1962.

JESSOP AND COMPANY, LIMITED

NOTICE is hereby given that the Thirtieth Annual General Meeting of the Members of Jessop & Co., Ltd. will be held in the Committee Room No. 2 of the Bengal Chamber of Commerce & Industry at 6, Netaji Subhas Road, Calcutta-1, on Tuesday, the 10th April 1962 at 11 a.m. for the transaction of the following business:—

LATEX PROCESS FOR RESTORING OLD BUILDINGS

Over the last seven years, 30,000 houses were demolished, and over 28,000 condemned, under clearance and compulsory purchase orders in the Greater London area alone. A very large proportion of these properties, which might otherwise have helped ease the housing situation, were ruined by rising damp, which brings about the rapid deterioration, and eventual disintegration, of brick and woodwork, plaster and decorations, and causes a great deal of waste in time and money. A new technique for inserting a liquid damp-proof course by means of injection has been developed by Dr. H. Haust of Cambridge. Timberproofing of Laboratories from a study of insect waterproof membranes of insect skins. Treatment consists in injecting a composition of natural rubber latex and water-based silicones under low pressure into holes drilled at intervals in a suitable mortar layer. The mixture permeates the porous mortar between the holes to form a waterproof barrier, which effectively prevents any further moisture rising from the ground.

During the past five years, more than 200 buildings of different types have been successfully treated in this way, among them the crypt of St. Bride's Church, London E.C.4. The original foundations of this church, built by Wren and badly damaged in the war, were found to incorporate bases containing disintegrating Roman, Saxon and Norman limestone masonry. The natural latex/silicone technique is to be marketed and exported under the trade-name "Actane". Costs are said to work out at less than half the normal price for "cutting-in" a damp-proof course by traditional means.

COAL COMPANIES

O., Po., F. and Dd indicate Ordinary, Preferred Ordinary, Founders and Deferred Shares respectively. 'P' next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

CALCUTTA, 22nd MARCH, 1962.

Vol. CXXXVIII No. 3702

JUTE INDUSTRY ON
THE MEND

THE essential and welcome fact underlying the speech made by the chairman, Mr. D. C. B. Pilkington, at the annual general meeting of the Indian Jute Mills Association in Calcutta last Saturday, is that the jute industry has emerged from its recent crisis and is now, successfully, convalescing. This is satisfactory news; nothing is more certain than that the industry could not have gone on losing money at the rate it did in 1961. If Mr. Pilkington devoted a rather larger proportion of his speech than usual to reviewing the measures the industry was forced to take to extricate itself from its difficulties, then that can be regarded as a suitable tribute to the importance such flexibility has attained. Not all these measures were taken with the active co-operation of authority. But in retrospect it is quite obvious that without them the situation, not only for the mills, but for their workers and for the country as well, would have been considerably worse than in fact it turned out to be. If from this the lesson is learned that it is sometimes necessary for an industry of this kind to take steps which inevitably damage particular interests, at least for the time being, then so much the better. Mr. Pilkington may appear to have laboured the point that all was done in everybody's long-term interests, but this is sometimes necessary to drive home the fact that unreasonable opposition to the industry's sensible and authoritative views is rarely to good purpose. The essence of survival in an industry of this kind is flexibility, and there is cause for congratulation that this has been achieved to the extent it has. Without it, disaster would have overtaken the Calcutta jute mills during 1961.

Now that the mills are relatively prosperous again, the Government may be tempted to consider the time ripe to permit new impositions. Apart from the fact that this would make nonsense of the commendable emphasis which Mr. Morarji Desai placed on the importance of expanding exports, it would seriously impede the industry in meeting the next serious threat which inhabits the near future, that of Pakistani competition. Mr. Pilkington's reminder that during last year's crisis the mills lost Rs 6 crores or more, should help to modify any official enthusiasm for curtailing their present modest prosperity. It will take many months of profitable working yet before such staggering losses can be made up, and nothing will hasten that happy day more than the Government's wholehearted co-operation with the industry's own efforts. There is no denying that the industry's management of its own affairs has been completely vindicated by experience, whereas the Government's independent attempts to influence the course of events have invariably ended in complete failure.

Much of the mills' present modest prosperity is due to the recent remarkable performance of overseas demand. This has remained strong at a time of year when the trend is usually downwards, and the fact that little of it seems to be due to restocking in the main buying countries suggests that it might possibly be a permanent phenomenon. If it is, then the task will be to ensure that India retains her share of it. In

hessian this might not be too difficult, although the shortage of quality jute is a factor which continues to place the Calcutta mills at a disadvantage compared with their competitors in East Bengal. But in sacking, the chances at the moment are far from bright and promise to get worse as the Pakistani industry increases in size. Mr. Pilkington's suggestions for meeting this threat deserve careful study. Hampered as it is, the Indian industry must implement a large-scale scheme of modernisation if it is to maintain its share of the world's sacking markets. The Government is no doubt aware of this need, but is all too liable to postpone playing its own part as long as it possibly can. This is a temptation to be avoided at all costs.

Now that the industry is no longer preoccupied with the urgent business of day-to-day survival, the time for planning to meet competition has arrived. There is no need to question the industry's determination to take all necessary steps, but unless it can carry the Government with it, the ground covered might not be adequate in the time available. With its present awareness of the export problem, the Government is in as good a mood as it is ever likely to be to grasp the realities of the situation. But whether this extends to a firm appreciation of the need to keep the mills' costs to the minimum, is another matter; what Mr. Pilkington had to say about the refund of import duty and the depredations of the Customs Authorities, suggests that it does not. The modernisation of the weaving section of the industry is now a matter of acute urgency. So is the formulation of incentive schemes to counter those adopted by the Pakistani Government. Any device which can serve to reduce the industry's production costs or increase its ability to export must be investigated while there is still time. Next year might be too late.

THE CENTRAL BUDGET

THE interim Budget for 1962-63 presented by the Central Finance Minister, Mr. Morarji Desai, to the Lok Sabha last week has disturbing implications. For some years, it has been the practice of the Finance Ministry deliberately to under-estimate revenue and to over-estimate expenditure, so that ultimately a small revenue surplus would emerge. The revised estimates for the current year, 1961-62, indicate that the under-estimation of revenue has been carried to quite extraordinary lengths. In the Budget which Mr. Desai presented in February last year, additional taxes totalling Rs. 57 crores were imposed. But the revised estimates show that not only has that Rs. 57 crores been collected; an additional Rs. 62 crores has magically flowed into the Government's coffers too. At the same time, the revenue expenditure figures, originally believed to be an over-estimate, have been exceeded. The excess in civil expenditure is small, being less than Rs. 3 crores. But, thanks

to still the most important factor in the industry's cost structure is the price and availability of its raw material. The self-congratulation which Mr. Pilkington, speaking for the industry, indulged in, was to a large extent justified. Slowly and painfully the theory has taken root that the mills have a permanent responsibility to take positive measures to ensure an adequate jute crop year by year. This gives considerable grounds for hoping that the problem of outright scarcity has been solved once and for all. Which still leaves the problem of prices. The present floor levels for low-quality fibre are considerably higher than the industry should be asked to pay, as has so often rightly been pointed out. If these prices are to be reduced in future years, as they will have to be in a period of less buoyant demand than the present, then more intensive cultivation must be encouraged among the growers. This is largely a job for the State Governments to tackle, but the Centre could do much to persuade the States of the urgency of the matter.

One of the best assurances for the future is undoubtedly the buffer stock scheme. It is probable, however, that Mr. Pilkington under-estimated the difficulties which this is likely to encounter in practice. Experience with the current crop suggests that it is most likely to become the receptacle for low-quality fibre which nobody wants and which cannot be exported, yet which must be supported for reasons of convenience or just pure politics. Whether this will lead to a rational pricing policy is something only the future can decide, but it is as well to face right away the fact that unless the problem of pricing is tackled realistically, buffer stock schemes can merely serve to accumulate unsalable surpluses which will be a nuisance to all concerned. Here again the essence is flexibility and the main need is to ensure that the industry's views always receive the attention they deserve from the authorities concerned. The difficulties of the past year have strained the relations between the Government and the industry a good deal. But they should also have underlined the necessity for maintaining these relations in as good a state of repair as possible and for due weight to be given at all times to the industry's views as to what must be done to ensure its continued survival.

to Goa, China and Pakistan, the excess in defence expenditure is extremely disturbing—about Rs. 19 crores. The Government can hardly be proud of ending up with a revenue surplus of nearly Rs. 34 crores in the revised estimates, after having predicted a deficit of over Rs. 5 crores in the 1961-62 Budget. The fact is that it is squeezing taxpayers harder than it said it would; it is making no serious effort to check the growth in its unproductive expenditure; and the result is that much of the extra revenue is being squandered away on programmes which will ultimately yield the nation little benefit.

The Budget estimates for 1962-63 indicate that no major deviation from this basic trend is to be expected in the coming year. The revenue is likely to go up by nearly Rs. 227 crores, out of which Rs. 150 crores will be due to changes in accounting classification. The expenditure will go up by Rs. 324 crores, out of which, again, Rs. 151

Not only has production of Jessop increased, but the ratio of profit to turnover has also improved. The directors say that the output would have been much higher but for the interruption caused by various difficulties. There have been shortages of electric power as well as of transport. The supplies of coal and coke have been short and of inferior quality. So the quality of castings has been affected. The production of box wagons has increased, and cranes are being produced. Gates are being made for the Rihand dam and the Kosi barrage. Besides, the production of road rollers has exceeded the output target. Considering an excellent order-book, the outlook for the current year is encouraging.

In his speech from the chair at the annual general meeting of Ashok Leyland Ltd in Ennore last week, Sir A. Ramaswamy Mudaliar said that by October this year, machine tools and jigs and tooling required for the production of components to meet the phased expansion programme would have been installed and supplied (A fuller version of the speech appears on a later page in this week's issue of *Capital*). The chairman looked forward to an annual output of 5,000 Comet chassis with a 20 percent excess capacity for spare parts production from next year when the expansion programme "would have got into its stride." The programme is designed to increase the engine output not only to provide the Comet engines but also the heavier "600" and "680" types required for chassis and industrial applications. Referring to the satisfactory sales turnover of Rs. 8.12 crores during January-September 1961, against Rs.8.83 crores in 1960, Sir Ramaswami said that this was due largely to the higher monthly output of Comet chassis. While the price charged by the Company for Comets has not increased since 1955 the selling price has increased because of the additional Customs and excise duty imposed year after year under the Central Budget. Sir Ramaswamy said that the total depreciation up to 30th September, 1961, exceeded Rs. 98 lakhs, while development rebate reserve amounted to Rs. 37.25 lakhs. With a paid-up capital of Rs. 3.45 crores, the gross block on that date was over Rs. 3.76 crores.

The directors of the New India Assurance Co. Ltd have decided to issue one fully-paid bonus share of Rs. 15 for every five shares held by the existing shareholders. The issue is subject to the sanction of the Controller of Capital Issues. The present paid-up capital is Rs. 1.42 crores, made up of 712,106 shares of Rs. 75 each, Rs. 15 paid-up, and 237,369 "A" shares of Rs. 15 each, fully paid. The proposed issue will raise the paid-up capital to Rs. 1.71 crores.

The results of the Mafatlal group of mills for the year ended December 1961, gave a shock to the stock markets in both Bombay and Ahmedabad. The main damper was the bare maintenance of New Shorrock's gross profit and the decline in the gross profit of Mafatlal Fine. Being the first major group to announce the pre-

liminary figures for 1961 working, the results have been of considerable interest. The working of the mills shows that the fine units have fared badly, although all the four mills have had a further rise in sales. One explanation for the fine units' disappointing performance is the strict observance of voluntary price control.

The Sassoon Spinning and Weaving Co. Ltd.—the group's coarse unit—has fared well. Its sales have risen sharply from Rs. 5.76 crores to Rs. 6.41 crores. The gross profit has increased from Rs. 49.70 lakhs to Rs. 80.22 lakhs. The directors have raised the dividend from Rs. 1.70 to Rs. 2 a share, subject to deduction of tax absorbing Rs. 15.08 lakhs. Depreciation gets Rs. 23.17 lakhs (against Rs. 18.40 lakhs) and taxation Rs. 20.54 lakhs (against Rs. 10.55 lakhs). Development rebate reserve has been allocated Rs. 2.65 lakhs (against Rs. 1.92 lakhs), statutory development rebate reserve Rs. 7.96 lakhs (against Rs. 5.76 lakhs) and general reserve Rs. 6 lakhs (against nil). These appropriations leave Rs. 21.55 lakhs. To this is added Rs. 24.84 brought forward from the previous year, making a total of Rs. 21.80 lakhs for distribution. After making various adjustments, Rs. 30.196 is carried forward.

The turnover of New Shorrock Spinning and Manufacturing Co. Ltd has improved from Rs. 5.39 crores to Rs. 5.54 crores, but the gross profit has been barely maintained at Rs. 1.47 crores. The dividend has been reduced from Rs. 60 to Rs. 45 paise a share, subject to deduction of tax, absorbing Rs. 35.42 lakhs. Depreciation is Rs. 22.72 lakhs (against Rs. 18.51 lakhs), taxation Rs. 52 lakhs (against Rs. 47.40 lakhs) and development rebate Rs. 8.01 lakhs (against Rs. 10.67 lakhs). General reserve receives Rs. 15 lakhs (the same) and dividend equalisation reserve Rs. 5 lakhs (against Rs. 10 lakhs). The carry-forward amounts to Rs. 3.31 lakhs, against Rs. 2.26 lakhs brought in.

The Mafatlal Fine Spinning and Manufacturing Co. Ltd. has earned a gross profit of Rs. 63.06 lakhs, against Rs. 69.48 lakhs in the previous year, in spite of a slight increase in the turnover from Rs. 2.73 crores to Rs. 2.84 crores. The directors propose to maintain the dividend at Rs. 30 a share, subject to deduction of tax, absorbing Rs. 17.40 lakhs. Depreciation claims Rs. 15.51 lakhs (against Rs. 11.77 lakhs) and taxation Rs. 16.63 lakhs (against Rs. 20.05 lakhs). Development rebate reserve is allocated Rs. 1.32 lakhs (against Rs. 1.89 lakhs). No transfer has been made to general reserve, against Rs. 2 lakhs in the previous year. The appropriation for dividend equalisation reserve has been reduced from Rs. 3 lakhs to Rs. 1 lakh. This leaves Rs. 40.575 to be carried forward, against Rs. 5.916 brought in.

The sales of Standard Mills Co. Ltd rose from Rs. 6.97 crores to Rs. 8.55 crores, but the gross profit increased only from Rs. 1.43 crores to Rs. 1.75 crores. The directors propose to reduce the dividend from Rs. 30 to Rs. 25 a share, subject to deduction of tax, on the increased capital of 153,650 shares following a bonus issue. The dividend distribution absorbs Rs. 38.41 lakhs. Depreciation claims Rs. 34.05 lakhs (against Rs. 28.09 lakhs) and Rs. 2.29 lakhs.

dividend at Rs. 22 a share, subject to deduction of tax.

The tax liability for the year is estimated at Rs. 53 lakhs and is proposed to be met by providing Rs. 41 lakhs from profit and by drawing Rs. 12 lakhs from deferred taxation reserve. Provision for taxation in the previous year amounted to Rs. 86.50 lakhs. Depreciation has been allocated Rs. 85.17 lakhs (against Rs. 79.17 lakhs). A sum of Rs. 39.25 lakhs (against Rs. 4.15 lakhs) has been transferred to development rebate reserve. The allocation to the debenture redemption fund has been maintained at Rs. 10 lakhs, but gratuity reserve gets nothing, against Rs. 3.50 lakhs in the previous year. The equity dividend absorbs Rs. 53.05 lakhs and the preference dividend Rs. 9.67 lakhs. The carry-forward is Rs. 93,407, against Rs. 441 lakhs brought in.

National Rayon has announced its proposal to issue debentures of the value of Rs. 150 lakhs, carrying interest at 6.5 percent, and redeemable after 15 years. The new debentures will rank along with the existing ones. It is stated that the rights of the existing debenture-holders are proposed to be amended by increasing the rate of interest from 5.5 percent to 6.5 percent and by extending the date of their redemption by seven years. In view of this issue, the Company does not propose to raise capital by a rights issue.

National Rayon has received another licence for importing equipment for further expanding its capacity for rayon yarn. Orders for machinery and equipment have already been placed. The "teething troubles" of the tire cord plant have already been overcome, and it is expected that the plant will shortly operate at its normal capacity. Arrangements for the expansion of the caustic soda chlorine plant have made considerable progress. The Industrial Credit and Investment Corporation of India has agreed to advance credit for importing the equipment from abroad. The import licence for the equipment is expected shortly. National Rayon has already entered into an agreement with International Paper Company of New York for technical collaboration and with Messrs Brown and Root of the U.S.A. for rendering engineering services required for the rayon-grade pulp project. Negotiations with the Mysore Government for exploiting the forest resources have reached the final stage. National Rayon has also approached the U.S. Agency for International Development for foreign exchange.

The shares of Samnuggur Jute Factory Co. Ltd., Titaghur Jute Factory Co. Ltd and Victoria Jute Co. Ltd have declined because their ordinary dividends have been passed for the year ended December 1961. Each Company paid an ordinary dividend of 6 percent, taxable, for 1960. The directors say that the unsatisfactory results have been due to adverse trading conditions during the major part of 1961. But more profitable business has been possible during the current financial year due to adequate fibre supplies. The half-yearly preference dividends of all the companies have been paid up to December 1961.

Sammuggur Jute has incurred a trading loss of £58,238 in 1961, against a deficit of £35,510. Investment income amounts to £19,074 (against £20,281). After providing £10,000 (the same) for the net loss, after tax, is £77,641 (against a loss of £48,273). General reserve is allocated £65,000. The carry-forward is £4,854, against £23,000 brought in.

The trading loss of Titaghur Jute is £40,302 (against a loss of £18,805). Investment income has totalled £26,893 (against £29,724). The net loss, after tax is £57,498, compared with a loss of £16,015, after transferring £10,000 (the same) to depreciation. General reserve absorbs £65,000. The carry-forward is £6,730, against £4,740 brought in.

Victoria Jute shows a trading loss of £59,921 against a loss of £18,820. Investment income is £14,989 (against £15,569). There is a net loss of £92,489 compared with a loss of £43,149 after providing £10,000 (the same) for depreciation and

Walchandnagar Industries Ltd has fared well during the year ended September 1961. It has earned a higher profit of Rs. 19.92 lakhs, compared with Rs. 16.34 lakhs in the previous year, after providing Rs. 28.48 lakhs (against Rs. 17.90 lakhs) for depreciation, Rs. 4 lakhs (against Rs. 10.21 lakhs) for development rebate reserve, and Rs. 2.50 lakhs (against Rs. 45,000) for taxation. The dividend on old shares is proposed to be maintained at Rs. 15 a share, subject to deduction of tax. On new shares, a dividend of Rs. 3.75 a share, taxable, has been recommended. A sum of Rs. 5 lakhs has been transferred from general reserve. After providing for the proposed dividends and making various adjustments, Rs. 1.50 lakhs is to be carried forward, against Rs. 1.61 lakhs brought in.

During the year, the Company manufactured 274,899 bags of sugar, against 218,442 bags in the previous year. The distillery produced 565,774 gallons (against 502,323 gallons) of rectified spirit. The sugar mill machinery division supplied machinery worth Rs. 1.29 crores, against Rs. 1.05 crores in the previous year. Anticipating a shortfall in orders for sugar machinery, the directors state that they are considering a proposal for manufacturing cement and paper plant and mechanical presses in the sugar machinery division to supplement its production.

The directors of Shri Ambica Mills Ltd, Ahmedabad, have decided to issue bonus shares in the ratio of one share for every three held at the cost of the equity dividend for the year ended December 1961, as it has been skipped. In the previous year, Ambica Mills paid a dividend of Rs. 50 a share, taxable. The dividend has been skipped perhaps deliberately, with a view to strengthening the reserves, since it is evident that out of the gross profit of Rs. 1.60 crores, which shows an increase of Rs. 16.83 lakhs over the previous year, the directors have transferred Rs. 53 lakhs (against Rs. 15 lakhs) to general reserve. Sales have improved further by Rs. 41.78 lakhs to Rs. 5.92 crores. With the previous year's surplus of Rs. 2.86 lakhs the total available is Rs. 1.62 crores (against Rs. 1.43 crores). Depreciation gets Rs. 14.49 lakhs (against Rs. 14.67 lakhs), taxation Rs. 65.20 lakhs (against Rs. 56 lakhs), development rebate reserve Rs. 2.70 lakhs (against Rs. 2.50 lakhs) investment reserve Rs. 10 lakhs (against Rs. 5 lakhs) and gratuity reserve Rs. 5 lakhs (against Rs. 3 lakhs). The balance of Rs. 1.37 lakhs is proposed to be carried forward.

The working of the Kil Kotagiri Tea and Coffee Estates Co. Ltd for the year ended October 1961 shows a lower profit than in the previous year. The net profit for the year has amounted to Rs. 3.22 lakhs, after providing Rs. 2.65 lakhs for taxation. The net profit for the previous year was Rs. 5.45 lakhs. With Rs. 15,600 brought forward from the previous year and Rs. 1.47 lakhs being the excess provision for taxation in previous years now written back and after transferring Rs. 2.75 lakhs from general reserve, the profit and loss appropriation account shows a total of Rs. 7.61 lakhs. Out of this, development rebate reserve accounts for Rs. 3.125, the dividend at 7 percent on preference shares amounting for Rs. 17,500. The directors have recommended a dividend of 25 percent on ordinary shares (the same as in the previous year), absorbing Rs. 4.2 lakhs, leaving Rs. 10,852 to be carried forward.

The total tea crop for the year amounted to 446,673 kilograms, against 467,187 kilograms. The cost of production was Rs. 3.60 a kilogram and the average price realised was Rs. 5.17 a kilogram. The coffee crop was lower at 37,379 tonnes, against 165,001 tonnes. The 1961-62 tea crop is estimated at 455,000 kilograms at a cost of Rs. 3.64 a kilogram. The 1961-62 coffee crop is placed at 104 tonnes.

According to present indications and with reasonably good blossom showers, the 1962-63 coffee crop is expected to be about 95 tonnes.

In his chairman's speech, Mr. J. N. A. Hobbs has discussed the outlook for Kil Kotagiri Tea. One notable feature, he said, is the maintenance of the dividend at 25 percent in spite of a fall in the profit. The reduction in profit is due almost entirely to the small coffee crop and lower prices realised on the sale of the Company's products. Mr. Hobbs says that the question of the disposal of the available surplus for the year has received the careful consideration of the directors, and although the results of the year's working would justify a smaller dividend, the directors have decided to maintain it at 25 percent, subject to deduction of tax. Mr. Hobbs brings to the notice of shareholders the fears entertained by him during the previous year about the Company harvesting only a poor coffee crop. His fears were fully justified, since the crop was only 37,379 tonnes, compared with 165,001 tonnes in the previous year. In view of the present low selling prices for coffee —particularly on the export market—the directors have considered it prudent to adopt a valuation of Rs. 1.90 a pound. But it is expected that the final return will be slightly more than this valuation. Dealing with the prospects, Mr. Hobbs refers to some uncertain factors. One of them is wages. Kil Kotagiri's capital commitments under the Plantation Labour Act continue to be heavy with an estimated capital expenditure of Rs. 2.31 lakhs for the current year. Another uncertain factor to which the chairman refers in his statement is the future prices of tea and coffee. He says that Indian tea is already facing severe competition in traditional markets and with the rising world production, competition will become more severe. The chairman says that there is little chance of world coffee prices improving in the near future, but he hopes that the Government will help the producer by abolishing excise duty or by a direct subsidy on coffee exports.

The U.P. Sugar Co. Ltd has suffered a setback during the year ended September 1961. for its profit has fallen from Rs. 7.66 lakhs to Rs. 2.61 lakhs, after providing Rs. 1.62 lakhs (against Rs. 1.41 lakhs) for depreciation. This decline has occurred in spite of an increase of Rs. 18.6 lakhs in sales to Rs. 1.55 crores. The directors have, therefore, proposed to cut the ordinary dividend by 10 percent to 5 percent, subject to deduction of tax. Allocations include Rs. 41,214 (against: Rs. 87,359) to capital reserves and Rs. 1.01 lakhs (against Rs. 76,000) to development rebate reserve. The dividend absorbs Rs. 2.4 lakhs. The carry-forward amounts to Rs. 92,601, against Rs. 53,565 brought in.

Sugarcane crushed during the year amounted to 4,709,000 maunds, against 4,874,000 maunds in the previous year in spite of a longer crushing season of 213 days against 167 days in the preceding year. The average recovery, however, improved from 9.43 percent to 9.56 percent. The directors say that the factory will crush about 4.2 million maunds of sugarcane, and the recovery is expected to be 9.7 percent during the current year.

The India Sugars and Refineries Ltd has suffered a setback during the year ended September, 1961. Sales have declined sharply from Rs. 2.05 crores to Rs. 1.27 crores. The gross profit has, therefore, declined to Rs. 19.09 lakhs from Rs. 22.50 lakhs in the previous year. The directors have reduced the ordinary dividend from 14 per cent to 10 percent, subject to deduction of tax. Allocations include Rs. 5.54 lakhs (against Rs. 5.70 lakhs) for depreciation. The net profit amounting to Rs. 12.34 lakhs, against Rs. 15.29 lakhs in the previous year. Including the preceding year's surplus and the past years' provisions written back, the total available for distribution is Rs. 16.90 lakhs. Out of this, Rs. 4,000 (against Rs. 42,000) is transferred to development rebate reserve. Taxation gets Rs. 4.70 lakhs (against Rs. 5 lakhs). The balance for shareholders is Rs. 7.13 lakhs (against Rs. 9.60 lakhs).

lakhs), leaving Rs. 3.17 lakhs to be carried forward, against Rs. 3.11 lakhs brought in.

The directors attribute the setback in the year's working to such adverse factors as sugar control in the early part of the year and the decline in prices after its was removed. They do not visualise any improvement in the conditions in the current year.

The Chemical, Industrial and Pharmaceutical Laboratories Ltd, better known as C.I.P.L.A., has fared well during the year ended October 1961. Sales have increased from Rs. 48.47 lakhs to Rs. 52.75 lakhs. The net profit is higher at Rs. 6.23 lakhs, compared with Rs. 5.42 lakhs in the previous year. It is arrived at after providing depreciation at Rs. 95,073 (against Rs. 90,106). Provision for taxation amounts to Rs. 2.50 lakhs (against Rs. 2.47 lakhs) and development rebate reserve Rs. 12,600 (against Rs. 19,000). The ordinary dividend has been increased from Rs. 9 to Rs. 10 a share, subject to deduction of tax, absorbing Rs. 1.38 lakhs. The gratuity fund gets Rs. 20,000 more at Rs. 35,000. The carry-forward is Rs. 3.36 lakhs, against Rs. 2.92 lakhs brought in. The directors' report says that the production of diosgenin has commenced. But it is not yet in full production due to some "unavoidable difficulties".

Indian Camphor Ltd, which is setting up a Rs. 95-lakh project for manufacturing 85 tons of camphor and its by-products a month, in collaboration with the U.S. firm of Gilden International will issue equity shares worth Rs. 57 lakhs out of the authorised capital of Rs. 1.25 crores. The issue will be in equity shares of Rs. 100 each. The directors and their friends are expected to subscribe for shares worth Rs. 28 lakhs, and the balance of Rs. 29 lakhs will be issued to the public. Indian Camphor is expected to enter the market next month. The U.S. firm will provide technical know-how for the project. The factory is proposed to be set up in Kalyan, near Bombay, and is expected to go into production by the middle of next year. Plant and machinery—mostly to be imported from the U.S.A.—is expected to cost about Rs. 50 lakhs.

The directors of Mahendra Mills Ltd, Kalo Gujarati, have proposed to increase the ordinary dividend for the year ended December 1961, by 2 percent to 14 percent, subject to deduction of tax. The increase is justified due to the rise in the gross profit to Rs. 39.01 lakhs from Rs. 34.01 lakhs in the previous year. Provision for depreciation has been reduced from Rs. 22.21 lakhs to Rs. 20.19 lakhs, but that for taxation has been raised from Rs. 2.80 lakhs to Rs. 6.50 lakhs. Development rebate reserve claims Rs. 2.38 lakhs (against Rs. 1.20 lakhs).

The results of the India United Mills Ltd during the year ended December 1961, are impressive. The preliminary figures show a substantial increase in the gross profit from Rs. 1.12 crores to Rs. 1.37 crores, underlining a sharp rise in sales. The directors have, therefore, proposed to raise the dividend on ordinary shares to Rs. 1.40 from 80p and on deferred shares to 374p from 131p. The shares of the Company have been among the few bright spots in an otherwise weak market.

Along with Rs. 9.70 lakhs brought in from the previous year and Rs. 5.52 lakhs being the refund of taxes for previous years and taxation provisions of Rs. 1 lakh no longer required, the total amount of Rs. 1.98 crores. The directors have made a higher provision for depreciation amounting to Rs. 14.92 lakhs, compared with Rs. 11.70 lakhs the previous year, and transferred Rs. 4.97 lakhs (against Rs. 3.91 lakhs) to development rebate reserve. Taxation claims Rs. 62 lakhs. Tax on ad hoc provision for bonus amounts to Rs. 35 lakhs. A sum of Rs. 8 lakhs has been provided to meet

The Hindustan Kokuku Wire Co. Ltd will offer 4,500 equity shares of Rs. 100 each at a premium of Re. 1 and 9,985 preference shares of Rs. 100 each to the public by the end of March. The shares, held originally by the Investment Corporation of India and its nominees, are being released for public subscription to enable the Company to have its shares listed on the Bombay Stock Exchange. Firm allotment has been made of 4,500 shares to the Life Insurance Corporation of India. The entire issue has been underwritten. Hindustan Kokuku's plant in Mathura, near Delhi, for manufacturing galvanised steel wires in technical collaboration with Kokuku Iron and Steel Wire Manufacturing Co of Tokyo, which has supplied the plant and machinery, has now been set up. It is expected to be commissioned in June.

The directors of Shreeniwas Cotton Mills Ltd have raised the dividend from Rs. 18 to Rs. 20 a share, subject to deduction of tax, giving a net return of Rs. 14, against Rs. 12.60, for the year ended December 1961. They propose to make a rights issue of one ordinary share for every nine held in order to raise the issued capital from Rs. 90 lakhs to Rs. 1 crore. The new issue will be at par. No permission of the Controller of Capital Issues is necessary, since the issue is for only Rs. 10 lakhs.

The preliminary figures show that Shreeniwas Cotton fared well during the year. Sales increased from Rs. 4.47 crores to Rs. 4.71 crores. The gross profit—before making any essential provisions—amounts to Rs. 83.49 lakhs, against Rs. 70.53 lakhs. The Company has made a capital profit of Rs. 2.08 lakhs (against Rs. 1.38 lakhs), which has been transferred to capital reserve. The profit thus shows an improvement of 18 per cent. Taxation provision amounts to Rs. 21.75 lakhs (against Rs. 18.50 lakhs) and provision for depreciation has been increased from Rs. 14.14 lakhs to Rs. 15.09 lakhs. Development rebate reserve gets Rs. 5 lakhs more at Rs. 10 lakhs. A sum of Rs. 11 lakhs, against Rs. 7 lakhs, has been transferred to general reserve. The gross block account is written down to Rs. 1.44 crores, against Rs. 1.07 crores. Machinery worth Rs. 49 lakhs was installed during 1961. A programme for erecting additional machinery valued at Rs. 30 lakhs is being carried out during the current year.

The Indian Wood Products Co. Ltd has maintained the taxable ordinary dividend at 30 percent, including an interim dividend of 10 percent, for the year ended September 1961. It is covered more than two-and-a-half times and offers a yield of 9.2 percent at the present price of Rs. 32.37 a share. The profit has improved by Rs. 2.43 lakhs to Rs. 16.33 lakhs, after providing Rs. 1.17 lakhs (against Rs. 1.12 lakhs) for depreciation. The improvement is partly due to the fact that sufficient stocks of timber were bought at lower prices, but these stocks are now nearly exhausted. Taxation absorbs Rs. 2.26 lakhs (against Rs. 5.76 lakhs) and general reserve Rs. 2.50 lakhs (against Rs. 2 lakhs). There is a carry-forward of Rs. 1.85 lakhs, against Rs. 1.29 lakhs brought in. The prospects for 1962 are reasonably good, but the directors take a cautious view of the long-term outlook. During the past two years or so, the Company has had to buy timber at open auctions conducted by the Forest Department. As a result, higher prices have had

The Attock Oil Co. Ltd has declared an interim dividend of 1 shilling, free of the U.K. income tax, for each £1 unit of stock for the year ended December 1961. The production of crude oil has improved from 1.9 million barrels in 1960 to 2 million barrels. Although the results during the current year are expected to be more or less the same as in 1961, there has meanwhile been a decline in oil prices throughout the world. In addition, the Company has come under pressure from the Pakistani Government for the elimination of the remaining element of freight protection enjoyed in its markets due to their geographical position. While a final agreement with the Government has not yet been reached on the Company's counter-proposals, stemming from the elimination of the freight protection, Attock Oil has agreed to bring its prices ex-Rawalpindi in line with those ex-Karachi in two stages. The first stage became operative on 1st August, 1961, and the second is due one year thereafter.

The New Bank of India Ltd, New Delhi, has maintained the dividend at 20 percent for the year ended December 1961, absorbing Rs. 2.99 lakhs. The net profit is slightly lower at Rs. 5.42 lakhs, against Rs. 5.87 lakhs in the previous year. Adding Rs. 4.62 lakhs brought forward and providing Rs. 2.08 lakhs for taxation, Rs. 7.91 lakhs is available for distribution. General reserve gets Rs. 99,000, raising the total of statutory and general reserves to Rs. 28 lakhs, against the paid-up capital of Rs. 14.93 lakhs. The carry-forward amounts to Rs. 4.02 lakhs.

The results of Oriental Industrial Investment Corporation Ltd during the year ended September 1961, are impressive. The gross income has increased from Rs. 6.73 lakhs to Rs. 8.45 lakhs. After providing for income tax deducted at source, the net income works out to Rs. 6.36 lakhs, against Rs. 5.45 lakhs in the previous year. Expenses of management—including the managing agents' commission—have gone up from Rs. 1.29 lakhs to Rs. 1.34 lakhs. Provision for depreciation has been reduced from Rs. 2.297 to Rs. 1.904, and that for taxation by Rs. 5.500 to Rs. 1.12 lakhs. The balance carried to the appropriation account is Rs. 3.88 lakhs, against Rs. 3.07 lakhs in the previous year. To this is added Rs. 18.621 brought forward from the previous year, making a total of Rs. 4.077 lakhs for distribution. From this Rs. 26.511 (against Rs. 6.141) has been set aside for additional income tax for previous years. The preferred dividends absorb Rs. 1.11 lakhs (against Rs. 0.91 lakhs). The equity dividend has been raised from 4.5 percent to 5.5 percent, subject to deduction of tax, absorbing Rs. 2.51 lakhs. The carry-forward is Rs. 17.354.

The Mahabooob Saheb Mills Co. Ltd has again shown a loss of Rs. 2.21 lakhs for the year ended September 1961, without providing for depreciation. The total accumulated loss amounts to Rs. 36.93 lakhs, after taking into consideration Rs. 23.47 being the refund received on income tax and corporation tax. The directors state that the overall results for the year were slightly better than in the previous year, although they are not satisfactory. Negotiations for financial assistance are expected to be completed soon.

The directors of Arbuda Mills Ltd (formerly known as Lal Mills), Ahmedabad, have again

At the meeting of the executive committee of the General Insurance Council held in Calcutta at the end of last month—an emergency meeting by all standards—no tangible conclusion could be reached on the question of rebates and malpractices in general insurance. The frustrating talks lasted three days without any material results. The failure of the trade to offer constructive suggestions strengthened the hands of the Controller of Insurance, who came out with his old case for reducing rates, reportedly by as much as 40 per cent. In his view, several crores of "black" money is in circulation, and it is shared primarily by a handful of persons. The agents hardly get a share, for they are intermediaries. The insured are, on the whole, not interested, for they are convenient pawns in the game of securing illicit gains. This view alerted the insurers, and a further conference was held in Bombay recently primarily for framing a reply to the Controller's criticisms. At this meeting, it is reported, the Tariff Committee has proposed that fire premium rates should be cut by an average of 15 per cent. However, a thorough probe into the revenue implications of rate reduction is vital for insurers.

Throughout the world, rates are based on a thorough collation of statistics over a period of years. In this, scientific developments in industrial processes also play their part. The Tariff Committee has been collecting statistics of fire insurance premiums and claims, but this is only a recent venture, and the work done so far is inadequate. In any event, data on claims are not enough. Loading for expenses, contingencies, catastrophes and a reasonable margin of profit, are totally essential. Any revision of rates for the future based on inadequate data will be unscientific. The Controller of Insurance does not, however, seem to be concerned about the statistical basis of rates. He is of the view that Indian fire rates, in particular, are designed to ensure a sizable trading surplus, part of which, if not the whole, is conceded to agents and the insured under stress of competition. If this surplus can be drastically reduced, little will be left to be illegally transferred. To this end he is reported to have suggested a reduction of rates by about 40 percent. Nothing, however, can be more ruinous for the trade. The gross direct premium income of general insurers in India in 1962, on a reasonable estimate, can be at best Rs. 40 crores. Of this, taking past statistics into account, fire premiums will be about Rs. 16 crores. It can be estimated that at least 50 percent of this is insured on the normal commission terms and some without any commission at all. The balance, amounting at the most to about Rs. 8 crores of premium income, is likely to be purchased with an override. Allowing for permissible development expenses, the unauthorised outgo can hardly be more than 5 percent of this sum, or about Rs. 40 lakhs. This figure is much less than the Controller's estimate.

In suggesting a reduction of rates by 40 per cent, he is estimating the illegal outgo at about Rs. 6.40 crores. The Controller of Insurance, it is evident, is basing his estimate on facile assumptions and guesses. In any event, he has no right to damage the trade in the way he proposes. He has no scheme to arrest the drift of money. On the contrary, he will be enlarging the existing drift by giving the outgo an appearance of legality. The high priority that has been given to the building of India's industries inevitably means that, over the years, India will become highly industrialised. Advanced industrial countries like

In his speech from the chair at the annual general meeting of the Indian Mining Federation in Calcutta last Friday, Mr. B. P. Agarwalla discussed the difficulties facing the coal industry. In 1961, coal production failed to maintain the rate of increase of the previous years. Instead of achieving the year's target, production—particularly in the last three quarters of 1961—declined sharply. For example, in the fourth quarter of the year, the output was only 13.77 million metric tons, compared with 14.07 million metric tons in the corresponding period of 1960. Mr. Agarwalla said that this decline is an unhealthy symptom which should not be allowed to continue in view of the urgent need to reach the third plan target of 97 million tons, which may have to be raised to about 110 million tons. The demand for coal during the third plan was variously assessed by different organisations, the Coal Controller and the Coal Council having placed it originally at 120 million tons and the Planning Commission's Working Group on Fuels at 110 million tons. Although the target was ultimately fixed at 97 million tons, both the Central Ministry of Steel, Mines and Fuel and the Planning Commission now seem to realise that there is a case for an upward revision of the target.

The chairman said that the major hindrance in raising coal production is the shortage of transport. The increase of coal movement from 49.5 million tons fixed for 1960-61 to about 90 million tons in 1965-66, will present a formidable task. If the third plan production target is raised, coal traffic will increase even more. Mr. Agarwalla said that against the daily average requirement of 7,133 wagons for 1961-62, the daily average loading was about 5,951 wagons. The daily average loading in the West Bengal-Bihar coalfields in 1961 was only 4,768 wagons. Total despatches during the year were only 50.3 million tons, against a total production of 56.1 million tons and pithead stocks of 3.3 million tons. As long as an adequate number of wagons are not available for coal loading, Mr. Agarwalla said, there is hardly any justification for raising the plan target above 97 million tons.

Another impediment to coal production has been the power shortage. Since March 1961, the industry has had to face frequent cuts in power supply. The Central Ministry of Irrigation and Power has, however, recently set up a study team to assess the power requirements of the industry during the third plan and to recommend measures for alleviating the shortage. Due to the shortage of explosives, the chairman said, the production of coal in several collieries has had to be slowed down. The bulk of explosives made—in fact, more than 75 percent—is taken by the Government, leaving only 25 percent for other consumers, including the coal industry. The continuing shortage of foreign exchange has also increased the industry's difficulties in importing plant, machinery and spare parts. Mr. Agarwalla, therefore, welcomed the loan of \$35 million from the World Bank to private sector collieries.

Dealing with the revision of coal prices, the chairman said that the higher electricity tariff and the enhanced prices of stores, plant and machinery have raised the industry's cost of production. "Steel, cement and other commodities operating within the framework of a controlled price struc-

The Department of Company Law Administration has prepared a draft *pro forma* of prospectuses intended for publication as advertisements in newspapers which has evoked serious comment in business circles. The Department thinks that the announcements of the nature now made by companies offering shares or debentures to the public in effect amount to publication of prospectuses in an abridged form and that this practice offends the provisions of Sections 56 and 66 of the Companies Act, 1956, which relate to the advertisements inserted by companies in newspapers. The Indian Merchants Chamber, Bombay, has addressed a memorandum to the Government stating that the latter would be unjustified in compelling companies to make announcements in a particular form in the absence of any authority under the Act to do so. The Chamber contends that neither Section 56 nor Section 66 of the Act prohibits an insertion in a newspaper by way of an advertisement about the flotation of a company and various other related factors since the advertisement makes it clear that it is only an announcement and not a prospectus.

The Chamber points out that the real test for the matter is whether application forms are issued without the prospectus and, therefore, as long as the newspaper insertions do not invite subscriptions and clearly state the position, there would be no breach of the Companies Act. It is further stated that although the Act has been in force since April 1956, and it has been recently amended, these advertisements have all along been there. The Government never took any statutory powers to control them as it now intends to do. The Chamber states that it is desirable to leave the advertisements to be inserted by company promoters and managements in such forms as they like, because what they would be advertising will not be prospectuses as such but certain vital information which they desire to give to the investing public, always mentioning and maintaining the position that the prospectuses could be inspected at particular places by intending investors. The Chamber has asked for the Government's clarification whether the *pro forma* would be an enabling provision for company promoters and managements or whether it would be in the opinion of the Company Law Administration authorities a binding condition for all company promoters and managements to comply with.

The word "marketing" is heard often enough these days, but a survey carried out by the British Institute of Management indicates that only a small proportion of firms do much more than talk about it. The Institute questioned 265 companies on their activity in marketing research, which was defined as "the objective gathering, recording and analysing of all facts about problems relating to the transfer and sale of goods and services from producer to consumer." This is clearly a broad field; certainly wider than the well-established process of "market research." Instead of dealing only with the customers' reactions, all aspects of the marketing process, including, for example, the cost of distribution, were taken into account. Perhaps it was the extremely general nature of the enquiry which deterred many firms from replying—at any rate, there were only 86 satisfactory replies. With such a small sample, the results must be interpreted with caution, but it appears that in relation to turnover, industrial goods mar-

The average annual expenditure of the reporting companies amounted to £34,600 in 1960. By themselves, however, consumer goods manufacturers spent an average of £66,000 a year, compared with only £20,600 for industrial goods producers. In both cases, the types of research most frequently done were the acceptability of new products, the study of competitive products, and the development of market potentials. Among the conclusions drawn from the survey are that marketing research has only been carried out in recent years. Most companies engage in some form of product or market research, but distribution cost studies, for example, are carried out by only 46 percent of the firms even in the consumer products group. The report expresses surprise at the comparatively small number of firms engaged in export marketing research, particularly in product and market research. It is also considered surprising that only 74 percent of marketing research reports contain recommendations. Only half of these recommendations are acted upon by the management.

The Northern Railway has undertaken electrification of the 349-kilometre long track between Mughalsarai and Kanpur. This section, considered to be the hub of the railway network in the north, has been a source of considerable headache in the past. In spite of some increase in the traffic handling facilities in Mughalsarai, the Railway has not been able to cope with the demand. Electrification of this section, it is expected, will speed up the movement of goods, especially coal, from eastern India to the northern, western and central parts of the country. The Northern Railway has also launched a scheme for providing alternative routes to relieve pressure on the Kanpur-Mughalsarai line. The execution of the electrification project will, however, pose many operational problems. To ensure smooth working, it is stated the engineers will require a daily line block of two hours for carrying out the construction work on the track. The Railway is working out a phased programme for blocking the line in such a way that minimum dislocation is caused. In any case, it is estimated that the Railway will lose 720 operating hours every year until the project is completed. The Railway administration also has plans to bring the 72-kilometre section between Kanpur and Lucknow under electrification. Global tenders for the project on the Kanpur-Mughalsarai track which will cost over Rs. 10 crores, are being invited, and the work, it is expected, will be finished by 1964. It is proposed to provide a major electric loco shed at Kanpur and a store depot in Allahabad.

In his report on the insurance business done by foreign insurers and provident societies during 1960, incorporated in the *Pakistan Insurance Year Book, 1961*, just published, the Pakistani Controller of Insurance records that there were 73 insurers functioning in Pakistan on 31st October, 1961. Of these, 35 transacted life insurance alone or with other classes of business, while 51 transacted only non-life business. Unlike in India, life insurance in Pakistan is a private undertaking. The new life insurance business effected there reached Rs. 277.5 crores in 1960, against Rs. 25.8 crores in 1959 a Rs. 19.96 crores in 1958. The progress thus appeared to be slow but steady. The total life insurance business in force in Pakistan at the end of 1960 was Rs. 100.86 crores, against Rs. 94.13 crores in 1959 and Rs. 84.9 crores in 1958. The total income and outgo during 1960 of local insurers on the life business left a balance of Rs. 184.63, so that the life fund rose to Rs. 889.76 crores. In the case of foreign insurers, the balance was Rs. 171.3 crores and the life fund rose to Rs. 981.48 crores. The management expenses of Pakistani insurers on their total life insurance business was 35.5 per cent of the premium income in 1960, against 36.7 per cent in 1959. The corresponding figures for foreign insurers were 26 per cent, against 27.3 per cent.

General insurance business in Pakistan increased considerably. The gross direct premi

income rose from Rs. 5.85 crores in 1958 to Rs. 6.11 crores in 1959 and Rs. 7.23 crores in 1960. The net premium income increased from Rs. 2.55 crores in 1958 to Rs. 3.04 crores in 1959 and Rs. 3.89 crores in 1960. The claims ratios were 32 percent in fire, 55 percent in marine and 42 percent in miscellaneous business, against 32 percent, 32 percent and 35 percent in 1959. The report shows that by 1960, the gross premium income of Pakistani companies in fire, marine and miscellaneous business increased to 962 percent, 839 percent and 391 percent of the 1949 figures, respectively. The corresponding figures for foreign companies worked out to 277 percent, 323 percent and 339 percent.

Personnel Management in Industry

In his address from the chair at the annual conference of the Indian Institute of Personnel Management held recently in Ernakulam, Kerala, Mr. P. N. Krishna Pillai referred to the Government's move to regulate the functioning of personnel management in industry. He felt that while it would be desirable to set up an advisory service on the lines suggested by the I.L.O., there should be no undue interference with the work of management. Moreover, the contemplated advisory service should not be created until the I.L.O. expert who is now enquiring into the problem submits his report. Some State Governments are, it is learnt, thinking of forming personnel management advisory services of their own, and Maharashtra has already set up one. The latter body, Mr. Pillai said, is not constituted on the

proper lines and "one is led to the irresistible conclusion that this service is nothing but duplication of conciliation machinery already functioning. It should be an advisory and persuading agency and not work on the premise that personnel management is a third force in industry," he added. Mr. Pillai said that personnel management is part of management and not a separate entity.

Inaugurating the conference, Mr. V. V. Giri, Governor of Kerala, a former Labour Minister of India and a veteran trade unionist, agreed with Mr. Pillai that personnel management is part of management, but felt that there is a difference. "Its function is not merely just to carry out the policies and programmes of the executive; it can contribute to the very formulation of a sound labour and personnel policy." He thought that the personnel manager was a "powerful bridge" between management and labour and could, by his "unbiased and non-partisan views and opinions," influence the management to follow "a realistic and practical approach wherever it was needed." Unfortunately, personnel management has yet to develop into a definite discipline in India, and personnel officers in most cases do not have adequate status and functions. Mr. Giri reiterated the view that compulsory adjudication is the enemy of the working class. Many of the obstacles in the way of running an undertaking smoothly can be removed by representatives of workers and employers coming together and establishing joint standing machinery to negotiate directly a solution of the questions under dispute. The issues which still remain unsolved could be

taken to a conciliation board including representatives of both interests.

Problems of Refractory Industry

The refractory industry is expanding in step with iron and steel manufacture. Some 75 percent of the domestic output is now consumed by the steel plants, although a large part of their requirements are still met by imports. Speaking at the annual general meeting of the Indian Refractory Makers Association in Calcutta last Friday, Mr. D. R. Subramanian, chairman, said that due to the "rush" of new plants, the much-needed modernisation of the existing old plants has been pushed to the background. He hoped that the old refractory works would be given foreign exchange to modernise their equipment, so that they could efficiently meet the more stringent specifications for their products. Existing manufacturers also feel that while licences for new units continue to be issued by the Government, not enough thought is given to the time lag between production and actual demand, and to the lack of balance in the types of refractories produced. "A spectre of over-production of the common grade bricks has always been hanging over the established refractory manufacturers in India," Mr. Subramanian said. Only recently have the specifications for some of the more important items been clearly laid down by the Indian Standards Institution; progress in standardisation of sizes has been poor.

Stressing the importance of standardisation from the point of view of both consumers and producers, Mr. Subramanian said that with uniform specifications for the major integrated steel plants they would not be required to maintain a large stock of spares, as they could then obtain their supplies at short notice from the manufacturers. The latter are at present unable to keep large ready stocks, as it is very expensive to procure and maintain different sets of dies and moulds. The delay in very period may also be long if standardisation is delayed.

Referring to the unsatisfactory supplies of coal and wagons for the industry, Mr. Subramanian said that it has become a regular feature for speakers at these gatherings to refer to these problems, but there has hardly been any improvement. Even refractory works close to collieries are unable to get their coal requirement. For moving finished products also, wagons have been very hard to get, especially over the South Eastern Railway. Refractories are essential for the manufacture of iron and steel; so the wagon priority for them should be the same as for steel, or at least close to it. The acute power shortage in the West Bengal-Bihar industrial belt has affected the refractory industry. Considering that there is no possibility of additional power being provided to electricity consumers in the region before 1964, it is feared that the refractory industry in the area will suffer a serious setback.

THE TEA CESS

WE notice that the prayer of the memorialists for a tea cess is that the Government of India will levy an export duty at a rate not exceeding one-fourth of a pie per pound for a period of five years on all tea exported from India. Now on whom is it intended that this duty should fall; on the producers of tea or the exporters? If it is intended that the duty shall fall on the producers, a much simpler plan would be to levy a cess on the production of each garden. If on the other hand it is intended that the buyers or exporters shall pay it, they, of course, have their remedy in bidding a lower price for the tea which they will probably do. Now the biddings at tea auctions proceed pie by pie, so that a buyer would pay one pie per pound for the tea, of which he would pocket three-fourths and give one-fourth as a cess or duty; in other words in order to realise one pie; this a pie, the tea industry will sacrifice one pie; this seems rather a wasteful method of collecting revenue—to spend three-fourths of the receipts in collection expenses—and reminds us of some of the charity organisations at home.

FROM

CAPITAL

A Ditcher's Diary

EVEN AFTER THE HUNGARIAN DEBATE IN THE UNITED Nations in 1956 I cannot remember that I called Mr. Krishna Menon a crypto-communist. Recently in Bombay, which is not his Waterloo but perhaps Stalingrad, he came out with the profoundly welcome assurance that he had never been one. According to reports, still uncontradicted, Mr. Krishna Menon added that if he had been a crypto-communist he could have shaken India up in five minutes—or, was it ten? My immediate gratitude for this admirable forbearance—because I am never foolish enough to say, "It can't happen here"—was, I must confess, mixed with some thoughts on just how Mr. Krishna Menon thought he would have shaken India up if he had been a crypto-communist, of course. Perhaps with his stirring speeches? Perhaps the small car—for the word "jeep" is by order of the Prime Minister *verboten* in this connection—produced by defence industries one day would be so stunning as to shake the country? I considered various other possibilities; but it was not easy to forget that, whatever happens in the next Cabinet, Mr. Krishna Menon is still India's Defence Minister and, as such, in charge of the country's armed forces. Could he by any chance mean that, (again) had he been a crypto-communist he would have shaken India up with the help of the army? Even Mr. Nehru may not dismiss the thought out of hand; but, I must add, the logic is incomplete. Why should it be necessary for Mr. Krishna Menon to be a crypto-communist to attempt anything so drastic? The thing has been done elsewhere by young army officers with no politics or old politicians with military support. This latter has almost always proved rather transient and it is unnecessary to remind Mr. Menon of that. But it is that word "crypto-communist" that I cannot get out of my mind. Maybe those who campaigned for Mr. Kripalani tried to fasten it on Mr. Krishna Menon; and the latter's reply after victory had to be couched thus. Although the communists have in the last 40 years found Mr. Menon very useful, while Mr. Menon himself always thought he was using the communists, I do not think he is a crypto-communist. I am quite certain that he is a Menonist, and not all that crypto either. Whether this means that he is safe in the Defence Ministry for the next five years is something for Mr. Nehru to decide.

Julius Caesar, presented by the Amateurs of the New Empire stage last Thursday, was an ambitious choice. But "ambition", as Shakespeare wrote, "should be made of sterner stuff." I do not for a moment doubt the hard work and the con-

scientious application which this, perhaps the youngest of Calcutta's theatrical groups put into its latest effort. I am not so sure, however, that the effort, commendable though it was, quite paid off in terms of the impact and entertainment one would expect of a Shakespearean evening. Dick Rodgers' interpretation of an otherwise judiciously shortened play was, on the whole, somewhat less restrained than my reading of it might have suggested. Apart from being producer and director, he himself managed well and quietly in the rôle of Casca; but I would not readily concede that Brutus was the personality given to aggressive histrionism which Vimal Bhagat initially portrayed him to be. It is arguable that the great Caesar, alternating between spells of cowardice and conceit, was a colourless man; but that, to my mind, is not an adequate reason why Kamal Bhagat, playing the rôle, should have been colourless too. Sydney Hill, as Cassius, was outstanding for his characterisation of the sly conspirator impatient of moral humbug; and Ernani Giambuzzi, as Mark Antony, gave an interesting performance, even if he inaugurated his famous oration to the Roman mob with some rather superfluous sarcasm. It has been my impression that large supporting casts are the bane of the amateur producer, although not of Mr. Samuel Goldwyn; and last week's performance once again demonstrated the point. For an amateur group, you may say, the shortcomings were but minor when considered against the totality of the achievement in having presented Shakespeare at all; and I would be happy to agree. But I may still be permitted to suggest that credit should be won not so much for a brave effort as for a really good one; and the latter is what audiences will want if they are to nourish the enthusiasm of the dramatic groups, and the coffers of the charities they support. I can sincerely say that I shall look forward to seeing the Amateurs again, but with less ambitious plays of which, I am sure, they will find there is no dearth.

NASTY AND NOT VERY MILDLY MALICIOUS JOKES about the so-called "expense account" civilisation of ours are plenty; and I have my own criticism of certain aspects of what I call executive ethics or mercantile morals. But not nearly enough has been said about V.I.P. tourism, which costs more money and usually in scarce foreign exchange. While the delinquent tycoon mainly touches his shareholders, for whom he has in most cases already declared a dividend, the itinerant diplomatist mulcts the taxpayer who can ask few questions especially after election time. The wastefulness of all governments is notorious; it is an occupational

disease. But can I lay it down as Ditcher's Law that the less an indigent country can afford to spend on diplomatic luxuries the more it feels obliged to spend on that account? Before coming to the ways of this country in this respect, let me refer to the recent Delhi conference on freedom of information. Most of the delegates came from countries where freedom in any form, except that from western colonialism, is unknown; and freedom of information is actively suppressed. Why, then, did they come to Delhi except to have a good time at the Vigyan Bhavan bar? Mr. Nehru's answer to critics of India's lavishness at the U.N. and other international gatherings is that others are worse. They are, at least some; but this seems to me a very negative sort of defence. I have been looking at an incomplete list of Indian delegates to the recent Geneva conference on disarmament. I hope Parliament, which sometimes asks embarrassing questions on the cost of some invitations India extends to foreign V.I.P.s, will demand an account of the total expense of the delegation to Geneva. Was it for disarmament that so large and "high-powered" a delegation was sent—or did some people just decide that Geneva would be pleasant at this time of year for a protracted paid holiday? It must have been known well ahead of the conference just what it might achieve and what India's contribution to that upshot would be. After the exertions in North Bombay, Mr. Krishna Menon probably earned a restful holiday but, considering that there is so little foreign exchange for ordinary Indian travellers, I wish Mr. Menon had set an example of austerity by spending a fortnight in Kashmir instead. For the rest of the delegation who made the pilgrimage to Geneva I have even less to say; some may vaguely have heard of disarmament. The French are at the moment a prosperous people; and General de Gaulle's decision not to send even a *concierge* to Geneva had nothing to do with economy. But I see the point, and wish some others had his, in this matter, inexpensive *hauteur*.

WHAT SEEMED TO ME PERHAPS THE MOST SIGNIFICANT comment on Mr. Nehru's denial that there was any intention of leasing the Aksai Chin area to China was in a picture cartoon published last week in a New Delhi contemporary. I cannot remember the exact words, but they went something like this: "So he (Mr. Nehru) is going to let them use it for nothing then." I thought it revealed a depth of public cynicism about the whole China-border issue which, if it grows, is likely to make a solution even more difficult than it is now. It might well be as a result of sensing this mood that Mr. Nehru turned down so firmly what appeared to me to offer a possible basis for a compromise. I have always believed that the use of the Aksai Chin road is the one point on which the Chinese will never yield. It offers the only practicable communication between western Tibet

THE RED ROAD

AT CALCUTTA

LIGHTING BY PHILIPS

Calcutta's Red Road, wide and smooth and straight as an arrow was, nonetheless, long considered rather unsafe for pedestrians or fast-moving traffic at night when the shadows of the maidan seemed to envelope it in darkness. But now this famous road has lighting worthy of its importance and adequate for its traffic.

And Philips have supplied the lighting.

Philips' exclusive lighting consisting of lamps, fittings and accessories ensures ultimate economy through maximum illumination level at lowest running cost and gives longer, trouble-free performance. Philips' scientifically designed equipment is the result of experience, research and development to meet the evergrowing demands of better lighting. And hand-in-hand with Philips' unrivalled quality goes the invisible *plus* of Philips' international experience and know-how.

PHILIPS

quality lighting for ultimate economy

FREE: For planned lighting, designed economically to suit your specific need—whether it is industrial, commercial or any other—specialised application—consult Philips Lighting Service Bureau.

and Sinkiang and supplies the left flank of the Chinese armies facing the Russians along what is reported to be a most troubled frontier. So indispensable is it to the Chinese that they would probably risk a war to hold on to it. The solution might be to let them, provided they accepted Indian sovereignty in the area and paid a suitable fee for the privilege. I cannot see the Indian people accepting such an arrangement though; they already feel too let down over the border issue, a fact for which Mr. Nehru only has himself to blame. That is one of the dangers of the public becoming interested in such matters. I was dining recently with a retired general of the British army who served in India both before and after the war. He told me that the Chinese had used this road—or mule track as it was then—for as far back as he could remember. It was well known to the British Government in New Delhi, but a blind eye was turned to it for the sake of amicable relations and the public was none the wiser. It is too late for India to do that now, but the position might be regularised on the basis of a lease of the road itself, and China might be prepared to pay more than we think for the security it would give her. I read in a recent issue of the *New Statesman* that the former British Government of Burma built a road linking Bhamo and Namkhan which passed through Chinese territory, and that by a convention of 1897 this territory was held in perpetual lease until Burma became independent. All very cosy; and certainly better than fighting about it. If I were Mr. Nehru I would not be quite so eager to turn down such a convenient arrangement until it had been thoroughly investigated.

A COLLEAGUE NOW OUT ON A JUNKET ON A WELL-known airline's inaugural flight to Europe is so full of admiration for air hostesses, whom many are inclined to consider as sometimes merely pleasant pieces of decoration, that he has taken his eyes off the magnificent Alps to write thus: "Many years ago someone wrote of the unknown and un-honoured heroes of our time, such as the poor bank clerk, with a sick wife at home, handling oodles of other people's cash and still remaining honest. The most unhonoured heroine of our time, I suggest, is the stewardess of a jet plane. Consider the flight from Bombay to Karachi—a bare hour and a few minutes. In that short time two poor girls and a man had to feed, with elegance and plenty, some 74 economy class passengers and then clear away everything so that the new one coming aboard at Karachi would have the delusion that they were the first to set foot on the plane. This takes no account of the many travellers who believe in economy only when it comes to paying the fare. You should see the eating. Nor is allowance always made for the vegetarian who views omelettes with disdain and thinks artichoke and mushroom are vegetables only for the carnivorous European. He likes curds, but the name Yoghurt is mentioned and he is deeply suspicious. The poor stewardess has to argue with him in the pleasantest manner and persuade him that, as Gertrude Stein did not say, a tomato is a tomato is a tomato. Meanwhile, the others must not be kept waiting and one of them is a two-month-old child crying to delight the heart of a proud mother, another a first-time traveller who does not know that it is a good idea to have a visa for the country he is visiting (unless it be West Germany); and yet another, a senior Indian journalist who thinks airlines exist only to give him free double whiskies. All this while the air hostess has to distribute hot towels, cotton wool, lozenges, fans, souvenirs, glasses of water and so many other things. Even all this would not be so bad if it had not been laid down that the stewardess had to smile all the time, making every male passenger feel that she is in love with him while at the same time taking care that he proceeds no further on that assumption. I have seen critical accounts of civil aviation's safety records in recent years. I am surprised that more air hostesses have not thrown out more passengers at 35,000 feet or even shot them out right. I know I would have."

THE DITCHER

ASHOK LEYLAND LIMITED, MADRAS

CHAIRMAN, SIR A. R. MUDALIAR'S REVIEW

Speech delivered by Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, Ashok Leyland Limited, to the Shareholders at the Thirteenth Annual General Meeting of the Company held on 12th March 1962 at Ennore, Madras.

Gentlemen,

I have great pleasure in extending to you a cordial welcome to the Thirteenth Annual General Meeting of your Company.

The Directors' Report, Audited Balance Sheet and Profit and Loss Account for the period from 1st January to 30th September, 1961 have been circulated to you and with your permission I shall take them as read.

At the last Annual General Meeting I referred to the change in the financial year which the Directors decided to make. This is reflected in the Balance Sheet and Profit and Loss Account before you which cover a nine-month period only from 1st January to 30th September, 1961 and the future financial years will run from 1st October to 30th September inclusive.

As the Profit and Loss Account shows, the Sales for the nine-month period at Rs. 8,11,93,053 are a little less than the figure of Rs. 8,32,66,909 representing Sales in the previous twelve months. It is gratifying to note that the value of Sales in nine months this year has nearly equalled that in 12 months last year, a result which was achieved mainly by increasing the output of Comet Chassis, the average output per month being 170 in 1960 as against 195 during the nine-month period in 1961, an increase of nearly 15%.

Continuous Expansion

The continuous expansion of the Factory is the result of the investment of funds mainly raised by additional Share Capital and to some extent by external credit. There has been only a negligible contribution of funds from the profits of the Company. In an expanding industrial unit, where plant and machinery have been added and additional buildings have been constructed to accommodate the plant and machinery and the increased activities of the Company, it must be obvious that after providing for depreciation, development and taxation reserve, there will be little left for ploughing profits into the concern. The small surplus remaining after these expenditures have been appropriated for a reasonable dividend. Your Directors are considering ways and means by which there might be a reasonable amount of profit which could be ploughed back into the concern for further expansion.

The progress of your Company during the last five years must be recognised to have been impressive. The rapidly expanding assets have been appropriately depreciated so that the total depreciation up to 30th September, 1961 exceed Rs. 98 lakhs. The Development Rebate stands at Rs. 37.25 lakhs. With a Paid-up Capital of approximately Rs. 3.45 Crores, the gross block on 30th September, 1961 was over Rs. 3.76 Crores and the total assets on that date included stocks valued at Rs. 3.21 Crores. I may mention here that the price charged by the Company for your Comets is the same today as it was in 1955, the difference in selling price being accounted for by the additional Customs or Excise Duties imposed in successive Finance Acts. I am not aware of any other Automobile Company which has maintained its price at the same level during the last seven years.

Plant and Machinery

Additional buildings to a value of approximately Rs. 40 Lakhs have been erected and additional plant and machinery of a value exceeding Rs. 56 Lakhs have been installed during the year under review. These additions represent partly the provision of plant and machinery to carry forward the Phased Manufacturing Programme and partly the buildings, plant and machinery required for the expansion programme to which I referred last year. Buildings required for the expansion of production are nearing completion and the

installation of plant and machinery has commenced. I hope that by the end of 1962 it will supply all the castings required by Ashok Leyland Ltd. which from April 1962 will discontinue the import of castings, including cylinder blocks and heads. From May 1962 progressively surplus capacity will be available for the supply of quality castings to users other than your Company. There are, nevertheless, certain difficulties which Ennore Foundries Ltd. have to face. Steel scrap is in short supply and is expensive, while pig iron available in the country has too high a phosphorous content. These difficulties may be overcome in due course, but while they persist the price of high quality grey iron castings will remain higher than it might otherwise be. Until these difficulties are overcome, it is unlikely that it will be possible to produce iron castings appreciably more cheaply than the landed cost of imported castings. It is hoped that before too long there may be definite plans to produce "Sponge" iron in India as this would provide an ideal raw material, as an alternative to steel scrap, at an economic price. "Sponge" iron is obtained by the direct reduction of iron ore by suitable carbonaceous matter; and considerable progress has been made in this new technique particularly in Germany. Madras has iron ore available at Salem and lignite at Neyveli, which could provide an ideal combination for the production of "Sponge" iron which would be very useful not only to Iron Foundries but also to Steel Works.

There has been from time to time discussions about the competition of road transport with rail transport and opinions have been expressed in some quarters that the Railway earnings must be protected and that they ought not to be eroded by road transport earnings. A review of present conditions of traffic on rail and road and a reasonable forecast for the future must leave one under no delusion about the necessity for road traffic developing and indeed side by side with the development of rail traffic. It must be clear in the light of recent experience that road and all other forms of transport must continue to expand and that in no other way can the success of India's agricultural and industrial development be assured. This expansion will during the next ten years not only result in the demand for Commercial Vehicles equal-

Ennore Foundries

Ennore Foundries Ltd has made good progress since your last Annual General

Meeting. Production commenced in November 1961 and by the end of March 1962 it will supply all the castings required by Ashok Leyland Ltd. which from April 1962 will discontinue the import of castings, including cylinder blocks and heads. From May 1962 progressively surplus capacity will be available for the supply of quality castings to users other than your Company. There are, nevertheless, certain difficulties which Ennore Foundries Ltd. have to face. Steel scrap is in short supply and is expensive, while pig iron available in the country has too high a phosphorous content. These difficulties may be overcome in due course, but while they persist the price of high quality grey iron castings will remain higher than it might otherwise be. Until these difficulties are overcome, it is unlikely that it will be possible to produce iron castings appreciably more cheaply than the landed cost of imported castings. It is hoped that before too long there may be definite plans to produce "Sponge" iron in India as this would provide an ideal raw material, as an alternative to steel scrap, at an economic price. "Sponge" iron is obtained by the direct reduction of iron ore by suitable carbonaceous matter; and considerable progress has been made in this new technique particularly in Germany. Madras has iron ore available at Salem and lignite at Neyveli, which could provide an ideal combination for the production of "Sponge" iron which would be very useful not only to Iron Foundries but also to Steel Works.

There has been from time to time discussions about the competition of road transport with rail transport and opinions have been expressed in some quarters that the Railway earnings must be protected and that they ought not to be eroded by road transport earnings. A review of present conditions of traffic on rail and road and a reasonable forecast for the future must leave one under no delusion about the necessity for road traffic developing and indeed side by side with the development of rail traffic. It must be clear in the light of recent experience that road and all other forms of transport must continue to expand and that in no other way can the success of India's agricultural and industrial development be assured. This expansion will during the next ten years not only result in the demand for Commercial Vehicles equal-

ling the combined output of manufacturers but also in increased demand to a figure which may well be a 100% more than the existing maximum production targets. The Board has, therefore, decided to go forward with the expansion project with confidence and be ready for such further developments as time and circumstance may demand.

You will be interested to know that, following requests received from a number of Shareholders, we have come to an arrangement with our Bankers whereby they will charge us a concessional rate of 1/64 per cent on the total payments to Shareholders who encash Dividend Warrants at any Branch of our Bank; and this charge will be paid by the Company. This will obviate Shareholders having to pay bank charges of Naye Paise sixty-five per warrant in order to encash them at out-stations.

British Associates

Since your last Annual General Meeting, we have had several visits from senior officials of Messrs. Leyland Motors Limited. Mr. West, Deputy Chairman of Leyland, accompanied by Mr. Grimshaw, Leyland's Engineering Consultant, came in November 1961; and Mr. Robinson, Leyland's Planning Controller in January 1962. In February 1962, we had the pleasure of welcoming Sir Henry Spurrier, Chairman of the Leyland Group, who visited us accompanied by Mr. West and Mr. Grimshaw. I must once more place on record not only our appreciation of the readiness with which our British Associates come to India to assist our efforts, but also of the invaluable advice which we receive from them. I am sure you will wish me to convey to them, and particularly to Sir Henry Spurrier, our thanks for all their assistance.

As Chairman I feel I must refer to one of my colleagues on the Board whose contribution to the progress of your Company has been outstanding. I refer to the Managing Director, Mr. Collins. His initiative and drive combined with his suavity—an invaluable asset to both in the Factory and in relations with Governments—has been a great factor in all our progress.

I must also record the enthusiastic help and co-operation which the Officers, Staff and Workers of your Factory have extended to your Directors. This co-operation has been readily given, indicating the interest of all employees in the development of the Factory and the cordial relations which exist. I should like to convey our thanks to them all.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Pipework installations by S&L

Our well equipped and modern workshop at Kidderpore, Calcutta, with an experienced staff of engineers, designers and draughtsmen, many of them trained abroad, now provides,

- * fabrication of all types of pressure pipework,
- * fabrication of bent boiler tube, superheater elements and coils for all purposes,
- * the installation of piping system for all pressure and temperature conditions.

THE CHARTERED BANK

CHAIRMAN, MR. V. A. GRANTHAM'S STATEMENT

Extracts from the statement by the Chairman, Mr. V. A. Grantham, on the Report and Accounts for the year 1961:

During 1961 there was no relaxation of the political tension between the two major power groups in the world and the international situation was further complicated by uncertainty regarding the internal relations of one of these groups. In several of the emergent Asian countries there were political crises and crises of confidence which were, in some cases aggravated by external factors. This pattern of Asian politics, economics and diplomacy, however confusing it may appear to be, is one with which the Bank has become only too familiar and it will be seen from the report which follows that notwithstanding many difficulties the profit-earning capacity of the Bank has been well maintained and indeed enlarged. I would draw your particular attention to the number of new branches that have been opened.

The favourable condition of the Bank's affairs reflects much credit upon the management both at the centre and throughout the branch establishment.

The Bank's Balance Sheet

In 1960 our balance sheet total reached a record figure and I indicated in the opening remarks of my overseas survey that there was at least a possibility of some recession in world trade which might affect us but in fact, there has been a further substantial increase in our own figures of £36,938,878, which has brought the balance sheet total to

£353,142,076. The most noticeable increase on the liabilities side of the Balance Sheet is that of £24,821,028 in Fixed Deposits, continuing the expansion noticed last year. There has also been a welcome increase in our Acceptances to £16,756,707.

On the asset side the further rise of £11,128,723 in Advances and Other Accounts to a new record figure of £155,564,528 reflects the continuing demand for bank finance throughout our sphere of operations.

The Consolidated Balance Sheet total of £408,097,902 shows an increase of £45,338,266 over that of last year.

Consolidated Profit and Loss Account

The profit we show in the current year of £990,238 exceeds that of last year by £228,322 a substantial increase for the second year running. We have been able to match increase costs with increased income.

In September last we paid an interim dividend of 7½ percent, less income tax, absorbing £252,656 and it is now proposed that out of the balance available a final dividend of 7½ percent, less income tax on a capital which has been increased during the year to £6,600,000 be now paid at a net cost of £303,188.

The premium of £1,100,000 arising from the Rights Issue has been transferred to Reserve Funds to which we have transferred a further £400,000 from our profits bringing the total of those funds up to £7,250,000. There remains to be carried forward a balance

of Profit and Loss account of £540,648, an increase of £34,394 over that of last year.

As the result of the new capital arising from the Rights Issue our stockholders have derived benefit and the total payments on account of dividend in the coming year, which, as I have already indicated to you, we hope to maintain at 15 per cent, will show some increase. Costs still show a tendency to rise and we should lack prudence if we did not envisage a half in the rate of profit increase we have so far enjoyed; but the conservative policy we have adopted in the interests of our depositors should be to the ultimate benefit of our stockholders.

India

India has reason to be proud of the progress made in the development of the national economy. Indebted as it is to foreign aid and investment for the success of its first and second five-year plans (1954/61) it has still by its own efforts, achieved remarkable results in what it terms its industrial revolution. Mistakes have been made as is bound to happen when so much is done so quickly but fortunately in India, as in all democracies, mistakes can be given publicity and remedied. The obvious and more costly mistakes can be indirectly attributed to an over socialistic way of thought and policy, and the increasingly bureaucratic involvement in industry, including state trading, appears in unfortunate juxtaposition to the achievements of the extremely cap-

CAPITAL, 22nd March, 1962.

able and efficient emerging Indian business man. However, business has increased with such momentum that there is room for both public and private sectors without too much friction.

The visible results of this revolution are the new industrial enterprises appearing in all parts of the country, but less apparent are the tremendous strides in agriculture which have raised the output of foodgrains by fifty per cent to 79 million tons in the last ten years and have helped to turn chronic food shortage and malnutrition to something approaching self-sufficiency. This achievement is all the more commendable when viewed against the background of a population showing an increase of 21.5 per cent during the same period and now reaching a figure of 438 millions.

The cost of the plans, or the revolution, whichever it be called, is not clear: India no longer has a surplus of foreign exchange and the present level of reserves is barely sufficient for current needs. Now too, the country goes into its third five-year plan faced with the additional burden of servicing the substantial debt already incurred and knowing too that only the further vast sums promised by the consortium of countries in the form of aid can make it successful. Fortunately private foreign investment continues at a high level and government's interest in attracting overseas investment, preferably in conjunction with Indian interests and for industries with export earning potential, was shown in tax concessions in the last budget. Taxation is, however, still very high by world standards.

To provide information on investment possibilities a quasi-official body, the Investment Centre of India, was formed during the year and its offices in New Delhi and New York and its representatives in London are already doing useful work in providing poten-

CAPITAL, 22nd March, 1962.

tial investors with preliminary information and bringing them into touch with Indian interests. More important perhaps than the endeavours to attract foreign investment are the steps being taken to increase exports, but the government is finding that improved living conditions and a wider diffusion of purchasing power tends to attract production to the home rather than to the overseas market: the pressure to increase wages has also made Indian products less competitive in international markets. Incentive schemes are being tried but if these are to put exporting on an uneconomic basis or necessitate involved forms of subsidies to the producer under the auspices of the State Trading Corporation, perhaps the success will be limited. Then too experience under the bilateral trade agreements with countries mainly in the Soviet bloc are open to criticism, for not always is a true export value received and in some cases rupees of depreciated value are created. The relatively stable domestic price level

should make it possible for the introduction of some form of fiscal incentive which will genuinely encourage exports.

The expanding business in India has led to continued demands for bank finance and the non or slow return of these funds, coupled with the very large sums owing to commerce and industry by government, has meant that the banks' ratio of advances to their own deposits continues to be very high. So that the industrial expansion will not be curtailed for lack of funds the bill market scheme has been considerably liberalised and the Reserve Bank has released the additional statutory deposits taken in the previous year. In order to retain and strengthen public confidence in the banking system the Reserve Bank has continued its realistic policy of seeing that the commercial banks are run on sound lines whilst allowing them a reasonable amount of freedom. Efforts are being made to merge some of the smaller and weaker banks with stronger units while a Deposit Insurance Act has been passed

under which banking deposits of up to Rs. 1,500 in any one name must be insured from January 1962. There is no doubt that it would suit not only the banks but commerce generally if agreement could be reached on a minimum interest rate for advances and, although the State Bank of India may have particular problems, which in any case we think could be overcome, it is unfortunate that lack of complete unanimity amongst the banks should hold up the completion of a workable agreement. There is, with the acquiescence of the Reserve Bank, a voluntary arrangement by banks for the quotation of maximum rates on deposits and it will be interesting to see whether the compulsory insurance on deposits will cause any change in the present preference of depositors for the larger and sounder institutions.

I have mentioned with some appreciation the work of the Reserve Bank and I would like to pay a tribute to the fair and open manner in which that institution has always treated foreign

banks in India, and it would be a sad day if any political pressure should be allowed to develop to an extent that discrimination against the exchange banks and their operations in India is introduced.

The political scene has been dominated by the general elections and in this the largest parliamentary democracy of the world, with voters numbering 210 millions, the interest is not in the return of Congress, which is a foregone conclusion, but in the type and strength of the opposition; at the moment there looks little chance of the emergence of an opposition well organised and virile enough to bring drive and purpose into a ruling party which has for some time now shown signs of staleness and internal dissension. Perhaps such a change would bring a much needed improvement in relations with India's neighbours and, by taking weight off the defence budget, would allow the lowering of taxation, which may be necessary for continued successful expansion.

REPORT OF THE AUDITORS

TO THE STOCKHOLDERS OF THE CHARTERED BANK

We have obtained all the information and explanations which we considered necessary for our audit. In our opinion proper books of account have been kept by the Bank and proper returns adequate for the purposes of our audit have been received from the branches which have not been visited by us. The annexed balance sheet of The Chartered Bank is in agreement with the books and returns.

We have also examined the annexed group accounts, comprising the consolidated accounts of the Bank and its wholly-owned subsidiaries and the accounts of its other subsidiary group accounts give, in the prescribed manner, the information required of banking companies by the Companies Act, 1948 and, on the basis indicated in Note (5) on the balance sheet, give a true and fair view of the state of affairs as at 31st December, 1961 and of the profit, ascertained as indicated in the profit and loss accounts, for the year ended on that date of the Bank and its subsidiaries, so far as concerns stockholders of The Chartered Bank.

PROVIDING EXPORT CREDIT FROM INSURANCE FUNDS

THE Berne Union, whose function is to regulate the terms of export credit by international agreement, reacted promptly to the announcement of a British scheme to make insurance funds available to finance exports for periods exceeding five years. This scheme was obviously in the minds of delegates who attended the Union's meeting in Munich at the end of January; but it was not only Britain they had in mind when they discussed the threat of credit race. From the British point of view, the new arrangement, although a potentially powerful factor in the country's export drive, does not give British exporters an advantage over their foreign competitors: rather it corrects a disadvantage. There are two problems involved, finance and the cost of finance. If the Berne Union's five-year limit had been strictly observed, the problem might have been confined to cost, for the banks can provide credit up to five years. The insurance companies are not normally interested in employing their funds for less than 15 years. The ten-year gap—or the relevant part of it—has been bridged by ad hoc arrangements, in which insurance companies have been involved on a comparatively modest scale. The finance thus made available has not been adequate, and it has not been cheap. Now more finance is forth-

coming in this intermediate range; and rates for both bank and insurance funds have been brought into line with those of foreign competitors.

Main Element

The insurance companies are the main element in the scheme, for they are bridging the gap, with a promise, initially, of £100 million at 6½ percent. It is recognised that they are making a concession in the national interest. The banks' part in the operation is more in accord with their normal practice; but they are fixing their rate at 5½ percent, instead of varying it with Bank rate, as hitherto. The banks' rate is about 1½ percent, the insurance companies' about 1 percent below the comparable rates effective at present. The new finance will, therefore be attractive. But the authorities will not allow it to be used indiscriminately. To qualify for this special finance, exports must require credit for at least three years. On an eight-year project, the banks would cover the first five years and the insurance companies the last three. But such long-term exports do not contribute to the current balance of payments, and the U.K. Export Credits Guarantee Department will probably not provide liberal insurance cover. No

finance will be available without the Department's guarantee.

In life insurance, a feature of current business is the strong demand for annuities. The change in the system of taxing payments to policyholders some years ago, when the authorities were belatedly convinced that the proportion representing the repayment of capital should not be taxed, has become widely known; and tax-saving experts have taken the initiative against the authorities with a dual-policy device which takes advantage of both the tax-free element in annuities and the tax concessions on premiums paid on full life policies. New annuity business was valued at £144 million last year, compared with £121 million in 1960, and the extension of these so-called "death-bed policies" was an important factor in the increase. A person who is affluent and of somewhat advanced age devotes a (partly untaxed) annuity to paying premiums (allowable against income tax) on a full life policy. When he dies, the annuity ceases but the full-life policy is the property of his estate, and considerable saving of death duty is possible if he has availed himself of the tax concessions allowed on married women's property. Another ingenious adaption of annuities is through investment trust

CAPITAL, 22nd March, 1962.

units which are based on good-class ordinary shares. The premiums are treated as equivalent to a specified number of units, and at a specified age the saver becomes entitled to what is, in effect, a pension. But his benefits vary with the market price of the units. So the scheme is attractive particularly as a hedge against depreciation of fixed values.

Fire Losses

The increase in fire losses reported from North America was not matched in this country last year. In spite of an increase in the number of reported outbreaks from 315 in the preceding year to 544, the estimated value of material damage decreased from £44 million to £39 million. The reduced figure is still abnormally high—before 1959 the total was never within £10 million of that level—but a reduction of £5 million from the peak figures of 1959 and 1960 may be significant. Particularly important, if the trend can be confirmed, is the decrease in the average cost of each fire. In both 1959 and 1960, there were a number of individual fires which caused damage valued in millions of pounds—up to £5 million; but in 1961 the maximum damage caused by a single fire was valued at £750,000. It seems that insistent attention to fire prevention is eventually taking effect—not by preventing outbreaks but by preventing fires from spreading. Attention to fire resistance of structural materials—a problem relevant, of course, mainly to new buildings—is rewarding. It has been found, for instance, that high-tensile-steel reinforcement rods will quickly collapse under strong heat and must be well covered with concrete.

CAPITAL, 22nd March, 1962.

Money

THE CALCUTTA MONEY MARKET CALL MONEY REMAINS TIGHT

Tuesday, 20th March.

THE level of advances has remained unchanged in the Calcutta money market during the past week. The fall in the requirements of the iron and steel industry, which was chiefly responsible for the sharp decline in the previous week, appears to have abated, and the other main sources of demand show either marginal increases or slight decreases. In the interbank market, conditions have become even tighter due to the imminence of tax payments. The call rate has increased further to 5½ percent and business has been reported up to 5½ percent.

The exchange market has been moderately active due to a steady flow of gunny documents. There have been very few tea bills, however. Demand for remittance has been poor throughout, but towards the close an improvement was discernible. Sterling remained fairly steady in the London exchange market, but closed with small losses against the twin dollars. Dutch guilders, Swedish kroner and the Belgian franc. Gains were recorded against the Swiss franc and the Norwegian kroner.

Advances, including loans, cash credits, overdrafts, and bills discounted and purchased have increased by Rs. 75 lakhs to Rs. 285.37 crores. Cash and balances are, in consequence, shown at Rs. 28.32 crores or Rs. 4.10 crores higher.

THE STATEMENT OF THE POSITION OF scheduled banks for the week ended 9th March, 1962, shows Demand and Time liabilities at Rs. 868.10 crores (Rs. 15.46 crores on account of (Rs. 15.46 crores from banks) and borrowings from banks) and Rs. 1,178.62 crores (Rs. 16.29 crores) compared with Rs. 868.34 crores (Rs. 17.63 crores) and Rs. 1,180.59 crores (Rs. 16.25 crores), respectively, in the previous week. Cash and balances with the Reserve Bank have increased by Rs. 3.71 crores and Rs. 1.36 crores to Rs. 51.21 crores and Rs. 77.02 crores. There is a drop of Rs. 9.81 crores to Rs. 589.70 crores in investments. Advances and bills discounted at Rs. 1,386.80 crores show a rise of Rs. 9.75 crores. The ratios to total liabilities of cash and balances, and of advances and discounts are, in consequence, shown at 6.3 percent and 67.7 percent, against 6.0 percent and 67.2 percent.

SILVER WAS STEADY IN THE PAST week due to the increased support in face of limited supplies. The price advanced from the previous week's level of Rs. 253.75 to Rs. 254.75, quoted today for ready delivery and the rate for forward delivery was quoted at Rs. 212.90. The London and New York prices were 85½d and 101.50 cents.

In spite of a rise in silver, gold was quiet and the price was easier around Rs. 145. The sovereign was quoted at Rs. 99.25.

ACTIVE NOTES DECLINED BY Rs. 5.45 crores to Rs. 2,073.07 crores, according to the return of the Reserve Bank of India for the week ended 16th March, 1962, while the total note issue rose by Rs. 19 lakhs to Rs. 2,094.56 crores. Notes held in the Banking Department consequently increased by Rs. 6.64 crores to Rs. 21.49 crores. Deposits of the Central Government improved by Rs. 32.83 crores to Rs. 86.04 crores and of other Governments by Rs. 2.04 crores to Rs. 5.47 crores due to satisfactory tax collection. Balances of commercial banks at Rs. 77.49 crores showed a fall of Rs. 5.24 crores. Balances held abroad rose by Rs. 2.54 crores to Rs. 10.19 crores, while investments fell by Rs. 18 lakhs to Rs. 153.17 crores. Other loans and advances increased from Rs. 174.40 crores to Rs. 193.77 crores, while advances to scheduled banks against usance bills amounted to Rs. 47.84 crores (Rs. 32.11 crores). Ways and means advances stood at Rs. 84.44 crores, against Rs. 75.63 crores.

THE RETURN OF THE STATE BANK OF India for the week ended 9th March, 1962, shows a drop of Rs. 3.69 crores to Rs. 557.41 crores in total deposits. Investments in Government securities and other authorised investments are down by Rs. 9.06 crores and Rs. 2 lakhs to Rs. 237.87 crores and Rs. 9.13

BRITISH OVERSEAS AIRWAYS CORPORATION IN ASSOCIATION WITH AIR-INDIA AND QANTAS

MARKET ENCOURAGED BY GOOD CORPORATE NEWS

Tuesday Evening.

THE stock market closed on Monday for the Holi festival and will reopen on Thursday. On Tuesday, Lyons Range was busy celebrating Holi and only a nominal amount of business was transacted on the kerb. It looked as if the market had recovered from the hangover of the collapse which occurred earlier in the past week. At first, prices, especially of speculative shares, declined appreciably due to nervous selling. Operators were disturbed by the statement of the Prime Minister, Mr. Nehru, on the China border situation. The worry over composition of the new Central Cabinet was accentuated when the interim Budget was presented to Parliament. The prospect of fresh taxation dominated operators' minds.

In a market bare of support, shorts sold heavily. But a remarkable feature is that although prices of selected shares have been marked down in sympathy with the general weakening of sentiment, there has been little sign of selling pressure. Investors are not inclined to sell in panic in view of the excellent corporate news. Some companies have decided to issue bonus shares, and many others are expected to do so in the near future. Recent reports show that companies are doing well in spite of many difficulties.

There has been a modest recovery in kerb trading after the closing of the market. Cheerfulness has returned on rumours that the new retention prices of steel will be announced soon. Lyons Range is inclined to take a sober view of the outlook. The statement by the Central Finance Minister, in his Budget speech, that vigorous steps will be taken by the Government to relieve the shortage of coal, transport and power, has impressed the market. The recommendations of the Ramaswami Mudaliar Committee about giving fiscal reliefs to export-oriented industries has helped to promote mildly bullish ideas.

In spite of the general weakness, there has been sustained support for selected jute shares. Apart from the fact that, at current prices of raw jute and jute goods, mills are making satisfactory profits, confidence has been reinforced by the address of Mr. Pilkington, chairman, at the annual general meeting of the Indian Jute Mills Association in Calcutta last week. He took a fairly optimistic view of the outlook. If the jute crop during the 1962-63 season turns out to be a good one, the prosperity of the industry should continue. Considering that the price support scheme voluntarily operated by the industry has succeeded in maintaining the price of fibre at a reasonable level, there is hope that sowing in the coming season will be encouraged.

Indian Iron are being quoted at Rs. 24.40 in kerb trading. Among engineering shares, Braithwaite have been firm on prospects of a bonus issue. Burn have improved on hopes of a bonus issue. Guest, Keen, Williams have recovered on replacement buying. Jessop have become steadier on a good report. Dalmia Iron are being bought on prospects of a rights issue. Kumardhubi and Britannia Engineering have been steady.

Turnover in miscellaneous shares has declined, and prices have generally fallen in the absence of support. Alkali Chemical have been steady on expansion hopes, and Dunlop Rubber

are being taken on prospects of a rights issue. Hindustan Motors have declined on pressure induced by the fear that the public sector might start producing small cars. Imperial Tobacco have been steady, but National Tobacco have weakened. Among new shares, interest is being taken in India Carbon and S.S. Duncan.

Selected jute shares have hardened further. Support has been forthcoming for Birla, Northbrook, Bally, Ganges, Nuddea, Kanknarrah and Anglo-India. Fort William, Baranagore, Kelvin and Empire have become steadier.

Coal shares have lacked interest, and support is poor. Burrakur have slipped back, but East Indian have been steady on expansion plans. Pench Valley have declined due to the predominance of sellers.

In the cotton mill section, Bharat Commerce have reacted on profit-taking, although the Company has declared a higher dividend. J. K. Rayon have been marked lower. Jay Shree Textiles are being taken by knowledgeable quarters on hopes of expansion. The Company has produced a good report, although the taxable ordinary dividend has been maintained.

Paper shares are quietly steady. Orient are being taken on expansion plans, and India Paper Pulp have improved on a report that the Company will soon start producing pulp from jute sticks. Ballarpore have gained on dividend prospects. Seshasayee are being taken on a report that the installation of the factory has made good progress.

Dyer Meakin Breweries have been firm in the sugar section on talk of a bonus issue. Several sugar shares, such as Carew, Belsund, Ramnugger and S.K.G., have declined.

Bank shares are steady, and United Commercial are being bought on prospects of a rights issue. Interest has been taken in United Bank and Punjab National.

Selected tea shares have been fancied on prospects of bonus issues. New Terai, Pahargoomiah, Huldibari and Hasimara have been steady. These companies have decided to issue bonus shares. Support has been forthcoming for Tyroon, Dibru-garh, Betjan, Rajgarh and Tezpur.

Government securities have been dull, although fluctuations are narrow. Business is being transacted on a small scale. The 3 percent Conversion loan 1986 has been quoted around Rs. 71.

Bombay Market

PRICES DECLINE ON BROAD FRONT

BORDER SITUATION AFFECTS MARKET

Tuesday Evening.

THE Bombay stock market closed in a subdued mood. Share prices declined on a broad front during the past week due to nervous rumour liquidation, following various rumours about the composition of the new Central Cabinet. The situation on the Sino-Indian border weakened sentiment, and bears sold aggressively.

ly. The interim Central Budget was interpreted bearishly, because the Finance Minister foreshadowed the possibility of further taxation soon.

Towards the close, selling pressure decreased somewhat, and activity was restrained by the imposition of automatic margins. A margin was imposed on bears in Premier Construction, while bulls were forced to pay a margin on Alcock Ashdown because the price had risen more than 10 percent over the previous *havala* rate. The settlement passed off last Friday in a tame fashion. The carry-forward charges increased towards the end due to more stringent credit conditions.

At the close, there was a modest recovery on talk of an early rise in the retention price of steel. Good corporate news also helped the recovery. Tata Steel closed at Rs. 139.25 and Indian Iron at Rs. 24.56. Alcock Ashdown were taken at Rs. 343 on prospects of a rights share issue but Premier Construction declined to Rs. 174 on paying a lower dividend on the increased capital. Tata Locomotive were transacted at Rs. 349.50 and Larsen and Toubro came to hand at Rs. 40.10. Mukand Iron were taken at Rs. 27.40 and T. Maneklal were done at Rs. 800. Motor-vehicle shares were quiet. Hindustan Motors fell to Rs. 19.80 and Premier Automobiles to Rs. 131.50.

Cotton mill shares on the whole were depressed in view of the growing shortage of cotton. Bombay Dyeing were sold at Rs. 69.30 and Century at Rs. 612. Simplex were available at Rs. 177 and Kohinoor at Rs. 310.

BANK OF BARODA TRAVELLERS CHEQUES!

are safe to carry, convenient to use!

When you travel, travel safely—with Bank of Baroda Travellers Cheques! They can be cashed only if you have counter-signed them!

Bank of Baroda Travellers Cheques are very convenient, too! They are available in denominations of Rs. 25, Rs. 50 and Rs. 100, at any of the branches of The Bank of Baroda Limited. Morarjee were dealt in at Rs. 422 and Standard at Rs. 1,040. Tata Mills came to hand at Rs. 78 and Shree Niwas at Rs. 293. Apollo were freely offered down to Rs. 2.42, but India United ordinary improved to Rs. 21.04 on declaring a higher dividend.

Sugar shares slipped back in the miscellaneous section due to a report that the Maharashtra Government would soon establish a corporation to take over surplus land from sugar factories under the Maharashtra Lands Ceiling Act. Belapur were offered at Rs. 235 and Phalton at Rs. 111.50. Walchandnagar Industries were sold at Rs. 161. Mining shares were quiet, and Shivrajpur Syndicate were transacted at Rs. 41. Sellers predominated in steamship company shares, and Scindia Steam were offered down to Rs. 12.24. Great Eastern weakened to Rs. 12.36. Cement shares were steady, and Associated Cement were dealt in at Rs. 154.50. Digvijay were wanted at Rs. 194.50. Bombay Burmah were quoted at Rs. 645. Rayon shares were quiet, and National Rayon declined to Rs. 540. Baroda Rayon were sold at Rs. 147.50. Gwalior Rayon came to hand at Rs. 55.50. Hindustan Lever were firm at Rs. 69.50 following the sanction for the bonus issue. Voltas were quietly steady at Rs. 283 and Tata Oil at Rs. 82.50. Ceat Tyre weakened to Rs. 195, but Permanent Magnets met with support up to

Rs. 180. Chemical shares were quiet, and Tata Chemical were sold at Rs. 17.68. Polychem were transacted at Rs. 215 and Indian Dyestuff came to hand at Rs. 506.25. Synthetics and Chemicals were steady at Rs. 215.

Bank shares were steady, and Bank of India were bought up to Rs. 149. Central Bank were wanted at Rs. 67.50 and Bank of Baroda at Rs. 122. Dena Bank were done at Rs. 71. Among insurance shares, New India Assurance rose to Rs. 64 on prospects of a bonus issue.

There was scattered support for electric company shares, and Ahmedabad were steady at Rs. 93.50. Business passed in Tata Hydro at Rs. 112.50 and in Bombay Suburban at Rs. 102.75.

Madras Market

OPERATORS WORRIED BY TAX PROSPECTS LESS SUPPORT FROM OUTSIDE CENTRES

Tuesday Evening.
DULL conditions prevailed in the Madras stock market during the past week. Turnover was limited. Operators were inclined to sit on the

sidelines in view of various uncertainties. The growing shortage of credit reduced support from outside centres. Uncertainties over the composition of the new Central Cabinet restrained activity. Operators were also worried over the prospect of more taxation in the regular Central Budget.

Nominal business was done in Government securities, and fluctuations were narrow. Bank shares declined due to profit-taking. Scattered interest was taken in selected public utility company shares due to good dividends. There was a modest recovery in selected sugar shares on replacement buying. Planting shares were quiet, with sellers predominating. The marketing outlook for tea was considered uncertain on the view that the supply of common teas would be adequate during the current year. Textile shares were cautiously transacted, although selective buying took place on the declaration of good dividends. Among miscellaneous issues, attention was concentrated on cement and chemical shares due to good corporate news.

In the banking group, Indian Overseas were dealt in at Rs. 181.50 and Indian at Rs. 181. Punjab National were taken at Rs. 22 and Canara at Rs. 86. Among public utility companies, West Coast were steady at Rs. 15.75 and Ellore at Rs. 22. Salem-

CAPITAL, 22nd March, 1962.

Erode were bought at Rs. 15 and Negapatam at Rs. 12.

In the sugar section, Deccan were transacted at Rs. 9.95 and E.I.D. hardened to Rs. 37.75. United Breweries were steady at Rs. 82.25 and Mysore at Rs. 53.40. India came to hand at Rs. 10.30 and Jeypore at Rs. 14.50.

Among planting shares, Blue Mountain weakened to Rs. 2.60 and Chembra to Rs. 3.35. Cochin Malabar were sold freely down to Rs. 7.15 and Consolidated Coffee were bought at Rs. 17.80. Business passed in Kil Kotagiri at Rs. 5.10 and in Lucky Valley at Rs. 10.12. Nilgiri were steady at Rs. 8.30 and Nonsuch at Rs. 22.75. Ouchterlony were offered freely at Rs. 9.93 and Periakaramalai at Rs. 3.37. United Nilgiri were dealt in at Rs. 20.84 and Vayitri at Rs. 1.36. Udayagiri were wanted up to Rs. 19.50 on a report that the Company was considering selling its Ashley Estates for Rs. 8.10 lakhs. Peermade declined to Rs. 19.75, as did Parkside to Rs. 23. Emerald Valley were transacted at Rs. 5.67 and Kadur at Rs. 2.78.

In the textile section, Bangalore Woollen were steady at Rs. 240 and Buckingham at Rs. 265. Cannanore were taken at Rs. 158 on issuing 15,000 rights ordinary shares at a premium of Rs. 5 a share in the proportion of one share for each one held. Lakshmi were done at Rs. 169 and Madura at Rs. 40.25. Travancore Rayon hardened to Rs. 46.10 on prospects of a higher dividend. South India Viscose were steady at Rs. 184 and Mettur at Rs. 398. Anglo-French were taken at Rs. 13.15. Rajalakshmi were bought at Rs. 109 and Ramakrishna at Rs. 250. Vijayalakshmi were placed at Rs. 111 and Tirupati at Rs. 15.

Among miscellaneous shares, Aluminium Industries were steady at Rs. 23.65, but Ashok Leyland reacted to Rs. 9.15 on profit-taking. Dalmia Cement were steady at Rs. 13.25, but India Cement weakened to Rs. 5.95. Mettur Chemical improved to Rs. 13.25 on the news that the Company had decided to issue 600,000 rights ordinary shares at a premium of 50p a share to ordinary and preference shareholders, in the proportion of six new shares for each share of Rs. 100 held. Binny were steady at Rs. 314 and Central Scientific were wanted at Rs. 7. Enfield were done at Rs. 12.15 and F.A.C.T. were easier at Rs. 8.10. Madras Rubber declined to Rs. 19.87 due to disappointment over the dividend. Seshasayee Paper were steady at Rs. 1.56 and Spencer at Rs. 24.25. Standard Motors were dealt in at Rs. 16.75 and Textool at Rs. 187. Tube Investment were placed at Rs. 291 and Tube Suppliers were sold at Rs. 10. United Electrical were done at Rs. 9.50 due to the issue of rights ordinary shares at par, in the proportion of one new share for each one held and, in addition, one new share for every 15 ordinary shares held. India Forge were sold at Rs. 5, but Kirloskar Electric were supported up to Rs. 19.50.

BIRDS are stepping up it

To sustain its expanding output, India's steel industry needs increased quantities of essential raw materials like iron and manganese ore, coal, limestone and refractories. By meeting a large part of this demand, Bird & Company (Private) Limited have been making significant contributions to the progress of the steel industry.

Birds have now launched on a programme of expansion, which when completed will step up considerably the annual output of these raw materials.

	PRESENT PRODUCTION	EXPECTED INCREASED PRODUCTION
Iron and manganese ore	2,000,000 tons	3,000,000 tons
Coal	2,250,000 tons	3,000,000 tons
Limestone	2,000,000 tons	2,500,000 tons
Refractories	100,000 tons	120,000 tons

This expansion will assure the steel industry of increased supplies of these vital raw materials.

London Market

BROAD ADVANCE IN INDUSTRIALS
NEW ISSUES AFFECT GILT-EDGED

London, 20th March.

A VERY satisfactory tone was maintained in the stock market throughout the past week, and although business was not at a high level, most sections recorded gains. Several factors combined to bring brighter conditions in the domestic sections of the market. The major influence was the recent cut from 6 percent to 5½ percent in Bank rate and confident expectations that a further reduction will not be long delayed. There were more hopeful views concerning the coming Budget now less than three weeks away, while other helpful factors included the good February retail sales figures, the rise in steel output and a generally more optimistic feeling concerning the general economic outlook. The increasing flow of new issues, particularly of fixed-interest securities, restrained the gilt-edged market, but prices held initial gains and showed modest improvements on the week. Industrials generally showed a broad but modest rise in prices. Chief exceptions were tobacco shares which were adversely affected by the doctors' report on "smoking and health" and heavy electrical issues which were unsettled by a lower than expected dividend from Associated Electrical Industries. Stores and breweries were particularly firm. The latter was helped by the good January output figures. Gold shares recovered earlier falls, with sentiment helped by an increased dividend from de Beers Consolidated. De Beers deferred shares rose sharply. Coppers improved after initial dullness, helped by Mr. Butler's central African appointment. Tin shares were buoyant following the rise in the price of the metal. Oil shares lost the small gains which followed the Shell Transport dividend. Rubber shares were well maintained, and occasionally harder, but teas were narrowly irregular.

New Delhi

Central Assistance to States to be Increased

(FROM OUR NEW DELHI CORRESPONDENT)

THE provision of Rs. 405 crores as assistance to States in the 1962-63 Central Budget does not include the additional allocation for power to them. An up-to-date estimate of this assistance, therefore, raises this figure to Rs. 435 crores. This Budget provision had been made before the third Finance Commission reported to the Government. It also does not take into account the tax effort which the States have promised to make, and which, according to reports, may be of the order of Rs. 70 crores in 1962-63. It has, therefore, been decided to review the question of Central assistance to States by May, and seek Parliament's vote for such additional amount as may be needed.

Criticism of States

The Finance Commission has criticised the administrative set-up in the States, especially their indifference to raising additional revenues. It says: "Secure in the knowledge that the annual budgetary gap would be fully covered by the devolution of Union resources and grants-in-aid, the States are tending to develop, as we have noticed, an allergy to tap resources in the rural sector on many considerations, and also a disinclination to make up the leeway in others. They do not also attach the same importance to a proper and adequate control on expenditure in the matter of services and supplies as before. Cadres expand, pay-scales get revised upwards, negligence develops in the procurement of supplies and execution of projects in the absence of proper cost control. While there is a close scrutiny of, and consultation on, the contents of the plan, there is hardly any on the contents of the annual estimates; there is no counterpart at the national level concerning non-plan expenditure, which is progressively increasing as a result of planning itself.

"A disturbing feature is not only the effect of unsound financial policies of a State on its own development, but its impact on neighbouring States also. We have noticed that in one State, the pay-scales of one of the services were being substantially increased, backed by the recommendations of a high-powered commission, even when the scales were one of the highest in India. Sufficient thought does not seem to have been given to the effect of this pay revision on other departments of the State itself, much less on its impact on the neighbouring States.

Disparity in Taxes

"A similar situation obtains in the field of taxation, and considerable disparities exist in the fields of land revenue, sales tax, motor-vehicles tax, etcetera. Though it is generally accepted that the rural sector could make a greater contribution to the national economy, there is an understandable reluctance to revise even the rates of land revenue in operation, even when they have not been reviewed in the last 30 to 60 years. In one State, when a limited operation indicated that the rates could be raised considerably on old accepted and established principles of assessment, the Government considered it inadvisable to continue the settlement operations. In another State, in real need of resources, the collection of betterment levy already introduced had to be suspended just because the neighbouring State had

done so in a more prosperous contiguous area. All these induce a chain reaction of enforced under-taxation on the one hand, and avoidable increase in public expenditure on the other.

"It is becoming increasingly evident that there should be arrangements for national or, at least, zonal economic co-ordination, both of tax levies and expenditure programmes, to introduce a measure of uniformity. It should ensure optimum mobilisation of resources and reintroduce a greater sense of responsibility in expenditure control. It is not our intention to suggest that absolute uniformity in various tax levies could be effected even on a zonal basis. The tax potential of even contiguous States is not always the same and their tax structure may need differing degrees of adjustment.

Tax Potential

"We consider that a comprehensive examination should now be undertaken to assess the tax potential of each State, to review its tax structure and to recommend rates under different heads of levies in the State list. This examination should appropriately be entrusted to an independent commission which would naturally take note of the widening gap between resources and functions of the States brought about mainly by the planning process and consider what adjustments, if any, should be made during the current financial year in Union-State financial relations which would add strength both to the Union and the States.

"Another important matter is the need for overhauling the administrative, technical and executive agencies to make them more efficient, quick in movement and effective in execution. We have noticed that in their natural anxiety to obtain larger State plans, there is a tendency to over-plan, current and additional resources, and promise economies which are not susceptible of realisation. We are not susceptible of the importance of 'non-plan' expenditure pertaining, more particularly, to administration, even in a planned economy. Unless even in a planned economy and a balance is struck between plan and non-plan outlays and the need is recognised of refashioning the machinery of the Government, we fear that the plan itself will be in jeopardy. In any event, it will be difficult to secure completion of projects to schedule or to obtain value for money expended."

The Finance Commission has also noted the objection to large-scale grants now given under Article 282 of the Constitution. It says: "It has also been urged that Article 282 is outside the provisions of the Constitution governing 'distribution of revenues between the Union and the States', and is one of the several 'miscellaneous financial provisions'; that it is only a permissible provision and is not intended to be used in the manner it is now being used." If the contention of the Finance Commission is accepted, all the Central Ministries dealing with State subjects, such as education, health, irrigation, agriculture and community development would have little to keep themselves busy.

Special Loans to States

A provision of Rs. 25 crores has been included in the Budget for

granting ways and means advances to the States. Several of them have faced acute ways and means difficulties during the current financial year, due largely to the increased tempo of developmental expenditure and the lag in their own resources, so it has become necessary to allow them larger short-term advances from time to time. These advances carry interest at 3 percent a year and are adjusted in the year itself against the amounts due to the States as their share of Central taxes, duties and statutory grants. Total requirements on this account are now estimated at Rs. 46.5 crores, necessitating a supplementary appropriation of Rs. 21.5 crores.

In spite of the grant of substantial assistance for this specific purpose, some of the State Governments have in recent years continued to face acute ways and means difficulties. While the tempo of developmental outlays has been rising steadily, the resources have not kept pace, with the result that the States have had to run heavy overdrafts with the Reserve Bank. The matter was recently considered in consultation with the State Governments, and it was decided to grant ten-year loans to the States concerned to clear their overdrafts with the Reserve Bank at the end of the second plan period, which would enable them to start the third plan on the level. The total amount of these ad hoc loans granted during the current financial year is Rs. 30 crores. Except for the first two years, when interest alone would be recovered, the loans would be repaid in equated annual instalments of principal and interest. No Budget provision was made for this purpose in 1961-62 as the decision to grant the special assistance was a post-Budget development.

Aid for Plan Schemes

A provision of Rs. 258.62 crores was made in the 1961-62 Budget for payment of loans to State Governments for their Centrally-aided third plan schemes, the details of which were as follows:

	(Rs. crores)
Loans under specific heads of development	173.57
Loans for miscellaneous development schemes	85.05
	258.62

As a result of the Planning Commission's discussions with the States on their annual plans, the pattern of loan assistance for the current year was further modified as follows:

	(Rs. crores)
Loans under specific heads of development	165.77
Loans for miscellaneous development schemes	104.75
	270.52

The latest assessment indicates that the provision for loans under specific heads of development is likely to show a further saving of Rs. 1.79 crores, namely, Rs. 9.59 crores in all, but the provision for loans for miscellaneous development schemes is likely to be exceeded by Rs. 19.70 crores. In addition, a provision of Rs. 8.04 crores is required for making arrear payments to States for their miscellaneous development

schemes relating to the second plan period.

Oil Royalty Dispute

The deadlock over the royalty on crude oil in Assam continues. The Assam Ministers who visited New Delhi last week failed to convince the Centre about the rightness of their case. The Government of India was also unable to persuade them to issue prospecting licences to Oil India Ltd and the Oil and Natural Gas Commission. Unless political considerations come in the way, the Assam Government is heading for a show-down.

The issues are very simple. The Assam Government has been taking a royalty of 10 percent on the well-head price of crude from the Assam Oil Company. When the agreement with the Assam Oil Company was signed the price was fixed on the basis of the Gulf of Mexico posted prices. It was Rs. 70 a ton and the royalty worked out to Rs. 7 a ton. It was then the perpetual complaint of the M.P.s from Assam that their State was made to pay high prices for petroleum products because the rates had been fixed on the Gulf of Mexico prices.

About four years ago, the western oil companies changed the basis of calculating prices from the Gulf of Mexico to the Persian Gulf, thereby reducing the value of crude a ton. In the case of Assam Oil, this worked out to Rs. 48 a ton, and the royalty to Rs. 4.8 a ton. It is unfortunate that the Assam Oil Company did not make the necessary change in payment of its royalty to the Assam Government to reflect the basis of calculation, which continued on the old basis, namely, the Gulf of Mexico posted prices.

Oil India Ltd, which is a joint enterprise of the Government of India and the Burmah Oil Company, has retained the quantum of royalty at 10 percent, but has taken the Persian Gulf posted prices as the basis for calculating the well-head price of the crude. In other words, the agreement has rectified the mistake which the Assam Oil has been committing for nearly three years.

The Assam Government's contention is that any reduction in the yield from royalty would affect its finances for development. This should not carry much weight, when the Government of India has been not only financing the development expenditure but also advancing loans to meet the ways and means expenditure of the States. It was to appease the Assam Government that the Central Government had to build two refineries, one in Assam and the other in Bihar, instead of one in Bihar or Calcutta. It may be added that the Assam Government has levied a sales tax of one naya paisa a litre on its own crude. This will increase the price of the crude by Rs. 12 a ton and will give the State Government Rs. 3.6 crores of revenue a year. According to official sources this additional sales tax will have to go, leaving only the Central excise of 2 percent.

Interest in Shipyard

Two British firms, Production Engineering Ltd and Babbie Shaw and Morton of Glasgow, are interested in collaborating in the construction of India's second shipyard in Cochin. Their representatives are here at present, bidding against each other for a consultancy agreement. If either of the firms gets the contract, the winner will have the financial support of the British Government in carrying out its works.

New Major Ports

Schemes for the development of Mangalore and Tuticorin as major ports have been included in the third

ACC QUALITY
REFRACTORIES

ACC's quality refractories are available in medium, high and super alumina content and to the size, shape and quality required. They possess all the physical properties needed for long service under the most severe operating conditions in high temperature zones.

Each firebrick fully complies with the Indian Standard Specifications 6-1953 and 8-1953.

five year plan, and a sum of Rs. 5 crores each has been allocated. Mangalore, it is proposed, will be developed primarily to handle about 2 million tons of iron ore, which it is expected will be available from Chitaldurg (Mysore) and other mining areas in the vicinity. The development of an all-weather port in Tuticorin is also considered necessary in order to enable the port to handle the existing traffic efficiently and to provide capacity for increase in traffic, which at present consists mainly of commodities entering coastal trade.

The overall capital expenditure on the development of Mangalore and Tuticorin ports is estimated at Rs. 12.70 crores and Rs. 10.27 crores, respectively. The expenditure during

the current year, it is expected, will be Rs. 80,000, mainly on account of preliminary expenses for conducting technical investigations such as fluorescent tracer studies, model experiments, penetroscope tests, etcetera, at the two ports.

Experiments conducted by the Central Water and Power Research Station, Poona, have shown that Mangalore port could be developed to receive vessels of 34 feet draft. Detailed designs and estimates will be prepared on the completion of investigations concerning borings and penetrometer tests and necessary surveys. As for Tuticorin, tests for the purpose of siting embankments as also for evolving designs for breakwaters are being conducted. It

is also proposed to establish a field division which could undertake local studies. On the completion of these investigations, detailed designs and estimates will be prepared.

Making the Small Car

The question of manufacturing a small car in India was raised again in the Lok Sabha during last week. The Minister of Industries, Mr. Manubhai Shah, replying to various supplementaries, said that the Government would soon take a decision. "I hope that within the next four to six weeks, a firm decision will be taken."

MR. TYAGI: "Have the present manufacturers of cars in India made

CAPITAL, 22nd March, 1962.

any representation to the effect that, if this car comes into the market, they will lose their business."

MR. MANUBHAI SHAH: Not in those terms; but the Federation, as well as the motor-vehicle manufacturers, as the House is fully aware, have been protesting against this project for a long time. But we have taken all matters into consideration, and as the House knows, the Government has decided that the car project will be considered, if at all, in the public sector, that is, the project for the manufacture of a small car."

MR. JOACHIM ALVA: "Is it the combination of the vested interests which has prevented this idea being fulfilled at a very early stage?"

MR. MANUBHAI SHAH: "It is not quite that. But there have been protests from all quarters. We have examined the project from all angles, and we hope that a decision will be taken very soon on this project. I shall only say that I am fully confident that a small car will be manufactured in this country in the public sector during the third five year plan."

MR. JOACHIM ALVA: "Small and cheap car."

MR. MANUBHAI SHAH: "We shall try to see that the decision is expedited. There is no reason to believe that this country can do without a small car of this size. The hon. Member is right in his surmise that a country like ours does need a people's car of this size."

MRS. RENUKA RAY: "May I know the reasons why the decision has been delayed?"

MR. MANUBHAI SHAH: "The resources question is there. The foreign exchange question is there. Then the technical feasibility of the car is there. Then there are all sorts of representations from different interests in this country. All these have combined to make the project a slow-moving one."

It will be thus seen that while the Government will reach a decision in about four to six weeks, the Minister has already announced his decision that "a small car will be manufactured in this country in the public sector during the third five year plan", notwithstanding the fact that there is no provision for this type of car in the present plan. The foreign exchange position continues to be very tight, and the Government is looking more and more to aid-giving countries to obtain finance even for "maintenance" imports.

Iron Ore Exports

Iron ore exports from India in 1961-62 were as follows: Figures, countrywise, are in 00,000 tons.

Country	Quantity
Japan	16.33
Czechoslovakia	5.63
Italy	1.43
Poland	1.13
Hungary	.86
West Germany	.58
East Germany	.24
Austria	.19
Rumania	2.95
Yugoslavia	1.44
	30.88

Provident Funds Act

The Employees' Provident Funds Act will apply to trading and commercial establishments engaged in the purchase, sale or storage of any goods from 30th April, 1962. This will include the establishments of exporters, importers, advertisers, commission agents and brokers, and

CAPITAL, 22nd March, 1962.

commodity and stock exchanges. It will not include banks or warehouses established under a Central or State Act. The Act will apply to establishments employing 20 or more persons.

Advisory Council

The Government of India has constituted a Central Advisory Council for the Posts and Telegraphs Department under the chairmanship of the Minister of Transport and Communications. The Council is intended to enable various interests directly connected with the functioning of the communication services, to be associated with the policy direction of the Posts and Telegraphs Department. The Council will deal with all-India matters, especially those pertaining to the development of postal, telegraph and tele-communication facilities in the interests of industry, commerce, transport, the Press and other services. Besides developmental matters, the Council will also review and discuss the functioning of the services. The Government has nominated, among others, 15 representatives of State Governments, four members of the Rajya Sabha and five members of the Lok Sabha to the Council. In addition, the Council will also have as its members representatives of the Central Ministries.

Aid for Industrial Co-operatives

The Central Government has formulated a scheme for liberalising the credit facilities for industrial co-operative societies in areas where co-operative banks are unable to accommodate such institutions. Under the new scheme, the State Bank will give working capital loans to industrial co-operative societies in the specified areas. These advances would be normally against adequate security of raw materials, finished goods, etcetera. In special cases, how-

ever, financial assistance can be provided on a more liberal scale against Government guarantee.

The State Bank will charge the industrial co-operatives interest at the same rate as is charged for a small scale unit for similar advances. The State Governments have been requested to subsidise where necessary so as to bring the interest rate on par with those of co-operative banks. The scheme also visualises the State Bank offering medium-term loan facilities and reasonable term advances for purposes of expansion, renovation and modernisation of industrial co-operatives in suitable cases.

Move for Higher Coal Prices

The coal industry has made a representation to the Government that the present price structure of coal is uneconomic and urged a general increase in the prices. The representation is now being considered. A decision, it is expected, will be taken soon.

Indian Investment Centre

The chairman of the Indian Investment Centre, Mr. G. L. Mehta, has announced that the Centre has so far processed and sent abroad 58 project proposals from Indian concerns seeking foreign collaboration in either new or expanded enterprises. Of these, 38 have been sent to the U.S.A., 18 to West Germany and 14 to the United Kingdom. Other countries are Japan, Belgium, Italy, Holland and East Africa. Some proposals have been sent to more than one country.

Mr. B. B. Ghosh

The Secretary to the Central Ministry of Food, Mr. B. B. Ghosh, retired last week from Government service. Mr. Ghosh first joined the Indian Audit and Accounts Service in 1930.

He served in the Finance Department of the Central Government from 1939 to 1947, when he became Joint Secretary in the Ministry of Defence. He took over as Food Secretary in October 1956. Mr. B. B. Ghosh

becomes the chairman of the Calcutta Port Trust.

Danish Collaboration

The following Danish firms have entered into collaboration agreements with Indian firms:

Name of firm	Products
Hydor Ltd, Haderslev	Air compressors
Silkeborg Maskinfabrik, A/S, Ltd, Silkeborg	H.T.S.T. plate pasturisers and other dairy equipment
Laur, Knudsen, Electrical Manufacturing Co., 53, Haraldsgade, Copenhagen	Low-tension switch gear, motor starters and instrument and control panels
Nordisk Insulinlaboratorium, 2 Ved Station, Gentofte	N.P.H. insulin
Niro Atomiser Ltd, 12, Aurehojvej, Copenhagen-Hellerup	Spray drying plants
Kosangas Ltd, 1, Vester Farimsgsgade, Copenhagen V	Filling of bottle gas cylinders for distribution to households and industry
Kosangas Ltd, A. Jespersen and Sons A/S, Nropsgade 18, Copenhagen	Bottle gas cylinders
J. Saabye and O. Lerche Ltd, 19, Nyropsgade, Copenhagen V	Design and construction of wet dock at Madras harbour
Hempel's Marine Paints, Copenhagen K	Marine paints
F.L. Smidth and Co. A/S, Copenhagen Valby	Cement machinery
The firms with whom collaboration are as follows:	arrangements are being negotiated
Danfoss Manufacturing Co., Nordborg	Evaporator thermostats, strainers and dehydrators
Roskilde Medical Co. Ltd, Roskilde	Iron dextran
Danish Machine Co. Ltd, Aabyhoj	Machine tools
Brdr. Simonsgaard, 155B, Jagtvej, Copenhagen N	B.S. lift trucks
Vilh. Pedersen Ltd, Hong	Milling machines
Dansk Frugtterreri, Hjallesø	Fruit drying, canning and deep freezing
Atlas Ltd, Copenhagen	Industrial compressors
A/S Teknova, Copenhagen	Valves and regulators
Red Rotary International Corporation, Copenhagen	Adding machines
Effort Maskinfabrik	Whipping machines

Specialized ENGINEERING AND CONSTRUCTION FOR THE IRON AND STEEL INDUSTRY

For more than half a century McKee engineers have specialized in the design, engineering and construction of steel-producing facilities. Our comprehensive mine-to-metal services include every phase of the work necessary for any steel-plant project, from preliminary studies to completed plant ready for initial operation.

The McKee Organization has executed contracts in 49 countries including India. Among these are some of the world's largest and most modern completely integrated steel plants and hundreds of individual units, including blast furnaces, open hearth shops, rolling mills, agglomerating, sintering and pelletizing plants. Most recent examples of large-scale integrated plants are the new Somisa plant at San Nicolas, Argentina and the C.S.N. plant at Volta Redonda, Brazil.

To the steel industry of India the McKee Metals Division offers the services of its large, well-qualified staff with a fund of sound, practical experience and specialized knowledge that is unmatched anywhere in the industry.

THE MCKEE ORGANIZATION

ARTHUR G. MCKEE & COMPANY
WESTERN KNAPP ENGINEERING

Represented in India by
DR. B. S. GILANI
29, Jor Bagh, New Delhi 3

Comprehensive engineering-contracting services, similar to those of the McKee Metals Division, are supplied by these specialized divisions of the McKee Organization:

PETROLEUM & CHEMICAL DIVISION

Complete Refineries and individual Processing Units for all modern petroleum and petrochemical processes and certain types of chemicals and chemical products.

WESTERN KNAPP ENGINEERING

Plants and facilities for production of Non-ferrous Metals, mining, preparation, handling, beneficiation and storage of Ores and Industrial Minerals.

THE BIG HURRY IN THE WORLD OF ASTRONOMY

Suddenly, a star exploded. ■ Turning within its spiderwork of iron and steel, the 200 ft. wide saucer-shaped 'eye' of the radio telescope at Jodrell Bank looked deep into black space and recorded: the star had exploded FIVE MILLION YEARS AGO! ■ Peering so deep into space as to question time itself such radio telescopes are revealing to us the breathtaking, even frightening, dimensions of space and time, gathering astronomical data that are making space travel a fast nearing reality. ■ Into the fashioning of the 2000 ton Jodrell giant went the most advanced technique and knowledge of welding and gas cutting. ■ It is this precise knowledge of industrial gas and its diverse applications that Indian Oxygen affords Indian industry.

INDIAN OXYGEN LIMITED

U.K. Budget Prospects: Chances of Tax Concessions Improve

(FROM OUR LONDON CORRESPONDENT)

AFTER the recent Bank rate cut, the Budget prospect is naturally being viewed less pessimistically than a week or so ago. The City has noted that the reduction to 5½ percent unlike the two previous cuts, has been related not only to the external strength of the pound but to the "general economic situation". The obvious inference is that the U.K. Treasury and the Bank of England are now convinced that the internal economic position is one no longer calling for a further tightening of the screw but rather for a mild stimulus. Strong evidence in support of this view, which has undoubtedly made its impact on official thinking, is the 10 percent fall in industrial capital expenditure reported for the final quarter of last year.

Against this background, it is reasonable to expect a Budget which, in net terms, will be neutral rather than severe. The threat of heavier tax burdens, which appeared to loom

on the horizon a few weeks ago, now looks much more remote. While the chances of some modest concessions have improved, however, it will be foolish to expect a Budget which will provide any strong stimulus to consumer demand. Consumer spending is still running at a high level close to its peak. The U.K. Chancellor's aim must be to reinforce the incentives to exporters and to capital investment by industry while keeping a firm hand on personal consumption.

Economic Trends

The capital market may have to raise much less new capital for industry this year than last, according to the latest quarterly Bulletin of the Bank of England. In its commentary on recent economic trends, the Bank says that industrial companies seem to have reduced their combined net borrowing from all sources towards the end of last year. Manufacturing industry was borrow-

ing less from the banks and raising less capital in the market in the fourth quarter of 1961 than previously. Companies appear to have run down their liquid assets because they were expecting that 1962 would bring higher retail profits, reduced capital expenditure and little change in stocks. If a higher turnover is also being expected this year, companies may feel justified in running down liquid assets in the hope that borrowing from the banks will become easier before long. The Bank described this analysis as "very uncertain" but suggests nevertheless that the volume of industrial new issues may be markedly smaller this year than last.

That is not all. The Bank's argument rests on the idea that profits ceased to fall in the fourth quarter of 1961 and that they may be rising either now or soon while dividends will remain unchanged for a time. It is this divergent trend of profits and dividends which is supposed to

provide industry with more resources for self-financing. If things turn out in this way, Britain ought to begin to hear better company news in half-yearly reports appearing within the next two or three months. It would not need more than a dozen clear examples of profit recovery to revive the spirit of the equity market.

Naturally, the Bank of England would not give such cheerful news to the stock market without attaching a stern warning. The resumption of economic growth will have to be led by an increase in exports. If growth were based on faster expansion of public expenditure or private consumption alone, it could easily damage the progress so far made in restoring the balance of payments. The Bank is cautious, too, about the timing of a recovery in output. Much will depend on the rate of stockbuilding, it says. Retailers' stocks continued to fall more than usual in the fourth quarter of last year, but manufacturers' stocks of finished goods seem to be still growing. These stocks may have to be reduced before the expected increases in private consumption, public expenditure and exports and any rebuilding of stocks by wholesalers and retailers can have their full effect on the total output. Even so, "a revival in total stockbuilding can most likely be expected later this year or at least early in 1963," the Bank predicts.

Capital Spending Down

Some of the effects of the credit squeeze on private industry are shown in figures published by the Board of Trade which show a substantial reduction in capital expenditure in the fourth quarter of last year. Capital expenditure by the manufacturing, distributive and service industries fell from £554 million in the third quarter to £499 million in the last three months of the year. The three industries, which cover a wide sector of the economy, accounted for 56 percent of all capital expenditure in 1960. The remainder was made up of expenditure in agriculture, forestry, fishing, coal mining, the public utilities and transport corporations and the Government. According to estimates made by the Board of Trade, the volume of capital expenditure in 1961 was about 9 percent higher than in 1960. Manufacturing industry's expenditure was up by 20 percent in 1960, but that of the distributive and service industries was 3 percent lower. Expenditure of manufacturing industry at current prices amounted to an estimated £340 million in the fourth quarter—15 percent higher than in the last quarter of 1960. Some 33 percent more money was spent on building work and 11 percent more on plant and machinery.

For 1961 as a whole, capital expenditure by manufacturing industry is estimated at £1,274 million at current prices or 24 percent more than in 1960. Expenditure on new building work was up by 32 percent, and on plant and machinery by 23 percent. Expenditure on motor-vehicles at £16.4 million rose by only 3 percent. The volume of manufacturing capital expenditure (at 1958 prices) over the year as a whole was estimated at £1,227 million—a rise of 20 percent on the previous year. The figures suggest that the metals industries—principally iron and steel—accounted for less than 30 percent of the increase in expenditure between 1960 and 1961, compared with 36 percent between 1959 and 1960. The chemical and allied industries, whose expenditure fell between 1959 and 1960, accounted for a substantial part of the rise in expenditure between 1960 and 1961. For the distributive and service industries, the capital expenditure figure for the fourth quarter of last year (at 1958 prices, seasonally adjusted) was £202 million—a fall of 10 percent on the previous three months.

U.S. BURLAP CONSUMPTION REMAINS HIGH

AFTER the sharp rise in U.S. burlap consumption in January 1962, the announcement that consumption in February was only 77 million yards came as a disappointment, although this constitutes a new high for that month. The total for the first two months of the year, at 165 million yards, is nearly 20 million yards more than the highest figure recorded in the past for those two months. It was too much to hope that the record figure for January could be maintained in spite of the general increase in production in the U.S.A. in recent months. On the other hand, the figures only represent the transfer of stocks from importers to retailers and processors. So they do not necessarily represent actual "consumption" and there is a possibility that the consumption reported was merely the building up of stocks by the latter to safeguard against future difficulties. It seems clear anyhow that the actual consumption of jute goods has not increased the way the January figures might have led one to conclude. Similarly, there is no reason why the figures for February "consumption" should cause any undue depression, in spite of the fact that stocks rose more than the fall in consumption. U.S. burlap stocks are now the highest since January 1961, but at the current average consumption they will last only three months. Requirements for 3½ months were held in stock at this time last year. It would be unwise, however, to draw any broad conclusions from the figures for only one or two months.

Dull Spell

The spurt caused by bazaar covering for early shipment goods having spent itself, there has been a dull spell in all sections of the market. For a time, it seemed as if there might be a decline in prices. Quotations have indeed dropped, but not much business has been done at the decline, although speculative profit-taking has been heavy. Enquiries from abroad continue to be centred on the early deliveries, but little business has been possible as mills have had little to sell. Business has been done for forward shipment, and mills are keen to sell forward due to their favourable raw jute position.

Raw jute business has kept pace with imports, but mills continue to be interested in the higher grades of Tossa and white, both of which are in short supply. Sellers are keen to dispose of low-quality jute, but are unwilling to enter into business for assortments, which will involve their adding to stocks. Mill purchases so far have kept pace with consumption and imports. It seems probable that, as the "off-season" advances, most mills will find their storage accommodation severely strained, particularly if they have to lay aside complete godowns to receive buffer stock purchases, which, it appears, are planned to commence in the very near future.

Little Rain So Far

With accommodation limited, mills might prefer to wait for good-quality jute from the 1962-63 crop rather than fill up their available space with low qualities, of which the supply is ample and the need less. But they are committed to a buying policy to satisfy the Government which is worried about the low price of jute. The sowing season is fast approaching, and it is reported that the price of seeds, particularly of good Tossa

variety, is rising on account of the increased demand. Weather conditions should be favourable in order that a crop, not necessarily a bumper one but of good quality, is grown and harvested. So far, there has been hardly any rain in the jute districts. There are still another 15 days or so to go before the lack of rain could constitute a worry. But a late crop will not cause any hardship to the mills since they have large stocks. One thing in favour of a late crop is that it is invariably a good crop from the point of view of quality.

The quieter tone apparent at the opening has been accentuated in the course of the week, and prices of both manufactured goods and raw jute have been marked down. Perhaps this is only a natural reaction to the bullishness of the past few weeks but there are probably deeper causes. Reports indicate that consumers overseas feel they are being called upon to pay too much for jute goods. They think that there is no real justification for the present prices now that mills' losses have been made up and an ample supply of cheap raw material is available. It is not surprising, then, to hear that high prices are checking business, and consumers, remembering how they have been stung before, are placing the smallest possible orders.

THE JUTE MARKETS

Manufactured Goods: Towards the close, there were signs of a reaction in the jute goods market. Profit-taking by speculators was a prominent feature, and apart from that, business was mainly confined to local business in the near positions. Prices fluctuated rapidly, and mills were sellers for nearly all forward positions. Opening at Rs. 134.25 for March shipment, which was Rs. 1.25 lower than on the previous day, B Twills on Thursday morning began to move up on reports of large overseas enquiries; 40in. 10oz. hessians remained firm and opened at Rs. 56.75 on the reports of hessian sales to the U.K. The rise was short-lived, however. On Saturday, and after the week-end, prices eased considerably, and the undertone of the market changed from steady to weak. On Monday, B Twills opened at Rs. 133.75 and hessians at Rs. 55.75, and there was a gradual decline throughout the day.

Opening quotations on Tuesday morning were as follows:

	March	April	Apr.-June	July-Sept.
40in. 7½oz.	40.50	38.75	38.50	36.25
40in. 8oz.	44.75	42.75	41.50	39.00
40in. 10oz.	55.00	52.75	51.50	48.25
B Twills	133.00	130.25	128.75	124.50
Cornsacks	138.00	135.00	133.00	127.50
Heavy Cees				
(Plain)	129.50	130.25	128.75	124.50
A Twills	155.50	154.50	153.00	147.50
Liverpools	152.00	149.50	147.00	141.50

Raw Jute: In the earlier part of the past week, the fibre market was steady. For the higher grades, sellers were wanting premiums of up to Re. 1. Arrivals on an all-India basis were estimated at about 450,000 maunds or 500,000 maunds a week, which was slightly less than in the previous week. Mills continued to take up their quota, which worked out to about one week's consumption. Later, in sympathy with the declining

goods market, jute prices eased. White jute and Tossa reverted to the minimum rates, while mesta was on offer at well below the minimum, as was jungli jute. In Cossipore, 600 wagons were reported last week, the figure being above average for the time of year.

Opening quotations on Tuesday morning were as follows:

	Landed at Mills (Basis Bottoms) Rs. a 100 kilos	Rs. a md.	Shipment
Assam	80.33	30.00	March-April
Northern	79.04	29.50	"
Purnea Desal	73.68	27.50	"
Daissee			"
Selected	85.73	32.00	"
Assam Tossa	83.06	31.00	"
Mesta:			"
Assam-Northern	72.34	27.00	"
Daissee	72.34	27.00	"
Desal	73.68	27.50	"

N. C.	102.00	a bale	"

THE FOREIGN JUTE MARKETS

YARN AND CLOTH PRICES CUT

(FROM OUR DUNDEE CORRESPONDENT)

A GOOD deal of uncertainty prevails in the raw jute market in Pakistan, although the authorities there say that there is little or no prospect of any reduction in fibre prices. They are apparently doing their best to maintain the present rates, but there is always the occasional shipper who is willing to accept something less, say, 10s to 30s a ton cheaper than the general quotations for various grades of fibre offered. Considering the price trend during the past few weeks, the reduction in raw jute values in the immediate future may not be substantial, but it is the easy tendency that troubles buyers, who are always on the look-out for cheaper prices, be it raw jute, yarns, cloth and bags.

Raw jute quotations for Mill Firsts are nominal around £145. Mill Lightnings are offered at from £116 10s to £118 10s, Mill Hearts from £95 to £97 and Grade Hearts £83 lowest, with Grade Tossa-2/3 from £134 10s, fours £117 10s to £119 and Continental Tossa-2/3 £102 and fours £87 10s, March-April, c.i.f. U.K. Continent.

The authorities who regulate the prices of various manufactures in the United Kingdom made a change in the rates. These came into effect on 10th March. Conversion costs, haulage charges and wage rises were taken into account, along with the change in prices for raw jute in Pakistan. The effect is that some yarns in Dundee are unchanged in price while others are cheaper by varying amounts, up to about £5 a ton. The prices of hessian yarns have been reduced from 17.49d to 17.04d a lb for 8 lbs C.H.W. cops and from 18.64d to 18.08d for 8 lbs J.C.H. warp or weft. Sacking yarns are unchanged and rove is down to £120 5s for 48 lbs and £90 5s for 200 lbs from £123 and £92 15s a ton, respectively. Hessian cloth is down from 14.87d to 14.70d a yard for 40in 10oz. and from 12.60d to 12.51d for 8oz.

Calcutta goods have fluctuated to some extent closing at 85s 6d for

40in. 10oz. and 63s 6d for 7½oz. March, 80s and 60s April-June and 75s 3d and 55s 6d July-September, with B Twills 207s 3d, 201s 3d and 196s for the respective positions of shipment, f.o.b. Calcutta.

A conference is to be held in Dundee on 26th March to discuss Pakistan proposals for "price stabilisation measures and buffer stock schemes". Mr. W. W. Duncan of Jute Industries will represent Dundee and Mr. G. H. Malcolm the London Jute Association.

U.S. BURLAP CONSUMPTION AND STOCKS

U.S. burlap consumption in February continued at a comparatively high level and was 5 million yards more than the same month of last year. Last month's bag cut-up was 60.3 million yards and piecegoods deliveries 17.2 million yards, compared with 54.8 million yards and 18.0 million yards, respectively in February 1961. U.S. spot and floats last month increased 13 million yards. At 254 million yards, 117.9 million yards were spots and 136.3 million yards were floats. Appearing below are two tables which include the February figures—(1) based on member reports to the Textile Bag Manufacturers Association and the Burlap and Jute Association, and (2) projected to represent the estimated consumption and stocks for the entire industry.

NORTH INDIAN TEA OUTPUT RISES: EXPORTS UP

(BY A SPECIAL CORRESPONDENT)

THE quantity of tea put up for public auction at the sale held on 12th March was considerably less than in recent weeks, for offerings from north India have now come to an end for the 1961-62 season. Although this area manufactured about 65 million lbs more tea than last year, exports have not moved up proportionately. India appears to have absorbed 16 million lbs more tea during this season than in the last one from north India. Exports of this season's tea have increased by 12.5 million lbs. Meanwhile, the U.K. is short of requirements by about 40 million lbs. Stocks there are low compared with the average over the past three years.

Tea Statistics

Tea statistics can be confusing, because in Calcutta the tea season in north India is supposed to begin from 1st April and continue up to 31st March, whereas in the U.K. the figures may cover a year from 1st January to 31st December. During 1961, the F.A.O. says, tea imports into the U.K. rose by 19,000 metric tons. This represented an increase of 7 percent while world tea production rose by a like percentage, but actual exports increased by 8 percent. This explains the disappearance of this season's surplus tea, but if absorption of the total surplus is already in sight, how is it that tea growers missed this important point? The prospects for 1962 crops are reported to be normal in most areas and good in parts of upper Assam, where quality teas come from.

Good Year for Pakistan

Pakistan has reported a good year for tea planters. Apart from price control, most of the restrictions on the industry have been removed. The total crop was a record at 59 million lbs. The Pakistani Government proposes to increase the area under cultivation by 22,000 acres by 1965. The area under tea in Pakistan is about 77,000 acres; so the target would appear to be about 100,000 acres or an increase of 28 percent. Large additions to crops are not likely before 1967-68 but, provided the new areas are properly planted, the eventual additions to supply

should be about 12 maunds an acre. The Pakistani people will require quite a lot more for internal consumption. The quality will, however, be mostly low grade.

Wage Increases

Just as the tea producers in India were finding reasons to be optimistic, the Central Wage Board has recommended a further interim relief for both daily and monthly rated workers in West Bengal and Assam plantations. Labour in the Cachar district had a rise last June. On 13th March, a copy of the interim recommendations was placed on the table of the Lok Sabha by Mr. Abid Ali, Central Deputy Labour Minister. The employers' representatives said that "no case has been made out for an interim wage increase either on variation of the base of living or for any other reason." Excluding Darjeeling hills and the Cachar district, the Wage Board has recommended an interim increase in the daily wages of men workers by 8nP, of women workers by 7nP and of employable child workers by 4nP, the corresponding increases for those employed in Darjeeling hills being 10nP, 8nP and 5nP. For clerical, educational, medical and supervisory staff and artisans in both States, including Cachar, the recommendations are for an increase of Rs. 10 a month and for the other monthly rated staff Rs. 6 a month. This is estimated to cost tea companies another Rs. 30 lakhs.

Sensible Proposal

Rubber workers are to profit likewise as from 1st December, 1961, but the Rubber Board has been somewhat more reasonable. As the Central Wage Board for the Rubber Plantation Industry recommended certain interim increases in the wages of rubber workers, the Rubber Board has suggested the grant of an "adequate increase" in prices. The Wage Board has recommended interim increases ranging from 8nP to 15nP in the rates of daily wages of all categories of workers employed in rubber plantations in Madras and Kerala. An interim increase of Rs. 10 a month has been recommended for clerical employees, field, factory, medical and educational staff employed and paid for by the estates in Kerala, Madras and Mysore. The recommendations of the Board were also laid on the table of the Lok Sabha last week by the Central Deputy Labour Minister. One is, however, pleased to note that an adequate increase in rubber prices has been suggested. This is a sensible proposal, because it will be far better to pay a fair price for the local product rather than incur additional foreign exchange expenditure on imports. But it is essential to increase the amount of raw rubber available in India as quickly as possible as rubber manufacturing companies keep applying to the Government for import licences.

Increasing Exports

The Central Finance Minister, Mr. Morarji Desai, said at the meeting of the Indian Jute Mills Association on Saturday: "Experience shows that a rapidly growing economy requires growing imports to sustain the tempo of development, and India's import needs have grown in spite of the diversification of its industrial structure. But there has been little improvement in the country's average

quality in contrast with the dynamism evident in practically every other sphere of the national life." The gap between exports and imports, he pointed out, was bridged in the past decade by drawing down the country's sterling balances and by mobilising external assistance. "But this is a process which cannot be allowed to go on indefinitely if only because reserves are exhaustible and foreign debts have to be serviced", Mr. Desai said. Nevertheless, during the past few years, the tea trade could have earned more foreign exchange had the Government cared to co-operate with a more reasonable fiscal policy. The trade is still anxious to increase exports, but the Government, instead of helping producers to reduce cost, is still considering measures to give higher wages to labour in spite of knowing that this may affect exports.

CALCUTTA TEA SALES IN FEBRUARY

QUALITY GRADES RECEIVE BETTER SUPPORT

FOUR sales numbered 34 to 37 were held in February, at which a total of 297,260 packages was offered, say Messrs Carritt Moran and Co. Private Ltd in their monthly tea market review. There was a good demand throughout the month, although this was not as strong as in January. With the export sales drawing to a close, buyers were selective. Plain descriptions generally declined by some 10nP in each sale, but where stalk or fibre were present, the fall in price was often more. Selected black orthodox fannings were, however, firm. With more selective buying, only the best orthodox B.O.P.s sold at firm to dearer rates, while the medium and plainer descriptions tended much easier. The demand for fannings was very irregular, the best often being dearer while the poorer sorts declined. C.T.C.s were also very irregular and except for the best, which were about firm, declined by up to 20nP in each sale. There was a strong enquiry for useful liquoring off-grades, and selected lines were appreciably dearer. The remainder, however, declined. Darjeelings sold readily. Flavours in invoices were generally dearer, but those from lower elevations were irregular. Tip was in demand at dearer rates. Whole leaf grades were generally firm to dearer with interest centred on the cheaper varieties.

With offerings of Darjeeling teas coming to an end, the leaf appearance declined. The majority of invoices became rather brown and more stalk was present. There were, however, one or two useful autumnal invoices. Orthodox leaf appearance from Assam was well maintained for the time of year, but there was more stalk and fibre present in the lower grades than in the previous month. The liquor quality was irregular, but there were some attractive invoices on sale. Apart from a few well-made C.T.C. invoices, there was a decline in leaf appearance, and off-grades showed a marked increase. The liquor quality was irregular. There was a decline in the orthodox leaf appearance from the Doorgas and Terai with more stalk and fibre present in the lower grades. Leg-cut and C.T.C. invoices became browner with an increase in stalk and fibre present. Although there were a few invoices with fair autumnal quality, the liquors of the majority of offerings were rather non-descript. There were a few plain invoices. There was more stalk and fibre present in the offerings from Cachar, while lower grades were often dull and rather unattractive. The liquor

CAPITAL, 22nd March, 1962.

quality was irregular. A number of plain invoices were offered.

The Internal Market

The 2,570 packages of leaf teas on offer in the four sales held in February met with a good market at irregular but generally easier rates. Four dust sales were held during the month, and offerings totalled 116,690 packages. Although medium C.T.C. dusts were irregular, they registered small declines in each of the four auctions. The better teas with strong liquors, however, sold well throughout the month at firm to dearer rates. Orthodox dusts were well supported at lower prices, and the closing quotation for this category was well below the opening rate. Non-wither leg-cut varieties opened on a strong note, particularly the bright liquoring teas, and this trend was maintained in the second auction. Thereafter, however, they became irregular and often easier, but the bright teas continued to sell well until the close of the month.

Quotations	1961-62		1960-61	
	A kilo Rs. nP	A kilo Rs. nP	A kilo Rs. nP	A kilo Rs. nP

Sale No. 37 Clean Plain Dust	4.15	4.78		
Medium Assam C.T.C. Dust	5.55	5.70		

(Inclusive of zonal excise duty)

Export sales up to and including Sale No. 37 totalled 2,118,938 chests at an average price of Rs. 4.71, compared with 1,929,944 chests at an average price of Rs. 5.38 for the same period of the previous season. Internal sales at 10,148 chests of leaf and 820,929 chests of dusts (average prices Rs. 3.92 and Rs. 4.87) go against 18,386 chests and 648,798 chests, respectively (against Rs. 4.36 and Rs. 5.23) of the corresponding period of the previous season.

Arrivals (in chests) in Calcutta warehouses during the period 1st February to 28th February, 1962, with the corresponding figures of the previous year in parentheses were: by steamer 70,143 (65,814), by rail 19,053 (6,363), by road 40,809 (15,121) and by air 10,594 (7,341) chests. From the beginning of the season 1st April, 1961 to 28th February, 1962, arrivals have been: by steamer 3,051,909 (2,823,698), by rail 1,390,259 (1,229,701), by road 394,596 (206,972) and by air 147,573 (164,357), making a total of 4,984,337 (4,424,728) chests.

COCHIN TEA SALES

At Dust Sale 11, 213,000 kilograms of tea were on offer. There was a strong general demand. Plain and low mediums were fully firm to dearer while all others were steady, except plain liquoring mediums which were easier.

NAMES AND DATES

The official opening of Bomas in Calcutta was celebrated on 13th March at the new office premises in Govind Bhawan, Brabourne Road. Bomas is one of the largest advertising agencies in India. With the setting up of the Calcutta office, it now offers an all-India network for national advertisers. The service chain includes Bombay, Calcutta, Delhi and Madras.

CAPITAL, 22nd March, 1962.

Calcutta Markets

GRAIN RATES RISE IN FREIGHT MARKETS

NUMEROUS grain cargoes were available from the Gulf and Northern Range, while tonnage was scarce for the March-April position in the freight markets during the past week. This situation helped ship-owners to increase the low rates which had been standard on the Atlantic coast of North and South America for some weeks. The Chinese charterers were quieter in the other markets, while they accepted five vessels from Casablanca with phosphate at 56s 6d to south China. Burma rice shippers concluded another fixture of 10,000 tons of rice in bags to Cuba at the unchanged rate of 55s f.i.o. and stowed. Indian ore charterers covered a few fixtures with steady rates, Marmugao-Genoa at 33s f.i.o. and trimmed, Marmugao-Japan 43s 6d f.i.o. and trimmed, Bombay-Poland 48s 6d f.i.o. and trimmed. Some 10,000 tons 5 percent sugar in bulk from Calcutta completing at Visakhapatnam March-April, paid \$(U.S.)6.75 f.i.o. and stowed.

The dates of replacing the lock-gate of K.P. Docks have now been changed to 2nd April to 8th April when there will be no movements of vessels in or out of the Kidderpore docks.

LINSEED EASIER

The market was easier in the past week. With improved supplies from the centres and with bigger new crop movements, prices fell appreciably for ready goods. Forward quotations also fell. Mills showed some interest for forward positions at lower prices. The oil market was dull with prices declining in sympathy with seeds. Some business was done for ready and forward deliveries at lower prices. Oilcake prices were maintained mainly because of goods shortages, but the trend is likely to change next month when crushers resume on a larger scale with the arrival of the new crop. The latest quotation is as follows: ready March Rs. 73.15 a quintal.

SHELLAC QUIET

During the week ended 19th March, the tone of the market was quiet. The range of quotations was as follows:

	Rupees a package
Pure Buttonlac	132 value
Lemon One shellac	152 buyers
Lemon Two shellac	154 sellers
Standard I shellac	124 value
Pure TN shellac	104 buyers
Golden Kusmi seedlac	106 sellers
Kusmi One seedlac	120 value
Golden Bysackey seedlac	120 value
Mambhum Fine Bysackey seedlac	103, 106 value
Fine Bysackey seedlac	90 buyers
Genuine Bysackey 5 percent seedlac	94 sellers
Grade One Class B seedlac	90 value
Grade Two Class B seedlac	114, 112 value
	94, 92 value

Shipments during March until 14th were 12,802 packages.

Commodity Markets

WHOLESALE PRICE INDEX RISES

THE official wholesale price index (base: year ended March 1953-100) rose by 0.5 percent to 124.5 dur-

ing the week ended 24th February, 1962, compared with 123.9 for the earlier week. The index was higher by 0.3 percent when compared with that of the corresponding week of the previous month, but was lower by 1.7 percent than that of a year ago.

NOTICE IS HEREBY GIVEN that the NINETEENTH ANNUAL GENERAL MEETING of the Members of THE UNITED COMMERCIAL BANK, LIMITED, will be held at the Registered Office of the Bank at 2, India Exchange Place, Calcutta, on Wednesday, the 11th April, 1962 at 4 P.M. to transact the following business:-

1. To receive and adopt the Report of the Directors and the Audited Balance Sheet as on 31st December, 1961 and Profit & Loss Account for the year ended 31st December, 1961;

2. To declare a dividend;

3. To appoint two Directors in the place of Mr. A. C. Law and Mr. T. S. Rajam who retire under Article 92 of the Articles of Association of the Bank and, being eligible, offer themselves for re-appointment;

4. To appoint a Director in place of Mr. M. L. Dahanukar who retires under Article 92 of

the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. M. L. Dahanukar, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of the Companies Act, 1956, shall not apply to him."

5. To appoint a Director in place of Mr. P. D. Himatsingka who retires under Article 92 of the Articles of Association of the Bank, and to consider and, if thought fit, to pass the following resolution, of which special notice, as required by Section 281 of the Companies Act, 1956, and in accordance with Section 190 thereof, has been received by the Bank:

"Resolved that Mr. P. D. Himatsingka, who has attained the age of 72 years, be and is hereby re-appointed a Director of the Bank and that the age limit, prescribed under Section 280 of

the Companies Act, 1956, shall not apply to him."

6. To appoint Auditors for the current year and to fix their remuneration.

Note: 1. A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member.

2. (a) The transfer books of the Bank will be closed from Monday, the 26th March, 1962 to Wednesday, the 11th April, 1962, both days inclusive.

(b) The dividend, if sanctioned, will be payable on and after the 12th April, 1962, to those Members whose names appear on the Company's Register on the 11th April, 1962.

(c) Dividend Warrants will be posted to the Members at their registered addresses or in accordance with their mandates. Members are requested to advise change in their addresses, if any.

By Order of the Board,
S. T. SADASIVAN
General Manager.

Calcutta,
17th March, 1962.

"This Notice replaces the Notice published in our issue dated 15th March, 1962, page 469."

TEA COMPANIES

O., Po. and Dd. indicate Ordinary, Preferred Ordinary and Deferred Shares respectively. P. next to the name of the company indicates that the Company also has Preference Shares. Figures in "accounts closed" column indicate the months of the calendar year in which accounts are closed. For Managing Agents refer to the Key (last page) under the numbers indicated.

74th YEAR OF ISSUE

CALCUTTA, 29th MARCH, 1962.

Vol. CXXXVIII No. 3703

FADING OPTIMISM IN THE COAL INDUSTRY

ABOUT a year ago, the outlook for the coal industry was considered to be more hopeful than at any time over the previous decade. The hope, paradoxically, was born of a crisis. It was assumed that the acute shortage of the commodity which had developed in 1960 would compel the Government to revise its policies for the industry, and lead to stronger efforts to increase the facilities for producing and distributing India's main commercial fuel. Over the past year, however, the optimism has been fading away. The production of coal has risen, but not as fast as the demand for it. Transport facilities for the commodity have lagged far behind needs, and have become more expensive. As a result, the production costs of coal-using enterprises have increased and the proportion of idle capacity in the economy as a whole is growing. Worst of all, only half-hearted efforts have been made to attack the basic difficulties of the coal producers. On the present showing, therefore, there is little hope that a lasting solution to the coal crisis will soon be in sight. In the circumstances, it is hardly surprising that Mr. P. Prashad, chairman, confessed to having "sounded somewhat despondent" in his address at the annual general meeting of the Indian Mining Association in Calcutta last Friday. (A fuller version of the address is published on a later page in this week's issue of *Capital*.)

Barely 12 months have passed since the Central Steel, Mines and Fuel Ministry started boasting that coal production was running at the rate of over 60 million tons a year, and that the output target fixed under the second plan had thus been "achieved." The mendacity of the boast has now been proved by the Ministry's own figures; they show that the 1961 production has amounted to no more than 56.11 million tonnes. It is certain that even during the first year of the third plan, the second plan target will not be achieved. Not only is the shortfall huge for a country desperately in need of coal; the growth of production has been slowing down too. The output target fixed for 1962-63 is 68 million tonnes, but there need be no doubt that once again it will not be reached. As Mr. Prashad pointed out, the number of wagons promised by the railways during 1962 will be enough to carry only about 55 million tonnes of coal. Two million tonnes may be moved by road, and another 2 million tonnes may be consumed at the collieries. Any production in excess of 59 million tonnes is thus likely to go into stocks, but there is a limit to the stocks the industry can be expected to carry. At one time last year, the stocks rose to 5.57 million tonnes, blocking Rs. 10 crores—an all-time record. As Mr. Prashad said, "no industry can bear such a burden without repercussions on its viability."

It is hard to endorse the I.M.A. chairman's tribute to "the magnificent performance" of the railways while "working under severe strain." The railways may be carrying more traffic than ever before, and the number of wagons offered to the collieries may also be an all-time record. But many of the expansion targets the railways had set themselves have not been achieved. As the latest Railway Budget papers show, a shortfall

has occurred even in the high-priority traffic to and from the steel plants. The coal industry has found to its cost that, in the first two months of 1962, when it was supposed to get 6,925 wagons a day, it has got only 5,976. The shortfall of nearly 14 percent, compared with what the railways themselves promised, indicates that the achievement is highly unsatisfactory. It is true that the failure cannot be blamed on the railways alone: the pattern of wagon movements has been dislocated because some areas have produced less coal than they were expected to, and also because of adventurous circumstances like the Goa operation. But the fault is still mainly that of the railways because serious delays have been allowed to occur in many parts of their expansion programmes. They have squandered away their money on staff welfare schemes, when that money should have been used for development. And, scared of competition, they have done everything to preserve their semi-monopoly by restricting the growth of other forms of transport. Mr. Prashad's plea will be readily endorsed that the railways should be given more money for expansion under the third plan. But it seems that a stricter watch will also be necessary to ensure that the money is properly used.

Apart from transport, the main problem which the coal industry faces is that its working remains uneconomic, because the price of the commodity has been fixed at too low a level. It is deplorable that the increases in production costs since the Coal Prices Revision Committee made its investigations some years ago have not been fully neutralised—although the Committee had recommended that they should be. Nor has the industry been fully compensated for its expenditure on

stowing. Its plea for an increase in selling prices has been shelved from time to time on the ground that more information is necessary, although the data already submitted to the Government clearly show the need for such an increase. The hypocrisy of the old excuse that an increase in coal prices would be inflationary has meanwhile been demonstrated by the Government's own actions; while the price payable to the industry has deliberately been kept down, the cost of coal to the consumer has been steadily raised through higher rail freights, through the cess imposed in order to subsidise coastal shipments, and through a compulsion to use road transport, which is more expensive. Mr. Prashad rightly pointed out that if the private collieries are to raise the Rs. 60 crores of capital they will need during the third plan, an increase in coal prices is urgently necessary. Only in that way can they replenish their internal resources, service loans, and attract new funds from the capital market. It would have been interesting, however, if he could have stated clearly just how big the increase in prices should be.

Looking back, it seems that there have so far been only three aspects from which the outlook for the private collieries has shown some minor improvement. The first is that the World Bank has sanctioned about Rs. 17 crores of foreign exchange for raising production. The second is that the Government is realising that if the output of coal does not increase more rapidly, the expansion of the economy as a whole will suffer. The third is that the expansion programmes of the railways are being speeded up. But in all three aspects, the improvement has been extremely limited. The use of the World Bank loan has already been greatly delayed, and ways are still being devised for the collieries to raise the rupee resources they will need for using the foreign exchange given through the loan. There is no sign yet that coal production can be increased as sharply as the planners think it should be. And even if it could be, there is little hope that the railways would be able

to carry the extra coal produced for many years to come.

It is time the Government realised that it cannot afford to tinker around with the coal crisis any more. The collieries have to be given an opportunity to raise more money through higher selling prices. They have to be assured of more transport facilities, more power and more explosives—the physical facilities necessary for increasing production. Finally, they have to be given the confidence that any increase in costs—whether resulting through a rise in royalties or through a rise in

wages now due to be investigated by a Wage Board—will be fully and promptly neutralised by an increase in selling prices. It is short-sighted to squeeze producers by regrading coal, and by penalising the production of the lower grades. It is equally short-sighted to imagine that the transport problems can be solved by half-baked schemes, such as those for coal dumps and block rake movements. A fundamental change in coal policies is necessary if more of the commodity is to be produced, and if its movement to consumers is to be prompt, cheap and efficient.

MORE FOR THE STATES

THE report of the third Finance Commission, and the Central Government's decisions on its recommendations, have once again highlighted the precarious condition of the finances of many State Governments. The division of taxing powers between the Centre and the States, as embodied in the Indian Constitution, means that the States have to depend on Central assistance even for their normal operations. Two five year plans have added to this dependence by increasing the States' current expenditure, while their own sources of revenue are relatively inelastic. Nevertheless, the Commission is right in criticising the States for "tending to develop an allergy to tap resources in the rural sector on many considerations and also a disinclination to make up the leeway in others." It is pointed out that control over expenditure has become lax. Pay-scales are revised in individual States without thinking about the impact on other departments or on other States. The Commission has suggested a comprehensive examination "to assess the tax potential of each State, to review its tax structure, and to recommend rates under different heads of levies in the State list."

The Commission was asked to recommend how much of the divisible pool of personal income tax should be distributed among the States, and what was the proportion of the total which each State should get. It was also asked to recommend ways of distributing the Central excise duties, grants-in-aid, estate duty, ad hoc grants in lieu of the tax on railway passenger fares, and the additional excise duties levied in place of the States' sales taxes on cloth, sugar and tobacco. In drawing up its scheme of Central assistance, the Commission has followed the principle that the current budgetary needs of the States should be met, as far as possible, by the devolution of taxes; and grants-in-aid should be given only to provide residuary aid. The Commission has, therefore, recommended that the divisible pool of the tax on personal incomes should be raised from 60 percent to 66½ percent of the net collections. The increase is justified since the Finance Act, 1959, removed the tax paid by companies from the divisible pool, and thus reduced the share of the States in the total income tax collections.

For fixing the shares of individual States, the Commission has gone back to the basis adopted by the first Finance Commission—80 percent on the basis of population and 20 percent on the basis of collection. The second Finance Commission had fixed the proportions at 90 percent for population and 10 percent for collection. Now that the tax on company incomes has been excluded, it can be said that personal incomes originate largely in the areas in which they are taxed. This in itself is one good reason for giving greater weightage to collection. Another is that States with a larger urban population are responsible for a major share of personal income tax collections. These States also have bigger administrative problems; they have to spend more on social services, and they pay relatively high wages to their employees, since urban costs of living are higher. The Commission has recognised all these factors. Still, not everybody will be satisfied that only 20 percent of the divisible pool is to be allocated on the basis of collection.

The Commission has reduced the States' share in the Central excise duties to 20 percent of the collections. But it has included in the scope of the division all commodities on which the Centre levies excise duties, except those on which the yield was below Rs 50 lakhs in 1960-61. This means that the States will get a share of the excise duties

sion may have accomplished is that each State will spend at least a certain amount of money on its roads. But the grants do not necessarily mean that the States will ultimately spend anything more on communications than they do already.

The Commission's recommendations about distributing the estate duty proceeds, the ad hoc grant in lieu of the tax on railway fares and the additional excise duties on cloth, sugar and tobacco, are based on fairly non-controversial grounds. These recommendations have been accepted by the Central Government together with those mentioned earlier. But the Government has only partially accepted the recommendations relating to grants-in-aid. It has agreed to the payment of the revenue gap grant. This will total Rs. 52 crores in future, against Rs. 39.5 crores at present. But, for some unknown reason, Bihar and Uttar Pradesh will not participate in this distribution: Maharashtra, Punjab and West Bengal are the other States excluded. The Central Government is right in not accepting the Commission's suggestion that 75 percent of the revenue component of the third five year plan falling in the sphere of the States should be covered by a statutory scheme of devolution. Such a move would have made the Planning Commission's annual revisions of State plans quite difficult, and probably meaningless. The Finance Commission was perhaps afraid that Central grants on the basis of annual reviews of the plan are subject to too many political and other pressures; in result, the actual amount of Central assistance to the different States is probably only in a minor way decided on the basis of needs. But the Finance Commission's recommendation would not have altered the final situation; the rest of the Central assistance would still have been subject to similar pressures.

It is with this possibility in mind that the Finance Commission has suggested that its own functions should be enlarged to embrace all financial assistance to States, whether by way of loans or devolution of revenues, to enable them to balance their normal budgets and to fulfil their plan targets. In its opinion, this would be in harmony with the spirit and the provisions of the Constitution. As an alternative, it has suggested that the Planning Commission should transform itself into the Finance Commission at the appropriate time, presumably every five years. It is doubtful, however, if either suggestion is practicable or is to be recommended. The former course would make the work of the Planning Commission difficult. The latter would place the entire responsibility for allocating additional resources to the different States on the Planning Commission—which after all is a wing of the Central Government. The political implications of such a move could not be lightly ignored.

GENERALITIES AT THE F.I.C.C.I.

THE presidential address of Mr. Karamchand Thapar at the annual session of the Federation of Indian Chambers of Commerce and Industry in New Delhi last Saturday rightly concentrated on one of the most important problems facing the Indian economy—the shortage of rail transport facilities. (In Mr. Thapar's absence, the speech was read by Mr. Shriyans Prasad Jain.) The shortage of transport was felt even during the first plan, when the average daily loading of wagons improved by only 10 percent. During the second plan, there was a 60 percent improvement, but outstanding wagon registrations were still 130,000 at the end of 1960. Only 75 percent of the target for wagon production was realised by 1960-61. These figures, of course, refer only to the shortage on existing lines. The expansion of the track network, too, has been rather slow. Mr. Thapar pointed out that investment in the railways in the second plan was Rs. 250 crores short of the requirements. The deficiency continues in the third plan. There is good reason for his fear that the country is heading for a still more serious transport crisis. It is not easy to estimate the demand for rail transport precisely. But the sector is so strategic that a shortfall there holds back progress in the rest of the economy. The Government should, therefore, plan for surplus capacity.

Referring to the third five year plan, Mr. Thapar urged that it should be flexible and adapted in the light of changing economic conditions. The plan

does not only have to look sound; it also has to be implemented efficiently. Many avoidable delays have occurred in various projects, and they have held back development in other spheres. The F.I.C.C.I. president rightly emphasised the importance of competition for the healthy functioning of the economy. The growth of monopolies is to be regretted as much by business men as by the rest of the country. Even in Russia, State-owned units are supposed to compete with one another, in order to ensure efficiency. It is significant that in India, no single industrial group owns more than 3 percent or 4 percent of any major consumer industry. Industrial ownership and income distribution are becoming more evenly spread, as average incomes in the higher levels are declining. A Reserve Bank study has shown that industrial shares are being increasingly taken up by the salaried classes.

Mr. Thapar's emphasis on exports was justified. But there is no need to assume straightaway that the U.K.'s entry into the European Common Market will affect Indian exports drastically. The opportunity has to be seized for expanding sales in continental Europe. As Mr. Thapar said, India's success depends more on her efforts and less on what others do for her. The scope for trade co-operation among under-developed countries should be explored further, as India's exports to these countries have not received the attention they deserve. Mr. Thapar voiced a general fear when

he said that Governmental activity is tending to exceed its boundaries, and venturing into fields unsuited to it. Such a policy is unprofitable; it hampers the smooth operation of private enterprise. The confusion over the coal policy provides an appropriate illustration of what he meant.

It was refreshing to hear the Prime Minister, Mr. Nehru, declare that to suppress private enterprise would be bad for the country. It may be true that in the present situation some controls are necessary. But it is also true that many controls are ineffective because the Government does not have the administrative talent to implement them; and other controls are leading to serious delays. It would have been interesting to hear more from Mr. Nehru on this point. But the Prime Minister seems to have confined himself to vague generalities; the debate might have been more illuminating if he had tried to deal specifically with the issues raised by the F.I.C.C.I. president.

By far the best speech of the whole session was made by Mr. G. L. Mehta. He pointed out that the

"unmixed" concentration of political and economic power is detrimental to democracy as well as to socialism. He pinpointed the advantages of planning in under-developed countries: it helps to give a sense of direction to long-term policies, provides a good setting for expansion, and enables various sectors of the economy to work for specific objectives. The present choice between many countries is, therefore, between different forms of planning and different degrees of freedom. Priorities are essential to conserve and mobilise resources and to see that necessities of life for the masses have precedence over luxury for a few. Mr. Mehta declared that private enterprise is no longer the private concern of the individual industrialist. Business men have to accept the obligations and responsibilities of its public character. The Indian entrepreneur, he said, is protected from both foreign and internal competition by the general scarcity. Shoddy goods have been produced, and cost-consciousness is absent. The consumer has not had a fair deal in the last 20 years, so business ought to become more expansion-minded.

materials and machinery from rupee sources and to manufacture more equipment in India. Construction work on the intermediate density polythene plant has been held up due to the delay in obtaining the capital goods licence from the Government. The licence has now been obtained, and active steps have been taken to go ahead with the project. When the latter is completed, the production of polythene at the Rishra factory will rise.

Alkali and Chemical has produced excellent results for the year ended September 1961. Sales rose from Rs. 5.4 crores in 1959-60 to Rs. 6.6 crores in 1960-61. The demand for the Company's products has steadily risen. The profit, before tax, has improved by Rs. 12 lakhs to Rs. 1.41 crores. The taxable ordinary dividend has been raised from 12 percent to 15 percent. A sum of Rs. 26.5 lakhs has been transferred to dividend equalisation reserve, raising it to Rs. 46.5 lakhs. The reserve is expected to help the directors maintain a progressive and consistent dividend policy.

Mr. Foster pointed out how Alkali and Chemical has passed on the benefit of higher production to consumers by reducing the prices of various products in spite of a considerable increase in production costs. The profit of the caustic soda and chlorine plant has been low due to the un-economic price fixed by the Government. The production of polythene has risen to 4,700 tons, against the designed capacity of 3,500 tons. The production of the paint plant has risen, but its working has been hampered by the raw material shortage. Efforts are being made to obtain raw materials from domestic and rupee sources. Mr. Foster referred to the difficulties of the Indian chemical industry in export markets. Economy will depend on a larger scale of production. It will take some years to reach the necessary scale for competing in world markets. Alkali and Chemical is, however, trying to increase its exports as far as possible.

Kasturbhai Group Mills Prospects

Of the five cotton textile mills—Arvind, Raipur, Nutan, Ahmedabad New Cotton and Saraspur—belonging to the Kasturbhai group, whose preliminary results for 1961 have been released along with the announcement of final dividends, only Arvind has failed to improve upon its previous year's performance. All other mills have done well, with both sales and profits recording substantial increases over the 1960 figures. Nutan, New Cotton and Saraspur Mills have raised their total distribution to the shareholders by Rs. 5 to Rs. 35 a share, subject to deduction of tax, while Arvind and Raipur have maintained their dividends at Rs. 45 and Rs. 40 a share, taxable, respectively. Sales and other receipts of Arvind Mills increased by about Rs. 10 lakhs, but the gross profit was Rs. 1.08 crores, against Rs. 1.09 crores in 1960. Allocations include depreciation Rs. 24.82 lakhs (against Rs. 18.36 lakhs), statutory development rebate Rs. 22.50 lakhs (against Rs. 4 lakhs) and taxation Rs. 30 lakhs (against Rs. 38 lakhs). After providing for the proposed dividends and making other adjustments, there remains Rs. 81,892 to be carried forward, against Rs. 1.58 lakhs brought in. Raipur Mills has earned a gross profit of Rs. 45.53 lakhs, against Rs. 39.30 lakhs in 1960. Appropriations include Rs. 7.42 lakhs (against Rs. 6.86 lakhs) for depreciation, Rs. 3 lakhs (against Rs. 75,000) for development rebate and Rs. 16.70 lakhs (against Rs. 13.50 lakhs) for taxation. After providing for the proposed dividend, the directors have allocated Rs. 1.07 lakhs (against Rs. 1.21 lakhs) to general reserve. A sum of Rs. 47,719 is carried forward, against Rs. 40,614 brought in.

Nutan Mills' sales increased from Rs. 1.61 crores to Rs. 1.84 crores. Its gross profit rose from Rs. 24.80 lakhs to Rs. 32.51 lakhs. The improved results reflect the effect of modernisation and renovation. In 1961 alone, the Company spent about Rs. 13 lakhs on machinery and buildings. After providing Rs. 7.17 lakhs (against Rs. 5.99 lakhs) for depreciation, Rs. 2.20 lakhs (against Rs. 4.50 lakhs) for development and rehabilitation reserve, Rs. 10.30 lakhs (against Rs. 6 lakhs) for taxation and Rs. 4.48 lakhs (against Rs. 1.13 lakhs) for other reserves, the net profit amounts to Rs. 5.23 lakhs

Current News and Comment

Hindustan Lever Pays the Same

The Rs. 10-paid shares of Hindustan Lever Ltd, which rose from Rs. 41.50 to Rs. 59.70 in 1961 and could be bought around Rs. 56 in January this year, have risen to a new high of Rs. 70 in spite of the generally sluggish behaviour of the stock market. The rise has occurred mostly after the announcement—made some weeks ago—of a bonus issue in the ratio of 12 new shares for every 23 held. While investors can derive comfort from the Government of India's sanction of the bonus issue, there is little in the working results for the year ended December 1961 to enthuse them. In spite of an increase of some 8 percent in turnover from Rs. 46.12 crores to Rs. 49.92 crores, the gross profit is down from Rs. 4.98 crores to Rs. 4.63 crores. The consumption of raw materials has increased along with the rise in turnover. But the profit margin has been squeezed by a substantial increase in various other costs—excise duty, salaries, wages and other staff benefits, advertising and miscellaneous expenditure. After providing Rs. 39.39 lakhs (against Rs. 35.33 lakhs) for depreciation, Rs. 5.30 lakhs (against Rs. 5 lakhs) for development rebate and Rs. 1.93 crores (against Rs. 2.08 crores) for taxation, the net profit amounts to Rs. 2.26 crores, against Rs. 2.50 crores in 1960. With Rs. 24.39 lakhs brought in from the previous year, the disposable surplus amounts to Rs. 259.90 lakhs. The dividend has been maintained at Rs. 2.60 a share, subject to deduction of tax, absorbing Rs. 1.45 crores. No allocation has been made to development reserve which received Rs. 2 crores in the previous year. General reserve accounts for Rs. 20 lakhs, against Rs. 90 lakhs. The balance of Rs. 85.08 lakhs is carried forward.

Sales of soaps and other detergents fetched Rs. 22.89 crores (against Rs. 19.95 crores) and vanaspati, margarine and other foods Rs. 23.17 crores (against Rs. 22.35 crores). Realisation from toilet preparations fell from Rs. 97.40 lakhs to Rs. 85.32 lakhs, while the sale of glycerine and other by-products increased from Rs. 1.68 crores to Rs. 1.83 crores. Groundnut cake and animal feeding stuff yielded Rs. 1.18 crores, against Rs. 1.16 crores. The increase in sales of soaps and detergents follows the rise in production from 83,027 metric tons to 87,937 metric tons. The output of vanaspati was, however, lower at 75,976 tonnes, against 82,286 tonnes in 1960. The directors state that Hindustan Lever faced during the year an unpredictable edible oil market, unduly high prices followed by a steep decline, and severe price competition. Toilet preparations lost ground mainly due to the imposition of high excise duties on skin preparations, which led to higher prices resulting in consumer resistance. The Company exported goods worth Rs. 74 lakhs, against Rs. 77 lakhs in 1960. Soap, vanaspati and toilet preparations fetched Rs. 33 lakhs, against Rs. 39 lakhs in the previous year. The directors say that due to high raw material costs, coupled with less export

incentive, vanaspati prices in the export markets became less competitive, so exports suffered a setback.

The directors state in their report that the land required for the skimmed milk powder and ghee factory in Etah has been acquired and the preparatory work of the site has begun. Meantime, a ghee development unit has been set up in Etah. After exploration unit has been set up in Etah. After experimental feeding trials, Hindustan Lever's cattle feed was launched in the Bombay area in July 1961 and has made satisfactory progress. The pilot plant has been replaced by one of increased capacity. The Company has applied to the Government of India for a licence to manufacture solvent extraction of cottonseed. Modernisation of the soap-making plant in the Bombay factory is in hand, and two Mazzoni units have already been installed. During the year, a second glycerine still was brought into operation at the Bombay factory. The milk project in Etah will require about Rs. 47 lakhs worth of foreign exchange. The Industrial Credit and Investment Corporation of India Ltd has agreed in principle to grant the Company a loan of about Rs. 25 lakhs in foreign currencies. Unilever Ltd has agreed in principle to supply the balance of foreign exchange for the project. The engineering building at the Calcutta factory has been completed and the expansion of the vanaspati factory in Ghaziabad is being completed. The total estimated cost of capital projects approved during 1961 was Rs. 1.96 crores. The share capital of Rs. 5.57 crores in equity shares of Rs. 10 each is supplemented by reserves and surplus amounting to Rs. 5.34 crores. Fixed assets valued at Rs. 4.24 crores have been written down to Rs. 4.24 crores. The issued capital is being increased from Rs. 5.57 crores to Rs. 8,24,36,000 in order to bring the share capital into closer relationship with the capital employed in the business. This is being done by capitalising Rs. 2 crores of development reserves and Rs. 67.36 lakhs of the accumulated balance of the profit and loss account.

Alkali and Chemical Expanding

The ordinary shares of the Alkali and Chemical Corporation of India Ltd are being supported around Rs. 45.50 due to the good dividend yield and growth prospects. In his chairman's statement at the annual general meeting in Calcutta last Thursday, Mr. A. R. Foster discussed the progress of various expansion plans. (A fuller version of the speech is printed on a later page in this week's issue of *Capital*.) The construction of the rubber chemicals factory is in an advanced stage, and production is likely to start during the next 12 months. The Company has decided to expand the capacity of the paint plant. An application has been made to the Government of India for permission to expand capacity. As the Government prefers expansion without spending foreign exchange, efforts are being made to obtain raw

against Rs. 5.05 lakhs in 1960. The proposed dividend absorbs Rs. 5.25 lakhs, against Rs. 4.50 lakhs. Sales of New Cotton Mills increased from Rs. 1.68 crores to Rs. 2.09 crores. Its gross profit improved from Rs. 22.49 lakhs to Rs. 31.70 lakhs. The directors have provided Rs. 8.40 lakhs (against Rs. 8.28 lakhs) for depreciation, Rs. 1.80 lakhs (against Rs. 3.50 lakhs) for development rebate, Rs. 9.71 lakhs (against Rs. 4.25 lakhs) for taxation, and Rs. 4.38 lakhs (against Rs. 1.12 lakhs) for general reserve. Out of the remaining profit of Rs. 4.50 lakhs (against Rs. 3.68 lakhs), the dividends absorb Rs. 3.99 lakhs, including Rs. 49,000 on preference shares.

The gross profit of Saraspur Mills has increased from Rs. 30.50 lakhs to Rs. 34 lakhs, after deducting managing agents' commission and donations. Allotments include Rs. 8.60 lakhs (against Rs. 9.30 lakhs) for depreciation, Rs. 25,000 (against Rs. 3.50 lakhs) for development rebate, Rs. 11.33 lakhs (against Rs. 5.70 lakhs) for taxation, Rs. 5.44 lakhs (against Rs. 5.15 lakhs) for general reserve and Rs. 1.27 lakhs (against nil) for the dividend equalisation fund. After providing for the proposed dividend, Rs. 40,219 has been carried forward, against Rs. 56,539 brought in.

Premier Construction Earns Less

The recent sharp decline in the shares of Premier Construction Co. Ltd from Rs. 199 to Rs. 171 reflects only partly the weakness in the stock market. Selling in these shares had been in no small measure based on reports that the Company did not fare well in 1961. The working results for the year ended December 1961 show a gross profit of Rs. 15.74 lakhs, against Rs. 18.58 lakhs in 1960. This is due to a modest decline in income from Rs. 23.14 lakhs to Rs. 22.76 lakhs and an increase in expenses from Rs. 4.55 lakhs to Rs. 7.01 lakhs. After providing Rs. 41,000 (against Rs. 36,000) for depreciation and Rs. 1.90 lakhs (against Rs. 1.79 lakhs) for taxation, the net profit amounted to Rs. 13.18 lakhs, against Rs. 16.38 lakhs in 1960. The directors have reduced the dividend from Rs. 13.50 to Rs. 10 a share, but this has not adversely affected the total distribution to ordinary shareholders in view of the increase in capital. Promoters' shares were converted during the year into equity shares. This was followed by the issue of bonus shares by capitalising reserves according to the scheme approved by the Bombay High Court. In view of the increased capital, the total distribution for ordinary shareholders in 1961 amounts to Rs. 11.49 lakhs, against Rs. 10.12 lakhs in 1960. The directors have transferred Rs. 3.12 lakhs from general reserve. After providing for the proposed dividends absorbing Rs. 15.58 lakhs, against Rs. 15.94 lakhs Rs. 88,651 has been carried forward, against Rs. 12,839 brought in. No allocation has been made to general reserve, which received Rs. 1.67 lakhs in 1960. Against a share capital of Rs. 1.20 crores, reserves and surplus total Rs. 1.27 crores. The net block stands reduced from Rs. 8.23 lakhs to Rs. 7.60 lakhs and investments are up from Rs. 2.31 crores to Rs. 2.72 crores. The directors state that Hindustan Construction—a subsidiary of Premier Construction—proposes to float a new enterprise to be known as Vikhroli Fabricators Ltd with a share capital of Rs. 10 lakhs. This will be fully owned by Hindustan Construction.

Brady Engineering Pays More

The increase in the dividend of Brady Engineering Co. Ltd from Rs. 5.50 to Rs. 9 a share, including Rs. 2 by way of bonus, subject to deduction of tax, for the year ended December 1961, is justified by the Company's impressive results. Proceeds of engineering work have risen by about 71 percent from Rs. 16.25 lakhs to Rs. 27.89 lakhs. The gross profit has sharply risen from Rs. 4.33 lakhs to Rs. 9.69 lakhs. After providing Rs. 1.19 lakhs (against Rs. 94,400) for depreciation, Rs. 24,826 (against Rs. 13,248) for development rebate reserve and Rs. 3.70 lakhs (against Rs. 1.32 lakhs) for taxation, the net profit amounts to Rs. 3.72 lakhs, against Rs. 1.60 lakhs in 1960. With Rs. 19,184 brought in, and adding Rs. 18,796 being the excess provision for taxation no longer required, the disposable surplus amounts to Rs. 4.10 lakhs.

Appropriations include Rs. 35,335 towards depreciation, being the net under-provision during 1957 to 1960 and Rs. 1 lakh (against Rs. 15,000) for general reserve. The proposed dividend will absorb Rs. 2.25 lakhs (against Rs. 1.38 lakhs), leaving Rs. 49,445 to be carried forward.

Production of pulley blocks and other lifting equipment recorded substantial increases in 1961. The first automatic bread plant was completed and delivered in 1961. The directors state that all efforts are being made to maintain last year's results, although a great deal will depend on the supply of component parts and import licences for materials which are not available from indigenous sources. They add that no further space is available for expanding the Company's present site. Brady Engineering became a subsidiary of W. H. Brady and Company with effect from 22nd November, 1961.

Bank of Baroda Profit Up

The Bank of Baroda Ltd has earned a profit of Rs. 67.63 lakhs for the year ended December 1961, against Rs. 40.66 lakhs in 1960. An interim dividend of 7 percent, taxable, was paid, absorbing Rs. 10.50 lakhs. A taxable final dividend of 10 percent has been declared, making 17 percent for the year, absorbing Rs. 15 lakhs. The reserve fund is allocated Rs. 20 lakhs and bonus to staff Rs. 20.20 lakhs. The carry-forward is Rs. 3.03 lakhs.

Deposits rose from Rs. 84.98 crores to Rs. 95.46 crores. Investments amounted to Rs. 24.90 crores, against Rs. 23.13 crores. Advances increased from Rs. 60.18 crores to Rs. 70.37 crores. (Fuller details are published on a later page in this week's issue of *Capital*.)

T.A.K. Machinery Share Offer

T.A.K. Machinery Ltd, which proposes to set up a plant in Maharashtra State for the manufacture of lifting and conveying equipment, is entering the market to raise Rs. 24.50 lakhs in equity shares of Rs. 100 each. The Company has an authorised capital of Rs. 1 crore, consisting of Rs. 50 lakhs in equity shares of Rs. 100 each and Rs. 50 lakhs in unclassified shares of Rs. 100 each. The issued capital is Rs. 50 lakhs, all in equity shares, of which shares of the value of Rs. 7.56 lakhs have already been subscribed and shares worth Rs. 17.94 lakhs are being taken up by the directors, their friends and associates, leaving 24,500 shares to be offered for public subscription. The project is estimated to cost Rs. 50 lakhs, of which Rs. 45 lakhs will be spent on land, building, plant and machinery. The main items to be manufactured are electric overhead travelling cranes, electric hoist blocks, chain pulley blocks, portable floor cranes, and conveyors such as belt conveyors, portable belt conveyors, bucket elevators, gravity roller conveyors and slat conveyors. In addition, the Company will do structural fabrication work and produce grey iron castings. Electric hoists are not at present being manufactured in the country and the production of electric cranes, chain blocks and conveyors is very small in relation to the domestic demand. The demand is expected to increase with the growing industrialisation of the country. Hence there will be a good market for the products. The Company has entered into a technical collaboration agreement with Fellows Brothers Ltd of England, belonging to the John Folks group of engineering industries and a leading manufacturer of the type of equipment. T.A.K. Machinery has obtained the right to export its products to all countries except the U.K., Northern Ireland, Eire and Pakistan. Most of the raw materials will be procured indigenously, and imported raw materials are likely to be secured from countries offering rupee payment facilities. The factory is expected to go into production by the middle of 1963.

Bonita from Modern Mills

Modern Mills Ltd has reported encouraging results for the year ended October 1961. Sales are up by about 16.5 percent from Rs. 1.99 crores

to Rs. 2.32 crores. The gross profit has risen by about 26 percent from Rs. 25.60 lakhs to Rs. 32.31 lakhs. The dividend has, however, been maintained at Rs. 6 a share, subject to tax, presumably in order to conserve resources for the expansion schemes. After providing Rs. 7.83 lakhs (against Rs. 4.62 lakhs) for depreciation, Rs. 70,000 (against Rs. 1.47 lakhs) for development rebate reserve, and Rs. 11.80 lakhs (against Rs. 8.25 lakhs) for taxation, the net profit amounts to Rs. 9.50 lakhs, against Rs. 9.13 lakhs in 1959-60. The allocation to general reserve has been raised from Rs. 3 lakhs to Rs. 4 lakhs. The dividend absorbs Rs. 5.57 lakhs (the same), leaving Rs. 29,835 to be carried forward, against Rs. 32,765 brought in.

The directors say that, apart from improved trading conditions, a drastic change in the pattern and scale of production have been responsible for the marked improvement in the working results. Modern Mills' plans for the modernisation and expansion of its two mills are progressing satisfactorily. When fully implemented, they will bring the net block of fixed assets to over Rs. 1 crore. The Company is issuing fresh equity capital of Rs. 46.47 lakhs required for financing the expansion programme. These rights shares are being offered in the ratio of one new share for every one held on 15th December, 1961. The new shares will qualify for bonus shares to be issued by capitalising Rs. 15.49 lakhs out of the share premium account and free reserves, for which the Government's sanction has already been received. The bonus issue will be made in the ratio of one share for every six held. After the issue of rights and bonus shares, the capital of Modern Mills will increase to Rs. 1.08 crores.

The acetate flake and yarn project with a capacity of 4 million lbs, to be launched by Modern Mills in Mysore State, will be finalised shortly. The Government of India has agreed in principle to direct negotiation by the Company with the U.S. Agency for International Development for a long-term loan of \$5 million to cover the chemical portion of the project, for which U.S. collaboration has been assured. For the acetate spinning portion, negotiations are well advanced for purchasing equipment from Europe under medium-term deferred credit combined with foreign financial participation. The directors state that, in order to finance the local component of the new project, Modern Mills proposes to offer towards the end of the year one new equity share for every one held at the time. This will help it to secure about Rs. 1.08 crores. Subject to the shareholders' approval, the Company also proposes to make a public issue of Rs. 1.50 crores in equity shares and Rs. 75 lakhs in preference shares. Part of the issue will be reserved for foreign participants as well as the shareholders of Sundatta Foods and Fibres Ltd, who will be offered one new equity share of Modern Mills for every one held in Sundatta Foods, whether equity or preference. The new equity shares worth Rs. 2.58 crores required for the new project will be designated as "A" equity shares since they will rank for dividend only after the new project goes into production. The reservation of equity shares as part of the proposed public issue in favour of the shareholders of Sundatta Foods and Fibres is in recognition of its pioneering rôle in completing the present acetate rayon project of Modern Mills. Sundatta Foods and Fibres is to be made a subsidiary of Modern Mills.

Jay Shree Textiles Diversifies

Commenting on the satisfactory results of Jay Shree Textiles Ltd for the year ended December 1961, the directors say that the Company produced new varieties of yarn fabrics and sold them easily. Reinforced rubber-lined hose is being manufactured in collaboration with George Angus and Co. Ltd of the U.K. A cotton spinning plant with 15,200 spindles has been set up, and it is likely to start production soon. The project for manufacturing high-tension electric insulators has made progress, and provisional orders have been placed. Due to the non-availability of import licences, the scheme for producing synthetic rubber oil seals, malleable castings, steel forgings and structural castings could not make any progress. But the directors are trying to implement them as soon as possible. In view

of the diversified activities, the name of the Company is being changed to Jay Shree Textiles and Industries Ltd. The latter has recently issued ordinary rights shares for Rs. 24.59 lakhs at par in the proportion of one new share for every two held. The directors are confident about the prospects for Jay Shree Textiles.

Sales rose from Rs. 1.21 crores in 1960 to Rs. 1.65 crores in 1961. Production could have been higher but for the shortage of raw materials, spare parts and electric power. The profit has improved from Rs. 19.85 lakhs to Rs. 28.44 lakhs, after transferring Rs. 3.19 lakhs (against Rs. 3.99 lakhs) to depreciation. A taxable ordinary dividend of 10 percent has been maintained. It is covered more than five times and offers a yield of 5.7 percent at the present price of Rs. 17.31 a share. Taxation absorbs Rs. 11.95 lakhs (against Rs. 8.70 lakhs), dividend equalisation reserve Rs. 10 lakhs (against Rs. 5 lakhs) and development rebate reserve Rs. 49,952 (against Rs. 1.19 lakhs). The carry-forward is Rs. 87,266, compared with Rs. 21,280 brought in.

Indequip Engineering Issue Soon

Indequip Engineering Ltd is a new enterprise which has been sponsored by Indequip Private Ltd to undertake the manufacture of Butterworth's peroxide bleaching range, humidification plants and essential spare parts of Butterworth machinery. The factory will be located in Naroda, near Ahmedabad, where the Gujarat Government has allotted 52,635 square yards of land to the Company. Indequip Engineering has secured the technical collaboration of H. W. Butterworth and Sons Company of the U.S.A. The former is to pay a royalty of 5 percent on all sales to the U.S. firm which has made available drawings, plans and designs and other necessary technical know-how. Negotiations are also progressing with Defensor A. G., Switzerland, for manufacturing humidification plants. The promoters have obtained a licence for manufacturing Rotor pumps for lubricating systems of all types of engines in collaboration with the British firm of Hobourn Eaton Manufacturing Co. Ltd. They have applied to the Government of India for the transfer of the licence to Indequip Engineering Ltd.

The Company is also negotiating with West Point Foundry and Machine Co Inc. of the U.S.A. for manufacturing sizing machines. The entire project is estimated to cost Rs. 50 lakhs, of which Rs. 24.37 lakhs is expected to be spent on plant and machinery, Rs. 11.50 lakhs on machinery stores, spares and working capital, and Rs. 5.64 lakhs on land and buildings. The cost is proposed to be met by raising Rs. 35 lakhs through share capital and a loan of Rs. 10 lakhs from the Government of India through the Gujarat Government which has already been approved. A sum of Rs. 5 lakhs will be raised from banks and other sources. Indequip Engineering has obtained import licences of the value of Rs. 12.27 lakhs for machine tools required for manufacturing continuous peroxide bleaching range and spare parts for rayon spinning machinery. The order for machinery has been placed with Hahn and Kolb of Stuttgart, West Germany. Machinery is expected to arrive shortly. The Company has an authorised capital of Rs. 1 crore in equity shares of Rs. 100 each, of which Rs. 35 lakhs is proposed to be issued in the beginning. The directors and their friends have already subscribed 500 equity shares of the value of Rs. 50,000. They have agreed to take up further shares of the value of Rs. 11.50 lakhs. The balance of 29,000 equity shares worth Rs. 23 lakhs will be offered to the public in the near future.

Elecon Engineering Share Offer

The subscription list for the Rs. 29.50-lakh public issue of Elecon Engineering Company Ltd will open shortly. The entire public issue has been underwritten. (Fuller details about the offer are published on a later page in this week's issue of *Capital*.) Elecon Engineering is already manufacturing mechanical handling equipment at the Goregaon (Bombay) factory, and its sales last year amounted to Rs. 21 lakhs. It has plans not only to expand production at Goregaon but also

to set up a huge factory in Vallabh Vidyanagar, Anand, Gujarat State, for manufacturing mechanical handling equipment and allied products such as worm reduction gears and troughing idlers. Elecon Engineering has acquired 15 acres of land in Vallabh Vidyanagar. Construction of two of the five sheds has already been completed. Production of mechanical handling equipment has also commenced. Construction of the three remaining sheds is expected to be completed before the end of May, and production of reduction gears is likely to be started in July or August. The Company has on hand major contracts for supplying conveying equipment of the value of Rs. 45 lakhs. Another big contract worth Rs. 25 lakhs is being finalised. It is claimed that, when completed and commissioned, the plant in Anand will be the biggest one in India for manufacturing mechanical handling equipment. This will help save considerable foreign exchange. The market for Elecon Engineering products is assured, and the directors expect the turnover to be around Rs. 1.20 crores in 1963. The Company, it is hoped, will be able to pay dividends on the fresh capital, which is now being raised, in 1964.

Elecon Engineering has secured the technical collaboration of Alfred Wiseman and Co. Ltd of the U.K. for manufacturing worm reduction gears. It has also secured the collaboration of Spencer (Melksham) Ltd of the U.K. for manufacturing troughing idlers and return rollers of belt conveyors. The Company has been permitted to export its products to other countries. The collaboration firms are being paid lump-sums as their boring firms are. The entire expansion programme involves an outlay of Rs. 1 crore, which is proposed to be met from the present share capital issue of Rs. 50 lakhs, a loan of Rs. 20 lakhs from the Industrial Credit and Investment Corporation of India Ltd which includes a foreign currency loan of the value of \$252,000, Rs. 10 lakhs from the Bank of India, deposits against orders of Rs. 5 lakhs and other bank borrowings amounting to Rs. 15 lakhs. The authorised capital of the Company is Rs. 1 crore, all in equity shares of Rs. 100 each. The issued and paid-up capital amounts to Rs. 10 lakhs by issuing 50,000 equity shares. Of the present issue, the directors and their friends will take up Rs. 13.30 lakhs. Alfred Wiseman and Company will be allotted shares worth Rs. 2.40 lakhs. The Life Insurance Corporation is being given shares of the value of Rs. 5 lakhs. The balance of Rs. 29.50 lakhs is being offered for public subscription.

Hongkong and Shanghai Bank

The profit of the Indian branches of the Hongkong and Shanghai Banking Corporation has risen from Rs. 2.29 lakhs in 1960 to Rs. 14.68 lakhs for the year ended December 1961. Deposits have improved from Rs. 7.57 crores to Rs. 8.24 crores. Investments amount to Rs. 1.51 crores, against Rs. 1.59 crores. Advances have risen from Rs. 7.83 crores to Rs. 9.99 crores. (Details of the balance-sheet are published on a later page in this week's issue of *Capital*.)

Rohit Mills Rights Issue

The directors of Rohit Mills Ltd, Ahmedabad, have decided to issue at par rights shares in the ratio of one new share of Rs. 100 each for every five held. This will enable the Company to raise Rs. 9.75 lakhs to meet the cost of its own expansion programme and of R. M. Engineering Works—division of the divisions of the Company. The expansion and modernisation programme of the R. M. Engineering Works is likely to be taken up shortly with the help of a Japanese firm. At present, the unit produces about 100 tons of castings a month. Rohit Mills has plans to increase the output to the licensed capacity of 250 tons a month. Although the directors have decided to maintain the dividend for 1961 at Rs. 10 a share (Rs. 100-paid) subject to deduction of tax, the preliminary figures about the working results show a marked improvement over the previous year's performance. After deducting Rs. 8.50 lakhs as bonus to staff for the three years, 1959 to 1961, the Company has made a gross profit of Rs. 34.80 lakhs, against Rs. 24.69

lakhs in 1960. The directors have provided Rs. 12.26 lakhs (against Rs. 13.75 lakhs) for depreciation and Rs. 10.50 lakhs (against Rs. 5.51 lakhs) for taxation. The net profit amounts to Rs. 9.59 lakhs, against Rs. 3.95 lakhs in 1960. The directors have allocated Rs. 3.77 lakhs to the general reserve fund. They have maintained the dividend at 10 percent in order to conserve resources for the expansion programme.

Empire Dyeing Profit Down

The working of the Empire Dyeing and Manufacturing Co. Ltd for the year ended December 1961, is unsatisfactory. The income from dyeing, mercerising and bleaching of yarn and cloth has risen from Rs. 43.76 lakhs to Rs. 51.31 lakhs, but the gross profit is down from Rs. 7.45 lakhs to Rs. 7.26 lakhs. After providing Rs. 52,000 (against Rs. 39,000) for depreciation, Rs. 12,468 (against nil) for development rebate and Rs. 3.12 lakhs (against Rs. 3.11 lakhs) for taxation, the net profit amounts to Rs. 2.83 lakhs, against Rs. 3.22 lakhs in 1960. With Rs. 34,975 brought in and adding Rs. 9,437 being the excess provision for taxation made in the previous year, the disposable surplus amounts to Rs. 3.28 lakhs. The dividend has been maintained at Rs. 5 a share, subject to deduction of tax, absorbing Rs. 3 lakhs. After charging depreciation of Rs. 10,203 being the net under-provision made on fixed assets during 1957 to 1960, Rs. 17,679 is being carried forward.

The directors state in their report that Empire Dyeing has established a good reputation in the cloth market for processing superfine goods, mostly of powerlooms. The Company has placed an order for the latest type of stentering machine of Famatex make which is likely to be delivered by the end of April. One complete automatic and two semi-automatic new dyeing jiggers were installed during the year. An order for a back-filling machine has been placed, and it will be received at the works by the end of April. Empire Dyeing has applied to the Textile Commissioner for importing one complete J-box bleaching range of the latest type.

Nil from Budge-Budge Jute

The Budge-Budge Jute Mills Co. Ltd has incurred a loss of Rs. 9.36 lakhs for the year ended October 1961, after providing Rs. 6.30 lakhs (against Rs. 3.54 lakhs) for depreciation. There was a profit of Rs. 12.01 lakhs in 1959-60. As a result of the loss, the dividends have been passed, leaving a debit balance of Rs. 8.91 lakhs. Sales, nevertheless, rose from Rs. 2.14 crores to Rs. 2.30 crores. The unsatisfactory results are due to high prices of fibre in comparison with those of jute goods. Unit costs have risen due to the reduced output following the restriction of working hours and the sealing of looms. The lay-off compensation to labour due to the block closures was substantial. Besides, the dearness allowance of workers was raised on the Wage Board's recommendation. The mills had to close down for some time due to a strike.

The directors take an optimistic view about the outlook for the current year. They say that simultaneous business has now become profitable due to fair raw jute prices. The restoration of full working in the mills—combined with the benefit of modern machinery—has helped reduce unit costs of production. The modernisation of drawing and spinning machinery for up to 87½ percent of the mill's registered loomage has been completed. The price of the ordinary shares of Budge-Budge Jute is Rs. 148.

More from National Ekco

The working of National Ekco Radio and Engineering Co. Ltd for the year ended December 1961, fully justifies the proposed increase in dividend from Rs. 15 to Rs. 20 a share, subject to deduction of tax. The total turnover has risen from over Rs. 1 crore to Rs. 116.26 lakhs. The profit, before taxation, has increased by about 40 percent from Rs. 15.51 lakhs to Rs. 21.79 lakhs. Taxation provision amounts to Rs. 11.60 lakhs, against Rs. 8.15 lakhs

in the previous year. The directors have provided Rs. 2.50 lakhs (against nil) to general reserve, but the allocation for contingencies reserve has been reduced from Rs. 3 lakhs to Rs. 1.50 lakhs. The proposed dividends absorb Rs. 6 lakhs, against Rs. 4.50 lakhs. The balance of Rs. 46,407 is carried forward, against Rs. 27,757 brought in.

National Rubber Profit Rises

The expansion programme started in 1957 by the National Rubber Manufacturers Ltd having been completed, the effects have been reflected in the trading results for the year ended last December. Sales rose from Rs. 2.43 crores in 1960 to Rs. 2.70 crores in 1961. After providing Rs. 6.93 lakhs (against Rs. 5.91 lakhs) for depreciation, the profit has increased from Rs. 2.62 lakhs to Rs. 6.87 lakhs. A taxable ordinary dividend of 6½ percent has been declared, absorbing Rs. 3.25 lakhs. The dividend gives a yield of 5.2 percent at the present price of Rs. 12.50 a share. Development rebate reserve is allocated Rs. 1.72 lakhs (against Rs. 2.62 lakhs) and dividend equalisation reserve Rs. 1 lakh (against Rs. 50,000), leaving a carry-forward of Rs. 58,466, against Rs. 46,685 brought in.

More from Cawnpore Textiles

Presenting their report for the year ended December 1961, the directors of Cawnpore Textiles Ltd explain that the production and efficiency of the mills has improved. In order to keep the equipment up-to-date, it is proposed to spend Rs. 25 lakhs on capital account over the next five years. Although exports increased in 1961, the prospects for 1962 are not considered encouraging because of the keen competition from Japan, Hongkong, Pakistan and some European countries. The company's profit has increased from Rs. 19.70 lakhs in 1960 to Rs. 20.76 lakhs in 1961, as sales improved from Rs. 1.46 crores to Rs. 1.62 crores. The taxable ordinary dividend has been raised from 7.20 percent to 10 percent. The dividend is covered more than six times, and offers a yield of 5.4 percent at the present price of Rs. 9.25 a share. Development rebate reserve is allocated Rs. 1.61 lakhs (against Rs. 98,800), taxation Rs. 9 lakhs (against Rs. 6.70 lakhs), general reserve Rs. 5.50 lakhs (against Rs. 6 lakhs) and Rs. 1.75 lakhs has been set aside for loss on sale of investments. The carry-forward is Rs. 47,303, against Rs. 56,618 brought in. Depreciation was given Rs. 3.79 lakhs (against Rs. 3.05 lakhs), before arriving at the profit figure.

Dhanalakshmi Mills Earns More

The Dhanalakshmi Mills Ltd, Tirupur, has reported encouraging results for the year ended December 1961. Sales increased by about 12 percent from Rs. 1.44 crores to Rs. 1.61 crores. The profit improved by about 33 percent from Rs. 24.72 lakhs to Rs. 32.91 lakhs. After providing Rs. 8.40 lakhs (against Rs. 7.48 lakhs) for depreciation and Rs. 8.50 lakhs (against Rs. 4.70 lakhs) for taxation, the net profit amounts to Rs. 13.98 lakhs, against Rs. 11.04 lakhs in 1960. The dividend has been maintained at 17.5 percent subject to deduction of tax, absorbing Rs. 8.50 lakhs. Appropriations include development rebate reserve Rs. 1.10 lakhs (against Rs. 3.29 lakhs), contingencies Rs. 80,000 (against nil), and bonus in relation to previous years Rs. 2.69 lakhs (against Rs. 1.39 lakhs). After making minor adjustments, there remains Rs. 487 to be carried forward.

Higher Profit for G. Claridge

G. Claridge and Company has reported encouraging results for 1961. The gross realisation on printing, binding, litho and box making increased from Rs. 38.11 lakhs to Rs. 48.73 lakhs, while the gross profit has risen from Rs. 4.46 lakhs to Rs. 9.79 lakhs. After providing Rs. 1.28 lakhs (against Rs. 97,000) for depreciation, Rs. 52,000 (against Rs. 14,000) for development rebate reserve and Rs. 3.67 lakhs (against Rs. 1.58 lakhs) for taxation, the net profit amounts to Rs. 3.35 lakhs, against Rs. 1.40 lakhs in 1960. The improved

results have enabled the directors to increase the dividend from Rs. 20 to Rs. 30 a share, subject to deduction of tax. A sum of Rs. 1.23 lakhs has been transferred from reserve for taxation and Rs. 3 lakhs from plant rehabilitation reserve. The allocation to general reserve has been raised from Rs. 15,000 to Rs. 6.50 lakhs. The proposed dividend absorbs Rs. 2.40 lakhs, against Rs. 1.60 lakhs. After making minor adjustments, there remains Rs. 9,716 to be carried forward, against Rs. 5,575 brought in.

The directors state that new machinery of the value of Rs. 3.20 lakhs was installed during the year. Machinery worth Rs. 4 lakhs is expected to arrive this year. In order to modernise the plant, G. Claridge has asked the Government for permission to import further machinery of the value of Rs. 9 lakhs. The authorised capital is proposed to be increased from Rs. 8 lakhs to Rs. 50 lakhs by creating 42,000 equity shares of Rs. 100 each.

High Costs in Canning

Speaking from the chair at the annual general meeting of the All-India Food Preservers Association, held last week in Calcutta, Mr. K.U. Patel said that high costs prevailed in the industry due to heavy raw material and other charges. This hampered further development. The prices of fruits and vegetables of satisfactory quality, sugar and packing materials, such as bottles and cans, were higher than in industrially advanced countries. Mr. Patel pointed out that a canner in Australia got sugar at Rs. 16 a maund, whereas an Indian canner had to pay anything over Rs. 40 a maund. Good quality bottles manufactured by automatic machines cost at least 40 percent more in India than in countries like the U.K. The cost of cans is about 18 percent higher, labels 70 percent, and packing cases about 200 percent. The railway freight rates are also disadvantageous to the industry. These have hindered its export promotion efforts. The industry has not been allowed to import machinery to modernise its operations. Hand peeling, hand trimming, or visual grading of the material, do not make for eye appeal, in spite of the product being good and wholesome, Mr. Patel emphasised.

The president said that adequate attention has not been paid to the growing of fruits and vegetables in India, although this would be more remunerative to the farmer. India produces only about 7 million tons of fruits and vegetables a year; a substantial portion of this consists of fibrous types. The country produces only 40,000 tons of canned products a year. The U.S.A. produces 35 million tons of fruits and vegetables annually, and at least 75 percent of this is used for canning and preservation. The U.K. which has largely to depend on imports of fruits and vegetables, has been making canned products in steadily increasing quantities. Her output was 762,600 tons in 1958, 795,400 tons in 1959, and 843,000 tons in 1960.

Hemp Exports Decline
