CONSENT of the Central Government has been obtained by Braithwaite & Company (India) Limited to issue 40,000 Redeemable Cumulative Preference shares of Rs 100 each, at par, payable in full on application. The subscription list will open on 28 August and close on 30 August 1962 or later at the discretion of the directors. Of this issue, firm applications have been received from the underwriters and their friends for 20,000 shares and these will be accepted in full. The balance of

20,000 shares will be offered to the general public. Application will be made to the Calcutta Stock Exchange for permission to deal in these shares of the company now being offered and, in due course, for an official quotation. Applications for shares must be for a minimum of 10 shares or for multiples of 10 shares.

The preference shares will confer on the holders thereof the right to receive a fixed cumulative preference dividend to accrue from the date of allotment at the rate of 9 per cent per annum (without any deduction therefrom on account of income-tax payable by the company, but subject to deduction of tax under Section 194 of the Income-Tax Act 1961 or any statutory modification or re-enactment thereof for the time being in force) on the capital for the time being paid up thereon and the right in a winding up to repayment of capital and arrears of dividend, whether declared or not, down to the commencement of the winding up in priority to the Ordinary shares, but shall not confer any further right to participate in profits or assets.

It is understood that the funds raised by the above issue will be utilized for the manufacture of new articles for which licence have been granted by the Government. It is proposed to manufacture electric overhead travelling cranes,

dockside level lifting cranes, railway break-down cranes and heavy structural, and for carrying on of part of the business of the existing industrial undertaking of the Anglo-Indian Company Limited for the manufacture of cast iron castings and steel forgings.

The company's order book is at present, in a satisfactory state and, subject to the continued availability of raw materials and electric power supplies, it is anticipated that production during the current year will exceed the figure for 1961. Further increases are to be expected in 1963 and 1964. In the longer term, the directors believe that, having regard to the progressive development of the Indian economy, there will be an increasing demand and therefore a ready market for the company's products.

The present preference issue should prove quite attractive to investors considering the high reputation of the Company and the record of its working in recent years. As Braithwaite has been expanding and diversifying its production, there is every reason to expect that profits in coming years will show further sizeable improvement.

NEW ISSUE NOTES
Bombay Steel

The Bombay Steel Rolling Mills Limited, Calcutta, is raising new capital of Rs 15,59,900 in 1,55,990 equity shares of Rs 10 each for cash, at par. The capital is required for the establishment of a rolling mill at Kalyani, Nadia district.

Assam Gas

The Assam Gas Company Limited, a State Government undertaking, is to issue Rs 15 lakhs, divided into 15,000 equity shares of Rs 100 each, to be subscribed by the State Government for cash, at par. The proceeds will be used for payment of technical consultancy.

DEBENTURE ISSUE NOTES
Tata Hydro

The Tata Hydro-Electric Power Supply Company Limited, Bombay, is to issue Debentures of Rs 100 lakhs. The Debentures will carry interest not exceeding 6½ per cent and will be offered to the public through a prospectus. The proceeds will be utilized for the company's programme of modernisation, improvements and rehabilitation.

Tata Power

The Tata Power Supply Company Limited is to issue Debentures of Rs 85 lakhs. The Debentures will carry interest at a rate not exceeding 6½ per cent and will be offered to the public through a prospectus. The proceeds will be utilized for the company's programme of modernisation, improvements and rehabilitation.

BONUS ISSUE NOTES

Calico Mills

The Ahmedabad Manufacturing and Calico Printing Company, Ahmedabad, will be issuing bonus shares of Rs 6.25 lakhs on capitalisation of the company's General Reserve.

Parle Products

Parle Products manufacturing Company Limited, Bombay, is issuing bonus shares of Rs 11.76 lakhs on capitalisation of reserves to a like extent.

Kaiser-I-Hind Mills

The Ahmedabad Kaiser-I-Hind Mills Company Limited has been granted to the issue of Rs 2.75 lakhs bonus capital on capitalisation of the company's reserves to a like extent.

INVESTMENT NOTES
Rallis India

Sometime ago, it was announced that Rallis India Limited would be holding an extraordinary general meeting on 24th August to pass certain resolutions to enable the sub-division of each equity share of Rs 100 in the company into 10 equity shares each. It was also announced that Fisons Limited had acquired a very large block of shares of the company and that they intended to pass over some of those shares to other interests. The directors consider that it will be inappropriate to pursue the proposal to sub-divide the company's shares while a large proportion of the shares is in the process of changing hands. Shareholders are, therefore, advised that it is the directors' intention to adjourn sine die the extraordinary general meeting of 24 August without transacting any business which it had been intended to put before the meeting.

In furtherance of their policy of expansion of their interests in India, Fisons of U.K., announce the purchase of forty-five per cent holding in the ordinary capital of Rallis India Limited. Fisons propose to transfer upto fifty per cent of this holding to Tata and their associates. Fisons present investments in India include Tata-Fison Limited, one of the leading pesticide companies in India which started manufacturing in 1957, Bengel Laboratories (India) Limited, manufacturers of pharmaceutical specialities whose factory at Konnegar, near Calcutta, is nearing completion, and Whiffens (India) Limited, manufacturing Emetine.

Universal Electrics

Universal Electrics Limited, has extended the last date of payment of the first and final call on the equity shares in the company from 18 August to 15 September 1962.

Indian Rayon

The Indian Rayon Corporation Limited, which commenced production of viscose yarn and to set up its first ready-made plant, proposes to take two new lines of manufacture. The first is the setting up of a unit for the manufacture of large size technical welded pipes for which it has already received an industrial licence. The company has secured the collaboration of two foreign firms. The second project is the setting up of a rayon fibre plant at Veravalloor for which an application for industrial licence has been

ORIENT PAPER MILLS LIMITED

(Regd. Office: Brajrajnagar, Dist. Sambalpur, Orissa)

NOTICE

NOTICE is hereby given that the Annual General Meeting of the Orient Paper Mills Limited will be held at the registered office of the company at Brajrajnagar in the District of Sambalpur (Orissa) on Friday, the 14th September, 1962 at 3 P.M. for the following purposes:—

- To receive and consider the report of the directors and to adopt the audited accounts of the company for the year ended 31st March, 1962.
- To declare dividends on Preference and Ordinary Shares.
- To elect directors in place of Shri J. P. Poddar and Shri B. N. Chaturvedi who retire by rotation and are eligible for re-election.
- To appoint Auditors for the current year and to fix their remuneration.
- AS SPECIAL BUSINESS
To consider and if thought fit to pass with or without modification the following resolutions to be proposed as special resolutions:—

- Resolved that the Articles of Association of the Company be amended by adding after Article 126(b) the following Article to be numbered as Article 126(c) viz.,

"The Board may appoint any person to act as an alternate Director for a Director during the latter's absence for a period of not less than three months from the State in which meetings of the Board are ordinarily held and such appointment shall have effect and such appointee, whilst he holds office as an alternative Director, shall be entitled to notice of meetings of the Board and to attend and vote thereat accordingly; but he shall not require any qualification and shall ipso facto vacate office if and when the absent Director returns to the State in which meetings of the Board are ordinarily held or the absent Director vacates office as a Director."

By Order of the Board,
Per Pro. BIRLA BROTHERS
PRIVATE LTD.,
G. D. MAKHARIA,
Managing Agents.
15, India Exchange Place,
Calcutta, the 6th August, 1962.

N.B.—

- A member entitled to attend and vote is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member.
- The Share Registers and Transfer Books of the Company will remain closed from the 16th August to 29th August, 1962, both days inclusive.
- The dividends, when declared, will be payable to registered shareholders as on the 29th August, 1962 or to their mandatees on or after the 15th October, 1962.
- The Explanatory Statement as required under Section 173 of the Companies Act, 1956 has been forwarded to the members of the Company along with the Notice of the meeting.

For the Investor

INVESTMENT GOSSIP

Lack of
Incentives

THE stock market has continued to rule dull this week in the absence of fresh incentives. The fact that Dalal Street remained closed for two consecutive days was partly responsible for the small business. It is not surprising that buying interest is for some time now conspicuous by its absence. For, the outlook for equities in the immediate future is rather confused what with the drastic import cut and the continued shortage of coal, power, and transport. Concern is also expressed over the future of exports to the UK as it has been made clear by EEC that with the notable exception of tea, exports from India will generally be progressively subjected to common external tariff of the enlarged community.

The situation in the northern border has given rise to fresh mis-

giving. Early this week Parliament debated the situation inconclusively. Opposition members tried unsuccessfully to get from the Prime Minister an assurance that no negotiations with the Chinese over the border would be undertaken before the Chinese vacated their aggression and took themselves away beyond the international border as shown from the evidence collected by our officials. Mr. Nehru asked and obtained a free hand to deal with the Chinese, subject to the proviso that nothing that will sully the name of India or barter her rights will be agreed to. The general impression is also that the military situation in Ladakh continues to be serious and the country must be prepared for any eventuality. All this adds up to a major source of uncertainty about the immediate future.

Operators are disappointed over the inordinate delay in the announcement of the steel retention price. Almost everyday for the past several days the announcement was considered to be imminent. The two

made. The directors are of the view that, as the installation of the full 10-ton capacity for filament rayon has already been taken in hand, it will be profitable to instal the productive capacity for stable-fibre as well.

INVESTMENT BRIEFS

Malabar Industrial Company Limited has reduced the dividend from 9 per cent to 5 per cent, taxable, for the year ended 28 February 1962.

Attikhan (Biligiri) Limited has passed over the dividend on the ordinary shares for the year ended 31 March 1962 as against a taxable dividend of 12 per cent paid previously.

Peninsular Plantations Limited has proposed to maintain the dividend at 20 per cent, taxable, for the year ended 31 March 1962. An interim dividend of 20 per cent, taxable, has already been paid. There is, therefore, no final dividend.

Krishnarajendra Mills Limited has maintained the ordinary dividend at 11 per cent, taxable, for the year ended 31st March 1962.

JARDINE HENDERSON, LTD.

NOTICE OF ANNUAL GENERAL MEETING.

Notice is hereby given that the Sixteenth Annual General Meeting of the Members will be held at the Registered Office of the Company, No. 4, Clive Row, Calcutta-1, on Wednesday, the 26th September, 1962 at 11.30 a.m. for the following purposes:—

(1) To receive and consider the Audited Accounts for the year ended 31st March, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and Auditors thereon.

(2) To confirm the Dividends already paid on the Preference Shares and to declare a Dividend on the Ordinary Shares of the Company.

(3) To appoint a Director in place of one retiring.

(4) To appoint Auditors and to fix their remuneration.

Notice is also given that the Transfer Books of the Ordinary Shares of the Company will be closed from the 13th September to the 26th September, 1962, both days inclusive.

A Member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and a proxy need not be a member of the Company.

By Order of the Board,
C. EVANS,
Acting Secretary.

4, Clive Row, Calcutta-1,
10th August, 1962.

STOCK EXCHANGES

Restrained Behaviour

Watch-Dog Writes:

IN the absence of any incentive, stock markets have continued to remain subdued. Fresh support shows distinct signs of peetering out at higher levels. Although bears are far from aggressive, bulls are extremely cautious in view of their experience in the recent past.

Lacking any support, prices on the Calcutta Stock Exchange drifted to lower levels due to scattered liquidation.

Dull conditions continued on the Bombay Stock Exchange where prices closed with mostly small declines from the previous week's levels.

The Madras Stock Exchange witnessed only thin trading and prices showed a mixed trend.

Although business on the London Stock Exchange remained at a high level, it was more of a two-way character.

Aggressive demand near the close pushed Wall Street to the week's highest levels, thanks to the approval of President Kennedy's tax message.

CALCUTTA

Friday Evening.

A number of factors combined to foster dull conditions, a restriction of business and generally easier prices on the local stock exchange during the week under review. Although fresh support at lower levels was discernible, prices showed a tendency to relapse due to a lack of follow-up support.

It looked as if the market preferred to wait for some time, rendering a clearer picture of the new economic and industrial policy. Hopes were entertained that the cut in the import quotas for industrial raw materials would be restored. But the official indication that imports might be slashed for the current half-year gave rise to a fear that industrial production would be hampered henceforward. Earning of foreign exchange to make good the deficit in the current maintenance imports was also considered to be out of question.

Secondly, there was still no news about steel retention prices. As a matter of fact, there was a revival of the rumours that the steel retention prices would not be uniform, but on a differential basis depending upon each unit. This factor coupled with the fear that the TISCO might be compelled to prune the dividend brought forth selling pressure in Indian Irons which, in turn, created a subdued atmosphere in the whole market.

Finally, operators felt that the postponement of Britain's entry to

the ECM would mean relief to Indian exports until then. Others, however, thought that the postponement would mean continuation of the uncertainties. It was, therefore, feared that the export trade might suffer under the impact of the current tendency on the part of various countries to establish tariff blocs.

For obvious reasons, professional operators preferred to keep on the sidelines, while the investors were unable to take a hopeful view in the light of the many uncertainties. As interest rates had risen all-round, investors were not sure whether the yields of many good shares at the current prices were sufficiently attractive. There was, therefore, a general disposition to press offerings even on small upturns, providing for irregular movements and an indecisive trend of prices.

The Giltedged market witnessed rather restricted activity. While the demand for short-dated issues was well maintained, longer dated issues were not favoured. Although the new State Loans were offered at a higher rate of interest, there were still no visible declines in the rates of the existing State Loans. 3 per cent 1966 Conversion Loan changed hands at Rs 68.75 to Rs 69, to finish the week at Rs 68.90.

Bank shares were quiet with Punjab National moving narrowly around Rs 20.81

Jute shares lacked support as operators showed greater anxiety over the prospects for exports of jute goods and the unstable conditions prevailing in the gunny market. Birlas were offered at one time at as low as Rs 33 from Rs 33.31; Howrah at Rs 20.06 from Rs 20.25 and New Central at Rs 14.37 from Rs 15.37 to finish better at Rs 33.25; Rs 20.25 and Rs 14.56 respectively. Megna were unchanged at Rs 13.87 and so also Kankarajh at Rs 115.

Coal shares remained inactive, reflecting the revised lower target production for the Third Plan. The only shares, that came in for sustained enquiry, were East Indian having buyers up to Rs 52.37 from Rs 52; Bengal up to Rs 353 from Rs 51.50 and Equitable up to Rs 28.50 from Rs 28.25. Burrakun fluctuated irregularly between Rs 17.37 and Rs 17.62, to close finally at Rs 17.50.

Thanks to the news of the EEC countries having agreed to abolish the common external tariff on the common external tariff on the commodity, Tea shares came in for selective enquiry although profit-taking erased some of the extreme gains towards the close. Brooke Bond met with business at Rs 14.44 to Rs 14.50; Bishnauth at Rs 17.81 to Rs 17.94; Grob at Rs 8.69 to Rs 8.94; Hattikihira at Rs 9.00 to Rs 9.25; Jay Shree at Rs 16.94 to Rs 17.06 and Tezporo at Rs 14.94 to Rs 15.06.

The difficulties, outlined by Mr Puri, President, at the recently-held meeting of the Indian Sugar Mills Association, had an adverse effect on Sugar shares, which remained practically neglected. Raza/Buland were

on offer at Rs 9.44 to Rs 9.56 and SKG at Rs 8.81 to Rs 9.06. Dyer Meakings were, however, easily absorbed up to Rs 32.62 from Rs 32.25, thanks to the bonus issue.

Textile shares lacked any support due to uncertainties over the exports of piecegoods and yarn. Jay Shree changed hands at Rs 15.25 to Rs 15.44; Dunbar at Rs 31.75 to Rs 32.25 and J. K. Rayon at Rs 16.75 to Rs 17.37. Bowreah lost more than half a point at Rs 26.12.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to realising pressure on rumours of the possibility of fixing differential retention prices. Against the previous week-end closing of Rs 26.62, Indian Irons opened lower at Rs 26.56 and receded further to Rs 26.36 before improving towards the close to Rs 26.50. In sympathy, TEXMACO moved down at one time to Rs 22.70 from Rs 23.10 (Rs. 22.85); Guest, Keen, Williams to Rs 37.69 from Rs 38.12 (Rs 38.06); Jessop to Rs 22.25 from Rs 22.56 (Rs 22.50); Calcutta Steel to Rs 15 from Rs 15.50 (Rs 15.25) and Binani Metal to Rs 11.69 from Rs 12 (Rs 11.75). Indian Standard Wagon turned quiet at Rs 34.62 against Rs 34.87 and so also Braithwaits at Rs 34.50 against Rs 35.25 on the announcement of the company's proposal to make a preference issue.

Although Miscellaneous issues attempted at a mild recovery early in the session, lack of follow-up support induced a quieter tendency towards the close. Following were the price trends of a few selected shares:

	As on Week's Week's 11 Aug. Low Closing		
	Rs	Rs	Rs

★

BALANCE-SHEET BRIEFS

The working of the Sutlej Cotton Mills Limited has resulted in a lower profit of Rs 30.91 lakhs for the year ended 31 March 1962 as against Rs 59.83 lakhs for the preceding year. The directors have, however, maintained the dividend at Rs 8.57 per share, less tax.

Company Reports

Higher Profits for Larsen & Toubro

THE rise in sales from Rs 3.51 crores to Rs 5.71 crores is reflected in the working results of Larsen & Toubro Limited for the year ended 31 March 1962. The net profit before providing for Depreciation and Taxation, amounts to Rs 56.56 lakhs as against Rs 53.04 lakhs for the previous year. In this connection, it may be added that the former figure includes Rs 1.13 lakhs being provision for taxation no longer required and the latter Rs 1.28 lakhs being provision for taxation no longer required.

In respect of allocations, General Reserve and Dividend Equalisation Reserve are maintained at Rs 2.50 lakhs and Rs 1.00 lakh respectively. The Depreciation amount is raised to Rs 12.20 lakhs from Rs 11.52 lakhs and Taxation to Rs 21.00 lakhs from Rs 17.40 lakhs. The provision for Development Rebate Reserve is lower at Rs 2.96 lakhs against Rs 4.82 lakhs. The dividend on the ordinary shares is reduced from 18 per cent to 14 per cent, subject to deduction of tax.

Against a paid-up capital of Rs 1.25 crores, reserves and surplus are shown at Rs 44.74 lakhs. Gross block at Rs 1.51 crores is depreciated by Rs 48.26 lakhs, leaving a net block of Rs 1.02 crores.

According to the directors' report, the company, during the course of the year, acquired at par, further 87,500 equity shares at Rs 10 each of Utkal Machinery Limited, Bombay, whereafter the company's total investment in that company stands at Rs 40 lakhs. A further issue of 7 lakh equity shares, at par, is shortly proposed to be made by that company and the directors have expressed their willingness to subscribe, up to the company's maximum entitlement of 1,55,556 right shares.

Further expansion of production facilities in the company's workshops at Powai, Bombay, and at Madras, involving a substantial addition to fixed assets was undertaken. This expansion has been necessary to develop indigenous production of light and medium heavy engineering plant and machinery in collaboration with Overseas Principals and Manufacturers.

Although these developments have, to a certain extent, proved a strain on the year's working results, they are a good portent for the future when progressive reduction in the import trade will make the company and its customers more and more dependent on domestic manufacture. With the continued increase in the company's sphere of activities, and with the manufacturing facilities being progressively enlarged, the directors view the future with confidence.

At the forthcoming annual meeting, the consent of the shareholders for an investment of Rs 1.50 lakhs in the equity capital of Eutectic Welding Alloys of India Private Limited, Bombay, will have to be obtained. The foreign collaborators have undertaken to invest an equal amount. This company has been formed for the purpose of manufacturing "Eutectic" low temperature welding alloys, fluxes and electrodes.

Towards the end of the year under review, the directors resolved to increase the subscribed capital of the company by the issue of further 5,50,000 equity shares of 10 each. These were issued during the current year at a premium of Rs 8 per share and were fully subscribed.

McLeod Repeats

Despite a rise in sales from Rs 2.72 crores to Rs 4.17 crores, McLeod and Company Limited has reported a decline in the net profit from Rs 20.32 lakhs to Rs 15.28 lakhs for 1961, mainly due to reduced dividend income and lower earnings from the jute mills and the tea companies under its management.

Apart from maintaining Convertible Notes Redemption Reserve at Rs 2.00 lakhs, the Depreciation amount is raised to Rs 1.19 lakhs from Rs 97,736. The provision for Taxation is lowered to Rs 2.68 lakhs from Rs 5.20 lakhs and Development Reserve to Rs 4,923 from Rs 8,623. No provisions are made for General Reserve and Investment Reserve against Rs 1.00 lakh and Rs 1.75 lakhs respectively in the preceding year. The dividends, both on the Ordinary and Deferred shares, are maintained at 15 per cent and 10 per cent respectively, subject to tax.

Britannia Biscuit Fares Well

The Britannia Biscuit Company Limited has produced satisfactory working results for the year ended 31 March 1962. While sales have risen to Rs 4.28 crores from Rs 3.29 crores, the net profit, before providing for Depreciation and Taxation, works out to as much as Rs 81.37 lakhs as against Rs 62.39 lakhs for the previous year.

In respect of allocations, the Depreciation amount is increased to Rs 8.61 lakhs from Rs 6.71 lakhs; Taxation to Rs 38.26 lakhs from Rs 24 lakhs and General Reserve to Rs 13.76 lakhs from Rs 12.70 lakhs. Dedemption Resumption Reserve is maintained at Rs 1.50 lakhs, while Development Rebate Reserve is slightly lower at Rs 1.98 lakhs against Rs 2.96 lakhs. The directors have proposed a taxable dividend of 25 per cent on the ordinary capital increased by the issue of bonus shares as against a taxable dividend of 30 per cent on the original capital.

During the year, a modern Bread Plant, manufactured in India, was brought into operation at Bombay.

Export effort has been intensified and the company has achieved further progress in overseas markets.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

Big feature of 1962 is the Seattle World's Fair: April 21 through October 21.

...and you're only hours away by Pan Am Jet!

America's outstanding tourist attraction in 1962 is the Seattle World's Fair. The theme of the Fair is "Century 21", and in a huge pavilion—actually a "floating city"—visitors can see how the world is likely to work, play and travel after the year 2000.

Now Pan Am flies Big Jet Clippers twice daily through India. Seattle is a mere 12 jet Clipper hours "over the Pole" direct from London. If you prefer, Pan Am can take you to Seattle via Bangkok, Hong Kong, Tokyo and Honolulu. Best of all, a Pan Am round-the-world ticket, costing as little as Rs. 6053 from Calcutta, gives you Seattle, the U.S.A. and Europe and Asia too! No matter which route

you choose, you'll find that Pan Am jet Clippers make good connections with domestic flights to all other parts of the U.S.A.

Choose first-class *President Special* or *Rainbow Economy* service! Both available on every flight and both feature internationally famed cuisine by *Maxim's of Paris*.

The Priceless Extra of Experience: You'll enjoy this priceless extra reflected in the innumerable ways Pan Am people help make you a happy, carefree traveller.

For reservations, call your Travel Agent or Pan Am in:

Calcutta: 42 Chowringhee, Tel. 44-3251 (5 lines)

Import Substitution

The scope for import substitution by indigenous production was discussed early this week at a meeting of the Planning Commission and representatives of the Federation of Indian Chambers of Commerce and Industry. The discussion had as its basis the detailed memorandum submitted by the FICCI in June last. Mr Nanda announced at the meeting the setting up of a panel of experts drawn from government and industry under the chairmanship of Mr G. L. Mehta. The FICCI has undertaken to prepare a list of items required by the industry that can be manufactured in the country. The expert panel will presumably examine these items, their scope and the related problems of their manufacture, and make suitable recommendations. Meantime, some relevant considerations may be stated.

The logic of import substitution cannot linger enough in the context of scarce foreign exchange but it should be fitted in a larger solution of the stresses in the economy. These are the results both of the exigencies of growth and bad planning and execution and it is not always easy to disentangle the one from the other. Side by side with idle capacity, there are unutilised licences for setting up plants whose production will obviate imports for direct consumption (like fertilisers) or for activating idle capacity. Of course, not all idle capacity is in that predicament because of lack of essential imports or indigenous substitutes. Some at least of such capacity is the result of misdirected import substitution, that is to say, substitution of comparatively inessential imports.

Secondly, import substitution may, in the short run, involve further drafts on scarce foreign exchange for capital goods. The determination of the priority of such calls on foreign exchange would be ticklish. There is then the time-lag. Our foreign exchange problem has its short-term as well as long-term compulsions. Import substitution being essentially a short-term solution, (at least in its immediate inspiration), both the new pressure on funds and delay are factors that enter in the calculation. From the point of view of idle capacity, the attractions of incurring the import bill in order to activate such capacity must be strong. This would be so particularly in the case of industries whose export potentialities are great. On the other hand, too ready a disposition to import (though scarcely capable of running riot in the present circumstances) can take away the incentive for a programme of import substitution. The long term objective of a measure of self-sufficiency in capacity for producing our needs of intermediates and spares and components would be thwarted by this.

There is thus discernible a certain amount of conflict between the ideals of export promotion and of import substitution. It is possible to argue that the components needs of industries (including those engaged in manufacturing goods for exports) should be

met by export earnings and a vigorous export drive would solve the problem. In other words, the way to solve the foreign exchange difficulties is to earn more and not spend less foreign exchange. The proponents of this view will also argue that a mature economy is not necessarily one that is self-sufficient. Any realistic appraisal of our export hopes makes such offhandness about import substitution somewhat unreal, though in particular cases, imports for use by export industries would make better economic sense. No doubt the problem would be decided empirically when the occasion arises.

The logic of import substitution is compellingly applied as a sort of rule of thumb. The cost factor, for example, is not easily overlooked. During the week, the question arose in the context of automobile industry, polemically in some characteristic observations of Mr T. T. Krishnamachari and less combatively in Mr C. Subramaniam's comments on the same subject. The cost of indigenous components is higher than those imported. No doubt, there is scope for reducing the cost of production by rationalising organisation of production. We presume that the Mehta Panel would not only recommend on the scope but also on the mode of organisation and other details of import substitution. Another aspect of the question is the quality of the indigenous substitutes. Both the quality and the cost have relevance from the point of the domestic consumer who is something of an orphan in the economy at the moment. They also have their relevance in the context of exports again, where our cost and quality may compare unfavourably as a result.

But the thinking on import substitution will have to be on details rather than on generalities. There are probably items which we import which we need not. The FICCI mentions wool and rubber as two such whose imports may be obviated by alternative processes. This gives a clue to the importance of research and technological awareness in making resourceful use of available material. The technical panel will no doubt go into the details of possibilities of technological substitutes. Thirdly, the nature of our imports themselves have been changing and can change further. Instead of importing processed materials, we may import the raw materials and do the processing here and save the manufacturing cost. The question of our being able to get alternative imports is also tied up with the readiness of our suppliers to co-operate with us in the switch-over. For instance, the FICCI's suggestion of substitution of fertiliser plants for food grains in our import list is not easy in view of the tie-up between food import and P.L. 480 exports of surplus agricultural commodity. Conceivably, there will be other items where similar difficulties may arise. Even so, the area where import substitution is possible is large enough to engage the minds of the technical panel going into the question.

Warehousing

A major programme undertaken in the course of the two plans for the improvement of agricultural marketing was to set up warehousing facilities under Central and State sponsorship in various parts of the country. The relative absence of facilities in this regard was as much responsible for the defective marketing structure as other factors like transport difficulties, inadequate grading, etc. Considering that the relative price spread between what the actual producer receives as price for his produce and what the consumer at the other end pays which is as much as 42 per cent and 75 per cent depending upon the various commodities, it should be plain that in any attempt to relieve the depressed living standards of the agricultural population, the greatest importance should attach to the improvement of the marketing structure. The significance of warehousing facilities in improving agricultural marketing derives not only from the facilities for storage that go with it but more importantly from the facilities for credit that it provided to the cultivator. As with other aspects of marketing in respect of setting up warehouses also, the real stimulus to national efforts was provided by the programmes charted out by the Rural Credit Survey in its report. At the recommendations of the Survey, a Central Warehousing Corporation at the apex level and State warehousing Corporations at State levels were set up to undertake an extensive programme of establishing warehouses in the country.

An assessment of the progress so far made in the setting up of warehouses contained in the July issue of the Reserve Bank of India Bulletin indicates commendable performance particularly by the Central Warehousing Corporation during the last five year period.

TARGETS AND ACHIEVEMENTS

Year	Number of Central Warehouses		Number of State Warehouses	
	Targets	Achievements	Targets	Achievements
1957-58	...	6	50	42
1958-59	...	4	...	...
1959-60	10	17	103	106
1960-61	21	13	127	122
Total	40	40	280	266

In terms of number of warehouses, the Second Plan programmes were very nearly fulfilled. But the fact that the majority of these warehouses were located in hired accommodation would seem to detract from the performance. The State Warehousing Corporations have been the worst defaulters in this regard and not a single new warehouse has emerged from new construction. In terms of storage capacity, however, the progress is not as impressive as appears from the number of warehouses established. While the Second Plan envisaged a total capacity of 1 million tons by the end of Plan period the storage capacity created by the Central Warehousing Corporation and the State Warehousing Corporations added up to only 356,000 tons, the respective shares being 79,023 tons and 277,877 tons. Progress between the different States has tended to be uneven reflecting mainly the delays in the setting up and commencement of the proper and effective functioning of the individual State Corporations and their warehouses.

Uttar Pradesh accounted for the highest capacity among States with a figure of 87,373 tons and is followed by Maharashtra, Mysore and Madhya Pradesh with capacities of 43,930 tons, 38,417 tons and 37,256 tons respectively. In a majority of States, the capacity was well below 20,000 tons. The relative slow progress of warehousing by State Warehousing Corporations is also reflected in the composition of their finances. In the case of the Central Warehousing Corporation, a sizable portion of funds was held in the form of investments comprising shares of State Warehousing Corporations. On the other hand, in the case of the State Warehousing Corporations there was a sizable concentration of investments in bank deposits. Fixed assets comprising land, buildings, godowns, warehouses etc constitutes only an insignificant proportion of the total assets.

An intensified programme for setting up of warehouses has now been initiated under the Third Plan by both the Central Warehousing Corporation and the State Warehousing Corporations. For the Central Warehousing Corporation, a target of 60 Central warehouses has been fixed for the Plan period. The target for capacity for both the Central and State Warehousing Corporations has been fixed at 1.6 million tons. Prospects of reaching the target are very reassuring considering the progress already made. For example, the Central Warehousing Corporation has already set up 20 new warehouses during 1961-62. Besides, many State Warehousing Corporations have also initiated the necessary action for construction and acquisition of warehouses. During 1961 there has been a remarkable spurt in the activities of the State Warehousing Corporations which is borne out by the increase in the number of State Warehousing Corporations to 344 as at the end of December 1961 with a storage capacity of 303,796 tons.

Considerable progress has also been made in the most significant aspect of warehousing, namely the scheduled banks advances to agriculturists against warehouse receipts. The outstanding advances against the receipts of the Central and State Warehousing Corporations rose from Rs 5.69 lakhs in 1961 to Rs 9.24 lakhs as at the end of March 1962. Although Advances against the security of warehouse receipts represent only a negligible proportion of the secured advances of the scheduled banks, their share in the total advances against individual commodities, such as foodgrains, groundnut, other oilseeds etc. has shown significant improvement over the last two years. The Reserve Bank study shows that these three commodities accounted for nearly 94 per cent of the total advances made by the scheduled banks against the security of warehouse receipts. In the States, the outstanding advances have reflected the varying growth of warehousing facilities in the different States. Much however remains to be done to popularise the use of warehouse receipts as an instrument of credit. At present the warehouse receipts lack, on account of some anomalies of the Company Law, all the attributes for free negotiability. Though under Section 17 (4) (d) of the Reserve Bank of India Act the Reserve Bank is authorised to make advances on the promissory notes of any scheduled bank or State Cooperative Bank supported by documents of title to goods which satisfy certain conditions, owing to absence of licensed warehouses, the section had remained inoperative. All these impediments have to be removed to give the necessary impetus to development of warehousing. Further,

though the Cooperative banks were expected to play a significant role in development of warehousing, the slow growth of cooperative marketing has left very little scope for progress of warehousing through cooperatives. In this light, the programmes for the setting up of marketing cooperatives have considerable significance for the warehousing development. As the Reserve Bank Study states "with the further development of the marketing co-operatives, warehousing facilities would have to be resorted to on an increasing scale by the cooperatives and the warehouse receipts may emerge as a major instrument for financing inter-State purchases and sales operations among the cooperatives."

That warehousing has made tangible headway, there can be no gainsaying. One striking piece of evidence on this is the increase in the number of commodities seeking warehousing facilities to 64 against a bare few in the beginning. From figures available of the pattern of utilisation, it is evident that warehousing facilities are being availed of more by the traders than by actual produ-

25 August 1962

cers. The percentage of growers utilising warehousing facilities is very low compared to the percentage of traders utilising the same. The Reserve Bank attributes this discrepancy in utilisation to the inability of marketing cooperatives in their present state of development to avail of these facilities. Considering that it is the price received by the producer which is in need of improvement, it is necessary to make warehousing as attractive to them as possible. In this light not only have facilities to be provided at centres easily accessible, but also the warehousing charges have to be reasonable and storage facilities proper and adequate. The emphasis laid by the Reserve Bank study on adapting storage facilities to the local requirements is not out of place in the light of the known resistance on the part of the growers and dealers to a changeover to a new method of storage. Special types of facilities to suite the requirements of the various commodities are particularly essential.

Co-operative Marketing of Paddy in Andhra Pradesh

MARKETING of paddy in Andhra Pradesh, and the impediments to the development of the co-operative sector, are examined in the report of the Study Team which was set up by the National Co-operative Development and Warehousing Board in June last year. Specific targets of the number of co-operative marketing societies were indicated in the Second Plan which visualised that the 1800 primary marketing societies to be established during the plan period would be able by 1961 to handle 10 per cent of the marketable surplus of agricultural produce. While the number of marketing societies has exceeded the plan target, the position is not so clear in regard to the operational target. Most of the societies have been concerned more with supply and distribution functions rather than marketing of agricultural produce and the figures of turnover that are available are mixed up with those relating to consumer goods handled by some of these societies. On account of the dearth of relevant data, there are difficulties in assessing the volume of agricultural produce actually marketed by the societies. Moreover, in the Southern States, the marketing of paddy has generally remained outside the range of activities of the co-operatives. It has also been noted that progress in the field of co-operative marketing has been far from uniform in the different States. Six States, Maharashtra, Uttar Pradesh, Punjab, Gujarat, Madras and Mysore, account for over 80 per cent of the sales undertaken by marketing societies of various kinds.

The progress of co-operative marketing during the Second Plan was reviewed by the Executive Committee of the National Co-operative Development and Warehousing Board in June last year on the basis of a Board in June last year on the basis of a Study Team to examine and report on the development of the co-operative sector in the marketing of important agricultural commodities including paddy in Andhra Pradesh. The choice of Andhra for investigations in regard to paddy is explained by the ranking of the State among the paddy growing regions.

Though Andhra Pradesh ranks only sixth among paddy growing States in respect of acreage, it comes second in the matter of output, contributing 13.2 per cent of the total production of rice in the country. The marketable surplus is also comparatively high, constituting 34 per cent of the total production, and even more significant, fifty per cent of the marketable surplus is exported to other States. If Co-operative Marketing is to be the chosen instrument for ensuring stability of food grain prices, its efficacy will have to be judged by the record in Andhra Pradesh. The report is timely in view of the large programme of expansion of co-operative activities under the Third Plan.

The record of Co-operative Marketing of paddy in the State is, however, not likely to induce visions of expanding vistas. Though there were about 196 primary marketing societies with a substantial membership, as well as fifteen District and two Apex societies, the Study Team found that few societies were dealing in paddy and that the quantity handled by them was negligible. In the Andhra region where the bulk of the marketable surplus of paddy is grown, no society, says the report, has yet undertaken marketing of paddy even on a small scale. But the societies, while not themselves undertaking the marketing, had advanced considerable amounts against pledges of paddy. This suggests that reasons other than lack of resources must be responsible for the very slow progress of cooperative marketing.

By its terms of reference, the Study Team was asked to examine the various impediments to the development of the system of co-operative marketing, such as inadequate finances, inhibitory tax laws, lack of processing facilities, etc. It is interesting to note that the Study Team has been constrained to indict general apathy as the major impediment to further development of the co-operative sector in the marketing of paddy. The report emphasises that "before any appreciable development of the co-operative marketing of paddy in Andhra Pradesh can be attempted, there should be a clear recognition on the part of both officials and non-officials concerned that such development is both desirable and feasible." The Team found, during the course of the tour, that this recognition was lacking.

This is a fact of considerable significance which, under a democratic set up, should lead to rethinking on the scope for extension of co-operative enterprise in the field of marketing of paddy. For, when the report goes on to affirm that there is urgent need for co-operative marketing of paddy in Andhra Pradesh and that this need should be recognised both by "departmental officials and non-official co-operators", it is difficult to follow the reasoning unless Co-operative Marketing is regarded as a Categorical Imperative.

The unexceptional objective of the programme for co-operative marketing is to bring about a system in which "marketing is by the cultivator and for the cultivator." Its realisation will, however, be determined more by the response of the actual producers to the facilities that are provided, than by the decisions of officials at the Centre pursuing the objective in theory. The response of the producers in turn will be governed by their assessments of the comparative advantages of the co-operative system and the existing system of private trade. If, in spite of five years of promotional effort and existence of a chain

of co-operatives, co-operative marketing of paddy has not made headway in Andhra Pradesh, and the societies themselves are reluctant to enter the field, it must be because, in the judgment of the producers, they would not be better served by co-operative marketing societies than they are at present by private traders.

Much is made of the "malpractices", said to be indulged in by the traders. But trade in paddy and rice, at least in Andhra, is a highly competitive business—the report admits that there are a considerable number of traders in the field—and it is difficult to see how under such conditions of keen competition malpractices could be widespread. The rice growers of Andhra are not a group of ignorant peasants who could be exploited by the village broker. As regards the "high cost" of marketing paddy through private channels, it is not possible to arrive at any conclusion until the comparative figures of the cost of co-operative marketing are also made available. Considering the admitted lack of business experience on the part of the managerial personnel of co-operative societies, it should not be surprising if the cultivators in the villages conclude that they get a better deal from the private trade. Moreover, in the producers' market which has been prevailing for nearly two decades, cultivators are naturally reluctant to give up the flexibility afforded by private trade. But the advent of the buyers' market (of which there is more than a hint in Mr S. K. Patil's reference to price support for rice at the parliamentary consultative committee meeting) should be followed by a helpful change in the attitude of the growers. With a policy of price supports in operation, co-operatives should be in a stronger position to extend their activities.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings. Individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Giltedged in Demand

In the month following new loan week the Scheduled Banks' purchase of giltedged has been enormous—and inevitable. Subscriptions of the banking system to the new loan as such were disappointingly low, for the simple reason that spare resources at the time were sparse, and the Reserve Bank had clearly indicated that it would frown upon too large a recourse to central banking credit. But, week by week since, the two-fold gathering of resources with the banks has been considerable, a veritable embarras de riches confronting the banking system. Between 13 July and 10 August, Deposits of the State Bank rose by Rs 10.44 crores and its Advances fell by Rs 12.76 crores. These resources, as also the "encashment" of Other Assets, have gone to swell the State Bank's portfolio of giltedged by Rs 59.03 crores to Rs 267.61 crores.

In the matter of purchase of giltedged the other Scheduled Banks have of course been rather more wary. Indeed, in the light of the heavier penal rates of interest that the banks would have to pay on their borrowings in the next busy season, there was (we may be sure) a positive reluctance to add to giltedged holdings. But the Scheduled Banks other than the State Bank, in the period 13 July to 10 August, experienced a rise of Rs 35.78 crores in Deposits and a decline of Rs 10.05 crores in net Advances. Of these newly released resources a sum of Rs 32.56 crores went to increase the giltedged portfolios of Scheduled Banks other than the State Bank.

Not all of the increase in banks' giltedged holdings would have been in dated loans; in recent weeks there have been considerable sales of intermediate Treasury Bills, though the offer at the Auctions has been unchanged at Rs 2 crores each week. Scheduled Banks other than the State Bank have, we fancy, shown considerable interest in intermediates notwithstanding the low rate of interest on them. For, what the banks hanker after is liquidity during the next busy season; they will avoid as far as possible resort to borrowings from the Reserve Bank for the obvious reason of penal cost.

The money market is very easy. Call money rates, temporarily pushed up at the beginning of the month, have receded to low levels both in Calcutta and Bombay. Next week of course some tightness, and rise in the call money rates, is to be expected as a result of the opening of subscription lists for the State Loans. Apart from the subscriptions of the Life Insurance Corporation and other public institutions (which will cause a considerable dent upon the Deposits of the banking system), the banks themselves will be "persuaded" to extend support in a large way. Our estimate of such subscriptions, it may be recalled, was Rs 80 crores. It is not improbable that, interrupting the slack season conditions, the banks may have to rely

heavily upon the Reserve Bank. And it may take the banks as long as a month to "recover" from the strain of the State loans.

But the new resources gathering in October will constitute a fresh embarrassment. Some further purchase of giltedged from the Reserve Bank seems probable—though the imminence then of the busy season might possibly influence the banks to plump for Treasury Bills instead.

What of the next busy season? We believe that, reversing the trend of recent years, there will be a decline in the magnitude of expansion of bank credit. Meantime Deposits would continue to accrue with the banking system. This is the result of the critical shortages in coal and power, transport and steel. So also, the low level of foreign exchange reserves has put a brake upon the import of raw materials from abroad. Industrial stagnation is already in evidence, with idle capacity reported all over the country. Thus, it is likely that in the 1962-63 busy season, paralleling the experience in the 1957-58 busy season, banks will be purchasers of giltedged.

There is one more interesting possibility. It is an open secret that Government's issue of import licences has for some time dwindled almost to nil. The impact of such non-issuance of import licences upon the foreign exchange reserves of the country should be felt in the course of the "export season" between September and March next. With almost no import bill, and exports steadily earning foreign exchange, there is the intriguing chance of foreign exchange reserves rising over this period by, if we may hazard a guess, something like Rs 100 crores.

BANK RETURNS

RBI Profit Paid to Centre

During the week ended 17 August the audit of the Reserve Bank's accounts for the year to 30 June 1962 has been completed, and the profit payable to the Central Government has been made over. However, there have also been in the same week certain inter-governmental transactions, so that the picture as available in the changes in Reserve Bank figures is somewhat confusing.

The onward march of the 1962 slack season is attested to by the contraction of Rs 9.64 crores to Rs 2,054.07 crores in Active Note Circulation and in the inflow of Rupee Coin in an amount of Rs 1.14 crores. Currency has been contracted against Rupee Securities for Rs 15 crores, the latter being accordingly lower at Rs 1,742.00 crores. Foreign Securities, from which in recent weeks there has been steady transfer to Balances Held Abroad in the Banking Department, are this week unchanged at Rs 89.34 crores.

The return for the Banking Department discloses a fall of Rs 44½ crores to Rs 160.15

Why the Discrepancy

When sweeping changes were made in the Reserve Bank returns, we had pointed out that there were two items in the new form of the statutory statement that were common to the return of Scheduled Banks. We had added that there were discrepancies to be noticed in respect of the two sets of figures, and we had suggested that an explanation from the Reserve Bank would be useful to the student of the money market.

We have now been enabled to shed more light on the matter. The weekly statement of affairs of the Reserve Bank of India, Banking Department, is published under Section 53 of the Reserve Bank of India Act and is therefore based on the figures as appearing in the books of the Reserve Bank. Though the weekly statement of position of Scheduled Banks is published under Section 43 of the same Act, the return itself is based on figures submitted by the banks to the Reserve Bank. Unfortunately, certain items sometimes take time to compile, and banks in certain cases therefore (as indeed a footnote to the Scheduled Bank statement makes clear) fail to submit final returns in time, with the result that provisional figures (usually the previous week's) get incorporated in respect of such banks. Thus, it happens that the figures of borrowings from and balances with the Reserve Bank do not tally.

But there remain questions to be answered. Surely, borrowings from the Reserve Bank are not an item which will take time to find out about? Surely, the exact balances of a particular bank with the Reserve Bank can be known without delay? We can understand banks submitting "provisionals" for such items as Deposits and Advances—but not in respect of the two items now in controversy. Lastly, at least the revisions can be effected in the figures relating to the "previous week"? What now happens is that, very possibly, the statutory returns of the Scheduled Banks are approximations; and it is only in Trend and Progress of Banking, published once a year, that the "correct" figures get printed. Why?

crores in Other Deposits; and this obviously relates to the Reserve Bank profit for 1961-62 being made over to the Centre. In broad terms the profit payable to the Centre may be put down at Rs 45 crores. In the same week the Centre has also apparently benefited from payments made by State Governments, whose balances are lower by Rs 6.25 crores at Rs 16.90 crores on top of an increase of Rs 4.82 crores to Rs 11.41 crores in their ways and means borrowings from the Reserve Bank. Besides, it would appear that the States have been obliged to replenish their resources by rediscounting Treasury Bills with the Reserve Bank, this last portfolio having risen in the week under review by Rs 5 crores odd to Rs 75.12 crores. The net effect of all these receipts must have been so to augment the Centre's balances, that cancellation of ad hocs in very sizable magnitude was possible. We have already seen that Rupee Securities in the Issue De-

25 August 1962

partment were lower by Rs 15 crores; it may now be noted that Investments in the Banking Department have declined by almost exactly Rs 40 crores to Rs 237.71 crores. So, on the face of it reverse ad hocs have been instituted for Rs 55 crores. The Centre, to recapitulate, received Rs 45 crores (Reserve Bank profit), and some Rs 15 crores from the State Governments (The sum of the fall in Deposits, increase in borrowings and in the Reserve Bank's portfolio of Treasury Bills Purchased and Discounted). Against total receipts of Rs 60 crores, thus, the apparent conclusion is that cancellation of ad hocs has been for Rs 55 crores, and that the balance of Rs 5 crores would be reflected in increase in the Centre's Deposits; but the Centre's cash balances have in fact risen by Rs 9.08 crores to Rs 67.31 crores. Our interpretation is that banks bought about Rs 5 crores of giltedged from the Reserve Bank tap, and that reverse ad hocs were instituted for the round figure of Rs 50 crores.

For the rest: Reserve Balances of member banks are better by Rs 5.99 crores at Rs 95.37 crores, and their borrowings down by Rs 0.82 crore to the nominal figure of Rs 1 crore. Balances Held Abroad are steady at Rs 5.98 crores against Rs 5.16 crores last week.

With the beginning of the month demand for funds out of the way, the return of the State Bank for 17 August reports a modest increase of Rs 0.63 crore to Rs 582.91 crores in Deposits as well as a more sizable contraction in Advances of Rs 2.93 crores to Rs 273.99 crores. However, the State Bank has, strangely enough, instead of adding to its giltedged portfolio, actually shown disinvestment for Rs 2.50 crores. As a result Other Assets are again higher by Rs 1.34 crores at the still unusually high figure of Rs 37.43 crores, thus possibly presaging further purchase from the State Bank in the weeks to come; and cash balances, including money at call and short notice, have gone up by Rs 4.22 crores to Rs 31.29 crores.

On the other hand, the return of Scheduled Banks for 10 August bears the impact of the spillover into the second week of month-early disbursements. It would appear that constituents preferred to run down their balances, instead of increasing their borrowings. Thus net Demand Deposits are lower by as much as Rs 10.34 crores at Rs 884.66 crores; the as Rs 10.34 crores to Rs 1,293.00 crores in rise of Rs 6.12 crores to Rs 1,293.00 crores in net Time Deposits may perhaps be ascribed, not so much to switch-over from Demand Deposits, but to the steady uptrend that has been observable for some time. It may be noted, incidentally, that almost half of the total fall in net Deposits of Rs 4.22 crores is total fall in net Deposits of Rs 4.22 crores on account of the State Bank. Constituents would of course have also borrowed more; but the slack season contraction in Advances has concealed this fact, with the total of Advances being shown Rs 1.34 crores lower at Rs 1,394.20 crores. While indebtedness to the Reserve Bank has been reduced by Rs 0.65 crore to Rs 1.76 crores, borrowings from the State Bank are somewhat higher by Rs 1.72 crores at Rs 17.76 crores. There is a fall of just under Rs 2 crores to Rs 870.25 crores in giltedged investments, but if regard is had for the State Bank but in the relevant week, a decline reporting, in the relevant week, it is clear that of about Rs 8½ crores, it is clear that other Scheduled Banks purchased quite heavily of giltedged during the week. The net result is a fall of Rs 7.54 crores to Rs 208.91 crores in the cash balances, including money at call and short notice, of the Scheduled Banks.

Money supply with the public during June 1962 has been estimated at Rs 3,085.84 lakhs made up of Rs 2,124.22 lakhs of currency and Rs 961.62 lakhs of Deposits. As compared with money supply in May 1962 at Rs 3,129.50 lakhs, there has been a slight decline of the order of Rs 43.66 lakhs, which is the result of a decline of Rs 53.36 lakhs in currency offset to the extent of Rs 9.70 lakhs by rise in Deposits.

As on 29 June, 1962 all Scheduled Banks in the country had excess reserves with the Reserve Bank of India to the tune of Rs 26.18 lakhs. The excess reserves of the Indian scheduled banks were placed at Rs 21.43 lakhs and of the Foreign Banks at Rs 4.75 lakhs.

Economics of Space Rockets

By Paul Einzig

The remarkable success of the Soviet Union in sending two manned rockets into the outer space and keeping them there for several days, was duly followed by a burst of Communist propaganda claiming superiority of the Communist system over the Capitalist system. It would be idle to deny that the Soviet Union has left the United States behind in the race for supremacy in space. But there is another side to the story. The American progress in respect of ships has been achieved without affecting the standard of living of the American people which continues to progress. Russian progress, on the other hand, has been achieved at the cost of a heavy economic burden. Reports from East Germany indicate that even the special allocations to the security police had to be cut. Many thousands of people, belonging mainly to the working classes, prefer to risk the bullets of the frontier guards rather, than remain in East Germany. The price of meat and other consumer goods was raised sharply both in the U.S.S.R. and in the satellite states with the declared object of reducing consumption. One of the West German papers published recently a cartoon showing an emaciated Russian peasant carrying on his shoulders a colossal space rocket. Indeed, the admitted inadequacy of progress in Soviet agricultural production is due to lack of tractors and other equipment which could easily have been supplied if only the Moscow had been thinking in terms of the standard of living of the ordinary man instead of being determined to be first to arrive in the moon, regardless of cost.

Under-developed countries must have noticed the difference between the promises of

assistance made from the Kremlin and the actual extent of assistance given to them, by Soviet Russia. The lavish promises could have been honoured had it not been for the untold billions of man-hours spent on rockets and space ships to which the bulk of scientific and technological research is diverted. Moreover, by forcing the pace, the Soviet Government has forced also the United States to spend much more on space research than it would have spent otherwise, with the result that they too can now afford to spend much less on external aid to under-developed countries than they would have liked to spend. If the opinion of many hundreds of millions of people in Asia, Africa and Latin America were to be asked whether they considered it more important to explore the moon than to provide them with something beyond the bare necessities of life, there can be no doubt what the answer would be.

Treasury Bills

Tenders for Rs. 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 21 August, 1962. Total amount offered was Rs 2,10,00,000. Tenders at Rs 99.415 per cent were accepted in full and those at Rs 99.410 per cent were allotted approximately 95 per cent. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at Bangalore, Bombay, Madras and Nagpur up to the close of business on Saturday, 1 September 1962 and at Calcutta, Kanpur and New Delhi up to the close of business on Monday, 3 September 1962. Successful tenderers should make payment on Friday, 7 September 1962 at all centres. Other conditions are as usual.

During the week ended 17 August, 1962. Government of India Treasury Bills for Rs 5,90,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 22 August, 1 September 1962 at Rs 99.431 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 14 to 18 August 1962 amounted to Rs 80,50,000.

LICENSING

An Unobstrusive Ban Lifted

In the critical phase of the foreign exchange situation that was only tided over after the drawal of funds from the International Monetary Fund, one of the measures that was taken by the Government to relieve pressure was to enforce a temporary suspension of import licensing. Since there was no official declaration to that effect, this has generally gone unnoticed. But industrialists making inquiries with the Government about the fate of their applications for import licences were confronted with a curious silence on the part of the authorities. The Government was obviously concerned not to create panic among industrial circles by an official announcement and therefore chose to work out a temporary ban unobstrusively. This gives a measure of the concern with which the foreign exchange crisis was viewed by the Centre.

The ban has now been lifted, but this does not seem to foreshadow any relaxation of the restrictions imposed on import licensing in the early part of June. At that time a 50 per cent cut on overall imports of established importers had been announced. It

was in respect of the imports by actual users that the ban was worked out. Even now after the ban has been lifted the applications for actual users are being subjected to the closest scrutiny and sanction accorded purely on an essentiality basis. However it is presumed that the cut in import licences for actual users will be about 10 to 15 per cent larger or smaller in individual cases, with the overall approach being restrictive. In respect of the established importers the 50 per cent cut is expected to continue though the measure of relief that will be available will be meagre in view of the low proportion constituted by imports by established trade to total imports.

The "unofficial" ban on import licensing has now confronted the authorities with the problem of arrears of uncleared applications which have piled up during the period when the ban was in force. In view of the traditional delay in the screening of applications by the Governmental machinery, a slight slowing down in the rate of establishment of new units appears inescapable.

SMALL INDUSTRIES

Familiar Complaints

The ad hoc committee of the conference of small scale industries met at Ahmedabad last week under the chairmanship of Mr Pravinchandra Gandhi, the President of the Indian Merchants' Chamber. The problems which the ad hoc committee discussed at greater length are many and well-known. They operate as serious impediments to the development of the small industries. The committee expressed concern at the acute shortage of the requisite raw materials which has disrupted the production schedule of many a small undertaking. Even though the committee was concerned only with those small units located in the Western Region, this phenomenon is not strictly confined to this region alone. On several occasions the grievances of the small scale ventures on this score have been aired with vehemence. The non-availability of adequate finance is another factor that is dampening the initiative of the entrepreneurs. Though the Government has constituted State Financial Corporations with a view to promoting small industries by extending financial assistance, a current study has spotlighted the

meagre benefit that has trickled to them due to the cumbersome procedures and abnormal demands which are beyond the means of the ordinary small entrepreneurs. There have been complaints in the past of the inordinate delays in sanctioning the loans by the SFCs and the higher margin stipulated for security has resulted in the non-materialisation of several schemes.

The suggestions of the ad hoc committee for the rationalisation of raw material distribution to small scale industries and re-allocation of raw material quotas and to conduct a thorough probe into the complaints voiced by the small scale units about the State Finance Corporation merit immediate consideration. Only the assurance of an adequate and regular supply of raw materials financial help and elimination of the irksome procedure for procuring loan from the SFC and the quickening of procedure for sanctioning loan will place the small scale units on a sound and firm footing to play the vital role of expediting the industrialisation of the country on an even pace.

STEEL

Low Output

In the Lok Sabha last week, Mr C. Subramaniam, Union Minister for Heavy Industries, disclosed that the question of a downward revision of the Third Plan target of steel is being considered by the Government. This should come as no surprise since the impossibility of reaching the Third Plan target is becoming evident even to official circles for sometime now. Even before the disclosure by the Union Minister in the Parliament, rumours have indicated that the Union Ministry for Commerce and Industry has sounded the Planning Commission about the difficulties in the way of the Third Plan target for steel production. Even at the end of the Second Plan, production was lagging grossly behind targeted schedules. While the Second Plan target for steel production was 6.0 million tons, production did not amount to more than 4.18 million tons of crude steel. Production in the private sector units at TISCO and IISCO was short of the target of 3 million tons by about 14 per cent, but production in the public sector units at 1.6 million tons was far lower. In terms of crude production, performance in the public sector units was commendable only in the Bhilai plant which had attained a production capacity of 80 per cent, while in Durgapur and Rourkela, the respective capacities attained for crude steel production were 53 per cent and 65 per cent. In terms of rolling capacity the performance was still less encouraging. Bhilai attained a rolling capacity of only 62 per cent while the respective figures for

Durgapur and Rourkela are 42 per cent and 25 per cent. The supply position during the last year deteriorated sharply owing to break-down in some units and the coincidence of maintenance works. Almost simultaneously the new bar mill of IISCO, the sheet and bar and billet mills of Bhilai and the slabbing mill of Rourkela went out of operation precipitating an unprecedented predicament in the normal working of steel plants.

The Third Plan target was based on the expansion scheme in the three public sector units and the setting up of a new unit at Bokaro. What casts doubts on the Third Plan target is the uncertainty hinging on Bokaro and the troubles afflicting the Rourkela Steel Plant. Originally there were expectations that the Bokaro plant would be set up with American assistance, and a couple of teams visited the country to make a study of the project. But subsequent reports have given the impression of a lukewarm attitude on the part of the Americans. Apart from vague assurances that the project will not be given up there is no knowing when the actual work will be started. But prospects of any production from the Bokaro plant by the end of the Third Plan have to be ruled out.

The expansion plans of the three public sector steel plants have also been considerably delayed and orders for machinery for expansion are yet to be placed. Leaving aside the expansion scheme, the foremost problem that has to be faced is to attain full rated capacity in both the Durgapur and the Rourkela steel

Indian Finance

25 August 1962

plants. In respect of Rourkela plant this, it is now learnt, will take considerable time. The Solveen Mission report on the working of the plant here has pinpointed the need for further investment to the tune of about Rs 10 crores on both equipment and spare parts. And until such time as the work of rehabilitation is completed, there can be no hope of making a start with expansion plan.

Apart from these delays and difficulties, there are misgivings that the original Third Plan estimates of demand for steel may prove to be wrong. Originally the likely demand at the end of the Plan period was put at over 7 million tons. But considering that demand during the last year has been about more than 6 million tons, the original figures will need drastic revision. In the light of this rise of anticipated demand, imports of steel to meet the full requirements may entail a foreign exchange expenditure of more than Rs 500 crores which compares with the earlier estimates of about Rs 250 crores.

AUTOMOBILES

Outlook Uncertain

The outlook for the automobile industry in the immediate future has become uncertain, if not actually gloomy what with the difficulty of obtaining essential foreign exchange allotment. Among the different types of motor vehicles, the passenger car seems to be in for fresh difficulties. Those who have been looking forward eagerly for a low priced car only recently heard the disappointing news that the small car project had been abandoned. Now comes the report that in a bid to increase production of commercial vehicles, Government has given the lowest priority in the matter of allotting foreign exchange to passenger cars. Thus not only will there be no low priced cars for several years to come but the waiting period for getting one of the current models looks like being further extended.

The revised policy with regard to the automobile industry is said to have been framed with a view to ensuring that with the available foreign exchange resources at least the target of production of commercial vehicles is hit. After making a fresh assessment of the requirements of foreign exchange by the various sections of the industry, top priority in the allocation of foreign exchange will be accorded to commercial vehicles so that the production target of 60,000 vehicles is reached by the end of the Third Plan. The next in the list is motor cycles and then will come scooters. Passenger cars will be placed last in the list. Mr C. Subramaniam, Minister for Steel

and Heavy Industry, seems to be confident that under the new policy it may be possible even to exceed the target of 60,000 commercial vehicles. The new policy, it is reported, will aim at reaching 90 per cent indigenous content as quickly as possible so that the saving of foreign exchange that will become possible after a time could be utilised for the expansion of production facilities. Mr Subramaniam has expressed disappointment over the continued dependence of the industry on a substantial percentage of im-

ported components. But manufacturers aver that the blame should be properly borne by Government as it was because of its failure to allot adequate foreign exchange for the import of essential equipment, the installation of which alone can help increase the percentage of indigenous content of motor vehicles, that they could not reduce the percentage of imported content to the extent anticipated.

The industry has been making satisfactory progress in recent years but the manufacturers have

pointed out that lately it has become difficult to work to full capacity due to several adverse factors, the most important of which is the non-availability of foreign exchange for the import of essential finished and semi-finished components. Speaking at the annual meeting of the Association of Indian Automobile Manufacturers, Mr L. P. Misra has pointed out that in view of the invaluable time already lost in waiting for foreign exchange allotment to carry out its planned programme of expansion, the au-

4½ Per Cent

ORISSA GOVERNMENT LOAN, 1974

Issue Price **Rs. 99.50** per cent

Opens on the 27th August, 1962

The loan will be closed as soon as a total of Rs. 7 crores has been subscribed and in any case not later than the close of the business on the 1st September, 1962.

Applications for the loan will be received at (a) the Offices of the Reserve Bank of India, Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, (b) the branch of the State Bank of India at Patna, (c) the branches of the State Bank of Hyderabad at Hyderabad (d) the branches of the State Bank of India located in the State of Orissa and (e) the Government Treasuries and Sub-Treasuries.

Full particulars can be obtained at any of the Offices mentioned above.

tomobile industry may not be able to reach the target of 60,000 commercial vehicles per annum by 1965. Even if the targeted level of production of commercial vehicles is reached as scheduled, the overall transport situation, according to Mr Misra, is not likely to show marked improvement. For he estimates that there will be about 70 million tonnes of additional load to be lifted by the end of the Third Plan, by road transport. This will require an additional 5 lakh commercial vehicles. The Third Plan target of commercial vehicles will give much less than this number as annual production will reach only 60,000 vehicles by the last year of the plan. It would appear that ways and means have to be devised to produce the additional vehicles needed as the alternative will be considerable reduction in industrial production and virtual failure of the Third Plan itself.

US

A Letter from Washington

The governments of free industrial nations are supplying needed capital to developing nations at a rate of about \$5,000 million a year, of which the United States contributes some two-thirds. But it has long been recognised that these public development funds, substantial and important as they are, cannot in themselves fill the enormous and long-term needs of the newly-developing areas. An expanded flow of private capital from both internal and external sources, also is necessary.

In the broad sense, capital is more than money or credit. It also brings with it productive skills and know-how which are basic to

development progress. Much of this capital and many of these skills are sufficiently obtainable only in the private sector.

Private investment, however is generally conceived and planned on a long-term basis, and is not subject to the changes in policy that may characterize public programs. Hence, it can transfer and apply skills and capital in an orderly and constructive fashion. It is in excellent position not only to nurture the initiative needed for healthy development, but also to organize and set into operation new ventures that will prosper and grow.

It is with this in mind that both U.S. and international economic assistance institutions have been encouraging industrial development banks where appropriate in developing countries. Right now, for instance, the U.S. Agency for International Development

(A. I. D.) is reportedly laying the blueprint for an industrial development bank in the Philippines. It is doing this along with the United Nations World Bank and the International Finance Corporation, World Bank affiliate specifically designed to promote private enterprise and investment around the world. According to reports, A. I. D. also expects to explore this year the prospects for some 20 additional development banks in developing areas.

Such banks, it is believed, can provide an especially effective means for carrying out basic investments essential to emerging economies. Usually managed by national governments, the banks make available to private groups, local and foreign, long-term and low-interest credits which might not otherwise be available. Development banks also may perform such other tasks as carrying out surveys, helping with industrial development plans, collecting business data, underwriting securities and investing in equities. A. I. D. loans, however are not generally used for stock investment.

In line with efforts to promote effective use of development banks, A. I. D. has publicly announced this year half a-dozen loans for this purpose totalling some \$82.5 million, well above the dollar figures for 1961 and 1960. The funds generally are channelled into essential economic areas.

Through June of this year, the U.S. Government had authorized \$226 million in loans to development banks abroad since the program began several years ago. Another \$75 million has gone to housing and agricultural credit institutions. Of the \$226 million, the banks had already recommitment more than \$62 million to private investors by the end of this past March. Nearly \$30 million had actually been disbursed, much of it by banks in such countries as Turkey, Pakistan and Israel.

The amounts made available by A. I. D. vary, of course, with the magnitude of the development operations in prospect. They range from \$40 million for the Chilean Development Corporation to \$400,000 for the Industrial Credit Corporation of Nepal.

A. I. D. apparently expects a number of new development banks to be established in Africa. Agency-sponsored surveys, for instance, have recommended banks for Liberia, the Ivory Coast and Sierra Leone, and more studies in other African lands are said to be planned or in process.

While it is spurring use of private resources abroad, A. I. D. also is promoting a healthy flow of U.S. private capital to other nations. In such countries as Pakistan, Thailand, Nigeria and Colombia, for example, A. I. D. is seeking out private enterprises in which U.S. investors may participate. A. I. D. will offer to back

Indian Finance

25 August 1962

interested easy terms to either U.S. or local investors, local currency loans, and a wide range of investment guaranties.

A. I. D. also is speeding up its program for helping U.S. companies make investment surveys in less developed countries. Under this program, A. I. D. and the interested company split the survey costs. If the company decides to proceed with the investment, it repays the government agency. If it does not so decide, it turns over the survey results to A. I. D. which then seeks out other investors.

Since this program was announced formally in March, A. I. D. has received hundreds of inquiries from potential U.S. investors. Its first investment contract under the program was signed recently with a company which will survey the economic and technical feasibility of manufacturing resins in Pakistan.

AUSTRALIA

Term Lending Experience

Australia, where industry and trade had been keenly feeling the relative absence of facilities for longer term finance, has taken the essential first steps toward the institution of term lending, this being one of the notable banking developments witnessed in that country in recent years. The predominant form of bank finance available to industry is the overdraft system, but this has, as in India, not proved sufficient to meet the long term credit requirements for industry and trade which consequently had been considerably handicapped in export business. Consideration of the problem by the Government, the Reserve Bank and the trading banks has led to a new scheme being devised to provide term lending to Australian industry and trade. The essentials of the scheme have been described in the July issue of the Reserve Bank of India Bulletin.

Under the arrangements agreed to, a special Term Lending Fund is being established with the Reserve Bank comprising accounts held with the Reserve Bank by the trading banks. Each trading bank has as its account in the fund, an amount equivalent to 2 per cent of its deposits of which only 1 per cent represents actual payments out of its liquid funds. The remaining 2 per cent is transferred from the Reserve Deposit Accounts which all banks are statutorily required to maintain with the Reserve Bank. With this transfer, the variable statutory Reserve Deposit Ratio is reduced from 12.5 per cent to 10.5 per cent.

The main source for term loans will be the Term Loan Fund which has an estimated £ A 55 million to begin with. Loans will

be granted mainly to finance capital expenditure of a developmental nature. Consumption expenditure has been excluded from the scope of such loans, but provision exists to accommodate the needs of rural and secondary industries and also of exports. Term loans for exporters will generally be for capital goods.

The duration of the loans as now envisaged ranges from 3 to 8 years though longer term loans are not ruled out. The loans will generally be amortised by regular instalments and it is remarkable that no ceiling has been placed on the size of individual loans. Many of the details of the proposed scheme for term lending such as procedure for granting of loans, the rate of interest to be paid by the borrowing unit etc are yet to be finalised. When all the details are worked out, it would be possible for India also to borrow features that would admit of adaptation in our country.

BALL BEARINGS

Considerable Progress

Though the ball bearing industry has made considerable progress during the past few years, it is still some distance from meeting the domestic demand in full. At present there is only one unit engaged in large scale production. Another unit which commenced production in 1960 is still producing only small quantities. Nine more units have been licensed but only four of these are likely to start production within the next two or three years. The installed capacity of the industry is expected to increase to about 7 million bearings in the course of the next three or four years although the total incensed capacity of the 11 units is placed at 11.20 million bearings. The industry however

is not confined to the large scale sector. There are several small units engaged in the manufacture of bearings. According to the Development Commissioner, Small Scale Industries, there are about 37 small scale units manufacturing ball bearings. Most of these units are concentrated in Punjab, as many as 34 being located in that State. Actual production of ball bearings has so far been on the low side as the production of 2" bore in 1961 of the one large scale unit was 3.2 million while the small scale sector contributed 0.47 million bearings during that year.

In the course of his speech in opening the public enquiry into the continuance of protection to the industry, Mr K. R. P. Ayyangar referred to different estimates of demand for ball bearings in the coming years. One estimate puts the probable demand by 1955-56 at 17.8 million ball bearings. It is anticipated that by 1963 the demand may be of the order of

"LIC had another good year, I'm told."

"Yes, they did a lot of new business in 1961"

PEOPLE ARE TALKING ABOUT LIC

LIC's new business in 1961 totalled Rs. 608 crores—an increase of 22% over the 1960 figure of Rs. 497.5 crores. A good record, by any standard. Especially so because 1961 was a bad year for field activity, with vast areas affected by floods. Greater reliance on Life Insurance as a means to safeguard the financial security of the individual and the family, and confidence in LIC as a stable organisation devoted to the welfare of the nation and its policy-holders, have been the main reasons for the phenomenal growth of LIC's business year after year.

Life Insurance Corporation of India

LOOK FOR THIS 'Mark of Quality'

It is your Assurance of Extra Safety and Dependability and only Firestone Tyres have it

Whether you own a Motor Scooter, a Car, a Tractor, a Truck or whether you control a fleet of giant Earth-moving units; there is a Firestone tyre to suit your needs. Every single one bears "The Mark of Quality"—the long-established Firestone symbol of Extra Safety and Dependability.

Specify Firestone and you get—

- **SAFETY** The exclusive Firestone tread design and tyre construction will give you MAXIMUM STOPPING POWER and resistance to road hazards.
- **ECONOMY** The longest-wearing tread specially compounded by Firestone for Indian service conditions ensures MORE KILOMETRES PER RUPEE from the original tread.
- **RETREADABILITY** Look after your Firestone tyres—don't overload them or otherwise maltreat them—and they will remain suitable for RETREADING OVER AND OVER AGAIN.

Firestone BEST TODAY—STILL BETTER TOMORROW

8.5 to 9 million bearings, both on account of consuming industries for original equipment as well as for replacement. The industry has informed the Commission that it experiences no difficulty in obtaining its essential raw materials though it has noted that there is need for some adjustments in regard to the different categories of steel items allowed to be imported.

Protection was first granted to this industry in 1952 for a period of two years by converting the revenue duty of 94½ per cent ad valorem into a protective duty on ball bearings not exceeding 2" bore diameter and by raising duty on adapter bearings not exceeding 2" bore diameter to 10 per cent ad valorem. The industry however has continued to enjoy protection for the past 10 years. The protected categories of ball bearings and adapter ball bearings and parts thereof are currently assessed to duty at 95 per cent ad valorem and the latest period of protection is due to expire on 31 December 1962.

It is gratifying to note that indigenous ball bearings are now used as original equipment by reputed manufacturers. Mr Ayyangar has also said that consumers are generally satisfied with the quality of indigenous bearings. He has however pointed out that some consumers have complained about the quality and the high prices of indigenous ball bearings. With more units commencing production on a large scale in coming years there is bound to be improvement in quality and a reduction in price.

about a marked change in the oil economy of the country. At present middle distillates, like diesel, kerosene and bitumen, are in short supply and India imported in 1960-61, diesel and kerosene oil valued at Rs 27 crores. The Third Five-Year Plan estimates that even after the two public sector refineries are brought into operation, the deficit in kerosene supply would be about 300 million gallons. Once India is able to produce middle distillates like diesel and kerosene oil from coal tar, the present imbalance resulting from the surplus production of gasoline in oil refineries will be corrected.

OIL SEAL LEATHER

A process has been developed at the Central Leather Research Institute, Madras, for producing oil seal leathers by impregnating chrome-retanned leathers with polysulphide liquid polymers. The desired degree of impregnation is provided by using the different chemicals such as cobalt hexogen, lead octate etc. No shrinkage during or after impregnation takes place in leathers processed properly. The shrinkage temperature of the impregnated oil seal leather in oil medium is between 150 degree and 160 degree C. The oil seal leathers produced at the Laboratory are cheaper than the imported oil seal leathers or synthetic oil seals. Their performance is comparable to that of imported varieties.

Oil seal leathers are used for a wide variety of purposes in aeroplanes, automobiles and elsewhere as pneumatic or hydraulic packings subjected to high pressures, for example, in airbrakes and hydraulic rams. The main properties desired are retention of the impregnated material, resistance to hot air, water and hot oils under high pressure (sometimes as high as 15000 lb/Sq. inch) and temperatures—53.9°C—121.1°C. The leathers have the advantage of lubricating due to capillary action without scouring the shaft and are resistant to solvents such as carbon tetrachloride, trichloroethylene, benzene and ketones.

DECOLOURISATION OF GLASS

Selenium has long been used for decolourising glass melted in tank furnaces. The Indian glass industry consumes about five tons of imported selenium annually for this purpose.

A new process developed by the Central Glass and Ceramic Research Institute, Calcutta, does away with the use of selenium and uses instead a base mix containing cerium dioxide, cobalt oxide and manganese dioxide. A glass free from colour is thus obtained, and it can be fabricated to the desired shape by blowing, pressing or drawing or by a combination of these processes. The articles are then annealed at the appropriate temperature range.

SCIENCE NOTES

Illuminating Fuels from Coal Tar

A process for the production of middle distillates (kerosene substitutes) and diesel fuels from coal tar and its fractions has been developed at the Regional Research Laboratory, Hyderabad. The process consists in the extraction of coal tar and its fractions, before or after removal of tar acids and bases, by organic solvents or solvent mixture. The extract is distilled to recover the solvent for re-use. The residue is hydrogenated under pressure and the hydrogenated product is again extracted with suitable organic solvents to remove the bulk of saturated hydrocarbons.

The raffinated oil thus obtained can be used in wick lamps as illuminating fuel. It can also be used as diesel fuel. A distinctive feature of the process is that the luminosity and smoke point of the fuel can be controlled by adjusting the solvent.

The production of middle distillates from coal is expected to bring

The Energy Revolution and the Oil Industry

By K. U. MATHEW

INDIA is witnessing an energy revolution, a revolution in which the Oil industry has to play a part. Every revolution produces its theoreticians and pundits and the major polemic on the energy front in India today is: How much in the public sector and how much in the private sector with consequent loss of a great deal of energy all-round, both in the literal and figurative sense. I submit that there is a case for diversifying the debate on petroleum. The spotlight on the relative roles of the private and public sector tends to distract attention from the underlying economic reality. It is necessary to bring this more important aspect into focus.

On the basis of historical trends and international comparisons it is true that in the initial stages of development, consumption of energy generally grows at a slower rate than the GNP (Gross National Product), and, later, at intermediate levels of development energy requirements will increase as rapidly, if not more rapidly than the GNP. After a high degree of development has been attained, income elasticity of energy will again become less than unity (or in plain words slow down) owing to improved efficiency in the use of energy and to a partial saturation of demand. India today is at the second stage referred to above—a stage which witnesses revolutionary rises not only in the total growth but in the pattern of that growth.

An interesting feature, however, is that as the economy progresses, there is a marked rise in the contribution which petroleum makes to the total energy mix. We estimate that by 1966 total demand in the country would be about 17 to 18 million metric tons of petroleum products and by the end of the decade about 30 million tons. In 1962 we shall have consumed well over 9 million tons. The real meaning of these figures is that as against the annual increase of 9.2 per cent experienced during the Second Plan, during the Third Plan the annual increase is likely to be around 15 to 17 per cent. Of course, one of the main reasons of this is the increasing reliance on Furnace Oil as a gap filler to Coal and the second reason is the emergence of petroleum as a chemical feedstock.

We are aware of what is happening in the Indian scene. Some oil is being found, but even the most optimistic would not say in Middle Eastern proportions. Refineries are being built; transportation bottlenecks are being recognised and pipelines (both for Crude and products) are increasingly regarded as a solution and new marketing organisations like the Indian Oil Company are being set up. There is certainly progress, but I venture to emphasise that the core of an expanding economy (without which much else of what you do is foredoomed to failure) is cheap, abundant and readily available power and energy. Oil is the

source of cheap power and raw materials for heavy chemicals. Many societies have shown that the rapid growth of production soon produces to the Government of the country a greater income by increased prosperity as a result of cheap power and raw materials than the yield from taxes. This means careful but prompt investment in the power producing sector and obviously it is unwise to put too high a tax burden on raw materials.

In this broad context, what is this logic of economics? All economic activity is essentially a choice between ends and means which have alternative uses. It is the choice of an alternative between immense wastage on the one hand, and productive use on the other. Take, for instance, the comparative economics of refining imported crude, and importing naked products.

Light Iranian Crude which is run at a Bombay Refinery is presently costing approximately Rs 66 per metric ton CIF Bombay. The naked products derived from this Crude are worth on an average Rs 116 per metric ton at present prices at the ports to which they are distributed in India. It can thus be seen that the gross foreign exchange saving per metric ton through refining crude in India rather than bringing in naked imported products is approximately Rs 50 per metric ton. Offsetting this gross foreign exchange saving there are the foreign exchange outgoings arising from an Indian refinery namely foreign flag coastal freight, payment for imported materials needed by the Refinery and not available in India, payment of royalties, etc, and remittance of profits: these on a per metric ton of crude consumption basis amount to Rs 15. The net saving per metric ton of crude consumption after taking into account the above factors is thus Rs 35. Considerable net savings also arise through the packaging of bitumen in India rather than through bringing in packed bitumen from the Persian Gulf: using the same divisor (a metric ton of Crude consumption) the packaging of bitumen saves a further Rs 4. It can thus be seen that the overall effect of the Bombay Refinery in 1962 is to save India Rs 39 per metric ton of crude consumption.

Viewing the matter purely from the import licensing viewpoint with crude costing Rs 66 per metric ton and the average value of products derived from the Crude Rs 116 per metric ton it can easily be deduced that a given amount of foreign exchange will make available for India 75 per cent more products if this sum is allocated to bring in Crude for processing into products in India rather than bringing in the products from refineries overseas.

Again: Let us look at the logic of economics in the context of the capital cost of the various refineries which exist in the country and

which are being planned for the future.

The Burmah-Shell Refinery cost Rs 26 crores and it can now process at the rate of 3.5 million metric tons per annum. Capital cost of the Esso Refinery is Rs 17.5 crores and it can now process at the annual rate of 2.4 million metric tons. The Refinery at Vizag cost Rs 15 crores to put up and its present capacity is believed to be about a million tons. The Barauni Refinery is estimated to cost Rs 39 crores and the capacity is 2 million tons. The Nunmati Refinery is Rs 18 crores and the capacity is 0.75 million tons. The figure quoted in the Press for the 2 million Koyali Refinery is Rs 30 crores. We thus have a situation where the capital cost per ton varies from about Rs 80 to anything upto Rs 240 and a strict application of the principles of the logic of economics fails to yield a coherent pattern. This capital has to be serviced and the higher the capital cost, the greater the service the community will be called upon to make. These are the inexorably logical facts in any industry.

What are the components in this logic of economics in the Oil Industry? The main one is Finance. How are you going to generate the cash that is needed in the quantity required? How economically can a job be done? Equally important is the question: How quickly can it be done when there is an energy revolution around? How quickly can oil be found, refined, transported and distributed to the consumer? Should the Government expend its scarce capital resources on projects which might well be left to existing agencies which have the time, skill and resources to do the job? Where should Refineries be sited? In areas of production or areas of consumption? What should be the level of taxation on petroleum products? These and similar questions must have a supremacy in any oil policy though I am prepared to concede that strategic considerations, prestige and the natural desire to be self-sufficient are important considerations, but if this latter set of considerations is found to hang heavily on the logic of economics, the energy revolution which is with us now can so easily come to a grinding halt.

Very often this logic of economics is relegated to the background on account of inadequate appreciation of the logistics of the oil business.

Let us take the nearest petrol pump. What are the logistics which enables the motorist to obtain his gallon of petrol at a price (if you leave out the taxes) which compares favourably with the price you pay for a gallon of Soda water sold.

Behind this street corner petrol pump and supporting it is the Depot, then the port installation, the Refinery, the tanker, the pipelines, the producing well—all working away conjointly and in harmony to effect the smooth sale of a few gallons of Motor Spirit. So smoothly that one almost takes it for granted like the formula of the air one breathes.

A petrol retail outlet and its constituent parts have to be designed and built within the rigid safety limits laid down in Government petroleum regulations. The capital cost to bring into commission a petrol retail outlet (excluding cost of equipment) can vary from Rs 10,000 to Rs 100,000. The petrol comes from the Depot, or a minor installation if you like to call it that. Here again costs vary but on an average the cost is Rs 4 lakhs and a large distribution network has to have hundreds of such depots. There are two basic properties of oil which affect the manner and methods of its transportation. Firstly, it is liquid and therefore subject to flow, whether by gravity or under pressure; secondly, it is volatile and inflammable therefore susceptible to losses through evaporation and leakage. The basic principle governing its distribution is minimum number of handling, and quickest possible manner of travel in largest practicable parcels at every stage.

In view of the inherent properties of oil, namely its liquid stage and its inflammability, transport is not an external item but a major problem to be solved within its own orbit or through agencies which offer specific services to the Oil Industry such as the Railways. The final purchase of petrol or HSD in the remotest town is essentially a small transaction involving a small quantity, while there is a great ad-

vantage from the point of view of cost in moving the product in large quantities. Our country has its own problems of oil storage and distribution owing to the geographical spread of the country, low per capita consumption and a host of other factors.

Despite massive industrial progress in the last ten years over the impact of the first two Plans, the Indian economy still has a broad rural base and this is reflected in the countrywide dispersal of demand for petroleum products with the exception of a few pockets of conce-

trated offtake. Compare India with Holland, which is no bigger than a large sized Indian district: total inland offtake in both countries is more or less of the same order at present i.e. about 8 million tons per annum. Whereas in Holland any market can be reached within a matter of hours, the leads from the supply bases in India are very long indeed; to quote a few, Kandla feeds Pathankot and Srinagar, Bombay's limit extends to Delhi and beyond, while Moradabad is in Calcutta's orbit. This creates stresses and strains in arranging

distribution, remembering at the same time that these products have to keep the wheels of Industry moving. Any closure or intermittent working of factories as a result of shortages in relation to demand is likely to have the most far reaching economic consequences.

It requires no detailed description to prove that the transport system in India has reached a saturation point and it is therefore essential that means must be found to move oil to the consuming centres at the cheapest possible cost. The railway capacity has been stretched to the

limit, and therefore road and sea transport must be developed urgently either for oil or for other commodities releasing the railway capacity for the movement of oil and other essential articles.

India has a vast coastline and many navigable rivers; yet the system of waterways remains neglected. The lack of development of coastal ports affects the progress of shipping. There is urgent need for modernising roads and improving bridges and culverts which could bring down the cost of road transport.

—As You Like It.

EVERY now and again, when the parlousness of foreign balances becomes too uncomfortably obvious, the idea of mobilising the hidden gold hoards in the country is taken out, dusted, looked over and put back again as "not practical". I hope the same fate will not overtake Mr Morarji Desai's recent resurrection of the idea in Parliament's informal Consultative Committee on Finance. Indian Finance has been repeatedly urging that Authority should take courage in both hands and devise a means of activating the sterile gold locked away in safes and cellars. It has asked for a workable scheme of gold bearer bonds and has suggested some of the forms the scheme might take. I know backwards all the objections that a lazy or timid bureaucracy has against it but they are certainly not insuperable. Gold hoarding is an ancient habit in this country which probably has unconscious psychological and magical implications. The tax-evading gentry finds in gold a handy repository of undeclared wealth. Our women are far too fond of jewels and find in it a valuable ally against feckless husbands. And everybody finds that gold is probably the best hedge against inflation, being literally and figuratively unrotable. I am not so naive as not to see that these attitudes and facts can be serious obstacles to bringing hidden gold into the open. But they can be overcome and must be overcome if we are to have anything like a solution of our balance of payment difficulties that is not mere desperate improvising. And all these objections, except the last, can be exaggerated. Take for example, the sterilisation of evaded money in the form of bullion. I have no doubt this is happening, but its extent can be overstated. Businessmen need funds and evaded income cannot, and what is more important, need and "rust". Everybody knows that often there is a sporting chance of escaping tax by bringing untaxed earnings as capital sums into the business. One of the forms of such backdoor entry into active use of untaxed money is the pretence that it represents sale of gold and jewels that have come as family heirlooms and so forth. The income tax department doesn't always fall for this story, but even if it reckoned only those sales it has accepted as genuine, quite a vast hidden hoard must have been disgorged into

the market! No doubt it can be argued that this gold in its turn will go into further secret hoards, but I don't think its scale can be as large as is sometimes made out. Indeed, as the Income-tax Investigation Commission found, any inferences about the volume of trade in gold from the books of gold and bullion merchants could easily be misleading; for many of these alleged sales and purchases are no more than a traffic in receipts which come in handy as evidence before the income tax department and no actual gold passes hands.

The difficulty with regard to making women part with their expensive (and often ugly) trinkets is certainly more genuine. Here what is needed is a really effective appeal to their patriotism, response to which may be greater than what many cynically imagine. Not all of us could have forgotten Gandhi's phenomenal success in wheedling and even mildly blackmailing women into handing over their jewels to him for the Harijan fund. What the nation will now be doing is much less for it involves no expropriation but borrowing. Is it beyond the capacity of many of the women's social welfare organisations to persuade women in the country to acquiesce in this? Gentle official pressure may also help. I rather think that many women will find it difficult to resist Mrs Tarakeswari Sinha coaxing them into parting with their bangles for a short while.

The fears about pauperisation by inflation once gold is parted with are more difficult to overcome. Even in advanced economies like the US, there have been recent reports of gold hoarding. (This, like balances in Swiss banks, may be symptomatic of tax evasion rather than of hedges against inflation). In one of his bitter moments some years ago, Rajaji expressed himself as unhappy in retrospect in having asked people in 1939 to desist from hoarding bullion. The progressive erosion of the value of money is too real for anyone to be glibly sarcastic about the instinct of primitive accumulation. But, the essence of the gold bearer bond scheme is the possibility of getting gold in specie, when the bond is surrendered in terms of its issue. In other words, the hedge against inflation will be intact, you would

get your gold (and not its value in money) back after a time and all that has happened is that the economy has been helped in the interim in a crucial way. Indeed, with the gold safely tucked away in the Reserve Bank vaults in Nagpur, you don't run the risk of loss. The negotiability of the bonds makes, subject to any fluctuations in values, (which cannot be very violent in the nature of the case) for liquidity in resources.

The principal objection to the scheme arises from its possibilities as an additional mode of evasion of tax. This objection is rather specious. The bearer bond cannot increase the quantum of evasion for evaded income can always transmute itself into gold. The bearer bond can at best deputise for gold, prize bonds or quite simply for currency notes in which currently some of the evaded income is salted away. It is true that the books of the bullion merchant will give leads about the destination of the gold, but with benami transactions on the scale they are, this is but a dim hope. The danger to the success of the scheme is far likelier to arise from opposite considerations. The tax-dodger may be afraid that he would be walking into a trap if he went in for these bonds, which, though nominally anonymous may give him away. This danger can be minimised by assurance of anonymity. After all, let the income tax department do its thinking about tackling tax-evasion. It is their job. Meantime, there is no reason, why gold, though tainted by association, should not help the economy.

To planners oppressed by the nightmare of numbers, an oral contraceptive has all the compulsive mystique of, ironically, a fertility symbol. The prospect of stumbling on one safe and effective enough has made frequent revisions of census figures bearable to them. It is not surprising therefore that the papers have been full of a Calcutta doctor's claim that he has discovered the wondrous drug. Details are scanty and I should like to warn against a too early rejoicing for several reasons. As far as I can gather, the claim is that a certain seed (whose identity is, for reasons of commercial prudence withheld by the doctor) ground into powder and taken in a quantity of 0.5 grammes stops conception for a year. Experiments on animals and human beings are stated to have been highly successful. Of the sixty persons taking it, only one conceived after nine months, and there was no toxic side-effects. But it was conceded that the active principle involved

in the contraception has not been isolated and the hypotheses about it (there are at least three) are tentative and certainly not verified scientifically. I am not suggesting that the whole thing should therefore be dismissed out of hand as some herbal mumbo jumbo. On the contrary the search for oral contraceptives is likely to lead to quicker results if we tested some old wives' nostrums. (It is an amiable fiction that dies hard in some high-minded circles that the populace is horrified at the thought of contraception. The truth is almost the reverse. Important leads for research can be had from popular medicine about these matters. The old-time village midwife would know as much about aphrodisiacs as about abortifacients and contraceptives, though of a crude and painful kind.) But it is necessary to test them thoroughly before they are used extensively. Particularly important is it to examine whether they have any subsidiary harmful effects. This warning is necessary in view of recent reports about certain synthetic hormone drugs used extensively in England and the US as oral contraceptives. An article in the British Medical Journal has recently drawn attention to the subject. One person who was taking Conovid, an oral contraceptive widely sold by the Family Planning Association in the UK was ill with what is called the phlebitis in the leg and thrombosis and died of a clot in the lung a week later. The article does not draw any firm conclusion whether there is any causal relation between the pill and the subsequent illness, especially because "venous thrombosis" is common even in young women not taking contraceptives. Indeed, the BMJ says that in a private conference on the subject, doctors from America (where also there have been similar cases) were of the view that the risk of "clots" were no greater than in cases of normal pregnancy. In any event, the BMJ warns that at least for the present "thromboembolic incidents" should be taken to be contra-indications for these synthetic hormone contraceptives. The FPA has also warned that "the long-term effects of these preparations cannot be predicted and that the responsibility of administering the medicine is the physician's, who should realise the limitations of present knowledge." I have gone into this at some length because of the obvious impatience in the country for an oral contraceptive and the shockingly common tendency in our people for self-medication. The ghastly consequences of thalidomide are fresh enough in our minds, but misguided zeal, at individual and collective level, for short-cuts for family planning should be held firmly under check until a really harmless and effective drug is found.

(From Our New Delhi Correspondent)

Raw Materials for Rubber Industry

THE need for licensing two more units for the manufacture of synthetic rubber, it is understood, was brought to the notice of the meeting of the Standing Committee of the Central Advisory Council of Industries which met here last Tuesday. The establishment of these two units with a total capacity of 50,000 tons, it is expected, would help close the gap between the supply and requirements of rubber anticipated in 1965-66. The largest consumer of rubber, both natural and synthetic, is the Automobile Tyres and Tubes Industry. The programmes for the development of this industry during the plan period were reviewed by the Standing Committee.

The Automobile Tyres and Tubes Industry has made phenomenal progress during the last decade. Production has been almost doubled, from 8.98 lakh numbers to 16.91 lakhs during 1961. In contrast to the difficult position two years ago, when tyres had to be imported, current production is adequate to meet the domestic demand and to leave a margin for export. Arrangements are now being made to build up an export trade. The tyre companies have been set an export target of Rs one crore for the period July/December 1962, and it is expected that the target would be raised to ten per cent of the production next year.

There are now five units engaged in the production of tyres and tubes, with an aggregate capacity of 1,818,000 Nos. each of tyres and tubes. Additional capacity to the extent of 2,023,200 Nos., including five new units, has already been licensed and the schemes are under implementation. Of the five new units licensed, three are expected to commence production within the next six months. Licensing of two more units, and expansion of capacity of the existing units and those already licensed, is now under consideration in order to reach the revised Third Plan target. In view of the growing demand, the target, which was originally fixed at 3.7 million Nos. each of tyres and tubes it was felt would not be sufficient to meet the requirements and it has subsequently been decided to

license additional capacity to bring the total to 5.14 million Nos. When all the schemes are implemented, there will be twelve units manufacturing tyres and tubes in the country. The State-wise distribution of the capacity of 5.14 million Nos. is as under:

West Bengal	..	1,079,400
Punjab	..	510,000
Maharashtra	..	1,450,000
Madras	..	905,400
Uttar Pradesh	..	300,000
Kerala	..	600,000
Rajasthan	..	300,000
		<u>5,144,800</u>

Increase in the capacity targets will not be realistic unless supplies of raw materials are also ensured. All the raw materials required by the automobiles tyres and tubes industry, except for the production of natural rubber from South Indian plantations which meets about 50 per cent of the requirements, are at present being imported. The annual foreign exchange bill at the current rate of output is of the order of Rs 16 crores. Apart from the automobile tyre and tube industry, there are over 80 units borne on the books of the Development Wing of the Ministry of Commerce & Industry, engaged in the manufacture of a wide range of rubber goods such as bicycle tyres and tubes, rubber and rubberised footwear, Railway components, belts etc. The total foreign exchange requirements of the rubber goods manufacturing industry, including automobile tyres and tubes, is now of the order of Rs 25 crores. Increase in the capacity of the automobile tyres & tubes industry will not be of much help if the import requirements also increase in the same proportion.

Steps have already been taken for licensing adequate capacity for the manufacture of the materials, other than synthetic rubber, required by the rubber goods industry, such as Carbon Black, Rayon/Nylon Tyre Cord, Accelerators & Anti-oxidants, Tube Valves, Bead Wires, Reclaimed Rubber etc.

The total requirements of the industry in 1965-66 of all grades of rubber is estimated at 140,000 tons, made up of natural rubber 50,000 tons, synthetic rubber 70,000 tons and reclaimed rubber 20,000 tons. The indigenous production of natural rubber in 1965-66 is estimated at 40,000 tons,

GOVERNMENT OF UTTAR PRADESH FINANCE DEPARTMENT

Dated Lucknow, August 7, 1962

PRESS NOTE

4½ per cent Uttar Pradesh State Development Loan, 1974

THE Government of Uttar Pradesh are floating a loan of Rs. 9 crores in order to finance development schemes particularly those relating to electricity, irrigation and industries. The loan will open for subscriptions on 27th August, 1962 and will close on 1st September, 1962 unless closed earlier. The main terms of the loan are that the issue price will be Rs. 99.75 for every Rs. 100 of the loan applied for; the loan will have a currency of 12 years from 27th August, 1962 and will be repaid at par on 27th August, 1974; the loan will carry interest at the rate of 4½ per cent per annum from 27th August, 1962 payable half-yearly on 27th February and 27th August, the payments being subject to tax under the Income Tax Act, 1961. Subscriptions for the loan can be made in the form of cash or cheque or securities of 3½ per cent Uttar Pradesh Loan, 1962 and will be received at the branches of the State Bank of India in Uttar Pradesh, the Government treasuries and sub-treasuries in the State of Uttar Pradesh where there is no branch of the State Bank of India, the offices of the Reserve Bank of India at Bombay, Calcutta, New Delhi, Madras, Nagpur and Bangalore, the branch of the State Bank of India at Patna and the branch of the State Bank of Hyderabad at Hyderabad.

Full details of the terms of the loan are contained in Finance Department notification no. B-1-3393/X-88-62, dated August 7, 1962, copies of which, along with the application form, are obtainable at the receiving offices mentioned above.

2. Financial position of the Government of Uttar Pradesh:

Revenue Position—The revenue receipts and expenditure and the surpluses for the last nine years are as follows:

	(Figures are in lakhs of rupees)		
	Revenue	Revenue	Surplus
	receipts	expenditure	(+)
1953-54	7,564	7,281	+283
1954-55	7,819	7,713	+106
1955-56	8,553	8,423	+130
1956-57	8,996	8,984	+12
1957-58	10,493	9,942	+551
1958-59	11,723	11,614	+109
1959-60	12,955	12,816	+139
1960-61	14,835	14,431	+404
1961-62	15,298	14,841	+457

Balances in the Reserve Funds—The balances at the credit of the various reserve funds at the end of 1961-62 were 523 lakhs in the U. P. Road Fund, 3 lakhs in the Hospital Fund, 46 lakhs in the Famine Relief Fund, 1,231 lakhs in the Revenue Reserve Fund, 2,246 lakhs in the Zamindari Abolition Fund, 264 lakhs in the Depreciation Reserve Fund—irrigation, 495 lakhs in the Depreciation Reserve Fund—Government Bus Services, 432 lakhs in the Depreciation Reserve Fund—Electricity, 21 lakhs in the Contingency Reserve Fund—Electricity and 221 lakhs in the Depreciation Reserve Fund—Cement Factory. Most of these are invested in Government of India Securities. The total balance in these Reserve Funds amounts to 5,482 lakhs.

Debt Position—On March 31, 1962, the debt of the Uttar Pradesh Government amounted to 31,793 lakhs consisting of 896 lakhs representing the consolidated debt due to the Central Government, 22,495 lakhs taken from that Government for development purposes, 1,071 lakhs for Community Development Projects and 838 lakhs for Relief and Rehabilitation Schemes plus 6,337 lakhs representing the amount of public loans floated by this Government from time to time, 134 lakhs as Uttar Pradesh Encumbered Estates Act Bonds, 229 lakhs from the Reserve Bank of India, 121 lakhs from the Life Insurance Corporation of India, 105 lakhs from the National Co-operative Development and Warehousing Board for expansion of Co-operative Institutions and Marketing Societies and 67 lakhs from the Khadi and Village Industries Commission. Apart from this, the State Government have also issued Zamindari Abolition Compensation Bonds and Rehabilitation Grant Bonds, the outstanding balance of which on March 31, 1962 amounted to 8,201 lakhs. Sinking Funds have been constituted for all the public loans and the balance at the credit of these funds which amounted to 2,520 lakhs on March 31, 1962 are mostly invested in Government of India Securities. Besides this a sum of 1,765 lakhs is also available in the Sinking Fund built up for the amortization of loans obtained from Government of India, which are repayable in lump sums.

Assets of the Government—Against the outstanding debt of 31,793 lakhs there are assets in form of the Ganga, Yamuna and Sarda Canals, various other small canals, and the State Tube-wells, Cement Factory, Government Bus Services and Electricity Schemes, in which about 24,934 lakhs have been invested. Another asset is the balance due to Uttar Pradesh Government on account of loans and advances amounting to 15,382 lakhs. Besides these, there are a large number of buildings and roads for which no separate capital accounts are maintained.

Footnote—The accounts for 1961-62 have not yet been closed finally. The figures for 1961-62 mentioned in the Press Note are based on the latest available information and are liable to changes.

while the Bareilly unit is expected to produce 30,000 tons of synthetic rubber. Including 20,000 tons of reclaimed rubber for which capacity has already been licensed, the total supply by 1965-66

BENARES ELECTRIC LIGHT & POWER CO. LTD.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday, the 21st September, 1962, at 11-20 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1962, and the Reports of the Directors and the Auditor thereon.
2. To declare a Dividend.
3. To appoint a Director in place of Mr. S. C. Gladstone who retires by rotation and offers himself for re-election.
4. To appoint a Director in place of Mr. S. K. Sinha who retires by rotation and offers himself for re-election.

In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Sinha, a retiring Director, who has attained the age of 67 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

5. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 14th September, 1962, to the 21st September, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and an a poll, to vote instead of himself.

By Order of the Board
MARTIN BURN LTD.,
A. G. GIDLEY
Secretary,
Managing Agents.

12, Mission Row,
Calcutta-1,
25th August, 1962.

NOTE:—An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

will be 90,000 tons against requirements of 140,000 tons.

Two more synthetic rubber units producing 50,000 tons of synthetic rubber will help to close the gap and make the country self-sufficient in the requirements of the rubber manufacturing industry by the end of the Third Plan. Proposals now under the consideration of the Government envisage the manufacture of two different grades, Cis: 1:4 Polybutadiene and Cis: 1:4 Isoprene, using Refinery by-products as raw materials. Approval of the proposals is, therefore, linked with the grant of permission for setting up of Naptha steam cracking units in the country on which a decision has to be taken by the Ministry of Mines and Fuel.

Programme for Drugs

The Standing Committee of the Central Advisory Council of Industries is also understood to have discussed the programmes for the Machine building industry as well as Drugs and Pharmaceuticals. As regards the last, the accent is now on the manufacture of basic drugs. It is estimated that by 1966 the entire requirements of essential drugs at present in use will be produced within the country, without additional import of raw materials. There is also an export angle to the development of the drugs and pharmaceutical industry. At present exports of drugs (mostly proprietary preparations) to neighbouring countries is of the order of Rs 82 lakhs. But exports of this type have only limited scope. For, apart from the keen competition from foreign manufacturers, these exports are likely to fade away when these countries develop their own drugs processing industries. Therefore it is proposed to develop intermediary products required for the production of finished drugs, for which the raw materials are available in the country. A beginning has been made in this field with the export to the U.K. and U.S.A. of Beta Ionone, obtained from lemon grass oil, for the production of Vitamin A. Export possibilities of other intermediary products are also being investigated.

Fertilizer Targets

The Department of Heavy Industries, it is learnt, has been asked by the Planning Commission to complete the review of the Third Plan Fertiliser projects and indicate the extent to which targets are likely to be fulfilled by 1965-66. In the meantime, the Minister for Steel and Heavy Industries stated in Lok Sabha in answer to questions last week, that Government are taking all possible steps to try and achieve the targets. The target for 1962-63 is 200,000 tons N and for 1965-66, the target is 800,000 tons N. The foreign exchange required for the 'fertiliser' projects in the

public sector, except in the case of one project, has been arranged. As regards the private sector, the Minister stated that the licensees are negotiating with foreign parties for financial collaboration and, in most of the cases, the negotiations are expected to be satisfactorily concluded within six months. The foreign exchange requirements of the public sector projects are being met from credits offered by the U.K., Japan, U.S.A., West Germany and Switzerland. The requirements of the private sector projects will be met from U.S.A., Canada and Holland.

The long time taken for the implementation of the fertiliser projects in the Second and Third plans underlines the need for planning ahead to meet the requirements of the Fourth. The Fertiliser Corporation of India, it is learnt, has been alerted by the Planning Commission to get ready to design and execute two fertiliser plants per annum to enable the achievement of the Fourth Plan target. The planning group for fertilisers, at a recent meeting, is understood to have decided that additional minimum capacity for nitrogenous fertilisers to be set up during the Fourth Plan would be of the order of one million tons. The Department of Agriculture has been asked to prepare at an early date rough estimates of requirements of fertilisers for each year of the Fourth Plan. As it would take some time before a complete picture of the Fourth Plan development becomes available, it has been suggested that immediate planning should be undertaken on the additional fertiliser capacity to be set up during the first year of the Fourth Plan, and the Fertiliser Corporation of India has accordingly been asked to indicate proposals for establishing two additional fertiliser factories in the first year.

CORRIGENDUM

It is regretted that in the announcement of Messrs. Braithwaite & Co. (India) Limited, which appeared on page No. 276 of Indian Finance, 18 August 1962, an inadvertent error has crept in. The relevant portion should read as follows:

NOW BEING ISSUED:
40,000—9% Redeemable Cumulative Preference Shares of Rs. 100 each at par Payable in Full on Application ... Rs. 40,00,000

The subscription List will open at the commencement of banking hours on Tuesday, 28th August, 1962 and will remain open until the close of banking hours on Thursday, 30th August, 1962 or later at the discretion of the Directors.

Markets

JUTE Weak Trend

THE weakness noticed last week in raw jute continued unabated this week also despite indications of renewed efforts by authority and the industry to support the market. Since it seems to have been assumed that the minimum price basis Assam Bottoms should be Rs 30 per maund, the fact that jute is now available at one or two rupees below the minimum levels has been interpreted to mean that jute holders have become sceptical about the ability of authority to maintain the current minimum price. There may be various reasons for the anxiety exhibited by raw jute sellers. Perhaps the most compelling of these is the heavy pressure of arrivals. As has been noted in this column last week, new crop arrivals are unusually early this season. With a sizable quantity of the old crop yet to be marketed, holders perhaps have been obliged to dispose of stocks even at a discount in order to make room for the new crop. Any way, Government appears to be determined atleast for the time being to maintain the minimum price at existing level. The Indian Jute Mills Association's decision to resume minimum jute purchase quotas for mills seems to be a move

calculated to arrest the spread of panic among raw jute holders. Quotas are likely to be issued from next week and this may bring about the desired result. Meanwhile, there is the news of heavy floods in Assam and parts of West Bengal and Bihar. The raw jute market has so far recorded no reaction to the news. If it is confirmed that the crop has suffered damage, raw jute prices should steady up.

The jute goods market ruled easy last week in the absence of fresh foreign enquiries. Earlier in the week there were scattered enquiries for hessian which as a consequence received some support. Speculative interest in this construction was encouraged by the news of a small increase in US burlap consumption in July. US burlap consumption increased by 2 million yards from 61 million yards in June to 63 million yards in July. Stocks also declined by 4 million yards from 241 million yards at the end of June to 237 million yards at the end of July. It was anticipated that US buying of burlap might show steady increase in coming months in view of the improvement noticeable in the economy of the country. Continued interest in hessian from Argentina was also expected. But towards the close of the week, hessian prices declined in sympathy with heavy goods which ruled easy

Notes:—The rates were nominally quoted at Rs 30, Rs 50 and Rs 32 for Assam Bottoms, Northern Bottoms and Dalsee Bottoms respectively, all per maund for September/October delivery.

on lack of buying interest coupled with selling pressure in the forward market. It has been reported that shipping instructions for this category of goods has been disappointing so far this month. Last month despatches were lower than in the previous month. Total despatches from mills in July declined to 95,200 tonnes from 99,300 tonnes in June. Despatches for export were lower at 75,200 tonnes against 80,200 tonnes but despatches for internal consumption were higher at 19,700 tonnes against 19,100 tonnes. The decline in despatches is shared by all categories of goods. While despatches of hessian fell from 39,600 tonnes in June to 39,300 tonnes in July, those of sacking declined from 42,900 tonnes in June to 40,100 tonnes in July. Despatches of other goods were also lower at 15,800 tonnes as against 16,800 tonnes.

Conditions in the goods market however were not easy from the

beginning of the week. Up to mid-week, sentiment was fairly steady with considerable speculative interest noticeable at the lower levels. The fact that there were scattered enquiries in hessian kept prices from declining. But on Wednesday, heavy goods came under pressure and as a consequence lost sizable ground. Though hessian also shed part of its earlier gains, the undertone in this section was steadier in comparison thanks to some covering business.

The raw jute market too ruled easy during the past week but to ward the close sellers were not found to be as keen to dispose of their stocks as in earlier dealings. Neither the news about the resumption of minimum purchase quota by the LTMA nor reports of heavy flood in Assam and other jute growing areas seems to have affected sentiment either way as selling pressure continued unabated throughout the week.

AGRA ELECTRIC SUPPLY COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday, the 21st September, 1962, at 11-10 a.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1962, and the Reports of the Directors and the Auditors thereon.

2. To declare a Dividend.
3. To appoint a Director in place of Mr. S. K. Sinha who retires by rotation and offers himself for re-election.

In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Sinha, a retiring Director, who has attained the age of 67 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

4. To appoint a Director in place of Mr. K. L. Ganguly who retires by rotation and offers himself for re-election.

In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956 has been received by the Company under Section 281 of that Act to move the following Resolution as a

Special Resolution at the meeting:—

"That Mr. K. L. Ganguly, a retiring Director, who is an associate of the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company."

Mr. K. L. Ganguly is according to the Companies Act, 1956, an associate of the Managing Agents, and consequently his appointment as a Director of the Company should be effected by means of a Special Resolution in accordance with the requirements of Section 261(1)(f) of the Companies Act, 1956.

5. To appoint Auditors and fix their remuneration.
- The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 14th September, 1962, to the 21st September, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a pool, to vote instead of himself.

By Order of Board

NOTE:—An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

TEA Fairly Good General Demand

IN the Export Sale held in Calcutta this week, offerings were 56,824 packages. There was a fairly good general demand. Orthodox descriptions met with useful enquiry, especially the brighter liquoring kinds; but prices were irregular. The plainest sorts were firm on last levels with selected Fannings a strong feature.

Medium CTC descriptions were again well supported; but prices were irregular. The best types were, however, fully firm and sometimes dearer. Legg-cut teas were sold at about last rates. There was more demand for the poorer whole Leaf descriptions which were firm; but the more stylish kinds were generally easier. The Tippest teas were sold well; but the lesser kinds met with a selective demand and were generally a weak feature.

Darjeeling teas met with less enquiry and prices were easier by fully 40 nP per kilo with a number of withdrawals. Following rates were quoted:—Clean Plain Pekoe Rs 4.10 to Rs 4.40; Plain BP Rs 3.40 to Rs 3.70; Plain Fannings Rs 3.50 to Rs 4.00; Medium Assam CTC BP Rs 5.40 to Rs 5.90; Medium Assam CTC Fannings Rs 5.40 to Rs 5.90; Best Assam CTC BP 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 8.20.

The overall decline in prices, fetched at the export auctions at Cochin this year in the first 29 sales, was 22 nP per kilo. For the North, the decline in the first six export sales this season was only one naya Paisa per kilo. For sales from January to 27th July 1962 and for the same period last year, the comparable figures for tea sold in London from the three main centres were as follows (average price per lb:—

	1 Jan. to July 1962	1 Jan. to July 1961
North India ...	4 8.65	4 7.00
South India ...	3 8.41	4 1.83
Ceylon ...	4 8.86	4 7.01

In the Dust sale, offerings were 29,340 packages. Demand was good and general. CTC dusts were well supported at irregular rates, the bright liquoring and fibrous secondary types being generally dearer. There was a keen enquiry for good CTC types and prices for this category were generally dearer. Plain Orthodox varieties once again declined by about 10 nP per kilo; but the Assam dusts were appreciably dearer, buyers following quality closely. The few Darjeeling teas, on offer, were difficult of sale.

The strongest feature of the sale was the non-wither legg-cut dusts and this category was much dearer to buy. Following rates were quoted:—Plain Orthodox Dus Rs 3.20 to Rs 3.50; Medium Assam Dust Rs 4.60 to Rs 5.00; Legg-cut Dust Rs 4.20 to Rs 4.60; Medium Assam CTC Dust Rs 5.50 to Rs 6.10 and Good Assam CTC Dust Rs 6.40 to Rs 6.90.

The production of tea in Pakistan has declined by about 1.21 million pounds in July as against 8.20 million pounds in July last year. The cumulative quantity of tea produced from the beginning of April to July this year also showed a decline by 4.64

million pounds as against 21.4 million pounds during the corresponding period of last year. The quantity of tea exported during July this year was 2,09,276 pounds.

In London auction, 28,378 packages including 10,628 packages of Northern

India tea were offered. The best colour Assams were decidedly dearer and prices were often about 3d per pound above brokers' valuation. Good mediums were strong at last rates. Doars were easier where liquors were thin. Demand for low tea,

THE INDIAN STEEL & WIRE PRODUCTS LIMITED

NOTICE

NOTICE is hereby given that the Twenty-Seventh Annual General Meeting of the Shareholders of THE INDIAN STEEL & WIRE PRODUCTS LIMITED will be held at its Registered Office, No. 7 Wellesley Place, Calcutta-1, on Tuesday, the 25th September, 1962 at 11-30 A.M. to transact the following business:

1. To receive and adopt the Directors' Report and Audited Balance Sheet and Manufacturing and Profit & Loss Account of the Company for the year ended 31st March, 1962.

2. To declare dividend on Ordinary Shares of the Company.

3. To appoint a Director in place of Sir Indra Singh, Kt. who retires by rotation and is eligible for re-appointment and to consider and, if thought fit, to pass the following resolution as a Special Resolution:

"RESOLVED that Sir Indra Singh, Kt., a Member, Director and Associate of Indra Singh & Sons Private Ltd., the Managing Agents of the Company, be and is hereby re-appointed a Director of the Company and that it be and is hereby declared that the age limit prescribed in Section 280 of the Companies Act, 1956 shall not apply to him."

Notice is hereby given that special notice as required by Section 261 and 281 of the said Act of intention to move the above resolution as a Special Resolution for the reason that Sir Indra Singh, Kt. is a Member and Director of Indra Singh & Sons Private Ltd. and therefore "an Associate of the Managing Agents" and stating that he has attained the age of 79 years, has been received by the Company.

4. To appoint Auditors for the current year and to fix their remuneration.

SPECIAL BUSINESS:

5. To consider and, if thought fit, to pass, with or without modification, the following resolutions:—

- (a) As an Ordinary Resolution:

"RESOLVED that in compliance with the requirements of Section 293(1)(d) of the Companies Act, 1956, the Company do hereby consent to the Board of Directors of the Company borrowing such monies as the Board may from time to time deem necessary for the purpose of the Company not exceeding at any one time Rs. 5,00,00,000/- (Rupees five crores only) not withstanding the monies to be borrowed together with monies already borrowed (apart from the temporary loans obtained by the Company from its bankers in ordinary course of business) will exceed the aggregate of the paid-up capital of the Company and its free reserves, that is to say, reserves not set apart for any specific purposes."

- (b) As an Ordinary Resolution:

"RESOLVED that pursuant to Section 293(1) (a) of the Companies Act, 1956, the Company do hereby consent to (i) the equitable mortgage created by the Board of Directors in favour of Central Bank of India Ltd. of Mahatma Gandhi Road, Bombay by deposit of title deeds relating to immovable properties of the Company comprising of factory buildings, general office buildings, town buildings at Tatanagar and all Plant and Machinery installed or erected thereon as security for the guarantees executed by the said bank on behalf of the Company in respect of Deferred Payment terms, and (ii) to the Cash Credit Arrangement already made with the Central Bank of India Ltd., Jamshedpur, to the extent of Rs. 1,50,00,000/- (Rupees one crore and fifty lacs only) against the security of all tangible moveable property of the Company comprising of all sorts of Block Assets, Machineries, Raw materials, Finished and Semi-finished products, Stock-in-trade, Stores, Spares etc. which now are or hereafter from time to time during the said security shall be brought in, stored or be in or about the premises or godowns of the Company at Indranagar, Jamshedpur or anywhere else on interest at the rate of 6% per annum to be calculated and charged on the daily balance due to the bank upon the Cash Credit Account and that the aforesaid mortgage and Cash Credit Arrangement against security be and are hereby confirmed and ratified.

The Transfer Books of the Company will be closed from 3rd September to 25th September, 1962 both days inclusive.

By Order of the Board of Directors
INDRA SINGH & SONS PRIVATE LIMITED.
A. SINGH
Director,
Managing Agents.

Calcutta-1,
9th August, 1962.

Note:—

- (1) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and upon a poll vote instead of himself and that a proxy need not be a member.

- (2) The Explanatory Statement of the above resolution under items No. 3, No. 5(a) and No. 5(b) of the Notice has been sent to the shareholders along with the Notice of the Meeting. It can be inspected at the Registered Office No. 7, Wellesley Place, Calcutta-1, during usual office hours on any working day.

- (3) If the dividend on shares, as recommended by the Directors, is passed at the meeting, the payments will be made on or after 4th October, 1962 to those shareholders, whose names are on the Company's Registers on the 25th September, 1962.

especially poor Africans, was weak, prices falling accordingly. The nominal quotation for low tea was 25h 11d.

Tea stocks in London, as on August 10, totalled 118.86 million pounds as against 116.95 million pounds in the previous week. The total amount to be landed on the same date was 23.29 million pounds. Total afloat was 37.27 million pounds including from Calcutta 23.27 million pounds; from Chittagong nil; from Cochin 4.59 million pounds; from Ceylon 7.13 million pounds and from other Ports 2.28 million pounds.

COTTON Outlook for Cotton

THE Bombay cotton futures market during the past week depicted a generally feeble trend. The easiness was mainly attributed to the tired bull liquidation induced by the encouraging weather reports from many of the cotton growing tracts. The Jarilla March contract which

commenced the week lower at Rs 744.50 per three quintals moved down steadily to Rs 735.25. However in later dealings the contract staged a slight recovery and moved up to Rs 740.50 and closed the week at Rs 739.50 with a net loss of eight points. The steadier tone in the latter half was ascribed to scattered bear covering. Activity continued to be restricted as the market was devoid of any encouraging news. Crop expectations also picked up somewhat and generated optimism in some quarters of better crop. The under tone in the market during the whole week was subdued and the turnover was rather meagre.

Brisk activity was visible in the spot market at Sewri with mill interest prominent in popular varieties like Laxmi, Surti, CO2, L147, and 107/3. A South Indian mill is reported to have entered the market. Prices were generally firm. With the stocks of the current crop getting thinner day by day keen spinner demand was reported during the week under review.

In the import section good business was transacted in the Egyptian

Giza and Karnak varieties mainly owing to the offering of the new crop at reduced prices. Though higher grade Sudan offers were not forthcoming readily from shippers, routine transactions for January-February shipments were done in lower Sudan varieties against the last import quota. Ready lots of cotton from Pakistan also met with good demand.

Meanwhile the Government of India has directed the State Governments to finalise special schemes on an emergency basis for cultivating cotton in the newly irrigated areas falling under the orbit of Bhakra-Nag, Rajasthan Canal, Chambal, Hirakud, Nagarjunasagar, Tungabhadra and Lower Bhavani projects with a view to stepping up cotton production and thus achieving the Third Plan target of 70 lakh bales. Considering the abundant scope offered by these areas, the Government is confident to increase the yield by about 10 lakh bales. Another 5 lakh bales are also expected by wider utilisation of fertilisers while the increase on account of the use of improved seeds and scientific methods of cultivation is tentatively placed at 5 lakhs. The crop for 1962-63 season is placed approximately at 50 lakh bales.

The Punjab Government has approved a Rs 1 crore cotton package plan calculated to raise the cotton yield by 33 per cent. The Surat co-operative cotton interests met during the week and suggested a federal structure for the proposed All India cotton body in lieu of a unitary body as indicated by the East India Cotton Association.

As a result of the representations made by the cotton textile industry and the delayed arrival of next season's crop the Textile Commissioner has decided that purchases against Indian cotton quotas issued to the mills prior to 1 August 1962 may be made upto 30 September 1962. The official press note released in this connection states that the purchases against the quotas issued from 1 August may however be made upto 31 October. The quotas in both these cases refer merely to the cotton year 1961-62 and therefore the purchases should be made only from the crop of the 1961-62 season and earlier seasons. It has also been indicated that under no circumstances should a mill be allowed to purchase new crop against the quota issued for 1961-62 season. The press note also stipulates that deliveries of domestic cotton by mills from September against the quotas for 1961-62 should only be taken with the prior sanction of the Textile Commissioner. Those mills which are desirous of obtaining permission should forward their applications to the Textile Commissioner with all relevant informations including the quantity, variety, name and address of the dealers and the survey certificate number and date.

The decision of the Textile Commissioner to prohibit mills from purchasing new crop cotton against the quotas issued to them in the current season has given a rude shock to both the cotton trade and spinners and they view it as an unusual measure. On the contrary they welcomed the decision allowing the mills to purchase cotton upto

the end of September quotas issued since 1 August. A section of the trade feel that the order will be a prelude to either requisitioning or freezing of cotton in the tracts where it has already got moving.

Imports of cotton from foreign countries from 1 September, 1961 to 4 August 1962 totalled 780,871 bales in contrast to 876,214 bales in the corresponding period in the previous season.

Description	1960-61	1961-62

FORT GLOSTER INDUSTRIES LIMITED

NOTICE is hereby given that the Annual General Meeting of the Company will be held at the Registered Office, No. 21, Strand Road, Calcutta-1, on Monday the 24th day of September 1962 at 11.45 a.m. for the following purposes:—

- To receive the Report of the Directors and to pass the Audited Accounts for the year ended 31st March, 1962.
- To declare dividends.
- To elect a Director.
- To appoint Auditors for the current year and to fix their remuneration.
- To transact any other ordinary business of the Annual General Meeting.

The Share Transfer Books of the Company will be closed from 10th September to 24th September, 1962, both days inclusive.

By Order of the Board

Sugar Export to Japan

IT is learnt that India will export 150,000 tons of raw sugar every year to Japan under a three-year agreement beginning with the next crushing season. This will be the first time for India to enter the Japanese sugar market. The agreement has already been signed between the State Trading Corporation and an American firm who are regular suppliers of raw sugar to the Japanese sugar industry. The export price of the Indian raw sugar will be based on the London daily price. It is also understood that details of the agreement are now under negotiation.

At present the imports come largely from Taiwan, Cuba and Australia. The decision to import raw sugar from India is a part of a new plan by the Japan Sugar Refining Industry Association to concentrate on geographically nearer Asia and Australia for its requirements so as to stabilise the volume of imports and prices through long term contracts. It is planned to suspend purchases from distant Cuba and other large exporting countries.

The actual production in India, for the first nine months of the season, was 27.15 lakh metric tons as against 30.06 lakh metric tons in the corresponding period of 1960-61. Despatches, upto July, 1962 were much better at 20.32 lakh metric tons as against 16.48 lakh metric tons in the same period last season. Thus, on account of a lower level of production and higher despatches, it has been possible to reduce stocks to some extent. On account of freer availability, the consumption of sugar for the current season may, therefore, increase to over 23 lakh metric tons. In the remaining three months of the current season, releases from stocks will be of the order of 6

THE TITAGHUR PAPER MILLS COMPANY LIMITED

Dividends for the year ended 31st March, 1962.

At a Meeting of the Directors held on Friday, the 17th August, 1962, the following Dividends were recommended subject to deduction of Tax under Section 194 of the Indian Income Tax Act, 1961:

On First Cumulative Preference Shares at 10.4 per cent p.a.

On Second Cumulative Preference Shares at 5.85 per cent p.a.
On Preferred Ordinary Shares at 7.5 per cent p.a.

On 'A' and 'B' Ordinary Shares at Re. 1/- per share p.a.

By Order of Board
F. W. Heijgers & Co. (Private) Ltd.
Managing Agents.

Registered Office:
Chartered Bank Buildings,
Calcutta-1.

18th August, 1962.

lakh metric tons. As there will also be exports to Canada and other countries, the carry-over may be around one million tons.

If exports in the next season go up to 5 lakh metric tons as anticipated in particular quarters, and consumption also improves to 24 lakh metric tons, there may be a decline in stocks to more manageable proportions. It is, however, clear that it will take two to three seasons for stocks to become normal. It will not be possible to utilise fully the capacity of the industry unless there are surprising developments in the internal market in the meantime.

Despite the release of the monthly quota, sugar prices have risen sharply in the Hapur market, thanks to a brisk buying support from Delhi, the Punjab and Uttar Pradesh. Spot delivery is quoted at Rs 110.50 per quintal.

NON-FERROUS METALS

On the Bombay Metal Exchange, prices showed a moderate recovery from the recent low levels. Although operators continued to be cautious as a result of the increased prospects of receiving supplies from abroad, they did not wish to press sales at the lower levels.

Both Tin and Copper registered moderate improvement. Zinc, however, firmed up notably due to the withdrawal of sales. Lead did not record a departure from its position. The undertone of the market, however, remained hesitant as the majority of the dealers prefer to await further news regarding the foreign shipments.

The East India Metal Merchants Association has urged the Government of India to review the import policy in regard to strategic raw materials so as to improve the over all supply position of non-ferrous metals. It is suggested that the import policy should be revised so as to restore the 50 per cent cut in imports recently effected. The quotas of established importers should also be increased cent per cent. It is also felt that the import of copper and zinc should be allowed only through established importers and distributed under Government supervision. Further, imports by the STC should invariably be distributed through the related associations as had been done in the case of chemicals, photographic goods and hosiery goods. This will help in averting gradual elimination of dealers and brokers of non-ferrous metals from the distributive trade.

COFFEE

According to the figures released by the Coffee Board, receipts upto 31 July, 1962 into the Coffee Pool amounted to 44,858 tonnes as against 67,040 tonnes in the corresponding 1960-61 period. During July 1962, a quantity of 3,148 tonnes was released in the internal market as against 2,475 tonnes in July 1961, bringing the total releases from January to July 1962 to 19,913 tonnes as against 18,774 tonnes in the corresponding period of last year.

Inclusive of the export sale on 8 August, 1962, a total quantity of 9,552

tonnes has been sold for export from the 1961-62 crop. A quantity of 2,482 tonnes will be put up in the export open auction on 5 September.

The International Coffee Conference is expected to finalise an agreement, which will put a stop to the declining prices of Coffee exported by the world's 28 major producers. The agreement will be signed in New York shortly by countries which account for more than 90 per cent of the world coffee trade.

It is learnt that the issues still outstanding related primarily to the export quotas to be imposed under the agreement. Exporters are stated to be close to an agreement on a five-year pact imposing production quotas. There was, however, a general agreement that all the producing countries would have to play their part and the major producers would have to retain some of their exportable production.

RUBBER

According to rubber growers, the gap between production and demand will widen more rapidly than what was thought likely a few years ago. They argue that, if essential machinery and equipment which are not available in India were covered by more liberal imports, much faster development will be possible. Rubber production this year is, however, likely to show a marked increase over the previous years.

World demand for rubber is expected to rise from just over 4,000,000 tons this year to 6.7 million tons by 1970. Natural rubber is not expected to contribute more than 2,500,000 tons of this, the rest being made up by synthetic. The year 1961 was the last year in which the total consumption of synthetic was less than that of natural. With 1962 has begun, a new era when quantitatively synthetic will predominate. Manufacturers expect greater competition between different types of synthetic than between natural and synthetic.

PEPPER

The Western India Shippers Association has protested against the recent announcement by the Conference Lines with regard to the rise in the freight rates which, it is feared will adversely affect the competitive capacity in foreign markets and increase the possibilities of the use of substitutes.

In the case of pepper, USA provides the principal market and it is necessary to ensure that nothing is done to create a position of disadvantage for Indian pepper in that market compared with supplies coming from alternative sources. The absence of a stable freight policy on the part of the Liners catering to this trade between India and the USA is, however, giving rise to this situation.

Frequent changes in freight rates at short intervals of a month or two make it difficult for exporters to enter into long-term commitments with buyers of this commodity in the USA. In the absence of such

long-term commitments, the buyers abroad will naturally like to cover their requirements by entering into commitments with suppliers from alternative sources. The Association has taken up these matters with the Director of the Freight Investigation Bureau and has requested him to use his good offices and persuade the Conference Lines to adopt a reasonable attitude in such matters.

YARN

In the Bombay market, Yarn prices displayed an easier tendency on reports of imminent arrivals. The reports, that the "Pool Scheme" would shortly come into operation, also affected the market sentiment.

The "Pool Scheme" for distribution of Rayon yarn will be brought into force in the very near future. Preliminary preparations are reported to be almost over. The scheme is being given final shape and it will be implemented shortly.

Barring Japan, all the prominent overseas spinners are understood to have already joined the scheme. Japan is expected to join later after the spinners there secure the approval of the Government of Japan.

After the scheme is put into operation, no exporter will be entitled to import art silk yarn directly on the import entitlements earned by him against the exports. He will be supplied yarn from the "Pool".

It is, however, learnt that the licences, which have already been issued, will be honoured and the holders of the existing licences will be allowed to import art silk yarn directly. Whether the shippers, who have already exported rayon fabrics but who have not been issued licences so far, will be allowed to import directly or not is still uncertain.

OILS & OILSEEDS

Irregular price movements characterised trading in the Bombay Oilseeds market. With reports from all over the country indicating a favourable turn in the weather, the initial tendency in Groundnut was downward. Subsequently, however, the bulls regained their control over the market and managed to push up prices. The bullish tendency was aided by the marked shortage of spot supply in the face of a steady demand. Groundnut Bold ready was quoted at Rs 49.75 and Groundnut Oil at Rs 19.70.

The continued absence of any business in castor oil was reflected in the Castorseed section where prices displayed an easier tendency. Domestic prices were also stated to be higher than those prevailing in the UK and the Continent. Castor ready was quoted at Rs 33.82 and Castor Oil, commercial quality, at Rs 12.65.

The Linseed section also reflected bearish conditions. The volume of business was very meagre due to lower advices from the groundnut and castorseed sections. Ready was quoted at Rs 40.50 and Linseed Oil at Rs 16.70.

THE UNITED PROVINCES ELECTRIC SUPPLY COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Friday, the 21st September, 1962, at 11-00 a.m. for the following purposes:—

- To receive and adopt the audited Accounts for the year ended 31st March, 1962, and the Reports of the Directors and the Auditors thereon.
- To declare a Dividend.
- To appoint a Director in place of Mr. S. K. Sinha who retires by rotation and offers himself for re-election.

In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Sinha, a retiring Director, who has attained the age of 67 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him."

- To appoint a Director in place of Mr. S. K. Banerjee who retires by rotation and offers himself for re-election. In this connection a Special Notice as defined in Section 190 of the Compa-

nies Act, 1956 has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Banerjee, a retiring Director, who has attained the age of 66 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

- To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 14th September, 1962, to the 21st September, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a pool, to vote instead of himself.

By Order of Board
MARTIN BURN LTD.,
A. G. GIDLEY
Secretary,
Managing Agents.

Calcutta-1,
25th August, 1962.

NOTE:—An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

Company Reports

TELCO Repeats

THE Tata Engineering & Locomotive Company, Limited has produced excellent working results for the year ended 31 March, 1962. Sales and earnings have maintained their upward trend. While sales are higher at Rs 41.65 crores against Rs 37.55 crores in 1960-61 and Rs 28.25 crores in 1959-60, the net profit, before providing for Depreciation and Taxation, has risen to Rs 5.98 crores from Rs 5.04 crores in the previous year and Rs 3.83 crores in 1959-60.

In respect of allocations, the Depreciation amount is raised to Rs 2.20 crores from Rs 1.81 crores; Taxation to Rs 1.88 crores from Rs 1.22 crores and General Reserve to Rs 25 lakhs from Rs 21.74 lakhs. The provision for Development Rebate Reserve is lower at Rs 40.18 lakhs against Rs 44.88 lakhs. The dividend on the ordinary shares is maintained at 10.15 per cent, subject to tax.

The company's chairman states that, in view of the dividend recommended for the year, it is necessary to bear in mind the present uncertainties, particularly in regard to the availability of foreign exchange, which may impede production in the current year, and the need to retain within the company a reasonable share of current earnings to finance the further growth of the company.

Substantial additional funds will be needed for the expansion and diversification of the manufacturing facilities. A part of these funds will be available from retained earnings. It is proposed to secure the balance, partly from a long-term foreign credit which is being negotiated with the Agency for International Aid, Washington, in consultation with the Government of India, and partly from an issue of Rs 5 crores convertible debentures. The terms and conditions of the issue including the conversion terms are still under discussion with the Government.

The expansion programme of the Automobile division is being carried out in two stages at the specific request of the Government in the light of the current balance of payments crisis. It is hoped that the Government will find it possible to sanction the stage of the plan in time to avoid a costly hiatus between the two stages of the complete programme.

The manufacture of Tata-P & H power shovels has been firmly established and high-grade capacity created for the production of machinery for paper and pulp.

The production of spare parts for the P & H and Tata-P & H excavators is making good progress. It is expected that, with the increasing popularity of these machines in India, the spare parts business is bound to increase in the near future. The company proposes to enter into an agreement with Voltec Limited for the distribution of the excavators.

The construction work of the Heavy Alloy Iron Foundry for the production of specialised high quality castings, such as rolls and cylinders for paper making machinery, is proceeding according to schedule. The foundry is expected to go into production during the latter half of 1962.

Strenuous efforts are being made by the company to export some of its products so as to earn much-needed foreign exchange. During the year under report, sixty diesel engines, five-vehicles and spare parts were exported to Ceylon and South Viet Nam. An Order for steel castings was also secured from Malaysia.

Birla Cotton Earns More

Despite a considerable increase in the cost of production, rise in the price of cotton and substantial increase in wages and salaries, the Birla Cotton Spinning & Weaving Mills Limited has reported satisfactory working results for the year ended 31 March, 1962. While sales have risen to Rs 7.42 crores from Rs 5.53 crores, the net profit, before providing for Depreciation and Taxation, works out to as much as Rs 47.10 lakhs as against Rs 42.91 lakhs for the preceding year.

In respect of allocations, Taxation provision is raised to Rs 23 lakhs from Rs 18.50 lakhs and Development Rebate Reserve to Rs 2.45 lakhs from Rs 30,000. The Depreciation amount is, however, lower at Rs 7.34 lakhs against Rs 7.80 lakhs and General Reserve at Rs 6 lakhs against

Rs 7 lakhs. The dividend on the Ordinary shares is repeated at Rs 2.00 per share, subject to deduction of tax.

The company has obtained the licence to set up two textile units—one at Kathua in the Jammu and Kashmir State with a capacity of 12,500 spindles and the other at Khurja in Uttar Pradesh, with a capacity of 25,000 spindles. Orders for the plant and machinery for the Kathua Mills have already been placed.

Decline in India Paper Pulp's Profit

Despite the sales being maintained at Rs 2.21 crores, the India Paper Pulp Company, Limited has reported reduced earnings for year ended 31 March, 1962, reflecting the rise in manufacturing costs and the restrictions on the import of wood pulp. Moreover, mill production of pulp was restricted by major renovations to its digester plant. In consequence, there was a further curtailment of production of finished paper which, at 13,181 tonnes, was 1,225 tonnes lower than for the previous year.

The net profit for the year is lower at Rs 35.98 lakhs as against Rs 41.73 lakhs for the preceding year. Except for Development Rebate Reserve which is raised to Rs 76,858 from Rs 66,201, all other allocations have been reduced:—Depreciation to Rs 12.56 lakhs from Rs 13.76 lakhs; Taxation to Rs 11.55 lakhs from Rs 12.10 lakhs and General Reserve to Rs 75,000 from Rs 3.45 lakhs. The dividend is reduced by 1 per cent to 12 per cent, subject to tax.

25 August 1962

The licence for the import of components for the plant required for the expansion scheme is now awaited. Meanwhile, the installation of forced circulation for the mill's digester plant is almost completed and this should produce a material increase in the production of pulp by the mill's existing plant.

Mettur Chemical Pays More

Thanks to the production of the main chemicals being maintained at a satisfactory level, the Mettur Chemicals & Industrial Corporation Limited has been able to report a rise in sales from Rs 1.34 crores to Rs 1.50 crores and in the net profit from Rs 18.78 lakhs to Rs 19.71 lakhs.

In respect of allocations, the Depreciation amount is raised to Rs 12.83 lakhs from Rs 9.47 lakhs. After transferring 2.70 lakhs from Deferred Taxation Reserve, Rs 41.81 lakhs from provision for taxes made in prior years and Rs 3.29 lakhs from General Reserve, the directors have allocated Rs 2.85 lakhs (Rs 6.60 lakhs) to Taxation and Rs 10 lakhs (Rs 2.50 lakhs) to Development Rebate Reserve. No provision is made for General Reserve against Rs 1.00 lakh. The directors have proposed to raise the dividend on the ordinary shares from 12.5 to 13.75 per cent, subject to tax.

According to the directors' report, the expansion of caustic soda from 20 tonnes to 40 tonnes

was almost completed and most sections were commissioned during March 1962. The remaining sections have since been commissioned. It is expected that the company will repeat the full benefit of the augmented capacity during the current year.

Plans for further expansion of caustic soda capacity from 40 tonnes to 100 tonnes and for the manufacture of organic chemicals are being pursued vigorously.

have been substantially over-subscribed. The list was closed on 20 August, 1962.

INVESTMENT NOTES

Seshasayee Paper

Seshasayee Paper & Boards Limited is expected to go into production in the first quarter of 1963. The company's paper machines will be ready for commissioning in September/October this year. The construction and erection of machinery of the unit at Pallipalayam in Salem district is ahead of schedule. The company has received import licences for substantial quantities of woodpulp from the USA and the USSR.

Mandya Paper

The Mandya National Paper Mills Limited will shortly expand its production capacity from 35 to 70 tons a day, becoming the largest paper-producing unit in the country. The estimated cost of expansion will be about Rs 2 crores. Of this, Rs 80 lakhs will be raised by a fresh issue of equity capital for which sanction has already been obtained.

Vallabh Glass

Shree Vallabh Glass Works Limited is reported to be making good project at Anand for the manufacture of wired glass and sheet glass. The company has started receiving plant and machinery. It is expected that the plant will go into production by the end of the year.

Indian Cable

British Insulated Callendar's Cables Limited has announced that it has been awarded a contract valued at over £250,000 by the Indian Railway Board. The contract is for the supply and installation of overhead equipment for railway electrification in the Calcutta area. BICC one of the world's largest manufacturers of electrical cables and equipment—will be supplying materials direct from its factories in Britain and also through the Indian Cable Company Limited in which it has a financial interest.

Camphor & Allied Products

Camphor & Allied Products Limited has been making satisfactory progress with its scheme for manufacturing camphor from indigenous raw materials. Supplies of machinery are expected to arrive at site from next month. It is anticipated that production will commence in March-April, 1963.

General Tyres

According to the report issued by General Tyres Limited, the construction of production sheds, stores and other buildings at the company's factory site, at Kankinarrah, has been almost completed. Most of the plant and machinery, supplied by Messrs Techno-export Foreign Trade Corporation, Praha, Czechoslovakia, have been received at the factory site.

Good progress has since been achieved in regard to the installation of machinery and equipments. Some of the raw materials required for initial production have been acquired from imported sources. According to the present plans, the factory is expected to go into trial production during the last quarter of the year. Meanwhile the company has been contemplating substantial expansion of its present licensed capacity of 1,80,000 each of automobile tyres and tubes per year.

INVESTMENT BRIEFS

The Titagur Paper Mills Company, Limited has halved the taxable Ordinary dividend to 10 per cent for the year ended 31 March, 1962.

The Northbrook Jute Company Limited has reduced the dividend from 30 to 20 per cent and the Lawrence Jute Company, Limited from 15 to 10 per cent, all taxable, for the year ended 31 March, 1962.

The National & Grindlays Bank Limited has proposed a taxable interim dividend of 7 per cent on the Ordinary shares for 1962.

Malankara Rubber has reduced the dividend from 16 to 14 per cent, taxable, for the year ended 31 March, 1962.

Nilgiri Tea Estates Limited has maintained the dividend at 10 per cent, taxable, for the same year.

Kasturi Mills Limited has proposed to raise the dividend from 9 to 10 per cent, taxable, for the year ended 31 March, 1962.

Mysore Tobacco Company Limited has declared a dividend of 10 per cent taxable, for the year ended 31 March, 1962 as against nil for the preceding year.

STOCK EXCHANGES

Dull Trading

Watch-Dog Writes:

IN the absence of any incentive, trading in stock markets has continued to remain dull with price movements confined to narrow limits. Support from the bulls is conspicuous by its absence due to the disappointment over the inordinate delay in the announcement of the new steel retention prices. Selling pressure is equally restrained as the bears have entertained the feeling that the announcement will not be delayed any longer. Investors, too, are taking a cautious view about the near-term outlook for the corporate sector.

Except for a few shares which recorded minor improvements on selective demand, conditions on the Calcutta Stock Exchange remained more or less unchanged.

In the absence of incentives, turnover on the Bombay Stock Exchange was very poor as a result of which equities kept abreast of the previous closing.

Activity on the Madras Stock Exchange was limited although the undertone was steady.

The atmosphere on the London Stock Exchange was cheerful with increased buying of gilt-edged securities and industrials, producing widespread gains.

Wall Street closed firm with a fair distribution of gains, ranging principally to \$2.

CALCUTTA

Friday.

ONCE again, the week's trading in Lyons Range had been dull and featureless. The absence of any incentive was the main reason for the sluggishness of the market, not to speak of the inordinate delay in the announcement of the revised steel retention prices, which had considerably disappointed the operators. There were also other factors contributing to the dull conditions in the market.

Concern was expressed over the likely adverse effects on the export trade of the country following the EEC's decision not to give preferential treatment to Indian goods. Secondly, there was an anxiety with regard to the country's ability to pay for the maintenance imports, especially when the idle capacity of various industries was growing due to the shortage of raw materials, transport and power. Last but not the least, it was feared that the forthcoming State Governments' loans might siphon off a good deal of investible funds.

With the result, professional operators were reluctant to extend their commitments and inclined to book profits at bulges. Investors, too, were not able to take a hopeful view in the light of the many uncertainties. A relieving feature of the week's trading was, however, the fact that bear operators were far from aggressive.

In the gilt-edged section, trading continued to remain dull. While some interest was shown in the short dated issues, longer maturities remained on offer. As a result, while prices of short-dated loans moved further ahead, long-dated issues continued to drift lower. 3 per cent 1986 Conversion Loan changed hands at Rs 68.95 to Rs 69.50.

Little or no interest was shown in Bank shares. The possibility of an inter-bank agreement to fix minimum lending rates had made virtually no impression on investors. Secondly, it was feared that the profits of banks might be squeezed if they were asked to increase their liquidity ratio. Except for business done in United Bank upto Rs 7.75 from Rs 7.50, no dealings were reported in other bank shares.

Apart from Ganges which met with sustained support upto Rs 16 from Rs 14.89 on reports of the dividend being raised from 10 to 15 per cent for the year ended 31 March, 1962, Jute shares met generally with a predominance of sellers in view of the obscure outlook for exports.

There was also an anxiety to await the Government decision with regard to the revision of the floor price for raw jute. Birlas were on offer at Rs 33.56 to Rs 33.75; Howrah at Rs 20.50; Megna at Rs 13.94 to Rs 14.25 and New Central at Rs 14.69 to Rs 15.12. Anglo-India, after being taken upto Rs 225 following the announcement of the increase in dividend from Rs 7.50 to Rs 10 per share, receded at the close to Rs 220 on profit-taking.

Coal shares were fairly steady, thanks to the news that there was no prospects of "immediate" nationalisation of the industry. Bengal were supported upto Rs 350 from Rs 347; East Indian upto Rs 52.37 from Rs 52.19 and Equitable upto Rs 28.50

from Rs 28.25. Central India and Western Bengal hovered narrowly around Rs 11.12 and Rs 9.56, while Burrakur fluctuated between Rs 17.50 and Rs 17.69.

Better prices obtained at this week's auction were reflected in the Tea section where a few select shares came in for some enquiry at improved levels. Dhelakhat changed hands at Rs 20 to Rs 20.12; Hasimara at Rs 14.94 to Rs 15.37; Hantapara at Rs 111 to Rs 113; Jay Shree at Rs 16.87 to Rs 17.19; Tezpur at Rs 15.00 to Rs 15.87 and Rydak at Rs 27 to Rs 27.31.

Sugar shares were practically neglected. The only bright spot in the section continued to be Dyer Meakins which, after forging ahead to Rs 35.00 from Rs 33.62, finished at Rs 34.87 due to profit-taking.

In the absence of encouraging prices from the piecegoods market, Textile shares remained subdued. Jay Shree were on offer at Rs 15.25 to Rs 15.37; Cawtex at Rs 7.25 to Rs 7.31 and J. K. Rayon at Rs 17.44 to Rs 17.62. Bowraah were, however, well maintained at Rs 26.12.

Price movements in the Engineering section were mostly influenced by the speculative activity in Indian Irons. Despite the delay in the announcement of the revised steel retention prices, operators believed that a higher retention price would be forthcoming. It was this belief which kept the price of Indian Irons from toppling down. Moreover, there was anxiety to await the outcome of the TISCO meeting, to be held on Monday next when it was expected that the directors would make a decision with regard to the declaration of an interim dividend. After opening steady at Rs 26.64, Indian Irons were pushed up at one time to Rs 26.82 before reacting at one time to Rs 26.70. Again, there was a sharp recovery to Rs 27.08 at the close.

TEXMACO met with business at Rs 22.85 to Rs 23.10; Guest, Keen, Williams at Rs 38.19 to Rs 38.31 and Jessop at Rs 22.87 to Rs 23.25, to close finally at Rs 21.25; Rs 38.25 and Rs 22.94 respectively. Britannia were maintained at Rs 11.56 and so also Dalmia from at Rs 11.75 and Calcutta Steel at Rs 15.16.

Miscellaneous issues moved in sympathy with the general trend of the market. The following table shows the price trend of a few selected shares:—

An Assured Pace of Growth

The most obvious impression one gets from the performance of the Life Insurance Corporation during 1961-62 is of an assured pace of growth which is in refreshing contrast to the uncertainties of the earlier years. This should be a matter for extreme gratification. For, not a little criticism was raised when life insurance was nationalised in 1956 on grounds of public interest, most of it being centred on the unsuitability of a public sector corporation for doing life insurance business. The results of working of the Corporation in the early years were also far from encouraging, but this reflected the preoccupation of the Corporation with the problem of adapting and streamlining its organisational apparatus to its particular role. Once this was got past, the Corporation buckled down to its real business and had so improved its business that it is now in a position to look back upon the last couple of years with a certain sense of achievement.

All the indices of business add up to a remarkable performance by the LIC during 1961-62. The new business done by the Corporation during 1961-62 amounted to Rs 608.82 crores under 14.70 lakhs policies which contrasts with Rs 497.54 crores under 12.58 lakhs policies in the previous year, representing an increase of 22.4 per cent. The total business in force at the end of 1961 is higher at Rs 2,737 crores under 86 lakhs policies against Rs 2,285 crores under 77 lakhs policies at the end of 1960, and shows an increase of 19.8 per cent during the year under review. One of the highlights of the LIC's performance during the year was the crossing of the Rs 100 crore mark in the premium income. The actual premium income at Rs 112.30 crores during 1961-62 compares with Rs 96.89 crores during the previous year and with Rs 58.55 crores being the figure in 1955, the pre-nationalisation year.

One of the fields in which life insurance suffered severely on account of nationalisation was in respect of foreign business. The LIC could not overnight step into the place vacated by the private companies when they wound up their foreign branches. Here, the LIC had not only to come into the breach but also set up connections in new countries. The sustained efforts taken by the Corporation in this behalf have not been without effects and during 1961-62 the foreign business transacted by the Corporation rose to Rs 10.03 crores from Rs 9.70 crores in the previous year. The political climate in some of the foreign countries has not been favourable to improvement of life insurance business, but the Corporation has a vast field to explore particularly in the newly independent countries of Africa.

Gratifying improvement has also been registered in respect of total life fund and total assets. The Corporation's life fund as at 31 December 1961 has been estimated at Rs 631.59 crores showing an increase of Rs 72.46 crores as compared with the previous year. The total assets of the Corporation at the end of 1961 were valued at Rs 696.31 crores as against Rs 622.85 crores in 1960. That the

Corporation's total assets should have improved by Rs 281 crores since its inception provides a significant measure of its progress.

In respect of earnings and management expenses also the Corporation's working has shown commendable improvement. From Rs 23.97 crores, in 1960, the income from interest, dividends and rents before deduction of income tax rose to Rs 27.95 crores in 1961. It is also important to note that the gross rate of interest at 4.80 per cent on the mean life insurance fund was the highest in the last five years. The decline in the overall expense ratio from 28.4 per cent to 28.0 per cent in 1961 despite the fact the Corporation had to bear additional expenses on account of increase in the dearness allowance sanctioned in 1960 reflects a step-up, though slight, in the efficiency of the Corporation's working.

While the progress made by the Corporation in all these directions is very reassuring, what has particularly to be commended in its recent activities is the venturesomeness it has shown in a sector of its life insurance business. It has been revealed by Mr B. K. Kaul, Chairman of the LIC in the course of his statement to the annual general meeting of the Corporation, that the Corporation has been experimenting with the practice of waiving medical examination in respect of proponents within certain age groups and for a total insurance not exceeding Rs 2,000 in individual cases. Such insurance without medical examination is also provided to special categories of persons in civil employment upto a maximum of Rs 10,000 and with an age limit of 30. This is no doubt contrary to conservative principles and practice of insurance, but the paucity of medical personnel and the importance of increasing life insurance business in the rural areas have been the decisive factors in introducing the novelty. If sufficient care and attention are taken by the field officers, its inherent hazards can be minimised.

In its principal task of life insurance, the scope for further expansion is great. There is a vast potential in the rural areas and the progress made by the Corporation during the last year is very modest, though the introduction of insurance without medical examination holds promise of substantial improvement. With the acquisition of Goa, Diu and Daman, a new field has been thrown open to the LIC to explore. It has been stated that the details of the scheme for taking over the life insurance business of the former Portuguese colonies are being worked out. The problem for the Corporation is not however one of trying to improving its life business alone. One disheartening feature of life insurance during 1961-62 has been the higher ratio of net lapses to the mean business which at 7.0 per cent in 1961 compares with 6.6 per cent in the previous year. Though this rise has been attributed to the effects of the rise in price level on the ability of the policyholders to continue their policies, it is evident that necessary action has to be taken to bring down the rate.

The Reserve Bank of India (Amendment) Bill, 1962

THE important place of credit facilities in increasing the country's export trade was referred to by Mr P. C. Bhattacharyya, Governor of the Reserve Bank, in his inaugural address to the first quarterly meeting of the All India Manufacturers' Organisation in Poona. He also said in this connexion that "the paramount necessity of export promotion has been borne in mind" by the Reserve Bank in administering its monetary policy measures. But, so far, the extent of accommodation which the Reserve Bank could provide has been circumscribed by the provisions of Section 17 of the Reserve Bank of India Act. The amendments proposed in the Bill introduced in Lok Sabha on August 22 will enable the Reserve Bank to play a more effective role in ensuring availability of larger volume of credit to finance exports, and for longer periods.

Expert Committee's Recommendations

It may be recalled that the Expert Committee set up by the Ministry of Commerce & Industry in April 1960, to examine the credit facilities available to exporters, had made a number of recommendations in this regard. One of the important recommendations was to the effect that export bills should be brought under the effective operation of the Bill Market Scheme by extending the usance of these bills. It was also recommended that the procedures that banks had to follow before they could obtain advances from the Reserve Bank against usance bills should be simplified. Though the Bill Market Scheme already covered export bills, it was noted that few banks had availed of the facility because the conditions under which advances could be made limited its practical utility. In the first place, the period of credit that can be allowed is too short, as the Reserve Bank cannot make advances on bills with usance extending over ninety days. Secondly, the procedure laid down for rediscounting the bills is such that banks find it difficult to comply with the requirements. In order to obtain advance, the banks are required to lodge as security with the Reserve Bank the export bills drawn by their constituents, or the usance promissory notes made by their constituents arising out of the conversion of their loan overdraft accounts secured against the export bills. It has been pointed out that the export bills drawn by the constituents cannot be lodged with the Reserve Bank as these bills have to be sent abroad for collection. The constituents, on the other hand, are reluctant to execute usance promissory notes in addition to the documentary bills which they have handed over to the banks for collection. In view of these practical difficulties in the way of the effective functioning of the Bill Market Scheme in respect of export bills, the Expert Committee had suggested that the usance of export bills should be extended to 180 days, and that the banks that are eligible to borrow under the Bill Market Scheme should be able to obtain advances from the Reserve Bank on the promissory notes executed by them. The Reserve Bank of India (Amendment) Bill, 1962 seeks to amend the relevant provisions of the Act so that these recommendations could be implemented.

Amendment to Section 17

Clause 3 of the Bill seeks to amend Section 17 of the Reserve Bank of India Act so to provide that: (a) the period of maturity of eligible bills of exchange (including treasury bills) and promissory notes, whether drawn on or in India or drawn on or in any other country which is a member of the International Monetary Fund, may be increased from ninety days to one hundred and eighty days if the bills of exchange or the promissory notes as the case may be relate to the export of goods from India and (b) loans to scheduled banks or to state co-operative banks may be granted against the signature of the borrowing institutions themselves, instead of on the basis of two good signatures as now prescribed by the Act if the borrowing institutions furnish declarations to the effect that they are holding and will continue to hold, so long as the advances granted to them by the Reserve Bank remain outstanding, bills drawn by Indian exporters on foreign countries maturing within one hundred and eighty days. The clause further seeks to provide that normal banking accommodation to the scheduled banks or to the state co-operative banks may be granted for one hundred and eighty days instead of ninety days if the accommodation is for the purpose of financing exports.

Amendment to Section 42

Apart from extending the usance of exports bills and the period for which accommodation may be provided to banks for purpose of financing exports, the amending Bill also seeks to make certain changes in regard to collection and supply of credit information and the balances which scheduled banks are required to maintain with the Reserve Bank under Section 42 of the Act so as to bring the balances in line with the present pattern of bank deposits. Under this section scheduled banks are required to maintain with the Reserve Bank two per cent of their time liabilities and five per cent of their demand liabilities. These balances can be increased by the Reserve Bank up to eight and twenty per cent of time and demand liabilities respectively. The Reserve Bank can also call for special deposits within an overall limit. In view of the marked increase in recent years of time liabilities as compared with demand liabilities, it is proposed to amend Section 42 so as to require the banks to maintain a uniform percentage of three per cent of the total time and demand liabilities. The overall limits for these balances and special deposits is also proposed to be fixed at 15 per cent of total liabilities in place of the present ceilings. A new provision will be introduced to enable the Reserve Bank to pay in its discretion interest on any balances or deposits which may be in excess of the normal minimum balance but less than the increased minimum balance or special deposit which is required to be maintained.

Supply of Information

While Clause 5 of the Amendment Bill seeks to protect the Bank and its officials in anything which is done in good faith in regard to the collection and supply of credit information, these functions are defined by Clause 6 which adds a new chapter to the Reserve Bank of India Act. The aim is to enable individual banks to obtain reliable information regarding the loans and advances given by other banks/financial institutions, to those who seek loans, so that on the basis of this information the banks could make their own assessment of the credit-worthiness of the parties concerned. Under these provisions,

every banking company will be required to supply any information relating to any constituent which may be required by the Reserve Bank and will be entitled on an application accompanied by the payment of a fee not exceeding twenty-five rupees to consolidated information relating to the loans granted by the banking companies to any person borrowing or intending to borrow from it. The term banking company as used in this chapter has been defined to include, in addition to commercial banks, any financial institution which may be notified for this purpose. Banking companies receiving information under these provisions will be prohibited from further publication of such information. Penalties will be provided for failure on the part of banking companies to comply with the provisions of this chapter.

The Expert Committee on Credit Facilities had also drawn attention to the fact that long term credit has become unavoidable in export trade and that Indian exporters should be enabled to extend such credit so that they might be able to gain a foothold in foreign markets against the keen competition from those already well established in the field. The amendment proposed to the State Bank of India Act would enable the latter to meet the requirements of the export trade in this respect. The period for which the State Bank of India can extend credit to exporters is now limited to six months. Clause 7 of the Bill seeks to amend Section 23 of the State Bank of India Act so as to enable the Bank to grant term loans for periods up to seven years to persons engaged in such business or trade or classes of business or trade as may be approved by the Board. This amendment will enable the Bank to grant medium term credits against exports.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

STATE LOANS

Not Much Pressure on Money

The borrowing effort of the State Governments appears to have been an unalloyed success. All the loans have elicited subscriptions in excess of amounts invited; the lists for seven of the 14 States could be closed on the very first day; four more of the States had obtained their targetted amounts on the second day; and but three States remained which had to keep their lists open for the third and last day. As many as five of the loans were over-subscribed, entailing proportionate and partial allotments.

It is, we suggest, no coincidence that heaviest success greeted those very loans where the issue prices had been fixed at par or at the nominal discount of 25nP. Of the six States in this category—Gujarat, Maharashtra, Madras, Mysore, Uttar Pradesh and West Bengal—only one (Madras) found it had to keep the lists open for the second day; and four of the six were over-subscribed. The heaviest subscriptions were on the first day; and the inference may be that the "preferred" subscriptions were put in in a hurry, lest the opportunity be missed for obtaining parcels of the chosen loans.

Strangely, the pressure upon the money market has been less severe than might have been expected. In Calcutta the call money rate just about inched past bank rate, but in Bombay a 3½ per cent rate was the highest touched. It is therefore possible to suggest that by and large banks' borrowings from the Reserve Bank did not in the aggregate exceed the first quota of 25 per cent of their statutory balances with the central banking institution.

Another intriguing fact is the near-failure of conversion. Such applications amounted to barely 20 per cent of maturities. What is puzzling is that most of the States which had a refinancing to do have experienced over-subscriptions to their new loans—but with very little by way of conversion applications. Obviously the clientele for State loans has changed a good deal, and holders of the 1962 series, mostly no longer interested, have opted for cash repayment; but such defections have been more than made good by, on the face of it, the new customers.

However, we must have regard for the fact that the "pressured" subscriptions, especially from banks, will not have been small. It may be recalled that our estimate in this regard had been Rs 30 crores. The pressure tactics is probably reflected in the fact that some of the loans are already quoting at a discount of one rupee vis-a-vis the issue prices. But because of the easy money market conditions it is possible that any further fall in prices is avoided.

FOREIGN AID

Pattern of Non-utilisation

An attempt is made here to present in tabular form the latest available figures of foreign aid promised to India, utilisation and credits outstanding. We may note here that in the process some sets of figures fail to tally, but by and large an accurate enough picture can be obtained from the following:

	Total Committed.	Amount Utilised.	Unutilised Balance.
(In Crores of Rupees)			
First Plan	126.42	125.87	0.55
Second Plan:			
Yugoslavia	19.05	...	19.05
Czechoslovakia	23.10	...	23.10
Switzerland	11.99	...	11.99
Canada	15.71	15.71	...
West Germany	134.07	128.13	5.94
IBRD	262.67	236.91	25.76
USA	345.57	234.13	111.44
USSR	319.07	43.00	276.07
Japan	27.62	23.59	4.03
Poland	14.30	0.15	14.15
Sub-Total	1,073.15	681.62	491.53
Third Plan:			
West Germany	99.82	61.54	18.28
Italy (ENI)	21.43	...	21.43
France	14.29	...	14.29
Canada	9.52	...	9.52
IBRD	69.29	4.46	64.83
IDA	72.61	3.17	69.44
USA	252.38	9.03	243.35
UK	102.66	34.62	68.04
Japan	38.09	0.49	37.60
Sub-Total	680.09	133.31	546.78
Grants	286.04	255.87	30.17
Grand Total	2,165.70	1,196.67	1,069.03

There are, it may be noted, some glaring inconsistencies. For example, both the UK and France are known to have extended assistance during the Second Plan—but are not so shown in the figures. But the picture that emerges does offer a few tenable conclusions. There would appear to be, firstly, considerable delay in the utilisation of "Iron Curtain" assistance. Secondly, utilisation is best in regard to West German aid. Thirdly, there seems generally some time-lag, and a not inconsiderable one, between commitment of aid and its utilisation. The reason for the time-lag, it seems to us, is capable of easy explanation.

There are a number of phases in regard to foreign assistance. Firstly, we have the "commitment". Secondly, the formal agreements are then drawn up and signed. Thirdly, the

negotiations in regard to projects on which the aid may be drawn are next set in motion. Then, fourthly, the orders are placed—quite often on a world tender basis. Finally, deliveries are effected—and it is only then that the credit gets "drawn on."

BANK RETURNS

Another Purchase From IMF?

Sharp currency contraction stands revealed in the returns of the Reserve Bank for 24 August. Active Note Circulation has fallen by Rs 25 crores to Rs 2,029.06 crores while inflow of Rupee Coin is in the unusually large amount of Rs 2.04 crores. Currency has been contracted for Rs 19½ crores against Rupee Securities by transfer to the Banking Department, reducing the latter to Rs 1,722.50 crores. Also, in order to meet the continuing drain upon our foreign exchange reserves, a transfer of Rs 0.50 crore has been made from Foreign Securities which as a result are lower at Rs 88.84 crores. The Reserve Bank's cash in the till accordingly moves up by Rs 7.04 crores to Rs 22.85 crores.

A special governmental transaction is hinted at in the return for the Banking Department. For, while Investments reflect the transfer from the Issue Department, in rising by Rs 19.20 crores to Rs 256.97 crores, the State Bank in the same week is known to have purchased securities for Rs 12 crores; and the fall of Rs 8.24 crores in the Centre's balances to Rs 59.07 crores can be seen to be linked with the maturities of about Rs 8 crores in the Treasury Bills Purchased and Discounted by the Reserve Bank. Thus, the inference is that deficit financing has been instituted for about Rs 12 crores. Why? A possible link is to be seen in the rise of Rs 13.70 crores to Rs 173.83 crores in Other Deposits; presumably—or perhaps—the Govt. has purchased another \$25 million worth of currencies from the International Monetary Fund. In that case, how it is that the foreign assets held by the Reserve Bank have not improved? There are two possible explanations: on the one hand, the proceeds may have been credited to the special account that Government has in Washington; on the other, the receipt may be reflected in the next week's return.

The State Governments have suffered a drain of Rs 4.98 crores to Rs 11.92 crores in their Deposits; and their ways and means borrowings are slightly lower by Rs 0.54 crore, at Rs 10.88 crores. The Scheduled Banks continue to be plagued with surfeit of funds: their Reserve Balances are higher by Rs 10.93 crores at Rs 106.93 crores, and their borrowings, lower by Rs 0.25 crore, are at the nominal figure of Rs 0.75 crore. It may be noted, lastly, that Balances Held Abroad are lower by Rs 0.02 crore; having regard to the transfer of Rs 0.50 crore from the Issue Department, it is clear that import drain during the week has worked out to Rs 0.52 crore.

As on 24 August the gilt-edged investments of the State Bank once again exceed its total of Advances. In the week under review, Deposits have gone up by Rs 0.75 crore to Rs 583.66 crores, and the total of

Advances has shrunk by Rs 6.25 crores to Rs 267.74 crores. After "cashing" Other Assets for Rs 4 crores, the State Bank has increased its gilt-edged portfolio by Rs 12 crores to Rs 277.20 crores, and so cash balances receded slightly by Rs 0.87 crore to Rs 30.42 crores.

+

Gathering resource are once again indicated in the return of the Scheduled Banks for 17 August, although growth in Deposits is rather more pronounced than contraction to Advances. Net Demand Deposits are higher by Rs 8.67 crores at Rs 893.33 crores, but net Time Deposits have fallen by Rs 1.13 crores to Rs 1,291.87 crores. Of the rise of Rs 7.54 crores in Deposits, only Rs 0.63 crore is attributable to the State Bank. Net Advances have declined by Rs 2.80 crores to Rs 1,385.53 crores, but this is wholly on account of the State Bank. Even so the drop of about Rs 1½ crores to Rs 668.63 crores in the gilt-edged investments of Scheduled Banks is wholly on account of the State Bank. Borrowings from the State Bank have been reduced by Rs 0.44 crore to Rs 17.32 crores, while indebtedness to the Reserve Bank has been pruned by Rs 0.76 crore to Rs 1 crore. The net result is a substantial rise of Rs 216.25 crores in cash balances, including money at call and short notice.

+

Reserve Bank and Export Drive

In his address to the quarterly meeting of the All India Manufacturers' Organisation held at Poona, Mr P. C. Bhattacharyya dealt with, among other things, the importance of cheaper export credit facilities for export promotion. Some progress was made with the establishment in 1957 of the Export Risks Insurance Corporation and the wide range of risks covered by this Corporation has facilitated the grant of credit by the banking system in those situations where exporters were previously unable to secure credit facilities. Further under the Bill Market scheme, the Reserve Bank of India has also offered facilities for exports. Such borrowing facilities will be considerably liberalised if the amendments that are being now made to the Reserve Bank of India Act are carried out. Apart from empowering the Reserve Bank to lend against the declaration of the borrowing banks in writing that it holds and will hold export bills the value of which will not be less than the amount lent by the Reserve Bank, the amendment will also extend the period of maturity of export bills from the present 16 days to 180 days. Another significant measure to be

taken by the Reserve Bank to liberalise credit facilities to exporters to exempt exporters from the purview of the operations of certain selective credit control measures. It is evident, that without such exemption from the credit control measures of the Reserve Bank, even the amended provisions of the Reserve Bank Act will be ineffective in enlarging facilities for exporters, as under the four-tier scheme of credit central banks will be reluctant to approach the Reserve Bank for borrowing against export bills if such borrowing is to be subject to the higher interest rates applicable under the four-tier system.

Mr Bhattacharyya also touched on the question of term lending by Indian Banks to meet the long-term credit requirements of industries. Presently the banks play only a supplemental role to the other specialised institutions that have been set up in this field. The relending facilities provided by the Refinance Corporation have provided some inducement to the commercial banks to take greater interest in term lending. Further progress is dependant, as Mr Bhattacharyya pointed out, on the growth of Deposit resources of the banking system.

Mr Bhattacharyya was somewhat guarded in his assessment of the progress made by the credit guarantee scheme instituted by the Reserve Bank some years ago. While not denying that it has proved to be inadequate to the requirements of the situation, the point stressed by Mr Bhattacharyya was that a period of two years was too short to judge the effects of a promotional measure such as the credit guarantee scheme. During this period, the guarantee organisation has issued guarantees exceeding Rs 10 crores and this, as Mr Bhattacharyya pointed out, can by no means be regarded as an unimpressive performance. The poor utilisation of guarantee facilities in certain areas catered by the scheme was ascribed to the fact that the scheme is in operation in only 52 districts in the country. When the scheme is extended to cover the entire country as is being sought to be done, substantial headway will have been made in enlarging the volume of credit to small industries under the guarantee scheme.

Even at present there is discernible a definite trend toward a steady increase in bank lending to small industries. Such lending on an average has totalled Rs 31 crores for the months July-December 1961 which compares with Rs 27 crores in January-June 1961 and Rs 20 crores in January-June 1960. The increase works out to about 33 per cent in the course of 18 months. The Reserve Bank has, to facilitate further increase in bank lending to small industries, agreed to enlarge the permissible amount of borrowing by banks at the bank rate for the period of January to June 1962 to the extent of credit given by banks in the first half of 1961 over that given in the first half of 1960. This policy of giving additional quota will go some way in increasing the flow of institutional credit to the small scale sector.

Treasury Bills

During the week ended 24 August 1962 Government of India Treasury Bills for Rs 20,44,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills sold from 22 to 25 August 1962 amounted to Rs 55,00,000.

+

The Berlin Crisis

By Paul Einzig

Although there has been lately a growing optimism both in Britain and in the United States about the economic position and prospects, its effect on stock exchanges has been relatively moderate. This is because of the uneasiness caused by the aggravation of the Berlin problem. The frequency and gravity of incidents has given rise to fears that before very long the world might have to face yet another full-scale war scare. The possibility of this has further complicated an already over-involved situation. It is bad enough for the monetary authorities to have to contend with cost inflation at a moment when they are anxious to encourage business revival. It is worse if, in addition they have to bear in mind the possibility of a major war scare. If they were to embark on an expansionary policy, the resulting stock exchange boom would make the economy even more vulnerable to the effects of a war scare. Suppose that, as a result of Bank rate reductions and other deflationary measures, equity prices should rise by, say, 10 per cent. If and when the war scare should materialise this would mean that equity prices would then relapse to the extent of say, 20 per cent instead of merely, say, 10 per cent.

The expansionist argument is that the authorities should not think at all in terms of stock exchange prices but should proceed with their policy of expanding the production of real goods which alone matters. Actually, they cannot afford to overlook the material and psychological effect of a sharp fall on the Stock Exchange. In the United States in particular the volume of both consumer demand and private capital expenditure is apt to be largely influenced by major stock exchange movements. Apart from a curtailment of spending power of both individuals and business firms as a result of a fall in stock exchange values, the psychological effect of such a fall is bound to exaggerate its material effect.

This is, of course, the age-old argument about the risk attached to prosperity. The higher stock exchange prices rise the heavier they are liable to fall. It would indeed be a short-sighted policy to prevent a rise for fear of a subsequent relapse. But when the relapse appears to be rather more than a bare possibility then the authorities could ill afford to disregard the effects of deliberately exaggerating the fluctuations. It is true the Berlin crisis has been with us in a chronic form for the last two years or more. The fact that it has not burst into an acute scare should not lull us, however, into a false feeling of security. So long as that threat is hanging over us it is advisable both for governments and for private firms and individuals to take it into consideration in shaping their plans. Needless to say, we all have to carry on as usual, but on the whole it is expedient to err on the side of caution when planning our investment and our expenditure.

Notes

PLANNING

The Impeding Factors

In his speech to the first quarterly meeting of the All India Manufacturers' Organisation held at Poona last week, Mr Prabhu V. Mehta spoke at length on the problems that impede the scheduled implementation of the development schemes of Third Plan. Mr Mehta particularly contrasted the slow pace of growth in our own country with the rapid strides being taken by the advanced countries like the US and Japan in further accelerating industrial output. The progress made by Japan during the last decade is particularly remarkable. The economic growth registered by Japan averaging more than 10 per cent per annum is even higher than that recorded by countries like the USA. It is, therefore, the Japanese example which Mr Mehta commends for emulation in our country. Japanese exports have been expanding at a higher rate than that of the gross national product, and this fact should have particular significance to our own plans for export promotion. Reflecting the relative lack of export consciousness till recently is the fact that we have the lowest per capita exports. The reason attri-

buted by Mr Mehta to this lagging exports, is the inability of the planners to correctly estimate the growth of our population and the people's capacity to consume our products. "This failure in our planning has aggravated our balance of payments position". The problem facing the country at present is how to meet the foreign exchange requirements for maintenance imports and also repayment liability of foreign loan taken in the past which may not be covered by foreign exchange earnings through exports. Also to be kept in view is the need to dispense with foreign aid in the long run.

Mr Mehta has suggested measures to enable persons of Indian origin residing abroad to bring their incomes into India to invest in industries or business with a view to eventually settle down in the country as a quick means of augmenting our exchange resources. This calls not only for simplification of fiscal procedure but also for extension of double taxation relief agreements to countries still lying outside the scope of such agreements. There is also need to give every encouragement to export promotion measures and from this point of view the stringent travel restrictions recently imposed have to be relaxed to encourage foreign travels undertaken for genuine export promotion.

Mr Mehta has also been highly critical of the attitude of the Government to power generation in the private sector. This rigid restriction of power generation in the private sector has been an important factor impeding rapid progress being registered in this sector. "The value of productions lost during these years due to power shortage would have paid for several power generating units". Mr Mehta has contrasted the rigid policy of the Government with the freedom granted by the US for power generation in the private sector. There are more than 300 investor-owned electric lighting and power companies in the USA. While the Government and co-operatively owned power companies in the US generate 40 million Kw, investor-owned companies generate 170 million Kw. It is also noteworthy that in the US the production of electricity has grown at about 2½ times the rate of economy as a whole as measured by the Gross National Product. The average rate of economic growth compounded per year is 3.05 per cent while the average rate of growth of power per year is 7.15 per cent. In the light of

this experience of power generation in the US, Mr Mehta has pleaded that the Government should reconsider its policy in regard to power generation by people and "permit resourceful and influential citizens of India to instal power generating stations".

Mr Mehta has also drawn attention to the inconsistencies in the Government's labour policy. While not denying the need for a reasonable standard of wages Mr Mehta has stated that "while deciding wage standards and other benefits to the workers, we should prescribe minimum out-put standards commensurate with facilities available with industry". Such a rational wage policy should be an important element in the national plan for cost reduction to make our exports competitive in the foreign markets. There are some signs of realism in the official attitude as the recent statements of Mr G. L. Nanda, at the Indian Labour Conference will testify. In his speech Mr Nanda laid considerable emphasis on higher production and productivity particularly on the part of labour. Now that the need has been appreciated it has to be backed up by concrete schemes by which it would be possible to determine the wage levels commensurate with labour productivity.

OILSEEDS

Stagnation in Production

The task of export promotion has been rendered doubly difficult by the declining trend in our traditional exports noticeable in the past few years. While exports are getting diversified with the emphasis shifting steadily from raw materials to manufactures, the country still depends on four or five traditional items such as tea, jute goods, cotton textiles, vegetable oil for the bulk of its export earnings. But it would appear that unless concerted measures are taken to keep these competitive in world markets, they will yield progressively smaller amounts of foreign exchange. The trend in oil exports is particularly disappointing. The export trade in castor oil and linseed oil has lost considerable ground last year. As against Rs 670 lakhs earned in 1960-61, export of castor oil in 1961-62 brought in only Rs 400 lakhs while export earnings of linseed fell sharply to Rs 8 lakhs from Rs 88 lakhs.

The main obstacle in the way of an expansion of exports of oil is the stagnation in production of oilseeds. Production of oilseeds has been at the disappointing level of 8.7 million tons in 1961-62. Though this is slightly higher than in 1960-61 when production was only 6.5 million tons, it compares unfavourably with

the record in the previous year when out-put amounted to 6.9 million tons. While production is not increasing, domestic demand for oil has been going up. The result is very little has been left for export. And what is more, what little that is available for export does not move fast in world markets on account of the wide disparity in world price and internal price.

The need for increasing production of oilseeds has been emphasised by the Planning Commission which has also indicated the measures to be taken to improve the position. Among the various steps outlined, perhaps the most important is the need for increasing the yield per acre. Compared to other oilseeds growing countries, the yield per acre in India is the lowest. China and Mexico are said to produce twice as much as India produces from one acre. It should be possible for us to increase the yield per acre by improved farming methods and the increased application of fertilisers. An increase in yield will help bring down the cost of production of oilseeds. Once cost of production is brought down it will be easier to compete in foreign markets more effectively than is now possible because of the high cost of our oil. It is gratifying to note that the Planning Commission is taking active steps to increase internal production of oilseeds. A countrywide survey of land suitable for oil seeds cultivation has been undertaken with a view to increase the area under oilseeds. If India is to take increasing part in world vegetable oil markets, it is imperative that oilseeds production in the country is increased in the near future

General Manager

for the problem is to produce sufficient oilseeds which will meet internal consumption in full and leave a substantial surplus of oil for export.

Speaking at the annual meeting of the East India Oil Millers' Association, Mr N. Nopany has pointed out that shift toward increased use of oilcake meal taken advantage of by our country. The world price of oilcake has become very remunerative and valuable foreign exchange can be earned by paying increased attention to the export of oilcake. But increased export of oilcakes is being retarded by the compound system of excise levy which encourages the unorganised sector of the industry to the detriment of the organised sector. The process of fragmentation makes it difficult for the industry to produce oil and oilcake cheaply with the result export suffers. It has been pointed out by Mr Nopany that as a result of the compounded system of excise levy a large production of the installed capacity of the organised industry has become idle. The inevitable outcome is increased cost of production and consequent loss of the export market. As world production of oil has expanded at a faster rate than increase in consumption, there is a buyer's market in vegetable oil. If India is to improve its position in world oil markets, it has to bring down the price of its oil. To bring about this the foremost step is a sizable increase in domestic production of oilseeds. Sufficient incentives have also to be given to the oil industry so that it is enabled to bring down its cost of production.

*

ILO The 46th Session

The 46th session of the International Labour Conference held in June last adopted two new Conventions concerning Equality of Treatment of Nationals and Non-nationals and the Basic Aims and Standards of Social Policy. The Convention regarding Equality of Treatment of Nationals and Non-nationals was adopted by a vote of 259 to 1 with fifty abstentions. It provides that a member country having ratified it shall grant within its territory to the nationals of any other member country which also has ratified it equality of treatment with its own nationals under its social security legislation. Such equality is to apply both as to coverage and as regards the right to benefits and in respect of every branch of social security for which the country concerned has accepted the obligations of the Convention. The Convention states that equality of treatment as regards the grant of benefits shall be accorded without any condition of residence. But residence conditions of a

specified time may be laid down in the case of benefits other than those the grant of which depends either on direct financial participation by the persons protected or their employer or on any qualifying period of occupational activity.

The Convention concerning the Basic Aims and Standards on Social Policy represents a revision of the Social Policy Convention 1947 and is intended mainly to make ratification or application possible for independent states.

Priority for Foreign Exchange

The Planning Minister Mr G. L. Nanda, has early this week, announced a list of 16 industries in the private sector for priority allocation of foreign exchange. These include alloy and special tool steels, steel castings and forgings, heavy structures, including cranes, railway wagons and other equipment, industrial machinery, fertilisers, special refractories and earth-moving equipment. This is intended to remedy the present confusing state of foreign exchange coverage for the private sector units. It is worthy of note that against the foreign exchange allocation of about Rs 450 crores for the private sector in the Third Plan upto the end of May 1962, foreign exchange approval had been given only for about Rs 207 crores. The situation in respect of individual industries shows sharp divergence. The industries fairly well covered by allocation of foreign exchange are heavy chemicals, cement, paper, drugs, plastics, automobiles, and several light engineering industries. But in others like non-ferrous metals, industrial machinery, machine tools, fertilisers, refractories, alloy and special tool steels and electrical engineering industries, the foreign exchange coverage is relatively small. The new list announced by Mr Nanda includes a number of industries from the category where there are serious lags in foreign exchange coverage.

The Preamble to the new Convention reaffirms the general principles contained in the 1947 Convention that all policies shall be primarily directed to the well-being and development of the population and to the promotion of its desire for social progress and also that all policies of more general application shall be formulated with due regard to their effect upon the well-being of the population.

The conference adopted a recommendation concerning Reduc-

tion of Hours of Work, by which the 40 hour week has been accepted as a social standard to be reached by stages according to the principles set out in the 40 hours week Convention 1935. It is also stated in the Preamble that maximum hours of work should be set according to the Hours of Work (Industry) Convention 1919 which provides for an 8-hour day and 48 hour week. One of the general principles contained in the new Recommendation is that normal hours of work should be progressively reduced so as to reach the social standard indicated in the Preamble without any reduction in the wages of workers as at the time hours of work are reduced. The Recommendation further states each member country "should formulate and pursue a national policy designed to promote by methods appropriate to national conditions and practice and to conditions in each industry the adoption of the principle of the progressive reduction of normal hours of work".

The Conference also adopted a Recommendation concerning vocational training which will be applied to all training designed to prepare any person for initial or later employment or promotion in any branch of economic activity, with the exception of (1) training for management or high-level supervisory posts (2) training for sea-farers and (3) training in agriculture. The proposals in this regard have been grouped under important headings like National planning and administration, arrangements for co-operation, information about training opportunities etc. The recommendation forbids any kind of discrimination in training on the basis of race, colour, sex, religion, political opinion, national extraction or social origin.

*

SUGARCANE PRICE Government's Decisions

The Government of India has announced its decisions on the recommendations of the Tariff Commission for payment of additional price for sugarcane for the period 1958-62, but it is strange that the Government should have chosen to keep back the actual report of the Tariff Commission on this important subject. This is an unusual departure from the erstwhile procedure and naturally raises doubts of unfair and sinister intentions on the part of the Government. As it is, the Commission's views have been quoted in patches with the decisions of the Government thereto, but without the full views of the Commission, the decisions of the Government lack rationale and justification.

According to the decisions announced by the Government along with some of the important recommendations of the Commission, the formula set out in the sugarcane (Control) Order, 1955, will cease to operate from 1962-63 when the scheme for linking of cane price with the recovery of sucrose content announced a few months ago by the Government will come into force. This need to link cane price with the quality of sugarcane supplied to the sugar factories forms part of the recommendations of the Tariff Commission. The Government press release on this subject says that "The commission has expressed the view that the scheme for linking the price of cane with the price of sugar which is not linked with the quality of cane and which completely ignores the interests of consumers and does not also promote good relations between the growers and the miller, is not in the larger interests of sugar economy and should be terminated as soon as possible". But on the particular question of the payment of extra price to sugarcane for the period 1958-62, the recommendations of the Tariff Commission have been modified by the Government. The Commission has suggested a new formula in which the share of the cultivator has been fixed at 45 per cent of the additional sugar price realised by the producer of sugar. The share of the miller has been fixed at 30 per cent, the balance of 25 per cent being represented by taxes on the share of the miller. Further the Tariff Commission had also recommended that the incentives given by the Government in 1959-60 and 1960-61 for increasing production of sugar are also to be shared in the same ratio suggested for sharing the additional realisations for sugar over the fair ex-factory price. But the Government's view on this specific recommendation of the Commission is that acceptance of the new formula will lead to complications and difficulties and its retrospective application would be more difficult than that of consequential changes in the existing formula. The Government's own decision on the matter is to apply the existing formula set out in the Sugarcane (Control) Order, 1955, after suitable adaptations in order to incorporate the suggestions of the Tariff Commission for inclusion of allowance for rehabilitation, export losses and for adjustment of costs and the sharing of incentives. The industry would be allowed to retain 25 per cent of the realisations from incentives of 50 per cent rebate in basic excise duty allowed in 1959-60 and 1960-61 for taxes and other outgoings and the balance would be shared between the sugarcane grower and the producer of sugar in the same proportion as the rest of realisations. The decision to provide for rehabilitation allowance to the sugar mills, is a re-

1 September 1962

deeming feature, but this concession has been allowed only to mills which have set apart funds or utilised some amount toward rehabilitation during the years 1958-1959 to 1961-62.

*

PLASTICS High Raw Materials Cost

Impressive as has been the progress of the plastics industry during the last decade, it is doubtful if it will be able to hit the Third Plan target of production of 8,500 tons. For, lately the pace of its progress seems to have slowed down. High raw material cost is said to be the main impediment in the way of a rapid expansion of the industry. At the two-day plastics Convention held in Calcutta last week, it was pointed out that multiple taxation that even raw materials of the industry have to bear makes indigenous plastics products expensive. The incidence of taxation is so high that indigenous raw materials are costlier than similar imported raw materials despite the fact that the latter have to pay countervailing import duties. The industry however may hope for some relief as Mr Nityananda Kanungo, Union Minister for Industries has himself told the Convention that the plea for a revision of taxation on the industry is quite reasonable. The industry needs to be helped to make rapid progress because the demand for plastic products is steadily increasing. With the progress of industrialisation, it will be called upon to supply a wide range of components. Already it has made rapid strides in diversifying its production. Starting from merely catering to the consumer needs, it is now making a large number of industrial accessories. An indication of the commendable progress that the industry has made is that the value of its production has increased from only Rs. 10 crores in 1956 to Rs 20 crores in 1960. It is expected that the value of plastics production may reach Rs 100 crores by the end of the current Plan. The industry has been fortunate to have most of its raw materials within the country. Although when the plastics industry started, it had to depended entirely on imported raw materials, the position has greatly changed in the course of the past five or six years. During the second five year plan, a programme of indigenous manufacture of essential raw materials was taken up with the result that most of the raw materials are now produced within the country.

The progressive increase in the production of synthetic rubber is posing a major problem to the natural rubber producers. This is an inevitable technological development and one need not be unnecessarily alarmist of its outcome. Its impact on natural rubber will be adverse in the long run only if productivity of natural rubber is not increased by scientific

The present installed capacity of the industry is placed at 36,000 tons with current consumption of plastic products estimated at 25,000 tons. Though the Third Plan envisages a target of plastics pro-

duction of 85,000 tons, the Development Council has estimated the demand by the end of the Third Plan to be about 133,000 tons. In this view the industry has to take long strides in the next two or three years if it has to meet internal demand in full and also to participate increasingly in exports. An idea of the tremendous scope for the industry in our country can be had from the fact that whereas in India per capita consumption of plastics is about 1 lb, it is as much as 26.84 lbs. in West Germany and 24.42 lbs in US. What is much more important in the present context of the acute shortage of foreign exchange is the industry's export potentiality. Export earnings have steadily increased to Rs 5 lakhs in the course of the past seven years, and the export target for 1962-63 has been fixed at Rs 1.2 crores. It is remarkable that the plastics industry has been able to enter the export field within a short time of its establishment. If however the industry is to be enabled to participate increasingly in the export markets, it is essential that its products are not only competitive in price but are of a high quality.

*

PLANTATIONS Accent on Productivity

The problems of the plantation industries were once again presented by Mr M. M. Varghese the Chairman of the Association of Planters of Kerala, at its recent 23rd annual general meeting held at Kottayam. Taking tea first, Mr Varghese drew attention to the warning given by the Food and Agriculture Organisation on the possible glut in the international markets and the need for strengthening the competitive capacity of the industry vis-a-vis other tea producing countries of the world. The imposition of various levies at different stages has inflated the price so much so that the Indian tea is placed at a distinctly disadvantageous position in the global markets. A reduction of the various taxes and the complete abolition of the export duty on tea will boost its competitive ability to a considerable extent. Enhancing the per acre yield by adopting modern techniques of agriculture which will automatically cut down the cost of production is another obvious duty.

The progressive increase in the production of synthetic rubber is posing a major problem to the natural rubber producers. This is an inevitable technological development and one need not be unnecessarily alarmist of its outcome. Its impact on natural rubber will be adverse in the long run only if productivity of natural rubber is not increased by scientific

methods of cultivation. The Rubber Board, with its vast experience and the technical know-how at its disposal, can provide the relevant instructions to rubber planters for attaining this objective. The Tariff Commission had recommended the inclusion of a provision at the rate of Rs 9 per 100 lbs of rubber in the price structure to represent the depreciation element in the wasting asset of the rubber tree. The Central Government has accepted this, but though Madras and My-

New Entrepreneurs only

The Union Government is understood to have taken a decision to reserve licences to set up plants and factories in ten well established industries to new entrepreneurs only. This obviously is aimed at reducing the concentration of economic wealth. It may be recalled that in the debate in the Lok Sabha, there was strong criticism of the Government's industrial licensing policy which was alleged to have aided further concentration of economic power. The latest decision of the Government to reserve licences to new entrants is evidently a sequel to such demands for measures against economic concentration.

The ten industries to which the decision will apply are cotton textiles, jute textiles, viscose rayon and yarn and staple fibre, sugar, cement, paper, caustic soda and soda ash, industrial gases, safety matches and superphosphates. Application for licences to set up new units in respect of any of these industries from individuals and firms who own existing units or who hold licences for a substantial capacity in the industry to which the application relates will not be considered unless if such applications were for diversification or expansion of existing units. Even application for expansion or diversification will be considered only if such expansion or diversification is necessary to make the unit economic or for increasing exports.

sore Governments have acted on it the Kerala Government is keeping the issue still pending. An early implementation of the recommendation in Kerala will act as a fillip for rehabilitation.

As far as coffee and cardamom are concerned the past year witnessed various unfavourable developments. The robusta growers were worst affected as the yield was very low and a substantial portion of the aggregate produce

had to be exported at much lower rates than the cost of production. The price of cardamom declined steeply during the year. The non-existence of representative body of the cardamom growers to apprise the Government of their grievances is a serious handicap and the proposed move to hand over cardamom marketing to the Coffee Board is viewed with concern by the growers, who prefer the formation of an association of their own instead.

The recommendations of the Wage Boards for Tea and Rubber for an interim increase of 15 nP for daily rated labourers and Rs 10 per mensem to the subordinate staff is adding to the strains of the industry. Moreover this interim award was made without any regard to the industry's position to bear the additional expenditure and without any consideration of the merits of the case. At least in the case of wage increase to workers in rubber plantations the Board also made a specific recommendation to the Government of India to incorporate a corresponding increase in the controlled price of rubber to off-set the addition to the wage bill. Unfortunately Government while accepting the wage increase, was not disposed to accede to the suggestion for an upward revision in the price to make up the extra cost. Such obvious arbitrary piece-meal adoption of recommendations that hang together reduces the Board's findings to a farce.

*

US A Letter from Washington

The American economy recorded some notable gains in July, and the economic advance appears to have regained a good deal of its momentum. What is more, the general improvement seems to have carried forward in early August.

Already widely hailed were advances to new highs in such important barometers of business health as employment, personal income and industrial production. Reports also had shown retail sales recovering smartly in July after the slight May and June fall-off.

Now there has come a new rash of data underscoring the gains reported earlier. One of the most significant is the jump in new orders for durable goods. After a slowdown of several months, new orders received by hard-good manufacturers rose five per cent from June to a seasonally adjusted total of \$16,100 million, bringing volume close to the record levels of January and February.

At the same time, sales of durable goods manufacturers climbed three per cent in July to a seasonally adjusted level of \$15,100 million.

sonally adjusted total of \$16,400 million, equalling the record levels of May and June. Both sales and new orders reflected increased activity in a wide range of industries, with the buoyant automobile industry leading the way.

Of particular significance is the fact that before adjustments were made for normal seasonal expectations, the flow of new orders in July actually topped durable goods sales for the first time in five months. This pushed the order backlog of \$44,700 million at the end of July, a monthly rise of some \$500 million, and pointed to further strength in industrial activity ahead.

Home building also showed some strength in July. Construction was begun on 133,200 in June. However, this modest decline represented an encouraging leveling-off from June's precipitate dip after seasonal adjustment. Moreover, private non-farm housing starts were at an annual rate of 1,389,000 units in July, identical with the June rate and five per cent above the July 1961 rate.

It is important to note in addition, that there was a sharp increase in both public and private construction awards this past week, also indicative of strength ahead. Private construction, in particular, rebounded with housing volume, reversing the earlier decline. Also, the government reported a sharp contra-seasonal July jump in applications for appraisal of proposed new homes under the Federal Mortgage Insurance Program.

Other significant developments include further increases in Department Store & Automobile sales in recent weeks. Department store sales in the week ended August 11 surpassed the year-earlier level by no less than six per cent. This came on top of a four per cent rise reported the previous week, and marked the eighth constructive week in which volume exceeded the level for the same week of 1961. So far this year, cumulative department store sales have been running some five per cent ahead of the 1961 pace.

Sales of new automobiles in the first ten days of August, meanwhile, reflected the expected seasonal decline at this time of year, but still ran more than 18 per cent ahead of the same period of last year. Sales for all of August now are expected to total about 500,000 cars. With production curtailed for the change-over to new 1963 models, this would cut inventories by as much as 300,000 cars, for the largest single month's reduction in a decade, and would leave the way open for a resumption of high-level automobile output in the months to come.

A little-noted but nonetheless significant indicator of economic health also has shown a remark-

able gain. Production of electricity, basic to all kinds of applications in home, farm & industry, set an all-time high for the week ended August 11. At 17,159 million kilowatt hours, out-put was up 2.7 per cent from the week before, and 6.7 per cent from the like 1961 week. This achievement represented something of a landmark, as it was the first time in history that weekly production topped 17,000 million kilowatt hours.

This accumulation of economic data reinforces the view that the US economy, far from heading toward a recession, may well be moving on to higher group after a brief summer-time respite. Certainly, there appears to be no immediate prospect of any significant slowdown in activity.

It was largely on the basis of the incoming July data, showing continued strength in the sustained economic upswing in the United States, that President Kennedy recently made his decision not to ask for an emergency tax cut to stimulate business at this time. Instead, he plans to wait until next year, when in line with his long-range economic program he will ask Congress to enact as of January 1, 1963, a major and long-overdue reform of the nation's tax system, including reductions in rate. Its primary aim will be the long-term acceleration of US economic growth.

KERALA

Land Transactions

The Reserve Bank of India Bulletin for July 1962 gives very interesting information about land transactions in Kerala during the year 1959. The data relate to type of deeds, cause of deeds, the area transacted, extent of land involved, value of deed, occupation of the transfer and the transferee and the area left with the transferer and transferee after the transaction. It is shown that during the year 1959 the total number of deeds registered in Kerala State was 3,12,225, about 60 per cent of which was registered in the first half of the year. The transactions covering these deeds have been classified under different groups like leases, mortgages with possession, mortgages without possession, sales, gifts etc. Both in terms of area involved and percentage to total number of deeds, sales come first with shares of 23.3 per cent and 34.7 per cent respectively. But there is no systematic relationship between the percentage share in total deeds and the percentage area involved in respect of each group. In respect of cause of deeds also a number of causes has been detailed such as marriage expenses, clearance of debt, purchase of other land, expenses in connection with

agriculture, building construction, expenses and medical expenses. Clearance of debt accounted for 25 per cent of the total mortgage deeds and 21 per cent of the sale deeds. Transfers effected for marriage expenses, education, medical and security purposes were negligible.

On the basis of area involved, sales deeds accounted for 23 per cent while partition deeds accounted for 21 per cent. Value of land transfers is given only in respect of sales and mortgages, the total amount involved in these two being placed at Rs 11,74,75 lakhs. 27 per cent of the value of sales and mortgages was accounted by transfers for clearance of debts, the next important reason being purchase of other land which accounted for 18 per cent of the total value.

Five different categories of land have been given in respect of the average value of different types of land. These are irrigated single crop, unirrigated single crop, irrigated double crop, unirrigated double crop and garden land. The value of land belonging to the same category is shown to have varied from one region to another. On the basis of occupation, the transfers have been classified into two broad groups, namely agriculture and non agriculture. Agriculturists were transferees in 78 per cent of the total number of transactions and were transferers in 66 per cent of the total number.

PAPER & PULP Difficulties of Raw Material

The paper and pulp industry in the country is confronting serious difficulties in procuring adequate supply of raw materials for the manufacture of paper and according to the present trend the industry will be steeped in a crisis for a pretty long time to come. The progressive deterioration of the supply of bamboo and sabine grass and the lethargic attempt made for stepping up the production of these essential raw materials have been ascribed as the serious contributory factors for this unhappy state of affairs. Recently the topic came up for discussion at the first meeting of the reconstituted Development Council which met in New Delhi last week. The insufficient supply of machinery for the paper and pulp industry and the lack of coordination between the indigenous supplies of machinery and imported equipment are also adversely affecting the progress of the industry. That the present crisis will only grow to alarming proportions is evident from the increased consumption of paper in the country particularly with the accent on spreading literacy

all over the country. The Union Minister for Industry Mr Nityananda Kanungo, who inaugurated the meeting conceded that the raw material supply was lagging behind the demand and has rated the existing resources of bamboo pretty inadequate for the expansion of the paper and pulp industry beyond the Third Plan period. This position cannot be allowed to drift unchecked as it contains enough potential to weaken the industry. Mr Kanungo assured that the scope for the plantation of the suitable species of fast growing timbers with bamboo as an undercover is under consideration. A move has also been initiated for country wide survey of the cellulosic resources and preinvestment survey. The maximum utilisation of the bagasse which is in abundant supply in the country for feeding the industry will be a significant step in relieving the raw material shortage. But such a step has its own limitation as the impact on the sugar factories by depriving them of their fuel will cast serious repercussions and before implementation some alternate arrangement should be made to ensure sugar industry enough fodder to feed the furnace. That a modest but significant start has been made in this respect by the Mandya Paper Mills at Mysore quite recently is somewhat comforting and the performance of the mill will be closely watched. The success of this scheme will depend solely on the alternate arrangement of fuel to the sugar factories by which, the estimated supply of bagasse at over 3.75 million tons can be transferred to the paper industry to its immense relief. The reported sanctioning of the licences for a number of schemes to augment the production of paper machinery in collaboration with some of the renowned foreign firms is heartening as the commissioning of these programmes can reduce to a considerable extent the shortage of machinery currently experienced by the industry.

The progress of the paper and pulp industry during the past decade both in terms of production and capacity has been spectacular. Paper production which stood at 13,915 tons in 1951 has moved upto 364,118 tons in 1961 while the installed capacity of the paper and paper boards has gone up from 410,000 tons to 4,380 by the end of this year. Furthermore an additional capacity of 769,840 tons per year has been licensed out of which 155,560 tons capacity would be covered by the expansion of the already installed units and 514,280 tons by fresh installation. If the implementation of new schemes and the expansion programme are carried out according to the schedule there would not be any difficulty in touching the targeted capacity of 840,000 tons by the end of the current Plan period.

During 1961-62, there was some significant increase in the installed capacity in several important industries, notably in aluminium, industrial machinery, machine tools, electrical equipment, fertilisers, heavy chemicals and cement. Construction work on a large number of industrial projects proceeded during the year according to approved schedules. The construction of the three steel plants in the public sector initiated in the Second Plan was virtually completed during the year. Preliminary steps for their expansion were initiated. The implementation of the projects under the Heavy Engineering Cor-

Third Five Year Plan

Progress in First Year

The review of the progress of the Third Plan in the first year was placed on the table on the Lok Sabha last week by Mr G. L. Nanda, Union Minister for Planning and Labour. While tracing the general progress of the economy in the first year of the Plan, it highlights the important developments and achievements in sectors like agriculture, industry, transport, power and education. According to the review, the total Plan outlay in 1961-62 was Rs 1,148 crores and it is being raised by Rs 300 crores during 1962-63. The review draws special attention to the significant increase in the installed capacity in several important industries and the success in creating capacity for the manufacture of a host of new products.

FARM PRODUCTION

Agriculture: The production was generally higher than in the previous year.

A significant increase was in wheat (11.6 million tons, as against 10.8 million tons in 1960-61), jute (6.3 million bales, as against 4 million bales) and barley (3.1 million tons, as against 2.8 million tons.)

Production of rice, jowar, sugarcane and cotton was below the 1960-61 level.

The review said that nearly 4.5 million students had been enrolled in primary middle and secondary schools. Considerable progress was being made in technical education too.

Progress in certain key industries is as follows:—

	1960-61	1961-62 (Estimated)	1962-63 (Projected)
Finished steel (in million tons)	2.4	2.9	3.9
Aluminium (in 1,000 tons)	18.2	19.4	38.0
Nitrogenous Fertilisers (1,000 tons)	97.1	140.0	200.0
terms of Nitrogen	53.0	61.9	90.0
Phosphatic Fertilisers (1,000 tons)	353.9†	423.0†	523.0
Sulphuric Acid (1,000 tons)	7.24†	8.50†	10.50
Machine Tools (value in Rs. crores)	7.8	8.2	9.5
Cement (million tons)	343.00	362.8	400.0
Paper and Paper Board (million tons)	10.7	42.1	13.5
Iron Ore (million tons)	55.5	55.2	62.0
Coal (million metric tonnes)			

Please note + as calendar year.

STEEL PLANTS

During 1961-62, there was some significant increase in the installed capacity in several important industries, notably in aluminium, industrial machinery, machine tools, electrical equipment, fertilisers, heavy chemicals and cement.

Construction work on a large number of industrial projects proceeded during the year according to approved schedules.

The construction of the three steel plants in the public sector initiated in the Second Plan was virtually completed during the year. Preliminary steps for their expansion were initiated.

The implementation of the projects under the Heavy Engineering Cor-

poration progressed satisfactorily. By the end of 1961-62, the heavy machine building project had progressed to the stage of commencement of construction.

Construction on the foundry forge project had also commenced.

Additional employment opportunities created are estimated at two million in 1961-62 and it was expected to be 2.4 million in 1962-63.

INDUSTRIAL PRODUCTION

In the increased Plan outlay for 1962-63, transport and communications get the major share with Rs. 349 crores.

Next in order are industry (Rs. 333 crores), social services (Rs. 257 crores), agriculture, community development and co-operation (Rs. 192 crores), power (Rs. 165 crores) and irrigation and flood control (Rs. 23 crores).

The problem of co-ordination in the related sectors of industry, transport and power has been a subject of special concern over the years, says the review.

Industry: Industrial production rose during 1961-62 by about five per cent. Apart from cotton textiles, jute and sugar industries in which special conditions prevailed, the rise in industrial production during 1961-62 is reckoned at about eight per cent.

Finished steel, aluminium, nitrogenous fertilisers, phosphatic fertilisers, sulphuric acid, machine tools, cement, paper and paper board, iron ore are estimated to have shown increase in the output.

Coal production was, however, lesser than the previous year's tally, but the projected output for 1962-63 is put at 62.0 million metric tonnes. This target is 6.8 million metric tonnes higher than the estimated output of 55.2 million tonnes in 1961-62.

The production in 1960-61 was 55.5 million metric tonnes.

The production in 1960-61 was 55.5 million metric tonnes.

HMT EXPANSION

The coal mining machinery projects had also progressed to the stage of civil construction. The project report for the Heavy Machine Tools Plant Ranchi, was received before the end of the year.

The expansion of Hindustan Machine Tools, Bangalore, was completed during 1961-62.

The site for the second machine tool plant at Chandigarh was selected.

The Heavy Electricals Project, Bhopal, which went into production in July, 1960, took up a number of new items of production and stepped up the volume of its manufacturing capacity.

The construction of the Rourkela Fertiliser Plant also reached an advanced stage.

TROMBAY FERTILISER PLANT

The progress of the construction of the Neyveli fertiliser plant was also satisfactory.

In the case of the Trombay fertiliser plant, a considerable amount of preliminary work was completed and orders had been placed for the major item of plant and equipment.

The second stage of expansion of FACT was also nearly completed. As for Naharkatiya fertilizers, the site was acquired and contracts for the main plant were given out.

In the private sector, industrial licences were issued covering the entire planned capacity of a fair number of industries. The number of applications for licences under the Industries Development and Regulation Act rose from 3,467 in 1960 to 4,012 in 1961.

Several industries in which adequate capacity in relation to the Third Plan targets had been licensed were placed on the "banned" list.

PRIORITY IN LICENSING

Projects which would save or earn foreign exchange were given priority in licensing.

A large share of the capital goods for which imports were allowed went to the paper and pulp, chemicals, textiles other than cotton, automobiles and engineering industries.

A notable development in 1961-62 was the expansion of facilities for designing and fabrication.

LESS COAL PRODUCED

Coal: The output of coal in 1961-62 was 55.2 million tonnes in 1960-61. For a variety of reasons, the output of the National Coal Development Corporation was less than in the previous year. A series of measures have been taken in recent months to expand transport facilities for the movement of coal, the programme of coal washeries is being pushed forward and, by way of incentive, the price structure for coal has been recently revised. In spite of lower production, the actual supply of coal was stepped up by three million tons.

TRANSPORT PROBLEM

Transport: To enable the railways to expand facilities mainly for the movement of coal, an addi-

tional outlay of Rs. 120 crores has been approved. A further provision of Rs. 25 crores has been accepted for line capacity works for general goods traffic and as an advance measure related to the movement of coal for the early period of the Fourth Plan.

During 1961-62, the production of wagons increased from 11,984 in 1960-61 to 19,115. Doubling and conversions were completed on about

422 miles of track. Electrification was completed on 327 route miles.

Roads: During 1961-62, 70 miles of missing links and five major bridges were constructed. Further, 300 miles of highways were improved. The plan for 1962-63 provides for the construction of 70 miles of missing links and ten major bridges and improvement of 400 miles of highways. The total addition to road mileage was about 4,000 miles and is expected to be about 4,500 miles during 1962-63.

Power estimates of generating capacity, generation of power, and towns and villages electrified in 1960-61, 1961-62 and 1962-63 are given below:

	1960-61	1961-62	1962-63
Installed generating capacity (in M.W.)	5,595	6,174	6,881
Generation of Power (M. Hrs.)	20,040	22,900	25,500
Additional towns and villages electrified	1,600	3,100	3,500

During 1961-62, the generation of power increased by about 13 per cent. However, in several areas the demand for power increased more rapidly and shortages were experienced. Foreign exchange has now been arranged for a large proportion of power projects included in the Third Plan and the implementation of the power programme is being accelerated as much as possible. To meet shortages in certain regions, additions of the programme for power generating capacity, amounting to about 500 m.w. have been agreed to.

While the year 1960-61 enjoyed unusually good weather conditions resulting in a large increase in agricultural production over the previous year, weather conditions were being normal during 1961-62.

The following table gives the figures of production of agricultural crops in 1961-62 (in million tonnes) for which final estimates are available.

	1960-61	1961-62
(million tons)		
Wheat	10.8	11.6
Barley	2.8	3.1
Rice	33.7	33.6
Jowar	9.2	7.7

Irrigation: The total potential created by major and medium irrigation schemes increased from 12.25 million acres to 13.75 million acres. The target for 1962-63 is about 16 million acres. In minor irrigation an additional 1.67 million acres were benefited, the target of 1962-63 being over two million acres.

Steps are being taken to intensify the minor irrigation and soil conservation programmes to raise the area to be benefited over the Plan period by about 20 per cent.

FERTILISER CONSTRUCTION

For cotton and oilseeds, where the shortage is particularly marked, areas of intensive development are being

facilities and other assistance are being provided.

The consumption of nitrogenous fertilisers increased from about a little over two lakh tons in terms of nitrogen to nearly three lakh tons. During the current year, the con-

sumption will increase to about four lakh tons.

Short and medium-term credit advanced by co-operative societies amounted to Rs. 256 crores as against Rs. 200 crores in 1960-61 and is expected to go up to Rs. 300 crores in 1962-63.

EDUCATIONAL PROGRESS

Progress in the field of education is as follows:

	1960-61	1961-62	1962-63
Enrolment in primary schools (millions)	34.3	37.8	41.5
Enrolment in middle schools (millions)	6.3	6.9	7.6
Enrolment in secondary schools (millions)	2.8	3.1	3.4

In the Third Plan, considerable emphasis is being placed on the provision of scholarships for needy children.

Under the scheme of national scholarships for outstanding students for post-Matric education, 2,400 awards were made during the year.

In addition to these, 61,000 scholarships were awarded under the programme of assistance to Scheduled Castes, Scheduled Tribes and other backward classes.

Considerable progress is being made in the field of technical education also.

APPRENTICES BILL

The apprentices Bill, 1961, has been passed by Parliament. Action has been taken to set up central apprenticeship councils, as laid down in the Act and also for other steps for the implementation of the Act. The four central training institutes for the training of craft instructors were expanded during the year for an admission capacity of 820, as against 530 in 1960-61.

Additional employment opportunities created are estimated at two million and are expected to be 2.4 million in 1962-63.

Two new programmes of great importance for the expansion of employment opportunities in rural areas have been initiated under the Plan. The rural works programme aiming

at the fuller utilisation of manpower resources of the rural areas, specially for agricultural development now extends to more than 200 development blocks. Given adequate organisation at the technical and administrative levels, it is proposed to expand this programme four-fold early next year.

INDUSTRIES IN RURAL AREAS

The high-level rural industries planning committee, constituted by the Planning Commission recently has drawn up a scheme for the intensive development of small industries in rural areas. With the object of gaining experience in the intensive development of small industries, 46 areas are being selected, each comprising a population of three to four lakhs and consisting of complete development blocks situated within the same district. The projects will be directed to all kinds of small industries and processing industries which can be developed in rural areas, and will be undertaken as part of a wider and well-co-ordinated plan of local development. On the basis of surveys to be shortly undertaken, steps will be taken in the selected areas to prepare area or regional development plans and to co-ordinate effectively the various development programmes under agriculture, irrigation, communications, industries, rural electrification and social services.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Trend-spotters in India tend to play it safe, preferring to be political coroners rather than political astrologers. Consequently, most Indian psephology is post-election. Complaints of the sort recently heard in England that pollsters, by the apparent air of a scientific finality of their findings stampede waverers into running with the current (as they see it) can hardly be made here.

We also take our bye-elections less frenetically. Mr Nehru may have been putting a brave face on it, but I don't suppose that his off-handedness about Thiruchengode at his press conference hid any serious worry. Neither the Congress party nor he is likely to consider Thiruchengode an Orping-ton or Chittoor or Leicester. The general election is a long way off and nothing, on Parliament's present form—consider how the debate on Ladakh ended—is more unlikely than a mid-term election.

For the Congress, the principal lesson of two reverses in a row may well turn out to be nothing more momentous than the political hazards of departing from a well-set habit: the nominating as-governors persons who win (in-governors persons who lose) instead of, as before, who lose elections is proving doubly risky. Two, instead of one, contests and a victory thrown away, not to mention the fact that unemployment among defeated politicians is very much what it was before. For the rest, the several possible inferences from the results cancel each other out and no firm conclusions can be drawn except that elections are still a toss up. The narrow margins of the wins together with the number of invalid votes (larger than the winning margin in both cases) clearly shows this. (Rajaji's argument, that the margin of some who are now ministers was equally narrow doesn't disprove my point). Electoral apathy is evident in the fact that the total votes polled this time was about a fifth less than in the general election at Thiruchengode and at Chittoor. This about a twentieth less. This makes opposition elation somewhat premature. On the other hand, the bye-elections being straight fights, the vote-splitting that alone gave the victory to the Congress at both places in the general election has been avoided. To argue from this that the electorate's heart has, from the opposition's point of view, always been in the right place is non-sequitur: in Thiruchengode, the successful DMK candidate secured less number of votes than last time

when he was defeated: therefore none of the votes that then went to other non-congress contestants can be said to have come to him this time. At Chittoor, on the other hand, the defeated Congress candidate polled slightly more than the successful Congress candidate in the general election. But powerful and organised groups that splintered the votes last time—the PSP at Thiruchengode and the Communist party at Chittoor—threw their weight behind the Congress this time. Both were regarded as "prestige seats", and Rajaji even complained of the inequity of All-India leadership (in, among others, the person of the Prime Minister's daughter) coming in force and electioneering at Chittoor. How much the result at Thiruchengode was influenced by DMK's brush with the government last month is difficult to say. Perhaps the halo of martyrdom made up for the deprivation of personal electioneering by the leaders. Local issues must have weighed in Chittoor too, with Swatantra's slogan of abolition of land tax pitted against the recent increase by the Andhra Government of this very tax. On the whole, the Congress has, if no cause for immediate worry, none for cheer either.

It was good to see Authority squirming with embarrassment at being caught in flagrante delicto by Parliament over the amendment to the Land Acquisition Act. For once, Parliamentary vigilance saw through the bland ruse of playing down important amendments as mere routine legislation designed to cope with a tiresome Supreme Court. Even so, it would be a mistake to consider the dust-up in the Lok Sabha, either in its inspiration or in its effect, an unqualified blow struck on behalf of the little man. Motives, if newspapers are to be believed, varied widely, from wanting to cock a snook at the UP Chief Minister and the Congress party, to furthering socialism with the help of the Supreme Court judgment. The little man himself entered the argument only marginally. For example, whether the little man was expendable when the acquisition of land was by and for the government was not the subject matter of the debate at all. What the alignment would then have been is difficult to predict on the basis of what happened in the last two weeks. In all probability, socialist zeal would then have had little by way of tears to spare for the little man. In other words,

there was probably not a single Chestertonian (or what comes to the same thing, Gandhian) voice in all the babel of objectors. If it were State Capitalism (in stead of, as on the present occasion, big business clumsily aided by State Capitalism) that was stridently walking over the rights of the little man, I wonder how many of the lions that roared last week would have raised their voice. Indeed among the suggestions made to get over the difficulty caused by the Supreme Court decision was one that recommended that acquisition should be only for public sector undertakings. From this point of view, the Land Acquisition Act is comprehensively socialist. ("We are all socialists these days," said Sir William Harcourt in, I believe, 1874. The Land Acquisition Act was brought on the statute book on 1894.)

But when it comes to acquisition of land for use by a company, the scope of the present Act is more limited. This was pointed out by the Supreme Court in the UP case that made the amendment necessary. The facts in that case were somewhat like this: the UP government wanted to help a particular company to set up a factory for manufacturing textile machinery parts. In order to provide land for the purpose, it issued a notification under the Act for acquisition for use by the company of about 12 acres of land belonging to one Mr Aurora, the appellant before the Court. There were procedural errors in doing this which were later rectified but which nevertheless tended to show how cavalier the government was about the matter. Incidentally, Mr Aurora himself would appear to have had some intention of erecting a factory of his own on this land. The action of the government was challenged on the ground that under section 40(1)(b) (under which the government purported to act), it cannot possibly be a party to the acquisition unless it was satisfied after inquiry that "such acquisition was needed for the construction of a work and that such work was likely to prove useful to the public." The Court held that the word "work" in the above clause meant "works like a hospital or a public reading room or a library or an educational institution open to the public or such other work as the public may directly use". It was contended for the government that such direct use of the work was not necessary and if the products of the company which constructed the work were useful to the public, the requirement of section 40 would be met. This was repelled by the Court, which in effect said that, put thus,

government can become an agent for acquiring land for every man who wants to start a factory. The amending bill tries to remove this difficulty by making it possible to acquire land for a company "engaged in an industry which is essential for the life of the community or is likely to promote the economic development of the country." At the moment of writing, I don't have before me the final form of the amended version. Expropriation is habit-forming and self-righteous arrangers of happiness for the masses can easily persuade themselves into acquisitions that can be avoided if respect for individual rights were a little more sturdy. Assurances of various sort to mitigate hardship as well as to avoid acquisition as far as possible have been given. Mr Patil, resilient and inventive as ever, has come out with suggestions like the expropriated land-owner being offered shares (or, if he prefers it, employment) in the company that is taking the land from him. How these will pan out in practice remains to be seen.

It reads like an O.Henry story but Kafka might have seen possibilities in it. It comes from Ceylon where towns have such beautiful names and it is true. A woman teacher working in a school in Nawalapitiya, in love with a confrere in a school in Anuradhapura, a hundred and fifty miles away, applied to the Education Department for a transfer to the Anuradhapura school. Months elapsed with no reply from the department. It was then thought that the man might have better luck and he sent in an application asking for a transfer to Nawalapitiya. Nothing happened for weeks and then . . . yes, both prayers were granted. Administrative efficiency and coordination are ideals very much a la mode now, but for once I find myself hoping that this particular turn of fortunes is the result of bureaucratic muddle. For I cannot bear to contemplate an officialdom so coordinately sadistic as to wish to blast love's young dreams in this ironic fashion, giving and denying by the same act. All the world loves the lovers and I should hate to think that a clerk in Ceylon's Education Department is an exception to the rule. Perhaps I am being hard on him, for I don't know what reasons the young people gave for desiring the transfer. Maybe the young man, taking a hint from Oscar Wilde, said he had a sick aunt in Nawalapitiya whom he had to look after. Or the young lady thought it cute to invent an invalid uncle in Anuradhapura. In either case, they have only themselves to thank for the unintended consequence of their stratagems. Now that their predicament has had some publicity, (who says 'the Press is not public-spirited') I should like to think that the story will have a happy ending.

EAVESDROPPER

Let not your Tax problems tax you any more GUIDE TO INCOME TAX ACT

by

A. RAMAIA

(Author of Guide to Companies Act)

The object of this book is to make available to the Income-tax assesses and their advisers, Chartered Accountants and Lawyers, a reliable Guide to the Income-tax Act and hand-book of easy reference on the Act.

The book contains explanatory notes, which will facilitate easy understanding of the provisions, and comments which will be found to be helpful in solving tax problems.

The provisions of the new Act have to be interpreted in their own language and on the back-ground of the basic material on which they are based. As the Act is a new Act, there is not much scope for citation of judicial decisions as authority for the interpretation of the new Act. Wherever there is room for interpretation the author has expressed his views clearly and these are bound to provoke further thought.

Here is a valuable book for your table which will solve many of your tax problems.

Price Rs. 15-00.

READY SOON

Ninth Edition of

V. S. SUNDARAM'S

LAW OF INCOME-TAX ACT

(Act XLIII of 1961)

This book needs no special introduction being known to all its users over these years. Opportunity has been taken to revise the book not merely by way of re-arrangement as necessitated by the new Act including the new Finance Act XX of 1962, and of bringing all relevant material up-to-date but by re-writing a good part of the book. All obsolete matter has been cut out but in view of the applicability of the old Act to all pending proceedings, all essential and important matters relating to the old law are retained. Several minor changes have also been made in response to the suggestions from the many users of the book. The Publishers are confident that this edition will be distinctly better than its predecessors.

(From Our New Delhi Correspondent)

Scrutiny of Plan Progress

THE progress of the Plan and the imbalances that have developed in the course of its implementation, came in for special attention last week. First there was a plenary meeting of the Planning Commission at which the Prime Minister made one of his rare appearances. The meeting is understood to have been devoted to the critical shortages that have developed in vital sectors of the economy. More or less the same ground was covered when representatives of the Federation of Indian Chambers of Commerce and Industry met the Prime Minister on August 24. The Federation was represented at the meeting by Mr Shriyans Prasad Jain (President), Mr Bharat Ram (Vice President), Mr Babubhai M. Chitambar, Mr A. M. M. Murugappa Chettiar, Mr Naval H. Tata and Mr G. L. Bansal (Secretary-General).

The main topic raised at the meeting related to foreign exchange earnings and speedy utilisation of loan assistance extended by friendly countries. In this context an interesting suggestion was made that there should be some flexibility in the utilisation of tied loans, so that, if there was delay in the particular project for which a loan was earmarked, it could be used for other similar projects. Other subjects discussed at the meeting included the supply and movement of coal, transport and power shortage. In regard to rail transport it was suggested that an assessment of wagon building capacity should be made so that the required number of wagons could be built in the country. Mention was also made in the course of the discussions of the need to have more coal washeries, the setting up of power generating plants near coal fields, rapid development of road transport capacity and the production of special alloy and tool steels. The representative of the Federation also suggested that those industries which needed power in bulk, but were finding it difficult to get it, should be allowed to set up their own power stations on a co-operative basis. In this connection it was also suggested that the Electricity Act should be suitably amended to provide a reasonable return on capital so that capital could be raised for electric power projects. The Act provides for a return of 2 per cent above the Bank Rate.

The round of discussions was capped by a two day debate in the Lok Sabha in the course of which the Minister for Planning made two comprehensive statements. The debate is notable for the emphatic

assurance by the Minister that, in spite of all difficulties the Third Five Year Plan would be successfully implemented and that its basic and vital objectives would be achieved. Though there may be need for adjustment of the allocations made for various sectors, on the whole he was confident that the main targets fixed in the Plan would be achieved.

Mr Nanda also stressed the need for legal and administrative sanctions and an effective distribution machinery acting in the public interest, in order to hold the price line. He said that "Government is at present engaged in a thorough study of the implications of the recent trends in prices and will not hesitate to take whatever action may be required for regulating the prices of basic essentials within defined limits."

Regarding production of wagons which was one of the topics discussed by representatives of the Federation during their meeting with the Prime Minister, Mr Nanda said that the production programme for wagons has been stepped up from 11964 in 1960-61 to 19115 in 1961-62 and to 23,469 in 1962-63. He added that the five year targets for rolling stock have been raised by about 42 per cent for wagons and by about 19 per cent for locomotives.

Good News from Rourkela

The debate did not throw new light on the critical shortfalls which have been frequently high-lighted. It is, however, a matter for gratification that Rourkela which was described as the 'sick child' of HSL has grown strong enough to enter the 'race for records'. It is learnt that the Steel Melting Shop at Rourkela set up a new record with the production of 2,392 tonnes of ingot steel on August 20. The previous highest output was 2105 tonnes on May 5, 1962. On August 20, the L. D. Converters set up a record of 45 blows giving 1908 tonnes as against the previous best of 39 blows. Not to be outdone, the four openhearth furnaces completed 11 heats three days later, yielding 872 tonnes of steel. The rated capacity of each furnace is 80 tonnes and between four of them they are expected to give at the most ten heats per day.

Another notable achievement was the re-lining of one of the L. D. Converters in 72 hours. When the Solveen Delegation inspected the plant in March, they found that the relining of the Converter required up to ten days and that the normal situation was such that one Converter was in operation while two were not. And they had suggested that corrective action should be

taken so that it should be possible to reduce the time taken for relining operations to 100 hours. In this respect Rourkela has improved on the target set by the Export Delegation.

The Third Blast Furnace at Rourkela was lighted on August 22. The authorities are confident that, as soon as larger quantities of hot metal from this furnace are available, the production of steel ingots would go up substantially beyond the present level of 50,000 tonnes per month. This level of output has been maintained for the past two months with the metal for the two furnaces that were in operation. The improvements so far recorded are particularly heartening, for they indicate that Rourkela would be able to reach rated capacity earlier than was expected even one month ago and be in a position to begin work on the expansion programme.

New Bank Law

The main purpose of the proposed amendment of the Banking Companies Legislation is to strengthen the capital structure and reserves of banking companies as well as to increase the balances held by them in the form of liquid assets. Two Bills, the Reserve Bank of India (Amendment) Bill, 1962 and the Banking Companies (Amendment) Bill, 1962, were introduced in Lok Sabha last week.

It has been explained that the changes proposed in the bills have become necessary to strengthen the financial position of the banking institutions in conformity with the trend in bank deposits. The Statement of Objects and Reasons appended to the Banking Companies (Amendment) Bill, 1962, points out that the provisions of the Banking Companies Act relating to the minimum paid-up capital and reserves of the commercial banks and the amounts which such banks are required to maintain in the form of cash on bank balances or in the form of assets are somewhat out of date. In view of the changes which have taken place since 1949, when the provisions relating to the minimum paid-up capital were brought into force, and the very great increase in the deposits and working funds of the commercial banking system, it is considered desirable that the paid-up capital and reserves, cash and bank balances and the overall liquid assets of the commercial banks should be increased.

Clause 2 of the Bill seeks to raise the minimum paid-up capital in the case of a banking company incorporated in India which applies for a licence in future to five lakhs of rupees from the present requirement of Rs. 50,000. Under the existing law, banking companies incorporated in India are also required to transfer 20 per cent of

Plan Outlays

The Planning Commission has fixed the total outlay during 1962-63 at Rs 1,446 crores which is nearly Rs 300 crores more than the outlay for 1961-62. Plan outlay during the first year of the Plan amounted to Rs 1148 crores which represented a step-up of Rs 77 crores over the preceding year, that is, the last year of the Second Plan. In this connexion it is pointed out that, at the end of each Plan, substantial amounts of expenditure on social services etc are taken as "committed expenditure" in the succeeding plan period and are provided for outside the Plan. Taking these into account, the increases in development outlays in 1961-62 over the previous year amounted to Rs 217 crores. The distribution of Plan outlay during 1961-63 as compared to 1960-61 is shown below:

	1960-61	1961-62	1962-63
Agriculture Community Development and Co-operation ...	140	151	192
Irrigation & Flood Control ...	93	98	125
Power ...	108	131	165
Industry ...	219	249	333
Transport & Communications ...	278	302	349
Social Services ...	206	203	257
Miscellaneous ...	27	14	25
Total ...	1071	1148	1446

their annual profits to statutory reserves till such reserves are equal to the paid-up capital. Clause 3 of the Amendment Bill seeks to provide that such transfers shall continue to be made even after the reserves are equal to paid-up capital and until such time as an exemption, if any, is granted.

Foreign Banks

Banks incorporated outside India are at present required to deposit with the Reserve Bank a sum of Rs 15 lakhs or Rs 20 lakhs as the case may be depending on the location of the office of the Bank in India. Clause 2 of the Amendment Bill provides that such banks shall be required to increase the amounts deposited with the Reserve Bank, in lieu of paid-up capital and reserves, by transfer of 20 per cent of the future annual profits of the Indian branches until such time as an exemption, if any, is granted.

The Reserve Bank's power to control the operations of foreign banks will be enhanced by Clause 5 which seeks to amend Section 22 of the Banking Companies Act so as to provide that in the case of any bank which is incorporated outside India, a licence may be refused or cancelled, if it appears to the Reserve Bank that it will not be in the public interest to allow the Bank to operate or to continue to operate in India.

Minimum Balances and Liquid Assets

Clause 4 seeks to amend Section 18 of the Banking Companies Act so as to provide that the minimum balances that non-scheduled banks are required to maintain shall be raised to three per cent of total liabilities from the present limit of two per cent of time and five per

1 September 1962

cent of demand liabilities. In the case of scheduled banks, the limit of three per cent will be prescribed by the proposed amendment of the Reserve Bank of India Act. The overall limit for these balances and special deposits in the case of scheduled banks will also be fixed at 15 per cent of total liabilities.

Clause 6 seeks to raise the minimum requirements as to liquidity. Under Section 24 of the Banking Companies Act, the minimum amount that every bank is now required to maintain in the form of liquid assets (i.e. cash with the Reserve Bank or its agencies gold and unencumbered approved securities) is 20 per cent of total liabilities in India. The deposits with the Reserve Bank of India, or cash reserves and bank balances in regard to which separate provision is made in Section 42 of the Reserve Bank of India Act, 1934, or Section 18 of the Banking Companies Act, 1949, as the case may be, are counted as liquid assets.

Clause 6 seeks to make two changes: (1) The minimum percentage of total liabilities in India which are required to be maintained in the form of liquid assets will be raised from the present level of 20 per cent to 25 per cent. (2) Statutory balances and deposits required to be maintained with Reserve Bank by scheduled banks and cash balances under Section 18 of Banking Companies Act in the case of non-scheduled banks will not be counted as liquid assets for the purpose of Section 24.

Taking into account the overall limits set for the statutory minimum balances, the effects of the amendments of Section 42 of the Reserve Bank of India Act and Section 18 and 24 of the Banking Companies Act will be to provide a minimum liquidity ratio of 28 per cent in the case of scheduled banks with provision for raising this percentage to forty per cent if necessary, and a liquidity ratio, not subject to variations, of 28 per cent in the case of non-scheduled banks. It is proposed that existing banks will be allowed a time limit of two years to enable them to comply with the amended requirements of the law.

The opportunity provided by the Amendment of the Act has also been utilised to make a few clarificatory changes in some of the other provisions of the Act. Clause 7 seeks to amend Section 35B of the Banking Companies Act, so as to make it clear that, notwithstanding the provisions of the proviso to sub-section 3 of Section 309 and the proviso to Section 387 of the Companies Act, 1956, as recently amended, the approval of the Central Government shall not be necessary for determining the remuneration of the chief executive officers or other directors of banking companies.

Clause 8 provides for a clarificatory amendment of Section 51 of the Banking Companies Act, so as to make the provisions relating to suspension of business or the sanctioning of a scheme of arrangement with the creditors and shareholders in the applicable in relation to the State Bank of India and its subsidiaries

which are governed by other statutory provision in the relevant Acts. Section 35A of the Banking Companies Act relating to the issue of directions by the Reserve Bank of India to banking companies generally is, however, proposed to be made applicable to the public sector banks.

*

Larger Railway Plan

The report that the Planning Commission has approved increase in the allocation for the Railways' Third Plan is slightly misleading. What the Planning Commission has done is to approve inclusion of additional programmes on a high priority basis. There is, however, no indication whether additional resources will be provided to meet the expenditure on these programmes. The expectation is that the Railways should be able to find the necessary resources for the executing of these programmes by adjustments within the total outlay of Rs 1,325 crores provided in the Plan. Unless the Railways are able

to effect substantial economies in the implementation of the plan programmes, and this seems unlikely in the face of the mounting costs, some of the programmes that are considered to be less urgent may be stretched out. In any case the Railways have been given the green signal to go ahead with the new programmes and the question of additional allocations may be considered at a later stage.

It may be recalled that early in the year the Railways approached the Planning Commission for additional allocation of Rs 195 crores to enable them to handle the traffic expected to materialise during the Third Plan. It was pointed out that the plan drawn up earlier and approved by the Planning Commission had become obsolete in relation to current requirements even before it was taken up for implementation. Out of the Rs 195 crores asked for, Rs 120 crores was for improving transport capacity in the Bengal-Bihar coal fields which had become necessary on account of the new

pattern of coal movement. The programmes under this head, for increase of rolling stock, traction capacity and some permanent way works, was approved by the Planning Commission in February and the Railways were asked to go ahead with the schemes.

The remaining Rs 75 crores asked for was for creating additional facilities to enable the Railways to handle an extra ten million tons of general goods traffic. Programmes for the creation of these facilities have now been approved after further discussions with the Railway Ministry. Out of the programmes for Rs 75 crores, Rs 65 crores will be for augmentation of rolling stock and Rs 10 crores for the provision of goods sheds, yards etc. to improve line capacity. With the execution of the new programmes, including those for Rs 120 crores sanctioned earlier, it is expected that the Railways will be able to handle 260 million tons of goods traffic by the end of the Third Plan as against the traffic of 245 million tons originally envisaged.

ANNOUNCEMENT REGARDING ISSUE OF FURTHER CAPITAL

THE KALPETTA ESTATES LIMITED

(INCORPORATED IN INDIA)

Registered office :

W-15/9847, BEACH ROAD, ALLEPPEY

EXISTING AND PROPOSED ACTIVITIES AND LOCATION

The Company carries on Tea, Rubber and Cardamom plantations in its estates viz: Chulika and Poonoor situated in Wynad Planting District in Kerala State.

The present planted acreages are as under:—

Tea	...	...	330
Rubber	...	...	909
Cardamom	...	...	285

It is proposed to expand the planted acreage on Poonoor Estate by 150 Acres of Rubber and on Chulika Estate by 200 Acres of Cardamom, raising the total planted acreage in Rubber and Cardamom to 1059 and 485 acres respectively. Including tea (330 acres) total planted acreage will be 1874 acres.

BOARD OF DIRECTORS

1. Sri A. V. Thomas (Chairman), Madras.
2. „ K. Venkataraghavan, Alleppey.
3. „ K. V. Suryanarayana Iyer, Ernakulam.
4. „ J. R. Motishaw, Bombay.
5. „ P. R. Subramanyam, Bombay.

MANAGING AGENTS

Messrs. A. V. Thomas & Co., Ltd.,
W-15/9847, Beach Road, Alleppey.

Directors of Managing Agents : —

1. Sri A. V. Thomas, Managing Director.
2. „ J. Thomas.
3. „ K. S. Krishnamurthy
4. „ K. L. Narasimha Rao.

AUTHORISED CAPITAL

1,50,000 Equity Shares of Rs. 10/- each ... Rs. 15,00,000/-

SUBSCRIBED AND PAID UP CAPITAL

80,000 Equity Shares of Rs. 10/- each ... Rs. 8,00,000/-

Of this 40,000 Equity Shares were issued as bonus shares by Capitalisation of Share Premium.

PROPOSED ISSUE

It is proposed to issue 40,000 Equity Shares of Rs. 10/- each at par payable in cash Rs. 5/- along with application and the balance Rs. 5/- within a month of allotment. The Shares are being offered in the first instance to the Shareholders on the Register of the Company as on 30-7-1962 in the proportion of one new Equity Share for every 2 Shares held on that date. Acceptance from shareholders and their renouncees will have to be lodged with the Company on or before 30-8-1962. Applications from the public will be considered only in respect of shares if any remaining unabsorbed by way of right shares and additional shares by the registered shareholders or their renouncees as per letter of offer.

DATES OF OPENING AND CLOSING THE SUBSCRIPTION LIST

The subscription list will open at commencement of banking hours on the 4th September 1962 and will close at the close of banking hours on the 12th September 1962 or later at the discretion of the Directors.

APPLICATION AND SUBSCRIPTION

Application forms along with copies of the prospectus can be had from the registered office of the Company at Alleppey or from the underwriters to the issue, Messrs. P. R. Subramanyam, Members, Bombay Stock Exchange, Bombay at their Office at No. 70-A Stock Exchange Building, Apollo Street, Fort, Bombay.

Decade of Development

Sir JEHANGIR GHANDY

It was in December last year that the U. N. General Assembly unanimously accepted the idea of designating the sixties as 'the Decade of Development'—a decade during which the poorer countries would be assisted to move towards self-sustaining growth. This implies a greater flow of aid—in men, money and materials—from more advantageously placed nations to the less privileged, the target being that one per cent of the national income of the former will be made available to assist the latter to reach the goal of 'the decade.'

The richer countries of the world are increasing their national incomes by 4 to 5 per cent a year. It is assumed, therefore, that earmarking one per cent will impose upon them no great burden. The question arises, however, why, for instance, should a farmer in the traditionally isolationist mid-West agree to put up with slightly heavier taxes to enable the Kennedy administration to pour more dollars into countries like India or Egypt. Our farmer friend may have raised fewer objections had these countries been political or military allies who could be relied upon to support the American cause in any international tussle—a debating match in the U. N. or a local war in the Far East. Since that is not the case—not at least in the case of the two countries I named—what could motivate the generosity that U.N.'s Secretary General, U. Thant expects of him?

Prosperity is Indivisible

The answer lies in the fact that prosperity, like peace, is indivisible. This is not a platitude, it derives substance from the stark reality that productive capacity in the United States cannot be fully utilised unless surplus goods can be marketed overseas. Two-thirds of the world live today in want and misery, constituting, therefore, a very poor market. If the income of these under-developed nations could be raised by 5 per cent a year—the target set for the development decade—then imports would rise by as much every year, if not more. This is what gives affluent nations a stake in worldwide development, and forms the basis on which the expectations of greater international aid are based. It is this growing realisation of mutual interdependence which has made it possible for India to obtain massive assistance for her Third Plan. As a leading member of the Kennedy team recently put it: "All boats rise on the incoming tide". The expansion of the world market that will accompany the Decade of Development will not only bring more jobs and more sales to the affluent nations but will also provide a hedge against

economic recession. Enlightened self-interest thus reinforces the moral appeal of good neighbourliness. The Economist, summing up the situation from the viewpoint of the aid-givers, recently concluded that the economic atmosphere of the world, somewhat clouded by the Wall Street crash, could profit from the stimulus that the development decade might provide.

Non-doctrinaire Approach

More than a plea for increased economic aid, the U.N. call of the decade brings to planning a non-doctrinaire approach which will command wide support. As U. Thant's report stresses, development planning need no longer be confused with extraneous issues such as the demarcation of public and private sectors in economic life. The word "planning" has had for some years an unfortunate connotation, since the theory of planned development originated in socialist ideology. But in India and many other countries, the need is accepted for both planning and for the assumption by the State of certain responsibilities in the economic sphere. Difference between planners and champions of free enterprise has considerably narrowed, and often it is not the concept of planning that is in dispute but either the methodology or the details. As Mr. Nehru has often pointed out, many of India's planning goals have been endorsed by both American and Soviet observers, confirming that the concrete tasks to be achieved at a particular stage of economic development admit of little controversy. We in private enterprise, I should like to emphasise, are neither against planning nor against doing so on a big scale. We firmly support the Government in its efforts to secure a quick and large increase in the national income, and fully appreciate that the problem of an abysmally poor country like India cannot be solved either without bold action or without sacrifice in which all of us must share.

The U. N. approach also considers it irrelevant to pose the issue of agriculture vs industry in considering the problems of development. After years of futile debate, there is a great deal of unanimity in India today that both sectors need to grow in step with each other if fundamental imbalances are not to arise. An over-populated country with little scope for extending agriculture to new areas must rely largely upon more intensive cultivation to feed her growing population. Intensive cultivation implies the availability of artificial fertilisers, and hence of a heavy chemicals industry. Likewise, steel for better farm implements or the building of irrigation works is equally indispensable

ble, as also the availability of trucks and wagons to move farm produce from one part of the country to another.

In fact, modern planning postulates a precise understanding of the interdependence of development in different sectors. Careful calculations are made of the outputs and inputs needed by each sector—a branch of economics as well developed at Harvard as in Moscow. A great deal of theoretical sophistication has been achieved in this direction in India, which justifies the claim made by the Prime Minister that we have learnt how to plan, even if our implementation may often fall considerably short of the ideal. It has also begun to be realised that for planning to be realistic, it must be based on adequate studies of available resources, and the full recognition of the time-lag inherent in some activities such as the building of new steel plants or developing new mines.

The Human Approach

To go back, however, to the U. N. approach, it is heartening to note the emphasis placed upon the human factor in development—economic growth in advanced countries was attributable not merely to the availability of capital but also to the resources in human skills they possessed. It is now seen that educated and trained people are always the chief and, in the long run, the only agents of development. The U. N. rightly urges, therefore, high priority to educational systems, including in this the task of reorienting the thinking of the whole population by giving them a sense of participation in the country's forward march. This latter requirement lends special significance to such programmes as community development which seek to refashion the attitude towards life of the millions who had hitherto lived in the isolation of the village, untouched by the currents of the modern world.

In India, despite the vast expansion that has taken place in education, school enrolment is only 9 per cent of the population as against 21 per cent in Ceylon, 14 per cent in China and 12 per cent in Cambodia. Among the 23 countries in the ECAFE region, India's rank was seventeenth which may come as an unpleasant surprise to many. It underlines the need for more intensified efforts if the modern economy we hope to build is not to be hamstrung by the shortage of qualified manpower.

The development of human resources must also include the fostering of better standards of health, because higher levels of economic activity cannot be sustained by a debilitated population. In this sphere, India has made notable progress as reflected in the rise in life expectancy from 33 years in 1941-51 to 42 years in

Indian Finance

1951-61. Malaria, which took such a heavy toll particularly in eastern India, has been wiped out. This has, if I may add, created problems of its own. The survival of a larger number of population of the reproductive ages inevitably implies not merely a net rise in population but also an increase in birth rates. This brings me to the key question of population growth, already in excess of 2 per cent, which largely cancels out the progress made on the economic front. While national income rose in the fifties by 39 per cent, the rise in numbers reduced the improvement in per capita income to about 14 per cent. This is a problem faced not only in India but in many other similarly placed countries. I, for one, would have been glad to see the U. N. proposals for the decade include a massive effort on social and medical research to underpin the family planning programmes.

Potential of Science

Another factor which will facilitate the achievement of the basic objectives of the decade is the potential of modern science to contribute to human welfare. Not many years ago, a country which lacked coal or water power may well have been written off for purposes of industrialisation. This is no longer true. First, the world has learned to utilise varieties of coal which were held to have no economic potential, as for example the lignite deposits of South India. Secondly, the development of nuclear energy, particularly small reactors, frees industrial development from dependence on geological fuels. In other directions also, science is making the path of developing nations less difficult, such as by the harnessing of wind power and solar energy. The developed nations could, of course, do more to direct some part of their massive research effort to tackling the specific problems of disadvantaged countries. In steel or power generation, the emphasis in Western research is on achieving the economies which greater capital investment can provide by reducing unit costs or labour inputs. Too little attention has been given to improving the efficiency of small, capital-light units needed by the newly independent countries of Asia and Africa with very limited resources at their command. This reorientation of research need not necessarily be undertaken for altruistic reasons. Enhanced exports of better equipment may be relied upon for recompense, a point made with some force by Mr. M. A. Fiennes, President of the British Iron and Steel Institute, some weeks ago.

All these facets of development are well within the means at the world's disposal. The notional incomes of the wealthier countries are about ten times the total of the developing two-thirds. The diversion of one per cent of the former's income would add, there-

1 September 1962

fore, about 10 per cent to the income of the latter. Invested at the normal capital output ratio, it should make possible an increase of three per cent in the wealth and resources of the poorer countries. If this aid were matched by a sufficiently high rate of domestic savings and reinvestment, this process could easily lift the poorer nations to the stage of self-sustaining growth—the stage when their national income starts to rise at about five per cent a year.

The Trade Gap

Aid alone will not, however, suffice. In 1956-59, exports provided the under-developed countries with six times more foreign exchange than they derived from long-term capital inflows and official donations. This was the ratio despite the substantial deterioration in the terms of trade because of the low level of prices for primary products. As a result, exports were clearly inadequate to finance economic development at acceptable growth rates, throwing a larger burden upon straight aid. This was specially disappointing since international trade as a whole showed sufficient dynamism to serve as a basis for financing all the development required in the poorer two-thirds of the world.

Problems relating to trade expansion have increasingly engaged the attention of world statesmen. A good deal of work has been done by GATT and all countries are committed, in theory at least, to facilitating the trade of nations like India by liberalising tariffs and easing quota restrictions where these exist. But the gains in practice have been extremely limited. A GATT committee report, frankly conceding that insufficient progress has been made in comparison with the magnitude of the problem, felt the need for prompt and positive action by the advanced nations. India's jute, the principal foreign exchange earner, is barred from many markets, as you no doubt know. France, determined to protect her high cost industry, allows imports from India barely above the level of zero. Belgium officially has no quota restrictions, but her jute trade operates a boycott that prevents entry of Asian jute goods for use within the country. As Mr. Morarji Desai said at the meeting of the U.N. Economic and Social Council in Geneva last month, it is paradoxical that rich and technologically advanced countries which have a tremendous comparative advantage in the production of the most complex capital goods should insist on protecting simpler forms of manufacture that undeveloped countries could profitably undertake. The principle of division of labour, frequently provision of labour, frequently claimed, is observed more often in the breach. It is invoked at times when India, for instance, wishes

to take up an item for manufacture which has hitherto been imported,

"Live and Let Live"

Fortunately, the U.N. Secretariat and the relevant agencies of the world body have thrown their weight on the side of the disadvantaged countries. They are pleading for a whole series of international agreements on commodities like tea and sugar, and light manufactures like textiles. The new agreements will be designed to permit an ordinary development of trade in these products at prices which are sufficiently remunerative to the producing countries. At the same time, the interests of competitive industries in the developed countries will be safeguarded to avoid violent disruption that may be caused by uncontrolled imports. India, for one, is not averse to such "live and let live" arrangements. She has, for instance, been voluntarily restraining her exports of textiles to a level agreed to with British interests.

There is danger, however, that new international arrangements may overlook the need for the diversification of exports. Primary commodities like tea and jute have no great growth potential, and hence the larger requirements of foreign exchange can come only from non-traditional items—processed goods and simple manufactures such as light engineering products in India's case. This is now well recognised; a GATT committee has said that a gap of alarming proportions will persist in the balance of trade unless earning capacity is raised not only by better terms and a freer flow of traditional exports but also by assisting the export of manufactured items. India's progress towards economic viability would be made impossible if the opportunities for cotton textiles, sugar and other manufactured goods were curtailed either in countries like the U.K. or the U.S. by tariff barriers or in third markets by discriminatory economic groupings.

A more sympathetic approach to these problems is necessary than hitherto adopted, and I suspect this will not be possible until the Economics Ministries of the West start to tackle the problems of educating their own electorates. The lesson of international interdependence needs to be remembered not only by the poor countries but also by the rich.

Regional Groupings

Another threat to freer flow of trade comes from regional economic grouping such as ECM. The hope that Britain's accession to the Common Market will make it less inward-looking has appreciably faded with the gradual unfolding of the terms on which the Six are willing to offer membership. In fact, a European statesman has suggested that it was not Britain seeking entry into the Common Market but the Six being asked

to join the Commonwealth. This supposedly witty sally underlines the dangers that lie ahead. India, as you know, takes the position that any arrangements which discriminate among developing countries should be eschewed because they distort the pattern of world trade and lead to unhealthy and uncertain dependence upon particular markets. Commonwealth preference is not something which India wishes to perpetuate but it will be at the same time wholly unrealistic to imagine that long-standing relationships such as have subsisted between India and the U.K. can be suddenly abrogated without a disastrous set-back to our export earnings. It is to be hoped, therefore, that the final terms set by the Six will make generous allowances for the stark realities facing the Asian members of the Commonwealth. Anything else would not only be contrary to the spirit of the decade of development but also be inimical to the interests of the Six themselves. This, I like to think, is understood to a greater degree in Bonn than elsewhere in Europe, as indicated by the beginning made by the West German Government towards liberalising some imports from India.

Still Short of One Per Cent

As I have already said, trade, even if restrictions and restraints were eased, would not take care of the financing of development unless supplemented by aid. In the first place, the quantum of assistance has to be raised to the level of one per cent, the U.N. target. The very substantial increase this would bring is underlined by the fact that the U.S. (according to the official figures released by AID) was contributing just over half of one per cent of her national income, about the same as West Germany or Britain, during the years 1956-1959. No less important than the actual amounts made available is the question of terms on which it is granted. According to a recent appraisal, the World Bank has made it a rule to be wary of lending to a country which has to use 10 per cent or more of its foreign exchange earnings from all sources for debt service. In 1954, only Brazil exceeded the 10 per cent mark but the number grew to 11 in 1960, and may now be approaching the level of 20. The Bank, we are told, was obliged to cut off aid to Turkey on account of this rule, a situation that may arise in our own case, the appraisal warns. The problem arises from the short terms of maturity adopted which are unsuitable in the case of non-industrial, infrastructure projects that it has quite often supported. The longer credit needed in their case should now come from interest-free AID loans with maturities extending to 50 years, terms which are now matched by the U.S. under the Kennedy administration.

Tied Repayment ?

Whether the credit is for a long or short period, it will eventually have to be repaid by exports from the recipient country. Many donors today insist on tied credits to safeguard their own balance of payments. The need for this is understandable but, as Mr. Morarji Desai has said, the same principle should apply in relation to repayments by tying redemption to purchases from the borrowing countries. Mr. Desai's suggestion is unlikely to prove acceptable, but the point he makes is wholly valid in the context of the rising indebtedness of many countries engaged in the challenging tasks of transforming their economies.

I am sure, however, that a satisfactory solution to this and other problems of the decade of development can and will be found. It is intolerable as well as dangerous that the gap between the developing and the developed nations should continue to grow—a view now widely endorsed in both groups of countries. That more people than ever before should be suffering from hunger and want at a time when affluence has been achieved or is within sight of whole countries and regions, is a sad commentary on the state of human affairs. I share the confidence that the means can be found to carry out the tasks of the decade provided that the will to achieve them exists. In shaping the will, the call that went forward from the General Assembly meeting of last December will, I feel, make an important contribution.

WHOLESALE PRICES

Slight Increase in Early August

The official wholesale price index (with the year ended March 1953 as 100) rose by 0.7 per cent to 131.8 during the week ended August 4, 1962 as compared with 130.9 (revised) for the previous week. The index was higher by 2.5 and 2.4 per cent respectively when compared with the corresponding week of the previous month and that of a year ago.

The index for 'Food Articles' advanced by 1.6 per cent to 132.9 as compared with 130.3 (revised) for the earlier week due to a rise in the prices of Milk (+9%), Arhar (+8%), Fish (+7%), Rice at Imphal (+6%) and at Nand Garh (+5%), Potatoes, Onions and Bananas (+6% each), Masur (+5%), Urad and Gur (+4% each), Gram (+3%), Ghee, Coconut oil and Chillies (+2% each) and Jowar, Maize, Ragi, Eggs, Sugar and Betelnuts (+1% each), although the prices of Oranges (-9%), Wheat at Sagar and Black Pepper at Madras (-5% each), Bajra and Meat (-3% each) and Mung, Cashew-nuts, Mustard Oil, Pea and Salt (-2%) each exhibited declines.

Life Insurance Corporation of India

New Business very Satisfactory

Premium Income crosses Rs 100 crore mark

Shri B. K. Kaul, I.C.S. Chairman, on Rural Insurance

Statement by Shri B. K. Kaul, I.C.S. Chairman, at the Seventy-Fifth Meeting of the Life Insurance Corporation of India held in Bombay on 27th August, 1962.

I have great pleasure in welcoming you to this sixth anniversary meeting of the Corporation. The draft of the Annual Report and the Statement of Accounts for the year 1961 have been circulated and are now before us for our consideration.

NEW BUSINESS

During the year our new business amounted to Rs. 608.82 crores under 14.70 lakhs policies as against Rs. 497.54 crores under 12.58 lakhs policies in the previous year, thus showing an increase of 22.4%. In the context of the rise in the price level during the year and of the natural calamities like floods in some parts of the country, the increase of more than Rs. 100 crores in the level of new business may be considered very satisfactory.

It is also gratifying to note that as many as 10.24 lakhs policies were taken by persons who were insuring for the first time. Thus out of every three persons insuring with us, two were seeking life insurance protection for the first time.

RURAL DEVELOPMENT

Out of the new business, as many as 5.3 lakhs policies assuring Rs. 182.59 crores were issued to people in the rural areas. I may mention that for the purpose of the definition of rural area we have now adopted the same criterion as was used in the 1961 census. As the earlier statistics were compiled on a different basis, we do not have the comparative figures for the previous year. There is, however, little doubt that we have made a considerable headway in our efforts of systematically expanding the business in the rural areas.

The main difficulty that constantly crops up in regard to the rural business is the lack of facilities for collection of premiums. We have launched early this year a pilot scheme in Rajasthan for collection of premiums through selected post offices. We are proposing to extend this scheme in due course to other areas, where

banking facilities are not available, in consultation with the postal authorities.

NON-MEDICAL BUSINESS

Another difficulty in propagating the message of life insurance in rural areas has been the paucity of medical examiners for conducting the medical examination of the lives to be assured. This has, to some extent, been solved by a wider application of non-medical schemes.

Under the general scheme, which now extends throughout the country, the medical examination is waived in respect of proponents within certain age groups, provided the total insurance on their lives does not exceed Rs. 2,000. Under this scheme, new business of Rs. 38.30 crores under 2.5 lakhs policies was completed during the year.

Besides this general scheme, we are also insuring, without medical examination, special categories of persons in civil employment upto a total sum assured of Rs. 5,000/-, which limit was increased, during the course of the year, to Rs. 10,000/- in the case of eligible persons, whose ages at entry do not exceed 30 years nearer birthday and also in the case of Category "A-1" of the commissioned officers in the Armed Forces. Under this scheme, new business of Rs. 58.48 crores under 2.4 lakhs policies was completed bringing the total non-medical business to Rs. 96.76 crores under 4.9 lakhs policies. Thus, one out of every three proposers was insured by the Corporation without medical examination.

The Corporation has no doubt provided adequate safeguards to ensure that the class of lives coming under the purview of these schemes are of the usual standard who would experience a favourable mortality.

It is my desire that the scope of the scheme is gradually enlarged as we gain further experience of this class of business.

FOREIGN BUSINESS

In some of the foreign countries, where we operate, the political and economic conditions were not quite favourable for the development of our business. However, due to sustained efforts of our officers and agents, our

total foreign business in 1961 came to Rs. 10.03 crores under 8056 policies, as against Rs. 9.70 crores under 7736 policies in the previous year. Special mention must be made here of our London Branch which wrote in 1961 a new business amounting to Rs. 92 lakhs.

BUSINESS IN GOA

Since the beginning of this year we have started transacting new business in Goa, Diu and Daman. Details of the scheme for taking over the life insurance business of the former Portuguese Companies are being worked out. In the meantime, we have extended to the Indian policyholders of these Companies facilities for the collection of premiums.

BUSINESS IN FORCE

The total business in force at the end of 1961 was Rs. 2,737 crores under 86 lakhs policies as against Rs. 2,285 crores under 77 lakhs policies at the end of 1960, thus showing an increase of 19.6% during the year.

LAPSE RATIO

The ratio of net lapses to the mean business in force was 7.0% in 1961 as compared with 6.6% in 1960. The rise in the net lapse ratio of the Corporation seems to reflect the deleterious effect of the increase in the general price level on the saving capacity of the insured population. Apart from the monetary loss to the policyholders as well as to the Corporation, which the lapses bring in their trail, the termination of life insurance protection for several lakhs of families every year is a matter of vital concern to us. Accordingly, I have been impressing, in the course of my discussions with the Development and other Officers, the imperative necessity to reduce the lapsation of policies to the minimum and to improve the quality of business to the maximum extent. The necessary machinery has been set up to review the lapse position periodically so that any adverse trend may be detected at an early stage and checked by taking suitable remedial action without loss of time.

PREMIUM AND OTHER INCOME

For the first time in the history of life insurance in this country,

the premium income has crossed the Rs. 100-crore mark, the actual premium in 1961 being Rs. 112.30 crores as against Rs. 96.89 crores in 1960. It may be mentioned that the total premium income in the year preceding nationalisation i.e. in 1955 was Rs. 58.55 crores only.

The total income for the year 1961 was of the order of Rs. 141 crores as against Rs. 116 crores in the previous year.

LIFE FUND, INVESTMENTS AND TOTAL ASSETS

The Corporation's life fund as at 31st December 1961 was Rs. 631.59 crores registering a handsome rise of Rs. 72.46 crores after taking into account the adjustments made to the life fund at the beginning of the year.

Of the total investments in India of Rs. 503.56 crores, the public sector accounted for 77.0% and the private sector 22.1%. During the year, 52 new issues were underwritten to the extent of an aggregate sum of Rs. 759 lakhs.

The total assets of the Corporation as at the end of 1961 amounted to Rs. 696.31 crores as against Rs. 622.85 crores in 1960. The net increase in the assets of the Corporation, since its inception, amounted to Rs. 281 crores.

RATE OF INTEREST

The income from interest, dividends and rents before deduction of income-tax rose to Rs. 27.95 crores in 1961 from Rs. 23.97 crores in 1960. The gross rate of interest at 4.80% on the mean life insurance fund (4.58% in 1960) is the highest during the last five years. I expect that the Corporation will be able to maintain this rate in future, if not improve upon it.

The steep rise in the net yield from 3.55% in 1960 to 4.68% in 1961 is however, largely due to the fact that the net rate in 1960 was depressed, whereas the net rate in 1961 has been pushed up as tax refunds, accounted for in 1961, comprise refunds in respect of two years.

EXPENSES OF MANAGEMENT

The overall expense ratio of the Corporation fell from 28.4% in 1960 to 26.0% in 1961, although

1 September 1962

LIFE INSURANCE CORPORATION Chairman's Speech—(Contd.)

the full effect of the ad hoc increase in dearness allowance sanctioned in 1960 was felt for the first time in 1961. The renewal expense ratio, which provides a better indicator of the economy of management, also fell from 12.9% in 1960 to 12.4% in 1961.

In the larger interests of the policyholders, the majority of whom consist of middle class people, there is an imperative need to keep a constant vigil on the expenses and to eliminate unproductive expenditure by strict budgetary control.

CLAIMS

Claims for the year amounted to Rs. 25.4 crores under matured policies and Rs. 8.7 crores under policies becoming claims by death. The total claims for the year amounted to Rs. 34.1 crores as compared with Rs. 30.7 crores in 1960. The total benefits by way of claims during the period, 1st September 1956 to 31st December 1961, amounted to Rs. 147 crores.

MORTALITY INVESTIGATION

The Actuarial Department at the Central Office set up, during the year, the necessary machinery for the collection of statistics for the purpose of continuous investigations into the mortality of lives assured with the Corporation. The object of this step is to keep the mortality experience under constant review so as to facilitate the construction of up-to-date mortality tables.

VALUATIONS

In exercise of the powers conferred by Section 49(2)(k) of the Life Insurance Corporation Act 1936, the Corporation framed regulations, with the prior approval of the Central Government, for the purpose of classification of policies for declaration of differential bonuses, and published the same during the year. These regulations came into force on 15th October 1961. The bonuses on policies which became claims by death or maturity before this date, were settled on the basis of the provisional classification of policies which was also approved by the Government.

The second biennial Valuation of the Corporation's business as at 31st December 1959 was completed during the year and, as a result thereof, Rs. 24.29 crores were allocated amongst participating policyholders, the rates of reversionary bonus allotted both for policies issued by the Corporation as well as for policies issued by the erstwhile insurers being the same as those declared in respect of the first Valuation as at 31st December 1957. The amount allocated to the Central Government was Rs. 1.28 crores.

The third biennial Valuation of the Corporation as at 31st December 1961 is in progress and the results of the same are expected to

be available before the end of the year.

BUILDING ACTIVITIES

We have on hand construction of a large number of buildings to house our offices and also for investment purposes. Although the shortage of building materials has hindered our building activities to some extent, special efforts are being made to complete the various buildings, at different stages of construction, as early as possible. The housing of our offices in our buildings would relieve the present congestion and would lead to more efficient working. It is my idea that the Corporation should have its own buildings for its offices. Suitable plots of land are, therefore, being purchased for our Divisional and Branch office buildings at various centres.

MORTGAGES

The scheme for grant of loans on mortgage of immovable properties has now been extended to 21 cities. It is expected that an increasing number of property owners would avail of this facility. The scheme for grant of loans to policyholders for construction of houses is being revised with a view to enabling the middle class people to own their homes with the help of loan facilities to be provided by the Corporation. The scheme is to operate in the first instance in 56 cities.

ADMINISTRATIVE AND DEVELOPMENT TRAINING

I am glad to report that the work of training the administrative staff is progressing satisfactorily, the total number of assistants trained till 31st December 1961 being 5,597. The Officers' Training College at Nagpur is also doing good and systematic work and has by now trained 741 Officers. The effect of this training will, in course of time, be reflected in the increased efficiency of our offices. On the development side too, the training centres are doing useful work. So far 6,617 Development Officers and 10,665 agents have been trained.

I have always received sincere co-operation and valuable advice from my colleagues on the Board and on the Investment Committee. I offer my grateful thanks to them. I take this opportunity to record my appreciation of the services rendered by the officers and staff at all levels. It is their services which have solely contributed to the fine results achieved by the Corporation. Finally, I thank all the agents who have done such excellent work in enabling the Corporation to break its previous records in the matter of our new business.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

THE EAST INDIAN COAL COMPANY, LTD.

(Incorporated in England with Limited Liability)

NOTICE OF ANNUAL GENERAL MEETING.

Notice is hereby given that the One Hundred and Tenth Annual General Meeting of the Members will be held at the Head Office of the Company, 4, Clive Row, Calcutta on Wednesday, the 3rd October, 1962, at 11.30 A.M. for the following purposes:—

1. To receive and consider the audited Accounts for the year ended 30th April, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of the one retiring.
4. To fix the Auditors' remuneration.

As Special Business—

5. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as an Ordinary Resolution:—

"That the authorised capital of the Company be increased from £240,000 to £900,000 by the creation of 660,000 Ordinary Shares of £1 each."

6. To consider and, if thought fit, to pass with or without modification the following resolution which will be proposed as a Special Resolution:—

"That the Articles of Association of the Company be altered in the manner following, viz:—

By substituting for Article 4 the following new Article, viz:—

"4. The share capital of the Company is £900,000 divided into 900,000 Ordinary Shares of £1 each".

7. To consider and, if thought fit, to pass with or without modification the following resolutions which will be proposed as Ordinary Resolutions:—

(a) That subject to the consent of the Controller of Capital Issues of the Government of India 144,000 new Ordinary Shares of £1 each in the authorised capital of the Company be issued at a price of £1.13.0 per share including a premium of 13 shillings per share or as the case may be at the Indian rupee equivalent of Rs. 22 per share including a premium of the equivalent of Rs. 8.67 nP. for each new Ordinary Share on the footing that such new Ordinary Shares shall rank in all respects pari passu with the existing Ordinary Shares in the company save and except that they shall not participate in any dividend which may be declared in

respect of any period ended on or prior to 30th April, 1962.

(b) That the said new Ordinary Shares so issued be offered subject to the approval of the Reserve Bank of India and/or any other statutory consents that may be required to those members of the Company whose names shall appear on the Company's United Kingdom Share Register on the 3rd day of October, 1962 in the proportion of three new Ordinary Shares of £1 each for every five existing Ordinary Shares then held by such members, at a premium of 13 shillings per share with a right to renounce all or any of the shares so offered to them in favour of any other person or persons whose names shall appear on the Company's United Kingdom Share Register on the date of renunciation or to persons whose names shall appear on the Company's Indian Share Register on the date of renunciation and whose registered address on that date shall be in India.

Provided that if the offer of the new shares be accepted in full or in part by any members, whose names shall appear on the Company's United Kingdom Share Register as aforesaid, the required payment shall be made by the members concerned to the Company's bankers in London; provided further that all fractional entitlements resulting from such offer as aforesaid shall be dealt with in the manner provided for in the resolution set out in paragraph (h) hereof.

(c) That the said new Ordinary Shares so issued be offered subject to the approval of the Reserve Bank of India and/or any other statutory consents that may be required to those members of the Company whose names shall appear on the Company's Indian Share Register on the 3rd day of October, 1962, but whose registered address shall be outside India on that date, in the proportion of three new Ordinary Shares of £1 each for every five existing Ordinary Shares then held by such members at a premium of Rs. 8.67 nP. for each share with a right to renounce all or any of the shares so offered to them in favour of any other person or persons whose names shall appear on the Company's Indian Share Register

ter on the date of renunciation and whose registered address shall on that date be within India or to other persons resident in India who are not at present shareholders.

Provided that if the offer of the new shares be accepted in full or in part by such members whose registered address shall be outside India and that permission has been received from the Reserve Bank of India for accepting such offer, payment shall be made by the members concerned in Indian rupees to the Company's bankers in India at the rate of Rs. 22 (including the premium of Rs. 8.67) per share; provided further that all fractional entitlements resulting from such offer as aforesaid shall be dealt with in the manner provided for in the resolution set out in paragraph (h) hereof.

(d) That the said new Ordinary Shares so issued be offered to those members of the Company whose names shall appear on the Company's Indian Share Register on the 3rd day of October, 1962 and whose registered address shall on that date be in India in the proportion of three Ordinary Shares of £1 each for every five existing Ordinary Shares then held by such members at the rate of Rs. 22.00 (including a premium of Rs. 8.67) per share payable to the Company's bankers in India and with a right to renounce all or any of the shares so offered to them in favour of any other person or persons resident in India, provided that all fractional entitlements resulting from such offer as aforesaid shall be dealt with in the manner provided for in the resolution set out in paragraph (h) hereof.

(e) That the 144,000 new Ordinary Shares of £1 each so issued be offered on the 25th October, 1962 to the members as aforesaid by a notice specifying the number of shares to which they are entitled provided that the offer, if not accepted on or before the 22nd December, 1962 either by the member to whom the offer has been made or by any other person or persons in whose favour the offer might be renounced as aforesaid, shall be deemed to have been declined and further specifying that the payment for such shares at the rate of £1.13.0 each payable in the United Kingdom or Rs. 22.00 payable in India as the case may be, for each new Ordinary Share so offered

shall be payable in full on application, provided that the abovementioned date of offer viz. 25th October, 1962 and the date of closure of offer viz. the 22nd December, 1962 can be varied at its discretion by the Committee appointed by the Board in this behalf.

(f) That any new Ordinary Share so issued not taken up by the said members in response to the above offer shall be available for subscription by those members of the Company who take up their rights under the said offer in full and who desire to apply for additional shares but so that allotment of any such additional shares shall be subject to any condition which may be imposed by the Controller of Capital Issues, Government of India, and, in the case of a member with a registered address outside India, subject further to the approval of the Reserve Bank of India.

(g) That the right to apply for additional shares shall not be renounceable in favour of any other person and in the event of the applications for additional shares exceeding the number of shares available, the allotment shall, subject to any condition that the Controller of Capital Issues, Government of India may impose, be made in proportion to the respective existing holdings of Ordinary Shares of the applicants for additional shares as on the 3rd day of October, 1962.

(h) That if the offer of the said new Ordinary Shares so issued results in any member becoming entitled to a fraction of a share, any such member who takes up his rights shall be required to pay for such fractional share in cash at the rate of £1.13.0 in the United Kingdom or Rs. 22.00 in India as the case may be, for every new share but the Company shall not issue any certificate in respect of fractional shares that the total number of shares representing such fractions shall be allotted by the Company to a person or persons appointed by the Board as nominees of the members entitled to fractional shares and the Company shall issue in favour of such person or persons certificates for the whole shares comprising such fractional shares which shall be sold by such person or persons in the open market as soon as practicable

able at the best price obtainable and the net proceeds of the sale of such whole shares shall be distributed amongst the members entitled to fractional shares in accordance with their respective entitlements.

Notice is also given that the Share Transfer Books of the Company will be closed from the 19th September to the 3rd October, 1962, both days inclusive.

A member of the Company who is entitled to attend and vote may appoint a proxy to attend and vote instead of him. A proxy need not be a member of the Company.

Markets

JUTE Firm Trend

Jute markets considerably steadied up last week. The undertone in raw had been helped by the revival of mill buying as a result of the resumption of the IJMA scheme of minimum purchase quota for member mills as also by the news that raw jute movement is likely to be disrupted by the heavy floods in Assam and other jute growing areas. It would appear that holders have derived considerable encouragement from indications about Government's anxiety to enable cultivators to obtain an equitable return. It is felt in some quarters that the jute huffer stock scheme, if properly operated could go a long way towards lessening the recurring anxiety about a steep decline in raw jute prices. In this regard, the demand continues to be made that Government should directly engage in the purchase of surplus jute.

Meanwhile, the problem seems to have become less urgent. While it is not clear whether the jute crop in Assam and other regions has suffered much damage due to

the floods, it would appear that jute movement will be adversely affected and consequently pressure of arrivals will considerably diminish. The improved sentiment has evidently been responsible for the smaller purchase quotas issued to IJMA mills last week.

Earlier in the week, there were reports of a fair amount of mill buying at the minimum prices. The Assam floods were for all practical purposes ignored and the only reaction was increased attention bestowed on quality jute presumably on the belief that quality would have suffered due to flooding. But by Saturday, except for jungli jute all others were above the minimum levels. In later dealings, the undertone further firmed up with most sellers indicating up to half point higher minimum prices but mills were reluctant to follow the rise in prices. In the futures market, Assam Bottoms September was done upto Rs 30.90 as against week's opening rate of Rs 30.36, to close on Wednesday at Rs 30.70.

The Jute goods market too firmed up during the week, mainly on speculative support. Though in

*August deliveries went off the board on 27 August.

earlier dealings, the trend was rather dull with business passing at a low ebb, prices soon gained ground. Settlement considerations in futures in August goods provided the initial momentum to the uptrend. There were reports of fresh US interest in near delivery hessian. Though consumers in US are still adopting a cautious buying policy, taking only for their immediate requirements, lately there has been indication of a revival of buying interest probably in view of the continued Argentine purchase. US business outlook is improving and this may be reflected in higher consumption in coming months. During the week under review, there was some enquiry from UK also. In the futures market, Hessian 40" x 10 ozs November on Wednesday closed more than two points higher on balance at Rs 52.34. Sacking too has improved. As against Rs 121.25 last Friday, B. Twills August delivery closed firm at Rs 125 on Wednesday. During the week there were reports of some buying of sacking by Australia, B. Twills November futures closed on Wednesday at Rs 123.90 as against last Friday's opening of Rs 120.9

TEA Demand at Irregular Rates

In the Export Sale held in Calcutta this week, offerings were 60,352 packages. There was a fair general demand but prices were irregular. Plain orthodox descriptions came to a strong market and were often sold at dearer rates. The better liquoring descriptions met, however, with only a selective enquiry and were easier with some withdrawals although Fannings were again sold readily.

CTC descriptions were taken up at generally lower rates, although selected lines were sold well. Legg-cut teas were a strong feature, often realising higher prices. The better whole Leaf grades came to a lower market with some withdrawals, while a stronger tone prevailed for the plainer sorts, which were sold readily. Best Tippy teas met with useful competition, but others came to a weak market.

Darjeeling teas met with a good enquiry although prices were lower following quality. Following rates were quoted:—Clean Plain Pekoe Rs 4.10 to Rs 4.50 Plain BP Rs 3.40 to Rs 3.80; Plain Fannings Rs 3.60 to Rs 4.10 Medium Assam CTC BP Rs 5.40 to Rs 5.90 Medium Assam CTC Fannings Rs 5.40 to Rs 5.90; Best Assam CTC BP Rs 7.00 to Rs 8.00 and Best Assam CTC Fannings Rs 7.00 to Rs 8.00.

In the Internal sale, offerings were 30,487 packages. There was strong general demand which weakened slightly towards the close of the sale. Medium CTC

descriptions were well supported at prices which were generally lower by about 20 nP and the good CTC dusts followed a similar trend. Plain orthodox varieties rallied after several weeks and came to a strong market at rates, which were dearer by 20 nP, and sometimes more. Bright liquoring Assams were, once again, sold extremely well.

The few flavoury Darjeelings, particularly the powdery types, were keenly competed for. Non-wither legg-cut dusts continued to improve further and were the strongest feature of the sale. Following rates were quoted: Plain Orthodox Dust Rs 3.40 to Rs 3.60 Medium Assam Dust Rs 4.70 to Rs 5.10; Legg-cut Dust Rs 4.50 to Rs 5.00 Medium CTC Dust Rs 5.50 to Rs 5.90 and Good Assam CTC Dust Rs 6.40 to Rs 6.80.

In the Cochin market, offerings were 755,000 kilogrammes of Leaf tea. Against a fair demand, low medium teas were generally 10 nP to 15 nP a kilo easier. Good mediums were barely steady, while high-grown were irregular and sometimes dearer according to quality.

In the Colombo market, offerings were 7,408,807 pounds. At the opening, few selected best Uvas were lower; but all others met with an active demand at an advance of 20 to 50 cents per pound. High-grown Dimbula BOPs were irregular following quality and averaged slightly below last week's closing rates. Medium BOPs from western districts were easier by 5 to 10 cents per pound. Low-grown teas opened lower, but tended to firm later. High and Medium BOP Fannings were a strong feature of the sale and were dearer to buy.

Production of tea in Ceylon is estimated at 34 million pounds for July 1962 as against 33 million pounds in the corresponding month of last year. Estimates for the first seven months of the current year are placed higher at 288.7 million pounds as compared with 282 million pounds in January to July 1961.

In London auction, a total of 21,398 packages, including 16,573 packages of Northern India, was offered. Good Assams met with a strong demand at full rates but the medium types were easier to buy. Good Dooars were the strongest feature of the sale and prices in all cases were higher. For Low Medium and Plain teas, the market was irregular and prices were lower, especially for the thin stalky sorts.

With arrivals of 28.27 million pounds in June 1962, total imports of tea into the UK, in the first half of this year, declined to 263.44 million pounds from 279.13 million pounds in the first six months of last year. Imports from India, the largest supplier of tea to the UK, declined from 125.83 million pounds in January/June 1961 to

110.79 million pounds in the period under review as did those from Ceylon, the second largest supplier, from 83.59 million pounds to 881.57 million pounds.

Arrivals of 9.78 million pounds in June put the total imports of tea into the USA, in the first half of this year, higher at 63.42 million pounds as compared with 54.86 million pounds in January/June 1961. While supplies from Indonesia, the sole exception, declined from 7.82 million pounds to 6.52 million pounds in the period under review, tea imports into the USA from all other sources showed an improvement.

Arrivals from Ceylon, the largest supplier of tea to the USA, increased from 21.81 million to 24.07 million pounds in the first half of this year as did those from India, the second largest supplier, from 13.59 million to 14.52 million pounds; Africa from 4.71 million to 5.88 million pounds and from all other sources from 6.93 million to 12.43 million pounds.

UPPER JUMNA VALLEY ELECTRICITY SUPPLY COMPANY LIMITED

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Wednesday the 26th September, 1962, at 4 p.m. for the following purposes:—

1. To receive and adopt the audited Accounts for the year ended 31st March, 1962, and the Reports of the Directors and the Auditors thereon.
2. To declare a Dividend.
3. To appoint a Director in place of Sir Biren Mookerjee who retires by rotation and, being eligible, offers himself for re-election.
4. To appoint a Director in place of Mr. S. Gupta who retires by rotation and, being eligible offers himself for re-election.
5. To appoint Auditors and fix their remuneration.

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 19th September, 1962 to the 26th September, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
 A. G. Gidley
 Secretary,
 Secretaries and Treasurers,
 12, Mission Row,
 Calcutta—1,
 30th August, 1962.

COTTON Futures Featureless

THE Bombay cotton futures market during the past week turned out to be dull and drab and price movements were confined to narrow limits. The ruling contract which opened at Rs 739.50 per three quintals edged forward to Rs 744.50 but reacted to Rs 736.00 before closing finally at Rs 742.50. The undertone toward the close of the week was quite steady. The quantum involved in the dealings was pretty small. The congenial weather reports from cotton growing centres induced occasional stray selling but the contract at lower levels met with short covering as a result of which the prices moved within narrow limits. But this is not an unexpected development especially at this time of the year and a clearer picture is likely to emerge with the finalisation of the first crop estimates.

The spot market at Sewri presented lively conditions with mill buying prominent in growths like CO2, Laxmi and Kalyan. Though some of the mills which had requisite quotas were anxious to cover their requirements the acute paucity of the varieties in demand stood in their way.

In the export section the traders were looking forward to the release of export quota for Bengal Deshi. According to the general opinion in the market the announcement of the release of export quota will be made within a couple of weeks. The quota will be on a first-cum-first served basis and valid for shipment upto the end of next March. In the import section, a slight slackening of demand was noticeable. Prices of Sudan cotton exhibited a tendency to slip down in sympathy with the decline in the Egyptian cotton. Stray transactions in Pakistan and African growth for prompt shipment were reported while some business was done in Egyptian Giza and Karnak for January shipment.

The decision of the Textile Commissioner to introduce a much simplified procedure from 1 September for the calculation of incentives for the exports of cotton and yarn marks a vital step toward boosting up exports. The newfangled procedure is expected to result in mills and exporters receiving their entitlements at speedier pace than at present and reduce the time lag by nearly two months. The calculation of incentives which will be a joint effort of the Textile Commissioner, the Indian Cotton Mills' Federation and the Cotton Textile Export Promotion Council, is expected to quicken the grant of incentives in two ways. Firstly, the transfer of actual calculation work to the Indian Cotton Mills' Federation from the Textile Commissioner's office will mean greater elasticity in adjusting the staff to the volume of the work. Secondly, the useful innovations incorporated in the procedure through the co-operation of the Textile Commissioner, the mills and exporters are designed to produce

better result. So far, mills become entitled to receive 90 per cent of their export incentives immediately on ex-mill delivery of cloth and yarn meant for exports. The remaining 10 per cent will be made available only after receiving evidence of actual exports of goods in question, which was supplied to the Commissioner by different exporters as and when the goods were actually shipped by them, generally after a few weeks after the ex-mill delivery. The necessity to establish a link between the ex-mill deliveries from a number of mills and the proof of export received from various exporters at different periods had proved a virtual bottleneck and the receipt of the remaining 10 per cent of the mills entitlement was delayed by six months to one year and in certain cases even much longer. Mills have consented to forgo their claim for receiving 90 per cent of the entitlement on ex-mill delivery and to postpone receipt of the whole of the entitlement on proof of actual exports. The exporters have agreed to make a change in the export contract, under which they will be required to place with the mill's certain deposits in case the actual export does not take place within three months from ex-mill deliveries. The control over the calculation of incentives will be shifted to a tripartite committee comprising the representatives of the Textile Commissioner, the Indian Cotton Mills' Federation and the Cotton Textiles Export Promotion Council.

PIECEGOODS

The Bombay piecegoods market showed sluggish trends during the week under review. The delayed monsoon resulted in poor offtake in the domestic sector. On account of the delay in the movement of crop the anticipated revival of demand from the farmers failed to materialise so far.

The popular varieties met with good enquiries from centres like UP, Madras and Punjab. Despite the proximity of the puja festival demand from Calcutta was conspicuously absent. Bleached longcloth, saris and higher medium clothes were more or less neglected. But the upcountry centres exhibited some interest in flannels.

As the offtake was far below the expectations, the stocks with the mills and the trade are steadily heaping up. Even though many of the mills were able to sell a fringe of their stocks on forward account, the buyers have not lifted the goods. At the same time, the mills are reported to be reluctant to dispose of their stocks at reduced rates.

The powerloom section, on the other hand, ruled firm obviously on account of the encouraging local support. Some of the prominent dealers and processors are reported to have purchased a good quantum of grey mills, dhoties and saris. These varieties also attracted the attention of some of the upcountry dealers.

The export front was devoid of any encouraging development during the past week. The UK was practically silent, although that destination evinced stray interest in some of

the usual qualities. Sudan and Africa too were dormant though rumours are current that demand from those countries is likely to pick up shortly. Casablanca focussed its interest on linen prints and shippers are anticipating fair business with that destination in the ensuing weeks.

Tin Scales A New High

A steady and sharp rise in the prices of Tin has been the main feature of trading in the Bombay Non-Ferrous Metal market during the week under review. Barring scraps, prices of other metals have remained more or less unchanged.

The spurt in Tin prices is due to the growing realisation that it will be difficult to augment the supply position in any foreseeable future. The present stocks are reported to be insufficient to cope with the increasing offtake of the expanding industries. Actual users, dealers and stockists have, therefore, holding their stocks and have also made fresh purchases. They feel that, if even some quantity is made available, the actual arrivals of the shipments will take a lot of time.

Although the US stockpile releases have been assured over a long period of time, it is not known what will be the quantum available for India and whether India can afford to spend foreign exchange for these imports in the face of other most urgent needs. The immediate needs of the actual users have, therefore, led to a depletion of the stocks and hence a constant upward pressure on the price level. Spot price for the metal is now quoted at as high as of Rs 228 per 10 kg as against only Rs 170 on 1 June.

Prices of Copper have not shown any change on account of the apathy of dealers and buyers. Owing to the expectation that stocks will be replenished appreciably by shipments from abroad, there is a withdrawal of enquiry for this metal.

SUGAR

Sugar markets have continued to rule firm, thanks to brisk festival demand from upcountry centres. The Punjab, Rajasthan, and Jammu and Kashmir State are the main buyers. With the result, the recent release of 225,000 tons of sugar for free sale has failed to curb the rising tendency in prices. The rise in prices is further aided by poor stocks of gur and khandasari in the producing centres of Western Uttar Pradesh.

Following the announcement by the US Department of Agriculture of the additional global quota, world sugar prices have also firmed up. At 3.15 cents per pound, the New York spot price has touched the highest level in the past one year. There is, however, a considerable disparity in the reaction to recent developments in the London and New York markets. While in the case of the latter, the increased activity resulting from global purchases has raised the demand for eligible origins in London, sugar from other sources like

East Europe, which is not eligible in the US, is more freely available at lower prices.

RUBBER

With an opening stock of 10,937 metric tons, a production of 2,917 metric tons and imports of 2,861 metric tons, total supplies of natural rubber in India increased to 16,715 tons in June from 15,386 tons in the previous month. On the other hand, consumption of natural rubber by manufacturers rose from 4,449 metric tons in May 1962 to 4,522 tons.

Natural rubber stocks with the estates, dealers and manufacturers, as on 30 June, 1962, were higher at 12,193 tons as against 10,937 tons at the close of May, 1962. Besides, there were 2,892 tons of synthetic rubber in stock at the end of June against 3,032 tons at the close of the previous month.

Meanwhile, rubber prices in the London market have reached their lowest level since 1958. Latest reports indicate that stocks in the Malayan Federation and Singapore have risen sharply from the lowest point of just under 100,000 tons to 125,000 tons. This is a larger increase than had been expected by most observers and is put down to imports from Indonesia, which are usually difficult to forecast. The market is sensitive to such rapid changes in the stock position. It is felt that the market will be depressed further this month if the current trend of stocks continues to increase.

One of the most important factors will, however, be the Soviet buying policy. The Soviet purchases vary widely from month to month though they appear to average approximately 15,000 tons a month. Some dealers in London are predicting that Russia is likely to buy less in September since they have already bought heavily in June, July and August. If the Russians place small orders for September, then the market may even fall beneath the 1958 low.

CASHEW

Market circles in Bombay feel that the cashew workers' strike in Kerala will not push up the kernel prices in view of satisfactory stocks with the manufacturers. Stocks with the manufacturers are placed around 100,000 to 125,000 cases of all varieties of kernels and pieces. The carryover in the current season, placed around 150,000 to 200,000 cases, is also more than normal. Meanwhile, negotiations are reported to be going on between the representatives of the workers and the manufacturers for the settlement of the strike.

It is understood that the manufacturers are not so keen to reopen their factories till after the 'Onam' holidays. There has, however, been a revival of demand from America for kernels.

America is reported to have purchased 20,000 to 25,000 cases during the past week, some of which are for shipments in the first quarter of 1962. Russia is also expected to re-

new her purchases shortly. Their purchases so far this year amount to 200,000 cases. She is likely to buy one lakh cases more.

FOODGRAINS

In the Hapur market, prices of Foodgrains displayed a slightly easier tendency, thanks to the bright 'khariff' crop prospects. Wheat prices have declined by 67 nP per quintal with the average quality quoting around Rs 40.87 and the farm quality at Rs 43.54. Rice prices are, however, marked up by Rs 2.87 to Rs 33.34 per quintal on reports of inadequate rains in certain producing areas. Gram prices have eased fractionally on lower Punjab advices. The Punjab quality is quoted at Rs 43.54 and the local variety at Rs 42.87 per quintal. Pulses have sought lower levels due to slack buying.

According to FAO forecast, world trade in wheat is likely to show a decline in 1962-63 for the first time in four years and wheat prices are likely to go up, particularly for superior varieties. The forecast says that supplies available for export will be lower, mainly because of the decrease in stocks of the major export countries at the end of 1961-62. Total exports may fall from an estimated 43.5 million tons in 1961-62 to 41 million tons in 1962-63 or even lower. Wheat exports to India and Pakistan declined in 1961-62 and shipments in 1962-63 are expected to be maintained at about the same level.

The prospects of reduced trade and higher prices mainly reflect the deterioration in crop outlook in Canada and the decline in stocks in other countries. The 1962 US crop is forecast at under 30 million tons—10 per cent lower than in 1961—although the final figure will, in part, depend on the extent of the voluntary reduction in acreage which farmers can make in addition to the mandatory 10 per cent reduction under the 1962 Wheat Programme. In Canada, the general wheat outlook, particularly for high quality varieties, is said to be rather bad for 1962.

India has, however, harvested another record crop and the prospects are also good in Pakistan, where the area has increased by 10 per cent. In Australia, the Wheat-pool price relationship tends to favour wheat-growing and the area sown may remain relatively high. In Argentine, efforts to expand acreage seem likely to reverse the recent downward trend of production. On balance, world wheat production in 1962-63, excluding the Communist bloc, may show slight increase; but the decline in carry-over stock may be the sharpest since 1957-58.

YARN

After a prolonged bullish spell, Yarn prices have staged a sharp retreat in the Bombay market, mainly due to the arrivals of imported material and a slackening demand. The fall in prices is reflected in the decline in the premium of art silk yarn licence from 315 to 280 per cent. Ready prices have also declined all-round. The fall in the price of indigenous yarn is of the order of 25 nP per pound.

The trade in Madras has protested against the State Government's levy of 1 per cent on sales tax on the exports of cotton yarn by merchant-exporters, who have pointed out that it puts an extra burden on them and undermines their competitive capacity to export in spite of their having received orders from overseas buyers. It is felt that, if the Madras Government does not withdraw the measure, there is little doubt that ultimately it will tell upon the country's export drive, especially when Indian yarn is already reported to be more costly than yarn produced by China, Pakistan, Lebanon and Egypt.

GOLD & SILVER

The report of the Finance Minister's intensions of bringing out the hoarded gold had negligible effect on the Bombay Bullion Exchange where the price of gold touched an all-time high. Also, reports of restricted arrivals of unauthorised gold following strict vigilance on smuggled activities helped the bullish sentiment in the spot as well as the forward sections. Arrivals amounted to 4,000 tolas against an offtake of 5,000 tolas. Bhadon delivery moved between Rs 127.05 and Rs 127.15, while the ready rate was quoted at Rs 128.10 to Rs 128.20. Sovereign firmed upto Rs 99.75.

The favourable trend in silver was induced mainly as a result of psychological effect caused by a further rise in the price of silver overseas, though part of the buying activity in the metal also reflected higher upcountry advices. Arrivals amounted to 20 bars as against an offtake of 12 bars. Bhadon delivery moved between Rs 217.45 and Rs 217.60, while the ready rate for (below .996) was quoted at Rs 216.95 to Rs 217.10.

After pausing for a two-week period, the price of silver on the New York market resumed its rise and jumped a half cent to a new peak for the past 42 years. The New York selling level was advanced to \$1.094 a fine ounce—the highest rate since 1920. Higher demand not only from the US consumers, but also from Europe resulted in an inability of users to obtain sufficient supplies at the lower level and was credited with responsibility for the price boost. At the new basis, the total of domestic purchases was estimated by local silver trade authorities to have moved up above the 500,000 ounce level.

OILS & OILSEEDS

With the exception of Groundnut which continued to rule firm, prices in other sections on the Bombay Oilseeds Exchange moved rather erratically last week. Trading in Groundnut continued to attract a good deal of speculative interest. The inspiration for the upswing was also provided by the renewed talks about better export prospects in groundnut oil. The persistent firmness in groundnut oilcake was yet another factor contributing to the rise in prices. The rigging up of prices was also occasioned, to some extent, by the proximity of the

maturity date for the September contract. Groundnut ready bold was quoted at Rs 50 and Groundnut Oil at Rs 20.

Trading in the Castorseed section was not as likely as usual. The absence of foreign demand for castor oil appeared to worry the operators. Even a section of the buyers was anxious to avoid accepting delivery of ready goods against the maturing contract. Castor ready was quoted at Rs 33.62 and Castor Oil, commercial quality, at Rs 12.65.

Prices of Linseed registered a substantial decline in line with the lower rapeseed advices from Northern India. Ready was quoted at Rs 40.25 and Linseed Oil at Rs 16.70.

THE TITAGHUR PAPER MILLS COMPANY LIMITED

NOTICE OF MEETING

Notice is hereby given that an Annual General Meeting of THE TITAGHUR PAPER MILLS COMPANY LIMITED, will be held at the Registered Office of the Company, Chartered Bank Buildings, Calcutta, at 3 p.m. on Thursday, the 27th day of September, 1962, for the following purposes:—

1. To consider and adopt the Profit and Loss Account of the Company for the year ended 31st March, 1962, the Balance Sheet as at that date and the Directors' and Auditors' Reports thereon.
2. To declare Dividends recommended by the Directors.
3. To appoint Directors in the place of the retiring Directors.
5. To appoint Auditors and to fix their remuneration.

The Share Transfer Registers of the Company will be closed from 5th to 27th September 1962, both days inclusive.

By Order of the Board,
F. W. HEILGERS & CO. (PRIVATE) LIMITED,
 Managing Agents.

Registered Office:
CHARTERED BANK BUILDINGS,
 Calcutta, 17th August, 1962.

NOTES:

- (a) A member entitled to attend and vote at this meeting may appoint a proxy to attend and vote instead of himself. A proxy need not be a member of the Company.
- (b) The Dividends, if declared, will be paid on or after the 26th October, 1962, to those Shareholders so entitled whose names appear in the Company's books on the 27th September, 1962, or to their mandatees. No application for Dividend Warrants will be necessary.

For the Investor

INVESTMENT GOSSIP Absence of Investment Support

Though stock markets are ruling steady for the past few days, investment interest continues to be only moderate. Lyons Range has particularly been cheerful and quite a few scrip in the forward list have gained considerable ground. Indian Iron has especially been strong having been consistently supported at steadily rising prices. Interest in steel shares is sustained by the belief that the new steel retention price will be announced latest by the middle of next week. The expectation is that the announcement will be made before the departure for UK of the Union Finance Minister. The fact that contrary to expectations there has been no interim dividend from TISCO, is taken as an indication the news about the retention price will not be long delayed. Hectic trading in Indian Iron was noticed on Thursday on Lyons Range with the price making further headway on strong rumours that the retention price news would come that night itself. Disappointment at the continued delay in the announcement was responsible for the sizable decline in the rate in Friday's trading when sentiment was also adversely affected in the rest of the list in sympathy with Indian Iron.

Investment support, however, continues to be on a moderate scale with only selected shares getting any attention. It is evident that investors are in no mood to extend commitments in view of the prevailing uncertainties. The outlook for equities is considerably obscured by the continued shortage of essential industrial materials and services such as coal, power and transport. It is not clear how far the scheme of import substitution will enable industries to overcome the difficulties felt due to scarcity of raw materials on account of shortage of foreign exchange. If present shortage of raw materials continues for some time, industrial profits in the current year will decline.

Speculative interest is not likely to feel confident because funds available for investment in the stock market may show a diminution what with the new banking bill and the proximity of the busy season. It is not expected that L.C. will show much interest in equities for some time to come in view of its large investment in Government loans. Persistent rumours about further changes in the Central Cabinet have also rendered speculative tendency cautious.

INVESTMENT SPECIAL Kalpetta Estates

The Kalpetta Estates Limited has proposed to issue 40,000 equity shares of Rs 10 each, at par, payable in cash Rs 5 along with the application and the balance of Rs 5 within a month of allotment. In the first instance, the shares are offered to the shareholders whose names are registered as on 30 July, 1962, in the proportion of one new equity share for every two shares held on that date. Acceptance from the shareholders and their renounees will have to be lodged with the company on or before 30 August, 1962.

Applications from the public will be considered only in respect of shares if any shares remain unabsorbed by way of right shares and additional shares by the registered shareholders or their renounees. The subscription list will open on 4 September and close on 12 September or later at the discretion of the directors.

This rubber-cum-tea-cum-cardamom company, established in 1935, has decided to plant 200 acres more in cardamom and 150 acres more in rubber. When this expansion programme is completed, the total planted acreage will be:—Rubber mature, 1,059 acres, cardamom in full bearing 485 acres and tea in full bearing 330 acres. The total planted acreage will be 1,874 acres. Further, the factories in the tea and rubber areas are being modernised and electrified.

The company has been paying a steady dividend of 12½ per cent for the past four years, including for the year ended 30 April, 1962. As against a paid-up capital of Rs 8 lakhs, reserves and surplus stand at Rs 8.67 lakhs, ie, little more than Rs 11.50 per share, while the book value per share is over Rs 21.50. What is more, the new shares will rank *pari passu* with the existing shares for the purpose of dividend for 1962-63.

NEW CAPITAL ISSUES Duncan Brothers

Duncan Brothers & Company, Limited, Calcutta, a public company carrying on the business of non-industrial nature and having a paid-up capital of Rs 1.35 crores, is to issue a further capital of Rs 18 lakhs, divided into 18,000 equity shares of Rs 100 each, to be issued as rights for cash, at a premium of Rs 10 per share.

Assam Sillimanite

With the approval of the Calcutta Stock Exchange, the following allot-

ments have been made in respect of the company's recent issue:—Applicants for 150 shares will get 150 shares; 160 to 210 shares—150; 220 to 300 shares—200; 310 to 500 shares—250; 510 to 600 shares—300; 650 shares—320; 660 shares—330; 810 shares—410; 1,000 to 1,600 shares—500; 2,000 to 3,000 shares—600; 6,000 shares—700; 7,000 shares—800 and 20,000 shares—1,260.

Indofil Chemicals

Indofil Chemicals Private Limited, Maharashtra, is issuing a capital of Rs 40 lakhs in equity shares of Rs 100 each, at par. Out of this, shares worth Rs 23 lakhs will be offered to Rohm & Haas Company, Philadelphia, USA. The money will be used for establishing the manufacture of Dithane fungicides and other items.

Bellary Spinning

The Bellary Spinning & Weaving Company Limited, Mysore, is to issue a capital of Rs 25 lakhs in equity shares of Rs 100 each, at par, for establishing a spinning mill.

Indore Wire

The Indore Wire Company Limited, Bombay, a public company established to undertake the manufacture of high tensile wire, will issue a capital of Rs 20 lakhs, divided into 15,000 equity and 5,000 cumulative redeemable preference shares (carrying a dividend of 7½ per cent gross), both of Rs 100 each, at par.

Rajasthan Spinning

The Rajasthan Spinning & Weaving Mills Limited, Calcutta, is issuing a capital of Rs 10 lakhs, divided into 9 per cent cumulative redeemable preference shares worth Rs 2 lakhs. The existing subscribed capital of the company is Rs 30 lakhs.

BONUS ISSUE NOTES Kashiparekh

H. M. Kashiparekh & Company Limited, Ahmedabad, will issue 81,972 bonus shares of Re 1 each, on capitalisation of the company's reserves to a like extent.

INVESTMENT NOTES Davangere Cotton

Davangere Cotton Mills Limited has a programme of expansion and modernisation, which is estimated to cost Rs 1.5 crores. The method of finding the required funds is being determined and there may probably be an issue of additional capital in equity shares at the appropriate stage. The mill, purchased at a Court auction, is to be renovated and a licence has been received for working this factory with an installed capacity of 12,000 spindles, 218 plain looms and 82 automatic looms.

The existing mill also is to be expanded on the weaving side and

permission has been received for erecting 500 automatic looms on the condition that 75 per cent of the output from these looms would be exported. The company has agreed to this condition and it is expected that the automatic looms will be in operation in the next two years.

ACC-Vickers-Babcock

The directors ACC-Vickers-Babcock Limited have, in their latest report, stated that the greater part of the construction work at Durgapur has been completed ahead of schedule. Certain of the heavier machine tools are yet to be received from overseas; but it is expected that the initial construction programme will be completed and the Works fully equipped by the end of September this year. The company has received firm orders for the manufacture and delivery of boiler plants to the extent of an estimated value of Rs 8.23 crores. Further projects are in hand and it is estimated that orders will be received for further five boiler units of an estimated value of Rs 7.5 crores under the Indian Power Projects programme. Meanwhile, the accounts of the company, for the year ended 31 March 1962, reveal a deficit of Rs 44,31,318. To this has to be added the deficit of the previous year's carried forward of Rs 1,71,760 making a total to be carried forward as a loss of Rs 46,03,078.

INVESTMENT BRIEFS

The Ramnarain group of textile mills—Dawn, Phoenix and Bradbury—has announced their dividends for the year ended 31 March 1962. Except Bradbury Mills which has raised the dividend from Rs 12.50 to Rs 15.00 per share, the other two mills have decided to maintain the distributions. Thus, Dawn Mills has maintained the dividend at Rs 15 per share and the Phoenix Mills at Rs 20 per share. The announcement has, however, fallen below the expectations of the market, which has been looking forward to a higher distribution on the assumption of their encouraging performance.

Alageswar Estates Limited has reduced the dividend from 15 to 10 per cent, less tax, for year ended 31 March 1962.

Amalgamated Coffee has maintained the dividend at 10 per cent, less tax, for the year ended 31 March 1962.

Vijayakumar Mills Limited has passed over the dividend for the year ended 31 March 1962.

Mysore Industrial & Testing Laboratory Limited has maintained the dividend at 10 per cent for the year ended 31 March 1962.

Cochin State Power has maintained the dividend at 12½ per cent, taxable, for the year ended 31 March 1962.

Mysore Coffee Estates Limited has passed over the dividend for the year ended 31 March 1962 as against a taxable dividend of 15 per cent, paid for 1960-61.

Sangameshwar Coffee Estates Limited has passed over the dividend for the year ended 31 March

1 September 1962

1962 as against 6 per cent, taxable, paid for 1960-61.

Jeevanlal (1929) Limited has proposed an interim dividend of 5½ per cent, taxable, for the 1962.

Chase Bright Steel will not be paying any dividend for the fifteen months ended 31 March 1962.

Century Spinning & Manufacturing Company Limited has maintained the interim dividend on the ordinary shares at Rs 12 per share, taxable, for 1962.

Bombay Dyeing & Manufacturing Company Limited has proposed an interim dividend of Re 1 per share, taxable, on the ordinary shares for the year ended 30 June 1962.

★ STOCK EXCHANGES Mixed Price Pattern

Watch-Dog Writes:

EQUITY prices have shown a mixed trend during the week under report. While there is more activity in the speculative issues which have forged ahead under the lead of Indian Irons, there is a slackening of demand for shares on the cash list. In general, both the bulls and the bears have reduced their commitments due to various commitments. It looks as though the real pattern of trading will be set after the retention price of steel is announced.

After initial hesitancy, a revival of interest was noticed on the Calcutta Stock Exchange. Under the lead of Indian Irons, prices improved on a broad front.

The Bombay Stock Exchange showed an erratic trading pattern. Prices picked up to a moderate extent at places on professional buying.

Trading on the Ahmedabad Stock Exchange was mostly of a squaring-up nature in view of the holiday from Thursday.

On the Madras Stock Exchange, forward shares were fairly active while turnover in the cash section continued to be restricted.

Wall Street closed irregular, showing mostly fractional changes in either direction.

★ CALCUTTA

DESPITE profit-taking at bulges, the week's trading on the local stock exchange brought modest advances on a broad front. The leadership for the mild movement was provided by Indian Irons, which continued to be in good form due to renewed hopes of an imminent increase in the retention prices of steel.

Activity, however, continued to be on a restricted scale. The tendency of the volume of business not to contract or expand substantially reflected the mood of the bull operators not to extend commitments either way. Selling pressure from the bear operators was equally restrained due to their feeling that the

steel retention price announcement might not be delayed any longer. With the result, even some of the leading shares including the clearing shares recorded no business at all on some days.

Apart from the fact that the market was in need of a decisive incentive, there was a general reluctance to extend commitments in view of the proximity of the Puja holidays. There were also other factors contributing to the apathy of the professional operators and the genuine investors.

First, the shortage of funds was growing. It was thought that, as large funds had been invested in the new State Loans, the LIC might not extend its support to industrial shares for the time being.

Secondly, concern was expressed over the reports that the Government was considering measures to mobilise gold hoards and impose a ceiling on the position thereof. In this respect, it was feared that public confidence was likely to suffer.

Thirdly, the reports regarding the possibility of some modifications in the industrial policy seemed to have affected sentiment to some extent.

Fourthly, the proposal to raise the liquidity ratio of banks gave rise to a feeling that the stock market could not expect to obtain more credit from the banking system.

Finally, the corporate news released during the week, was considered to be rather disappointing. A cautious view was taken about the near-term outlook for the corporate sector. With the result, whatever business done was mostly of a jobbing nature.

The Giltedged market ruled quiet. As the response to the State Loans was reported to be fairly encouraging, interest in the existing loans was restricted. 3 per cent 1986 Conversion Loan moved narrowly between Rs 69 and Rs 69.10.

Among bank shares, Punjab National came in for some enquiry up to Rs 21.12 from Rs 20.81. There was limited business in other shares.

Jute shares came in for selective support on the feeling that the current year's working of the mills would be encouraging in view of the easy supply position of the raw material. Birlas were a special feature and spurted to Rs 36.60 on reports of the company having obtained sanction to diversify its activities. Anglo-India were enquired up to Rs 232 from Rs 224; Ganges up to Rs 16.12 from Rs 15.62; Howrah up to Rs 21.50 from Rs 20.56; Kankarrah up to Rs 136 from Rs 116 and Reliance up to Rs 6.94 from Rs 6.62.

Although dealings were restricted, Coal shares were fairly steady. Bengal met with business up to Rs 353 from Rs 350 and Equitable up to Rs 52.75 from Rs 52.25 following the company's proposal to expand its production. Central India were, however, quiet at Rs 11.12 against Rs 11.19.

Although the results of the auctions were disappointing, prices of

selected Tea shares improved on the thought that gardens, which produce good tea, would do well. Brooke Bond changed hands to Rs 14.69 from Rs 14.37; Grob up to Rs 9.19 from Rs 8.87 and Jay Shree up to Rs 17.37 from Rs 17.12.

Among Sugar shares Dyer Meakins receded to Rs 34.50 from Rs 37.12 on report of the company having announced a taxable dividend of only 18 per cent on the increased capital as against 30 per cent, taxable, on the original capital.

Textile shares were rather subdued in the absence of encouraging advices from the cloth front. The only exception to the general trend were Jay Shree, which were rushed up to Rs 17.31 from Rs 15.25, thanks to persistent support from influential quarters. Cawnpore, Dunbar and Elgins were all well maintained around last levels.

For reasons stated earlier, Indian Irons came in for a good deal of speculative buying. After opening higher at Rs 27.24, Indian Irons forged ahead to Rs 27.60 before receding at the close to Rs 27.00. JEXMACO moved up to Rs 23.80 from a low of Rs 23.10 (Rs 23.40), while Gues, Keen, Williams were wanted up to Rs 38.94 from Rs 38.50 (Rs 38.37). Jessop moved narrowly between Rs 23 and Rs 23.19, while

Britannia met with the same fate at Rs 11.31 to Rs 11.81; Braithwaite at Rs 34.25 to Rs 35.19 and Binani Metal at Rs 11.31 to Rs 11.56.

Miscellaneous issues generally followed the prevailing trend of the market. Following were the price trends of a few selected shares:

	As on Week's Week's

JUBBULPORE ELECTRIC SUPPLY CO. LTD.

NOTICE

Notice is hereby given that the Annual General Meeting of the Company will be held at the Registered Office No. 12, Mission Row, Calcutta, on Wednesday the 26th September, 1962, at 3-30 p.m. for the following purposes:—

- To receive and adopt the audited Accounts for the year ended 31st March, 1962, and the Reports of the Directors and the Auditors thereon.
- To declare a Dividend.
- To appoint a Director in place of Mr. S. K. Sinha who retires by rotation and offers himself for re-election.

In this connection a Special Notice as defined in Section 190 of the Companies Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Sinha, a retiring Director, who has attained the age of 67 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

"That Mr. S. K. Banerjee, a retiring Director, who has attained the age of 67 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

In this connection a Special Notice as defined in Section 190 of the Companies

Act, 1956, has been received by the Company under Section 281 of that Act to move the following Resolution at the meeting:—

"That Mr. S. K. Banerjee, a retiring Director, who has attained the age of 66 years, be and is hereby re-appointed a Director of the Company, and that the age limit prescribed by Section 280 of the Companies Act, 1956, shall not apply to him".

The Register of ordinary shareholders of the Company and the Transfer Books will be closed from the 19th September, 1962 to the 26th September, 1962, both days inclusive.

A member entitled to attend and vote at the meeting is entitled to appoint a Proxy, who need not be a member, to attend, and on a poll, to vote instead of himself.

By Order of the Board,
MARTIN BURN LTD.,
A. G. Gidley
Secretary,
Managing Agents.

12, Mission Row,
Calcutta—1,
30th August, 1962.

NOTE:—An Explanatory Statement is annexed to the convening notice issued to the members of the Company.

Anglo-India Jute Pays More

Thanks to the rise in sales from Rs 7.26 crores to Rs 7.57 crores and in the net profit from Rs 26.80 lakhs to Rs 32.38 lakhs, the Anglo-India Jute Mills Company, Limited has been able to raise the dividend on the ordinary shares from Rs 7.50 to Rs 10 per share, subject to tax, for the year ended 31 March, 1962.

Apart from providing Rs 1.50 lakhs for Investment Reserve, the Depreciation amount is raised to Rs 12.17 lakhs from Rs 11.59 lakhs; Taxation to Rs 9.00 lakhs from Rs 5.25 lakhs and Development Reserve to Rs 2.04 lakhs from Rs 1.50 lakhs.

The directors state that the prospects for the current year are satisfactory. Avenues are also being explored to extend the company's activities to cover the manufacture of other specialised fabrics.

Saran Engineering Earns More

Although the Saran Engineering Company, Limited has reported a slight decline in sales from Rs 37.42 lakhs to Rs 36.54 lakhs, the net profit for the year ended 31 March, 1962 has risen to Rs 8.70 lakhs from Rs 7.88 lakhs, thanks to increased realisations from scrap sales and the economies effected in other directions.

In respect of allocations, Taxation provision is lowered to Rs 3.50 lakhs from Rs 4.00 lakhs, while Rehabilitation Reserve is maintained at Rs 2 lakhs. Depreciation amount is higher at Rs 1.22 lakhs against Rs 1.10 lakhs; General Reserve at Rs 1.25 lakhs against Rs 20,000 and Development Rebate Reserve at Rs 1,896 against Rs 600. The directors have proposed a taxable dividend of 50 nP per share as against a taxable dividend of 40 nP paid previously.

The directors have started diversifying the company's activities and have succeeded in securing and executing substantial orders from other firms.

JENSON & NICHOLSON-1962

PAINT AT WORK FOR INDUSTRY

J & N's FIRST PAINT WAS AN INDUSTRIAL COATING

—a glossy, lustrous varnish called 'Japan Black'. It was used to paint 'society' carriages—the status symbol of 19th century London. Little did John Jenson suspect in 1821 that his Japan Black was destined for fame. It was to become the forerunner of a varied range of J & N coatings. Today, J & N can meet any industrial need.

APPLYING THE THREE 'R's' AT J & N

Range.....Reliability.....Resourcefulness—words which thoroughly sum up J & N's service to industry. The range is exhaustive—it extends from finishes for folding chairs to marine paints for ships; from polychromatic enamels for typewriters to non-yellowing whites for fans. Reliability is as much part of a J & N coating as the shade of colour—the happy result of J & N's

achievements as Solventless Insulating Varnishes for the Electrical Industry and High Temperature Stoving Enamels for the Cycle Industry, lies the tireless, never-ending effort of J & N research.

WHEN MR. A WANTS TO PRODUCE A MORE ATTRACTIVE FAN...

...he approaches the J & N Technical Advisory Service. Mr. A's problem is simply stated: he wants to improve the finish of his product in appearance and durability. One of J & N's Industrial Representatives—an experienced chemist—visits the factory and discusses the entire problem. He may make recommendations on the spot, or return to the laboratory and work out a detailed plan. The scheme accepted, the representative supervises application at Mr. A's factory till he is satisfied that a more attractive fan has been produced. If you have a paint problem, call, write or 'phone J & N.

NOT JUST ANYONE'S CUP OF TEA!

A number of conventional treatments were

tried and found wanting. Much time was wasted. A lot of money was spent. The Tea Industry had a paint problem and it wasn't just anyone's cup of tea! Then they were introduced to EPILAC...The trade name for a range of outstanding Epoxy based industrial coatings. Epilac is noted for toughness, adhesion, good gloss retention and resistance to staining, heat and chemicals. When the Tea Industry required coatings which could be successfully used for cement floors, machinery etc., J & N recommended Epilac. It suited the industry to a 'T'. Write to Jenson & Nicholson at 2 Fairlie Place, Calcutta 1, for your free copy of the booklet 'Paint For The Tea Industry'.

J & N PAINTS—S...A...

Keenly aware of the country's need for foreign exchange, J & N contributes to the national effort by providing specialised coatings to exporting industries. Almost all cycles exported are finished with J & N products. Sewing Machines...Electric Fans...Insulating Cloths...all kinds of manufactured goods carry J & N coatings to foreign markets. In this challenging period of economic expansion, J & N continues to play an increasing role in providing India's new and growing exporting industries with the indispensable components they must have.

century-old policy: quality first! J & N's resourcefulness has led to coatings like the popular rivalling enamel, with its wrinkled finish, so often found on cameras, office equipment etc. Equally ingenious is the polychromatic finish which reflects light in all directions. At J & N, the phrase 'paint is one of the lubricants of industry' finds practical outlet.

RESEARCH PRODUCES RESULTS

The research laboratory at the J & N factory near Calcutta is geared to a fine degree of up-to-the-minute efficiency. When necessary, it draws upon the pooled knowledge of J & N laboratories abroad. Behind such

Do you often SEE RED?
In which of J & N's shades?

EPILAC Primers and Finishes are outstanding for their toughness, adhesion, high gloss and resistance to staining, heat and chemicals. Backed by J & N's world-wide experience, EPILAC is one of a range of coatings specially formulated by J & N to meet the needs of Indian industry. Specify EPILAC Primers and Finishes for: ● Excellent adhesion to the most difficult surfaces ● Toughness comparable to vitreous enamel ● Flexibility and impact resistance not found in other types of industrial coatings ● Exceptional chemical and electrical resistance, particularly in alkaline conditions.

QUALITY SELLS J & N COATINGS

Earlier Steadiness not Maintained in August

Earlier cheerfulness proved short-lived on the stock market during August as both operators and investors became cautious in later dealings in view of the fresh uncertainties in the investment situation. The initial optimism stemmed from some favourable development and expectations of further good news to come. The main incentive was provided by the announcement of an interim dividend of 80 nP per share from Indian Iron. It was believed that the total dividend would be higher than the previous distribution. The expectations of a higher dividend were evidently sustained by rumours of higher steel retention price. Interest in steel shares was stimulated by the news the Indian Iron & Steel Company had submitted proposals for the doubling of its capacity and that the proposal was receiving the sympathetic consideration of Authority. It was pointed out that in view of the growing shortage of steel in the country, Government itself was anxious to encourage increased production by the private sector steel companies.

Speculative interest was encouraged by the news that the Aid India Club at its latest meeting pledged to meet the greater portion of the shortfall in foreign exchange required for the second year of the Third Plan. As a result of the fresh commitments, the gap in foreign exchange resources would be reduced to 80 million. The new assurance by the Aid India Club helped re-

move the uncertainty as regards the implementation of the plan projects scheduled to be taken up during the current year. But operators' enthusiasm was tempered by the fact that there was still a gap, however small compared to the previous position. The expectation that the remaining gap would ultimately be filled by increased aid from the US however failed to impress sentiment. Although there was disappointment over the continued delay in the announcement of the steel retention price, speculative sentiment was kept hopeful because of a rumour that TISCO too would announce an interim dividend in line with IISCO.

Around the close of the first half of the month, transactions were slow and the undertone dull. Bullish fervour was subdued because of the gloomy prospects of exports to the UK in the event of its joining the ECM. In spite of the Government of India's strong representation, the EEC has not extended any substantial concession in respect of most of the important commodities, except in regard to tea. As regards cotton textiles and jute goods, no worthwhile concession has been obtained. The position was described as serious by the Union

Finance Minister himself. He had pointed out that the restrictions that would come into effect would have extremely serious effect on India's foreign trade and consequently would adversely affect its development plans. The anxiety was somewhat relieved later in the week when the Prime Minister expressed the hope that more favourable conditions might ultimately be obtained from the EEC as regards India's exports to that region. Even so, market sentiment continued to be different as there was no indication of a favourable change in the stand of the Six in regard to exports from commonwealth countries.

One of the reasons for the absence of aggressiveness on the part of bulls would appear to be the lurking fear that Government policy as regards private enterprise would undergo a change to the disadvantage of the private sector. A remark of Mr T. T. Krishnamachari to the effect that scooter manufacturers would do well to bring down the price of their products created fresh anxiety in the minds of operators as it was interpreted to mean Government interference. The generality of investors however were naturally worried about the near term prospects of industry. The anxiety about

maintenance imports was not lessened but increased by the almost clear official indication that maintenance imports should be solely financed by export earnings. As it was believed that it would be almost impossible to increase export earnings in the near term, it was concluded that the present difficulties of obtaining adequate industrial raw materials would continue thereby leading to an increase of the idle capacity of industry.

Another preoccupation of the market was the fresh developments in the northern border. The situation there had given rise to misgiving as would be evident from the deep concern shown by speakers in Parliament. The general impression was that the military situation in Ladakh continued to be serious and the country should be prepared for any eventuality. Thus the border situation constituted a major source of uncertainty to marketmen.

Toward the close of the month there was a revival of interest especially in the more speculative counters. Indian Iron was a prominent counter receiving sustained speculative attention on persistent rumours of an early announcement of the steel retention price. But by the end of the month, bullish fervour was subdued considerably as the month ended without any news about the steel retention price.

Sectionwise, Jute shares remained subdued while coals were selectively higher in later dealings. Teas were steadily but sugars were dull.

(a) After transferring Rs 20,638 from General Reserve No. 1.

(b) After transferring Rs 200,000 from Development Reserve and Rs 65,000 from General Reserve No. 1.

(c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 1,008,546 from General Reserve No. 1.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 119,825 from Development Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 1,137,451 from Contingency Reserve.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 1,207,838 from General Reserve.

(s) After transferring Rs 289,747 being provisions made in previous year.

(t) After transferring Rs 300,000 from General Reserve.

(u) After transferring Rs 300,000 from General Reserve.

(v) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(w) After transferring Rs 390,580 from General Reserve.

(x) After transferring Rs 65,163 being excess provision in previous years.

(y) After transferring Rs 1,075,000 from General Reserve No. 1.

(z) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(aa) After transferring Rs 300,000 from General Reserve.

(ab) After transferring Rs 308,000 from General Reserve.

(ac) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 88,529.

(ad) After transferring Rs 780,000 from General Reserve and Rs 45,068 from excess provision for Bonus.

(ae) After transferring Rs 100,000 from Dividend Equalisation Reserve and Rs 200,000 from provision for taxation.

(af) After transferring Rs 1,296,000 from General Reserve No. 1.

(ag) After transferring Rs 175,000 from General Reserve No. 1.

THE CHARTERED BANK

(Incorporated in England by Royal Charter 1853).
(Liability of Stockholders Limited).

Affiliated Institution:—
THE ALLAHABAD BANK LTD.

Head Office:
38, BISHOPSGATE LONDON,
E.C.2

West End Branch, London:
2, Regent Street, London S.W.1.
and at
MANCHESTER, LIVERPOOL, NEW
YORK and HAMBURG.

Branches of the Bank are established
at most centres of commercial
importance throughout Southern
and South-Eastern Asia and the
Far East.

Branches of The Eastern Bank
Limited, a wholly-owned subsidiary
of The Chartered Bank, are estab-
lished in Iraq, Bahrain, in the
Persian Gulf at Qatar and Sharjah,
Lebanon and Hadramaut and in
India, Pakistan, Ceylon, Aden,
Singapore and Malaya.

Calcutta Office:
4, Netaji Subhas Road.
Sub Branch: I. G. THOMSON
31, Chowringhee Road. Manager.

ALLAHABAD BANK

LIMITED

Established 1865:
Affiliated to The Chartered Bank.

Planning or Ad Hoc Coping?

WE hope that Mr Nanda, the Minister for Planning, is not really as frighteningly complacent about the prospects of the Third Plan as the tenor of his speeches in Parliament in the last fortnight would appear to suggest. Even his confessions of failure sounded smug—"I am not going to be ashamed of coming to the House and saying that we could not rise to your expectations..."—as though an orgy of self-flagellation in public conferred absolution for failures. For the rest, Mr Nanda went on to assert that the Plan will not be pruned and that "its vital and basic objectives" will be achieved. This declaration is at best an act of faith backed by a genuine resolution to strive one's best to make it a reality; At worst, it is a kind of Micawberism hoping for something to turn up to make things better. What it is not is a sober assessment of probabilities on the basis of evidence.

This evidence, summarised in an official review always anxious to draw attention to the silver lining is not very encouraging. The figures presented give away the fact that by every conventional measure of performance there has been shortfalls from expectations. The rate of growth during 1961-62 was only of the order of 3.5 per cent against the targeted 6 per cent. The plan outlay in the first year at Rs 1,148 crores was also well below the average required in terms of the total plan target. Most disconcertingly, the failures have been glaring in crucial sectors of the economy like coal and steel production, power generation and transport. The other elements of worry are the precarious foreign exchange position, and the threatening price inflation that is slowly sapping the morale of the public. And above all, behind all these measureable failures is discernible a pattern of uncoordinated, ad-hoc coping with unexpected difficulties that is quite inconsistent with the very idea of planning.

Taking the physical performance first, the official review of the Plan progress has made much of the success in establishing new industries and the resultant headway in diversification. But the rate of increase in industrial production at 5 per cent is considerably short of the rate of 8 to 9 per cent achieved over the first two Plan periods. The official claim that the rate would rise to 8 per cent if jute, cotton textiles and sugar were excluded overlooks the failures in other sectors like coal production, steel production and railway transport. The out-put of coal averaged only 55.2 million tons against more than 56 million tons in 1960-61 and reflected mainly the lagging tempo of development in the public sector by the NCDC. As regards power, in spite of the 13 per cent increase in power generation during 1961-62, requirements had been met only partially highlighting not only the lag in implementation of power projects but also the failure to correctly forecast the power demand and make advance arrangements to meet it. In steel production, the necessity for a downward revision of the target has already been accepted, consequent on the shortfalls in the expected production in existing units and the

delay in the erecting of the Bokharo Steel Plant.

In the field of agricultural production also the expected rate of growth has failed to materialise. And according to Mr Nanda, it is the slackening in the rate of growth in agricultural production that has brought about the fall in the rate of growth of the national income during 1961-62. Foodgrain production during 1961-62 was only marginally higher than in the previous year and rise in individual crops has been offset by declines in other. The position in respect of availability of fertiliser is still in doubt and even the revised target of about 680,000 tons in terms of nitrogen appears on current rate of progress in the setting up of fertiliser units, extremely uncertain.

One important problem that is looming large is the increase in the level of prices of which there have been some signs. Since the beginning of August, when the index number of wholesale prices stood at 131.8 against 128.7 at this time last year, the price situation has gone worse. When the Third Plan was formulated, the objectives of its price policy were modestly envisaged at no more than merely "holding the price line" as it stood at the end of the Second Plan. It looks as if even this not very ambitious expectation is proving illusory. As regards foreign exchange, the original estimate of the foreign exchange outlay of the Third Plan was Rs 2030 crores. The Government has been reluctant to admit that this may prove an underestimate. However, the total availability against even the lesser amount is put at Rs 1890 crores of which Rs 440 crores are for non-project requirements. The total additional aid required would be Rs 1100 crores including Rs 400 crores as carry over for the Fourth Plan. But the most serious problem has been the ensuring of maintenance imports to keep the productive assets already created in use. Increased export earnings are nominally to take care of this, but the outlook is not very hopeful. Traditional items like Cotton-textiles have registered notable declines in foreign exchange earning and even tea, whose volume of export has increased, earns less because of fall in its price.

Part of the difficulties of the Third Plan can legitimately be attributed to the stresses and strains of development but only a part. Even after making allowances for this, it is not possible to escape responsibility for bad planning. Every now and again, as in the power crisis last year, the country seems to get caught unawares by an emergency whose inevitability must have been evident from the beginning. Even here it is not so much inaccurate forecasting, as the operation of extra-economic considerations in choices of agencies and ordering of priorities that land us in difficulties. And once in the grip of a crisis, we seem to improvise desperately solutions which, in their turn, create further problems and further distort the original expectations. The frenzied efforts in the production and transportation of coal in the last two years would offer instructive examples of this.

Equipment for Power Projects

The programmes for Import Substitution, which will be examined in detail by the Mehta Committee, have both a long term and a short-term aspect. And it is the latter that has relevance to the current foreign exchange shortage. From this point of view indigenous production of Heavy Electrical Equipment for power projects is not likely to bring perceptible relief, though the Minister for Irrigation & Power indicated the possibility that production of hydro and thermal generating plants might commence from 1964. Whatever the quantum of production of Heavy Electrical Equipment during the plan period, it must have been taken into account in arriving at the foreign exchange requirements of the Third Plan Power programmes. Additions to installed generating capacity are anticipated to be of the order of 3 million kilowatts of hydro-plant and 4 million KW of thermal plant. The foreign exchange requirements for setting up new generating capacity of this order, excluding the atomic power station, are estimated at Rs 335 crores out of the total cost of Rs 1089 crores. If the production programme at Bhopal gets bogged for some reason, either more foreign exchange would have to be provided for power projects or the execution of some of these projects may have to be delayed.

The Heavy Electricals, Ltd. Bhopal had been set a target of Rs 3.5 crores worth of saleable equipment to be reached by March 1962. Owing to various reasons, including delay in the receipt of imported raw materials and components, the actual production was short of the target by Rs 1.5 crores. The extent to which the Bhopal Factory would be able to help in conserving foreign exchange during the Third Plan, therefore, depends on successful achievement of the phased programmes of production that has been drawn up. Value-wise, the annual targets for the remaining years of the Third Plan are as under:

1962-63	Rs	9 crores
1963-64	Rs	14.60 crores
1964-65	Rs	27.20 crores
1965-66	Rs	32.80 crores.

To judge by the production programmes that have been drawn up, the outlook for the supply of indigenous equipment for the Fourth Plan is more encouraging, and if all the projects make satisfactory progress, the value of the equipment manufactured in the country should be about equal to the requirements of the power projects. On the assumption that two million kilowatts of generating capacity would be added every year during the Third Plan, the Central Water and Power Commission had estimated that the total value of the requirements of heavy electrical machinery at Rs 80.65 crores per annum. The expansion of the Heavy Electrical Project at Bhopal and the production from the Second and Third Heavy Electrical Plants are expected to raise the annual output to about Rs 87 crores in value by 1970.

The capacity of the Bhopal Factory is to be increased from the level of Rs 32.8 crores expected to be reached by the end of the Third Plan, to Rs 52.5 crores, consisting of the following items, by 1970.

Items		Value
Turbines	Rs	7.5 crores
Generators & motors	Rs	10.0 "
Transformers	Rs	13.5 "
Switchgear	Rs	10.4 "
Traction equipment	Rs	8.8 "
Industrial control gear	Rs	2.6 "
Capacitors	Rs	0.3 "
	Rs	52.5 "

The factory will manufacture hydraulic and steam turbines and generators up to 15,000 KW unit capacity, with approximate output of 500,000 KW, transformers of 10,000 KVA and over, D.C. Motors up to maximum size of 5000 H.P., circuit breakers, industrial motors etc. The production build-up during the Fourth Plan will be as under:

1966-67	Rs	38.8 crores
1967-68	Rs	44.0 "
1968-69	Rs	48.3 "
1969-70	Rs	52.5 "

Of the two other Heavy Electrical projects, one is being built at Ranipur (Uttar Pradesh) with Soviet assistance, and the other at Ramachandrapuram (Andhra Pradesh) with Czech collaboration. The project being built with assistance from U.S.S.R. will have saleable output of Rs 25 crores on the completion of the first stage by 1970. The estimated capital outlay for the completion of the first stage will be Rs 35-40 crores. The production programme for this plant envisages manufacture of steam turbines and turbo alternators up to 200,000 KW unit capacity, heavy A.C. & D.C. motors etc. The production programmes for the first and final stages are as under:

	In million kilowatts	
	First Stage	Final Stage
Steam turbines and turbo alternators	0.75	1.5
Hydro turbines and generators	0.60	1.20
Large size motors	9.26	0.52

The Heavy Power Equipment plant at Ramachandrapuram, being built with Czech assistance, will involve an outlay of Rs 27 crores for the first stage. Saleable output on completion of the first stage by 1970 will be about Rs 12 crores. The production programme is indicated below:

	In million kilowatts	
	First Stage	Final Stage
Steam turbines and turbo alternators	0.62	1.30
Diesel Engines	209,000 H.P.	

Both the plants will have captive foundry capacity for grey iron castings up to five tons piece weight.

The Minister for Steel & Heavy Industries is reported to have indicated at the recent meeting of the Parliamentary Consultative Committee, that the detailed project report for the plant in Uttar Pradesh was expected by May 1963. As regards the plant at Ramachandrapuram (Andhra Pradesh) the project report is expected before the end of the current month.

One distinctive feature of these agreements is that provision has been made for the training of Indian personnel in the basic

techniques of manufacture of electrical equipment. A deputation of three Soviet specialists will be coming to India to impart training to Indian engineers in the techniques of manufacture of hydraulic and steam turbines. Likewise a team of four Czech experts will train Indian engineer-trainees in the techniques of steam turbines and alternators. Besides, a team of six Indian engineers has been deputed to Prague for participation in the preparation of detailed project reports. Similar arrangements have also been made in the case of the Heavy Pressure Boiler Plant being built with Czech assistance at Tiruchirappalli. The Plant will make twelve boilers per annum, each to serve a 50 MW turbine. The programme also includes fittings, pumps, and other ancillary equipment for steam turbines and boilers and the value of the annual output will be Rs 12 crores.

While the total capacity for Heavy Electrical Equipment programmed in the public sector appears to be adequate, it will be necessary to take into account the long delays unavoidable in projects of this magnitude, and the output that has been taken into account in drawing up power programmes may not be available according to the present schedule. On a realistic appraisal of requirements, there is a strong case, therefore, to license manufacture of Heavy Electrical equipment in the private sector to supplement to capacity planned in the public sector, where foreign collaboration is available on advantageous terms. This is a field in which the Planning Commission should adopt a pragmatic approach. Likewise an early and positive decision is indicated in the matter of permitting industries to set up captive power plants to meet their own requirements.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET
Strain After New Loan Week

The behaviour of the money market, in the new loan week of the State Governments and thereafter, has been somewhat puzzling. What though the cash subscriptions alone to the States' offerings exceeded Rs 100 crores, the strain upon the money market was not severe in the week ended 31 August. The Scheduled Banks, it is true, had to run down their Reserve Balances by very nearly Rs 27 crores, and they had besides to augment their borrowings from the Reserve Bank by over Rs 15 crores; and the State Co-operative banks also figured as having borrowed substantially more. Nevertheless, in that week call money in Bombay barely touched bank Rate, though in Calcutta it inched past to a level of 4½ per cent. The following few days, or the first days in September, have witnessed a monetary stringency which could almost compare with conditions as they exist at the peak of the busy season. Both in Calcutta and Bombay call money has commanded 5½ per cent; and with borrowers scarce there even seems the prospect of call money, for the first time since the four-tier bank Rate was introduced, reaching 6 per cent. Why?

The first reason for the tight money conditions is of course the pressure of demand occasioned by beginning of the month disbursements. The first week, and if the Friday should fall early in the month, the second as well usually witnesses, even in the midst of a slack season, a creeping tightness in the money market. Coming so close after the disequilibrium caused by the new loan subscriptions, it is obvious that banks were put to some strain.

This strain became intensified, secondly, because of the tax payments due on 1 September. Receipts of the Centre should have been very heavy indeed, and there should have been a correspondingly heavy demand upon the banking system, both by way of draws on Deposits and in utilisation of overdraft limits. Banks' resources, already fully drawn upon by the new loans' demands, further exposed to month-early disbursements, felt severely therefore the impact of the September tax instalments.

Further to complicate matters, there is many a company in the Calcutta region which pays the Puja bonus well ahead of time, a month ahead if it were possible. We gather that such payment of Puja bonus made a significant enough inroad into the already strained resources of banks. This also explains, we may add, why the call money rate has been higher in Calcutta—operating in has been higher in Calcutta—operating in Calcutta has been the special and peculiar circumstance of Puja bonus payments and their impact upon the banking system.

It is, therefore, not in the least surprising that the money market, in the midst of one of the slackest slack seasons we have known,

should have turned so stringent. But we dare say that, before the end of the month, the easy money conditions we had so far experienced in the 1962 slack season will once again prevail; and the outlook consequently is for fresh demand for gilt-edged to emerge during the month of October—the last month of the "notional" slack season.

STATE LOANS
Source and Destination

The details in full are now available about the subscriptions to the new loan programme of the State Governments and some details of where the money came from and where it went to are available in the latest banking returns. The following table summarises subscriptions, maximum retention (that is, ten per cent over the notified amount), non-conversions and new cash obtained: (In Rs Crores)

Of the seven States which issued their loans at Rs 99.50, it will be seen that four failed to attract subscriptions in excess of 110 per cent of the amount sought and that one more State barely reached the level of over-subscription. On the other hand, of the five loans issued at Rs 99.75, only two failed to be over-subscribed; and both loans issued at par were over-subscribed. This should indicate, in the first place, that borrowing from strength is the surest means of attracting investor support; but is also, it may be noted, an index of the strength of the borrowing States themselves. Cash refunds work out to a little over Rs 8 crores, and cash repayment in respect of maturing loans against which holders have failed to convert adds up to Rs 10.87 crores. Thus, the net borrowing of the States this year adds up to Rs 89.10 crores, inclusive of conversion applications totalling Rs 4.73 crores.

	Amount Sought	Subscriptions	Maximum Retention	Non-Conversions	Net Borrowings Inc. Conversion
Issue Prices: Rs 99.50					
Andhra Pradesh	10.00	13.25	11.00	...	11.00
Assam	3.00	3.02	3.02	...	3.02
Bihar	4.00	4.36	4.36	...	4.36
Madhya Pradesh	5.00	5.06	5.06	0.85	4.21
Orissa	7.00	8.15	7.70	...	7.70
Punjab	3.50	3.65	2.65	...	3.65
Rajasthan	4.50	5.02	4.95	...	4.95
Issue Price: Rs 99.75					
Kerala	4.00	4.15	4.15	...	4.15
Madras	12.00	13.38	13.30	1.77	11.43
Mysore	6.00	7.94	6.60	...	6.60
Uttar Pradesh	9.00	11.81	9.90	1.33	7.57
West Bengal	7.00	7.03	7.03	1.02	6.01
Issue Price: Rs 100.00					
Gujarat	6.00	7.11	6.60	...	6.60
Maharashtra	12.50	15.07	13.75	5.90	7.85
TOTALS	93.50	109.00	100.97	10.87	89.10

res. It has been an altogether successful borrowing programme.

Cash subscriptions totalled over Rs 104 crores, of which about Rs 8 crores were to be refunded. Where did this money come from? Some clues are offered in the latest banking returns

In the returns of the Reserve Bank, it is to be noted that

	Rs crores
(i) Scheduled Banks' borrowings have gone up by	15.18
(ii) Scheduled Banks' Deposits are lower by	26.99
(iii) Borrowings of State Co-operative Banks have risen by	7.91
(iv) Notes held in the Banking Department, possibly representing cash subscriptions, are higher by	19.30
(v) Bills Purchased and Discounted, perhaps in respect of banks replenishing balances, are higher by	6.71
And in the return of the State Bank, we note that	
(i) the total of Advances is higher by	7.78
all of which total	83.87

Although the cash refunds would still have to be effected, in broad terms it may be noted that about Rs 12 crores of subscriptions have a mysterious source. We would venture to suggest that this sum represents inter-investment among some of the States: receipts of one State would be offset by its payments, and so on.

Where did the money go? This is much simpler stated. Deposits of the State Governments rose by Rs 22.93 crores, and their indebtedness to the Reserve Bank was cut by Rs 8.64 crores. Payments by the States to the Centre are reflected in a rise of Rs 33.05 crores in its Deposits and even larger payment received by the Centre is suggested by the fall of Rs 20.00 crores in Investments, which could be cancellation of ad hoc Treasury bills before maturity. This adds up to Rs 84.63 crores.

It will be seen that there is not much variation between the two sets of figures, where the money came from and where it went. As such, our hypothesis of inter-government investment may possibly be correct.

BANK RETURNS

Deposits Rise,
Advances Fall

Apart from the impact of the States' new loans on bank returns, the most noteworthy feature of the figures under review is the further smart rise in Deposits of banks and also in the considerable decline in bank Advances.

According to the returns of the Reserve Bank for 31 August, slack season conditions (together with possible cash subscriptions for the new loan) are responsible for the fall of Rs 17.68 crores to Rs 2,011.38 crores in Active Note Circulation; and Rupee Coin has also returned from circulation in an amount of Rs 1.62 crores. A transfer of Rs 0.50 crore has been effected from Foreign Securities, now lower at Rs 88.34 crores, to Balances Held Abroad in the Banking Department; and there has been countervailing transfer to Rupee Securities, which are correspondingly higher by Rs 0.50 crore at Rs 1,723.00 crores.

The new loan receipts, as noted, have swelled both Central and State Governments' balances; and are responsible for (a) decline in Reserve Balances of Scheduled Banks, (b) increase in borrowings both of Scheduled and State Co-operative Banks; (c) rise in Treasury Bills Purchased and Discounted; (d) reduction in States' ways and means borrowings; and (e) fall in Investments probably reflecting Centre's cancellation of ad hoc Treasury Bills before their maturity.

Balances Held Abroad have improved by Rs 0.69 crore to Rs 5.75 crores, and of the rise half a crore is traceable to transfer from the Issue Department; at last, thus, the registering of an export surplus, however small it might be.

The impact of the State loans on the return of the State Bank for 31 August is, we believe, restricted to the rise of Rs 7.78 crores to Rs 275.52 crores in the total of Advances; this rise may represent borrowings extended to "rural" investors who were obligated to lend support to the loans floated by their particular State but who were unable to find the finance themselves. No explanation is necessary for the rise of Rs 1.02 crores to Rs 584.68 crores in Deposits, except perhaps to mention that the State Bank either had no institutional investors of consequence as constituents who supported the States' new loans or that such constituents, having accounts with other banks as well, were minded not to draw down their Deposits with the State Bank. The increase of just about Rs 14 crores to Rs 291.25

crores in the gilt-edged portfolio seems at first reckoning to indicate State Bank purchase in the new loan; but the State Bank normally is not a client for the State loans, and hence we would infer a further purchase of gilt-edged from the Reserve Bank, with Other Assets drawn by 13 crores odd to Rs 20.19 crores for this purpose—as also a small fall of Rs 0.43 crore to Rs 27.99 crores in cash balances, including money at call and short notice. An intriguing question is, why are Other Liabilities higher unusually by Rs 5 crores?

The return of Scheduled Banks for 24 August does not of course cover the new loan week of State Governments; but it indicates an accretion of fresh resources such that, without difficulty, the banking system was able to cope with the tremendous strain posed by cash subscriptions of the order of Rs 100 crores. Demand Deposits are once again higher by Rs 7.88 crores at Rs 901.21 crores, and net Time Deposits have also improved by Rs 1.20 crores to Rs 1,293.07 crores. Of the total rise of Rs 9.08 crores in net Deposits, Rs 0.75 crore is traceable to the State Bank. Secondly, the contraction in bank credit is of significant size: the total of Advances has fallen by Rs 11.26 crores to Rs 1,381.41 crores, but of this fall, more than half or Rs 6.25 crores, is on account of the State Bank. Since the busy season peak, contraction in bank credit has exceeded Rs 60 crores, of which about a third is attributable to the State Bank. The easy position of Scheduled Banks is reflected in the further fall of Rs 0.27 crore to the nominal level of Rs 0.73 crore in indebtedness to the Reserve Bank, though borrowings from the State Bank are a shade higher at Rs 17.76 crores against Rs 17.31 crores. The rise of Rs 12 crores to Rs 680.84 crores in gilt-edged investments is wholly traceable to the State Bank. The end result is a rise of Rs 2.60 crores to Rs 218.85 crores in cash balances, including money at call and short notice. The considerable impact of subscriptions to the State loans upon the Scheduled Banks will be seen in the next return: certainly Deposits will record a considerable fall, as will cash balances; and borrowings from the Reserve Bank will have shot up.

BANK PROFIT

Chartered Bank

The Manager, The Chartered Bank, Calcutta, has received the following cabled information from his Head Office in London:—

"Directors have declared interim dividend of 7½% actual subject to deduction of

Income Tax at 7s. 9d. in the pound payable on Friday 28th September 1962."

Rise in Gilt Edged
Prices

By Paul Einzig

Had anybody dared to predict earlier this year when the price of 3½ per cent War Loan was at 52 that by the end of August this year it would be quoted at 61 such forecast would not have been taken seriously. Indeed the change of sentiment in the gilt-edged market during recent months has been most unexpected. Nor has it been due to the new monetary policy advocated by the Radcliffe Report which suggested that the Government should not confine its intervention to the market for Treasury Bills but should extend it to medium and long-term loans. There is no evidence that this has in fact been done in this country, even though it is known to have been done to some extent in the United States. The mere possibility was sufficient, however, to convey a certain degree of optimism.

A much more important influence was the setback in business conditions and in the trend of equity prices. So long as it was assumed that the sky was the limit to the rise in equities and to the expansion of company profits, very few people were keen on holding medium and long-term Government loans. Institutional demand was largely confined to short-dated loans and trusts continued to hold medium and long-term loans. The rest of investors switched into equities long ago. The moment doubts began to arise about the continuation of the boom in equities second thoughts began to prevail. The high yields on gilt-edged loans became attractive in spite of the fact that their real yield was considerably below their nominal yield owing to the depreciation of the purchasing power of sterling. But then this process of erosion affected fixed interest and variable dividends alike.

So long as it appeared reasonable to assume that the erosion of variable dividends through the rise in the cost of living is offset and more than offset by an increase in nominal dividends all was well. Since, however, the large majority of dividends showed no increase this year, holders of equities began to remember that their earnings were liable to be affected by creeping inflation. Moreover, since a fair number of dividends were actually reduced, many investors arrived at the conclusion that after all there was a great deal to be said in favour of receiving fixed dividends.

Notwithstanding all this, forecasts made recently about the possibility of War Loan rising to 80 appeared to be unduly optimistic. The Government might be in a position to take advantage of the undertone of the market and push up the price to that level, but it seems doubtful whether such intervention would be considered expedient in official circles. The prevailing official view is still that no special measures are needed for stimulating the economy. Should this view be changed possibly the reflationary measures may assume the form of official support to medium and long-term loans. On the other hand, the possible adverse effect of a trade revival on the gilt-edged market must also be borne in mind.

Indian Finance

8 September 1962

Notes

COMPANIES

Fall in Registration
in 1961-62

According to the statistical returns received by the Research and Statistical Division from the Registrars of Companies in various States in India, the total number of new company registrations showed a fall to 1,614 in 1961-62 from 1,683 in 1960-61. But it is notable that the authorised capital of the new companies registered during 1961-62 was higher at Rs 324.87 crores against Rs 287.05 lakhs in the previous year, showing a higher average authorised capital per new company at Rs 20.1 lakhs as compared with Rs 17.1 lakhs in the previous year. Since 1951-52 the average authorised capital has remained higher at Rs 24.8 lakhs and Rs 26.0 lakhs respectively only during 1956-57 and 1958-59.

The industry-wise distribution of the new companies shows that metals and chemicals and commerce accounted for the largest number at 468 and 481 respectively. In terms of authorised capital, the new registrations in metals and chemicals accounted for a total of Rs 153.57 crores which is more than one-third of the total authorised capital of all companies. Next to metals and chemicals and

commerce, transport accounted for 163 companies with an authorised capital of Rs 4.50 crores, though in terms of total authorised capital the third place is taken by the other manufactures which show an authorised capital of Rs 50.13 crores.

The split-up of the new companies as between public and private shows that the majority of the new companies at 1,415 were private. But it is noteworthy that while the number of public companies among new registrations shows an increase to 199 from 153 in the previous year, the number of new private companies was lower at 1,415 against 1,530 in the previous year.

A break-up of the new floatations on the basis of size of capital shows that 74 companies had authorised capital of Rs 1 crore though the largest floatations were in the category with authorised capital of less than Rs 10 lakhs. Companies with authorised capital of over Rs 50 lakhs and under Rs 1 crore numbered 57 and those with capital of over Rs 25 lakhs but under Rs 50 lakhs amounted to 48.

Year	Number of Companies	Authorised Capital (Rs. lakhs)	Average Authorised Capital per new Co. (Rs. lakhs)
1951-52	1,866	1,50.26	8.2
1952-53	1,333	96.42	7.2
1953-54	1,193	1,55.39	13.0
1954-55	1,203	2,25.98	18.8
1955-56	1,448	1,56.94	10.3
1956-57	848	2,10.65	24.3
1957-58	961	1,02.71	10.7
1958-59	1,095	2,34.36	26.1
1959-60	1,452	1,60.54	11.1
1960-61	1,683	2,87.05	17.1
1961-62	1,614	3,24.87	20.1

MICA

Export Prospects
Obscure

The export prospects of mica from India are increasingly becoming obscure owing to the combination of factors like the growing competition from countries like Brazil, the US Government's decision to discontinue stockpiling programme and the emergence of competition from synthetic mica. The adverse impact on Indian mica due to the interplay of these factors are being closely observed by the authorities and trade interests. Speaking at the annual general meeting of the Mica Export Promotion Council held in Calcutta last week, Mr Binodananda Jha, the Chief

Minister of Bihar dealt at greater length on the future of the mica exports and drew pointed attention to the expediency of resorting to adequate measures with a view to safeguarding the mica industry in India. Though Mr Jha has discounted the immediate impact on the mica exports from the synthetic mineral on account of the prohibitive cost of production, it will be precarious to dismiss the danger so lightly as in these days of advanced technological development reduction of the cost of production of synthetic commodities cannot pose an insuperable difficulty.

In such a context, complacency is dangerous. Among measures suggested are the reorientation of the industry for export promotion, the fixation of floor price to mica for protecting the interests from price fluctuations and to accord greater attention to the quality of mica for endearing it to the customers abroad. The exporters for their part can avail themselves of the opportunities afforded for pre-shipment inspection for ensuring that the specific standards are strictly adhered to. The suggestion to develop fabrication of mica in the country needs immediate implementation as India's contribution to the international demand for processed mica was distressingly at a low of mere 3 per cent despite being the largest producing country in the world. The adoption of the processing practices in other countries and even seeking foreign collaboration for the technical know-how will go a long way in taking up this new line of industrial activity. The ensurment of a fair price to mica is also necessary. The practice of buyers dictating and controlling the prices should be put an end to. At the same time ways and means should be adopted to develop new uses for this mineral.

The statistics of export performance tabled at the meeting revealed that exports of mica had gone from Rs 87,724,180 in 1956-57 to Rs 1,02,038,055 in 1958. In 1959 it went upto Rs 1,11,497,472 but thereafter the downward drift began and in 1961-62 it declined to Rs 1,06,604,589.

JAPAN

The Wage Pattern

Under pressure of the technological changes and the fast rising industrial output, the industrial wages system of Japan has been undergoing a reappraisal of its basis and value in recent times. The present system is a legacy of the thirties when wages were principally determined on the basis of employee's seniority. This was the predominant form throughout the country until the end of the World War. Though during the war time mobilisation and the post-war inflation, the principle

of the seniority wage was replaced by a living wage, following the economic normalisation after the cessation of post-war inflation, the old system of wage payment based on the principle of seniority was revived. However, wages showed some improvement as compared with pre-war period since they were fixed in accordance with an objective wage rate table representing the degree of skill, responsibility and efficiency of the worker.

In recent years, pressures to change the system of wage payment have arisen from many reasons. First, as production methods have changed due to technological innovation, skilled workers who rely on rule of thumb methods and those who have just graduated from school show little difference of ability before the line-process automation system. Another significant factor is the tendency toward tightening of the labour market, with a pronounced shortage of new graduates and skilled workers. The impact of new social doctrines and the emergence of labour unions are also important factors in the new situation that demands a change in the system of payment by the old principle of seniority. As a result of the working of these factors attention has now come to be directed to an objective system based on job analysis and job evaluation. Such a system based on job evaluation and job analysis is particularly suited to industries where operations are mainly of a repetitive character. This system is widely prevalent in the other industrial countries. In view of the immediate difficulties faced in its introduction, Japan has been trying a phased programme

through various approaches toward a system of wages based on jobs. Utilisation of existing standards by school careers and seniority, provision of various allowances such as service allowance, attached to responsible posts, allowance for special operations etc are the important strands of the new policy that is being tried in the attempt to introduce a full-fledged system of wage payment by job. The practice has been spreading and according to a survey conducted in March this year, by the Japan Managers Association, companies which adopted the system of wage based on jobs and those which are contemplating the adoption of this system accounted for 11 per cent of 674 companies which gave reply. It is expected that eventually all the companies may be forced to take up the problem which involves not only the revision of wages, but also the reorganisation of the personal management system as a whole.

INDUSTRIAL SCRAP 4 Lakh Tons for Export

The broad acceptance of the recommendations of the Scrap Committee by the Government of India evidences the useful work done by the Committee which was empowered to conduct a comprehensive study into the affairs of the industrial scrap in the country. The most noteworthy decision taken by the Government as a sequel to the report of the Committee is the one relating to the lifting of price and distribution control on all categories of scrap excluding fresh unused defective, re-rollable scrap and ingot moulds in all forms. The Government has also decided to fix an overall quota of four lakh tons for the export of scraps and place a total ban on the export of heavy melt-

ing scrap and No 1 sheet cuttings, including main producer's skull scrap. The free export of other kinds of scrap like 2, 2a and 3 class of sheet cuttings and high silicon sheet cuttings upto the overall ceiling will be permitted in future. But the export of turnings and borings will be left to the discretion of the Iron and Steel Controller and the export of electric furnace skull scrap will be prohibited only when the domestic producers and furnace owners are in a position to utilise this scrap. The Government has not acted on the suggestion to remove the prevailing restrictions on the export of stainless steel scrap and a final decision will be arrived at only after further scrutiny.

The Government's acceptance of the recommendation not to permit licensing for new re-rolling mills is a move calculated to prevent the installation of additional rolling capacity as the recent study

has already given a forewarning that by the end of the current Plan there will be a surplus rolling capacity. However the question of immediate expansion of electric furnace capacity will be taken into account subject to the extent the scrap supply will permit.

While considering the general pattern of export policy for 1962-63 the Committee admitted the need for earning more foreign exchange but at the same wanted to ensure necessary safeguards against a violent spiralling of prices in the country which may result from an unlimited export policy. Only on this basis that the Committee has advised to fix the quota at the same level as in 1961. Even for formulating export policy for latter years the Committee was opposed to formulate it much earlier as the estimates of supply and demand are so tenuous that they require periodical reviews.

★

BRITISH AID £175.5 Committed so far

Two agreements were reached at New Delhi between India and Britain early this week under which the latter will furnish two loans totalling £18 millions for financing the economic development under the Third Five Year Plan. The first of these loans for £13 millions is intended to enable India to provide for the purchase of essential equipments for a number of development schemes in vital sectors of the economy, including the Heavy Electrical Project at Bhopal set up in collaboration with Britain, a ropeway and other equipment for the coal-mines and supplies for the Joint Steamer Companies operating in Eastern India. The other loan which carries an amount of £5 million will be utilised on a wide range of essential imports from Britain in a manner which will provide immediate relief to the already strained foreign exchange reserves of the country. These loans are of a long-term character and are repayable over a period of 25 years with a grace period of seven years before repayment of principal commences. The rate of interest that will be charged on these loans will be the same as that applied by the British Government at the date of issue to a loan for a comparable period from its domestic Consolidated Fund, plus an administrative charge of one-quarter per cent.

It needs to be mentioned that these agreements, the sixth and the seventh to be arrived at between the two countries in connection with the current Plan, are in fulfilment of the promise of £95 million made by Britain at the World Bank Consortium

meetings convened in May and June last year and in July last. These loans thus take the total of aid committed by Britain for the Third Plan upto £95 million. Assistance provided to India under Britain's Technical Assistance Programme, accelerated repayments of the pension fund surplus (Second Plan period) and financial arrangements made with private sources in Britain are not included in the above mentioned figure.

Grand total of disbursed and committed assistance during the Second and Third Plans to date: £175.5 million.

Second Plan

Project aid for Durgapur 1958, £15 million.
General balance of payments aid 1958, £28.5 million.
General balance of payments aid 1959, £19 million.
Project aid for Assam pipeline 1959, £3 million.
General balance of payments aid, 1960, £10 million.
General balance of payments aid 1960, £5 million.
Total £80.5 million.

Third Plan

Commitment to date, £95 million.
Loans signed:
Mixed project and development goods loan—May 1961, £30 million.
General balance of payments loan—May 1961, £10 million.
General balance of payments loan—Nov 1961, £5 million.
General balance of payments loan—May 1962, £10 million.
Durgapur extension loan—May 1962, £22 million.
Mixed project and development goods loan—September 1962, £13 million.
General balance of payments loan—September 1962, £5 million.
Total signed, £95 million.

★

The Indian Central Cotton Committee has estimated the cotton production at the end of June 1962 at 4.89 million bales which compares with 4.76 million bales estimated at the end of May 1962. The major part of the increase is known to have been accounted for by two States, namely, Maharashtra and Gujarat. Stocks of cotton with the mills and trade at the close of the season has been estimated at about 1.7 million bales against 2.0 million bales at the commencement of the season. According to the ICC, stocks at this level and at the current rate of consumption by the mills will be sufficient for more than four months in 1962-63 by which time new crop would become available.

World Population Trends

TWO UN publications issued on 30 August, 1962, viz., the quarterly Population and Vital Statistics Report (Statistical Papers Series A, Vol. XIV, No. 3), which includes data available as of 1 July 1962 on total population, births and deaths and the 1961 Demographic Yearbook, which deals with international statistics on area, population, birth, death, fetal death, marriage and divorce give valuable demographic data. Here are some of the highlights of the reports:

1. By mid-1961 the world's population had passed the three billion mark, representing an increase of almost one-half billion since 1950.
2. An average rate of population growth of 1.8 per cent a year, greater than in any earlier 10-year period, has been shown in the results of population censuses taken during 1960 and 1961 in many countries, stimulated by the UN World Population Census Programme.
3. There are now 22 persons for each square kilometer of land, compared with 18 only 10 years ago.
4. Baby girls in Sweden have the longest expectation of life—slightly over 75 years. Boy babies, with few expectation of life is close to 72 years, also in Sweden.
5. Married persons, the world over, have lower death rates than the single, widowed or divorced.
6. Half, or more, of all the deaths in 1960 in the United Kingdom, Canada, the United States, Australia, New Zealand and Israel were caused by heart disease or cancer.

Among 15 countries of Asia the total population is approximately 35 million persons greater than had been anticipated.

The fastest growing region of the world is Central America, where the average annual rate of growth is 2.7 per cent, but the countries of Southwest Asia have grown almost as rapidly, with an average annual increase of 2.6 per cent. The slowest growth is found among the countries of Northern and Western Europe, in which the population increased by an average of only 0.7 per cent a year.

Density of Population

The increase in the total population of the world has been accompanied by an increase in the density of the population. The greatest absolute increase has taken place in South Central Asia, where there are now 109 persons for each square kilometer of land. Although this region as a whole is still not as crowded as is Cen-

tral Europe, the most densely populated region of the world with 137 persons per square kilometer, South Central Asia had added 12 persons for each square kilometer since 1955, while Central Europe had added only five.

The Netherlands has the highest density of any country—342 persons per square kilometer, followed by England and Wales with 303 persons, Belgium with 300 and Japan with 252. Much greater densities than these occur in certain "city states," such as Ceuta and Melilla (in North Africa), Macau, Gibraltar, Hong Kong, Singapore, Monaco and the Holy See, where densities of between 2,800 and 15,000 are found.

High densities also exist in island areas. Malta and its neighbouring island of Gozo have a density of 1,040 persons per square kilometer, while Bermuda has 805, Barbados 564 and the Channel Islands 561. In Puerto Rico, China (Taiwan), Grenada, the Republic of Korea, the Maldives Islands in the Indian Ocean, and the Ryukyu Islands, densities are 250 or more. At the other extreme are Australia, Bechuanaland, Greenland and South West Africa, with not more than 1 person per square kilometer.

Birth and Death Rates

The estimated world birth rate is now 36 per 1,000 population and the estimated death rate is 18 per 1,000. The highest regional birth rate (48 per 1,000 population) and the highest death rate (27 per 1,000 population) are found in Tropical and Southern Africa. Although the birth rate in Southwest Asia is at the same high level, the death rate in that region is somewhat lower (22 per 1,000). The lowest regional birth rate (18 per 1,000) is that of Northern and Western Europe. The lowest regional death rate (8 per 1,000) is that of the USSR.

With the exception of those for the USSR, regional rates are only estimates and cannot be considered as exact, because birth and death rates for many countries are not known and estimates vary greatly in reliability. Although some of the apparent increase in the population is the result of the fact that methods of counting have become more exact, there is no doubt that the major reason is the decline in mortality. One of the reflections of this decline is the increase in the expectation of life in various countries.

The most recent information received at the United Nations shows the longest expectation of life is for baby girls in Sweden, who can now expect to live for slightly over 75 years. Norwegian baby girls have an expectation of almost 75 years, while in the Netherlands, England and Wales, and France, their expectation is

74 years, and in New Zealand and the United States it is 73 years. In addition, there are 18 other countries, making a total of 25 countries where baby girls can look forward to living for over 70 years.

The longest male expectation of life is close to 72 years, in Sweden, with the Netherlands, Norway, and Israel following closely with 71 years, and Denmark with 70 years. So far, only these five countries have achieved an expectation of life of 70 years or more for boy babies, contrasted with 25 girls live in these ages.

It is possible, however, that even longer expectations than these are already, or will shortly, be evident, as more countries revise their life tables on the basis of recent population census results.

Death Rate Decreases

The long-term downward trend in the death rate can be illustrated by a comparison of average death rates for 1945-49 in individual countries with the rates for 1958, 1959 or 1960. Out of 144 series of death rates covering this period only 10 failed to show a decrease. In 17 cases, the death rate has been cut in half or even more in 71 cases, the rate decreased by between 20 and 49 per cent and in 46 cases, the decrease was between 1 and 19 per cent.

However, according to UN statisticians, the reliability of the figures for over half of the countries in the world for which death rates are available is questionable. In a report prepared for the Population Commission of the United Nations at the end of 1960, it was pointed out that, around 1958, death registration statistics considered to be "complete" (that is, representing at least 90 per cent of the deaths occurring in each year) were available for only 36 per cent of the population of the world. For another 50 per cent of the people, some inadequate data existed, while for 14 per cent there was no indication that any death registration at all existed. That there has been little change in the situation since that time is demonstrated by the fact that the figures for over half of the areas shown in the current Yearbook are still considered incomplete.

Even less adequate is the coverage of specific types of statistics relating to deaths. Only 28 per cent of the world's population was included in complete reporting of deaths by age and sex around 1958, and only 25 per cent for deaths by cause. Thirty-five per cent of the population was covered by complete reporting of infant deaths but only 28 per cent for infant deaths by age.

Lower Death Rate Among Women

Together with their generally greater life expectancy, women

The future is for the foresighted

09/09/62

and girls usually have a lower death rate than do men and boys. In only seven of the almost 90 countries for which death rates by sex are shown in the Yearbook does the crude death rate for women and girls exceed that for men and boys. Of these seven countries, only two are considered to have reliable death statistics.

Among the much larger group of countries where the male death rate is higher than the female, the United States, 38 per cent in male excess is 36 per cent in the Canada, 33 per cent in Argentina and 26 per cent in Australia. These differences are about the same as they were four or five years ago.

The relative weight of environmental factors and of innate bio-

logical factors in effecting the differential is not yet known. It might, for example, result from the fact that males are faced with greater stresses of living or, conversely, that females have a greater capacity to withstand physical and emotional stress.

Regardless of the general level of mortality, the age-specific death rates in individual countries usually conform to a standard pattern, starting at a high peak immediately after birth, falling to a minimum in the early teens, and then rising, gradually at first and more and more rapidly as age advances. The decline in mortality in the world during modern times has tended to accentuate, rather than diminish, the differences in the mortality experience at diffe-

rent ages because death rates in childhood and young adulthood have been cut by proportionally greater amounts than the rates among older persons.

The Married Live Longer

In all parts of the world, married men and women have lower death rates than either the single, the widowed or the divorced population in the same sex and age groups. Among the figures on the death rate by age, sex and marital status, appearing in the Yearbook for the first time, the countries where an exception to this rule occasionally occurs (usually at ages under 20 and over 65) can be counted almost literally on the fingers of one hand.

This relationship holds true regardless of how individual countries classify persons by marital status (whether, for instance, persons not legally married but living in consensual unions are classified as single or as married) and in spite of the fact that the ways in which persons report their marital status at a census and the ways in which it is reported at their death seem to vary.

The relationship among the death rates for persons not married, i.e., single, widowed or divorced, is not nearly so clear, varying from country to country and from age group to age group, with perhaps a slight tendency for divorced persons to have a lower death rate than the widowed.

In the view of United Nations statisticians no single satisfactory explanation for this phenomenon has yet been found. The higher death rate of the single as compared with the married might be the result of the fact that marriage is a selective process, people with serious physical impairments or chronic diseases being less likely to marry than healthier people. On the other hand, it is perhaps true that marriage itself has a salutary effect on health, the family situation giving rise to reciprocal concern about each partner's well-being and a sense of responsibility about preserving one's own health.

The possible effect of divorce or widowhood is open to even more speculation. The lives of some divorced persons might be lengthened by contrast with the single or widowed simply because they have escaped an unsatisfactory marriage. The lives of widowed persons might be shortened by grief or they may have a greater likelihood of having contracted any communicable disease from which their spouses died.

There can only be speculation until it is possible to study data on the cause of death for persons in different age and marital status groups, combined with information on the duration of marriage and no married states.

Infant Mortality Rates Decrease

For each 1,000 babies born alive in Iceland, 13.3 die in the first year of life, in the Netherlands 15.4 and in Sweden, 15.5.

In one West African country it has been estimated that death claims 250 of each 1,000 live-born babies before they reach one year of age.

This contrast in infant mortality rates typifies a situation which has existed for some time. The average rate among a relatively large number of countries decreased from 106 in 1930 to 51 in 1956—a decline of over 50 per cent in 26 years. For the most part, this decrease is continuing. The low rates cited above are substantially below the lowest re-

corded in 1956. Nevertheless, the spread among the rates throughout the world continues.

An examination of the latest recorded rate in 168 areas shows that about 23 per cent are below 30 per 1,000 live births, 34 per cent are between 30 and 60, 27 per cent are between 60 and 100, and 16 per cent are above 100. Furthermore, some of the lowest rates pertain to very small groups of persons, such as the non-indigenous populations in parts of Africa and Oceania and the small European states such as Liechtenstein and Monaco.

In addition to Liechtenstein, Gibraltar, Monaco, Iceland, the Netherlands and Sweden, countries with recorded rates below 20 per 1,000 live births include Norway, Australia, Finland, as well as some non-self-governing territories. Among all of these the United States, with a rate of 25.2 in 1961, ranks 29th in ascending order.

The infant mortality rate is considered to be a good indicator of the general level of health and welfare among a population because it can be affected strongly by culture, environment, sanitation, bad nutrition—or, in other words, by the "level of living." As such, the high rates point clearly to the low level of living which still exists in more than half the countries of the world.

As infant mortality rates are reduced, deaths in the first week of life assume an increasingly larger part of the total infant mortality in many countries. Where infant mortality rates are lowest, more infants die in the first week of life than in all the remainder of the first year. In one European country 7.3 of each 1,000 babies born alive die in the first week of life, while only 6.1 die in the remainder of the first year.

By contrast, in one Latin American country, with a total infant mortality rate of 91.9, only 19.9 of each 1,000 live-born infants die at under 1 week of age, while 72.0 die between the ages of 1 week and under 1 year. The large death rate among babies after one week of life in various countries is probably due, in large part, to environmental causes, UN studies suggest.

New Tables on Perinatal Deaths

High death rates continue among very young infants despite the improvements which have saved the lives of many older babies; the reason appears to be that the factors influencing early neonatal mortality are more closely related to those influencing prenatal than they are to those effective in postneonatal infant mortality. Because of this similarity, deaths just before, during and immediately after birth have been grouped into a single figure, known as perinatal mortality. In general,

perinatal mortality rates measure the risk of dying in the period between 28 completed weeks of gestation and the first 6 days of extra-uterine life.

A newly introduced table in the Demographic Yearbook shows statistics of perinatal deaths. The highest recorded perinatal mortality rates in 1960 (the number of deaths in the perinatal period per 1,000 live births) was 91.8 in Mauritius. The lowest reliable recorded rate was that of Iceland, which was 20.4. The majority of countries considered to have a complete record of such data show rates ranging between 20 and 40, signifying that for each 1,000 children born alive during the year there will be from 20 to 40 still-births and deaths in the first week of life.

A consistent decline in perinatal mortality rates has occurred in the years since 1952, which is the earliest year for which data are shown in the Yearbook. Of a total of 58 series of comparable rates, 10 have decreased by up to 10 per cent between 10 and 30 per cent, and 6 by between 30 per cent. In only one country, Cyprus, is the current reported rate less than half of what it was in 1952.

Causes of Death

The accuracy of statistics on cause of death throughout the world is not really known but must be assumed to be quite poor in many countries. One of the reasons for this assumption is the large number of deaths for which cause is reported only by lay persons with no medical training at all.

In 41 of 84 countries supplying information on this subject, fewer than 90 per cent of all deaths are medically certified. In 15 of the 41, less than half the deaths are so certified. For the remainder of the countries of the world, there is no information on the extent of such certification, but it is not unreasonable to assume that it occurs even less frequently.

The reliability of any distribution of deaths by cause will be determined to a great extent by whether the causes of death have been certified by a physician or other medically trained person or reported by a person with no medical training. Although the extent of medical certification has increased somewhat in the past several years, there is still much room for improvement.

Occupational Pattern

In spite of the interest in variations of the death rate according to occupation, the problems of achieving comparability between the deaths and the population at risk has made this information extremely scarce. Only four countries have found it possible to provide figures on male death rates specifically for occupation or socio-economic group and age.

While it is not possible to compare the four sets of figures in detail, in each of the countries administrative personnel generally have the lowest death rates at all ages, along with farmers and agricultural workers when these latter are shown in a separate group. Miners, quarrymen, mariners, fishermen and unskilled workers appear to have the highest death rates at all ages.

Disease Pattern

Half or more of all the deaths during 1960 in Australia, Canada, England and Wales, Iceland, Ireland, New Zealand, Northern Ireland, Scotland, and the United States were caused by heart disease or cancer. These two causes also accounted for almost half the deaths in Austria, the Channel Islands, Finland, Israel and the Netherlands, and for over 35 per cent of the deaths in Bulgaria, France, Hungary, Luxembourg, and Malta and Gozo.

In each of these countries, deaths, from the infectious and parasitic diseases, pneumonia and bronchitis, gastritis, duodenitis, enteritis and colitis, and from birth injuries and diseases peculiar to early infancy, accounted for fewer than 20 per cent of all deaths.

Almost exactly the reverse situation is found in the Cape Verde Islands, Mauritius, Costa Rica, Guatemala, Panama, Grenada St. Lucia Colombia, China (Taiwan), Hong Kong, Jordan, Singapore and North Borneo, where the latter group of causes accounted for from 35 per cent to 65 per cent of all the deaths, while the former group was responsible for less than 20 per cent of the total.

Significant Variation

According to UN statistics the situation in these two groups of countries generally typifies the broad differences in the economically more advanced countries, where heart disease and cancer form an increasingly important part of the causes of death, as contrasted with the less developed countries, both because of the control of infectious diseases and because of differences in age structure of the population where the latter group of causes still does not approach the magnitude of the former.

A third situation, typifying only about a half-dozen countries, occurs where the two types of causes are more evenly balanced, with heart disease and cancer accounting for approximately 20 to 30 per cent of all deaths and the infectious and parasitic diseases accounting for between about 15 and 30 per cent. In these infectious and parasitic diseases in recent years, with some increases in the rates from heart disease and/or cancer.

Accidents, the Great Killer

In most countries, particularly those with a higher degree of economic development, accidents take more lives than tuberculosis, and with very few exceptions they claim more lives than does childbirth. In 40 out of 47 countries, they are the leading cause of death among young men aged 15 to 24 years, and in 36 they are the leading cause among boys of 5 to 14 years. Girls and young women also lose their lives with notable frequency in accidents, but not to the same extent as the males. In 25 of the 40 countries, accidents are the chief cause of death for females at ages 5 to 14 years, and in 19 countries they are the principal cause among females aged 15-24 years.

Motor vehicle accidents are taking an increasing toll of lives in most countries, while the death rate from other accidents is tending to decrease. The rate from motor vehicle accidents has increased in 37 out of 53 areas for which rates are shown in the Yearbook for more than one year since 1955, while the death rate from other accidents decreased in 35 areas. While deaths from non-motor vehicle accidents are still substantially greater than motor-vehicle-accident deaths in most countries, in Australia and Luxembourg the two causes are almost at the same level.

The highest death rate from motor vehicle accidents is 27.5 per 100,000 population in Austria, followed by 24.8 in the Federal Republic of Germany. Among other motor-vehicle-accident death rates are 23.6 in Luxembourg, 20.8 in Canada, 20.6 in the United States and 20.2 in Switzerland.

The highest death rate from all other types of accidents is 42.6 per 100,000 population in Austria. In France and Mexico, the rate is 41.1, while Peru, Grenada, Finland, Scotland, Panama, Surma, Canada, the United States, New Zealand and Costa Rica have rates between 30 and 37 per 100,000 population.

Europe, Japan Lead in Suicide Rates

The highest suicide rates are found in the European countries and Japan. Hungary suffers the highest rate (24.9 per 100,000 population), exceeded only by West Berlin (34.0). A number of other countries have rates almost as high as in Hungary, namely Austria (23.0), Japan (21.3), Denmark (21.0), Finland (20.4), Switzerland (19.4) and Sweden (18.1).

Rates of below 5 are found in countries throughout the world, including Jordan, North Borneo, Turkey, Greece, Ireland, Malta and Gozo, the Cape Verde Islands, Mauritius, Costa Rica, Guatemala, Nicaragua, Barbados, Grenada, Trinidad and Tobago, Colombia, Peru and Northern Ireland.

Construction of an annular kiln using ACCOSET-50

ACC'S REFRACTORY CEMENT

ACCOSET-50

makes linings and joints as strong as the firebricks themselves

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, **ACCOSET-50** gives good bonding strength and high heat resistance. Once it is dried and burnt **ACCOSET-50** becomes one with the bricks.

YOU CAN USE ACCOSET-50

for jointing, repairing and patching for bonding and laying firebricks of any shape for protective wash for furnace walls and floors for monolithic and rammed linings

ACCOSET-50 — your refractory monolithic cement that makes strong joints to improve furnace thermal efficiency.

ACCOSET-50 — saves your time, saves your money.

Technical literature sent free on request.

For your requirements of **ACCOSET-50** contact

6" spindle ram-type horizontal mill and boring machine

No. 14/36 combination turret lathe installed in the AVB light machine shop

...a Powerful Partnership for Progress

ACC-VICKERS-BABCOCK LTD.

16, Queen's Road Estate, Bombay 1

Calcutta Offices: Ilaco House, 1 & 3 Brabourne Road, Calcutta 1
Works: P. O. Durgapur 1, Dist. Burdwan, West Bengal

The REAL POWER of AVB...

Vast Technical Resources... Modern Workshops...

Immensely rich in experience and technical knowledge, with modern workshops equipped with some of the world's most up-to-date machine tools... here is the *real power* of AVB. The essential combination to generate *real industrial power*.

This real power and potential of AVB will give added impetus to the continued and large-scale expansion of industry... by providing the finest facilities for the manufacture of high pressure steam-raising plant and pressure vessels and heavy machinery for the cement-making and mining industries.

Among the modern machine tools in the AVB workshops are

1. 6" ram-type horizontal mill and boring machine: This machine has a vertical movement of 14' 6" and a horizontal movement of 20' and is the largest of its kind in India
2. Numerous capstan and turret lathes: Upto 36" diameter swing and central lathes upto 42" diameter.
3. 28/60 vertical model hydrotel milling machine: With 360° profile milling equipment.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

SO it wasn't a student on whose behalf some colleges in Calcutta emptied themselves on Tuesday last to seek (perhaps "deal" would be a better word) summary justice. Not that, if it had been, it would have justified the student-marchers' desire to assert the right to travel first class with a third class ticket. On no better evidence than the possession of an exercise book the "wronged" (!) man was identified as a scholar. He turned out to be an apprentice-mechanic in a radio shop. Do you think that this fact has made the "student-leaders" abashed at having set afoot incalculable mischief on a wholly wrong premise? Not a bit. I find that they have been peremptorily telling the Chief Minister that he must do this and do that, that he must release unconditionally all the students arrested and pay compensation to those among them that got hurt in the melee and so on. I like their nerve. And urchins in Naihati have been staying away from classes and going about shouting "First Classsy Jabo, Tikit Dobo na" ("will travel first class but won't pay"). I think it is time that we stopped making excuses for these young delinquents saying boys will be boys and that hooligans took over at some stage in the proceedings and they were helpless. I would be more impressed with the latter argument if there had been one contrite word from the students whose impulsiveness on behalf of some wrong-doer who was not even one of themselves led to all the trouble. A manly apology to the public in a resolution at the meeting they convened the day after the events would have made decent amends. But then they had other business to attend to—wit, beating up a reporter whose paper had given out the fact that the offending traveller was no student.

And why burn trams? After all the CTC had nothing to do with the Railway police hauling up a ticketless traveller. Is it vicarious visitation of baffled wrath on another mode of transport? Hardly, since on other occasions too trams are the first to feel the goondas' touch. What is it about the tram cars that arouses the pyromaniacal instinct of Calcutta rioters? Some unconscious Freudian compulsion?

Or sheer force of habit? I rather fear that it is more disreputable than all these. The argument would appear to be that if trouble we must make, start with "bijayti" property, then move on to government property, and then others, in that order. Burning property belonging to foreigners may even be considered patriotic and government is always fair game. But surely even if you have no tear to shed for the loss of Rs 8 lakhs to the company, the inconvenience to the thirty-five thousand odd people whom the 13 trams that were burned used to carry every day and who now will have to crowd the depleted fleet, should weigh with you? But who cares? And why pelt fire engines away? The answer, of course, is, that they will put down the fire that has been started at such trouble. Ironically enough, the same evening, I saw a grimly moving British film on fire-fighters during the Blitz, and it depressed me that our "heroes" should find such different ways of showing their mettle.

As it happened, I saw the "Tamasha" for sometime on Tuesday. It was obvious that the police were harassed by an odd reluctance to act. Even odder was the curious apathy of the public. Dorothy Sayers remarks somewhere that in a street row, the sympathy of the British crowd is instinctively with the police. Quite the opposite is the truth here. Not one of the many "eye-witnesses" who volunteered information on my way to Sealadah that evening had a word of anger against the hoodlums or of sympathy for the police. The reasons for this are probably complicated. It may be an emotional backwash from a not-too-distant history, when the policeman was the oppressor's tool. Or may be it is the anarchy in all of us getting a wry satisfaction out of the discomfitures of Authority. Some at least of the onlookers were quick enough with their grievances against the Government, which deserved all it got. Or it is just the Indian habit of opting out of any secular involvement? Whatever it is, it is not very creditable to us.

Hoodlums are on the loose and in the news and Calcutta rioters had impressive Indonesian prece-

dent the day before. Indonesia is obviously a touchy nation but its behaviour during the past week of so hasn't been such as to make others try to be considerate to her feelings. The Fourth Asian Games sponsored by the Asian Games Federation Council was running into a storm even before it got started properly since Israel and Formosa were excluded from participation at the Djakarta meet. It is obvious to the unprejudiced that such untouchability in sports is ridiculous. Mr Sondhi from India seemed to have made some clumsy attempts at putting things right by suggesting a change of name. This, in Indonesian eyes, would have stripped the meet of its international character. Indonesia had gone to considerable trouble and expense in arranging the Djakarta meet: the stadium, newly built, is considered by some an expensive "status symbol" that under-developed countries can ill-afford. And here was someone pulling the glamour off the whole thing. All this is understandable, though not necessarily approved of. But when soured amour propre runs amuck and official backing is available for its cruder expressions directed against a friendly and sympathetic government, it becomes intolerable. Some people have been charitable and attributed Indonesian confusion of Mr Sondhi with the Government of India to lack of acquaintance with genuine democracy where the citizen says what he pleases without too fine a regard to the feelings of his Government. But this does not take into account the other sinister facts of the situation. First, it is not the ignorant man in the street who got hot under the collar at what Mr Sondhi did. A minister of the government thought Mr Sondhi's "misdemeanour" serious enough to wish to sever trade relations with India. The subsequent raid on the Indian Embassy, despite the Indian Government's prompt dissociation of itself from Mr Sondhi's personal views shows that other considerations have weighed with the Indonesian authorities. Mr Nehru, never a one to rush to offend susceptible Asian Governments, drew attention to the fact that processions have to be sanctioned officially in Indonesia. Other reports mention government transport used by the rioting mob, which shows official connivance, if not inspiration. President Soekarno too has been studiously silent. Mr Nehru mentioned possible Chinese hand in the direction of the mob fury, a by no means improbable theory. There apparently is a concerted attempt by China to isolate us from the rest of Asia. The Djakarta imbroglio is only the most

recent of much depressing evidence that this attempt is succeeding only too well.

Top management and executive suite are themes on everybody's lips these days. I have never been able to make up my mind how much of the literature the subject has spawned is genuine and how much phoney. Some snobbery is surely involved in the sudden consciousness of Indian businessmen of these problems. I heard the other day that a particular business house which had suddenly found itself a great industrial empire is feeling that some of its former employees are not smart enough and would like to gradually replace them by "qualified men". Not that I consider such preoccupation wrong. Quite the contrary, in fact. Some at least, of the problems of recruitment are "built-in". For example, provision has to be made for the sons and nephews of people likely to be useful at various levels. There must too be the "spy and the hatchet man". None of these things, I fancy, are provided for in the text books. These looked after, the desire to apply the principles of "scientific recruitment techniques" are genuine enough. To the harried men grappling with the problem, Director, the journal of the Institute of Directors, Great Britain, has some news in its August issue. I don't know how much of it is offered "tongue-in-cheek", but anyway here goes. A French company has been applying in its recruitment the ancient principle of the "Golden Mean", dear to the hearts of Euclid and Pythagoras. In other words, besides norms of physical fitness already in use, it requires of its candidates approximation to the principle of the Golden Mean in their physical proportions. The Golden Mean is an ideal ratio, which is 1: 0.618. If, for example, the distance from the foot to the navel is 1, then the ideal distance from the navel to the head should be 0.618. Likewise, if we regard the length of the thumb as equal to 1, then the lower joint of the thumb should be 0.618 from the base and so on. These are stated to be indicative of an elegant, harmonious and balanced individual. Doubtless reference to our manuals of aesthetics, describing in detail the Samudrika lakshanas would help. But one particular doubt gnaws me. A harmonious individual is probably the last man modern business needs. What sort of aggressive salesmanship can you expect from an individual who is not only a paragon of handsomeness, but also a harmonised individual at peace with himself? He may be decorative, but hardly useful. On the whole I think businessmen would be better employed reading Adler rather than Pythagoras if they are at all concerned with their sales graphs.

EAVESDROPPER

THIS IS ONLY AN ANNOUNCEMENT AND NOT A PROSPECTUS AND PERSONS INTERESTED IN THE MATTER ARE REQUESTED TO APPLY FOR A COPY OF THE PROSPECTUS FOR FULL DETAILS.

"An Industrial Licence has been obtained from the Central Government for the establishment of this new Industrial Undertaking of which a copy is open to public inspection at the Head Office of the Company. It must be distinctly understood that in granting this Licence, the Government of India do not take any responsibility for the financial soundness of this undertaking or for the correctness of any of the statements made or opinions expressed in regard to it."

"Consent of the Central Government has been obtained to this issue by an order of which a complete copy is open to public inspection at the Head Office of the Company."

A copy of the Prospectus with the documents required to be attached thereto has been filed with the Registrar of Companies, Maharashtra, Bombay for registration. Applications are invited only on the basis of the Prospectus, copies whereof may be obtained at the Registered Office of the Company, its Bankers, Underwriters and Brokers mentioned herein.

Application will be made to the Stock Exchange, Bombay, for admission of the Company's shares to dealings on the exchange and for an official quotation.

CHITALE SUGAR WORKS LIMITED

AUTHORISED CAPITAL :

	Rs.	Rs.
3,60,000 Equity Shares of Rs. 10/- each	36,00,000/-	
9,000 Cumulative Redeemable Preference Shares of Rs. 100/- each, carrying a rate of dividend of 9.285% free of Company's Income-tax but subject to deduction of tax at source at the prescribed rates	9,00,000/-	45,00,000/-

ISSUED, SUBSCRIBED AND PAID-UP :

1,48,280 Equity Shares of Rs. 10/- each held by Chitale Agricultural Products Ltd., the Holding Company of this Company	14,82,500/-	15,80,810/-
9,831 Equity Shares of Rs. 10/- each	98,310/-	
352 Cumulative Redeemable Preference Shares of Rs. 100/- each carrying dividend as described above.		35,200/-
		16,16,010/-
Less Calls unpaid		300/-
		Paid-up Capital 16,15,710/-

PRESENT ISSUE CONSISTS OF : offered at par

2,01,919 Equity Shares of Rs. 10/- each	20,19,190/-	
8,648 Cumulative Redeemable Preference Shares of Rs. 100/- each, carrying a rate of dividend of 9.285% free of Company's Income-tax but subject to deduction of tax at source at the prescribed rates	8,64,800/-	28,83,990/-

Terms of Payment :

	On Equity Shares of Rs. 10/- each	On Cumulative Redeemable Pref. Shares of Rs. 100/- each
On application	Rs. 5/- per share	Rs. 50/- per share.
On allotment	Rs. 5/- per share	Rs. 50/- per share.

UNDERWRITING

The whole of the above Issue of Equity and Preference Shares offered for public subscription has been underwritten by the Union Bank of India Limited, Bombay. There is no contract or arrangement entered into in respect of any preferential right to subscribe for these shares.

BOARD OF DIRECTORS

Shri MURARJI JADAVJI VAIDYA (Chairman), Businessman, Jadavji Mansion, 3, Cuffe Parade, Colaba, Bombay-5.

CHITALE SUGAR WORKS LIMITED, ANNOUNCEMENT—(Contd.)

MANAGING AGENTS

Messrs. CHITALE & COMPANY (Private), LTD., 31, Western India House Phirozeshah Mehta Road, Fort, Bombay-1.

REGISTERED OFFICE

31, WESTERN INDIA HOUSE, PHEROZESHAH MEHTA ROAD, FORT, BOMBAY-1.

OBJECTS OF THE COMPANY

The Company was incorporated for establishing a Sugar Factory at Chitalanagar in District Sholapur (Maharashtra State), at a distance of 90 miles from Poona. The Factory having a crushing capacity of 800 tons of sugarcane per day will produce approx. 1,38,000 bags of sugar by crushing about 1,20,000 tons of sugarcane during an average crushing season of 150 days.

PROGRESS MADE BY THE COMPANY

Construction of the main Factory Buildings has been already completed. After proper investigation the bulk of the plant and machinery has been purchased from indigenous sources at comparatively cheap prices thereby bringing down the capital cost to a considerable extent. The experts have opined that the selection of the machinery has been well planned, and efficiently made with modest capital cost. The Company has already spent Rs. 63,90,000/- towards the project.

START OF PRODUCTION

As the construction of the Buildings and the erection of the machinery have reached an advanced stage, the Company expects to go into production during the manufacturing season of 62-63.

LOCATION AND ITS ADVANTAGES

The Factory is ideally situated at Chitalanagar, in frost free canal zone. The supply of water is abundant and labour comparatively cheap. The supply of sugarcane in the neighbouring areas is quite adequate with an average yield of about 50 to 60 tons of sugarcane per acre and an average sugar recovery of about 11½ to 12 per cent, the yield and recovery both being reckoned as amongst the highest in India. There is a ready market for sugar in the area surrounding Chitalanagar which obviates necessity of long distance transport.

LOAN FROM INDUSTRIAL FINANCE CORPORATION

After a very careful study of the Company's project, the Industrial Finance Corporation of India has sanctioned a loan of Rs. 32/- lakhs on the first mortgage of the fixed assets of the Company, and has already paid an interim loan of Rs. 20/- lakhs.

MAHARASHTRA AGRICULTURAL LANDS

(calling on holdings) ACT, 1961

The company is not covered by the provisions of the above mentioned Act as it does not have sugarcane plantations of its own.

ESTIMATED CAPITAL OUTLAY, AND FINANCIAL REQUIREMENTS

Particulars.	Exps. incurred.	Exps. to be incurred.	Total.	Other financial requirement.
1	2	3	4	5
Rs.	Rs.	Rs.	Rs.	Rs.
1. Expenditure on Land & Buildings, Plant and Machinery, etc.	63.90.000	20.91.000	84.81.000	
2. Margin for working capital	Nil	5.00.000	5.00.000	
3. Expenses of this issue	...	...	...	1.27.000
4. Repayment of dues to Holding Company	...	...	...	23.78.000
5. —do— to others	...	...	...	1.38.000
Total	63.90.000	25.91.000	89.81.000	26.43.000

THE SUBSCRIPTION LIST WILL OPEN AT THE COMMENCEMENT OF BANKING HOURS ON 12th SEPTEMBER, 1962, AND WILL CLOSE AT THE CLOSE OF BANKING HOURS ON 19th SEPTEMBER, 1962, OR LATTER AT THE DISCRETION OF THE DIRECTORS.

Urban and Rural Housing

Representatives of 22 countries from ECAFE region will participate in an eight-day UN Seminar on Essential Services in relation to Urban and Rural Housing to be inaugurated by the Vice-President, Dr Zakir Husain, in New Delhi on September 17, 1962.

The Seminar, being held at the invitation of the Union Ministry of Works, Housing and Supply, will discuss different aspects of providing community facilities in industrial and urban areas of tropical countries. It is being organised by Economic Commission for Asia and the Far East and Bureau of Technical Assistance Operations in co-operation with WHO.

The member and associate Governments of ECAFE have been invited to nominate a team of three highly qualified persons with wide professional and administrative background, who have experience in the management, construction and maintenance of community facilities to participate in the Seminar.

The agenda of the Seminar divided in five sections, covers administrative and organisational aspects; town planning and its bearing on location and cost of essential services; design, construction and maintenance of essential services; and, financing of community facilities.

In relation to administrative and organisational aspects, the Seminar will discuss the existing and potential demand in urban and rural areas.

It will consider apportioning of responsibilities between the housing authorities, local government and State or Central Government regarding the planning and actual execution of the work in new developments in urban areas and between community development and health authorities in rural areas.

MANUFACTURE OF PLANTS

It will also consider priorities for starting the work on various services in relation to the new housing projects and responsibility of maintenance of services in urban and rural areas.

The Seminar will discuss town planning with special reference to housing densities and its effect on cost of providing services.

In relation to designing, construction and maintenance of essential services, the Seminar will consider the question of water supply, sewerage and storm water drainage, roads, electricity and landscaping.

Another important question which will come up for discussion will be the allocation of cost for services between various authorities in urban and rural areas.

The Seminar will consider possibility of manufacturing different sizes and types of pipes, pumping sets, water purification, sewage treatment plants, electric generators, etc. in the region and also training of suitable staff at various levels for construction and maintenance of such facilities.

FINANCIAL RESOURCES

It is proposed to raise the above amount of Rs. 25,91,000/- and Rs. 26,43,000/- totalling Rs. 52,34,000/- from the following resources:—

	Rs.
(1) Proceeds of this issue	28,83,990
(2) Balance amount of the loan from Industrial Finance Corporation of India	12,00,000
(3) Borrowings from Banks and others	11,50,010
	52,34,000

The Holding Company has assured this Company that it will make available to this Company adequate sums towards any unexpected increase in the estimated capital cost of the project if any or towards working funds that may be required over and above borrowings from Banks, out of its loan of Rs. 23,78,000/- proposed to be repaid by this Company, as shown above.

SCOPE AND PROSPECTS

The Industrial Licence granted to this Company is so far the last in the private sector in the State of Maharashtra, as further licensing of new units has been suspended.

With growing population of the country, demand for sugar is continuously increasing. The demand for sugar will further increase with exports rising.

During the last year India produced about 27.10 lakh tons of sugar against a target of sugar production of 35 lakh tons at the end of the third Five-Year Plan. There is thus a wide gap to be filled. With exports growing and internal consumption of sugar increasing, experts believe the present surplus position of the sugar stocks is likely to be a temporary phase.

ESTIMATED PROFITS

On the basis of existing prices and manufacturing cost arrived at after careful investigation, and also after considering the substantial savings effected in capital outlay, it is estimated that in the absence of any unforeseen circumstances, the Company will be in a position to provide an attractive return to the shareholders. As the plant is expected to go into production during the manufacturing season of 1962-63, it is expected that the Company will earn profits earlier than similar new units which usually take about 2 to 3 years to start operation.

UNDERWRITING COMMISSION AND BROKERAGE

The Underwriters will be paid an underwriting commission of 2% on the face value of the shares in terms of the underwriting agreement with them.

Brokerage at the rate of 1% will be paid on all allotments made in respect of applications bearing the stamp of a Bank or a recognised broker including the Managing Broker. Brokerage on the same basis is payable to the underwriters, in addition to the underwriting commission on all allotments in respect of applications made or procured by them and bearing their rubber stamp.

No commission and/or brokerage will be payable to the Underwriter, Managing Broker, Brokers or Bankers to this issue in respect of shares which may be allotted to Chitale Agricultural Products Limited, the Holding Company of this Company.

APPLICATION FOR SHARES

Application for shares should be made on forms accompanying the Prospectus and should be sent before the closing date of the subscription list to the Bankers of the Company at their Head Office or any of their Branches in India or the Managing Broker or Brokers to this issue or to the Registered Office of the Company duly accompanied by the amount payable on application. Up-country drafts or cheques should not include Bank Charges, as the Collection Charges will be borne by the Company.

Olympus

(From Our New Delhi Correspondent)

Machine Tools

THE Third Plan programmes for the development of machine tool manufacture were discussed at the last meeting of the Informal Consultative Committee of Parliament attached to the Ministry of Steel and Heavy Industries. The Machine Tools industry has been assigned a very important place in the programmes of industrial development. To encourage the development of the industry in the private sector, it was decided in 1960 to place Machine Tools in the free licensing list. Any firm desiring to manufacture any type of machine tool was allowed to do so if the scheme was a round one. High priority is given to the industry in the matter of release of foreign exchange for import of capital equipment.

Production of machine tools has made rapid progress during the Second Plan period, but at the same time demand has grown much faster than production. The Second Plan had fixed a target of Rs 3 crores for machine tools. Production had actually increased from Rs 74 lakhs in 1955 to Rs 4.4 crores by 1959 and was further stepped up to Rs 6.9 crores in 1960 and Rs 10 crores in 1961. The output of machine tools in the small scale sector is now estimated at about Rs 2 crores. The Hindustan Machine Tools, Bangalore, has played a significant role in this rapid expansion. The construction of a Second Machine Tool Factory, entirely financed by HMT, was com-

pleted in 1961. HMT have also been assigned the task of constructing two more units in the public sector.

Despite the rapid progress registered, indigenous production has been able to meet only a small portion of the growing demand for machine tools. The total demand for machine tools computed by adding figures of imports and indigenous production has increased from Rs 0.57 crores in 1956 to Rs 19.48 crores in 1969. It is anticipated that the demand will increase to Rs 60 crores per annum by 1965-66. The Third Plan programmes are designed to ensure that indigenous production would be able to meet at least fifty per cent of this demand; a target of Rs 30 crores per annum has been set for 1965-66. But it has been made clear that this figure is not a ceiling and that favourable consideration would be given to well conceived schemes for increasing domestic production.

Output from the public sector enterprises during 1965-66 is expected to be of the order of Rs 14 crores and from the private sector Rs 15 crores. The output of the four public sector enterprises in 1965-66 is expected to be as follows:

	Rs crores
Hindustan Machine Tools Ltd., Bangalore	7
Hindustan Machine Tools Ltd., Pinjore	3
Praga Tools Corpn. Ltd. Secunderabad	1
Heavy Machine Tool Factory, Ranchi	3
	14

In the private sector 25 licensed units are in production at present. So far 146 licences have been issued for manufacture of machine tools in the private sector. Out of these, 86 firms, it was stated, have not so far been able to implement their schemes. But as licences for 46 out of these were issued only last year, it will be some time before it is known how many of the units would come up. So far action has been initiated to revoke the licences of 27 licensees who have failed to take effective steps to implement the licences granted to them. It was also stated that 14 schemes, which together would account for production of Rs 14 crores were being actively pursued and were expected to be implemented.

In regard to financial assistance for the industry, the National Industrial Development Corporation advances loans for purchase of capital equipment as in the case of the

jute industry. The investment in the industry during the Third Five Year Plan would be as under:

	Total Investment Rs	Foreign Exchange Requirement Rs
Public Sector	22 crores	16 crores
Private Sector	18 crores	11 crores

Neiveli Prospects

Prospects of a steel plant in the South based on Neiveli lignite and Salem ore and expansion schemes of the Mysore Iron & Steel Works were also considered at the meeting of the Consultative Committee. A team of observers, consisting of representatives of the Government of Madras, the Neiveli Corporation and the Union Ministry of Steel & Heavy Industries, was deputed to be present during the pilot plant tests in East Germany and Norway. As facilities for production of lignite coke on a pilot plant scale are not available in India, it was necessary to arrange for carrying out the tests abroad. Tests with Neiveli Lignite and Salem Ore, using electric furnaces in Norway and low shaft furnaces in East Germany were necessary to ascertain the comparative advantages of these two processes. The tests have been completed and the team of observers is expected to submit a report shortly. It is also learnt that a member of the team has sent a preliminary summary report of his impressions of the smelting tests in East Germany. These indicate that the furnace operations were smooth and that Neiveli Lignite Coke stood up to the tests very well. He has also stated that it is possible to make iron of low phosphorus content, suitable for making steel, with lignite coke and Salem ore in low shaft furnaces. Tests have also disclosed that the Salem ore has good sintering properties and will yield a hard sinter. After the report of the team is received, the economics of production using different processes will have to be more closely examined. There is also a proposal for further tests in the USA using a new process of steel making. In the meantime, Messrs Dastur and Co. Consulting Engineers, were being asked to prepare a detailed project report for a pig iron project, later possibly a steel project, based on Neiveli Lignite and Salem iron ore.

Bhadravati

As regards the Mysore Iron & Steel Works, the problem now is one of choosing among a number of expansion projects some of which have been already approved. The latest thinking is to convert the Works entirely into an Alloy and Special Steels Plant. The expansion programme of the Bhadravati Works to 100,000 tons of steel ingots as included in the Third Plan, and orders for machinery for the expansion scheme which was expected to use the LD process were

placed in 1960. Conversion to manufacture of alloy and special steels will involve replacing the LD process, on which basis orders had been placed, by a different process suited to manufacture special types of steel, and consequent modifications of the plant and machinery. According to a preliminary estimate, the conversion will involve extra expenditure of 46 million DM in foreign exchange. But for a steel plant with a small capacity of about 100,000 tons, it will be more profitable to produce alloy and special steels than ordinary steel which can be more economically produced in the integrated plants.

Apart from the original expansion scheme, the Planning Commission and the Union Government had also approved the Mysore Government's proposal to set up capacity of 15,000 tons of alloy and special steel. During his visit to Bhadravati in June, the Minister for Steel and Heavy Industries had suggested that it would be advantageous to combine the expansion scheme and the special steel project and convert the Works entirely to the production of alloy and special steels. Following this the Government of Mysore has submitted two alternative proposals for manufacture of about 12,000 tons of alloy steels as short-term measures within the next two years, and a long-term proposal for the conversion of the Works with installed capacity of 100,000 tons of alloy and special steels. While one of the short-term proposals involves an outlay of Rs 4 crores, the other envisages the use of existing smelting units and a portion of the rolling equipment in the rod strip mills. Additional equipment required will cost about Rs 75 lakhs and the total investment required will be Rs 100 lakhs. The output would consist mostly of low grade alloys and a small quantity of about 100 tons of tool steel.

These schemes were discussed with the Planning Commission in July and it was suggested that in consultation with the technical committee for steel, an integrated scheme for expansion should be prepared and that consequential changes of conversion from LD process should be carefully studied. The Consultants, Messrs Demag, have been asked to prepare a detailed project report. On receipt of the report, which is expected shortly, the problems relating to the economics of the expansion schemes, the technical feasibility and the method of financing and the extent of participation of the Central Government in equity capital have all to be examined further, before the scheme could be finally approved.

Rourkela

The Committee was also told of the progress of implementation of the recommendations of Solven Delegation. At any rate, recent reports from Rourkela bespeak the new drive which has been in evidence since the reorganisation effected by Mr C. Subramaniam soon after he took over as Minister for Steel and Heavy Industries. The production figures for August are definitely heartening; many sections have exceeded rated capacity. The achieve-

8 September 1962

ments are: The two coke over batteries produced 70,457 tons of hard coke as against their rated capacity of 66,666 tonnes. The third coke oven battery was lighted on August 14, and will start production from November, 1962. The total production will then reach the rated capacity of 1,00,000 tonnes.

The two blast furnaces in operation during the whole of August produced 57,865 tonnes of iron against proportionate rated capacity of 60,000 tonnes for two furnaces. The third furnace was recommissioned on August 22 and produced 2,336 tonnes of foundry grade iron. The production during August was 78.4 per cent of the total monthly capacity for the million tonne plant.

The production of ingot steel at 54,022 tonnes was the highest achieved so far. The Plate Mill set up a high record of 15,201 tonnes of plates against the rated capacity of 14,200 tonnes per month. Other sections of the rolling mills have also established substantial production records.

In the meantime Bhilai, which had an earlier start in the 'Record Stakes' continues to maintain its lead. The steel works during August produced 91,600 tonnes of ingot steel, while pig iron production for the month was 1,01,852 tonnes, beating all previous records. The Rolling Mills of the Steel Works rolled out 84,772 tonnes of ingots. With Bhilai and now Rourkela well set in the race for records, it is high time that some records came out of Durgapur, if for nothing else, to show that it is not a non-starter.

Mr Tarlok Singh

The elevation of Mr Tarlok Singh to the Planning Commission is widely regarded as the first of the steps proposed for reconstitution of the Planning Commission as a more effective body. Mr Tarlok Singh brings to the Commission vast and intimate knowledge of the intricacies of Planning. He has been with the Commission since its inception and as member he remains in charge of the Administration. A Trojan for work, Mr Tarlok Singh has found time in the midst of his back-breaking job to write books on planning and rural problems. It is said that he acquired the habit of working eighteen hours a day, when he was Private Secretary to the Prime Minister in 1947. And he kept up the habit even after he was transferred to the Planning Commission which hostile critics sometimes describe as a Pinjrapole. Cool and soft-spoken, Mr Tarlok Singh never strives after verbal brilliance. But he has an answer pat for all inconvenient questions. He is definitely a man to watch, now that he has left the administrative stall for the free pastures of politics.

Swatantra Plan

Mr Tarlok Singh is not the only civilian who has displayed a flair for economic planning. Mr Lobo Prabhu is another. He used to represent the Government of Madras at the meetings of the National Development Council while Rajaji was Chief Minister. But he found his niche

after retirement not in the Planning Commission, but in the Swatantra Party's Alternative to the Third Plan in a series of provocative lectures under the auspices of the Forum of Free Enterprise.

The Swatantra Party has travelled far since the days when Planning was anathema to its founding fathers. Since then the party has learnt, at the hustings, that a Plan for economic development is an essential ingredient of an election manifesto. And the result is the appointment of a Working Group with Mr Lobo Prabhu as convener, to draw up an alternative plan as a counterblast to the Third Five-Year Plan.

The ingredients of the alternative plan have been carefully selected to appeal to the rural voters. It is compounded of freedom for private enterprise, supplemented by subsidies for projects which private enterprise does not find sufficiently attractive, such as agricultural improvements, rural housing, small and medium industries. The Swatantra Plan will maintain the economic

targets of the Third Plan while at the same time effecting drastic reduction in taxes. The Miracle—it will be nothing less—will be achieved by denationalising State enterprises, allowing people the freedom to use their own resources for their economic betterment and, above all, by cutting out all programmes in the Third Plan which the Swatantra Party considers have been included to serve the political interests of the Congress Party. Under this category Mr Lobo Prabhu listed Community Development, Village and Small Scale Industries and even irrigation projects, schools and hospitals. Some irrigation projects, Mr Lobo Prabhu said, are intended not to irrigate the parched fields but the election prospects of Congress members. Land tax will be abolished. For concentration of economic power, Swatantra planners have a simple remedy—a ceiling on shareholdings in public companies. This last is calculated to appeal to the affronted sense of justice of the rural population smarting under land ceiling legislation introduced by Congress Governments.

After all, who has heard of blank transfers in the benighted villages of Tamil Nad and Andhra Pradesh where the Swatantra Party hopes to make its kill in 1967?

About 1,52,000 fertiliser demonstrations were held on cultivators' fields during 1961-62, under the project of the Indian Council of Agricultural Research to popularise new types of fertilisers. Disclosing this, the annual report of the Council for the year, says that in all, 3500 metric tons of fertilisers were supplied free to the States for the purpose of these demonstrations. On the basis of data collected after special fertiliser trials in 130 districts, maps have been prepared showing areas and degrees of crop responses to nitrogenous, phosphatic and potassic fertilisers.

During the year, ICAR sanctioned 76 new schemes of research in agriculture, animal husbandry and allied subjects and the extension of 112 others, at a total cost of about Rs 82 lakhs.

Exports? Imports? Letters of Credit? Foreign Remittances? Travellers' Cheques?

Foreign Trade is becoming more and more complex every day—Exchange Control Regulations of the various countries need careful attention—details of foreign collaboration of any nature require careful study of the various aspects.

Whether it is information that you require or consultation upon any problem, or just efficient service, **THE BANK OF INDIA LTD.**, with its foreign branches and correspondents in almost all parts of the world, can help you expand your overseas business.

INDIA STEAMSHIP COMPANY LIMITED

Notice of the Annual General Meeting to the Shareholders

NOTICE IS HEREBY GIVEN THAT THE ANNUAL GENERAL MEETING OF THE MEMBERS OF THE INDIA STEAMSHIP CO. LTD., will be held at the Registered Office of the Company, 'India Steamship House' 21, Old Court House Street, Calcutta, on Tuesday, the 25th September, 1962, at 3-30 p.m. in order to transact the following business:—

- To receive the Directors' Report and Audited Balance Sheet and Profit & Loss Account for the year ended 31st March, 1962.
- To sanction payment of dividend on Preference Shares as recommended by the Directors for the year ended 31st March, 1962.
- To appoint a Director in place of Dr. S. C. Law, M.A., Ph.D., who retires by rotation and is eligible for re-appointment and to consider and if thought fit to pass the following resolution of which a Special Notice as required by Section 281 of the Companies Act, 1956, has been received by the Company and the relative Explanatory Statement concerning which is annexed hereto as required by Section 173 of the said Act.

RESOLVED that pursuant to the provisions of Section 281 of the Companies Act, 1956, Dr. S. C. Law, M.A., Ph.D., who has attained the age of 70 years and who retires by rotation be and is hereby

re-appointed a Director of the Company and it is hereby specifically declared that the age limit for the Directors prescribed under Section 280 of the said Act shall not apply to him.

- To elect Maharaja Sir Pratap Chandra Bhanj Deo Bahadur of Mayurbhanj, G.C.I.E., a Director of the Company, who retires by rotation and is eligible for re-election.
- To appoint Auditors for Head Office and Branch Office, Bombay and fix their remuneration.

The Share Transfer Register of the Company will be closed from Monday the 10th September, 1962 to Tuesday the 25th September, 1962, both days inclusive.

BY ORDER OF THE BOARD,

A. Mukerji

Secretary,

INDIA STEAMSHIP COMPANY LIMITED.

Calcutta,

The 30th July, 1962.

The dividend, if sanctioned, will be payable on and from 1st October, 1962, to those Shareholders whose names stand on the Register of the Company on Monday, the 10th September, 1962.

N. B.—Member entitled to attend and vote is entitled to appoint a Proxy and the Proxy so appointed need not be a member of the Company.

NOTE: The Explanatory Statement as required u/s 173 of the Companies Act, 1956, is annexed to the convening notice issued to the Members of the Company.

THE CHAMPDANY JUTE COMPANY, LIMITED

NOTICE

NOTICE is hereby given that an Extraordinary General Meeting of Members of The Champdany Jute Company, Limited, will be held at the Registered Office of the Company at No. 2, Netaji Subhas Road, Calcutta, on the 25th day of September, 1962, at 12-30 p.m. for the purpose of considering and, if thought fit, passing with or without modification, the following resolutions as

SPECIAL RESOLUTIONS

(a) That the capital of the Company be reduced from Rs. 60 lakhs divided into 60,000 shares of Rs. 100/- each to Rs. 30 lakhs divided into 60,000 shares of Rs. 50/- each, and that such reduction be effected by returning to the holders of the said shares paid-up capital to the extent of Rs. 50/- per share, and by reducing the nominal amount of the said shares from Rs. 100/- to Rs. 50/-.

(b) That immediately and contingently upon the said reduction of capital taking effect each of the resulting shares of Rs. 50/- each in the capital of the Company be sub-divided into 5 shares of Rs. 10/- each.

By Order of the Board,
JAMES FINLAY & CO. LIMITED
Managing Agents.

Calcutta, 29th August, 1962.

NOTES:—

- (i) A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a member. The instrument appointing the proxy shall be deposited at the Registered Office of the Company not less than 48 hours before the time for holding the meeting.

- (ii) The Share Transfer Books of the Company will be closed from the 10th day of September 1962 to the 25th day of September 1962 both days inclusive.

Explanatory Statement and Statement of Interest of Directors under Section 173(2) of the Companies Act, 1956.

The position arising from the sale is as follows:—

Champdany Mill fixed assets as per the Books of Account as at 31st March, 1962.

	Rs.	Rs.
Land	...	58,394
Buildings	...	12,96,201
Machinery:—		
Mechanical	72,824	
Electrical	2,07,969	
Sprinkler	29,203	3,09,996
		16,64,591

PRICE REALISED	48,20,000
Estimated Cost of Sale	50,000
	47,70,000
Estimated Realisable Profit	31,05,409

The Directors recommend that of this sum of Rs. 31,05,409/-, the amount of Rs. 17,04,690/- representing the compensation to the redundant workers of Champdany Mill arising out of the sale of the property, and in the debit of the Profit & Loss Account as at 31st March last be written off during the current year. This will leave a balance of profit on the Sale of Champdany Mill estimated at Rs. 14,00,719/- to be carried to Capital Reserve.

As regards the disposal of the cash proceeds of the Champdany Mill property amounting to Rs. 48,20,000

the Directors recommend that this be applied towards recouping the cash position of the Company as follows:—

	Rs.	Rs.
To meeting the estimated cost of the sale	50,000	
To meeting the redundancy payments mentioned above	17,04,690	17,54,690

Leaving an estimated balance of cash of ... 30,65,310

The Directors consider that this amount of cash is in excess of the wants of the Company and they recommend that as large a portion of this as can be conveniently arranged should be returned to the Shareholders. The paid-up Capital of the Company is Rs. 59,16,490/- in 59,164 Ordinary Shares of Rs. 100/- each. The Directors accordingly recommend that Rs. 50/- per fully paid up share of Rs. 100/- be repaid. This will absorb Rs. 29,58,200/- of the estimated surplus cash, leaving a balance of about Rs. 1,07,110/-

which after meeting the legal cost of Capital reduction and repayment will comprise a small but useful addition to the Company's liquid resources.

As a result of the foregoing, the shares will then be of Rs. 50/- each denomination. This is an awkward denomination and in order to provide a wider market for the shares, the Directors, recommend that the shares be divided so as to reduce the nominal value to Rs. 10/- each.

The Directors and Managing Agents of the Company are interested to the extent of their shareholdings in the Company as set out below:—

Mr. A. I. Munson ... 10 shares
" B. Gill ... 10 shares
" R. G. Edwards ... 10 shares
" N. S. Coldwell ... 10 shares
James Finlay & Co. Ltd. 28,315 shares

By Order of the Board,
JAMES FINLAY & CO. LIMITED
Managing Agents.
CALCUTTA, 29th August, 1962.

THE CHAMPDANY JUTE COMPANY, LIMITED.

NOTICE is hereby given that an Annual General Meeting (being the Seventy-Second Ordinary General Meeting of the Company) will be held at the Registered Office of the Company, 2, Netaji Subhas Road, Calcutta, on 25th September, 1962, at 12 noon to transact the following business:—

- (1) To receive and consider the Audited Accounts for the year ended 31st March, 1962, the Balance Sheet as at that date and the Reports of the Board of Directors and the Auditors thereon.
- (2) To appoint Directors in the place of the retiring Directors.
- (3) To appoint auditors for the current year and to fix their remuneration.

The Share Register of the Company will be closed from 10th to 25th September, 1962, both days inclusive.

By Order of the Board,
JAMES FINLAY & CO., LIMITED.
Managing Agents.

2, Netaji Subhas Road,
Calcutta, 29th August, 1962.

NOTE:—A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote instead of himself, and the proxy need not be a member. Markets

JUTE

Outlook for Gunnies

THE jute market has been disloyalizing a quiet trend this week with sellers anxious for business. This is in contrast to last week's firm trend which was brought about by apprehensions of an appreciable fall in arrivals as a consequence of the floods in Assam and other jute growing areas. Though reports indicate that the crop in Assam especially has suffered damage, imports of raw jute, have increased during the past few days. The large arrivals may be partly due to smuggling from Pakistan. Reports have it that encouraged by the wide disparity in prices between what are obtainable in India and those prevailing in Pakistan, smuggling activities have increased in recent weeks. Be that as it may, the fact remains that small lots of jute are changing hands at a discount. In the meantime, divergent opinions continue to be advanced regarding the minimum price to be fixed for this season. It is sought to be impressed on Government that further steps should be initiated at an early date to make the buffer stock scheme more effective. In this connection there is a proposal before the Government that the State Trading Corporation should commence purchase of jute preferably from Co-operative Societies in the up-country centres as a supplementary operation to that of the Jute Buffer Stock Association which purchases jute only in the Calcutta market. It is expected that a decision may soon be announced as presently Dr Ajit Mojoyndar, the Jute Commissioner is in New Delhi to hold discussion on the matter with the Union Ministry of Commerce and Industry.

The jute goods market ruled fairly steady during the week as there was a revival of interest in near delivery hessians. The outlook for hessian exports appears to be quite satisfactory in the coming four or five months. Although during the past two or three weeks, the US has not shown much interest in Calcutta hessian as buyers seem to think that price is high, it is quite likely that US buying may revive before long. Already indications are that contrary to expectations, shipping instructions have been fairly satisfactory and it is believed that hessian stocks with mills as at the end of August may show a sizable diminution. It is pointed out that there will not be much difficulty in disposing of hessian production even if output continues at the present rate till the end of the year. Indications are that mills will be asked to continue to work to their full capacity till December.

As for heavy goods, sentiment has turned rather quiet on Wednesday although earlier they were firm on rumours of fresh overseas business. It was reported that the Sudan had placed an order for Sugar bags while Government had called for a tender for B Twills. The general expectation is that the demand for heavy goods will also continue to be quite satisfactory till the end of the year as mills' production would be readily absorbed by overseas orders booked in the past few months as well as the increased internal consumption expected in the next three or four months.

* Foreign Demand Expected

Foreign demand for Indian jute goods should hold strong for the remainder of this year according to Jute Bulletin of the Indian Central Jute Committee.

The bulletin bases this assessment on encouraging crop prospects in the main sack using countries and the return of relative price stability in the Calcutta gunny market, resulting from the firm action taken by the Forward Markets Commission.

Noting that overseas enquiries had broadened last month, the bulletin said that the major beneficiary was the sacking counter which was receiving fairly large orders for a variety of heavy goods from Cuba, Australia and West Africa. As the production of the Pakistani mills was fully booked till the end of November, any new demand would have to be met by India. Further, the bulletin added, the internal demand for sacking goods has looked up and the expectation is that off-take on this account will increase steadily in the months ahead.

The bulletin said: "Against this optimistic background, the IJMA decision to allow member-mills to continue their present maximum level of output until the end of September is specially welcome.

"Depending on the climate of business", it was to be hoped that the mills would be asked to go full-out also in October, "which is a short-working month on account of a number of holidays."

"Optimum mill activity," the bulletin said, "will do three things—ease the ready goods market, safeguard employment and ensure steady off-take of raw jute."

* Minimum Price for Jute

IJMA'S Clarification

From statements which have appeared in the press and from questions which have been asked in Parliament, it is evident that the publicity given to the figure of Rs 30

per md. as a so-called floor price for raw jute for the 1960-61 jute season has given rise to much misunderstanding. Not only has this figure been misinterpreted as being an absolute minimum price for raw jute irrespective of its quality, but in some cases it has even been regarded as the minimum price to be received by the cultivator for his crop. In fact the price of Rs 30 per md. related to a particular grade of jute, namely Assam Bottoms delivered at the Calcutta mills, and was the figure used to indicate the general level at which the jute industry agreed, in the circumstances prevailing at the end of 1961, to do its best to stabilise jute prices at that time. For jute of better quality, such as middles and tops, the corresponding prices are higher, while for jute of inferior quality and from other districts, the corresponding prices are naturally lower.

To clarify the position and remove the misunderstanding which evidently exists, the Indian Jute Mills Association thinks it desirable to publish the following list giving a broad indication of the discounts for some of the principal grades of jute in relation to Assam Bottoms.

	(Rs per md.)
West Bengal:	Discount.
Northern Bottoms ...	0.50
White Deshi Bottoms ...	2.50
Jungli Bottoms ...	4.50
Bihar:	
Good Quality Bottoms ...	1.50
White Deshi Bottoms ...	2.50
Lower Quality Bottoms ...	5.00

As already indicated, these prices are for jute or mesta delivered at the Calcutta mills, including the cost of transport insurance, handling and other charges. The price received by the cultivator therefore depends not only on the quality of his jute but also on the transport and other charges involved in delivering it to the mills.

TEA Need for Strong Internal Market

AN important point stressed by the outgoing president of the United Planters' Association of Southern India at the Association's annual meeting held last week-end, is that the selling price of tea is not governed by the cost of the producer. The world price of tea is controlled by the law of supply and demand. The present position with regard to Indian tea is that the price it is able to get is not remunerative. There is growing competition in world tea markets from producers and the result is a low price for tea. Among the tea producing countries, only India appears to be placed in a disadvantageous position because all the other producers have a low cost of production due to cheap labour, a light tax burden and an easy access to the principal tea consuming countries. Indicative of the difficulties increasingly encountered by Indian tea in the export field, is the declining trend

of exports during the past few years. Even so, Tea is still the largest earner of foreign exchange. The need for maximum exports of tea has gained special significance in the present context of the extreme stringency of foreign exchange. It has now been realised that in order to maximise exports concern must have to be put forth. The various export promotion councils, the special treatment accorded to export industries in the matter of the import of necessary raw materials and equipment are the direct outcome of this realisation of the urgent need for augmenting export earnings. While it is gratifying to note that new products are increasingly finding their way into world markets, it will be too optimistic to expect earnings from these to add up to much in the near future. Our traditional exports such as tea, cotton textiles, jute goods have therefore for some considerable time to come to make up the greater portion of our export earnings.

Viewed in this context of declining exports and the unremunerative price available for our tea, the Third Plan target for tea production of 900 million lbs may seem to be rather ambitious. But it is pointed out in knowledgeable circles that the target would be met provided conditions conducive to a rapid expansion of tea production are expeditiously created in the country. According to Sir Richard Duckworth, Chairman of the Indian Tea Association, it would be quite proper for India to pursue a policy of increasing tea production. But he has pointed out that the increased tea production will depend on the availability of sufficient finance to the industry as also on a strong internal market which can absorb any possible surplus of production over exports.

A generally firm trend prevailed at this week's export auction in Calcutta with a good general demand. A total of 68,543 packages were on offer. Clean plain orthodox teas fetched firm to dear prices with BOP's proving to be a strong feature. The poorest kinds met with quick demand but were sold at irregular rates. Medium Assam Orthodox BOP's were firm to dearer, while the better liquoring kinds were well supported. Prices were, however, irregular especially for fannings.

At this week's internal sale in which offerings totalled 29,523 packages, demand was initially strong but as the sale progressed interest considerably weakened especially with regard to CTC types. There was keen support for CTC dust as the sale commenced but prices declined towards the end particularly for the better teas with some withdrawals in this category. Plain orthodox varieties improved further on last week's rates and quoted fully firm to dearer. There was good demand for bright liquoring Assams. Selected Legg cut dusts were the strongest feature of the sale with their prices advancing at times by more than 50 p.p. Quotations inclusive of excise duty are: Plain Orthodox Dust Rs 4.00 to Rs 4.40; Medium Assam Dust Rs 4.80 to Rs 5.20; Legg Cut Dust Rs 4.20 to Rs

8 September 1962

5.20; Medium Assam CTC Dust Rs 5.50 to Rs 5.90; Good Assam CTC Dust Rs 6.40 to Rs 6.70.

Interest in Medium CTC tapered off as the auction progressed. At the opening the best among them opened strong and sometime attained dearer levels but by close they lost ground quoting at easier levels. Legg-cut sorts, of which only a small selection was on offer, were steady. A generally better trend was noticeable in whole leaf grades with the plainer kinds finding ready sales with the trend sometimes tending to be dearer. Medium tip met with more enquiries but the price trend was irregular. Although Darjeeling was sold readily they were rather irregular. The quotations inclusive of excise duty are:

Clean plain Pekoe Rs 4.10 to Rs 4.60; Plain BP Rs 3.40 to Rs 3.80; Plain Fannings Rs 3.60 to Rs 4.20; Medium Assam CTC BP Rs 5.40 to Rs 6.00; Medium Assam CTC Fannings Rs 5.40 to 6.00; Best Assam CTC BP Rs 7.00 to Rs 8.00; Best Assam CTC Fannings Rs 7.00 to Rs 8.00.

* COTTON Futures Steady

The cotton futures market in Bombay presented steady conditions during the past week and fluctuations were cabined and cribbed to a narrow range of 5 points. The aggregate turnover during the week was pretty meagre. The ruling Jarilla March contract which opened at Rs 741.00 per three quintals moved between Rs 739.50 and Rs 744.25 and finally closed at Rs 742.25. Stray transactions were in evidence from Ahmedabad thanks to favourable weather reports. The operators were disinclined to extend larger commitments obviously on account of the uncertainties that shroud the crop prospects at this stage. The contract met with stout resistance at lower levels and there was a gradual recovery henceforth.

The futures market was devoid of any significant developments during the week under review. Even the eagerly awaited cotton policy for the new season was not made available. The market circles were anxious to know the details of cotton control policy particularly in the light of the prior indications of a rigorous control that are likely to be enforced from the very commencement of the new season.

Cotton production in the 1962-63 season is expected to be higher by nearly 6 lakh bales at 52 lakh bales. With a carryover of approximately 17 lakh bales and imminently 17 lakh bales, the total supply position will be in the neighbourhood of 78 lakh bales. But a particular section of the trade is sceptical about the new crop prospects. This is mainly due to the fact that the crop is left to the mercy of the vagaries of the monsoon and the reported damage

to the crop in cotton growing tracts like Khandesh and some parts of Gujarat.

In the spot market at Sewri routine business was reported. Selected varieties such as Laxmi, Co2 and Jayadhar met with keen interest from spinners. In the import section occasional business was done in Sudanese and Pakistani crop. Prices were well maintained.

The Government of India has decided to allow the import of 175,000 bales of 400 lbs each of raw stapling 1-1/16" inches and above from any area. The announcement made by the Joint Chief Controller of Imports and Exports in this connection indicates that the entire quantum permitted for imports will be available for shipment only from 1 January 1963 but not later than 31 May 1963. Therefore the import licence will be valid for shipment only between 1 January and May 1963. The announcement also mentioned the pattern of allocation of the imported cotton. Out of the total quantity allowed for import 25,000 bales would be allotted to mills against their retention quota under the export incentive scheme. The remaining 150,000 bales would be distributed in the following manner: 75,000 bales of cotton stapling 1-1/16 inches and above but below 1-3/16 inches would be allocated to consumers of cotton of the same staple on the basis of their consumption for such cotton during the calendar year 1960 and the balance of 75,000 bales would be distributed to the consumers of imported cotton stapling 1-3/16 inches and above on a similar basis of their consumption. The mills applying for import licence for importing cotton stapling of 1-3/16 inches and above are required to pay a premium of Rs 200 per bale of 400 lbs. each whereas those applying for licences to import 1-1/16 inches and above but below 1-3/16 inches are required to pay a premium of Rs 150 per bale to the Indian Cotton Mills Federation, Bombay.

India figured as the second leading supplier of cotton textiles to Aden during April 1962. Out of the 4,517,706 yards exported to Aden from various destinations Japan accounted for 1,651,471 yards and India for 1,633,453 yards and Pakistan's contribution amounted to 878,180 yards.

PIECEGOODS

The cotton piecegoods market during the week under review exhibited slightly better conditions. A revival of demand from the upcountry dealers was visible in the domestic section, though the demand failed to reach upto the expected level. Business on a small scale was done in coatings and malasia while printed and dyed flannels met with only few enquiries. Blue and black drill were in the limelight. Prices of

shirtings and poplins tended to be rather easy. A small decline in prices of saris and dhoties was reported mainly on account of the slackening of demand in the context of an encouraging supply position.

Traders from Bihar and Uttar Pradesh figured as prominent buyers while those from Calcutta did not enter the market at all. It is rather unusual that this centre is dormant particularly at this time due to the proximity of the Puja festival and the trade is optimistic that the demand will pick up in the immediate future.

The powerloom section remained firm thanks to the improved local demand and the soaring prices of grey yarn. Mills showed keen interest in grey mulls, but that variety was found in short supply.

Considerable business was transacted in grey sheetings at fairly attractive prices in the export front. The US accounted for a huge quantum of furnishings while Sudan and East Africa were satisfied with a restricted quantity of usual varieties. Burma focussed its fancy on printed voiles and shirtings though the turnover was very limited. Australia accounted for a moderate quantum of usual varieties particularly mulmul.

* Non-Ferrous Metals Firm

FERM conditions have continued to prevail in the Bombay Non-Ferrous Metal market, mainly due to restricted arrivals. In the case of Copper, there are reports of delay in the clearance of consignments. In this respect, importers in Bombay are perturbed over the change in the procedure of assessment of countervailing duty, made effective from 1 September. The change refers to the weightment of each consignment of unwrought copper when it is not covered individually by weight specifications as furnished by the overseas suppliers or the refinery.

Copper importers have pointed out that it will neither be possible to produce such weight specifications as required by the Customers nor to confirm that the ingots or bars forming the consignment are of uniform size and weight. For, it is stated, that overseas refineries' producers do not furnish any weight specifications for individual lots or for ingot bars. Only consolidated weight specifications are issued by the overseas suppliers and those only to large quantities depending on the capacity of the weight scale. Secondly, it is learnt, that wide differences exist between ingot bars of the same consignment which render the percentage check weightment also not feasible. It is, therefore, felt that the implementation of the new procedure will delay the clearance of consignment from the docks. Moreover, importers have urged the Customs authorities to

accept the weight as quoted on the overseas suppliers' invoice and the B.I. of Lading. Meanwhile, copper prices have risen by Rs 2 per 50 kg.

Zinc has also firmed up to Rs 280 per 100 kg owing to scanty offerings in anticipation of a further rise in prices. In this connection, it is felt that the imports of far more useful metals have been curtailed. A suggestion is made with regard to the readjustment of the country's import policy. This suggestion is, that the imports of zinc, which is in heavy demand, should be liberalised, if necessary by cutting down the quantum of lead imports.

Tin is again to the fore. The metal has staged a sharp advance in prices to touch a new peak for the year. Paucity of stocks and encouraging advices from the South have contributed to the rising trend in prices. Sellers are, therefore, reserved on the hope that prices will advance further. Dealers and stockists have held on to their holdings and even made fresh purchases on the belief that the recent cut in imports will not be restored. Sentiment is also aided by the firmness of the metal in the London and Singapore markets.

India's imports of the four major base metals—copper, zinc, lead and tin—in the first half of this year mirrored faithfully the Government's restrictive policy, only the lead import figure showing a rise of 2,400 tonnes at 17,500 tonnes as compared with 15,100 tonnes last year. Imports of virgin copper, during the period, totalled 2,500 tonnes against 33,100 tonnes in the corresponding period of last year; zinc imports amounted to 36,600 tonnes against 38,200 tonnes, while imports of tin were more or less maintained at the 1961 level of 2,600 tonnes. The estimated annual requirements of these metals are:—copper and zinc 85,000 tonnes each; lead 35,000 tonnes and tin 7,000 tonnes.

On the London Metal Exchange, an interesting scale of affairs has now developed in Tin. The US Government has finally announced its long-awaited stockpile selling programme. It was expected that the US would be selling 300 tons a week; but it has now decided to sell only 200 tons. Some dealers have pointed out that, if the US continues its stockpile sales, they will virtually eliminate the present gap between world tin consumption and production. Consumers may also decide that they do not need to hold large stocks as in the past. As a matter of fact, there are reports that there is enough tin in the US stockpile to prevent a serious shortage of the metal for ten to fifteen years. But the Tin Council thinks further ahead than this and wishes to ensure supplies for future generations.

* YARN

Prices on the Bombay Yarn market showed a mixed trend. While staple-fibre yarn suffered a further setback owing to the continued long liquidation, prices of art silk yarn showed a small improvement, thanks to sustained demand.

Reports of heavy deliveries induced large-scale liquidation in staple futures. Bulls were inclined to transfer their position from the current contract to the distant delivery. With the result, the contango widened during the week.

In the cotton yarn section, 60s, 80s, and 100s improved owing to short supplies. Coarse and medium counts were, however, easy in the absence of any incentive.

SILK

The Bangalore Silk market displayed a mixed trend during the week ended 24 August. Rates of filature raw silk of 20/22 Dr. were revised between Rs 84.89 and Rs 88.20 per kgm. Cottage basin silk fluctuated between Rs 79.37 and Rs 82.67 per kgm. Charka silk declined slightly to Rs 57.32 and Rs 74.96 per kgm.

Spun silk yarn of 2/210's was quoted at Rs 74.96 per kgm.

Filature and cottage basin silk waste remained steady at Rs 12.23 and between Rs 9.35 and Rs 11.55 per kgm respectively. Charka silk waste varied from Rs 3.85 to Rs 4.95 per kgm.

Reeling cocoons ruled between Rs 3.25 and Rs 5.75 per kgm. Foreign and Mysore race seed cocoons increased to rule between Rs 8.00 and Rs 13.00 and Rs 5.00 and Rs 6.50 per thousand respectively.

The Bhagalpur Silk market presented steady trend during the previous week. Prices of tasar raw silk, silk waste as well as spun silk yarn remained firm. Daba and Bogai varieties of reeling cocoons were quoted at Rs 90.00 each per kahan. Eri cocoons and yarn were stagnant.

In the Malda Silk market, cottage basin and charka raw silk were steady between Rs 75.00 and Rs 78.00 and Rs 62.00 and Rs 74.00 per kgm respectively. Matka yarn ranged from Rs 23.58 to Rs 42.87 per kgm. Reeling cocoons varied from Rs 3.00 to Rs 3.25 per kgm and silk waste was quoted at Rs 2.14 per kgm.

The f.o.b. price and landed cost of Japanese raw silk of 20/22 Dr. were Rs 65.63 and Rs 100.55 per kgm respectively as on 15th July, 1962.

SUGAR

A fall demand at higher levels and fears that the Government may take steps to check the rising trend in prices have caused a slight setback in Sugar prices during the week. As stocks of gur and khand-sari are poor and consumers' demand is likely to increase due to the coming festive season, trade circles do not apprehend a substantial fall in prices in the near future.

The demand for the sweet commodity has been keen during the last few days. Gujarat and Saurashtra are reported to have diverted their purchases to Bombay owing to higher prices at the dealers in Uttar Pradesh. The trade does not expect the State Government to

intervene at this stage. A section of the trade, however, feels that the tender system should be so amended as to ensure even distribution of the commodity to a larger number of dealers.

The US Department of Agriculture has boosted US requirements for 1962 by 200,000 short tons and has stated that most of the additional purchases will be made from Western Hemisphere. The Department has also stated that the increased requirements are made necessary by a strong current demand and the fact that considerable quantities of foreign and domestic sugar, due to be supplied under previously-allotted quotas, will not be available until new harvests begin late in the year.

FOODGRAINS

Barring Gram which was steady on the Punjab advices, other foodgrains ruled generally quiet in the Hapur market on reports of rains over a wide area. While farm variety wheat remained almost unchanged, the average quality declined by 67 nP per quintal. Gram improved by 32 nP per quintal as arrivals were reported to be small. Among Pulses, Peas sought lower levels on slack demand. The market for Arhar ruled quiet in the absence of demand, while that for Moong remained depressed on easier advices from the South.

In the Bombay market, prices of foodgrains showed a moderate decline from the previous levels. Wheat showed a fall of about Rs a quintal due to selling pressure, induced by the sustained inflow from the Punjab. In the Rice section, trading was a dull affair with the retailer interest remaining at a low ebb. Although arrivals were fairly satisfactory with the bulk of the supplies coming from Madhya Pradesh, there were strong rumours that the movement of rice from the Madhya Pradesh State might be banned in view of the inadequate rainfall. Trader were, therefore, inclined to wait for a few days more in order to obtain a clearer picture of the situation.

OILS & OILSEEDS

After an interval of three holidays, the Madras oils and seeds market opened slightly easy. Arrivals of groundnut kernels had slowed down. The City is getting only 50 tons daily. In Southern side the arrival of kernels had gone down to 200 tons daily. In Pollachi the market is receiving at the rate of 200 tons while Salem receives about 25 tons daily. Movements of the new summer crop are also restricted. There is also some coromandel variety available.

Calcutta absorbed fairly sizeable quantities of groundnut oil last week. Also small operators and vanaspathi dealers took up some stocks. For September third week deliveries of groundnut oil some

premium rates were paid. Local bazar interest also were keen in taking up oil for their innumerate commitments.

Old winter crop of groundnut was not much in evidence. Buyers continued to be hesitant because the price of groundnut looks still high. In groundnut oil forward position there was not much activity. September contract was quoted at the Ready rate. January 1963 forward quotation remained mostly nominal throughout last week.

Groundnut cake remained very firm as supplies were not adequate. Summer groundnut crop arrivals in the South had gone down appreciably due to the season advancing. Prices of gingelly oil and seed maintained more or less at a steady level. The West Coast coconut oil market maintained steady level with small decline for all positions.

Ready groundnut oil last Thursday was quoted at Rs 191.50. It declined to Rs 191.30 with lack of buyers. On Saturday the Ready rate declined to Rs 190.00. As for September position last Thursday it was on par at Rs 191.50 with Ready. On Saturday September was at Rs 192. January position remained at Rs 183 and went down to Rs 182 last Saturday.

Groundnut kernel coromandel quality was at Rs 80 improving to Rs 81 by the weekend, while summer peanut remained at Rs 78 per bag of 80 kgs. Groundnut oil per candy of 500 lbs in the Southern markets remained the same more or less throughout last week. In Guntur it was at Rs 435. Vridhachalam Rs 425, Nandyal Rs 425, Villiputtur Rs 425, Cuddappah/Yerraguntla Rs 427, Tanjore Rs 425 and Salem the same.

Groundnut kernels at Vridhachalam was quoted at Rs 81 per bag of 80 kgs. At Villiputtur Coromande was available at Rs 81. In Cuddappah and Pollachi the peanut crop was at Rs 73 per 80 kgs.

HIDES & SKINS

There was no change in prices of tanned cowhides for the week. Arrivals were also not much. There was not appreciable business with the United Kingdom. Prices offered for fifth selection or 5/5½ lb of tanned cowhide was on the basis of 49½d. For the same quality 8/8½ lb the basis of negotiation was reported to be 39½d. For fourths the prices were 64d and 54d. For 5/5½ lb and 45d and 42d for 8/8½ lb.

Much activity was however seen in the semipremium marks. Importers were prepared to offer half to a penny more. The basis of negotiations in this for 5/5½ lb run, fourth and fifth was at 75½d and 58d respectively.

There was not much business in inferior fifts. The prices asked for in Madras was considered very high. Good inquiries were also made for 1/1½ lb run at 108d.

No change was observed in tanned buffalo calf. The quotation for this commodity was on the basis of 93d and 73d for 1½/2 lb. Tanned goatskin prices were considered very high. Therefore business was not much. Light weight continued to be firm on the basis of 16/9d, 16/3d, and 13/9d in 8/9 lb. In the 11/12 lb business was reported in prime class marks. The market in prime class tanned sheepskins was quiet the price remaining to be good.

HUKUMCHAND JUTE MILLS LIMITED

Notice to Share Holders

NOTICE is hereby given that the next Annual General Meeting of the Share-holders will be held at the Registered Office of the Company, 9, Brabourne Road, Calcutta, on Thursday, the 27th September, 1962, at 4.00 P.M. for the following purposes:—

- (1) To receive and pass the Directors' Report and Audited Accounts for the year ended 31st March, 1962.
- (2) To declare dividends.
- (3) To elect Directors in place of those retiring.
- (4) To appoint Auditors.
- (5) As special business to consider and if thought fit to pass with or without modification the following Resolution as Special Resolution:—

"RESOLVED that Sri Debi Prasad Goenka, a Director of the Company retiring by rotation, who is a partner of the Managing Agents be and is hereby re-elected a Director of the Company."

Dividends, if declared, will be paid to Registered Shareholders only.

The Share Transfer Register of the Company will be closed from the 17th September, 1962, to 27th September, 1962, both days inclusive.

By Order of the Board,
RAMDUTT RAMKISSENDASS,
Managing Agents,
Calcutta,
30th August, 1962.

A Member entitled to attend and vote at the above meeting is entitled to appoint a proxy to attend and vote instead of himself and the proxy need not be a Member.

Explanatory Statements in connection with the special business will be sent to the individual shareholders.

Indian Finance

8 September 1962

For the Investor

INVESTMENT GOSSIP Steel Retention Price Disappoints

In Friday's trading on Lyons Range, Indian Iron lost considerable ground to be placed at Rs 25.70 as against the previous day's closing of Rs 26.30. Selling pressure was encountered in the scrip on Thursday itself on rumours that the increase in retention price granted was somewhat less than what the Tariff Commission had recommended. It was reported that the increase amounted to Rs 30 over the prevailing price of Rs 512 per ton while the Tariff Commission's indication was Rs 550 per ton. But the news that awaited the market the next day proved to be quite disappointing. The increase in retention price granted is only Rs 10.50. This is applicable upto March 1962. As the market expected a much higher increase, the news generated selling pressure with the result the quotation was pushed down rapidly. Though it was anticipated that Government would be rather stringent in granting an increase in the retention price, few expected that it would be as low as it had proved to be.

Uncertainty regarding the steel retention price apart, there is little in the investment situation that can provide an incentive to abiding interest being taken in equities at least at the present juncture. It is still doubtful if the remedial measures initiated by authority would result in commissioning industrial capacity rendered idle by paucity of imported raw materials and essential equipment. It is yet too early also to assume that shortage in power, coal and transport has been satisfactorily overcome so that industrial production could rise uninterruptedly.

Another impediment in the way of an expansion of interest in the stock market is the growing stringency of money. With the busy season due to commence shortly, there is already pressure on available funds. Bank finance may be difficult to obtain as Banks' funds are already sizably employed in Government loans. By the same token, the LIC may not evince much interest in equities for some time. Investors too hereafter are likely to keep a close eye on yield as interest rates are going up.

It would appear that speculative fervour is subdued by apprehensions of a possible change in Government's policy toward the private sector. It is expected that

some indication in this regard will be available after the Prime Minister's return from his foreign tour, for it is believed that he may then be reshuffling his cabinet.

INVESTMENT SPECIAL Chitale Sugar Works

Chitale Sugar Works Limited is offering at par for public subscription 2,01,919 equity shares of Rs 10 each and 8,648 cumulative Redeemable Preference shares

of Rs 100 each carrying a rate of dividend of 9.285 per cent free of Company's income tax but subject to deduction of tax at source at the prescribed rates. Payment is to be made in equal instalments on application and allotment. The subscription list opens on 12 September and will close on 19 September or later at the discretion of the directors. Production is expected to commence during the manufacturing season of 1962-63. The company was incorporated for establishing a sugar factory having a crushing capacity of 800 tons of sugar cane per day. The total production may approximate to 1,38,000 bags of sugar during an average crushing season of 160 days. The factory is situated in an ideal location in one of the best sugar cane regions in the country. As there is a ready market for sugar around the factory area, the company will be able to dispose of its production easily without

relying much on long distance transport.

NEW CAPITAL ISSUES

Six companies are the latest to be given consent by the Controller of Capital Issues to issue capital totalling Rs 2.15 crores. Of these, two are banks and one is an insurance company. Two companies are issuing bonus shares. The consent of the Controller in all cases is valid for 12 months.

Following are the details:

Jayanti Shipping

Jayanti Shipping Company (Private) Limited, Delhi, is issuing Rs 2 crores divided into 2,00,000 equity shares of Rs 100/- each, to be issued for cash at par. The proceeds of the issue will be utilised in paying off the balance of amount to the sellers of the oil

"I say, our accountant who has the exchange rates of Sweden and many other countries at his finger-tips. Quotations for BINNY fabrics are called for by discerning buyers in over 50 countries overseas—countries where good quality and efficient service are appreciated—countries where the name 'BINNY' is known and trusted.

Quality Control
BINNY's reputation for the excellence of their fabrics is in no small part due to their system of rigid quality control—a system of laboratory testing designed to eliminate defects at every stage of production—a system of control that guarantees the strength and durability of all BINNY fabrics.
Every year BINNY manufactures over 82 million metres of Shirts • Khaki Drills • Bleached and Dyed Drills • Towels • Crease-resistant Suits • Tussore • Union Fabrics • Silk Saris

The Panipat Woollen & General Mills

The Panipat Woollen & General Mills Company Limited, Kharar (Punjab), having a paid-up capital of Rs 10,51,984/- will raise further capital of Rs 3,12,630/- divided into 31,263 equity shares of Rs 10/- each to be issued as bonus shares on capitalisation of the company's general reserve to a like extent.

Asian Distributors

Asian Distributors Limited, Rajasthan, is issuing bonus shares of the value of Rs 5 lakhs on capitalisation of reserves to a like extent.

ASHOKA CEMENT LIMITED

Registered Office:
DALMIANAGAR (BIHAR).

NOTICE

The Annual General Meeting of the Shareholders of Ashoka Cement Limited will be held at the Registered Office of the Company at Dalmianagar on Saturday, the 29th September, 1962, at 11 A.M. to transact the following business:—

- (1) To receive and adopt the Directors' Report and audited Statement of Accounts for the year ended 31st March, 1962.
- (2) To declare dividend.
- (3) To elect a Director in place of Shri M. L. Jalan, who retires by rotation, but, being eligible, offers himself for re-election.
- (4) To appoint Auditors for the current year and to fix their remuneration. The retiring Auditors, Messrs. N. C. Jain & Co., Chartered Accountants, being eligible, offer themselves for re-appointment.

Share Transfer Books and Register of Members of the Company will remain closed from Wednesday, the 19th September to Saturday, the 29th September, 1962, both days inclusive.

By Order of the Board,
For ASHOKA CEMENT LIMITED,
For SAHUJAIN SERVICES LIMITED,
S. SRIKRISHNA AYYAR,
Director.
Secretaries.

Calcutta,
24th August, 1962.

Note: A member entitled to attend and vote at the Meeting of the Company is entitled to appoint another person as his proxy to attend and vote instead of himself and such proxy need not be a member.

Sri Mayuram Bank

Sri Mayuram Bank Limited, Mayuram, is to issue capital of Rs 2,54,000/- in 2,540 'A' class shares of Rs 100/- each, for cash at par. The proposed issue will strengthen its capital base.

Indian Mercantile Insurance

Indian Mercantile Insurance Company Limited will capitalise Rs 4,23,060/- from its reserves for the purpose of raising the paid-up value of 42,306 shares already issued from Rs 40/- per share to Rs 50/- per share.

The Chettinad Mercantile Bank

The Chettinad Mercantile Bank Limited is to issue capital of Rs 1,800/- in 18 shares of Rs 100/- each, for cash at par, Rs 60/- per share paid-up. The proposed issue will strengthen its capital base.

INVESTMENT NOTES

IISCO Output

Steel production by the Indian Iron and Steel Company at their Burnpur works recorded an improvement in August over that of the previous month.

According to a statement issued by the company's agents the approximate production of saleable steel in August amounted to 69,349 tonnes as compared to 63,006 tonnes in July. Pig iron production was 105,296 tonnes against 96,151 tonnes and steel ingots 79,708 against 78,352 tonnes.

During the month despatches totalled 66,872 tonnes against 56,251 tonnes in July.

Arlabs Limited

The subscription list of Arlabs Limited will open on 10 September and will close at the close of the Banking hours on 15 September or earlier but not before the close of banking hours on 12 September. The company is issuing 20,000 equity shares of Rs 100 each at a premium of Rs 50 per share of which 8,344 equity shares are issued to the existing shareholders, 1,656 equity shares are reserved for allotment to such persons as the directors may deem proper and 10,000 equity shares of Rs 100 each at a premium of Rs 50 per share are now offered to the public for subscription. The company has undertaken the manufacture of vat dyes and under the first phase of their expansion programme, has reached the monthly production capacity of 1400 kg. Under the second phase which is under way the company proposes to reach the production level of about 6000 kgs. per month.

STOCK EXCHANGES

Sentiment Depressed

Watch-Dog Writes:

Stock markets ruled quiet most of the time during the past week. Bulls who were quite aggressive especially around steel shares the previous week were sorely disappointed by the inordinate delay in the announcement of the steel retention price. Though it was believed earlier in the week that the announcement might come at the end of the week, few were prepared to extend commitments in view of the persistent rumour that the new price would be smaller than what the Tariff Commission had recommended. It was announced on Friday the additional retention price allowed was only Rs 10.50. This was much below market expectation. Speculative fervour was subdued by the official indication that vigorous measures would be taken to hold the general price line. Investment support also was hesitant as the outlook for most industries was not considered to be bright in view of the growing idle capacity of industry. It is also apprehended that there will not be much flow of funds to the stock market in view of the proximity of the busy season.

The Calcutta Stock Exchange opened the week on a slightly better tone with interest concentrated on jute shares. Initial enthusiasm could not be maintained as in later dealings sentiment was adversely affected by the inordinate delay in the announcement of the steel retention price. The fact that trading had been interrupted by a holiday was also partially responsible for the hesitancy in Lyons Range. On Thursday, Iron came under heavy selling pressure on adverse rumours about the steel retention price and on Friday the scrip lost considerable ground on the announcement of a lower than expected increase in retention price.

It was a dull week on the Bombay Stock Exchange. Besides the disappointment caused by the delay in the announcement of the steel retention price, trading had been adversely affected by the intervention of holidays. Steel shares were subdued as earlier hopes of an interim dividend from TISCO did not materialise. Cotton textiles were depressed as exports in the first half of the current year were at a disappointing level.

Trading on the Madras Stock Exchange was on a much reduced scale as both operators and investors were hesitant to extend commitments in view of the prevailing uncertainties in the investment situation. Even so, selected scrips all along the line were well maintained. Among plantings while teas were generally quiet,

coffee shares met with realising pressure.

CALCUTTA

Calcutta, Friday Evening

The Calcutta Stock exchange started the week after the extended week-end generally on a quiet note in the absence of fresh incentives. In earlier dealings a few selected jute shares met with some demand on hopes of improved earnings by the industry. But in subsequent trading, the list as a whole met with poor response from buyers mainly in sympathy with the market leader which was depressed because of the inordinate delay in the announcement of the steel retention price. On Thursday Indian Iron came under heavy selling pressure on rumours of a smaller than anticipated retention price being decided upon by Government. It was reported late on Thursday that Government had come to a decision on the steel retention price and an increase of Rs 30 per ton had been granted. But Friday brought the depressing news that the increase in retention price was only Rs 10.50.

In the general depression over the disappointment as regards the continued delay in the official announcement of the steel retention price, the market completely ignored the news of a rise in the output of the Indian Iron and Steel Company during August. Both production and despatches have risen. Apart from the disappointment caused by the small quantum of increase in steel

THE BENGAL COAL CO., LTD.

The Board of Directors have today declared interim dividends in respect of the year ending 31st October, 1962 @ 1.998% on the Preference Shares and of Rs. 3/- per share on the Ordinary Shares. Tax will be deducted from both these dividends in accordance with the provisions of the Finance Act currently in force. These dividends will be payable to those members whose names are registered in the Books of the Company on the 21st September, 1962 and the Dividend Warrants will be despatched to shareholders on that date.

The Register of Members and the Transfer Register of the Company will be closed from the 8th September to 21st September, 1962, both days inclusive.

By Order of the Board,
THE BENGAL COAL CO., LTD.,
ANDREW YULE & CO., LTD.,
A. S. MacLaren,
Secretary,
Managing Agents.

Registered Office,
8, Clive Row,
Calcutta-1,
30th August, 1962.

retention price, the market is worried about the overall industrial picture. The official review of the Third Plan's first year has shown that industrial production is lagging behind in vital sectors. There is then the uncertainty as regards exports prospects of cotton textiles and other commodities in the event of Britain joining the European Common Market. Investors are also naturally cautious to lend support at higher levels in view of the higher interest rates and the stringency of money.

Jute shares were selectively better in earlier dealings but even this section was rather subdued by close, in sympathy with the rest of the market. It would however appear that selected jute shares will begin to attract attention when conditions elsewhere turn conducive to an expansion of interest. A section of marketmen tend to take an optimistic view of the outlook for jute shares in view of the fact that for a number of months mills have been working to full capacity. Although the full working period of mills is to end in a month or so, indications are the industry will be asked to continue full working at least till the end of the year. Demand for both hessian and heavy goods continues to be on a satisfactory level and it is expected that production even if it continues for the rest of the year at full capacity will be absorbed by foreign buying and increased internal consumption. The fact that raw jute will be available in plenty ensures the industry will be able to work to full capacity even beyond the end of the year. However, it is pointed out that the industry will be encountering increased competition from Pakistan which has plans for further expansion of its jute goods industry. By virtue of the good quality jute that is available to it coupled with the fact that its machinery are up-to-date, the Pakistan industry is placed in a very advantageous position in foreign markets. Moreover, it is greatly helped by the export incentive scheme under which it is getting valuable concessions from its Government. During the week under review, Champdany was in good request following the decision of the company to reorganise its capital structure. New Central was wanted up to Rs 15.56.

The Committee points out that there is a general lack of Indian experience in the use of the Correspondence method. "This lack of experience generates caution and argues the need to proceed slowly so as to ensure that in the absence, inherent in this method, of regular classroom contact between teacher and taught, it is still possible to create and maintain high educational standards."

Referring to the experiences of other countries, such as Australia, Scandinavian countries, the UK, the USA and the USSR, the Committee "is convinced that if the scheme is consistently operated by exacting and skilled teachers and educational administrators, standards need not and will not suffer."

In its recommendations, the Committee has suggested that Correspondence Courses leading to a degree or equivalent qualifications should be administered by Universities only. Indeed, the Committee would go further and say that it would not be advisable on academic and other grounds to establish any separate institution concerned exclusively with such Correspondence Courses. For the maintenance of academic stand-

Cotton textile shares were generally subdued in view of the disappointing performance during the first half of the year on the export front. Even so, one or two

shares like Jayashree continued to find support at slightly increased price levels.

Business in the tea section was on a restricted scale as prices in the auction showed little improvement. Bishnauth was done at Rs 17.62, while Hasimara changed hands between Rs 14.94 and Rs 15.06. Hoolungoorie was done upto Rs 175 with Seajuli changing hands at Rs. 20.81.

Sugar shares were generally an easier market as the outlook for the industry appears to be uncertain at least in the near term. Dyer Meakin lost further ground during the week's trading closing on Thursday at Rs 32 as against last week's closing of Rs. 34.50. Carew was done at Rs 12.25.

Facts & Figures

Correspondence Courses

The Report of the Expert Committee on Correspondence Courses, set up by the Union Ministry of Education in March last year, has just been released. The Committee presided over by Dr D. S. Kothari, Chairman of the University Grants Commission, has recommended a cautious approach and emphasised the need to proceed slowly so as to ensure high educational standards since this will be the first experiment of its kind in the country.

The Committee points out that there is a general lack of Indian experience in the use of the Correspondence method. "This lack of experience generates caution and argues the need to proceed slowly so as to ensure that in the absence, inherent in this method, of regular classroom contact between teacher and taught, it is still possible to create and maintain high educational standards."

Referring to the experiences of other countries, such as Australia, Scandinavian countries, the UK, the USA and the USSR, the Committee "is convinced that if the scheme is consistently operated by exacting and skilled teachers and educational administrators, standards need not and will not suffer."

In its recommendations, the Committee has suggested that Correspondence Courses leading to a degree or equivalent qualifications should be administered by Universities only. Indeed, the Committee would go further and say that it would not be advisable on academic and other grounds to establish any separate institution concerned exclusively with such Correspondence Courses. For the maintenance of academic stand-

In the Engineering Section Indian Iron opened the week steady at Rs 26.92 but by close receded to Rs 26.80. The next day it lost further ground closing on Wednesday at Rs. 26.50. The scrip encountered heavy selling pressure on Thursday on adverse rumours about retention price to end the day at Rs 26.30. When it was announced on Friday that the increased retention price allowed is only Rs 10.50 prices toppled down to Rs 25.75. Among other engineering shares Texmaco was placed at Rs 23.30.

In the Miscellaneous section, but for a few bright spots, the general trend was subdued in sympathy with the rest of the market.

The Correspondence method is susceptible of use in both Science and the Humanities. However, for the present, in view of organisational difficulties, the Committee recommends that the courses be started only in the faculties of arts and commerce. Science should be incorporated as early as possible.

For a first degree course, the Committee continues, Correspondence Courses should normally take longer than for degree at a regular college say four years instead of the usual three. Outstanding students, may, however, be able to compress this into a period of three years. Flexibility in all matters relating to the application of the system to varying needs is strongly recommended by the Committee. There should be three written examinations suitably spaced. In addition, for Correspondence Courses, it is advisable in the Committee's view to have a viva to assist students rather than to intensify their screening. In other words, candidates should be 'vivaed' up: they should never to 'vivaed' down.

Fees for students applying for these courses should be reasonably high in the first year, but should be progressively lower in the second and third years and perhaps, if this is possible, be eliminated altogether in the fourth year, the Committee suggests.

SUPPLEMENTARY AIDS

Two supplementary aids, (a) Refresher Courses and (b) use of radio and television, are recommended by the Committee in order to raise standards in spoken language and to correct a too easy reliance on the written word.

Correspondence Courses should be run in the first instance by one University, ie, the University of Delhi, and the subjects to be included in the course as well as the details of administration should be as suggested by the Working Group.

It is important to ensure that the scheme is administered so as to achieve economy. This will be possible in virtue of the fact that items of expenditure normal at regular colleges can be eliminated under the Correspondence system, and also if an adequate number of students is provided for so as to reap the benefits of large-scale organisation.

Besides the Chairman, the other members of the Committee were: Shri P. N. Kirpal, Educational Adviser to the Government of India; the late Prof. N. K. Sidhanta, Vice-Chancellor, Delhi University; Dr Ram Behari (appointed in place of Prof. N. K. Sidhanta in January 1962). Professor and Head of the Department of Mathematics and Statistics, University of Delhi; Dr P. Partha, Vice-Chancellor, Utkal University; Mr T. M. Advani, Principal, Jai Hind College, Bombay; Dr Homer Kemper, ITCM Consultant on Correspondence Courses, New Delhi; Dr Hans Simons, Consultant on General Education, University Grants Commission; Dr P. D. Shukla, Deputy Educational Adviser, Ministry of Education; and Mrs Muriel Wasi (Member-Secretary), Deputy Educational Adviser, Ministry of Education.

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial insurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

Slack But Stable

IS there anything significant in the fact that, in a year which is described by the 1961-62 volume of the Report on Currency and Finance as having witnessed "a slackening in the pace of growth of the Indian economy," there was also relative stability? The coincidence of these two factors may possibly provoke the anti-planners to see a link where there is none. Indeed the causes that were responsible for the deceleration in industrial growth should normally have been expected to have had precisely the opposite impact, an increase in price levels. Again, we are afraid that during 1961-62 we were blessed with rather less of price stability than appears to be the conclusion derivable from comparison of fiscal year-end figures. If any lesson is to be learnt, it is that the impact of industrial shortages on the price behaviour continues to be much less important than that of agricultural shortfalls.

A principal reason adduced by the Report for the slower rate of growth is the shortage of raw materials for the main industries, jute and cotton textiles, during 1961-62; and in fact the index number of jute goods production declined in that year by 5 per cent. But we should not overlook the fact that 1961-62 was a bumper year for raw jute, when even the Third Plan target was exceeded. To some extent it is because the jute year begins three months later (from 1 July) which is responsible for the confusion; to some extent, too, lack of raw material for the first three months of the fiscal year (which of course form part of the previous jute year) will have curtailed production. But it is a moot point if, even had we been able to sustain jute goods production at the previous year's level, we would have been in a position to effect export of that magnitude. The cotton crop, on the other hand, was a disappointment in being nearly one million bales lower at 4.45 million bales. The last year witnessed a near-bumper harvest in foodgrains. The impact of the shortfall in cotton was all but offset by increases in other agricultural produce. And so, until especially the new jute crop began moving in prices continued to rise, reaching a peak in July 1961 when the index number of wholesale prices touched 130. Thereafter prices gradually declined, though from December onwards there were narrow two-way fluctuations, with the general index, by the end of March 1962, showing a fall over the year of 3.1 per cent to 123.6. The Report quite recognises this fact: "... price developments during the year serve to bring out in bold relief the special role played by a record bumper harvest in raw jute and a good harvest in groundnuts, and to indicate that the imbalance between aggregate demand and aggregate supply had only temporarily lessened."

Thus, while it is true that, with production of jute and cotton textiles declining, the weightage given to these two articles exaggerates their impact upon the general index of industrial production, note must also be taken of various other factors which operated to slow down industrial growth; and these, too, have been listed in the Report. Firstly,

the low level of foreign exchange reserves, and the consequent import restrictions, were responsible for keeping industrial raw materials in short supply; secondly, "there were growing bottlenecks in the basic sectors of power and transport"; and thirdly, this led in turn to coal production being affected. Simply, our inability to work industry to capacity, due to shortages of one or another of basic raw materials, stands reflected in the slower rate of growth in 1961-62.

The foreign exchange situation is unlikely to allow of a return to more generous import licences. Industrial raw materials have to be improvised indigenously, so that industry is given the opportunity to work to fuller capacity, and so that, as a result, the rate of growth is maintained. Here is a challenge and opportunity for this country. With partition India was left with the jute and cotton textile industries—but with very little of the two raw materials. It did not much matter until the autumn of 1949 that we had to secure our requirements of raw jute and cotton from Pakistan; but when Pakistan failed to follow the general example of the Sterling Area devaluation of currencies, two of India's most important industries were in sore trouble, because the cost of the raw material had then gone up by nearly 50 per cent. At that time in a Special Supplement we had suggested as forcefully as we could that it was within the country's competence considerably to augment raw jute and cotton production—indeed, that we could aspire to be self-sufficient. Our faith in that capacity has been amply proven. If industrial capacity set up at such foreign exchange cost during the Second Plan is not to lie idle, it is up to our entrepreneurs (with, it may be stressed, correct and apposite encouragement from Government) to seek to manufacture industrial raw materials which we now have to import.

We would like to suggest that revised series of indices of industrial production and wholesale prices are long overdue. The exaggerated impact of jute and cotton textiles production has already been referred to; and we have noted that agricultural products have a greater weightage as far as concerns price indices. It is interesting to note that under the sub-heading of cotton textiles itself the weightages as applied to current levels of production are lopsided. The Report remarks that the index for cotton cloth fell by 2.6 per cent; but adds petulantly in a footnote that "actual production of cotton cloth showed a small rise during 1961"—but that rise was almost wholly due to increased output of coarse cloth, which has a weightage of only 1.4 per cent out of a total of 24.07 for all cotton cloth (mill-made).

As compelling a reason for revision of the index of industrial production is the emergence of many a new industry which is not covered in the present series. Perhaps 1955-56, or the year preceding the Second Plan, would be best suited for both the new price and production indices.

Other aspects of the Report will be dealt with in a special article next week.

Retention Prices

GOVERNMENT'S decision to disregard the main recommendations of the Tariff Commission in the matter of steel retention prices is both surprising and disquieting. For in effect Government would seem to be asserting blandly that it is in a better position to come to economic judgments than an august body that had spared neither time nor effort in its analysis of steel costs. And we now have the prospect that differential steel retention prices will once again become fashionable.

It may be recalled that some years ago the two private steel producers got differential retention prices: and while the state steel plants were still on paper it was made clear that the steel industry would work in terms of a new policy of uniform retention prices. At one stage it was thought, at least in some circles, that such a policy bode ill for the private sector steel plants, in that the state plants, being fully modern and without the embarrassment of surplus labour, would have a much lower cost of production. Of course what has happened is greatly different, and it is the state steel plants which cannot compete with private sector steel. So, with a view to keeping down the quantum of profit with the private sector plants differential retention prices are to be reintroduced. This means that the private sector in steel in this country, which had so long, through the Steel Equalisation Fund, subsidised imports of steel, is in the future being called upon to subsidise state-produced steel. A second implication is that the efficient producer is not to benefit, but is instead to make up for lacks and inadequacies in another. If it is not Government's intention to encourage the private sector steel plants to expand, then perhaps, and then alone, there might have been some justification in the decision to reintroduce differentials.

But not only is the private sector in steel expected to step up capacity and production: the implication of a second Government decision, to deduct from the Tariff Commission's recommendation Rs 8 per ton which was to have been regarded as a special element to be used in the payment of interest and repayment of loans, is that the steel plants are to find additional requirements of finance through rights issues of shares. This is manifestly unfair: if only the private sector steel plants were able to retain optimum profits, then they would have had no difficulty in laying their hands upon the resources necessary for meeting costs of expansion. The loophole is that the companies had agreed that repayment of loans would be by means of a special element in the retention price and/or issues of rights shares.

It is the third decision that is least defensible of all. The Tariff Commission in its enquiry ascertained that costs of production must be based on the plants working to 90 per cent of capacity. Shortages of raw materials, wide variations in the quality of coal supplied and transport inadequacy are merely some of the reasons why the steel plants find quite impossible an output equivalent to 100 per cent of capacity. Of course it is true that capacity output is possible; but not, let it be recognised, in the conditions obtaining today in the country. According to Government, "the plants should have worked at 100 per cent of capacity instead of 90 per cent optimum mentioned by the Commission". The steel companies, we may be sure, were ready, eager and willing to set optimum production at 100 per cent: but circumstances quite beyond their control—and this has apparently been appreciated by

the Tariff Commission—prevented such optimum production.

We very much fear that if the latest decisions of Government, on steel retention prices, do not soon get revised, the prospect in steel is bleak beyond words. For the step-motherly attitude of Government will make the steel companies reluctant, as far as expansion programmes are concerned; and if the bulk of steel is Government-produced, then its higher cost will slowly but very surely push up the selling prices of steel.

The Problem of Prices

Stability of the general price level is one of the important objectives of the Third Plan, but recent trends in this regard have been such as to give warnings of disconcerting possibilities during the rest of the Plan period. Though there is no room for an alarmist view of the price situation, the rise in prices that has occurred is admittedly of a serious order. In the course of a mere five months since the commencement of the current financial year, the wholesale price index has soared 11 points ahead as compared with the situation nearly an year ago. Though the price index reveals a redeeming decline in the prices of industrial raw materials as compared with prices an year ago, concern arises mainly in respect of foodgrain prices since most of the important food items like millets, sugar, gur etc have registered marked rise in prices. Considerations of the effects of such rise in prices of food articles on standards of living naturally call for early measures to bring the prices down.

The rise in the general price level is certainly not an unforeseen development. The Third Plan itself has admitted the possibility of inflationary pressures latent in the step-up of investment envisaged in the Plan. The results of the Second Plan have also pointed to the need for evolving effective machinery for controlling the prices in important sectors of production. The rise in price that occurred during the entire Second Plan period was of a substantial order. While the general price level went up by 30 per cent, prices of food items and of manufactures rose by 26.72 per cent and 26.08 per cent respectively. It was in respect of industrial raw materials that the most serious rise occurred the rise being estimated at about 45.53 per cent. With such experience of price behaviour during the Second Plan period, there was no room for taking hazards in respect of price trends in the context of development. Recognising this, the Third Plan itself has spelt out in detail the measures that might be resorted to on occasions when their use might be warranted. Extensive licensing and regulation of wholesale trade, open market operations, physical allocations and direct controls are among the major elements of the price policy as set out in the final report of the Third Plan. These are further to be backed by strengthening of cooperative marketing and selling at the retail level and monetary regulation at the financial level.

The current upward pressure on the price level obviously reflects the shortfalls in Plan implementation in the first year of the Third Plan. Significantly enough the rise in agricultural production was also only of a marginal order. The rate of increase was only 1.8 per cent as compared with the increase of 8.1 per cent registered in 1960-61. Rises in respect of some items had been offset by falls in others. Production of wheat for example scaled new heights to 11.8 million tons, but

production of rice was lower at 34.2 million tons. The price situation in respect of foodgrains was kept under control, according to the latest Reserve Bank report on currency and finance mainly due to imports under P.L. 480 account.

After certain hesitancy, the Planning Commission has now announced some measures, by which it is hoped to bring the prices of the affected commodities down. Release of larger quantities of wheat and its distribution through fair price shops has been indicated. What will be done in respect of rice is however not known, though it is an item which is known to have recorded a fall in production in the last year. The problem in respect of rice will be rendered more difficult by virtue of the fact that the size of the buffer stock is relatively smaller than that in respect of wheat, and this makes procurement necessary to build up a sufficiently large stock to permit effective open market operations. The Planning Commission has also announced regulated release of sugar with a view to bringing its price down. The rise in this case is certainly paradoxical considering that the industry was only lately complaining about excess stocks arising from overproduction. Such 'non-economic' phenomenon can only be put down to the operations of the muddled policy of the Government. The example of the rise in the sugar price constitutes a clear warning against any complacency in the context of the scope for hoarding and speculation. While the latest press note of the Planning Commission has recognised the importance of measures against such profiteering and speculative activities, no concrete measure to check such unhealthy tendencies has been indicated.

While it may be hoped that measures might be instituted to secure a reversal of the upward trend in prices, it has also to be emphasised that there are other aspects to the situation which should be taken into account in devising a rational policy for the future. The price situation ruling at any given time is the result of the factors operating at various levels of the economy including not only the physical progress of production programmes but also the effects of measures taken at the monetary and fiscal spheres. One wise step taken during the Third Plan was the scaling down of the intended quantum of deficit financing from the high levels of more than Rs 1,000 crores to something around Rs 600 crores. It may be pointed that the substantial price rise witnessed during the Second Plan was not a little due to the heavy dose of deficit financing instituted by the Government as a measure of resources mobilisation. But on the other hand, the tax efforts in the Third Plan have been fixed at a considerably higher level than in the Second Plan.

The tax measures imposed by the Government in the first two years have embraced a wide variety of items including industrial raw materials, manufactures and also articles of consumption, and it is inevitable that they should exert an upward pressure on the price level. This upward pressure has further been aggravated by the fact that a great part of the revenue so raised has gone only to swell unproductive expenditure of the Government. Economy in Government expenditure has remained an ideal to which only lip service has been paid. Though in this light, a reduction in the quantum of taxes could serve in easing the pressure on prices, the fiscal programmes for the rest of the Plan period hardly indicate any prospect in this direction.

In the final analysis, the key to stability of prices has to be found in an all-round increase in production with special emphasis on agricultural production. In view of the stag-

nancy of agricultural production, it may be asked whether the planning authorities have been sufficiently seized of its importance. For, with substantial gaps in the utilisation of irrigation potential created, lagging progress in fertiliser production and continuing diversion of land from food crops to cash crops, the failures of planning have been most glaring in the agricultural sphere. If after nearly a decade of planning no solution has been found to the erratic movements in the production of the various agricultural crops, it only reflects the failure of planning. Even the little increase witnessed in the production of some of the individual crops has been more owing to the increased acreage and other fortuitous factors than to any attempts at raising productivity. The per acre yield of most of the agricultural crops has shown very little improvement. Similarly in the industrial sphere also emphasis on productivity has been oddly lacking. It is only under the stress of the foreign exchange shortage that attention is now being devoted to the importance of cost control and other measures for improving productivity. The connection between the price level and these weaknesses in Plan implementation is only too obvious to be ignored. The most important step that is required to reach the Plan objective in respect of prices is to improve the implementation machinery. Stability in prices also implies a co-ordinated development in the various sectors and this could be only ensured if the implementation of the Plan programmes and schemes proceed according to schedules.

Population and Employment

THE report on the Final Population totals of the 1961 Census (Paper No. 1 of 1962) highlights the growing pressure of population on resources as well as the shifts in employment categories which add to the complexities of providing remunerative employment to the growing population. India which has only 2.4 per cent of the world's land surface accounts for 14.6 per cent of the world's total population. And this population has increased during the last decade at the rate of 2.5 per cent per annum. The rate of increase, which was estimated at 1.5 per cent in the previous Census, had grown to 2.5 per cent by 1961 and may grow further to 2.7 or 2.8 per cent. Within the country there are striking variations in the density of population ranging from 153 per sq. mile in Rajasthan to 1127 in Kerala. Though the average density of population for India as a whole is 373 persons per sq. mile, about one-third of the population live in one-tenth of the land area with a population density of over 750 per square mile. While the regional disparities in the distribution of population may be the result of natural endowments and past development, these will have to be taken into account in any policy of balanced economic development of the country as a whole. Regional development cannot be a matter of mere geographical distribution of new investment. It should be capable of providing answers to the problems arising out of population pressures.

As regards the population figures, it is gratifying to note that the final totals differ only to a very insignificant extent from the provisional totals released early last year within twenty days of the completion of the count. While the provisional figures were 436.424 millions, the final figures for a comparable area show a total population of 436.533 millions. The population of Dadra and Nagar-

Haveli, Goa, Daman and Diu, Manipur, NEFA, Nagaland, Pondicherry and Sikkim were not included in the provisional figures. Including these, the total population of India as shown in the final totals is 439.235 millions. A post-enumeration check which was carried out in all the major States, three weeks after the completion of the count, has revealed a possible under-count of 0.7 per cent of the population, which means in absolute terms a population of 3.074 millions. In this context it may be mentioned that the range of error in the 1961 Census is substantially lower than in 1951. A post-enumeration check in 1951 showed an under-enumeration of 11 persons per 1000 counted. Besides the main population tables, the first volume has given priority to presentation of data of economic significance such as the growth of the working force, distribution of the working population over different occupation categories etc. Data relating to distribution of population according to religion, language etc, it has been stated, will be presented in subsequent volumes.

The statistics relating to the working population indicate that the number of persons at work has lagged behind the growth of population. While the index of total population (with 1901 equal to 100) has moved up to 183.40, the indices of total workers and the population of working age 15-59 have only increased to 169.14 and 169.0 respectively. On the other hand, the index of non-workers has increased to 195.86. But the ratio of workers to the population of Working age 16-60 has remained almost constant at 79 per cent during the sixty year period.

There are striking differences between the rural and the urban areas in regard to the growth of the working population. In the rural areas there has been an appreciable increase in the number of workers which is higher than the decennial population growth. This may be the result, in part, of the changes in the definition of the worker adopted in the 1961 Census. Nevertheless, it is clear that urban areas have not done as well in regard to growth of working population. Though the urban population has grown twice as fast as the rural population, the indices of urban workers are substantially below the figures for rural areas. This contrast between the urban and rural areas suggests that, perhaps, India, despite its small urban ratio is over-urbanised. It may also provide an explanation of the slow rate of urban growth in spite of the planned programme of industrialisation.

The distribution of the working population over the different categories of workers is of considerable significance in evaluating the effects of a decade of planning. The changes during this period in the distribution of male workers over different occupational categories revealed by the Census of 1961 is shown in the following table.

	1951 %	1961 %
Cultivation and Agricultural Labour	66.85	64.82
Forestry, Plantations, Mining Quarrying etc. ..	2.79	3.10
Household Industry & Manufacturing	9.84	11.27
Construction	1.19	1.41
Trade & Commerce	6.21	5.29
Transport, Storage & Communications	2.04	2.28
Services	11.08	11.77

The decline in agricultural occupations and the distinct increases in Household Industry & Manufacturing, Construction, Transport & Communications are what might have been expected from the programme of planned

development. But the most disconcerting feature is the slow progress of employment in what is described as the tertiary sector, and notably the decline under Trade & Commerce. It would appear that the effects of the heavy investments in the primary and secondary sectors have not percolated to other sectors of the economy. And this raises disturbing questions about the employment aspects of the Third Plan. The Third Plan like the Second, relies heavily on Trade and Commerce to provide additional employment. While the Second Plan reckoned additional employment in Trade and Commerce at 52 per cent of the total estimate of 8 million, in the Third Plan additional employment under this category is estimated at 56 per cent of the total estimate of 19.5 million.

The decline in employment under Trade & Commerce revealed by the 1961 Census affords an explanation of the failure of the Second Plan to achieve its employment target. The figures are also of grave import to the employment prospects of the Third Plan. There is clearly need for rethinking at the highest level in regard to the policies adopted toward Trade & Commerce. The Census data confirm the impression that the small traders, in both rural and urban areas, are being systematically ground down by forces operating in the economy including the effects of Government's policies. These policies which aim at the elimination of the middlemen, or to reduce their number by channelling distribution of controlled commodities through approved dealers, may be sought to be justified by invoking the objective of a socialist economy. But there is an inherent contradiction in pursuing these policies and, at the same time, expecting Trade and Commerce to provide over fifty per cent of the additional employment during the Third Five Year Plan.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Manifold Repercussions

It is the middle of a month, and a slack season month at that, but money is by no means easy. There is still a scramble for funds, though stringency is not so severe as it was earlier in September. As we had remarked last week a combination of factors has been responsible for transforming plethora into shortage. The subscriptions to the new loans of the State Governments, late in the last month, set the ball rolling; this was immediately followed by instalments of tax due and payable on 1 September; to add to the demand for money there were the normal beginning of the month disbursements; and to top it all many companies in the West Bengal region paid their Puja bonus at this time. This last explained why call money was dearer in Calcutta than in Bombay. The returns of the Reserve Bank for 31 August gave an inkling of the impact of the State loans. The latest banking figures now available reflect the repercussions of the other factors we have mentioned.

According to the returns of the Reserve Bank for 7 September, Active Note circulation has expanded unusually heavily by Rs 32.68 crores to Rs 2,044.06 crores, and outflow of Rupee Coin has also amounted to the considerable figure of Rs 2.16 crores. Foreign Securities being unchanged at Rs 88.34 crores, currency has been expanded for Rs 5 crores against Rupee Securities (up now to Rs 1,728.00 crores) by transfer from the Banking Department, and cash in the till is sharply depleted by Rs 29.84 crores to Rs 12.13 crores.

Despite beginning of the month disbursements the Deposits of the Central Government have risen substantially, by Rs 22.63 crores to Rs 114.74 crores; and with Investments falling by Rs 15 crores (as against the transfer of Rs 5 crores to the Issue Department) to Rs 221.02 crores, there is the suggestion of cancellation of ad hoc before maturity in a sum of around Rs 10 crores. The institution of reverse ad hocs and the rise in

the Centre's balances are both indicative of tax receipts. Beginning of the month disbursements (and also possibly some element of payment to the Centre) have entailed a drop of Rs 13.21 crores to Rs 21.64 crores in Deposits of State Governments, whose ways and means borrowings moreover have risen slightly by Rs 0.85 crore to Rs 3.09 crores.

The pressure upon the banking system, too, has been great. Borrowings of Scheduled Banks from the Reserve Bank have shot up for the second week in succession in rising by Rs 26.71 crores to Rs 42.65 crores. Re-discount of Treasury Bills has taken place for Rs 32 crores, of which some Rs 25 crores are on account of the State Bank; and the result is a rise of Rs 8.76 crores to Rs 88.07 crores in Reserve Balances.

Loans to State Co-operative Banks have also risen by Rs 0.61 crore to Rs 127.62 crores, and the remnant category of the Reserve Bank's Loans and Advances is similarly shown higher by Rs 0.82 crore at Rs 2.09 crores.

It may be mentioned, lastly, that Balances Held Abroad have declined by the nominal figure of Rs 0.31 crore to Rs 5.44 crores; and foreign assets held by the Reserve Bank in both Departments are just short of Rs 94 crores.

+

While subscriptions to the new loans of the State Governments did not at all affect Deposits of the State Bank, it would appear that the pressure of month-early expenditure, Puja bonus and tax payments has been rather more pronounced. For, the return of the State Bank for 7 September discloses a steep fall of Rs 14.38 crores to Rs 570.50 crores in Deposits; but it is necessary to add that part of the fall may possibly be accounted for by making over of Public Law 480 funds to the Reserve Bank. Advances, however, have risen by the much more modest sum of Rs 1.51 crores to Rs 277.03 crores. Instead of borrowing from the Reserve Bank, the State Bank has presumably re-discounted Treasury Bills in an amount of Rs 25 crores, this being the magnitude of disinvestment in gilt-edged shown in the latest return. The end result is a rise of Rs 4.29 crores to Rs 32.28 crores in cash balances, including money at call and short notice.

Indian Finance

The statutory statement of Scheduled Bank gives an indication of the impact of the States' new loans.

	Rs crores
Firstly, the net Deposits have declined by	19.42
Secondly, borrowings from the Reserve Bank, have risen by	15.04
Thirdly, cash balances have been drawn down by	30.60
Fourthly, the total of Advances has expanded by	22.58
All of which add up to	87.64

This figure reconciles with the analyses we had made last week. However, there is a flaw in this line of reasoning, and we have to probe more deeply:

Non-banking subscriptions caused Deposits to fall by	19.42
and the total of Advances to rise by	22.58
to which has to be added a sum of being rise in "other" Demand Deposits, presumably with State-associated banks, being Deposits on account of State Governments; and the total of non-banking subscriptions is thus	50.21
Such pressure upon the banking system was met as to	15.04
by increased borrowings from Reserve Bank and as to	30.60
by drawing down cash balances.	

Then, there are subscriptions of the Scheduled Banks themselves. In the return for 31 August, gilt-edged investments have risen by Rs 18.51 crores; but of this Rs 14 crores, on account of the State Bank, presumably do not relate to fresh acquisition of Scheduled Banks. So about Rs 4½ crores of the new purchases appear to have already been consolidated in the latest return. To this, moreover, we have to add roughly Rs 7 crores representing Treasury Bills apparently discounted by Scheduled Banks in that week, but which decline has been offset by new loan acquisitions. Some of the banks and in respect of some of the loans may not have "consolidated" their purchases; and if the next return should reflect a rise of about Rs 18 crores in the gilt-edged portfolio, our guesstimate of bank support adding up to Rs 30 crores will have been proved. Since the State Bank in the week ended 7 September has disclosed a fall of Rs 25 crores in the gilt-edged portfolio, what we should anticipate is a net fall of Rs 7 crores—that is, State Bank disinvestment offset as to Rs 18 crores representing other banks' purchase of State loans.

+

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 11 September 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.405% and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.370 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 17 September 1962. Successful tenderers should make payment on Friday, 21 September 1962 at all centres. Other conditions are as usual.

During the week ended 7 September 1962 Government of India Treasury Bills for Rs 12,22,75,000 were sold in favour of Reserve Bank of India.

15 September 1962

Notes

STATE AUTONOMY

TTK's Vigorous Espousal

In his stimulating Feroz Gandhi Memorial Lecture at New Delhi, Mr T. T. Krishnamachari, Union Minister without portfolio, analysed the trends in the relationship between the Centre and States in India and also the contents of some of the fundamental rights guaranteed by the Constitution. It was Mr Krishnamachari's opinion that this relationship could admit of some readjustment in favour of more powers to the States. This should be obvious to anybody who has watched the working of the Federal set-up in the country during the last one decade. Though in theory a federal structure is supposed to maintain a fairly even balance of power between the Centre and the States, the drafters of the Indian Constitution, for reasons probably of the recently acquired sovereign status and the desire to preserve and retain national integrity, would seem to have deliberately written more unitary features into the Constitution than are strictly consistent with the federal character which it is supposed to represent. In the division of powers, the balance was heavily tilted in favour of the Centre and after the Constitution was inaugurated there has set in a trend toward further accretion of powers to the Centre at the expense of the States. Mr Krishnamachari has given some telling instances where inroads have been made into States' powers. The dominant position which the Centre has acquired in the matter of control of foodgrain prices by means of creation of food zones is one such. In many instances it is the vagueness of the constitutional provisions that has helped such whittling down of States' powers. The concurrent list has also been utilised by the Centre to assert its dominance on matters over which the powers of the Centre and the States are supposed to be equal. Analysing the reasons Mr Krishnamachari stated that "it arises from the fact that the establishment and the functioning of the institutions and ministries in the Centre which are not satisfied with the mere task of legislation and co-ordination but draw on to themselves increasingly greater power backed undoubtedly by the somewhat uncertain but nevertheless potent factor of Central grants and loans that are necessary and inevitable for the furtherance of progress under their heads".

The tendency toward gravitation of more powers to the Centre can hardly be considered healthy. The main risk in such concentration of powers at the Central level is that by ignoring local aspirations and local bias it might have reactions which may threaten the very foundations of the State. Though the relationship between the Centre and the States in the country since the Constitution was inaugurated has been fairly cordial, instances have arisen in the recent past when it has experienced some strain. The Assam Oil Royalty dispute and the dispute between the Centre and the West Bengal Government over the right of the latter to mine coal within its geographical jurisdiction may be pointed out. It is however interesting that in this particular matter Mr Krishnamachari is in favour of giving more powers to the Centre. The Constitution according to Mr Krishnamachari does not give adequate powers to the Centre for the profitable utilisation of the natural resources of the country. While underlining this need for arming the Centre with more powers for the exploitation of the natural resources, Mr Krishnamachari has left no doubt about the equally urgent need for restoring greater powers to the States. In this connection, he has put forward

a suggestion for the creation of a high power body with a view mainly to keeping a watch over the movement of power between the Centre and States and to advise the Central Government from time to time. One important requisite for the devolution of greater powers to the States is greater financial autonomy, since the substance of the Central dominance is derived from the concentration of financial resources at its disposal. In this light, it may be agreed that the quinquennial Finance Commission can function as a force on the side of the States by recommending more of financial resources to the States. But it is difficult to agree how the Planning Commission can be put on the same par with the Finance Commission in this matter. The status enjoyed by the Planning Commission as a super-power dictating to the Centre and in no way adding to the powers of the States has been a subject of much scathing criticism by Rajaji. That the relationship between the Planning Commission and the State Planning machinery has not been always cordial has been dramatised by the protracted tussle between the Planning Commission and the West Bengal Government over the allocation of outlay for the West Bengal State for the Third Plan. Though subsequently agreement was reached on this subject, the early differences of opinion have raised questions of the measure of autonomy that should be allowed to the States in the sphere of planning. It is the opinion of Mr Krishnamachari that the initiative wherever possible could be left with the States. While admitting that some kind of "control reserve power" would be necessary in the context of the development of planned economy, Mr Krishnamachari has stated that this should be more in the nature of a veto rather than a source of power.

*

TINPLATE

World Production Trends

World tinplate production in the period since the end of the World War II has shown tremendous changes. Most importantly, Britain which was once the largest producer of tinplate in the world has been relegated to the second position by the USA which has now emerged as both the leading producer and also exporter of tinplate. During 1960 the US shipped about 5,075,000 short tons of electrolytic tinplate. The greatest part of the US exports is directed to India, the Philippines, Japan, the Netherlands and Venezuela. It has been estimated that the tin mill products exported from the US constitute nearly 25 per cent of the

US exports of the steel mill products.

In the UK the changes have been toward a reduction of the number of operating companies which has now shrunk to three. Production has been estimated at 12,34,400 tons nearly half of which is exported. Recently there has been a trend toward increasing production of electrolytic tinplate matched by a corresponding decline in that of dipped tinplate. Production has also improved phenomenally in France which takes the third place in total production. Before the war, France was producing only 130,000 tons a year and it rose to 300,000 tons in 1954 since when it had doubled reaching a figure of 596,881 in 1960. Japan, West Germany and Canada rank fourth, fifth and sixth respectively in total world tinplate production with an yearly production estimated for 1960 at 442,864 tons, 338,000 tons and 312,700 tons respectively. Production in Japan is marked by a high degree of concentration of control in the hands of three companies, while in West Germany also four largest producers account for the major part of the total production.

In Australia and Netherlands tinplate production was started only in the course of the last decade, in the former the industry being only five years old. All the same, considerable extensions to manufacturing capacity has been witnessed. Italy is another country to register a remarkable expansion in production.

In India tinplate production is of a very low order at 70,000 tons the entire production being accounted for by the Tinplate Co of

India and being made up of hot dipped. There is as yet no indigenous capacity for the manufacture of electrolytic product in the country. However, new capacity for the production of both hot dipped products and electrolytic products are now being contemplated. The Tinplate Co of India has provided for the expansion of its capacity by another 100,000 tons to reach a total capacity of 170,000 tons. Moreover, provision has also been made for the setting up of capacity in the Rourkela works for the installation in the initial stages of six hot dipping lines with 10,000 tons capacity each. Another scheme of expansion in the Rourkela works envisages provision for an electrolytic line of 120,000 tons capacity annually.

SCREWS

Selective Incentives Needed

The screw industry in India, the development of which can be traced back to the World War II and after, has registered striking progress during the short period of its existence. Originated in Punjab during the war period it has been decentralised to other parts of the country like Delhi, UP, West Bengal, Bombay and Madras. There are at present as many as 51 units both big and small engaged in the production of wood screw. Among these twenty units are registered with the Development Wing while the remaining manufacturing concerns are operating in the small scale sector. The installed capacity of the units registered with the Development Wing in 1961 aggregated 7.3 million gross per annum on a single shift basis. There has been a progressive increase in the actual production which at 10.6 million gross in 1961 stands in comparison with 9.9 million gross in 1960, 7.8 million gross in 1959 and 6.5 million gross in 1958. Though there is no reliable data on record of the production of the small scale sector ventures they are approximately placed at 5 million gross. Taking into consideration of these figures the total production in the country during 1961 would be in the neighbourhood of 15 million gross.

Apart from these units engaged in the manufacture of wood screws, eleven major factories are producing machine screws. The installed capacity and the actual production during the past six years are as follows:—

Year	Installed capacity ('000 gross)	Actual production ('000 gross)
1956	1,034.4	1,278.0
1957	1,240.8	1,401.6
1958	1,348.8	1,833.6
1959	1,624.8	1,776.0
1960	1,878.0	2,312.0
1961	2,664.0	2,587.3

Some of these manufacturing units have diversified production by taking up the manufacture of precision machine screws and fasteners.

The major impediment to the rapid growth and development of the screw industry is the paucity of wire, the principal raw material. As observed by Mr S. K. Mazumdar, at the twelfth annual general meeting of the Screw Manufacturers Association recently held in New Delhi, the non availability of requisite quantities of wires of the required specification is a threat to the industry. Notwithstanding the fact that there are ten wire manufacturing units sponsored by the Development Wing under the Industries (Development and Regulation) Act over and above the Indian Steel & Wire Products Limited at Indranagar with an annual wire drawing capacity of 54,500 tons on double shift, there is only one source from which the industry could secure right type of wire with specific standards. This is a sad commentary on the indigenous industry and the gap will have to be bridged soon for catering to the demands of the screw industry. Another disconcerting factor spotlighted by Mr Mazumdar is the precipitous decline in the export of wool screws. The total value of the export of screws in 1961 amounted only to Rs 300,909 when compared with Rs 1,186,295 earned in the preceding year. Though fierce competition in international markets is largely responsible for this low earnings, the industry's weakness in stepping up the productivity and reducing the cost of production and the comparatively high cost of raw materials are also other contributing factors. This position is sought to be tackled by the Association by approaching the Government for certain concessions and assistance. It demands, supply of steel to the manufacturers at a concessional price of Rs 535 per ton which will cut down drastically the cost of production. Second, the whole of the steel, viz 133-1/3 per cent replenished is asked to be made available to the manufacturers at the concessional price in lieu of the mere 100 per cent of the present. Thirdly, some cash subvention is sought in order to make good the loss sustained by the industry in exports. The fourth demand is that exporters of wood screw should be permitted to use their import entitlements to import essential raw materials, stores components, machinery and the like for resale to other units in the engineering industry if they find difficulty in using them. Fifthly, it is desired that the Government purchase policy should be biased in favour of manufacturer-exporters. Sixth, the modernisation of the plants and machinery should be undertaken at an early date by every possible means. Lastly the supply position should be improved to meet the industry's demand. Another vital factor that

is corroding the efficiency of the industry is the abnormally high incidence of labour costs despite the low wage scale of the labourers. The low efficiency of the workers is so glaring that whereas an operator in Europe and other countries attends nearly 15 to 25 threading machines his counterpart in India can hardly operate three threading machines. Not all demands of the industry is capable of meeting, but selective incentives to encourage an ancillary industry is patently reasonable.

TYRES & TUBES

General Tyres' Unit at Kankinara

A new unit for the manufacture of automobile tyres and tubes is taking shape in Kankinara near Calcutta and is promoted by the National Rubber Manufacturers Ltd. The new unit which commenced its business in August, 1960 has been styled as "General Tyres Limited" and is being started with technical collaboration with M/s Techno-export Foreign Trade Corporation, Praha, Czechoslovakia. Under the terms of the agreement, the Techno-economic Foreign Trade Corporation will provide not only the complete automobile tyre and tube plant but also help with technical assistance in its erection and operation. A noteworthy feature of the agreement is that the Techno-economic Foreign Trade Corporation has agreed to purchase 5,000 tyres and tubes per year for a period of four years from the commencement year of production for export to Czechoslovakia and other countries. Though involving foreign collaboration and import of foreign machinery, no expenditure of foreign exchange will be entailed since all payments for machinery, installation and technical assistance are being made in inconvertible rupee currency. The Czech collaborating firm is the manufacturers of the world renowned "BARUM" brand and this should ensure a high degree of perfection in the quality of products. According to the agreement, tyres and tubes will be manufactured and sold under the "BARUM" brand.

The initial installed capacity of the factory will be 180,000 for automobile tyres and 180,000 for automobile tubes. A further expansion by 120,000 each of tyres and tubes has also been envisaged. Considerable progress has already been made in the erection of the factory. Construction of the production sheds, stores and other building at the factory site has been almost completed and nearly 90 per cent of the plant and machinery has been received at the factory site. The estimated cost of installation and machinery has been put at Rs 1.15 crores and

the employment potential in the initial stages at 1,000. The factory is expected to go into trial production by the end of the current year while full-scale commercial production is expected by the first quarter of 1963. When it goes into full production, it should go a long way in meeting the present shortfalls in production of automobile tyres.

*

NCDC

Mining in MP in a Big Way

The NCDC is programming to carry out coal mining in Madhya Pradesh in a big way. The approval of the plan for the Singrauli project, one of the biggest coal mining projects in the country, and the decision to open another mine at Bijuri are two instances in point. The opencast Singrauli project which spans almost 220 sq K.M. with an approximate cost of Rs 15 crores facilitates the scope for extracting 130.76 tonnes of grade two and grade three coal. Production during the current Plan period will amount to 2.54 million tonnes per annum from 1965-66. In the Fourth Plan the production will improve to 3.5 million tonnes per annum. The net profit from this project after providing for interest on capital will be of the order of Rs 77.37 lakhs per annum. During the second stage of the development of this 600 feet deep quarry, by which time skips will replace conventional coal-haulers, the net profit is expected to go up to Rs 95.27 lakhs. The life of the mine, according to present calculations, is placed at 40 years. It should be noted in this connection that the Singrauli is the Corporation's seventh project in the State for the current Plan period, the total production capacity of the other six projects aggregating 5.8 million tonnes per annum. As in the case of many mining projects in MP, the Singrauli area is confronting serious difficulties on account of the inadequate transport facilities. The nearest railway station is situated about sixty-five miles away from the fields and road link is conspicuously non-existent. The transport bottleneck has to be solved for the unhampered mining operations in this site.

The proposed Bijuri project, the eighth of its kind in the State, which entails a cost of over Rs 2 crores, will be located in an area with a total reserve of 12.82 million tonnes, though only 9 million tonnes are minable. The quality of the coal varies from grade one and grade two. Commencing with an initial output of 50,000 tonnes in 1963-64, the Bijuri colliery will produce 3 lakh tonnes by the end of the Third Plan and will reach its full rated capacity of 360,000 tonnes per annum in the next Plan

period. The return on the capital each year is expected to be about 9.44 per cent.

Though the area is well served by both rail and road transport, the peculiar geological conditions have rendered this underground project a bit more complicated than others. The thickness of the seam is sometimes as low as 1.2 metres while the workable area is intersected with numerous faults or dislocation of the coal seams. Though the method of operation will be partly manual, the output

per manshift will be of a high order at 1.07 tonnes in contrasted with the all India average of 0.43 tonne.

A Workshop at Korba

The agreement reached between National Coal Development Corporation and the Soviet Organisation "Tjashpromexport" early this month by which equipment worth

Rs 79 lakhs will be provided by the latter for the Central Workshop at Korba in Madhya Pradesh is yet another instance of Indo-Russian collaboration in the economic and industrial development of India. This agreement, it may be recalled, is in pursuance of an earlier 500 million rouble credit agreement signed between the Government of India and the Soviet Union in November 1957. The Korba Central Workshop which will approximately cost over Rs 2 crores is meant for un-

dertaking overall and major repairing works to the mining industry employed by the Corporation in its collieries in MP. Its programme for the manufacture of several spare parts required for the coal mining equipment is another important activity which will help save the country considerable quantum of foreign exchange. When completed the workshop will also fabricate steel structural for the corporation's mining projects apart from the other jobs.

Who but Pan Am gives you free representatives in 114 world trade centres?

Pan Am's new World-Wide Marketing Service is a concept as dramatic as the recent reductions in air shipment cost. **WWMS** gives you on-the-spot representation in 114 world markets... helps you find new markets and new sources of supply!

Air cargo rates have never been cheaper! More commodities than ever may now be shipped on a straight-weight basis... and rates are down as much as 63%!

Low air cargo rates mean you can have more markets! And Pan Am's World-Wide Marketing Service helps locate prime markets for you, virtually anywhere in the world.

Pan Am's more complete cargo service really amounts to a revolution in the distribution of goods. Virtually any

commodity now may be shipped economically by air. You save time, so your money turns over faster. Insurance rates are lower than by surface means, because pilferage, damage, and loss are minimized. Packing, crating, handling costs are lower. Your packing and shipping

are even faster and safer when you use Pan Am's family of containers.

Pan Am advises you on such things as packing, international rates, insurance, local cartage, routing—and simplifies documentation for you, too.

Pan Am has more specialists working solely on cargo than any other airline—1357 specialists who can help you build a solid business in other parts of the world. For tips about new markets for your products, call your Cargo Agent or Pan Am in:

The Economy in 1961-62

Reserve Bank's Appraisal

Slower growth with somewhat better balance between aggregate supply and aggregate demand internally and larger imbalance externally was the main feature of the Indian economy during 1961-62, according to the Reserve Bank of India's Report on Currency and Finance for the financial year 1961-62, published recently. The Report is divided into two parts. Part I consists of two chapters, the first dealing with the major developments in the Indian economy during 1961-62 and the second with leading developments in the international economy in 1961. Part II consists of eight chapters which provide detailed reviews of main aspects of the economy. The Report also contains, as usual, comprehensive statistical material in the form of 102 statements and 14 graphs setting out economic and financial data. The following is a brief summary of the Report.

Abroad, the year 1961 witnessed, in general, less buoyant expansion in world industrial production and in world trade than in 1960, with industrial production rising by about 3 per cent in 1961 as compared to 7 per cent in 1960 and world trade rising by 4 per cent as against 12 per cent in the preceding year. The bulk of the increase in trade during 1961 was accounted by trade between industrial countries, and the primary producing countries once again failed, as in 1960, to gain appreciably from the expansion. The payments position of the major industrial countries showed some improvement in 1961. However, the foreign exchange markets were subjected to large-scale speculative movements of funds particularly in the first half of the year in the wake of the revaluation of the Deutschmark and the Dutch guilder in March 1961 and on expectations of a general realignment of currencies. In such a context, in pursuing monetary and fiscal policies, the industrialised countries had to face the dilemma of reconciling the needs of their internal economies with the dictates of their external payments situations. Greater resort was, therefore, had to measures of international co-operation with a view to checking the pressures arising from movements of short-term funds among the continental European countries and the USA. A general feature of monetary policy in less industrialised countries in 1961 was that it was one of restraint designed to limit the supply of credit without raising its cost.

In India, the year 1961-62 witnessed a slackening in the pace of

growth of the economy attributed largely to adverse natural factors and partly to growing pressures and bottlenecks associated with rapid development. Indicative of this, national income showed a smaller rise (3 per cent) as compared to that in 1960-61 (7.1 per cent) and the annual average rise (4 per cent) during the Second Plan period. Although the growth in national income was modest, the imbalance between aggregate supply and aggregate demand would appear to have narrowed down somewhat as evidenced by the course of prices during the year. On the external front, although exports showed an encouraging, albeit inadequate, performance, the overall balance of payments position deteriorated further with the foreign assets of the Reserve Bank dropping close to the level of Rs. 100 crores.

The slow growth in national income in 1961-62 was, in the main, the result of a smaller rise in **agricultural production**—provisionally estimated at 1.6 per cent as against 8.1 per cent in 1960-61. Foodgrains output, which had touched a record of 80.5 million tonnes in 1960-61, showed no increase during 1961-62 and fell short of the Second Plan target by 1.6 per cent. Among the major commercial crops, while output of raw jute showed an impressive rise and that of oilseeds a modest increase, both cotton and sugarcane witnessed declines.

In the **industrial sector** too, the rate of growth was smaller being 4.6 per cent in 1961-62 as compared with the previous year (11.1 per cent), and the average rate of growth over the Second Plan period (8 per cent). Shortage of domestic supply of raw materials coupled with further import curbs as also the growing bottlenecks in the basic sectors of power and transport contributed to the slower rate of growth. Despite this slackening, the process of diversification of industry and the establishment of new lines of production, which has been a feature of economic development in recent years, continued during 1961-62.

Notwithstanding the smaller rate of growth in agricultural and industrial production, the **price situation** showed some improvement during the year. The general index of wholesale prices (base: 1952-53=100), which had shown successive net increases in the preceding three years, recorded a fall of 3.1 per cent over the year. The groups chiefly contributing to the decline in the general price level were industrial raw materials and manufactures, the two

groups which had been principally responsible for the increase in wholesale prices in the preceding two years. Among raw materials, the prices of raw jute fell sharply by 45 per cent and of groundnut by 6.3 per cent while that of raw cotton showed a rise of 1.8 per cent. Food articles showed a further rise during the year. There has, however, on the whole, been an encouraging trend in the prices of food articles in recent years in that the magnitude of the annual rise has fallen considerably.

As regards **Government finances**, the revenues of the Centre and States taken together rose by Rs 175 crores to Rs 1909 crores in 1961-62. The combined total of net market borrowings, net collections of small savings and net issues of prize bonds was somewhat lower in 1961-62 at Rs 234 crores than in 1960-61 (Rs 256 crores) while net receipts from external loans (excluding P.L. 480 assistance) increased from Rs 247 crores to Rs 312 crores. The inadequacy of Government resources to match total outlays was made good by deficit financing, which for the Centre and States aggregated Rs 87 crores in 1961-62 in contrast to surplus of Rs 32 crores in 1960-61. For 1962-63, the overall deficit after taking into account the effect of additional taxation by the Centre and States has been estimated somewhat higher at Rs 121 crores.

Reflecting mainly the impact of the budgetary deficit in 1961-62, money supply recorded a further expansion of the order of Rs 209 crores (after adjusting for the withdrawal of special currency from Kuwait to the extent of Rs 34 crores) during the year. Net bank credit to Government, after adjusting for P. L. 480 and P. L. 665 deposits, increased sharply from Rs 114 crores in the previous year to Rs 279 crores in 1961-62. On the other hand, credit extension to the private sector which had risen by Rs 132 crores in 1960-61 declined by Rs 17 crores in 1961-62.

The net expansion in **scheduled bank credit** (Rs 83 crores) was much lower than in 1960-61 (Rs 208 crores). At the same time, the slackening in the rate of growth of deposits witnessed towards the latter half of 1960 was reversed during the year and banks increased their deposits by Rs 220 crores or double the rise in 1960-61. Increased confidence in the banking system was in part due to the introduction of the deposit insurance scheme, official measures towards compulsory amalgamation of banks and efforts to widen the capital base so as to increase the shareholders' stake in the banking system. The higher rate of interest on deposits was also another contributory factor. The large accretion to banks' resources relative to the rise in bank credit made conditions in the short-term money

market generally less stringent during the year and enabled banks to build up their government securities portfolio.

In line with the prevailing economic conditions, **stock markets** ruled buoyant although they had shed off some of their earlier ebullience. The main reason for the continued, if somewhat subdued, buoyancy has been the growth in industrial production, albeit at a reduced rate, and the prospects of growth of industries particularly engineering and chemicals. The **Government securities market** remained, on the whole, steady with a tendency towards a gradual decline in prices and a gradual edging up of yields.

On the **external front**, there was a deterioration in the country's overall balance of payments position. The foreign exchange reserves, which had fallen by Rs 59 crores in 1960-61, fell further by Rs 6 crores notwithstanding the net drawing on the Fund of Rs 58 crores during August 1961. The outstanding features of the payments position during the year under review as compared to the previous year were a marked contraction in the trade deficit of Rs 159 crores brought about mainly by reduced import payments and partly by higher export earnings, a sharp deterioration (of Rs 48 crores) on current invisible transactions, a larger than usual outflow of short-term capital and smaller utilisation of external assistance. The value of imports at Rs 978 crores in 1961-62 showed a fall of 11 per cent, principally due to a 40 per cent reduction in food imports. Export earnings in 1961-62 at Rs 668 crores showed a distinct improvement over the previous year (Rs 630 crores) as well as over the annual average of the Second Five Year Plan (Rs 612 crores). The deterioration in current invisible transactions noticed in the past several years continued and, for the first time during the year under review, showed an excess of payments over receipts on this account.

The **trade policy** during the year was marked by a growing accent on export promotion. Import control policies were directed towards achieving a balance between 'maintenance' and 'development' imports within the limitations of foreign exchange resources. The decision of the U.K. to seek admission as a member in the European Economic Community has led to a reconsideration of India's export prospects, since the membership would create a new preference against Indian goods and remove simultaneously the preference which India has so far enjoyed and has underlined the need for vigorous efforts to impress upon industrialised countries the desirability of removing impediments in the way of exports from the underdeveloped countries including India.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

Family is a word that gets bandied about freely in Commonwealth contexts, especially when the PMs meet, but usually unction is its key-note. Last year for the first time the "family Council" of leader writers came to bear some resemblance to that well-known institution in English fiction—the special occasion when relatives fetch up from all corners of the earth and the family reprobate is on the mat. But even South Africa as a family black sheep—the adjective may be resented more for pigmental than for idiomatic reasons by South Africa—goes off lightly compared to the wiggling Britain is getting this time. It is, of course a special occasion, since the parent is the delinquent. No wonder the "family" theme is notably muted this time. The *Economist* whose lobbying for the Common Market is getting weekly more desperate has now editorially come out with the suggestion that the "mother-daughter" gag is played out and the time has come "when Britain not only can afford to cast aside this psychological prop, but indeed must cast aside". Plainly, a lot of words uttered in the last few years (including some by the *Economist*) will have to be eaten. The irony of the situation is, as the *Economist* itself points out in the same issue, the while Britain is so pathetically trying to convince the other members of the Commonwealth that it is best for them to let her join the EEC the evidence that she is wanted there is thinning out. In his now notorious television broadcast, Dr Adenauer came as near telling Britain that she was not wanted as any German statesman would dare come. And President de Gaulle has since been to Bonn, spoken in German to admiring audiences and in general done a German version of last month's Dr Adenauer's deliberately dramatised visit to Paris. The two old men would in effect appear to be telling all concerned that they are not embarrassed by a Europe without Britain.

The pity is that Mr Macmillan and his government seem to have worked themselves up into a mood in which they can see no economic alternative to joining. This, apart from native to joining. This, apart from what may be due to the Commonwealth—to whom nothing may be due once the mother-daughter relation is formally repudiated—is unction is warranted. In a brilliant article in the *Statist* recently, Mr Douglas Jay has cogently argued that there is not an alternative but such an entry into the ECM without any of its disadvantages. In his view, the reci-

procal tariff cuts between the US and the EEC that President Kennedy has proposed in his now famous Trade Expansion Programme will get automatically extended to Britain under the most favoured nation rule. Apart from this, if the negotiations with the Six have revealed anything, it is that the ECM is a high-tariffed, restrictionist outfit and a standing repudiation of GATT principles. It has been able to get away with so outrageous a protectionist set-up by a combination of brazen legal quibbling and plain defiance.

In any case, in Marlborough House, the assembled Commonwealth statesmen left Britain in no doubt about what they thought of Britain's wishes in the matter. Plainly a lot of home-work had been done by every one of them and any lingering hopes of bland and platitudinous generalities getting past them must be abandoned by Britain. Of course, everybody said it was for Britain to decide whether she will go in or stay out. But what she cannot pretend is that her going in on the terms that Mr Heath has been able to obtain so far—and it is unlikely he will be able to do better towards the end of the month—will leave the Commonwealth intact. Maybe not many hearts in Britain will be broken because of that. And such of them as do, may bleed for different reasons. (Lord Beaverbrook's and Jenny Lee's, for example, have little in common). But what Britain cannot go on saying is that the Commonwealth is still a meaningful political entity.

When years ago, TTK suggested administrative tribunals for tackling tax-dodgers hiding behind writ petitions, much pseudo-Anglo-saxon anger vented itself on so French a solution. He has since revived the idea in his brilliant Feroz Memorial lecture. I have no doubt that we shall hear once again all the old self-righteous objections to isolating tax-proceedings from the due process, equality before law and the rest of Dicey. It is a myth that dies hard that the French droit administratif is arbitrary and like French Criminal Jurisprudence which presumes the accused guilty until acquitted, weighted in favour of Authority. Whatever one may say about the rationale of French criminal law the assumption that administrative justice is necessarily suspect is, on French experience, unfounded. Administrative law is not discretionary law and is in every way as formally legal and in detail, as weighed down with precedents and case law as the

other kind. Indeed, until recently, in Tort it was distinctly better from the point of view of the citizen in that he could hold Government responsible for the tortious acts of its servants, who, until the Crown Proceedings Act, hid behind their Sovereign in Anglo-Saxon jurisprudence. Another objection to TTK's idea is that the kind of tribunal he wants has already been struck down by the Supreme Court and will again be, if revived. This may well be so, though the final blow to the Income-tax Investigation Commission was partly of Authority's own devising. It will be recalled that the first attack that was mounted on the Commission was in respect of Section 5(4) of Taxation of Income (Investigation Commission) Act. This section dealt not with cases that were originally referred to the Commission, but with cases that cropped up, so to speak, as the Commission got to work on cases referred to it under Section 5(1) of the Act. Section 5(4) was struck down and the government, instead of amending the Constitution, tried to enlarge the machinery of the Income-tax Act to deal with such cases. After this it was inevitable that the really substantial cases coming under Section 5(1) should argue that they were being discriminated against *vis-a-vis* cases that were dealt with under Section 5(4) in that the latter will be subjected to a less harsh procedural machinery. Thus, whether there existed any discrimination before or not, a new discrimination was now introduced. This argument was irresistible and accepted by the Supreme Court. The only way to deal with the possibility of recurrence of such a situation is to amend the Constitution so as to make administrative tribunals or

tax purposes unassailable on grounds of discrimination.

Mr C. Subramaniam has been at his most combative in Bombay recently and for the most part he talked sense. But some of his shots were widely off the mark and at least one of his targets was grotesquely ill-chosen. Mr Subramaniam is normally such a suave controversialist that one suspects other compulsions behind his wild swipe at the Tariff Commission. Was it because he ran out of arguments so soon in defending his departing from its recommendations over the retention price for steel? And what does he mean when he says that the Tariff Commission is out of date or words to that effect? In the sense it no longer concerns itself principally with protective duties—a pre-occupation rendered largely meaningless in the context of drastic import cuts—it certainly does not perform its most important original function. But it has been at the price-fixing game long enough to have gained some expertise—certainly more than what a politician who has just given thought to it. Does he mean that the principles adopted by the Tariff Commission in fixing the retention price are unscientific? If so, coming as it does from a man who arbitrarily assumes against the weight of all evidence that steel mills in India are one hundred per cent geared to production, it is rich. I don't deny that economic decisions politically and otherwise inspired are often expedient in a democracy. But I don't see any call for pretending that such decisions are in any sense "scientific" or that unpolitical expert bodies don't know their jobs. Considering how bare-faced is government's rejection of the Tariff Commission's recommendations, there is a case for ending this farce of obtaining independent opinion. But to make snide references to its obsolescence, especially when it can't answer back, is very improper.

Trade Councils Meetings

AS Mr Bharat Ram, Vice-President of Indian Chambers of Commerce & Industry pointed out at the joint meeting of the Export Promotion and Import Advisory Councils last week, so much had been said on the subject of Import Controls and Export Promotion, and from so many different forums, that there was very little scope for novel suggestions. The main emphasis has to be on the implementation of the recommendations already made and decisions taken thereon. This act was fully reflected in the general discussions which were mostly concerned with procedural difficulties or the need for relaxation of specific import restrictions. The Minister for Commerce & Industry, however, made it clear in his concluding remarks that there was little scope in present circumstances for any relaxation of import restrictions. In fact he indicated that further cuts may be unavoidable during the second half year.

With the formation of the Board of Trade which meets every month and covers the same ground, there was a perceptible shift in interest and importance. The debate at the joint meeting of the Councils was, however, notable for a fervent appeal by Mr T. N. Singh, Member Planning Commission, on the need to adopt an integrated view of trade policies from the national standpoint. For the rest the discussions followed the usual pattern. The problems of small scale industries were explained at length by their spokesmen. The difficulties of the textile

industry were presented in an effective speech by Mr Neville Wadia. The Industry faces the triple problem of raw material shortage, high production costs and dwindling export markets. Mr Wadia feared the exports of cotton textiles may drop as low as Rs 25 crores.

The principle of Import Substitution had unanimous support though several members, including Mr S. Srinivasan who spoke for the Associated Chambers of Commerce, emphasised the need to ensure that the indigenous substitute could really substitute the imported article. On the question of prices, Mr Bharat Ram felt that some increase was inevitable in a developing economy and warned against panicky talk which could lead to panicky action.

In a comprehensive reply to the debate, the Minister for International Trade, while reiterating that import restrictions were inescapable also gave the assurance that the utmost care was being taken, and would be taken, to see that operation of import controls, did not adversely affect the economic development of the country. He referred in this connection to the cuts which had resulted in the reduction of imports in the first six months of the current year to the extent of Rs 50 crores and said that import saving of this order had been achieved without damaging any sector of the economy. He also agreed with the view that great care and circumspection were necessary in carrying out the policy of import substitution. Constant stress on import cuts, he felt, was not a very healthy line to take for the economic development of the country. He was referring to the various suggestions for banning imports on the ground that they were either non-essential or that efforts were being made to produce them in the country. However, he had little to offer to Established Importers except the advice that they should rapidly transform themselves into Established Exporters.

How far they will be able to do so will depend on the overall picture of the country's foreign trade and the prospects it offers for expansion of exports. The abolition of the distinction between manufacturers exporters and merchant exporters in the matter of grant of export incentives, which was announced at the meeting, should enable merchant firms which have long experience of foreign trade and markets to play an effective role in increasing the country's exports.

Review of Foreign Trade

In his inaugural address Mr K. C. Reddy had made an exhaustive re-

view of the present state of the country's foreign trade and the difficulties which were as great as the need for expanding the volume of exports. He drew pointed attention to the continuous deterioration in sterling balances which had declined from Rs 180 crores a year ago to Rs 94 crores, despite draws from the IMF standby credit of \$100 million. As a result of stricter control, the rising trend of imports had been reversed last year. During 1961-1962, total imports at Rs 1088 crores were Rs 84 crores less than in the previous year. During the first seven months of 1962, the value of imports was Rs 575 crores against Rs 625 crores in the corresponding period last year. The breakdown of the total figures shows that the pattern of imports in recent years has remained more less unaltered except for increase in the share of industrial raw materials. In 1961-62, imports of capital goods have been of the order of 16 per cent; of industrial raw materials 68 per cent; food grains 9 per cent; and consumer goods, including Rs 28 crores worth of kerosene, 7 per cent.

As regards exports, the total for the period January to July 1962 at Rs 327 crores shows a small increase of Rs 4.14 crores over the corresponding period last year. Exports of tea have increased from 81 million kg. to 87 million kg during the first seven months of the year, but the value has not registered corresponding increase. Jute exports show increase both in quantity and value, while exports of cotton textiles have declined by Rs 7 crores. The exports of manganese ore, and items like coffee, raw cotton and cotton waste, leather and leather manufactures, fish and preparations show a declining trend. The items of exports which show increase include tobacco, vegetable oils, art silk fabrics, coir manufactures, sugar, oil cake and iron ore. The adverse balance of trade has been reduced from Rs 480 crores in 1960-61 to Rs 377 crores in 1961-62. This improvement is reflected in the balance of payments to the extent of Rs 120 crores. But there is still a long way to go before the country will be able to pay for all its maintenance imports.

Exports to Europe

The export prospects remain uncertain and may be adversely affected as a consequence of Britain's joining the EEC. Mr K. C. Reddy pointed out that in regard to many items of vital importance to India, no solutions have yet been found and, in regard to some other items like textiles and manufactures, the solutions proposed cannot be deemed to be satisfactory. Mr Reddy has also drawn attention to the significant fall in exports to the UK and to the six countries of the EEC during the first half of the current year. Exports to the UK during January-June, 1962 have also declined by six crores of rupees and exports to the EEC countries by seven crores of rupees, as compared with the corresponding period last year.

The decline in exports to Europe has been viewed with particular concern. The Council for Trade with Europe, which was set up two months

ago, to undertake specialised study of the problems of exports to Europe held its first meeting last Friday. The Minister for Commerce and Industry indicated in his inaugural address to the Joint meeting of the Advisory Councils, that it might be possible to report of the activities of the Council at their next meeting. He also indicated that similar Councils may be set up for other regions, particularly the Americas if the Council for Trade with Europe showed good results.

Jute Exports

The Minister for Commerce and Industry made a reference to the measures that have been taken to enable the jute industry to improve its export potential. In order to diversify production the industry has been encouraged to install broadlooms for carpet-backing cloth, and allowed to increase its spinning capacity to match its weaving capacity. Foreign exchange has also been made available to the industry for the import of broadlooms and the spinning machinery. In this context a reference to the difficulties faced by the industry which were mentioned by Mr D. P. Goenka may not be out of place. The export performance could have been better if the industry had not been hampered by shortage of power and transport. He was confident that the industry could exceed the target set for it by Rs 15 crores, if the difficulties were removed. He also pointed out the exporters were being handicapped by interference by customs authorities in legitimate sales on the suspicion of under-invoicing. Trade in jute manufactures is carried out on the basis of forward contracts. If the ruling market prices at the time of shipment six months later are higher than those mentioned in the contract, that should not be held against the shippers.

New Export Insurance Scheme

Among the export promotion measures adopted by the Government, Mr Reddy had referred to the recommendations of the Kapur Committee on credit facilities for exporters, which have been accepted by the Government. The Reserve Bank of India Act and the State Bank of India Act have been amended to facilitate the flow of credit to exporters.

Attention may also be drawn in this connexion to the new scheme of the Export Risks Insurance Corporation which is designed to help small exporters who often find difficulty in getting a line of credit from banks. Normally Credit Insurers the world over do not cover risks of non-acceptance by the overseas buyers. But in view of the difficulties faced by the small exporters and the need to increase exporters, ERIC will issue insurance policies covering this risk also, subject to proof of the credit-worthiness of the exporter and the quality of his goods. The non-acceptance risk policy will serve as an important collateral security for banks.

The Titaghur Paper Mills Company Limited

Modernisation & Expansion Programme

Continued Increase in the cost of Raw Materials and Railway Freight

A DIFFICULT YEAR FOR PAPER INDUSTRY

Sir Walter Michelmores, the Chairman, On Re-organisation

The following is the Statement, issued by the Chairman, Sir Walter Michelmores, along with the Report and Accounts of the Company.

WHEN, in 1960, the Tariff Commission gave its award on paper prices based on 1958 costs, those most closely concerned with the industry predicted a difficult time ahead, and this has certainly proved to be the case. In the first place the 12% return on capital employed covering as it does taxation, provision for rehabilitation, managing agents' remuneration, bonuses to labour and preference dividends, does not leave a sufficient balance to provide an adequate return by way of ordinary dividends on the capital employed. In the second place the cost of virtually every raw material and service used by the paper industry has increased sharply, often as a result of Governmental action. Coal has increased in price and so has the freight on it—the Calcutta Electric Supply Corporation rates for power have been increased—every single chemical whether caustic soda, lime or sodium sulphate, to mention only a few, are more expensive than in 1958—and the same applies to the basic raw materials, whether bamboo or waste paper. In March 1962 it was estimated that the total increase in cost since 1958 was Rs. 160 per metric ton or 16 nP. per kilo. The 1962-63 Budget and the Railway Budget added a further Rs. 20 per ton to the industry's costs—or an additional 2 nP. per kilo.

The recent increase in paper prices of 6 nP. per kilo was granted with commendable promptitude and it does not do to look a gift horse in the mouth. The inadequacy of the increase will however be apparent from the figures quoted above, and it is sincerely to be hoped that Government will, before long, turn a sympathetic ear to the industry's case and agree to a further price increase of a substantial nature. To illustrate the difficulties of, at any rate, certain units in the industry, in the case of your No. 2 Mill the price increase has been

virtually entirely absorbed by having to transport 50% of the mill's coal requirements by road—a cost factor that was not even taken into account in determining the recent price increase.

COAL

This raw material has been a continuous headache throughout the year. In the first place coal stocks have been down to below one day's consumption on several occasions. Secondly, the mills now receive—and cannot expect anything better—Grade I coal which has to be burnt in boilers, many of which were designed for Selected A rubble. Finally, as mentioned above, 50% of the coal has to be transported by road. In the case of industrial units consuming under 1000 tons of coal per month, road transport of 50% of consumption is expensive and inconvenient. In the case of your Nos. 1 & 2 mills which consume 16,000 tons per month, road transport is ruinous—spelt out in Rupees an additional 18 lakhs is added to the annual coal bill. Having spent considerable sums to strengthen the mill sidings to take full rakes of BOX wagons, it would seem only reasonable that concerns such as yours, should be permitted to take their full coal requirements in this manner. This procedure was in force for a limited period and it is believed suited the railways as well as your company—why it should have been terminated is difficult to understand. If however the paper industry with its high coal consumption has to take 50% of its requirements by road, it would appear to have just as good a case for a subsidy or an increase in paper prices as industries in the country who are compelled to take their coal by sea.

BAMBOO

Gregarious flowering of bamboos in Assam and Orissa has created difficulties, but by stepping up cutting in the company's own forest areas to 60,000 tons, adequate supplies have been made available at despatching points. Wagon supplies have however been totally inadequate—a situation not

peculiar to your company—with the result that 50,000 tons of bamboo are awaiting despatch at the time of writing and as with coal, stocks at the mills have on occasion fallen below one day's consumption.

Longer term, one of the difficulties your company is faced with, is that with new paper mills going up in the states adjoining West Bengal, they tend to be given preference over your company in respect of bamboo leases, even in respect of areas from which supplies have been drawn continuously for many years. It is evident that the paper industry as a whole will have to rely to an increasing extent on alternative raw materials such as bagasse and jute sticks, and this is receiving careful attention as far as your company is concerned.

MARKET

The market has remained firm throughout the year and it would appear that demand will remain in excess of supply until some time in 1963. With additional mills coming into production, it is quite possible that there may be a surplus of paper in 1964 or 1965, but it is hoped that on a longer term basis, with the increase in literacy, this will be only a temporary feature.

In the reorganisation of your company's affairs, to which reference is made later in this statement, particular attention is being paid to the improvement of quality in all the various types of paper produced. Even allowing for the difficulties with which the paper industry as a whole has been faced, shareholders will naturally wish to know why your company's results compare so unfavourably with those of other units in the industry of comparable size. I will therefore deal with this matter in some detail and at the same time outline the remedial measures that either have been taken already or are in process of implementation.

BAMBOO FOREST AREAS

It will be noted that some Rs. 23 lakhs has had to be written off

bamboo stocks. Your company's policy was to value bamboo stocks in the forest areas at a figure well below cost. A few years ago this method of valuation was objected to and stocks were valued on the basis of average cost irrespective of location. A very poor cutting year resulted in an extremely high cost figure, and it was regrettably not realised until the current year that this resulted in an overvaluation of bamboo stocks lying at points distant from the despatching points to the mills. The revaluation in this year's accounts provides for the cost of moving forest stocks to railhead and in addition strict budgetary control has been introduced throughout the bamboo forest areas.

NO. 3 MILL—CHODWAR

It was always realised that this mill would not be a fully economic unit until output reached the level of 18,000 tons per annum as provided by the original industrial licence—12,000 tons per annum plus an expansion licence of 6,000 tons per annum. The mill was however planned in 1955 on the basis of bamboo at Rs. 71 per ton delivered, other chemicals at ruling rates, and paper at the prices that prevailed before the reduction imposed by the Tariff Commission. On this basis it was expected that, as a one machine mill, it would nearly break square and that on a two machine or 12,000 tons per annum basis, a small profit would be made. Unfortunately many factors have combined to make this projection of profit very wide off the mark.

With the increase in the cost of bamboo, chemicals and all other raw materials, and the reduction in the price of paper, it is now evident that No. 3 Mill will not break square under 30 tons of paper per day.

For part of the year only one machine was operating with a rated capacity of 15 tons per day. The second machine was installed in the course of the year, increasing the rated capacity to 35 tons per day. In practice the average daily output in the year under review

did not exceed 23 tons per day. The financial result of this most unsatisfactory state of affairs has been a gross loss of Rs. 39.41 lakhs to which must be added depreciation of Rs. 11.49 lakhs.

Many factors have been responsible for the low production and the high loss, and in fact there is practically no misfortune this mill has not experienced. A go-slow movement in the crusher house and roaster section—wagon shortages leading to chlorine and lime running out so that unbleached paper had to be made on many occasions—power cuts as often as twelve times in a week, some probably due to sabotage. These are only a few of the unexpected problems that have had to be faced up to in the past year.

NO. 2 MILL

This mill has made practically no contribution to the company's profits during the past year. The two main causes have been labour problems, particularly in the receiving section, and poor management. The former is being dealt with and the latter has been dealt with, as will be explained later.

The recovery side at this mill has been giving very poor results, and as always this is a most expensive weakness in any paper mill. While improved results are expected, a modern recovery boiler is essential at this mill—partly because the existing obsolete recovery plant will never give a recovery percentage above 55%, however efficiently operated, and partly because it is vital to provide additional steam from this source, thus enabling a reduction in the very high ratio of coal per ton of paper. Mention has been made earlier of the high cost of moving coal by road, and No. 2 Mill suffers badly from the other factor of having to burn low grade coal in boilers designed for the best coal India can produce.

NO. 1 MILL

This mill has worked with reasonable efficiency during the year and has contributed all the company's profits.

REORGANISATION

The Directors of your company, and the Managing Agents, have been acutely conscious of the decline in management efficiency in the recent past. This can often occur, and not only in India, after a long period of prosperity when the going has been too easy. A severe shock is often the best cure and this has certainly been administered by the current year's results, assisted by the Tariff Commission. I would therefore now like to touch on what remedial action has and is being taken and the results that have been achieved so far.

As already intimated to you in a previous statement, Messrs. Urwick, Orr & Partners Limited

were commissioned to do both a survey of the company's mills and bamboo forest organisation and to undertake the preliminary implementation of their reports. I should like to take this occasion of congratulating them on the excellent job they have done. It is therefore most unfortunate that, when there are not yet available in this country management consultants of this calibre, Government should have refused sanction to remit them their dues, with the result that the company has not yet been able to pay them for the greater part of their work—which for this reason had to be brought to a premature end.

Quite considerable savings in costs have already been achieved as a result of their reports and there are more to come now that Work Study Engineers have been engaged at all three mills.

Apart from cost savings, the whole senior management structure has been recast and there are new faces in virtually every senior post. A Superintendent of Mills has been appointed, there are three new Mill Managers, a new Superintendent of Engineering Services, and a new Cost Accountant. In my opinion the company now has a most excellent team of senior executives. Almost equally radical changes have been and are being made in the lower staff levels.

Many other changes are also being made, such as a complete overhaul of the Labour Relations organisation, the introduction of a modern Training Scheme, a new Cost Accounts system—to mention only a few.

While it will be appreciated that a major reorganisation of this nature cannot achieve a complete cure overnight, shareholders will no doubt be interested to know what results have been achieved so far.

NO. 1 MILL

This mill is now earning satisfactory profits. The output in July at 2,330 tons was the highest in its history and in August 98 tons was manufactured in one day which again is the highest figure ever achieved. In my view, even further improvements can be expected in certain directions such as the recovery percentage, quality control—and even output.

NO. 2 MILL

This mill reverted to a profit making basis—albeit small—in June. A progressive improvement is now expected and it is hoped that by the end of 1962 satisfactory profits will be being earned. A reduction in the percentage of broke and an increase in the recovery percentage are the two main technical problems but getting a full day's work out of a percentage of the labour force is equally important.

NO. 3 MILL

This mill is still making a substantial loss, although on a lower scale than last year. However, in August over 30 tons was reached as daily output on several occasions and given co-operation by the labour—there have been several recent instances of sabotage—it is hoped to get on to a break square or small profit basis towards the end of 1962. As at the other two mills, the new management deserves congratulations at the extremely good job being done, often under difficulties—as recently as July, six wagons of lime were lost on the railways, forcing the mill to make wrappers only for 7 days.

From the above brief survey it will be seen that substantial progress has been made in recent months. It is therefore expected that the 1962-63 results will show a substantial improvement, but it may be 1963-64 before the company can claim that its results bear favourable comparison with those of other companies of equivalent size.

CAPITAL REORGANISATION

The company's paid up capital is unduly small in relation to the scale of its operation and the value of its assets. On the other hand its borrowings from the I.C.I.C.T. and the bank are on the high side in relation to its paid up capital. To rectify this situation and to provide funds for the modernisation and expansion programme that is completely essential, application has been made to the Controller of Capital Issues for a bonus and rights issue. It is hoped that sanction will be obtained in the near future, although details of the capital expenditure proposed will still have to be cleared with the Development Wing of the Commerce & Industry Ministry.

MODERNISATION AND EXPANSION

The Adamson Engineering Corporation were appointed Technical Consultants to the company in June 1962. Mr. George Adamson and Mr. Mac Coston have paid two visits to India in the course of their survey of the three mills and their report has been received and is being studied. Mr. Adamson has been responsible for erecting and commissioning the new bamboo pulp and paper mill at Bataan in the Philippines and thus is the rare combination of a technical expert with knowledge of the latest techniques in the world's paper industries plus a special knowledge of the problems involved in bamboo based paper manufacture.

Until the Consultants' report has been carefully studied it is impossible to say with exactitude how the funds to be raised by the rights issue will be spent. There are, however, certain general observations that can usefully be made. While it is expected to increase output at No. 1 and 2 Mills by in-

creased efficiency, the expansion licence for 6,000 tons is specifically for No. 3 Mill and the greater part of the capital expenditure will therefore be concentrated on that mill. Apart from this consideration it is quite essential to make No. 3 Mill a contributor to the company's profits instead of a liability as hitherto, and this postulates increasing the output to 18,000 tons per annum which is today the minimum economic size, bearing in mind the competition to be faced from large and modern mills shortly coming into production.

In retrospect it is evident that No. 3 Mill was planned on too small a scale, and with the desire to save foreign exchange and the company's funds undue reliance was placed on reconditioned plant—undoubtedly a false economy. Both these errors of judgment must be rectified.

Apart from No. 3 Mill a modern recovery unit at No. 2 Mill is essential—there are in fact many other directions in which capital expenditure can improve efficiency and cut costs—one example is installing chippers for bamboo at despatching point to save freight and wagon capacity—but the governing factor will be the availability of funds until the company resumes making profits on a scale that permits a generous plough back.

LABOUR

Since the close of the year agreement has been reached with the representatives of labour on a long outstanding dispute. An increase in dearness allowance has been granted and an improvement in the clerical grade scales. On the other hand a retiring age has been accepted coupled with a gratuity scheme. It is also hoped that by the time shareholders read this speech, gate control will have been introduced at Nos. 1 and 2 Mills. Urwick Orr's investigations have shown up what a large surplus of labour exists at all mills, but with give and take on both sides it should be possible over a period to resolve this problem with the minimum of hardship, if any.

In conclusion, I would say that I well appreciate the concern shareholders will feel at the extremely poor results shown in the accounts now in their hands. Nevertheless, I feel confident that this year is a turning point—that the mistakes of the past are being corrected, and that the increased efficiency now evident at the three mills plus the modernisation programme being planned, and I hope sympathetic treatment by Government of the problems of increased costs, will restore your company to the high standing it has so long enjoyed.

NOTE—The above statement is not a report of the proceedings of the Annual General Meeting, which will be held on the 27th September, 1962.

Markets

JUTE

Steady Trend

STEADY conditions prevailed in the jute markets during the past week and prides in both the sections tended to be firm. In the raw jute market sentiment improved on indication that Government would take active steps to ensure that the rate grower received an equitable price throughout the current season. It was stated in Parliament last Friday by Mr. Manubhai Shah, Minister for International Trade, that Government had decided that the State Trading Corporation should enter the jute market and buy raw jute so that the growers secured the maximum benefits of the "operational price" of raw jute fixed at Rs 30 per maund. It is said that the S.T.C. will function in close co-operation with the Jute Buffer Stock Association which is also entering the market for further purchases. Government's determination to assist growers to get an equitable price is also evident from the fact that simultaneously with the entering of the S.T.C. in the raw jute market in a supplementary capacity to the JBSA the co-operative societies are being strengthened for the purpose of stabilisation of jute prices. The National Co-operative Marketing Federation is also entering the market. The undertone of the market has considerably been helped by increased mill buying in recent weeks coupled with the steadier trend in the goods market. The fact that jute mills have been asked to work full capacity for another month until the end of October will mean mill consumption will continue to be at a high level.

Prices in the jute goods market ruled generally steady. Jute goods stocks at the end of August were higher by 5,500 tonnes at 91,800 tonnes; while hessian were lower by 1,100 tonnes at 25,000 tonnes, sack-fine goods were again higher, the rise being to the tune of 6,600 tonnes. Other goods were unchanged at 13,900 tonnes. The news of a decline in hessian stocks imparted steadiness to the section as demand is expected to be well maintained for the next few months. Sentiment in heavy goods was not adversely affected despite the heavy rise in stocks at the end of August. Presumably it is generally believed that foreign demand in this category of goods will also be on a satisfactory level.

Moreover, internal consumption is also expected to account for increased off-take in the coming months.

1 Lakh Bales Cuttings to be Imported

An import quota of one lakh bales of jute cuttings to be imported from Pakistan has been released in favour

of the Jute Buffer Stock Association. This, the first bulk allotment of cuttings in the current jute season is intended to strengthen the competitive position of Indian jute mills in export markets, especially for sack-fine. The import of a limited quantity of cuttings at this time is not expected to affect the price of Indian jute, which as Government have announced will be maintained by all possible means at or above the minimum level indicated by Rs 30 per maund for Assam bottoms delivered at Calcutta.

Maximum Output to Continue upto end of October

At their meeting on Monday, the Committee of the Indian Jute Mills Association considered the market situation in the light of the stocks of manufactured goods held by the mills at the end of August. The Committee noted with concern that sack-fine stocks had risen for the fourth consecutive month, the increase in August being 6,500 tons; but in view of the continuing demand for hessian they decided that, for the time being, the present maximum level of pro-

duction in the jute industry should be continued for a further month from the end of September to the end of October, 1962.

JBSA to Purchase 2½ Lakh Maunds

The Committee of the Jute Buffer Stock Association have decided that a further quantity of 2½ lakh maunds of jute should be purchased for the buffer stock. Purchase quotas for this amount will be issued as soon as possible; but as the jute now arriving in Calcutta is too wet for prolonged storage, the mills will be required to place their contracts by the end of September for delivery within the next six weeks.

It will be recalled that the Jute Buffer Stock Association began operation last April. By the middle of June purchase quotas had already been issued for a total quantity of 11½ lakh maunds of jute, so that this further purchase will increase the size of the buffer stock to 13½ lakh maunds valued at well over Rs 3 crores.

It is understood that, in view of this buffer stock purchase and taking into consideration also the purchases made by the mills on their own account during the week ended the 1st September, which were more than double the quota issued for that week, the Quota Sub-Committee of the Indian Jute Mills Association have decided that no quota should be issued.

TEA Outlook for Exports

According to Mr A. S. Bam, Chairman of the Tea Board, the apprehension that in the next few years there will be a large surplus of tea in the world is unfounded. For, consumption is expanding as fast as

contributing to the country's industrial and commercial growth...

THE BANK OF BARODA LIMITED!

4³/₄ % MADRAS STATE ELECTRICITY BOARD BONDS 1972

For Rs. 300 Lakhs

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL, GUARANTEED BY THE GOVERNMENT OF MADRAS)

The bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purposes of the Insurance Act and the Banking Companies Act.

Issue Price Rs. 99.75 per cent

Redeemable at par on the 24th September, 1972

Subscriptions will be received in cash or cheques from the 24th September 1962. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 300 lakhs and in any case not later than the close of business on the 29th September 1962.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Hyderabad, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all offices of the State Electricity Board.

production, if not faster. In 1961, while world production increased by only 7 per cent, exports had gone up by 8 per cent. As far as India is concerned, the Third Plan target of 900 million lbs. for tea production may even fall short of requirements. Speaking at the annual meeting of the Bharatiya Cha Parishad, he has pointed out that tea consumption is increasing in the country at an annual rate of 20 million lbs. At this rate internal consumption may reach an annual rate of 380 million lbs by 1965. To this if the export target of 610 million lbs is added, requirements by the end of the Third Plan would be much more than 900 million lbs. Mr Bam thinks that the target is to be raised by 80 million lbs.

Referring to the near term prospect, he says that the current year has started with great promise as both production and exports have recorded a rising trend so far. Total production in India upto the end of June is placed at 214.2 million lbs. as against 211.4 million lbs. in the corresponding period of last year. However, the increase has been contributed solely by South India as North East Indian tea production has so far been lagging behind. Exports during the period January-July 1962 are higher at 195.39 million lbs as against 178.83 million lbs in the same period of last year. Mr Bam thinks it should be possible to reach an export level of 500 million lbs this year as a favourable climate for tea exports has been created by the reduction of export duty, and the number of steps initiated by the Tea Board to popularise Indian tea in consuming countries.

At this week's export sale in Calcutta a steadier tendency was noticeable with a general demand for Plain Broken and similar Fannings. While the former often sold upto 20 nP dearer, the latter too fetched higher rates than previous valuations. Medium BOP's however were easier though the more useful liquoring kinds sold well. Offerings totalled 70,026 packages. Though demand was strong in CTC descriptions, prices fetched showed an irregular pattern. Legg Cuts came to a strong market realising dearer rates. Demand was also strong for the Plain whole leaf teas with prices often dearer while only lower prices could be obtained for Assam. Tippy teas continued to be supported at around previous rates. Though Darjeeling came to a fairly active market, prices realised were irregular. Quotations inclusive of excise duty are: Clean Plain Pekoe Rs 4.20 to Rs 4.70; Plain BP Rs 3.60 to Rs 4; Plain Fannings Rs 3.75 to Rs 4.25; Medium Assam CTC BP Rs 5.40 to Rs 6.00; Medium Assam CTC Fannings Rs 5.40 to Rs 6; Best Assam CTC BP Rs 7 to Rs 8; Best Assam CTC Fannings Rs 7 to Rs 8.

At this week's internal sales in Calcutta, offerings totalled 29,828 packages. Although there was a good general demand, prices realised were generally lower than previous valuations. Both Medium and Good CTC were in keen demand but only at easier rates. The latter was generally easier by 20 nP but at times the decline was even greater as buy-

ing became selective towards the close. Plain orthodox dusts met with a good demand selling at around previous levels with the small powdery varieties among them being favoured. Bright liquoring Assams met with good enquiry but rates were lower than at the previous sale. Legg cuts were the strongest feature of the sale getting better prices than in the previous auction. Quotations inclusive of excise duty: Plain Orthodox Dust Rs 4.10 to Rs 4.50; Medium Assam Dust Rs 4.75 to Rs 5.15; Legg Cut Dust Rs 4.90 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 5.90; Good Assam CTC Dust Rs 6.30 to Rs 6.70.

COTTON Futures Lack Support

A generally easy tendency was in evidence in the Bombay cotton futures market during the past week. The ruling Jarilla March contract which opened higher at Rs 742.75 per three quintals moved forward to Rs 747.25 from which stage onwards started the gradual decline. The rise in the early part of the week was attributed chiefly to the disturbing weather conditions in some of the cotton growing tracts and the apprehension of damage to the cotton crop in Kandesh and many places in Gujarat and partly due to the upcountry buying. However, the sentiment was affected by the downtrend in bullion and share markets.

The trade circles gratefully acknowledged the announcement of the export quota of two lakh bales of Bengal Deshi. The shipment is to start from 11 September 1962 and last upto 31 August 1963. Scattered business for nearly 5,000 bales of this growth was reported from some of the continental countries. But the trade is sceptical of the scope for immediate disposal of the entire quota permitted for export as the foreign purchasers mainly Japan are not likely to be in a hurry to cover their requirements on account of the large size of the quota for exports and the long duration of the shipping period allowed.

Another encouraging news is the Government's decision to allow import of 55,000 bales of cotton stapling between 1-1/16 inches and 1-3/16 inches from America which was also welcomed by the trade and industry. This allocation is in pursuance of the sugar cotton barter deal entered into between the Governments of the two countries in April last. The quantity involved will be available for immediate shipment which will last upto 31 December 1962.

The spot market at Sewri presented sluggish conditions. Only varieties like CO2, L 147 and Kaiyan met with scattered interest. In the import section the prices of imported growths like African and Sudanese cotton showed an easier trend owing to the lack of fresh mill support.

The cotton policy for 1962-63 season announced by the Government of India last week is character-

ised by the streamlining of the control measures. It also embodies adequate provision for safeguarding against any emergency arising from a possible reduction in this season's cotton production.

An important departure from the previous season's policy is that the regional survey system has been dropped. But in its place six zonal committees will undertake the task of compulsory survey. Survey will be made compulsory only before cotton is taken delivery of by the mills or by other consumers to whom cotton is sought to be handed over. Under the new policy the trade will not be required to rush for survey of the cotton and cotton would be moved uninterrupted. Bengal Deshi cotton, which is delivered for exports is also exempted from the procedure of compulsory survey.

The six committees, which will operate under the control of the East India Cotton Association Limited will be situated at Akola, for Maharashtra Zone; Ahmedabad, Gujarat Zone; Ujjain, for Madhya Pradesh and Rajasthan Zone (excluding Sri Ganganagar District of Rajasthan); Bhatinda (the Punjab, Uttar Pradesh and Sri Ganganagar District); Hubli (Andhra Pradesh and Mysore) and Tirupur for Madras and Kerala.

The clause governing the purchase of kapas by a manufacturer has been amended under which the manufacturer will be permitted to purchase kapas only to that extent of the spinning capacity of his factory. The policy of random requisitioning has also been maintained and will be resorted to only when there is any tendency for the prices to pierce the ceiling level.

In line with the earlier announcement made on 1 May, the Government has enhanced the ceiling price for the basic variety by Rs 35 per three quintals with corresponding rises in the prices of other varieties too. However, there will be no change in the floor prices of these growths. The policy pertaining to the quota system for domestic cotton will be announced at a later date.

PIECEGOODS

A moderate improvement was visible in the Bombay cotton piecegoods market during the week under review. The demand in the domestic sector failed to flow upto any encouraging level and the conditions in the export front was almost listless save in the case of Britain. Almost all the upcountry centres except Kanpur, Delhi and Calcutta showed keen interest in a number of goods.

New qualities of mill made clothes failed to evoke the attention of the buyers though scattered business was reported in dyed and printed flannelets, coatings, drills, bleached longcloth and malasia. Madras focussed its attention on prices. Drills black and blue and gadlapat ruled generally steady while grey malasia and dhoties and saris tended to be easy owing to the lack of sup-

port. The mills were adamant on their prices because of the anticipated increase in demand in the coming festive season. At the same time the stocks with dealers of unsold goods were estimated approximately at two lakh bales.

On the export front the UK was in the limelight exhibiting interest on a fairly large scale in the nearby deliveries obviously on account of the shortage of goods in that destination. The UK accounted for a slight quantity of medium grey in the week under review. The US entered the market on a small scale and booked moderate quantum grey sheetings and furnishing fabrics. West Germany and France directed their attention on medium grey goods.

Owing to the keen competition and the sufficient stock of goods, the transactions with Sudan were far from encouraging. Enquiries from Africa flowed on gadlapat and coarse grey sheetings. While West Africa was satisfied with a negligible quantity of dyed towelling cloth, Saudi Arabia was contented with dyed mulls and grey canvas on a small scale. Australia's attraction fell on wider width sheetings, and coatings while Singapore booked a small quantum of bleached mulls and longcloth. Burma too entered the market though the offtake was only a mere trickle.

Wide Fluctuations in Bullion

The bullion market recorded wide fluctuations last week consequent on the passing by the Lok Sabha of a Bill enabling the Central Government to take legislative or administrative steps to exercise control over the supply, production and distribution of gold and silver as in the case of other non-ferrous metals, under the Industries (Development and Regulation) Act. The measure is intended mainly to prevent smuggling and hoarding of gold. The first reaction to the news was heavy selling pressure due to the apprehension that forward trading in bullion might be banned. But in later dealings sentiment recovered presumably on the assumption that even if Government contemplated direct action, it would be sometime before it could initiate it as it would require complicated procedure. The general expectation seems to be that there will not be any move from Government toward interfering directly with market trends before the Union Finance Minister is back at headquarters. At Monday's trading, a distinct improvement in sentiment was noticeable, thanks to short-covering and revival of some bull support. Arrivals of gold, however, continue to be large but this appears to have caused little concern. Silver too met with increased interest on Monday due mainly to technical considerations. Even so, the undertone in the bullion market continues to be rather uncertain.

DETONATING FUSE

from YUGOSLAVIA

NOW AVAILABLE IN INDIA

CISSY PRIVATE LIMITED, have pleasure in announcing that supplies of DETONATING FUSE in coils of 250 metres, packed in cases containing 4 coils, tested and approved for use in India by the Chief Inspector of Explosives, are now available in India. Consumers may write to:

CISSY PRIVATE LIMITED

C-243, DEFENCE COLONY, NEW DELHI-13

for their requirements giving storage licence details.

(These supplies are imported from Messrs. JUGOIMPORT, YUGOSLAVIA)

Under rate contract with D. G. S. & D.

PLANNING NATIONAL PROSPERITY

National Prosperity requires continuous planning efforts. It is imperative that every individual puts his shoulder to the wheel enthusiastically and realises that he has a stake in the Plan. Cognizant of the ultimate objective, J. K. Organisation are adding new enterprises each year to make India self-sufficient in every way.

J. K. ORGANISATION

KANPUR • CALCUTTA • BOMBAY

Creating Great Industrial & Commercial Combine

NON-FERROUS METALS

After earlier steadiness, sentiment turned rather easy in the Bombay non-ferrous metals market. The change in sentiment in later dealings was mainly due to decline in demand. The higher prices touched by in a lone time could not be maintained as contrary to earlier expectations US buying for stockpiling turned to be for much reduced weekly quotas. The quiet trend in zinc and copper might have stemmed from apprehensions of possible Government action in case prices continued to move upward. Earlier steadiness in these items was sustained by rumours of scarcity of supplies as a consequence of the full utilisation of all import licences.

FOODGRAINS

Easy conditions prevailed in the Hapur foodgrains market, during the past week. Wheat, rice, maize and other coarse grains drifted lower owing to liquidation by stockists with the arrival of new maize in the

market. Fairly heavy rains were received during the week which besides proving beneficial to standing kharif crops including paddy would now enable timely preparation of land for rabi sowings. Gram, was unchanged. Arrivals were negligible and stocks declined to 14,000 maunds. New maize arrivals were still poor. Barley and bejhar prices also sought lower levels on poor demand. While guwar was stationery jowar prices improved on better demand against poor stocks. Other coarse grains prices were listless. In pulses too prices receded according to quality on slack demand in face of heavy stocks and selling pressure by stockists. Arrivals were poor and stocks declined to 60,000 maunds. Arhar and arhaddal prices also eased.

SUGAR

Sugar prices ruled easy during the week thanks to improvement in the supply position. Demand from the South was slack following Government's decision to release an addi-

tional quota of 10,000 tons from factories in Maharashtra and it was further gathered that another extra quota of little over one lakh metric tons had also been issued for open sale in the market. Monthly release is also soon due. Export performance in current season has been fairly satisfactory and the target of five lakh tons is likely to be achieved. Ready gur prices sought lower levels during the week due to fall in demand from South as new gur was now reaching some centres there. Stocks were now meagre and new production would commence some time next month. Cane crop prospects were still far from normal although reported better thanks to rains during the week.

OILS & OILSEEDS

Two-way price movements characterised trading in the oilseeds market in Bombay last week. In the beginning the sentiment was bullish inclined continuing the previous week's trend as indications

were that the crop would be adversely affected owing to paucity of rains in the growing areas. However, the trend was not all the time upward as now and then values gave way under profit-taking. Around mid-week prices were marked down in sympathy with the easier trend in the stock market. One of the reasons why bullish fervour succumbed to selling pressure was the absence of any foreign interest. Towards the close, however the undertone improved on short covering. Groundnut oil was rather dull due to accumulation of stocks with millers.

A quiet trend prevailed in castor seed and price movements were generally in line with groundnut. Business in castor seed was rather restricted as the export demand in castor oil was rather dull. Overseas buyers especially from the UK did not evince interest in Indian castor oil due to decline in UK price. Earlier firmness in linseed gave place to easier conditions in later dealings in sympathy with groundnut and castor.

For the Investor

INVESTMENT GOSSIP Depressed Mood

STOCK markets have continued to be depressed during the past week after the severe shock of last week following the announcement of steel retention prices. As the increase sanctioned was only Rs 10.50 per tonne against a general expectation of Rs 30 steel shares came under heavy selling pressure and consequently lost considerable ground. Tata Steel was the worst sufferer as it was thought that the

small increase in retention price would result in a serious erosion of its profits. During the past week, steel shares have been moving within narrow limits. In the case of Indian Iron there has been marginal recovery. Sentiment elsewhere in the stock market had also been adversely affected by the severe shake out in steels. Investment interest continues to be hesitant because it is generally apprehended that Government's new move to hold the price line will not augur well for a favourable increase in the selling price of

those commodities which came under official control. The growing stringency of money also proved to be an impediment to expansion of activities.

Investment interest has greatly diminished in the course of the past few days as prospective buyers are labouring under fresh apprehensions as regards the working of the corporate sector. Already there are indications of a slow down in production in industry and it appears that the results of the current year would be no better. While there is growing concern over the increasing idle capacity in industry due to paucity of imported raw materials, it has been officially indicated that far from there being any relaxation, there will be further cuts in the near future.

The small increase in retention price that has been granted to the

steel companies has been mainly responsible for the lack of interest in equities. The private steel companies had asked for a sufficiently large increase in the retention price. The recommendation of Tariff Commission was for an increase of Rs 38. But what has been actually granted by Government is much lower than even the most pessimistic of calculations. It is feared that with such a small increase, the companies will not be left with much to distribute as dividend to its shareholders. Of the two private sector steel companies Indian Iron has declared an interim dividend of 80 nP per share. Although Tata Steel was also expected to announce an interim, there was no news from the company in that regard. Now that the new steel retention price has been announced, it is expected that the com-

Indian Finance

15 September 1962

pany will soon make known its decision regarding the dividend. It is apprehended that TISCO may not be able to maintain the dividend even at the previous year's level.

Tata-Robins-Fraser

The Government of India have sanctioned the establishment of a new company, Tata-Robins-Fraser Limited, for the manufacture of a wide range of materials handling equipment. This will be the first undertaking in India which will be manufacturing the complete range of materials handling equipment. Apart from the manufacture of this type of equipment, the new company will have a self-contained Engineering Division to undertake turn-key contracts for the entire designing and installation a wide variety of handling and other equipment.

The new undertaking will make available to the country a valuable and extensive range of plant, equipment and engineering services covering the variegated requirements for the handling and processing of the materials of coal, steel, cement and other industries which have been accorded high priority in the country's development plans.

The plant is proposed to be set up in Jamshedpur in collaboration with Hewitt-Robins Ins. U.S.A., and Fraser & Chalmers Engineering Works of the General Electric Company of England. The Indian partners are Tata Iron & Steel Company Limited and the Associated Cement Companies Limited, who will together hold 51% shares in the new company, Tata-Robins-Fraser Limited. The foreign collaborators will each have 24.5% holding and their contribution will fully cover the foreign exchange required for the import of plant and machinery.

Hewitt-Robins and the General Electric Company have agreed to furnish the know-how and technical services for the supervision and initial operation of the plant, including the Engineering Division, and to the training of Indian personnel in their plants and offices in the USA, and the UK, as also in India, in the processes of manufacturing the products of the new company, in the design and techniques required for systems contracts, in the engineering services related to the application of such products and in the proper methods of installation of such equipment.

Practically all the formalities for incorporating Tata-Robins-Fraser have been completed and its plant in Jamshedpur is expected to go into production towards the end of 1963.

Gillanders Arbuthnot

Gillanders Arbuthnot & Company, Limited has made a net profit for the year ended 31 March, 1962 before providing for taxation and

depreciation of Rs 3,157,953 as against Rs 3,290,049 for the previous year. Sales have declined to Rs 17,209,919 from Rs 18,223,572. After providing Rs 1,290,147 for taxation against Rs 1,037,551 and Rs 240,513 for depreciation against Rs 211,347, and allocating Rs 400,000 for Reserve fund against Rs 300,000, Rs 19,313 for development rebate against Rs 4,553 and Rs 100,000 for other funds against Rs 582,840, the ordinary dividend is maintained at 11 per cent absorbing Rs 1,021,429. A sum of Rs 168,102 is carried forward as against a sum of Rs 192,551 brought in.

The company's trading activities now almost wholly depend on indigenous agencies and progress continues to be made in the acquisition of these. The managed companies generally had a satisfactory year although a number of them have been affected by shortages of raw materials and power and by transport difficulties. During the year under review investment is substantially higher than in the previous year as a result of higher dividends in respect of the year 1960 received from the tea companies.

STOCK EXCHANGES

State of Suspense

STOCK markets have continued to present a gloomy appearance due scattered offerings and lack of buyers. It looks as if the operators have not yet got over the recent shock following the disappointment over the retention price of steel. A relieving feature of the week's trading is the fact that selling pressure has abated, partly due to short-covering and partly due to speculation over the final dividend of the Indian Iron & Steel Company Limited.

With restricted activity price movements on the Calcutta Stock Exchange were confined to a narrow range.

The Bombay Stock Exchange finished the week on a subdued note, reflecting lack of support and tired long liquidation.

There was a further contraction of business on the London Stock Exchange where no definite trend was established.

Wall Street closed steady with mostly fractional changes in either direction.

CALCUTTA

Friday Evening. EXCEEDINGLY dull conditions prevailed on the local stock exchange during the week under review. With buying interest at a low ebb, price movements remained narrowly irregular as there was a tendency to press offerings even on the modest upturns.

In general, leading operators preferred to unload their holdings as a precautionary measure as they feared that the recent decision of the Government with regard to the steel re-

tention price would affect the financial position of the steel companies, which are faced with a continuous rise in production costs. A section of the market feared that both the TISCO and IISCO would not be in a position even to maintain their ordinary dividends. All eyes were, therefore, fixed on the final dividend, to be declared by the Indian Iron & Steel Company as this would, to a certain extent, be helpful in indicating the attitude that the company's directors would adopt in meeting the situation created by the unfavourable decision by the Government.

The near-term outlook for the corporate sector was also considered to be disappointing. Investors could derive no inspiration from the regular flow of corporate news, as there was increasing evidence that profits were squeezed by rising production costs raw material shortages and transport bottlenecks. In this respect, it was even feared that the profit-margins of industries might be squeezed further by official measures designed to check the rise in prices. There was also a general disposition to await the final outcome of the Commonwealth Prime Ministers' Conference at London. French support, therefore, remained virtually absent even at the depressed levels.

Conditions in the Gilt-edged section remained dull, and the volume of business transacted continued to be small. There was scattered support for selected short and medium-dated securities. 3 per cent 1986 Conversion Loan changed hands at Rs 68.85 to Rs 69.25 to finish the week at Rs 69.

Jute shares showed a mixed trend although the fixation of the minimum price for raw jute at the same level as in the previous season induced the operators to be cautious in their dealings. Even Champdany, which were boosted up to Rs 157 on reports of the company's proposal for capital reorganisation, slipped down to Rs 145.50 due to lack of support. Birlas changed hands on the ex-dividend basis at Rs 35.37 to Rs 35.75, while Howrah were cheaper at Rs 20.69 against Rs 21; India at Rs 17 against Rs 17.25; Ganges at Rs 15.62 against Rs 15.94 and New Central at Rs 14.62 against Rs 15.37. Kinnison were, however, supported up to Rs 150 following the encouragement derived from the speech made by the company's Chairman.

Except East Indian which met with consistent support up to Rs 52.37 following the company's proposal to expand production, Coal shares were devoid of interest. New Beerbhoom met with business at Rs 23.12 to Rs 23.25; Central India at Rs 10.12 to Rs 10.31 and Western Bengal at Rs 9.25 to Rs 9.56. Burrakur fluctuated irregularly between Rs 17.25 and Rs 17.44 due to alternate buying and selling closing finally at Rs 17.37.

Despite the improvement in the auction results obtained this week, operations in Tea shares were hesitant to enter into commitments. They seemed to be worried by the short-fall in the North Indian crop. They

also thought that the profits of the companies for the current year would be no better than in 1961. Baradigi changed hands at Rs 23.87 to Rs 24.12; Hasimara at Rs 14.56 to Rs 14.75; Jay Shree at Rs 17.19 to Rs 17.37; Methoni at Rs 18.87 to Rs 17.37 and Methoni at Rs 18.87 to Rs 19.06.

Textile shares were subdued in view of the rather obscure outlook for the exports of piecegoods. JK Rayon were rather stagnant at Rs 16.87 while Bowreah were well maintained at Rs 28.75. Elgins turned cheap at Rs 19.12 against Rs 19.56 with Jay Shree changing hands at Rs 16.87 to Rs 17.50.

Little or no interest was shown in the Sugar section, as the demand of the industry for higher fair prices had not been conceded by the Government. Dyer Meakin, after ruling very steady at Rs 32 till the middle of the week, were on offer at Rs 31.50 at the close. Darbhanga were quiet at Rs 9 against Rs 9.62 and Balmore at Rs 2.28 against Rs 2.40. Cawnpore, after a long time came in some enquiry up to Rs 12.81.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons which, in turn, were subjected to cautious trading. Operators seemed to be nervous and started speculating on how the announcement of the retention price was going to influence the directors in deciding the final dividend. Even the small carry-forward charges at this week's settlement, seemed to have not impressed the bulls who had suffered heavily due to the recent shake-out. After opening better at Rs 25.54 Indian Irons receded to Rs 25.30 on settlement considerations. After improving again to Rs 25.60, the scrip finally closed at Rs 25.52. TEXMACO touched a low of Rs 22.80 from a high of Rs 23.10; Guets, Keen, Williams Rs 37.62 from Rs 38.09 and Jessop Rs 22.37 from Rs 22.50, before finishing the week at Rs 22.95; Rs 37.69 and Rs 22.56 respectively. Binani Metal were on offer at as low as Rs 10.81 against Rs 11.19; Dalmia Iron at Rs 11.69 against Rs 12.12 and J. K. Steel at Rs 16.69 against Rs 17.06.

Miscellaneous issues moved in sympathy with the general trend of the market. Following were the price trends of a few selected shares:

	Week's Week's Week's High Low Closing

Company Reports

Titaghur Paper Dividend Halved

The results of the Titaghur Paper Mills Company Limited for the year ended 31 March 1962 show a net profit, before providing for taxation and depreciation, of Rs 15,667,460. This amount however is after drawing liberally on various reserves. The net profit is arrived at after transferring Rs. 7,00,000 from General Reserve, Rs 250,000 from Dividend Equalisation Reserve; Rs 1,100,000 from Reserves for Revaluation of Stocks and Stores; Rs 7,00,000 from Reserve for Development Rebate; 6,600,000 from Reserve for New Mill Project and Rs 3,641,000 from Reserve for Taxation contingencies and including Rs 383,792 being excess profit tax refunded for period ended 31-3-41 to 31-3-46. In the previous year the net profit before providing for taxation amounted to Rs 10,872,721 after transferring Rs 700,000 from Dividend Equalisation Reserve. Depreciation gets a lower allocation at Rs 3,431,111 as against Rs 5,775,035 in the previous year. However a sum of Rs 10,241,000 has been transferred to General Reserve while the Statutory Development Reserve receives Rs 700,000 as against Rs 626,300 in the previous accounting year. Provision for taxation gets nil against Rs 2,005,573. The ordinary dividend has been halved to 10 per cent from 20 per cent.

Owing to the unsatisfactory operation of No. 2 and No. 3 Mills, the company's results have been adversely affected. Total production has been slightly lower than in the previous year. Costs of chemicals as well as repairs and maintenance have been high at No. 2 Mill while the standard of operational efficiency required to turn No. 3 Mills into a profit-making unit has not been achieved yet. Difficulties as regards procurement of railway wagons continue while it has been necessary to supplement bamboo as raw materials with bagasse, jute sticks and paddy straw.

The company holds an industrial licence for an increase in the installed capacity of No. 3 Mill by 6000 tons per annum and the directors note in their report that there is scope for effecting modernisation and substantial improvement by way of productive efficiency and economies in operation at Nos. 1 and 2 Mills. In order to meet the substantial capital expenditure that will be involved in these expansion programmes, the company has applied for permission to capitalise a sum of Rs 56 lakhs from General Reserve by making a bonus issue of new "A" equity shares in the proportion of one bonus share for every two ordinary shares held to the holders of "A" and "B" Ordinary shares and after the bonus issue to make a "rights" issue of new "A" equity shares in the proportion of two shares for every one ordinary shares at a premium of Rs 5 per share.

The revenues of the company will be augmented to the tune of Rs 34 Lakhs annually hereafter as Government has sanctioned an ad hoc increase of 6 p.p. per kilogram on all qualities of paper and board with effect from 21 June 1962.

Indian Cable Pays Same

Although sales of Indian Cable Company Limited for the year ended 31 March 1962 have increased to Rs 100,441,619 from Rs 94,820,353, the net profit before providing for taxation and depreciation has declined to Rs 16,241,477 (after transferring Rs 200,000 from provisions for Bad and Doubtful debts and Rs 708,595 from provision for taxation) from Rs 16,959,471. The Directors have explained in their report that the decline in the rate of profit is due to the

fact that in spite of increased costs resulting from a combination of factors including increased manufacturing expenses and a substantial increase in distribution expenses, especially freight costs necessitated by the large scale use of road transport the company has not increased its selling price.

Provision for taxation is slightly higher at Rs 6,950,000 while provision for depreciation at Rs 1,685,909 is lower than in the previous year. Reserves get an allotment of 1,000,000, Rs 5 lakhs less than last year. Development Rebate gets only Rs 50,000 as against Rs 300,000 while other funds are allotted Rs 818,367. The ordinary dividend is maintained at 22.5 per cent absorbing Rs 5,304,982. A sum of Rs 5,015,117 is carried forward as against Rs 4,872,642 brought in.

The company's modernisation and expansion plans have been finalised and it is anticipated that the new projects will be completed and full production attained in the next two years. In his statement accompanying the Accounts, the Chairman of the company has pointed out that notwithstanding the coming into production of several new cable factories and the consequent increase in competition, the demand for the company's products continues at a high level and the order book remains comfortably full.

JENSON & NICHOLSON

1962

J & N has been producing India's leading paints since 1922. With a pioneering history of forty years, the name Jenson & Nicholson is synonymous with the finest decorative finishes and industrial coatings. The paints featured in this advertisement—leaders in their fields—are only three in a vast range of J & N brands.

ROBBIALAC PLASTIC EMULSION

is excitingly different. It applies easily—brush marks vanish as you paint—and dries in an hour. It leaves a smooth, lustrous, extremely durable finish that will stand repeated washing and scrubbing. Robbialac Plastic Emulsion is especially suitable for decorating walls, ceilings and woodwork. When planning your new colour scheme, consider Robbialac Plastic Emulsion—choose from 120 delightful shades.

JENSOLAC STOVING ENAMEL

is the perfect coating for metal. It provides a clear, attractive, hard-wearing gloss, and is widely used for refrigerators, typewriters, filing cabinets and other domestic and office equipment. Industry has clearly demonstrated its confidence in Jenson Stoving Enamel. As with all J & N's industrial coatings, Jensonlac is backed by a Technical Advisory Service second to none! Staffed with qualified chemists, this service offers expert advice and practical assistance to industry on any problem involving paint.

ROBBIALAC SUPERGLOSS ENAMEL

is the last word in quality finishes. It represents the most advanced thinking in its field. It combines rich, brilliant tones with a superb gloss. The most versatile coating in the J & N range, Robbialac Enamel can be used, with equally superlative results, for interior and exterior painting. Robbialac Enamel comes in a very wide range of colours. It is recommended for use in homes, offices, shops, showrooms, theatres...anywhere, in fact, where only the finest paint is good enough.

The International Four

The international financial institutions met last week, but their meetings were almost anti-climatic in the light of the deliberations of the Commonwealth Prime Ministers on the issue of Britain's entry into the ECM. The Washington discussions have also failed to invest the meetings with any sense of urgency; and yet the importance to the developing countries of the group of four international financial agencies was never more compelling. In the immediate post-war period the two that then existed were faced with West Europe's problem of reconstruction. And let it be recognised that, vital though American aid and the Marshall Plan were, the quickening in West European economies owed not a little to the timely and considerable assistance that was provided by both the International Monetary Fund and the International Bank for Reconstruction and Development. By the early fifties with the 1949 crisis marking almost the peak of the hardships that had to be borne by West European countries, this aspect of the task of the IMF and the IBRD had been faithfully discharged. Then followed a period of more intense political, rather than economic, activity in the free world. More and more nations successfully won their freedom from colonialism of one sort or another. Now clearly the time had come for the two financial institutions to fulfil their responsibility of assisting to overcome the difficulties that invariably accompany development. The question before us is, have the IMF and the IBRD (and the two newcomers, IFC and IDA) been equal to the demands of developmental economies?

We are afraid that the general answer to the question must be no, notwithstanding the fact that in the particular case of India the IBRD especially has shown a nice awareness of what needed and needs to be done. We shall, if we may, take first the IMF and assess how well (or badly) it has carried out its tasks. The function of the IMF is to make available "free" foreign exchange currencies to a member country which may be experiencing essentially short-term imbalances in trade account; and it is normally expected that such a member country will effect the re-purchase of its own currencies within a period of 3 to 5 years. The IMF was "conservative".

But a conservative or orthodox policy can be of little help in dealing with the problems of the developing countries. In their case trade imbalances tend to be spread out over longer periods; and as Mr Jacobson himself has recognised at this year's meeting of the IMF, the need of the developing countries for long-term development finance is great. However, he does not appear to have realised that equally the need for shoring up the reserves of such countries is acute. India's is a case in point. We had need of buttressing reserves with the purchase of currencies from the IMF; but before we could do so it became necessary to effect re-purchase of \$127.5 million of currencies. So, though the IMF in its year to April 1962 did make available a total of \$250 million of facilities, the net worth of such assistance was \$122.5 million.

Inescapably India has had to ask for another standby credit of \$100 million, against which also we have since drawn. We trust that the IMF in its operations will take due account of the need for a longer period before requiring re-purchase by developing countries.

In the case of the IBRD almost the only criticism is that its interest rates sometimes tend to be on the high side. We can hardly complain, India figures as the largest borrower, having obtained, by way of original principal amount and as at 30 June 1962, a total of \$846 million since the first Railways loan in August 1949. Again, as the convenor of the Aid India and Pakistan Clubs, the IBRD (more popularly known as the World Bank) has revealed its sincerity of purpose in helping the developing countries.

The International Finance Corporation appears to be a futile organisation. It seems to us to possess a sort of doctrinaire "free" enterprise approach, insisting on some sort of profit-sharing scheme quite often. In terms of "interest", or repatriation of profit by way of dividend, an IFC loan and/or investment in equity can be prohibitive as to cost; and a developing country cannot quite afford an outgo of foreign exchange in the form of dividends to the extent apparently possible where an IFC transaction is concerned. We are not sure why it has happened, and therefore we would like to know the implication of the Republic Forge Co Ltd and the Kirloskar Oil Engines Ltd both cancelling or terminating operational investments (to which the IFC had committed itself) in an amount of \$2.35 million. If the foreign exchange investments of bodies like the IFC are to be looked upon as catalysts, to activate industrial progress in developing countries, then surely there should be due care taken to ensure that foreign exchange outgo in respect of such investments is not crippling.

We come lastly to the International Development Association, which in the most desirable person of Mr Eugene Black shares its President with the IBRD and the IFC. In its first full year of operation, as the annual report has it, the IDA "has been able to provide substantial financial assistance to important development projects in its member countries." India again leads the list of beneficiaries with six credits during the year and a total of seven since inception. The IDA is an admirable organisation which has particular sympathy with the difficulties of developing countries. Interest rates have been deliberately kept low; repayments are over the extended period of 50 years; and there is a long 10-year period of grace.

What, then, is the balance-sheet of the four international organisations? The answers are the rigid approach of the IMF and the prohibitive cost of the IFC; the credits, the generosity of the IBRD and the humaneness of the IDA. The assets are slightly the greater, if we have regard for the fact that there are signs of a thaw in the IMF. The economic freedom of the free world can be safeguarded by the four; let us hope they will so safeguard.

...not exactly
astronauts, of course,
but we do manage to circulate
-about twice every year

The BINNY Group of Mills manufactures over 30,000 miles of cloth every year—enough to encircle the world twice at the equator! From their inception the Madras and Bangalore Mills have unfailingly concentrated on the production of high grade materials so that the name 'BINNY'—synonymous with superior quality and durability—has been carried to the remotest corners of the country. The volume of their production bears ample testimony to the popularity of BINNY fabrics, the fine quality of which has not only created a large and growing following in India but has also succeeded in winning the goodwill of buyers in many countries overseas—sure proof that BINNY fabrics are equal to the best in the world.

Progress of Co-operation

A comprehensive review of the achievements in the field of co-operation during 1958-1960 has been presented by the Reserve Bank in one of its latest publications on the subject. Judging from the standpoint of the targets fixed in the Second Plan, the progress registered during this period can be considered fairly satisfactory. For, except in respect of medium term loans, the target for the short term loans and for long term loans was exceeded even one year ahead of the final year of the Second Plan. Thus against the target of Rs 150 crores for short term loans by the end of the Second Plan, the total of short term loans extended by the cooperative system amounted to Rs 154.01 crores, while in respect of long term loans the target and loans outstanding as on 30 June 1960 were Rs 25 crores and Rs 28.05 crores. Other sectors of the movement like marketing, consumers, cottage industries, farming etc have also maintained their progress during the period. Taking an overall view, it may be seen that the number of societies of all types has increased from 258,000 in 1957-58 to 313,000 in 1959-60 while the number of members of primary societies had gone up from 21.4 million to 30.3 million. Progress reflected by other indices like paid-up share capital working capital and loans advanced by primary credit societies etc is also impressive.

PROGRESS OF THE COOPERATIVE MOVEMENT

Item	1957-8	1958-9	1959-60
No of societies of all types (in thousands)	258	284	313
No of members of primary societies (in millions)	21.4	24.8	30.3
Paid-up share capital of all types of societies (in crores of rupees)	122	149	185
Working capital of all types of societies (in crores of rupees)	696	880	1,083
Loans advanced by primary credit societies (in crores of rupees)	202	260	325

The largest segment of the cooperative sector is constituted by the agricultural credit societies, and here progress has continued to be maintained especially at the primary level. The number of villages served by agricultural credit societies as at the end of 1960 has been placed at 3.84 lakhs the percentage coverage being 68. The membership of the credit societies has also shown an increase of 42 lakhs to 144 lakhs which is very near the target of 150 lakhs fixed in the Second Plan. The average membership per society at 71 also shows on improvement from 61. The societies have also registered a substantial expansion in the working capital which was higher at Rs 223.07 crores as compared with 133.75 crores as on 30 June 1958.

The period covered by the Reserve Bank review was one which witnessed reorganisation of the cooperative movement. Though originally the emphasis was on the formation of large sized societies on the recommendations of the working group set up by the Government the emphasis was shifted to

the organisation of small sized societies. Similarly a process of rationalisation was also started in respect of the Central and State cooperative banks. The objective was to have one strong central bank for a district. As a result during the period 27 central banks were amalgamated with other Central Banks, the operation being mainly confined to three States, namely, West Bengal, Madhya Pradesh and Rajasthan. Consequent on this rationalisation the number of Central banks was lower at 400 as compared with 418 as on 30 June 1958. On the other hand the number of offices of the Central banks registered a noteworthy rise to 1,277 against 985 in 1957-58. Further consequent on the increase in the number of member societies to 2.16 lakhs from 1.76 lakhs, there was a corresponding increase in the aggregate membership of the Central Banks. A substantial increase in the paid-up share capital by Rs 14.42 lakhs was also a remarkable feature of the progress of the Central banks during this period. The total paid-up share capital has been estimated at Rs 31.49 lakhs against Rs 17.07 lakhs as at the end of 30 June 1958. With larger paid-up share capital and also reserves the owned funds of the Central banks showed an overall increase from Rs 24.49 lakhs to Rs 41.69 lakhs during the period.

There has also been a noticeable improvement in the loan operations of the Central bank. The volume of fresh advances made by Central cooperative banks showed an increase from Rs 159.87 crores to Rs 210.16 crores. The outstandings of advances made by the Central cooperative banks at the end of the period have been estimated at Rs 176.11 crores of which the major portion at Rs 172.58 crores constituted outstandings against societies.

In respect of the State cooperative banks there has been a decline in their membership of both individuals and also of banks and societies affiliated. This however only reflects the fact that the memberships of the State banks were tending to be confined to Central banks and apex and regional soci-

eties eliminating individuals as far as possible. But in other matters like owned funds and deposits there has been striking improvement. The total share capital of the apex banks increased from Rs 8.47 lakhs as at the end of 1957-58 to Rs 14.62 lakhs as on 30 June 1960. The deposits held by the State cooperative banks also registered an increase of nearly 33 per cent to Rs 60.15 crores. The total working capital of the State cooperative banks as at the end of 1959-60 has been estimated at Rs 174.74 crores which compares with Rs 109.14 crores at the end of 1957-58. The advances made by the State cooperative banks which declined to Rs 153.40 crores in 1958-59 from Rs 212.48 crores in 1957-58 rose to Rs 196.92 crores during 1959-60.

In the field of long term finance also, there was a remarkable improvement in the loan operations of the Central land mortgage banks the loans issued at the end of 1959-60 being placed at Rs 8,51.70 lakhs as against Rs 4,67.65 lakhs as at the end of 1957-58. The loans advanced by the primary land mortgage banks also showed an increase to Rs 5,10 lakhs against Rs 3,27 lakhs during 1958-59. The number of primary land mortgage banks was also higher at 408 against 347 at the end of 1957-58.

While, thus in statistical terms, the picture that emerges is encouraging, account has to be taken of the surviving weakness of the cooperative structure of which there is abundant evidence in the Reserve Bank review itself. A serious shortcoming of the progress of the cooperative movement is its uneven growth as between the different States. Progress has been noticeable mainly in a few States like Madras, Andhra Pradesh, Maharashtra and Gujarat. Loans advanced by the agricultural credit societies in these States formed the major part of the all India total in this regard. The averages of working capital per society and per member also show wide divergence confirming the uneven growth of credit co-operation as between the different States. In the qualitative aspect of the movement also very little pro-

gress is indicated. To take some instances recoveries of loans advances made by the societies continue to be very poor. Overdues were as much as 33 per cent in Mysore, 27 per cent in Maharashtra, 25 per cent in Gujarat and 26 per cent in Punjab. The large number of societies estimated at 42,000 working at a loss is proof of the continuing imbalance in the financial working of the credit societies. The major failure of the co-operative movement has been in attracting deposits which in principle should furnish the real basis for the operation of the credit societies. Deposits it has been revealed formed a small 5.3 per cent of the total working capital as on 30 June 1960 while the average deposit in the case of the small sized societies was only Rs 410 per society. In the case of the State cooperative banks the deposits constituted only about 3 per cent of the owned funds. In the result, the movement has come largely to depend on State aid and borrowings from other sources for its progress.

Public Sector Undertakings

For some time now, there has been much inchoate dissatisfaction and some interested lobbying about the poor performance of public sector enterprises, especially about the poor profitability. There was particular scepticism about these undertakings providing from their surpluses Rs 300 crores for financing the plan projects as the Third Five Year Plan expects them to. The publication recently of the annual report of the working of forty two commercial and industrial undertakings of the central government in 1960-61 is not therefore a day too soon. The report has not dispelled doubts about these enterprises generating the surplus hoped for financing the Plan. But it contains enough encouraging news to make one wonder why Authority has always been so much on the defensive in the past about these undertakings. It can only be that they have never bothered to assemble the evidence together and see what the real situation was out of a fear that it may be very discouraging. Such tentative and half-hearted collation as was made earlier gave a picture which was very unflattering. It will be recalled that at the time the budget for 1962-63 was presented, we had occasion to be highly critical of the misleading data that was presented in the Explanatory Memorandum on this very subject. We shall have occasion to refer to these data later on in this article: at the moment it is enough to note the odd fact that first, Authority does not seem to know facts in its favour and second, when it does assemble facts, it presents a picture far more unfavourable than what it in fact is.

Four Categories

The present report goes some way in reversing this impression created by earlier attempts at assessing public sector performance. It divides government undertakings into four broad categories: (i) those under construction (9) (ii) completed ventures not commissioned (1) (iii) running commercially (26) and (iv) promotional and developmental enterprises (6) (Figures in brackets indicate the number of enterprises in each category.) The methodology of this division is a distinct improvement on the one adopted by the Central Statistical Organisa-

tion's study entitled "Principal Public Sector Undertakings in India—1960-61". The latter covers a much wider ground giving information about 63 undertakings including the departmentally run Railways and Post and Telegraphs, the Chittaranjan and Perambur units (whose accounts get incorporated in the Railways Accounts) the State Bank, the Reserve Bank, the LIC and the Oil and Natural Gas Commission etc. Its classification is as follows: (a) Industrial Undertakings completed and in full operation, 24 units in number and corresponding more or less to category (iii) in the present report, (though Hindustan Steel, included by the present report in category (ii) is included in this by CSO). (b) Industrial undertakings incomplete and not in full operation, numbering 11, roughly corresponding to category (i) above, though quite a few in this CSO category find a place in category (ii) in the present report. (c) Commercial, Financial and general developmental undertakings, numbering 28 roughly co-eval with category (iv) above. Apart from the better rationale of isolating the enterprises that are functioning more or less regularly in a category of its own, the present report gives a far better picture of the profit performance of the various concerns individually and in their totality. The CSO study does make an attempt to give the total picture of what might be called balance sheet items, like capital, reserves, block and other assets. But it does not give the picture of total profits and the disposition of these profits.

The report shows that the total investment by the central government as at the end of 1960-61 was Rs 953 crores, consisting of equity capital of Rs 556 crores and of loan capital of Rs 397 crores. This proportion of equity to loan capital is somewhat the reverse of the general trend in the private sector and to that extent, profit as percentage of equity capital understates performance. By categories of undertakings, it will be seen that the biggest investment, Hindustan Steel, is as yet nominally unproductive, that is to say, not fully commissioned. It accounts for Rs 606 crores and 63.6 per cent of the total investment. Running concerns account for Rs 212 crores, that is to say 22.2 per cent of the capital deployed. Taking all the 42 concerns together, the value of sales and business transacted was Rs 205 crores and the net profit after providing depreciation, meeting interest and tax obligations was Rs 7.74 crores. In terms of percentage on paid-up capital it works to 5.5 per cent against 4.4 per cent the earlier year.

Misleading Figures in Explanatory Memorandum

It is interesting to compare these figures with the figures worked out in the Explanatory Memorandum to the budget for 1962-63 referred to earlier. Annexure XVII in the Explanatory Memorandum purports to give a "statement of investments in industrial undertakings and other concerns and returns therefrom." It lists 74 undertakings and total investment therein by the government is given as Rs 606 crores as at the end of 1960-61. Total profits made for the year is given as Rs 2 crores which works out to a percentage on "investment" of 0.3 per cent. Even the most cursory examination and comparison with the figures given in the report under review shows how careless has been the compilation in the Explanatory Memorandum. The "investment" by the government in 74 enterprises is shown as Rs 606 against Rs 953 crores (equity only) and Rs 953 crores (including loans by govern-

ment) in 42 undertakings given in the present report. At first sight, one may imagine that the Explanatory Memorandum was thinking only of the equity capital and not of the loan capital lent by the government. This guess would appear to be confirmed by the figure of Rs 300 crores shown as "investment" against Hindustan Steel. But this impression would be wrong as the basis is not uniformly followed. For example, if you check up the figures for Air-India International, the Explanatory Memorandum gives government's investment therein as Rs 18.16 crores, whereas the equity capital therein is correctly given in the present report as Rs 9.12 crores. If you add to this government's loan of Rs 9.12 crores it comes to Rs 18.24 crores, which is nearer the Rs 18.16 crores mentioned in the Explanatory Memorandum. In other words, the Explanatory Memorandum takes investment to mean only equity investment in certain cases and in certain other cases it takes investment as inclusive of loan by government. It is on this anomalous "investment" that it has worked out the "return" at 0.3 per cent. Moreover, as pointed out by us at the time budget was presented and as confirmed by the present report, many concerns which did make profit during the year, (Air India, International, for example, made a profit of 7.4 per cent on equity capital) is not shown to have made profit at all in the Explanatory Memorandum. A good deal of the sarcastic comment on the performance of the public sector that the ratio given in the Explanatory Memorandum evoked at that time would have been spared had government shown the care (and sense of public relations) it has since shown in this report.

8 Per cent Profit on Sales

But the most interesting part of the report is that dealing with the performance of the running concerns. The total investment in 26 such concerns is Rs 212 crores (including loans given by the government.) 23 out of the 26 have yielded a profit of Rs 7.83 crores while the other three suffered losses amounting in all to about Rs 9 lakhs. (The losing concerns were Hindustan Salt, Indian Oil Company and National Project Construction Corporation.) This is net of taxes and interest payments. A rather common measure (one, however, not adopted by the report) is the percentage of gross profit (i.e. after providing for depreciation but not interests and taxes) on sales, which works out to about 8 per cent which cannot be considered a bad showing. As percentage of capital employed, the gross profit (as defined earlier) works out at 5.4%. As percentage of paid up capital, this year's net profit (after providing depreciation, interest and tax) is put at 5.5 per cent against 4.4 in the previous year.

It would, however, be fatal to be complacent about the performance of these concerns. In some cases at least, there has been an element of overstatement. For example, it is admitted that interest charges have sometimes, as in the case of Air India International and Indian Airlines Corporation, been deferred. Considering that as on 31 March 1961 the government has lent over Rs 9 crores to AIL and about Rs 8.5 crores to IAC, it is easy to see that the profits that don't take into account the interest charges on these amounts are somewhat exaggerated. If account is also taken of the interest holiday given to Hindustan Steel (which owes government Rs 366 crores) the total picture will be much less flattering. (Incidentally, it may be mentioned here that the 0.3 per cent profit worked out by the Explanatory Memo-

randum did not take account the loss from Hindustan Steel, whereas the present report does. Of course, the "loss" would in both cases have been far greater if interest on government loan had been charged.)

Resources Outlook

From the point of view of resources for the Third Plan, it is necessary to note that "surpluses" which are to finance the Third Plan are synonymous neither with "profits" nor with "dividends" received by the government. Part of the surpluses are, of course, reserves created out of profits and to that extent profits are relevant. The other element in the surplus is depreciation and other development reserves charged to the profit and loss account. Though depreciation reserve is theoretically for replacement and not for expansion, the Third Plan programmes to be financed cannot be easily bifurcated thus. To the extent to which depreciation reserves are available only for replacement, they are not available for expansion. But development rebate reserve is obviously a source of fund for expansion. Accumulated "surpluses" are estimated by the present report at Rs 79 crores from the commencement of operations by these concerns. How much of it is "free" in the sense that it does not represent directly an asset already created out of it is difficult to say. But despite hopes of better earnings from these undertakings in the coming years expectations of Rs 300 crores from them by way of free reserves for the Third Plan would appear to be somewhat dubious.

ECAFE SEMINAR

Services Related to Housing

THE importance of adopting a comprehensive approach to the problem of Housing was emphasised by Dr Zakir Hussain, Vice-President of India, in his inaugural address to the UN Seminar on Essential Services in relation to Urban and Rural Housing which is now in session in New Delhi. The very fact that this seminar has been organised by the ECAFE and the Bureau of Technical Assistance Operations, in cooperation with the World Health Organisation and the Government of India, is evidence of the recognition that the mere provision of houses does not constitute a complete answer to the problem of housing. Any programme for development of housing immediately raises a host of others relating to transport, land ownership and land values, employment, location of industry, quite apart from the provision of essential services like water supply and arrangements for disposal of waste. These latter in the tropical countries assume even greater importance than housing itself, as Mr U Nyun has pointed out in his opening statement to the Seminar. In these regions some sort of protection against the weather can be secured at no great cost by the people themselves. But provision of protected water supply and drainage within the limited resources available poses difficult questions which underline the need for comprehensive planning.

The dimensions of the problem can be assessed in relation to the requirements of additional houses. The Acting Secretary

General of the United Nations, in his report to the ECOSOC outlining his proposals for action in the Development Decade has given a graphic description of housing, or the lack of it, in large areas of the world and suggested a programme of action.

It is estimated," says this report, "that over 1000 million people in Africa, Asia, and Latin America—about half the total population of these countries—are homeless or live in housing which is a health hazard and an affront to human dignity. Major cities in these areas have large hovel settlements in which as much as 20 to 30 per cent of a city's population may live in rudimentary shelters, with no water, sewers, roads or other community facilities. Rural areas are even more deficient. . . . In virtually all developing countries housing conditions are deteriorating steadily, despite the fact that these countries are allocating to housing a share of gross domestic fixed investment ranging from 12 per cent to as high as 30 per cent. To make matters worse it is estimated that over 200 million new inhabitants will crowd into the cities of Africa, Asia and Latin America during the development decade".

The programme suggested by him envisages the construction in the countries of Africa, Asia and Latin America, of from 19 to 24 million dwellings annually throughout the decade 1960-70 to eliminate existing shortages in 30 years, to house the increase in population and to meet current obsolescence. The provision of related services will call for sustained effort, not only in the planning and construction of the houses under the programme, but in the field of development of industries for manufacturing housing materials, cast iron pipes for water supply and for drainage, water purification plants, sewage disposal equipment, pumps etc within the region. Some of the countries are already making such equipment and the programmes would have to be stepped up and the units more widely dispersed to cope with the requirements of a really adequate housing programme. For, the success of the latter depends on the availability of the required materials and the equipment as well as their cost. It is, therefore, encouraging to note that the manufacture of these items of equipment in the region is one of the important topics on the agenda of the Seminar. Training of technical personnel is also another subject that will be considered by the Seminar for, as the ECAFE Secretary has pointed out, the preparation of proper schemes for establishing the essential services is often hindered by shortage of technical personnel, quite apart from financial difficulties.

As far as India is concerned, the Third Plan provides for a total outlay of Rs 202 crores on the different housing schemes of the Central and State Governments and the programme to be financed from funds to be provided by the Life Insurance Corporation. Besides these there are also additional housing programmes financed from other sources such as the Coal and Mica Mine Welfare funds, the allotment for housing under the programme for the welfare of backward classes etc. The total number of houses that will be built under these various programmes has been estimated at 900,000 as compared with 500,000 in the Second Plan. Private investment on housing and other construction during the Third Plan period is placed at about Rs 1125 crores.

Government's approach to Housing as Mr Mehr Chand Khanna, Minister for Works,

Housing and Supply, said in his welcome address to the Seminar, may be a comprehensive one. But that does not alter the fact that it is still inadequate in relation to the requirements—an inadequacy which was highlighted at the last meeting of the Parliament's Informal Consultative Committee for his Ministry. The Members of the Consultative Committee are understood to have drawn particular attention to the slow progress of the Village Housing Scheme. A sum of Rs 12.7 crores is the allotment for this scheme which is confined to a few selected villages. The Minister had explained that lack of funds stands in the way of its extension to all villages in the country.

A revolutionary approach to the problem of rural housing, which will help to mobilise all available resources for investment, including idle or underemployed manpower, on rural housing will be required to prevent the lack of housing in villages creating and perpetuating slums in urban areas. Unless such an initiative is forthcoming it will not be possible to stop the dismal trek to the towns or to tackle the problem of urban slums with any hope of success.

The question of costs is certainly relevant in this context. The provision of essential facilities which should be part of any housing programme worth the name will add substantially to the cost of building. This is a matter on which the Seminar could give useful guidance. Mr U Nyun has also referred to the question of costs in relation to the limited resources available to the Governments in the region and invited the Seminar to give special attention to this aspect of the problem of providing the services ancillary to housing.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Slightly Easier Conditions

The money market has turned distinctly easier, and it would appear that the banking system has got over the pressure arising from tax payments, beginning of the month disbursements and Puja bonus payments in the first week of September. We presume that it is a contraction in bank Advances which has contributed to the easier tendency, though there may also be an element of fresh accretion to Deposit resources. But, by the end of the month, we fancy banks will once again find themselves with resource surplus to their requirements and a more intense bidding at Treasury Bill auction as well as purchase of Intermediate Treasury Bills can safely be expected.

According to the returns of the Reserve Bank for 14 September Active Note Circulation is shown lower by Rs 2.36 crores at Rs 2,041.70 crores, and there has been inflow of Rupee Coin in an amount of Rs 0.68 crore. Foreign Securities are unchanged at Rs 88.34 crores, there having been no need to buttress Balances Held Abroad, as appearing in the return for the Banking Department. Rupee Securities at Rs 1,728.03 crores show a nominal adjustment. So, the Reserve Bank's cash in the till has improved slightly by Rs 3.08 crores to Rs 15.38 crores.

There is, in the return for the Banking Department, distinct evidence of reverse ad hoc being instituted. Investments have been marked down by about Rs 27½ crores to Rs 193.47 crores, and the Centre's Deposits have more or less correspondingly declined by Rs 30.33 crores to Rs 84.42 crores. Cancellation of ad hoc Treasury Bills before maturity may, therefore, have taken place for an amount around Rs 25 crores. The Centre has, moreover, made some payment to the States, whose balances are higher by Rs 7.67 crores at Rs 29.40 crores on top of a reduction of Rs 2.24 crores to Rs 0.85 crore in their ways and means borrowings from the Reserve Bank.

The pressure upon the banks has been alleviated: although Reserve Balances of member banks have fallen by Rs 5.26 crores to Rs 82.81 crores, their borrowings from the Reserve Bank have been cut steeply by Rs 23.96 crores to Rs 18.69 crores; and the Reserve Bank's advances against usance bills are shown Rs 9.10 crores lower at Rs 12.50 crores. State Co-operative Banks also show declines both in Reserve Balances and borrowings from the Reserve Bank.

There is an increase of Rs 21 crores odd to Rs 127.25 crores in the Treasury Bills purchased and discounted by the Reserve Bank. The increase relates as to roughly Rs 15 crores to the disinvestment by the State Bank in the same week, and the balance may be on account of some of the States'

replenishing their balances by re-discount of Treasury Bills. Balances Held Abroad have risen fractionally by Rs 0.32 crore to Rs 5.76 crores, but with this rise the foreign assets held by the Reserve Bank manage just to exceed Rs 94 crores.

+

The return of the State Bank for 14 September is noteworthy for the further disinvestment in gilt-edged that it discloses. In the bare space of two weeks the State Bank has reduced its gilt-edged portfolio by just under Rs 40 crores. Of course the main reason would have been the pressure created by tax payments of constituents, which has caused both a depletion in Deposits and a sharp rise in Advances. During the week under review, however, the strain has been rather less with Deposits rising by Rs 0.99 crore to Rs 571.49 crores. The total of Advances has expanded by the very modest figure of Rs 0.31 crore to Rs 277.34 crores. The State Bank has nevertheless disinvested in gilt-edged for Rs 14.71 crores, reducing its holdings to Rs 252.21 crores. In consequence Other Assets have been marked up correspondingly by about Rs 18 crores to Rs 38.26 crores. The end result is a fall of Rs 2.36 crores to Rs 29.92 crores in cash balances including money at call.

±

The statutory statement of Scheduled Banks for 7 September reveals the tremendous pressure that the banking system was subject to as a result of the combination and coincidence of tax payments, beginning of the month disbursements and Puja bonus. Net Demand Deposits have fallen steeply by Rs 16.17 crores to Rs 888.26 crores, and net Time Deposits show a smaller fall of Rs 4.42 crores to Rs 1,265.83 crores. Moreover, borrowings from the banking system also rose considerably, the total of Advances being marked Rs 15.45 crores higher at Rs 1,419.44 crores. It is interesting to note that, of the fall of Rs 20.59 crores in Deposits, an element of Rs 14.38 crores is on account of the State Bank; but of the rise of Rs 15.45 crores in Advances only Rs 1.51 crores are attributable to the State Bank. This two-fold pressure upon the banking system naturally entailed large-scale recourse to central banking assistance. Borrowings from the Reserve Bank have shot up by Rs 26.24 crores to Rs 42.01 crores; however, indebtedness to the State Bank is practically unchanged, at Rs Rs 17.58 crores. The two-fold pressure also apparently necessitated disinvestment in gilt-edged in a big way, since the portfolio is shown to be Rs 20.72 crores lower at Rs 678.63 crores; but the State Bank alone is responsible, having sold securities in that week in an amount of Rs 25 crores. Thus, other Scheduled Banks actually added to their gilt-edged holdings (by way, presumably, of the new State Loans) by roughly Rs 4.28 crores. It may be mentioned, lastly, that cash balances, including money at call and short notice, are marked higher by Rs 6.41 crores at Rs 194.62 crores—but this was

largely on account of the State Bank's replenishing its resources by disinvestment in gilt-edged. It may be noted that banks have substantially experienced a reduction in strain and pressure in the week ended 14 September, for the latest Reserve Bank returns make plain the fact that Scheduled Banks paid off nearly Rs 24 crores of borrowings from the Reserve Bank.

Prospects are that the 1962 slack season may be prolonged, and that the next busy season will be less severe. For it is now quite clear that industrial production is stagnating, that more and more industrial capacity is being rendered idle for want of imported raw materials or due to shortages of power or coal. It is not yet opportune to hazard a guess about the quantum of expansion in bank credit during the 1962-63 busy season, but in broad terms it may be safe to assume that the increase will tend to be smaller than it was during the last busy season. If, at the same time, the trend in the growth of bank Deposits is maintained, we may have a repetition of the conditions that were witnessed in the 1957-58 busy season. It may be recalled that on that occasion, so slack were money market conditions, we had the unusual phenomenon of banks adding to their gilt-edged portfolios during the currency of the busy season itself. We shall, at the national end of this slack season, endeavour to assess what money market conditions are likely to be over the next six month period till the end of April, 1963.

+

Sterling's Autumn Prospects

By our Special Correspondent

THE extent of selling pressure on sterling during August and early in September was rather less than the usual seasonal pressure, and this gives rise to hopes that the autumn will pass without any undue difficulties. The balance of payments is still adverse, but less so than during the last two years. There is no evidence of any substantial speculative long position in sterling the covering of which would accentuate the seasonal pressure. It is difficult to foresee the direction in which covered arbitrage funds are likely to flow during the next few months, but it seems safe to assume that short-term interest rates in London are likely to decline materially, if at all. How the international political situation is likely to influence the exchanges is of course, anybody's guess. Likewise, it would be bold to predict the influence of the progress, or absence of progress, of Britain's negotiations with the Common Market on sterling, for the simple reason that the outcome of these negotiations is very uncertain.

Sterling's prospects depend, of course to a very large degree on the labour situation in Britain. Any excessive wage concession, or any major strike resulting from a refusal to make such concession, is liable to cause pronounced weakness. From this point of view there may be room for guarded optimism. Even though the trade union movement has rejected the Government's policy of wage restraint, it is now prepared to consider the idea of an incomes policy. Moreover, it seems probable that the Government will introduce its promised legislation under which the dismissal of abundant employees will be made subject to notice or compensation. It is con-

ceivable that, for the sake of securing this major concession, the trade unions may practise some degree of self-restraint—at any rate until the concession is in the bag.

Above all, the strength or weakness of some other major currencies will influence the tendency of sterling. At the moment the dollar seems to be steadier, but there is always a possibility of a revival of selling pressure. Likewise, the prospects of the D. Mark are considered to be at the moment less favourable than they had been at any time during the last ten years. Considering that the weakness sterling in 1957, and again last year, was aggravated by transfers to West Germany, this factor is of some importance in favour of sterling. On the other hand, now that France has solved the Algerian problem the franc is likely to gather strength, always provided that the aftermath of the Algerian solution will not lead to major disturbances in French domestic politics. Barring such disturbances the franc is certain to be very firm though this is more likely to affect the dollar than sterling. Allowing for all these considerations, it seems probable that we shall see the year through without an acute sterling crisis.

RBI

Foreign Assets Survey

The Reserve Bank of India has recently undertaken a Survey relating to India's foreign liabilities and assets as at the end of 1961 under the powers vested in the Bank by Government's Notification No. D. II-1869/ET-47 dated 23 October, 1947 issued under the International Monetary Fund and Bank Ordinance, 1945. It may be recalled here that the previous Survey was as at the end of 1955 and the report on it was published in 1957.

The Survey is mainly confined to long-term foreign liabilities and assets which include the net liability (or assets) abroad of branches of foreign institutions working in India, securities of foreign and Indian Governments and shares of foreign and Indian joint stock companies and other obligations maturing on or after 1 January, 1963. All branches of foreign firms and companies, all scheduled banks, all insurance companies and all Indian joint stock companies having any of these long-term foreign liabilities and/or assets are required to file returns on special schedules designed for the purpose. Individuals and Indian partnerships are not covered under the present survey.

The institutions concerned are being approached individually by the Reserve Bank. However, if any institutions having long-term liabilities and assets of the above description to report, have so far failed to receive the official communication, they may kindly get in touch with the Director, Division of International Finance, Economic Department, Reserve Bank of India, Bombay-1. The last date for filing the return is 31 October 1962.

As with the previous Survey, arrangements have been made for ensuring that the information reported in each return is kept strictly confidential. The Reserve Bank, therefore, invites the co-operation of the institutions concerned in making this Survey a success.

It is notified, for general information, that a new series of Rs 100 Reserve Bank of India Notes will be shortly issued. While the design will remain unchanged these new notes will bear the signature of the present Governor, Mr P. C. Bhattacharyya. Except for this change the new notes will, in all other respects, be similar to the existing ones. Notes with the emblem of Asoka Pillar and bearing the signature of Mr H. V. R. Iengar or Sir B. Rama Rau will continue to be legal tender.

British Treasury's Dilemma

By Paul Einzig

CONFRONTED with the rising trend in the gilt-edged market, the British Treasury has the choice between two courses. It could allow the movement to proceed freely and even encourage its progress. Or it could take advantage of the trend for carrying out a long-overdue funding of the excessive amount of its floating debt. Judging by the issue of the new £500 million 5½ per cent long-term Treasury Stock, official circles have come down on the side of the second alternative. The new issue has been taken up by the public Departments and is now "on top" on terms which depend on the pace at which the Treasury wish to proceed with the funding exercise. It must have been very tempting for the authorities after the lean years on the gilt-edged market to allow the upward movement of gilt-edged prices to proceed unabated. It would be good for the prestige of Government Loans if forecasts of a rise in 3½ per cent War Loan to 70 and above were to materialise in

Indian Finance

the not too distant future. Yet confronted with the choice the Treasury appears to prefer to slow down the rise for the sake of being able to fund a large proportion of the Treasury bill issue.

Should the tap loan be unloaded at a considerable rate it would produce a distinctly disinflationary effect, since it would mop up Treasury bill and would reduce the liquidity ratio of the banks, thereby forcing them to go slow with a granting of credits. This is not the intention of the authorities. Even though they may feel that the time for engineering a reflationary recovery has not yet come, it cannot be their opinion that the present situation calls for an additional dose of disinflation. Conceivably their idea is to prepare the ground for a subsequent reflationary exercise. In due course they are likely to intervene as buyers in the gilt-edged market, and in doing so they will encourage its further rise at the same time as increasing the amount of Treasury bills, thereby preparing the ground for a credit expansion.

In order to be able to operate in this sense the Treasury may deem it expedient to proceed first with funding. Otherwise the net result of its operations would be a lasting addition to the already excessive degree of liquidity of the community. It is a widely-held opinion that one of the main reasons why conventional disinflationary devices have been largely ineffective during the post-war period is the excessive liquidity of the community resulting from the War-time and post-War method of Government financing largely with the aid of short-term and medium-term issues. It is strongly felt that, apart altogether from counter-cyclical ups and downs, the basic trend should be towards a reduction of liquidity. For this reason the Treasury is now engaged in an operation aiming at reducing the degree of liquidity—or to put it in a different way to increasing the average maturity of the public debt—so that when it embarks on an operation in the opposite sense there should be no net increase of liquidity on balance.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 18 September 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.405% and above were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.365 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) upto the close of business on Monday, 24 September 1962. Successful tenderers should make payment on Thursday, 27 September, 1962 at Calcutta and Bangalore and on Friday, 28 September, 1962 at all centres. Other conditions are as usual.

During the week ended 14 September 1962 Government of India Treasury Bills for Rs 133,05,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 19 September 1962 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 12 September to 15 September 1962 amounted to Rs 75,50,000.

22 September 1962

Notes

OILSEEDS

Precipitous Fall in Exports

In his inaugural address to the half-yearly meeting of the Indian Central Oilseeds Committee, Mr S. K. Patil expressed grave concern at the steep fall that has been registered in the country's export of oilseeds products in the course of the last few years. From a level of Rs 34 crores in 1955-56, earnings from exports of oilseeds products have dropped precipitously to a mere Rs 5.83 crores during 1961-62. The decline is to some extent to be attributed to the ban imposed by the Government in 1957 on export of groundnut oil. But this apart, the fall in the export of other oilseeds products has been of a quite serious order. In the course of one year, exports of castor oil fell to Rs 4 crores in 1961-62 from Rs 6.7 crores in the previous year, while linseed oil exports recorded a sharp fall to Rs 8 lakhs from Rs 88 lakhs in the previous year. The fact of the matter is that consequent on the expansion in the output of oilseeds in other countries, the Indian oilseeds products have been finding it difficult to stand up to the competition in the international markets because of the relatively higher cost of production. Reflec-

ting the relatively higher cost of production is the low per acre yield of Indian oilseeds. In groundnut, one of the major oilseeds, and of which India is the leading producer, the Indian per acre yield is only 696 lbs while the yield is as high as 1,003 lbs in Nigeria, 1,002 lbs in the US and 1,337 lbs in Brazil. It is a matter for concern that the schemes for improving per acre yield undertaken in the First and Second Plans should have had the least impact on productivity, (which has actually shown a slight decline). The output at 6.6 million tons in 1960-61 was 1.1 million tons behind the Second Plan target and 0.4 million tons below the peak production registered in 1958. Production in this field has further been marked by extreme variations in individual crops. During 1960-61, production of groundnuts showed a rise of 11.4 per cent and rapeseed and mustard rose by 27.4 per cent. Against this, there were offsetting declines in the production of sesamum, linseed and castorseed.

The solution to the falling trend in exports of oilseeds products can only be found in efforts to increase the per acre yield. Though the Third Plan has fixed a target of 9 million tons for oilseeds production, performance in the first year of the Plan is not very encouraging. Total production of oilseeds amounted to only 6.82 million tons, which is 100,000 tons below the production attained in 1958-59, though the acreage under oilseeds in 1961-62 was 3 million acres more than in 1958-59. In this perspective, no efforts should be spared to increase the per acre output. Mr Patil has suggested the package unit approach to the problem of increasing production of oilseeds. Further, the causes for the instability and variation in oilseeds production, which has been a striking feature both during the First and Second Plans, should also be looked into.

FREIGHT RATES

India Left High and Dry

A reduction in freight rates on India's exports is one of the important problems facing the country as the annual expenditure of more than Rs 130 crores on shipping freight has been a huge drain on the foreign exchange resources of the country. While this draws attention to the leeway the country has to make in shipping, es-

pecially in the development of overseas shipping, an aspect that cannot be lost sight of is the high level of freight rates which the foreign conference lines, because of their dominance in the overseas trade, have been able to impose on the import and export cargo. A recent instance relates to the rise of about 15 per cent announced by the India-US conference lines and the lines between Calcutta and Canada. It is now recognised that high freight rates may bedevil the Third Plan and may put up the estimated costs of projects included in it. There have also been instances of gross discrimination in the matter of freight rates on both exports and imports. Particularly, exports of new products are being classified as general cargo and charged higher rates. Similarly, discrimination is also a material factor in the competition which the country's traditional exports have been meeting with in the international markets.

So, the efforts being made by the Government for ending freight discrimination and also for securing reduction in rates will be widely welcomed. Limited measure of success has attended the efforts of the Freight Investigation Bureau. At last week's meeting of the consultative committee of shipping interests, a number of concessions in freight rates have been announced. These include lower rates for cardamom, black pepper, quartz, ajwain seeds, and pulses. New rates are also expected for some other products like tyres, conveyor beltings, etc. With all these, freight discrimination and anomalies are far from being ended, and the committee itself is known to have considered some 17 instances in which freight anomalies still persist. A glaring instance relates to the freight on cotton yarn. It has been brought to light that the lines charge freight on Indian cotton yarn on measurement basis while the freight on cotton yarn from competing countries like Spain and Portugal was being charged on weight basis. In this connection, it has been pointed out that because the overseas demand for Indian yarn was for cones and not for hanks, the freight rate charged on measurement basis worked out to be very high.

Proposals are now being mooted for fixing separate tariffs from India to Middle East countries. A sub-committee is being appointed to formulate new schedule. The opportunity can be availed of to bargain for reduction of rates to the Middle East. The Middle East has in recent years emerged as one of the potential markets for Indian products like tea and light engineering goods. And in the emerging competition from East African countries in exports of tea in this region, freight costs may be a decisive factor in indicating prospects for increasing Indian exports. Apart from tea there are also other articles like coir products in

which reduction in freight rates may give considerable fillip to Indian exports. All these constitute matter for bargaining between the Indian Government and the foreign conference lines. The absence till late of a central agency for the chartering of foreign tonnage has been a source of weakness from the point of bargaining with the foreign lines. In this light, the constitution of a Central Chartering Committee to canalise in the first instance all the cargoes originating on Government account and also in the public sector undertakings should be a matter for gratification. If the Committee succeeds in getting to Indian ships, the transport of the food imports arising from Public Law 489 agreement with the US, the saving in freight rates will be considerable.

TEXTILE MACHINERY

Output Rises Steadily

The impressive progress lately made by the textile machinery industry is particularly gratifying as the need for modernisation and rehabilitation of the textile industry can brook no delay. One of the main reasons for the increasing difficulty encountered by India's cotton textiles in export markets is that our prices are not competitive, largely because much of plant and equipment is obsolete and therefore makes for uneconomic production. A large number of textile mills are equipped with machinery installed some 40 years ago. Great improvements have taken place in the world textile

industry during the past two or three decades, while the Indian industry has stagnated. The result is that today while the industry elsewhere is highly efficient and is noted for its productivity and high quality of its products, the Indian industry is handicapped by low production, poor quality and a high cost of production. If Indian cotton textiles are to regain their lost position in world markets, it is imperative that they become competitive in price and are of a high quality. To achieve these objectives, however, our industry has to be modernised as quickly as possible.

Thanks to the attention devoted by the Textile Machinery Manufacturers' Association to its development aspect, the industry has been able to record commendable progress in recent years. The value of its current production is about Rs 20 crores per annum and it is expected that production will reach an annual rate of Rs 30 crores by the end of the Third Plan. This will mean that the industry will be able to cover up to 50 per cent of the domestic demand during the current plan period. Such rapid progress has

been made possible by the Government policy of protecting indigenous production. Only the most essential equipment and machinery is allowed to be imported and that too after making sure that such items are not indigenously produced and are required very urgently.

GOLD

Thin end of the Wedge?

The Reserve Bank's directive to Bullion Associations all over the country to submit data relating to arrivals, offtake and other relevant details of spot gold transactions conducted by their members during the past ten years could not have come as a surprise to the trade. For, ever since the Bill empowering Government to exercise control over supply, production and distribution of bullion became law, the trade has been expecting some sort of control. A section even apprehended that the first step would come in the shape of a complete ban on forward

trading in bullion. As it is, the first step is limited to collection of information. This suggests that further action will await an analysis of the information that will be made available to the RBI.

The decision to institute a probe into the working of the gold market does not come a day too soon. This market at best is in an unhealthy state. This is perhaps inevitable because of the peculiar circumstances under which it has to function. With demand at a high level and supply limited the price of gold has been pushed up; in the past three, four years the increase has been by leaps and bounds. The result is that anyone who can bring in gold into the country without being caught can now get almost double the world price for it. It is no surprise therefore that smuggling is rampant notwithstanding severe penalty attending detection. Mr B. R. Bhagat, Union Deputy Finance Minister estimates the annual value of gold smuggled into India at about Rs 40 crores.

In the present context of the extreme shortage of foreign exchange resources this is a serious drain on our reserve. Any measure

to arrest gold smuggling is therefore to be welcomed. But will Government be successful in stopping smuggling? It is doubtful if statutory price control alone will bring any improvement in the situation; for, as elsewhere when the price is controlled, there will be a thriving black market.

Obviously, further steps are planned. Gold Bearer Bonds? Or perhaps even an enactment making illegal holdings of gold beyond specified limits? Whatever the measures, the galling fact remains that India's hoards of gold will be idle—unless enforcement of law becomes both efficient and stringent.

ALLOY STEEL

Bhadravathi Project

A scheme for the conversion of the proposed ordinary steel and rolling mill at the Mysore Iron and Steel Ltd., Bhadravathi, into a special and alloy steel manufacturing plant is understood to have been proposed by Demag the world famous German firm. In its report submitted to the Mysore Government, the Demag has recommended a three-phase plan for the manufacture of special and alloy steel products. In the first phase the project will be designed to produce about 42,000 tons of alloy and special steel products. In the final phase it is envisaged to have hundred per cent utilisation of the LD steel works the output of which could be increased from 80,000 tons to 120,000 tons a year while the capacity for production of special alloy and tool steel products will be about 75,000 tons. Considerations of the growing demand for the special steel and alloy products and the poor progress so far made in the implementation of projects for the manufacture of special alloy and tool steels make the projected scheme at Bhadravathi a very attractive one. In the Third Plan originally the demand for special alloy and tool steel was estimated at 200,000 tons and on this basis, the Plan drew up schemes for setting up a major producing unit at Durgapur. Though responsibility for the Durgapur project was entrusted to the Hindustan Steel Ltd., very little progress has so far been made even in the preliminary works connected with the project. The main hindrance has been foreign exchange coverage and no firm commitment had been secured from foreign sources in this regard. Apart from the Durgapur unit, the Third Plan also visualised production to be supplemented by the defence industries and also private sector units. While very little is known about the progress of the production schedules in the defence industries, the private sector schemes have

Indian Finance

22 September 1962

been lagging behind mainly for want of foreign exchange coverage. Moreover the original demand estimated at 200,000 tons is now considered somewhat on the low side and in the result the shortfalls in availability will be further aggravated.

The projected scheme at Bhadravathi, if it comes off, will go a substantial way in relieving the pressure of demand for special alloy and tool steel and enable considerable saving in foreign exchange that might otherwise become inescapable. The practicability of the scheme has been vouched beyond any doubt by the Demag. In this connection it may be mentioned that even in the Second Plan a tentative scheme for the manufacture of special alloy and tool steel at Bhadravathi was included which however came eventually to be dropped on the recommendations of a foreign team which made a strong case for a new unit at Durgapur. Among the reasons given in the report of Demag for selecting Bhadravathi works for producing special alloy and tool steel, are availability there of experienced personnel and an efficient organisation, availability of pig iron of good quality suited for the production of special steels, its vicinity to industrial centres like Madras, Bangalore and Coimbatore etc. Further it has also been stated that the existing ferro-alloy furnaces in the factory could produce different types of ferro-alloys required in the manufacture of special steels. In view of these advantages, the report recommends an annual production capacity of 146,000 tons as ultimate figure to be reached in three stages with a simultaneous increase in the pig iron production capacity. The fact that with minor alterations to plants now under construction at Bhadravathi, the project could be made to produce approximately 56,000 tons of special tool and alloy steel per year by 1963 is also a point in its favour.

NUTRITION

Vegetable vs. Meat Proteins

Several surveys conducted by various organisations on the health and dietary habits of the people belonging to different countries of the world leave the general impression that the manifestations of malnutrition are more or less akin in almost all the under-developed countries chiefly on account of insufficient food production and distressingly low quality. The failure to utilise the available supply of protein foods like milk, meat, eggs, and fish on a desired level, the poverty and ignorance of the masses and the practices originating in social backgrounds and cultural tradi-

tions are also listed as other contributing factors for this unsatisfactory situation. There are marked variations in the nature and extent of malnutrition in different regions, localities and dietary habits of the people. However, the protein deficiency is found to be a common phenomenon in all these areas and the infants and growing children are the worst sufferers on this score, though the comparatively low health standards of even the grown-ups is equally disheartening.

Efforts in combating protein malnutrition on a world-wide scale are many. A combined WHO-FAO-Macy Foundation conference on Human Protein Requirements convened as early as in 1955 focussed attention on this problem. The conference led to the encouragement of research from a Rockefeller Foundation grant administered by a committee of the US National Research-Council and after some

time to the evolution of the WHO-FAO-UNICEF sponsored Protein Advisory Group. Several projects assisted by these agencies are operating in the laboratories of India, Uganda, Mexico, Guatemala, Nigeria and other countries and have produced excellent results.

An important finding of these researches is that suitable vegetable protein sources compare favourably with animal sources of protein in their biological value. The most significant and abundant sources of proteins of vegetable origin found in these countries are the low-fat meals obtained from oilseeds, and nuts like soyabean, peanut, sesame, coconuts and pulses such as grams, beans, etc. The Central Food Technological Research Institute at Mysore has concentrated more on the development of basic and supplementary protein rich foods based on these ingredients, particularly the peanut flour. The Institute has worked out a process of

an edible quality peanut flour which is palatable and contains 50 per cent proteins apart from certain B vitamins. Various infant food compositions, weaning foods, supplementary protein rich foods, cereal substitutes and processed foods based on protein isolates have been processed by the Institute. Infant food compositions have been fortified with vitamins and mineral to enhance their nutritional value to a prescribed specification. The balanced foods, protein blends and bulk foods processed in this Institute have proved their nutritional value. Analyses of the protein blends and skimmed milk powder have shown that vitamin contents of the former are almost double those of the latter. The process for the production of edible fish flour from oil sardine is another fruitful activity of the research conducted in the Institute.

An international status has recently been accorded to this Institute.

PEOPLE ARE TALKING ABOUT LIC

One of LIC's objectives is to extend the protection of Life Insurance to every insurable person who can afford it. Since most of our people live in villages, LIC have intensified rural publicity. Travelling by jeep and bullock-cart and even by boat and camel, LIC workers spread the message of Life Insurance to every nook and corner. They take films and cine-projectors with them to explain the benefits of Life Insurance more effectively. Such intensive publicity pays handsome dividends; often villagers come forward to take Insurance policies immediately after such a propaganda session.

Life Insurance Corporation of India

ASP/LIC-E-30

tution when the US National Institute of Health, entered into collaboration arrangements for the furtherance of studies on the development, formulation, biochemical, nutritional and acceptability evaluation of protein foods from oilseeds meals and legume flours as dietary supplements for infants, children of different age groups, and nutritionally vulnerable adults and for the study of etiology of kwashiorkor and other syndromes of protein malnutrition and the metabolic changes during repletion. The results of these experimental studies are bound to pave the way for the enhancement of nutritional standards in India and other countries with low health standards.

USSR

...The Mother of Invention

The Russian experiments with laws regulating inventions and patents and the marked departure from the conventional approach to the topic have evoked world-wide interest. The changes that characterise the existing legislation in the Soviet Union are aimed at (i) the establishment of a novel type of protection known as the "certificate of authorship" which has become more important than the "patent" itself; (ii) the substantial extension of the scope of protectability; and (iii) the establishment as a preliminary measure preceding the grant of any rights of certain conditions for the purpose of fostering the creative talents of the main mass of the workers. All these measures are designed to give a new impetus for the developing of truly inventive spirit among the people.

The Government of the Soviet Union protects the inventions either through the grants of "author's certificates" or through "patents" of conventional types. Foreigners are also allowed to enjoy these rights equally with the Soviets on the basis of reciprocity. The grant of author's certificate apparently recognises the authorship alone while the latter recognises the author's exclusive rights to the invention also. While the authorship certificate entitles the inventor to an adequate remuneration but with the right to work on the invention reserved to the State, the patent holders have the privilege of prior consultation before the invention is worked out.

The statute which protects the right to authorship is exhaustive in character so as to include discoveries and innovation (improvement) proposals also. The applications for author's certificates or patents are scrutinised by expert bodies to evaluate their novelty and usefulness. The promotion and utilisation of inventions are entrusted to a Committee for

Inventions which occasionally seeks the co-operation of the All-Union Association of Inventors and Innovators. This Committee sends lists of all new inventions every three months with descriptive details to various departments and agencies which study them and finalise programmes for their application.

The right to remuneration in the Soviet Union is governed by the "Regulation on Compensation for Discoveries, Inventions and Innovation Proposals". The general practice adopted for fixing the remuneration is by calculating the gains that are accruing with them.

Apart from this the inventor is also entitled to participate in the utilisation of the invention, preference in holding key scientific posts and additional dwelling space. Equally encouraging incentives are provided to those who utilise the inventions by way of bonuses and rewards. In 1959 over 22 million inventors and innovators submitted 3.5 million inventions and innovation proposals for improving industrial practices of which more than 2 million inventions and innovation proposals were implemented.

COMPANIES

New Registrations in Second Quarter

Figures compiled by the Company Law Administration show the total number of new companies registered in the quarter ended June 1962 at 412. This indicates a rise by 36 from the relevant figures in the preceding quarter. Of the total new formations, 55 were in the public sector and 357 in the private sector their respective shares of authorised capital being Rs 3522 lakhs and Rs 1895 lakhs. But considering the total authorised capital involved in the new companies, there is nothing to gloat over as the 376 companies incorporated in the preceding quarter carried an authorised capital of Rs 9858 lakhs in contrast to Rs 5417 lakhs of the 412 companies.

A probe into the industrial pattern of the new floatations makes it clear that the two industrial groups "Commerce (Trade and Finance)" and "Processing and manufacture—Metals and Chemicals and products thereof" have accounted for the largest number at 115 and 112 respectively. Next in order are placed processing and manufacturing industries such as food stuff, textiles, leather and leather goods etc, with 73, and Transport and Communication and Storage with 52. The two broad groups Processing and Manufacture and Commerce (Trade and Finance) together with transport, communication and storage group registered a total of 352 companies forming nearly 85 per cent of the

new registrations during the quarter under review. The remaining groups, Agriculture and Allied Activities, Mining and Quarrying, Construction and Utilities, Community and Business and Personal and other Services represented 15 per cent of the total number and 24 per cent of the total authorised capital of the new registrations.

A study of the size pattern is interesting. 321 companies registered during the quarter under review entailed a capital of less than Rs 10 lakhs and accounted for 78 per cent of the total new registrations while the remaining 91 companies carried an authorised capital of Rs 10 lakhs or above. Of the 321 companies, 86 were placed in the authorised capital

group of "below Rs 1 lakh", 147 in the group of Rs 1 lakh and under Rs 5 lakhs and 88 in the group of Rs 5 lakhs and under Rs 10 lakhs. On the other hand, the 91 companies listed in the group of Rs 10 lakh and above, 47 companies are placed in the group of Rs 10 lakhs and above but below Rs 25 lakhs, 18 companies under Rs 25 lakhs and Rs 50 lakhs, 10 big sized companies between Rs 50 lakhs and under Rs 1 crore and 18 giant sized companies with an authorised capital of Rs 1 crore and above. The aggregate authorised capital of these giant undertakings at Rs 30,50 lakhs accounted for 56 per cent of the total authorised capital of all the new registrations.

22 September 1962

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

The final communiqué of the Commonwealth Prime Ministers is bland enough but the discussion that preceded it was, by all accounts, far from decorous. Mr Lee Quan Yew, the canny Prime Minister of Singapore, is reported to have remarked that at times the conference resembled a rugged scrum. The New Statesman argues that the carefully-laid plans of Mr Macmillan have been thrown awry by the upset in his time-table caused by French intransigence last month at Brussels. The fait accompli with which the British Prime Minister had wanted to confront the Commonwealth statesmen was thus not available. Those who had expected the Commonwealth to get blown in a bang of disagreement at the London meeting were obviously naive. On present showing, if Britain's entry in the ECM is to break up the Commonwealth, the accompanying noise is more likely to be a whimper.

India, Pakistan and Ceylon have definitely demanded that pending conclusion of the trade agreements between them and the enlarged community (at present slated for some time after 1965) the present trade arrangements between these countries and Britain should be left undisturbed. This, by the way, is one of the four conditions on which Mr Gaitskell, is willing to support Britain's entry in the ECM. For it is quite plain that serious immediate damage is inevitable to the export prospects of these countries if Britain also puts up her external tariff. The other Commonwealth countries have made known their special objections. Broadly, no specific assurances have been given by Britain. But she has promised to promote world-wide commodity agreements covering both tropical and temperate agricultural and raw material produce and manufactures of developing countries. The EEC is mentioned as anxious to promote such agreements.

Be that as it may, beyond the comfort that they have vented their feelings and left Britain in no doubt whatever of their views, the Commonwealth Prime Ministers will be returning home with nothing tangible. Any hopes of softening the heart of the six by direct negotiation are also forlorn. President Ayub Khan who suggested a summit of Commonwealth and Common Market leaders has

found President de Gaulle cool to the idea. The Pakistani President has overlooked the fact that the general has no head for heights and has never made a secret of his contempt for summitry.

The goings on over the UP Land Holdings Tax Bill are getting curiousest and curiousest. Though Mr Gupta, the UP Chief Minister has since denied it, it was earlier reported that at a meeting in Kanpur he felt that his colleagues who opposed it were evading the commitments under the Plan. Obviously a major struggle between two views is involved here and neither the Congress, nor the Planning Commission has come out of it very well. The assumption that the agricultural sector is insufficiently taxed has been freely aired in the literature, both national and international, on Underdevelopment. Our own planners have taken this into account in indicating the source of funds for the States. It is possible that such an assumption is unfounded and even unexamined. If it is, it speaks poorly of our planning that it should have been written into the Third Five Year Plan. Indeed, acting thereon, quite a few States, (Andhra Pradesh, Assam, Gujarat, Jammu and Kashmir, Madhya Pradesh, Madras and Maharashtra, besides UP) have announced in their budgets for the year 1962-63 various levies on land. The proposed UP levy, it is true, suffers from certain arbitrariness in its mode of operation, and therefore difficult to defend on details. For example, it takes the form of capital levy, in that the tax is arbitrarily fixed at 2½ per cent the capital value of the holdings. Though this is merely a mode of calculating the tax, it suffers from the appearance of expropriation. Moreover, the assessment of the capital value is a notoriously difficult task, and the bill provides for a rough and ready mode of determining it. The administrative cost of collecting the tax is fairly high, not to mention the immense scope for complaints of harassment and worse. The Prime Minister made a rather equivocal intervention in the matter, owing, one suspects, to political pressure, and the matter was referred to the Planning Commission. The discussions between the Planning Commission and the UP authorities have been inconclusive with suggestions like exemptions from tax of very

small holdings. Obviously, the Planning Commission is not happy about having to assist in a process that cuts across its own basic assumptions. Meantime, the question legitimately arises why the peasants in other States should submit themselves to a levy that is found onerous by the rulers in UP. Quite plainly, it is party-political considerations that have determined the desire to interfere, which would seem to point to the disastrous moral that intra-party squabble pays and discipline does not. Madhya Pradesh had passed the bill but the Governor has not given his assent. What is surprising is that on so vital a matter as land revenue, a party which is in power in almost all parts of the country should have no clear ideas or if it has, should buckle under, the moment some interested political pressure is exerted. The UP episode is the most gratuitous gift the ruling party has yet made to the Swatantraites.

I have not had the pleasure of the acquaintance of Mr Mastaquin of whom a Statesman report said a few days ago that burglary hasn't been quite what it was since he has been clapped up in gaol. He seems to have been quite a lad. "A nimble slim man in his middle-twenties," he seems to have led the police a rare dance. Off-duty, he was a gentleman of leisure and a cafe-haunter. After closing time, however, he was an artist with the drill and whatever else it is house-breakers use to effect entry into houses and access to booty. His special challenges seem to have been the beau monde, the nobs and the high society,

European houses, by preference. When he deigned to rob Indians, he chose High Court judges, eminent lawyers and physicians and company directors. Snobbery or socialism? I am not quite sure, though come to think of it, most romantic criminals in fiction have had a weakness for the fair sex and the fashionable world. On the other hand, it may be plain horse sense: the houses of the poor are easy to burgle—which leads me on to the thought that professional pride entered in his choice as much as pecuniary prospects—but hardly worth the trouble. And perhaps the thought that the rich are none the poorer, though insurance companies may be, eased his conscience. I detect a certain note of regret in the voice of the police official who felt that with Mastaquin behind the bars, life isn't the same. As W. S. Gilbert said, "the policeman's lot is not a happy one...when the enterprising burglar is not burgling." Elsewhere too, interestingly, the police are upset because of fall in standards in this and cognate skills. The Police Review in Great Britain recently lamented the fact that Englishmen are losing the light touch and pick-pocketing is fast becoming as lost an art as calligraphy. The journal attributes this parlous state of affairs to the modern trend noted elsewhere: the impatience of the young who want big money before they do their stint of apprenticeship. Bill Sykes wouldn't approve at all of the lack of professionalism in so exacting a vocation. The Journal makes the rueful remark that as things are, "all the best pockets are picked by foreigners." This is admiration rather than Britain's celebrated xenophobia. At any rate, it squares with facts, or at least, Fiction. Off-hand, the only twentieth century lovable criminal I can recall is Chesterton's Flambeau, who was French and Catholic.

Prices

THE policy on prices indicated in the Planning Commission's press note last week has to be viewed against the steady upward trend in the prices of essential commodities that has been evident since March last. During this period the wholesale price index for Food articles has moved up from 118.5 on March 31 to 132.9 on August 4, 1962. The wholesale price indices for different items included in this category for these dates along with the figures for March 1961 are given below.

	March 31 1961	Aug 4 1962
Food Articles	118.1	132.9
Cereals	101.3	108.9
Rice	101.2	113.2
Wheat	91.5	92.6
Jowar	112.3	140.1
Bajra	127.2	132.5
Pulses	91.9	112.2
Gram	88.9	96.0
Fruits & Vegetables	108.8	131.3
Milk & Ghee	118.4	138.0
Edible Oils	164.3	158.8
Fish, eggs & meat	120.0	149.2
Sugar & Gur	117.0	165.4
Gur	111.4	184.7
Sugar	127.0	132.3

The figures shown above indicate that while prices were fairly steady last year, there has been a marked increase in all categories of food articles, except wheat, since last April.

On the basis of a preliminary report from the Planning Commission, Government have decided to release larger quantities of wheat and sugar to help bring down

prices. As a result, it is expected that the price of wheat will be held at the level of last year. As regards sugar, the aim is to maintain prices at the level of the controlled prices before decontrol and, if possible, a little below this level. The Ministry of Food and Agriculture is also arranging for larger releases of sugar to meet the extra requirements of the festival season.

These measures may be adequate and effective in regard to these two commodities as the stocks at the disposal of the Government are quite ample. But the problem becomes more intricate when we take into account the steep increases that have occurred in the case of the other items, notably, rice, millets, pulses, and edible oils. In regard to these, as well as of industrial commodities which enter into common consumption, the Planning Commission has set up two study groups to work out detailed proposals. The study groups include representatives of the Ministries of Agriculture, Commerce and Industry, Finance, Community Development Panchayati Raj and Co-operation, Labour and Employment and Railways. The reports of both the study groups are expected to be ready within a fortnight. It has been made clear that Government will seek the active support and participation of Trade and Industry, Labour and Consumer Associations in working out the details of the proposals and in implementing the measures that are finally decided.

The broad outlines of the measures that may become necessary to keep in check the inflationary forces that were anticipated have already been indicated in Chapter VII of the Third Plan. To the extent that the Plan has been approved by Parliament, the series of measures indicated therein should also be taken as having the general support of the public. The apparatus of control is also ready to hand. Government have the power to control prices and to make allocations in respect of several commodities. In adopting specific measures, the object, however, must be to regulate prices of basic essentials within defined limits, without destroying the incentives to larger production. The main task of the study groups is to reconcile the divergent approaches arising out of these conflicting requirements.

These difference in approach have been highlighted by the baffling controversy conjured up

by the press reports of speeches made in Madras by the Minister for Food and Agriculture and the Minister without Portfolio. It is possible that the differences are exaggerated in the summarised versions of the speeches from which the nuances and qualifications have been cut out. It is not also clear that the two Ministers are talking about the same thing, when Mr S. K. Patil holds forth against controls or Mr T. T. Krishnamachari maintains that they are necessary to hold the price line. There are controls and controls. Mr Patil's Ministry is exercising a measure of control when it operates the buffer stocks. These measures will be enough as far as the commodities of which there are stocks at the disposal of the Government are concerned. In regard to the others, confidence in Government's determination to hold down prices can be maintained only by convincing evidence of measures taken to increase the production of essential commodities in the short run. The decisions taken at the conference of State Agricultural Ministers held in Delhi at the end of last month are of relevance in this context.

This conference took decisions on the steps to be taken for accelerating the pace of minor irrigation and soil conservation, for extending the coverage of improved seeds and for better utilisation of fertilisers. In regard to minor irrigation the Planning Commission has already assured the States that funds in excess of the present ceilings would be made available to them, up to 20 per cent if they would take up additional programmes. This promise was further reinforced by Mr Shrinani Narayan who said: "whatever is physically possible will be made financially feasible."

In regard to fertilisers, the accent now is on removing the prejudice of farmers against new fertilisers, particularly calcium ammonium nitrate. The prices of fertilisers are fixed in relation to their nitrogen content and some new fertilisers like urea or ammonium sulphate nitrate, cost more than ammonium sulphate to which the farmers are accustomed. It has been suggested that the prices of these fertilisers might be reduced to make them more acceptable to the cultivators. The question of price levels of different types of fertilisers, it was stated, was under consideration of the Government and that suitable changes would be made in price differentials.

A scheme is also under examination whereby fertilisers lifted by States in certain months of the year would qualify for rebate. This should help to relieve the embarrassments created by the accumulation of stocks of fertilisers at the ports and the fertilisers plants. The accumulation is the result of the inability of State Governments to send despatch instructions because they have large unsold stocks. The rebate, it is expected, will provide an extra incentive to State Governments to take measures necessary to increase the offtake of fertilisers by cultivators.

Conference of Package Personnel

The question of better utilisation of fertilisers is also likely to figure prominently at the Conference of Key Personnel of the Package Programme which is scheduled to be held here from September 25 to 29. The Conference, which is similar to the one held last year, will be attended by District Collectors, Project Officers, Deputy or Assistant Registrars of Co-operative Societies concerned with implementation of the Intensive Agricultural District Programme at the district levels from all the 15 districts covered by the programme. The Conference will review the progress made so far, try to find answers to the problems encountered in the course of the year and draw up the programme of work for 1963-64.

Cheaper Fertilisers for Plantations

Nitrogenous fertilisers will now be available to tea and other plantations in North Eastern India at cheaper rates. Hitherto plantations in West Bengal, Assam, Manipur and Tripura had to pay more for fertilisers as compared with plantations in South India. The difference in rate for ammonium sulphate was about Rs 17 per tonne. The Government of India, it is learnt, have now decided that effective from September 1, nitrogenous fertilisers, covered by the Pool system, should be sold at the same prices to all the plantations in the country, wherever they may be located. The pool issue prices of various nitrogenous fertilisers for supply to tea, coffee and rubber plantations will be as follows:

	Per tonne Rs.
Sulphate of Ammonia	354.60
Ammonium Sulphate Nitrate	400
Urea	670
Calcium Ammonium Nitrate	310

All these prices are F.O.R. Works/Ports/Despatching Station, Freight paid by the Fertiliser Pool up to railhead destination by the shortest and cheapest rail and river route. The retail prices of fertilisers for plantations are not to exceed the following rates per metric tonne: Sulphate of Ammonia—Rs 384.60; Ammonium Sulphate Nitrate—Rs 435; Urea Rs 715; and Calcium Ammonium Nitrate Rs 342.

Better Railway Performance

Good traffic handled by the Railways during the past two months, it is learnt, has surpassed the target of ten per cent increase over the previous year. Originating traffic in July at 12.5 million metric tonnes represents an increase of 11.5 per cent over the traffic moved in July 1961. Movement of coal is of immediate relevance to the question of power shortage. And movement of coal, it is understood, has been on a much larger scale than ever before. From Bengal and Bihar coalfields, con-

22 September 1962

sumers other than steel plants and washeries got more than their daily quota of 3,766 wagons in July and August. The extra supply during August was on an average 28 wagons per day. This was in addition to meeting the full requirements of the steel plants and washeries. Demand for wagons from the outlying coalfields, it is learnt, has also been met fully; the loading was on an average 1,211 wagons per day during these two months. Railways have also got a complaint against the collieries. Several collieries in the Raniganj coalfields could not use the wagons allotted to them.

Indo-Afghan Trade

Following the conclusion of the revised trade agreement between India and Afghanistan during the recent visit of the Minister for International Trade to Kabul for the purpose, the trade between the two countries should increase to a perceptible extent over the present level of Rs 5 crores either way. If it is found practicable to overcome difficulties of transport. The agreement provides for extension of the balanced, bilateral trade as it exists at present, with a more diversified shopping list. India will import, besides dried fruits which form the bulk of imports, hides and skins, raw wool, raw cotton and asafoetida. The list of exports from India covers most of the consumer goods manufactured in this country. But the extent to which the trade could be stepped up above the present level will depend on the feasibility of arranging for air lift on an adequate scale. The Minister for Commerce of the Government of Afghanistan and the Minister for Transport are expected to visit India in the Winter, when this question of developing transport facilities will be further discussed. There is plenty of goodwill on either side. And once the transport difficulties are overcome, it should be possible to increase the trade on a balanced basis to a substantial extent.

ROHTAS INDUSTRIES LIMITED

Regd. Office—Dalmianagar (Bihar).

The Directors of Rohtas Industries Ltd., have decided to recommend the following dividends subject to deduction of tax to the forthcoming Annual General Meeting of the Company in respect of the financial year ended 31st March, 1962:—

'A' Preference Shares—10.1%
'B' Preference Shares—5.525%
Ordinary Shares — 8%

The Share Transfer Books and Register of Members of the Company shall remain closed from 29th September, 1962 to 12th October, 1962, both days inclusive.

By Order of the Board
A. K. JAIN
Managing Director,
Managing Agents.

Calcutta,
8th September, 1962.

Relaxation of Export Control

Government have announced the removal of all licensing restrictions on most of the items included in the various export control lists. As compared with 185 banned items on the old lists, there will now be only 78 such items. These latter are items on which control is inescapable. The banned list includes atomic minerals and components, products in short supply which are required for domestic consumption and products whose export has to be banned in pursuance of national schemes such as the Preservation of Wild Life. Another list of 31 items shows the commodities for which there will be free licensing within the ceilings which will be announced on an annual basis. In respect of 45 items which were hitherto allowed to be exported after considering the merits of each case, the formalities of obtaining licence will be removed.

Short-term Plan for Calcutta

The short-term plan of the West Bengal Government for improvement of Calcutta was explained by Mr P. C. Sen, Chief Minister, at a press conference here during his recent visit to attend the annual meeting of the Council of Indian Institutes of Technology. The Chief Minister traced the major problems of the State, and particularly of Calcutta, to the pressure of population and unemployment. The Master Plan for the Calcutta Metropolitan Area under preparation was not likely to be ready before 1965. The removal of the slums, it has been estimated, would take twenty years. In the meantime something has to be done to relieve the misery of the population. The short-term plan envisaged arrangements for improved water supply and sanitation in the slum areas. Against the requirements of 250 million gallons per day, the present supply of filtered water was only 90 million gallons. A scheme was to be taken up immediately to increase the daily supply by 60 million gallons, under the short-term plan. It was also proposed to upgrade the civic amenities in the suburbs of Tollygunge, Manicktolla and Cossipore. The short-term plan also includes a new bridge across the Hooghly. Two sites are under consideration. The cost would be lower if the bridge is sited at Haldia, but then construction would have to wait until the port is developed. It is likely that a site between Babughat and Kidderpore may be selected.

In order to provide more living space, the reclamation of the Salt Lakes on the outskirts of the city had been speeded up. Land was being reclaimed at the rate of three acres per day. The reclaimed land would be offered to the public at Rs 3,000 per coftah, he said. Unlike other big cities Calcutta could not expand upwards to accommodate its growing population. The soil conditions were not suitable for building skyscrapers. As Calcutta cannot grow upwards, it had necessarily to grow outward.

SIMPSON AND COMPANY USE CARBORUNDUM UNIVERSAL ABRASIVES FOR THEIR GRINDING OPERATIONS

"We are pleased with the high standard maintained by Carborundum Universal Ltd., in their Grinding Wheels and Honing Sticks which we have been employing widely in our Production and Assembly lines with satisfactory results for producing components of the world-famous 'P-Series' Perkins Diesel Engines in our Plant 1 at Madras."

SIMPSON & CO. LTD., Madras.

Markets

JUTE Support for Hessian

The raw jute market has continued to rule rather quiet although it is now more than a week since fresh measures calculated to lend support to the market had been announced. The Jute Buffer Stock Association as announced last week has already allotted to mills buying quotas for a total quantity of 2½ lakhs maunds of jute. As mills have been asked to work to their full capacity upto the end of October, raw jute requirements will continue to be as at present for another six weeks or so. Government has also made it clear that the JBSA is not the only organisation to lend support to the raw jute market. The State Trading Corporation and co-operatives are to enter the market as buyers of raw jute at suitable periods so that the main objective of ensuring an equitable price to the cultivator is achieved. It has also been made clear officially that the minimum price of raw jute at Calcutta will be maintained at Rs 30 per maund basis Assam Bottoms. Even so, sellers in the raw jute market have been keen for business even at a discount. This is especially true of lower grade jute which seems to

be in abundant supply as imports have increased over the past few days. However, there is good

DESPATCHES OF JUTE GOODS IN AUGUST

Despatches of jute goods from mills in August, 1962 (in '000 metric tons) are as follows:

FOR EXPORT ABROAD

Indian Finance

demand for higher grades which being in short supply are fetching prices above the minimum. Although mills have to complete their quota for a total quantity of 2½ lakh maunds on behalf of the JBSA, buying is proceeding at a slow pace presumably because of pressure on storage space.

Demand for sacking goods has been on a disappointing level last week as fresh enquiries have been conspicuous by their absence. This is in spite of the fact that sacking despatches in August had been on a higher level than in the previous month. As against 40,700 tonnes, despatches of sackings in August were 42,300 tonnes. It would appear that though generally it is believed that atleast till the end of the year, sacking despatches will continue to be at a satisfactory level, the rising trend in stocks in this category of goods will be difficult to arrest so long as production is maintained at the present high level. It is apprehended that the demand for sacking may be adversely affected by the growing competition from Pakistan where sacking production is steadily rising. Overseas buyers are not likely to place orders with India so long as they are able to get supplies from Pakistan which is able to offer lower prices for comparable goods. Hessian on the other hand is presently in a strong position and looks like remaining so for many months to come. In August hessian despatches were 3400 tonnes more than in the previous month. The news that US burlap consumption in August was 73 million yards as against 63 million yards in the previous month imparted strength to the section. Moreover, during the week there were reports of fresh enquiries from the US for this construction.

TEA A Shortfall in crop

THT North Indian Tea crop has again revealed a shortfall in August. Production amounted to 109.9 million pounds as against 112.4 million pounds in August last year. In the five months ended August 1962, total crop amounts to 316.25 million pounds as compared to 328.66 million pounds in the corresponding period of 1961.

Considering the fact that the current and the next month are the only two months, when good crop can be expected, the overall North Indian crop in 1962 is not expected to be bigger than in 1961.

The trends at auction prices reveal that the gardens cannot very much hope to compensate for the loss of production by higher prices. As a matter of fact, while the average price of leaf tea has so far remained satisfactory at Rs 5.84 a kilogram, the average price of Dust has declined from Rs 5.21 to Rs 4.72 per kilogram.

An encouraging feature has been the fact that South India has maintained the upward trend in output. Up to the end of July, production was higher by 4.5 million pounds than the corresponding figure of 1961. In this connection, Mr A. S. Bam, the Chairman of the Tea Board, has expressed the view that the shortfall in North India can be made up by South India in the remaining months of the current year and that the overall production this year may be higher than in 1961 despite natural calamities.

Mr A. S. Bam has also characterised the much-talked-of crisis of over-production of tea in India as unfounded. He states that, while world production has increased by only 7 per cent, world exports have gone up by 8 per cent. He has urged the tea industry to take full advantage of the relief granted by the Government and to avail itself of the measures of assistance initiated by the Tea Board and the goodwill for Indian tea abroad. Moreover measures to popularize tea, particularly Indian tea, are being taken in all important tea consuming countries. He believes that total world production in 1965 will not exceed consumption by any substantial margin.

Meanwhile, in the Export sale held in Calcutta this week, offerings were 70,709 packages. There was a fair general demand; but prices generally eased following the seasonal decline in quality which was noticeable when compared to offerings in the previous sales. Plain orthodox descriptions were again sold readily although prices generally followed a slightly easier trend. "Tea for price" was the strongest feature of the sale. Orthodox Assams met with useful enquiry at lower rates with some withdrawals although selected lines were sold well.

In the Internal sale, offerings, were 30,367 packages of Dusts. Demand was good and general; but a slight-weakening was evident as the sale progressed. Medium CTC dusts received good support at prices which were generally easier by up to 20 nP a kilo, while the good CTC types were keenly sought after.

Plain orthodox dusts were readily absorbed at a discount of 10 nP to 15 nP per kilo, while the Assams declined by up to 20 nP towards the close. There was once again a good enquiry for legg-cuts and, although at times easier, the small and powdery teas were sold well. Following rates were quoted:—Plain Orthodox Dust Rs 4.10 to Rs 4.50; Medium Assam Dust Rs 4.75 to Rs 5.10; Legg-cut Dust Rs 4.90 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 5.80 and Good Assam CTC Dust Rs 6.40 to Rs 6.80.

In the Colombo market, offerings totalled 5,070,615 pounds. The market opened to a strong demand for Uva teas and prices were generally dearer except where quality showed any appreciable decline. High-grown Broken from Western districts were also dearer except for plain light liquoring sorts. Mediums opened irregular and were often slightly

22 September 1962

lower; but better coloury sorts were dearer. Leafy-grown teas were generally lower; but Tippy Fannings were substantially dearer.

Medium CTC descriptions were well supported although again very irregular and generally following an easier trend. The best sorts registered a drop of up to 40 nP a kilo with some withdrawals. Legg-cut teas were easier by 10 nP to 20 nP. There was less demand for Whole Leaf grades, which were generally sold at easier rates, while the few Tippy teas met with a fair enquiry. Darjeeling came to a discriminating market and prices were irregular and generally lower. Following rates were quoted:—Clean Plain Pekoe Rs 4.20 to Rs 4.60; Plain BP Rs 3.80 to Rs 4.10; Plain Fannings Rs 3.85 to Rs 4.20; Medium Assam CTC BP Rs 5.30 to Rs 5.90; Medium Assam CTC BP Rs 5.30 to Rs 5.90; Medium Assam CTC Fannings Rs 5.30 to Rs 5.80; Best Assam CTC BP Rs 6.80 to Rs 7.60 and Best Assam CTC Fannings Rs 6.80 to Rs 7.60.

According to trade sources, arrivals of tea in the Port of Calcutta, during August 1962, increased to 722,831 chests from 485,941 chests in the previous month. Total arrivals, in the vious months ended August 1962, were five months ended August 1962, were higher at 1,596,733 chests as compared to 1,507,137 chests in the corresponding period ended August 1961. While arrivals by rail, road and river rose from 382,861 chests, 169,785 chests and 902,900 chests in April-August 1961 to 413,861 chests, 177,593 chests and 959,650 chests respectively in the period under review, arrivals by air fell from 51,591 chests to 45,829 chests.

About 1,500,000 pounds of Green Tea is reported to be lying unsold and unlifted in various plantations in the Doon valley. In Dehra Dun, there are no arrangements for the manufacture of black tea due to competition with Assam and Darjeeling; and Green Tea is supplied to Kashmir and Afghanistan. The Doon tea industry's major competitors are China and Japan, who are subsidising their supplies to West Asian countries. A spokesman of the Dehra Dun Tea Planters' Association has stated that, if the present crisis continues and stocks are not sold immediately, nearly 6,000 labourers engaged in these plantations may be rendered jobless.

According to the Board of Trade, London, total imports of tea into the UK, in the first seven months of the current year, were lower at 303.03 million pounds as compared to 310.47 million pounds in the corresponding period of last year despite the fact that arrivals in July showed an increase of 6.8 million pounds over the figures for the same month of last year. While tea supplies to the UK from India fell from 137.05 million pounds in January-July 1961 to 117.04 million pounds in the period under review, imports from Ceylon and Africa increased from 94.64 million pounds and 43.30 million pounds to 106.3 million and 53.58 million pounds respectively. Imports from all other sources, during January-July 1962, were lower at 26.11 million pounds as

against 35.39 million pounds in the similar 1961 period.

Tea stocks in London, as on 7 September 1962, were slightly lower at 114.41 million pounds as against 114.68 million pounds in the previous week. The total amount to be landed on the same date was 24.68 million pounds. Total afloat was 42.74 million pounds including from Calcutta 27.83 million pounds; from Chittagong nil; from Cochin 3.33 million pounds; from Ceylon 10.78 million pounds and from other Ports 799,000 pounds.

COTTON A Momentous Week

The past week, as far as the cotton trade is concerned, was a momentous one. A series of informal deliberations were made between the mill interests and a repre-

sentative forum of the cotton trade for formulating a suitable scheme to curb the tendency of prices to ride above the official ceiling level. The mill industry in a programme submitted at the consultations sought to enforce what can be termed as a revised version of the nominee system implemented some time ago. The scheme envisages the appointment of controllers in every district to whom the merchants of particular localities are required to tender cotton after different processes like ginning and pressing. Under this set up the mills will get the option to purchase cotton from a buyer of their choice where a these latter will be left with the sole step of approaching the controller for procuring the requisite quantum of cotton for delivery to the mills. The trade interests naturally raised a furor against this as they consider this system as a serious threat to the trades very existence. They pointed out that prices could be effect-

ively controlled if the mills exercised self restraint on their buying and were prohibited from carrying not more than three months stocks inclusive of forward purchases and foreign B cotton. As the deliberations failed to arrive at a mutually acceptable procedure, the solution rests with the Government to evolve a suitable mode of marketing.

The cotton futures market in Bombay during the week exhibited a two sided movement and the fluctuation in prices was governed by alternative bouts of selling and buying. The undertone, remained generally easy.

The ruling contract which opened the week at Rs 738.50 for three quintals, three points lower than the previous closing, edged forward to Rs 741.25 in the initial trading but reacted to a low of Rs 734.75 before finally closing at Rs 739.25. The recovery in the early part of the week was obviously the result of intermittent technical rallies and

Firestone

Here's another reason why motorists
who know always choose

New Deluxe Champion Tyres

GIVES MORE KILOMETRES
PER RUPEE INVESTED

As an end product of over 20 years experience in the manufacture of tyres in India for Indian road conditions, and backed by Firestone worldwide technical research, the Firestone New Deluxe Champion is a tyre exclusive in quality and construction. The specially compounded wear-resistant tread and strongly reinforced cord body ensure more trouble-free mileage—means more kilometres per rupee invested.

Your Mark of Quality

the easiness in later dealings was due to the congenial crop developments and the anticipation of a comfortable supply position in the future. However the development of the cotton crop in the next three weeks will be chief influential factor in the transactions in the market.

The Sewri spot market was almost devoid of any activity mainly owing to the meagre supply of 1961-62 cotton crop stocks and the delay in announcing the marketing policy regarding the new crop. Mills stayed away from the market and will resume their commitments only after the release of the new policy.

The demand from foreign countries for Bengal Deshi cotton was scattered even though the Government permitted the export of 2 lakhs bales of that growth as early as on 5 September.

The import section was featureless and barring the demand for American cotton against the recent announcement of 55,000 bales under the Sugar-Cotton barter deal, it was quiet.

The Government of India's directive to the textile mills for a compulsory export of 12.5 per cent of their aggregate production has yielded some results. Quite recently a business of nearly one and a half million yards in higher medium qualities at reduced prices has been confirmed by the United States, a prominent group of Bombay mills and another contract for approximately 2 million yards of the same

category is under way. It should be noted that this is the first time that the USA has purchased textiles of higher medium qualities.

The UK continued its interest in the usual varieties like grey sheeting-grey tapestry etc, the prices offered were comparatively low. Transactions for about 2.5 million yards with that destination have been concluded recently. That centre also enquired for furnishing cloths but the turnover was meagre.

Sudan has accounted for small quantities of superior bleached and dyed voils while Canada booked bed ticking of wider widths and dyed gauge cloth on a moderate scale. Singapore was satisfied with nearly 150 bales of bleached long-cloth. The business with the USA was also encouraging though the prices were unremunerative.

Japan is emerging as a serious competitor for India in exports of piecegoods to Aden and according to recent reports we are gradually losing ground. Aden has recently turned to Japan for its requirements of finer variety of piecegoods. In March 1962 our exports to that destination were valued at £11,444 in comparison with Japan's £120,329. Cotton piecegoods such as drills, shirtings, poplins, mulls etc offered by Japan are fast becoming popular in Aden. Japan's exports of rayons and nylons also amounted to nearly 53 per cent of Aden's total imports. Among the contributing factors for the decline in exports from India are listed the irregularity in ship-

ments, inferior quality, absence of captivating packings and the failure to launch an effective drive to introduce novel varieties that can capture the attention of the consumers there. Even our share of exports of ready made garments totalled only a mere ten per cent of Aden's total imports as against 85 per cent shared by Japan and Hong-kong.

Negotiations between Egypt and Czechoslovakia are underway concerning the purchase of new crop Egyptian cotton by the latter. That destination purchased approximately 3 lakh kantars of last year's crop from Egypt. These talks are being held with a view to eliminating the difficulties that have arisen from the Egyptian Government's decision to dispose of the new cotton crop since that country intends to make these purchases subject to a quota for each country in such a manner as to satisfy the largest number clients. Apart from this, the Egyptian Government's reluctance to enter into any barter deal is another impediment as Czechoslovakia along with countries like Russia, and People's China is affected.

World Coffee Pact

ACCORDING to reports from London, the world's first fully comprehensive International Coffee Agreement is expected to be ready for final approval by nearly 60 countries in New York on 28 September. This is the date set for the next plenary session of the United Nations' Coffee Conference when the full draft of the new pact, to govern the world's coffee over the next five years, will be presented. The agreement will operate through export quotas, the first of which have been fixed at a total of 45.6 million bags or roughly 85 per cent of the total exportable production in the year beginning 1 October next.

The pact has been generally welcomed in coffee trade circles, but it will obviously take some time to get into working order. The total quotas are roughly in line with actual exports to all destinations in 1960-61; but the shipment figures for 1960-61 included exports to markets not covered by the present quota system. The Brazilians and other South American producers are expected to continue their efforts to develop new outlets—particularly in the Soviet Block—as part of their effort to reduce the world surplus.

Meanwhile, the figures, released by the India Coffee Board reveal that receipts into the 1961-62 Pool amounted to 45,168 tonnes (87,227 tonnes) in August, comprising of 22,347 (28,984) tonnes of Plantation variety, 6,525 (10,191) tonnes of Arabica Cherry and 16,296 (28,072) tonnes of Robusta. Figures shown within brackets are the corresponding figures into the 1960-61 Pool last year.

During August 1962, a total of 2,680 (2,947) tonnes was released in the internal market, bringing the total releases, for the eight months January/August 1962, to 22,606 (21,721) tonnes. Inclusive of the sale on 5 September, the total quantity of coffee sold for export from the 1961-62 crop amounted to 11,960 Plantation, 1,151 tonnes of Arabica tonnes, made up of 8,479 tonnes of Cherry and 2,330 tons of Robusta.

PEPPER

There has been a phenomenal rise in the exports of Indian black Pepper with the increased purchases by America and the Communist countries. As enough quantity is not available from Singapore, America, it is learnt, has turned to India for her requirements. The offtake from the Communist countries has also remained at a high level. Besides, the Continental countries, which used to meet their requirements from the UK, have made purchases direct from India. The exports are likely to surpass the previous record of 1959-60.

Shipments of pepper from Bombay and Cochin, during November 1961 to 1962, are estimated at 18,793 tons as against 14,444 tonnes in the corresponding period of last season. Exports in the best season 1959-60 were placed at 19,730 tons, while the current season's exports are expected to be over 21,000 tons. Exports for August are placed at 1,300 tons.

SUGAR

The Sugar market in Delhi registered further sizable losses last week following the Government's decision to release larger quantities from the mills. The Government had already released a special quota of one lakh tons from the Uttar Pradesh sugar factories and another quota of 10,000 tons from factories in Maharashtra. Again, the monthly quota of 2.25 lakh tons, which was to be released sometime next week, was increased to 2.50 lakh tons and was announced a week in advance. All these factors had a bearish effect on the market.

The wholesale sugar trade in Delhi has, therefore, a proposal to form a Syndicate with a view to checking a further fall in prices. It has also fixed "floor" rates for the various categories of sugar. Dealers have also decided not to buy further stocks of the commodity until the present stocks have been sold out.

Meanwhile, it is learnt that the State Trading Corporation will be signing shortly an agreement with a firm in Malaya to sell 70,000 tons of sugar, which may be earning for India nearly £2 million. The Chinese firm, which is the importer, has agreed to pay cash in pound sterling. At the time of signing the agreement, the price will be fixed on the basis of London daily price. The sale will be effective in 1963.

The STC's earlier contract with an American firm for 200,000 tons of raw sugar for the next three years included a firm commitment of 150,000 tons to Japan and the rest 50,000 tons to other destinations.

22 September 1962

NON-FERROUS METALS

Prices on the Bombay Non-Ferrous Metal market showed a mixed trend. While Copper prices suffered a setback, Tin remained firm. Lead remained unchanged, while Zinc, which was initially firm, declined at the close.

The fall in Copper prices was on account of reports of increased arrivals, lower demand and more offerings. Advances from upcountry centres were also discouraging. Sentiment weakened on expectation of a further fall in prices. In the case of Zinc, enquiry was restricted.

Tin prices have continued to rule firm. Though licences are understood to have been issued to actual users, sentiment has remained distinctly bullish in view of smaller arrivals.

The US Government's handling of the first sales of stockpile tin has been greeted with some relief in London trade circles. The US Government did not in fact sell any tin at all, as all bids for the metal were rejected. The US has given an understanding not to accept prices for the stockpile metal, which are not consistent with the prevailing market levels and the rejection of the bids appears to show that she intends to keep her word.

The tin market, however, still regards the stockpile with a good deal of caution, not to say suspicion. The market picked up slightly when the bids were rejected; but consumer demand remained small and the trade generally did not appear to be wholly convinced by the US action. It is felt that any real recovery in prices will seem unlikely while the stockpile continues to cast a shadow over the whole situation.

GOLD & SILVER

After a sharp break in prices, the Bombay market for Gold and Silver showed a partial improvement at the close of the week. Earlier fears about the authorities snatching away the gold stocks lying idle in various bank-lockers proved baseless. As a result, there was a revival of confidence among bull operators, who tried to lend fresh support to the market.

About 20,000 sovereigns were reported to have been received by spot houses in Bombay for sale on commission basis. A part of this quantity, estimated at around 5,000 pieces, is said to have been disposed of on Monday at around Rs 95 per piece as compared to Rs 97 quoted at the previous week-end.

Though the spot metal is quoted at a premium of Rs 1.75 over Magshar settlement, the spot houses are reported to have emerged as sellers in the forward section. The occasional improvements in prices are proving short-lived. Although the dealers have not been asked so far by the authorities to furnish details of their turnover, they fear that these may be called for at any moment. In the circumstances, spot houses are sustained sellers. The smaller arrivals have, therefore, failed to exercise any bullish effect on prices. Arrivals were estimated

at 10,000 tolas as against an offtake of only 5,000 tolas. Gold Mangshar delivery moved between Rs 122.75 and Rs 123.25, while spot gold is quoted at Rs 124.50. Sovereign was quoted at Rs 97.75.

In the case of Silver, arrivals were estimated at 30 bars as against an offtake of only 5 bars. Turnover was moderate. Silver Mangshar delivery moved between Rs 221.20 and Rs 221.55, while the spot rate is quoted around Rs 220.15.

In the New York market, the price of silver, however, rose by 1½ cents to \$1.15 per fine ounce—the highest level touched in 42 years. This advance reflected scarcity of offerings. American demand included buying by silverware manufacturers as well as increased needs for industrial use owing to a seasonal business improvement.

SILK

Prices in Bangalore Silk Market were steady during the previous week. Filature raw silk of 20/22 Dr remained unchanged between Rs 84.89 and Rs 88.20 per kgm. Cottage basin and charka raw silk ruled easy between Rs 78.81 and Rs 84.87 and between Rs 57.32 and Rs 77.71 per kgm. respectively.

Spun silk yarn of 2/205s was firm at Rs 74.96 per kgm.

Filature, cottage basin as well as charka silk waste varied from Rs 12.23 to Rs 12.65; Rs 9.35 to Rs 11.53 and from Rs 3.85 to Rs 7.15 per kgm respectively.

Reeling cocoons fluctuated between Rs 3.25 and Rs 6.00 per kgm. Foreign and Mysore race seed cocoons increased significantly to rule between Rs 4.00 and Rs 20.00 and Rs 9.00 and Rs 16.00 per thousand respectively.

Bhagalpur Silk Market was quiet during the past week. Tasar raw silk waste as well as spun silk yarn prices remained unchanged. Reeling cocoon prices showed an upward trend. Daba variety rose to Rs 100.00 per kahan. Bogai and serikan varieties remained steady. Eri cocoons and yarn were stagnant.

Cottage basin and charka raw silk remained unchanged during the week under review. Matka yarn was steady between Rs 24.65 and Rs 42.87 per kgm. Reeling cocoons increased to rule between Rs 3.49 and Rs 4.14 per kgm. Silk waste was steady at Rs 2.14 per kg.

The i.o.b. price and landed cost of Japanese raw silk of 20/22 Dr were Rs 65.63 and Rs 100.55 per kgm respectively during the month of July, 1962.

OILS & OILSEEDS

After initial signs of hardening, the Bombay Oilseeds market turned quiet in the absence of follow-up support and fears of large tenders in castorseed.

Apart from favourable reports from producing centres, reports in connection with the Government's

intention to bring down the prices of consumer items had an adverse effect on sentiment. In the Groundnut section, trading was dull due to reports of good rains in Gujarat and Saurashtra. While the favourable turn in the weather tended to allay fears in respect of the new crop, demand in the spot section was generally subdued. Groundnut Bold ready was quoted at Rs 49.25 and Groundnut Oil at Rs 19.25.

No fresh development took place in the Castorseed section. Though shippers claimed enquiries for castor oil from the USA at 13.50 cents per pound, no business could materialise as domestic prices were higher than the export parity. The UK quoted £104 per ton for commercial and £111 for the BSS quality. These prices were regarded as unremunerative and hence no commitments were entered into by the exporters. Castor ready was quoted at Rs 32.37 and Castor Oil, commercial quality at Rs 13.60.

In the Linseed section, trading continued to remain dull and prices moved in line with the fluctuations in groundnut and castorseed. Up-country advices were also not encouraging. Ready was quoted at Rs 40.50 for the Bold quality and Linseed Oil at Rs 18.20.

HIDES & SKINS

Arrivals of tanned cowhides were moderate. Clearance was steady. Prices for market quality cow hides with United Kingdom also did not change. Prices quoted for 5/5½ lb run, fourths and fifths were 63d, 53d and 49d respectively and for 8/8½ lb were 45d, 42d and 40d respectively.

For 5/5½ lb semipremium marks quotations were on the basis of 76½d, 68½d and 58d respectively, for run, fourths and fifths. For premium marks of 5/5½ lb the quotations were 78½d, 68½d and 59½d for run, fourths and fifths respectively.

There were small arrivals of tanned cow calf into the market. Good demand for 2/2½ lb cow calf remained fair and business was done in the premium marks at 105d to 107d for 2/2½ lb for run, and 80/82d for fourths of same commodity. For 14/14½ lb light weights the basis of quotation was 106 for run and 80d for fifth.

There were no changes in both tanned buff calf and buff hides sections. Good inquiries turned out for tanned goat skins from United Kingdom. Also there were quiet steadiness in the tanned sheep skin market. The following were the prices of tanned skins & hides per lb;

BANK OF BARODA
TRAVELLERS CHEQUES!
are safe to carry,
convenient to use!

When you travel, travel safely—with Bank of Baroda Travellers Cheques! They can be cashed only if you have counter-signed them!

Bank of Baroda Travellers Cheques are very convenient too! They are available in denominations of Rs 25, Rs 50 and Rs 100, at any of the branches of The Bank of Baroda Limited. Can be cashed at any branch of the Bank of Baroda, State Bank of India, Bank of Rajasthan, and some branches of the Punjab National Bank.

So before you plan a trip, make sure you get Bank of Baroda Travellers Cheques!

THE BANK OF BARODA LTD.

(Estd: 1908) Head Office: Baroda
Branches: Over 135 branches in India and also in East Pakistan, London, British East Africa and Fiji Islands.

INT-25-3012

HOW DO THEY AFFECT YOUR VEHICLE?

Firstly, erratic driving consumes more fuel. Secondly it wears out tyres, engine and brake linings—not to mention the blow-outs! All this swells maintenance cost—quite a substantial amount if you own a large fleet! Certainly you cannot accompany each vehicle to check on this.

TACHOGRAPH

TACHOGRAPH provides on a Diagram Disc case history for twentyfour hours—throughout the year. TACHOGRAPH is a guide to safety—educates the driver to be methodical. TACHOGRAPH is a friend of the operator and the driver too.

Aluminium Corporation's Expansion Programme

The directors of the Aluminium Corporation of India Limited have stated that the first phase of the expansion programme, i.e. metal production, has begun operation from the middle of June 1962. The complete plant has been ordered for the second and third phase, i.e. fabrication and alumina sections. It is expected that they will be completed as scheduled.

Meanwhile, the company has reported a reduction both in sales and earnings for the year ended 31 March 1962. Sales are lower at Rs 1.26 crores against Rs 1.28 crores, while the net profit, after providing for Depreciation and Taxation, amounts to Rs 12.29 lakhs as against Rs 25.48 lakhs for the preceding year.

The directors have provided Rs 7.35 lakhs (Rs 4.76 lakhs) for Depreciation; Rs 11.50 lakhs for Taxation; Rs 1.00 lakh (Rs 14 lakhs) for General Reserve and Rs 85,979 (Rs 7,107) for Development Rebate Reserve. The dividend on the Ordinary shares is, however, maintained at Rs 1.20 per share, subject to tax.

Hoare Miller Maintains its Position

Despite keen competition in the export trade, Hoare Miller & Company Limited has continued to maintain its position as one of the leading exporters of jute goods from India. The net profit, after providing for depreciation, is slightly higher at Rs 3.92 lakhs for the year ended 31 December 1961 as against Rs 3.84 lakhs for the previous year.

The Depreciation amount is raised to Rs 68,178 from Rs 57,498. After transferring Rs 5 lakhs from General Reserve, Taxation provision is raised to Rs 6.95 lakhs from Rs 1.38 lakhs. The dividend is maintained at 6 per cent, subject to tax.

The directors are seriously considering the installation of a wire-drawing plant and a processing plant to manufacture copper-coated spring steel wire under foreign experts' supervision.

Hastings Mill Earns Less

In common with other jute mills, Hastings Mill Limited has reported a substantial reduction in the net profit from Rs 14.41 lakhs to Rs 4.77 lakhs for the year ended 31 March 1962 despite a rise in sales from Rs 3.40 crores to Rs 3.51 crores.

A sum of Rs 8.72 lakhs (Rs 8.14 lakhs) is set apart for Depreciation; Rs 1.60 lakhs (Rs 8.30 lakhs) for Taxation and Rs 3.16 lakhs (Rs 2.71 lakhs) for Development Rebate Reserve. The dividend on the Ordinary shares is, however, maintained at Rs 6 per share, taxable.

In view of the rising demand for carpet-backing cloth from the US markets, the directors have proposed to increase the wide looms up to 80.

Champdany Jute Skips

The Champdany Jute Company Limited had only recently announced its proposal for capital reorganisation. The company has reported a decline in sales from Rs 3.20 crores to Rs 2.68 crores for the year ended 31 March 1962, while the accounts reveal a net loss, after providing for Depreciation, of as much as Rs 25.87 lakhs as against a net profit of Rs 3.11 lakhs for the previous year.

The Depreciation amount is reduced to Rs 8.98 lakhs from Rs 9.18 lakhs, while no provision is made for Development Rebate Reserve against Rs 1.31 lakhs. The dividend is passed against a taxable dividend of Rs 5 per share paid previously.

Ashoka Cement Repeats

LOWER production due to stoppage of kiln for the installation of electro-static precipitator for about a month and the interrupted supply of power is reflected in the working results of the Ashoka Cement Limited for the year ended 31 March 1962. While sales have gone down to Rs 1.62 crores from Rs 2.00 crores, the net profit, after providing for Depreciation and Taxation, is reduced to Rs 6.77 lakhs from Rs 7.70 lakhs.

Apart from providing Rs 1.12 lakhs for Rehabilitation and Development Reserve, Depreciation is raised to Rs 10.05 lakhs from Rs 8.97 lakhs and Development Rebate Reserve to Rs 1.52 lakhs from Rs 33,000. No provision is made for general Reserve against Rs 3 lakhs. The dividend is, however, maintained at 7 per cent, subject to tax.

Production of clinker is lower at 133,695 tonnes against 166,512 tonnes and cement at 138,597 tonnes against 173,733 tonnes. Dispatches are also lower at 137,504 tonnes against 176,014 tonnes.

Phillips Carbon Incurs Loss

It would be recalled that Phillips Carbon Black Limited had only recently made the first and final calls on the company's original issue of equity shares. Meanwhile, a re-assessment of the company's financial position was made, taking into account the expansion capacity from 22 million to 30 million pounds per annum. In the light of this, the directors came to the conclusion that greater use should be made of equity rather than loan capital.

In the circumstances, it was decided to make a rights issue of equity shares on the basis of one for four, at a premium of Rs 3 per share. This issue was approved by the Con-

troller of Capital Issues shortly after the close of the company's financial year ended 31 March 1962 and the offer has been conveyed to the shareholders.

The accounts for the year reveal loss of Rs 3.01 lakhs as against a loss of Rs 1.77 lakhs for the previous year. A sum of Rs 75,495 (nil) is provided for Depreciation, while no provision is made for Taxation against Rs 40,000. According to the directors' report, work on setting up the company's plant at Durgapur has been proceeding and final plans are now being made for commissioning of the complete unit. It is anticipated that commercial production will have started well before the end of 1962.

Jardine Henderson Pays 6% Against 7%

The working of Jardine Henderson Limited has again resulted in a reduced profit, which is partly accounted for by the decline in trading profits principally in the yarn and fertilizer departments, mainly through a very substantial reduction in income from the jute mills and other agencies such as shipping.

While sales are lower at Rs 7.40 crores against Rs 12.61 crores, the net profit works out to only Rs 14.19 lakhs as against Rs 17.18 lakhs. The decline in profits would have been more, but for the substantial improvement in the income from coal and coke company agencies and packaging subsidiaries.

The Depreciation amount is raised to Rs 1.81 lakhs from Rs 1.36 lakhs and Development Rebate Reserve to Rs 28,343 from Rs 1,294. Taxation provision is lower at Rs 462 lakhs against Rs 11.84 lakhs, while no provision is made for General Reserve against Rs 1 lakh. The dividend on the Ordinary shares is reduced by 1 per cent to 6 per cent, subject to tax.

Steady Progress of East Anglia Plastics

East Anglia Plastics (India) Limited is steadily making progress in the implementation of its integrated scheme, having obtained the collaboration of an internationally-known group of industries for the manufacture of Cellulose Acetate Flakes. The collaborators have agreed to participate in the share capital of the company.

The directors state that the fund, recently raised by the issue of right equity shares for Rs 75 lakhs, will help finance the initial expenses. As for further finance for the Flakes project, about Rs 3 crores may be required for importing the equipment, while the cost of the indigenous plant and machinery has been estimated at around Rs 2 crores. Besides this, the working capital has also to be provided. The foreign exchange component of the project will be financed by credits on deferred payment basis. In this respect, there are indications that the applications made for capital goods import licence has been approved by the Government, subject to the availability of foreign credit. The rupee counterpart is proposed to be raised by a further issue of shares and by borrowing.

In addition to the Flakes project, the company has made a further application to the Government for a licence for the manufacture of Plasticizers. The company received several offers of collaboration for the Plasticizer project. It is hoped that this unit will go into production along with the Flakes project

simultaneously if the licence is granted in time.

With the setting of the Flakes plant and the unit for the manufacture of plasticizers, the company will be self-sufficient in the matter of raw materials for the compounding unit. Meanwhile, the company's accounts for the year ended 31 March 1962 reveal a loss of Rs 1.42 lakhs as against a net profit of Rs 33,611 for the previous period covering from 1 February 1960 to 30 March 1961.

Disappointing Results of Clive Mills

Although gunny sales are shown higher at Rs 82.95 lakhs against Rs 69.76 lakhs, the Clive Mills Company Limited has incurred a net loss of Rs 6.85 lakhs for the year ended 31 March 1962 as against a loss of Rs 4.56 lakhs for the previous year.

Depreciation is reduced to Rs 63,297 from Rs 84,473. The directors have passed over the dividends, both on the ordinary and Preference shares for the year.

Northbrook Jute Pays Less

Despite sales being nearly maintained at Rs 2.61 crores against Rs 2.62 crores, the Northbrook Jute Company Limited has reported a substantial fall in the profit from Rs 19.55 lakhs to Rs 4.05 lakhs for the year ended 31st March 1962.

Depreciation is raised to Rs 6.29 lakhs from Rs 6.09 lakhs, while Taxation provision is substantially lower at Rs 6.18 lakhs against Rs 16.39 lakhs. After transferring Rs 1 lakh from Taxation Contingency Reserve, the directors have found it possible to provide Rs 62,000 (Rs 1.48 lakhs) for Development Rebate Reserve and pay the dividends, both on the Ordinary and Preference shares. The dividend on the Ordinary shares is reduced from Rs 3 to 2 per share, subject to tax.

PSOI Maintains Distribution

The Publicity Society of India Limited has reported a slightly lower net profit, after providing for Depreciation and Taxation, of Rs 2.24 lakhs for the year ended 31 March 1962 as against Rs 2.66 lakhs for the preceding year, reflecting the decrease in income by advertisements from Rs 11.33 lakhs to Rs 11.13 lakhs.

In respect of allocations, Depreciation is raised to Rs 4,828 from Rs 695, while Taxation is reduced to Rs 2.50 lakhs from Rs 2.75 lakhs. No provision is made for General Reserve against Rs 1.00 lakhs. The dividend is, however, maintained at Rs 3 per share, less tax.

Darjeeling Ropeway Pays More

Although traffic income is lower at Rs 1.71 lakhs against Rs 1.75 lakhs, the Darjeeling Ropeway Company Limited has reported a slightly higher net profit, after providing for Depreciation and Taxation, of Rs 28,095 as against Rs 27,673 for the preceding year.

In respect of allocations, Depreciation is reduced to Rs 29,254 from Rs 33,806 and General Reserve to Rs 3,000 from Rs 5,002. Taxation is raised to Rs 34,500 from Rs 28,899 and Development Rebate Reserve to Rs 2,664 from Rs 1,280. The dividend is raised from 7½ to 10 per cent, subject to tax.

22 September 1962

For the Investor

INVESTMENT GOSSIP

Cautious Trading

Stock market sentiment continues to be depressed as the uncertainties that adversely affected trading in the previous weeks have continued to hold sway. If anything there have been further addition to the list. Investors are chary of extending commitments because the outlook for equities has been clouded by conflicting reports about how the Government wants to hold the price line. While it would appear that it is permissible to assume that no radical change in Government policy would be made in dealing with the situation created by the present high prices, it is to be noted all the same that a radical change is not improbable. For while one important Minister appears to think that no abnormal situation has developed, others are hinting at the need for drastic measures to hold the price line. In this connection, it is also generally expected that there will be a major Cabinet reshuffle soon after the return of the Prime Minister.

Investment interest has reason to be cautious because of the fresh Chinese incursions on the country's northern border. While it is not expected that there will be any serious flare up, it is pointed out that the northern border will continue to require great attention for a long time. Operators have not fully recovered from the shock administered by the

Government announcement pertaining to the increase in the steel retention price. What is now worrying marketmen is whether the private steel companies will be able to maintain their dividend. The explanation given by Mr C. Subramaniam, Union Minister for Steel and Heavy Industry, why Government has decided to reduce substantially the price recommended by the Tariff Commission has not been of much help in restoring confidence in Steel Shares.

Operators have derived little encouragement from the outcome of the Prime Ministers' conference in London. Some indication of a favourable revision of terms notwithstanding, the general belief is that unless the Commonwealth countries are successful in obtaining substantial concessions India's export earnings will be adversely affected. The apprehension of further import cuts in the next licensing period has also depressed sentiment because industrial production has already received a set back due to increasing idle capacity in industry.

NEW ISSUE NOTES Asian Refractories

Asian Refractories Limited proposes to enter the market towards the end of this month with an issue of Rs 40 lakhs, divided into 7,000-9.3 per cent cumulative preference shares of Rs 100 each and 3,30,000 equity shares of Rs 10 each. The company has been licensed to manufacture 24,000 tons of fire bricks and 6,000 tons of silica bricks per annum. In the beginning, it proposes to manufacture high alumina fire bricks and castable refractories. The plant is to be set up in Hazaribagh district in Bihar.

An agreement has been concluded between the company and Messrs Cekop of Poland for the supply of plant and machinery. Hoare Miller & Company has been appointed as sole selling agents. The Industrial Finance Corporation has sanctioned a long-term loan of Rs 35 lakhs. The entire public issue is underwritten.

Upper Doab Sugar

It is learnt that the offer of equity shares to the public by the Upper Doab Sugar Mills Limited has been fully subscribed.

Sandvik Asia

The basis of allotment for Sandvik Asia Limited has been finalised in consultation with the President of the Bombay Stock Exchange Ltd. have been drawn for applications for 5 to 150 shares. Applications for 155 shares and above will each get the following allotment:—155 to

260 shares—5; 265 to 440 shares—10; 450 to 610 shares—15; 615 to 750 shares—20 and 755 and above—25. The issue has been over-subscribed approximately by 38 times.

East Anglia Plastics

The last date for payment of the call of Rs 5 per share on the new equity shares is 30 September 1962. The call money is payable to the bankers of the company at their branches. Any amount remaining unpaid on 30 September will bear interest at 5 per cent per annum from the above date till the date of payment. The last date is not extended beyond 30 September 1962.

Dalmia Cement

Dalmia Cement (Bharat) Limited will issue capital Rs 12,48,900. The object of the issue is to implement a scheme of arrangement between the company and the Dalmia Magnesite Corporation of India Limited, to be sanctioned by the High Court.

Mysore Chipboards

Mysore Chipboards Limited, Bangalore, is raising equity capital of Rs 30 lakhs for cash, at par, for financing the manufacture of chip boards.

Sun-n-Sand Hotel

Sun-n-Sand Hotel Private Limited, Bombay, will issue equity capital of Rs 15 lakhs, including Rs 10 lakhs already subscribed, for cash, at par.

The proceeds will be utilised for establishing, in Bombay, a board and lodging hotel for tourists and catering to international airlines.

Doon Valley Combers

Doon Valley Combers Private Limited, Maharashtra, a new company incorporated for the manufacture of wool tops, will raise capital of Rs 30 lakhs, divided into 30,000 equity shares of Rs 100 each, at par.

Model Mills

The Model Mills Nagpur Limited, a public company engaged in the business of spinning and weaving will issue further capital of Rs 50 lakhs, divided into second mortgage Debenture units of Rs 10 each, carrying interest at 4 per cent per annum and redeemable in five annual instalments, commencing on the expiry of one year from the date of issue, at par to such of the creditors who opt to take them under the Scheme of Companies, sanctioned by the Bombay High Court, on 26 July 1962.

BONUS ISSUE NOTES Raptakos Brett

Raptakos, Brett & Company Private Limited, Bombay, having a paid-up capital of Rs 24,50,000 is to issue Rs 16,87,500, divided into 33,750 equity shares of Rs 50 each as bonus shares on capitalisation of the company's Reserves.

For Rs. 300 Lakhs

(PAYMENT OF INTEREST AND REPAYMENT OF PRINCIPAL,
GUARANTEED BY THE GOVERNMENT OF MADRAS)

The bonds will be trustee securities under the Indian
Trusts Act and also approved securities for the purposes
of the Insurance Act and the Banking Companies Act.

Issue Price Rs. 99.75 per cent

Redeemable at par on the 24th September, 1972

Subscriptions will be received in cash or cheques from the 24th September 1962. But the lists will be closed without notice as soon as the total subscriptions amount to approximately Rs. 300 lakhs and in any case not later than the close of business on the 29th September 1962.

Applications will be received at all branches of the State Bank of India within the State of Madras and at the State Bank of India at Madras, Bombay, Hyderabad, Calcutta, Delhi, Bangalore and Bangalore City.

Copies of the Notification announcing the terms of issue and application forms are available at all the receiving offices mentioned above, at all treasuries and sub-treasuries in the State of Madras and at all offices of the State Electricity Board.

Ahura Chemical

Ahura Chemical Products Private Limited, Maharashtra, is issuing 3,50,000 on capitalisation of the company's Reserves.

INVESTMENT NOTES

Ahmedabad Stock Exchange

The Government of India have decided to renew the recognition granted to the Ahmedabad Share and Stock Brokers' Association, Ahmedabad, under Section 4 of the Securities Contract (Regulation) Act 1956, for a further period of five years commencing September 16, 1962. A condition of the renewal is that the membership deposit from each member is raised from Rs 5,000 to Rs 10,000. Members already admitted to the membership of the Association will however, be permitted to pay the balance of Rs 5,000/- within a period of one year in instalments to be determined by the Governing Board.

Durgapur Steel

Production of iron and coke at Durgapur Steel Plant reached their maximum so far in August 1962. Three blast furnaces together produced 90,136 tonnes of iron, of which 43,942 tonnes were sent to the Pig Casting Machines.

During the month under review, three batteries of cokeovens produced 1,21,614 tonnes of coke which is more than their rated capacity. Correspondingly, there was rise in the coke ovens by-products also. About 4,700 tonnes of crude tar and 1,300 tonnes of ammonium sulphate were produced.

INVESTMENT BRIEFS

The directors of the Chartered Bank have declared an interim dividend of 7½ per cent, taxable, on the ordinary shares, for the year ended 31 December 1962.

Talayar Tea has maintained the dividend at 10 per cent, taxable, for the year ended 31 March 1962.

The new bonus equity shares of the Dehri-Rohas Light Railway Company Limited can be sold and delivered against the old equity shares.

Searsole Coal Company Limited has passed over the dividend for the year ended 31 January 1962.

BALANCE-SHEET BRIEFS

Despite a decline in the net profit from Rs 5.21 lakhs to Rs 3.46 lakhs, the Mysore Chemical Manufacturers Limited has maintained the dividend at 20 per cent, subject to tax.

The Laxmi Starch Factory Limited has reported a rise in the net profit from Rs 65.55 lakhs to Rs 72.03 lakhs for the year ended 31 March 1962. The dividend on the old shares is, however, reduced from 13 per cent to 12 per cent, subject to tax.

STOCK EXCHANGES
Lack of Support

Watch-Dog Writes:

TRADING on the stock markets was on a quiet note during the past week as sentiment had been adversely affected by the uncertain outlook for equities in general. There is growing apprehension that steel dividends may not be even maintained in view of the disappointing increase in steel retention price. Indication of a further cut in imports is discouraging investment support while receding hopes about favourable terms for the commonwealth countries in their trade with the UK when it joins the EEC have made speculative interest subdued. Renewed anxiety about further Chinese incursion and the proximity of the long Puja vacation in Lyons Range are other restraining influences.

Conditions in the Calcutta Stock Exchange continued to be quiet and in the absence of buying interest prices drifted to further lower levels. While uncertainty regarding dividend kept Indian Iron weak, elsewhere buying interest was conspicuous by its absence presumably in view of the approaching Puja recess.

The Bombay Stock Exchange was in a disturbed state and although a section seemed to assume that the Tata Steel dividend would be maintained, selling pressure in the scrip continued to be encountered. From the trend of the Commonwealth Premiers' conference, operators were not able to derive much cheer as regards preferential treatment to commonwealth exports to the EEC. Section wise, cotton mill shares were depressed, while elsewhere automobile shares met with realising pressure.

A quiet trend prevailed in the Madras Stock Exchange where sentiment was adversely affected in sympathy with other principal market.

CALCUTTA

Calcutta, Friday Evening.

EXCEPT for a feeble attempt at rally in midweek, the Calcutta Stock Exchange continued to rule easy last week. Earlier hopes of maintenance of dividend by Indian Iron seem to have dimmed as the week progressed and the scrip lost shape ground on balance. Although earlier concern about the fresh Chinese incursions into the NEFA seems to have lessened on the reassuring statement of the Defence Minister there is a lurking fear that the border will continue to demand the vigilant attention of the Armed Forces for a considerable time to come. Indications of further import cuts in the next licensing period coupled with the growing shortage of foreign exchange have given little encouragement to fresh buying while the usual pre-Puja caution is accentuating the quiet trend.

In the Engineering section, Indian Iron opened the week on a quiet note at Rs 25.38 as against last week-end closing of Rs 25.52. Although the rate slightly improved in later dealings and continued to show further small improvement

next day also, the trend became easier by close on Tuesday with the rate pushed down to Rs 25.30. Narrow fluctuations characterised trading in the scrip on Wednesday with the day's closing placed at Rs 25.34. On overnight selling pressure, the rate opened as low as Rs 24.14 on Thursday and closed the day somewhat higher at Rs 25.28. Among other engineering shares, TEXMACO closed on Thursday quiet at Rs 22.60 as against the week's opening of Rs 22.85. Jessop moved down to Rs 22.56 from Rs 22.94.

Interest in Jute shares, continued to be meagre. Although production of mills is to continue to full capacity upto the end of October, the outlook for the despatches of sacking is not rated very good in view of the growing competition from Pakistan and the decision of the Government to maintain raw jute prices at last season's minima. Birla was sold down to Rs 34.37 from Rs 35.25. Champdany was quiet at Rs 145.50. New Central was however, slightly better on balance at Rs 14.50.

Business passing continued to be restricted in the Coal section, where investors evinced little interest in the absence of incentives. Burrakur eased to Rs 17.19 from Rs 17.37. Western Bengal was fractionally lower at Rs 9.19.

Tea shares where marked were generally lower on balance. While investment interest is discouraged by the lower price trend in the week's auctions, it is apprehended that profits of North Indian tea companies would be adversely affected on account of the decline in production so far in the current season. Haimara moved both ways to close on Thursday lower on balance at Rs 14 as were Loobah at Rs 4.44.

Sugar shares found little support and the few shares that changed hands during the week finished mostly lower on balance. Dyer Meakin, however, met with some interest at the lower levels and closed slightly better at Rs 31.19.

Miscellaneous shares were generally easier in sympathy with the rest of the market. Dunlop Rubber reacted to Rs 38.37 from Rs 39.12. Indian Aluminium came down from Rs 36.87 to Rs 36.44. Hindustan Motors weakened further during the week on adverse news and closed on Thursday at Rs 18.44. Orient Paper was also easier at Rs 41.90. Other Paper shares were generally easier

NEWS IN BRIEF

The Government of India have extended the Employees' Provident Funds Act, 1952 to more establishments employing twenty or more persons.

The Act will apply to saw mills; wood seasoning kilns; wood preservation plants; wood workshops and to establishments engaged in the processing or treatment of wood with effect from October 31, 1962. The latter would include establishments manufacturing hard-board or chip board; jute or textile wooden accessories; cork products; wooden furniture; wooden sports goods; cane or

bamboo products and wooden pottery separators.

The Government of India have established three new Land Customs Stations on the western side of the Indo-Tibet border in order to regulate Indo-Tibetan trade. This follows a recent decision declaring Tibet to be foreign territory under the Indian Tariff Act, 1934. These Customs Stations are located at Koyul in Ladakh, Changgo in Himachal Pradesh and Garbyang in Uttar Pradesh. There is already a Land Customs Station on the eastern side of the border at Kalimpong in West Bengal.

Goods from Tibet to India and vice versa may be carried only along the prescribed routes through any of these Customs Stations. Import/Export duties will be leviable at the prescribed rates on any article imported into or exported from India. All the existing bans and the provisions of Import and Export Trade Control restrictions have become applicable in respect of trade with Tibet.

Britain is sending laboratory equipment worth £1,770 to the Central Drugs Laboratory, Calcutta, under the Technical Cooperation Scheme of the Colombo Plan.

The equipment consists of centrifuges, sterilizer ovens, compressors and analytical balances. It will be used for the development of Indian national standards for biological and allied drugs; for research and development concerning standardization of new drugs and multi-drug formulations; and to effect improvements in the existing methods of drug analysis.

Special equipment for use with the radically new surgical freezing technique developed by Dr. Irving S. Cooper, director of the department of neurosurgery at New York's St Barnabas Hospital, is now available from Union Carbide Corporation. The Cooper technique makes use of freezing as a surgical tool at temperatures as low as 100 degrees below zero centigrade (minus 150 degrees Fahrenheit).

The control unit made by Union Carbide for the Cooper cryosurgery system regulates the flow of liquid nitrogen, which provides the ultra-low temperature. The nitrogen is delivered through the tip of an insulated instrument known as a cannula—sometimes referred to as the "cold knife." The cannula freezes the affected tissue so that it is destroyed and eventually absorbed in the body.

This cryosurgery evolved out of more than 10 years of research by Dr. Cooper on cases of parkinsonism or "shaking palsy" as it was once known in which he treated patients successfully in more than 1400 operations by destroying small localized areas of brain tissue. Recent applications of the new cryosurgical technique for the treatment of parkinsonism and also diseases in other parts of the body were described in detail by Dr. Cooper at the American Medical Association meeting in Chicago on June 26, 1962.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

In or Out?

When Mr Heath, the chief British negotiator, resumes his tasks in Brussels next month, he will find himself free from the psychological cramp that has been hampering his style all these days. This seems to be the chief gain of the Commonwealth Conference that ended last week in London. Mr Macmillan has shown brilliant adroitness once again. When the Conference started, it looked as though he 'had had it'. In retrospect, however, it looks as if almost the only gainer from the Conference is Great Britain. For the others, the Conference provided a cathartic occasion and no more. Once they got their worries and objections off their chest, they seem to have gone too limp to do anything further about it. Mr Macmillan was, of course, taking a calculated risk: the Conference may well have broken up in confusion, in which case Mr Macmillan's plans of entry into the EEC would have been shattered beyond repair. As it turned out, Mr Macmillan depended on international good manners and the famous Commonwealth trait for compromise to do the trick for him—and his hopes were not belied. The final communique incorporated the differing points of view, and consultation before further negotiation was promised. From the beginning there has been gentle insistence that after all it was for Britain to decide whether it will go in or stay out, a truism whose very repetition was designed to wear down opposition. Now that the big get-together is over, Britain can go ahead with a clear conscience. If the final terms on which Britain joins the EEC leave the Commonwealth partners high and dry, and the Commonwealth breaks in consequence, it would hardly cause a ripple.

Indeed Mr Macmillan has already begun to talk as if the terms so far secured are more or less final. In his broadcast on 20 September, his complacency was unshakable: "For the Asian countries, we have got, on the whole, very good terms... very good. For African and Caribbean countries, we have got wonderful terms—just wonderful terms—if they would take them." If this is the way Mr Macmillan feels, Mr Heath would not even try for, much less obtain, the postponement of the operation of the Common external tariff and the continuance of the status quo vis-a-vis Asian exports till the comprehensive agreement between the enlarged EEC and these countries is negotiated. In other words, on present evidence, the Asian Commonwealth countries have failed to make the slightest impression in London. This is not entirely a matter for surprise but it does make hypocritical the final communique's pious professions of consultation before further negotiation.

The outlook for most other Commonwealth countries is equally gloomy. Re-opening of issues already tentatively agreed upon is not entirely ruled out: but on the present mood of the six, which is also bound to take note of Britain's own hardly concealed stand in the matter, such wholesale revisions are extremely unlikely. A rough balance sheet

of the present position will read somewhat as follows:

Asian Commonwealth countries, as has been indicated in the previous paragraph, may take it that Britain has shot its bolt as far as they are concerned in securing duty-free entry for tea and sundry other minor concessions. They will have to put up with the higher tariffs on textiles and other manufactures going to Britain as well as the rest of the Six till the negotiation with the enlarged Community is finalised after 1966. As regards African members, the outlook is more obscure, since they have, for the most part, rejected the associate status. The Six is having its own troubles with its present overseas associates and therefore some new relationship will have to be thought up. From a purely economic point of view, especially in the short run, the attractions of an associate status are considerable but these are not such as to be decisive with these countries.

As regards New Zealand, it has been agreed even by the Six that special arrangements will have to be devised. The other white Commonwealth countries have been vouchsafed nothing more than the prospect of world-wide commodities' agreement which will provide for a managed market on a fair basis with price policies that will be reasonable to producers and consumers and which will safeguard to traditional suppliers access to traditional markets.

In the immediate future, therefore, not much remains to be done from the point of view of Commonwealth countries. If re-opening of settled issues is barred, except for some haggling about tariffs on aluminium and newsprint (in which the interests of the Six inter se are clashing) there is little unfinished business at Brussels. Future negotiations will now shift to problems relating to British agriculture and EFTA. There is, of course, the politics of the decision which has to be hammered out at Brussels and elsewhere.

How far domestic opposition to joining will now be effective in deflecting Mr Macmillan from his path is difficult to predict. When all is said and done, the effect on Commonwealth trade and ties is only one aspect of the question. Domestic opinion is sharply divided on the wisdom of joining, and not only because of the impact of joining on Commonwealth ties. Mr Gaitskill, for example, has been qualifying his support with conditions that the present British Government is unlikely to get the Six to fulfil. Mr Macmillan himself has not wavered from his desire to go in, but his party has been sharply divided on the issue. The politics of the decision to join is even more controversial, and therefore Mr Macmillan may well decide to go to the country before he takes the final plunge. Therefore, though the feelings of Commonwealth countries are probably no longer a serious obstacle to Britain's going in, there are other formidable factors in the situation, and Britain's entry in the EEC still remains a question mark.

He never looked back...

In 1920, P. K. Chatterjee, a young man just out of school, joined Tata Steel as an apprentice draughtsman.

Full of ambition and zeal to learn, he entered the Company's Technical School which afforded the opportunity to study during leisure. Young Chatterjee was among the first to complete a three-year course in engineering.

Over the years, Chatterjee has worked his way up in the Engineering Department, and blast furnaces have been his enduring interest. He has helped to rebuild the blast furnaces in the Jamshedpur Works, including a 1,000-ton-a-day blast furnace which was rebuilt to his design—the first such attempt in India.

Now an Assistant Chief Engineer in charge of special projects, Chatterjee is widely travelled and highly esteemed by blast furnace designers all the world over.

He is yet another example of how creative talent is recognised and developed in Jamshedpur, a city where industry is not merely a source of livelihood but a way of life.

Half-Yearly Stocktaking for LIC

THE half-yearly stock-taking of the performance of the Life Insurance Corporation shows a significant increase in the business done in the first six months of 1962. During this period, the number of policies issued by the Corporation rose by 43,777 to 358,031 as compared with policies issued in the corresponding period of last year, implying a corresponding increase in the protection afforded to the people. The total sum proposed is marked higher at Rs 221.79 crores against 210.36 crores for the first six months of 1961. Of greater importance is the increase in the amount of completed new business which is higher by Rs 19.84 crores at Rs 139.23 crores, the increase being of the order of 16.6 per cent. Equally significant is the increase in the ratio of completion to 62.8 per cent from 56.8 per cent as on 30 June 1961. This is an indication of the greater efficiency of the Corporation staff in the collection of the first premium. All the same the gap between total sum proposed and sum completed is wide enough to call for more intensified efforts to bring it down further. The introduced business is another aspect in which the performance of the Corporation has failed to be up to the mark. Increase in business in this regard in the first six months of 1962 was only of the order of 5.4 per cent which can by no means be considered satisfactory.

In as much as the business of the Corporation in the first six month period of 1962 represents a continuation of the trend that has been noted in the last one or two years it also gives an indication of still better results in the remaining six months of the current year. Basis for hope lies in the marked zonal-wise variation in the business for the period January-June 1962. Performance has been most gratifying in the Southern zone where both the percentage of completion and percentage increase in completed business are higher. The percentage of completion placed at 73.7 per cent for the Southern zone compares with 63.9 per cent for the Northern zone, 67.3 per cent for the Western zone, 53.9 per cent for the Central zone and 49.5 per cent for the Eastern zone.

The zonal-wise position in respect of percentage of completion shows a marked change in the course of a mere one year. For, at the end of 30 June 1961, the Southern and Western zones were similarly placed with a percentage of slightly over 60. By the end of the first six months of 1962 the Southern zone has forged ahead to take top place. The other zones with the exception of the Eastern zone have also improved their relative position as compared with the end of the first six months of 1961. Oddly enough, the Eastern zone has recorded a fall in the percentage of sums assured from 53.4 per cent to 49.5 per cent as at the end of June 1962. Within the Eastern zone notable declines have been registered by Centres like Calcutta, Patna and Musaffarpur, while only Assansol and Cuttack show any worth-while improvement in this regard. Also noteworthy is the fact that total of new policies issued and sums proposed in the Eastern zone show no improvement as compared with the first six months of 1961.

The general stagnancy in the business of the corporation in the Eastern zone should be a pointer to the scope for improving its performance. In the same way, the division-wise variations of business within particular

zones are indicative of scope for improving business in each zone. Taking the Southern zone, for example, the percentage of sums assured to sums proposed varies from 63.8 per cent in Masulipatam to 83.0 per cent in Bangalore. In the Central zone Varanasi has a low proportion at 44.8 per cent while Muzaffarpur in the Eastern zone with 41.8 per cent has the lowest proportion. There are also notable variations in the percentage increase in sums proposed between divisions, though zone-wise the performance has been uniform, the Eastern zone providing a solitary exception. It is important to note that Ajmer in the Northern zone, Agra in the Central zone, Musulipatam in the Southern zone and Nagpur in the Western zone have registered a fall in the new sums proposed in the first six months of 1962 as compared with the corresponding period of last year. To what extent the decline in these centres has been caused by adverse factors like floods and drought is not known.

On the whole, the outlook for internal business for the Corporation is encouraging and with accent on rural insurance there is ground to hope for a further substantial improvement in the remaining six months. The increase in the foreign business is, however, not of the same order as in the first six months of 1961, the sums proposed and completed being Rs 4.36 crores and Rs 2.44 crores respectively against Rs 4.41 crores and Rs 2.70 crores respectively in the six months of 1961. The Corporation has therefore to devote greater attention to increasing its foreign business. (Incidentally it may be pointed out that the Corporation has announced its decision to follow the financial year for its accounting purposes instead of the calendar year. The change is expected to have beneficial effects on its business).

TOTAL NEW BUSINESS.

Period: 1-1-1962 to 30-6-1961.

Zones.	Sum Proposed.	Sum Assured.	Percentage of Completion.	% Variation over 1961 figures completed.
Northern	36.83.15	23.52.56	63.9	22.5

Economics of Road Research

THE need for a larger road plan was among the topics highlighted at the conference convened by the Federation of Indian Chambers of Commerce and Industry to consider the problems of shortage of power and transport. There can be no dispute about the need for rapid and substantial increase of road mileage. The inadequacy of road mileage is aggravated by the deficiencies of the existing net-work. Mr Shriyans Prasad Jain has emphasised in his presidential address that, though the targets of the Nagpur Plan had been more or less achieved by the end of the Second Plan, their effectiveness had been reduced by the fact that there are many missing links even on national highways, such as absence of bridges, not to speak of innumerable gaps in feeder roads. The Third Plan has also acknowledged the deficiencies of the existing

road net-work. About 60 per cent of the total mileage consists of earth roads. Out of 15,000 miles of national highways, only about 2,300 miles have two lane carriage ways. The National Highways and the State highways have crust thickness of only nine to ten inches which is inadequate for the present volume and intensity of traffic.

The main difficulty in implementing an adequate programme of road development is lack of resources. Road programmes costing about Rs 324 crores have been included in the Third Plan of which Rs 244 crores relate to programmes in the State sector, and the remaining Rs 80 crores to central programmes. A few additional programmes in the Eastern region as well as in Bombay are also being financed by the IDA credit of Rs 29 crores. Under the State programmes it is estimated that about 25,000 miles of surfaced roads would be added to the existing net-work. The central programme provides mainly for the improvement of the existing national highway system. It does not appear likely that Government would be able to step up the outlay to Rs 590 crores as suggested by the FICCI conference. The main consideration, however, is not the financial outlay, but the provision of a larger network of all-weather roads capable of bearing the load of increased traffic. Replacement of conventional methods of construction of different categories of roads by cheaper methods could make it possible to build more roads at lower cost. The results of work done in the Central Road Research Institute (CRRI) are of considerable interest in this context.

The Central Road Research Institute is one of the chain of National Laboratories which was set up in 1952. The research work of the Institute is organised in six divisions, namely, Soils, Concrete, Bitumen, Roads, Traffic and Workshop. During the short period of its existence, the CRRI has a considerable volume of achievement to its credit. The methods developed at the Institute for the construction of stabilised soil roads, the use of compacted soils in the lower layers of road pavements, use of locally available aggregates in road construction, use of cinder in road embankments, manufacture of puzzolanic surkhi from local soils, brick sandwiched concrete road pavements, etc, indicate the scope for effecting substantial reductions in the cost of road construction. The Institute has also developed a number of materials used in road engineering such as expansion joint fillers and anti-stripping agents from locally available materials which could replace imported items, thus saving foreign exchange.

The possibility of realising the economies indicated by the results of research depends on the adoption of the new methods by the State Governments. There is always an element of risk involved in adopting new techniques and the Highway authorities have not shown themselves eager to face it. To cover the risk of failure, Government has set up a "risk fund" to underwrite the loss that might be caused by the failure of roads constructed according to the new methods. This should encourage the State Governments and their highway engineers to adopt a more progressive outlook.

From the results of the work done at the Institute, it appears that it should be possible to effect substantial increase in the mileage target for the same financial outlay. The cost of road construction, apart from labour cost, consists mainly of cost of materials and haulage. Stone aggregates used in conventional methods of road construction are not

29 September 1962

easily available in all parts of the country, and have to be brought from long distances, adding to the total cost. Over large areas of the Gangetic plain and in the black cotton soil area in Deccan, stone suitable for road construction is not available within easy distance. In Rajputana the only material available is fine sand. Even water for compacting the soil is not available. Research carried out at the CRRI has established the suitability of alternative aggregates which may be locally available, such as brick ballast, kankar, moorum, laterite, etc. A method for compacting fine sand with bitumen is also being developed for use in Rajputana.

The method for stabilised soil road construction suitable for different soils which has been developed at the Institute is of considerable importance from the standpoint of cost reduction. The cheapest all-weather road, constructed by conventional methods, that is, water-bound macadam, costs about Rs 35,000 per mile of road 10 ft wide for the road crust alone. The adoption of the new method, it is claimed, will enable the cost of surfaced all-weather roads, capable of carrying medium traffic, to be cut by half. If the surface is left untreated, the cost will be less than a third of the conventional method. Under the new method, a blend of suitable local soils with a small percentage of locally available aggregates is compacted to maximum density at optimum moisture content. The surface is then treated with bitumen in the ordinary way. The employment potential of this method is another consideration that should recommend it to the State Governments. As compared with conventional methods of construction, the new method can provide a larger volume of employment per mile of road, as most of the work is done by manual labour.

The practicability of adopting this method depends on the availability of suitable soils in the vicinity of the road alignment. The CRRI has carried out a country-wide survey of soils which shows that the method can be applied to a larger part of the Third Plan road programme. The Institute has also developed methods to deal with particularly difficult soils like black cotton soil by treating the soil with a small percentage of lime.

Development Banks Aid Modernisation

PART I: A NEW SOURCE OF CAPITAL FOR INDUSTRY

By Shirley Boskey

First of two articles on the role of national development banks in emerging countries. Mrs Boskey is the author of "Problems and Practices of Development Banks," published by Johns Hopkins University Press.

DEVELOPMENT banks are in fashion. During the last 20 years, the number of these institutions in the less developed countries has greatly increased. What is more, they cannot be dismissed as a fad, for their popularity is firmly based upon their demonstrated usefulness as instruments of economic development.

Exactly what is a development bank? The versatility of these organisations makes it difficult to define the term with precision, or to describe a "typical" development bank. The label attaches to a wide variety of institutions, differing in ownership, capital structure, and type of activity. Some are public agencies, with funds and management supplied

by the government. Some—considerably fewer but growing in number—are wholly owned and controlled by private investors. Still others are financed and run by government and private interests in partnership.

Some development banks are concerned solely with the public sector; they have been created to set up and operate government-owned enterprises or to engage in broad development planning. Other banks, including both governmental and private institutions, have been made responsible for assistance to the private sector only.

Some development banks deal only with the field of agriculture, some with industry, some with mining; still others range over the entire economy. The geographic scope of the bank's operations may be countrywide or merely regional.

The financing operations of some banks are restricted to lending; others may invest in any appropriate form. There are banks which are purely financial institutions and others which may also offer technical assistance or engage in promotional activities.

This diversity among development banks reflects the differing needs of developing countries and the varied political, economic and social environments in which the banks operate. The sponsors of a new bank, whether local businessmen or government officials, must consider carefully the purposes the bank is to serve before deciding how to organize it, what sources to approach for capital and, at a later stage, what the bank's operational policies shall be.

Despite the variety in characteristics and functions of development banks, some common elements can be discerned. A development bank is a vehicle for bringing together capital, initiative, and technical skills for the purpose of stimulating economic development.

The many different approaches which a development bank may take in performing its task are best illustrated by those banks which are created to stimulate the growth of the private industrial sector.

In most developing countries, there is normally a shortage of long-term investment capital; short-term working capital needs can usually be met by the commercial banks. Before the development bank can serve as a source of investment capital, however, it must have funds of its own. These may in principle come from a number of sources; governmental and private, domestic and foreign.

In some cases, the government has contributed a bank's entire capital. It may do this, for example, by subscribing to shares, by annual appropriations, or by earmarking a portion of tax revenues. In other instances, the equity (share capital) has been subscribed in whole or part by private investors, individual and institutional, such as banks and insurance companies.

The bank's loan capital may be borrowed from the local government (usually on highly favourable terms permitting repayment over a long period with low or no interest), or may come from foreign national or from international sources such as the US Agency for International Development (AID), the World Bank (IBRD), the International Development Association (IDA), or the Inter-American Development Bank. The International Finance Corporation (IFC) is now a potential source of equity capital for development banks.

The Industrial Mining and Development Bank of Iran provides an illustration of the variety of sources from which a development bank's capital funds may originate. Shares in this bank have been purchased both by individuals and institutions. Shareholders include not only Iranians but Belgian, Dutch, French, German, Italian, UK and US investors as well. Loan capital has come from the Government of Iran the US Development Loan Fund and the World Bank.

As this example shows, the very creation of a development bank affords the possibility of marshalling capital from within and outside a country for industrial investment. An infusion of foreign funds not only adds to the country's supply of foreign exchange and provides a point of contact with capital markets in the industrialised countries; it may bring with it the managerial, professional, and technical skills which a developing country so greatly needs.

In deciding upon the terms and the form of its financing, a development bank must take into account a number of factors. These include the source and cost of its own capital, the economic environment and the preferences and needs of applicant enterprises.

Normally, the bank will try to assure that it does not compete with other sources of finance, by restricting assistance to types and maturities of financing which other institutions are not prepared to provide.

In contrast to the commercial banks, for example the development banks normally relies more heavily on an applicant's earnings prospects and the quality of its management than upon its current worth and its ability to put up conventional security.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings. Individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

Prospect for Bank Profits

What will the fate of bank profits be in 1962? It is always difficult, and very often foolhardy, to venture any prediction in this regard. Yet the fact remains that there are already available a number of pointers which should broadly indicate what the trend is likely to be. The first factor of importance is that, though there was record expansion in bank Advances during the 1961-62 busy season, on the whole utilisation of resources of the banking system has been rather less remunerative for the greater part of the year so far. 1962 has witnessed a true slack season, the pressure upon the banking system in respect of the 1961-62 busy season drew earlier to its close—and in the early part of the year banks paid through their nose for their borrowings from the Reserve Bank. Furthermore the rise in Deposit resources, particularly Time Deposits, has been quite sharp. The influence of such developments in banking will undoubtedly be to bring down or cut into bank profits.

The second factor concerns the cost of insurance of bank Deposits. The scheme will be applicable for a whole year, and its cost will not be inconsiderable nor its bite into bank profits insignificant.

The third factor is the additional bill for salaries and wages consequent upon the new Award. The abolition of an area and the elimination of one category of banks will both spell increased establishment expenditure—involving, again, a reduction in profits.

Nor, for that matter, is the outlook for the remaining three months of the year other than bleak. If present trends continue, banks despite themselves will be attracting new Deposits mostly in the form of the higher-costing Time Liabilities. At the same time, the industrial stagnation that has set in will mean that the demand for Advances will be moderated and also perhaps that the 1962-63 busy season will get off to a late start. Thus, though banks may be able to avoid the penal 6½ per cent rate of borrowing from the Reserve Bank, the fact remains that such a fortunate position will have been secured simply because there was insufficient demand for banks' money.

As this realisation grows, of being plagued with an embarras de richesse, banks would probably rush to "hedge" their idle resources. We expect, as we have stated on a former occasion, a sustained purchase of gilt-edged during the next busy season.

The squeeze on profits has also recently provoked the Scheduled Banks to evolve an inter-bank agreement for a minimum rate of Advances. It is not at all unlikely that, should improvement in profit margins fail to be of sufficiently large proportions, the banking system should consider a revision of Deposit rates.

BANK RETURNS

Two-fold Rise in Resources

The money market is back to normal as indicated in the latest banking figures. According to the returns of the Reserve Bank for 21 September, Active Note Circulation has contracted considerably by Rs 21.90 crores to Rs 2,019.79 crores, and there has also been inflow of Rupee Coin for Rs 1.68 crores. (With Foreign Securities unchanged at Rs 88.34 crores, currency has been contracted against Rupee Securities, which are lower by Rs 20 crores at Rs 1,708.03 crores.

In the return for the Banking Department, Investments are also seen to have declined by Rs 20 crores to Rs 173.31 crores. Now, it is known that the State Bank figured as a purchaser of gilt-edged for Rs 23 crores during the week under review. The balance of the fall in the Rupee Securities held by the Reserve Bank in both Departments—Rs 17 crores—is clearly indicative of ad hoc Treasury Bills cancelled by the Centre in advance of maturity. Such reverse ad hocs have accordingly reduced the Centre's balances by Rs 10.63 crores to Rs 73.78 crores. The fall in the Deposits of the Centre would have been steeper but for presumed payments by the States, which report a decline of Rs 13.70 crores to Rs 15.71 crores in their Deposits as well as a rise of Rs 3.00 crores to Rs 3.85 crores in their ways and means borrowings from the Reserve Bank.

There is little or no pressure now upon the banking system. Loans and Advances to Scheduled Banks are substantially lower by Rs 12.40 crores to be placed at Rs 6.28 crores, of which Rs 5.04 crores represent advances against usance bills. (Moreover, Reserve Balances have been added to by Rs 1.85 crores in being shown at Rs 84.66 crores. However, the State Co-operative Banks report a small decline of Rs 0.26 crore to Rs 1.90 crores in their balances with the Reserve Bank; and their ways and means borrowings are also higher though nominally, by Rs 0.62 crore at Rs 127.77 crores. The Reserve Bank's portfolio of Treasury Bills purchased and discounted shows a drop of about Rs 2 crores to Rs 125.24 crores.

It may be mentioned, lastly, that Balances Held Abroad disclose an increase of some size in the latest Reserve Bank returns, in being marked up by Rs 1.82 crores to Rs 7.58 crores; and foreign assets held by the Reserve Bank are once again in excess of Rs 95 crores. Question: will the uptrend in foreign balances be maintained?

The return of the State Bank for 21 September also discloses an easing of the strain upon the banking system. The total of Advances has dropped sizably by Rs 7.35 crores to Rs 270.00 crores, while Deposits and other Accounts have improved by Rs 2.33 crores to Rs 573.83 crores. Such release of resources

has been taken advantage of to replenish the gilt-edged portfolio, which had in the two earlier weeks been sadly depleted. The State Bank's holdings of Government and other Trustee Securities has gone up by Rs 23 crores to Rs 275.32 crores—but replacement buying in an amount of another Rs 16 crores is necessary before the 1962 peak of gilt-edged holdings is once again to be hit. For this purpose some Rs 11.22 crores were marshalled from Other Assets, which in consequence are lower at the more normal level of Rs 27.04 crores. Borrowings are negligibly changed at the negligible figure of Rs 0.38 crore; and cash balances, including money at call and short notice, have receded by Rs 2.44 crores to Rs 27.48 crores.

The return of Scheduled Banks for 14 September already indicates a recovery from the stringency that had been witnessed in the money market in the two previous weeks. Net Deposits rose by Rs 8.38 crores, with net Demand Deposits marked higher by Rs 5.15 crores at Rs 893.41 crores and net Time Deposits by Rs 3.23 crores at Rs 1,269.06 crores. All of this rise, save an element of Rs 0.99 crore, was on account of Scheduled Banks other than the State Bank. Similarly, bank credit has contracted in handsome manner, with the total of Advances declining by Rs 11.16 crores to Rs 1,408.27 crores. There has, it is true, been disinvestment in gilt-edged for Rs 16.50 crores—but this is largely (as to Rs 14.71 crores) attributable to the State Bank. Such plethora of freed resources has enabled the Scheduled Banks to cut sharply by Rs 23.12 crores to Rs 18.88 crores their indebtedness to the central banking institution, though borrowings from the State Bank are fractionally higher by Rs 0.13 crore at Rs 17.71 crores. The end result is a fall of Rs 3.79 crores to Rs 190.83 crores in cash balances, including money at call and short notice. As already hinted at by the returns of the Reserve Bank for 21 September, the next statutory statement of the Scheduled Banks should disclose a further increase in Deposits and another contraction in bank credit.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills were opened on Tuesday, 25 September 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000, the average rate of accepted tenders being Rs 2.360 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Saturday, 29 September 1962. Successful tenderers should make payment on Friday, 5 October 1962 at all centres. Other conditions are as usual.

During the week ended 21 September 1962 Government of India Treasury Bills for Rs 59,81,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 26 to 29 Sept. 1962 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 19 to 22 September 1962 amounted to Rs 20,00,000.

29 September 1962

UK

Financial Position Continues Strong

By John Kingsley

THE financial position of Britain continues to be strong. The normal seasonal strains on sterling have been markedly light, and the usual loss of gold and foreign exchange from the reserves in the summer months has not taken place. This points to an underlying strength in the basic balance of payments of the Sterling Area with the rest of the world.

Both in Britain and in other sterling countries like Australia there has been a marked improvement in the current balance of payments; nor is Britain now relying heavily on inflows of short-term funds. These, it is officially stated, probably ceased at the end of May; so that sterling's creditable performance since then rests on more enduring supports. One of these may well be a renewed inflow of foreign investment funds in the gilt-edged market, to buy the stocks of the British Government itself.

Such purchases were not especially apparent in the second quarter of the year, but subsequently the gilt-edged market showed a great deal of life, and it would be surprising if foreign investors had not taken part in this activity. Those who bought at the end of last year now show a capital appreciation of 20 per cent and more, which is no mean performance in current investment conditions.

This financial strength has given rise to speculation that the Government may intend to make some relaxations in fiscal and credit policy this autumn. Of course, no one but the Chancellor of the Exchequer himself knows what is in his mind, but many observers have the impression that, when he returns from the meeting of the International Monetary Fund in Washington, Mr. Reginald Maudling will be prepared to inject a stimulus for the economy—if it needs one. The qualification is important.

So far this year, personal consumption has not been rising as fast as was expected. The effect on production has been blurred by movements in stocks, and production has, in fact, been rising quite well of its own accord. But unless consumption shows signs of picking up equally spontaneously, the Government might clearly consider lowering its purchase and excise taxes.

Some observers still feel that this may not be necessary. They point out that wage and salary incomes have risen, and that in recent months prices have not risen. People have had more money to spend, that is, and unless they have suddenly started to save more, they must have been buying more.

Meanwhile, the Chancellor can take comfort from the fact that the external financial basis for a new expansion for the economy is now firm and sound.

British firms continue to have major success in winning large international contracts in building and civil engineering. In the year to March 1962, some 60 British firms operated in as many different countries and completed work worth £135 million. New contracts obtained during this year were £122 million.

The range of activity of these firms was remarkably wide—from the building of bridges and harbours to the construction of hospitals and schools.

The Maudling Plan

By Paul Einzig

AT the annual meeting of the International Monetary Fund, Mr. Maudling put forward a plan under which surplus countries would hold currencies of deficit countries under the intermediary of the IMF. Details of the plan are still lacking, but it seems that its broad principles themselves have encountered opposition on the part of quarters upon whom the adoption of the system would largely depend. Even before the plan appeared, the spokesmen of the IMF and of the United States authorities declared that no exceptional steps, in addition to those already taken for the increase of international liquidity, are needed. As for France and Germany, for some time past they have made no secret of their feeling that, in their opinion, international liquidity is excessive rather than deficient. In the circumstances the British plan is only likely to receive support from underdeveloped countries. Actually very few of these countries would stand to benefit directly by the plan, for one of the conditions for participation in it is the possession of a convertible currency. Indirectly, however, an increase of international liquidity would benefit all deficit countries.

The lack of enthusiasm displayed now only by surplus countries but even by the United States is understandable. For the British plan offers yet another formula to enable countries with a chronic balance of payments deficit to take the line of least resistance. Admittedly it is often necessary to assist such countries in the task of working out their salvation. Under the proposed plan, however, countries which qualify for assistance would receive it automatically, regardless of whether their difficulties were due to causes for which the remedy lies in their own hands.

Many underdeveloped countries could easily solve their balance of payments deficit by creating conditions in which a chronic influx of foreign investment would be assured. Their system of taxation and various other legislative measures discourage, however, the influx of foreign private capital. Its place has been taken to a large extent by various forms of official foreign aid. Judging by the increasing resistance encountered by President Kennedy's foreign aid programme in Congress, however, the flow of funds from that source is likely to decline. It is true, if the Maudling Plan should be put into operation, Britain would be enabled thereby to continue financial assistance to underdeveloped countries on a large scale at the cost of increasing its short-term external indebtedness. That process could not continue for ever, however, and in any case the prospects of the adoption of the Maudling

plan are not very favourable. In the circumstances underdeveloped countries are well advised to make an effort to reduce their dependence on external aid or to ensure such aid on a commercial basis by creating conditions in which private capital would be willing to flow in on an increased scale.

—Copyright.

The foreign banks during the month of June have shown an increase in their Deposits of the order of Rs 656 lakhs. Their aggregate Deposits at the end of June amounted to Rs 260.25 lakhs as against Rs 253.69 lakhs in the previous month of May.

The statutory reserves maintained by the scheduled banks and state co-operative banks with the Reserve Bank had, as at the end of June, risen sharply over the previous month such that the excess over the statutory minimum doubled itself from Rs 13.02 crores to Rs 26.18 crores.

The number of offices of banking companies in India rose during July by 12 to 5,228, and all of this increase was in respect of scheduled banks; a further interesting point is that foreign banks increased their offices by 2 to 81.

India's foreign exchange reserves, including Government balances held abroad, rose in July by Rs 2.12 crores to Rs 243.36 crores, but the drain in reserves in the first four months of 1962-63 has amounted to almost Rs 54 crores.

Government of India Treasury Bills outstanding as at the end of July marked a fall of Rs 19.46 crores to Rs 1,264.90 crores. But deficit financing in the first four months of the current fiscal year already exceeds totals very nearly Rs 90 crores.

Outstandings of small savings have shown a fall of Rs 87 lakhs during April 1962 as compared with the previous month, the respective figures being Rs 849.25 lakhs and Rs 850.12 lakhs. In this light the prospect for augmenting small savings collections for the rest of the year appears somewhat bleak.

The Bazaar Bill rate has remained remarkably steady in all the three centres namely Bombay, Calcutta and Madras since July 1961. The rate was 12.50 and 13.92 in Bombay and Madras respectively. In Calcutta the rate which was 12.00 showed variations between 10.50 and 12.00 in the month of August 1961.

The index number of variable dividend industrial securities shows an increase to 184.0 at the end of July 1961 from 182.8 as at the end of July 1961. The index for Agriculture and allied activities shows a heavy decline from 170.4 to 156.3 while for mining and quarrying there has been a moderate fall from 165.4 to 160.7. On the other hand the index for processing and manufacture shows an increase to 200.4 from 197.6 as at the end of July 1961.

WORLD TRADE Lower Rate of Growth

World trade during 1961 and early 1962 was marked by a deceleration of its rate of growth, mainly owing to the slower trade expansion in the free market economies. Within the free market group, the gains in trade were mainly reaped by Europe, and, according to a press release issued by the European office of the United Nations, there was a further rise in 1961 in Europe's share of the total world trade. In contrast, the increase in trade both in North America and the primary producing countries was less than the world average.

The increase in Europe's share in the total world trade has been reflected in the expansion of the intra-European trade and particularly intra-west European trade. In western Europe, foreign trade is shown to have grown faster than industrial production, though there were marked variations between the rates of growth in individual countries. During 1961, the highest rates were accounted for by countries like Ireland, Italy, West Germany, etc, but in the early part of 1962 smaller countries like Greece, Iceland and Turkey forged

ahead, while in the other countries the expansionary phase had passed its crest. Value-wise, the expansion in trade during 1961 was smaller, being only about 12 per cent as compared with the rise of 20 per cent recorded for 1960. The greatest fall has been recorded for west Europe's trade with North America. Imports from that area increased by merely 2 per cent which contrasts with the expansion by 40 per cent registered in 1960. The trade decline with North America was further precipitated by a decline by 2 per cent in exports. A slight increase in west Europe's imports from the primary producing countries was offset by a 3 per cent decline in prices with the result that in value the total imports were less than in 1960. Most of the commodity groups with the exception of petroleum were affected by falls in prices. The fluctuation in the prices of primary commodities is one of the major problems plaguing world trade and the root of the chronic trade imbalances experienced by these countries. Clearly measures for stabilisation of prices of primary commodities are called for. In connection with measures for improvement of the terms of trade of the primary producing countries, account has also to be taken of the effects of the proposed trade groups like the EEC.

In east Europe, the slowing down in the rates of growth of trade was evident even in 1960. During 1961, there was a further fall to 8½ per cent from 10 per cent in 1960. The sharpest decline in this area was recorded by the Soviet Union, being caused by the steep fall by about 55 per cent in trade with Communist China. It has been estimated that between 1959 and 1961 Sino-Soviet trade fell by about 55 per cent whereas with the rest of the world, Soviet trade rose by about 30 per cent over the two years.

Trade between East and West Europe has also failed to expand at the rate witnessed in 1960. The rise in West Europe's exports to East Europe was of the order of 10 per cent while imports were only slightly more than 4 per cent higher. The main obstacle to greater expansion of east-west European trade has been the inability of the east European countries to earn sufficient amounts of west European currencies to pay for their growing import requirements. The total value of trade with east Europe has been estimated at a little more than 4 per cent of West Europe's total trade last year.

SHIPPING

India's Pool Quota to Rise

For the second year in succession, the India Steamship Company Ltd. has shown a loss. However, this is no reflection on the efficiency of the company's operations, such an experience being shared by many shipping lines and companies because of the continued depression in the freight market. If fact, considered from the standpoint of freight carried and number of voyages undertaken, the performance of India Steamship can be considered fairly encouraging. The freight earned during 1961-62 was higher at Rs 8.97 crores against Rs 8.63 crores, while the total number of liner voyages was 54 as compared with 49 in the previous year. The continuing loss has been put down to the combination of low freight rate for goods carried from east to west throughout the year, on the one hand, and to the fall in the volume of high freighted cargo handled by the company on the other. Another factor that stands out is the continuing increase on expenditure side rendered inevitable by the increments in salary, revision of scales etc. The increase in operating expenses also reflects other difficulties which shipping companies continue to face in general. The draft restrictions on the Hooghly due to silting should particularly be pointed out. Reduced loadings as a result of strikes at the Calcutta port have also affected the turnaround of ships.

While the outlook for shipping in the light of the results of India Steamship appears gloomy, there are some silver linings on the horizon. The increase in the freight rate for coastal shipping, announced by the Government at the instance of the Abhi Committee, should augment earnings of all shipping companies.

In the overseas trade, an agreement has been signed by three Indian companies with the British companies, and India's pool quota is expected to be raised from 30.5 per cent to 39 per cent with a further escalation clause for an annual increase by 1 per cent. Another factor of significance that has a bearing on the outlook for shipping companies is the agreement between the three Indian lines engaged in the India-UK/Continent trade. The agreement provides on a pooled basis for equal carriage of freight and equal earnings for the three lines in the trade on some of the important lines, like Indo-Polish trade, Indo-German trade, Indo-Soviet trade, etc. This furnishes an example of cooperation which could be further extended to spheres not so far covered.

The most important problem which shipping companies now face, and to which Sir Ramaswami

Mudaliar has drawn special attention at the annual general meeting, is that relating to freight rates. According to India Steamship Chairman, the future of shipping depends largely on a far-sighted policy that the shipping companies and the shippers of any importance take in regard to the freight rates of commodities. Government intervention in freight rates is fairly universal and has considerably restricted the freedom of action previously enjoyed by the shipping companies in the fixation of freight rates. As far as India is concerned, the problem is to strike a balance between considerations of export promotion and the need to foster the growth of shipping. The suggestion of Sir Ramaswami Mudaliar to set up agencies to study the problem should prove extremely useful.

BIHAR

Floods and Drought

A weird combination of floods and drought has posed one of the most difficult problems to face Bihar State in recent years. While north Bihar has been ravaged by devastating floods, south Bihar continues to be in the grip of an unprecedented drought. The floods and drought have taken a heavy toll of agricultural production in the State. The agricultural economy in large areas of the State is in a state of serious dislocation. In north Bihar, an area of about 12.35 million acres has been affected by floods, and the resultant damage to agricul-

29 September 1962

tural crops has been estimated at about Rs 8.35 crores. In south Bihar the ominous shadow of famine has been looming large and starvation deaths have been reported.

In the discussions in the State Legislative Assembly, deep concern has been expressed by all parties at the hardships inflicted on the people by these calamities. In the wake of the sufferings, the Government has initiated measures to provide relief to the affected people. Among the steps that are being taken in this behalf, mention may be made of opening of fair prices shops for distribution of food, granting of taccavi and agricultural loans, provision of house-building grants, etc. Even the Government benches have admitted the insufficiency of the relief measures, and this fact should in itself furnish a measure of the hardships the people have suffered. Not without justification, the Opposition has charged the Government with neglect of its responsibilities for flood protection and irrigation. If anything, it is the breakdown of the Government's measures for flood protection and irrigation that is glaringly reflected in the occurrences of floods and drought on the scale witnessed in the State. Vast sums of money have been spent on flood protection in the State, the bulk of which has gone down the drain. Government is to blame for the piecemeal manner in which the problem has been tackled. Incomplete embankments in some cases and its lack in others have been among the major causes for the floods. Silting of river beds has also aggravated the flood situation. An abiding solution has to be sought in coordinated schemes with emphasis on the construction of embankments on both sides of the Ganges and the Sarayu. The floods which seasonally overrun Bihar have their source and origin in Nepal. If the Nepal Government could be prevailed upon to construct a reservoir at the Bagmati river, the frequency and also the intensity of floods in north Bihar could be considerably reduced. Similarly if recurrence of droughts is to be forestalled, irrigation schemes particularly minor irrigation schemes must be taken up. South Bihar is generally known for its scanty rainfall, and this can be made good only by irrigation. The allocation for minor irrigation works under both the first two Plans was inadequate to tap the full potential. The situation was merely further aggravated by neglect of repair work by the Government, as a consequence of which a number of minor works have been rendered useless.

late become a major preoccupation of both the Central and State Governments. Despite the abundant supply of raw materials, availability of cheap electric power, adequate transport facilities and surplus labour, the State's progress in the industrial horizon during the past makes disappointing reading. The growing scare of unemployment, the explosive population growth and the low standard of living of the people only aggravate the maladies of this problem-ridden State. The promotion of industrial undertakings in the large and small-scale sectors simultaneously will of course help greatly. But, as Mr K. R. K. Menon, Chairman of the Kerala State Industrial Development Corporation, stated at its first annual general meeting, the non-availability of adequate quantum of risk capital and lack of entrepreneurial skill are serious impediments to industrial development. Even the State's endeavour (admirably captained by its illustrious Governor, Mr V. V. Giri) to woo entrepreneurs from outside met with only partial success.

A thorough probe into the causes for the inertia of the industrialists to start new units in the State will be a worth while study. The political instability with which the State is closely associated is largely a thing of the past. Labour unrest is less. Nevertheless, other factors still lie untackled. For instance, a comprehensive economic survey of the State with particular reference to the availability of various sorts of raw materials should be undertaken speedily. As the Chairman has admitted, the Corporation has had much difficulty on several occasions in furnishing "foreign" businessmen with a correct appraisal on these points. Another dampening factor is the unaccountable delay in land acquisition proceedings, supply of electricity and civic amenities in industrial centres. The State Government should also offer incentives to attract more and more investors for starting new ventures. The KIDC, which is sponsored for fostering and developing large-scale industries in the private sector, should also take the initiative to contact outside businessmen and render all possible assistance for locating new units.

It may be recalled that the Industrial Delegation sponsored by the All-India Manufacturers' Organisation, after conducting an on the spot study, had in its report incorporated a catalogue of industries which can be profitably developed in the State during the current Plan period. They can be broadly categorised under five heads: industries based on forest resources, agricultural resources, marine resources, mineral resources and power resources. The panoramic beauty of Kerala offers immense scope for developing tourism as a highly remunerative

industry. The delegation has also stressed the need for expanding and modernising the existing industries and setting up an adequate propaganda machinery to give wider publicity to the vast industrial opportunities Kerala offers and the incentives provided by the State Government to the entrepreneurs to start new ventures.

CENTRAL REVENUES Encouraging Trend

Central revenue collections in the first four months of the current financial year have revealed an encouraging trend. According to the data released by the Government of India, total collections under nine important heads (details given in table below) add up to Rs 305.63 lakhs which is higher than the total realisations under the same heads in the corresponding period of the last budget year by Rs 36.15 lakhs. On the basis of this trend, it is certain that the budget estimates for revenue for 1962-63 will be easily exceeded.

It may be seen that revenue collections under both Customs and Union Excise Duties are substantially higher than in the April-July period of 1961. The increase in revenue under these two heads are of the order of Rs 15 crores and Rs 25 crores respectively, against about Rs 8 crores and Rs 53 crores estimated in the Budget for 1962-63. Considering that revenue accruals under these two heads are more or less evenly spread through the year, it can be hazarded that the total collections by the end of the financial year will be substantially more than the estimates in the budget. On the other hand collections under Corporation Tax and Income-tax during April-July 1962 are somewhat less than in the corresponding period of last year. But, regard has to be had for the fact that collections under these two heads are concentrated generally in the last quarter of the financial year and for this reason figures for a limited period may tend to be misleading. Further the experience in all previous years has been for revenue almost under

every head to be much in excess of the original estimates. This may be attributed to the habit of deliberate underestimate of revenue generally practised by the Union Finance Ministry and this is again now reflected in the figures for the four months period given by the Government.

PORTS

Mangalore to be made All-weather

The Mangalore port, as reports in the papers aver, is poised for further expansion. The development operations, which are expected to commence in April next at an estimated cost of Rs 12.70 crores, envisage the enhancing of porting facilities and when completed will permit easy access of 34 draft to 38 draft ships to the berths. The conversion of Mangalore into an all-weather port is another feature of the developmental programme. The experimental studies conducted by the Indian Institute of Studies, Bangalore, and the Central Water Research Institute seem to have spurred the Government to go ahead speedily with the programme. Mr Jagjivan Ram has asserted, at the recently convened meeting of the Major Port Development Board at Visakhapatnam, that the investigations will be completed and preliminary works begun by the end of March 1963. The development work will be carried out under the joint operation of the Central Agency and the State Government and is expected to finish within five years after initiation. The State Government's notification for acquisition of about 8,000 acres and the allotment of foreign exchange for the purchase of a two-ton grab dredger to quicken the dredging operations are both evidence of the urgency with which the programme is being implemented.

The authorities are not quite oblivious of the need for improving rail facilities along with the port expansion scheme. The sanctioning of the proposed Hassar-Mangalore rail-link and the State Government's strong plea to the Centre for taking up another rail-

way line connections Harihar and Kottur for better ore traffic on the Bellary-Hospet line for exports are two instances in point. Both the port development and the completion of railway lines should be taken up simultaneously so that the requisite loading capacity can be provided at the port. But the financing of the schemes is likely to run into difficulties. The Central Government has allotted Rs 5 crores for the Mangalore project in the Third Plan, and there is no knowing where the balance will come from. Considering the importance of Mangalore port and the inadequate port facilities in the country, the expansion of the project cannot be allowed to suffer for lack of finance—or, for that matter, any other reason.

FREE PORT

Waning Enthusiasm

There has been increasing pressure of late from business and other interests in Gujarat for an early decision regarding the establishment of a free trade zone at Kandla. Much of the clamour is a reaction to the opposition from certain commercial sectors in Maharashtra which want a free port to be set up in Maharashtra in preference to the one proposed at Kandla. All the same, there is genuine concern at the delay in the setting up of a free trade zone at Kandla. It may be pointed out that the proposal was first mooted in 1960 and initial measures were also taken for the development of the Kandla port. But progress was not as rapid as was at first expected. Whether this indicated anything of an abatement of the early official enthusiasm for the project is not clear. There has, however, in recent months been a reappraisal of the utility of the schemes for free ports even at official levels. It may be recalled that the recommendations of a study group headed by Mr. G. I. Mehta for the formation of a string of free ports in different States met with a cold reception from Members of Parliament. The report and the conflicting views it has provoked has underlined the need for a fresh study of the whole question of free ports and for an unequivocal stand from the Government. Much of the arguments in favour of the development of free trade zones takes no account of the problems and difficulties inherent in such development. It has now come to be recognised that even Kandla was conceived only in an ardour of export promotion unrelated to the consequent costs involved in its development. There can be no gainsaying the benefits that would follow in the shape of new industries, more of employment to the local labour force, the field it would throw open to

the enterprising Sindhi and Gujarati business communities and the relief in shipping pressure it would afford to the neighbouring Bombay port. The benefits certainly appear attractive and impressive, but have to be considered against the estimated costs that would be entailed in the provision of the necessary facilities. Some of the major problems relate to the development of the requisite transport facilities like railway lines to the main centres and the development of the port itself. Account has to be taken of the availability of shipping services. But the decisive factor would be the scope for increased export trade which the development of the free trade zone would ensure. And, certainly, it will take a long time for export trade to be stabilised in a free trade zone.

ISI

Standards for Exports

As the national standards body, the Indian Standards Institution has been rendering useful service to the country by trying to improve standards of our manufactures. It is charged with the responsibility of preparing and promoting general adoption of standards on a national and international basis relating to structures, commodities, materials, practices, operations, etc. As such the activities of the ISI have a vital importance for industries in general and promotion of exports in particular. The ISI has already prescribed about 1,986 Indian standards for raw materials, semi-finished goods, finished products, codes of practice, methods of tests, etc. With the exception of small industries, in respect of which there are obvious difficulties in prescribing standards and enforcing them, most of the large-scale industries have been covered by the specifications prepared by the ISI. A subject to which attention is now sought to be paid by the ISI is informative labelling, especially for food products. The ISI is ever alert to the exacting demands for standards and has sought to meet them. While in the national sphere, the working of the ISI has been of immense benefit in ensuring standard quality products, in the export field there has been an odd lack of emphasis on quality and standards. This can in no sense be construed as a failure on the part of the ISI, but has to be put down to the unscrupulousness of the manufacturing and exporting houses. Quality has not been a strong point with Indian exports and this has been an important factor in the stagnancy of export of some of the important traditional products. Cotton textiles, jute textiles, cashew nuts, etc, may be pointed out as instances in

which lack of attention to maintaining quality has brought about a decline in exports. In the case of cotton textiles, India held a dominant position, particularly in the immediate post-war period, but there has since followed a steady fall in exports. Legislation for quality control has been hinted at, but will not avail unless there is a system of pre-shipment inspection. Complaints have been frequently heard that the exports do not conform to specifications indicated in samples on the basis of which export orders are booked. Such instances of export of sub-standard goods are by no means few, and have tarnished the prestige of the country in the foreigners' eyes. The ISI is understood to have given high priority to this matter in the agenda of its convention to be held in January next year. The matter is obviously of such gravity that delay in taking early measures will cost dearly.

IDA CREDIT

\$42 Million for P & T

The International Development Association (IDA), an affiliate of the World Bank, has extended a development credit equivalent to \$42 million to India. The funds will be used by the Indian Post and Telegraphs Department for the purchase abroad during the next two years of equipment to expand and improve telephone and telegraph services.

India urgently needs expanded telecommunications facilities. It has only about 1.2 telephones per 1,000 inhabitants, compared with an average of 5 for Asia, 46 for the entire world and 300 to 400 for most highly developed countries. In addition, such telephone service as exists is heavily concentrated in the areas of the principal cities. Partly as a result of the country's recent economic development, the backlog of registered applications for new subscriber services amounts to some 50 per cent of those installed and even this percentage may understate the effective demand.

The large majority of telegraph offices in India are still equipped only with hand-operated Morse Code sounders, requiring trained telegraphers at both ends. Their normal speed of transmission is 25 words per minute, as against the international speed of 66 words per minute by mechanical processes. The system is continuously overloaded, so that telegrams sometimes have to be sent by regular mail. To speed up operations the Post and Telegraphs Department has initiated a program to install teleprinters operating at the international speed.

The allocation for investment in telecommunications during India's Third Five-Year Plan (1961-1965) has been set at 1,345

million rupees (\$292.5 million), of which \$101 million will be in foreign exchange. The program will be carried out by the Telecommunications Branch of the Indian Post and Telegraphs Department. The Branch has substantial earnings: in addition to covering its own operating expenses and depreciation charges, it expects to provide from its own funds the equivalent of \$120 million toward the expansion program. The remaining funds required, including the proceeds of the \$42 million IDA credit, will be made available by the Central Government, in accordance with normal practice in India, as a permanent investment on which Department will pay the Government an annual charge of 4½ per cent.

Under the expansion program during the Third Plan, urban telephone networks are to be expanded by increasing the subscriber sets from 461,000 to 761,000 and by increasing the capacity of the central exchanges from 412,600 to 758,100 lines. The inter-urban telephone network is to be strengthened by increasing the co-axial cables from about 300 miles to 4,350 miles, by expanding the network of pole lines will be extended considerably, and the number of channels on these lines increased through the addition of more carrier equipment.

The telegraph service will be improved by building new telegraph offices, and considerably expanding the teleprinter service. Telecommunication facilities of the railways are also provided by the Post and Telegraphs Department. In connection with the railway electrification program, some 1,500 miles of specially shielded underground cables and related carrier equipment will be installed.

Equipment to be financed by the IDA credit will be procured on the basis of international competitive bidding. The IDA credit is for a term of 50 years. Repayment of the principal will begin on March 1, 1973. Thereafter, 1 per cent of the principal will be repayable annually for ten years and 3 per cent will be repayable annually for the final 30 years. The credit is free of interest, but a service charge of ¾ of 1 per cent per annum on the amount withdrawn and outstanding will be made to meet IDA's administrative costs.

... and \$18 Million for Bombay Port

The development credit of \$18 million to India for improvements at the Port of Bombay, which had been approved by the International Development Association's Executive Directors on 11 July, 1962, has now been signed. Certain documents were executed in Bombay by the Trustees of the

Indian Finance

29 September 1962

Port of Bombay and the credit agreement and related documents were signed in Washington on 14 September by His Excellency the Ambassador for India, Mr. B. K. Nehru, on behalf of the Government of India, and by Sir William Iliff, Vice President, on behalf of the World Bank.

The Government of India is making proceeds of IDA credit available to the Trustees of the Port of Bombay for a five-year program to eliminate congestion by expanding capacity of the port, and to improve facilities for the handling of passenger and cargo traffic.

POWER

Cauvery to be Tapped?

The Government of Mysore's efforts to tap the available power potential in the State augur well for its rapid industrialisation. The vigilance shown by the Government, though belated, is to be commended in the context of the existing power shortage and the dislocation caused to the production schedule of many an industry and the inconvenience caused to the general public as well. It is also a pointer to the inadequacy of existing arrangements. The proposal to exploit the power potential of the Cauvery valley

is a dynamic one—but the lack of any definite policy does not permit any complacency. But one factor is apparent: the authorities have taken note of the immense power potential (estimated at over four million kW) and the need for its rapid exploitation. The situation is further worsened by the reported reluctance of the Government of Madras to review the agreement—entered into as long ago as 1922—on the Hogenakal project.

The State's backwardness in the generation of electricity can be easily gauged from the fact that, by the end of the Second Plan, its firm capacity was at a low of 160 mW in comparison with 364 mW in Andhra Pradesh, 572 mW in Madras and 788 mW in Maharashtra. With the completion of the Sharavathi project, the capacity will be stepped up further to 821 mW.

COMPANIES

Registrations Rise in August

August saw a notable increase in the number of new company registrations in the country. The new floatations, as evidenced by the reports received by the Research and Statistical Division of the Department of Company

Law Administration from the Registrars of the Companies, stood at 158 with an aggregate authorised capital of Rs 23.20 crores in contrast to 127 companies with an authorised capital of Rs 19.72 crores in the preceding month and 115 companies with authorised capital of Rs 11.47 crores in the corresponding month of 1961.

The new registrations in the month under review comprise 11 giant-sized concerns having an authorised capital of Rs 1 crore and above and 5 big-sized with an authorised capital of Rs 50 lakhs and below Rs 1 crore. Out of the 11 giant-sized companies, four (Bhaskar Textiles Mills Limited, Cominco Binani Zinc Limited, Multimetals Limited and National Standard Duncan Limited having an authorised capital of Rs 1 crore, Rs 3 crores, Rs 1 crore and Rs 2 crores respectively) were registered in West Bengal, two (Gopichand Textiles Mills Limited and New India Spinning and Weaving Mills Limited with an authorised capital of Rs 1 crore each) in Punjab, and one company each in Madras State (Facit Asia Limited Rs 1 crore) Mysore (Bellary Spinning and Weaving Company Limited Rs 1 crore), Orissa (Orissa Fisheries Development Corporation Limited Rs 2 crores), UP (Hind Auto Industries Limited Rs 1 crore) and Delhi (Frick India Limited Rs 1 crore). The

distribution pattern of the 5 big-sized companies is as follows: two companies (Nataraj Spinning and Weaving Mills Limited and Surya-lakshmi Cotton Mills Limited with Rs 50 lakhs each) in Andhra Pradesh, Unichem Laboratories Limited (Rs 75 lakhs) in Maharashtra, GTN Textiles Limited (Rs 50 lakhs) in Kerala and Orient Spinning Mills Private Limited (Rs 50 lakhs) in Orissa.

A State-wise split-up of the new registrations places West Bengal with 34 companies at the top followed by Maharashtra, Madras and Delhi with 32, 26 and 24 companies respectively. The remaining 42 companies were shared by other States in the Indian Union.

ALUMINIUM

Production Limited by Power Shortage

As one of the major units in the industry, the Aluminium Corporation of India Ltd occupies an important position and its continued progress as reported in the chairman's speech at the company's annual general meeting this week should be a matter for gratification. Production during

Australian Economy Gains Ground

Figures compiled by the Australian Commonwealth Statistician show that the Australian economy is steadily gaining ground after last year's setback. In the last quarter of the 1961-62 financial year, gross domestic expenditure increased by £114,000,000 or 7 per cent compared with the same quarter of the previous year. The gross national product increased by £122,000,000 or 7 per cent. The Statistician estimated that income represented by wages and salaries was up by £44,000,000 and personal consumption expenditure by £35,000,000. Higher expenditure on most consumption goods including clothing, footwear and drapery, and electrical and other durable goods was estimated. Gross private fixed investment in the June Quarter was £328,000,000, an increase compared with a year earlier of £10,000,000 or 3 per cent. This was due to a £19,000,000 rise in purchase of motor vehicles (30 per cent for cars and station wagons and 11 per cent for commercial vehicles), the only sector of investment continuing to show weakness and investment by public authorities on goods and services increased by £17,000,000 or 4 per cent for the quarter, and by £112,000,000 or 8 per cent for the year. The amount of money at the disposal of the Australian public increased by about 7 per cent in 1960-

March, 1962). In the June quarter, deposits exceeded withdrawals by £15,000,000 and interest added to accounts amounted to £50,000,000. Total savings bank deposits at the end of June 1962 amounted to £164 per head of population, compared with £150 at the end of June 1961. The number of operative accounts increased by 525,000 in the year or 5.8 per cent.

Rising trends in recent official figures for employment, banking advances, and production of motor vehicles reflect improvement in the Australian economy. In July, registered unemployed fell by 3037 to 90,091 a record decline for that month. The improvement in Queensland was due to increased seasonal employment in the sugar industry, but in Victoria there was a greater demand for labour in industries making motor vehicles and accessories, electrical equipment, agricultural machinery, textiles, footwear, plastics and light engineering products. In New South Wales there was increased seasonal employment in fruit and vegetable processing, and additional employment in motor vehicle construction and assembly, production of motor accessories, tyres and engines, and in the wool textile and knitted goods industries. July also brought an increase of £29,518,000 in bank advances outstanding which at the end of the month totalled £1,060,888,000. The figures suggest-

ed that the pick-up in activity in the economy was beginning to mop up the surplus liquidity in some parts of the business community. Higher production in the motor vehicle industry was shown by new registrations of motor vehicles for July. The total was 28,866, the highest since the 31,891 registered at the peak of the boom in November 1960.

Most Australian key industries are continuing to turn in improved production returns in a steady recovery from last year's setback, according to preliminary figures released late last month by the Federal Statistician. They show that, during July, 31 of the 34 major manufactured items listed by the Statistician improved their production performance compared with July of last year. Only the figures for pig-iron, gas and electric motors of one horse power and over, were lower. Output of car bodies increased from 13,500 in July last year to 23,000. A sharp rise in production occurred also in production of home appliances. Output of domestic refrigerators was up from 11,500 to 17,300, and washing machines from 16,900 to 20,400. Radio sets increased from 23,700 to 37,300, and lawn mowers from 3,600 to 7,600. Improved figures were shown for cotton yarn, wool yarn, woven cloth, synthetic fibre, clay bricks, cement, hardboard, floor coverings, and tobacco.

1961-62 was higher than in 1960-61 and significance attaches to the completion of the first phase of the expansion programme. The difficulties experienced by the Aluminium Corporation have underlined the basic problems faced by the country in the development of the aluminium industry. Mr Lakshmi Pat Singhania has drawn special attention to the difficult foreign exchange situation and the shortage of power. Power shortage is a serious limitation to the development of the aluminium industry, for in aluminium manu-

facture power is a basic raw material. Measures to meet these two problems are urgently called for as otherwise shortfalls in supply will be considerably accentuated. Even on the basis of the Third Plan programmes for the industry, it is doubtful whether self-sufficiency could be achieved. The fact is that in assuming a demand for aluminium at 87,000 tons by the end of the Plan period, the authorities failed to reckon with the developments in the direction of replacement of copper by aluminium in the transport and other

engineering industries. On the basis of the revised estimate of demand at 120,000 tons, even after the materialisation of present schemes of expansion, etc, demand will be considerably in excess of internal production. The outlook has been rendered worse by reports that some of the collaboration projects for new units in the private sector may fall through. In this light it is essential that no effort should be spared to ensure the two basic requisites for the development of the industry, namely, sufficient foreign ex-

change for import of machinery and components and of cheap and adequate power. The suggestion has been made that Government should allow large consumers to produce their own power by offering coal and other facilities or in the alternative that sufficient power should be made available to the industry from the public sector units.

Economic rates show to be an important consideration since consumption of power in the aluminium industry is of a high order.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

IT is characteristic that Rajaji's first trip abroad should be for the purpose of personally pleading with the President of the United States for the cessation of nuclear tests. Rajaji believes that there is far too much international gadding about and he does not believe in the grand gesture. It is only the fact that he passionately believes in the need for ending the fouling of the atmosphere by competitive test explosions that has made him undertake the journey. Those who have read Monica Felton's recent book on Rajaji would have sensed that there never was an issue in his whole life in which his being was so completely engaged as the health hazards of nuclear testing. Polemical articles and letters and personal appeals have been pouring from his pen ever since 1954 when he came out with the suggestion that the US should unilaterally consign all its atomic weapons to the sea. He has since made tireless use of every organ of public opinion in propagating his views. Even Khrushchev once felt obliged to defend himself to Rajaji. Characteristically, Rajaji has never had any political or diplomatic squeamishness in denouncing nuclear immorality wherever he found it. It is perhaps too much to expect that Rajaji's visit would make the US change its policies overnight. But few Americans will find it easy to combat the implacable logic and warm concern for humanity that characterises Rajaji's views on the subject. Rajaji, as many in the United States know, is no namby pamby do-gooder. Indeed his moral toughness and intellectual clarity has a harsh undecorated starkness that makes many a sentimental meliorist shrivel before him. If such a man considers nuclear testing an international outrage, he is more likely to back it with arguments that will stand the most severe legal scrutiny than with rhetoric. I should be vastly surprised if President Kennedy does not find Rajaji a formidable opponent in the exchanges.

Mr Lal Bahadur Shastri has certainly pulled a neat one. Nothing, I suppose, should surprise one in politics, especially Kerala politics, but few could have thought of a gubernatorial bait for Mr Pattom Thanu Pillai as a solution of the Kerala Congressmen's troubles. Obviously it was sheer inspiration occasioned

by Mr K. C. Reddi's somewhat intriguing and otherwise inconvenient second thoughts about leaving the Central Cabinet. And Mr Pillai seems to have been only too willing. At the moment of writing, it is not clear whether Mr Pillai took counsel with his party in the State: he most certainly did not with its National Executive. Mr Asoka Mehta complained of this as also of Mr Shastri's over-looking to mention the arrangement to him. I can't say that he is not justified in feeling rather scurvily treated: considering that the Cabinet in Kerala is even now supposed to be a coalition of the two parties, bare courtesy would have demanded his being told, if not consulted, about these impending changes. But appearances have long since ceased to be kept in Kerala where Pattom has long been known to be out of step with the national leadership of his party. Perhaps nothing is to be gained by being censorious about the whole thing. The practical consequence of the new development may well be the eventual exit of the PSP from the coalition. The National Executive of the party itself may feel obliged to demand it, though the present representatives of the Party in the Cabinet may not be too readily obedient. This possibility may in turn determine the National Executive's own policy, of course. Should the PSP quit, the Congress may consider it good riddance, for it has long been wanting the coalition ended. Only the desire not to appear to be the one to do it has held its hand so far. It would however be too premature for Congressmen in Kerala and elsewhere to throw up their caps in joy. Mr Sankar, the new Chief Minister has probably his own battles to fight against his rivals in the party. (Indeed in his last few months as Chief Minister, Pattom was making adroit use of this very factiousness in the Congress.) Plainly Mr Shastri has by no means made his last trip to Trivandrum.

It was only the day before Mr Rishikesh Shah was replaced by Mr Tulsi Giri as Foreign Minister of Nepal that the papers were reporting the imminence of another visit by him to Delhi. Even at that time the report sounded odd, since Mr Shah had only recently returned to Kathmandu after what everybody in India regarded as a

highly satisfactory trip to Delhi. Recent Nepali politics being what it is, one wonders uneasily whether the second journey to Delhi was to have anticipated the turn of events. If so, the fact that the trip did not come off may even have a sinister significance. Such fears may seem exaggerated, since Mr Shah continues to hold office under the present government. But there is no doubt that his demotion has something to do with Indo-Nepal relations: the communique announcing the changes brings in somewhat unnecessarily the "gravity of the situation created by violent rebel activities across the Indo-Nepal border." Obviously, Mr Shah's recent efforts to stop these, have been found wanting. How wanting is only too clear from the man who is displacing him. The very success of Mr Shah in recapturing the earlier fellow-feeling with India has upset the faction in Nepal that has notoriously worked to disrupt it. The fact that Mr Giri whose displacement three months ago led to a better atmosphere is back again as Foreign Minister shows the way things are shaping in Nepal. All this is a great pity. Mr Shah had succeeded in making New Delhi take a less loftily democratic view of the activities of the Nepalese in India who are opposed to the present regime. In particular, steps to prevent trafficking in arms from India have been taken and the wings of the rebels clipped in various other ways. Given time, Mr Shah is sure to have worked, in cooperation with India, a mode of stopping completely rebel activities from across the Indian border. Now that Mr Giri is in charge, it is only too likely that the two countries will slip back into the old habit of suspicious hostility. This may not worry Mr Giri, but it must King Mahendra.

The Spectator carried recently an article on the new science of Synectics that should interest readers in this country. When I call it science, I am using the word rather loosely, for Synectics is more a new way of looking at things than a new discipline like Cybernetics or Topology. It is based on the interesting belief that the scientific inspiration is not very different from the poetic: in both cases, it is the sudden explosion within, the leap in the void and the wild surmise that often apprehends the truth and gives it form and beauty. Not fierce concentration, nor collated thinking of scientific task forces but the odd quirk of a restless and wandering mind that will provide

the clue. As the Spectator puts it: "Synectics studied the creative process of artists, musicians, scientists and technologists and painters and came to the conclusion that what most often produces results is the unpredictable imaginative jump, the moment when the creator seems to go off the rails altogether but thereby arrives at the goal." Therefore, stir up the unconscious, look for the irrelevant and the absurd and you are sure to stumble sooner or later upon the answer to your problem. Curiously, such a process probably works more readily in practical or applied science and technology than in more fundamental fields of research where one may still have to do one's hard logical thinking. Synectics has, not surprisingly, caught on in the US. Harvard has organised Synectics sessions in which a dozen men sit around a table tossing from one another various ideas. These men, each with more than one major interest—say, an engineer who paints or a physiologist who writes modern poetry—deliberately look for the fantastic in the problem posed. Often it may be as apparently ridiculous as semantic parlour games like riddles and cryptograms. Suppose, to choose an example given by the Spectator, you want to invent a new can opener. The thing to do is not to think of cans but to try to think of a dozen different meanings of the word "open." Or again, if you want a new kind of paint that will stick, you are invited to imagine yourself to be a daut of paint, saying "Help! Help! I'm falling." To pursue the same line of thought, a man wishing to invent a new kind of vacuum cleaner would probably let his mind wander around the Walrus' problem. "If seven maids with seven mops swept it for half a year, do you suppose that they could get it clear? See the point? A Through-The-Looking-Glass" way of looking at things, standing ideas on their heads, chasing the odd association may bring new discoveries. Veblen, who in this, as in many other things, had the root of the matter in him, talked of the two creative traits in human nature—the idle curiosity and the instinct of workmanship—and likened the former to an aptitude for 'play'. 'Idle fooling around' is what Synectics is and it is idle only in the sense that your mind is free and untrammelled to do what it pleases. The scope for minor inventiveness is indeed vast in a country like ours and the reports of the Controller of Patents lament annually our poor performance in this as in more fundamental fields. If our universities and colleges organised some kind of science clubs in which, instead of reading mediocre papers, half a dozen wide-awake men sat together in Synectics sessions, we may get somewhere.

EAVESDROPPER

San Francisco's Golden Gate Bridge, one of the world's great bridges, has a central span of 4,200 ft.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra charge on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6092 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the U.S.A.

Spotlight on Power and Transport

The Planning Commission will be meeting shortly to consider the recommendations of the Conference on Power and Transport organised by the Federation of Indian Chambers of Commerce and Industry. The impact of the Conference, it is expected, may be felt more in the field of implementation of the plan programmes than in any upward revisions of targets. The physical targets of the various plan programmes in the different sectors have been set at levels which call for much larger resources than have been allocated in the financial Plan. Against the allocation of Rs 297 crores for roads, the cost of the programmes included in the Third Plan works out to Rs 324 crores. Again, in the case of Railways, cost of the development programmes that were originally included in the Plan added up to Rs 1,325 crores. As against this, the financial provision amounted to Rs 890 crores excluding a sum of Rs 350 crores from the Railway depreciation fund and a sum of Rs 35 crores required by the Railways for their stores suspense account. Subsequently the physical targets have been stepped up by the inclusion of additional programmes costing Rs 145 crores. These include programmes costing Rs 120 crores for ensuring movement of coal during the Third Plan. Rs 15 crores for line capacity works required early in the Fourth Plan for coal movement and Rs 10 crores for line capacity works related to general traffic. While the Railways have been assured that funds would be made available for these high priority programmes, there is no indication yet whether the full extent of the resources necessary to implement all the programmes included in the Plan would be available. In these circumstances any addition to the physical targets is not of much significance in the context of overall planning until the availability of additional financial resources is also assured.

Implementation of Power Projects

The Conference has focussed attention on power shortages and suggested many expedients to meet the deficiency. In this context it is relevant to note that, within the limit set by the total provisions made in the annual plans of States, power projects have been given the highest priority in implementation. For instance, in Andhra Pradesh,

against the provision of about Rs 10 crores for power in the annual plan for 1961-62, the actual expenditure has been of the order of Rs 12 crores. The balance is made up by shortfalls in other sectors. But even in a State like Andhra Pradesh which has shown great concern for expansion of power resources, work on important multi-purpose projects has been held up by the time taken in arriving at decisions by the Centre and the Planning Commission in regard to approval of revised estimates, allocation of foreign exchange, etc.

The revised estimates for Nagarjunasagar project have been under examination in Delhi for over six months. Similarly a decision on the Srisaillam hydro-electric scheme has yet to be taken. An early decision on this project is essential if the Third Plan power programmes of the State is to be completed in time. Work on the Srisaillam scheme cannot be viewed apart from progress of Nagarjunasagar though the hydro-electric scheme at Nagarjunasagar has now been separated from the integrated scheme. The Nagarjunasagar dam is expected to reach a height of over 505 feet (above sea level) by the middle of 1965. As the bed level of the Srisaillam dam higher up the river is about 500 feet above sea level, work on the dam has to be started early and the dam raised to 570 feet before the Nagarjunasagar dam reaches the level of 500 feet, if the backwater effect is not to interfere with the work at Srisaillam.

It is also learnt that a decision on the allocation of foreign exchange for import of two generating sets for the Srisaillam project, which have to be installed by the end of Third Plan, has been delayed in the hope that the Bhopal Heavy Electricals Project would be in a position to supply the equipment. Now it seems that HEP, Bhopal, may not be able to supply the sets before the end of the plan period. As it usually takes two years to get generating sets from abroad after an order is placed, supply of power from Srisaillam may be delayed beyond the Third Plan unless foreign exchange is allotted in time. The FICCI conference would have served a useful purpose if it speeds up decisions on these and similar projects in other States that are awaiting the green signal from the Centre. It might also induce a constructive attitude on the part of the State Governments concerned to the inter-State disputes which hold up the development of hydro-electric potential in South India.

As regards the overall planning of transport or power, the Third Plan has taken a comprehensive view which includes many of the points made by Mr Shriyans Prasad

Jain in his presidential address. The appeal made to the Conference by the Deputy Chairman of the Planning Commission, to take an integrated and balanced view, may be interpreted as a reminder that there is very little scope, if any, for radical changes of policy within the framework of the Plan. Regarding the demand which has been made for the last two years for permission to set up power plants in the private sector, he has drawn attention to the Industrial Policy Resolution under which generation and distribution of power are included in Schedule A which is reserved to the public sector. Nevertheless, he has pointed out, the Third Plan includes a provision of Rs 50 crores for investment in the private sector. Some additional schemes have also been recently sanctioned in the private sector, after considering the merits of each proposal. In sanctioning these schemes, Government has to consider not only the availability of capital, but the problem of supplying fuel to keep the thermal plants running. This raises difficult problems of coal production and transport, or of foreign exchange if the plants use liquid fuel. The possibility of Government adopting a more flexible policy in sanctioning generating units in the private sector has now been further complicated by the demand, which is being pressed with vigour, for increasing the rate of return allowed under the Electricity Act on capital invested in electricity undertakings.

Transport Planning Committee

In regard to both power and transport, Mr Jain had drawn attention to the fact that demand rises faster than the rate of growth of industry in general, which indicates the need for forward planning to draw up adequate programmes to meet the demand likely to develop in future. A high-level Committee, has been set up with Mr Tarlok Singh, Member, Planning Commission, as chairman, to plan for the future transport needs. The Railways and the Ministries of Transport and Communications, Mines and Fuel, Steel and Heavy Industries, Commerce and Industry and Finance are represented on this Committee which will advise the Planning Commission and the Ministries concerned on the formulation of development programmes in the transport sector and the adjustment of the requirements of these programmes from time. The Committee will be assisted by a technical group which will collect data and work out projections of transport requirements for the formulation of transport plans. Its main function will be to provide the broad framework within which the programmes of the Railways and other means of transport will be formulated.

Wagons for Coal

The Conference had laid special emphasis on steps to improve the operational efficiency of Railways. But the Railway authorities think

that they are now in a strong position to deal with their critics who concentrate their fire on the availability of wagons for transport of coal from the Bengal Bihar coalfields. It is learnt that, for the last one or two months, every day 150 wagons on an average have been returning empty from the pitheads as no coal was available for loading. Hitherto the cry was about lack of wagons and accumulating pithead stocks. Now it is a case of empty wagons for which there is no coal. There is however, no mystery about this unusual situation. And it does not mean that the Railways are yet in a position to provide all the wagons necessary to transport the coal that may be raised during the entire year.

Every year the raisings of coal and therefore, of wagons loadings are reduced during the monsoon. Both production and despatches pick-up after the monsoon and rise to a peak during the winter and early summer when the Railways are hard put to meet the demand. Stocks at pitheads begin to accumulate from March onwards. In former years the Railways used to cut down the supply of wagons during the monsoon to the level of the demand. But this practice depressed the daily average for the year, as the Railways could not increase the wagon supply to meet the demand during the peak period. The Railways thus exposed themselves to the criticism that they did not provide wagons at the daily average rate needed for the planned movement of coal.

The interesting development this year is that the Railway authorities have decided to maintain the full agreed supply of wagons every day irrespective of the fact that many wagons would return unloaded (involving empty haulage). They calculate that this course will enable them to show at the end of the year, when the critics get vociferous, that they had throughout maintained the daily availability of wagons at the level required for the planned movement of coal. This may enable the Railways to score a point. It remains to be seen whether it will also serve to silence the critics or serve the nation.

Many of the shortage which were discussed at the FICCI conference will get a further airing, when the Central Advisory Committee for Industries meets on 29 September. This will also provide an occasion for the presentation of the Administration's point of view on the suggestions made at last week's Conference.

Oil Requirements

The Oil Advisory Committee which met here last Monday under the Chairmanship of Mr K. D. Malaviya, Minister for Mines and Fuel, decided to set up a sub-committee to review the position regarding the requirements of furnace oil. A large increase in the demand for furnace oil is expected on account of the switching over of industries in the Western region from coal to oil because of coal shortage. But Mr Malaviya does not think that the growth in demand for furnace oil would be as large as anticipated and on the basis of which the total demand for petroleum requirements had been worked out.

India Steamship Company Limited

Increase in Freight Earned and Rise in Costs

Sir A. Ramaswami Mudaliar, on Outlook for Shipping

The following is the speech of Sir A. Ramaswami Mudaliar, K.C.S.I., D.C.L. (Oxon), Chairman, India Steamship Co., Ltd. delivered at the Annual General Meeting of the Shareholders of the Company, on the 25th September, 1962:—

Gentlemen,

The Audited Accounts and Directors' Report for the period ending March 1962 have been in your possession for some time and, with your permission, I shall take them as read.

I have to refer to the great loss that the Company sustained in the demise of my esteemed friend and colleague, Sir Bijoy Prasad Singh Roy. The place that he had in the public life of India and of Bengal in particular can hardly be filled and your Company has lost a most valued and devoted champion of Indian shipping. May I request you to pass a resolution conveying the deep sense of sorrow of the shareholders of the Company at this great loss and offering our condolences to the members of the bereaved family.

The Directors' Report shows that the freight earned during the year was Rs. 8,97,26,920 as against Rs. 8,63,00,835 in the previous year. The total number of Liner voyages during the year was however 54 as compared with 49 voyages in 1961 and the number of ports called at was 947 as against 942 in the previous year. In spite of the larger earnings of freight, it is regretted that the year has ended in a loss. It was hoped that when the pooling system was introduced, the Company would show much better results. Though the loss is somewhat less than in the previous year, various factors have combined to make the position less satisfactory than was expected. The number of freight tons carried during the year was 9,56,332 as compared with 8,80,070 in the previous year.

The earnings reflect two factors. The first is the low rate of freight which continued for goods carried from east to west throughout the year and for goods from west to east during most of the year. The second factor was that the volume of high freighted cargo had fallen to some extent and the vessels had to carry low-freighted cargo like oil cakes, ore and fertilisers which swelled the volume of freight tons carried without substantial benefit to the Companies concerned. The increase in items of expenditure are due to incre-

mental increases of salary, revision of scales in some cases, and repair and maintenance charges. The insurance charge has also gone up on account of the unfortunate loss sustained by the Company last year of the Indian Navigator. The depreciation charges have also gone up as the latest steamer, Indian Trust, was throughout the year in service and the full depreciation amount had to be provided for. The picture is admittedly a gloomy one but I venture to express the belief that it is not an unrelieved gloom, as there are factors which have recently come into existence which redeems the situation to some extent. These factors will be referred to at the end of my speech.

The financial results of the working of your Company are not satisfactory, though perhaps slightly less unsatisfactory than those of the previous year. The fact that almost all the shipping companies, both Indian and foreign, have shown either losses or considerably less profit than in the previous year may be noted but does not afford any consolation to your Company. This is particularly so in regard to companies whose fleets are mainly engaged in the India/U.K./Continent trade.

In my last year's Report to you, I referred to the fact that the freight rates have not been revised since 1957. During part of the financial year under review, the freight rates eastward remained the same and were increased only from 1st October 1961, the consequence being that the result of such increase is recorded only in the voyages of three months of the year. The freight westwards remains the same virtually as in 1957.

The costs have, however, been increasing, a state of affairs which cannot long be maintained. The difficulties and delays at ports, the strikes—official and unofficial—in no case justified, have all aggravated to bring about a serious financial situation for all companies. The drafts in the river Hooghly during the year under review have caused a great deal of anxiety to shipping companies. There are only a few days in the month when a ship can carry a load of more than 5,000 tons either to the port or down the river.

In this state of affairs, the increased rate of dock levies seem to be thoroughly unjustified, particularly when they are meant for

providing special amenities to the dock labour staff. In February of this year, the levy amounted to 90% over the normal rate and from 1st April, it is 100%. These matters require careful reconsideration. The remedy lies in either providing for adequate freight rates or for decreasing the costs. It may be stated that more efficient management may also reduce the financial gulf between receipts and expenditure. But the outcry against what has been termed rationalisation of sailings by shipping companies and the demands of shippers of small quantities of freight from almost every port in the country which was hardly ever served by an ocean-going vessel a few years back poses a problem which is not easily soluble, consistent with the principles of efficient management. I place these facts before you and the public not with a view to minimising any shortfall on the part of the management of this or any other company, but to present the picture clearly and unambiguously both to the authorities and the public.

INDIAN LINES SHARE

Last year, I referred to the pooling arrangement that was arrived at which gave some sort of security to the share of the trade to the Indian flag, and I based my optimistic hope of better results in freight earnings on the fact that undue and unfair competition will be less and perhaps completely eliminated. I must candidly state that the results of the short period prove that some of the most serious abuses have been eliminated in the particular sector that I have referred to. The result would have been far better if the quantity of freight moving, particularly high value freight, had not fallen during the year.

I also referred to the fact that the Western Shipping Corporation, a public sector company, has been admitted as a member of the Conference with the agreement and approval of the two Indian Lines on the India/U.K./Continent route. I emphasized then that this would be the beginning of a harmonious working of the two sectors and that there would be a growing appreciation of the difficulties of shipping in all quarters. A further step has been taken in this direction and negotiations have been carried on by all the three shipping lines, the India Steamship Company, the Seindia Steam Navigation Company and the Ship-

ping Corporation of India, with the United Kingdom Lines, with a view to increasing the pool percentage allotment to the Indian Lines as a whole and with a view also eventually to bring about an absolute parity in the India/U.K. trade between the Indian Lines and the British Lines. I hope that the negotiations, which have come to an advanced stage, will shortly result in definite agreements and that all chances of rivalry, as between the Indian Lines and the British Lines, will cease and that this will be fortified by an agreement among the Indian Lines themselves, allotting certain percentages to each of the three companies concerned. These matters have occupied a great deal of the attention and time of your Directors who were resolved to seek a lasting solution for the problems, international and internal, in regard to shipping.

FREIGHT INCREASES

I must emphasize that the future of shipping depends largely on a far-sighted policy that the shipping companies and the shippers of any importance take in regard to the freight rates of commodities. Whether it is a general increase demanded by the rising costs of shipping companies or an increase in the freight rates of individual commodities, there has recently been a tendency on the part of Governments not merely in India, to limit the freedom that once existed of shipping companies to increase such rates after full discussion at Conference meetings. It cannot be denied that the earning of foreign exchange has become a very serious preoccupation of most Governments, particularly Governments of developing countries. It is also a matter of serious concern for those countries which depend on invisible earnings from shipping for securing a balance of payments position for their countries. Export promotion is an acute problem for many Governments and the Government of India is no exception to it. It is making every effort to increase its exports, to diversify the destinations of such exports, to find new markets and to give incentives or rather to remove disincentives which stand in the way of exports by reasonably efficient units of production in the country. It is a well-known fact that the first obstacle to exports which a shipper feels he has to encounter is the rate of freight he has to pay for movement of his goods by road, rail or sea. If only

what he produces can, by a miracle, be transported to its ultimate destination without any charge, some at least of the shippers will be most happy. But this is obviously impossible. And if shipping services have to be maintained for the transport of goods, they have also to work certainly without loss and indeed with a little profit. The shipping companies cannot on the one hand afford to fix such rates as will preclude the transport of goods which is their only function, or on the other, carry freight at uneconomic rates. It is therefore necessary to set up agencies which will really find whether the shipper can afford the freight charged or not and whether in fact the export of goods has been prevented or their quantity unduly diminished by freight rates. The profit which the shipper is making has also therefore to be very carefully considered by the Government and by the shipping companies before any conclusion can be drawn as to the unreasonableness of a freight rate. It is my hope that these essential economic factors affecting all interests concerned will be given due consideration and freight policies evolved as a result of these considerations.

I shall not refer to the port delays that have occurred from time to time and I do not wish to refer to the strike in the Calcutta port which over a period of time seriously affected shipping companies. Nor do I wish to comment on the present rate of development rebate which requires that 75 per cent of the allowances has to be provided from the profits before any dividend can be declared. The National Shipping Board, which is the body responsible for advising the Government in matters of policy, has recently reiterated its recommendation that the development rebate may be spread over a period of years—five or six—a reasonable proposal in my opinion. And I hope the Government will give further consideration to it and give effect to the proposal.

Apart from expansion of shipping, replacement of old shipping has to be undertaken seriously. New ships have to be built in our shipyards and in foreign yards where necessary, and the development rebate requirements are proving a serious handicap according to the Shipping Board itself.

There is another matter on which the National Shipping Board has made its recommendations. Recently, the Government have been pleased to order that the instalments on loan received from the Government may be repaid over a longer period than was fixed for loans taken between 1953 and 1960. The National Shipping Board has suggested that the same principle may be applied, that is, payment over a longer period for those instalments on the previous loans which have yet to be paid by shipping companies.

I hope that in fairness to the older applicants, this principle may be accepted.

There has recently been a change in the Cabinet Minister in charge of Transport. Shri Jagjivan Ram has replaced Dr. P. Subbarayan as Minister of Transport and, Shri Raj Bahadur continues to be the Minister of Shipping. Both of them are enthusiastic and eager for the promotion of Indian shipping and have helped with support and advice all reasonable demands of shipping. I only hope that their voice will prevail and their recommendations accepted in the ultimate decisions that may be arrived at by the Cabinet of the Union Government. The Secretary to the Ministry of Transport, the Director-General of Shipping, who has since been promoted as an Additional Secretary, the deputy and assistants of the Director-General of Shipping, have all shown a real interest in helping Indian shipping and we have been greatly profited by their advice and assistance. It is not a formal record of thanks that I wish to place before you.

TRIBUTE

It would have been noted that the freight earnings of the year are the largest on record, though for reasons already stated the net results are not what we may expect from such earnings. The gross freight earning is an indication of the zeal and devoted services of all your staff, both afloat and ashore. I am personally aware of the exceedingly arduous duties that fell upon them both in consequence of the first year of the working of the pool and as a result of falling freights and low freight rates, and I should like to express the appreciation of the Board for their services. I should also like to convey the thanks of the Company to the Shippers, who have extended their continued and firm support to us, and to the brokers and forwarding agents who have shown confidence in us and in the quality of our shipping services.

Since the above paragraphs were written, I would like to refer to some redeeming factors of recent date which would go to relieve the situation in the current year. The coastal freight has, after prolonged investigation and thorough study, been increased by 15 per cent for general cargo and about 10 per cent for coal carryings. This will benefit all Companies including yours which do some amount of coastal trade. A second factor, which has been publicised widely, is the fact that the three Indian Companies have come to an agreement with the British Companies to raise with immediate effect, from September 1st, the pool quota from 30.5 per cent to 39 per cent and to increase that percentage every year by an escalation of 1 per cent. Though the bulk of

the advantage of increased percentage would go to the Shipping Corporation of India, the other two Indian Lines engaged in this trade, your Company and the Scindia Steam Navigation Company, will have a fair advantage in freight earnings.

The last and most important factor which enables me to feel optimistic, is the agreement that has been come to between the three Indian Lines engaged in the India/U.K./Continent trade both ways, the Shipping Corporation, the Scindia Steam Navigation Company and your Company. The agreement provides on a pooled basis equal carriage of freight and equal earnings for the three Lines in the Indo-Polish trade, the Indo-German trade, the Indo-Soviet and Indo-Rumanian trade in the Black Sea, and in the trade to the Egyptian and Levantine ports, and Indo-Adriatic trade. This agreement has great possibilities, both because of the friendly and co-operative atmosphere it has created and of the fact that there is

Company Law

The Department of Company Law Administration will make available to the public from the 1 October 1962 copies of the fortnightly bulletin entitled "Company News & Notes" at present issued by the Research & Statistics Division for official use only. The Bulletin in its new form will inter alia contain (i) copies of Departmental circulars, notifications, press notes, etc., (ii) Departmental News covering interpretation of sections of the Companies Act, summaries, research papers, broadsheets, and staff papers etc., (iii) legal decisions on corporate matters; and (iv) corporate news, both Indian and foreign, bearing upon company statistics, new issues, company reports, mergers, takeovers, company law criticism, accounting matters, etc.

This decision to throw open this publication has recently been taken by the Department for the benefit of trade and industry, research and professional institutions interested in corporate matters.

The annual charges for the Bulletin have been fixed at Rs 25.00 which is to cover cost of stationery, postage, etc.

Requests for supply of the publication may be made to the Director of Research and Statistics, Department of Company Law Administration, Reserve Bank Building, New Delhi and on hearing from him that the publication could be made available, the amount should be deposited preferably in a local treasury or the State Bank of India and credited to the head of account "LIII-Miscellaneous" and the duplicate copy of the challan signed by the Treasury or the State Bank forwarded to this Department, with a covering letter addressed to the Under Secretary to the Government of India (Administration) Department of Company Law Administration, Reserve Bank Building, Parli-

ment Street, New Delhi-1. If, however, the amount can not be deposited in a Treasury it may be sent by Money Order to the above mentioned officer.

All communications relating to the publication should be addressed to the Director of Research and Statistics of the Department.

According to a Tass release, Leningrad engineers have begun drawing up the blueprints for enlarging the refractory material shop at the Bhilai Steel Plant.

Fully mechanised and automated equipment is to be used, such as revolving ovens for roasting the dolomite. Three shaft furnaces have been designed for gas fuel and two functioning ones will be switched over to gas.

In view of India's hot climate, the designers propose an original through-ventilation system. The refractory shop building made of wavy asbestos cement sheets will have a device protecting it from direct sun rays.

After the expansion and reconstruction, which will be effected with the help of Soviet specialists, steel output at the mills is expected to increase 150 per cent.

N.B.—This does not purport to be a record of the proceedings of the above Annual General Meeting.

The Defence Ministry has recently placed an order with the Asea Company, Sweden, for the supply of a complete medium-size rolling mill valued approximately at Rs 50,00,000. The machine will be located at Ishapore near Calcutta for rolling bars of special steel. The equipment includes two pairs of rollers actuated by d.c. motors with provision for expanding later in such a manner as to accommodate a light section mill and a rod mill also. The mechanical part of the mill will be provided by Morgardshammars Mek. Verdstad while the electrical part, the gearing and the pinion stand will be delivered by Asea Company.

The Aluminium Corporation of India Limited

First Phase of Expansion Programme Completed

Mr Lakshmi Pat Singhania on Prospects for the Development of the Aluminium Industry.

Address delivered by Sri Lakshmi Pat Singhania while Presiding over the Twenty-fourth Annual General Meeting held on Monday, the 24th September, 1962

Gentlemen,

I have great pleasure in welcoming you to the 24th Annual General Meeting of the Corporation. This means that this Corporation which has played a very important role in establishing this basic industry in the country from scratch, has entered its 25th year—the Silver Jubilee Year—of its existence and this is indeed a matter of pride for all of us.

The annual Report and Accounts for the year ended 31st March, 1962 have already been circulated to all of you and the Directors in their report have explained most of the salient features of the Company's working during the year and I need not now elaborate on the same except to point out that the production during the year has been slightly higher than last year. But the sales and profits are slightly lower this year due to less despatches during the year and due to rise in cost of production consequent to higher salaries and wages and increased cost of stores, spares and transport charges, whereas the selling prices have not been increased. However, this does not reflect any substantial difference with the working of the last year.

The graph attached to the Balance Sheet will show that the industry of this nature has to carry a very heavy burden of salaries and wages, numerous taxes and excise duties and costly manufacturing charges before the industry and the shareholders can be provided with their share. In a highly capital intensive industry like this until and unless the return on sales is higher, it is impracticable to provide the requirements of the industry to enable it to grow by re-employment of finance which generates and at the same time creating confidence in investors to attract more finance. It should not be expected from the investors in any industry that they should be the last persons to be thought of and that they should wait for their turn at the last. This means waiting for several years before the investment can have any return. This is not practical economy. Until and unless the invested capital is serviced regularly and suitably it should not be expected that the capital will be available for steady growth in the

industry. Unfortunately, in our country the shareholders are regarded as the last person for consideration.

The industrial expansion in India is taking shape. But the foreign exchange shortage as well as the Government Policy for granting licences and delays in execution of public sector projects most needed for the economic growth of the country, enough availability of power and transport, all these may have a retarding effect on the present tempo of industrial growth. If, however, the performance of the Private Sector and their achievements during the two plan periods are weighed keeping in view the circumstances under which they have been made to work, then I have no hesitation that they have done much better than it was expected.

I might recall that before the establishment of this industry in India, the consumption was confined to imported metal which was only T. 1,350 in 1940-41. When the industry was established in India, sufficient encouragement in price fixation and adequate returns was not given in the earlier years. Had this encouragement been given the industry would have presented a different picture to-day. However, in view of the great importance attached to this basic industry in the industrial development of the country, especially due to non-availability of resources for non-ferrous metals and consequent dependence on import, it has become essential to review the consumption of aluminium in the country. These changed circumstances have also led to a different thinking on the enlargement of this industry from what it was a few years ago so much so that aluminium industry in India is to be considered as being on the threshold of real expansion.

In the World Aluminium Industry there has been a regular pattern for the consumption of aluminium to double itself every decade which means an average of 7.5 per cent per year over the previous year. However, in India at the start of the five year plans the thought was the consumption of metal to increase @ average about 4 per cent per year during the first five years and 18 per cent per year for the next 10 years leading to an estimated total consumption of 50,000 tons at the end of 65-66. However, in actual fact the consumption in this country in 1959 compared to 1950 has increased by

an average rate of about 20 per cent and based on this experience a few years ago it was visualised that similar rate of growth will continue during the Third Five Year Plan leading to a final estimated consumption of 87,000 tons in 1965-66. Now, it is being felt by various planning bodies including Development Wing that the estimated consumption in 1965-66 will be about 1,20,000 tons which means an increase @ about 32 per cent per year since 1959. I am of the opinion that provided the metal is available this consumption can be still higher. The contributory circumstances for this revision are several such as use of aluminium in place of imported copper for transmission of high tension and low tension power and more extensive use in transport and other engineering industries. Taking into consideration the versatile nature of aluminium metal it is the only metal which can replace other metals and in addition generate a number of new uses of its own. Thus in the present circumstances the production of the metal in the country will not overtake the consumption at least in the near future. From the point of view of industrial development of the country, from the point of view of direct savings in foreign exchange and from the point of view of indirect savings in foreign exchange as a result of replacement of other metals, the production of aluminium in the country in larger quantities, therefore, becomes essential.

This development on a larger scale, according to me, depends basically on two factors—firstly on the availability of sufficient power at a suitable rate and secondly on the availability of initial foreign exchange for importing components of the plants needed for producing the metal. Power is the basic raw material for this industry and its availability at suitable economic rates is the foundation for this industry. The country is passing through a very acute shortage of power and the growth of industrialisation is being seriously hampered in spite of the fact that the production of power supposed to have been planned ahead of the requirement of the industry and civic consumption but in the present circumstances it has proved otherwise. The Government will have to give serious consideration to the idea of allowing large consumers of power to produce their own power by offering coal and other facilities. If, however, the Government themselves want to make power available then sufficient power for electrometallurgical and electrochemical industries should be earmarked assuring of certainty of power. In large power projects of the Government this will be low say 5 to 10 per cent of total capacity and this power should be available to the ear-marked industries at economical rates for the calculation of which arguments of equality etc. should not be advanced.

As regards foreign exchange, it is often suggested that the industry should also export besides catering to internal consumption in the country. The idea is no doubt good, attractive and in the present foreign exchange situation, important as well. But if the export is to be done the question is at what cost. It should not be forgotten that aluminium is being produced by very large producers at low costs and that there is a keen competition for aluminium market and that there are tariff barriers. If we think of export, then that can be only at a much lower price than cost because the industry in India does not have the same facilities of cheap power etc. as other producers elsewhere in the world to produce at comparable cost. If the export is done at lower than cost, then it will be necessary either to charge the internal market higher price or to bear the losses. If the industry has to be developed and if the necessary foreign exchange is not available the industry no doubt must sacrifice by exporting at below cost and utilise such foreign exchange for its development. The whole country will also benefit. Alternatively, the home market must be charged higher prices to equalise the losses on export. This is nothing new and ultimately, the future expansion will depend on the capacity of the industry to sacrifice and on charging to the home market higher prices.

I would now like to add a third important factor for the development of this industry viz., technical knowledge and technical personnel needed to establish and man the industry. What this Corporation has done for developing in this field and what sacrifices it had to make in this by denying any returns to shareholders for over a decade is a matter of history. Suffice to say that it had to be done in the hard way of experience. To-day foreign technical

knowledge and technique can be purchased by paying its price but it is a matter for consideration as to how far such prices can be offered and as to how much capital has to be serviced in future. This is really a delicate matter and all the pros and cons have to be thoroughly examined. The rosy picture that was before the country upto last year in respect of production of metal by collaboration with major world producers is now gradually fading out. Some of the licences granted are still in suspense and the progress is either slow or there is no progress at all. This shows lack of interest on the part of those who originally made these schemes. Of course, this also means blocking of licensing for others who might be able to do better and here it is a matter of policy for the Government to decide whether those who have contributed towards this industry should be encouraged or not.

The question of trained personnel for the industry is also playing a very important role. On the one hand there is the problem of huge unemployment and on the other hand there is the shortage of most of the personnel needed in technical and non-technical categories. This indicates that there is something wrong somewhere and no power adjustment has been made between requirement and educational training programme. Training of suitable personnel for a proper industry and for particular job is a long process and has to be preplanned by estimating ahead the requirements of the industry. This requires as much thought as Planning the establishment of the industry itself. In a developing economy like ours it does not pay to exploit personnel of a particular unit or industry; instead own personnel should be trained in a preplanned programme. Although the Corporation feels pride

and pleasure in contributing trained personnel not only to this industry but also to other allied industries, it is definitely distressing to see such personnel forsaking their parental institutions.

As the Directors have indicated in their report, the first phase of expansion programme has been completed as scheduled i.e., the metal production and the Paste Plant have gone into production. I take further pride in mentioning that in this expansion a good amount of plant has been manufactured indigenously and only essential machinery which has not been manufactured in the country were imported. The plant is most up-to-date in the country and housed in a building technically designed to offer comfortable working condition. The progress for the balance two phases of expansion is being maintained and it is expected that a completely integrated facility of the expand-

8,000. This will mean that there will be more and more sacking from Pakistan in world markets and if the conditions at present obtaining continue unchanged as far as our jute goods are concerned, Indian sacking will have an uphill task in entering even its traditional markets, let alone making headway in new regions.

The raw jute market has been irregularly steady during the past week. There has been fair mill business on some days though mill interest has tended to lag on others.

As in the previous weeks, the emphasis in mill buying continued to be on quality jute which being in short supply commanded a premium up to 1 rupee. It is not surprising that sellers, especially of low quality jute, have been keen on disposing of their stocks because raw jute arrivals have been at a very high level during the past month and continue to be so in the current month also despite recent heavy rains in many of the up-growing areas. A total quantity of 348,750 bales of raw jute arrived in Calcutta and mill stations during August. Of this quantity, 340,100 bales were of Indian origin and 3,650 Pakistani. In the first two months of the current jute season, total arrivals have amounted to 707,705 bales. This is 197,505 bales higher than arrivals in the corresponding period of last season.

The news that the Pakistan Government has fixed minimum prices for cuttings has had little effect on sentiment. Although the official announcement came only this week, rumour had already indicated quite accurately the level at which the minimum rate would be fixed. In the meantime, in a press note issued last Saturday, the Jute Commission has announced that the period of shipment of raw jute export is to be extended up to the end of the year. Export sales for a total quantity of 36,000 bales of jute out of the quota of 200,000 bales have so far been approved by the Government of India. The balance of this quota will be available for export up to 31 December 1962 and inter-

ed plant by trebling the present capacity as well as adding various new lines of aluminium products starting right through from bauxite including all intermediary process to the finished goods will be at the country's service by the end of next year.

Gentlemen, on your behalf I have to express my thanks to the Managing Agents for the very careful way in which they have been guiding the affairs and the growth of the Corporation all these years. I would also like to express my appreciation of the contribution made by all sections of our employees starting from the humblest worker, the technicians, the Management Staff and our various customers who have patronised our products.

N.B.—This does not purport to be a record of the proceedings of the Annual General Meeting.

ding exporters have to submit their detailed proposals to the Jute Commissioner for approval. The period of shipment of this quota released for export earlier this year was extended up to the end of September under a notification issued on 17 August last.

Better Return from a Jute Seed Crop

The production of mother jute seeds this season at the Central Nucleus Jute Seed Multiplication Farm of the Indian Central Jute Committee at Bulbul, Panagarh (Burdwan), is expected to increase by about 200 per cent to 438 maunds from only 152 maunds in 1961-62. In 1960-61 the farm's output was also about 62 per cent lower at 271 maunds, compared to the present season's estimate.

The very large improvement in the farm's production of jute seeds, which are used annually as foundation stocks for further multiplication by the State agricultural farms for subsequent distribution to cultivators, is the outcome of a new successful experiment of combining the production of a certain amount of good quality fibre with that of jute seed in the same land.

Explaining the method, Mr P. D. Dixit, the Chief Jute Development Officer of the Indian Central Jute Committee, told the ICJC Executive Committee, at its meeting at Bulbul, Panagarh, on September 11 that proper thinning of a seed crop followed by harvesting of about a third of the plants before flowering for the purpose of fibre alone had been found definitely to stimulate, rather than depress, the yield of seeds borne by the rest of the plant population. The main objective of his experiment, he added, was to make the production of jute seeds under cultivators' conditions more remunerative than at present.

Normally the jute obtained from a crop grown for seeds alone is of poor quality, fetching a low market price, because the plants have to be cut late when the fibre becomes coarse. The low return from this

Indian Finance

29 September 1962

inferior fibre is not always compensated by the sale-proceeds of jute seeds, in which the yield average is around 2.5 maunds an acre.

The new method is expected to provide sufficient financial inducement for the multiplication of improved jute seeds by the common run of growers because it will raise the yield of seed to at least 3 maunds per acre and give about 6 maunds of high quality fibre, which will be additional to the 10 to 12 maunds of coarse jute usually obtained by them.

TEA Export Trend Satisfactory, but..

The continued easier undertone in the weekly auctions in Calcutta is indicative of the growing competition for Indian tea in world markets. Till a decade or so ago, Indian tea was not only in great demand overseas but it was able to obtain reasonably good prices. But the position has radically changed in the past few years as more and more producers have come to sell their tea in the world market. Even so, India is by far the largest producer of tea and if the programme of production under the Third Plan is carried out as per schedule, it will continue to hold a pre-eminent position. From a recent FAO forecast of tea production by the principal producers in 1970, an idea of the relative position of these countries can be obtained. According to the FAO the following are the tentative figures of output for 1970: India 450,000 tons, Ceylon 240,000 tons, Japan 100,000 tons, Indonesia 75,000 tons, Pakistan 60,000 tons, Taiwan 60,000 tons, China 200,000 tons and the combined production of Africa and South America 95,000 tons.

The trend in exports in the current year so far appears to be satisfactory in the first seven months, January-July 1962, with the quantity exported higher by 16.56 million lbs as compared with the corresponding period of last year. But it is doubted if the export performance for the year as a whole will be at least as good as that of last year. For, tea production in North-East India is lagging behind and it is held unlikely that with only two more months of good output, total production will catch up with last year's level. There is of course one redeeming feature—the higher production in South India. Production in South India in the first seven months, January-July 1962, is placed at 108.6 million lbs as compared to 97.6 million lbs during the corresponding period of last year. It remains to be seen whether the better performance of South Indian gardens will completely offset the setback in the North-East Indian tea growing region.

Although there was a fair general demand at this week's export sale in Calcutta, prices again showed a declining tendency following a further seasonal decline in quality. Offerings totalled 74,233 packages. Good support was forthcoming for Plain Orthodox descriptions once again with the plainest kinds among them fetching higher prices. Orthodox Assam met with a fair enquiry but they generally fetched prices lower than previous valuations. Liquoring varieties among them, however, obtained a better price. Medium CTC descriptions showed an irregular trend and were slightly easier whilst the best followed a similar trend although selected lines were occasionally dearer. The small selection of leg-cut tea sold well at about last rates. Whole leaf grades met with a limited demand at easier rates. There were also some withdrawals in these. Tippy teas were well supported and hence realised dearer rates. There were several withdrawals in Darjeelings although selected lines sold well. The rates inclusive of excise duty are Clean Plain Pekoe Rs 4.10 to Rs 4.50, Plain BP Rs 3.30 to Rs 4.10, Plain Fannings Rs 3.85 to Rs 5.30 to Rs 5.80, Medium Assam CTC Fannings Rs 5.30 to Rs 5.80, Best Assam CTC BP Rs 6.60 to Rs 7.40, Best Assam CTC Fannings Rs 6.60 to Rs 7.40.

At this week's internal sale in Calcutta a total of 30,041 packages was on offer and there was a better demand than in previous auction. Good CTCs appeared to be in request in earlier bids but as the sale progressed the rate declined. Medium CTC dusts also received keen support but only at irregular intervals. Plain Orthodox Dusts and the Assam varieties met with fairly general enquiry although prices were lower by 10 nP to 20 nP. Enquiry for Non-Wither leg-cut Dusts was again good but buyers generally followed the small and powdery teas. Quotations inclusive of excise duty are: Plain Orthodox Rs 4.10 to Rs 4.45; Medium Assam Rs 4.70 to Rs 5.05; Leg-cut Rs 4.90 to Rs 5.30; Medium Assam CTC Rs 5.50 to Rs 5.80; Good Assam CTC Rs 6.40 to Rs Rs 8.70.

At this week's auction in Colombo, a total of 5,701,731 lb was on offer. Uva showed a marked decline in quality while Western teas were generally lower following quality but better liquoring Dimbula broken were fully firm. Best Medium BOPs were fully firm to dearer, but Low Mediums were slightly better on previous valuation. There was a better demand for Low Green teas and rates were slightly dearer.

COTTON Weather Reports Push Up Prices

SENTIMENT in the cotton futures market during the past week was mainly influenced by unpropitious

weather reports that streamed in from cotton-growing tracts like Akola, Hyderabad, Punjab and Vidarbha. The ruling contract which opened the week at Rs 740.00 per three quintals advanced sharply to Rs 752.75 following the reports of incessant heavy rain and the fear of heavy damage to the crop in the affected areas. Renewed spot buying also fanned the upswing during the early part of the week. But largely on account of the absence of any follow-up support the contract could not make further headway, but on the other hand slipped down to Rs 643.00 due to the reports of clear weather and the rumours of the release of new crop quota to the mills thus erasing the earlier gains.

The trading in the spot market at Sewri was dull and drab owing to the lack of new crop indigenous cotton quotas and the marketing policy for the current season. However, CO2, L-147, 197/3 and Kalyan met with scattered enquiries.

There was no improvement in the overseas demand for Bengal Deshi cotton in spite of the large quota issued by the Government. Nevertheless there was no adverse reaction on the prices which maintained a firm trend. Japan, the leading buyer of this growth, seems to have adopted a watch and wait policy closely observing the price trend here and other competitive growths.

In the import section, save for enquiry for US cotton and higher grade Sudan cotton mill interest was lacking in other foreign growths. Naturally enough the prices of these imported growths tended to slip down.

At a joint meeting the Gujarat Regulated Markets Union and the representatives of the State marketing co-operatives passed a resolution requesting the Government for a reduction of the difference between ceiling and floor prices to Rs 150. The resolution also advocates the introduction of such price policies which would generate confidence among the cultivators. The meeting expressed concern over the decision of the Government to appoint controllers through whom mills are required to purchase cotton at ceiling or floor prices. The need for tightening of control was also stressed in order to save the farmers from being victimised by a small section of people, who have scant regard for the traditional purchasers and traders. The meeting also voiced grave fears about the precarious consequence of this policy which may create a monopoly.

In pursuance of the Government of India's latest directive to the States to raise the annual production of cotton, the Maharashtra Government is about to launch a special package programme to grow long staple variety of Deviraj cotton or 170—CO2 in districts of Nasik and Ahmednagar to step up the annual production of this variety from 56,000 bales to 262,000 bales in the next three years. The highlights of the scheme, involving a total allocation of about Rs 2 crores in the current Plan, are the innovations sought in the acreage pattern in respect of variety. Land would, under this scheme, be diverted to long staple

from small and medium varieties. The irrigation facilities will also be enhanced considerably so as to water 300,000 acres of land in contrast to the 100,000 acres at present. The provision of improved seed, fertilisers and plant protection measures are other features that require special mention.

The Government has launched another scheme for bringing additional 1.2 million acres of land under intensive cultivation of long staple variety of L-147. The Government has decided to deploy Rs 7.8 lakhs on its co-ordinated cotton development programme. The scheme, based on the suggestions of the Indian Central Cotton Committee, aims at helping the cotton cultivators to adopt modern methods of agriculture and to employ suitable plant protection methods.

PIECEGOODS

The Bombay piecegoods market during the last week depicted slightly improved conditions. An improvement in the demand from upcountry centres was noticeable. Though buyers from the distant centres were active in the market they showed an aversion to the mill-made piecegoods. Barring the intake of a negligible quantum of seasonal goods the mill-made sector was almost neglected. The prices offered were pretty low. Dealers from Delhi, Agra, Kanpur, Bihar, Punjab and Rajasthan also entered the market while buyers from Calcutta preferred to stay away. The slackness in demand was obviously due to the direct arrangements made by the mills for selling their products in the upcountry markets.

The prices of grey uncalendared dhories and saris, in the powerloom sector, exhibited an easier tendency but the grey mulls maintained a firm tendency. Bleached dhories and grey calendared goods met with poor demand from upcountry centres. Dealers from Rajasthan, Bihar and UP accounted for small quantities of grey and bleached dhories. Goods sold to Calcutta on forward delivery basis were cancelled and demand from that centre was conspicuously wanting.

Thanks to the good business deals with the USA the export front presented brisk activity. Substantial business was put through for that destination, though the price offered was unattractive.

The UK's interest continued to concentrate on grey tapestry and lower medium sheeting cloth. Sudan was satisfied with grey sheetings in 9 pounds quality had nearly 1,000 bales are reported to have been booked.

OILSEEDS Rain Induces Lower Prices

Oilseeds prices ruled easy last week following persistent selling pressure induced by the receipt of beneficial rain in almost all growing areas. Groundnut prices, which were developing a hardening tendency in earlier dealings, began to lose ground later on reports of favourable weather. In the Bombay market, sentiment was adver-

Markets

JUTE Hessians Steady, Sacking Down

DURING the past week, prices of sacking have been moving downward, while hessian prices have remained steady. This almost opposite movement of the principal sections in the gunny market is not surprising because statistically only hessian is in a strong position whereas sacking is burdened with steadily increasing stocks in the last few months. Moreover, the outlook for hessian exports is considered to be bright in view of the continued demand from its main consumer, the US, where the trend of burlap consumption in the past eight months is quite encouraging. As against 510 million yards in the first eight months of 1961, burlap consumption up to the end of August 1962 amounted to 581 million yards. The figure of 73 million yards for August is considered to be quite good and is taken as an indication of the pick-up in the economy of the US. In this view, it is to be hoped that the rising trend in burlap consumption in the US will be kept up in the coming months. During the current month in the Calcutta market there have been steady enquiries for hessian, and in the past week fresh enquiries have been reported from the UK and US. In view of the low stock position in hessian, the continued full capacity working of mills is not causing much worry.

As far as sacking is concerned, although despatches have so far been on a satisfactory level, the future outlook does not appear to be very

bright. The growing accumulation of stocks during the past few months is a measure of the difficulties that this category of goods is encountering in foreign markets. The main competitor to India in this field is Pakistan which, by virtue of the many advantages it enjoys over India, is able to make steady headway in a number of sacking markets. The present position appears to be that no foreign buyer of sacking is coming first to India with buying orders because Pakistan is offering goods of a superior variety and at much lower prices. The Pakistani industry is aided by the export bonus scheme of its Government in addition to the natural advantage it has in the superior quality of its raw jute. In recent years, while Indian sacking has lost ground in its principal markets, Pakistani goods are making headway. Australia, one of the most important markets for Indian sacking, has been taking more of Pakistani goods. In the course of the past few years, Pakistan increased its sales of sacking to this country from 26,161 tons to 34,118 tons while the share of India has dropped from 78,000 tons to 51,500 tons. In other areas also, while Pakistan's sales are increasing at a rapid pace, Indian sacking is not making much headway. The matter, however, does not stop with the current Pakistani competition which is at least partly due to the export bonus scheme. The threat from Pakistan to our sackings is not only a continuing one but a growing one. For the Pakistani industry is steadily expanding. In a few years it will have 50 per cent more looms than at present, and there are suggestions to increase the loom target to 18,000 from the present level of

sely affected as the outlook for the crop improved in the main growing areas of Saurashtra, Gujarat and Hyderabad. During the past week earlier firmness, following reports of drought especially in Saurashtra and Gujarat, yielded place to weakness as the outlook for the crop came to be assessed as favourable in view of the return of fair weather in most growing areas. There was heavy selling from Saurashtra interests on indications of better crop prospects in that region. It is generally believed that the coming crop will be a good one. It would appear that there is an undercurrent of apprehension about the proposed Government measures to hold the general price line being applied in some way or other to the oilseeds market as well. As a matter of fact, rumour had it last week that influential circles will be making recommendations in respect of price and distribution. The downward trend in groundnut futures was accentuated by the easy undertone in the spot markets where, in the face of heavy offerings, crushers and other bulk consumers kept on the sidelines presumably anticipating further decline in rates.

The trend in castor seeds was more or less similar to that prevailing in groundnuts. Dealings in the futures section was on a meagre level partly in sympathy with groundnuts and partly due to growing anxiety about exports to the UK in the event of that country joining the ECM at an early date. Even otherwise, export enquiries were at a disappointing level as the interest from the US also continued to be marginal. Linseed, too, attracted little attention.

In the Madras groundnut and groundnut oil market, there was a subdued tone with buyers exhibiting no tendency to buy despite the low quotations for oil. Calcutta did not evince much interest. Bombay too did not show interest in anticipation of larger arrivals of groundnut kernels early next month. Local arrivals of groundnut were about 50 tons daily, while in South Arcot markets they were reported at 100 to 120 tons daily. In Pollachi the market arrivals were reported at 400 to 450 tons daily.

There was practically no business in forward positions. There is the hope of getting spot goods cheaper and buyers did not want to commit to future positions, expecting the prices to go down further.

The following were Tuesday's quotations at the closing of the oils and seeds exchange in Madras.

Groundnut oil Ready per quintal ex-Madras Godown expeller Ready 3 per cent FFA Rs 180.50, September Rs 180 nominal, October not quoted; January Rs 176.

Groundnut kernels per bag of 80 kgs: Coromandel Rs 76, peanut Rs 74.

Castor oil per quintal Rs 149 to Rs 149.50.

Coconut oil per tin Rs 49.50; Gingelly oil per quintal Rs 205, Gingelly seed Rs 74/75 - per bag. Groundnut cake Rs 30.25 per bag of 160 lbs.

The groundnut oil price for ready was Rs 183 per quintal late Wednesday.

day. It went down to Rs 181 the next day. There was a further fall by a rupee on Friday and it shed another fifty nP on Saturday last. On Monday the market opened at Rs 180 per quintal. The September vaida was quoted on the same lines. January 1963 was nominal throughout.

Coromandel groundnut kernels were at Rs 78 per bag of 80 kgs on Wednesday. It went down by a rupee and ruled at Rs 77 till Saturday. It went down by a rupee when the week opened. The peanut variety was available at Rs 76 or even lower. It lost fifty nP during that week. When the week opened coromandel was at Rs 78 and peanut at Rs 75.

In the upcountry markets, groundnut oil prices were lower by Rs 5 to Rs 7 per candy. Mostly peanut groundnut was available at Rs 72 to Rs 77 per bag of 80 kgs.

FOODGRAINS
Steadier Market

The foodgrains market at Hapur ruled steadier mainly on reports of damage to standing crops in the Punjab. According to reports, damage to food crops is rather heavy due to the recent heavy rains in the State. During the past week wheat prices hardened on good consumer demand coupled with poor arrivals.

According to Mr. S. K. Patil, Union Minister for Food and Agriculture there is no scarcity of foodgrains in the country and if food prices are higher in some centres, it is purely due to local factors. Addressing the Grains and Oilseeds Merchants Association in Bombay, he has said that Government policy is to ensure an equitable return to the cultivator and accordingly steps will be initiated shortly with a view to guaranteeing a minimum price for rice as in case of wheat, cotton and jute. In this connection he has revealed that Government will soon build up a stockpile of 4 million tons of wheat and 2 million tons of rice. This is to ensure that there is no sudden rise in prices as also there is no scarcity anywhere in the country.

At the moment Government has a stock of 2.5 million tons of rice and wheat in the Central reserves and for the next two years about 8 million tons of wheat are expected from the US. Government has also plans to import more rice in the future from the US. The Minister has pointed out that the outlook for the kharif crop is even better than last year. While admitting there is some rise in the price of jowar, he has noted that the additional supply of wheat is being sent to those areas where jowar is consumed may not bring about a marked change in the situation because people who are accustomed to jowar may continue to insist on it with an inevitable rise in the price.

The following were Tuesday's quotations at the closing of the oils and seeds exchange in Madras.

Groundnut oil Ready per quintal ex-Madras Godown expeller Ready 3 per cent FFA Rs 180.50, September Rs 180 nominal, October not quoted; January Rs 176.

Groundnut kernels per bag of 80 kgs: Coromandel Rs 76, peanut Rs 74.

Castor oil per quintal Rs 149 to Rs 149.50.

Coconut oil per tin Rs 49.50; Gingelly oil per quintal Rs 205, Gingelly seed Rs 74/75 - per bag. Groundnut cake Rs 30.25 per bag of 160 lbs.

The groundnut oil price for ready was Rs 183 per quintal late Wednesday.

SUGAR
Business sets in

Sugar prices have further eased in Hapur and other principal sugar

markets during the past week. There is nervousness among traders because of the growing apprehension that the present downtrend will be further accentuated as a result of the declared policy of Government to hold the price line. While mills are keen to dispose of stocks at current levels, buyers are reluctant to enter into commitments as they expect a further decline in the price. The general feeling also is that prices will progressively develop a downtrend in spite of the coming high consumption months. The Puja and Diwali months usually bring about a heavy demand for sugar but this year Government has made it clear that sufficient stocks will be released to offset any untoward rise in the price on account of increase in seasonal demand. Last week a further quota of 250,000 tonnes of sugar was released for open sale and this depressed the market. In earlier dealings there was some indication that the downtrend might be arrested, at least temporarily, in view of the then poor prospects for the cane crop in many of the growing areas in north India. But with the receipt of beneficial rains later on bulls were once again discouraged to extend commitments. The fact that bulk buyers who usually lift large quantities at this time of the year have become rather cautious in view of the declining trend in sugar prices has added to the reactionary trend.

An easier tendency prevailed in the gur markets. While demand was rather slack, the decline in sugar prices had a sympathetic effect in this market, too. Arrival of new crop gur in some South India markets and the improved outlook for the cane crop were other advers influences affecting the price trend during the past week. As stockists in most centres were anxious to dispose of old stocks to make room for new gur which is expected shortly, price fluctuations have been dictated not merely by the supply and demand factor.

The Bangalore Sink Market presented an upward trend during the past week. Filature raw silk of 20/22 Dr. remained unchanged between Rs 84.89 and Rs 88.20 per kgm. Cottage basin and charka raw silk increased to rule between Rs 79.37 and Rs 85.42 and between Rs 61.73 and Rs 78.26 per kgm. respectively. Spun silk yarn of 2/20's was firm at Rs 74.96 per kgm. Filature, cottage basin as well as charka silk waste rose to Rs 13.20 Rs 9.48 and Rs 11.68 and is 4.40 and Rs 7.70 per kgb, respectively.

Reeling cocoons fluctuated between Rs 3.75 and Rs 6.00 per kgm. Foreign and Mysore race seed cocoons increased significantly to rule between Rs 10.00 and Rs 25.00 and Rs 11.00 and Rs 18.00 per thousand respectively.

The Bhagalpur Silk Market was steady during the past week. Tasar raw silk, silk waste as well as spun silk yarn prices remained unchanged. Reeling cocoons of Daba variety was quoted at Rs 100.00 per

thousand respectively.

The Bhagalpur Silk Market was steady during the past week. Tasar raw silk, silk waste as well as spun silk yarn prices remained unchanged. Reeling cocoons of Daba variety was quoted at Rs 100.00 per

kahan. Bogai variety declined sharply to rule between Rs 60.00 and Rs 80.00 per kahan. Eri cocoons and yarn were stagnant.

Cottage basin and charka raw silk at Malda showed an upward trend and varied from Rs 75.00 to Rs 80.00 and from Rs 62.00 to Rs 76.00 per kgm. respectively. Matka yarn fluctuated between Rs 23.58 and Rs 45.01 per kgm. Reeling cocoons ruled between Rs 3.25 and Rs 4.13 per kgm. Silk waste was steady at Rs 2.14 per kgm.

The f.o.b. price and landed cost of Japanese raw silk of 20/22 Dr. were Rs 65.63 and Rs 100.55 per kgm. respectively during the month of July, 1962.

HIDES & SKINS

This week the arrivals of tanned cowhides continued to be moderate. Absorption too was likewise, while the prices remained unchanged. There was a quiet undertone for inferior fifts. In the 5/5 1/2 lb run, fourths and fifts business was done on the basis of 75d, 65d and 57 1/2d respectively.

In tanned cow calf, the demand was for semi-premium of 2/2 1/2 lbs. The market was quiet in the tanned buffalo hides. In tanned buff calf, arrivals continued to be fairly good.

There were good inquiries for tanned goatskins from the United Kingdom. There was no change in the prices of middle-class goatskins.

Prices for middle-class sheep skins also remained unchanged.

The following were the prices of tanned hides and skins per lb:

Tanned cow prime 5/5 1/2 lb Rs 2.75 to Rs 2.84; 6/6 1/2 lb Rs 2.50 to Rs 2.58; 7/7 1/2 lb Rs 2.22 to Rs 2.25; 8/8 1/2 lb Rs 2.03 to Rs 2.06; 10/12 lb Rs 1.89 to Rs 1.94; Tanned cow inferior fifts 5/5 1/2 lbs Rs 2.25 to Rs 2.28; 7/7 1/2 lb Rs 1.94 to Rs 2.00; 8/8 1/2 lb Rs 1.84 to Rs 1.91; 10/12 lb Rs 1.78 to Rs 1.81; Tanned cow calf 1 1/2 to 2 lb Rs 3.70 to Rs 3.81; Tanned buff calf 1 1/2 lb Rs 3.25 to Rs 3.31; Tanned buffalo lights 5/5 1/2 lb Rs 2.40 to Rs 2.44; Heavies Rs 1.65 to Rs 1.73.

Estrela Batteries Pays the same

Despite a strike lasting 45 days by the daily-rated employees, the Estrela Batteries Limited 1962 shows a net profit before depreciation and taxation of Rs 3,205,611. This is however lower than the corresponding figure for the previous year when net profit before depreciation taxation amounted to Rs 3,447,856 which was arrived at after transferring Rs 138,646 from capital reserve Account being depreciation applicable to revaluation of Plant and Machinery. During the year under review there is again no provision for taxation while depreciation gets Rs 961,354. The allotment to reserve fund is Rs 1,000,000 against nil. Development rebate gets Rs 349,665 as against Rs 220,532. A dividend of 12.5 per cent on ordinary shares is paid as against no dividend paid in the previous year. The carry forward is Rs 127,874 against Rs 21,749 brought in.

The company's present production capacity is 10 million cells. This capacity is fully utilised and the company's application for increasing the capacity to 65 million cells has been sanctioned by Government. The company has concluded a technical collaboration agreement with Messrs. Societe Des Accumulateurs Fixes Et De Traction of France, a well-known manufacturer of dry batteries in Europe and Government has also approved its basic terms.

For the Investor

INVESTMENT GOSSIP

Jobs for Jobbers in Madras

At the Silver Jubilee celebration of the Madras Stock Exchange last week speakers stressed the vital role of stock exchanges in a growing economy. For industrialisation to progress at a rapid pace, entrepreneurs should be encouraged to launch new enterprises. It is here that the stock exchanges come to play their vital role by channelling private investment into productive industrial undertakings. Without active stock markets it will be an uphill task to attract fresh capital. For investors not only expect to profit by their investment, but also want their capital to be retrievable at short notice. This twin objective can be realised only if there are stock markets which provide the unique service of giving liquidity to the invested capital.

The record of service of Indian stock exchanges has been commended by no less a person than the former Governor of the Reserve Bank of India, Mr H. V. R. Iengar. As he has however, hastened to put a rider on his encomium, it is quite true that Government's vigilant supervision of the working of stock markets, especially in recent years, has gone a long way towards making our stock markets what they are today. Excessive speculation is rightly being frowned upon by Authority and apart from taking certain monetary measures to curb unbridled gambling Government has made the stock exchanges themselves largely responsible for their ordered functioning. This is as it should be. But it is at the same time wrong to think that stock exchanges are gambling places merely because there is speculation. It is therefore gratifying to note that in his speech Mr S. Narayanaswamy has pointed out that some speculation is essential in stock market transactions. Perhaps it will be more acceptable to the purists, if it is termed not speculation, but intelligent anticipation.

Government should realise that its responsibility is not merely to curb excessive speculation. It is equally its responsibility to ensure that stock markets are active. It is here that the LIC can be of considerable help. The LIC has come to occupy a pre-eminent position as far the stock market is concerned because it is the largest single investor in the country. The investment activities of the LIC are, therefore, keenly watched by the stock market. It would appear that the time has come to re-examine the investment policy of this institution so far as it concerns the stock market. Mr G. R. Chandrasekariya, the outgoing president of the Madras Stock Exchange, has

entered a plea for a change in the LIC's trading in shares. The LIC only buys and never sells. This one-way traffic is not without some serious repercussions. Perhaps with the Mundhra deal always serving as a warning (the LIC Chairman, however, has recently said that the LIC is no longer in the red as far as these shares are concerned) the LIC cannot be criticised too strongly for its extra cautious buying of equities. As it is, therefore, considerable parcels of good scrip are out of circulation. This is causing an artificial scarcity and consequent inflation of prices. Mr Chandrasekariya's suggestion is that the LIC should also sell equities at opportune moments so that there is no situation where too many buyers chase too few scrip. His other suggestion, that the LIC should be bold enough to increase its investment in new ventures may not readily find favour because, the foremost duty of the LIC is to the policy-holder.

Mr Chandrasekariya also referred to the comparatively poor turnover in the Madras Stock Exchange; and to remedy the situation he has suggested the augmenting of the number of members and the introduction of a few jobbers. In this connection it may be of interest to note what a leading stock broking firm of Madras (Chitra & Co.), says in its latest fortnightly report: "The stock markets of Bombay and Calcutta have been in doldrums. Investment interest has been conspicuous by its absence. The Madras market which never responded robustly to cheering news, but with great promptitude to bearish news, started on its slashing campaign and prices have been lower all along the line. There are those who believe that the non-improvement of share prices in Madras and its sublime disregard of intrinsic worths and yields is not to be put down wholly to lack of an appropriate mechanism, in the shape of a fully equipped jobber-rich market but to basic phlegmatism and to temperamental incapacity to enthuse over good news coupled with a unique sensitiveness to dismal news. So cynical an assessment seems uncharitable, but may be there is a grain of truth in it."

INVESTMENT SPECIAL

Raymon Engineering

Although Raymon Engineering Works Limited has reported a loss for the year ended March 1962 for the second year in succession, the company seems to have a bright future before it. For such result as have been reported in the last two years are nothing extraordinary for a company which is only two years old.

Like any other unit of its stature, Raymon has been having teething troubles and if the past two years have been exceptionally difficult, it is because. Industry in general has to work under various limitations brought about by the present acute shortage of foreign exchange, and shortages in power, coal and transport. Considering the severity of the handicaps, Raymon has acquitted itself quite creditably. A measure of the confidence of its customers in it is that Raymon has already orders which will keep the wagon division and part of the forge and press shop fully engaged up to June 1964. Commendable progress has been made in the various departments; the forge and press shop has been very nearly brought into commission; capacity has been set up for meeting increasing demand for structurals, plate work and cranes; during the past year three prototype overhead electric cranes have been successfully manufactured. Along with the stepping up of output in existing lines, the company is taking up new lines as well. It has already received an industrial licence for the manufacture of spiral welded pipes for oil, water, gas and sewage from 20" diameter and above. It is also actively exploring the possibilities of manufacturing silos and other heavy engineering equipment in technical-cum-financial collaboration with certain American firms.

BONUS ISSUE NOTES

The Gujarat Rubber

The Gujarat Rubber Works Ltd., Baroda, is issuing Rs 1,43,750 as bonus capital in 1,150 equity shares of Rs 125 each. The shares will be allotted to the existing equity shareholders in the ratio of two for three shares held.

NEW ISSUE NOTES

Engel India

Engel India Machines and Tools Ltd., Calcutta, a new company will raise capital of Rs 50 lakhs in 5 lakh equity shares of Rs 10 each. The company will manufacture and sell plastic injection moulding machines, for which a licence under the Industries (Development and Regulation) Act has been obtained. The company has arranged for foreign collaboration with an Austrian firm who will subscribe to the extent of Rs 7.50 lakhs.

Sree Ayyanar Spinning and Weaving

Sree Ayyanar Spinning and Weaving Mills Ltd., Madras, is to issue capital of Rs 40 lakhs consisting of equity shares of the value of Rs 32 lakhs and 9.3 per cent preference shares of Rs 8 lakhs for cash at par. The proceeds of the issue will be utilised for establishing a textile mill.

Amaravathi Gypsum

Amaravathi Gypsum Products Ltd., Madras, is raising capital of

Rs 40 lakhs consisting of equity shares worth Rs 35 lakhs and 9 per cent preference shares of Rs 5 lakhs for cash at par. The proceeds of the issue will be utilised for the manufacture of gypsum boards.

Mohatta & Heckel

Mohatta & Heckel Ltd., Bombay, another new company, will issue capital of Rs 55 lakhs for cash at par divided into Rs 45 lakhs in equity and Rs 10 lakhs in preference. Out of this, equity shares of the value of Rs 10.80 lakhs will be offered for subscription in George Heckel G.M. b.H. of West Germany. The capital is intended for the manufacture of wires and wire ropes.

Wellman Incandescent

Wellman Incandescent India Ltd. is to raise Rs 29 lakhs of which 50 per cent will be issued to the Wellman Smith Owen Engineering Corporation Limited, England. Of the balance Rs 1.50 lakhs will be taken up by the directors and their friends and associates and Rs 11 lakhs will be offered to the public through prospectus. The proceeds of the issue will be utilised for the production of oil fired, gas fired, coal fired and electrically heated furnaces and ovens and allied equipment. The assets of the Calcutta branch office of the Wellman Smith Owen Engineering Corporation Ltd will be taken over for consideration other than cash amounting to Rs 3.99 lakhs.

Madras Spinners

Madras Spinners Ltd is issuing equity capital of Rs 25 lakhs for cash at par. The proceeds will be used for starting a cotton mill at Palghat, Kerala State.

Arbor Acres Farm

Arbor Acres Farm India (Private) Ltd., Delhi is to issue Rs 25 lakhs capital of which 50 per cent will be held by non-residents and 50 per cent by Indians. The proceeds of the issue will be utilised for setting up large-scale poultry breeding farms near Calcutta and Bombay.

The Mysore Electro-Chemical

The Mysore Electro-Chemical Works Ltd., Mysore will issue further capital of Rs 25 lakhs for cash at par divided into 2,00,000 equity shares of Rs 10 each and 5,000 9.3 per cent (subject to tax) preference shares of Rs 100 each. Out of this, preference shares of the value equivalent to DM 192,000 will be offered to foreign collaborators of West Germany. The proceeds will be utilised for the manufacture of storage batteries.

Bharat Fertiliser

Bharat Fertiliser Industries (Private) Ltd., Maharashtra, a company engaged in the manufacture of mixed fertiliser, is to issue further capital of Rs 15 lakhs divided into 15,000 equity shares of Rs 100 each for cash at par. The proceeds will be utilised for financing the manu-

29 September 1962

facture of NPK granulated mixed fertiliser duly licensed under the Industries (Development and Regulation) Act.

Orissa Textile

Orissa Textile Mills Ltd., Cuttack is issuing further capital of Rs 10 lakhs in equity shares of Rs 10 each for cash at par. The proceeds will be utilised for the manufacture of cotton yarn.

DEBENTURE STOCK ISSUE Oil India

Oil India Limited is to issue debenture stock of Rs 30 crores for cash at par. The proceeds will be utilised for the construction of a pipeline from the oilfields to the two refineries at Gauhati and Barauni.

BALANCE-SHEET BRIEFS Supreme Industries Ltd.

The working of the Supreme Industries Limited for the year ended 31 March 1962 has resulted in a net profit of Rs 464,565 which includes as sum of Rs 23,000 transferred from profit on sale of capital assets. The provision for taxation is higher at Rs 144,009 against Rs 6,055, while depreciation gets Rs 127,327 against Rs 81,210. Development rebate is Rs 37,229 against Rs 8,704. Dividend on ordinary shares is maintained at 13 per cent. The carry forward is Rs 2,875 against Rs 2,770.

Kinnison Jute

A loss of Rs 1,283,451 (before providing for depreciation) is reported by the Kinnison Jute Mills Co., Ltd. for the year ended 31 March 1962, after transferring Rs 137,000 from General Reserve and Rs 1,000 being excess provision for depreciation in previous years. Provision for depreciation is lower at Rs 831,737 against Rs 908,797. The ordinary dividend is passed and there is a debit balance of Rs 2,189,282.

Lansdowne Jute

The Lansdowne Jute Co., Ltd does not propose to pay any dividend on ordinary shares for the year ended 31 March, 1962. To the profit and loss account has been transferred Rs 956,660 from General Reserve Rs 100,000 from Debenture Redemption Reserve, Rs 79,322 from Statutory Development Rebate Reserve and Rs 93,100 from Welfare Reserve. Thus there is a net profit before providing for depreciation (Rs 387,518) and Taxation (Rs 7,641) of Rs 75,458. There is a debit balance of Rs 684,149. Sales have only been slightly lower at Rs 22,439, 565 against Rs 22,449,199 in the previous year.

Lawrence Jute

For the year ended 31 March, 1962, Lawrence Jute Co., Ltd. is to pay an ordinary dividend of 10 per cent against 15 per cent paid for the previous year. The net profit before taxation and depreciation at Rs

1,360,194 is after transferring Rs 350,000 from Taxation Contingencies Reserve and compares with the net profit before taxation and depreciation in the previous year of Rs 1,251,144. Provision for taxation is Rs 552,800 against Rs 165,432 while depreciation is slightly lower at Rs 204,311 against Rs 216,055. Reserve Fund gets only Rs 100,060 as against Rs 300,000 provided in the previous year. A sum of Rs 138,282 is carried forward as against a sum of Rs 54,949 brought in.

Auckland Jute

Although sales are higher at Rs 28,771,226 during the year ended 31 March, 1962 as compared to Rs 28,578,653 in the previous year. Auckland Jute Co., Ltd. is passing the ordinary dividend. The company paid an ordinary dividend of 12 per cent for 1960-61. After transferring Rs 160,000 from General Reserve, the net profit before taxation and depreciation is Rs 411,363 as against Rs 3,050,958 in the previous year. There is a debit balance of Rs 502,872.

Dalhousie Jute

After transferring Rs 137,000 from General Reserve and Rs 86,740 from Statutory Development (Rebate Reserve), the net profit before taxation and depreciation of Dalhousie Jute Co., Ltd. for the year ended 31 March, 1962 amounts to Rs 875,515 as compared to Rs 922,521 in the previous year. Provision for taxation is nil while Depreciation gets Rs 648,817 as against Rs 484,998. The ordinary dividend is nil against 1 per cent paid previously and the debit balance amounts to Rs 62,456 against a sum of Rs 9,802 brought in.

Union Jute

The working of the Union Jute Co., Ltd. for the year ended 31 March 1962 shows a net profit before taxation and depreciation of Rs 692,699 after transferring Rs 50,000 from General Reserve. Provision for taxation is Rs 116,690 against Rs 325,742 while depreciation gets Rs 471,141 against Rs 451,159. The ordinary dividend is nil against 6 per cent paid in the previous year. The carry forward is Rs 18,317 against a sum of Rs 8,800 brought in.

STOCK EXCHANGES Prices Decline Further

Watch-Dog Writes:

AN easier undertone prevailed in the stock market during the past week as buying interest was conspicuous by its absence. Tired liquidation pushed down prices all along the line. Both operators and investors were chary of evincing fresh interest despite the low level of prices of most equities. Speculative interest was primarily disturbed by the continued uncertainty over the dividend of steel companies. While last week there were quite a few people who were prepared to contend that Indian Iron at least would maintain its dividend, their ranks have since con-

siderably thinned. It would appear that the unexpectedly meagre rise in steel retention price has completely unnerved market men and there is now growing apprehension that it is part of a new pattern of Government policy. This coming on top of the anxiety over the growing idle capacity in industry coupled with indications of further fresh taxation to come has left little enthusiasm for equities. Investors are unable to take a constructive view because the outlook for equities even in the long-term is rather hazy in view of the continued acute shortage of foreign exchange and the spiralling of prices in general. The present apathy may be nothing more than a policy of wait and see because there are all kinds of report about the manner in which Government is going to allocate available foreign exchange. One report says that a priority list has been drawn up and only foreign exchange will be allotted first to units at the top of the list. Naturally investors will like to make sure before taking up shares in a particular company whether it has firm allotment of the requisite foreign exchange. In other words investors will only lend selective support to new issues in the immediate future. The Calcutta Stock Exchange ruled easy during the past week following continued selling pressure. In the absence of an indication as to the size of the IISCO dividend the market later lost considerable ground and the market closed on a weak undertone. The long Puja recess is another restraining influence on sentiment.

The Bombay Stock Exchange continued to be in a depressed mood with operators sometimes indulging in panicky sales. The main reason for the reactionary trend gathering fresh momentum during the past week appears to be the growing conviction that Tata Steel would not be able to maintain the dividend at last year's level. This assessment seems to be in spite of earlier revival of confidence as a result of a higher bonus distribution to workers. It is generally believed that profits may not show any serious diminution, but all the same company may not be able to pay last year's dividend. Section wise, cotton mill shares have found little incentive in the result of the Commonwealth Prime Ministers conference. The latest apprehension seems to be some sort of government control on the production variety wise with a view to arresting the price line in cloth, the second essential commodity after food. Elsewhere also sentiment was depressed with prices losing ground on realising pressure.

The Madras Stock Exchange lacked interest and prices showed around weakness. With outside support much reduced on account of the depressed conditions in Dalal Street and Lyons Range, even small selling orders had an exaggerated impact on the price trend. In earlier dealings selected plantation shares met with some support but sentiment later on turned easy as investors seemed to apprehend that prospects for industrial units especially those still depending on foreign exchange and imported raw materials was rather bleak at least in the near term.

CALCUTTA

Thursday Evening.

Sentiment was depressed on the Calcutta Stock Exchange last week as realising pressure was in evidence all along. Apart from the fact that the market will shortly close for the long Puja vacation, there is nothing in the investment situation just as present to enthuse investors. In the first place, the continued Chinese incursion in the NEFA region has begun to cause considerable anxiety in the country lately because of the growing apprehension that the erstwhile skirmishes might deteriorate into a shooting war. Operators are naturally reluctant to extend commitments. Even otherwise, there is little that is encouraging as far as stock market operators are concerned. Fears of additional taxation have revived especially after the publication of the report of the central board of directors of the Reserve Bank. In view of a number of rather serious uncertainties in the investment situation, the usual pre-Puja caution has been accentuated.

In the Engineering section, Indian Irons opened the week on a quiet note at Rs 25.10. Though the scrip tried to stage a recovery, the attempt proved abortive and the rate declined again to Rs 25.10 by close. The scrip lost further on Tuesday to be pushed down to Rs 24.96. Wednesday was Settlement day and in the course of the day's trading another 10 nP were lost to bring the quotation to Rs 24.86. On Thursday the scrip opened the day higher at Rs 25.04 on overnight covering but by close of the day easier trend reasserted itself to push the rate down to Rs 24.84.

Sectionwise, the general trend was downward. The reactionary trend noticeable in the more speculative counters had a sympathetic effect on other sections too. Cotton mill shares were depressed in view of the disappointing export performance of the industry in the first half of the current year. It is apprehended that the shortage of raw cotton could not be fully made up from imports as foreign exchange continues to be in short supply. During the past week coal shares again met with little interest and shares where marked lower on balance. Evidently investors do not fancy coal shares because the prospects for the industry are not considered bright what with the meagre increase granted in the selling price of coal. Although jute mills are working at full capacity for a number of months now, investors are not very keen to accumulate these shares as it is generally believed that with the Government's decision to keep the minimum price of raw jute at last year's level, mills will not be able to make much profit. It is also apprehended that the disposal of sacking goods will become more and more difficult in view of the growing competition from Pakistan which is fast expanding its own jute mill capacity. Tea shares are also neglected more or less for the same reason. Prices in recent auctions have been disappointing and as it is feared that North Indian tea production will be lower this season investors in tea shares are further discouraged.

PLANNING FOR PROSPERITY THROUGH INDUSTRIALISATION

The framers of India's Third Five Year Plan have put targets of development in black and white. J. K. ORGANISATION strives to show them reality's light through its varied industrial activities, ever increasing and always expanding.

J.K. ORGANISATION

KANPUR • CALCUTTA • BOMBAY

India's Great Industrial & Commercial Combine

Look what you get with HONEYWELL Instrumentation

Far more than just instruments, you get a complete control system, custom designed for your specific needs, by men who know your processes. You get expert, interested assistance every step of the way, with your initial planning and long after your instruments are installed. Blue Star assume full responsibility for the engineering, installation and start-up of your system. You get training for your instrument technicians in the most up-to-date

maintenance methods at the tuition-free Blue Star-Honeywell Instrumentation Education Centre at Bombay. You get prompt, competent service from your nearest Blue Star office and immediate replacement of emergency repair parts.

These are but some of the plus-values that comprise instrumentation by Honeywell...and they apply regardless of whether you buy a single instrument, a replacement part or a complete control system.

Exports to Pay for Maintenance Imports

Foreign exchange to pay for maintenance imports has posed one of the major problems of the Third Plan and even after the completion of the first year prospects are far from certain. Doubts arise not only because of the admitted difficulties of export promotion but also because of the vacillations in the official estimates of the requirements of maintenance imports and the corresponding level of exports for the Plan period. An aspect of export promotion which has received considerable emphasis in the Third Plan itself, the problem has been rendered formidable by the reappraisal and revision of the requirements since the formulation of the Draft Outline. From a level of Rs 3,570 crores, the export target was raised to Rs 3,700 crores in the Third Plan and it has again been raised to Rs 3,800 crores by the Board of Trade at its meeting last week. The new estimates of targets envisage exports to be raised from Rs 680 crores in 1961-62 to Rs 720 crores in 1962-63, Rs 760 crores in 1963-64, Rs 800 crores in 1964-65 and Rs 840 crores in the last year of the Third Plan. Though the target is the essential minimum below which the country cannot afford to plan for, its feasibility is not a matter that can be taken for granted. Performance in exports in the first year of the Plan gives no ground for hope in this regard. Thus, while the target was fixed at Rs 680 crores for the first year, total exports amounted only to Rs 662 crores leaving a shortfall of Rs 18 crores. Export trends in the first half of 1962 have been marked by decline in both quantity and value of some of the important items, as compared with the first half of 1960: further, the upward trend in total exports in the first half of 1962 has been of a more moderate order than in the corresponding period of 1961. There has been a notable decline in sales abroad of cotton fabrics and the value of exports under this head amounted to only Rs 22 crores against Rs 27.9 crores and Rs 29.1 crores in the first six months of 1961 and 1960.

The assessment of export prospects has mainly to take into account the keen competition in the international markets for the traditional exports, and the uncertainty spelt by the formation of the European Common Market. Incentives for exports have been receiving considerable attention from the Board of Trade and some important concessions including rebate on income tax are considered likely in the current context of the widening gap between imports and exports. However, in view of the keen competition the primary emphasis has to be on reduction of the cost of production of Indian products and it is gratifying that measures are being taken to constitute cells in important industries for studying their cost structure with a view to devising measures to bring costs down. While the importance of these measures for export promotion cannot be gainsaid, their significance in the short run appears extremely limited. One aspect of exports that has not been taken into account by the estimates in the Third Plan is the scope for increasing export of iron ore from Goa. In view of

its acquisition, credit can be taken for an additional export of 6 million tons of iron ore. At the same time, it has also to be mentioned that realisations from export of iron ore from Goa will be relatively less than from iron ore from the rest of the country for the reason that iron ore from Goa is priced lower than from other areas.

Apart from the difficulties inherent in efforts at export promotion, it is also a moot point whether even the revised estimates of exports will approximate to likely requirements for maintenance imports during the Plan period. Even when the Third Plan was finalised a certain amount of under-utilisation of industrial capacity was written into it by leaving an uncovered gap of about Rs 150 crores in maintenance imports. While it was envisaged that maintenance imports would rise to a level of Rs 3,800 crores, it was decided to follow a figure of Rs 3,650 crores. In the light of the upward revision of the export target to Rs 3,800 crores, the import target also stands automatically revised. It is however doubtful whether full requirements can be met within this level of exports. The Planners have based their estimates of maintenance imports on the assumption that requirements will decline in the latter half of the Plan period as new industries like iron and steel and aluminium come into being. That such an assumption is fallacious has been made evident by experience in the latter half of the Second Plan. In this connection it is essential that regard must be had for the maintenance requirements of industries that will be set up in the early period of the Plan.

To the extent to which untied foreign credits can be arranged, it will help in paying for maintenance imports. There has in recent times been greater appreciation by the aid-giving countries of the importance of untied credit as an integral part of the developmental assistance they are giving. However, the contribution from such untied credit will be relatively small and, therefore, there can be no escape from the necessity to concentrate on export promotion. Prospects are limited for traditional items like tea, cotton and jute textiles. For, apart from international competition, there are other factors like the growing internal requirements in the case of tea and the emergence of substitutes in the case of jute which have to be reckoned with. Similarly, in the case of new items of exports like engineering goods and sugar, the relatively higher cost of production in India is a limiting factor. If exports are to be increased, it is thus necessary to direct attention to other items for which export prospects are more favourable. Special mention may be made of iron ore and manganese ore. It is a pity that the authorities have so far failed to recognise the export potentials offered by these two items though factors like international demand and the abundant resources of the country in these two have pointed to them as, certainly, most prospective items. In respect of iron ore particularly, the resources are limitless.

Section 43A Companies

Under Section 43A of the Companies Act, certain classes of private companies are deemed to be public companies. This refinement in classification was introduced by the Companies (Amendment) Act of 1960. In consequence of this amendment a private company in which not less than 25 per cent of the paid up share capital is held by one or more bodies corporate would be deemed under the Act to be a public company. As a result, many of the rigorous requirements of the Companies Act that govern public companies will govern private companies deemed as public companies. For instance, in reckoning the number of directorships in any public companies that any one persons can hold, his directorship in Section 43A Companies will be taken into account. Likewise, managing agents cannot hold the managing agency of more than 10 public companies including private companies deemed as public under this Section. Again Section 43A companies which are managing agents and which belong to groups having multiple managing agency companies will have to adjust their internal share-holdings in such a manner that no share-holder exercises more than 10 per cent voting power. Restrictions relating to (a) maximum managerial remuneration under Section 198 of Companies' Act (11 per cent of net profits and Rs 50,000 per annum in case of inadequacy or absence of profit); (b) remuneration of Directors under Section 309; and (c) remuneration of managing agents at 10 per cent of net profits under Section 348 would be applicable to Section 43A companies in the same way in which they would be applicable to regular public companies.

The background of this legislative change is fairly well-known. The Sastri Committee, which reviewed the working of the Companies Act 1956 and made a series of recommendations to plug the loop-holes that were discovered in practice, went into the question of the disguising of substantial public interest in companies that were nominally private companies. Managements of public companies had interest in private companies which in their turn were not subject to the rigours of the Companies' Act in respect of access of information to the share-holders, submission of statutory returns and statements to the Company Law authorities.

The interest of the share-holder in the public company which in its corporate capacity was a share-holder in a private company was in consequence often in jeopardy. The tendency of some managements of public companies and their friends to have extensive interlocking financial interests by a chain of private companies with interlocked share-holding was something that could go on without the scrutiny of public or of authority under the old dispensation. Now, however, as public companies, these Section 43A companies would have to stand the scrutiny of the share-holders of the larger units whose funds are used by the private company. Another important consequence of the creation of the new class of companies has been the frustration of efforts to overcome restrictions regarding managerial remuneration. Thus, as indicated earlier, the maximum permissible managerial remuneration from public companies would take into account the remuneration received from Section 43A Companies.

The Company Law Administration has recently surveyed the pattern of such Section 43A Companies in the Indian corporate sector between the date of coming into force of the Section and 31 March 1962. Between 28 March 1961, which is the date on which the amendment creating the new class of company came into effective force, and 31 March 1962, 518 Private Companies became Section 43A Companies. These companies had a total paid-up capital of Rs 86 crores of which over Rs 65 crores were held by 934 bodies corporate. The 518 Section 43A companies constituted only 2.6 per cent of the total private companies though their paid-up capital amounted to 10 per cent of the total paid-up capital of all the private companies (including private companies in the Government sector.) This may seem a rather insignificant percentage. But if the Government companies are excluded, the percentage of paid-up capital of Section 43A companies in the total paid-up capital of private companies came to the considerable figure of 27. Even more interestingly, if the paid-up capital of Section 43A companies were treated as the paid-up capital of public companies, the share of the paid-up capital of public companies in the total paid-up capital of the entire corporate sector rose from 51 per cent to 56 per cent.

The study confirms the general impression of sophistication in corporate organisation in Maharashtra and West Bengal. These two States account for over 70 per cent of the Section 43A companies with Maharashtra having 233 and West Bengal having 127 such companies. Madras trails behind with 60, followed by Gujarat with 23 companies. In terms of paid-up capital, Section 43A companies in Maharashtra and West Bengal account for 50 per cent of the total paid-up capital of all such companies in the country. By virtue of Oil India Limited, Assam has the rather fortuitous distinction of being the state with the second largest aggregate of total share capital of Section 43A companies. Its four Section 43A companies have a total of Rs 27.17 crores of paid-up capital. This is less only to the aggregate paid-up capital of Section 43A companies in Maharashtra amounting to Rs 30.06 crores.

Quite a proportion of the Section 43A companies are really subsidiaries of public companies or of Section 43A companies. This is inevitable since public companies would wish to have as tight a hold as possible on private companies that they have formed for special purposes. Out of the total of 518 Section 43A companies as many as 269 are subsidiaries. The total paid-up capital of these subsidiaries is Rs 60.4 crores of which Rs 45.2 crores were held by their principals. The share-holding of public companies in non-subsidiary Section 43A companies worked out only to 66 per cent of the total share capital of such Section 43A companies as against the 80 per cent in the case of subsidiary Section 43A Companies of which 75 per cent was held by the holding companies themselves. But even this 66 per cent holding in non-subsidiary Section 43A companies is, on the face of it, far larger than the mere 25 per cent laid down in the act to bring it within the mischief of the Section. Size-wise, 11 Section 43A companies are giant-sized each having a paid-up capital of Rs 1 crore or more. 19 such Companies have a paid-up capital between Rs 50 lakhs and Rs 1 crore each and 34 Companies have a paid-up capital between Rs 25 lakhs and Rs 50 lakhs each. By far the largest number of Section 43A companies (259) have a paid-up capital of upto Rs 5 lakhs each.

The industrial pattern of the 518 Section 43A Companies shows that largest

number of them (184) are trading and financing companies. Among the industrial group, 73 are engaged in machinery manufacture, 32 in pharmaceutical lines and 30 in basic industrial chemicals and chemical products. Foreign interests participate in the capital of 147 Section 43A companies. Many of these have obviously been formed under the desire for foreign collaboration in industrial, pharmaceutical and chemical lines. Many of them are ancillary industries and some of them are the coming together of associates. Incipient tendency towards monopoly, which however is not very pronounced, can be noticed in the coming together of some of the possible rivals in Section 43A companies. But it is difficult to infer, from the facts presented in the study, that Section 43A companies are a favourite or even a principal device through which elimination of competition of rivals is sought to be achieved. Obviously concentration of economic power of particular groups by interlocked associates will find Section 43A companies an extremely useful device. But a study of its extent would involve a collation of all the various interests (including those in Section 43A companies) of particular groups. A study in isolation of the structure of Section 43A companies would not offer much enlightenment on this subject.

Can IFC Further Export Drive?

The annual report of the Industrial Finance Corporation reflects not only the steady expansion of the lending operations of the Corporation, but the new developments in the industrial sector and its diversification within the framework of a planned economy. The IFC was set up fourteen years ago primarily to extend the facilities offered by existing credit institutions, especially of long-term credits for medium scale industries, and its lending policies have been shaped by the changing requirements of planned development. The Corporation has played a notable role in stimulating the expansion of the co-operative sector of industry, particularly of sugar co-operatives. It has followed a positive policy for the dispersal of industry by giving priority to applications for loans from units in comparatively backward regions of the country. While there is a reduction in the number of applications for guarantees of deferred payment arrangements, the Corporation has been granting sub-loans in foreign currencies. Recently the Corporation has also extended its coverage to the coal industry and provided rupee finance for projects whose foreign exchange requirements are met out of the World Bank credit. The cumulative total of loans approved by the Corporation has increased from Rs 3.42 crores as at the end of June 1949 to Rs 130.27 crores as on 30 June 1962. As against this, the total amount disbursed amounts to Rs 68.14 crores. If loans amounting to Rs 24.09 crores which were either declined by the applicants, or not made available to them for various reasons, are excluded from the total, the percentage of disbursements works out to 70 per cent of the firm commitments. But the reasons for the comparatively high proportion of infructuous loans calls for further examination. Apart from these, the fall in the number of applications for loans—59 applications for loans for a total of Rs 31.40 crores against 76 applications for an aggregate amount of Rs 36.86 crores in the previous year—reflects the slackening in the tempo of industrial activity last year.

Side by side with the increase in the amount of loans granted by the Corporation and its gross income, there is also a natural but nonetheless welcome reduction in the ratio of expenses. Administrative expenses which amounted to 50.79 per cent of the gross income of Rs 5.73 lakhs in 1949, now, work out to 4.82 per cent of the gross income of Rs 304.18 lakhs in the year under report. There is also a corresponding improvement in the working results. Excluding profits from the sale of investments which was a special feature of 1961, the profit for the year under review was higher by Rs 13.98 lakhs as compared with the previous year. Out of the net profit the Corporation has allocated Rs 18 lakhs to repay in full the outstanding balance of the subvention from the Government of India. The report also records notable improvement in the repayment of interest and loans. The percentage of default in the repayment of principal declined from 2.34 in 1960-61 to 1.24 in 1961-62, and defaults in repayment of interest from 0.25 in 1960-61 to 0.18 in the year under report.

Out of the total loans approved, about 24.1 per cent represent loans to co-operative units, with sugar co-operatives getting Rs 30.04 crores. The change effected last year in Government's policy regarding licensing of new units for the manufacture of sugar is bound to have its impact on the quantum of loans to sugar co-operatives in future. The Corporation has been turning its attention to other types of industrial co-operatives. Loans of the order of Rs. 1.02 crores have been approved to three co-operative spinning units and one co-operative unit for manufacture of vegetable oils.

Industrial units in all parts of the country have derived assistance from the IFC, as may be readily seen from the table given below. During the year under report the Corporation approved 41 applications covering 16 industries in 13 States, including the Union territory of Pondicherry. Special attention has been drawn to the loan of Rs 35 lakhs to a cotton textile spinning mill in Mahe. This is the first time the Corporation has sanctioned a loan for a concern located in the former French territories. There are also indications that special consideration will be given to the requirements of industries in Goa.

	Rs Crores
Andhra Pradesh	7.50
Assam	5.83
Bihar	8.68
Gujarat	9.05
Kerala	9.77

Pondicherry	0.35
Total	130.27

The operations of the IFC have not only helped the geographical distribution of industry; according to the statement made by the Chairman at a press conference last week, the IFC has been responsible for spreading entrepreneurship beyond the traditional groups to which it was restricted till recent years. Many newcomers, mostly persons trained in technology management, have been enabled to establish themselves as industrialists. Through the detailed scrutiny of projects, the IFC has also been instrumental in improving

standards of technique and management. The value of prior scrutiny has been recognised by the industrial concerns, to judge by the increase in the requests for underwriting new issues, and the consequent expansion of the Corporation's activities in a field where it was inclined to step cautiously. The underwriting activities cover a wide range of industries such as pottery, china and earthenware, basic industrial chemicals and fertilisers, textiles, metal products, electrical and other machinery, paper and mining.

As indicated earlier, the Corporation, since last year, has been giving sub-loans in foreign currencies against the credit extended by America's AID and the German Bank of Reconstruction, West Germany. These include dollar loans amounting to Rs 2.75 crores to six concerns and two loans in West German currency equivalent to Rs 22.02 lakhs. Apart from the AID and West German credits, Government of India has made an allocation of \$2 million out of the Yen credit of \$80 million. The Corporation has also been extended a line of equipment credit of \$10 million out of the additional assistance of \$30 million promised by France for the Third Five Year Plan.

NOTICE

Owing to the Puja holidays, there will be no issue of Indian Finance on 13 October, 1962. The next issue will be published on 20 October, 1962.

Editor.

The increasing importance of sub-loans in foreign currency in IFC's loan portfolio raises the question whether the Corporation's lending policy could be directed toward augmenting the resources needed by the country for repayment of the loans in future. No doubt, as the Chairman indicated at his press conference, the export orientation of Government's industrial policy is likely to be reflected in the applications for loans that are received by the Corporation. The Corporation has set up a remarkable record in fostering the growth of the co-operative sector in industry. The IFC could be equally effective in furthering the export drive.

Back to Silver?

By Paul Einzig

The recent sharp rise in the price of silver has made it necessary to reconsider our attitude toward the use of silver as a monetary metal. Its demonetisation during the second half of the 19th century and during our century, which was mainly responsible for the sharp decline of its price, was largely due to the conclusion reached by one government after another that the disadvantages of instability of the gold-silver ratio could only be removed through the adoption of a monometallic system. In the meantime the world has experienced exchange fluctuations compared with which the instability of gold-silver exchange in past periods paled into insignificance. Moreover, silver has recovered to a large extent recently in the complete absence of monetary demand, entirely as a result of a genuine increase in its intrinsic value caused by a rise in industrial demand. Having regard to this and to the growing volume of complaints about the inadequacy of the world's monetary stock of gold, it might be advisable to do some hard thinking about the possibility of restoring the monetary role of silver to some limited degree.

The end could be achieved if the governments represented on the International Monetary Fund decided that henceforth their official holdings of silver should be published as part of their metallic and Foreign Exchange reserves, and that, to a limited extent at any rate, they are prepared to accept in international payments silver reckoned on the basis of current market prices. If this were done it would solve the problem of inadequate international liquidity for in addition to the monetary gold reserves the monetary silver stocks too would become available for international requirements. The solution would not be ideal, but it would compare favourably with any increase of international liquidity by means of the various schemes suggested from various quarters.

Many, if not all, governments would be able to increase their monetary reserves considerably as a result of the re-monetisation of their existing holdings and of acquisitions of newly mined silver, or through withdrawal of coins with high silver content. In particular the United States Government could greatly strengthen the international defences of the dollar, since it possesses a very substantial stock of silver whose value in terms of gold would necessarily increase as a result of its partial re-monetisation. Such a change would inspire infinitely more confidence in international monetary stability and in the possibility of economic expansion than any creation of an international currency or some system of mutual assistance which would necessarily mean that the inverted pyramid of the monetary system would become even more precarious. It is to be hoped that, instead of arguing about ingenious devices by which we could raise each other with the aid of each other's shoestrings, the governments of the world will seize upon the opportunity provided by the spontaneous recovery of silver for working out a solution which is considerably less artificial than many of those suggested.

Notes

NCDC

Mr Malaviya on Coal...

Mr K. D. Malaviya, Union Minister for Coal and Fuel, has announced a scheme for the decentralisation of the National Coal Development Corporation. The scheme under which the collieries belonging to the NCDC will be divided into six zones each under the control of the chief mining engineers, comes into operation from 1 October. The reform has been expected for some time since, as in Hindustan Steel Limited, concentration of control at the top has been found to be an impediment to co-ordinated development. The NCDC has been lagging in the implementation of its development programmes. In the first year of the Third Plan, production in the public sector suffered a serious setback. These are, however, to be attributed to the physical limitations arising from power shortage and transport bottlenecks. The key to greater production of coal in the public sector lies naturally in measures to remove these physical limitations. At the same time, the beneficial effects of the steps for decentralisation of administration cannot also be overlooked. Dispersal of power should particularly help in speedy implementation of the development programme by making zonal units responsible for measures

against problems of a local nature. The details of the scheme and the extent of the powers delegated to the zonal units have not been made known. But since the need for dispersal of power has been recognised these should be a matter for adjustment in the light of the actual working of the scheme.

REFINERIES

...and Oil

Mr Malaviya's recent statement affirming the Government's decision not to allow expansion of foreign oil refineries should cause no surprise but considerable disappointment. Elucidating the Government's stand on the subject, Mr Malaviya stated that "the question of revising the existing refinery agreement has nothing to do with the expansion of refineries." This probably is a recent refinement of the Government's policy, as in some of his early utterances on the subject. Mr Malaviya had linked the two subjects together. However, it turns out that even the latest decision is not final and absolute and that expansion of refineries will be considered if the foreign oil companies were willing to import much cheaper crude oil than they do at present and to accept payment for it in inconvertible rupees. The Government is obviously concerned to conserve foreign exchange, but on the face of it, the terms are not calculated to make the foreign private companies enthusiastic about expansion. It is now doubtful whether the Third Plan demand for oil, increasing beyond expectations, can be met by indigenous production. The original estimate at 14 million tons has been considered as being on the low side and revised estimates have placed likely consumption at 17 million tons. Mr Malaviya has challenged the tenability of the revised figure for the reason that it assumes that import and consumption of petroleum products would continue to go unrestricted. While it is open to the Government to restrict the consumption, it is beyond its power to prevent the adverse effects on development that may ensue. Substitute fuels like coal and gas could obviate the pressure on demand for oil in such areas as the Western and the Central regions.

But there is no ground for optimism in this regard on the basis of the present state of progress in coal and gas production. The coal production programmes have been lagging grossly behind the Plan schedules; even at the end of the first year of the Third Plan, the Second Plan target could not be reached. Further, the attainment of the production level of 14 million tons for petroleum products as

envisaged in the Plan is not a matter for facile assumption as there has already occurred considerable delay in the completion of the first two public sector refineries. Not even preliminary work has started in connection with the projected public sector refinery at Gujarat. Will the expansion of the other two refineries be completed in time? It is clear that the country faces a widening gap in availability of oil at the end of the Third Plan.

HOUSING

Need for Self-Help

Self-help in housing, by way of contribution of labour as well as of cash, was emphasised by Mr Mehr Chand Khanna, Union Minister for Works, Housing & Supply, when he inaugurated a five-day seminar of the ECAFE Working Party on Housing and Building materials, in New Delhi last Tuesday. Referring to the need to mobilise small savings for the housing programme, the Minister said: "If co-operative societies could assure the members that they would be helped in having houses of their own the moment they managed to build up a minimum reserve out of their savings and are prepared to contribute their labour, we would have done a lot for the cause of housing in our respective countries. While it is true in general that incomes, especially in the rural areas are low, no one would deny that there is scope—some considerable scope—for diverting some portion at least of those incomes towards housing and thus towards improving the level of living in our villages."

A sum of Rs 23.90 crores has been allocated to State Governments by the Centre under the different Housing schemes for the year 1963. The State-wise breakdown is as under:

	Rs. lakhs
Andhra Pradesh ..	128.34
Assam ..	50.80
Bihar ..	174.40
Gujarat ..	235.90
Jammu & Kashmir ..	45.69
Kerala ..	75.23
Madhya Pradesh ..	161.80
Madras ..	255.88
Maharashtra ..	506.60
Mysore ..	181.90
Orissa ..	62.49
Punjab ..	82.89
Rajasthan ..	158.90
West Bengal ..	289.39
Total ..	2,390.19

EXPORTS

Ready Market for Processed Foods

Inaugurating the Processed Foods Export Promotion Council in New

Delhi last Monday, Mr Manubhai Shah, Minister for International Trade, suggested that leading manufacturers should make concerted efforts to boost exports of these products which he said, had a ready market abroad. He also commented on the export performance of the processed foods industry which has been poor both in relation to total production and to the special export incentives afforded by Government. Exports of preserved vegetables and fruits, including juices, marmalades, pickles etc., in 1961 amounted only to Rs 84 lakhs out of the total production of Rs 5 crores. Exports of biscuits and confectionery are equally disappointing. Out of total production of Rs 8 crores only Rs 7 lakhs worth of biscuits were exported last year. Exports of confectionery amounted to about Rs 1.5 lakhs. Referring to the incentives offered to the industry the Minister said: "A subsidy of Rs 500 per ton is allowed on tinplate used in the manufacture of open top cans for fruit products, condensed milk and meat industries. Provision exists for refund of all customs and central excise duties paid on raw and packing materials used in the manufacture of food products. There are also other fiscal rebates such as drawbacks on tin containers at the rate of Rs 272 per metric tonne and drawback on glass containers at Rs 106.90 per metric tonne and other central excise rebates under Rule 12(a). A special export incentive scheme has been introduced with a view to enabling the exporters of food products to compete favourably in the export market taking into account the price of sugar prevailing in

India." With all these concessions, he said, the industry could certainly augment foreign exchange earnings by a joint effort of the various units engaged in food processing industries.

COMPANY LAW

Professional Discipline

Thanks to the vigorous drive initiated by the Department of Company Law Administration the idea of professional discipline of management accountancy for improving the standards of corporate management is gaining ground in the country. It was accorded a further boost during the workshop discussions attended by top accounting experts and executives convened in the three major commercial centres, Bombay, Calcutta and Madras in September, when topics like profitability, budgeting, return on capital, capital expenditure control, stock control, etc., figured prominently in the deliberations. Though the spade-work for popularising the novel features of this comparatively new science has been done by the Department during the past couple of years, the great leeway that has to be made in the country has impelled the authorities to quicken the implementation of the programme. As a further measure to the dissemination of knowledge on this professional discipline a seminar will be convened in New Delhi toward the end of the current year, and experts from both the public and private sectors are expected to participate.

The three case studies prepared by the Department on the public sector undertakings reveal the lines on which this aspect will be tackled in future. The recommendations pertain to forecasting and planning,

production control, cost analysis, and rationalisation and streamlining of accounts. The report has, *inter alia*, also drawn pointed attention to the need for formulating separate purchase budget in order to ensure purchase in the most efficient manner without permitting needless blockage of funds in inventories; to correlating the purchase programme with production requirements; and to allotting appropriate funds for purchase when the occasion demands and evaluating the performance of the purchase department by contrasting actuals with forecasts. Even in the case of financial reporting, the new proforma of statements prepared by the Department at various levels have sought the introduction of new methods designed to show cost analysis in a proper perspective and in fuller detail.

FOUNDRIES

Foundering Without Pig Iron

The Indian Foundry Industry is on the march. Considerable progress has been registered in ferrous and non-ferrous castings; the number of foundries has gone up approximately to 2,000 with an aggregate installed capacity of nearly 14 lakh tons and the adoption of new lines of production other than conventional items is noteworthy. Even in exports of foundry products there has been commendable improvement and frequent enquiries from foreign traders bear testimony to the immense scope for exports not merely to Asia and Africa but also to industrially advanced countries in Europe and to America. Considering the severe competition in the international markets the quality of castings should strictly adhere to

the prescribed specifications and prices should be competitive.

As Mr K. Agarwalla, the President of the Indian Foundry Association, has pointed out at its eleventh annual general meeting, the difficulty in securing raw materials like pig iron and hard coke is a serious impediment to the progress of the industry. As against the present demand for pig iron by the industry estimated at 1.5 million tons the available quantity is at a low of 600,000 tons. The supply position of hard coke during the past has seldom been satisfactory and more often than not most of the foundries have had to work below their capacities and naturally losses result. The situation demands immediate action to ensure sufficient supplies of raw material.

The absence of a competent research organisation is another obstacle. The need is increasingly felt in new fields of production. The creation of a research organisation is essential to further, mutual assistance on technical problems such as inspection, production, specification, etc., to stimulate research in pure and allied mechanical engineering; to lay down suitable specifications for the production and maintenance of castings; and finally to foster the growth and maintain the efficiency of the foundry industry. Another point touched by the President relates to mechanisation. A rapid mechanisation of the foundries all over the country would not only reduce the cost of production to a great extent but also considerably enhance the quality of products.

The Government's policy of increasing the price of pig iron at frequent intervals has been viewed with concern. The grievances of the industry will have to be considered and selective incentives provided to what is one of the oldest and 'basic' industries of the country.

UK

Exports Higher in June-August

The growth of exports to Western Europe, which has been a feature of Britain's trade in the last few years, has continued during recent months. Board of Trade figures issued in London on 24 September showed that in the three months June-August exports to Western Europe increased by 4 per cent, over those in March-May, including an 8 per cent increase in exports to European Economic Community (Common Market) countries.

Exports to European Free Trade Association (EFTA) countries in June-August were 3 per cent lower than those in the previous three months, but there was an increase of 16 per cent in exports to the remaining European countries.

Exports to the Sterling Area continued to recover, after declining throughout 1961, and there was a 3 per cent increase over the previous three months. Exports to Australia and New Zealand increased by 7 per cent and 5 per cent respectively.

Exports to North America, which faltered during the second quarter after rising continuously in 1961 and early 1962, recovered strongly in June-August, when they were 7 per cent higher than in March-May. In June-August the value of exports was 2½ per cent more, seasonally adjusted, than in the previous three months, and 5½ per cent more than in the last quarter of 1961. This was achieved despite a fall in August—to £ 309,000,000 compared to £ 327,000,000 in July. Most of

S. T. SADASIVAN

General Manager

Mr Subramaniam's Lecture Tour

During his recent visit to Calcutta, Mr C. Subramaniam, Union Minister for Heavy Industries, fulfilled a busy schedule of engagements. The main purpose of the visit was to inaugurate the axle and wheel plant at Durgapur, but the opportunity was utilised to meet pressmen and also to address the annual meeting of the Indian Foundry Association at these places. Mr Subramaniam ranged over subjects that have assumed a topical importance at present. At Durgapur, the celebrations marking the completion of the integrated steel project were marred by the stoppage of work by over 100 workers for more than two hours in the morning. Though in the consequences to production entailed by the strike, it was by no means serious, it was symbolic of the tensions latent in the labour-management relations and also drew attention to the problem of inter-union rivalry which continues to sap the strength of the trade union movement in the country. The strike was in the nature of a display of strength by the leftist employees' union following its vic-

tory over the INTUC-controlled union in the recent elections to the Works Committees. It was therefore appropriate that Mr Subramaniam should have devoted the major part of his speech at Durgapur to the question of labour-management relations. Mr Subramaniam minced no words in emphasising the need for industrial peace and discipline. It was stated that management should ensure such discipline through "firmness and justice".

The suggestion, as Mr Subramaniam had chosen to call it, has relevance not only to the early attainment of full production capacity at Durgapur, but also at Rourkela where frictions between labour and management have often proved to be a severe drag on the progress of the project.

Prospects for supply of pig iron for foundries and the position in respect of production of special steel were other subject touched by Mr Subramaniam. The Union Government has decided to set up three separate pig iron complexes to meet

the needs of foundries on a regional basis. The regional balance is ostensibly meant to obviate transport bottlenecks likely to result from long haulage and to ensure equitable distribution. Establishment of a few plants of the lowshaft furnace type in the public sector to produce pig iron has also been hinted at. But no hope has been given for an early alleviation of the exasperating shortage which the foundries experience at present. The suggestion that the integrated steel plants should switch on to the production of foundry grade pig iron has been ruled out. It was, however, disclosed that the Government was considering the establishment of a pig iron plant at Goa with a possible capacity of 10,000 tons and working on the basis of imported coke and coal.

Mr Subramaniam also reiterated the Government's decision to go ahead with the Bokaro steel project and the Durgapur project for the manufacture of special alloy and tool steel. These two are projects for which foreign exchange coverage has not so far been obtained. Failing

materialisation of US assistance (in respect of which hopes are still entertained), the project is intended to be taken up with assistance from other countries like the UK, the USSR or West Germany. Referring to the Durgapur special alloy and alloy tool steel plant at Durgapur, it was disclosed that the last date for submission of world tenders had been extended to November. Though the project has been criticised by the FICCI for the alleged high cost it will entail, Mr Subramaniam made it clear that the project would not be dropped for this reason. However, the final picture of development of this sector during the Third Plan is not as yet clear. The Defence Ministry project to set up an alloy steel plant is still in a fluid state. There is no knowing also when the Durgapur project will be taken up and completed. In this context, significance attaches to the recommendation of the Demag for the conversion of the Mysore Iron and Steel Works at Bhadravathi into a special steel plant. The decision of the Government in this regard is still awaited.

this was caused by a fall of £ 16,000,000 in exports of engineering products, much of it due to erratic movement in exports of ships and aircraft.

Imports, too, have been rising. In the three months June-August they were 4½ per cent more than in the previous three months and 5 per cent more than in the fourth quarter of 1961. Most of the increase has come from the Sterling Area. In June-August they were 9 per cent more than in the previous three months. Imports from Australia were 8 per cent more, but imports from New Zealand and India were in each case 6 per cent less. Imports from other Sterling Area countries were 13 per cent higher.

JAIPUR UDYOG Progress Despite Difficulties

Despite various handicaps, the Jaipur Udyog Limited has been

able to record satisfactory working during the year ended 31 March 1962. Production of both clinker and cement has been at a higher level than in the previous year and the improvement has taken place despite setback to output caused by shortage of coal, transport and power and labour strike for a period of a fortnight or so.

In his Chairman's speech at the recently held annual general meeting of the company, Mr S. P. Jain has catalogued the several difficulties that still dog the footsteps of the industry. Perhaps the most crippling of these is the inadequate selling price allowed for cement. It is contended that the price fixed in 1958 has been inadequate. The Third Plan has fixed the target for cement at 15 million tonnes capacity to turn out a production of 13 million tonnes but the progress so far of expansion of the industry is not very encouraging. Knowledgeable circles believe that the actual demand at the end of the Third Plan would be much more

than 13 million tonnes. In this view it will be necessary to plan for a higher output of cement. But private enterprise is chary of sponsoring cement companies for the simple reason that it is not quite confident of attracting sufficient investment support for its ventures. Existing cement companies are equally reluctant to expand capacity because at the present level of selling price coupled with the ever-rising cost of production, they are hardly able to plough back profits.

Expansion apart, it would appear that it is becoming increasingly difficult for existing units to work efficiently. Mr Jain has pointed out that the Jaipur Udyog is bedevilled not only by shortage of essential raw materials and services but also by the indifferent quality of supplies made available. Coal supplied to the company has a high ash content and often stocks of coal have had to be run down to a precariously low level, though the position has lately shown some improvement. Transport bottlenecks hamper production at all stages. It is not uncommon that while mills godowns are bursting with cement, consuming centres have had to wait for supplies because the railways are not able to move cement from factory to markets swiftly. The factory is yet to get sufficient power supply though it was assured of the required quantity when the State Government concerned started receiving power from Chambal.

The Jaipur Udyog has taken steps for the mechanisation of its steps for the mechanisation of its quarries and installation of handling and other equipment at the works with a view to improving efficiency and achieving economy in production. This will of course involve the import of some essential machinery. Will Government oblige?

MYSORE PAPER Ever-rising Costs—I

Mr M. D. Shivananjappa, Chairman and Managing Director of the Mysore Paper Mills Limited, has made a valuable suggestion that paper prices should be periodically revised keeping in view the increase in the cost of production caused by extraneous factors. The question of fixing selling prices has assumed vital importance for paper companies in recent years as the cost of production has been going up almost continually thanks to the ever-rising wages and the price of raw materials. Last but not least is the rising trend in the cost of imported raw materials and components of paper machinery. The industry complains that Government does not adequately appreciate its difficulties while fixing the selling price of paper. The consensus is

that the recent ad hoc increase of paper, is quite inadequate to cover the increase in costs. Referring to this important point, Mr Shivananjappa says: "The Indian paper industry as a whole and more particularly the smaller and unfavourably situated mills like ours which are working on progressively diminishing margins attach very great importance to the question of increase in the selling prices of paper to correspond with increased costs of labour, materials, chemicals and spare parts which have all risen steeply and continue to rise."

Although production of Mysore Paper Mills Limited during the year ended 31 March 1962 was higher than the previous year, sale proceeds were lower due mainly to the fact that large quantities of low-priced paper had to be manufactured as adequate supplies of imported wood pulp were not available. The efficiency of the mills, however, has considerably improved with the installation of the Recausticising unit. The financial results of the company for the year are quite satisfactory leaving a surplus of Rs 6,72,432, including a carry over from last year of Rs 36,664, for distribution. The directors have recommended a dividend of 15 per cent subject to tax on ordinary shares. All arrangements and agreements for the company's expansion scheme, with the various lending institutions have been completed. The scheme envisages the stepping up of production to 18,000 tons.

INDIAN TURPENTINE Ever-rising Costs—II

The Chairman of the Indian Turpentine and Rosin Co. Ltd. has pointed out in his speech at the recent annual meeting of the company that future prospects have been rendered rather uncertain by the ever-rising cost of production and the stiff competition met with by the company's products in export

markets. The company gets its bulk of resin supply from the Forest Department of the UP Government. The last Resin supply Agreement expired in March 1962 and the long negotiations with the Forest Department have not produced any result so far. The delay is apparently due to the desire of the UP Government to get the highest possible price. The company has submitted its proposals and before long the agreement is expected to be renewed for a further period. In the meantime, the cost of resin is going up and consequently the profit margin is reduced. Although the company's products are of a high quality, they are encountering keen competition in export markets because of their high price. The Chairman has pointed out that this is in spite of the fact that our export price is nearly half of the internal price. Messrs Camohor & Allied Products Limited Bombay, a firm manufacturing synthetic camphor, will be the main internal consumer of the company's turpentine production.

During the past year a new plant for the production of turpentine was commissioned and it is significant that the entire machinery has been designed and directed by the company's own staff. A backlog of a substantial quantity of raw material lying in stock since 1959 was cleared during the past year and considerable efficiency has been achieved in expeditiously processing raw materials.

ESTRELA BATTERIES Raw Materials Got Indigenously

The past year (to 31 March 1962) has been successful for Estrela Batteries Limited, Bombay, in spite of several handicaps that beset the company: shortage of raw materials, severe cut in import licences and a labour strike for about a month and a half. The ordinary dividend has been maintained at Rs 5 per share. Due to the shortage of imported raw materials, much of the increasing demand for the company's products could not be met in full. Efforts are being made by the company to enter the export markets. The limited life of the dry battery and the severe competition from other suppliers constitute the biggest hurdle in the way of export promotion.

Great difficulty is experienced by the company in obtaining the requisite raw materials because of the severe cut in import licences. Through the active efforts of its Development and Research Department, the company has nevertheless been able to find indigenous substitutes for some of the imported raw materials. The expansion programme to achieve the sanctioned production capacity is being delayed as permission from the Government of India to import certain machinery from the continent is still awaited. The Ball Mills plant, however, is expected to be commissioned soon.

Although the Government is yet to sanction the terms of the collaboration agreement, the company's French collaborators have already their work with the company.

THIRD PLAN Call for Pruning

The extreme stringency of foreign exchange makes it most unlikely that the Third Plan will be implemented in toto. Even among Government spokesmen there does not appear to be a unanimity of hope. It is not surprising, therefore, that the recent statement of the Central Planning Minister that there will not be any difficulty in fulfilling all the targets of the Third Plan as scheduled has not carried much conviction. Speaking at a meeting of the Central Board of the J. K. Organisation, Sir Padampat Singhania has avowed that some pruning is inevitable if the main targets are to be hit. His suggestion is that some of the projects which are not of immediate importance should be abandoned and attention concentrated on the execution of basic industries. He also wants that plants where foreign exchange is not required should be licensed so that the supply of consumer goods may be increased while at the same time there will be a better chance of augmenting foreign exchange earnings. Referring to the general demand in the country for a sizable reduction in the cost of living of the people, he has pointed out (most optimistically) that the remedy lies in the abolition of excise duty which accounts for about 25 per cent of the price of most commodities. It is certain that abolition of excise duty will be the last thing that Government will agree to. On the contrary, with its ever-increasing need for additional resources, Government will be in search of new commodities on which excise duty can be imposed as the scope for netting any sizable resources from direct taxation has become extremely restricted.

JAY ENGINEERING Rising Cost and Exports

Thanks to the cut in power supply and other adverse factors like increased excise levies on copper, winding wires and special steels and increased freight charges on transport of coke, etc, there has been a deceleration in the growth rate of production in the Jay Engineering Works during the last year. On the financial side also, the results have not been as satisfactory as in 1960-61. Both the return on capital employed and the equity dividend show declines. Addressing the annual general meeting of the Company, Mr Lala Charat Ram, Chairman of the Company, drew attention to the rising trend in the cost of production and the adverse effects this spells for exports. Engineering exports have been looking up

in recent years, and it is natural that the scope for enlarging exports in this regard should be explored further. As Mr Charat Ram has pointed out, the main hindrance to efforts at increased exports is constituted by the higher cost of production of the Indian products. He has commended the efforts that are being made at the official level for stimulating Indian exports. At the same time, he has stressed that the industrial interests themselves should realise the importance of self-reliance and maximum individual export effort. While underlining the need for measures for cost control in industries, Mr Charat Ram has also urged the need for a policy that would take into account the immediate scope for increasing exports on the basis of subsidisation. A dual price policy involving a higher price in the domestic market and lower price for exports is commonly followed in all the leading industrial countries and there is no reason why it should not be thought of in our country also, especially if the resulting losses could be spread over every section of the community; that is, the Government foregoing some part of earnings from taxes, workers agreeing to a reduction in bonus, management accepting reduced remuneration and consumers agreeing to pay a slightly higher price. In view of the urgency of the problem it is necessary that the economics of exports should be properly looked into and a suitable policy devised, taking into account all the essential elements of a successful export drive.

SNIPPETS Ashok Leyland

Further details of the fleet of Ashok Leyland Comet ALCO/1-176 in wheelbase goods chassis ordered by the Indian Oil Company, Limited Bombay, have now been received. The cabs and tanks on these chassis will be fabricated under the supervision of Automotive Manufacturers (Private), Ltd, Bombay, one of the main dealers of Ashok Leyland Ltd. The driver's cab will be of all-metal construction with the interior roof covered with PVC leather cloth and roof domes consisting of aluminium alloy sheets. The off-side windscreen will be divided vertically in the centre while the nearside screen will be fixed.

The driver's seat is adjustable for horizontal and vertical movement and the mate's seat is of tubular construction. Both the seats will be upholstered with foam rubber cushion and covered with PVC leather cloth. The vehicles will be painted in synthetic enamel as per the Oil Company's specification.

The tankers will operate in the State of Maharashtra and will deliver the Indian Oil Company's products to various fuel pumps.

Uttam Singh Dugal & Co. (Private) Ltd, has placed a contract with

Ashok Leyland for the delivery of 15 Comet ALCO/1-176 163 in. wheelbase goods chassis for work in the steel town of Bhilai.

The Bhilai Steel Project is now busy with its expansion programme which has commenced according to schedule. Apart from its own fleet which includes nearly 50 Comet goods and passenger vehicles, the project employs a number of private contractors mainly on construction work. The 15 Comet 7/8 ton payload goods vehicles chosen will help the speedy execution of the work for which it has received a contract.

Simco Meters

The Commonwealth Development Finance Company, Limited is to enter in a big way in the manufacture of electric meters in India. Under the recently signed agreement with Simco Meters Ltd, Tiruchirappalli, the CDFC has consented to subscribe the equivalent of £50,000 for ordinary shares, and a sterling loan of £137,500 toward the total cost has also been promised. Simco Meters will undertake the manufacture of domestic and industrial electricity meters. The company is sponsored by the Seshasayee Brothers (Private), Ltd with the technical collaboration of Denis Ferranti Meters Limited of Bangor, Wales and will be managed by the South Madras Industries Development Company (Private), Limited. The production of meters is expected to commence in the middle of next year.

Machine Tools

Indian Machine Tools Manufacturers' Association report that the total approximate production of various machine tools by their 21 leading member-firms during the month of August, 1962, was as under:—

Description of Machine Tools Manufactured.	Quantity Nos.	Value Rs.
Lathes	292	27,38,511
Milling Machines	37	27,00,000
Radial Drills	31	9,73,000
Pneumatic Tools	471	3,78,106
Air Compressors	12	3,41,196
Shaping Machines	28	3,23,321
Regulators	1,539	2,42,010
Blow-pipes	811	1,71,365
Boring Machine	1	1,50,000
Drilling Machines	20	1,10,180
Press Brakes	2	92,850
Planing Machines	6	90,566
Eccentric Presses	8	81,203
Furnaces	22	77,106
Pneumatic Power Hammer	1	51,165
Oxygen Cutting Machines	15	48,060
Hacksaw Machines	10	44,432
Surface Grinder	1	28,006
Lathe Chucks	168	25,200
Power Press	1	13,506
Double ended snagging grinder	1	8,700
Guillotine shearing	1	7,500
Lathe Centres	15	1,800

Total 3,491 87,04,398

Don't damage the floor.

Let your goods roll on

DUNLOP TROLLEY CUSHION TYRES

Goods movement in factories, ports and railway stations is smooth, swift and easy on Dunlop Trolley Cushion Tyres. Fragile goods are carried safely (Dunlop Trolley Tyres cushion the bumps) and heavy goods with a greatly reduced tractive effort.

RBI

Central Board's Report for 1961-62

The annual report of the Central Board of Directors of the Reserve Bank of India contains a review of the working of the bank during the accounting year ended June, 1962 and a survey of current economic problems and policies.

The economic developments of 1961-62 (July-June) point to some narrowing of the imbalance between aggregate demand and supply, with an easing of the pressure on prices. But this easing was associated with a slackening in the rate of development and growing pressure on the balance of payments. Natural factors affecting agriculture played a large part in the slower rate of increase in production during the year, but there was evidence of strains and stresses from bottlenecks in fuel, power and transport and from deficiencies in supply of technical and managerial personnel which retarded economic progress. Some slackening in the rate of increase in national income from the record of 7.1 per cent in 1960-61 was to be expected, the rise in 1961-62 is estimated at 3.4 per cent, giving a modest start to the Third Plan and increasing the leeway to be made good during the remaining years.

The increase in agricultural output in 1961-62, tentatively estimated at 1.6 per cent, is to be taken with the increase of 8.1 per cent in 1960-61. The rise in output in 1961-62, though small, indicates that the various measures adopted in earlier years, such as use of fertilisers, spread of irrigation facilities, provision of cheap production credit etc. have borne some fruit, and simultaneously emphasises the need for further efforts to increase crop yields for attaining the targets indicated in the Third Plan. The need to pursue intensively measures to increase both agricultural production and productivity assumes a special urgency, not only to broaden the industrial base but to make possible an increasingly larger flow of exports. The report focusses attention on the problem of diversion of land from one crop to another and, in this connection, emphasises the crucial role of price policy. It also stresses the need to moderate the annual fluctuations in output, possibly through a combination of crop planning, support prices and buffer stocks. Agriculture, the report emphasises, is a field in which the role of the States is not only important but crucial.

In the industrial sphere, the Report refers to the influence of raw material shortages and bottlenecks in power and transport in curtailing the growth of industrial output in 1961-62. The seriousness of the power and transport bottlenecks, the report states, cannot be exaggerated, since they relate to the infrastructure of planned development and affect the advance of the entire economy. The report stresses the need for determined efforts to develop new materials and intermediate products internally to reduce dependence on imports, and to bring

about the largest measure of import substitution through research, inventiveness and adaptation, as unified loans from abroad are not forthcoming on the scale desired. It also emphasises the need for practical and sustained efforts simultaneously to promote all-round efficiency, if the high cost of development is not to act as a drag on the economy for years to come.

Aggregate supply during 1961-62 was better than in 1960-61, the estimated increase of 3.4 per cent in national income being a broad measure of the improvement. Aggregate demand also increased, and probably at a slightly higher rate than aggregate supply. Consequently, the index of wholesale prices showed a rise of 1 per cent for the accounting year 1961-62 as compared to an average annual increase of about 6 per cent in the Second Five-Year Plan. The report states that in the context of not merely exports but the general health of the economy, the need to hold the price line cannot be over-emphasised. The development process involves a certain degree of inflationary pressure in a less developed country, but such pressure has to be contained by suitable policies which would mop up surplus purchasing power. From this point of view, mobilisation of substantial resources by taxation becomes an inescapable constituent of our planning. In fact, since savings in the economy are low, this method of levying what in substance is forced savings is unavoidable and is preferable to forced savings by deficit financing.

In 1961-62, with the substantial stopping up of the growth in total outlays, the problem of resource mobilisation in the public sector became even more difficult, as is evident from the wide swing from an overall surplus of Rs 32 crores for 1960-61 in the Central and States budgets to a deficit of Rs 87 crores for 1961-62. For 1962-63, the combined overall budget deficit of the Centre and the States would be Rs 121 crores. There is clearly need for caution, the report emphasises, in resorting to deficit-financing during the remaining years of the Third Plan, especially in the context of the exiguous state of our foreign exchange reserves. In the private sector, mobilisation of resources for financing the needs of industry appeared to have proceeded well during 1961-62. This was facilitated by the continued buoyancy of share markets, though they were less ebullient than in 1960-61. The resources raised from new issues were augmented by financial assistance from various special institutions purveying medium and long-term credit to the private sector of industry, as well as from the various schemes already in operation to assist the small-scale industries. As regards the co-operative sector, the Reserve Bank continued to lend to State Governments for subscribing to the share capital of co-

operative credit institutions and to subscribe to the debentures floated by central land mortgage banks.

Reflecting the increase in deficit financing, the pace of monetary expansion was slightly larger, although scheduled bank credit recorded a much smaller expansion than in 1960-61. The most striking feature of monetary trends during 1961-62 was the rapid growth of deposits, the previous year's setback proving to be temporary. As the expansion in bank credit was modest relative to the growth in deposits, banks maintained a high degree of liquidity during the year, in contrast to the strain experienced last year.

As regards credit policy, the major role played by deficit-financing in the expansion of money supply as well as the worsening of the balance of payments pointed to the need for continued caution and restraint. The slackening in the rate of growth in industrial production, which stemmed from physical shortages and bottlenecks, and of the economy as a whole made the need for restraint on monetary demand all the greater. In consequence, the Reserve Bank's monetary and credit policy continued to be one of general restraint, though it was tempered by concessions to certain sectors like the co-operatives and small-scale industries. The three-tier system of slab rates, introduced on 1 October 1960, was the chief instrument of credit control employed by the bank throughout the year. Early in July 1962, this was substituted by a four-tier system, with smaller quotas of lendings at the lower rates, designed to raise the net cost of access to the Reserve Bank by about $\frac{1}{2}$ per cent or more. Apart from its effect on the cost and availability of credit from banks, the higher cost of borrowing from the Reserve Bank in recent years, appears to have set in motion an intensified drive for deposit mobilisation by banks. Selective credit controls were adapted, as before, to the changing economic conditions, some of the controls being relaxed and some withdrawn. Efforts to strengthen the banking system were also continued, through merger of sub-standard units, and through improvement of the capital funds and the liquidity ratio of banks.

The overall balance of payments position showed a deterioration, as a result of the unfavourable turn in current "invisibles" during the year from a traditional surplus to a sizeable deficit. Imports, though less than last year, continued to be high necessitated by the growing economy, at the same time there was a small expansion of exports, leading to an improvement in the trade balance. However, with the onset of the lean season for exports and some delays in reimbursement receipts under aid projects, foreign exchange reserves declined rapidly, the Reserve Bank's foreign assets contracting to a level below Rs 100 crores. A stand-by agreement for \$100 million was therefore, negotiated with the International Monetary Fund soon after the termination of the year to tide over temporary difficulties.

The stagnation in exports over the Second Plan period, the report states, has been a disturbing feature and the stimulation and expansion of exports should continue to have top priority. With the formal acceptance of exports as a first priority a full-fledged Department of International Trade has been set up by Government to impart a new dynamism to the solution of the export problem. The difficulties of exporters have been considered piecemeal from time to time and measures have been introduced to provide additional assistance or special incentives to facilitate exports. What is needed, however, is a comprehensive approach to the entire export problem, for in the case of exports especially, a drive for all-round increase in productivity is essential.

Given the size and pattern of the Plan investments, foreign assistance on an adequate scale remains an indispensable supplement to domestic resources for development. India has been fortunate in securing the assistance of many foreign countries to a substantial extent. However, as most of the foreign aid so far received is tied to projects, it allows inadequately for the heavy unfavourable incidence, on the balance of payments, of a programme of development of the magnitude and kind on which India has embarked. A certain proportion of aid in the united form would improve its general efficiency and provide greater flexibility in the execution of the Plans.

In the field of banking legislation and development, the report refers to the enactment of the Deposit Insurance Corporation Act and the setting up of the Deposit Insurance Corporation as well as the progress made in the compulsory mergers of banks. As a result of these measures, public confidence in the banking system, which had been adversely affected to some extent in the latter half of 1960, was fully restored.

In recent years, the Reserve Bank has played an active part in establishing the institutional machinery for the provision of industrial finance and for facilitating industrial growth in the private sector. This machinery, the report states, is becoming increasingly useful and its scale of operation has continued to expand. In the sphere of agricultural finance the Reserve Bank's efforts continued to be directed towards the revitalisation and strengthening of the machinery of co-operative credit. The volume of finance provided by the bank to the co-operative sector showed a further increase during the year, the outstanding amount of short-term loans made available to State co-operative banks for financing seasonal agricultural operations and marketing of crops rose over the year from Rs 100.1 crores to Rs 114.8 crores, and that of medium-term loans for agricultural purposes from Rs 8.8 crores to Rs 11.7 crores.

The bank's income amounted to Rs 54.0 crores during the accounting year ended June 1962 and expenditure Rs 10.5 crores, the net profit available for payment to the Central Government in terms of Section 47 of the Reserve Bank of India Act being Rs 43.5 crores as compared to Rs 42.5 crores in 1960-61.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

It is a poor heart that never rejoices and the Puja that is round the corner as I write is an occasion when all except those whose souls have become completely shrivelled up try to snatch a little gladness. The grim struggle abates a while and worries are deliberately put behind. The pockets are flush, though not for long, their contents quickly emptied into the shop-keeper's till. The rains recede and the season mellows with the first nip in the air giving agreeable promise of cooler days to come. Perhaps it has something to do with the season, there is in these autumn festivities nothing of the abandon of the spring festivals, none of the heady sense you thrill to of breaking bounds and chasing life as it bursts on you on all sides. The air then stings you with the warmth to come, and the riot of colour where there were grey and leafless stumps before sends your blood coursing quicker through you, and sober men do mad things. The gaiety during the Puja, on the other hand, has a certain undercurrent of sadness and the fugitiveness of the fleeting moment is never far from one's consciousness. At any rate this mood has woven itself in the legend of the Puja in Bengal, where it commemorates the annual home-coming, after reluctant permission from her Lord, of Uma, whom every house in Bengal has adopted as its daughter. But her stay is so short that her visit is as much a source of anguish as of joy. All this perhaps is a little remote from the Puja of today. Things have changed over the years and with the changing times and changing values, the Puja holidays have become assimilated to the secular vacation of modern times, the getting away from it all. They no longer provide the focal point for ancient pieties of the hearth. There is a good deal of the keeping up with the Joneses in the desperate emptying of Calcutta during this week to hill stations and fashionable resorts, but it does indicate also the displacement of the idea of pilgrimage by that of tourism. Of course, Calcutta can empty itself of tens of thousands and still not feel the difference. The "community worship"—another phenomenon of recent times—in hundreds of Pandals in all parts of the city is enough to keep the traffic choked and the police busy. For the less robust among us there are many irritations in store. For instance, there is the racket that the loud-speakers raise with the most incongruous film-songs

rending the air. Despite all this, I can hardly bring myself to grudge the little happiness that all this brings people's way. The young in particular, God bless them, have a good time and that is something worth corking our grousers for.

Gandhiji's name is taken less often these days and, for that sole reason, taken less often in vain. Precious little of what he considered important in personal and public life survives in practice. Gandhiji is a difficult man to stereotype: there was much that was improvised and tentative in his ideas, and in his exposition thereof over the years there were many contradictions and ambiguities. And yet, his ideas form a recognisable whole. It would be futile to deny that there is very little that is uniquely Gandhian in the socio-political ideals pursued by the present generation of Indians, though here and there half-hearted attempts at working out his ideas are made either out of real conviction or as a concession to some pressure groups. A self-conscious modern State with all the paraphernalia of army and police has little in common with a non-violent, almost non-governing, political entity that Gandhiji seemed to consider as ideal and even practical. Our economic philosophy with its conventional, even old-fashioned, faith in an industrial society serving a consumption-oriented way of life has little in common with Gandhiji's ideas on the subject. It may be that his ideas were utopian, but they were certainly challenging. Instead of trying to work them, we have tried to play it safe—not that anyone can blame us very much on the choice, considering the risks,—by pursuing conventional industrialisation leading to material affluence as an ideal. And yet, birthday pieties are not entirely without their value. What would have most distressed Gandhiji, were he among us today, is the profound corruption of character, a pervasive atmosphere of the grossest kind of self-absorption and aggrandisement. In the economic sphere, these manifest themselves in the most blatant kind of materialism and worship of money, in the vulgarest ostentation of wealth and conspicuous consumption, in the midst of much unalleviated mass misery. In the political sphere, it would be the men in the power game playing it with a cynical disregard of principles and even appearances that

would have distressed him. Take the question, for example, of "National Integration". This is an expression that has been so continually done to death in the last few months that one would rather avoid using it, if one could. And yet the idea itself is of urgent relevance. Why is it still a mere dusty cliché? It is because of the lack of a burning conviction in it. National integration is capable of realisation the moment politicians give some evidence that they believe in it by suffering individual deprivations in its pursuit. Gandhiji often demonstrated his bona fides in this way. Linguistic, provincial and caste squabbles have to be fought consciously for they are powerful, natural, almost normal, impulses in human beings. But what actually happens is that the moment it is expedient to use them for some immediate gain, it is so used without any qualms. This is the kind of action that Gandhiji's steady and unwavering gaze would have quelled. His memory ought to do the same thing, but then his memory is becoming hazier and hazier as the days go by.

Fraud on the Constitution is a pretty strong expression and I cannot readily recall the Supreme Court having used it before. Therefore its description in such terms of the Mysore Government's order on reservation of seats in professional colleges is as near losing its temper with executive delinquency as it is ever likely to come. But then the Mysore Government has been simply clamouring for the snub. It has been persisting in this particular piece of discriminatory outrage despite successive raps on the knuckles by the Courts. From 1958, it has passed four orders on the subject, each one of which has been declared void for the most part by the Mysore High Court. In July this year, it passed another which has been taken straight to the Supreme Court under article 32 of the Constitution. In this order, 81 communities were defined as "backward" and had 28 per cent of the seats in professional colleges reserved for them. About 135 communities were defined as more backward and had 22 per cent of the seats reserved for them. The scheduled castes and scheduled tribes had 15 and 3 per cent respectively of the seats exclusively for them. This left 32 per cent of the seats for the common pool. The Supreme Court's judgment on the validity of this order is sure to go down as a judicial classic: it has said in effect that the "socially and educationally backward classes" for whose advancement article 15 (4) authorises special provision, should, in the matter of backwardness be

comparable to the scheduled castes and scheduled tribes to whom also article 15 (4) applies. Secondly, the Mysore order which has made caste the sole criterion of social backwardness within the meaning of article 15 (4), not only offends against article 29 (2) but breaks down even at the commonsensical level by making article 15 (4) not applicable to non-Hindus. Thirdly, the criterion of educational backwardness applied by the Mysore Government was arbitrary. Thus, with the State average of student population per thousand being 6.9, it considers Lingayats (among whom the average of student population per thousand was 7.1) a backward class. The Supreme Court has also drawn attention to another screaming absurdity: the Government's classification makes 90 per cent of the population of the State backward. In consequence, a special constitutional provision conceived as an exception to the general rule of equal rights is invoked for application to an overwhelming majority. If 90 per cent of the population is in fact backward, then backwardness as a special problem cannot arise. The only form special provisions can then take is the deprivation, for whatever reason, of the rights of the minority. It is this intolerable enormity that the Supreme Court has rightly characterised as a fraud on the Constitution. Courts cannot take judicial notice of the political compulsions behind this act but it is well known that Mysore has long left Madras behind in its appeasement of the grossest kind of communal clamour. This has led to such ridiculous spectacles like the Lingayats who were originally classified as just "backward" agitating (successfully) to be included among the "more backward". Mysore can yet redeem, if it chooses, its fair name, thanks to the Supreme Court.

Industrial Finance Corporation of India

Useful Contribution Towards Maximum Production and Development of Human Resources

Gross Income Reaches Highest Figure

Mr. Mathrani, the Chairman, Reviews Progress

The following is the speech delivered by Mr. Mathrani, Chairman of the Industrial Finance Corporation of India, at the Fourteenth Annual General Meeting held on 28th September, 1962:—

Gentlemen,

I have great pleasure in welcoming you and placing before you the Fourteenth Annual Report of the Board of Directors and the Accounts for the year ended the 30th June, 1962. The printed copies of the report have been circulated to all the shareholders and I shall, with your permission, take them as read.

2. The year under report almost coincides with the first year of the third Five Year Plan. As the lending policies of your Corporation are closely integrated with the country's Five Year Plans, we have, as in the past, made during the year under review, a useful contribution towards the successful implementation of the objectives of the Plan viz. to create conditions for the maximum production and employment and the development of human resources. Your Corporation has, during the year, sanctioned loans of the order of Rs. 24.45 crores and has disbursed loans of the value of Rs. 10.78 crores. These are the highest figures for loans sanctioned as also disbursed in any single year of the working of the Corporation and thus constitute fresh landmarks in the history of the Corporation.

3. The year under review has been another successful year in the life of the Corporation. Our gross income during the year was Rs. 3.04 crores which is the highest figure reached so far and shows an increase of Rs. 5.32 lacs over that of the previous year. This has been achieved in spite of the fact that the income of the preceding year included a profit of Rs. 22.62 lacs realised by the Corporation on the sale of its investments, a factor which did not operate during the current year as no investments were sold by us during the year. Our gross profit, subject to provision for taxation, was Rs. 139.71 lacs as against Rs. 139.30 lacs for the previous year. If the profit on the sale of investments is excluded, the profit for the year under review is higher by Rs. 13.98 lacs than that for the pre-

ceding year. The Corporation has also had to make a larger provision for taxation as a result of the increase in the rate of income-tax from 45% to 50% in the current year.

4. As the shareholders are no doubt aware the Government of India had, during the first eight years of the career of the Corporation, to make subvention of the order of Rs. 53.45 lacs to enable the Corporation to pay the minimum guaranteed dividend of 24% per annum on its share capital of Rs. 5.00 crores. With the progressive improvements in our working results, we have repaid so far a sum of Rs. 35.45 lacs during the last four years and the balance of subvention outstanding at present is Rs. 18 lacs. We have decided to repay this amount from the profits of the year under review and thus liquidate finally the Corporation's liability in this behalf—a step which I have no doubt will receive the whole-hearted support of the shareholders. With the discharge of this statutory liability, the Corporation may now claim to have come of age—as an institution depending more and more on its own strength in its task of promoting the industrial development of the Country.

5. I had mentioned in my speech at the last Annual General Meeting that in the Finance Act, 1961, the Government of India had made an amendment to the Income-tax Act, which gave a relief to the financial corporations approved by Government by enabling them to claim a rebate in income-tax in respect of the amounts, not exceeding 10% of the total income of each year, transferred by them to a Special Reserve Fund. I am glad to say that the Central Government have approved the Corporation for the purpose of availing itself of the benefit of this rebate from the year ended the 30th June, 1960. As required under Section 36(1) (viii) of the Income-tax Act, 1961, we have created a Special Reserve Fund and have transferred a sum of Rs. 24.82 lacs to this account in respect of the accounting years ended the 30th June, 1960 and 1961 from our General Reserve Fund. Out of the current year's profits, we have transferred a sum of Rs. 13.21 lacs to this Fund in order to qualify for the maximum

admissible rebate in income-tax. The total amount thus transferred to this Special Reserve Fund amounts to Rs. 38.03 lacs. As a result of these transfers, we have secured a relief to the extent of Rs. 11.84 lacs in our income-tax assessments for the accounting years 1959-60 and 1960-61. We expect to get a rebate of Rs. 6.60 lacs in respect of the year under report.

6. A review of our loan accounts has shown a further improvement in the position regarding bad and doubtful debts. It is a matter of gratification that not only have there been no accretions to bad debts but on the other hand some of our loan accounts, in regard to which we were anticipating shortfalls, have been fully liquidated and the rest are in the process of being cleared. No additional provision was, therefore, considered necessary by your directors towards the Reserve for Bad and Doubtful debts, the balance in which now stands at Rs. 14.47 lacs.

7. As a result of our underwriting operations both in respect of preference and equity shares, our investment portfolio has been slowly enlarging and we held, at the end of the year, investments of the paid-up value of Rs. 106.44 lacs. A majority of the shares held by the Corporation are redeemable cumulative preference shares carrying fixed rates of dividend. The share issues have been underwritten by the Corporation as a part of its promotional activities and the role of the Corporation has been that of a catalytic agent rather than as an investor. We have, however, as a measure of caution, transferred a sum of Rs. 2.00 lacs to the Reserve for Depreciation on Investments.

8. We have transferred a sum of Rs. 26 lacs out of the net profits for the year under review to the General Reserve Fund which now stands at Rs. 134.08 lacs. Our Special Reserve Fund under Section 32-A, to which are credited all the dividends on the shares of the Corporation held by the Central Government and the Reserve Bank of India, now stands at Rs. 41.05 lacs. The total of the balances now standing in General Reserve, the Special Reserve Funds and other Reserves comes to Rs.

230.63 lacs, which may be regarded as a creditable performance.

9. I had mentioned at the last Annual General Meeting that the Board of Directors of the Corporation had under their consideration the issue of further share capital to the extent of Rs. 2 crores carrying a minimum guaranteed dividend of 4% per annum, for which the approval of the Central Government had been obtained. We entered the market in March this year and I am glad to say that the issue was a success and in fact the quota reserved for the institutional investors, including the co-operative banks, was over-subscribed. On behalf of the Board of Directors and myself I should like to thank you all for your response to this issue and to welcome to our fold those investors who have subscribed to our shares for the first time. The dividend on our shares has, in view of the restriction contained in Section 31(2) of the I. F. C. Act, to be limited to the minimum guaranteed by the Central Government viz. 4% per annum in respect of the recent issue of Rs. 2 crores and 24% per annum in respect of the original issue of Rs. 5 crores. I am aware of the feeling of our shareholders in regard to the dividend in respect of our first issue. An alteration of this position, however, requires an amendment to the I. F. C. Act which is under the active consideration of the Government of India. We have set aside a sum of Rs. 12.66 lacs for the payment of the guaranteed dividend to our shareholders for the year under report. The dividend in respect of the second issue is, in accordance with the terms of the issue, payable from the 12th March 1962 i.e. the date when the issue was launched on the market.

10. The Corporation received during the year 59 loan applications for an aggregate amount of Rs. 31.40 crores as against 70 applications for an aggregate amount of Rs. 36.86 crores received in the preceding year. The fall in the number of applications could be attributed partly to the restrictions on the import of plant and machinery on deferred payment terms and also the curtailment of the grant of industrial licences for the establishment of new sugar factories. Moreover, during the recent months we have

been advising the parties coming to us for assistance to obtain, as far as practicable, the various statutory permits and clearances such as those relating to the grant of industrial licences, the permission of the Capital Goods Committee and the Foreign Agreements Committee and the consent of the Controller of Capital Issues before making a formal application to us. This may also be partially responsible for a fall in the number of applications. But you will appreciate that the revised procedure saves a good deal of infructuous or avoidable labour on the part of our beneficiaries and substantially shortens the period during which applications have to be kept pending. It would, therefore, be of advantage all round in the long run. However, during the intervening period we continue to have informal discussions with them in order to enable them to submit to us their applications in as complete a form as practicable.

11. Out of the total loans of Rs. 130.27 crores approved by the Corporation during the last 14 years, loans aggregating Rs. 24.09 crores were either declined by the applicant concerns or were not made available to them for various reasons, and loans amounting to Rs. 7.86 crores were pending approval of the Government of India or the AID. The firm commitments of the Corporation for the grant of loans thus aggregate Rs. 98.32 crores, out of which a sum of Rs. 68.14 crores i.e. about 70% of the commitments, was disbursed. These results may be regarded as satisfactory and have been achieved as a result of the various measures which the Corporation has taken from time to time to expedite the attendant formalities on the part of the Corporation prior to the disbursement of the loans. In order to meet the immediate requirements of our borrower concerns, we also continue to grant interim loans in cases where a prima facie valid title to their properties has been established, and during the year, we disbursed interim loans to the tune of Rs. 5.73 crores.

12. While the loans in rupee still constitute the bulk of our lending operations, the Corporation has also, since last year, been sanctioning sub-loans in foreign currencies. The first dollar loan of 10 million dollars (Rs. 4.76 crores) obtained from the D. L. F. (now merged in A. I. D.) was completely committed early this year. I am glad to say that we have received a second loan of 20 million dollars (Rs. 9.52 crores) from the A. I. D. and a formal agreement in this behalf was executed in June, 1962. A sum of 4.8 million dollars (Rs. 2.29 crores) has already been committed from the second loan and I believe that the balance of the loan will be put to fruitful use in not too distant future. As the first dollar loan was largely and the second

dollar loan is completely tied to purchases in the United States it has been our endeavour to obtain in addition lines of credit from other countries. These efforts have now borne some fruit and we have been sanctioned a line of credit in the West German Currency to the extent of 15 million D. M. (Rs. 1.79 crores) from Kreditanstalt für Wiederaufbau Frankfurt/Main (German Bank for Reconstruction), out of which a sum of 1.92 million D. M. (Rs. 22.86 lacs) has already been committed in the form of sub-loans. I may add that there are indications that an additional loan in the same currency will be available to the Corporation in the near future. The Government of India have also further decided to make an allocation to the Corporation of the Yen equivalent of a sum of 2 million U. S. dollars from the Yen available with them. Lastly we have recently been informed of the sanction to I. F. C. of a line of equipment credit in French currency to the extent of 50 million new French francs (Rs. 5 crores) through a French commercial bank and the terms and conditions of the credit are now in the process of negotiation. These you will agree, are welcome developments as they will go to meet, though to a limited extent, the needs of our borrower concerns in respect of foreign currencies. In view, however, of the fact that except for the West German loan, these credits are tied to purchases in those countries the need for a more substantial line of credit in convertible currency for meeting the foreign exchange requirements of industries in the private sector is obvious.

13. Coming to our loan operations the sugar industry continues to lead the list of loans approved by the Corporation. During the year, we sanctioned loans of the order of Rs. 7.52 crores to 13 sugar mills of which there were 12 sugar co-operatives. This brings the total amount of loans approved to Rs. 30.4 crores to sugar co-operatives numbering 45 which are distributed all over the country. Besides, the Corporation has sanctioned loans of the order of Rs. 1.02 crores to three co-operative spinning units and one co-operative unit for the manufacture of vegetable oils. The loans approved by the Corporation to co-operative units represent 24.1% of the total loans approved, and is indicative of the high priority given by the Corporation to the development of the co-operative sector. These co-operatives, I am glad to say, have, by and large, shown satisfactory working results.

14. Chemical industry to whom loans aggregating Rs. 6.38 crores were sanctioned during the year has, for the first time, occupied the second place while the third place is taken by the electric machinery manufacturing industry to whom loans of the value of

Rs. 3.14 crores were sanctioned. For the first time, the Corporation has sanctioned to a concern in Mahe in Pondicherry for setting up a textile mill a loan of Rs. 35 lacs in addition to a guarantee for deferred payments to the extent of Rs. 5.62 lacs. The Corporation has also for the first time sanctioned a loan of Rs. 1.09 crores to a concern engaged in the production of industrial and medical gases.

15. For sometime past the problem of modernisation and expansion of the coal mining industry in the private sector has been engaging the attention of the Central Government which has been sanctioned a loan of 35 million dollars by the World Bank for the import of coal mining equipment and spares in order to achieve this purpose. The coal mining projects to be financed out of this credit have been examined by high level screening committees set up by the Government of India, with which our Corporation has been associated. While the foreign exchange requirements of these projects would be met out of the World Bank credit, the rupee finance has to be arranged by the undertakings concerned either from their own resources or through the various institutional channels. In view of the vital nature of this industry in the present context, the Corporation has agreed to assist in this direction and has so far sanctioned loans to 3 such concerns of an aggregate amount of Rs. 82 lacs.

16. Although our approach to underwriting has been somewhat cautious, we are continuing to enlarge our activity in this field in order to meet the increasing requests of our clients. In view, however, of the fact that in most of these cases the Corporation has sanctioned loans for substantial amounts, the underwriting commitments of the Corporation in respect of such concerns are generally of a token nature. During the year, we had approved 11 proposals for underwriting facilities to the extent of Rs. 62 lacs in equity shares and Rs. 10.5 lacs in preference shares. The applications approved cover a wide range of industries such as pottery, china and earthen-ware, basic industrial chemicals and fertilisers, textiles, metal products, electrical and other machinery, paper and mining. Since December, 1956 when the Corporation started underwriting business, we have underwritten 18 issues of capital for an aggregate amount of Rs. 4.92 crores. As a result of amendments to the I. F. C. Act in December, 1960, the Corporation has also been authorised to subscribe directly to the stocks and shares of industrial concerns. Having regard to the experience gained by the Corporation in the field of underwriting in the past few years, it is expected that the

Corporation will be able to make a fruitful contribution in this direction.

17. There was a reduction in the requests for guarantees of deferred payment arrangements owing to the restrictive policy of Government in this behalf. We approved three applications for such guarantees of the value of Rs. 43.61 lacs during the year, bringing the total value of guarantees approved by the Corporation to Rs. 27.6 crores.

18. The periodical inspections carried out by us and the progress reports received from our borrower concerns have shown that many of them earned sizable profits and 37 such concerns have during the year, declared, with our prior approval, dividends in excess of 8%. There has been a further reduction in defaults in the repayment of principal and the payment of interest by our loanee concerns. The percentage of defaults in the repayment of principal has declined from 2.34 in 1960-61 to 1.24 in 1961-62 while in regard to interest it has come down from 0.25 to 0.18.

19. The resources position of the Corporation continued to be comfortable during the year. The capital outgoings in rupees amounted to Rs. 10.78 crores (inclusive of investments in shares to the extent of Rs. 26 lacs). We met these commitments from the proceeds of the further issue of share capital of Rs. 2 crores and borrowings from the Government of India to the extent of Rs. 4½ crores in addition to our own internal resources of the order of Rs. 4.28 crores inclusive of the repayments of loans due to the Corporation. We did not therefore enter the market for a fresh issue of bonds during the year. We have, however, decided to go in for a fresh issue of bonds to the extent of Rs. 6 crores to enable us to strengthen our resources further in order to meet the likely demands of industry during the year. These bonds which are for a period of 12 years will carry rate of interest @ 4½% per annum the issue price being Rs. 99.5. The terms are similar to those on which the State Governments recently floated their loans and are, I believe, sufficiently attractive for the investors. I am sure I can count upon your generous support, as in the previous years, to make the issue a success. It is a matter of coincidence that the issue has been opened to public for subscription from to-day.

20. The rate of interest charged by the Corporation from its borrower concerns had remained constant at 6½% per annum net for the last five years. Our lending rate is, however, dependent on our borrowing rate as also the general monetary and economic conditions. During the last year there was a gradual increase in the rates of interest

charged by the scheduled banks and we had reached an anomalous position where our rate for medium and long-term loans was lower than that charged by many commercial banks for their short-term loans. Further, the Government of India and the State Governments offered higher yields in respect of their recent issues of public loans as compared to their market floatations in the previous year. This has had its repercussion on the rate at which the Corporation is able to borrow from the market and we have had to offer a rate of $4\frac{1}{2}\%$ on our bonds as against 4% in 1959. Having regard to these circumstances as also the general economic conditions, the Corporation after careful consideration, came to the conclusion that an increase of $\frac{1}{2}\%$ in the rate of interest would be appropriate. Accordingly, the Corporation, with the approval of the Central Government raised, with effect from the 19th July 1962, its rate of interest from 7% per annum to $7\frac{1}{2}\%$ per annum with the usual rebate of $\frac{1}{2}\%$ for punctual payments i.e. a net rate of 7% per annum. The Corporation has not, however, made this rate applicable to the concerns which had fully or partially availed themselves of the loans sanctioned to them prior to this date.

21. The Corporation's efforts to promote joint financing of large projects in collaboration with other credit institutions and banks gathered further momentum during the year. In pursuance of this policy, the Corporation convened at Bombay in January 1962 a conference of the representatives of institutional investors like the Life Insurance Corporation of India, the Industrial Credit and Investment Corporation of India, Ltd., the State Bank of India and other leading commercial banks, with a view to formulating common approach in regard to joint participation. The proposal received wide support. It was appreciated that such joint participation by different financial institutions would help in establishing healthy practices regarding the scrutiny of applications, coverage of loans and the follow-up operations. Requests in respect of large projects are being processed in the light of these deliberations. In this context, I might mention that international institutions such as the International Finance Corporation, Washington, have also expressed their interest in co-operating with I.F.C. and other Indian institutions in this manner.

22. A conference of Development Banks in Asia was held in Bombay towards the end of March 1962 under the auspices of

the Industrial Credit and Investment Corporation of India Ltd. to discuss the various problems of development banks. The General Manager and a senior Manager represented the Corporation at the deliberations and I also participated in some of the sessions which, by and large, proved useful and instructive.

23. Our relations with the various Chambers of Commerce and with our loanee concerns continue to be cordial. We have nominated more non-officials on the Boards of our loanee concerns and I take this opportunity to thank them on behalf of the Board of Directors for the keen interest they have taken in the work.

24. During the year, we have reconstituted our Advisory Committees and have enlarged them by nominating some additional members having considerable experience in their respective fields of activity. I should also like to convey on behalf of the Board of Directors our sincere thanks to the members of our Advisory Committees for the able and effective assistance they have given to the Corporation.

25. Before concluding I should like to express the thanks of the Corporation for the assistance and co-operation accorded to us by

the United States of America Agency for International Development, with whom our relations have been very cordial and who have recently sanctioned to us a further line of credit of 20 million dollars. Our appreciation is also due to Kreditanstalt für Wiederaufbau, and also to the French authorities for their agreeing to sanction loans in foreign currencies and we look forward to a period of useful association with them. I should also like to convey my heartfelt thanks to my colleagues on the Board for their valuable co-operation and wise counsels. In particular, I should like to make a reference to Prof. S. K. Basu and Shri G. D. Ambekar who ceased to be Directors of the Corporation from the 19th February 1962 and the 12th April 1962 respectively. The Corporation benefited much by their active participation and sound advice during their association with it. Finally, I have great pleasure in conveying the thanks of the Board of Directors as well as my own to the General Manager and the entire staff of the Corporation for their loyal and devoted service to the Corporation during the year.

N.B.—This does not purport to be a record of the proceedings of the above Annual General Meeting.

achieved, nonetheless the production would certainly have been better, but for the dislocation caused by frequent power shedding in Calcutta.

Exports have been for your Company a matter of social and business philosophy and our efforts have been continuing for an expanding organisation to meet the targets of higher export figures. I referred last year to the proposal for the setting up of foreign subsidiaries as a part of our export promotion drive. Your Company has now started the manufacture of sewing machines in Ceylon in collaboration with the people of that country. Authorisation has also been obtained for starting a manufacturing unit in Burma. There has been an unfortunate decline in exports from Rs. 113 Lacs to Rs. 91 Lacs in the preceding year; the fall is accounted for by the import restrictions imposed by the Governments of Yugoslavia, Burma, Ceylon and Egypt, resulting in a decline of Rs. 33 Lacs, from Rs. 52 Lacs to Rs. 19 Lacs. On the other hand, our exports to industrially developed countries such as U.S.A., Germany, U.K. and others are increasing.

The matter of rising cost of manufacture is one of great alarm. Criticism is voiced, and rightly too, against increase in selling prices of goods, and the steady inching up of living costs. But if manufacturing costs continue to mount up, they must sooner or later be reflected in increased selling prices. It would appear however that those people who represent against this trend, pay only lip sympathy to the cause. Organised labour which represents an important mass of consumer group, ceaselessly strives in the factory for higher remuneration in one form or the other, while agitating in the market place for lower prices—a contradiction in terms. Governmental authorities wish to keep prices down, as any good Government must, and yet as a consequence of one or the other imposts, costs of transport, materials, power etc. keep on going up. Management personnel have an important role to play in this area; without implying that the material efficiency in Indian industry is not capable of improvement, the fact needs to be faced that tirading against industry as distinct from trade may meet political objectives, but will not provide solutions to the problem. To the extent that the ratio of return on capital in an industry shows a decline in the face of increasing production, it is a demonstration of the fact that the management has not increased its selling prices to match rising costs. The matter however is much too serious to permit of mutual mud-slinging; it is a matter of joint responsibility of the management, personnel in industry, its operating personnel

in plants and offices, and of the Government. Each of these groups needs to work whole-heartedly in their own areas of responsibility for keeping unit costs down. This matter of keeping unit costs low is of vital importance for our export trade, for it is on our export earnings that our very future hangs. I am glad to be able to report to you, as I have said earlier, that in the face of rising costs, your Company has refrained from any increases in the selling prices of its sewing machines and fans.

It is heartening to note that the Prime Minister has thought it fit to give the port-folio of International Trade in the Union Government in the very energetic hands of Shri Manubhai Shah. However, apart from some assistance in the shape of elimination of bottle-necks, which the Government might render, I consider that it is in the enlightened self-interest of Indian industry itself that it realises the absolute importance of self-reliance and maximum individual export. Every one must be aware of the country's very difficult foreign exchange situation and its impact on the country's economic plans. If the retardation in the growth of our economy continues to take place, as has been evident from several recent studies, this would necessarily have an impact on employment opportunities. In this context I may briefly state here what may be termed as "the economics of export", in the light I understand it. It is only a truism that the cost structure for most of our country's products is higher than in other countries. It is also correct that management personnel and operating personnel owe a duty towards a constant reduction in cost, and I hope that we are all attempting to work towards this objective. However it would be unrealistic to wait for working aggressively for exports till such time as our costs become comparable to those of other countries. The selling prices in export markets bear little relationship to the costs of manufacture, even as they do not in the domestic market, and exports will need to be done only at competitive prices, and very often at prices below costs. Almost all countries follow a dual price policy, there being a much lower price for the export market than for the domestic market, the former being subsidised by the consumer in the domestic market. The incidence of all export loss has to be borne by the home consumer through increases in domestic prices; there is no escape from this situation. However, the incidence of loss on exports is not as frightening as it is made out to be very often. For the loss of every rupee in export, about half is contributed by the Government by way of loss in taxes, partly it is borne by the workers in the shape of reduction

in bonus; partly by the management in the shape of reduced remuneration; and partly by the shareholders in the shape of reduced dividends. The consumer shares his bit by marginal increases in the domestic selling prices: If we also consider the reduction in costs, which higher output on account of export leads to, the loss to any Company in its net retained profits would be negligible indeed. Let me repeat that export effort is necessary now as a patriotic effort for national development, irrespective of short term, real or imaginary self interest.

But export sales need, not only patriotism, but a good marketing organisation. As one of the major exporters in the engineering group of industries, it might be of some interest, if I was to give a brief account of the export marketing experience of your Company. All sales of your Company are now handled through a separate marketing company which was set up a few years ago. This was done with the conscious knowledge that the manufacturing activities had grown to such large proportions, that for the satisfactory marketing of these goods an independent organisation, free from the problems of factory and production, was needed. This step, taken initially with some apprehension, has been fully justified by subsequent results. In fact it will be correct to state that the high rates of output being achieved by the factory might not have been possible without a distinct marketing organisation, planned for selling all the output. This marketing Company makes a constant study of the market potential in India and abroad, and keeps a constant watch on the designs, quality and prices of our competitors' products in the foreign markets. Every year, export targets are set for each country, and the achievement of these targets becomes the responsibility of the sales organisation personnel as a whole. More often than not, we have been able to meet and even surpass these goals. The proper location and expansion of distribution channels is extremely important for any marketing activity. We have distributors located strategically in various parts of the world. The Annual Report which is in your hands gives a list of the 40 odd countries, where the products of your Company are distributed. Basically there are two alternatives available for the development of distribution in the foreign markets, i.e. either to establish a foreign branch of the Company or to appoint local distributors; the choice ultimately depends partly upon the extent of the market and partly the extent to which we have resources for running a departmental distribution system in a foreign country. However, there is no doubt that a branch of the Company is in almost all cases far more effective

than local distributionship. The combination of these two exists however in the sense that while work of physical distribution is the responsibility of local people, the sales promotion effort is largely planned and directed by our own representatives.

The development of distribution channels is only a part of the big effort needed for the promotion of exports. Unflinching heed to quality maintenance is a must for any exporter of engineering goods. Traditionally the Indian producer has not been as quality-minded as is needed. Japan has made a remarkable recovery in this matter in the post-war era. Its exports have increased in the last 10 years by 300 percent to the staggering figure of over Rs 2500 Crores per year, as against our annual rate of only Rs 650 Crores. This increase is largely due to the comparable if not better quality goods that Japan now offers at highly competitive prices. These handicaps however are bound to wear off as we gain experience and your Company is meeting the challenge of quality and design constantly in a fast changing world market.

Yet another matter which an exporter has now to pay increasing attention to, is one of credit extension. This involves the raising of funds, and of covering the inherent risks involved in bad debts. Unfortunately refinancing facilities for exporters are still inadequate in India. In this connection the Mathrani Study Group recommendation for the establishment of an Indian Export Import Bank is most welcome. The risk of bad debts is now somewhat covered by the Export Risks Insurance Corporation. It is however necessary to liberalise the terms of insurance on the basis that a little more than reasonable risk is worth taking if the real objective of export insurance is to be attained.

The provision of 'technical service-after-sales' is of imperative importance in the marketing of engineering goods. This applies not only to industrial products, but also consumer products such as Sewing Machines and Fans. Unless adequate servicing arrangements go hand in hand with sales arrangements, the export venture is likely to end in distress. We have always assigned the highest importance to this aspect and the success that we have had in exports is attributable in no small measure to emphasis on this matter.

Finally I would refer to an aspect of export sales which is abstract rather than tangible, but none the less significant. It is the "image" that the exporter creates in the foreign market. Business has always to be responsive to community needs in any area; it becomes much more important when doing business in a foreign country. The new comer is always suspect, and a natural impression

The Jay Engineering Works Limited

Investments and Gross Profits Up

Collaboration Ventures in Ceylon and Burma

Lala Charat Ram, the Chairman, on Measures to Stimulate Exports

Speech Delivered by Lala Charat Ram as Chairman of 25th Annual General Meeting of Shareholders of The Jay Engineering Works Limited Calcutta on 27th September, 1962.

Gentlemen,

I have great pleasure in welcoming you to the Twenty-Fifth Annual General Meeting of the Company.

At the last meeting I had deputized for my father, Sir Shri Ramji, on account of his indisposition. Sir Shri Ramji has continued to guide the affairs of the Company so far in spite of keeping indifferent health for sometime now, and he has now requested the Board to relieve him of the responsibilities of the Chairman's position; he has however assured us all, if an assurance were at all needed, that he will continue to be a part of us all, remain on the Board of the Company and guide our steps as

heretofore. It is a solemn occasion for me, and one of no little apprehension at stepping into shoes that had hereto been filled by such an eminent personage. In all humility I pray for being able to serve this Company well, which is so near to Sir Shri Ramji's heart.

During the year, your Company—as indeed the whole of India—lost its great friend, Dr. B. C. Roy. Dr. Roy's services to West Bengal and particularly to its Industry—need no repetition. Your Company had the privilege of his special patronage and we feel his loss greatly.

The Annual Report of the Company for the year ended March 1962 has been with you for some time now; with your permission I shall take it as read. As usual, there have been some areas of gains, and some other areas which must cause us all concern. I would like to highlight some of these here.

The gross profit has been marginally higher at Rs. 91 Lacs as against 88 Lacs last year. This profit however is on increased capital and reflects a lower capital productivity i.e. return on the capital employed. The decline is explainable somewhat by increasing investments in our Hyderabad factory, which will necessarily take some more time before it begins to contribute to the profits of the Company. The profits were also affected by frequent power shedding in Calcutta, increased excise levies on copper, winding wires and special steels, considerably higher transport charges on coke on account of rail transport not being available, and very much higher price paid for American silicon sheets due to restricted import licensing from other countries. The incidence of actual cost due to these causes has been considerable. Your Company however has refrained from increasing the prices of its finished products, in keeping with

its traditional policy of avoiding increases in selling prices so far as is at all possible.

The equity dividend proposed to be disbursed this year amounts to Rs. 22.8 Lacs against Rs. 18.4 Lacs last year, being 15% this year on enlarged share capital as against 17.15% last year on smaller capital. In the face of continuous increase in costs, which are beyond the management's scope of control, it is requiring all the management effort in keeping down costs by expansion of production and reduction of expenditure. We are launching this year on a plan of economies in all directions, and it is hoped that with this effort, and the contribution which the Hyderabad unit might make, profitability will show improvement.

Increases in production have been less this year than previously. Whereas the rate of expansion necessarily slows down as higher levels of output are

is created that he is there for his own ends, at the expense of the receiving country. The exporter has to create confidence, to generate a feeling of community of interest and to establish himself not as a self-seeker but as one who is there to contribute to the welfare of the society in which he is operating. This aspect can present considerable difficulties, and much unintended offence can be caused. We have attempted always to pay great attention to local susceptibilities, and to create an image of "USHA" which evokes respect and camaraderie. This has helped us a great deal.

I am sorry that I have taken so much of your time in attempting to place before you some of the

points that our Company emphasises in developing the export business; basically there is nothing new in any of these points yet this has been done in the hope that it may possibly provide some guidance to the willing and young exporter of this country. I believe that such pooling of experience will be of great advantage to the country's export trade.

In closing, I wish to briefly say a few words on my understanding of the real difficulty in the way of exports and what is needed to be done about it. I believe that in the existing economic situation in our country, there is scarcely any alternative to a programme of mandatory exports. Incentives and persuasion have been

tried for many years now, but with disappointing results. The vast increase in volume and spread of purchasing power makes this country of 400 million people a fabulous market for any producer. It would be a foolish producer who would seek out difficult markets and at a loss. Banking on patriotism is in my opinion banking on a weak staff. Many arguments are placed against mandatory exports; however the opponents of this scheme are not able to place any positive alternative scheme of expansion of exports. There is no objection in trying for some more time the instrument of persuasion, but I hope that ideological opposition will not be permitted to come in the way

of expansion of export earnings for much longer; our country cannot afford the time. This, however, is my own personal view and I would be very happy to see myself proved wrong.

I thank you for the patience with which you have heard me. I am very proud of this opportunity of addressing you to-day, and I hope that the operations of the Company in the year have been a matter of general satisfaction to you.

Thank you.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

The Jaipur Udyog Limited

Transport and Coal Position Serious Through-out the Year

Mr. S. P. Jain on Cement Industry's Development

The following is the speech delivered by the Chairman, Mr. S. P. Jain, at the Annual General Meeting of the Shareholders of the Company, held on 25th September 1962, at Sawaimadhopur:—

Gentlemen:

I have pleasure in welcoming you to the Annual General Meeting of the Company.

The Directors' Report and Statement of Accounts for the year ended 31st March, 1962 are already in your hands and they would have given you all particulars for a proper understanding of the working of the Company during the year.

IMPROVED PRODUCTION

The production of clinker and cement improved during the year from 6,32,899 tonnes and 6,78,988 tonnes to 6,69,675 tonnes and 7,42,298 tonnes respectively. It will be seen that production registered further improvement as compared to the previous year. It would have been possible to step up production further had other conditions regarding supplies of coal and availability of power and of transport for movement of raw materials been more favourable than they have been. Further, the illegal strike resorted to by the workmen lasting for a fortnight also impeded better results.

RAW MATERIALS AND TRANSPORT BOTTLENECK

The position regarding quality of coal and its transport has remained serious throughout the year. The quality of coal supply is of high ash content while the better quality of coal, designed to use better quality of coal. During some periods, coal stocks had

gone down so low as to meet only a couple of day's requirements and production naturally had to be curtailed. The coal supply position has improved recently and the government and railways are showing greater awareness of the importance of the needs of a basic industry like cement.

Due to inadequacy of transport facilities, it has not been possible to move the required quantity of limestone from the quarries to the works. On account of operational and other difficulties, the Railways have not been able to give as the number of wagons required daily for movement of limestone with the result that production in the factory has to suffer on account of shortage of limestone which is the most important raw material. Since the Railways have not been able to help us even to move the daily quota, the building up of safety stock in the factory which is necessary to take care of seasonal fluctuations, could not obviously materialise. Besides, the Railway freight of Rs. 4/- per ton on this basic raw material over a movement of 14 miles distance is very excessive. The representation to the Railways in this matter of high freight cost has been without any result. The Company is considering, with a view to reducing the cost on this account, the question of installing an aerial ropeway or a siding of its own complete with rolling stock etc. Preliminary surveys and negotiations have been initiated.

CEMENT MOVEMENT

Transport has also not been sufficiently available to improve the movement of cement at a time when there should be quicker despatches to meet the unsatis-

fied and growing demand, resulting in the paradoxical situation of the Company being forced to carry heavy stock and the consumers unable to meet their requirements.

Your Company has also endeavoured to move certain quantity of cement by road to different consuming centres. In this respect, a severe handicap is the higher transport cost involved. Road movement of cement will be largely facilitated if the freight allowance provided by the State Trading Corporation is sufficient to cover the extra cost for the long haulage.

POWER

Sufficient power has not been available to meet the increasing requirements of your plant. Your Company was assured of supply of the required quantity of power when the State received power from Chambal and we were hoping that by this year our power problem would be very largely solved. However, even though the State has stated receiving power from Chambal our difficulty continues. Recently, the State Government has been good enough to make available to us a small quantity of power for temporary use. We hope that the State authorities will see their way to meet our requirements fully.

FOREIGN EXCHANGE

With a view to improving efficiency and achieving economy in production which is desired as much by Government as by ourselves, we have taken steps for mechanisation of your Quarries and installation of handling and other equipments at the Works. It will be possible to fabricate certain sections of machinery

within the country itself but it is absolutely essential that the minimum amount of foreign exchange required for importing necessary equipments should be expeditiously sanctioned. Our application for import licence is still pending with the Government for sanction. I am sure Government will appreciate that by importing these balancing equipments and improving production, it will be possible to make available more cement to the consumer. The foreign exchange requirement in such case per ton of cement produced is less than that for expansion or new plants and also helps to reduce costs. Therefore such application should be given a higher priority and viewed with a sense of urgency.

INDUSTRY'S DEVELOPMENT

It is acknowledged that the existing level of production capacity in the country is not sufficient to meet the rising demand. The Government and the industry are equally anxious that the development of the cement industry should be accelerated and it is towards this objective, I feel, governmental policy and action should be directed. The targetted capacity in the Third Plan period is 15 million tonnes and the production to be attained is 13 million tonnes. It is now realised that even this target will prove inadequate and requires to be revised upwards judging from the rate at which demand is rising. How far efforts to expand capacity are commensurate with this need is a point for serious thinking. I have my doubts as to whether with the present resources available to the industry under the present policy of taxes and price fixation, the industry would be able to even

realise the existing planned target. It is unfortunate that a fully controlled industry like the cement industry has not been able to develop itself to the extent required and considered desired. It is common knowledge that the lack of development in the last four years has been, largely the consequence of 1958 price fixation. In the latest price fixation, the Government did not think it fit to accept the recommendations of an expert body like the Tariff Commission although the latter's proposals to give a reasonable developmental price to the industry were made after a comprehensive study of actual costs. If the Government consider, as has been recently expressed by the Minister for Heavy Industries & Steel, Sri C. Subramaniam, that a body like the Tariff Commission is not a suitable price fixation machinery, it is only to be hoped that Government will evolve a more suitable machinery which will enable a scientific and practical price fixation. I do not feel, how-

ever, that it will be advisable to eliminate an independent machinery like the Tariff Commission from the scheme of price fixation.

ESCALATION FOR COAL & FREIGHT

Costs have further increased on account of rise in the price of coal, railway freight etc. since the last price fixation. The Government of India in their resolution dated 31st October, 1961 announcing the prices stated that adjustments in prices would be made whenever called for by variations consequent on governmental action including escalation for fuel and power. But the Government have so far failed to implement their assurance in this respect. Representations have been made by individual manufacturers and also by the Cement Manufacturers Association and the Minister for Heavy Industries also assured to the industry's representatives that early action would be taken in this matter. I hope Government

will fulfil the assurance and announce their decision without further delay avoiding unnecessary loss to the industry.

COST AND PRODUCTIVITY

As you are aware, the Company implemented the recommendations of the Wage Board for the Cement Industry resulting in considerable increase in wage costs. This will be justified only with simultaneous improvement in productivity. The Government have recently constituted panels for the study of productivity in the industry. I hope the work of these panels will lead to improvement in productivity and reduction in costs.

ABU ROAD PROJECT

I would like to mention that the Company had put up to Government a proposal for setting up a cement plant at Abu Road. This new project supported by the State Government has been approved by the Government of India. The completion of the project has,

however, to be programmed to synchronise with the availability of power by the middle of 1966 and a good portion of the machinery from indigenous sources.

I would like to say before I finish that the new Minister for Heavy Industries, Sri C. Subramaniam, is taking active interest in studying the problems of the cement industry. I do hope that the various problems that are halting the industry's development will find satisfactory solution under his earnest appreciation and timely action.

Lastly I would like to take this opportunity to thank workers and members of the staff at all levels and hope that they will continue to work hand in hand with the management for the continued prosperity of the Company and its employees.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

Machinery Manufacturers Corporation Limited

Stable and Progressive Manufacture after Difficult Years

Mr K. C. Mahindra reviews Problems of Imports

Speech delivered by the Chairman, Mr. K. C. Mahindra, at the Sixteenth Annual General Meeting held in Bombay on 26th September, 1962.

In welcoming you to this Annual General Meeting of Machinery Manufacturers Corporation Ltd., I desire to express my personal satisfaction that I have been able to be present on this occasion. This Company was inaugurated 15 years ago—years of long await when the patience of most of the shareholders must have been exhausted, even as the resources of the Management were strained to the utmost. These have been long and difficult years, and if your Company has now emerged into a relatively stable and progressive manufacturing unit, it has been due as much to your faith in our judgement as to the hard work and toil which everyone connected with the Company has put into this venture.

I should also like to avail of this opportunity to recollect the distinguished auspices under which we started—the strong umbrella of encouragement and faith which certain friends of mine, eminent in their own sphere, showed in this pioneering endeavour. Amongst them I recall the names of Sir Purshotamdas Thakurdas, our first Chairman, Sir Homi Mehta, whose name is familiar to everyone in Bombay, and Mr. N. R. Sarkar, who later became Finance Minister

in the Government of West Bengal. These friends, no longer with us, contributed considerably to the sustenance of faith in this industry and they have left vital links of hope in the person of Mr. Mathuradas M. Parekh, Mr. Jai H. Mehta and Mr. D. N. Bhattacharjee, who are now members of your Board. I should also like to mention Sir Sobha Singh who is happily still with us and continues to give valuable guidance to the Board.

You gentlemen have shown great patience and even consented to the dilution of your Equity in times of distress, in order that the Company may get another chance to start on a clean slate. I am sure you will agree with me that the opportunity so provided to Management has been properly and judiciously availed of, and today both the financial position and future prospects appear to be good.

The Directors' Report presented to you with the Accounts of the Company for the year ended 31st March 1962 has briefly told you the story of the year of operation, and I trust that the financial results as shown meet with your commendation. Our Order Book remains full; production and despatches continue at the same level as in the latter half of 1961/62; considerable renovation has been done in improving the products and the productivity of the Works. It will not be out of place to mention that your plant, originally designed for a rated capacity of 50 Carding Engines per month, is now producing on the average 85 units every month, regularly. You will appreciate this factor when I add that the plant and equipment of the Factory is now over 10 years old and requires considerable rehabilitation and replacement. We are engaged in an exhaustive technical study for this purpose. At the same time keeping in view the cyclical nature of the industry, we are maintaining the pressure for diversification. The Speed Frame of our own design which should have been ready by now is still in the prototype stage, for the simple reason that equipment and tooling required for the purpose have not yet been procured, and this because the relative import licences have not been forthcoming. A quota of such licences have recently been received for import from East European countries, and we hope to be able to overcome difficulties through substitution of whatever machinery can be had on the tap, and although even then there will be some further delays we hope to push ahead and add this extra production line in the Factory before our next Annual Meeting. Likewise, detailed work on the engineering of the Turf Lathe has been completed, and we are awaiting import licences for one or two specialised machine tools which are necessary for the job.

The main diversification which has been taken in hand is the contract work for castings and machining for Diesel Engines produced by the Indian National Diesel Engine Co. Ltd., which Company is an associate of the Managing Agents. Batch line production of Diesels is not working satisfactorily yet for lack of a few machine tools needed for the purpose. Here too we are hoping to be able to surmount the obstacles before we meet again next year.

It is my conviction that your Company should continue to accord priority to this issue of diversification. It will not only be a healthy expansion, but would serve as a cushion to the fluctuations which have characterised the Indian textile industry, particularly in respect of its demand for machinery either for replacement or for expansion purposes. It is also the Company's experience that over the years Government has not been able to formulate a consistent policy for the development of the textile machinery industry in the country—possibly policy is influenced by the vagaries of the industry itself, or what is more likely, confusion is created purposely on this issue by the proponents of the consumer trade. We have accordingly witnessed considerable vacillation in the operation of controls which govern the machinery industry. The swings in respect of import policy have almost been as violent

as the fortunes of the textile industry itself. Take, for instance, the recent drive for enlarging our Export Trade. The enthusiasm and the aggression of the new Ministry of International Trade must be welcomed, but it is questionable whether the prescriptions framed for securing these laudable objectives are of the correct dosage, or composed of proper ingredients. Exports of cloth have been on the decline. New mills of as small a spindleage as 12,000 spindles are being encouraged to be set up, with the proviso that their production must be exclusively reserved for export purposes, although it is not stated how and at what price and where these goods will be sent. In order that such mills start operations as expeditiously as possible, Government announced couple of months ago that licences for the import of Carding Engines and Ring Frames will be granted to actual users in consultation with the Textile Commissioner. Similar liberalisation of import licences in 1957 set back the machinery industry very considerably and now five years later when this industry has not only established itself on a sound and firm basis, but proven

itself in the matter of quality of its products, Government has thought fit to encourage import of the two articles which are now being regularly produced in the country and are accepted as equal in performance to that of any imported product. I should add that your Company made a special representation to the Textile Commissioner in this respect, and we have been informed that it is not the Government's intention to grant licences *ad hoc* to all the users, but only where the so-called export mills have to be set up on a pattern which alone will increase the export potentials of the Textile business. Then again, with due respect, one may join issue with the Ministry of International Trade when it is asserted that textiles have been earning a substantial export surplus. Perhaps the study made by the Reserve Bank of India on the Balance of Payments implications of industrial production respecting the textile industry, which appeared in the Reserve Bank Bulletin for March 1962, has not received the proper attention of the authorities. This study has come to the conclusion that over the five years 1956 to 1960 the total

foreign exchange earnings from exports of cotton piece goods, yarn, hosiery and waste cotton, aggregated Rs 339.6 crores, and that the foreign exchange outlays on the industry amounted to, over the same period, Rs 429.2 crores, that is, in other words, a deficit in the balance of payment position of Rs 89.6 crores. Granted, that this includes an outlay of Rs 240.4 crores on raw cotton, but India has not become self sufficient in the matter of raw cotton. It is also to be added that the foreign exchange outlay on textile machinery during the five years amounted to Rs 83.6 crores. In this respect it has been the endeavour of the manufacturers of Textile Machinery to reduce this import burden as speedily as possible, and I should have thought that Government will not hastily enact a regulation or introduce a change in import policy which will impede the realisation of the object that the country should become independent of imports in respect of textile machinery in as short a time as possible.

To our shareholders a matter of immediate concern is the continuation of the satisfactory role which your Company has played

in building up a new industry. In spite of past setbacks, through unwitting frequent changes in policies, I maintain that we have now established a position of leadership in this industry—manufacturing a capital product with indigenous content of 98% in value—import being limited to special steels, aluminium alloys and ball bearings, not presently manufactured in this country. Despite the difficulties facing us, in respect of supply of indigenous raw materials like pig iron and coke particularly from the point of view of quality, an essential for the manufacture of precision capital goods, we are hopeful that the Company will continue to show promising results which will be found satisfactory by the shareholders.

I should like to conclude by placing on record on your behalf, if you will permit me, the thanks of the Management and of the Directors for the ungrudging work and loyalty of your staff throughout the year.

NOTE:—This does not purport to be a report of the proceedings of the Annual General Meeting.

Again, the taxes levied by the Centre and the States on teas even meant for exports, and on stores used by the industry for manufacturing such teas, are very high, whereas teas produced by other countries do not have to bear so much burden of taxes. Above all, Indian teas have to pay heavy charges for transportation from the producing area to the Port since the distance is quite long and transport charges are high.

As far as exports are concerned, they have remained more or less stagnant, whereas the exports of other countries have gone up considerably. Between 1954 and 1960, Ceylon increased her exports by 30.41 per cent, while Kenya recorded an increase of as much as 112.5 per cent. On the other hand, our exports declined from 229.5 million kg in 1958 to 195 million kg in 1960, although exports increased by 5 per cent to 200 million kg in 1961.

In the circumstances, Mr Mohta fears with regard to the outlook for Indian tea are well substantiated. He feels that the main handicaps, which are standing in the way of improving our tea exports, should be tackled carefully. He has pointed out that multiple and high taxation, heavy charges for transportation, non-availability of foreign exchange and rising labour costs are the main handicaps that are standing in the way of improving our tea industry.

Mr Mohta, has therefore, suggested the possible ways of making Indian teas competitive in foreign countries. He states that no tax of any kind should be levied by the Central and the State Governments on exportable teas and on stores used for the purpose. He adds that the inland transport cost should be kept as low as possible on exportable teas. He has also made a suggestion that producers and exporters of tea should be permitted to undertake foreign trips for establishing contacts with the buyers of the consuming countries. He feels that, if this can be done successfully, it will be possible to divert larger quantities of tea direct to the consuming countries and thus avoid heavy handling charges, which are unnecessarily levied at present on Indian teas by the London distributors.

It cannot be denied that, if the handicaps mentioned by Mr Mohta are removed, the Indian tea industry will not only be able to meet the expanding home demand, but also export bigger quantities of tea to foreign countries and thus bring home a larger amount of foreign exchange, which is vitally needed for the country's Third Five-Year Plan.

Meanwhile, in the export sale held in Calcutta this week, offerings were 60,165 packages of Leaf grades. Demand was stronger and more active than in the previous week, although prices continued to be irregular. Plain orthodox descriptions followed an easier trend. Orthodox Assam BOPs were a strong feature of the sale, selling at dearer rates. Liquoring Fannings were fully firm to dearer, while others were often lower. Medium CTC types were irregular and generally slightly lower

following quality, although the more fibrous kinds came to a dearer market. There was a fair demand for the best; but this slackened as the sale progressed and, at the close, these sorts were 20 nP to 40 nP per kilo easier. Legg-cut teas came to a good market with the best realising slightly higher prices.

Whole Leaf grades met with more enquiry and were sold readily although they generally realised a slight decline in prices. Tippy sorts met with useful competition and again followed a slightly dearer trend. Darjeeling teas were well supported although prices were generally somewhat below the levels of the previous week. Following rates were quoted:—Clean Plain Pekoe Rs 4.10 to Rs 4.40; Plain BP Rs 3.70 to Rs 4.00; Plain Fannings Rs 3.80 to Rs 4.10; Medium Assam CTC BP Rs 5.30 to Rs 5.70; Medium Assam CTC Fannings Rs 5.30 to Rs 5.70; Best Assam CTC BP Rs 6.50 to Rs 7.20 and Best Assam CTC Fannings Rs 6.50 to Rs 7.20.

In the Cochin market, a quantity of 214,000 kilogrammes of Dusts was offered for internal consumption. Against fair demand, prices were irregularly 10 nP to 20 nP a kilo easier all-round except for black leaf sorts which were steady. Also, 457,000 kilogrammes of Leaf tea were offered for export. Against strong and active demand, Low Medium and Medium Broken were firm, while similar Fannings were irregular and often dearer. Good Mediums were strong, while high-grown Broken were dearer. Fannings grades were in less demand and easier, while unorthodox descriptions were steady.

In London auction, offerings were 44,907 packages including 38,799 packages from Northern India and 746 packages from Pakistan. There was again a strong and general demand for the best Assams and prices ruled firm to dearer. Teas from the Dooars met with brisk bidding and the best of these were sold at higher rates. Plain sorts were the weakest feature of the sale and were easier to buy.

FOODGRAINS Baffling Problem —Bitter Pill

The recent upswing in wholesale prices, particularly of foodgrains, has posed a baffling problem to the authorities and for the consumers is a bitter pill to swallow. Official utterances both in and outside the Parliament pinpoint the alarm created by the upturn in prices and it has been feared that the present tendency may even endanger the progress of the current Plan. Despite the fact that the authorities were grappling with this vital aspect during the past, no suitable solution has so far been found. A correct prognosis of the malady is in order before the remedy is to be applied. The reported decision of the Planning Commission to adopt the scheme of licensing wholesale traders in foodgrains and the introduction of the concept of "strategic controls" with a view to controlling the rigging of prices is a step in the right direc-

tion. But, as stated by the Federation of All-India Foodgrain Dealers' Association, to pass the entire buck on to the wholesale trade is unwarranted and unjustified. Various factors have combined together to push the prices up. The adoption of improved methods of agricultural practices in the country by way of utilising better seeds, fertilisers and farm improvement methods, has to certain extent enhanced the cost of production. The various incidences of taxation, water cess, development cess, etc. the expenditure incurred on improvements in transport, communications housing and other social amenities have also inflated the prices of foodgrains. There has been an important shift in the articles of consumption due to urbanisation of the population and the rise in the standard of living of the people. As a result the index number of prices itself does not mirror the change in prices precisely. Toward this the Parliamentary Congress Committee for Prices has sought a reshuffle of the items included in the index number in a manner so as to reflect the price-trend. The setting up of consumers co-operatives can help considerably, but complaints about malpractices, favouritism and the low quality of grains offered for sale in the fair price shops are not comforting. Will the authorities look into this matter?

PEPPER Outlook for Pepper

IN the Cochin market, Pepper values have declined further in the absence of foreign buying support and due to scattered selling pressure. The rate for garbled ready is noted around Rs 309 per quintal. Despite the downward trend in values, trade circles feel that the outlook for exports is bright.

India's exports of black pepper to the end of August, covering the first ten months of the current season, have touched 20,000 tons. Trade expectations is, that September and October will add about 1,200 tons to make the total, for the season, well over 21,000 tons. This will be a record. Exports last season amounted to only 17,800 tons. In view of this heavy export, sellers are generally reluctant to part with their stocks unless the prices are very attractive.

Another encouraging factor is the news that there is squeeze in the New York market for spot delivery pepper, which has gone up by 22½ cents to 55 cents per pound within the course of the past two weeks. Replacement buying of a substantial nature by grinders is reported from New York. Sentiment in that market is influenced by the fears of a shortage if the threatened dock strike were to materialise. Among the other bullish factors are the small offerings from Singapore. Unlike in the past arrivals of new Indonesian crop in Singapore are small. So much so there is no selling pressure from that end. It, therefore, appears that pepper is now in a buyers' market. Marketmen in India think that the

US buyers may come again to make their purchases if they are convinced that the chances of any further decline in prices do not exist.

CASHEW Strike Ends— Normalcy Expected

With the end of the Cashew worker's strike, normally is expected to be restored in the cashew market soon. During the strike period, despite attractive offers from abroad, shippers were not in a position to conclude any substantial business in view of the uncertain supply position.

Cashew kernels are one of the 28 Indian export products which are eligible for tariff reduction incorporated in bilateral agreements between the United States and India, being one of the contracted parties to the General Agreement on Tariffs and Trade. The US Government has now issued an order effecting the first reduction from 1 July this year. According to this order, the rate of import duty on cashew kernels had been reduced to one cent per pound from the previous rate of 1.5 cents per pound. The second reduction is expected to come into force from July next year, after which the new duty will be 0.7 cent per pound.

Although foreign buyers are expected to come in shortly to cover their shortage, prices are not likely to show any appreciable improvement in view of the comfortable raw nut supply position. This is mainly due to reports that Africa is having a bumper crop. The new African crop is expected to reach India from November. One cannot, therefore, rule out the possibility of prices of both raw nuts and processed kernels falling with the arrival of the new African crop.

RUBBER Reliance Still on Imports

India has not yet attained self-sufficiency in the production of natural rubber. Although production has been showing a steady increase during the past few years, consumption is far in excess of home production. Several steps have already been taken by the Government of India to raise home production and produce Synthetic rubber in the country to minimise imports. But, there appears to be no immediate prospects of reducing imports.

Replanting schemes have also been undertaken in as many as 70,000 acres of old low-yielding rubber lands with higher yielding rubber strains. But, it is expected that it will take about 10 years before these rubber trees can be tapped.

To bridge the gap between demand and the availability of rubber, the Government has also sanctioned the setting up of two synthetic rubber plants—one at Bareilly and the other in Assam. The plant in Bareilly is expected to go into production by the

Markets

JUTE Hessian Continues Steady

Trading has been dull last week in the jute markets, but there is a distinct weakness in sacking. Hessian, on the other hand, continues to be steady and indications are that this category of goods will be able to attract sustained interest for some time to come. As was noted in this column last week, the fact that US burlap consumption in August was at a satisfactory level has strengthened hessian. Though buyers in the US are somewhat hesitant to extend commitments at the present high price levels, they may not have much choice in the matter because the bulk of their requirements for the last quarter of the current year has yet to be bought. Operators in Calcutta are also unlikely to allow a lower price to prevail as they know that there will not be too large a stock of hessian available in the next two or three months as demand has been well maintained for the past several months. Owing to the intervention of holidays in the current month, mill output will be less than in the previous month, notwithstanding the fact that the industry is working to maximum capacity this month also. In view of the steady rise in sacking stocks, the IJMA, in all probability, may decide to curtail production with effect from November. But in regard to hessian it will be advisable to maintain output at the maximum

possible level in order to ensure stability of price levels. This is essential because, unlike sacknig, the position in hessian is encouraging and we cannot afford to lose ground here also. We should not be complacent about the outlook for hessian exports, as Pakistan is making steady headway. For instance, in the US,

which is Indian hessian's largest market, the Pakistani share is steadily increasing.

During the past week, the jute goods market ruled easy in sacking but continued to be steady in hessian. Though there has not been much of fresh enquiries for hessian, intermittent covering resulted in the price levels at the close being slightly higher on balance. Obviously, with the current month a short one and with indications of continued business with the US, the present statistical position of hessian favours a steady trend. The outlook for sacking appears rather gloomy in view of

the continued absence of enquiries. The general lack of interest in sacking is reflected in the loss of considerable ground. During the past week B Twills eased by more than two points.

The raw jute market is quiet with lower quality jute quoting below the minimum price. Arrivals continue to be at a high level and market circles believe that the pace may further increase in coming weeks.

TEA Poor Performance

Mr S. M. Mohta, the President of the Tea Association, has struck a dismal note about the present position of Tea, which is one of our principal foreign exchange earners. For from enjoying a position of monopoly, India has now to face severe competition from teas of Ceylon, Indonesia, East Africa and other countries. Although the world consumption of tea has increased immensely, India has not been able to get even a small share of that additional demand.

Last year, there was an appreciable increase in our production when the crop exceeded the previous year's harvest by about 29 million kg. However, this rate of increase has not been maintained and, this year, the crop is expected to be higher by about 7 million kg only. The gardens are not given freely foreign exchange for importing some of their essential machines, equipment, etc. and thus cannot produce quality teas according to the taste of the foreign buyers, especially when quality tea forms a comparatively small proportion of our total output.

PRICE TRENDS

	As on 26 Sept. Rs.	As on 29 Sept. Rs.	As on 3 Oct. Rs.

end of the current year, while the other plant in Assam will take a little more time.

An Indian rubber delegation leaves for Malaya on 6 October to study rubber production methods and to see how rubber replanting in Malaya can be adopted with advantage in India.

COFFEE Limited Agreement

Last month's Coffee Conference in New York ended with agreement on certain limited aspects. Much remains to be done; but the conclusion of even a limited pact represents a minor triumph after the walk-out of the Brazilian delegation which looked like putting an end to the prospects for any reasonable arrangement.

The main achievement of the Conference was to obtain agreement from importing countries not to increase their purchases from non-member countries and to enforce this by demanding certificates of origin for coffee shipments. As this arrangement covers about 95 per cent of world trade in coffee, it should help prevent producers breaking their export quotas and should thus provide a breathing space for them to tackle the problem of over-production.

SUGAR Heavier Releases —But Prices Higher

After a further fall due to the Government declaration to check rising trend in Sugar prices by releasing heavy stocks for sale in the open market to meet festive demand, Sugar markets have again tended to rise in view of the revival of buying support from Delhi and the Punjab. Support from Gujarat and Maharashtra is, however, lacking. Mills

are faced with heavy saleable stocks and buyers are still reported to be few.

It can be said, on the basis of despatches in the first ten months of the 1961-62 season, that the carry-over during 1962-63 will not be very much more than one million tons due to an increase in internal consumption and larger exports. The lower level of output in the current year has, no doubt, been a helpful factor; but the present favourable position could not have come about without an increase in the offtake for internal consumption.

The actual output, up to August 1962 is 2,719,000 metric tons as against 3,021,000 tons in the corresponding period of 1960-61. Total despatches up to August 1962 are higher at 2,321,000 tons as against 1,896,000 tons. This increase in despatches by 4,250,000 tons is indeed heartening, especially as exports have accounted for an additional quantity of 49,000 metric tons. Thus, the closing stock with the factories, as on 31 August 1962, is lower at 1,545,000 tons as against 1,672,000 tons on the corresponding date of last year.

There was recently a release of 250,000 tons from stocks and there may be another release of 200,000 tons shortly, while exports are also being stepped up. The carry-over into the next season will not, therefore, be very much more than one million tons.

According to the Sugar Mills Association, India's sugar exports, during January-July this year, totalled 186,287.3 metric tons. Of these, 94,920 metric tons were exported to the United States; 57,895 tons to Canada; 24,338 tons to Malaya and Singapore; 4,654 tons to Aden; 1,907 tons to Pakistan; 1,250 tons to Somali Land; 801 tons to Oman; 200 tons to British East Africa; 199 tons to Seychelles; 93 tons to East Africa and 15.5 tons each to Morocco and Tunisia.

GOLD & SILVER Apprehensions

Prices on the Bombay Bullion Exchange continued to display a downward trend due to the pressure of heavy supplies. Offtake also remained poor due to apprehensions regarding official steps to curb futures trading and likely measures to bring out hidden gold in the country.

Spot Gold has gone to a discount, as sellers are anxious to get rid of their stocks. The yellow metal is very sensitive to rumours. There is a sort of nervousness on the part of those who seem to hold stocks of the metal. Whether the Government is really going to take upon itself the thankless job of controlling the prices and if so what will be manner in which it is going to be done, is difficult to say. It is, however, not so easy as one imagines; but all the same the fear is there in the market. The second factor is the future of forward trading. If the Government really takes it into its head to control prices and distribution of the metal, forward trading will perhaps be the first casualty.

Despite firmer advices from London and New York, Silver prices failed to maintain the high levels in view of the larger arrivals. As a matter of fact, in the London market, the price of the white metal has now risen to a point where the United States Government may have to act to prevent the profitability of putting the country's silver currency into the melting pot. Attempts are already being made to melt down some of the Mexican coinage.

The market is reported to be now approaching the level at which it becomes worthwhile to melt down silver coins in America. It is, however, expected that the US authorities will intervene before that point is reached. The US still has some silver stocks which she can sell. If she does, the rise in prices will, no doubt, be checked and a fair amount of profit-taking may develop. But the long-term problem of inadequate silver production will remain. In time, therefore, prices will probably start climbing again.

OILS & OILSEEDS Bull Grip

Prices on the Bombay Oilseeds Exchange showed a mixed trend. In the Groundnut section, sentiment was guided mainly by the efforts of the bulls to maintain prices in view of the maturity of the September contract, which was under strong bull grip. Consequently, the bull's not only supported the current contract, but also absorbed heavy goods offered in the spot section.

At this stage, it will be interesting to consider the outlook for groundnuts in the coming season. Despite the recent waterlogging in the Punjab and the consequent damage to the crop over there, the overall situation is said to be excellent. Moreover, the prospects for exports in the coming season are considered to be encouraging, especially when the Government is determined to sell about 100,000 metric tons of Groundnut oil, half of which will be through the State Trading Corporation. It is also said that the STC has been able to find some new customers, who are willing to pay attractive prices. Morocco is one such customer and is said to have recently bought 7,000 metric tons of groundnut oil at around £106 per metric ton in bulk.

Another important group of customers will be Soviet Russia and the East European countries, which are expected to take a minimum of 50,000 metric tons in the coming year.

The outlook for exports of HPS variety are also considered good. It is said that already about 38,000 38,000 metric tons have been committed to the UK, Continent, Canada and East European countries. A further quantity of 20,000 metric tons is also said to be possible. The total this year is, therefore, likely to be around 60,000 tons as against an annual average of 40,000 to 42,000 metric tons.

Extractions are not likely to lag behind. It is reported that the STC has concluded barter agreements

with non-traditional countries, which may mean an outgo of an additional 175,000 metric tons before the end of December 1963. In view of the demand for groundnuts and oil as well as extractions during the coming season, the outlook is thought to be excellent.

Continued lack of overseas enquiries, receding price levels in the foreign markets and the upward revision of the crop estimates in other countries were reflected in the Castor seed section where prices took a downward trend. Ready Madras quality was quoted at Rs 32.15 and Castor Oil, commercial quality, at Rs 13.

In the Linseed section, price movements were confined to a narrow range. Operators from Madhya Bharat and Akola lent some support to the market. Linseed small quality was quoted at Rs 30.50 and Linseed Oil at Rs 18.

COTTON Optimism About New Crop

Dull trading conditions prevailed in the Bombay cotton futures market during the past week with price fluctuations strictly cribbed and caged to a narrow groove. The Janilla March 1963 contract drifted downward from Rs 745.00 per three quintals to Rs 735.50 on reports of favourable crop in Gujarat and Punjab. But taking a cue from the adverse weather reports from cotton growing tracts like Khandesh and Vidarbha, operators pushed prices up to Rs 742.25 toward the close of the week. Observers in the market consider crop prospects satisfactory, rate the present fall as a purely temporary phase and are optimistic of the new crop outlook.

The spot market at Sewri was devoid of enthusiasm obviously due to the fact that several mills have already exhausted their cotton quotas. Consequently the turnover was a mere trickle. Scattered business was reported in the export section in old crop Bengal Deshi. In the import section Sudan cotton for prompt delivery met with good spinner interest.

The Indian Cotton Mills' Federation has contradicted the reports in a section of the press relating that the Tariff Commission has submitted its recommendations to the Government. A press-note released in this connection alleges that they are baseless and the matter is still under the consideration of the Commission.

The Cotton Advisory Board will be meeting in Bombay on 10 October to review the cotton situation for this season. Despite the expectation of a bigger crop of nearly 5.4 million bales in the current season, the authorities are still perplexed about regular and adequate supply of domestic cotton to the textile industry at prices below the official ceilings. The proposal to introduce the nominee system was received with mixed feelings by the industry and the cotton trade. The Board is expected to make a detailed study of the nominee system and to analyse carefully the reactions of the industry and the trade over this issue.

For the Investor

INVESTMENT GOSSIP Rally, Fall, Rally

Though stock market sentiment continues to remain hesitant there have been valiant attempts at a rally during the past week. Of the three days the Calcutta market remained open this week—Lyons Range is having its long Pujā recess from Friday—rally attempts were successful on two. On Monday, Indian Iron made a smart recovery. Though on Wednesday there was a setback, sentiment again improved

on Thursday despite the news that production of saleable steel at IISCO had declined in September. The recovery in Indian Iron may be due to renewed fears of impending Government action to curb excessive bear selling and/or renewed rumours about the maintenance of dividend.

It is, however, to be expected that stock market sentiment will generally continue to be hesitant for some time to come. In the first place, one of the principal stock markets will remain closed for the next few days and trading will necessarily be

restricted elsewhere also. Though the generality of investors have remained comparatively calm—there was no excessive selling pressure in the cash sections in the past four, five weeks when price levels in the more speculative counters were hammered down to new low levels, they are nevertheless chary of making fresh purchases in view of the confused outlook for equities. It is apprehended that the corporate sector's profit may suffer a diminution what with Government asking manufacturers to keep down prices of their products while the cost of production continues to rise and there are threats of further import cuts. The investor is sure to have taken note of the persistent complaints from industry regarding the shortage of many of the basic requirements. All over the country industrial units have been plagued for the past several months by shortages in coal, power or trans-

port. The foreign exchange shortage has caused large-scale idle industrial capacity and if the speech of Mr K. C. Reddy at the recent meeting of the Central Advisory Council of Industries is any guide, prospects of obtaining adequate foreign exchange allotments for industry are not encouraging.

The latest report of the Central Board of Directors of the Reserve Bank has revived the bogey of additional taxation to come. The general belief so far is that after the heavy doses of taxation in the past years, the taxpayer will be let off lightly in the coming years. But after the publication of the RBI report the fear about further heavy taxation has revived. The report has emphasised the need for mopping up excess purchasing power from the people with a view to augmenting resources needed for the implementation of the Third Plan.

MARTIN BURN LIMITED

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 15th October to 18th October, 1962, both days inclusive, for the purpose of payment of Preference Dividend for the half-year ended 30th September, 1962, on or after the 18th October, 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 18th October, 1962, or to their mandatees.

By Order of the Board,
L. K. SEN CHOWDHRY,

2. The dividends, if declared, will be payable to the Shareholders registered in the Books of the Company on 12th October, 1962.

NEW ISSUE NOTES

Metal Distributors

The recent issue of 392,000 equity shares of Metal Distributors Limited has been over-subscribed. In consultation with the Calcutta Stock Exchange Association, the Board of Directors have finalised the scheme of allotment as follows:—Each applicant of 50 shares will get 10 shares; for 100 to 250—20 shares; 300 to 400 shares—25 shares; 450 to 500—30 shares; 550 to 700—40 shares; 750 to 1,150—50 shares; 1,200 to 1,250—60 shares; 1,300 to 1,700—75 shares; 1,800 to 2,250—100 shares; 2,400 to 2,550—125 shares; 2,600 to 3,200—150 shares; 3,500—175 shares; 4,000 to 4,200—200 shares; 5,000 to 5,100—250 shares; 6,000—325 shares; 7,000—350 shares; 7,200 to 7,600—375 shares; 10,000 to 10,800—500 shares; 11,000—550 shares; 12,000—600 shares and 40,000—2,000 shares.

Indian Aluminium

Indian Aluminium Company Limited will issue (i) 801,276 equity shares of Rs 10 each for cash at a premium of Rs 15.50 per share, to be issued to the existing shareholders; (ii) 6 1/2 per cent 1971-76 Debenture Stock for an amount of Rs 100 lakhs, to be issued at par or at a premium not exceeding 2 per cent and (iii) sterling Debenture Stock of the value of £500,000, to be issued to the Commonwealth Development Finance Company Limited, UK. The proceeds of the issue will be utilized for increasing the production capacity of the smelter at Alupuram from 5,120 to 10,850 tons per annum and setting up an aluminium foil-rolling and finishing mill of the capacity of 2,500 tons per annum at Kalwal near Bombay.

Bharat Forge

Bharat Forge Company Limited, Bombay will issue capital of Rs 230 lakhs in equity shares of Rs 100 lakhs in equity shares of Rs 100 each. Out of this, shares of the value of Rs 5 lakhs will be issued to the Steel Improvement & Forge Company of Cleveland, Ohio, USA. The proceeds of the issue will be utilised for the manufacture of various types of steel forgings.

Indian Refineries

Indian Refineries Limited, New Delhi, a wholly-owned Central Government undertaking, is to issue further capital of Rs 9.10 crores (including Rs 3.85 crores already issued), divided into 91,000 equity shares of Rs 1,000 each, to be issued to the Central Government for cash at par.

Titagur Paper

The Titagur Paper Mills Company Limited, Calcutta, is raising further capital of Rs 1,68,07,200, consisting of Rs 56,02,400 in bonus shares on capitalisation of Reserves and Rs 1,12,04,800 in equity shares of Rs 10 each for cash, to be offered to the existing equity shareholders at a premium of Rs 5 per share. The proceeds will be utilised for financing the scheme of expansion and renovation of the mills.

Hindustan Photo Films

Hindustan Photo Films Manufacturing Company Limited, Madras, wholly-owned by the Central Government, is issuing further capital of Rs 130 lakhs in equity shares of Rs 1,000 each, to be subscribed by the Central Government in cash, at par. The proceeds will be utilized for the manufacture of raw films for cinema industry, X-ray and roll films.

Fibre Glass

Fibre Glass Pilkington Limited, Bombay, a new company, is raising capital of Rs 1,19,99,930 in equity shares of Rs 10 each, at par. Out of this, shares of the value of Rs 61,20,000 will be issued to the foreign collaborators; Rs 30.60 lakhs to Fibre Glass Limited of St. Helens, Lancashire, and Rs 30.60 lakhs to Owens Corning Fibre Glass Corporation of the USA. The proceeds of the issue will be utilized for the manufacture of glass fibres and glass fibre products.

Mac-Tools

Mac-Tools Limited, Madras, will issue capital of Rs 1 crore, divided into Rs 80 lakhs in equity shares of Rs 10 each and Rs 20 lakhs in 9.5 per cent Preference shares of Rs 100 each, all for cash. The proceeds will be used for the manufacture of bench lathes, hydraulic surface grinders and workshop presses, etc., in collaboration with Matra-Works GNBH, Germany, who will be allotted equity shares of Rs 9 lakhs.

Devidayal Cable

Devidayal Cable Industries Limited, Bombay, will issue (i) bonus shares for Rs 4.10 lakhs on capitalisation of General Reserve Fund to a like extent and (ii) further cash issue of Rs 37.50 lakhs in 275,000 equity shares of Rs 10 each and 100,000—9 1/2 per cent (subject to tax) Preference shares of Rs 10 each. The proceeds will be utilized for the manufacture of winding wires and insulated cables, etc.

INVESTMENT NOTES

IISCO

According to the figures released by the Indian Iron & Steel Company Limited, production has shown a mixed trend last month. While the output of Pig Iron has declined from 105,296 tonnes in August to 103,650 tonnes in September and Saleable Steel from 69,349 tonnes to 61,274 tonnes, that of Steel Ingots is slightly higher at 79,794 tonnes against 79,708 tonnes. Despatches are lower at 56,256 tonnes against 66,872 tonnes.

TISCO

In contrast, the production figures released by the Tata Iron & Steel Company Limited are better. The output of Saleable Steel amounts to 111,500 metric tons against 108,500 tons; Semi-finished Steel to 35,500 tons against 28,300 tons and finished steel to 76,000 tons against 80,290

THE INDIAN IRON AND STEEL COMPANY LTD.

NOTICE is hereby given that the Register of Members and Share Transfer Books for Preference Shares in the Company will remain closed from the 15th October, to 18th October, 1962, both days inclusive for the purpose of payment of Preference Dividend for the half-year ended 30th September, 1962, on or after the 1st November 1962, to those Preference Shareholders whose names appear on the Company's Register of Members on the 18th October, 1962, or to their mandatees.

By Order of the Board,
MARTIN BURN, LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

Registered Office:

has been extended by the Board of Directors from 1st October, 1962 to 31st October 1962.

tons. The output of Pig Iron is shown at 137,600 tons against 141,300 tons and Steel Ingots at 150,100 tons against 137,000 tons.

STOCK EXCHANGES Mild Recovery— but Sentiment Weak

Watch-Dog Writes:

IT looks as if the bear operators are still having a tight grip on the stock markets with the bulls on the retreat. Even the smart recovery in the prices of a few selected shares, that was noticed in the early part of the week, has proved to be short-lived. Taking full advantage of the general weakness of the market, bears have depressed prices by selling freely, while the professionals have preferred to lighten their commitments.

Although the Calcutta Stock Exchange started the week on a pro-

misising note and showed a marked recovery from the recent low levels. lack of sustained support coupled with fresh offerings resulted in prices developing a slightly easier tendency at the close.

After a steady opening, equity values on the Bombay Stock Exchange lost ground steadily under an onslaught of bull liquidation and bear hammering.

The Madras Stock Exchange, however, remained fairly active. Cleared shares particularly were in better form, while business in the cash section continued to be meagre.

The week's performance on the London Stock Exchange was generally satisfactory. Although business was restricted by the hold-up of clients' orders, selective buying of equities produced fairly widespread gains.

CALCUTTA

Thursday Evening.

SENTIMENT on Lyons Range continued to remain generally depressed. After the sharp recession wit-

nessed last week, prices displayed a smart recovery in the early part of the week under review due to better Bombay advices. The slight improvement in sentiment was also aided by the rumours of the Indian Iron & Steel Company Limited having applied to the Government for re-consideration of the steel price increase. It was also felt that the company might, in the meantime, declare a further interim dividend. But, there was a small decline in prices towards the close of the week due to lack of follow-up support. Even the leading shares struggled hard to stabilise at low levels.

While the leading operators preferred to wait and watch pending a clearer picture of the economic and political situation, the delay in the announcement of the dividend as well as the discouraging production figures released by the IISCO disrupted the morale of the market. To make matters worse, the rejection by the Supreme Court of the appeals of the TISCO, IISCO and Indian Copper Corporation against the levy of a cess on the ores mined by these companies in Bihar had a depressing effect on sentiment.

Apart from the fact that the operators were in a holiday mood due to the approaching holidays for the Pujya festival (the market will remain closed from 5 to 15 October, both days inclusive) and inclined to square up their outstanding transactions, there were several other factors contributing to their hesitancy into entering into commitments at all. There were fears of a drastic cut in imports for the October/March period and of a revival of price control over the selling prices of commodities. Again, the annual report of the Reserve Bank and the growing tension over the Indo-Chinese border caused a good deal of concern.

It was also thought that there was no improvement in any sector of the economy, as even in certain industries where imported materials do not form any significant part in manufacturing operations, difficulties of a local nature like shortage of coal, power and transport had been playing havoc.

Conditions in the Giltedged section continued to remain dull. With sellers dominating and buyers conspicuously absent, business transacted turned out to be extremely small.

Jute shares seemed to have lost the enthusiasm of the operators in view of a marked decline in enquiries for jute goods from overseas buyers. Another important fact, which was completely ignored by the market circles in its present mood of depression, was the current year's profitable working of the jute mills, which should enable the industry not only to recoup past losses, but also pay satisfactory dividends. Birlas were marked down to Rs 34 from Rs 34.50 (Rs 34.00); Howrah to Rs 20.12 from Rs 20.44 (Rs 20.12); and New Central to Rs 13.50 from Rs 14.12 (Rs 14.00). Ganges were nearly maintained at Rs 14.75.

Coal shares were devoid of interest and, in the absence of any buying enquiry, prices slipped down

wherever any business was recorded. Central India were on offer at Rs 10.06 and Western Bengal at Rs 9.12.

Except for some enquiry in Cawnpore up to Rs 12.37 and Dyer Meakin changing hands on the ex-dividend basis at Rs 30.75, Sugar shares were generally neglected on reports of accumulation of stocks with the mills.

The obscure outlook for exports of piecegoods and yarn was reflected in the Textiles section where dealings were few and far between. Jay Shree were the only exception, having buyers up to Rs 17 from Rs 16.56. JK Cotton were, however, offered at Rs 15.94 against Rs 16.12 and so also Kesoram at Rs 25.94 against Rs 26.19.

In the Engineering section, price movements were mostly influenced by the speculative activity in Indian Irons. Against the previous week-end closing of Rs 25.06, the scrip opened better at Rs 25.12 and improved further to Rs 25.34 before reacting at the close to Rs 25.24. But for the production figures, the scrip would have finished around the highest levels for the week. Jay Engineering were done at Rs 24.87 to Rs 25.40; Jessop at Rs 22.62 to Rs 23.06; Guest, Keen, Williams at Rs 36.94 to Rs 37.50 and TEXMACO at Rs 22.45 to Rs 22.75 (Rs 22.55). Figures shown within brackets were the closing rates for the week.

With a limited turnover, the Miscellaneous section recorded further losses in values due to receipt of some selling orders by the brokers. Indian Aluminium were a weak feature and were pushed down to Rs 34.75 from a high of Rs 36.56 on reports of the company's proposal to issue right shares at a high premium of Rs 15.50 per share, although the closing rate was better at Rs 35.75 following the news of an interim dividend of 75 nP per share for the current year. Orient Paper were marked down at one time to Rs 40.10 from Rs 40.30 (Rs 40.45); Shree Gopal to Rs 24.94 from Rs 25.06 (Rs 25.00); Dunlop Rubber to Rs 38.19 from Rs 38.69 (Rs 38.00); Hindustan Motor to Rs 18.31 from Rs 18.62 (Rs 18.37); Orissa Cement to Rs 16.69 from Rs 16.84 (Rs 16.81); Jaipur Udyog to Rs 12.31 from Rs 12.44 (Rs 12.44); Rohtas to Rs 14.19 from Rs 14.31 (Rs 14.31); Indian Cable to Rs 35.87 from Rs 36 (Rs 36.00) and Indian Copper to Rs 4.61 from Rs 4.65 (Rs 4.63). JK Synthetics were, however, maintained at Rs 13.56 and so also India Carbon at Rs 25.37. Titagur Paper were slightly lower at Rs 38.87 against Rs 39.

The Proprietors of Indian Patent No 40034 "Recovery of Acids from Coal Oils or Tar" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered Patent.

Anyone interested should apply to—Box No. 40.
C/o Indian Finance, Calcutta-14.

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

INVESTOR'S SUPPLEMENT

Equities Easy in September

EQUITY prices suffered a severe setback during September as confidence had been rudely shaken by a number of adverse factors. Both investors and speculators were reluctant to extend commitments because they believed that the outlook for equities had become gloomy. Perhaps the most powerful adverse influence came from the long awaited announcement regarding the new steel retention price. The increase granted is Rs 10.50 a ton and the news brought about a heavy slump in the prices of steel shares. It is not surprising that market men reacted bearishly to the announcement because no one thought that Government would fix such a small increase as only Rs 10.50 a ton. Rumour had it even on the eve of the announcement that an increase of not less than Rs 30 a ton would be given although the Tariff Commission had recommended a higher figure. The actual increase allowed falling far short of expectations, market men took a gloomy view of the outlook for steel dividends and expressed their dissatisfaction by hammering down the prices of steel shares. The arguments advanced by the Government spokesmen in support of the official decision on steel retention price were not considered to be convincing and it was pointed out that Government had failed to take into account the rising cost of production and the many handicaps that the steel companies were facing such as the high ash content of the coal supplied to the steel factories, transport bottlenecks etc. It was also

apprehended that similar stringency would characterise Government's decisions in the future in fixing the return for other producers of basic materials. The depressed mood of the stock market was primarily caused by the fear that with such a paltry increase in the retention price, steel companies would not be able to bring their distribution to the shareholders even upto the previous year's level.

Even otherwise, there was little enthusiasm among operators. For corporate news was far from encouraging what with several companies announcing reduced profits and smaller dividends. Caught between rising costs of production and increased raw materials cost and slowing down of working on account of coal and power shortage, corporate profits were being squeezed. Talks of holding the price line engendered the fear that producers might find it extremely difficult to obtain government approval for higher selling prices for their manufactures on the plea of mounting production costs. In this regard, the possibility of a radical revision of official policy toward private enterprise was also having an adverse influence. Persistent rumours about a major reshuffle of the Central Cabinet contributed to the uncertainty in the

investment situation. Investors were chary of lending sustained support to equities as they were sceptical about the corporate sector making a satisfactory showing in the current year. In the first place, there was the question of the growing idle capacity in industry on account of raw material shortage. In view of the extreme stringency of foreign exchange, hopes of obtaining sufficient imported raw materials had receded. How acute was the problem of foreign exchange was clearly indicated in the working of the automobile industry. While the Government was accusing the industry that it had failed to quicken the process of increasing the indigenous content of their vehicles, the industry replied with the counter-accusation that it was because of failure of Government to allot the industry the necessary foreign exchange for the import of machinery which alone could help reduce the imported content of vehicle that the progress in that regard had been retarded. Since it was made clear that maintenance imports had to be financed out of export earnings, enthusiasm considerably lessened even for equities which were earlier sought after for their growth prospects. With the country's principal export commodities meeting with stiff competition in world markets coupled with the prospect of a steep fall in export earnings in

the event of Britain joining the European Market without getting adequate safeguards for commonwealth countries, it was believed that even maintenance imports would become increasingly difficult. To add to the difficulties already experienced by industry in respect of imports, there was the fresh threat of further import cut in the next licensing period. Towards the close of the month sentiment was further dampened by the renewed apprehension of additional taxation to come.

Investors were also considerably worried over the continued build up of Chinese troops on the northern borders of the country and fresh incursions in the Nefa region. It was taken for granted that the northern border would require vigilant attention of our troops and consequently defence expenditure would mount up.

Sectionwise, despite continued capacity production of mills, jute shares received only scattered support. It would appear that investors did not rate the outlook for dividends high because exports of sacking which formed the bulk of mills output were on a disappointing level. In view of the expansion plans of the Pakistani jute industry which had turned out to be a serious competitor to India in world markets, exports of Indian sacking would become increasingly difficult. It was also feared that the fact that Government was determined to maintain raw jute prices at last season's level would further impair the competitive capacity of Indian jute mills.

(a) After transferring Rs 162,500 from Dividend Equalisation Fund.

(b) After transferring Rs 385,000 from Dividend Equalisation Reserve and writing back Rs 29,488 from provisions.

(c) After transferring Rs 281,261 from General Reserve.

(d) After transferring Rs 784,586 from General Reserve No. 2; Rs 522,000 Reserve of exempted profits and Rs 358,750 from Dividend Equalisation Reserve.

(e) After transferring Rs 60,000 from Development Rebate Reserve and Rs 90,940 from Rehabilitation Fund.

(f) After transferring Rs 9,800,000 from General Reserve.

(g) Includes Rs 628,716 being provision for contingencies written back.

(h) After transferring Rs 62,000 from General Reserve.

(i) After writing back Rs 61,971 being over provision in previous years.

(j) After transferring Rs 329,164 from General Reserve Rs 270,000 from Deferred Taxation Reserve and Rs 41,811 from provision for taxes.

(k) After transferring Rs 142,000 from profit on sale of capital assets.

(m) After transferring Rs 407,298 from General Reserve.

(n) After transferring Rs 150,000 from Deferred Taxation Reserve and Rs 129,559 from provision for taxes made in previous years.

(o) After transferring Rs 1,150,000 from Special Reserve.

(p) After transferring Rs 100,000 from General Reserve.

(q) After transferring Rs 2,500,000 from Dividend Equalisation Reserve; Rs 3,042,276 from provision made in previous years and Rs 1,613,456 from General Reserve.

(r) After transferring Rs 250,000 from Reserve for Deferred Income-tax.

(s) After transferring Rs 3,379,376 from General Reserve.

(t) After transferring Rs 7,000,000 from Tax Equalisation Reserve.

(u) Dividend in the form shares in The Punjab National Bank at one share for every 20 shares held in Bharat Nidhi.

(v) After writing back Rs 383,619 being excess provision of previous years and including Rs 1,353,645 being profit on sale of investments and Rs 173,784 being profit on sale of Fixed Assets.

(w) After writing back Rs 37,643 being provision for taxation and Rs 10,000 being Reserve for Bad and Doubtful debts.

(x) After transferring Rs 114,000 from Reserve

for Doubtful Reserve; Rs 31,138 from Investment Reserve and including Rs 129,735 being balance refunds capital from Baraboni Tea Co. and Rs 135,113 being refund of Income-tax.

(y) After transferring Rs 226,256 from Rehabilitation and Expansion Reserve.

(z) After transferring Rs 300,000 from Rehabilitation Reserve; Rs 123,920 from Reserve for taxation and writing back Rs 135,815 from Depreciation Reserve.

(a1) After transferring Rs 500,000 from General Reserve and Rs 1,950,000 from Dividend Reserve.

(a2) After transferring Rs 470,475 from Development Rebate Reserve.

(a3) After writing back Rs 32,015 being over provision in previous years.

(a4) After writing back Rs 118,059 from provision for taxation.

(a5) After transferring Rs 200,000 from Bad and Doubtful Debts Reserve.

(a6) After writing back Rs 315,185 from Fleet Depreciation Reserve.

(a7) After writing back Rs 122,090 being excess provision of Development Rebate Reserve.

(a8) After transferring Rs 100,000 from Investment Reserve.

(a9) After writing back Rs 1,123,473 being depreciation on Mining Leases and Rs 58,833 being depreciation excess provided in previous years.
