In London auction, offerings were 27,265 packages including 24,262 packages from Northern India and 330 packages from Pakistan. The market remained very strong for all descriptions with the exception of some of the best Assams, which were inclined a little easier. Teas from the Dooars and the poor quality kinds were a strong feature of the sale and the prices for these tended dearer. The rate for Plain Broken Pekoe was quoted at 3sh 9½d per pound.

Tea stocks in London, as on 23 November, totalled 136.10 million pounds as against 132.43 million pounds in the previous week. The total quantity to be landed on the same date was 15.87 million pounds. Total afloat was 28.01 million pounds including from Calcutta 14.38 million pounds; from Chittagong 966,000 pounds; from Cochin 3.07 million pounds; from Ceylon 8.56 million pounds and from other Ports 1.03 million pounds.

In the Cochin market, 278,000 kilogrammes of dusts were offered for internal consumption. Against fair demand, prices were generally 10 nP to 20 a kilo easier for all grades except for brighter Medium which were firm. High-grown and unorthodox descriptions were irregularly easier.

COTTON Bearish Trend in Futures

THE recent downward swing in the Bombay cotton futures market gathered fresh momentum during the past week and the ruling Jarilla March 1963 contract declined further to the new low level of Rs 681.50 per three quintals mainly due to heavy nervous bull liquidation. The bearish tendency stemmed originally from the news of the signing of an agreement with the US for the import of 375,000 bales cotton under the PL 480. The market suffered another jolt consequent on the ban on the forward trading in kapas (unginned cotton), non-ferrous metals and shares. The trade circles apprehended that the order may be extended to other commodities as well including cotton. Sentiment was further demoralised by the reports of huge accumulation of unsold cloth stocks in upcountry centres and good movement of cotton crop. The contract which opened on Monday at Rs 699.00 slumped down to Rs 681.50 on Friday at which level, thanks to the bear covering by a prominent Calcutta operator and partial replacement support from Akola, it met with some steadiness. But the steady trend fizzled out suddenly and the contract closed for the week at Rs 682.75, indicating a decline of Rs 18.00. But in the initial trading of this week owing to untimely rain the contract showed signs of recovery and on Monday it closed at Rs 686.00 per three quintals.

In the spot market at Sewari a distinct easiness was in evidence in all the new crop varieties. In addition to the restricted purchase by the spinners, the easy tendency was imparted by the lower valuation awarded to the initial lots of 147 by the Textile Commissioner's appeal committee. The Indian Cotton Mills' Federation stopped purchase of Kandesh 197/3 as the prices slipped down the ceiling level. Surti also lost some ground during the week under review. Obviously due to the alarming accumulation of unsold stocks with them, the mills restricted their booking to immediate requirements.

The import section was in a desolate condition. Transactions came to a standstill with the uncertainty generated by the Government of India's announcement to resort to drastic cuts in the allocation of global cotton quotas to the mills. It is reported that the spinners and traders had entered into commitments far in excess of the licensed quantities.

Nevertheless, the trade is optimistic that it won't be allowed to starve for lack of cotton for further imports of cotton from the US under a barter deal in exchange for sugar and manganese ore are also expected.

PIECEGOODS:

The cotton piecegooss market during the week under review presented divergent conditions. The tempo in the export front was well maintained while the domestic sector was dull and drab. The anticipation of brisk activity in the domestic sector with the onset of the busy season was belied as the transactions dwindled into a mere trickle. The stockists were reluctant to augment their commitments on credit. The up-country centres were dormant and most of them have already cancelled their bookings against previous purchases. It is reported that the merchants are finding extremely difficult to realise the amounts in respect of their previous sales particularly to Assam and other border centres. The paucity of funds was a major limiting factor and the turnover was disappointingly low. It is also understood that many consignments booked from here had not so far reached their destinations.

Stocks with the mills are mounting day by day despite the fall in production. According to a recent estimate the unsold goods with the mills are placed around 4.5 lakh bales by the end of November in comparison with 4.32 lakh bales in the preceding month.

On the contrary the export section was active. The eight member trade delegation from Burma is reported to have concluded business for nearly 11 lakh yards of cotton textiles. Their purchase comprises 6.40 lakh yards of superfine printed voils, 2 lakh yards of mosquito netting cloth, 1.75 lakh yards of tussore coatings and 75,000 yards of bed ticking cloth. The delegation, a representative body of 11 joint venture corporations in that country, is reported to have stated that more delegations will be sent to India in the near future in order to enter into further trade talks pertaining to cloth, oil, cloth cotton waste and the like.

The UK accounted for a small quantum of grey sheeting and tapestry. Sudan was satisfied with a small quantity of grey sheetings at discount prices. The US focussed its interest on furnishings and grey sheetings. East European countries enquired for grey and processed goods.

Export Prospects for Sugar

ADVICES from Bombay indicate that the special temporary rate of \$50 on 1,000 kilos on Pepper, Ginger and Turmeric from the West Coast of India to the USA Atlantic Ports has been extended up to 30 April, 1963. The tariff rates for these commodities are \$78.50, \$50 and \$85 respectively. The Freight Investigation Bureau is pressing the Conference to make these rates permanent.

India has a 10 per cent price disadvantage from present tariffs which can be offset by Indian cost advantages or trading practices. While users in general are not very sensitive to price, importers are influenced by the relative prices of alternative sources of supply.

According to a study of the Australian market for pepper, released by the Spices Export Promotion Council, it is seen that imports of black pepper accounted for 35 to 40 per cent of the total pepper imports. The size of the future Australian demand for the commodity will be governed by the population growth and the extent of development of the canned meat industry there, which is a regular consumer. The market survey has also shown a definite, sure and expanding market for pepper in Australia. It is suggested that through specialised advertising, India can raise her exports to Australia.

Meanwhile, it is learnt that the implementation of the scheme for grading and marking of pepper intended for exports to ensure the quality standard of the commodities, originally intended to be brought into force from December 1, has now been postponed to January next. At this juncture, a vigorous export promotion drive, stressing product quality, service and strict weight specifications, should enable India to increase her shipments of pepper to Australia.

It is also necessary that Indian exporters of pepper should commence a campaign of consumer education, keeping in view that the greatest users of black pepper for seasoning are the European migrants. It is stated that there will not be any difficulty in colour or taste substitution as it will be only a question of switching over from Singapore or Sarawak to Indian pepper.

In the Cochin market, the rate for pepper has developed a firmer tendency due to the scarcity of sellers. Ready rates moved between Rs 271.50 and Rs 273.50, while the December delivery is quoted at Rs 270.50 to Rs 275 (all rates per quintal).

COFFEE Check in Price Rise

The India Coffee Board is taking immediate action to keep the prices of coffee in the internal market, which had shown an upward trend of about Rs 10 per kg recently. This increase in prices was attributed to a few big parties entering the market for bulk purchase in large scale. As a first step to maintain the price line during emergency, the Board conducted another sale at Coimbatore. The Board has also stated that, if the situation caused by the rise in prices of Robusta Coffee warrants to be taken, allotment to traders may be considered seriously.

It is also encouraging to note that India has now signed the International Coffee Agreement under which she is assured of four years of an annual export of 21,000 tons of coffee to countries which are members of the Agreement. The agreement leaves

India free to export more to non-member countries. Last year, India exported nearly 30,000 tons. But, with the increasing competition in the world market and the universal shortage of foreign exchange in developing countries, the agreement ensures the trade against sudden adversities for four years.

At a meeting held in New Delhi on Saturday last, a demand was made on behalf of coffee growers for concessions similar to those enjoyed by the tea industry. These included supply of fertilizers, artificial irrigation and credit for the purchase of machinery. All these demands were accepted.

NON-FERROUS METALS Ban on Forward Trading

The ban imposed on forward trading in Non-Ferrous Metals had little direct effect on the actual functioning of the market. It was pointed out that the notification was quite vague. The Bombay Metal Exchange was the only recognised body for conducting forward trading; but it had stopped forward trading in Tin from April last following the restrictions imposed on the importers regarding profit margin. In Zinc, distribution and price control continue, which, in Lead, licences given to actual users cannot be sold in the open market.

However, the repeated warnings by the authorities against the unauthorised deals have had some effect on the activity of the speculators. The traders had voluntarily closed down forward trading by joint decision. But the outstanding positions in unofficial deals are yet to be settled though traders have generally refrained from entering into fresh commitments.

As regards price changes during the past week, Tin declined from Rs 270 to Rs 268 on stray selling and lack of support. Operators seemed to be reluctant to enter into fresh commitments in view of the current talks between the Tin Council and the UK on stockpile releases.

Copper conductors were quiet around Rs 390 per 50 kg. Zinc slumped from Rs 252 to Rs 242 on reports of ample stocks and credit instructions. Lead remained static around Rs 162 although the closing rate for the week was better at Rs 164.

SUGAR Poor Demand

Sugar prices have eased further during the week as the demand is poor and traders are disinclined to enter into large commitments in view of the political uncertainties. Apart from the latest quota of 200,000 tons for open sale, about 50,000 tons of the previous month's release are reported to be still lying unsold in factories. Selling pressure from the factories has also continued as the Government is not going to extend the validity period for any lapsed orders. In the Hapur market, mill delivery D/29 is quoted at Rs 100.98 for Amroha; Rs 100.98

for Dharmpur; Rs 100.62 for Bijore and Rs 103 for Simbhaoli, all rates per quintal.

The Export Agency Division of the Indian Sugar Mills' Association has sold 3,70,000 tonnes of sugar for shipment in 1963. Taking into account the US statutory quota for India of 20,000 short tons raw value (which comes to about 17,000 tonnes), India can expect to ship 387,000 tonnes of sugar next year. The achievement is considered to be encouraging when compared with the sale of 391,000 tonnes in the current year for export.

Except about 20,000 tonnes of raw sugar, the Indian exports consist of crystal sugar. The production of raw sugar, however, is being slowly stepped up as the export price is fetched on raw value. Seven units in the country commenced production of raw sugar this year by adjusting the US productive technique obtaining in almost all the sugar mills in India. At present, five units are continuing the process. The question of increasing the production of raw sugar is likely to be examined at the beginning of next year when the price of sugarcane is expected to stabilise.

GOLD & SILVER Sharp Rise in Gold Price

Despite the Finance Minister's statement expressing the Government's determination to bring down the price of gold to the international level, spot gold in Bombay had advanced rather sharply to Rs 101.50 from Rs 96.50. This rise is attributed to the scarcity of offerings. Stocks in the City are reported to have dwindled considerably. It is felt that they will be able to dispose of a large part of their holdings before the Government comes out with fresh measures. Arrivals on Tuesday this week were only 5,000 tolas as against an offtake of 7,000 tolas.

With the sharp recovery in gold, Silver prices have also moved up with the Fagun contract attracting good support. With the contango hardening to Rs 2.65, an automatic margin of Rs 750 has become operative against sellers in the Magshar contract. Arrivals of the metal on Tuesday were 45 bars as against an offtake of 8 bars. Spot silver (below 998) changed hands at Rs 194.10 to Rs 195.40.

OILS & OILSEEDS Heavy Bull Unloading

Prices on the Bombay Oilseeds Exchange suffered a sharp setback due to heavy bull liquidation on the fear of a further fall in prices.

The Groundnut section was the worst to suffer in the slump. The rising inflow of the new crop on the one hand and nervous unloadings on the other undermined the trading sentiment. The continued political tension and the Government's policy of curbing the advance in commodity prices gave rise to a feeling of nervousness which was aggravated fur-

ther by the suspension of forward trading in shares and metals. Ready Bold was quoted lower at Rs 39.50 and Groundnut Oil at Rs 16.70.

The break in groundnut exercised a bearish impact on the Castorseed section. Although a few shippers were seen covering their supplies of castor oil against their export commitments, that support failed to help the market. Castor ready was quoted at Rs 31.75 and Castor Oil, commercial quality, at Rs 13.65.

The tendency in the Linseed market remained subdued despite the fact that the new crop would not be available for another two months. Although the supply position was fairly tight, this factor was ignored in the absence of demand from shippers and the paint industry. Linseed ready was quoted at Rs 39.50 and Linseed Oil at Rs 16.70.

SILK Firm Trend

The Bangalore silk market showed an upward trend during the previous week. Filature raw silk of 20/22 Dr. was steady between Rs 88.18 and Rs 89.29 per kg. Cottage basin Charka raw silk increased to rule between Rs 83.77 and Rs 91.49 and Rs 63.93 and Rs 81.02 per kg. respectively.

Spun silk yarn of 2/210's was firm at Rs 74.96 per kg. Cottage basin and charka silk waste fluctuated between Rs 10.45 and Rs 13.20 and Rs 4.95 and Rs 7.70 per kg. respectively.

Reeling cocoons varied from Rs 3.50 to Rs 5.50 per kg. Foreign and Mysore race seed cocoons ranged from Rs 3.00 to Rs 12.00 and from Rs 4.25 to Rs 5.37 per thousand respectively.

The Bhagalpur silk market presented a steady trend during the last week.

THE BENGAL FLOUR MILLS CO. LTD.

NOTICE is hereby given that the Board of Directors has today declared an Interim Dividend of 10% (subject to deduction of Income Tax) on the shares of the Company, in respect of the year ending 31st December, 1962. The dividend will be payable on or after 27th December, 1962 to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 15th December, 1962 to 27th December, 1962, both days inclusive.

By Order of the Board,
BALMER LAWRIE & CO. LTD.
D. MANSON

Jeypore Sugar Repeats

The Jeypore Sugar Company Limited has reported a slightly higher net profit of Rs 31.16 lakhs for the year ended 30 June 1962 as against Rs 30.48 lakhs for 1960-61. The latter figure includes Rs 3 lakhs transferred from General Reserve No. 1 and Rs 54,084 from General Reserve No. 2.

In respect of allocations, General Reserve is raised to Rs 3.00 lakhs from Rs 2.90 lakhs and Depreciation to Rs 15.62 lakhs from Rs 9.33 lakhs, apart from providing Rs 4.75 lakhs for Taxation. The provision for Development Rebate Reserve is lowered to Rs 1.65 lakhs from Rs 12.25 lakhs. The dividend on the Ordinary shares is maintained at 15 per cent, subject to tax.

A total of 68,588 tons of cane was crushed during the season by the company's Chagallu factory, resulting in a production of 7,426.6 tons of sugar with a recovery of 10.64 per cent. For the season 1962-63, the company is engaged in the exclusive production of raw sugar which will be wholly exported out of India. The company has entered into a contract for the export of 10,000 tonnes of raw sugar during the 1962-63 season.

The Rayaghada sugar factory crushed 48,798 tonnes of cane, resulting in a production of 4,214.6 tonnes of sugar and recovery of 8.69 per cent. The lower recovery percentage is due to accidental fires in the sugarcane fields.

The company's application to the Orissa Government for the adjustment of the minimum guarantee liability of Rs 4.42 lakhs in respect of consumption of power is still pending decision by the Government.

Kothari Sugars Incur Loss

Kothari Sugars and Chemicals Limited has incurred a loss of Rs 78,587 for the year ended 30 June 1962 as against a loss of Rs 5,017 for the previous period covering from 7 November 1960 to 30 June 1961. The amount set aside for Depreciation is higher at Rs 22,933 against Rs 3,739. The dividend is passed again for the year. The debit balance carried forward to next year is Rs 1.10 lakhs.

The directors state that 95 per cent of the machinery and plant has been received so far. The boilers for the factory, which were expected from TEXMACO in November 1961, actually were received in May 1962. Hence, it was not possible to complete the erection of the machinery as expected by May 1962.

Fall in Profits of Asher Textiles

Asher Textiles Limited, Tirupur, has shown a fall in sales from Rs 92.54 lakh, to Rs 91.78 lakhs as well as in profits from Rs 13.54 lakhs to Rs 10.25 lakhs for the year ended 30 June 1962. In this connection, the directors have stated that the fall in profits is mainly due to the high cost of cotton and the considerable rise in production costs consequent on the implementation of cotton Textiles Wage Board recommendations, the payment of higher dearness allowances to employees and the adoption of ceiling prices for yarn.

In respect of allocations, Depreciation is raised to Rs 3.56 lakhs from Rs 2.82 lakhs and Development Rebate to Rs 93,000 from Rs 90,000. Taxation provision is, however, lower at Rs 3.00 lakhs against Rs 5.25 lakhs and General Reserve at Rs 75,000 against Rs 1.00 lakh. The dividend is halved at 15 per cent, subject to deduction of tax.

The directors state that the company's application for a licence for additional spindle for balancing the preparatory equipment of the mill has not met with success so far.

Investment Trust Earns Less

The working of the Investment Trust, of India Limited, during the year ended 30 September 1962, has resulted in a lower net profit of Rs 77,614 (including Rs 30,000 being excess provision for income-tax written back) as against Rs 86,623 for the preceding year.

The Depreciation amount is slightly higher at Rs 2,579 against Rs 1,433, while General Reserve is maintained at Rs 10,000. The dividend is repeated at 6 per cent, subject to tax.

Dividend Halved by Mysore Chemicals

The sharp decline in sales from Rs 50.52 lakhs to Rs 37.32 lakhs is reflected in the working results of the Mysore Chemicals and Fertilisers Limited for the year ended 31 March 1962. The net profit, before providing for Depreciation and Taxation, works out to only Rs 3.89 lakhs as against Rs 8.34 lakhs for the preceding year.

Except for Development Rebate Reserve which is raised slightly to Rs 2,005 from Rs 1,850, all other allocations have been reduced: Depreciation to Rs 2.43 lakhs from Rs 2.81 lakhs and Taxation to Rs 66,000 from Rs 2.64 lakhs. No provisions are made for General Reserve and Dividend Equalisation Reserve against Rs 21,773 and Rs 20,000 respectively set aside in the previous year. After transferring Rs 40,000 from Dividend Equalisation Reserve, the directors have been able to pay a taxable dividend of 5 per cent as against a taxable dividend of 10 per cent paid for 1960-61.

In connection with the expansion of the Sulphuric Acid Plant, the directors state that orders for a 50-ton/day capacity have been placed and all the equipments have been received. There is, however, some delay on account of non-receipt of equipment fabricated in India due to transport difficulties.

An industrial licence has been received for putting up a fully mechanised Superphosphate plant, which will increase the production of Superphosphate to 33,000 tons per year. The plant is expected to be ready for delivery during May 1963 and may be expected to be commissioned to service by the middle of March 1964. The cost of the above expansion schemes is about Rs 38 lakhs. This amount is being raised by taking a medium-term loan of Rs 25 lakhs from Bank of Mysore after finding a sum of Rs 13 lakhs from the internal resources of the company.

The company has also received an industrial licence for the installation of a Caustic Soda/Chlorine plant, capable of 40 tons per day. The cost of the project, which is of the order of Rs 200 lakhs, will have to be partly financed by raising the share capital of the company and going in for long-term loans from Financial Agencies in the country. This scheme is expected to enable the company to undertake production of vitally-needed articles, which are not produced in the State and for which the market is likely to expand.

For the Investor

INVESTMENT GOSSIP Lack of Incentive

Stock market sentiment continues to be depressed in the absence of fresh buying support. The ban imposed last week on forward trading on shares has reduced business to a bare minimum. While this measure will considerably reduce speculation, it does not necessarily follow that investment interest will automatically increase. For there are still many uncertainties in the investment situation as obtaining at the present time and buyers will wait for positive indications as regards the trend of corporate working.

The shape of things to come in the near future has been indicated by the Union Finance Minister, Mr Morarji Desai, while addressing the Associated Chambers of Commerce in Calcutta last week. He has made it clear that there can be no slackening of effort to develop the economy despite the urgent need for strengthening the country's defence. This is not going to be an easy task. There is the problem of foreign exchange, the supply of which is extremely inadequate. The position in this regard will become further acute in view of the need for diverting large amounts of foreign exchange for maintenance requirements of industries serving defence needs. Mr Desai has also referred to the need for additional taxation to meet the increased expenditure on defence.

It is generally believed that additional taxation has to be levied in order to meet the varied needs of the present emergency. Six eminent economists in the country have called for immediate tax effort to mobilise adequate resources. They point out that a supplementary budget should have been announced by now. It is their view that the opportunity to tax must be seized before it is too late.

One of the reasons for the continued reluctance of investment interest even though present prices in most shares are very attractive is the expectation that minimum prices will be again revised downward. In this connection it is reported that the LIC may evince fresh interest in the market only when the prevailing minima are reduced even in the case of pivotal shares.

NEW ISSUE NOTES Tata-Finly

Tata-Finlay (Private), Limited, Bombay, is to issue capital of Rs 50 lakhs, divided into 50,000 equity shares of Rs 100 each for cash, at par. Out of this, shares of the value of Rs 24.50 lakhs will be issued to James Finlay & Company Limited of UK and their associates.

Elect-O-Mech

Elect-O-Mech Limited, Bombay, a new company, is raising capital of Rs 35 lakhs in equity shares of Rs 10 each for cash, at par. The proceeds of the issue will be utilised for the manufacture of electrically-operated hoists, battery/diesel operated industrial trucks, geared motors and spare parts, etc.

Bharat Fertilizers

Bharat Fertilizer Industries Limited, Bombay, proposed to be converted into a public limited company, has been allowed to issue capital of Rs 15 lakhs, divided into 15,000 equity shares of Rs 100 each for cash, at par.

INVESTMENT NOTES Madhusudan Mills

Shree Madhusudan Mills Limited, Calcutta, has been granted consent to the postponement of the date of redemption of its Debentures, issued in 1957 up to 1972. This is subject to the condition, among others, that any debenture holder, who expresses his disagreement to the postponement, shall be paid in cash.

IISCO

The production figures released by the Indian Iron & Steel Company Limited for last month, should be considered very satisfactory especially when the number of working days is only 30. The output of Pig Iron is lower at 107,690 metric tonnes as against 109,801 tonnes in October, while that of Steel Ingots has risen to 85,016 tonnes from 83,644 tonnes and Saleable Steel to 70,218 tonnes from 65,482 tonnes. Despatches are higher at 79,856 tonnes against 60,217 tonnes. These would have been still higher, but for the fact that 7,400 tonnes could not be despatched due to the shortage of wagons.

TISCO

According to the figures released by the Tata Iron & Steel Company Limited, the output of Saleable Steel has declined to 121,300 metric tons in November from 124,500 tons in October. On the other hand, production of Pig Iron has improved to 156,800 tons and Steel Ingots to 163,200 tons from 153,500 tons and 155,500 tons respectively.

Tensile Steel

Tensile Steel Limited has reported considerable progress in its project for the manufacture of high tensile steel wire for use in prestressed concrete. Indigenous machinery is already on site and is in the process

of erection. A major portion of the imported plant and machinery from Japan has reached the factory site. Erection operations will start forthwith and are likely to be completed by the end of February. The plant is expected to be commissioned by March 1963.

INVESTMENT BRIEFS

The Orissa Minerals Development Company Limited has proposed a final dividend of 10 per cent, making a total of 20 per cent, taxable, for the year ended 30 June 1962. This compares with a taxable dividend of 28 per cent paid previously.

Associated Cement Companies Limited has maintained the dividend of Rs 12 per share, taxable, for the year ended 31 July 1962.

Mandya National Paper Mills Limited has skipped the dividend for the year ended 30 June 1962.

The shareholders of the Bank of India Limited have approved and adopted the scheme of amalgamation of Gadodia Bank Limited with the Bank of India Limited.

Model Mills Limited has skipped the dividend for the year ended 30 June 1962.

Jayant Paper Mills Limited has once again skipped the dividend for the year ended 30 June 1962.

Among the Hydro-electric group of companies, Tata Hydro has recommended an interim dividend of Rs 3 per share, Tata Power Rs 30 per

share and Andhra Valley Rs 30 per share, all subject to tax, for the year ended 31 March 1963.

Andhra Scientific Company Limited has maintained the dividend at 15 per cent, taxable, for the year ended 30 June 1962.

Binny & Company (Madras) Limited has announced an additional dividend of 3.25 per cent, taxable, on the Ordinary shares in respect of the year 1961.

BALANCE-SHEET BRIEFS

J. K. Steel Limited has reported a lower net profit, after providing for Depreciation but before Taxation, of Rs 20.46 lakhs for the year ended 30 June 1962 against Rs 26.12 lakhs for the preceding year. The directors have proposed to pay a taxable dividend of Re 1 per share on the increased ordinary capital. The dividend for the previous year was 20 per cent on the old capital. It is indicated that, out of the ordinary dividend of one rupee, shareholders will be entitled to get 90 nP per share, tax-free, and the balance of 10 nP only will be taxed. The net dividend will, therefore, be 97 nP per share. There was a similar exemption previously.

Spencer & Company Limited has reported a net profit, before providing for Depreciation and Taxation, of Rs 27.59 lakhs for the year ended 30 June 1962 against Rs 28.42 lakhs. The total dividend for the year is maintained at 18 per cent, subject to tax.

The working of the Standard Batteries Limited has resulted in a decline in the net profit from Rs 19.95 lakhs to Rs 13.31 lakhs for the year ended 30 June 1962. The dividend is reduced from Rs 15 to Rs 10 per share, taxable.

Loyal Textile Limited has reported a further improvement in the working results for the year ended 30 June 1962. The net profit works out to 17.11 lakhs as against Rs 14.90 lakhs for the preceding year. The dividend is raised from 6 per cent to 7½ per cent, subject to tax.

STOCK EXCHANGES Moribund Conditions

Watch-Dog Writes:

STOCK markets have again recorded a dull session during this week with prices showing hardly any change from the minimum levels. Even the possible lessening of tension between India and Pakistan and the massive military aid from friendly countries have been ignored. Operators seem to be in no mood to make commitments even at the present low levels.

There was no virtual change of situation on Lyons Range where the old moribund conditions persisted.

Except for some enquiry in a few selected scrips by way of a squaring-

up nature, Dalat Street continued to be in doldrums following lack of interest.

On the Madras Stock Exchange, a few selected shares changed hands at the market rates.

The Delhi Stock Exchange was devoid of any activity and operators were busy in adjusting their positions.

Thin trading continued to be the feature on the Ahmedabad Stock Exchange.

CALCUTTA

Friday Evening.

THIS week's trading on the local stock exchange came virtually to a standstill. Following the recent ban on forward trading which had paralysed the activity in the market, professional operators were left with no alternative other than being content with the small investment business done on spot delivery basis. As a matter of fact, business even in the cash section had dried up in the absence of any incentive.

It was thought earlier that the encouraging news like the end of the more than two-month-old river steamer strike, early possibility of talks to ease Indo-Pakistani relations and the news of the possibility of the removal of export duty on tea, might bring about an improvement in sentiment. On the contrary, conditions became more subdued as operators preferred to wait till it was possible to see more distinctly into the future.

Many of them were not in a position to extend their commitments, firstly because of the number of restrictions imposed by the stock exchange authorities and, secondly, because business was not permitted below the minimum levels fixed earlier.

Although the authorities permitted trading in all shares on spot delivery basis, this relaxation had no effect on the market, as the Finance Minister's address to the businessmen on Saturday last, that more taxes were on the way, gave cause for concern, not to speak of the general disposition to await further developments in the border situation. Thus, with the absence of business even at the attractive low levels, the price pattern showed that holders were inclined to get out of the market as early as possible.

It is, however, learnt that brokers are offering sizable parcels of equities, especially in the clearing list, to the LIC. Hopes are entertained that, if the LIC takes up some of the heavy loads now overhanging the market, there will be a definite swing in sentiment for the better. There is a general feeling in the market circles that the market should not be allowed to remain in the state as it is now. Hopes are now held that certain shares, notably Indian Irons and Hindustan Motors, will be purchased by the LIC in view of these shares being now quoted below their intrinsic values. [At the time of going to Press, it is learnt that the offers were not accepted by the LIC].

Conditions in the Gilt-edged section continued to remain quiet. As sellers

dominated in most of the loans, prices tended to sag slowly. State Loans, in particular, declined rather sharply on persistent selling. 3 per cent 1986 Conversion Loan, after touching a low of Rs 62.50 from Rs 62.95, finished better at Rs 62.85.

In the clearing securities section, business done was at the minimum levels. Indian Irons were nominally quoted at Rs 22, while no enquiry was noticed in Guest, Keen, Williams and TEXMACO. Dunlop Rubber changed hands at Rs 36.25 to Rs 36.50 with Hindustan Motor, Indian Cable, Indian Aluminium, Indian Copper, Orient Paper, Jaipur Udyog, Orissa Cement, J. K. Cotton and Rohtas quoting at the minimum levels.

In the cash section, Elgin Mills came in for some enquiry at Rs 19.50 and New Beerbhoom at Rs 20.94. Ganges were a steady feature at Rs 13.12 Central India Coal turned quiet at Rs 9.81 against Rs 10 on lack of support. Braithwaite met with good support up to Rs 33.50 with Binani Metal changing hands at Rs 9.87 to Rs 10. Among Miscellaneous issues, Alkali Chemicals were cheap at Rs 37.50 against Rs 37.62, while Hindustan Aluminium moved narrowly between Rs 13.50 and Rs 13.56. Goodyear were marked up to Rs 39.62 from Rs 39.12. India Steamship remained unchanged at Rs 6.25. Martin-Burn were done at Rs 29.81 to Rs 30. After a long time, General Tyres came in for business at Rs 8.19 and so also Imperial Tobacco at Rs 10.87 Aluminium Corporation were steady at Rs 15.12.

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing
Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial insurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future
The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

INVESTOR'S SUPPLEMENT

Conditions in the stock market continued to be depressed during November with a further reduction in business passing. In a bid to arrest the selling pressure, the various stock exchange authorities initiated a number of measures such as fixation of minimum prices, imposition of heavy margins on short sales, etc. The only redeeming feature of the month's trading was the appearance of a few buyers in selected scrip at around minimum prices whenever there was an indication of an improvement in the political situation. There was however little improvement in market sentiment as the more speculative issues continued to encounter persistent selling pressure. With a view to preventing undesirable speculation in stock markets, the Government of India banned forward trading in shares throughout the country with effect from 29 November. The existing contracts entered into upto the day of the notification and remaining to be performed were permitted to be liquidated in accordance with the rules, byelaws and regulations of the stock exchanges concerned. The ban on forward trading however failed to restore confidence as trading was further reduced after the ban was announced. Immediately before forward trading was suspended there were indications that some measure of stability would be resorted to as a result of further corrective mea-

Business at low Ebb in November

sures taken by some of the stock exchanges. Toward the end of the month and before the ban on forward trading was imposed, the Bombay Stock Exchange further relaxed restrictions on trading while the Calcutta Stock Exchange revised downward the minimum prices of another five share in the forward list. Trading was on a low ebb throughout the month mainly because of the political and economic uncertainties. While speculators were continuously depressing the prices on account of indications of a long drawn-out war with China, investors were reluctant to extend commitments in view of the uncertain outlook for equities. The Chinese cease fire and the offer of unilateral withdrawal by invader failed to instil confidence as regards an early end of hostilities between the two countries for the simple reason that the Chinese offers were rightly suspect. The Government made it clear that the unilateral offers of the Chinese had made no change in its plan for war preparations in the country. It was rightly emphasised that there could be no rest to the country until the nation was made militarily strong enough to resist successfully any future attempt at invasion of the country. The implications

of the new awakening were clear: While the Third Plan in its essentials would be implemented everything in the economy would be war oriented. In other words the highest priority would be given to defence industries in the matter of allocation of foreign exchange, raw material allotment, transport, power and coal supply etc. Government's determination to hold the price line and indications of further taxation to come to meet the mounting defence expenditure were other depressing factors. Investors believed that corporate profits would be cut to the bare minimum and some even apprehended some sort of control on dividend.

Even so, the generality of investors did not appear to be unduly perturbed despite the fact that many of their holdings had sharply declined in value since the emergency. In a timely Press Note the Ministry of Finance had also pointed out that there was no need for panic. Perhaps the near term prospects were not very encouraging but there was no gainsaying the fact that the long term outlook was quite bright. While the highest priority would have to be given to defence industries, it was inconceivable that other sectors of the economy could be neglected.

In earlier dealings in the month there had been feeble attempts at rally though there was no evidence that confidence had been restored. The fact that selling pressure became very heavy necessitating the closure of the Exchange in Bombay was a disturbing influence in the first week of the month under review. It was pointed out that the absence of a uniform policy for all stock exchanges in the country in dealing with the situation encountered as a result of the continuous selling pressure was partly responsible for bringing about the panicky conditions. Reports of LIC purchases of sizable quantities of shares failed to improve sentiment as bear operators continued to dominate the market.

In the subsequent weeks sentiment at times showed some improvement following continued attempts at arresting the bear raids on the one hand and at reviving investment interest on the other. The Calcutta Stock Exchange further reduced the minimum prices of three shares in the forward list while the Bombay Stock Exchange imposed a margin of 20 per cent on short sales. It also appeared for some time that the Chinese offer of unilateral cease fire had contributed in a small measure to the revival of interest. But the month closed without any indication of a marked revival of buying interest.

(a) After transferring Rs 20,838 from General Reserve No. 1.
 (b) After transferring Rs 80,000 from provision for contingencies.
 (c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.
 (d) After transferring Rs 50,000 from General Reserve.
 (e) After transferring Rs 151,000 from General Reserve.
 (f) After transferring Rs 80,100 from Dividend Equalisation Reserve.
 (g) After writing back Rs 645,151 being excess provision in previous years.
 (h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.
 (i) After transferring Rs 250,491 from General Reserve.
 (j) After transferring Rs 250,000 from Dividend Equalisation Reserve.
 (k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.
 (m) After transferring Rs 119,825 from Development Rebate Reserve.
 (n) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.
 (o) After transferring Rs 1,137,451 from Contingency Reserve.
 (p) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.
 (q) After transferring Rs 580,170 from General Reserve and Rs 47,990 from Investment Reserve.
 (r) After transferring Rs 1,207,838 from General Reserve.
 (s) After transferring Rs 289,747 being provisions made in previous year.
 (t) After transferring Rs 300,000 from General Reserve.
 (u) After transferring Rs 320,000 from General Reserve No. 1.

(v) After transferring Rs 98,240 from Dividend Equalisation Reserve.
 (w) After transferring Rs 113,089 from General Reserve.
 (x) After writing back Rs 65,163 being excess provision in previous years.
 (y) After transferring Rs 450,000 from Dividend Equalisation Reserve.
 (z) After transferring Rs 1,078,000 from General Reserve No. 1.
 (a1) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.
 (a2) After transferring Rs 300,000 from General Reserve.
 (a3) After transferring Rs 308,000 from General Reserve.
 (a4) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 88,529.
 (a5) After transferring Rs 780,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

Free Trade Zones

The report of the Committee on Free Trade Zones, whose general approach and recommendations were endorsed by the Board of Trade at its last meeting held in Delhi, does not indicate that the balance of advantage will be clearly in favour of the establishment of a number of free trade zones in the country. There are many problems which require further detailed investigation before a positive decision could be taken, and the Committee had therefore recommended a cautious and experimental approach. In view of the emergency the Board had decided to postpone the implementation of the suggested programme.

The question of setting up a Free Trade Zone has been under discussion for a number of years. In 1957 the Export Promotion Committee had drawn attention to the facilities for increased exports that Free Ports or Free Trade Zones could provide, and had suggested that the Government should examine the feasibility of providing similar facilities for the entrepot trade in the vicinity of ports like Kandla, or Cochin, which were not so congested as the ports of Calcutta, Bombay or Madras. Subsequently a decision was taken to establish a Free Trade Zone at Kandla and an officer was deputed to report on its implications. Apart from considerations of export promotion, the selection of Kandla was determined by the fact that the establishment of a Free Trade Zone would open employment opportunities to the refugees settled in the Gandhidham township. The report expressed guarded hope that "with determination and a practical approach, we can successfully utilise the mechanism of the Free Trade Zone as one important step in the effort to tilt the balance of foreign trade in our favour". Meanwhile, Trade Associations in different parts of the country had been making representations that Free Trade Zones should be set up in other suitable places to back the export effort. Among the locations suggested in this connexion were Cochin, Goa, Pondicherry, and Karaikal. The question came up before the meeting of the Board of Trade held in Calcutta last July. The problem was handed over to a Committee which, besides considering the proposal for establishing Free Trade Zones, was also asked to decide on the criteria for selection of industries with large export potential which could be established in the zones. It was expected that, in view of the numerous suggestions pushing the claims of different locations, the Committee would also lay down the criteria that should govern the selection of sites, and indicate the number of zones to be set up as well as the broad allocation of areas where they should be set up. But when the Committee got to grips with its task, it soon became evident that actual allocation of areas would require detailed investigation which the Committee was not in a position to take up. So the Committee has refrained from making any specific recommendations on this prickly topic.

The Committee has pointed out that the experience of the working of Free Trade Zones in other parts of the world does not offer useful guidance for India, as what we have in view, when we discuss Free Trade Zones is something different. Entrepot trade and stock-holding have been the principal activities of Free Trade Zones elsewhere. But the idea behind the Zones in India is that they should serve as centres of processing and manufacture for export. It is expected that the elimination of Customs and Excise duties and comparative freedom from

Government regulations, would enable industries established in the Free Trade Zones to produce their wares at minimum cost and sell them in foreign markets at competitive prices. This change in the functions of the Free Trade Zones complicates the administrative problems. The administration of Customs and Excise regulations, Import and Export Licensing and Foreign Exchange Control, which could be managed without great difficulty when all the goods imported are re-exported without much change, will become complicated, and more onerous both for the authorities and the industries concerned, when the character of the goods is radically altered by processing or manufacture.

Moreover, the development of the Free Trade Zones as manufacturing centres should fit into the plan for the industrial development of the country without causing adverse reactions on other sectors of the plan, by diverting capital and personnel resources from other places where such manufacturing activity might have been already established or would otherwise have grown. The establishment of Free Trade Zones could lead to unhealthy concentration of industry both in relation to location, as well as in relation to producers. Even within these limitations, the Committee has suggested, there would be "considerable openings for marginal transformation activity capable of developing into substantial export lines." It has also been suggested that the danger of undue concentration of industries in any one area could be reduced by setting up Free Trade Zones in each maritime State in the country after an initial experimental period.

As regards the selection of industries to be developed in the Free Trade Zones the report emphasises that such production "must be sharply differentiated from domestic production and domestic markets and, in fact, it should be 100 per cent exportable." A number of industries have been mentioned in this connexion, such as finishing of cloth for export, readymade clothing, hand-printing of imported rayon fabrics, mechanical carpet weaving, stainless steel utensils for special markets abroad, brass-ware and other furnishings, rexine products, coffee-chickory blends and so on. But apart from indicating the broad criteria, the Committee has not been able to examine any of these possibilities or to ascertain their feasibility and other capacity to obtain additional net export earnings.

In conclusion, the Committee has indicated that "it may be worthwhile to experiment with the idea of the establishment of a Free Trade Zone in the usual sense of a centre of stock-holdings and entrepot trade." The experiment, it is further pointed out, "may be proceeded with when it is, prima facie, established that the costs are not heavy in relation to the expected net additional export earnings and other advantages accruing to the country." Further investigations, the report points out, will be required before establishing a Free Trade Zone with emphasis on transformation activity, and the Committee has modestly suggested that competent persons would have to draw up a list of activities which could be permitted and which were likely to be established in such a zone. It is also suggested that there may be advantage in starting with two independent experiments for the two types, though the resulting costs would be heavier, and, on the completion of the experimental stage, the policy should be to establish Free Trade Zones in each maritime State.

BURNPUR —A PORTRAIT IN STEEL

A busy steeltown. Alive to the problems of the day, prepared for the challenge of tomorrow. Thousands live and work here day and night. All of them think in terms of steel—and more steel, for India.

Yet less than ten years ago, the rated annual capacity of Burnpur was about half a million tons of crude steel and a similar quantity of pig iron. A two-step expansion programme has since raised annual production at the integrated steelworks to 1 million tons of crude steel and 1.3 million tons of pig iron. The smallest additional capital cost can expand production further, by another million tons of steel if need be.

Meanwhile, IISCO steel—in all the shapes that steel can take—serves India's developing economy.

The productivity team sent by the National Productivity Council to visit the USSR, Czechoslovakia and Rumania to study and report on the state and working of the oil industry in these countries has released its report setting out its impressions and recommendations for the development of the oil industry in the country. The recommendations of the team embrace all aspects of the industry from exploration to marketing and distribution of the products. The specific aspects dealt with in the report include the current imbalance in the production and consumption of petroleum products, the location, size and operations of refineries, distribution and marketing, establishment of design and research institutes, training of workers, exhibition and information centres, petroleum rules and safety codes, and organisation, efficiency and productivity. The recommendations of the team regarding these diverse aspects of oil industry are as the report has avowed, based on the analysis of the practices and techniques observed in the countries visited by the team.

The keynote of the problem in the development of the Indian oil industry, according to the team, is the attainment of self-sufficiency in crude oil production. This is a task of no small magnitude considering the present and prospective gaps in crude oil production in the country. On the basis of the Third Plan estimate of demand for petroleum products at about 14 million tons by 1965-66 the equivalent quantity of crude oil that may be required comes to about 15 million tons. Against this, the production that is expected on the basis of the Third Plan programmes to develop Moran and Nahorkatiya oil fields in the Assam State and the Ankleshwar fields in the Gujarat State, is only about 7 million tons which would leave a deficit of 8 million tons. The foreign exchange drain that may be entailed by import of crude oil of this order may well exceed Rs 700 crores. With evidence of accentuated pressure of demand since the proclamation of emergency, indications are that demand for petroleum products may further shoot up and exceed even the 17 million ton mark being the revised estimate of the Oil Advisory Committee. While stressing the importance of imaginative and determined efforts to step up crude oil production, the report is also cognisant of the present limitations in resources. The report contrasts the meagre provision of Rs 202 crores made for oil exploration in the Third Plan with the investment of Rs 300 that is estimated to be necessary for locating and annually producing an extra ton of oil. Apart from finding the huge capital, requirements of trained technical personnel also pose grave problems.

The report admits that the attainment of self-sufficiency in crude oil production may be a long and costly effort fraught with many difficulties, and, in this knowledge, recommends that the country should spare no efforts in establishing adequate refining capacity consistent with the pattern of demand. According to current estimates and after making allowance for Nummati, Barauni and Koyali refineries, it is anticipated that additional refinery capacity of 3 to 5 million tons will be called for by the end of 1965. The team considers any large investment that may be necessary to develop indigenous production capacity of this order as worthy and justified by the huge saving in foreign exchange that may ensue. With this same end of saving foreign exchange, the team has also recommended full utilisation of spare capacity in the existing refineries and also procurement of crude oil requirements at competitive prices.

Another major recommendation of the team relates to the development of indigenous capacity for the manufacture of petroleum equipment. The present lack in this regard is a serious drag on

development of the oil industry. "Much of delay experienced in the implementation of the various oil projects in India has more often than not been due to the non-availability of equipment. Long negotiations with foreign suppliers and equally long haulage have often hampered the planned schedule of projects, necessitating frequent revisions of target dates of completion." On the other hand, the strident progress made by the East European countries has been based not a little on the development of equipment manufacture. It will not be too soon to make a beginning at least in respect of drilling, refining, distribution and marketing equipments.

The team has also made some very pertinent recommendations in regard to the problem of excess gasoline caused by the rapid dieselisation of commercial vehicles. For a satisfactory solution of the problem, it recommends (1) more rapid development of roads, (2) production of low-priced cars and (3) curbing the use of HSD by encouraging the production of petrol driven engines/vehicles upto 5 tons. Apart from these measures, it is also of the view that all refineries planned for the future should continue to be based on minimum gasoline production. For mitigating the problem of surplus gasoline, the team has recommended some important measures like production of naphtha base aviation jet fuel for military use and gasification of naphtha for the supply of town gas to major cities. Anticipated deficit in kerosene and high speed diesel is the other element in the problem of imbalance of petroleum products. Consumption of each of these is expected to go up to 3 million tons from the present level of about 1.5 million tons. In view of the rapidly rising population, increasing incomes and urbanisation, the team has recognised the difficulties in curbing the greater demand for use of kerosene as a cooking fuel. All the same it has indicated some scope for minimising consumption by making alternative fuel i.e. liquified petroleum gas and natural town gas as is done in the Soviet Union. In respect of high speed diesel oil also, the team does not see any great scope for curbing the rising demand except in a small way by encouraging the production of petrol driven engines vehicles upto 5 tons as is done in the USSR.

The team has made some proposals for increasing the viscosity specification of industrial fuel oil. This will release considerable flux from the fuel oil that is blended at present and will thus increase the production of diesels. The report, in this connection, refers to attempts now being made to substitute high speed diesel oil for other fuels which can be used in the normal diesel engines with similar efficiency. These fuels consist of mixtures of naphtha and heavy gas oil components which are more readily available than the high speed diesel oil. The team has emphasised the need for expediting investigations on the use of such fuels.

The team has been greatly exercised about the growing deficit in the production of aviation turbine fuel and one of its important recommendations concerns the need to produce locally maximum quantity of aviation turbine fuel out of kerosene turbine. Further, maximum recovery of kerosene distillate fractions from the crude oil is also considered desirable to meet the current demand for this product. To achieve this objective, the team recommends the introduction of advanced technological processes in the refining of crude oil.

Furnace oil is another product for which demand is anticipated to rise up further substantially in view of the emphasis placed on the development of heavy industries in the Third Plan. The demand is estimated at over 3 million tons by 1968 while during 1960 it was only of the order of 1 million tons. To what extent the present gap in production could be closed by alterations in the production pattern of refineries cannot be known, though the scope for such increase in production is beyond question. All the

same, self-sufficiency in furnace oil production by 1965-66 does not appear to be a feasible proposition. The country had been currently meeting its demand by imports mainly from the Soviet Union. With the coal supply position having turned somewhat bleak for the Southern and Western regions which are far removed from coal producing areas dependence on furnace oil may further be accentuated. There has already been some evidence of a switch-over to furnace oil firing by some industries in these regions because of shortage in coal supplies. What presently stands in the way of greater use of furnace oil as fuel is the relatively high price at which it sells. The Government during the last one year has been under great pressure from commercial and industrial circles to reduce the excise duty which makes up a sizable part of the total price of furnace oil. The team also sees possibilities for use of furnace oil for railway traction and for thermal power production.

The team has also stressed the need for reducing the variety of lubricants that are presently produced and marketed in the country. It contrasts the thousand and odd varieties that obtain in the country with the emphasis laid in the Soviet Union on a minimum of grades. It is the opinion of the team that by reducing the variety of such lubricants, both productive efficiency and cost reduction can be achieved.

The report also calls for a new approach in regard to other aspects of petroleum industry like location of refineries, establishment of research institutes and facilities for training technical personnel. The report is particularly critical of the stringent petroleum regulations for which there are no parallel in the countries the team visited. It has expressed the view that stricter codes of practice have necessitated more elaborate construction involving greater costs and resulting in delays in the execution of plans. In this light, it has recommended a detailed examination of the existing rules and regulations with a view to liberalising them without losing sight of the ultimate safety of the oil projects.

The price line must be held. This is as much the responsibility of the State as of every citizen. Idle money, in the form of cash in hand, is the devil in the price spiral.

Money put in a bank, remains active in the service of production and distribution of goods and facilitates keeping the price line under control.

Use less cash; make your money transactions through your bank account. You will thus make a direct contribution to the effort in holding the prices under check.

EMERGENCY Need for Direction

THE second week in December has finally produced a modicum of stringency in the money market; and it is certain that spillover of monthly disbursements are not alone the cause of such tightness as is now in evidence. Busy season financing, it is safe to assume, has commenced, and together with it there may also be a more ready extension of accommodation for the defence effort. The call money rate has climbed and banks are already borrowers from the Reserve Bank at the penal rates. At this rate, what with the demands likely to arise for the usual end of year window-dressing, the prospect is one of fairly sustained pressure upon the money market for perhaps the next three months, or even a slightly longer period.

Meantime there has been the hopeful indication from the Chairman of the Tea Board that all is normal in the bank financing of the tea industry; apparently the assurances implicit in the hedging of war risks as passed by Parliament last week have been sufficient for banks to creep from out of their timid shells. For the contention of the authorities (as exemplified by a statement made by the Finance Minister in piloting the legislation) seems to be that it is up to the banks in the national interest of their own position to undertake some measure of risk. We regret to say that we cannot support such a standpoint.

We would again stress that policy making and decision making in the economic sphere have been, in relation to the emergency, far too slow and halting. It is in fact understood that the banking system has scarcely "heard" from its guide and mentor since the onset of the emergency. Surely it is already time enough for drawing up lists of priority industries to which by directive bank finance will readily be made available. The emergency requires that the Reserve Bank should be evolving and executing a fully flexible policy of selective monetary control.

control.

In the absence of firm directive from on top we have a situation of drift. Banks till lately had a surplus of cash, which however they did not dare utilise either in an expansion of advances portfolios or in addition to holdings of gilgedged. The anticipated demand during the busy season had to be made provision for, and the apprehension that the Reserve Bank would not be a ready buyer of Government securities were both reasons why the banks had to hold on to cash surplus to their needs.

Banks still don't know how far they can go in the extension of Advances. The demand, we repeat, is - there, but only spare resources as they may lie with banks and accruing Deposits as they may gather are (in the present view of bankers) to be earmarked for fresh or additional accommodation to constituents—whatever may be the "priority" of such borrowers. For, and we repeat, banks cannot count on replenishing their resources through disinvestment in giltedged; and they are uncertain as to what the limits of credit from the Reserve Bank will be.

Governmental action can no longer be deferred.
We call for an immediate indication of the
following:

- (1) The priority industries, to which banks will be expected to furnish such finance as they may be called upon;
- (2) The restricted industries, to which banking finance will be discouraged;
- (3) The credit limits available from the Reserve Bank say, till the end of April 1963; and
- (4) The assurance that "Priority" Advances can be readily discounted with the Reserve Bank.

BANK RETURNS

Record Rise in Active Notes

Beginning of the month disbursements as also perhaps the stirrings of the 1962-63 busy season are reflected in the latest banking returns.

According to the Reserve Bank figures for 7 December, Active Note Circulation has jumped up by a record amount of Rs 51.28 crores to Rs 2,122.59 crores, and the outflow of Rupee Coin is also in the substantial amount of Rs 3.03 crores. With Foreign Securities continuing to be unchanged at Rs 88.08 crores, currency has been expanded against Rupee Securities for Rs 55 crores, raising the relative figure of the latter to Rs 1,808.29 crores.

The transfer from the Banking Department is partly reflected in the fall of Rs 46 crores to Rs 167.51 crores in Investments; and with the rise of Rs 28 crores to Rs 106.60 crores in the Reserve Bank's portfolio of Treasury Bills purchased and discounted traceable to the State Bank, it seems a fair inference that the Central Government has instituted deficit financing for about Rs 10 crores.

The deficit financing notwithstanding, the Centre's Deposits are lower by Rs 3.76 crores at Rs 54.14 crores. There have appeared been some payments to the State, which have reported an improvement of Rs 11.03 crores to Rs 21.26 crores in their balances on top of a reduction of Rs 2.85 crores to Rs 6.99 crores in their ways and means borrowings from the Reserve Bank.

Month-eaily expenditure as possibly accentuated by the start of the busy season would seem to have involved some strain upon the banking system. Although Reserve Balances of member banks have improved by Rs 3.58 crores to Rs 72.36 crores it is noteworthy that the Reserve Bank's loans and advances to Scheduled Banks are up sharply by Rs 24.68 crores to Rs 29.89 crores; and advances obtained by Scheduled Banks against usance bills have gone up by just under Rs 16 crores to Rs 17.38 crores.

BUY

NATIONAL

DEFENCE

BONDS

State Co-operative Banks, too, have felt obliged to have greater recourse to central banking credit, their borrowings rising by Rs 1.47 crores to Rs 135.08 crores. It may be mentioned lastly that Balances Held Abroad show a welcome rise of Rs 3.26 crores to Rs 8.70 crores, and foreign assets in the keeping of the Reserve Bank now exceed the Rs 95 crore mark.

The beginning of the month and also the putative onset of the busy season, have both made their fair impress upon the return of the State Bank for 7 December. Constituents drawing down their accounts have caused the Deposits of the State Bank to fall by Rs 13.45 crores to Rs 561.52 crores; and increased demand for accommodation has resulted in the total of Advances expanding by Rs 9.45 crores to Rs 264.75 crores. The State Bank has inevitably had to disinvest in gilt-edged; the sales, presumably relating to re-discount of Treasury Bills, have been in an amount of about Rs 29 crores. Other Assets show an incidental rise of Rs 7 crores, and State Bank's cash in hand and with Reserve Bank mark a fall of Rs 1.53 crores to Rs 21.55 crores.

CO-OPERATION

The Statistical Picture—II

There were 24 state marketing societies with a membership of 5181 societies and 367 individuals. Their working capital amounted to Rs 9.09 crores at the end of 1960-61. The sales effected by them as owners and agents aggregated Rs 37.93 crores. At the intermediate level there were only 171 marketing societies during 1960-61 as against 511 during the previous year, the reduction in the number being due to re-classification of Taluka Purchase and Sale Unions in Maharashtra and Gujarat (which had been classified hitherto as central societies) as primary marketing societies. The sales of central societies during the year as owners and agents amounted to Rs 31.28 crores. The primary marketing societies numbering 3108 had a membership of 14.68 lakhs and working capital of Rs 28.21 crores at the end of June 1961. They sold produce (as owners and agents) valued at Rs 86.13 crores. The position in regard to the recovery of loans given by credit societies through marketing societies was not encouraging inasmuch as only 257 of the marketing societies recovered loans amounting to Rs 5.20 crores on behalf of 9231 primary credit societies.

Co-operatives continued to make progress in processing, particularly in the production of sugar. The number of co-operative sugar factories went up during 1960-61 to 66 from 57 in the previous year. Of these 32 factories were active as against 26 last year. The working capital of all factories amounted to Rs 65.34 crores as against Rs 47.39 at the end of 1959-60. They crushed 40.49 lakh tons of cane during 1960-61 as against only 26.03

lakh tons during 1959-60 and produced 4.75 lakh tons of sugar valued at Rs 43.52 crores during 1960-61 as against 8.84 lakh tons valued at Rs 28.89 crores during 1959-60. Their sales during the year amounted to Rs 28.85 crores compared to Rs 23.38 crores during the previous year.

Among other non-credit societies sugar cane supply societies numbering 9172 stand out as the most important with a membership of 24.24 lakhs and working capital of Rs 8.54 crores. Their sales of sugarcane amounted to Rs 79.71 crores during 1960-61 as against Rs 68.44 crores in the previous year. There were 6,325 farming societies of which 2,080 were joint farming societies and the gross area cropped by them during 1960-61 was 8.01 lakh acres of which 2,080 were joint farming societies and the gross area cropped by them during 1960-61 was 8.01 lakh acres of which 6.34 lakh acres were under food crops. The total value of their production was Rs 5.24 crores as against Rs 2.39 crores during 1959-60. The number of weavers' societies increased from 11,215 to 11,947. They had a total membership of 13.29 lakhs and output valued at Rs 44.21 crores. The consumers' stores numbering 7,133 as against 7,233 during the previous year, had a membership of 13.67 lakhs. Their purchases and sales during the year amounted to Rs 54.07 crores and Rs 60.05 crores respectively as against Rs 46.29 crores and Rs 47.98 crores during 1959-60.

At the end of June 1961 the total contribution of State Governments towards the share capital of co-operative societies of all types amounted to Rs 40 crores, of which Rs 6.46 crores were in respect of State Co-operative Banks, Rs 10.31 crores for Central Co-operative Banks, and Rs 5.71 crores for Primary Credit Societies.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 11 December, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.355 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 17 December, 1962. Successful tenderers should make payment on Friday, 21 December, 1962 at all centres. Other conditions are as usual.

During the week ended 7 December, 1962, Government of India Treasury Bills for Rs

12,48,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 12 December, 1962 to 15 December, 1962 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from the 5 December to 8 December, 1962 amounted to Rs 1,25,25,000.

Sterling's Good Prospects

By Paul Einzig

Sterling seems to have weathered the autumn—which is usually a critical period—remarkably well. It only dipped occasionally below parity and never came within dangerous distance to its lower support points. Admittedly, on many occasions the Exchange Equalisation Account supported it even though it was at some distance from its lower support points. Had it not been for these operations it would have undoubtedly depreciated to support points. The tactics pursued by the authorities have undoubtedly much in their favour. Even though shrewd Foreign Exchange dealers were fully aware that sterling was maintained artificially, the psychological effect of the evidence of its support was not nearly as strong as if it had been if the authorities had to intervene to maintain it at the actual support points.

During the last two months the gold reserve has been increasing which is rather unusual during the autumn season. Since the beginning of December sterling has been keeping to a sizeable premium and it seems probable that the authorities have been gaining more gold. In the circumstances it seems reasonable to expect a reduction of the Bank rate in the near future. In fact there is a distinct possibility that the Bank rate will be reduced immediately after the holidays. This is in accordance with the reflationary policy adopted by the Government in order to reduce unemployment.

Sterling could well stand the strain of a Bank rate reduction because the amount of foreign arbitrage funds in London is believed to be relatively moderate at present. It is true, with the abandonment of the wage restraint policy, we have to envisage an increase in the cost of production. Since, however, the same trend is in operation also in most other industrial countries, in existing circumstances rising costs and rising consumer demand in Britain need not necessarily aggravate the balance of payments position. It all depends on the relative extent of wage inflation in Britain and abroad.

The ups and downs of the prospects of Britain joining the Common Market do not seem to have affected sterling so far. Periodic recurrent rumours, that Britain's adhesion would necessarily entail a devaluation in order to correct sterling's over-valuation in relation to continental countries, have failed so far to affect sterling. It is by no means certain that sterling is over-valued. On the contrary, France is considered to be a more expensive country than Britain. Moreover much is likely to happen between now and the conclusion of an agreement and even more between now and Britain's actual adhesion to the Common Market. Judging by the trends of French and German wages there is at least a possibility that in spite of the abandonment of wage restraint in Britain sterling might become, if anything, undervalued in relation to the franc and the D mark. It is therefore premature to speculate on the possibility of a devaluation especially as it is not a hundred per cent certain that an agreement will be reached at all.

Notes

EMERGENCY Risks Insurance

As vigorous steps are being taken to strengthen the food front, the uncertainties which have dislocated commercial and industrial activity in some areas, should be taken care of by legislation on emergency risks. The schemes of insurance proposed under the two Bills passed by Lok Sabha last week generally follow the pattern of the war risks insurance in force during the last world war. The schemes are intended to provide insurance cover for industrial establishments and for goods intended for sale. Government property which is departmentally owned will not be included in the scheme of insurance, but autonomous public undertakings and enterprises will be subject to the same burdens and be eligible for the same rights as other units in the public sector. The burden of the scheme, the Finance Minister said, will be shared by the private and public sectors alike, and there will be no distinction as regards this matter between the two sectors. Both the bills, as passed by the Lok Sabha, provide for a ceiling on premiums. The ceilings have been fixed at two per cent in the case of factories and three per cent in the case of

inland vessels. Within these limits the prevailing rates will be determined from time to time by the Government. The Finance Minister said that, in fixing the premium, the Government will not have a fiscal motive.

Properties that will be included under the Emergency Risks (Factories) Bill are factory buildings, plant and machinery and materials used in or by factories. The Government may also, at its option, cover the plant and machinery of oil mines, coal mines etc; properties of gas and electric supply undertakings, standing crops and inland vessels. The Government can also exclude, at its discretion, factories of certain categories from the purview of war risks insurance. It also stipulates that insurance is non-compulsory for goods worth Rs 30,000 or less owned by one person in a particular district. It will be noted that the Government's liability under the scheme in the case of factories will be discharged either by payment in cash or reimbursement of the cost of restoration of factories or other insured property to its conditions prior to the destruction caused by the aggressor. The Bill, empowers the Government to provide insurance cover in addition to any other insurance which may be available in the normal course. This is an important change as compared with the scheme which was in existence during the last world war. This change has been made, the Finance Minister said, in view of the growth of the mineral oil industry in recent years and the somewhat special position and importance of the tea industry in Assam.

The Emergency Risks (Goods) Insurance Bill provides for scheme of insurance for goods intended for sale in the course of business. This excludes property in various forms such as land and growing crops, residential houses, or household and other goods owned and held for purposes other than sale. But protection will be extended to goods in transit from any place in India to any other place within the country throughout the period of such transit. But goods owned or supplied by the Government will be excluded from compulsory insurance. The object in providing insurance facilities under this scheme, the Finance Minister said, is quite modest and practical. It is to ensure, firstly, that industrial or commercial activity will not be hampered because of the fear of what may happen as a result of political or military

action, and secondly, that the normal production, sale and movement of commodities will continue, without any interruption at any time or in any area. While the Bill provides for compulsory insurance for all persons holding property for sale in excess of a prescribed limit in any one district, the Finance Minister said that the scheme, when it is framed, will make it clear that optional insurance will also be available in case of properties below the limit.

LIC No Change in Bonus Pattern

The Third Valuation Report of the Life Insurance Corporation of India as at 31 December 1961 does not show any change in the benefits accruing to the policy holders. However, this is not due to lack of improvement in the Corporation's position as compared with the previous biennium. There has been substantial increase in the yield on the Corporation's investments: 4.14 per cent during the biennium ending December 1961 as compared with 3.81 per cent in the previous biennium. And yet the rate of interest used in the third valuation is 2½ per cent, the same rate as had been used in the previous valuation. In consequence, the bonuses declared on whole life assurances and endowment assurances remain unchanged at Rs 16 and Rs 12.50 respectively. Such conservative valuation, it has been explained by the Chairman of the LIC, has been done on two main considerations. First, it will be inappropriate to increase the quantum of bonus in view of the present Emergency in the country. Secondly, a conservative valuation will be in keeping with the practice of good companies all over the world who are anxious to maintain satisfactory results even in lean years. These are unexceptionable reasons which should receive the acceptance of the policy holders.

It is gratifying that the Third Valuation has been completed in half the time the Second Valuation took. While the Valuation for the biennium ended 1959 took nearly two years to complete, the latest valuation has been published within a year of publication of the preceding valuation report. There is every possibility that in computing the next valuation a much lighter mortality table will be adopted. For the actual mortality experience during 1961 has been very favourable compared with the mortality basis used in LIC premium rates as also in the Third Valuation. It may however be noted that a lighter mortality table (Modified Oriental 1925-35 Ultimate Mortality table) was used for the valuation as on 31 December 1959 while the mortality table used in the 1957 valuation was the

Oriental 1925-35 Ultimate Mortality Tables. The Corporation has also undertaken a detailed investigation into the mortality experience during 1961-64. The total number of policies in force at the date of the Third Valuation was 85.81 lakhs assuring as a sum of Rs 2,738 crores, including bonuses. The total profit available for distribution was Rs 34.45 crores, of which Rs 32.73 crores is allocated to the policy holders with the balance of Rs 1.72 crores going to the Government of India. The comparative figures in the last biennium were Rs 24.28 crores for policy holders and Rs 1.27 for the Government of India.

While few shareholders will feel dissatisfied with the results of the Third Valuation and the quantum of bonuses for reasons discussed earlier, the size of profit being what it is, they will be quite justified in expecting larger bonuses in succeeding valuations. It is nearly 8 years since the LIC came into being and it is not too much to expect that it should have by now considerably improved its efficiency in all its activities including investments which should be yielding progressively better results.

MACHINE TOOLS

Fuller use of Capacity

The declaration of emergency has imparted a sense of urgency to the programmes for stepping up machine tools production in which progress has so far been somewhat disappointing. Annual value of production at present has been raised only at Rs 22 crores while

demand in the country is substantially higher. It has now become evident that with the emergency requirements of defence preparation, production capacity will have to be considerably expanded to ensure greater availability of machine tools in the country itself. The fact that during 1959-60, total demand for machine tools in the country was valued at Rs 75.25 crores should provide a measure of the gap in production capacity. The Third Plan had originally envisaged a production target of Rs 30 crores to be reached by 1965-66. Emergency requirements have now

rendered necessary a further revision of target. That the Government should have recognised the need for such revision is a welcome sign. It has been understood that schemes are being put through to reach a target of Rs 60 crores by 1965-66. Most gratifying in this regard is the assurance recently given by Mr C. Subramaniam, Union Minister for Heavy Industry that the Union Government will grant all facilities for the full utilisation of the existing capacity in the heavy machine tools and heavy electrical equipment industries. The country's basic deficiency

which has tended to limit production in machine tools has been lack of technical know-how which only foreign assistance could make good. Mr Subramaniam's statement that the Government would henceforth sympathetically consider the setting up of joint ventures for the manufacture of heavy machine tools to meet both the defence and development requirements, indicates a welcome change in the Government's attitude. It is noteworthy that some schemes are already under way which promise to make a substantial contribution to machine

tool production. Mention may be made of the project of MS Cooper Engineering Co Ltd and of M/S Standard Engineering Co of Bombay.

Preparations are already afoot to expedite programmes for expansion of production. Both the public sector and private sector units have come forward with schemes to increase production by 30 per cent. In the public sector, the Hindustan Machine Tools has already switched over to two-shift working, and a third shift is also under consideration. With the necessary requirements of increased power being assured by the Mysore Government, it should not be too soon before the third shift also materialises. In considering the scope for expansion of machine tools production in the short-run, what needs prior attention is assurance of requisite raw material supplies, since considerable difficulties had been experienced in this regard. A major source of uncertainty arises in connection with the supply of special steels which are one of the most indispensable items in raw materials. Schemes that have been announced in this sector have to be implemented with the utmost speed.

* AGRICULTURE Long Term Financing

The proposal to set up an Agricultural Refinance Corporation as envisaged in the Bill passed by the Lok Sabha last week, marks a timely step in the direction of provision of long term finance to agriculture. The relative sparsity of facilities in this field has been among the major handicaps which had impeded agricultural production in the country. Though land mortgage banks were intended to meet this lack, progress has been far too slow to make them really useful and effective. Apart from their relatively small number the land mortgage banks that have been set up have been found to be working on an uneconomical basis with quite a number of them even showing losses. At the rate of progress shown by the land mortgage banks, it would take the country an exceedingly long time to meet the full requirements of long term credit for agriculture. With the setting up of the new Corporation, it is now possible to visualise brighter prospects for long term agricultural credit.

The new Corporation is to be set up with an authorised capital of Rs 25 crores. The initial paid-up capital will be Rs 5 crores and will be made up of shares of Rs 10,000 each. A 15-year interest-free loan from the Central Government has also been provided for in the Bill. Participation in the capital is to be broad-based. 50 per cent of the first instalment of capital is to be allotted to the Reserve Bank while State co-

operative banks and land mortgage banks will participate to the extent of 30 per cent, another 20 per cent going to scheduled banks, the LIC, insurance and investment companies and other financial institutions. The capital and dividend have been guaranteed by the Central Government. (An interesting and useful provision that will enlarge the resources of the Corporation is that the Reserve Bank will not draw its dividends for at least 15 years.) The Corporation has been vested with power to borrow money by the issue of bonds and debentures from the Reserve Bank against trustees securities and from the Central Government and other institutions approved by the Government. Besides, it can also borrow money in foreign currency against Government securities.

In its working, the Corporation will discharge functions similar to that performed by the Refinance Corporation for Industry. The major accent in its working will be on providing refinance facilities, and as envisaged in the Bill the Corporation will provide the necessary resources mainly to a central land mortgage bank or a scheduled bank or a State co-operative bank or approved co-operative societies. The period for which the refinancing facilities will be extended will be for a maximum of 25 years. Apart from refinancing, the Corporation also may assist agriculture by subscribing to the debentures of land mortgage banks and in certain cases also render direct assistance to co-operative societies recognised by the Corporation. The Corporation will thus infuse new blood and lend additional strength to the existing institutional setup for long-term agricultural finance.

* RAYON A Bad Patch

The rayon industry in India is currently passing through a critical period in its history. The crisis developed in the wake of huge accumulation of art-silk stocks with the spinners and the discouraging off-take. The twin factors are viewed with concern by the industry as they contain enough potential to paralyse the numerous manufacturing units. Such a dampening trend is disturbing at a time when, in the context of emergency, all the industrial activities are to bolster their productivity.

Reports from the various manufacturing units give an alarming picture of the heavy piling up of stocks, and if allowed to drift unchecked, may lead to further deterioration. The National Rayon and the Century Rayon, the leading units in the industry, have reported that the stocks with them alone amount to 22,000 cases of yarn worth approximately Rs 2 crores. Even the smaller units are perplexed with the problem of

mounting accumulation, and they apprehend that the present tendency may set in motion a demoralising effect. The deterioration in the off-take is attributed to stringent financial conditions resulting in a slump in the rayon weaving industry.

The trade is of opinion that the Government should postpone the reservation of yarn for exports to a future date and release additional ad hoc quotas, as done previously, for actual users to provide some relief to the present crisis. It stresses that the staggering of imports under the export promotion

scheme by extending the validity period of licenses will be an alleviating factor. The Government's determination to prolong the prevailing controls on art-silk yarn is also considered detrimental to the industry as the outlets to its products are diminishing rapidly. The only way out of this situation lies in the creation of a buffer stock at the initiative of the Government, which should lift the stock from the different units of the industry. Government intervention in whatever form is obviously called for in this juncture, particularly when the

yarn prices are showing a downward swing and the premium of import entitlement has slipped down to 175 per cent. Fresh transactions in rayon fabrics are at a painfully low ebb. In addition to all these, many of the rayon producing factories have developed a tendency of late not to supply goods to shippers against pending orders obviously on account of the decline in the premium on entitlements which has disrupted their calculation. This development is wrought with serious danger as the country cannot lose foreign exchange.

EASTERN EUROPE Fall in Trade with China—

The rising trend in the trade relationship of the east European countries with India is in striking contrast with the heavy decline that has been registered in the trade with Communist China. Some interesting facts regarding this are given in the latest Economic Bulletin for Europe. Most

significantly, Soviet imports from mainland China have fallen to a point that is lower than the 1950 level. Such imports during 1961 were valued at 330.6 million roubles and compare with 549.4 million roubles during 1950. How precipitous and serious has been the decline in imports may be inferred from the fact that during 1960 total imports into the Soviet Union from mainland China were valued at 735.4 million roubles. Exports from China to the USSR have also recorded a substantial fall to 496.3 million roubles in

1961 from 763.3 million roubles in 1960 though the 1961 total is considerably higher than exports in 1950 when they stood at only 172.1 million roubles.

Till 1960 the trade of other east European countries with mainland China was also at a respectable level, but a severe setback has been recorded during 1961. Ideological differences that have been simmering between Peking and other Communist capitals may seem to account for such a precipitate decline in trade. It is a significant coincidence that

Soviet trade with Albania, another communist country with which Russia has been at ideological loggerheads, has also revealed a marked fall while between China and Albania, doctrinaire allies in the ideological warfare, trade has grown at a fast pace. There has been a doubling of trade between these two countries during 1960 and 1961 with the Chinese share in the total turnover of Albanian trade having gone up to 28 per cent from 2 per cent in 1957-59.

Trade of the East European countries with western countries has also shown strident expansion, the rate of growth being even faster than the intra-trade. Though there was a slight falling off in the rate of imports as compared with 1960, exports have expanded at a record pace. Another noteworthy fact about trade trends of the east European countries is the even faster rate of growth of its trade with the developing countries. With primary producing countries in particular, there has been a continuously rapid growth in trade. Exports to the primary producing countries showed only a modest increase to 837 million dollars in 1961 from 829 million dollars in the previous year, but exports of the primary producing countries to the east European communist countries rose to 1,120 million dollars from 944 million dollars in 1960.

But Increase in Trade with India

A feature of the country's foreign trade in recent years has been the growing volume being accounted for by the East European countries. For the current year, for example, total trade with these countries is expected to reach a level of Rs 200 crores. The bulk of the increase in trade has occurred in the course of the last five or six years being facilitated mainly by the arrangements for rupee payment for imports of machinery and equipments obtained from them. The realisation of the vastness of the Indian market and recognition of mutual advantages implicit in trade relations have also been important factors in the trade expansion witnessed recently. Further expansion of trade with these countries will help us achieve a measure of balance in our overall trade.

A country-wise review of trade with these countries would show Soviet Union to be the major partner in this region. With other countries also trade has grown at a fairly rapid speed. A fact that requires special mention in connection with the trade relationship with these countries is the place that manufactured goods have come to occupy in our country's exports to this region. An eight member trade delegation which visited these countries on an exploratory mission, has reported most encouragingly about the

scope for developing our exports on these new lines. By next year, it is expected that total trade with these countries would increase by another 25 per cent and, in particular, substantial increase is anticipated in the export of textiles, iron ore, de-oiled cake, rolled steel products including structural, tobacco and castor oil. Machine tools are another important item for which scope for export to the east European countries has been vouched by the delegation. Considering that the current pattern of trade, with manufactured goods forming only an insignificant share of total exports, has left the country exposed

to fluctuations in earnings arising from unexpected and sudden changes in world commodity prices, the opportunities offered by the east European countries should be utilised for working out the much needed change in the composition of exports. In this regard, the visit of experts from these countries to study the kind of manufactured goods which we can offer should prove timely. The delegation has drawn attention to the unlimited scope for export of salted fish to Rumania, but such expansion is stated to be contingent on the improvements we can make in the processing of salt, the present methods employed in this behalf being considered not satisfactory to meet their specific requirements.

The arrangement for rupee payments for imports from these countries is an advantage that has enabled the country to pay for

requirements of capital machinery and equipment without serious drain on foreign exchange. Fears entertained in certain quarters about the huge deficits and possible complications later of such unrequited balances, have no foundation in the trends that had been discernible so far.

It is also argued sometimes that such "forced exports" to the Iron curtain countries to enable these to liquidate their rupee holdings results in no gain to the nation, since these exports are merely diversion of items meant for other markets. This is an argument arising from laziness, since nothing prevents us from coping with the enlarged world demand by suitably increasing production. In other words, the monetary arrangements do not touch the argument. More serious is the fear, not wholly unfounded, that these countries sell goods they buy from us in markets to which we export. Assurances in this regard were asked sometime ago from them and obtained. The scope for items like textiles for which the EEC holds a bleak prospect are bright, in Eastern Europe as shown by the recent Russian order. These opportunities should be seized.

FACT Oil Gasification

The commissioning of the oil gasification plant, designed and

supplied by Power Gas Corporation of the UK, marks the completion of the second stage of the Rs 2 crore expansion programme of FACT, Kerala. The factory's long association with the Power Gas Corporation is a saga of productive collaboration. The multi-programme of FACT, finalised as early as in 1954, got Government sanction only in 1956. The multi-phased development programme comprises three planned stages. The first stage, with an allocation of Rs 3 crores, witnessed the establishment of an electrolytic hydrogen plant along with an air liquefaction plant for the generation of adequate gases for the manufacture of 40 tons of ammonia per day. The second stage increases the production capacity of the factory from 10,000 tons of nitrogen to 30,000 tons per annum and replaces the outmoded wood gasification process. The third stage with an outlay of Rs 11 crores envisages the enhancement of production of nitrogen to 70,000 tons from 30,000 tons and P2O5 to 33,400 tons from 13,600 tons annually, thus taking the end product to 230,000 tons of ammonium sulphate; 135,000 tons of ammonium phosphate; 25,000 tons of ammonium chloride and 44,000 tons of superphosphate. The gasification plant's crucial importance to the nation arises in its utilisation of naphtha, a light distillate available from the oil refineries in the country for producing adequate hydrogen for the manufacture of 80 tons of ammonia per day.

INDIAN ALUMINIUM Expansion Programme

The Commonwealth Development Finance Company Limited (CDFC) has consented to subscribe £500,000 (about Rs 30 lakhs) debenture stock to be issued by the Indian Aluminium Limited. This amount will contribute towards the total cost of expanding the company's existing aluminium smelter capacity at Alupuram, in Kerala State, and constructing a new aluminium foil rolling and converting plant in Kalwa, near Bombay. The smelter expansion is scheduled to start production in the second half of 1964 and the foil plant in mid-1965.

The total new capital investment required for this combined project is approximately \$10 million (nearly Rs 5 crores). The expansion is being financed in part by the issue of further share capital to Aluminium Ltd. (the Canadian parent which holds 59 per cent interest) and about 4700 other Indian shareholders; a loan of \$1 million (roughly Rs 50 lakhs) from \$20 million credit extended to India by the Canadian Export Finance Corporation and the debenture of £500,000 (about Rs 60 lakhs) from the CDFC and the issue of Rs 1 crore 7 per cent debenture stock 1971/76 (first mortgage) at par in units of Rs 500 (nominal or par value), payable in full on application.

THE TYRE
MOST
IN DEMAND

Dunlop Truck and Bus tyres are most in demand with operators all over the country. They have proved themselves to be the most sturdy, most dependable and most profitable under all conditions of service. Extra strong casing—more re-treads per tyre—lowest cost per mile!

LONGEST MANUFACTURING EXPERIENCE IN INDIA

DGC-16

An International
of force

Let us keep
prices down

Our moral is

Hurling the Chinese back across the Himalayas calls for national stamina, not just a flexing of the biceps. The mobilization on the economic front is as important as it is on the military front. In the emergency that imperils our freedom today, the dividing line between profits and profiteering can be pretty thin. Even at the army, a nation in combat has to march on its stomach. The farmer in the fields is just as much a 'jawan' as the captain of industry. In keeping prices down, we help keep our morale high, our national stamina in fine fettle, and our armed forces in the fighting spirit that it takes to win.

Jai Ja

Issued in the interests of the nation
BY SAKHU JAIN GROUP OF INDUSTRIES

The Indian Aluminium's current smelter capacity comprises 23,000 tons per annum at Hirakud and 7,000 tons per annum at Alupuram in Kerala. The new expansion programme will increase the Alupuram capacity to 12,700 tons annually and the company's smelter capacity to 35,300 tons per annum. The power required for the new capacity will be procured from the Kerala State Electricity Board.

The decision to embark upon the new expansion plan follows closely upon the completion of the doubling of the capacity of the Hirakud smelter to 22,600 tons and the related increase in the capacity of alumina plant at Muri, Bihar, which is based on bauxite production at Bagru Hill, also in Bihar.

The recently completed expansion scheme also included an increase in rolling mill capacity at Belur, West Bengal, from 10,000 tons annually to 18,400 tons per

annum. The foil mill in Kalwa will have a capacity of 2,500 tonnes of foils.

As in the case of the recently finalised expansion programme the design work and the construction of the company's new facilities will be undertaken by the General Engineering Department of the Indian Company in technical collaboration with Aluminium Laboratories Limited, Montreal, the technical and research unit of Aluminium Ltd.

The new foil mill should add to the considerable stimulus to the consumption of Aluminium in India. In 1961 the consumption of aluminium in India totalled 51,300 tons nearly three times the amount consumed in 1950. In 1961 7,766 tons of Canadian aluminium were shipped to India. India's ability to expand its consumption faster through imports has been restricted by a shortage of foreign exchange.

US Changes in Top Economic Posts

Two of President Kennedy's top aides were named to new jobs last week. Budget director David E. Bell moves over to head the Agency for International Development (AID), and Kermit Gordon leaves the President's Council of Economic Advisers to take over Mr Bell's old post as budget chief.

These changes are not startling, as Mr Bell and Mr Gordon have been valuable members of the Kennedy administration since its inception, but they do underscore certain significant developments. One is the continuing importance attached to the nation's programme of economic assistance to less developed countries, which is the prime concern of the AID Agency.

Mr. Bell brings to his new job a background and a variety of skills which promise to benefit AID in several ways. At the budget bureau, he helped institute important innovations, such as new and more realistic concepts of income and expenditure calculations, which have contributed to the effectiveness of government fiscal programmes.

He also has had the opportunity to examine AID and its operations at close hand and to participate in the formulation of economic assistance policies, which always have interested him.

As he approaches the task of mankind aid a more efficient and more effective organization, he will have the added advantage of having had direct experience with foreign aid programmes in the past. He headed a group of US advisers to Pakistan from 1954 to 1957.

Also, because he is a relatively young man, Mr Bell is hardly to be viewed as a stop-gap appointment to a programme which has had close to a dozen administrators, and has been reorganized half a dozen times since its start right after World War II.

At the age of 43, Mr Bell has won his spurs as a top economist and administrator outside as well as inside the government. He has held teaching and administrative positions at Harvard University, for instance, and he served in the budget bureau when Harry Truman was President.

All this should prove helpful to the aid programme, which admittedly has been encountering increasing public and congressional criticism in recent years.

Kermit Gordon, as one of President Kennedy's three-man Council of Economic Advisers, has worked closely with Mr Bell, and brings to the budget bureau an insider's knowledge of government programmes and economic policies. Like Mr Bell, he has the kind of broad experience that a budget director finds invaluable in these days of increasingly complex economic programmes and relationships, both at home and abroad.

On the Council, he helped shape administration policies on wages, prices and productivity, as well as on nuclear power, public works and other fields. His prior government experience includes a stint as an economist with the Department of State. He was a professor at Williams College for several years before being tapped for his appointment to the Council of Economic Advisers.

The switch in jobs will be gradual, and will not be completed until early next year. Mr Bell is still preoccupied with decisions affecting the new federal budget estimates for the 1964 fiscal year beginning next July 1, and Mr Gordon with the Council's annual economic report. Both are due to be published in January.

The replace Mr Gordon on the Council of Economic Advisers, President Kennedy has chosen John P. Lewis, head of the Department of Business Economics at Indiana University. Mr Lewis served with the Council under President Truman. He has written on business conditions in the United States and on problems of economic development abroad.

This leave Chairman Walter W. Heller as the lone surviving member of President Kennedy's original Council of Economic Advisers. He is now joined by Mr Lewis and by Gardner Ackly, University of Michigan professor and former government economist, who has replaced Frank Tobin.

A highly skilled economist, Mr Heller, like Mr Bell, has played a prominent part in formulating US government programmes and policies. He enjoys an enviable reputation for ability abroad as well as at home.

SNIPPETS

STEEL PRODUCTION

Durgapur

The Durgapur Steel Plant produced 97,312 tonnes of pig iron and 82,047 tonnes of steel ingots in November 1962. This represents 86 per cent of the iron making of the plant and 75 per cent of the ingot steel making capacity.

The Blooming Mills of Durgapur Steel Plant rolled 2848 tonnes of ingot steel (410 ingots) into blooms on November 28 last. This exceeded the previous good rolling record of 2744 tonnes of ingot steel (396 ingots) on March 26, 1962.

The Coke Ovens of the Steel produced 4671 tonnes of coke on November 22, 1962 exceeding the record of 4,332 tonnes of coke setup on October 22, 1962.

Bhilai

The production of steel in the Bhilai Steel Works during November 1962, amounted to 99,300 ingot tonnes. The steel production was more than the rated capacity of the plant. Production of pig iron during the month totalled 94,970 tonnes.

RICE

Good Harvest Expected

According to the Commonwealth Economic Committee's bulletin on rice, published in London, almost all the major rice-producing countries in Asia report favourable conditions.

In India, a good harvest is expected again, despite droughts and floods earlier, while a record crop is indicated in Japan. Prospects in Thailand, Burma and Viet-Nam are all good.

The mid-September estimate for

the Japanese harvest is of 16,000,000 tons (of paddy), slightly above the 1960 record. The increase in output is attributed to favourable growing conditions and improved techniques. The outlook for the crop in Burma is also good, and with an increase in acreage to 100,000 acres, the outturn should be higher than last year. A higher level of output is expected in Thailand and South Viet-Nam, too, where harvesting is soon to commence. In the Philippines, the crop is expected to meet local requirements.

Reports from China, the bulletin continues, indicate that drought has seriously affected crops, particularly in the South-west.

Exports so far recorded this year are, in the aggregate, at much the same level as in the comparable period of 1961, although since June, shipments from several major exporting countries appear to have declined sharply.

Ropeway for Collieries

The Coal Board has entered into an agreement with Breco-Ropeways, an engineering firm of U.K. for building up a 7-mile long ropeway system in the Raniganj coalfield to supply some 40 collieries with sand for stowing purposes.

The ropeways which will cost Rs 6 crores will be set up in three years and will make a substantial contribution to the increased coal production target set for the present plan. About 50 per cent of the money required for the ropeways is being financed under the U.K. aid programme, the rest being raised in India.

The ropeway system is for three independent plants—two winning sand to the Jambak Kajora areas for the Raniganj coalfield. The

main ropeways will each be of 6 or 7 miles in length and each will carry sand at the rate of 450 tons hour. Each main bocable ropeway will be fed with sand from the rivers at 3 sand winning points. At each such point (9 in all) there will be scrapers, conveyers and monocabable ropeways of 200 tons per hour capacity. Gigantic stockpiles of 60,000 will be built up from which sand will be delivered to the various collieries.

The Coal Board under its central ropeways scheme proposes to instal six ropeways—three in Jharia field and three in the Raniganj field—for transporting sand from the rivers to the collieries for stowing so that the coal production target prescribed for the Third Plan may be achieved, ensuring at the same time conservation of coal and safety in coal mines.

The three ropeways in the Jharia field will have a total

49 years ... not even a scratch

The rate of industrial accidents in India has increased from about 24 per thousand workers in 1938 to about 44 in 1959. Every year, over 93,000 workers are involved in accidents and 250 lives are lost. Also wasted annually are a million man-hours—enough to produce 170 broad gauge locomotives or 700 coaches for the Indian Railways.

Safety has always been Tata Steel's watchword as efficiency is hardly possible without it. 'No-accident month' as an annual feature, safety exhibitions, training in safety, safety awards, safer working conditions, a continuing campaign under the direction of joint councils to turn safety into a habit... these are some of the means adopted in Jamshedpur to prevent accidents in the Plant.

Safety, however, depends largely on the worker himself because about 75 per cent of industrial accidents are found to be caused by human negligence. This is where men like Jamuna Dube, the oldest employee in Tata Steel, come in. He has worked for 49 years without ever sustaining an injury, not even a scratch.

The importance of safety was one of the first things that Jamshedpur taught Dube when he arrived in the Steel City half-a-century ago... a city where industry is not merely a source of livelihood but a way of life.

capacity of 6 million tons of sand, while the three ropeways in the Raniganj field will have a total annual capacity of 4.5 million tons.

Humphreys & Glasgow

Mr Ambrose Congreve head of the well-known firm of international consultants, contractors and engineers, Humphreys & Glasgow

Limited, is in Bombay to review the progress made by the firm's Bombay Branch since its inception last February—and explore the possibilities of extending its services still further.

Humphreys & Glasgow Limited started as a partnership between two families in London in 1892, and is still a family concern, though its activities now extend across the globe. The firm undertakes jobs of a highly specialised nature, in the fields of gasification, chemicals and power. It has

contracted major engineering and installation jobs from Japan to Germany, Canada and Australia. Through its various offices in different parts of the world, it is in very close contact with important producing companies, and through these contacts is able to offer a very wide range of the latest proven chemical processes. It is constantly working on the development of new processes. Most significant are the processes for the production of Ethylene and other petrochemicals.

The Bombay Branch, despite its recent start, is already committed to complete contracts valued at over Rs 8 crores. Among these, the most important are the setting up of a plant for the manufacture of dyestuffs intermediates and allied products for ATUL, and a plastics and sulfa drugs plant for CIBATUL at Bularsar.

As a considerable number of their services are offered against Rupee payments, large foreign exchange savings are now possible for the country.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

AS I write, the Colombo Conference is still in session, but my own expectations from it are minimal. I was not exactly thrilled when I heard it first bruited and was almost relieved when it nearly got ditched, because President Nasser, who too had little enthusiasm for it, stalled. It has since been resurrected and we have, as we ought to, exerted ourselves to put the record straight and brief the participants. But considering how most of them reacted in the first instance to the news of Chinese invasion of India, we had better pitch our hopes low. The first reaction was no surprise either. Most of these countries are subject to internal and external pressures directly traceable to Communist China and it is the major preoccupation of their governments to come to terms with them. Such compulsions are not exactly conducive to standing up to China. It is not without significance that the only country that came nearest to describing Chinese action by its proper name was also the one least subject to such pressures. Then there are other small things. Some of these countries have quarrels of their own to settle with India, though, of course, these are nowhere near the dimensions of our quarrel with China. Some probably have imaginary slights to avenge and other resentment against India to work off, though most of it is probably unconscious. None of these would really matter if these nations were not haunted by an inchoate fear of offending China. It is plain enough that what strikes this unwholesome terror in their hearts is precisely what has been dramatised vividly in the Sino-Indian conflict. It is a pathetic illusion that we ourselves have only recently shed that Chinese expansionism could be contained by pretending that it is not there and that even when it is known to exist, its deadly blast can be avoided by being nice to it. Of course, if the Colombo Conference is able to hammer out a solution that we can accept without qualms, that we should indeed be grateful to it. Mr Ali Sabri of the UAR touched the core of the problem when he declared on Monday that the Conference should take care that it did not confer respectability on gains of aggression. Any solution that respects this

dictum is welcome to us. If the Conference shirks this—as it well might—and tells us to come to terms with China somehow, we may have to thank these good people and ask to be left to sort out our difficulties alone.

*

Are the simmering Sino-Soviet differences coming to the boil at last? Those who are hopefully looking for signs of this—and they include men like Mr Kennedy and Mr Nehru—may take such comfort as they can from one development. The collision is still not head on and the whipping boys, Albania and Yugoslavia are still vicariously belaboured. But harder things were said directly to the Chinese by fellow communists in Rome last week than at any time before. Signor Togliatti's support to the Soviet Union, especially on the way it handled the Cuban crisis was later amplified by Signor Pajetta who left none in any doubt that the Italian Communist Party took a dim view of the Chinese disapproval of Khrushchev's policies. Signor Pajetta was the first man to abjure openly the hypocrisy of saying Albania when meaning China. Other delegates from France and Spain shared the Italian view and asked the Chinese, in the words of one of them, "to end their incompressible and dangerous attitude." Given time, the People's Republic may be trusted to completely isolate itself from even the communists of the world. But that day is probably still far off. It is true that, taking the cue from the speakers at the Italian party congress in Rome last week, Pravda has at long last remonstrated with the Chinese for siding with Albania. From this to dropping the pretence (which, in any case deceived none,) that the real clash is between two pigmies on the periphery of world communism may be but a step. But that step will not be lightly taken by either side. Certainly hopes of the Soviet Union as the fifty first signatory of the US Constitution or of General Malinovsky taking over from General Chaudhuri are a trifle premature.

And talking of the Russians taking over the defence of the

Himalayas, what did Mr Kozlov say in Rome last week? If what the Economist says he said is at all correct—which I doubt—there has been a grievous failure on the part of our Government (and to a lesser extent, our Press) in making use of very valuable diplomatic and propaganda material. This is what the Economist says: "This week, in the sympathetic atmosphere of the Italian party congress in Rome, both Signor Togliatti and the chief Soviet delegate Mr Kozlov, made clear their deep disapproval of the Chinese action against India." This is pretty categorical and I don't know the Economist's authority for this assertion. But if it is anywhere near the truth, it would have made an enormous difference to the deliberations of the Colombo conference of six neutrals. The utmost that could be gleaned from the reports in our papers was that Signor Togliatti considered the armed conflict between India and China "irrational and absurd"; its effects would be "negative" in the "fight against imperialism and for peace", and finally "it represents in addition a serious blow to those neutral countries whose presence on the world scene is a positive factor in the battle for peaceful coexistence." It is obvious that only the last sentence can be construed as involving any condemnation of Chinese action. As for Mr Kozlov, his remarks as reported are even sketchier. The conflict has caused "deep concern" in the Soviet Union. It "seriously damages the interests of our Chinese brethren and of our Indian friends." If this was all he said, then the Economist has led its wishes run away with it. Its inference of "disapproval" of Chinese invasion of India by Signor Togliatti barely passes muster: as for Mr Kozlov, he does not appear to be within miles of disapproving. And that is not surprising in the light of what Mr Khrushchev is reported to have told the Supreme Soviet last Wednesday. Plainly, brothers are dearer than friends, and blood, even when it is bad, is thicker than water.

*

Subramanya Bharati, whose eighty first birthday fell early this week was to the Tamils what Tagore was to the Bengalis. Apart from what they meant to their people, these two had much in common though there was also much in which they differed radically. They shared the same voracity for experience and comprehensive humanity, the same quick and eager response to life and beauty. If Tagore was the more intellectually sophisticated, Bharati had the greater gusto and a most

attractive common touch. Bharati was no salon poet. He was more a troubadour and came nearest the archetype of a poet found frequently in ancient Tamil classics. He was no long-haired aesthete but a humorous scamp with an ironic sense of his own vocation, chronically poor but proud, cadging but not sycophantic, the panegyrics that earned his pennies delivered tongue-in-cheek. Bharati too was the more committed of the two and was more immediately involved in the controversies of the times. Sir C. P. Ramaswami Iyer told a Madras audience the other day that almost his first contact with Bharati was by the agency of the chair that Bharati threw at the moderates during the Surat Congress session. Bharati is the only poet I can recall who earned his living by subbing in a newspaper office.

*

And yet the comparison is a little unfair to the Tamil poet for he never lived to realise the fullest measure of his promise. Like the young English romantic poets whom he admired and sometimes unconsciously echoed, he died young. He was barely thirty-eight when he died. And Tagore was spared too the horrors of poverty and neglect that was Bharati's lot, his Nobel prize catapulting him (much to his chagrin at earlier slights) into favour with his people. Bharati himself was remarkably free from bitterness on this account but the old jibe about seven cities contending for Homer dead through which, living, he begged for bread is just enough to hurt. If a poet's greatness is to be measured by the constancy with which his poems are on the lips of his people, Bharati is a very great poet indeed. The Emergency which has probably thrown into disarray plans of a study of his more considerable poetical achievement has given a new lease to his patriotic songs. These have great gusto and energy and have found their hour once again. His two ambitious efforts are his Panchali Sabadam, a self-consciously modern interpretation of the Mahabharata and Kuyil, a long mock-heroic poem of sustained dramatic interest with passages of great power and lyrical beauty. But more than for any specific achievement, Bharati will be remembered gratefully by his people for the enormous change he made to the Tamil literary and cultural life. Quite unquestionably he initiated the new poetry in Tamil and though Tamil prose had already begun to shed its florid ineffectuality when Bharati came on the scene, it was he who gave the final push it needed to be wholly rescued from the Pandits. His lyrics, remarkable for their musical qualities have passed into the repertoire of modern music. Rarely has one man given so much to his people.

BONUS

WHOLE LIFE ASSURANCES
Rs. 16.00
per thousand per annum

ENDOWMENT ASSURANCES
Rs. 12.80
per thousand per annum

The Life Insurance Corporation has pleasure in declaring the above rates of bonus as a result of the third Valuation of its liabilities and assets as at 31st December 1961. These bonus rates are applicable to with-profits policies issued by the Corporation and which were in force for full sum assured as at the date of Valuation.

The total sums assured and bonuses under 85,81,367 policies in force on the date of the Valuation amounted to Rs. 2738 crores, and the total amount payable under 10,297 Life Annuities was Rs. 1,09,50,470 per annum. Out of the total profits available for distribution amounting to Rs. 34.45 crores, a sum of Rs. 32.73 crores has been utilised for allotting bonuses at the above rates to the policyholders. Government's share of surplus amounted to Rs. 1.72 crores.

The rates of bonuses on with-profits policies of the erstwhile insurers also remain the same as those declared under the Differential Bonus Scheme on the occasion of the first and second Valuations.

Bonus intimations in respect of the third Valuation will be sent out to the policyholders as soon as possible.

Floor Price for Rice

A firm indication of Government's policy in regard to food-grain prices was given by Mr S. K. Patil at a meeting of the Informal Consultative Committee of members of Parliament last week. The meeting had been specially called to hear an address by Mr B. R. Sen, Director-General, FAO, who strongly endorsed the policy of guaranteed floor prices for foodgrains. Agriculture, said Mr Patil, could not progress unless the farmer had the surest guarantee that it was going to be profitable and hence Government had initiated measures to support and protect the agriculturist as much as they could. While it was necessary to ensure adequate supplies of foodgrains to consumers at reasonable prices by cutting the profit margins of intermediaries, he could not accept the proposition that consumers should be protected at the expense of the farmer. A minimum price for wheat was already in force and a similar price support scheme would cover rice also. The Minister indicated that, for the 1962-63 season, wherever procurement prices had been fixed, they would be the minimum prices for rice. These prices ranged from Rs 14.50 to slightly over Rs 18 per maund for different regions and different varieties of rice. For increased procurement this year, in view of the emergency, he proposed to give a little higher price than last year. Also he would try his best to increase prices next year.

Mr Sen described Government of India's scheme as a very important step forward. He told the Committee that in India there was not enough understanding of the producers' interest. So long as this matter did not get proper attention, not much progress could be made in agriculture.

He had also expressed the view when he met Dr Ram Subhag Singh, Union Minister for Agriculture, a few days earlier, that a comprehensive scheme of guaranteed floor prices coupled with intensified production campaigns in the rural areas would go a long way in stepping up agricultural output in India. India's food production programmes and the ways in which FAO could assist, were discussed at this meeting. The talks covered, among other things, plans to increase availability of

fertilisers incentives to cultivators, expansion of storage accommodation and matters relating to agricultural commodities of importance to the exports trade of the country.

The Consultative Committee was told by Dr Ram Subhag Singh that agricultural plans would assume a "new look" because of the emergency. The National Development Council at its meeting held last month, had decided that very high priority should be given to agricultural production programmes, more especially those which would result in rapid increase in food production. In a note sent to the State Governments, the Union Ministry of Agriculture has called for increase within the overall State Plan ceilings for 1963-64, if the allocations for agriculture, minor irrigation and, soil conservation, as well as for the agricultural component of the Community Development programme. It has been suggested that the allocations for 1963-64 should be substantially higher than the revised estimates for 1962-63.

The note, which was sent to State Governments after consultation with the Planning Commission, says that increased allocations should also be made for specific programmes to step up the production of rice, millets, gram and other pulses, cotton, oilseeds (especially groundnut and castor seed) fruits and vegetables and milk, meat and eggs. In the context of the present emergency, from the point of view of holding the price line and meeting urgent defence needs, the Government of India considers it necessary that immediate increases should be secured in the production of these commodities and the States should, accordingly, intensify efforts to achieve higher targets of production in these commodities in particular. The note also says that the Ministry is anxious to see that adequate financial resources are provided for carrying out the policies on agricultural development laid down by the National Development Council and whatever is physically feasible should be supported by adequate allocations of financial resources during 1963-64 and the subsequent years of the Third Plan. At the same time the Ministry has also asked the State Governments to review the present scheme of subsidies so that those which may now be regarded as obsolete may be abolished and other changes brought about to provide the needed stimulus to

programmes for accelerating agricultural production.

FOREIGN AID Rs 56 Crores West German Credit

The Governments of the Federal Republic of Germany and India signed an agreement this week for the utilisation of DM 470 million (Rs 55.9 crores) given to India for the current year of the Third Five Year Plan. The credit has been allocated as follows:

- (i) DM 56 million (Rs 6.66 crores) for the Rourkela Steel Plant for:
 - (a) replacement materials, spare parts and machinery for the workshops (Rs 3.57 crores)
 - (b) railway rolling stock and repair shop (Rs 1.31 crores) establishment of a wagon repair shop (Rs 3.57 crores) and
 - (c) deputation of operation and maintenance personnel (Rs 1.78 crores).
- (ii) DM 100 million (Rs 11.9 crores) to be used in 1962-63 for buying raw materials and auxiliaries, semi-finished products and other maintenance requirements of Indian industries. At additional sum of DM 75 million will be utilised during the next financial year for the same purpose.

(iii) DM 50 million (Rs 5.95 crores) to be given as direct loans to the Industrial Finance Corporation of India, Industrial Credit and Investment Corporation of India and the National Small Industries Corporation which finance industries in the private sector.

(iv) DM 189 million (Rs 23.5 crores) to be used for mutually agreed projects.

The duration of the loan is for a period of 20 years in all cases. For the first two categories the rate of interest will be 3% per annum. The loans to the three financial institutions which will carry an interest of 5½% per annum are repayable by December 1982. The period of the loan as well as the interest in respect of the amount of DM 189 million earmarked for projects will be determined separately.

West Germany has so far granted credits totalling DM 2876.6 million (Rs 342.43 crores) towards assistance for our development projects. Out of this a sum of DM 1176.6 million (Rs 140 crores) was made available during the Second Plan period and the balance of DM 1700 million (Rs 203.4 crores) which was indicated at the Consortium meeting held in May-June, 1961 is for the Third Plan.

The following is a break-down of figures:

Second Plan Credits:

1. DM-660 m (Rs 78.57 crores)—1958 for financing payments to West German suppliers under contracts for Rourkela Steel Plant
2. DM-168 m (Rs 20 crores)—1959 for payments to West German suppliers under contracts concluded before 1-10-59.
3. DM-125.1 m (Rs 14.89 crores)—1960 for import of equipment from West Germany.
4. DM-125.1 m (Rs 14.89 crores)—1960 for import of equipment from West Germany.
5. DM-98.36 m (Rs 11.71 crores)—1961 to refinance Rourkela repayments between 30-1-61—31-8-61.

Third Plan Credits:

6. DM-230 m (Rs 27.38 crores)—1961 to refinance Rourkela repayments between 1-4-61—31-3-62.
7. DM-100 m (Rs 11.9 crores)—1961 for balance of payments assistance. Includes DM 30 m for loans through IFC, NSIC and ICICI.
8. DM-170 m (Rs 20.24 crores)—1961 for balance of payments assistance.
9. DM-85 m (Rs 10.12 crores)—1962 for refinancing Rourkela repayments during 1-4-62—31-3-63.

Of these credits, SI, 2, 3, 4, 5, 6, 7 and 8 have been fully utilised. Out of the credit of DM-660 million under SI 1, DM-624 million has been used so far and the balance of DM-36 million is expected to be used by 31 March, 1963.

Out of the credit of DM-85 million under SI 9, DM-60.3 million has been utilised already upto 31 October, 1962. The balance is expected to be used up by 31 March, 1963.

The credit under SI 2 of DM-168 million has varying rates of interest as follows:

DM-48 million: 5.25 per cent.
DM-100 million: 5.7 per cent.
DM-20 million: 7.0 per cent upto 30 January, 1961 and 5.5 per cent thereafter.

	Interest per cent	Period years
1. DM-660 m (Rs 78.57 crores)—1958 for financing payments to West German suppliers under contracts for Rourkela Steel Plant	6.3	3
2. DM-168 m (Rs 20 crores)—1959 for payments to West German suppliers under contracts concluded before 1-10-59.	5.25 to 7.0	20
3. DM-125.1 m (Rs 14.89 crores)—1960 for import of equipment from West Germany.	6.5	20
4. DM-125.1 m (Rs 14.89 crores)—1960 for import of equipment from West Germany.	6.5 upto 19-1-61 and 5.5 thereafter.	15
5. DM-98.36 m (Rs 11.71 crores)—1961 to refinance Rourkela repayments between 30-1-61—31-8-61.	5.75	4
6. DM-230 m (Rs 27.38 crores)—1961 to refinance Rourkela repayments between 1-4-61—31-3-62.	5.5	13
7. DM-100 m (Rs 11.9 crores)—1961 for balance of payments assistance. Includes DM 30 m for loans through IFC, NSIC and ICICI.	5.5	20
8. DM-170 m (Rs 20.24 crores)—1961 for balance of payments assistance.	5.5	20
9. DM-85 m (Rs 10.12 crores)—1962 for refinancing Rourkela repayments during 1-4-62—31-3-63.	5.5	12

General Tyres Limited

Expansion of General Tyre's Production Capacity by 1,20,000 Nos. each of Tyres and Tubes per annum Approved in Principle

Chairman Sir A. Ramaswami Mudaliar's Address at the Second Annual General Meeting

The following is the address by the Chairman Sir A. Ramaswami Mudaliar at the Second Annual General Meeting of the company held on 11th December 1962 at Calcutta:—

Gen'lmen, I have great pleasure in welcoming you to the Second Annual General Meeting of your Company. The Directors' Report and the Audited Accounts for the year ended 30th June, 1962, have been in your hands for some time now and with your permission I shall take them as read.

The operation of the Company during the year under review resulted in a loss of Rs 92,822/- on account of the expenses incurred during the period of construction; your Directors have recommended that this amount be carried forward.

The automobile tyre and tube industry in India recorded satisfactory progress during the period under review. Taking 1956 as the base year, the index of production of rubber manufactures including tyres and tubes in July, 1962 was 173.9 as against 151.9 being the general index of industrial production. Actual production of automobile tyres and tubes, during the twelve months from July, 1961 to June, 1962 was substantially higher than that during the corresponding period in 1960-61. This would be evident from the following figures:—

Description:	Production (Lakhs Nos.)	1960-61	1961-62
Automobile tyres	15.93	17.94	
Automobile tubes	15.21	16.95	

During the year under review the Government of India made an upward revision of the target for automobile tyres and tubes to the extent of about 40 per cent over the capacity target of 38.43 Lakh Nos. as originally provided in the Third Five Year Plan. The latest available position relating to the proposed target as above is detailed below:—

Particulars:	Quantity covered (Lakh Nos.)
Capacity in operation:	18.18
Additional capacity licensed and under implementation:	20.23
Further expansion under consideration:	13.94
Total	51.45

Chairman voices unqualified support of Tyre and Tube industry in defence efforts

The Government of India have been considering requests from various units for sanctioning expansion schemes to cover the revised and increased target capacity as indicated above. I am glad to inform you that the application of your Company for expansion of its manufacturing capacity by 1,20,000 Nos. each of tyres and tubes has been approved in principle by the Government of India and steps are being taken to finalise the said scheme of expansion. With the implementation of this expansion scheme the total manufacturing capacity of your Company will be raised to 3,00,000 tyres and tubes each per annum. Besides, the proposed license for expansion will also cover 600 tons of tyre retreading material per annum.

Recently the Government of India is reported to have decided that for the purpose of republishing the Third Plan, projects already approved but not yet at an advanced stage of execution will have to be cleared by the Government again so that such projects as do not fit in with the new order of priorities may be deferred in spite of previous approval. It is, however, understood that the highest priority will be accorded to projects having a bearing on defence efforts such as basic and heavy industries, power and transport. In the present national emergency transport has been appropriately given a high place in order of priority which is essential for effective defence efforts. The automobile tyre industry has a great strategic significance being ancillary to transport and as such the scheme of development and expansion relating to this industry is being accorded a similar degree of high priority. I am sure I shall be voicing the feeling of the tyre industry as a whole when I say that this industry on its part will always offer its unqualified support to the Government in its defence efforts by stepping up production of tyres and tubes and thus maintain the vital means of transport all over the country.

The construction work at the factory site and also installation of plant and machinery has made considerable progress over the past one year and at present work is going on round the clock. Another team of technicians deputed by the

collaborators, M/s. Technoexport Foreign Trade Corporation are expected to arrive in India in course of a month or so to put the plant and machinery on trial run and the factory is expected to commence production early next year. Suitable arrangements for supply of raw materials required for production during the initial stage have been made.

The supply position relating to imported raw materials may sharply deteriorate due to further cuts in foreign exchange allocations with a view to meeting essential needs under the prevailing circumstances. It is, however, expected that in view of the strategic importance of the tyre industry raw material requirements of the industry will be accorded the priority it deserves.

Meanwhile, it is gratifying to note that the tyre industry in India is expected to be fairly relieved of

its almost total dependence on imported raw materials, as and when the new units set up for the manufacture of synthetic and reclaimed rubber, tyre cord, bead wire, tube valves, carbon black and rubber chemicals go into production in course of the next one year or two according to present plans. Till, however, the country is substantially self-supporting in this respect, adequate imports should be allowed to enable the industry to keep reasonable stocks for maintaining production according to programme.

Before concluding, I take this opportunity of expressing our sincere appreciation of the co-operation and assistance received from the Technical Collaborators, M/s. Technoexport Foreign Trade Corporation, Czechoslovakia, and the loyal and devoted work of the officers and staff of the Company.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE Measures to Stabilise Raw Jute

A steadier tendency was noticeable in the raw jute market this week following effective steps taken by Government to step up the offtake of jute, particularly from Assam where huge stocks had accumulated as a result of transport difficulties. At a high level conference between representatives of Government and the jute industry held in Calcutta on 6 December, jute growers in Assam were advised not to get panicky and dispose of their stocks at unduly low prices in view of the various measures initiated to facilitate the movement of jute and its purchase at equitable prices. As regards movement of jute, already there has been an improvement following the resumption of work by the striking workers of the Joint Steamer Companies. Moreover, the number of railway

wagons available for transport of jute from Assam have been sizably increased from 40 to 115 per day. This is in addition to about 190 wagons per day loaded from stations in West Bengal and North Bihar areas. It is pointed out that with the new steps taken to expedite jute movement and with the end of the steamer strike, all the remaining quantity of raw jute in Assam could be moved to Calcutta and mill areas within the normal season. The IJMA and JBSA have agreed to purchase about 2 lakhs bales from Assam out of their quotas for the current month.

Government on its part is also initiating steps to increase the quantum of purchases by its agencies such as the State Trading Corporation, The National Agricultural Marketing Federation is to step up buying from growers through co-operative agencies for supply to the STC. It is expected that with the introduction of War Risk Insurance, confidence will be restored in the trade and among

growers. It is also reported that the Central Government has asked the Assam State Government to buy on its behalf (Central Government's) 7.5 lakh bales of raw jute with a view to bringing about an immediate improvement in the situation created by the accumulation of stocks in the past few weeks as a consequence of the Seamer strike and dislocation in other modes of transport due to the emergency.

As the Jute Commissioner has allotted a total quota of 8.5 lakh bales to Jute mills for the current month and as the jute buffer stock quota of 2.5 lakhs bales is to be completed by 19 December, there has been revival of mill buying during the week with an improvement in the price level also. Even so prices are still below the minimum though sellers have lately become reluctant to discount rates. It may be expected that distress selling will stop in view of the assurances given by both the Government and the jute industry. For the IJMA had expressed its determination not only to buy all jute offered but also to ensure that reasonable prices were paid to the growers.

The need for giving active support to the raw jute market has been stressed by the Indian Central Jute Committee. The latest issue of the Jute Bulletin has warned that if the famine conditions of 1960-61 are not to recur growers should not be left to smart under the feeling that jute cultivation is a losing game. It further points out that extraordinary situation could have been avoided if there had been no

slow-down in the mill offtake during September-October.

According to the Jute Bulletin the minimum that the current emergency demanded of the jute mills is that buying of jute at the November level should continue throughout December-February. In its opinion, the jute industry has not done all that needed doing to correct the supply-demand disequilibrium. At least the end-month fibre stock position of the mills reporting to the IJMA did not show that the buying of ready and near delivery jute between July and October had been nearly as heavy as the supply and the rate of consumption warranted. This had resulted in distress sale of jute in various parts of the country. The Bulletin continues: "The fact that more fibre had been lifted last month than was required under the Jute Commissioner's order had made little impression on the market. It would seem that the support had come rather late. From February to June mill stocks varied between two million bales and 1.72 million bales. At the end of July these dropped to 1.5 million bales and as low as 1.23 million at the end of September. Godown stocks at the end of October, estimated as 1.47 million bales, were sufficient for just over two and half months consumption.

Production of jute goods during November is higher at 101,400 tonnes as compared with the previous month when total output amounted to 90,900 tonnes. The increased production is due to the increase in the number of hours worked. While in November mills worked for 208 hours, the number of hours worked in October were only 192. Output of hessian has increased from 39,800 tonnes to 45,100 tonnes while that of sacking increased from 42,900 tonnes to 46,100 tonnes. Output of other goods too has in-

creased from 8,400 tonnes to 10,200 tonnes.

A mixed trend was noticeable in the jute goods market during the week. In the absence of fresh foreign business hessian ruled quiet. The fact that hessian stocks as at the end of November showed a substantial rise over the previous month-end level was partly responsible for the quiet trend in this category. Sacking however, steadied up as stocks of this category showed a fall of 3,700 tonnes as compared with the previous month. Another significant point is that sacking stocks have declined for the second month in succession. Total stocks of jute goods at 91,300 tonnes at the end of November are 500 tonnes higher than at the end of October. Hessian stocks were higher by 3,100 tonnes at 27,000 tonnes. Sacking stocks were lower at 50,400 tonnes. Stocks of other goods increased by 1,100 tonnes to stand at 13,200 tonnes. Although the stock figures imparted a quieter tendency in the market, sacking section witnessed some gain in view of the fall in sacking stocks. Buying was also encouraged by reports of fresh business with some middle East countries. In contrast to the anxiety prevailing till some time ago, sentiment around sacking is steadily improving as it is believed that there will be no great difficulty in disposing of sacking stocks what with possibility of further orders from Government of India and the revival of support from Middle East countries. As announced last month, the IJMA committee considered the market situation in the light of the offtake of manufactured goods as revealed by the stock figures at the end of November 1962 and came to the decision that full working of mills should be continued until the end of January 1963, when the position will again be reviewed. The Committee also noted that although there had been a small rise in the overall stocks, the offtake of standard goods was generally well maintained.

JUTE GOODS STOCKS AT END OF NOVEMBER.

	30 Nov. 1962	31 Oct. 1962	30 Nov. 1961
Hessian	27.7 (27.2)	24.6 (24.2)	17.7 (17.4)
Sacking	50.4 (49.6)	54.1 (53.3)	29.6 (29.1)

TEA Export Duty to be Abolished?

TEA exports have begun to look up. During the first nine months of the current calendar year, exports of tea have touched the record figure of 308 million pounds—24 million pounds higher than the figure for the corresponding period of last year. But the tax relief is said to have been virtually negated by the recent grant of interim relief to the plantation workers, increase in labour costs due to the uncertainty and insecurity created by the Chinese aggression.

The Commerce Ministry feels that, if additional tax relief is not granted immediately to the industry, Indian tea may well be priced out of the world market. It is, therefore, understood that the Government is actively considering the desirability of abolishing or substantially reducing the export duty on tea. The proposal is said to have been mooted in a bid to help the industry not only to recapture the lost ground in certain foreign markets but also to maintain its present position in other markets in face of serious challenge from other tea producing countries. It is also intended to increase the competitive power of Indian tea in the ECM.

Meanwhile, in the export sale held in Calcutta this week, offerings were 54,208 packages of Leaf tea. There was only a fair demand and this was less general than in the previous week, slaking as the sale progressed. Orthodox descriptions met with restricted enquiry and declined by 30 nP to 50 nP per kilo, while the better liquoring Assam teas were considerably lower and many of these types had to be withdrawn. CTC descriptions shared in the general price decline and were also easier by 30 nP to 50 nP. The best sorts were up to 70 nP lower and there was a weakening noticeable towards the close. Legg-cut teas registered a drop of 30 nP to 50 nP a kilo.

Whole Leaf grades and the more Tippy sorts were sold quite well, but followed the lower trend of the market. Demand was better for those Darjeeling teas showing some seasonal improvement, but

STATE BANK OF INDIA

Bombay, the 14th November 1962.
23rd Krik, 1884 (Saka).

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Tuesday, the 1st January 1963 to Tuesday, the 22nd January 1963, both days inclusive.

N. A. KRISHNAN,
Managing Director.

prices generally followed an easier tendency. Following rates were quoted:—Clean Plain Pekoe Rs 4.30 to Rs 4.50; Plain BP Rs 3.80 to Rs 4.20; Plain Fannings Rs 4.00 to Rs 4.50; Medium Assam CTC BP Rs 5.40 to Rs 5.90; Medium Assam CTC Fannings Rs 5.50 to Rs 6.00; Best Assam CTC BP Rs 6.20 to Rs 6.50 and Best Assam CTC Fannings Rs 6.40 to Rs 6.60.

In the Internal Sale, offerings consisted of 29,856 packages of Dusts. There was less general demand and prices were generally lower. The lesser medium CTC teas received only fair support and realised much easier prices with the brighter lines selling well. Good CTCs were readily absorbed at around last levels. Plain orthodox teas, together with the poorer Assams, were up to 80 nP easier and, at the close, there were some withdrawals.

The better liquoring medium Assams realised fair prices. Legg-cut teas followed the lower trend of the market and demand eased with the progress of the sale. Following rates were quoted:—Plain Orthodox Dust Rs 4.00 to Rs 4.30. Medium Assam Dust Rs 4.40 to Rs 4.90; Legg-Cut Dust Rs 5.00 to Rs 5.40; Medium Assam CTC Dust Rs 5.55 to Rs 5.80 and Good Assam CTC Dust Rs 6.20 to Rs 6.60.

In the Cochin market, a quantity of 891,000 kgs of leaf tea was offered for exports. Against a fair demand at much lower prices, plain and low medium sorts were quoted at rates 80 nP to Re 1 per kilo lower than the previous week's prices. Brighter mediums were 50 nP a kilo easier. High-grown brokens were generally 50 nP to 60 nP a kilo lower and similar Fannings were sometimes more. Unorthodox descriptions were substantially easier.

In Pakistan, tea producers have expressed fear that the production during the next season will be affected substantially. The industry had been informed earlier that fertilizers would reach Chittagong by the end of January next; but there was no specific indication of details of shipment to Chittagong. This has created doubts among the tea producers if at all orders have been placed for import of fertilizers with foreign exporters. Again, it is learnt that there has been no progress in the expansion of acreage under tea, announced officially in August last year, to make for the target of one lakh acres in five years against the present estimated 80,000 acres.

A representative of the Pakistan Tea Board has stated that only 4 million pounds so far has been exported out of 5 million pounds initially announced. Still, the internal price has shown sharp upward trend in recent weeks, rising by nearly 10 annas per half pound packets in some cases. The industry in Pakistan is, therefore, now passing through a critical phase.

In London auction, offerings were 23,443 packages including 21,278 packages from Northern India and 731 packages from Pakistan. The lull in demand continued and prices for all descriptions showed a further decline of about 1d per pound. Plain Broken Pekoe was quoted at 3sh 7½d.

Tea stocks in London, as on 30 November, totalled 137.62 million pounds as against 137.10 million pounds in the previous week. The total amount to be landed on the same date was 12.26 million pounds. Total afloat was 30.99 million pounds including from Calcutta 18.38 million pounds; from Chittagong 932,000 pounds; from Cochin 618,000 pounds; from Ceylon 9.55 million pounds and from other Ports 1.51 million pounds. The average price realised at the auction was £1.06d per pound as against 60.68d in the previous week and 50.89d a year ago.

COTTON Mixed Trend in Futures

The Bombay cotton futures market during the past week displayed an unsteady trend. In the initial stages the prices tended to recover as a technical reaction to steep landslide in the previous week. But the improvement proved short-lived and the market sustained a fresh setback as a result of which prices tumbled down to a new low of the season. Bear elements were active in the market and exploited the situation to their advantage.

The mild recovery in the first few days was attributed to reports of untimely rain in some of the cotton growing tracts, particularly in the Moglai areas. The recovery was also aided by the apprehension of delay in the movement of crop from Berar and Akola and the Government's decision to extend more credit facilities to the textile mills for skipping over the difficulties consequent on the alarming accumulation of unlifted stocks with them. But attempts at recovery proved abortive owing to a variety of reasons, foremost among them being the heavy bear selling which accentuated the downward drift. Expectation of a bumper crop of nearly 58 lakh bales during the current season and the reports of a reduction in cloth prices played havoc on the sentiment and the market closed on a distinctly weak note.

The ruling Jarilla March contract which moved up initially to Rs 696.75 from Rs 682.75 per three quintals slipped down to a low of Rs 674.00 before finally closing at Rs 681.75.

An easy trend persisted in the spot market at Sewri. Trading in CO 2, L 147 and Kandesh growths was few and far between. Demand from mills dwindled into a mere trickle as they were not in a mood to cover their requirements unless prices stabilise at a reasonable level. Sellers far outnumbered the buyers and prices were quoted below ceiling levels obviously on account of the discourag-

ing arrivals from upcountry centres. The lifting of the ban on the movement of cotton from city godowns under Port Trust unleashed brisk movement of cotton in upcountry growing areas which however was restricted by the unseasonal rains. Considering that the prices are well below the ceiling the trade is bewildered by the continuation of the supervisory system which would only inflate the costs and delay deliveries to the mills. It needs to be recalled that a prominent trader from Tirupur had already challenged the scheme and the writ petition is scheduled for hearing on 17 December.

A moderate improvement was witnessed in the export section. Prices of Bengal Deshi ruled steady thanks to the fresh business put through by shippers. Out of the current export quota 57,323 bales were registered for shipment till 5 December. On the contrary the import section was dormant as spinners kept aloof from the market.

According to the United States' Department of Agriculture, the world cotton output is expected to exceed utilisation in 1962-63. An increase in production of 1.9 million bales in cotton crop from last season more than offsets a 0.7 million-bale reduction in commencing stocks, and augments the world cotton supply to 68.8 million bales. For the first time since 1955-56 the total stocks are expected to look up by approximately 1 million bales. The current season world cotton production, estimated at 49.2 million bales, is the fifth successive record. Favourable returns from preceding year's large crops stimulated larger plantings in countries like Central America, South America and the Far East. Apart from this, a moderate recovery is anticipated from the last season's below-normal yields in India, Nigeria, Egypt and Uganda.

Foreign free world cotton crop is estimated at a record 20.6 million bales (up 1.5 million bales from last year) while a small increase in China may raise Sino-Soviet output by 0.2 million to 14 million. The aggregate production in the United States is placed at 14.6 million bales as against 14.4 million bales last season.

PIECEGOODS

The cotton piecegoods market presented depressed conditions as all the upcountry centres were out of the market. Dealers and stockists were disinclined to make any fresh commitments as they had already covered their requirements.

The export section, on the other hand, was active. The leading purchaser was the UK, though the offtake failed to come upto the expected level. Australia, Sudan and Singapore accounted for moderate quantum of usual varieties.

Dear money conditions have adversely affected both the mills and the cloth trade. The outlook for cloth has been drastically changed. Though exports have picked up lately, the overall trend during the current year is discouraging. This apart, the earlier expectation of a sizable demand for defence efforts failed to materialise. The powerloom textiles are seriously hit by the present state of affairs. Small powerloom opera-

tors with limited capital were compelled to sell their goods at unremunerative prices.

Sugar Output Prospects

THERE is a growing feeling that the production of Sugar during the current season will decline considerably. Apart from the fact that many factories have not sufficient funds even to buy cane for current production, they do not have enough cane for crushing even from the reserved areas. If the present trend of sugarcane supplies to the factories in West Uttar Pradesh is any indication, India may not be able to produce more than 2,400,000 to 2,500,000 tons in the 1962-63 season.

The downward trend in sugarcane production is attributed to the large-scale diversion of cane to the manufacture of gur in West Uttar Pradesh, as the rate for gur is ruling high now. Moreover, farmers are reluctant to supply cane to the factories since they will have to repay the advance made to them at the time of sowing. Under the circumstances, the mills in West Uttar Pradesh may not be able to run beyond Feb. 1963. As an adequate supply of the sweet commodity is necessary in the present emergency, it is time that steps are taken to restore confidence in the sugar market by regulating the supply in relation to demand.

Meanwhile, conditions in the sugar markets have continued to rule quiet due to selling pressure from factories following easy availability of the commodity for open sale. While the Punjab and Delhi evinced some demand, enquiry from the South is wanting. Mill delivery prices have declined by 37 nP to 50 nP a quintal.

In contrast, prices in the international markets are showing a rising tendency. In the London market, LDP rose to £32.50 from £30.50 within the space of a fortnight. In the US market the rate has improved by 10 points to 3.80 cents per pound.

White sugar in the world sugar market has, however, continued to be much cheaper than raw, mainly because the bulk of the surplus raw sugar in the coming twelve months will be produced by Cuba and most of which will be shipped to East Europe or China. These countries, not needing Cuban sugar for domestic requirements, will probably continue to export white sugar, thus depressing the market.

OILS & OILSEEDS Sentiment Depressed

Sentiment on the Bombay Oilseeds exchange remained generally depressed. Although the prices of Groundnut looked up initially, they developed a reactionary tendency towards the close on strong rumours that the Forward Markets Commission would reduce the ceiling prices. The bearish trend was accentuated by the increasing discount for the new crop from

Kanpur, Groundnut Bold ready was quoted at Rs 40.62 and Groundnut Oil at Rs 16.90.

The prospects for the export of groundnut expeller have, however, become bright. Although the quantum of business committed so far is moderate, the earlier doubts about the scope for exports have now been proved baseless. When the quota of 26,500 tons of groundnut expeller was announced, a section of the trade was sceptic about the export prospects.

The response to the quota announcement this time is encouraging. It is felt that the timing of the announcement has satisfied both the buyers and the sellers. Indian shippers are particularly happy that the supplies are easily available and at competitive prices. With the improved marketing of new groundnut crop and more crushing, no difficulty is experienced in effecting shipments at specified dates.

The behaviour of the Castorseed section was determined largely by the fluctuation in groundnut. Shippers

claimed enquiries for castor oil from the UK at £111 and £105 per ton c.i.f. in bulk for BSS and Commercial qualities respectively. Business put through was estimated at about 2.0 tons. Castor ready was quoted at Rs 32 and Commercial quality oil at Rs 13.80.

Trading in the Linseed section was highlighted by a sharp decline of Rs 3 per 50 kgs in the price of ready supplies. The setback was attributed to the unloading of the old stocks induced by favourable reports in connection with the new crop. Linseed ready was quoted at Rs 36.25 and Linseed Oil at Rs 16.40

GOLD & SILVER

Gold Recovers : Silver Reacts

Prices on the Bombay Bullion Exchange showed a mixed trend. Spot

gold staged a spectacular recovery to Rs 103.50 from Rs 96.75. Despite the Union Finance Minister's warning that the Government was bent upon bringing down the price of the metal, the demand for the metal persisted and, with the supply position somewhat tight, prices showed a marked recovery from the recent low levels. Sovereign was quoted steady at Rs 78.50.

Prices in the Silver section, however, gave way due to bull liquidation and bear pressure, induced by high carry-over charges, the weakness of commodity markets and lack of support. Ready closed at Rs 197.60, while the forward delivery was quoted at Rs 200.60. Arrivals and offtake were estimated around 24 and 15 bars respectively.

CASHEW

Setback in Prices

Cashew kernel prices have declined by about 3 cents during the past two

weeks. Sentiment has been affected by the general decline in commodity markets and a bulk sale of about 10,000 cases recently by one of the leading producers to US importers at 42½ cents. The Communist countries are now out of the market, having bought most of their requirements.

The weakness in kernels is reflected in the nut market also. Prices have declined by about Rs 40 per ton during the same period. Mozambique is now quoted at Rs 560 a ton against Rs 600 two weeks ago.

Indian importers are reported to have commitments for nearly 50 per cent of the total requirements. Total sales of the new crop amount to 14,000 tons in Portuguese East Africa; to 33,000 tons in British East Africa and about 6,000 tons in Dar-es-Salaam. Shipments of about 12,000 tons have already arrived and an additional 22,000 tons are expected to arrive in India shortly.

PEPPER

Export Prospects

Thanks to sizable purchases made by Russia, Pepper values have improved slightly during the week. In the Cochin market, the rate for garbled ready is quoted at Rs 270 per quintal. But the present prices are still higher than those ruling in the Singapore market. While black pepper is quoted here at 31 cents a pound, stray business is reported done at even 26 cents in Singapore.

As a result of this disparity, enquiry from the USA has been very small in the current season. If the present trend continues, India's exports will fall far short of the record achieved last year. Last year's record was partly due to the absence of Indonesia in the world market for quite a few months on account of the political disturbances there.

According to the Pepper and Ginger Merchants' Association, Bombay, India exported last season (November 1961 to October 1962), 23,226 tonnes of black pepper as against 17,264 tonnes in 1960-61. Exports in 1961-62 were nearly 50 per cent higher than the average of 15,517 tonnes in the preceding five seasons.

FOODGRAINS

Easy Trend

An easy trend persisted in the Hapur Foodgrains market. The recent rains have brightened the crop prospects. The market for Rice remained steady. Larger arrivals of the new produce from East Uttar Pradesh were reaching the market. The Wheat section was quiet although arrivals were small. Gram prices showed an easy trend on account of lack of support and weak advices from the Punjab. Prices declined by 32 nP to 67 nP, to be quoted at Rs 39.85 for the Punjab quality and Rs 39.52 for the local produce. Maize prices also eased due to heavy arrivals. In the Pulses section, Peas prices declined sharply by Rs 2 to Rs 2.50 a quintal due to selling pressure from stockists.

Company Reports

Burrakur Coal Repeats

THE Burrakur Coal Company, Limited has produced encouraging working results for the year ended 30 June 1962, thanks to the rise in raisings from 1.31 million tonnes to 1.33 million tonnes, despatches from 1.28 million tonnes to 1.37 million tonnes and sales from Rs 3.22 crores to Rs 3.43 crores. The net profit, before providing for Depreciation and Taxation, works out to Rs 50.19 lakhs as against Rs 40.47 lakhs for the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 13.46 lakhs from Rs 11.99 lakhs and Taxation to Rs 19.55 lakhs from Rs 11.62 lakhs, apart from providing a sum of Rs 50,000 for Debenture Redemption Reserve. Development Rebate Reserve is, however, lowered to Rs 2.22 lakhs from Rs 3.62 lakhs. The dividend on the Ordinary shares is maintained at 13 per cent, subject to deduction of tax.

According to the directors' report, the Government has approved the company's project report in connection with the import of mining machinery/equipment for increasing raising at the collieries and has allocated foreign exchange. Against the total allocation of Rs 74.29 lakhs, the company has received import licences to the value of Rs 54.63 lakhs up to 31 October 1962 and has placed orders on suppliers to the extent of Rs 49.50 lakhs. It is expected that most of the equipment ordered will be in this country before June 1963.

Orissa Minerals Pay Less

The depressed conditions that prevailed in the manganese market and the consequent fall in sales from Rs 1.20 crores to Rs 1.19 crores are reflected in the working results of the Orissa Minerals Development Company Limited for the year ended 30 June 1962. The net profit, before providing for Depreciation and Taxation, is substantially lower at Rs 19.00 lakhs as against Rs 24.85 lakhs for 1960-61.

The Depreciation amount is raised to Rs 6.02 lakhs from Rs 5.61 lakhs and Statutory Development Rebate Reserve to Rs 1.41 lakhs from Rs 1.20 lakhs. The provision for Taxation is lower at Rs 0.35 lakhs against Rs 0.40 lakhs and General Reserve at Rs 2 lakhs against Rs 3 lakhs. The directors have proposed a final dividend of 10 per cent, making a total of 20 per cent, taxable, as against 28 per cent, taxable, paid previously.

Phosphate Company Fares Better

Thanks to the price of superphosphate being increased by Rs 11.10 per tonne by the Ministry of Agriculture with effect from the middle of June to compensate the rise in the cost of production, Phosphate Company Limited has been able to report a rise in sales from Rs 80.50 lakhs to Rs 82.21 lakhs for the year ended 30 June 1962.

In respect of allocations, Depreciation is raised to Rs 1.51 lakhs from Rs 1.48 lakhs; Taxation to Rs 5.70 lakhs from Rs 4.90 lakhs and Development Rebate Reserve to Rs 3.23 lakhs from Rs 20,756. General Reserve is, however, lowered to Rs 1 lakh from Rs 1.75 lakhs. The directors have recommended a taxable dividend of 17.5 per cent on the capital increased from Rs 15 lakhs to Rs 22.50 lakhs. In the previous year, a taxable dividend of 25 per cent was paid.

Trial runs of new sulphuric acid plant were made during the year and normal production has started from early August this year. This has made the company self-sufficient in sulphuric acid for its requirements. With a view to diversify the activities of the company, the directors have decided to set up a Ferro-Alum plant for which there is a good market and the plant is expected to start production early next year.

Blue Mountain's Earnings Almost Doubled

The rise in the tea crop from 683,558 kgs to 716,244 kgs as well as in the coffee crop from 584,094 kgs to 612,417 kgs is reflected in the sales of the Blue Mountain Estates & Industries Limited for the year ended 30 June 1962. While sales have risen to Rs 58.69 lakhs from Rs 54.25 lakhs, the net profit, before providing for Depreciation and Taxation, is almost doubled at Rs 16.76 lakhs as against Rs 8.43 lakhs for the preceding year.

All allocations have been increased:—Depreciation to Rs 2.03 lakhs from Rs 1.52 lakhs; Taxation to Rs 4.24 lakhs from Rs 3.04 lakhs and Development Reserve to Rs 2.30 lakhs from Rs 14,718. The dividend is, however, maintained at 10 per cent, subject to tax.

The directors state that, in connection with the Fertilizer project, the company has spent a sum of Rs 48.91 lakhs for plant, machinery, factory buildings and lands. This includes a sum of about Rs 33.72 lakhs spent during the year under review. The working of this factory will be reflected in the current year's accounts.

Panchura Estates to Diversify Activities

Panchura Estates Limited has reduced the dividend from 25 per cent to 15 per cent, taxable, despite a rise in the net profit from Rs 28,798 to Rs 51,267 for the year ended 30 June 1962. Apart from providing a sum of Rs 25,000 for Taxation, the Depreciation is reduced to Rs 6,485 from Rs 7,007.

The directors that the company should diversify the activities. They have thought it best to go in for the manufacture of High Tensile Steel Wires and Rods. Necessary application for the licence has been submitted to the Government of India. To finance the project, the directors have thought it best to increase the share capital of the company to Rs 10 lakhs. New shares will be issued to the existing shareholders in the ratio of five shares for every share held, at par. The new shares will rank for dividend and in all respects pari passu with the existing shares.

In the event of the Government refusing licence for the project and any delay in obtaining foreign collaboration, the directors have decided on an alternative project of expanding in the Estate line, by cultivating essential oil plant and spices, which have very good demand, both in the internal and external markets.

The balance-sheet, as at 30 June 1962, shows a paid-up capital of Rs 1.50 lakhs, divided into equity shares of Re 1 each. Against this, General Reserve stands at Rs 1.50 lakhs. The gross block at Rs 3.15 lakhs is depreciated by Rs 39,797 leaving a net block of Rs 2.76 lakhs.

Excellent Results of Kamani

Metals

Kamani Metals & Alloys Limited has produced excellent working results for the year ended 30

June 1962, thanks to the rise in turnover from Rs 2.14 crores to Rs 2.32 crores. The net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 32.53 lakhs as against only Rs 18.10 lakhs for 1960-61.

In respect of allocations, Taxation is raised to Rs 15.75 lakhs from Rs 6.05 lakhs and General Reserve to Rs 3.70 lakhs from Rs 40,000. The provision for Depreciation is, however, lowered to Rs 6.09 lakhs from Rs 7.16 lakhs and Development Reserve to Rs 50,000 from Rs 90,000. The dividend on the Ordinary Shares is more than tripled at 28 per cent, taxable, as against 7.5 per cent, taxable, paid previously.

The company has concentrated on the production of industrial sheets, strips and coils during the year under review. The company is now confident of manufacturing both nickel-silver strips and spring brass in the near future.

During the year under review, new markets have been developed. Besides, hot rolled sheets/circles, new items like cold rolled brass and copper strips have also been supplied in the foreign markets for which the company is now getting repeat orders from the buyers. With the introduction of items like nickel-silver strip, phosphor-bronze strip, etc. it is hoped to book more orders for these items very soon.

For the Investor

INVESTMENT GOSSIP Little Support at Minimum Levels

Sentiment continues to be depressed in the stock market with business at a standstill in cleared shares. Transactions in cash scrips too have been few as investors seem to be in no mood to extend commitments in view of the economic and political uncertainties. Though it has been emphasised again by Government spokesmen that the

Third Plan should be fulfilled, it has been made clear that defence needs should get the top most priority. Referring to the mounting defence expenditure, Mr. Morarji Desai, Union Finance Minister, has pointed out that defence expenditure which is about 2½ per cent of the national income at present would have to be raised to 5 per cent. He has further stated that even if the present crisis diminished it would have to remain at about 3 to 4 per cent of the national income. One implication of this is

that there will have to be additional taxation sooner or later. Apart from these uncertainties which are inhibiting fresh buying, conditions in the stock market are far from conducive to fresh interest being evinced by investors. Despite the various measures taken both by Government and the authorities of the Stock exchanges, there has not been much change in the technical position of the market generally. While sentiment in Dalal Street appears to be slowly improving after the decision of the authorities of the Bombay Stock exchange to permit forward trading in selected shares under certain restrictions, Lyons Range continues to be depressed. The hope that the LIC would buy substantial quantities of certain pivotal shares has not materialised. It is said that the LIC was prepared to buy only below minimum

prices and offers from Calcutta were above the levels acceptable to the LIC. The news that the LIC has been able to buy a sizable lot of Tata Steel at much below the minimum price—Rs 117—indicates that the Corporation will try to obtain the best possible bargain. It would appear that transactions below the minimum price are taking place in unofficial dealings. These developments have given rise to the belief that sooner or later minimum prices will be further revised downward. It is no wonder therefore that investors are reluctant to extend commitments at the prevailing minimum price levels.

NEW ISSUE NOTES Globe Auto

The share capital of Globe Auto Electricals Limited is to be increas-

ed from Rs 20 lakhs to Rs 45.75 lakhs by the issue of 25,750 equity shares of Rs 100 each. Out of the additional issue, 15,750 shares will be allotted, at par, to the Electric Automobile Company against the supply of machinery. The balance of 10,000 equity shares will be issued, at par, as right shares to the existing shareholders in the ratio of one share for every two shares held. The Industrial Finance Corporation of India has agreed to underwrite half of the rights issue. The proceeds of the new issue will be utilised for financing the company's expansion plans and the "Autolite" project.

Thomson Press

Thomson Press (India) Limited, New Delhi, is to issue Rs 25 lakhs equity capital for cash, at par. The proceeds of the issue will be utilised for setting up an up-to-date modern high-speed offset printing Press suited to the printing and production of text books for students and other educational institutions.

Apeejay Structurals

Apeejay Structurals Limited Calcutta, a new company, is raising capital of Rs 35 lakhs in 3,50,000 shares of Rs 10 each for cash, at par. The capital is required for the establishment of a factory in the district of Burdwan for the manufacture of steel structurals. The total capital cost of the scheme is Rs 90 lakhs.

UP SIC

The UP Small Industries Corporation Limited, Kanpur, a State Government undertaking, carrying on business to assist finance, protect and promote the interest of small industries in the State, will issue capital of Rs 47.5 lakhs (inclusive of Rs 12.5 lakhs already raised) dividend into 47,500 equity shares of Rs 100 each for cash, at par.

BONUS ISSUE NOTES Pandyan Insurance.

Pandyan Insurance Company Limited, Madurai, is issuing Rs 10 lakhs bonus capital on capitalisation of its Share Premium and Reserve accounts to a like extent. The shares will be allotted in the ratio of one bonus share for every two shares held.

INVESTMENT NOTES Bharat Ball Bearing

The Bharat Ball Bearing Company, Limited, which hopes to commence trial production in the first quarter of 1963, has already completed the factory buildings and made arrangements for the supply of power. The company has entered into a technical collaboration agreement with a US firm for an initial period of ten years.

INVESTMENT BRIEFS

The Metal Box Company, Limited has announced an interim dividend of 90 nP per share, taxable for the year ended 31 March, 1963. Transfer Books of the company will be closed from 9 to 17 January, 1963.

Indian Oxygen Limited has proposed a taxable dividend of 12 per cent for the year ended 30 September, 1962 on a capital increased by the issue of bonus shares. The dividend on the old equity capital for 1960-61 was 15 per cent, taxable.

Belapur Company Limited, Bombay, has recommended a taxable dividend of Rs 20 per share for the year ended 30 September, 1962 as against a taxable dividend of Rs 25 per share for the previous year.

The Malabar Agricultural Company Limited has proposed a taxable dividend of 5 per cent for the year ended 30 June, 1962 as against nil for the preceding year.

STOCK EXCHANGES Subdued Activity

Watch-Dog Writes: STOCK markets have continued to remain dull and featureless during the week under review. In the absence of any news of import to the investment outlook, operators as well as investors are in no mood to do any business and the recorded transactions are few and far between.

Lyons Range was almost in a moribund condition and prices hovered idly around the minimum levels.

Dealings on Dalal Street continued to be slow and were confined to a few selected shares.

In the absence of enquiries from outside markets, turnover on the Madras Stock exchange continued to be restricted.

On the Delhi Stock Exchange, enquiries were limited and the turnover was negligible owing to a lack of buying interest.

Conditions remained practically unchanged on the Ahmedabad Stock Exchange where transactions were limited.

On the London Stock Exchange, the buying of shares was selective; but the best levels were not always held.

CALCUTTA

Friday. CONDITION on the local stock exchange continued to be as listless as before. In fact, business gradually dwindled in volume to such an extent as to make it appear that the market was kept open without almost any purpose. As the recent ban on forward trading had paralysed the activity in the market, operators were left with no other option than to be content with small business done on spot delivery basis; but business even on cash basis had dried up in the absence of any incentive.

In general, professional operators as well as investors seemed to be making time for a favourable turn of events, both on the political and economic fronts. Apart from the fact

that the Union Finance Minister's recent warning of heavy additional taxation in the near future caused concern to them, there was a growing feeling that the minimum prices for leading shares might soon be reduced further from the present levels as some of the deals had already been taking place unofficially below the minimum prices.

It was but natural for the operators to look to the LIC to come to the rescue. It is already known that the LIC has made purchases of 50,000 shares of Tata Steel in Bombay and has helped the market there to be relieved of a substantial part of its load. In this respect, it is felt that a good part of the LIC's patronage has gone to only Bombay wherefrom the support to the local market has been very little. It is the general feeling that, if the LIC decides to buy shares at such a critical stage of the stock markets, it should extend its support evenly to all the important centres in India.

There was virtually no business in Indian Irons due to a general feeling that the scrip could be bought below the official minimum price. Other engineering shares were also neglected. TEXMACO were nominally quoted at Rs 19.75, while Jessop remained steady at Rs 22. Calcutta Steel came in for business at Rs 14.87 with Binani Metal ruling steady at Rs 9.81.

A Press report that some jute mills might have to suffer power-cuts had an adverse effect on the Jute section where transactions were few. New, Central were on offer at Rs 13.25, while Ganges were maintained at Rs 13.12 and India at Rs 17.12. Bally were quoted at Rs 280 and Baranagore at Rs 172.

Coal shares were completely neglected.

The uncertain outlook for the commodity was reflected in the Tea section where enquiries were limited. The reports, that many North Indian gardens might face financial difficulties due to the reluctance on the part of banks to advance money, were also a contributory factor. Hantapara were on offer at Rs 102, while Dhelakhat were a steady feature at Rs 20.

COAL MOVEMENT The Dumps Again

It is to be hoped that the Government will reconsider its proposal to introduce a new system for the movement and distribution of coal with effect from 1 January 1963. Under the proposed scheme, consumers with a quota of 1,500 tons and above per month, will have to accept their entire requirements in block rakes of 70 wagons; those with a smaller quota must either combine suitably to be able to receive block rakes or obtain coal from stockists maintaining dumps at places where such block rakes can be received.

As pointed out by the Indian Chamber of Commerce in its representation to Government, so far as the consumers are concerned it

coal is despatched by rail first to the dumps, it means that the consumers will have no remedy if they are supplied with inferior quality of coal. Further, the process of despatch of coal to dumps will result in additional cost to the consumer resulting from unloading, stacking, reloading and onward transport to the consumer's site. Such additional cost to the consumers may work out to anywhere around Rs 10 per ton in addition to the cost of transport of coal by trucks. Moreover, an already difficult transport situation has been aggravated further by defence priorities. Therefore the procedure of moving coal from the collieries to dumps and from the dumps to the consumers by road will create further difficulties.

For the producers, the new system will create new headaches. There are many medium sized or small collieries producing about 10,000 tons of coal a month and those collieries will be unable to handle block rakes unless they combine with other collieries. Since different collieries produce different grades of coal, it will be difficult for them to arrange for combined movement in order to utilise block rakes. The uncertainties inherent in such arrangements may result in dislocation of production.

The new proposals introduce the co-operative fad in coal-movement at a time that admits of no doubtful experiments. State Co-operative Marketing Societies are to be preferred for appointment as stockists. This will throw out of employment a large number of middlemen now engaged in the coal trade.

The Proprietors of Indian Patent No. 56043 "Compressed Air Gas Containers for Fire Extinguishers" desire to conduct negotiations for the grant of a manufacturing licence with respect to or for the disposal of the above-numbered Patent.

This one aircraft from Pan Am's huge cargo fleet offers you a capacity of 18 tons!

THE WORLD'S MOST DEPENDABLE SUPPLY LINE IS THE WORLD'S MOST EXPERIENCED AIRLINE

Pan American—The world's largest air cargo carrier—brings your world-wide operation closer together, helps it run more smoothly. More economically!

You can depend on Pan Am Clipper Cargo to deliver your shipments *on time*—every time. In factory-fresh condition! Pan Am links 114 cities on all 6 continents—and frequent departures and arrivals keep your orders on the move.

You save money, too! Insurance is less than by surface. Insurance companies know that careful Pan Am handling assures you of far less chance of

loss or damage. You save on packing and crating. You can cut inventories and free capital for other uses. And Clipper Cargo rates are down as much as 63% on some routes.

Reserve cargo space in advance for one shipment or hundreds. For details on Pan Am's world-wide Jet routes, schedules and many savings, call your Cargo Agent, Freight Forwarder, or Pan Am in:

Oils for Oilbased Industries

IN a comprehensive address to the inaugural meeting of the reconstituted Development Council for Oils and oil-based industries which met in New Delhi last week, Mr Nityananda Kanungo, Minister for Industry, has highlighted the achievements and shortfalls in the different sectors. He has also reminded the Council that the development programmes have to be pushed through under difficult conditions in which imports of raw materials "will have to be orientated to production for defence, indirect defence and exports". Vegetable oils are the basic raw materials for other important industries covered by the Council such as Vanaspati, Soap, Paints, Toiletries etc. Shortage of the supply of oils is one of the main factors responsible for the soap industry to make full use of installed capacity. Production of soap in the organised sector was only 1,50,000 in 1961 against the installed capacity of 2.53 lakh tonnes. Mr Kanungo has stated that, in view of the large unused capacity, Government had decided not to license additional capacity, though the Third Plan target has been fixed at five lakh tonnes per annum.

As the scope for increased imports of copra or palm oil is strictly limited because of the shortage of foreign exchange, the gap between supplies and requirements of vegetable oils has to be filled by increased production of the principal oilseeds, and recovery of oils from other sources that are now largely unused. Mr Kanungo has stated that, in order to stabilise oil prices, Government are considering import of large quantities of Soyabean oil under PL 480. But these imports, when they are made, will not increase the total availability of oils in India. For, as Mr Kanungo has stated, the imported oil is to be used in the manufacture of Vanaspati, releasing equivalent quantities of groundnut oil for export. Mr Kanungo has estimated the requirements of vegetable oils by 1965-66 at 29.28 lakh tonnes which appears to be very much on the low side. It may be recalled that the National Advisory Council had estimated the present requirements at 3.84 million tons for human consumption alone for meeting minimum nutritional requirements. These requirements will increase to 4.31 million tons in 1965-66. As against this, current production has been estimated at 18 lakh tonnes.

The shortage of supplies is further aggravated by the wasteful use of resources in the sector of small scale and village industries. The relevant facts mentioned by Mr Kanungo raise the question whether a policy of encouraging manufacture of oil or soap in the small scale sector as village industries will be really in the national interest, when basic materials are in short supply and every effort has to be made to conserve resources. For instance, Glycerine, one of the by-products of soap manufacture is of significance in the present emergency, in view of its use in the manufacture of munitions. While the organised sector is recovering 90 per cent of the Glycerine in the fatty materials used in soap manufacture, small units are not in a position to install the plant required for recovering this by-product. The loss of Glycerine on this

account is estimated to be of the order of 7,000 tonnes, valued at Rs 3.2 crores at present prices. The loss may be reduced if, as recommended by the Development Council, fat splitting units are set up in different parts of the country, to supply fatty acids, after separating Glycerine from oils and fats, to the small units engaged in soap manufacture.

The oil left in the oil cake produced by small oil-crushing units is also largely wasted, for the cake produced by these units is not suitable for processing in the solvent extraction units. The position has been aggravated by the operation of the compounded excise levy which works to the disadvantage of the oil mill industry. As a consequence, a number of units in the organised sector have either closed down, or reduced their production. On the other hand, a number of small units have sprung up in order to take advantage of the reduced excise levy. The net result has been that the supply of oil cake of the quality required by the solvent extraction units has been very much reduced. This is a matter which should receive the immediate attention of the Ministry of Finance.

There are other sources of oil. It has been estimated that large quantities of oil can be recovered from oilcakes and rice bran by the solvent extraction process. There are at present 43 solvent extraction units in the country with an installed capacity of 3.3 lakh tonnes in terms of oilcake. The total licensed capacity at present is 18.5 lakh tonnes and Mr Kanungo stated that the Third Plan target of 20 lakh tonnes of installed capacity is likely to be reached by 1965-66. The manufacture of solvent extraction plants has also been developed. More than thirty plants have already been manufactured under a phased programme for the import of essential components. It is expected that the entire plants will be manufactured indigenously in the near future. But the efforts to develop the cotton seed oil industry do not appear to have made much headway, though a number of incentives have been given such as (1) exemption from payment of excise duty on the oil, (2) rebate on excise duty payable for vanaspati, in proportion to the quantity of cotton seed oil used in its manufacture, and (3) the export incentive scheme for the export of cottonseed cake by way of import of copra. Against the Third Plan target of installed capacity for processing eight lakh tonnes of seed, the total licensed capacity is 5.9 lakh tonnes and so far 14 units with an installed capacity of 2.2 lakh tonnes have been set up. It has also been stated that cotton linter, which is a by-product of this industry is the raw material for the manufacture of gun cotton, cellulose acetate, tyre cord rayon etc. This material is at present imported and requirements by 1965-66 are estimated at 35,000 tonnes. In view of the variety of incentives and the varied uses of an important by-product, there is no reason why the cotton seed oil crushing industry should not be remunerative. The disposal of the cake left after the extraction of the oil may present a problem. In that case, propaganda should be undertaken to make the cotton seed oilcake acceptable to the cultivators as cattle feed.

Firestone

Your Symbol of Quality and Service

To millions of motorists and truck operators throughout the world, Firestone means value—and with good reasons: Firestone leads the world in tyre and rubber research, constantly meeting the challenge to make the best tyres today still better tomorrow. And for 22 years, this has been the Firestone way of manufacturing tyres in India. In fact, no part of your car is more thoroughly proved than its Firestone tyres. You know what you're getting when you buy Firestone!

For EXTRA SAFETY and ECONOMY choose Firestone New DeLuxe Champion Tyres

STOCK EXCHANGES

The Turn of the Tide?

After a prolonged spell of depression during which equity prices were marked down sharply, stock markets are this week showing signs of broadening activity. Quite a few buyers have appeared around the minimum price levels and some specially favoured groups of shares have recorded significant recovery from their earlier low levels. Till late last week buyers were conspicuous by their absence and one of the reasons for the continued apathy of the investors was said to be the expectation that minimum prices would be revised further downward. Proving market forecasts wrong, equity prices have steadied up since last week-end thereby giving the lie to the view that the prevailing level of minimum prices was the real impediment in the way of a recovery. A clue to this rather unexpected behaviour of the market may be found in the political situation which obtains at the moment. The resumption of civil administration in Bomdila, one of the divisional headquarters in NEFA overrun by the invading Chinese, has presumably led to the belief that the ceasefire has come to stay though Government is rightly cautious in putting too optimistic a construction on the Chinese withdrawal.

Another important factor which might have paved the way for a revival of interest is the improvement in the technical position at least in Dalal Street consequent on the purchase by the Life Insurance Corporation last week of a sizable block of shares of Tata Iron and Steel. In concluding the purchase, the LIC has used its position as the largest single investor to acquire the shares as cheap as possible. The offtake of a large number of shares no doubt has reduced considerably the pressure on the market but this act of kindness was performed at a heavy price to the sellers. A week earlier, a similar deal in Indian Irons was reported to have fallen through in Calcutta because sellers there were not prepared to discount rates to the extent desired by the LIC. Obviously the LIC acted like a hard bargainer since its primary responsibility is to its policy holders. It also shrewdly cashed in on the market situation in which absence of buying interest was acting as a drag. In retrospect, this paying of a stiff price, by the sellers is seen to have been worthwhile, because of the 'toning-up' of the market in consequence.

The welcome revival of buying interest however may not gather much momentum at least until the investment situation becomes clearer than it is at the moment. The present national emergency has necessitated a reassessment of the outlook for equities. The pre-emergency order of priorities for industrial development has undergone a radical revision with defence industries given the favoured position in regard to allocation of foreign exchange, raw materials, transport and power facilities and the like. It has been made clear that even in the event of any practical purposes, there is not going to be any relaxation of war effort. The strength of the army both in men and military hardware is to be sufficiently increased so that the nation does not find itself again in an unprepared position. This means increased outlay on defence which is to be largely financed by the people themselves in the shape of savings and taxes. An indication of the expenditure involved has been recently given by the Union Finance Minister. According to Mr. Morarji Desai, defence expenditure is likely to double itself from the present level of 2½ per cent of the National income. It is also significant that six noted

economists in the country have opined that a supplementary budget should have been brought out by now. In his recent speeches Mr. Morarji Desai has also been emphasising the need for mobilising additional resources to meet the mounting defence needs. It is therefore only prudent to anticipate new taxation measures. With industries oriented to war effort and with prospects of additional taxation, it will not be surprising if the investor becomes chary of extending his commitments. It is not as though the emergency has put a stop to any buying spree. For even before the Chinese invasion started, the stock market was not in a particularly buoyant mood as the then prevailing equity prices were considered to be rather high in view of the increasing interest rates.

Moreover, it will take some time for confidence in stock market to be fully restored for the memory of the debacle is still fresh. Within the space of a few days after the news of the Chinese invasion, equity prices had shed round about 30 per cent of their previous values. It was one long spell of bear domination and despite the various corrective measures taken selling pressure did not abate. Even when business was at a standstill in the official markets as a result of the severe restrictions on trading imposed by the various stock exchanges and the ban on forward trading on shares, bears continued to be active and prices of pivotal shares were depressed below the officially fixed minima in what goes by the name of unofficial dealings. A section of the market men was canvassing

for a downward revision of the minimum prices with a view to attracting investments interest as it was argued that even the prevailing minimum prices were high from the point of view of yield. The fact that the LIC had concluded a deal first in Bombay and then in Ahmedabad for the purchase of large blocks of important shares at much below the minimum prices evidently with the approval of the stock exchanges concerned only served to strengthen the hands of those who were asking for a further downward revision of the minimum prices. There is, however, no justification for the panic witnessed in the stock market. While the entire country was exhibiting rare courage in standing up to the challenge thrown up by the Chinese and while the principal commodity prices were maintained thanks to the ready co-operation of the business community to the Government's call for holding the price line, the stock market alone was in an extremely demoralised state.

NOTICE

Owing to the intervention of the Christmas and New Year holidays, there will be no issue of Indian Finance dated 29 December, 1962. The next issue, therefore, will be dated 5th January 1963.

Editor.

It is a pity that Government has not apart from a general reassurance given when the bear assaults began early in November, concerned itself with the developments in the market. The serious erosion in equity values has put the shareholders to great difficulty. The genuine investor is not ordinarily bothered much about the wide fluctuations in the prices of his shares. But it is too much to expect him to remain unmoved when he finds 25 to 30 per cent of the value of his investments vanish into nothingness in a matter of days. In an emergency of the kind we are

It is also time Government realised that the stock market is an important sector of national activity and what happens there will have far reaching repercussions to the economy as a whole. The steep decline in equity values has undermined the confidence of the investors in the stock market. Capital formation has already received a setback as evidenced by the withdrawal of some right share offers. One would expect Government to take adequate timely measures to ensure that no serious erosion of values takes place in the stock markets especially since it is convinced that the long-term outlook for industries is good.

Support the Jawan

THE vitality and strength of the national economy supplies the real strength of our valiant Jawans fighting the aggressor. That means more and quicker production and distribution of goods. Banking service is indispensable for promoting the higher pace in Industry and Commerce.

YOUR banking transactions directly contribute towards development efforts. Spending or saving, do it through a banking account and help us increasingly to help raise the tempo of economic activity, so very essential to support our brave Jawans at the front.

World of Finance

EMERGENCY

The "Phoney" War

The early part of the Second World War, in as much as it affected England, has come to be called a "phoney" one: there was little action, but valuable time was thereby gained for making the defence preparations in the emergency created by Chinese aggression in Indian territory, we have since the unilateral "ceasefire" similarly gained some respite. But it is essential that the time we have so won is not dissipated. The effort to build up the nation's defences has to be all the greater in the next few weeks and months.

Such effort implies a maximising of production both for defence and for civilian supplies. As to the latter the situation in cotton textiles would seem to indicate there is no great urgency in striving for additional output. But we would emphasise that the gathering stocks with textile mills is likely to be no more than a passing phenomenon. As expenditure for "war" consumption rises, so too will purchasing power that will seek outlets. To some extent surplus purchasing power of this nature has to be mopped up and made sterile: we can confidently expect the Finance Minister to do just that in his next Budget. An array of new or additional excise duties will be imposed, and for two reasons. On the one hand much needed revenue for financing the costs of defence will need to be garnered in. On the other, especially in regard to commodities likely to be in short supply, an increase in excise duties will be intended to bring forth some element of consumer-resistance to the higher prices.

And yet it is of paramount importance that the price situation is not allowed to get out of hand. A deliberate move on the part of Government to raise prices in order to keep down consumption is one thing; but as essential is the effort to satisfy reasonable demand for goods at reasonable prices. That is to say, the need for additional civilian production must not be neglected.

Here is where the banks—and the Reserve Bank—have to act. Except for a temporary stringency arising from beginning of the month disbursements the money market has generally tended to be easier that it should be at a time when normally at least the busy season should be near the end of its second month. Are banks showing great reluctance to extend fresh accommodation? We fear that such may well be the case: as it is early December compelled the banks to have recourse to Reserve Bank credit at penal rates. Demand for funds that cannot be denied and which will be thrown up in the course of the next month or two will be such as to entail banks' borrowing sustainably from the Reserve Bank at penal rates. And so the banks now are conserving their resources as best they can.

Banks cannot be faulted for their caution: it is indeed their duty to ensure that the normal financing of the busy season will take

place. But we are not living in normal times, though the cease-fire has given us a phoney war until the thaw next spring. The extension of bank finance has now to be on a war footing; and for this purpose we would again stress the direction of the Reserve Bank is vital and urgent.

It is still not too late for the monetary authorities to indicate to the banking system that liberal and substantial lines of credit would be available for meeting any snort-fall in its resources; and it is not too late to encourage the banks to lend more for production, by repealing the multiple-tier bank rate.

The trouble is that the behaviour of the call money market is no true index of the demand for funds from the producers of goods: this rate merely reflects the extent of the pressure that banks have agreed to bear upon their resources at any given time. For example the last week of the year will again witness temporary stringency in the money market as a result of the manoeuvres for the window-dressing of their accounts. But our judgment is that demand for banking finance from producers of goods is not being met or satisfied, and that therefore the productive effort is being enfeebled for lack of money. We may be called upon to pay dearly for the niggardly financing of industry—in the form of rising prices from the spring of 1963 onwards.

Let the Reserve Bank act, and act now.

The Common Market Dilemma

By Paul Einzig

Ever since the British Government decided to join the Common Market, provided that this was possible on acceptable terms, it has found itself confronted with a dilemma. On the one hand it had to create a favourable public opinion in Britain so as to make the risks and sacrifices that the change necessarily entails acceptable to the majority. To that end it was necessary to make out the strongest possible case for joining the Common Market by pointing out the grave disadvantages of remaining outside it. On the other hand, it was necessary to drive a hard bar-

gain with the EEC countries in order to obtain acceptable terms. The more emphatically official spokesmen stated and overstated the advantages of joining, the more difficult the task of the British negotiators has become. Indeed, judging by the recent by-election results and by the stiffening of the attitude of the Six, the Government's pro-Common Market propaganda was more effective in Brussels than in the United Kingdom.

In particular, the attitude of the EEC has been utterly uncompromising in respect of agricultural subjects. Up to the time of writing there has been no indication of any possible compromise that would break the deadlock. As things stand, the Government could only go into the Common Market by flagrantly dishonouring the undertaking repeatedly reaffirmed to the farmers. To do so would be political suicide. It would also greatly aggravate the balance of payments problem owing to the decline of British agriculture and the flood of imported land products.

Confronted with a rigidly uncompromising attitude at Brussels, the Government felt impelled to reverse the gear of its pro-Common Market campaign. Within the last few days two leading Members of the Cabinet, the President of the Board of Trade, Mr. Erroll, and the Chancellor of the Exchequer, Mr. Maudling, declared that it would be no disaster if Britain did not join the Common Market. It is true, vague remarks, to that effect could be quoted also from earlier official pronouncements. But this time there is a distinct change of emphasis. "We have the whole of the rest of the world to make our living in", declared Mr. Maudling. "Outside the community Britain would not be going down the hill".

Opponents of joining the Common Market could not have put it much more neatly. Of course, they go much further by saying that, should the Government break off the Brussels negotiations the resulting shock might electrify the British people into working out its salvation outside the Common Market through a moral revival. It would take unfortunately more than that shock to electrify the British trade unionist into working harder. Moreover, one of the main arguments of those in favour of joining is precisely that increased competition by our new partners in the Common Market would provide the necessary shock. It is impossible to know which of the two conflicting opinions is correct. What matters at the moment is that the Government itself has become less dogmatic about the unilateral advantages of joining and unilateral disadvantages of staying out.

Notes

RICE New Procurement Pattern

A new rice procurement policy embodying changes in existing procurement practices has now been announced by the Government and represents an important step in the series of measures that have been promised to keep the price level for foodgrains under check. Till recently, the price situation for foodgrains had displayed grave signs of instability. For sometime, a general upward pressure somewhat irreconcilable with the state of production and stocks was in evidence, but with prompt and energetic action taken by the Government, a serious rise was averted. Among foodgrains, it was rice which gave the major cause for concern, if for anything because of the very slight increase in production registered in 1961 and the relatively smaller size of the central buffer stocks. The ensuing harvest offers the best opportunity for building up the buffer stock. Under the new policy, the State Governments have been asked to avail themselves of the opportunities of purchasing as large a quantity of rice as possible during the ensu-

ing crop season. With the rice harvest in prospect, there is also the danger of a price depression developing in the wake of the large-scale selling in the immediate post-harvest period. The new policy has obviously been timed to forestall such a development. Though no floor price will be fixed, price support will be ensured by the Government entering the market for large-scale purchase if the prices fall below the procurement level.

Rice procurement in the form of a levy scheme is already in force in some States like Madhya Pradesh, Uttar Pradesh and Punjab. In Madhya Pradesh, the quantum of levy has been fixed at 25 per cent, while it has been raised to 50 per cent and 66 2/3 per cent respectively from 35 per cent and 60 per cent in Uttar Pradesh and Punjab. In contrast to earlier practice of fixing uniform price for the whole country, procurement prices have now been fixed at different rates in the different States. Considering the divergent conditions of production and stocks in the different States, the decision to fix varying procurement prices was only a realistic one. Another noteworthy feature of the scheme is that it provides no direct price support to the paddy grower as procurement prices have been fixed only for the common qualities of white rice. But it has been provided that if prices of paddy in any particular area tend to fall unduly, mills in that area will be asked to purchase paddy at prices corresponding to the procurement prices for rice. To ensure the co-operation of the mills in this matter, they have been given an assurance that the rice produced from paddy so procured by them would be taken over by the Government.

DEFENCE PRODUCTION PAC's Findings

The report of the Public Accounts Committee places the record of the Defence Ministry in defence production in the proper perspective. It is a record that shows both achievements and failures. In the main the Committee has commended the working of the ordnance factories and of the expansion in capacity that has been achieved in recent years. While according due credit for this, it is proper that the debit side should also be looked into so

that nothing shall be left which will weaken the defence potential. The probe by the PAC in this regard has revealed lapses and failures that, considering the present emergency conditions, have to be viewed with concern. Most serious of the lapses pointed out by the PAC is the sense of false economy shown by the Defence Ministry in not utilising fully the sums voted for defence production. There has as a result been a considerable increase in under-expenditure with the savings on voted grants being as much as Rs 28.08 crores during 1960 marking an increase in percentage terms to 8.30 per cent from 5.63 per cent in the previous year. It is natural that such under-expenditure should give a setback to the programmes for increasing the production of indigenous content leading at the same time to a grave shortfall in the total production of trucks and tractors. The indigenous content is still at a small percentage of 50 in the case of trucks and lower at 47 per cent in the case of tractors. The Defence Ministry seems to have sought to hide its failure in this field by the curious accounting procedure of showing imports of trucks and tractors as production in the ordnance factories.

The major requisite, as the Committee has seen it, to put defence production on sounder footing is proper planning and foresight. The measure of failure in this regard is indicated by the discrepancies amounting to lakhs of rupees remaining unreconciled for as many as 13 years and the amount of machinery costing Rs 7.54 lakhs still lying unused. Continuation of infructuous expenditure is another instance of irresponsibility that has come for critical comments at the hands of the Committee.

One important recommendation of the Committee concerns the need for a proper survey of the existing capacity for repair facilities in the private sector and for measures to expand such capacity. Ideological predilections of the Defence Ministry have so far prevented it from recognising the need for urgent and expeditious progress in this matter. Now that conditions in the country warrant the utmost efforts, to step up defence production, the Government would do well to bring in the private sector also to contribute its share to production.

SHIPPING Brighter Outlook

The outlook for shipping that at one time appeared bleak what with the meagre provision of only Rs 51 crores made in the Third Plan has now become bright and according to current indications, the country appears well set to reach the target of 14 lakh tons recommended by the National

Shipping Board and dismissed as ambitious by the Planning Commission. Though the tonnage presently in operation is only of the order of 10,25,600 tons, it is known that a tonnage of 2,68,000 GRT is under construction in India and abroad while the Government has given approval for acquisition of further tonnage to the tune of 2,55,109 GRT. Put together, the tonnage under operation, under construction and under consideration will add up to 15.49 lakh tons and with about 2.40 lakh tons expected to be scrapped during the Third Plan period, the net tonnage at the end of the Plan period may amount to 13.09 lakh GRT. The prospect is most encouraging and has been made possible by the readiness displayed by the foreign countries to accept deferred payments for tonnage booked with them.

In other directions also there have been signs of welcome improvement. Noteworthy in this regard is the better movement of coal by the coastal route reported during the period May to November 1962. The improvement reflects mainly the increase in the number of colliers that were pressed into service. There are still major handicaps which coastal shipping has to contend against before it can register substantial progress. These include the draft limitations of the Hooghly during certain months, and poor performance in regard to the turnaround of ships.

At the recent meeting of the National Shipping Board, held in Bombay, other important aspects of the shipping industry and the problems faced by it were considered. The Board considered the report of its sub-Committee re-

garding the role of private sector in the shipping industry and the need to ensure proper facilities to it. This question of the role of private sector in the shipping industry vis-a-vis the public sector was posed by the Estimates Committee of the Lok Sabha which had favoured the development of the public sector. In view of the substantial progress made by the Shipping Corporation of India, the major unit in the public sector, the sub-committee had expressed the view that there was no longer any need for putting limitations on the progress of the private sector, since what the country wanted was co-operation of both the sectors in the larger interests of the country.

Chartering of foreign vessels by shippers to take advantage of the lower freight rates in the foreign vessels was also considered by the Board. The case against giving permission to charter such foreign vessels rests mainly in the existence of tramp shipping with the Indian companies and more importantly in the drain on foreign exchange that this will entail. But in view of the unfinished state of discussions between the Conference Lines and the shippers regarding this matter, the conference has postponed further consideration of this issue.

COTTON TEXTILES The Piling Stocks

The heavy accumulation of cotton textiles with the mills all over the country has posed a baffling problem for the mill owners and the widespread anguish over this issue exposes the precarious predicament in which they are plunged. Various factors have coalesced together to precipitate this crisis in the industry. Admittedly the declaration of Emergency and the nation-wide propaganda "to spend less and produce more" has aroused the patriotic feelings of the people and there has been significant austerity practised. But this is not the whole explanation. Other forces were in operation even before. The growing scare of paucity of raw cotton which was looming large early this year has tapered off, thanks to the large-scale import of cotton, prospects of securing adequate quantities from abroad in future and turns from bumper crop this the anticipated bumper crop this season. As such purchasers, taking a cue from the declining trend in prices adopted a "watch and wait" policy and showed reluctance to enter into any commitments before prices stabilised. Besides, they are expecting a further decline in prices and are nurturing the view that the mills will be able to make a downward revision of the price schedule. Added to this, the Reserve Bank intensified, after the Chinese aggression, its credit squeeze policy, designed to combat

inflationary pressures on the economy. This policy has created lack of funds and an atmosphere of uncertainty which led to poor demand for textiles which in turn has aggravated the stock position. All these culminated in poor off-take by wholesalers and retailers as a result of which the industry is saddled with accumulation of stocks, which according to the trade, is of the order of nearly 5 lakh bales worth about Rs 55 crores. Official pronouncements admit some accumulation of cloth, though not of the proportion mentioned by the trade.

Several measures to tide over this situation have been suggested by the spokesmen of the textile industry and allied interests. The suggestion to create a buffer stock under the aegis of the Government is one. Its merit is that apart from relieving the industry of the burden of mounting stocks immediately, it will ensure that the supply position is well maintained without disrupting any untoward development in the price line. The administrative and organisational details of this suggestion need detailed thinking. Relaxation of credit control measures, as Mr D. C. Kothari, the President of the South India Millowners' Association has observed, will also facilitate speedy lifting of the accumulated stocks with the mills. It has been reported that the Reserve Bank will liberalise its line of credit to scheduled banks to meet "genuine needs" of advances from trade. These measures may help themselves from the difficulties cotton textile mills in existing they find themselves in.

POWERLOOMS Need for a Programme

The Government of India's decision to appoint an enquiry commission to conduct a thorough probe into the affairs of the powerloom sector and the problems that bedevil it and evolve a pattern of development is a step which is long overdue. The powerloom sector has grown haphazardly, subject to the buffets of changing winds of ad hoc policy-making and has failed to acquire a distinct status of its own. Intrinsically it falls under the category of small scale though it utilises power for weaving operations. But handloom interests frown on its development as on a rival. Mill interests grudge it the concessions that they are denied. It is true that the handloom industry occupies a unique position in the national economy by dint not only of its significant contribution to the total cloth production in the country but also of the employment opportunities it holds forth. Therefore, a sudden shift in the present policy in favour of the powerloom sector

is bound to evoke country-wide agitation from it. It will be recalled that as early as in the Second Plan Government introduced a programme of progressive conversion of handloom into powerlooms on a cooperative basis. This is the only sensible way to reconcile the economic progress by use of new techniques and the immediate human problems of too swift a change. The programme is, however, progressing at a lethargic pace so much so that out of 13,000 powerlooms sanctioned only about 3,500 powerlooms were installed during the last Plan period. Though this is partially due to the placating of the mill and handloom sectors, lack of technological daring is also to blame. The proposed committee should chalk out a long term programme by which different sectors of the cotton textile industry can be weaved into a stable and acceptable fabric.

TOBACCO EXPORT European Prospects

A two-member delegation of the Tobacco Export Promotion Council which visited the UK, the USSR, and Europe on a market exploratory mission has indicated bright prospects for increasing exports of Indian tobacco which has shown some signs of decline during the last year. Fears about export prospects for tobacco have rested mainly in the disappointing performance of exports during the last year and the prospect of a fairly high tariff wall in the E.C.M. countries. British plea for a duty quota for Indian tobacco seems to have made no impression on the six. With Greece, a substantial producer of tobacco, having joined the Common Market as an associate member, indications were

that India will be hard put to it to increase its exports of tobacco. The delegation, on the contrary, has found no valid ground for pessimism about export prospects. According to it, the export problem is no one of selling but of producing enough to sell. The delegation has particularly vouched for keen interest in Indian tobacco in Germany and other countries like Italy and Egypt. It is indeed odd that while we are exercised about export possibilities, there should be complaints that Indian tobacco was not available in adequate volume because of the pressure of demand from the east European sector. The delegation's views formed on the basis of on-the-spot study, indicate favourable prospects also in France, Belgium and Rome. Of the West German market also which at present takes a meagre quantity of Indian tobacco, the delegation is optimistic about a favourable turn provided we could meet the quality specifications required for proper blending.

The possible entry of the UK into the Common Market is a factor that would seem to cast a shadow on export prospects for tobacco. The UK is at present among the major consumers of Indian tobacco and the steep decline in its off-take last year has been a matter of profound concern. The delegation however sees no reason for alarm as it is of the view that the fall in UK's import of Indian tobacco was caused by the heavy build-up of stocks and did not reflect any drop in consumption. The delegation is robustly optimistic about prospects for Indian tobacco even in the event of the UK joining the Common Market. "In any case, Indian tobacco would sell well on its own merit both in quality and price. It had come to stay as a permanent blend for the consumers in the UK".

SPICES Export Performance

During his discussions at Ernakulam, with representatives of the cashew, spices and marine products export promotion councils and the coir board Mr Manubhai Shah, Union Minister for International Trade indicated various lines of action for promoting the export of these products. Though prospects for such exports are bright, actual export performance has not been very satisfactory. Owing to restrictions imposed by Ceylon and Burma, export to these countries of dry fish and coir products had shown a fall during the last year. The trade delegation currently touring these two countries is expected to take up the matter with the appropriate authorities in these countries, but lifting of the present restrictions is mainly dependent on the improvement of the balance payments position of these countries. Coir exports had gone up to about Rs 13 crores, but the scope for export of finished products like mats and meetings had not been properly explored and it is export of coir yarn that forms the bulk of coir

exports. Modernisation and mechanisation of the industry and particularly of weaving sector is the prime need for promoting the export of finished products. What is deplorable in this connection is the continuing apathy of the industry in regard to modernisation. The proposed demonstration unit to be set up by the State Government and the Coir Board should prove very useful in educating the people in the industry about the advantages of mechanisation.

Mr Manubhai Shah has suggested greater publicity and propaganda for stimulating the exports of spices especially in the non-traditional European markets. Spices exports had shown a fairly steady trend, but as Mr Shah had pointed out there was scope for earning more foreign exchange per unit of spices on the basis of a programme for price stabilisation, diversification and manufacture of consumer preparations. In regard to cashew also larger consumption possibilities have been indicated in the USA, which could be taken advantage of only by proper quality control and grading of the export products. The major requisite for a sustained programme of export promotion in respect of all these is to increase internal production of these products.

QUALITY CONTROL For Industrial Rewards

Addressing the annual general session of the Indian Society for Quality Control held in Calcutta Mr N. K. Jalan brought to sharp focus, the supreme need for a vigorous drive to popularise the technique of quality control all over the country for reaping industrial rewards of progressive returns. It has been widely accepted that "quality control is the practical application to industrial problems of the science of statistics" and it is reckoned as "a decisive tool which enables the user to arrive at the most correct answer to his problems". Quality control is doubly rewarding particularly in a developing country like India for sustained industrial growth and improving productivity and sizably reducing the cost of production. Moreover the large-scale application of the modern quality control techniques assumes urgency for producing quality goods not only for internal consumption but for exports also as the international markets have of late become more competitive.

Selling "quality control" to various business organisations is, understandably enough, not easy. But if the quality control enthusiasts within each business organisation and Society join together, results will be heartwarming. The ISQC tackles these problems in a four-pronged way, the organisation of training courses for executives and other supervisory personnel; the publication of its bulletin for disseminating knowledge, providing technical advice and assistance and by holding conventions, discussions, group meetings and conferences and the maintenance of a well equipped library. It is a matter for gratification that thanks to the unflagging efforts of this Society a majority of industrial managements has become quality conscious and those who secured assistance have produced concrete results. The proposal for the formation of a National Society for Quality Control by merging the ISQC and Quality Association of Bangalore augurs well for the rapid propagation of and creation of quality consciousness in industrialists.

COCHIN PORT Performance in 1960-61

The Administration report of the port of Cochin for the year 1960-61, shows a deficit of Rs 2.06 lakhs which compares with the deficit of Rs 6.70 lakhs that was anticipated in the revised estimates. The fall in the estimated deficits is attributable to increase in

receipts under wet docks and wharves, bunders and jetties, lands and buildings, port department and interest on the one hand and the fall in expenditure under general charges, wet docks and wharves, bunders and jetties, lands and buildings, railway department and dry dock on the other.

The income under the port fund during the year under review has been estimated at Rs 1,21.67 lakhs while expenditure including debt charges and contribution to the Capital Account and Reserve Funds has been placed at Rs 1,23.74 lakhs. The outstandings of debt at the end of the financial year has been estimated at Rs 3,92.60 lakhs of which a sum of Rs 3,28.07 lakhs is due to the Government of India and the balance to the Government of Kerala. The percentage of working expenses to income under the General Account has also shown a slight increase to 59 per cent from 58 per cent in the previous year.

A small increase has also been recorded in the total trade of the port during the period under review. The total tonnage for the year 1960-61 has been estimated at 2.01 million metric tons which compares with 1.98 million metric tonnes in the previous year and 1.63 million metric tonnes during 1955/56. In foreign trade, there was an increase of 12,149 tonnes in imports whereas in exports there was a decrease of 44,663 tonnes. The total foreign trade was slightly lower at 946,221 metric tonnes against 978,735 metric tonnes in 1959-60, while, total coastal trade was slightly higher at 1,062,448 metric tons against 998,795 metric tonnes in the previous year.

The capital works started under the five year plans have been making steady progress. It is stated that the work on the con-

struction of four additional wharf berths in the Ernakulam channel with ancillary facilities which was started in April 1955 had shown an overall progress of 87 per cent. The work in connection with the construction of railway siding was in progress with the percentage of work completed being 83. Commendable progress has also been reported in respect of other capital works undertaken.

ASIAN INDUSTRIES Expand in 1962

According to data compiled by the United Nations Statistical Office appearing in the November issue of the Monthly Bulletin of Statistics, the rates of increase in the manufacturing and mining industries in Asia, excluding mainland China, from 1958 to the first half of 1962 were the highest among all regions of the world, excluding eastern Europe.

The index of over-all industrial and mineral production for Asia has more than doubled in the last six years. Taking as a base 1958=100, the index was 86 for 1957 and climbed to 183 for the period April-June of this year.

This figure comprises the indices of 136 for mining and 190 for manufacturing. Heavy manufacturing, particularly basic metals and metal products is by far the fastest growing segment of industrial activities in Asia. While the index for food, beverages and tobacco was only 114 in the second term of this year, (Base 1958=100) the index for metal products is 306. Heavy manufacturing rose ten times in the last 14 years, from 24 in 1948 to 240 in April-June 1962. Nevertheless, the relative weight of heavy manufacturing in Asia in comparison with total world production is only 4.8 per cent.

Other activities showing relatively high rates of increase are paper and paper products, chemicals and petroleum and coal products and non-metallic mineral products. Their indices are, respectively, 175, 162, and 166.

The United Nations publication gives separate data for selected countries, among them China (Taiwan), India, Japan, Republic of Korea, Pakistan and the Philippines.

The industrial production of Taiwan rose at a steady pace to reach 185 last January. The indices were 113 for 1955, 128 for 1960 and 143 for last year. Nevertheless, general industrial production seems to have slackened its pace during the first months of this year, to be 150 in June. While mining, manufacturing, and electricity and gas had continued a steady expansion, construction diminished to be only three-fourths of 1958, with an index of 72 for the whole of 1961 and 74 for June 1962.

Japan shows the greatest rate of increase in industrial production, which has more than doubled in the last four years and tripled since 1955. The index that in 1955 was 69 for general industrial activities rose to 189 for 1961 as a whole, was 210 for last December and reached 226 in March of this year. However, the work dropped to 209 for June.

An even greater expansion characterised mining in the Republic of Korea. Its index was 54 in 1955 and it grew vigorously to 139 in 1959, 183 in 1960 and 207 last year. The last figure shown for August this year is 248, almost five times the production in this field seven years ago.

Provisional data for Pakistan put general industrial production at 142 for the last term of 1961, with practically the same figures, 144 and 142, for mining and manufacturing, excluding food products, clothing, furniture, most non-metallic mineral goods and metal products for which data are not yet available.

REFINANCING Capital and Engineering Goods

A scheme enabling the Refinance Corporation for Industry to refinance medium-term bank loans to capital goods and engineering goods exports has been announced and represents a major step in the efforts to stimulate the export of such goods from the country. Under the scheme, the Corporation will provide loans to the banks against such credit at a concessional interest of 5 per cent per annum, while the banks charge an annual interest of 7 per cent on export advances. The loans that will be eligible for such refinancing will be term loans for periods of more than six months and less than five years. The minimum amount against which such refinancing will be provided has been fixed at Rs 1 lakh while the maximum will be Rs 50 lakhs. Other conditions for eligibility to such refinancing facilities are that the term loans should be supported by letters of credit and also that the relevant item of exports should be covered by an insurance policy issued by the Export Risks Insurance Corporation.

Considering the growing importance of engineering and manufactured goods among the country's exports, and the inadequacy of credit facilities and the inadequacy of credit facilities to stimulate their exports, the latest scheme can be considered a timely measure. The groundwork in this matter was laid by the study group on Credit Facilities for Exporters constituted by the Ministry of Commerce and Industry. The group had expressed the view that the Refinance Corporation for Industry had sizable unutilised resources at its disposal which could be utilised to reinforce bank loans to exporters.

A list has already been prepared showing the particular goods that will

be eligible for refinance in the case of exports. While some consumer goods like sewing machines, cycles, electric refrigerators etc have been included, the refinancing facilities will be available mostly to capital and producer goods. In consonance with the country's aim of stepping up of engineering goods for which prospects are by far brighter than for others, most of the engineering goods in which headway has been made in production has been included.

BRITISH ECONOMY 5½ per cent Increase in 1961

Figures of Britain's national income, product and expenditure for the years 1951 to 1961 are given in the Blue Book, National Income and Expenditure, 1962. It revises and amplifies the preliminary estimates published early in April.

The gross national product increased by 83 per cent between 1951 and 1961—from £12,926 million to £23,701 million. The increase from 1960 to 1961 was 5½ per cent. Measured in real terms, that is after allowing for increases in prices and costs, the increase over the ten-year period was 28 per cent.

Between 1951 and 1961, total personal incomes (before tax) rose by 90 per cent; wages went up by 80 per cent, salaries by 115 per cent, income from rent, dividends and interest by 103 per cent, and income from self-employment by 45 per cent. In 1961 personal incomes (before tax) rose by 7½ per cent, receipts from rent, dividends and interest, and income from employment both rose by 7½ per cent, and income from self-employment by 3½ per cent.

In 1961 there were 11.1 million persons (counting husband and wife as one person) receiving less than £500 a year before tax (compared with 19.2 million in 1954); 10.5 million receiving between £500 and £1,000 a year (in 1954, 7.7 million); 3.85 million receiving

between £1,500 and £1,500 a year (compared with 2.30 million in 1959); 793,000 receiving between £1,500 and £2,000 a year; 518,000 receiving between £2,000 and £5,000 a year; and 199,500 receiving more than £5,000 a year.

In 1961, personal consumers spent £17,336 million on goods and services. Of this, £4,989 million went on food, £2,268 million on alcoholic drink and tobacco, £2,393 million on housing and fuel and light, £1,687 million on clothing, and £1,291 million on durable goods (including cars).

Between 1951 and 1961 consumers' expenditure, in real terms (i.e. after allowing for price changes) increased by 27 per cent. The biggest increases were on motor cars and motor cycles (up from £88 million to £553 million when revalued at 1958 prices); on running costs of vehicles (up by 210 per cent to £510 million); radio, electrical and other durable goods (up 91 per cent, although the peak year for sales was 1959); household textiles (up 60 per cent).

Between 1960 and 1961, consumers' expenditure in real terms increased by 1½ per cent, as against 4 per cent in actual values.

Total current and capital expenditure (excluding loans) in 1961 amounted to £9,161 million. This total included £1,113 million on debt interest; £1,774 million on military defence; £1,668 million on national insurance, pensions and assistance; £1,166 million on health services; and £411 million on housing.

SAVINGS

During the 1950s, half or more of the total savings came from companies, the proportion varying between 49 per cent in 1957 and a peak of 62 per cent in 1951. In 1961, however, companies provided only 42 per cent of the total, with the personal sector contributing 38 per cent and the Central Government 9 per cent. The personal sector's contribution to national saving has risen from zero in 1951 to 16 per cent in 1958, 20 per cent in 1959 and 31 per cent in 1960.

Bengal Coal Company Ltd.

This company which belongs to Andrew Yule group of companies has a paid up capital of Rs 1.20 crores and capital employed of Rs 5.39 crores. The connections through the directorships of its directors extend over 82 companies, of which only 6 are coal companies and 7 financial companies. Out of the 7 financial companies, 6 are investment companies. Out of its six directors only one can be considered as the inside director belonging to Andrew Yule group. This inside director is also serving on the boards of 23 other companies. The remaining 59 companies are connected to Bengal Coal Company Ltd. through the five outside directors.

The foregoing case studies of inter-linking of seven companies through common directorships bring out the wide prevalence of interlocking of directorships in companies belonging to long-established and reputed houses. It must, however, be mentioned that the existence of common director or directors on the boards of two companies does not necessarily mean that the policies of the two companies are completely integrated. Much will depend upon the personality of such common directors and the influence they wield on the strength of their associations with business houses etc. Subject to the limitation mentioned above, it is seen that there is association of the seven companies studied here with financial companies particularly banks and investment etc. through common directors. Further, the interlocking of directorships of these seven companies with companies carrying on similar trade or manufacturing activity connote horizontal integration which often results in common price and distribution and related policies which are of mutual benefit. The exact extent of such uniformity in business policy has not been, however, studied here.

Olympus

(From Our New Delhi Correspondent)

FICCI Matters of Moment

Matters of topical importance relating to the streamlining of the administration, reduction of civil expenditure, prices and other questions arising out of the national emergency were considered by the Committee of the Federation of Indian Chambers of Commerce & Industry at a meeting held here on December 15, 1962. The Committee felt that immediate action was called for, both at the Centre and in the States, for streamlining the administration and effecting economy in non-developmental civil expenditure. Industrial development, the Committee pointed out, has to be accelerated, especially in those fields which are of strategic importance to the defence of the country and in branches in which further export is possible. Moreover, as whatever expenditure that becomes necessary for defence must be incurred, the Committee has urged that saving on non-developmental expenditure should be effected with great determination, as that would set free resources for defence purposes. Even a saving of 20 per cent would make available nearly Rs 180 crores.

As regards prices it was noted that the prices of essential commodities such as textiles, food-grains, sugar etc., were firmly held throughout the country and prices of certain categories were in fact ruling lower than the level that obtained before the emergency started. There were however, certain commodities such as cement, tyres and tubes, iron and steel and their products, whose prices have tended to register an increase in certain centres. A committee under the President of the Federation was constituted to study the production and distribution methods of these and other commodities, so as to recommend to Government, as also to the concerned industry and trade, to take the necessary steps to augment production and improve the distribution system, wherever necessary.

The situation in Assam and North Bengal where business activity has been affected by the uncertainty created by the emergency engaged the special attention of the Committee. In view of the difficult conditions in which the industry and trade in these areas were operating, the Committee

felt that it was necessary to ensure not only that the normal supply of commodities reach these destinations, but additional stock should also be readily available so as to avoid possible tensions in the supply position. This would mean making available additional transport as also additional finance which currently could not by any means be said to be easy. The Committee decided that these matters should be brought to the notice of the Government of India.

Indo-Iraq Trade Agreement

A trade agreement between India and Iraq incorporating the Most Favoured Nation clause was signed in New Delhi on December 13. The Minister for International Trade signed the agreement on behalf of the Government of India and Mr Nadhim Al-Zahawi, Minister for Trade and leader of the Iraqi delegation, signed on behalf of the Republic of Iraq. The agreement provides for increased trade between the two countries in traditional items as well as for trade in some new items. The main commodity of import from Iraq is dates. Iraq offers large opportunities for Indian engineering products. It is also an important market for tea, jute manufactures, textile and spices.

The adverse balance in India's trade with Iraq continued up to 1958-59. The subsequent three years show favourable trade balances. The agreement will come into force immediately on ratification by the two Governments and will be valid for two years.

Following the visit last month of a Burmese trade delegation led by Col. Chit Myaing, Member of the Revolutionary Council, an Indian delegation has left for Rangoon, for talks with the Burmese Government on a long-term trade agreement. The delegation is led by Mr V. Shankar, Secretary Department of Food, Ministry of Food & Agriculture. Another delegation led by Mr D. S. Joshi, Special Secretary, Ministry of Commerce & Industry, is also leaving for Colombo to review the India-Ceylon trade agreement signed in October last year.

Indian Standard Institution

The Third Five Year Plan of the Indian Standards Institution, which was put into operation on April 1,

1961, envisages a two-fold increase in the activities of the Institution. The total outlay will amount to Rs 275.9 lakhs out of which Rs 159 lakhs will be contributed by the Government of India and the balance of Rs 116.9 lakhs would be collected from different sources of direct income. The rate of formulation of Indian Standards will be gradually increased so as to reach the figure of 500 in the last year of the Plan, bringing the total number at the end of the Plan to 3500. According to the annual report of the Institution for the year 1961-62, the total number of Standards printed and under print on March 31, 1962 was 1926. During the year, 326 new and revised Indian standards on different subjects of interest to industry, trade and commerce were published, marking a substantial increase over the figure of 264 during the previous year.

The Certification Mark scheme, which provides third party guarantee to the consumer and quality control and status to the manufacturer, continued to gain popularity with different sectors of the economy. The number of licences issued for the use of Standard Marks rose to 401 at the end of the year under report from 289 at the end of 1960-61. The annual value of the products covered under the scheme was estimated at Rs 48.50 crores. An important development was the introduction of ISI Certification Marks scheme in the steel industry when the first ten licences covering structural steel were issued to the Hindustan steel Limited for their Plants at Bhilai and Durgapur.

UN Aid for Forest Survey

Government of India's Rs 140 lakh scheme for surveying the country's forest resources is likely to receive assistance to the extent of Rs 40 lakhs from the United Nations Special Fund. The representative of the Fund, Mr Cochin, is understood to have told Mr Shriram Narayan, Member, Planning Commission, at a meeting last week, that he would recommend this project for consideration at the Fund's next meeting in May, 1963. The aid will be mainly in the form of technical assistance and equipment, including helicopters and aerial survey apparatus. The project which is included in the Third Plan, is for making an appraisal of forest resources in order to step up the supply of the requirements of industries using forest products such as rayon, chip board fibre board etc. It will also include survey of the scope for improvement of logging methods in accordance with modern developments. The survey will prepare a forest inventory, conduct an appraisal of industrial develop-

ment possibilities and suggest a plan for industrial plantations, specially of quick growing species. The survey will cover an area of 12,000 square miles to begin with in the following three regions: (1) The Himalayan region, particularly in Uttar Pradesh, Himachal Pradesh and Punjab, (2) Central Zone consisting of Madhya Pradesh, Orissa, Andhra Pradesh and Maharashtra; and (3) Western Zone consisting of Kerala and Mysore.

Paper for Text Books

The Swedish Government's magnificent gift of paper for school text-books is all the more valuable because it comes at a time when our own resources have to be diverted to the defence effort and funds available for sustaining programmes of development in vital sectors is necessarily limited. Under an agreement signed in New Delhi early this month, Sweden will supply 8000 tons unbleached, slack glazed printing paper sized for litho offset printing and 500 tons of cover papers in five approved colours for printing text books.

In addition to supplying paper, the Royal Swedish Government will also provide for the transportation of the paper to the ports of Bombay, Madras and Calcutta and will defray all shipment and insurance risks. The paper will be delivered in two shipments. The first shipment containing 4016 tons of paper to Bombay was planned to leave Sweden about the middle of the month. The second shipment of 1840 tons of paper to Madras and 2144 tons to Calcutta is planned to leave about January 31, 1963.

The paper will be distributed by the Government of India among the different States according to their individual requirements for printing text books for schools. While the books will be supplied free to needy students, proceeds of sale will be used for educational purposes. Government of India will meet the costs of clearance at ports and onward despatch to destinations, and the State Governments will bear the cost of printing.

The free supply of paper is being made under the UNESCO's Regional Project for furthering primary education in Asian countries. Other countries that are participating in the project for the supply of paper are Australia, Canada and New Zealand. West Germany has supplied the necessary printing equipment. A printing press with latest equipment valued at approximately one million DM, presented by the West German Government, has been set up in Mysore under the supervision and control of the Government of India. Services of West German experts will also be made available to train Indian personnel in the early stages.

COMPANY MEETING

The Associated Cement Companies Limited

Summary of Chairman's Statement

The following is a summary of the statement which has been issued to shareholders by Shri Dharamsey M. Khatau, Chairman, The Associated Cement Companies Limited, dealing with the Company's working for the year ended 31st July 1962. The Annual General Meeting of the Company will be held on Friday, the 18th January 1963 at 4 p.m. at the Sunderbail Hall off Queen's Road, Bombay-1.

We are today under a grave national crisis caused by unprovoked aggression. Our policy and all actions affecting each of us as individuals and our business must therefore be governed by the overall consideration of the great and urgent task of repelling the invader. The Company's factories, collieries and engineering workshops will naturally be utilised to the fullest extent in the service of the country. Your Company has already donated Rs. 10 lakhs to the National Defence Fund and I am proud to say that the employees of the Company, numbering many thousands, are solidly behind the Government.

If, against this background, I appear somewhat critical of certain Government policies, I want to make it clear that such criticism is made both in view of the urgent need to stimulate the growth of the cement industry—a vital industry both in times of peace and war—and of the part which your Company can play in this great emergency.

During the year the most important event was the recommendation of the Tariff Commission for an upward revision in the retention price of cement and Government's action thereon. The Directors' report has mentioned the difficulties—operational and other—which prevented the Company from achieving better results than were actually obtained and why, despite higher profits it has been possible to recommend a higher dividend.

PROSPECTS FOR THE FUTURE PRICING AND INDUSTRIAL POLICY OF GOVERNMENT

As regards the profit-earning capacity of the Company and its future prospects, these are so largely dependent on the retention prices and Government's industrial policy and action, that there is very little I can say. I can only assure you that our efforts in increasing productivity and reducing costs are being ceaselessly pursued. As you are aware, Government arbitrarily scaled down the increase in price which the Tariff Commission had recommended. The retention price allowed to your Company was inadequate

even by the Tariff Commission's standards; and in the absence of automatic escalator clauses, the relief afforded by such price increase is being rapidly reduced, since prompt adjustments to cover subsequent increases in the price of fuel and power, railway freight rates etc., are unfortunately not forthcoming.

It is a matter of deep regret that the Government should ignore the recommendations of a statutory body like the Tariff Commission—an independent body consisting of people, known for their capacity and judgment, who make their recommendations after scrutiny of all relevant facts and giving weight to all affected interests. It is therefore most disturbing that there is a tendency to dub this body as 'outmoded'. In the absence of an independent organisation of this kind, one fears that fixation of prices by Government could be completely arbitrary.

The incidence of the enhanced Tax on Corporations from 45 to 50 per cent is substantial. The heavy financial burden imposed by these and other charges has further reduced the profit element. One of the recommendations of the Tariff Commission was that the retention price should be revised if and when adjustments become necessary owing to increases in costs due to governmental action. A representation has been made to the Government through the Cement Manufacturers' Association.

CEMENT INDUSTRY IN THE NATIONAL ECONOMY

Cement is a key industry whose continued progress and prosperity are vital to the economic development of the country. The measure of work to be done can be seen from the fact that the target of installed capacity at the end of the third five-year plan, fixed at 15 million tonnes, has been considered inadequate, and it has been mentioned in authoritative circles that the figure should be 18 million tonnes. Even against a target of 15 million tonnes, the current capacity is only 10 million tonnes. The rate of growth is thus certainly not as vigorous as might be expected. Even conceding that numerous difficulties exist it is difficult to escape the conclusion that this slow growth is largely due to lack of incentives, through the imposition of rigid Government controls on price, distribution and in the manner of licensing of new factories.

THE ROLE OF ACC

I would like to remind you of the role which ACC has played in

building a sound cement industry and in developing a demand for cement in the country. ACC has a proud record of pioneering during the past quarter of a century. To serve consumer as also national interests, it has dispersed its factories carefully and has put to good use even substandard raw materials by employing beneficiation processes. The wisdom of such planned dispersal must be evident to the S.T.C. which I have reason to believe, is deriving considerable monetary advantage by low freight leads on despatches from ACC factories, which helps it to subsidise the higher freights on cement despatched from factories belonging to other interests. ACC has been a pioneer in employing new processes and producing new products. The dry process of cement manufacture, the manufacture of white cement, blast furnace slag cement, oil-well cement, water-repellent cements, low-heat cement etc. have all been introduced by ACC after much study, research and development. The credit for manufacturing cement-making machinery at its own workshops and thus helping to lay the foundations of a sound heavy engineering industry in our country must also go to ACC. Our Engineering Works at Shahabad and the AVB Heavy Engineering Works at Durgapur, established in collaboration with Vickers and Babcock & Wilcox, will not only meet ACC's own requirements, but also serve the needs of the cement industry as a whole, thus helping India to conserve a great deal of foreign exchange.

Much foresight, money and effort have gone into these projects and products. ACC has therefore paved the way for other manufacturers to share in the benefits of its pioneering and developmental efforts. Far from discouraging new entrants in the field, ACC has, on several occasions, lent a helping hand to them.

I have dwelt on this somewhat pointedly as there appears to be a tendency, especially in licensing new factories, to consider a Company like yours as a monopoly, for which reason it must take a lower place in the queue!

During the year your Company's contribution towards the National and State finances was Rs. 27 crores in the form of Income-tax, Corporation Tax, Excise and other Duties, Sales Tax, Railway Freight, Import Duty etc.

These direct and indirect contributions to the national revenues, and the Company's record of progress and service are impressive. All this can continue to be har-

nessed to good use and I sincerely hope that Government will not stifle this by a doctrinaire approach. I believe that the 'know-how' we possess and our organisational vigour can help to expedite the expansion of the cement industry and make it easier to hold the price line.

COAL AND PACKING MATERIAL

Coal supplies continued to cause some anxiety in the early part of the year though, with special arrangements for the allocation and movement of coal introduced by Government, the position has considerably improved. The Company has also been able to draw about 30 per cent of its coal requirements from its own collieries. With increasing emphasis laid on regionalisation of the supply and movement of coal, the importance and utility of our two collieries have grown.

In the matter of packing materials the industry was looking forward to a continuance of the satisfactory position permitting the rational use of second-hand bags in reasonable proportions. However, its hopes were rudely shaken by Government's decision from the last quarter of 1962, insisting that producers pack 50 per cent of their production in second-hand bags—a condition physically impossible to fulfil in view of the limited availability of second-hand bags of serviceable quality. The jute bag is a wasting commodity and cannot be re-used beyond a certain point. From the point of view of the consumers it is likely adversely to affect the standard of packing and will result in loss of cement by seepage by repeated use. The industry has made representations to Government to restore the status quo ante in this respect.

CEMENT DEMAND AND TRANSPORT

Demand for cement in the country is in excess of availability. Transport difficulties have aggravated the situation, creating artificial scarcity in some localities. Your Company has endeavoured to gear road transport to meet the situation. Substantial quantities of our cement were moved by road during the year.

EXPANSION AND REHABILITATION

The Company's planned programme of expansion and rehabilitation has made satisfactory progress. Your Board has taken the decision to resume work on the construction of a new factory at Porbandar.

ACC-VIKERS- BABCOCK LTD.

The Heavy Engineering Plant of ACC-Vickers-Babcock Limited, at Durgam Cheruvu, inaugurated in February last, has commenced production and has received orders for boiler plant, cement making machinery etc. Full production will be reached by the end of 1963.

LABOUR-MANAGEMENT RELATIONS

The labour situation at our Cement Works continued to be peaceful. At the Kalmi Firebricks plant and Okhla Bulk Depot where the Wage Board's Recommendations did not apply, we entered into comprehensive wage settlements. The only factory, Madukkarai, where it was not possible to implement the Wage Board's Recommendations has also been brought into line and the settlement of implementation was signed on 31st July 1962.

The question of bonus, unfortunately continues to trouble us as it is troubling all industries, in spite of the fact that it has been the policy of the Directors to pay bonus to employees even though strictly according to the Labour Appellate Tribunal Formula no bonus may have been payable. We have four bonus disputes before Tribunals—National and Industrial. These proceedings cost a great deal of money, and drain away the time, energy and attention of personnel, including workers, from the productive side of the enterprise.

Here again, there are hopeful signs in the shape of the appointment of the Bonus Commission by the Government of India. It is earnestly hoped that the Commission will be able to arrive at an acceptable formula which will once for all bring peace in this sphere of industrial relations.

At our Collieries there was one major stoppage and quite a number of lesser dislocations—lightning strikes, go-slow, conciliation and adjudication. Kotma Colliery was closed for 133 days on account of a strike followed by closure. This strike was called on a completely extraneous non-industrial issue, and continued despite the advice of concerned Government Authorities, and was accompanied by violence.

The appointment of the Wage Board for the coal industry during the year to determine 'fair' wages, I hope, will bring peace and improvement in production in this sorely troubled industry.

APPRECIATION

I would like to express on your behalf our warm appreciation of the sustained hard work and whole-hearted co-operation of your employees.

Bombay, 30th November 1962.

The above summary is not a document purporting to be a report of the proceedings of the Annual General Meeting.

Markets

JUTE

Earlier Steadiness not Maintained

After earlier steadiness the jute goods market developed a reactionary tendency in the absence of sustained buying support. All along hessian was rather dull and moved only in sympathy with the heavy goods section. Once again during the week under review fresh foreign enquiries for hessian were conspicuous by their absence. This is attributable to the forthcoming Christmas recess in overseas markets when usually business is reduced to a trickle. The lack of interest in this construction may also be due to two factors: the principal hessian consuming country, the USA, had bought heavily some time ago and there is no anxiety as regards regular supplies as Indian Mills' production of hessian is steadily being stepped up. The fact that mills are to work to full capacity up to the end of January also indicates that adequate supplies will continue to be available.

In the meantime, it is reported that consumers of jute backing in US have protested to the Indian Embassy in that country over the orders of the Calcutta Customs authorities which they think interfered with the supplies of jute backing ordered under forward contracts. The difficulty has arisen out of the orders of the Calcutta Customs authorities refusing to permit jute exports under forward contracts unless the prices quoted therein were in line with current spot prices. While bringing the matter to the notice of the Union Finance Ministry the Indian Consulate in US is reported to have pointed out that unless a steady flow of supplies of jute carpet backing is ensured the US carpet industry may turn to other suppliers for their requirements.

Though sacking too has not been able to maintain its highest levels till the close of the week, the outlook for this category seems to be improving for one thing, its outgo has been steadily increasing in the past few weeks and the expectation is that more enquiries will be forthcoming in coming weeks from the Government of India on defence account.

In earlier dealings during the week heavy goods displayed a steadier trend on reports of a Government tender for B. Twills. Rates however fluctuated both ways on conflicting reports about the size of the Government order but the undertone remained steady all through the first half of the week. On Monday a firm tendency developed in the sacking section partly due to some fresh business on Government account and partly due to covering business in ready B. Twills. B. Twills December which was quoting at Rs 119.10 at the beginning of the week (Thursday) advanced to close at Rs 121 by close on Monday. In subse-

quent trading however prices declined in the absence of fresh enquiries. B. Twills December came back to Rs 120.60 on Tuesday. Reports of poor shipping instructions coupled with some selling in futures depressed sentiment in sacking, further on Wednesday with the result B. Twills December lost another Rs 1.60 to be placed by close of transaction on Wednesday at Rs 119. Except for reports of enquiries of some specialities, the hessian section received little support in the form of foreign enquiries and in consequence price movements in this section generally followed the trend in the heavy goods section. 40" x 10 oz Hessian December after opening at Rs 52.60 receded to Rs 51.75 by close of the week.

The improvement noticed in the jute market last week has been maintained thanks to sustained mill purchases partly on behalf of the Buffer Stock Association and partly in respect of quotas issued by the Jute Commissioner. Even so lower grade jute continues to be quoted below minimum levels as selling pressure in this quality persists. At present mills seem to be in need of high quality jute which being in short supply commands a premium. The proposal of mills for utilising some portion of the buffer stock for their current requirements seems to have been made in view of the deterioration in stocks of jute held on behalf of the Buffer Stock Association.

DESPATCHES OF JUTE GOODS FROM MILLS: November 1962 (In 1000 Metric Tons/Tons) FOR EXPORT ABROAD

	Nov. 1962	Oct. 1962	Nov. 1961
Ressian	38.8 (38.2)	36.5 (36.0)	31.8 (31.3)
Sacking	30.7 (30.2)	25.5 (25.1)	27.9 (27.5)

Note:—Rates were nominally quoted at Rs 30 for Assam Bottoms, Rs 29.50 for Northern Bottoms, and Rs 32 for Daisee Bottoms, all per maund for December-January delivery.

TEA

Easier Tendency in Prices

THE easier tendency in prices, that has been noticeable at the auctions during the past two weeks, has not caused any concern to the tea circles. This was expected in view of the strong buying which took place in the previous weeks following the Chinese invasion and the strike by the Joint Steamer Companies' staff in Pakistan. As arrivals in Calcutta have been commendably good and it has been possible to schedule regular sales now, there is a general disposition on the part of foreign buyers to take their requirements slowly.

On a longer view, however, it is expected that the trend of prices will be steadier, as the world supply of the commodity is likely to be in close balance with demand during the current season. According to the Indian Tea Association, the outturn in North East India in November is smaller by 2.3 million pounds, reducing the total crop by 27.4 million pounds to 367.82 million pounds. Many gardens are reported to have already stopped plucking due to an early advent of the winter and as such the outturn during the current month is expected to be small. Thus, the North Indian output, which contributes a major portion of the world supply is likely to be at least 27 million pounds smaller for the current year than for 1961.

In the Export Sale held in Calcutta this week, offerings consisted of 61,413 packages. Although demand was more general than in the previous week, prices generally displayed an easier tendency for reasons stated earlier. Plain orthodox broken were in good support, but were sold at often lower rates. Fannings met with only limited enquiry at a decline of 20 nP a kilo. Better liquoring BOPs were readily absorbed although at slightly easier rates, while Orange Fannings were easier by 30 nP to 40 nP. CTC descriptions met with a useful enquiry although selling at a drop of 20 nP. Broken received better support than their equivalent Fannings. The more fibrous kinds were virtually neglected. Leggcut teas followed the declining trend.

Plain Whole Leaf grades were readily sold and were sometimes dearer by 10 nP, but the more stylish teas and Tippy sorts met with limited enquiry and were easier. Darjeeling teas were taken up at lower rates although quality teas were sold well where improvement was noticeable. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.40 to Rs 4.70; Plain BP Rs 3.80 to Rs 4.10; Plain Fannings Rs 3.90 to Rs 4.30; Medium Assam CTC BP Rs 5.30 to Rs 5.80; Medium Assam CTC Fannings Rs 5.30 to Rs 5.80; Best Assam CTC BP Rs 6.10 to Rs 6.40 and Best Assam CTC Fannings Rs 6.10 to Rs 6.40.

In the Internal Sale, offerings consisted of 29,321 packages of Dusts. There was a fair general demand at irregular and lower rates. Medium CTCs came to a lower market and eased by 20 nP to 30 nP per kilo with the brighter descriptions selling well. The powdery descriptions were well sought after. Good CTCs came in for better sup-

port and realised prices equivalent to those prevailing last week.

The brighter Assam orthodox kind were well supported at last levels, but the poorer liquoring descriptions declined considerably and were sold about the same levels as the plain orthodox descriptions. Leggcut tea were readily absorbed, but generally at easier rates. Following rates were quoted:—Plain Orthodox Dust Rs 3.90 to Rs 4.20; Medium Assam Dust Rs 4.90; Leggcut Dust Rs 5.10 to Rs 5.30; Medium Assam CTC Dust Rs 5.50 to Rs 5.80 and Good Assam CTC Dust Rs 6.20 to Rs 6.60.

In the Cochin market, offerings were 605,000 kilogrammes of Leaf tea. Against good general demand, Low Medium and Medium Broken were 10 nP to 20 nP dearer, while similar Fannings were fully firm. Good Mediums were steady, while high-grown were irregularly lower. Unorthodox descriptions were strong and dearer.

With shipments of 6.94 million pounds in October 1962, total exports of South Indian tea, in the seven months ended October this year, showed an all-round increase at 56.27 million pounds as compared to 41.87 million pounds in the corresponding period of last year. Supplies to the UK rose from 25.86 million in April/October 1961 to 28.07 million pounds during the period under review; to the USSR from 1.33 million to 4.05 million pounds and to the USA from 3.28 million to 3.65 million pounds.

The reversal of the recent upward trend in Mincing Lane tea auction prices, noticeable last week, became much more pronounced at this week's sale following the ending of the boat strike on the Brahmaputra river and a seasonal decline in the quantity of teas from North India. This week, 42,326 packages, including 3,638 packages from North India and 738 packages from Pakistan, were offered in London. Although there was a fair demand for the best liquoring descriptions, all prices declined from 2d to 4d per pound. The rate for Plain Broken Pekoe was quoted at 35h 4d per pound. The next sale will be held on 31 December.

Tea stocks in London, as on 7 December, were lower at 133.04 million pounds as against 137.62 million pounds in the previous week. The total quantity, to be landed on the same date, was 21.83 million pounds. Total afloat was 25.75 million pounds including from Calcutta 10.63 million pounds; from Chittagong 10,000 pounds; from Cochin 2.51 million pounds; from Ceylon 10.65 million pounds and from other Ports 1.95 million pounds.

COTTON

Erratic Price Movements

Trading in the Bombay cotton futures market during the past week was characterised by erratic movements. The ruling contract after a low start recovered smartly and closed the week on a steady tone.

The Jarilla March contract which opened at Rs 676.00 per three quintals slipped down to a new low of

after fluctuating between Rs 575 and Rs 669.75. The Jarilla March contract, which was gradually recovering from a low start, showed an official concern at the trend in prices and adopted extended support as a result of which the contract looked up.

The Government's intention to raise the floor price for cotton at the middle of the season was dismissed by a particular section of the trade as purely of academic interest while another section considered it as portending the future trend of prices.

The Textile Commissioner's announcement of the release of second instalment of new crop quota to the mills and Forward Markets' Commission's instruction to restrict weekly fluctuations did not impart any strength.

The Japanese delegation held a series of discussions with the East India Cotton Association about the proposal to start an 'open contract' for Bengal De-hi. A cotton delegation from East Africa is expected to arrive

shortly to discuss the implications of the cut on global imports of cotton.

The announcement of the second instalment of quota to the mills failed to revive activity in the spot market at Sewri. Moderate transactions in 147.3 and 1.17 were reported during the week under review. CO2, Kalyan, Vijay and Digvijay met with scattered demand. The total turnover was restricted.

Interest from overseas in Bengal Deshi has broadened considerably. Increasing export sales with Japan and Continent were reported. Out of the export quota for two lakh bales of this growth nearly one lakh bales were sold and 75,000 bales were registered for shipment.

In the import section was devoid of any fresh developments. Sudan and American cotton met with stray enquiries. According to the trade circles the US is expected to release more cotton under the PL-480.

A three-member delegation will be leaving for Burma for negotiating a tripartite agreement with that country under which US cotton received under PL-480 will be exported to

Mincing

Publication of two new Law Journals—the Income-tax Journal and the Company Law Journal by the well-known firm of legal publishers, the M. L. J. Office, Madras. The two journals will make their appearance in January, 1963.

Leading Advocates, Chartered Accountants and top ranking specialists in Company Law and Income-tax Law & practice will serve on the Editorial Board and will guide the policies of the Journals and enhance their usefulness.

INCOME TAX JOURNAL

Promot reporting of cases on Income-tax, Estate Duty, Gift Tax and Wealth Tax with exhaustive headnotes.

Articles by specialists on topics of interest.

Publication of select English Cases.

Issued Fortnightly — Two Volumes per Year

Annual Subscription Rs. 40. Post free

COMPANY LAW JOURNAL

Prompt reporting of cases on Companies Act, Banking Companies Act, and Insurance Act.

Articles on subjects of interest to Executives, Accountants, Advocates, and Auditors.

A Question and Answer department will answer simple queries from subscribers, free of charge.

Publication of select Foreign Cases.

Issued Fortnightly — Two Volumes per Year

Annual Subscription Rs. 25. Post free

SPECIAL INTRODUCTORY OFFER.

On the inauguration of the new journals the Publishers offer a special Introductory Rate. Subscriptions for both the Journals received before 31st January, '63 will be accepted at the reduced rate of Rs. 50 instead of at Rs. 65.

For the I. T. J. the Introductory offer rate will be Rs. 30. For the C. L. J. the Introductory offer rate will be Rs. 20.

Here is a valuable opportunity to equip one's library with standard journals at a rate that is a real bargain.

NOTE.—A specimen copy will be sent on request.

M. L. J. OFFICE, P. B. 604, MADRAS-4.

India against exports of some commodities.

PIECEGOODS

Business in the Bombay cotton piecegoods market during the past week was virtually at a standstill. Upcountry demand was conspicuously absent and the efforts of overseas buyers to boost exports proved unsuccessful.

It is evident that the heavy accumulation stocks with the trade and mills has literally paralysed the market. According to a latest estimate the stocks with the wholesale dealers totalled approximately 1.5 lakh bales of unsold goods in striking contrast to nearly 75,000 bales in the corresponding period in the preceding year. In addition to this, they are experiencing the heavy pressure for money to close the yearly accounts and the remittances from the border areas were pretty meagre. In the circumstances they were disinclined to transact any business on credit.

Almost all the upcountry centres were dormant as a result of which demand for cloth remained at a low level. The North Indian dealers were unwilling to lift goods owing to the lack of consumer demand apparently due to the political disturbance. The expected revival of demand from South Indian centres on account of the proximity of the Pongal festival proved elusive. Consequently movement of flannelettes and coatings was discouraging. There was a fall of nearly 15 to 20 per cent in the prices of powerloom goods whereas prices of mill made goods were well maintained.

The leading buyer on the export front was the UK which accounted for a moderate quantum of furnishing fabrics and sheetings. Mills are reported to have quoted lower prices. It is also stated that on account of the prevailing slackness in the domestic sector the textile industry has become export-minded. France shied away from the market while Sudan, obviously due to the unsteady conditions in the market preferred to be an onlooker without entering into any commitments.

The Calcutta cloth market during these weeks presented extremely slack conditions. There was almost a disastrous fall in the off-take of piecegoods and the godowns of textile merchants and mill warehouses were full to the brim. There was so far no disruption in the production schedule but such a development is possible shortly if the prevailing conditions continue for some time.

Coffee Export Quota Prospects

ACCORDING to reports from Cochin, some dissatisfaction over the coffee quota fixed for India is felt by the producers and the Government. The quantity of 21,600 tonnes was far below the 32,600 tonnes India exported in the 1960-61 season; but India will share in any increase in quotas that may be fixed in future as a result of world rise in consumption and in case of short crops in other countries.

At 21,600 tonnes as the export quota and with internal demand at about 45,000 tonnes, Indian production will have to be maintained at 57,000 tonnes or more. With a crop forecast at around 56,000 tonnes, the quota now allowed is almost within India's capability.

The chances of increasing the quota are also bright. Whereas the basic quota was fixed on the assumption that world export requirements is 44 million bags, the latest US Department of Agriculture forecast is that 1962 may witness a record 47 million bag exports.

According to the figures released by the Coffee Board, the receipts into the 1961-62 Pool up to 30 November 1962 amounted to 45,653 tonnes (7,587), comprising of 22,482 tonnes (28,968) of Plantation variety; 6,620 tonnes (10,278) of Arabica Cherry and 16,551 tonnes (28,341) of Robusta variety. The figures within brackets indicate the corresponding receipts into the 1960-61 Pool last year.

During November 1962, 3,300 (2,905) tonnes of coffee were released for the internal market, bringing the total for the eleven months of the year to 31,454 (31,213) tonnes. Inclusive of the sale on 28 November, the total quantity of coffee sold for export from the 1961-62 crop amounted to 18,600 tonnes, made up of 11,249 tonnes of Plantation; 3,022 tonnes of Arabica Cherry and 4,329 tonnes of Robusta varieties.

SUGAR Weak Tendency

Sugar prices have continued to display an easier tendency following the announcement of the release of a further quantity of 200,000 metric tons of the commodity for sale by the factories in the open market. In the spot section, prices have eased by 25 nP to Re 1 per quintal. In the mill-delivery section, demand for the commodity has remained confined mostly to the Punjab and parts of Western UP districts. Though stocks are reported to be lower at the destinations, dealers are reluctant to make bulk commitments in view of the uncertain political situation. The factories, having stocks, are not, therefore, able to complete sales and despatches of larger quantities against the previous quota.

At a time when the cotton textile and tea industries have a problem of disposing the accumulated stocks, the sugar industry is looking forward to a reduction in its stocks to normal proportions by the end of the current season. The industry has started the new season with a carryover of around 1,000,000 tons. As most of the factories in West UP are facing shortage of cane supplies, sugar production in the country is likely not to touch even 2,500,000 tons during the 1961-62 season. With a larger capacity for crushing cane, it should have been normally expected that the output would be very much more than 2,500,000 tons. It is, however, felt

that, on account of a smaller standing crop and large-scale diversion of cane supplies for manufacturing gur, the output of the sugar mills may not be very much more than 2,500,000 tons.

The position in the market is rather paradoxical since buyers are hesitant to make further commitments in view of the weak tendency. Representations are, therefore, being made to the Government to grant some relief to sugar producers and also to take timely steps to check financial disruption. It is suggested that a policy decision to increase the sugar stockpile in the country for emergency purposes may improve the market outlook to some extent; but the basic solution will have to be found in price stabilisation. The instability is said to be the main factor in diverting cane to gur manufacture, which is currently fetching even better price than sugar in some areas.

The manufacturers have pointed out that the costs have gone up by about Rs 3 a maund, while the 10 per cent cut in production, ordered by the Government last season, has resulted in putting up the production cost by about Re 1 per maund. The manufacturers have suggested to the Government that the fair price should be Rs 40.70 excepting rehabilitation charges, but including export losses.

CHEMICALS & DYES Conditions Depressed

Conditions in the Bombay Dyes and Chemicals market remained depressed and prices moved down in most of the cases. The absence of business was attributed generally to tight money conditions. Merchants were reluctant to extend credit facilities to the upcountry merchants, because of the proximity of the year-end. Demand was also poor in view of the political uncertainty. At the lower level of prices, however, there was some buying support.

NON-FERROUS METALS Mixed Pattern

Prices in the Bombay Non-Ferrous Metal market showed a mixed tendency.

THE INDIAN IRON & STEEL CO., LTD

NOTICE

LOST—Certificates for 20 ordinary shares Nos. 2478193/202 and 2330865/874 in the abovesaid Company registered in the name of Mr. Madan Gopal Vij have been reported as lost. An application for the issue of a Duplicate Certificate in respect of the said shares in lieu of the original lost has been received from the registered shareholder. The Notice is hereby given that the issue of the Duplicate Certificate will be considered unless valid objection is received by the Company within one month from date.

The Indian Iron & Steel Co. Ltd.,
Martin Burn Ltd.,
F. G. Liversedge,
Managing Director,
Managing Agents

Registered Office
12, Mission Row, Calcutta.
Dated, the 17th December, 1962.

While Copper prices tended to move down, Zinc showed a steadier tendency. Tin and Lead prices showed only minor changes in values.

An easier tendency in Copper prices was attributed to offerings by stockists. Stringency of money was cited as a deterrent to buying support and an inducement for more sales, while dealers preferred to go light in view of the uncertain political outlook.

Larger supplies of copper in the local market presumably induced more enquiry for Zinc. There was, therefore, a revival of buying interest and the rate for the metal improved from Rs 118 to Rs 121 per 50 kgs. Tin and Lead prices were well maintained, the former being quoted at Rs 266 per 10 kgs and the latter at 163 per quintal.

GOLD & SILVER Boom Conditions

The bullion market in Bombay staged a sudden and unexpected recovery from the pre-Bond issue levels. In this connection, it would be recalled that gold prices came down to around Rs 100 per 10 grams following the issue of Gold Bonds, ban on forward trading and the Union Finance Minister's statement indicating that further curbs on gold trading were in the offing. But, the price of the yellow metal has now shot up to Rs 116 before closing with a net gain of about Rs 15 at Rs 115.25. This sharp rise, caused mainly by the hectic buying for the marriage season in the context of the extremely tight supply position, has virtually put back gold prices to the level prevailing before the issue of Gold Bonds. Reports are also active buyers of gold of late. Sovereign is now quoted at Rs 90 as against Rs 72 recorded in the last week of November.

Aided by boom conditions in gold, Silver prices have also shot up. Forward prices are quoting Rs 214 as against Rs 211.45 in the previous week. The bullion authorities have called for a special meeting and fixed the clearing rate at Rs 113.75. They have also asked the members to submit to them a detailed statement, as on 19 December, of outstanding transactions. Spot (.996) is changing hands at Rs 212.90 to Rs 213.45 and (below .996) at Rs 212.40 to Rs 213.45.

YARN Forward Trading Banned

The Government of India has banned forward trading in Art Silk and Staple-fibre yarns with immediate effect. All outstanding forward contracts in these commodities should be closed at the rates prevailing as at the close on 17 December. At a time when prices were generally showing a tendency to go down, the ban has taken most of the operators unawares. The President of the Bombay Yarn Merchants' Association has stated that the Government's action, coming as it does during the national emergency,

will create unnecessary panic in the market.

At this juncture, the revision in the selling prices of indigenous rayon yarn and the modification of the export promotion scheme have come in for criticism at the hands of both spinners and weavers. Rayon cloth producers have already recorded their protest against the decision of the Government to raise the prices of yarn at a time, when the industry is faced with a heavy accumulation of stocks. Spinners, on the other hand, have complained that the increase is not adequate to compensate them for the concessions they are obliged to offer to the manufacturer-exporters under the export promotion scheme.

Meanwhile, there was a sharp rise in staple-fibre prices. The underlying sentiment was distinctly firm and the closing prices showed sizable gains. Art silk yarn was also better. The December contract in staple-fibre declined initially to Rs 652 on profit-taking, but spurted later to Rs 672 on hectic short-covering. Sentiment was also influenced by higher spot advices. The February contract was quoting higher by Rs 30 over the December delivery.

OILS & OILSEEDS Rising Trend in Prices

The Bombay market for Oils and Oilseeds, which had been ruling weak during the past few weeks, developed a firmer tendency under the lead of groundnuts. Sentiment was mainly aided by rumours of free exports of HPS groundnuts. The flare-up in gold prices together with the firmness in cotton also helped the sentiment. Mills also made heavy purchases owing to persistent demand of groundnut oilcake from shippers. Bold ready as quoted higher at Rs 40.87 and Groundnut Oil at Rs 17.00.

The improvement in the export prospects in respect of castor oil imparted a firm tone to the Castorseed section. While the bulls were seen to

support the market actively, shippers figured as steady buyers. More than 1,000 tonnes of castor oil were reported to have been sold during the past six weeks under the export incentive scheme. Ready Castor was quoted at Rs 33.25 and Castor Oil, commercial quality, at Rs 14.60.

Prices in the Linseed section moved rather erratically in the absence of fresh influences. The movements were generally shaped by fluctuations in groundnut and castorseed. Linseed ready was quoted at Rs 37.50 and Linseed Oil at Rs 16.45.

SHAW WALLACE & COMPANY LIMITED.

Dividend on Preference Shares.

The Directors have declared a second Interim Dividend of Rs 2.4975 per share (i.e. Rs 3.00 per share increased in accordance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960 less Income Tax at the Company's rate of 25% in accordance with the Finance Act 1962) subject to deduction of tax under Section 194 of the Income Tax Act 1961 on the Company's Preference Shares in respect of the year ending on the 31st December, 1962, payable to Members whose names appear in the Preference Shares Register of the Company on the 15th January 1963. Warrants will be posted on or after the aforementioned date to the addresses or in accordance with the instructions recorded in the Company's books.

The Transfer Register of the Preference Shares will be closed from the 8th to the 15th January 1963 both days inclusive.

Central India Spinning Skips Again

Although the working of the Central India Spinning, Weaving and Manufacturing Company Limited has shown further improvement for the year ended 30 June 1962 as compared to the previous year due to fuller utilisation of the productive capacity and further rationalisation, the company is not still in a position to pay any dividend.

Sales have risen to Rs 4.71 crores from Rs 4.29 crores, while the net profit, before providing for Depreciation and Taxation, works out to Rs 39.42 lakhs as against Rs 33.84 lakhs for 1960-61. The Depreciation amount is raised to Rs 13.55 lakhs from Rs 13.33 lakhs. The debit balance of Rs 93.73 lakhs brought forward from the previous year is now reduced to a debit balance of Rs 57.86 lakhs, which is carried forward to next year.

Neelamalai Tea Repeats for 7th Year in Succession

The Neelamalai Tea and Coffee Estates Limited has made a lower net profit of Rs 9.12 lakhs for the year ended 30 June 1962 as against Rs 12.07 lakhs for 1960-61. Apart from providing Rs 20,550 for Development Rebate Reserve, the Depreciation amount is raised to Rs 1.21 lakhs from Rs 1.09 lakhs. Taxation provision is lower at Rs 4 lakhs against Rs 4.45 lakhs. No allocation is made for General Reserve against Rs 1.25 lakhs. The dividend is repeated at 7.5 per cent, taxable, for the seventh year in succession.

The crops manufactured were 822,585 kgs of tea and 44 tonnes of coffee as against 747,772 kgs and 259 tonnes respectively.

Carew's Profit Nearly Doubled

Carew & Company Limited has fared very well during the year ended 30 June 1962. With the rise in sales from Rs 3.01 crores to Rs 3.99 crores the net profit, before providing for Depreciation and Taxation, is nearly doubled at Rs 37.74 lakhs as against Rs 19.87 lakhs for the previous year.

In respect of allocations, Taxation provision is raised to Rs 23.19 lakhs from Rs 11.42 lakhs; Development Redemption Reserve to Rs 1.76 lakhs from Rs 1.00 lakh and General Reserve to Rs 5.40 lakhs from Rs 2.00 lakhs. Depreciation amount is, however, reduced to Rs 4.04 lakhs from Rs 4.30 lakhs and Development Rebate Reserve to Rs 34,000 from Rs 50,000.

The dividend on the Ordinary shares is again skipped, while the last dividend was paid at 2½ per cent for the year ended 30 June 1958. However, the directors have proposed to pay the arrears of dividends on the preference shares for four years ended 30 June 1962.

KCP Repeats on Increased Capital

Thanks to the rise in sales from Rs 4.29 crores to Rs 5.72 crores, KCP Limited has produced excellent working results for the year ended 30 June 1962. The net profit, after providing for Depreciation, is shown at as much as Rs 70.12 lakhs as against only Rs 45.27 lakhs for 1960-61. The depreciation amount is raised to Rs 26.40 lakhs from Rs 21.42 lakhs.

After transferring Rs 6 lakhs from Development Rebate Reserve, the directors have made the following allocations: Taxation Rs 18 lakhs (Rs 10.50 lakhs); General Reserve Rs 1.85 lakhs (Rs 10 lakhs); Development Rebate Reserve Rs 27.50 lakhs (Rs 10.74 lakhs) and Rehabilitation Reserve Rs 8.38 lakhs (nil).

The directors have proposed to maintain the dividend at 15 per cent, taxable, on the increased ordinary capital. In this connection, it would be recalled that the company offered 1,00,000 equity shares to the shareholders in January 1961. Out of this, 98,608 shares were allotted up to the date of the last annual general meeting and a further 567 shares were allowed during the year under review.

The second stage of the factory went into production in June 1962. The cement factory at Macherla produced 91,815 tonnes of cement as against 71,519 tonnes in the previous year.

For the Investor

INVESTMENT GOSSIP Welcome Recovery

There has been a heartening improvement in stock market sentiment this week with quite a few shares including some in the forward list crossing their official minimum levels. A significant feature of trading during the past few days is the broadening of interest in the cash list. Though

the volume of business passing is yet small, it is in marked contrast to the stagnant conditions that prevailed till a few days ago. The obvious explanation for the welcome change in sentiment is the growing belief following the resumption of civil administration in some of the regions in NEFA recently vacated by the Chinese that the war situation may not show any significant alteration for some time to come. Once the major uncertainty inhibiting trading is removed, other relevant

considerations seem to have come into play. A number of first class shares have reached an attractive level during the past few weeks and investors have naturally concluded that it would be profitable to pick them up.

In the meantime the position with regard to the more speculative shares has also improved thanks to the LIC purchase of a sizable block of shares in the Bombay market. Some buying of pivotal shares in smaller lots elsewhere has also been reported. It would appear that the decision of the Bombay Stock Exchange authorities not to revise minimum prices and the strict enforcement of the minimum prices on Lyons Range have somewhat unnerved bears who have been hoping for official sanction for further lower levels. The Calcutta Stock Ex-

change has made it clear that it will not be holding on to restrictions longer than necessary by removing the minimum price restrictions in respect of jute shares in the cash list as well as preference shares. If the present improvement continues it will not be long before other restrictions on trading are also removed.

It is however unlikely that the present recovery will strengthen into a boom. For one thing, stock markets will soon be having the Christmas recess and the New Year will bring in its wake thoughts about the shape of things to come in the budget. Additional taxation is generally expected and despite the favourable signs in the war situation, war effort in the country will continue in full measure. These are some of the factors that may well subdue bullish fervour.

NEW ISSUE NOTES

Utkal Machinery

Utkal Machinery Limited, Bombay, will issue capital of Rs 70 lakhs in equity shares of Rs 10 each for cash, at par. Out of this, 66 2/3 per cent will be offered for public subscription to three German companies in equal proportion. Proceeds of the issue will be utilised for the manufacture of heavy vessels and machinery for heavy engineering industries.

Heavy Engineering Corporation

Heavy Engineering Corporation Limited, Ranchi, a wholly-owned Central Government undertaking, is raising capital of Rs 10.35 crores, divided into 1,03,500 equity shares of Rs 1,000 each, to be subscribed privately.

Luk Auto

Luk Auto Ancillary (India) Private Limited, Delhi, is to issue capital Rs 20 lakhs in equity shares of Rs 10 each. Out of this, shares of the value of Rs 9.8 lakhs (49 per cent) will be offered to a German firm against supply of plant and machinery to be imported and the balance of Rs 10.2 lakhs (51 per cent) to Indian nationals for cash, at par.

Jindal

Jindal (India) Private Limited, Calcutta, will issue capital of Rs 4,91,000, divided into 4,910 equity shares of Rs 100 each for cash, at par, to be issued privately.

Dr Paul Lohmann

Dr Paul Lohmann (India) Limited, Calcutta, is issuing capital of Rs 30 lakhs in 3,00,000 equity shares of Rs 10 each on rights basis in the ratio of one new share for every share held.

Dharamsi Morarji Chemicals

Dharamsi Morarji Chemicals Company Limited has proposed to issue right shares in the ratio of three shares for every ten shares held, at par, subject to the approval of the shareholders.

INVESTMENT NOTES Mysore Paper

The expansion scheme of the Mysore Paper Mills Limited is estimated to cost about Rs 3.5 crores. The production under the expansion scheme is expected to begin by the end of next year. A new paper machine, which will have a capacity of more than the two existing machines, is proposed to be installed, while a pulp plant of the latest design with a capacity of 10,800 tons of bamboo pulp is to be erected. It is also indicated that a programme for diversification of the lines of manufacture is under consideration.

Associated Battery

The accounts of the Associated Battery Makers (Eastern) Limited, for the year ended 31 August 1962, reveal a net profit, allowing for depreciation, of Rs 51 lakhs. After providing for taxation and reserves, and Travancore Rayons Limited, being the count, the amount available is Rs 25 lakhs. The directors have proposed to recommend a dividend of 15 per cent, subject to tax, for the full year on the issued capital of Rs 118 lakhs.

TRAYONS

The cotton linter pulp plant of Travancore Rayons Limited, being the first of its kind in the country, was commissioned a few days back. The new plant has been erected in collaboration with a Swiss firm. The capacity of the plant is 10 tons daily. It is stated that cotton linter pulp yields cellulose of the purest quality and that Travancore Rayons will be able to produce and supply rayon yarn and transparent cellulose film of superior quality than hitherto marketed by the company.

INVESTMENT BRIEFS

In the Bird group of jute mills, Auckland has proposed an interim dividend of Rs 5 per share; Dalhousie Rs 5; Lawrence Rs 5 and Union Rs 5 and Northbrook 50 nP, all subject to tax, for the year ended 31 March 1963, payable to those shareholders whose names are registered as on 29th December 1962. Transfer Books will be closed from 24 to 29 December 1962.

India Paper Pulp Company Limited has announced an interim dividend of 50 nP per share, taxable, for the year ended 31 March 1963. This is payable to those shareholders whose names are registered as on 9 January 1963. Transfer books will be closed from 26 December 1962 to 9 January 1963.

Britannia Biscuit Company Limited has proposed an interim dividend of 6 per cent on the ordinary shares, subject to tax, for the year ended 31 March 1963. The dividend is payable to those shareholders whose names are registered as on 19 January 1963. Transfer books will remain closed from 7 to 19 January, 1963.

General Tyres Limited has made the second and final call of Rs 2.50 per equity share and Rs 25 per preference share, payable before 31 January 1963.

The scheme of arrangement of the merger of Magnesite Corporation of India Limited with Dalmia Cement (Bharat) Limited comes into effect on 1 January 1963.

The next meeting of the LIC Investment Committee will be held at Bombay on 9 January 1963. Offers for the consideration of the Committee should reach the Executive Director not later than 8 January 1963. Offers received thereafter will not be considered.

Tube Suppliers Limited has extended the final date for the payment of the last call to 31 January 1963. The company has not recommended any dividend for the year ended 31 July 1962.

STOCK EXCHANGES

Impressive Recovery

Watch-Dog Writes:

FOR the first time after several weeks, a definite improvement in sentiment is noticed in stock markets, thanks to a general feeling that there may not be a resumption of hostilities on the Northern border. Prices of most shares have crossed and improved upon the minimum levels, resulting in an increase in turnover. If the present trend continues, the controversy over the minimum prices will die a natural death.

Conditions on Lyons Range took a definite turn for the better with more attention directed towards jute shares.

Dalal Street was very active and prices generally improved on a wide front. Automobile and Tyre shares were in good demand, presumably due to defence orders.

The Madras Stock Exchange manifested a firmer tendency. Activity was widespread, with good business done particularly in the Planting section.

Sustained enquiry in a few selected shares imparted some confidence to the operators on Delhi Stock Exchange.

The revival of trading, though on a very small scale, was in evidence on the Ahmedabad Stock Exchange.

The London Stock Exchange had, however, another week of unsettled conditions.

Although the news background remained largely encouraging, further ground was yielded by Wall Street. The damage done to values was however, mild.

CALCUTTA

THE local stock market witnessed active trading during the week under review. Signs of a rally were clearly visible on Saturday itself and this was fully extended during the week's session. Prices of most shares crossed the minimum levels and there was an appreciable increase in the volume of business.

The main fillip for the market was derived from the news about the setting up of Indian administrative posts in the areas vacated by the Chinese. Subsequent reports of a further withdrawal by the Chinese from certain other areas and the renewed efforts now being taken by the representatives of the Colombo Conference to bring about peace gave rise to a feeling that the hostilities on the

border front might end at an early date. It was also being realised that the outstanding loads on the market had been eased by the recent purchases made by the LIC.

In view of a definite turn for the better in the conditions of the market, the Stock Exchange Committee decided to lift the minimum price restrictions in respect of all preference shares and jute shares in the cash list with effect from Friday, 21 December. The Committee also decided that there would be no compulsory carryover from Clearing No. 378 in respect of Birla Jute, Hindustan Motor, Indian Aluminium, Indian Copper and TEXMACO. It was a fact that the minimum levels, fixed by the authorities acted as a deterrent to the prospective buyers or sellers. It was even suggested that the minimum prices should be revised downward or altogether abolished.

With the steady improvement now noticed in the market, there is a growing feeling that the authorities may relax all restrictions on trading in the next few weeks and even the ban on forward trading may be removed, provided the present sign of a little change in the political climate continues. There is, however, a general disposition on the part of the bull operators to follow the recovery move rather cautiously in the absence of genuine support from investors.

A notable development in the Gilt-edged section was the reduction in prices announced by the Reserve Bank in respect of some Central Government securities. This, however, had made hardly any impact on the market. The actual business transacted was extremely limited. 3 per cent 1966 Conversion Loan changed hands at Rs 63.10 to Rs 63.50.

In the week's dealings, more attention was directed towards jute shares. This was mainly due to the inspiration derived from the announcement of satisfactory interim dividends made by some companies in the Bird group. It was generally felt that other companies might follow suit in view of the satisfactory working of the industry during the current year. Birlas changed hands upto Rs 31.00 from Rs 30.12; Ganges up to Rs 14.12 from Rs 13.25; India up to Rs 17.87 from Rs 18; New Central up to Rs 14.12 from Rs 13.25; Delta up to Rs 180 from Rs 171 and Kamarhatty up to Rs 169 from Rs 164.50.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

BIRD & CO., (PRIVATE) LTD., F. W. HEILGERS & CO., (PRIVATE) LTD.,
Chartered Bank Buildings, Calcutta-1

88003

Indian materials, Indian craftsmanship have gone into the building of India's first basic research centre from private industry at Goregaon, Bombay. Sponsored by CIBA, the centre will bring together Indian scientists to conduct fundamental and applied chemical research for the health and well-being of our people.

HINDALCO ALUMINIUM

TO MEET THE GROWING
DEMAND OF MANUFACTURING
INDUSTRIES

The 20,000 tons (per annum) aluminium plant of Hindustan Aluminium Corpn. Ltd. is in operation from May 1962. Supplies of Hindalco's very high quality COMMERCIAL GRADE ALUMINIUM INGOTS, ELECTRIC CONDUCTOR GRADE ALUMINIUM INGOTS and ALUMINIUM WIRE-RODS (rolled from "Hindalco" ingots) are now available to meet the nation's industrial requirements.

...And all you do is turn the key!

Turn-key jobs are a speciality of Larsen & Toubro. From the design and construction of buildings to the supply, erection and commissioning of plant and equipment, L&T can do the job for you. ⚙️ Larsen & Toubro represents some of the world's foremost manufacturers of plant and equipment in every branch of engineering. L&T's own manufacturing programme at its Powai Works embraces a wide variety of equipment. The Company's qualified engineers and first-rate service stations ensure effective after-sales service. ⚙️ With its ten Divisions and several subsidiary Companies, Larsen & Toubro is in an excellent position to undertake turn-key jobs, including all design work, civil engineering, and the supply and erection of equipment.

The Economics of the Emergency

DISCUSSION of the economic tasks before the nation during 1963 is complicated by the ambiguities and imponderables of the situation. In this respect, the position in November last was substantially different from what it is now. Then the outlook was more immediately grim, the choices at least were clear-cut. National duty dictated itself quite simply as the gearing of the nation to the stark reality of an unwanted war thrust on us by a predatory neighbour. Much has happened since and it would be ambiguous, if not equivocal, to describe the present state of the economy as on a "war-footing". But it is not either one in which the possibility of actual fighting breaking again can be eliminated from the calculations. India has accepted the Colombo proposals designed to bring India and China to the Conference Table, but China is still stalling. It is conceivable that China may eventually accept the proposals and the two countries revert to the position before October last, with inconclusive negotiations taking the place of tedious exchange of notes. On the other hand, fighting may break out once again. This makes it dangerous, if not impossible, to talk of defence preparedness as a leisurely long-haul operation as was being done before Chinese hordes moved into Indian territory last autumn. In other words, the economics of 1963 would be, on present reckoning, neither that of a nation at war nor that of a nation merely strengthening its defence. It is perhaps best described as the economics of the Emergency, a word whose ambiguity exasperates Mr Rajagopalachari's logical mind, but which nevertheless describes the cruel dilemmas of a situation in which the nation has to be prepared for a war that may not come off but which eventually cannot be taken for granted.

No Slackening

It is obvious that in such a predicament, any counsel for the slackening of the defence effort would have to be dismissed out of hand. This is both because it would be suicidal folly to proceed on the assumption that active hostilities will not be resumed again and because strengthening the defence potential of the country against China has become the basic economic fact of our life for as long ahead as we care to look. The present indeterminate state of affairs may give rise to an overwhelming temptation to shirk this task because compulsions behind the imposition

of fresh burdens on the people are now less immediately apparent than in November last. This temptation should be firmly resisted. Fortunately there is sufficient awareness among our people of the implications of having China as our neighbour to make them accept burdens that might seem excessive on a hypothesis of cessation of hostilities in our northern borders.

General Implications

The general implications of this changed situation resolve themselves into two: the primary task of defence and defence preparedness and the consequential secondary tasks. The primary task itself involves action at two levels: obviously we have to increase the strength of our fighting forces, improve the facilities for their training and for the related provision of skilled support. We have also to increase massively the production of arms, ammunition and equipment. At a different level, this would involve the creation of capacity for producing arms and equipment we need which means that the basic defence industries will have to be developed and developed rapidly. This in its turn would impinge on the general productive pattern of basic industries like iron and steel, machine-making, chemicals, engineering, etc. Uninterrupted production in all these would naturally lead on to the over-riding priorities of power and transport and thus we have imperceptibly slipped into the relative urgencies of the Plan itself.

The secondary tasks would principally arise from the pressure on the economy in the expansion in production of what is essentially sterile end-products. This would cut into the investment in endeavours that provide the normal needs of consumption and in those that induce a chain reaction of further productive activity. If active fighting takes place, this pattern of unproductive investment will have to be continued indefinitely. Meantime, economic activity, heightened more than ever before, would generate money incomes that would be chasing fewer goods. The resulting situation would impose its own pattern of subsidiary economic duties. First, shortages in essential commodities will have to be obviated both in the interests of a minimum level of living and of civilian morale. This will have to be done by increased production, by increased investment if necessary, but most definitely by increased productivity. This once again brings up the other

priority written into the Plan for a different reason—the basic importance of agricultural production. While increased production would certainly meet part of the problem, reduced consumption (and equitable sharing) would still be essential for reducing the pressure on scarce goods which might push up prices, especially when there is a lot of money about. Secondly, the order of investment in the economy that would become necessary in the wake of the new priorities requires a substantial increase in the quantum of savings of the community and this is possible only by less wasteful expenditure. The productive pattern of the rest of the economy would also require rationalisation both for the purpose of discouraging investment in the less essential sectors of the economy and to reduce the range of temptation to consume.

The Stern Compulsions of Defence

Finally, there is the task of finding the financial resources for the massive increases in the outlay on defence and the subsidiary economic endeavours necessitated by the changed situation. This question has its domestic as well as foreign exchange aspects. Taking the latter first, a good deal of the equipment we need may have to be obtained from abroad. Friendly foreign countries have responded with encouraging alacrity to our requests for arms. Missions from the US and the UK have visited India and made detailed study of all requirements over and above what we have already received. But, however, sympathetic friends abroad may be, pressure on our foreign exchange for defence requirements cannot be ruled out. This means an already difficult situation will become even more difficult. Taking an overall view, it would appear that new accretions to our foreign exchange resources, besides foreign aid, export earnings and invisibles will have to be found by us at least for that part of the defence equipment that we have to pay for. This is on the assumption that the requirements of the Plan in respect of foreign exchange are met by better export performance and the broadly promised foreign assistance.

The only way, these new resources can be obtained is obviously by activating the sterile hoards of gold in the country. Though gifts of gold and gold ornaments have poured into Government's coffers, there are obvious limits to such generosity.

There are many who, for various reasons, could not bring themselves to make an out right gift of the gold in their possession. These people were asked to make a more limited sacrifice of lending the gold in their possession. But, despite its considerable attractions, the response to the Gold Bond Scheme had been disappointing. Perhaps making the bond a Bearer Bond and the return of gold in specie at the end of the period (both of which are suggestions that Indian Finance made long ago) would probably induce a readier response to the scheme.

In its domestic aspect, the question of financial resources for defence and the related investment in the economy has its stern unavoidable compulsions. It may break our hearts that we should thus be obliged to divert for defence resources for which there are many other more essentially worthy claimants in the economy. But since this investment has come to represent the very condition of our existence, it cannot be evaded. For years we have grudged even the amounts that for we now find to have been totally inadequate for the purpose. It has been estimated that China has been spending around the equivalent of Rs 1,000 crores for the last twelve years on her defence. India on the other hand, has been spending between 1951 and 1961 Rs 2,238 crores both on revenue and capital account on defence which works to an annual average of less than 250 crores, less than a fourth of China's expenditure. Only in the last three years has there been increase in such expenditure. The budgeted figure for 1962-63 was Rs 370 crores and it was only in November last that a supplementary budget was presented which increased the outlay by about Rs 95 crores. The pattern of expenditure in the last three years is shown in the table below:

	DEFENCE EXPENDITURE				
	(In crores of rupees)				Total
	1960-61	1961-62	1962-63	1962-63	
Revenue a/c	248	302	343	75	418
Capital a/c	33	26	33	20	53
Total	281	328	376	95	471

Selected Economic Indicators—I

	National Income and Per Capita Income			
	1950-51	1955-56	1960-61	1961-62
1. National Income (in crores of Rupees)				
(i) At current prices	9,530	9,980	14,160	14,630
(ii) At 1948-49 prices	8,850	10,480	12,750	13,020
2. Per capita Income (in rupees)				
(i) At current prices	265.6	256.0	326.2	329.7
(ii) At 1948-49 prices	247.5	267.8	293.7	293.4
3. Index Number of National Income (1948-49=100)				
(i) At current prices	110.2	115.4	163.7	169.1
(ii) At 1948-49 prices	102.3	121.2	147.4	150.5
4. Index Number of per capita Income (1948-49=100)				
(i) At current prices	106.8	102.2	130.7	132.1
(ii) At 1948-49 prices	99.2	107.3	117.7	117.5

	PERCENTAGE OF CHANGE	
	First Plan	Second Plan
5. National income		
At current prices	+ 4.7	+41.9
At 1948-49 prices	+18.4	+21.7
6. Per capita income		
At current prices	— 4.3	+27.9
At 1948-49 prices	+ 8.2	+ 9.7

It will thus be seen that even after the increase in November last, the total expenditure by us is less than half of the Chinese expenditure. In physical terms, the leeway we have to make is even more alarming. Taking the size of the army alone, it has been estimated that the size of the Chinese army is about 3.5 million in regular cadre besides a militia estimated at 30 million men. And China has been fighting for the last thirty-five years of her life.

An Estimate of the Effort

There has been many estimates in the recent months of the order of effort for mobilising resources for the twin purposes of immediate strengthening of the defence of the country and of the basic investments needed for reorienting the economy to meet the new situation. The latter task does not involve any radical changes in the magnitudes already written into the Plan. The former calls for ad hoc increases with a certain amount of flexibility to meet all possible eventualities. In the nature of things, these projections are largely speculative and are valid only within a wide range of variation.

We may take the projections made by the NCAER as fairly typical of the kind of guesses of the order of financial effort needed. The NCAER puts the broad economic aggregates of the new pattern as follows:

Achievement of the cumulative rate of growth of the national economy of seven per cent;

Increase in the rate of saving of the community over the five year period from 8.5 per cent to 12 per cent and of the marginal rate of saving from 17 to 25 per cent in 1963-64;

The ratio of aggregate investment to income to be stepped up to 15 per cent instead of 14 per cent envisaged in the Third Plan;

Increase of Rs 753 crores in the Third Plan target of additional taxation; and

A rise in per capita consumption of 11.4 per cent over the five years, 1961-66, as compared with the 17 per cent anticipated in the Plan.

Against a rate of 5.4 per cent envisaged in the Plan, the increase in national income during the first year of the Plan was only 2.2 per cent. The assessment of prospects for the current year is more encouraging and, over the first two years, the increase in national income may be a little over 7 per cent. But, to achieve the Plan target, national income will have to increase at 7 per cent in each of the following three years. Considering the different sectors, the cumulative rates may have to be of the order of 5 per cent in agriculture and allied activities, 14 per cent in industry and 6 per cent in the tertiary sector. Achievement of this rate of growth will involve more rather than less investment. Thus the increase in financial outlay of the Plan as such may be taken to be provided by eliminating the distinction between physical and financial targets made in the Plan and making the financial target as Rs 10900 crores.

While the problem of finding finance of this order is serious, it is not beyond the capacity of the people or the economic and social institutions built up during the last few years. Taking into account the additional requirements of defence, and allowing for foreign assistance that may be available for current expenditure on defence account, the total outlay on investment and current outlays for the Plan period has been estimated at Rs 13,600 crores. This comprises, plan investment of Rs 10,900 crores, plan current outlay of Rs 1200 crores, defence investment of Rs 450 crores and current additional expenditure on defence Rs 1050 crores. Assuming that the foreign exchange component of the additional net investment would be in the same ratio as indicated in the Third Plan, the total domestic resources required for the Plan and for meeting the defence needs have been estimated at Rs 8550 crores, of which Rs 4750 crores will be in the public sector and Rs 3800 crores in the private sector.

Selected Economic Indicators—II

CURRENCY AND BANKING

	Outstanding as on		
	25 January 1963	31 March 1962	31 March 1961
	(Crores of Rupees)		
1. Currency with Public	2,298.32	2,207.81	2,098.05
2. Demand deposits of Banks	853.93	832.52	757.10
3. 'Other deposits' with the RBI	18.74	23.34	18.95
Money Supply with the public (1+2+3)	3,170.99	3,063.67	2,874.11
Foreign assets	95.46	128.15	136.25
Scheduled Banks Deposits	2,046.71	1,931.07	1,746.06
Scheduled Bank Credit (exclusive of inter-bank credit)	1,470.55	1,410.78	1,319.54

Rs 6800 crores for Three Years

Economies in investment and current expenditures are expected to result in savings of Rs 100 crores under each item. Allowing for these savings, the total financial resources that Government will require to meet all its Third Plan commitments as well as defence needs will be of the order of Rs 6300 crores as shown below:

	Rs crores	
Plan investment	4,350	
Defence investment	300	
Plan current expenditure	1,100	
Defence current expenditure	1,050	
Total	6,800	

The total foreign assistance required by the public sector will be Rs 2,650 crores of which Rs 2,350 crores will be for the Plan and Rs 300 crores for defence.

Out of the total of Rs 6,800 crores of domestic resources required, Rs 5,430 crores will be for the Plan as against original provision of Rs 5,300 crores and Rs 1,350 crores for defence. Against requirements of this order, total resources raised by the Centre and State Governments over the past two years are estimated at Rs 2,346 crores. Of the balance of Rs 4,454 crores, the amount that is required in addition to the Third Plan provision is Rs 1,500 crores, of which Rs 150 crores will be for achieving plan targets and Rs 1,350 crores will be available for defence. For raising the extra resources of Rs 1,500 crores, additional receipts as compared with Third Plan estimates are indicated under the different heads as shown below:

	Rs crores	
Balances from current revenues	5	
Contributions of Railways	—50	
Surplus of public enterprises	150	
Loans	150	
Small savings	192	
Provident fund, etc.	753	
Additional taxation	300	
Deficit financing	1,500	
Total	1,500	

Additional taxation: Rs 285 crores per year

More than half the additional resources are to be raised by additional taxation. The Third Plan target of Rs 1,710 crores has been raised to Rs 2,463 crores, of which Rs 1,705 crores is the target proposed for the Centre and Rs 758 crores for the States. Against these targets, the estimated yields over the plan period of the new taxes introduced during the first two years are Rs 850 crores for the Centre and Rs 354 crores for the States, leaving a balance of Rs 855 crores at the Centre and Rs 404 crores in the States to be met by additional taxation during the next three years. The NCAER has suggested new levels to

Countries We Export To...3

Canada
has from January
to June 1962 purchased
396000 pairs of footwear
from **Bata** India

bring in additional yields under different heads as shown below:

	Rs crores	Rs per annum crores
Centre:		
Excise	155	465
Income-tax	50	150
Corporation-tax	35	105
Salt-tax	35	105
Tax on Bank advances	6	18
Tax on advts.	4	12
Total	285	855
States:		
Land revenue	50	150
Electricity duties	4	12
Betterment levy	10	30
Plugging evasion of sales-tax	42	126
Scrapping of Prohibition	30	90
Total	136	408

Assuming that the extra resources needed to accommodate the new demands in the rest of the Third Plan period is as worked out above, it seems that the estimates of receipts under various heads would admit of argument. We agree that surpluses from public sector undertakings, far from providing the extra funds now found necessary would fall short of even the estimate of Rs 450 crores anticipated in the Plan and the short-fall estimated at Rs 50 crores by the study may be on the low side. We also agree that the additional permissible limit of deficit financing is Rs 300 crores besides the Rs 550 crores written into the Plan. The average of slightly over a hundred crores of rupees has been exceeded in the first two years. The need for discipline in this regard is certainly overwhelming.

Economy in Expenditure

But about the other estimates in the computation, we have our reservations. First of all, it seems that the extent of economy in expenditure put at Rs 300 crores for the rest of the plan period seems an underestimate to us. By reducing conscientiously all needless non-plan expenditure alone there should be sizeable saving. Again, the new merciless jettisoning of projects that the priorities have pushed low down if not out of the list—television and the more fanciful social service items, prestige projects that are status symbols are obvious examples—would save sizeable sums. Above all, a careful reexamination of estimates and more efficient use of available resources could—as proved by the improved performance of the Railways last year—could save enormous sums. The tax-payer has a right to expect that Government would seriously examine the possibilities in this regard before touching his pocket, since financing such expenditure out of taxes at this juncture would be doubly inexcusable since it not only does not finance essential tasks but diverts the funds from them to inessential ones.

*Provisional.

†Seasonally adjusted.

Secondly, the estimates do not appear to take any account of the receipts from donations to the National Defence Fund. There is reason to believe that the size of the fund is far more considerable than what appears from periodical press reports of the total credits to the Central Account, since there appears to be some time lag between collection and final accounting.

Thirdly, without in anyway minimising the extent of the tax effort required, it seems to us that the staggering magnitude of the estimate made in the study has been necessitated, apart from reasons mentioned above, by the underestimate of receipts from provident and other funds—to which a new addition of considerable financial potential is the fund created out of premia for Emergency Risks Insurance—small savings and market borrowings.

Compulsory Savings

Taking small savings, it seems to us that it should be possible to obtain from this source far larger sums than what has been estimated. It should be possible to dovetail into this a scheme of compulsory savings of a certain percentage of the income of every individual and earning entity. In particular, this can be applied to people at the lower income groups where it can take the place of income-tax. In his pamphlet on "How to Finance the War" published in 1940, Keynes had suggested such a scheme in which a portion of every wage earner's income was automatically invested in government bonds redeemable after the war, finance for which was to be found by a capital levy. Standing his General Theory on its head, Keynes suggested forced saving to finance (and mitigate the consequences of) excessive investment, thrust by circumstances exactly as he suggested stimulation of investment to correct a situation of excessive savings. The advantages of the procedure are several: the sum is available to Government when it needs it, excess purchasing power is withdrawn, money that would probably have been consumed is made to earn an income for the individual and above all, it is not, like tax, completely expropriated. There is also a psychological advantage. At the moment small savings are nominally voluntary but complaints of subtle and blatant pressures for investment in it are widespread. A well-thought out scheme of compulsory savings grafted to small savings schemes would formalise the element of compulsion and thus not make it as odious as it is now because of its furtive illegality.

Borrowing from Strength

As regards market borrowings, we have often deplored in the past that Government has tended to underestimate market borrowings as a source of finance for the Plans and relied more on taxes. The attraction of tax has been its expropriatory nature and the absence of the necessity to repay. No doubt taxation will still remain the principal source of collecting money for financing development and other expenditure. But there is wisdom in the old fashioned notion that market borrowing should finance capital and extraordinary expenditure and taxation the current expenditure of the Government. From this point of view, the venturesomeness of Government in the last few years has left a great deal to be desired. Even in the various schemes for borrowings introduced after the Emergency was declared, there has been a tendency to borrow almost apologetically offering the most favourable terms to the borrowers. The situation has also been complicated by the Reserve Bank following, on its assessment of the needs of the monetary situation, a dear money policy thus incidentally making money dearer to Government also.

It is odd that Government which thinks nothing of increasing taxes should, when it wishes to borrow, be afraid of alienating the public and try to seduce it with attractive interest and discount rates and other inducements. This is a wholly

wrong approach in our view, especially in the present context. The patriotic urge released by the Chinese aggression would have made the public respond eagerly to loans even though the interest rates and other terms were not attractive.

We know the objections to this line of thinking. First, it will be urged that the response so far, especially to gold bonds, has not been encouraging. But there are special reasons which we need not go into here why the gold bond scheme flopped. Secondly, it will be urged that the gilt-edged market is not in a good shape and none except those who have to buy Government securities for statutory or institutional reasons, buy them. This is not wholly true. Even if it were, the remedy for a sick gilt-edged market is the opposite of what is being done. Obviously new issues with attractive terms of interest would further depress earlier issues in the market with less attractive features and the resulting drag pulls down the new issues also eventually. And secondly if there is already a specialised market for gilt-edged where the terms of issue are comparatively irrelevant, there is no necessity to provide any inducements at all. What such institutional investors, especially bankers, require is not so much attractive interest rates as a convenient pattern of maturity with a certain amount of room for manoeuvre for liquifying assets without too great a loss. Moreover, the state of the stock market after the Emergency, in which the equities were no longer a serious rival to gilt-edged should have been taken advantage of for less liberal terms of issue. All over the world, during a period of war, for reasons of patriotism and allied considerations, the market for gilt-edged has remained sound. This has been taken advantage of for low interest rates and long maturities. The pumping in of money of the order envisaged in an economy in which opportunities for alternative investments would be regulated if not curtailed gives a certain built-in opportunity for government borrowing. Quite a considerable part of this money will get into the banking system which for statutory and liquidity reasons may find it expedient to invest in gilt-edged. For all these reasons, a programme of borrowing from strength, with appropriate use of the patriotic sentiment, should fetch government far more than it dares hope.

The shape of taxation

All this does not mean that the tax effort that will be imposed upon the nation in the coming years can be light. Far from it. The general expectation at least for the coming year is that defence expenditure would have to double itself. This would involve a tax effort for the Centre of at least Rs 200 to Rs 250 crores. The most feared and most spoken of as inevitable is an increase in corporate taxation. A five per cent increase is freely mentioned. Such a blanket increase would be wrong for at least two reasons. First, the tax

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

BIRD & CO., (PRIVATE) LTD., F. W. HEILGERS & CO., (PRIVATE) LTD.,
Chartered Bank Buildings, Calcutta-1

BRD/23

on companies was raised only last year despite earlier representations that the change-over to a 45 per cent tax plus the abolition of grossing up did not leave companies where they were before as was assumed when the change was made. Secondly, the lower corporate earnings feared this year would also belie the expectations that last year's increase would cut more sharply into the available resources of the companies who have had (and are having) massive burdens laid on them by the Centre (like the Emergency Risks Insurance) and by the State Governments (like West Bengal's levy on industrial power). The revival of the Excess Profits Tax, which is also mentioned as a possibility, has very little revenue attraction, since the standard profit computation like the one in vogue during the war years would leave little excess profits to tax. On the other hand, there is something to be said for a selective increase in corporate tax which will have some of the characteristics of the Excess Profits Tax without its conventional mechanism. For example, a five per cent levy on profits in excess of what the Tariff Commission considers reasonable return in some of its price-fixing formulae, would in effect be an Excess Profits Tax.

For the rest, there is room for marginal adjustments in Wealth Tax (whose yield up to December has been disappointing) and Estate Duty, increases in the middle reaches of income tax which are at the moment comparatively lightly taxed. Among the other levies suggested is a tax on bank deposits, which the Finance Minister will do well to dismiss out of his mind, if it has entered it at all. Any discouragement to putting money in the bank should be avoided, for monetary and tax reasons, especially when there is a lot of it about. Tax on cheques, an exoticism sought to be imported from Ceylon, is again capable of driving money outside the banking and tax-paying system, with no good to anyone. Tax on Advances may more plausibly be presented as a fiscal supplement to monetary measures to curb excessive expansion of credit and to bring about a more

desirable debt-equity ratio. Here again, the objection to blanket curbs on credit instead of selective ones that we have advanced for monetary reasons from time to time holds good in the fiscal context. A tax on import licences—some have even suggested their auction—is sometimes mentioned as a desirable fiscal and economic measure. Imports on private account are estimated at about Rs 200 crores annually and a levy that will roughly absorb the premia at which these licences are openly hawked in the market will put into Government's pocket moneys now going into private ones. The argument that costs will be pushed up by the levy doesn't hold water since the premia paid does it anyway and no new burden will be cast by the tax.

Finally, excise levies offer some scope for increase both in range and depth, especially on luxury items. One only hopes that the Finance Minister will spare industrial raw materials. And if Mr Desai is too much of a Gandhian to scrap prohibition, he is enough of a realist to overcome reasons of sentiment for imposing a levy on salt.

Accent on Productivity

Besides the fiscal duties cast by the Emergency discussed at some length earlier, there are other economic tasks before us which are no less important. After all the resources raised are to be made available for specific economic endeavours. Besides defence production whose priority is overriding, other priorities have been readjusted under the pressure of the Emergency. At its January meeting the Standing Committee of the National Development Council spelt these new priorities under five heads: agricultural production, industry and minerals, power and minor irrigation, transport and technical education. Targets have been raised in some cases (technical education and Power) and in others (Power, Steel and Coal) time-schedules have been speeded up. Even within broad allocations, programmes with immediate and

quick returns are to be preferred. Thus, the Community project allocations will finance less than frills and the show pieces and concentrate on better physical performance in tangible tasks like more grains production. Major irrigation schemes with long maturities will have to bide their turn while the minor ones (which have never had their due share) come into their own. Above all, the emphasis should be on productive efficiency, a wide-awake concern to get the best out of every rupee spent, and every hour of work put in, and avoidance of waste of money and endeavour in inessential tasks. It is notorious that in such matters as yield per acre and production per man-hour, we are behind possible achievements by the mere act of wanting them. The Emergency enjoins on us the duty of summoning up at least the necessary will to get the best out of the Economy. If that is done, there will be a spectacular increase in production which alone can save us from the hazards of an economy that will be, despite our best efforts, heavily inflation-oriented.

Indian Banking Under War Conditions

Ever since our country has been invaded by the Chinese, the question uppermost in the minds of bankers has been how will it affect Indian Banking. Some bankers who are pessimistic about the situation feel that they will have to go through very trying times while the optimists, on the other hand, are equally sanguine: they point to the vast development of Indian banking during the second World War. The recent slump in the share and bullion markets which has naturally affected many banks again goes to show the stresses and strains to which banking is likely to be subjected under the present emergency conditions. The purpose of this article is to discuss some of the problems which are likely to arise in the sphere of Indian banking in the immediate future, assuming that the emergency conditions last for some time.

It would of course be impossible to say exactly what will happen even from the narrow bankers' point of view because so much will depend upon the way the situation develops, the measures the Government adopts to meet it and the extent of aid we receive from various friendly countries. The object of the article therefore is not to predict things, much less to forecast events in the banking field: it is just to indicate in very general terms, mainly based on our experience during the last war, how banks are likely to fare in the next few years.

The steep fall in the value of shares and bullion during the last few months cannot be taken as an indication of what is to happen in future. Such things resulting in sudden changes in the fortunes of people, industries and trade usually do happen during the transitional period before any economy is adjusted to war-time conditions. Industries producing goods for our defence requirements will get all assistance and will therefore fare better whereas some of the other industries in the private sector are likely to be affected for want of raw materials or due to transport bottlenecks or shortage of finance. However, as we go along and get reconciled to the new conditions, we will naturally witness less and less of such difficulties and strain.

Let us therefore see how under the present conditions bankers are likely to fare in the immediate future and in the course of the next few years, once our economy is geared to meet the emergency.

Banking Statistics released by the Reserve Bank of India for the period from October 19th to November 16th do not indicate any appreciable change. There is a drop in the aggregate deposits of about Rs 13 crores which is curiously enough accompanied by almost a corresponding drop in banks' investments in Government securities. There is also a drop of about Rs 8 crores in the total bank credit but that may be due to the sudden fall in the values of equities and commodities or the usual seasonal decline. Looking at banking statistics therefore all that one can say is that on the whole emergency conditions have not produced significant changes in the sphere of banking, at any rate for the present.

BANK DEPOSITS

In the initial stages, one thing is certain, and that is that the bankers' deposits are likely to go down. Most of the donations to the Defence Fund by companies and individuals which are being freely and gladly given will be out of bankers' deposits. Secondly, the contributions to the Defence Bonds etc. which are bound to gather momentum as time passes are also likely to be mostly out of bankers' deposits. Although recent statistics have not yet shown an appreciable drop in banks' deposits, this tendency will be there. As discussed later, however, this will be a temporary phase. As the economy would be geared to the defence requirements, there will be a substantial increase in public expenditure, part of which would reflect itself in increased banking deposits.

By

A. S. NARIMAN

such it will not be a bad idea if banks try to adhere to the liquidity ratio of 28 per cent as prescribed by the new banking legislation, although under the law they have been allowed to do so in two years. It would be desirable on the part of banks to do it as soon possible. Difficulties are there, but an attempt has to be made.

BANK CREDIT

Even before the 1962-63 busy season had set in, most banks in the private sector were already overlent. As on 9th November, the total bank credit works out to Rs 1,389 crores—its ratio to deposits being 68 per cent. If the figures of the State Bank were to be eliminated it works out to about 77 per cent. Further, if the figures of the subsidiaries and some of the other banks which are also maintaining a lower level of advances were to be eliminated, the ratio of bank credit to deposits of many Indian banks may work out to over 80 per cent and that also at a time when the busy season has hardly set in. As has been the case among most Indian banks for the last few years they are rather stretched on the very eve of the busy season.

This is obviously too high a ratio and has to be brought down. Of course it will not be an easy task for banks to reduce their advances in view of the falling prices in the share, bullion and other markets. It is already reported that some leading banks have refused to entertain any proposals for fresh advances, and also for increase in limits due to accumulation of stocks—tea, cotton and rayon, in which case it is a clear indication that, perhaps, banks cannot help doing so. As the demand is very large, banks have to ration credit, select their borrowers and if necessary, consider putting up their lending rates to keep out the less needy borrowers.

IMMEDIATE FUTURE

The above facts and figures show that banks are in a difficult position, at any rate at the present time, to take on the additional load of financing industries for defence requirements. While they would make every effort to increase their deposits, it will be upto the Reserve Bank to devise ways and means by which banks can assist the Defence supply industries in addition to meeting the usual requirements of seasonal finance which also may be higher this year owing to transport bottlenecks etc. The Reserve Bank may have to give time to banks to build up

BANK INVESTMENTS

Sooner or later banks will have to subscribe to Government securities on a much larger scale than at present, not only as a measure of strengthening their own position but also as a part of their contributions to the national effort. For the present, most banks have been maintaining a low liquidity percentage. According to the position as on November 16, 1962 scheduled banks' investments in government securities amount to about Rs 685 crores—33.44 per cent of their deposits. However, the State Bank's holdings of securities work out to more than Rs 290 crores—about 50 per cent of its deposits. If the State Bank figures are eliminated from the combined scheduled banks' figures, the percentage of the remaining scheduled banks drops down (from 33.44 per cent) to just under 27 per cent. While this is the general position, it is known that there are banks whose position is still worse and the percentage may be just about 20 per cent in their case.

It is obvious that such a low ratio of Government securities to banks' deposits is inadequate and unsatisfactory. Bankers cannot afford to work on such a narrow margin in the present unsettled conditions. There is therefore considerable need for many banks to increase their investments in Government securities though it may be at the expense of their advances. If they do not go in for more Government securities voluntarily they may soon be called upon to do so by the Reserve Bank. In fact, in the interests of banking as

additional liquidity required by the present conditions. The Reserve Bank may have to come out with a new version of the Bill Market Scheme so that banks may keep on financing essential industries to the required extent. Banks cannot also neglect the other industries altogether.

Some time ago it was reported that there was a crisis in the tea industry in Assam as well as the cotton textile industry in Ahmedabad, as their stocks had mounted up mainly due to the dislocation of traffic. If banks cannot finance such important industries out of their own funds, the Reserve Bank will have to help them by providing the required finance through its Bill Market Scheme. In view of the difficult resources position of banks and the continued demand for credit, the policy of the Reserve Bank will have to be operated in such a way as to assist scheduled banks in finding solutions to these problems as quickly and as effectively as possible.

DISTANT FUTURE

What about the distant future? What will happen if the emergency conditions persist for a few years as appears to be the case from the look of things? If the last war is any guide, banks may not have any serious difficulties. Banks generally do well under war conditions. However, there are two

important points of difference between the last war and the present Sino-India border dispute. The last war was not fought on the Indian soil and there was, therefore, no question of any large scale destruction or loss of Indian property. The present emergency which has affected our own soil is therefore likely to cause an enormous strain on Indian resources. Another difference between the last war and the present situation is that in 1939 banks had large deposits available for lending, whereas today the position is the other way round, as indicated above.

BANKS AND INFLATION

Whatever be our contribution to the defence effort by way of subscription to Defence Bonds, Gold Bonds, etc., these will be only a portion of the enormous funds which will be required to finance defence expenditure.

The shape of things to come as well as the duration of the emergency situation is uncertain; it is anybody's guess to estimate the annual expenses on defence in addition to the budget provision of Rs 382 crores and supplementary Rs 100 crores. As an estimate this may come to about Rs 500 crores, if not more. Moreover, there is an assumption that we will get substantial assistance from friendly countries without having to pay

for it, either in terms of foreign currencies or in rupee payments. We will be lucky if we succeed in mobilising over Rs 150 crores a year by way of National Defence Fund or Defence Bonds etc. Additional taxation may give us not more than Rs 100 crores per year; the balance of the amount of about Rs 250 crores will have to be raised by way of deficit financing, in addition to estimates taken in the Third Plan. The creation of new currency of that much amount is bad enough but as that may be accompanied by the destruction of some of our resources and the diversion of goods and services away from the markets for our defence requirements, the net effect on price and income structure will be multiplied and cumulative. Whatever be the will of the Government, the commercial and the business organisations and the people at large, it appears that it would be extremely difficult to avoid emergence of inflationary conditions on a large scale.

It may be recalled that during the last six years from 1955-56 till September 1962 the index number of wholesale prices has moved up by 38 points—an approximate annual rise of more than 6 per cent. Under the emergency conditions therefore the general prices are bound to rise—may be more than 10 per cent annually. It cannot be

helped: it is the price which people have to pay in every war and the present emergency can be no exception.

Now such a large increase in the new supply of currency will mean a large increase in bank deposits. In fact the increase in bank deposits may be larger as during the emergency conditions, money usually changes hands much quicker than in normal times. That being the case, whatever the adverse consequences such inflation may inflict on our economy, the banking system will benefit. A substantial annual increase in deposits, a large demand for credit, better employee-employer relations, etc are likely to result in a sustained prosperity for banks and therefore an increase in their profits, some of which may have to be passed on to Government in the form of additional taxation.

Indian banks will have of course to put up with some difficulties mostly during the next 6 months or so, roughly coinciding with the current busy season, until our economy is geared to the national emergency. It is this short period that the banks will find trying. They have to get down to brass tacks and adjust their policies in keeping with the conditions during the transitional time. Once they get over the transitional hurdles, they have a prospect of a reasonably bright future.

New Horizons

In pre-Independence era, India had plans and programmes for social and economic betterment of the people. But there was a fundamental weakness—the weakness of their belonging more to the Government than to the people.

Independence came, and with it a new awakening, and people's plans, for the people, by the people. The results were tangible—more and more of better and cheaper things; a better way of life for more and yet more people of our land.

We of DALMIA ENTERPRISES have been constantly endeavouring to produce more and more of such goods that contribute towards improved living standards of our people. We are doing this not only since Independence but almost for a quarter of a century. The task is not so easy. Yet we are going ahead, undauntedly, in the hope of seeing a brighter tomorrow... a new dawn... along the new horizons

The Outlook for Savings.... Its Limitations and Difficulties

By

Prof. V. G. RAMAKRISHNA AIYER

Recent expert studies on savings have highlighted the extreme inadequacy of savings in the context of the need to step up the rate of economic growth in the underdeveloped countries. The supply of savings as a proportion of gross domestic product is low. In contrast with the advanced industrial countries where almost the entire supply of savings comes from the domestic sources, in the underdeveloped countries there has been an increasing tendency to greater reliance on foreign savings to supply deficiencies in internal savings. The increasing reliance on foreign savings only underlines the inability of underdeveloped countries to raise the level of domestic savings. In most underdeveloped countries the levels of total savings have remained practically unchanged.

The pattern of changes in savings has also been not uniform. Domestic saving constitutes government, corporate and household saving with the latter two combining to form private saving in the national economy. The behaviour patterns of these different components of total saving in India are significant.

CHANGES IN THE LEVELS OF SAVING BY SECTOR IN INDIA

(1950-52 to 1957-59)
 (As percentage of gross domestic product)

Total Net Saving	5
Foreign Saving	3
Domestic Saving	2

Taken as a whole, the supply of savings in under-developed

countries is of relatively small volume in relation to the demands for capital formation to sustain an acceleration in the pace of economic development. This is to be ascribed to the level of per capita income, the market variations in the volume of savings, the distribution of income, the size of the export market etc. It is against this general background of the economy of the underdeveloped countries that we have to approach the study of the outlook for savings in India's economic growth.

VOLUME AND PATTERN OF SAVINGS

(In crores Rs at current prices)

	50-51	51-52	52-53	53-54	54-55	55-56	56-57	57-58	58-59
Government Sector	93.84	192.30	88.39	70.99	82.22	69.92	128.92	114.42	103.00
Domestic Corporate Sector	32.15	56.49	4.29	22.87	38.88	54.33	53.89	17.20	34.27
Household Sector	509.88	254.76	492.62	504.88	561.64	785.98	810.36	686.55	837.57
(a) Urban	319.95	59.78	305.79	298.64	392.69	610.42	595.96	481.47	595.21
(b) Rural	189.93	194.98	186.82	206.24	168.95	175.56	214.40	205.08	242.36
Total	635.88	503.55	585.29	598.74	682.74	910.23	992.97	818.17	974.84

The points that emerge from the above data are noteworthy. Most significant is that relating to the proportion constituted by savings in the household sector to total savings and they account for the major portion of total savings. At constant prices savings from this sector had amounted to more than 80 per cent of the total savings for the entire period from 1950-51 to 1958-59. The corporate sector is of relatively insignificant size to have any large share in the total. Within the household sector, it is the urban household sector which is the larger source of savings, its relative share being

more than double the share of the rural household sector. It is also worthy of note that substantial portion amounting to more than 60 per cent of savings in the household sector is in the form of physical assets.

Total savings for the whole period (1951-59) at current prices have risen from Rs 635.88 crores to Rs 974.84 crores, and at constant prices, the increase is from Rs 591.0 crores to Rs 902.0 crores and for the entire period, the household sector's share of total savings amounts to 81.4 per cent at constant prices, and that of the government at 13.9 per cent. As

a proportion of National income, savings have increased from 6.7 per cent in 1950-51 to 7.7 per cent in 1958-59.

AVERAGE SAVING/INCOME RATIOS—AGGREGATE AND SECTOR-WISE (PER CENT)

	1st Plan Period	Three years of Second Plan (56-57 to 58-59)	50-51 to 58-59
Government Sector	10.3	8.2	9.7
Domestic Corporate Sector	37.0	32.4	35.8
Household Sector	5.3	6.7	5.8
Rural Household Sector	2.5	2.7	2.6
Urban Household Sector	12.6	16.9	14.1
Aggregate Saving	6.6	7.9	7.1
Aggregate Marginal Saving Ratio	...	17.3	...

The aggregate savings/income ratio has risen from 5.9 per cent to 7.9 per cent the average ratio for the whole period being 7.1 per cent. The savings/income ratio is the highest for the domestic corporate sector and lowest for the household sector. The Government Sector's average saving/income ratio declined from 13.5 per cent to 7.4 per cent in the early part of the period but rose finally to 8.2 per cent. On the other hand, the average ratio for the Corporate domestic sector declined from 34.2 per cent to 22.4 per cent in the period under consideration.

NCAER FINDINGS

The National Council for Applied Economic Research made a study of the subject yielding results that are strikingly different from the findings of the Reserve Bank. The NCAER estimates are as under.

	(In crores of Rs.)	(1950-51)	(1955-56)	(1957-58)
Individuals	...	472	990	1048
Corporate Sector	...	16	32	21
Government	...	136	113	142
Total	...	624	1135	1211

There is a broad correspondence between the results of NCAER study and those of Reserve Bank study in respect of the proportion constituted by each sector to total savings, but the similarity ends there. In respect of the absolute volume of savings in each sector, and the aggregate savings there is a wide divergence; the estimates of the NCAER are higher in respect of the total volume of savings and also the volume of savings in the Government and Individual sectors. There is consequently a difference in the saving-income ratios, and the finding of NCAER regarding the similarity in the saving-income ratios of the Government and Individual sectors is not also supported by the Reserve Bank study.

In respect of the Corporate sector, the estimates of the NCAER are lower than the Reserve Bank

estimates which may be explained by the fact that the former, unlike the Reserve Bank estimates, make adjustments for inventory valuation. Though the NCAER and the Reserve Bank studies have adopted the method of 'blowing up' to arrive at the total volume of savings from the savings ratio for a limited number of companies, it is noteworthy that the Reserve Bank study accepted the profits as presented in the corporate accounts as they are, and the NCAER makes adjustments in the reported profits. The greatest difference is in the case of individual sector estimates. In fact such divergences, methodology and also the fact that savings estimates in India are only rough in view of the vastness of the size, and the different components contributing to total savings. In particular, the margin for difference and error is bound to be great, in the case of physical assets calculation. For instance, the Reserve Bank estimates of savings in the Household sector omits savings in the form of inventories in agriculture and trade, non-monetised investment in agriculture and consumers' durables, whereas the NCAER includes all these in its estimates. In fact part of the difference in the estimates of savings can be ascribed to the inclusion in the one and the omission in the other of the components of savings and differences in estimation procedure.

It is necessary to emphasise the difficulties and limitations. First, we cannot claim any precision for the estimates. The limitations to the validity of estimates arise from the imprecise classification of receipts and expenditure items as between the current and capital account in Government accounts, lack of comprehensiveness in the savings estimates of local authorities etc. The sample survey method usually adopted in estimates of savings is also subject to inherent limitations and when sample surveys show different results, the difference will be further widened in the estimates based on such results. Again in recent studies of savings estimates, it is not fully realised that under present economic conditions in India, it is essential that any such survey should correlate gross earnings at different levels with domestic expenditure. With increased domestic commitments, such as education of children, medical expenses, marriages etc., it is almost impossible for a wage earner to effect any savings to be invested. It is also to be realised that with the cost of living going higher day by day, and increased standard of living becoming the vogue, the greater the income, the larger the expenditure.

In spite of their statistical inadequacies, the figures presented by expert studies serve to bring out the significance of the general pattern of income and savings, a knowledge of which is

essential for the fulfilment of the financial targets of the Plans. The savings pyramid is even more narrow at the top than the income pyramid for the reason that households with less than Rs 3000 a year constitute 85 per cent of the households and contribute little to net savings, while the top 0.7 per cent of the households with incomes above Rs 15,000 account for more than 100 per cent of the net savings for the urban sector as a whole. Nearly all the families with incomes below Rs 3,000 have annual deficits, and it is in the case of higher incomes, there is a discernible savings/income ratio. Out of nearly 12.3 million urban households, over 6 million seem to have deficit budget while 0.5 million households with incomes above Rs 6,000 a year accounting for 25 per cent of the total urban income contributed almost the entire savings accruing in the urban sector. In fact the

average family in the country is in deficit, and the task of enabling the average household to close this gap—either by raising incomes or by bringing down the cost of living—is as important as the task of stepping up the rate of savings in the country.

It may also be pertinent here to ask whether the national income in response to investment will be steadily moving up. It seems rather doubtful in the light of the failures and disappointments of the Second Plan to assume that the pattern of distribution and the pattern of saving that goes with it will remain unchanged. If the future growth of incomes is confined to households getting less than Rs 3,000—4,000, there is not much of a possibility of the rate of saving rising above the present levels, and measures of taxation on incomes above Rs 6,000 a year accounting for 25 per

cent of the total income which now contribute the entire income accruing in the urban sector are likely to directly affect savings. In the light of our Plan targets, not to mention the new demands of the defence effort, the importance of increasing the volume of savings in the domestic sector can hardly be over emphasised. While there has been significant increases in real incomes, the marginal rates of saving have continued to be disappointing. Special attention should be given to the scope for increasing Government saving both by economy in Government expenditure and by mopping up a great part of the addition to total national income. A diversification of the tax structure with less dependence on external trade, and on enlargement of the tax area in the domestic front may be considered for increasing the volume of saving in the Government sector.

THE HONGKONG BANK GROUP

YOUR KEY TO WORLD TRADE

During 1959 and 1960 this Group of Banks, comprising over 120 branches throughout the world, pooled their vast resources. With their extensive experience and intimate knowledge of world affairs each is superlatively well equipped to offer a comprehensive service. Their informed counsel and invaluable help could be your 'key' to profitable trade.

Export Promotion

By

M. BALASUBRAMANIAM

It is a truism that shortages and bottlenecks are inescapable in a developing economy. At present the sectors of our economy which are causing severe headaches to the Government of India and the Planning Commission are coal, power and transport on the one hand and foreign trade on the other. The former, though acute, is temporary and partly due to mistakes in the allocation of resources. It is essential to have an adequate margin of supply over demand in coal, power and transport and this can be ensured by a larger allocation of resources to them and by planning in advance and for a longer period. But the position in respect of foreign trade is different. The gap between imports and exports threatens to persist for a long time. Even more serious is the fact that there is a conflict between the short term and long term measures to bridge the gap.

The data relating to balance of payments position of India and the regional pattern of India's Balance of Payments (current account) are processed in the appendices I and II. It is evident from the tables that the current account deficits, inclusive of the unrecorded transactions responsible for "errors and omissions", amounted to Rs 310 crores, Rs 511 crores, Rs 349 crores, and Rs 292 crores in the last four years 1954-60. They were met by net capital receipts of Rs 89 crores, Rs 251 crores, Rs 307 crores and Rs 183 crores and drafts on the reserves of Rs 221 crores, Rs 260 crores, Rs 42 crores and Rs 16 crores respectively. In the four years but for the special payments connected with our increased subscription to and repurchases of rupees held by the International Monetary Fund, the reserves would have risen by Rs 26 crores instead of falling by Rs 16 crores. The difficulties in external payments have been increasingly met by severe pruning of import needs and large assistance from friendly countries, though in 1959-60, the export performance also contributed modestly to their alleviations. These difficulties, however, are neither a fortuitous nor a temporary phenomenon. As a country progresses with its industrialization, although the composition of its imports changes radically, its total import requirements may not necessarily go down continually. On the other hand the progress of development, with its stress on industrialization, cannot in its early stages hold out a prospect of a rapidly growing volume of goods and services being available for export. World trade in commodities other than manufac-

tured goods has not in the last decade or two expanded as much as that in manufactures, and an underdeveloped country in its initial strides towards industrialization would, therefore almost necessarily be at a disadvantage in international trade. At our stage of development, therefore, the balance of payments difficulties are necessary incident of the very process of development. They acquire a keener edge when the country's exchange reserves are at a low level such as ours have reached at the end of the fourth year of the plan; and indicate that while vigorous efforts to promote exports and to keep down imports to the minimum optimum level must continue, the developmental programme requires the support of timely and adequate external assistance.

The pattern of this deficit will be clear from the following figures for 1960-61 which was generally a normal year. Imports on private account amounted to Rs 591.5 crores and those on Government account to Rs 496.5 crores to total Rs 1,088 crores. Exports covered Rs 631.9 crores leaving an adverse balance of Rs 456.1 crores. Of the private imports, consumer goods were only for Rs 75.6 crores; raw materials and intermediate goods amounted to Rs 332.1 crores, and capital goods to Rs 106 crores. Of the imports on Government account, foodgrains accounting for Rs 238.4 crores and capital goods Rs 98.1 crores, the rest being iron and steel, railway and communication stores and others.

In some respects, this picture holds out promise for the future. It should be possible by more intensive cultivation to eliminate the imports of foodgrains which constituted more than half the deficit gap in 1960-61. There is hardly much scope in the reduction of consumer goods. So the major issue is in relation to industrial raw materials, intermediate goods and capital goods. It is true that in many countries a large proportion of raw materials is imported

converted into manufactures and exported. In India too, this is true of cotton which is required for blending and higher counts. But, if we look at the foreign trade balance sheet of the textile industry, we find that we imported Rs 40.2 crores worth of cotton and Rs 15.7 crores worth of textile yarn while we exported Rs 12.8 crores of cotton and Rs 73.7 crores of textile manufactures. This gives only a net balance of Rs 30 crores which is highly disappointing. Our textile industry is amongst the oldest in the world and the conditions of that industry are such that we should be able to secure a substantial and increasing proportion of the international market for textiles. If we have not been able to do so and even our existing export trade is being seriously threatened by Japan, China, and Hong Kong and other countries, this is solely due to the inefficiency of that industry.

EXPORT IN THE PLAN PERIOD

It is true that our exports in the First and the Second Plans have been more or less stagnant. If we take the five years' average, Rs 610 crores, was the annual average of the First Plan and Rs 613 crores was approximately the annual average of the Second Plan. More or less it was stagnant. Yet, as against this, the world trade is expanding. All over the world, the effort of every country, whether it is a highly industrialised country, a developing country, or an underdeveloped country, is in the direction of increasing exports. India's gross national product is of the order of Rs 11,980 crores and might become almost Rs 12,500 crores during the current year. Six per cent of that to be pushed out to foreign countries should not be beyond the possibilities of human endeavour, more so in a country surcharged with an over all enthusiasm created in every quarter of the community to do their mite for the country.

If we examine the history of world trade in the last decade, we

find, on a rough estimate, that it would amount to Rs 30,000 to Rs 40,000 crores. Our share in this comes to less than 2 per cent, even though India commands a population, which is one-sixth of the whole mankind. Therefore, even speaking from a purely physical angle, it should not be difficult for us to reach our targets which are very modest and yet which we find very difficult to fulfil, namely, Rs 40-50 crores a year. This works out to just half a per cent extra every year of our averages gross national product. If we can catch up, we should be able not only to fulfil our obligations but to dynamise the economic activities all round. This modest increase is an insignificant portion of the world trade and should not be impossible of achievement.

Our export trade suffers from some weaknesses. One of the primary weaknesses is that our prices are not competitive. We are priced out in agricultural commodities as well as in industrial manufactured articles. This difficulty can only be removed on a long term basis by increasing our productivity. This is by no means peculiar to India alone. All underdeveloped countries of Europe, Africa, Asia, the Latin American countries, the American continent and the East European countries, when they began on the highway of industrialisation, had these very built-in handicaps of a community not accustomed to modern productivity and modern technology. Therefore it is not proper to run down the people of this country as inefficient. We will have to create long term conditions for higher productivity and thus, make our prices in the export markets competitive. The Government is prepared to stand by the exporters and to make the export trade worthwhile.

THE EXPORT PROBLEM:

Exports are increasing but not at the kind of rate that is necessary if we are to earn substantial foreign exchange and work our way out of the problem created by a large excess of import over export. The Government of India is reported to be giving thought to a new plan for export based perhaps on various kinds of incentives. The difficulty is that, with a growing demand in the home market for all types of goods, most of our manufacturers are not inclined to make the necessary effort to compete in the world market with other countries who have more expert knowledge of sales technique than we have. There are also psychological factors involved which economists tend to ignore. Just as the development

of heavy industry in this country needed an act of faith in the capacity of our industrialists to make machines they had never made before, a similar belief that India can make and is making articles of good quality is necessary if we are to push our wares in foreign markets. When Britain was facing a dollar crisis seven years ago, it was necessary for British industrialists to key themselves up to enter the American market in a big way and sell, for example, motor cars in a country which was itself the greatest car making centre in the world. Yet it was done and to-day it is the United States that is girding its loins for an export drive in European markets. The lesson to be learned by India from this is that we should have first of all confidence in our ability to turn out manufacture of competitive quality. In addition to our traditional exports of raw materials, we now produce a long list of goods ranging from lathes, bicycles, diesel pumps and electrical goods to the simpler consumer goods, like pen, pencils, soaps, textiles of all types, shoes, leather goods, plastic articles, cosmetics, oils, packaged goods, jams, etc. Now if we are to export these, not in small quantities as at present but in really large volume, we must direct our attention to selling articles that are as good as those sold by the established exporters of the world. Made in India, should be an attraction to the consumers and not a matter of adverse comment. It is not too much to claim that in some of the lines mentioned above, the locally made article is of good design and quality and the standard of others could be improved considerably. This is not surprising because the machines that are turning them out are of the most modern type.

We have also to do better in the matter of packaging. It is a great mistake for our exporters to think that because the article is sound it can be sent abroad wrapped in newspapers or in unattractive cardboard. We certainly lag behind in the department of advertising abroad and in the outward appearance of our goods. Indian goods as a whole can, however, be successfully advertised abroad on the "Made in India" slogan once our manufacturers and businessmen realise the importance of offering for sale goods which can compete with the products of other countries. Some of our more enterprising firms are already aware of the fact that they have sold considerable shipments abroad—because of image of the national brand they have built. The price factor is also important but in the richer markets of the West it is not so important as in Asia and Africa. Textiles of distinctly Indian design or soaps carrying an exotic perfume are likely to sell even if they are not particularly cheap. But extensive sales promotion effort is essential.

There has also been some discussion of exchange of goods in South-East Asia where the historical trade links have been with distant countries instead of with near neighbours. In this area, Japan is in a position to provide capital goods. India and China will soon be similarly placed and they can set up factories in countries which are still only on the brink of industrialisation. Such countries as Ceylon, Burma, Malaya, Thailand and Cambodia are anxious to begin manufacture of textiles, cement and consumer goods of various types, provided technical assistance is also given. This is a matter for negotiation with their Governments which have national plans of their own. In view of our own difficulties, such assistance will not be easy but unless we make the effort we shall lose ground to other industrial nations and the markets of our nearest neighbours will be lost to us. Japan and China have already done much more in this respect than India and both Government and Industry here will have to give this problem their urgent attention.

INCENTIVES FOR EXPORTS:

Saving and earning foreign exchange through an avoidance of imports and a stepping up of exports, are very important to achieve the targets under the Third Plan. With the increased commitments for Defence because of the threat to our very existence, this compulsion is even greater. From all accounts, it would appear that even with liberal aid from friendly countries, a serious effort would be required to finance maintenance imports of Rs 3,650 crores, not to speak of the need for providing for defence requirements and against the contingency of mistakes in under-estimating the foreign exchange content of the Third Plan. Export earnings have been estimated at Rs 3,700 crores during the Third Plan period or an average of Rs 740 crores yearly. After taking into account external assistance of Rs 2,600 crores and providing for capital repayments and interest charges of Rs 550 crores, the total of foreign exchange resources available will be Rs 5,750 crores. Of this, maintenance imports will account for Rs 3,650 crores while the balance will be utilised for imports of machinery for plan projects and for components, intermediate products etc. In the light of the recent experience, it may be necessary to provide for a higher level of maintenance imports, as a large number of new projects will be coming into being in the next two years. Until it becomes possible for us to utilise indigenous raw materials to a large extent, the new units will have to be helped with the needed imports of raw materials, components or other items so that they can work at full capacity. It will be worth while

to enquire how far indigenous production can be stepped up by intensive utilisation of existing capacity and what can be the consequential saving in imports of finished goods and the surplus available for exports. There is room to think that a sizeable saving in expenditure on imports can be effected if the capacity of some industries can be used fully.

The Third Plan export of Rs. 3,700 crores cannot be considered ambitious though it might not be easy of achievement. There have been recently complaints about the holding up of export of iron ore on account of the transport bottleneck, while some other industries have been unable to maintain production due to the reluctance of the authorities to import larger quantities of raw materials. If exports of cloth and jute goods are maintained and a concerted drive is made to increase exports of engineering goods and iron ore and special inducements are provided to the plantation industries for boosting exports, the task of stepping up exports by Rs 100 crores annually over the Second Plan average cannot be regarded as formidable. Iron ore and plantation products alone can bring in additional foreign exchange earnings of Rs 50 crores, if not more, in a short period. It is encouraging to know that a beginning in the scheme for offering a rebate in taxation in respect of profits out of higher exports has been made. The tea industry is to be helped with long term loans for replanting purposes, the provision of adequate quantities of fertilizers and the like. The attempt to adopt an integrated approach to regulate imports and stimulate exports may not, however, bring about the desired results unless the difficulties in stepping up production and transporting of goods are properly understood. Then only can new incentives yield the maximum results.

EXPORT CREDIT:

As exports grow in volume the need for liberal export credit facilities and better arrangements for discounting export bills will also grow. Those industries engaged in the production of engineering goods particularly would find such aids very helpful. There is really no need for the establishment of special types of institutions on the lines of the U. S. Export-Import Bank or the Subsidiaries of British Exchange Banks to help exporters. What really matters is the availability of medium-term credit on attractive terms and the provision of facilities for discounting export bills without the production of the relevant documents. The Re-finance Corporation which was set up some years ago to help banks to extend medium-term finance to industry can without any difficulty take up the work of providing the required discounting facilities to

member banks to finance the export trade. The Corporation has large unutilised funds at its disposal. Even the sum of Rs 5 crores initially obtained from the Central Government remains unused and was invested in Government securities at the end of 1960. These funds can be profitably employed to provide medium term loans in respect of applications from various industrial units which are seeking to build up export markets by offering favourable terms of payment. If necessary, the P.L. 480 rupee funds can, with US concurrence, be further pressed into service to augment the Corporation's resources.

From the point of view of the foreign buyers who may be willing to place orders for our engineering products, deferred credit arrangements appear to be of vital importance. The total cost to the buyer should not be prohibitive. Some leading Indian engineering units can probably handle large export orders over a period if they can arrange for the necessary credit. With an increasing output of industrial machinery and other heavy engineering items, we would be in a position to step up exports if we can offer our goods on terms comparable with other established exporters. The volume of credit that may be required in the early stages may not be large. Our engineering goods being some what costly it may be examined whether the disadvantage of higher prices for the buyer can be offset by the offer of low interest rates on the amounts payable. As the Re-finance Corporation has been getting its requirements from the Government at less than two per cent interest, it should be able to offer exporters credit facilities well below the ruling market rates. With simplification of arrangements for rediscounting export bills the banking system will be enabled to put its own funds to other good uses, especially if the quota restrictions and the levy of penalties that may go with borrowings from the Reserve Bank do not operate where export finance is concerned. But all this needs to be backed by greater enterprise on the part of our industrialists. Nor is it less important to open a larger number of branches of the leading Indian banks in foreign countries which will not only serve to finance our export trade but also to mobilise local deposits.

A MINISTRY FOR EXPORT

Without export of tea and jute it is scarcely possible to conceive how India could have earned foreign exchange for the massive import of machinery so essential to our industrial development. Most of our tea is bought and consumed by Britain but we face competition from Ceylon, East Africa, etc., and we cannot afford to rest on our oars. We should not take it for granted that tea cannot be sold in Europe as well

as in Britain. Russian-style iced tea can be popularised in Europe, provided the right type of marketing campaign is launched. Tea can produce an infusion which can match the delicacy of wine and the pungency of coffee, no matter whether it is sold in tea bags or in packets. It is noticeable that tea habit is spreading in the United States where iced tea has long been popular.

The industrial progress made in the last decade was indeed impressive. But there were imbalances in the economy e.g. shortage of power and transport and especially of foreign exchange which was needed not only for imports but also to repay the aid India has been getting from abroad. There would therefore have to be strict rationing of foreign exchange for some years to come. A system of priorities would have to ensure that foreign exchange was allocated to maintenance imports (to supply industry already licensed), to import plant to manufacture from local materials goods now being imported, to import raw materials which could be processed for export and finally to replace obsolete plant in the export industries. No doubt such a system of priorities does exist but whether it is being properly applied is open to question.

Besides co-ordination, of export efforts, the Ministry of Foreign Trade should have the positive task of exploring new markets for traditional Indian goods and to develop exports of new items like engineering goods and machines. At present this is one of the functions of the State Trading Corporation. This function is how-
ever, so important that it cannot be left solely to the S.T.C. We have already export promotion Councils for various industries and a good deal of spade work has been done. Indian goods are now being increasingly exhibited at trade

fairs and the commercial counsellors in our overseas embassies are helping exporters. But if a big break-through is to be achieved in the diversification of foreign trade, sustained effort has to be made and a separate Ministry for the job is advisable. In the United Kingdom, almost the entire work of the Board of Trade is concerned with export promotion. The quality of Indian goods is satisfactory and if the price factor can also be reduced by improved productivity, there is no reason to be pessimistic about our exports. The Government and the industrial community will, however, have to give this problem much more attention than it has received during the past decade.

INDIA AND EUROPEAN COMMON MARKET:

While there are clearly certain gains from the Indian point of view in parts of the provisional agreement reached in Brussels between Britain and "the Six", there are others which are detrimental to our interests and still others which leave our position vague and uncertain. The agreement to let tea from India, Ceylon and Pakistan duty free into the enlarged common Market is a notable gain. Other items which will enjoy duty free entry into Britain are cashewnuts, curry powder, chutney and some spices, but their over-all value is not considerable. What has been causing us the greatest worry from the beginning of Britain's negotiations with the E.C.M. is the future of our textile exports, which were valued at Rs 17.2 crores in 1961. These exports are now subject to a ceiling in the U.K. but are admitted duty free. Even if the common Market tariff of 17½ per cent is imposed in three or four stages, we stand the risk of some diminution in exports at a time when we really need to step up our

exports. The provisional agreement, while seeking to temper the wind to the shorn lamb, has not gone beyond providing for remedial action in the form of duty free quotas in case Indian exports decline following the application of the ECM tariff. This is hardly satisfactory for a country whose exports and foreign exchange resources need immediate strengthening.

What is even more inexplicable is the insistence of 'the six' on guarantees from Britain that exports from India (and Pakistan) should not exceed their present level. No agreement has been reached on the treatment of East India kips (in which Madras is vitally interested), jute manufactures, coir mats and handknit carpets. We have substantial ex-

ports to Britain of all these goods, which now enjoy commonwealth preference of 20/30 per cent. The elimination of this preference by the adoption of the fairly high common Market tariff will inflict a crippling blow on our exports of these products to Britain. If the preamble to the provisional agreement, which proclaims the interest of the European Economic Community in the growth of the underdeveloped countries, is not an empty formula, the ECM must adopt a more sympathetic and liberal attitude towards the export problems of countries like India. The offer to enter into comprehensive agreements in 1966 is no answer to the immediate and urgent needs of these countries. India must be helped to export more now and not five or ten years later.

APPENDIX II.

BURMAH-SHELL
deliver the goods

“ The provision of sufficient quantities of the required products in the right place and at the right time often produces serious problems and to solve these necessitates a careful but flexible organization, an elaborate system of transportation, storage and distribution. There are more than 3,000 Burmah-Shell petrol dealerships and over 1,600 kerosine agencies, besides nearly half a lakh kerosine sub-dealers in India's 5½ lakh villages ”

Some Salient Features of the Oil Industry In India

By

KHANDUBHAI K. DESAI

IN normal times and in an economy like that of India devoted to peaceful pursuits, oil in its various forms plays an important role. It keeps the wheels of industry moving and in fact affects the life of the common man everywhere. In the context of the unprovoked aggression launched by China on our borders it has a special significance. It constitutes an important sinew of war. In this emergency the oil industry whether in public or in private sector or in a joint Indo-British cooperative sector like that of Oil India Limited is called upon to put in its very best effort to meet the requirements of the defence service and also industry as, after all, it is industry which sustains the effort to resist the aggressor.

Even before this calamitous action of the Chinese descended, India, under the imperatives of industrial growth and the rising standards of living, had been paying thought to the development of the oil industry with particular emphasis on utilising the indigenous resources of oil available in the country. The progress of the public sector in oil industry during the last half a decade has been a spectacular one. This emergency if anything should make us more determined than ever to reach self-sufficiency in our requirements of oil by intensifying the search for oil. We are proud of the fact that as a result of the activities of the undertakings in the public sector in oil, we will have about 6 million tons of crude oil production by the end of the Third Five Year Plan period and a refining capacity of about 8 million tons in the public sector alone, assuming that our plans for the expansion of the public sector refineries in Gauhati and Barauni materialise and also the proposed refinery in the South comes up. This, however, does not mean that there is not sufficient scope for further refining capacity. The field is a vast one wherein both the public and the private can work to their mutual advantage.

Oil industry is capital intensive and its operations are complicated and in this respect it is different from any normal industrial organisation in India or outside. Oil industry comprises many operations including, surveying, prospecting, drilling, production, transport, refining and marketing with entirely different problems and yet inter-related economically.

Before test drilling is undertaken to find oil, extensive geological surveys have to be conducted to locate tracts and regions favourable to the existence of oil-bearing rocks, and when these are defined or earmarked further intensive geological surveys are launched to elicit information about these buried rocks and structures. Only

then a first test well is sited. An idea of the expense involved in the whole project can be had from the fact that a test well, which may or may not be successful, may cost an organisation anything between Rs 25 lakhs to Rs 1 crore. Even when this test drill is successful oil cannot be taken for commercial quantities has to be determined by drilling out-step wells which will define roughly the area of the reservoir of oil and may also give some indication of the reserves there. Each out-step well will cost about Rs 10 to 15 lakhs or even more in case of deep wells. Secondly it is seldom that oil is found in places where it is required, thereby entailing its transportation over some distance to a place where a refinery is located. This necessitates the construction of pipeline connecting the oilfields with the refinery. After the crude oil is refined, and petroleum products are available for distribution, an agency has to be set up to distribute these products through wholesalers, retailers, etc. All this requires considerable capital investment and technical know-how, and as oil has to reach every nook and corner of the country the distribution channels have got to be efficient to ensure supplies at uniform prices as far as possible.

Since our basic approach to problems is pragmatic we have a varied pattern in oil as well. In the field of exploration and production of indigenous oil there was hardly any agency in the private sector in the past apart from Assam Oil Company (owned by The Burmah Oil Company) whose extensive activities in the Assam area over a long period resulted in the discovery of the new Nahorkatiya and Moran fields in 1953-54. The Indo-Stanvac Project was the first major attempt to explore for oil outside Assam but unfortunately it had to be abandoned as no oil or gas was found in the Bengal basin despite drilling several exploratory wells. Apart from these there was no determined consistent effort to search and develop the possible resources of oil in the country. Until about 1954 when the three coastal refineries in the private sector

came up, all of India's requirements of petroleum products with the exception of 0.45 million tons refined at Digboi, were imported in the shape of finished products. These were distributed and marketed by three major oil companies in the private sector, The Burmah-Shell Oil Storage and Distributing Company of India Limited (a company owned half and half by The Burmah Oil and The Shell International), Standard Vacuum Oil Company (later re-organised as Esso Eastern), and Caltex India Limited. The Burmah Oil Company (India Trading) Limited, a subsidiary of The Burmah Oil Company, marketed the Digboi products in Assam, Tripura and Manipur. Under the Refineries Agreement which pro-

vided a price on import parity basis, the three private sector coastal refineries were set up with an initial total throughput of 3.82 million tons (Burmah-Shell 2 million tons; SVOC 1.20 million tons and Caltex 0.68 million tons). Their present capacity achieved mainly by experience of working these refineries over the years and efficiency in operations is about 7.1 million tons (Burmah-Shell 3.5 million tons, Esso Eastern 2.4 million tons, Caltex 1.2 million tons).

It was in this background that the Oil and Natural Gas Commission started its work first as a departmental organisation, later assuming a statutory status in 1958 through an Act of Parliament. A recent amendment to the Act authorises the Commission to set up subsidiary organisations to cover other aspects, thus permitting the organisation to follow, to some limited extent, the vertically integrated pattern which major international oil companies have found suited to the needs of the industry. The Commission has conducted surveys in almost all parts of the country and has drilled exploratory and development wells in Punjab, Cambay and other parts

India is facing a grave threat. Operations such as coalmining, steel making, earth-moving, oil drilling, shipping and shipbuilding, have to be executed with the greatest promptitude, involving maximum efficiency and minimum wastage. During such an emergency the utility of wire ropes is invaluable.

The Usha Martin Black plant at Tatisilwai, Ranchi, is equipped with some of the world's most modern wire drawing, rope making and rope testing machinery.

What is more, UMB wire ropes can be used in different climates, be it in the cold Himalayas or in hot Rajasthan, and under varying conditions below the earth, on the surface, afloat or in mid-air.

At this moment of a foreign exchange crisis, Usha Martin Black sets an example by manufacturing what hitherto had to be imported and thus saves vital foreign exchange.

JVTUMB 4226A

of Gujarat, and the Brahmaputra Valley, besides drilling structural and information wells in U.P., Punjab and Gujarat. The Commission's efforts have already met with considerable success.

Up-to-date the Commission has drilled in Cambay 30 wells of which 2 are oil producers, 15 are gas bearing and the remaining are either dry holes or are awaiting further testing. In Ankleshwar area, out of 54 wells completed, 51 are oil producers and only 3 are dry. The first well in Sertha (Kalol) turned out to be an oil producer and subsequently two more successful wells were drilled there. In Rudrasagar, Assam, out of four wells completed three are oil producers and one which has only recently been completed, awaits testing. Besides this, the Commission had drilled a number of structural wells in places like Hoshiarpur, Adampur, Januari and Zira to elicit data about the formation of soil and possible oil-bearing rocks. Ankleshwar oilfield has already gone in production and the daily output is being stepped up to about 1800 tons.

The Indian Refineries Limited was set up by the Government to undertake the construction of the two public sector refineries at Gauhati and Barauni which between them will refine 2.75 million tons of Upper Assam crude oil. The Gauhati refinery has already gone on stream while work in respect of Barauni is in hand. The refinery in Koyali in Gujarat with a capacity of 2 million tons per annum, will be under Oil and Natural Gas Commission. To distribute the products of these refineries in the public sector and also to market some of the imported refined petroleum products, especially middle distillates and Kerosene, being purchased with rupee payments, the Government has set up the Indian Oil Company which was incorporated on 30th June 1959 with an authorised capital of Rs 12 crores. The Government have also set up an organisation, within The Indian Refineries Limited, to construct a net-work of pipelines in the country to facilitate the movement of finished products mostly. Currently the preliminary work on the construction of the products line from Gauhati to Siliguri, a distance of 260 miles, is in hand. The project is estimated to cost Rs 6 crores.

The foregoing very brief description of the various organisations working in the field of oil will show that both the private and the public sector are operating side by side in the oil industry. But apart from these organisations working in the private and the public sector there is the Oil India Limited which is a 50:50 partnership concern of the Government of India and The Burmah Oil Company. In as much as it is neither a fully public sector organisation nor a private sector

company, it would be more appropriate to class it as a joint co-operative sector enterprise distinct from the various undertakings operating in these two sectors.

The success which met the efforts of the Assam Oil Company Limited to discover oil in Nahorkatiya situated about 24 miles from its old oilfields in Digboi was a landmark in India's endeavour to locate sources of oil in the country. It showed the possibilities of discovering oil in commercial quantities so far lying hidden deep below the alluvial silt in the valley of the Brahmaputra. Further it led to the formation of Oil India Limited which was destined to play an important role in the

nation's efforts to develop its oil resources. Oil India Limited was incorporated as a rupee company on 18th February 1959 following the signing of the Promotion Agreement between the Government of India and The Burmah Oil Company and Assam Oil Company on 14th January 1958. The Second Supplemental Agreement signed on July 27, 1961, converted Oil India into an equal partnership venture and it is now engaged in the search for more oil, development of its existing fields and construction of a 720 mile long pipeline to transport this crude oil to the refineries in the public sector at Gauhati (Assam) and Barauni (Bihar). The total cost of the entire project (oilfields and

pipeline combined) is presently estimated at over Rs 75 crores. Out of a total of Rs 50 crores authorised equity share capital of Rs 28 crores have been subscribed in equal proportion by the Government of India and The Burmah Oil Company. The company recently floated debenture stock of Rs 30 crores to meet the rupee expense of its pipeline project whose foreign exchange cost was provided by The Burmah Oil Company and by a loan from the British Government.

Oil India has drilled 140 wells of which 105 wells are successful commercial producers of oil and gas; 19 wells have to be tested further to establish their status and 16 wells are dry. In addition

A BRIEFCASE FULL OF PROFIT

For you...in the CALTEX "STOP-LOSS" Programme

Out of the Caltex Sales Engineer's briefcase comes a sheaf of ideas for cost control through organised lubrication—the Caltex "Stop-loss" Programme.

Start on the programme immediately. You will find that organised lubrication reduces losses in three important directions: production, maintenance and purchasing. The savings will go directly into profits—an average gain of up to 4% safely in the bag.

CAL 5 62 SL

FLYING TO AIRLINK INDIA Today, IAC is operating an air route mileage of over 24,000 to cover the entire sub-continent of India. It maintains 70 stations—some in remote hilly regions of Assam, Kashmir and Himachal Pradesh—making them easily accessible to air passengers. Not all these stations handle heavy traffic; some indeed are on a weekly schedule, yet a full complement of staff and ground equipment must be maintained at all times to ensure peak efficiency. IAC owes it to the people to offer the most because it is more than an airline...it is a public service.

INDIAN AIRLINES

tion two wells, one in Nahorkatiya and one in Moran are being drilled. The total expense incurred by it on drilling operations has been about Rs 17 crores which gives an average cost of Rs 12 lakhs per well including all charges such as construction of approach roads, rigging up operations, drilling, testing, commissioning, rigging down, depreciation and departmental and general overheads. Drilling in the more remote areas of the field has involved larger outlays on road construction and Oil India's constant aim is to reduce the cost of drilling by efficiency and greater speed. In 1961, Oil India completed 30 wells and the average drilling time taken by it to complete wells between 9,500 to 10,500 ft. was only 11 days which compares favourably with the best achievements in any oil field in the world. Side by side with its drilling operations the Company had to set up installations to collect oil from wells, pumping stations, workshops, power stations, stores, godowns, offices and residential accommodation and other ancillary buildings. Out of a total estimated expenditure of Rs 23 crores, on these works the company has already expended Rs 15 crores and good progress has been recorded.

The 16 inch pipeline covering a distance of 250 miles from Nahorkatiya to Gauhati which constitutes the first stage of the 720 mile long pipeline system was commissioned in the first week of April 1962 and the second stage

the 14 inch diameter 470 miles long pipeline from Gauhati to Barauni is currently under initial test. When fully commissioned this will be one of the most modern pipelines of its kind in the world and second longest in the East. The estimated cost of the pipeline project is about Rs 49.50 crores, of which about Rs 36.03 crores have already been expended.

The viscous nature of the Nahorkatiya crude posed a serious problem in transportation; and after considerable research a plant was designed to condition the crude to a state in which it could be pumped through the pipeline in cold weather using normal pumping pressures. Despite difficulties faced in importing very large vessels and equipment from abroad and its transport to the site the plant has made satisfactory progress and is expected to be completed very soon. While it has proved to be possible to feed the Gauhati refinery without the crude conditioning plant, this crude conditioning facility will be required during the coming winter and also when crude oil will be pumped a further distance of 470 miles from Gauhati to meet the requirements of the Barauni refinery particularly in the cold weather.

Although Oil India is still in an advanced stage of development and its present production is below the potential capacity of the oilfields, which can produce 3 million tons yearly, Oil India's annual report for 1961 showed a

gross surplus of Rs 4,65,82,387. After deducting the oil produced so far, the proved and indicated resources of oil and gas are follows:—

Oil	
Imperial Barrels	
Proved Oil Reserves	225,000,000
Indicated Oil Reserves	68,000,000
Total	293,000,000
(46 million tonnes)	
Natural Gas million cubic feet	
Proved Reserves	507,000
Indicated Reserves	249,000
Total	756,000

Oil India Limited is due to receive a letter of grant from the Assam Government to explore in fresh areas of 1,880 sq. miles to which it became entitled under the Second Supplemental Agreement with the Government. Its present leases are as follows:—

(a) Nahorkatiya 0.55 sq. miles for 30 years; (b) Nahorkatiya Extension 64 sq. miles for 20 years; (c) Hoogrijan 280 sq. miles for 20 years; (d) Moran 165 sq. miles for 20 years.

The Board of Directors of Oil India Limited consists of 8 Directors who are nominated in equal proportion by the two partners. The Managing Director is a nominee of the Government and holds office for five years while the Chairman will alternate between the Government and the BOC nominees each year. The Board formulates broad policies and these are executed by the

Managing Director through the General Manager in the fields and a pipeline construction organisation. There is perhaps nothing unique in this arrangement, but the motivating force behind the fine achievement of Oil India is the identity of interest between the Government and The Burmah Oil Company in the affairs of Oil India Limited. This is not to deny that there are no differences but the determination to work together helps in overcoming them. Oil India is perhaps the only organisation of its kind in which the host Government and the foreign expert interests work together, not only in sharing profits but also in managing the affairs of the company. Our experience has shown that this is a good arrangement which ensures Government's sympathy in the affairs of the company, which serves national interests, and possesses the best available administrative and technical know-how. This is in conformity with India's ambition to develop her own oil resources with the assistance received from outside and to build up her own technical know-how in the course of time in the field of oil. Surveying, prospecting and drilling for oil and transportation of crude oil with which Oil India is concerned are highly specialised jobs in the chain operations of the oil industry, and if these can be done on basis of mutual co-operation there is no reason why other aspects of this industry should not be dealt with in a similar manner.

I AM 'HAPPY'!

Yes, 'Happy' is my name, and I am known to thousands of motorists in the many countries of the world.

Now I am here in India—a symbol of that Esso service which has been built up during the past half century, and which today is a proud tradition of Esso.

From now on you're going to see a great deal of me for you'll find me wherever you see the Esso sign—the sign of Happy Motoring. I, 'Happy', symbolise that efficient, prompt and courteous service —which reflects progressive leadership.

Sugar—Control and De-Control

By

MATADIN KHAITAN

In his presidential speech at the 29th Annual General Meeting of the Indian Sugar Mills Association, Mr D. D. Puri rightly observed that "Sugar has swung between regularly recurring cycles of shortage, control, glut and control again. In the three seasons ending 1955-56, we have imported 13.17 lakh tons sugar and later had over a million tons to export. No one can look back with satisfaction on these violent fluctuations or on this almost perpetual state of crisis with which the sugar industry has lived over the last 15 or 20 years." To appreciate this statement of Mr Puri's one will have to go back to as early as April 1942 when statutory control over the price and distribution of sugar was imposed by Government for the first time, ever since the fiscal protection was given to the industry in 1932. The ex-factory prices fixed per maund of sugar were Rs 13-00 in 1942-43, and they were gradually increased to Rs 20.87 till October, 1946. The controls on sugar were lifted on the 8th December, 1947. A gentlemen's agreement between the Government of Uttar Pradesh and the Sugar Syndicate, which was the sole selling organisation for the sugar factories in U.P. and Bihar during periods of de-control, resulted in the ex-factory price of sugar for the season 1947-48 being fixed at Rs 35.44 for D/24 grade sugar. This increase in the ex-factory price was necessitated by the increase in sugarcane prices from Rs 1.25 to Rs 2.00 per maund. In the subsequent season viz. 1948-49 the ex-factory price was reduced to Rs 23.50 per maund, as the sugarcane price was fixed at a lower level at Rs 1.62 per maund.

In August 1949 the retail prices of sugar ruled a little higher and control on sugar was again imposed with effect from 2nd September 1949, the ex-factory price being Rs 28.50 per maund for E-27 grade sugar. The imposition of controls resulted in decline in production in 1949-50, and this in turn forced the Government to relax the controls to a certain extent with a view to maximising the production. According to the policy of selective controls, adopted by the Government from December, 1950, the control was exercised over one million tons of sugar and any quantity produced by a factory in excess of 107 per cent of its production in 1948-49 and 1949-50 was allowed to be sold by it, without restrictions on prices. The policy of selective control was followed till 1952-53 season also, when 95 per cent of the average production of each factory during the two years

1948-49 and 1949-50 was fixed as the basic quota of the factory and one half of the production of each factory in excess of its basic quota was allowed to be sold in the free market, while the other half, together with the basic quota was reserved for distribution at controlled prices. This policy of selective control had its desired effects and sugar production began to show an upward trend. Following the increase in production, controls over prices, movement and distribution of sugar were removed in 1952-53, although a portion of the stocks was reserved for controlled distribution. Government did not find control a necessity in the subsequent seasons till July 1958, when controls were again imposed and an ex-factory price of Rs 26.00 for U.P. and North Bihar, and Rs 36.50 for Punjab was fixed. The control on ex-factory prices was imposed only in the Northern Region which was a surplus region in its requirements of sugar while the Southern and Deccan regions

which were actually deficit regions went unaffected. Control was imposed by the Government on the plea that prices of sugar began to increase after April 1958, in anticipation of larger release for export by the Government and a levy of additional excise duty to cover the export losses. No doubt, the prices did increase, but it was mainly due to some unforeseen circumstances like failure of monsoons, rise in the prices of gur and khandasari and international tension. Sugar prices rose in other countries also, but they were allowed to find their own levels. In India too, by the time control was imposed on the 30th July, 1958, sugar prices had come down appreciably and were near about the levels obtaining before the rise. It was, thus, surprising that ceiling on prices was imposed in a falling market and that too where supplies were surplus. What was more, the price fixed was uneconomic and therefore affected the industry's working. As a result, the pro-

duction in 1958-59 fell and the country was once again faced with a crisis of shortage.

In the next two seasons the pendulum swung once again. Government realised the need to maximise production and Mr S. K. Patil, the Food & Agriculture Minister, announced a policy of incentives. Various incentives such as fifty per cent rebate in excise duty on the excess production of a factory over and above the average output of the preceding two seasons, remission in cane cess for early start and late crushing etc., were announced. Besides, growers were given an incentive in the minimum cane price which was increased from Rs 1.44 to Rs 1.62 for gate deliveries. Correspondingly the ex-factory price for U.P. and North Bihar was raised to Rs 37.85 per maund and for Punjab to Rs 38.35 per maund. In April 1960, control on ex-factory prices was imposed in South Bihar also, the ex-factory price being Rs 38.35 per maund.

These incentives had their desired effects and in the succeeding two seasons viz. 1959-60 and 1960-61, the sugar production increased beyond expectation. A record production of 29.80 lakh tons was obtained in 1960-61 season, while internal consumption had been stagnant at about 20 lakh tons from 1955-56 to 1960-61. Thus within a couple of years a crisis of shortage was transformed into a crisis of surplus. The following table gives at a glance the production of sugar, taxes, ex-factory and open market prices during control and selective control periods and in the seasons when incentives to produce more were announced and during de-control times since 1942-13.

TABLE I

Year	Weather controlled or de-controlled	Production of sugar (in lakh long tons)	Taxes per maund of sugar including Cess and Co-operative Societies' commission	Wholesale price of sugar per maund in U.P. during de-controlled times (including taxes)	Ex-factory controlled price per maund in U.P. during controlled times (including taxes)	Open market price per maund in Uttar Pradesh during controlled times (including taxes)

1961-62	"	27.00 (Estimate)	13.16	—	—	—

*Details for 1961-62 are given in Table-II.

From the above, it can be seen that whenever control was imposed, the production in the subsequent season decreased and in order to maximise production, Government had to resort to extraordinary remedies. Between 1950 and 1952, Government followed the policy of selective controls and between 1959 and 1961 they announced various incentives to boost up production. Leaving aside the adverse effects on the output of the industry that control has, it should be remembered that control of a commodity like sugar cannot be a hundred per cent success, as only about 40 per cent of the entire population in India consume white sugar, while another 40 per cent prefer gur, the remaining 20 per cent taking no sweetening agent at all. Rationing and controls on such a commodity which is not used by the entire population, will not be effective and such measures will only promote unhealthy practices. This was what happened in the past during periods of control. Often sugar was sold at more than double the rate of fixed ex-factory prices, in open market. Thus, the controls have only been detrimental to the interests of the consumers, while the objective of Government in imposing them was to protect their interests.

Another evil effect of control on sugar, had been that the sugar

trade became practically extinct during control times. The factories in the controlled regions were required to sell their quotas to Government nominees, through whom sugar was distributed. Under conditions of scarcity prevailing at such times, such favoured few in the country, were enabled to manipulate stocks and accounts and the ultimate sufferer was the consumer.

While sugar was decontrolled in September, 1961 the Government retained the mechanism of releases 'in the interest of the cane growers on the one hand and the consumers on the other'. The mechanism has been working successfully, as whenever the prices tend to rise, even due to some unforeseen circumstances like increase in the price in gur, Government have been releasing more sugar to arrest the rise in the sugar prices.

It had been the policy of Government in the past to resort to the control of sugar at the slightest increase in its price. Even a 5 per cent increase in price of sugar upsets high-powered bodies like the Planning Commission while substantial increase in the prices of other commodities like gur, jute, cloth, oils etc never seems to have bothered them over much. Often such controls have been imposed without going into the reasons for the rise in prices. Such measures had proved detrimental

to the consumer and to the larger interests of the nation, as the total output of sugar had come down, following controls. It should be remembered in this connection that the sugar prices are correlated to that of gur, particularly in West U.P. where more than 50 per cent of the people prefer gur under normal market conditions and also in Punjab, Delhi and Rajasthan. Past experience reveals that in these regions, whenever the prices of gur went up, the sugar prices also increased, owing to the increased demand for white sugar, created by switching over from gur to white sugar. According to the law of demand and supply, when the demand for a commodity increases, the prices for the same will also increase depending on the supply position of that commodity. In 1958, the prices of white sugar did go up, due to the increased demand, caused by the rise in gur prices. The solution to the problem was to maximise the production of sugar and not to control it. As already stated, controls imposed in 1958 only aggravated the situation, since production came down in the 1958-59 season.

In 1960-61, production of gur amounted to about 37 lakh tons, but in 1961-62, the output came down considerably and no substantial increase in the 1962-63 level is expected. Because of these factors, the gur prices shot up since March 1962. From Rs 15.75 nP per maund in the first week of March it went up to Rs 26.00 in September, 1962. As a natural corollary the sugar prices also went up, but through the Government's mechanism of larger releases, it has been kept within reasonable limits. In fact, during this period, the releases were sometimes larger than what was warranted by the needs of the situation. The following table gives the monthwise prices of sugar since decontrol in 1961 and the prices of gur from March, 1962, in Uttar Pradesh.

Months	Sugar Rs. nP.	Gur Rs. nP.
October, 1961	38 50	...
November, 1961	36 75	...
December, 1961	36 00	...
January, 1962	37 00	...
February, 1962	37 00	...
March, 1962	36 00	15 75
April, 1962	37 00	20 00
May, 1962	39 00	20 50
June, 1962	39 50	21 25
July, 1962	39 50	25 50
August, 1962	40 50	26 25
September, 1962	40 00	26 00
October, 1962	38 50	...

It can be seen from the above that fluctuations in the price of sugar has been only about 5 per cent and it has come down to the level of pre-decontrolled ex-factory price by October, 1962. Compared to this the fluctuations in the gur prices have been as high as 50 percent. This is remarkable when one takes into account the

increase in the internal consumption of sugar, which has risen from 20.93 lakh tons in 1960-61 to about 25 lakh tons in 1961-62. The consumption which had been more or less stagnant from 1955-56 at about 20 lakh tons has shown an increase of about 4 lakh tons or about 20 percent within one year after de-control. The following table gives the consumption of white sugar, gur and khandasari from 1955-56 to 1961-62:—

Year	Total In lakh long tons	per capita In lbs. per annum
1955-56	19.41	11.1
1956-57	19.86	11.1
1957-58	20.42	11.2
1958-59	20.80	11.2
1959-60	20.21	10.7
1960-61	20.93	10.7
1961-62*	25.00	12.4

Year	Total In lakh long tons	per capita In lbs. per annum
1955-56	29.04	16.6
1956-57	32.80	18.3
1957-58	34.50	19.0
1958-59	36.70	19.8
1959-60	34.00	17.9
1960-61	37.27	19.1
1961-62*	34.00	17.7

Year	Total In lakh long tons	per capita In lbs. per annum
1955-56	1.50	0.9
1956-57	1.80	1.0
1957-58	2.25	1.2
1958-59	2.50	1.3
1959-60	3.50	1.9
1960-61	3.00	1.5
1961-62*	2.50	1.2

Year	Total In lakh long tons	per capita In lbs. per annum
1955-56	49.95	28.06
1956-57	54.26	30.04
1957-58	57.17	31.04
1958-59	60.00	32.03
1959-60	57.71	30.05
1960-61	61.20	31.03
1961-62*	61.80	31.03

The increase of consumption by about 4 lakh tons in 1961-62, has increased the excise revenue of the State exchequer by nearly Rs 12 crores. the revenue of the State Governments taken together has also gone up by about Rs 2 crores by way of purchase tax or cess. Incidentally, such a huge increase in consumption could not have taken place but for decontrol. An increase of about 20 percent in consumption was possible, mainly because of the fact that sugar prices have been ruling at reasonable levels in the open market and in fact have been lower than the pre-decontrolled rates. On an average the prices of sugar in the open market during the control time were ruling about Rs 5 per maund more than the fixed controlled prices. Sometimes the prices were ruling Rs 10 to 15 per maund higher than the controlled prices at certain places. Just before decontrol, sugar was being sold at the rate of Rs 45.01 per maund in the open market in Cal-

cutta i.e. over Rs 4 per maund than the controlled prices. Soon after decontrol the prices came down to Rs 41.00 in October, 1961 and the prices continued to go down till February, 1962, when they were ruling at Rs 40.00 per maund. Since then there has been a slight increase in the prices, due to various reasons such as increase in the price of gur, as already stated, but they never touched the rates prevailing just before decontrol of sugar.

Another factor responsible for the rise in consumption is the increase in gur prices, from March this year. It may be stated here that of the total increase in consumption of about 4 lakh tons of sugar, an increase of about 2 lakh tons, can be attributed to the increase in gur prices, as can be seen from the following table, showing the monthwise despatch of sugar by factories for internal consumption for the year 1961-62 and 1960-61.

	1961-62	1960-61	Increase or decrease	Increase or decrease %
	(In Lakh long tons)			
Month.				
November ...	1.89	1.43	+0.46	+32.0
December ...	1.81	1.54	+0.27	+16.0
January ...	1.80	1.46	+0.34	+23.0
February ...	1.79	1.68	+0.11	+7.0
March ...	2.02	2.06	-0.04	-2.0
April ...	2.05	1.56	+0.49	+33.0
May ...	2.36	1.73	+0.63	+36.0
June ...	2.01	1.70	+0.31	+18.0
July ...	2.28	1.78	+0.50	+28.0
August ...	2.43	1.83	+0.60	+32.9
September & October ...	4.56	4.16	+0.40	+9.6
Total ...	25.00	20.93	+4.07	+19.4

It will seen from the above that during November 1961 to March 1962 the total increase in sugar consumption was only 1.14 lakh long tons, while from April to the end of the season, the increase expected is 2.90 lakh long tons. Of this an increase of 2 lakh tons can be attributed to the increase in the price of gur, while the balance 0.90 lakh tons would be due to decontrol of sugar.

Here a word of caution may be added that a portion of the people who have switched over to the white sugar from gur may go back to it, when the prices of gur get reduced. In the larger interests of the nation it is necessary to see that sugar prices are kept at levels 'competitive' to other sweetening agents, as increase in white sugar consumption means extra revenue to the state exchequer. This can only be done by reducing the cost of sugar production, for which earnest efforts on the part of all concerned, viz. the cane grower, the industry and Government are required. Production of gur and Khandsari is a wasteful process, as only a recovery of 5 to 6 per cent of cane be obtained from them, while in the manufacture of sugar the average recovery is about 10 percent. Thus, from the same quantity of cane, the production of sugar would be about 50 percent more than the production of gur and Khandsari.

Past experience has taught us the lesson that the imposition of control is not the proper remedy to bring down prices. The real solution lies in maximising production to take care of increase in demand. Controls on sugar have been imposed in the past, without going deep into all factors relevant or without ascertaining precisely the reason for the increase in prices. As stated earlier, sugar

prices are related to those of gur and any increase in the price of the latter is bound to have some effect in the price of the former. Here again, if there is any increase in the price of gur, it is not the price of sugar, that should be controlled, on the contrary, measures should be taken to bring down the prices of gur. This will be in keeping with Government's policy of protecting the interests of the poorer section of the people most of whom consume only gur and not white sugar. Further it may be mentioned here that even a rise of 10 per cent in the sugar prices will not affect its consumer to any great extent. It can be seen from Table—III above, that the per-capita consumption of sugar is only 12.4 lbs per annum. In other words on an average a consumer spends only about Rs 6 per year on sugar at present day prices as against his total expenses of 142.40 per year. An increase of 5 per cent in the sugar prices i.e. Rs 0.30 will mean an increase of only 0.12 per cent in his annual expenses, which is very nominal.

The problem of shortages and rise in price of sugar can be successfully tackled not by blanket controls, but by the mechanism of controlled releases, invented by the late Food Minister Mr Rafi Ahmed Kidwai. This is the key to maintain prices. Government can dump the market with sugar, if the prices tend to go up. What is required for the success the mechanism is adequate transport facilities to move sugar to places where sugar prices shoot up. The Government have full control over movement of commodities and this mechanism is working successfully. So long as it is achieving the desired results, there is no reason why control on sugar prices should be thought of.

Recent Trends in Indian Joint-Stock Banking

By

A. RAMAN

The Second World War may be said to be an important mile-stone for the development of Indian joint-stock banking; for, as a result of the War, there was an enormous increase in deposits and the number of branches. The deposits of the scheduled banks increased from Rs 259.26 lakhs at the end of March, 1940 to Rs 285.63 lakhs at the end of March, 1941, Rs 318.96 lakhs in 1941-42, Rs 410.49 lakhs in 1942-43, Rs 599.41 lakhs in 1943-44, Rs 778.92 lakhs in 1944-45 and Rs 914.05 lakhs in 1945-46. A similar trend was witnessed in other countries also like England, America, Canada, Germany and Australia. The chief causes for this huge rise in deposits were increase in the total volume of notes in circulation, high individual incomes, control of the channels of investment, difficulties in the way of obtaining the necessary capital goods and the curtailment of private consumption.

The number of branches of the Imperial Bank of India increased from 381 to 426 during the period from 31.12.1939 to 31.12.1945 while the branches of the other Indian scheduled banks rose from 798 towards the close of 1939 to 860 towards the close of 1940, 954 towards the close of 1941, 974 towards the end of 1942, 1,400 towards the end of 1943, 1,976 towards the end of 1944 and 2,419 towards the end of 1945. The factors favourable for the expansion of banking facilities were the absence of adequate scope for those having large amounts of money to invest them in suitable channels owing to the non-availability of capital goods, the abundant supply of man-power and the absence of present-day difficulties like the Bank Awards and the keen competition of the Government for funds. As a result of the liberal policy of branch expansion, the smaller areas came to have the advantage of enjoying banking facilities. There were, however, some defects in this policy of banking expansion such as indiscriminate branch expansion, too wide disparities between the authorized, issued and paid-up capital, the interlocking of Directorates and excessive speculation; and hence, it became necessary to issue Ordinances and finally pass the Banking Companies' Act in 1949.

THE IMPACT OF PARTITION:

The Partition of the country in 1947 created many difficulties for the banking system. Some of the banks had the foresight to reduce their advances in the areas affected by the communal disturbances prior to the Partition to the minimum. But many of the branches of the Indian banks operating in the area of Pakistan had to be closed and some of the advances could not also be recovered with

the result that there was a decline in earnings. The deposits of some of the banks also showed a decline.

For meeting the difficult situation, the Government of India took some steps like the promulgation of the Banking Companies' (East Punjab and Delhi) Ordinance and the amendment of Section 18 of the Reserve Bank of India Act. Under the amendment to Section 18 of the Reserve Bank of India Act, the Reserve Bank was empowered to give loans against any security which it considered adequate. Under the Banking Companies' (East Punjab and Delhi) Ordinance, the Central Government could pass an order staying the commencement of proceedings against a bank having its head office in the East Punjab or Delhi for a period of three months which, however, could be extended. A sum of Rs 1 crore was also set apart for the rehabilitation of the banks affected by Partition.

A great dislocation of business was caused by Partition. A crisis was expected to develop but fortunately, it was averted by the organized banking system. This was because of the wisdom and foresight of the organized banking system as well as the help given to it. The unorganized sector of the banking system was, however, put to difficulties.

THE BANKING COMPANIES' ACT

An important landmark in the history of Indian Banking soon after the close of the Second World War was the passing of the Banking Companies' Act in 1949. This Act defines the business of banking, prohibits the employment of Managing Agents, prevents banks from undertaking certain functions and imposes restrictions on the holding of immovable property. It also lays down the minimum capital requirements, regulates the relationship between the authorized, subscribed and paid-up capital, restricts the voting rights of shareholders, prevents the interlocking of Directorates, imposes restrictions on the granting of loans and advances and lays down the minimum reserve require-

ments. It has also given enormous powers of control and supervision to the Reserve Bank. These powers include those of the licensing and inspection of banks, the asking of information regarding their business and details and statements as regards the advances granted to industry, trade and agriculture, laying down the margins to be maintained in respect of advances and determining the purposes for which advances may and should not be given and the interest rates to be charged on advances.

The Banking Companies' Act has been amended in 1950, 1953, 1956, 1959, 1960 and 1961. An important feature of these amendments is that the Reserve Bank has been endowed with still greater powers over the banking system. The Reserve Bank has, with its wide powers, an effective control over the banking system.

After the passing of the Banking Companies' Act, the banks are being regularly inspected; and these inspections have been useful in that they have enabled the Reserve Bank to have an insight into their working and have also brought out some undesirable features in their working. These defects are being pointed out to the banks concerned and the banks are asked to rectify them. The Reserve Bank has, on the whole, exercised its powers judiciously and has been making attempts to strengthen the banking system through

"1. legislative proposals to the Central Government to correct the defects in the banking system, to rectify lacunae in procedural matters or to meet the requirements of changing economic conditions.

"2. specific suggestions to individual companies to remove the defects in their working and to improve their methods of business and

"3. general suggestions to banking companies by means of circular letters on matters of common interest." (Trend and Progress of Banking in India, 1950 P. 50, published by the Reserve Bank of India).

There has been a qualitative development of banking in recent years. This can be attributed to the effective control exercised by the Reserve Bank over the banking system along with other equally important factors like the development of sound banking traditions owing to the good sense of bankers and a re-orientation in the banking mechanism.

THE BILL MARKET SCHEME:

The absence of a Bill Market was felt for a long time in our country. In 1952, the Reserve Bank took some steps for the creation and development of a Bill Market in India. This scheme known as the "Bill Market Scheme" is similar to the scheme in operation prior to 1935 under which it was possible for the Imperial Bank to get loans from the Currency Department up to Rs 12 crores during the busy seasons against internal bills or hundis drawn with the object of promoting trade.

Under the Bill Market Scheme, the Reserve Bank grants advances to scheduled banks at its various centres in the form of demand loans against the usance promissory notes of their customers under Section 17 (4) (c) of the Reserve Bank of India Act. Certain concessions were allowed to scheduled banks at the time of the introduction of the scheme. The Reserve Bank was granting advances at $\frac{1}{2}$ per cent below the Bank Rate under the scheme. It also bore half of the stamp duty. But these concessions were withdrawn during 1956-57. At first, the scheme was made applicable only to the bigger banks with deposits of over Rs 10 crores; but, since 1954, all licensed scheduled banks can get accommodation under the scheme. The minimum amount of a bill and the minimum amount that could be borrowed under the scheme were reduced to Rs 50,000 and Rs 5 lakhs respectively in 1954 consequent on the recommendations of the Shroff Committee.

It may, however, be pointed out that the scheme has not really set up a Bill Market. There are many difficulties in the way of developing a Bill Market in India. The absence of Acceptance Houses or Discount Houses in our country as in the UK, the small volume of acceptance business done by the Indian banks in regard to inland and foreign trade bills, the existence of an unorganized sector of the money-market comprising of indigenous bankers and money-lenders and the predominance of the systems of cash-credits and overdrafts over that of the discounting of bills would surely stand in the way of the development of a full-fledged Bill Market. The scheme introduced by the Reserve Bank is, however useful to banks in meeting the credit requirements of the busy season and

Power is the business of ENGLISH ELECTRIC—around the world and in India—the power that generates 225 MW of electricity at the Rihand Hydro Electric Scheme in Uttar Pradesh, the power which produces 6000 KW of electric locomotives up the Ghats from Bombay and the power behind Corporation in South India, the mills at Burpur and the power behind the steel rolling numbers of looms, pumps, compressors and the like all over the country. The Madras Works, which was established in 1958, has behind it the entire resources of the country, dating back to the turn of the century.

The range of manufacture at Madras currently includes low voltage industrial distribution equipment incorporating High Rupturing Capacity Fuse Links, Protective and Auxiliary Relays, and Control and Relay Boards.

as such, occupies an important place in the credit structure of the country.

THE NATIONALISATION OF THE IMPERIAL BANK

Another important event in the history of Indian Banking during the post-war period is the nationalisation of the Imperial Bank and the establishment of the State Bank of India. The Rural Banking Enquiry Committee was against the nationalisation of the Imperial Bank of India. However, the All-India Rural Credit Survey Committee recommended the nationalisation of the Imperial Bank and the establishment of the State Bank of India which would mean "the creation of one strong, integrated, state-sponsored commercial banking institution with an effective machinery of branches spread over the whole country, which, by further expansion (including further, but minor, amalgamation where necessary) can be put to take over cash work from non-banking treasuries, provide vastly extended remittance facilities for co-operative and other banks, thus stimulating the further establishment of such banks, and generally, in their loan operations, in so far as they have a bearing on rural credit, follow a policy which, while not deviating from the canons of sound business, will be in effective consonance with national policies as expressed through the Central Government and the Reserve Bank". (Report of the All-India Rural Credit Survey Committee, Second Volume, P. 404). The most important argument in favour of the establishment of the State Bank of India was, thus, the extension of banking facilities into the rural areas and the financing of agriculture and small-scale industries. The Imperial Bank was nationalised and converted into the State Bank of India on 1-7-1955. The State Bank is undertaking two kinds of functions viz. traditional and developmental. As a bank engaged in developmental activities, it is meeting the credit needs of agriculture and small-scale industries and spreading organized banking facilities in the rural and semi-urban centres and as a bank engaged in commercial banking activities, it is catering to the financial needs of trade and industry.

The State Bank opened 450 branches during the period from 1-7-1955 and 30-6-1962. As a result of its policy of branch expansion, banking facilities are now available even in small areas having a population of less than 10,000. The Bank has opened branches in many centres having no branch of a scheduled, non-scheduled or co-operative bank and in some centres where banking facilities were not available within a distance of twenty miles.

The State Bank is helping in agricultural development by (1) giving liberal remittance facilities

to co-operatives (2) granting loans to co-operative marketing and processing societies (3) contributing to the debenture-capital and the share-capital of the State Warehousing Corporations and giving loans against their receipts and (4) subscribing to the debenture-capital of the Land Mortgage Banks. It introduced a Pilot scheme at a few of its centres in 1955 for helping the small-scale industrial units. Under the scheme, a small-scale producer of commodities likely to be sold without difficulty, could get advances from the Bank. As at the end of June, 1962, the number of units given financial assistance and the amount of loans sanctioned stood at 2,918 and Rs 10.7 crores respectively as against 2,644 and Rs 9.2 crores respectively as at the end of June, 1961. The State Bank also grants medium-term loans to small-scale industrial units.

The nationalisation of the Imperial Bank and the state-associated banks has brought a sizable portion of the banking system under public-ownership.

BANK AMALGAMATIONS

During recent years, a number of bank amalgamations have taken place. These amalgamations have been brought about for preventing a crisis or for establishing a bigger unit or for strengthening the banking structure. The amalgamation of the Bharat Bank with the Punjab National Bank and the amalgamation of the four scheduled banks of West Bengal viz., the Bengal Central Bank Ltd., the Comilla Banking Corporation Limited, the Comilla Union Bank Ltd., and the Hooghly Bank Limited, into the United Bank of India Limited in 1950 were intended to avert two banking crises.

During the last two years, the question of amalgamations has assumed much importance. A number of banks were found to be in an unsound financial position and hence, moratorium was granted to them with the intention of amalgamating them with well-established institutions. The Indo-Commercial Bank, Mayuram, the Bank of Nagpur, the Prabath Bank, New Delhi, the Scasiya Midland Bank, the Kottayam Orient Bank, the Travancore Forward Bank, the Bank of New India and the Bank of Kerala were given moratorium during the year 1960-61. During the year 1961-62, five commercial banks were given moratorium. The Reserve Bank now possesses powers for bringing about the compulsory amalgamation of banks which are not working properly with efficient and well-established institutions. The Indo-Commercial Bank, Mayuram has been amalgamated with the Punjab National Bank Limited. The Travancore Forward Bank, the Kottayam Orient Bank and the Bank of New India have been amalgamated with the State Bank of Travancore while the Midland Bank and the

Bank of Kerala have been merged with the Canara Bank. The establishment of bigger units in banking would lead to an economy of working costs and the growth of deposits and contribute to the stability of the banking system.

THE FAILURE OF THE PALAI CENTRAL BANK:

The failure of the Palai Central Bank is one of the important events in the history of Indian Banking during the last two years. It appears that the working of the Palai Bank was not sound for a fairly long time. The granting of a large volume of unsecured advances, the declaring of dividends in spite of its unsound financial position and the non-publication of correct and comprehensive balance-sheets were some of the defects noticed in the working of the Palai Bank. There was a run on the Bank during the months of June, July and August, 1960. It was decided to apply to the Court for the winding up of the Palai Bank in August, 1960.

The decision of the Reserve Bank to apply to the Court for the winding up of the Palai Bank came in for a good deal of criticism. The Reserve Bank which had been inspecting the Palai Central Bank for a long time, could have taken some measures against the Palai Central Bank some years back when it (i.e. the Reserve Bank) noticed the defects in the working of the Palai Bank. Unfortunately, the Reserve Bank did not do so. The Reserve Bank appointed one of its officials as the General Manager of the Palai Bank for bringing about an improvement in its working. When it did this, it could have given time to the Palai Bank for setting its affairs right or given the Palai Bank financial assistance. Unfortunately, the Reserve Bank did not take any of these steps. As such, one is not quite sure as to whether the decision to wind up the Palai Bank was the only possible solution and as to whether the Reserve Bank could not have done something else to avert the crisis.

The failure of the Palai Central Bank and the unsound condition of a few other banks were responsible for creating a scare in the minds of some people regarding the safety of investing their money with banks. Soon after the failure of the Palai Central Bank, there was a run on some of the branches of two Scheduled Banks. These two banks were able to meet the demands of the depositors without any difficulty. The Reserve Bank also assured financial assistance to the two banks for meeting the run, if necessary.

There was a decline in bank deposits during the last few months of 1960 and the early months of 1961. One of the causes for this trend was the shaken confidence in the working of the banking system after the failure of the Palai Central Bank; but there were other causes also like the smaller volume

of deficit financing, the increase in the balance of payments deficit, the investment of money in industrial shares and the holding of money by many people outside the banking system in the hope of taking advantage of the conditions in trade and industry.

There was, however, an improvement in the position as regards bank deposits after March, 1961. This was due to several factors like the restoration of confidence in the banking system owing to mergers and amalgamations and the introduction of deposit insurance, the larger volume of deficit financing, and the raising of the interest rates on deposits. The deposits of the scheduled banks stood at Rs 2,013 crores during the last week of 1961. They amounted to Rs 2,028.48 crores in September, 1962 and Rs 2,218.83 crores during the week ended 16th November, 1962. The advances granted by the scheduled banks amounted to about Rs 1,285 crores

during the last week of 1961, while during the week ended 16th November, 1962 they stood at Rs 1,377.50 crores. This increase in advances has to be attributed to the increase in the tempo of economic activity.

During the last two years, a number of measures have been taken for strengthening the banking structure. These measures include (1) the introduction of a system of deposit insurance and (2) enacting legislation for the strengthening of the capital structure, raising of the minimum reserve requirements and the strengthening of the reserves.

DEPOSIT INSURANCE IN INDIA:

The system of deposit insurance was first introduced in America for affording protection to the numerous depositors whose interests suffered very much by the innumerable bank failures that ravaged the American economy during the years 1920-33. It has been working successfully in America.

The question of the introduction of deposit insurance in India has been discussed for the last one decade. Both the Rural Banking Enquiry Committee and the Shroff Committee had recommended its adoption. However, the question of the introduction of deposit insurance assumed special significance on the failure of the Palai Central Bank and the unsound financial position of a few other banks. Discussions were held between the Finance Minister and the officials of the Reserve Bank on the one hand and the leading bankers on the other and as a result of these discussions a Deposit Insurance Corporation has been established in India with effect from 1-1-1962. The maximum amount of deposits insured is Rs 1,500.

But the utility of the system of deposit insurance depends on the coverage; the greater the coverage the more will be utility. If, for instance, deposits are insured up to a maximum of Rs 1,500, then, those

THE CHARTERED BANK GROUP

These are the territories served by The Chartered Bank group through a system of over 190 branches extending to most centres of commercial importance in India, the Middle East, South and South East Asia and the Far East.

THE CHARTERED BANK

(INCORPORATED BY ROYAL CHARTER 1853)

Head Office: 38, Bishopsgate, London, E. C. 2

Branches in India at: Amritsar, Bombay, Calcutta, Calicut, Cochin, Delhi, Kanpur, Madras, and New Delhi.

THE EASTERN BANK LIMITED

Head Office: 2 and 3 Crosby Square, London, E. C. 3

Branches in India at: Bombay, Calcutta and Madras.

ALLAHABAD BANK LIMITED

Head Office: 14, India Exchange Place, Calcutta.

Over ninety branches throughout India.

THE INDIAN BANK LTD.,
(Established in 1907)
REGD. OFFICE: INDIAN CHAMBER BUILDINGS, ESPLANADE, MADRAS-1

Offers complete Banking service of every description, backed by more than 55 years of sound experience.

Has a net work of 145 offices (24 situated in the city of Madras, 5 Overseas and 116 spread over 8 States in the Indian Union) and is fully equipped to advise and help regarding deposits, advances, remittances, collections, foreign exchange business etc.

having deposits of Rs 2,000, Rs 3,000 and more have a limited advantage. Hence, it is desirable to have as wide a coverage as possible. But there is the cost factor. If the coverage is wide, the premium to be paid also will be more. The difficulty is that it would add considerably to total costs. In spite of this, it may be pointed out that a system of deposit insurance can help in the strengthening of the banking habit.

RAISING OF CAPITAL AND RESERVES

About two years back, it was pointed out by the then Governor of the Reserve Bank of India, Mr H. V. R. Iengar, that the capital and reserves of commercial banks had to be raised. The percentage of capital and reserves to total liabilities which stood at about 7 in 1955 declined to nearly 4 in 1959. Though it is true that even banks whose percentage of capital and reserves to total liabilities is low, can be effectively managed, still a proper proportion between capital and reserves and total deposits appears to be quite essential, if not for anything else, at least for infusing in the minds of the people a sense of confidence about the efficient working of a bank. A number of banks like the Bank of India and the Indian Overseas Bank have already issued fresh shares and raised their paid-up capital.

The minimum capital requirements have also been raised by legislation in 1962. In 1936, the minimum capital needed for starting a bank was fixed at Rs 50,000. This amount of Rs 50,000 is considered to be far too low under the present economic conditions. The Banking Companies (Amendment) Act of 1962 has, therefore, laid down that the minimum paid-up capital of an Indian banking company should be Rs 5 lakhs. The Act has also made provision for strengthening the reserves position of commercial banks.

MINIMUM RESERVE REQUIREMENTS

Under the Reserve Bank of India Act of 1934, the scheduled banks were required to maintain 2 per cent of their time liabilities and 5 per cent of their demand liabilities with the Reserve Bank of India. This provision has been amended in September, 1962. Under the amendment, the scheduled banks should keep 3 per cent of their total liabilities (viz. demand and time liabilities) with the Reserve Bank of India. The Reserve Bank may vary this reserve requirement between 3 and 15 per cent. This provision applies to the non-scheduled banks too.

The Reserve Bank is also authorised to collect credit information from banks and other financial institutions since September, 1962.

BANKS AND ECONOMIC DEVELOPMENT

The big Indian joint-stock banks are, at present, giving term-loans

for the development of industries. These term loans are given for the production of those commodities which are in good demand and are easily salable. In view of the necessity for industrializing our country as rapidly as possible, these loans will be quite helpful. The establishment of the Re-finance Corporation has augured well for banks undertaking the supply of medium-term finance to industries.

A few Indian joint-stock banks are also engaged in giving instalment loans and hire-purchase finance for buying durable goods like machinery and consumer goods like radios, scooters and sewing machines. The instalment loans can help in improving the standard of living of the people. But these loans should not be given for the purchase of those commodities which are in short supply; for that would lead to an increase in prices and contribute to inflation.

BANKS AND THE EMERGENCY:

With the outbreak of the border conflict between India and China and the declaration of a state of emergency, the responsibility of the banking system has increased. The banks have to provide sufficient funds not only for productive purposes but also for meeting the defence needs. During the week ended 23rd November, 1962, the investments of scheduled banks increased to Rs 704.82 crores as against Rs 684.74 crores. This increase must have been due to the decision of the banks to take more of Government securities to help the Government during the emergency. The banks are also mobilising as much resources as possible to help the Government in their war effort. The contributions from the people for the war effort may be made at any of the branches of the State Bank of India and its subsidiaries, the Central Bank of India, the Punjab National Bank, the Bank of India, the Bank of Baroda, the United Commercial Bank, the Indian Bank and a few other joint-stock banks.

CONCLUSION:

The recent trends in Indian joint-stock banking are quite encouraging. There has been a qualitative development of banking owing to an increase in the powers of and the control exercised by the Reserve Bank of India. We notice an expansion in banking activity during the last few years. The banks have begun to play a useful role in the country's economic development instead of being mere financiers of trade and industry. Attempts have also been made for the strengthening of the banking structure. The progress of the Indian banking system in recent years has, thus, been quite encouraging. And it may be hoped that, in future, the Indian banking system would be able to contribute still further for the advancement of the country.

The U. P. Landholdings Tax Bill: A Point of View

By
D. S. KUSHWAHA

Now that the U.P. Land Holdings Tax Bill has been postponed for consideration and tempers have cooled down, it is time to think about the measure in a dispassionate manner.

The object of the Bill was to provide financial resources for economic development for which the State is committed to the Planning Commission and to encourage the evolution of a single tenure system of peasant proprietorship.

The Bill divided the tenure holders into three categories for taxation: Bhumidhars or those who possessed equivalent rights in land in non-Zamindari abolition areas; Sirdars or those possessing non-equivalent rights in land in non-Zamindari abolition areas; and Asamis of Gaon Samaj in Zamindari abolition areas and non-occupancy tenants in non-Zamindari abolition areas. The Bill provided for an annual tax equal to two and a half per cent of the capital value of a holding. The capital value of a holding was deemed to be an amount equal to 50 times the land revenue or rent in the case of tenure holdings of the first category, 20 times of land revenue or rent in the case of the second category and 12 times of the rent in the case of the third category. Tenure holders of the first category were allowed a remission of 60% of the tax. Tenants of the second category were allowed remission so as to ensure that the burden of both, tax and land revenue or rent, on any one tenant did not exceed the amount computed at double the sanctioned hereditary rates except in the erstwhile Rampur State and enclaves in which this limit had been prescribed at 1½ times the sanctioned hereditary rates. Provision had also been made to exempt the small tenants from this tax. Sirdars who acquired Bhumidhari rights before December 31, 1961 were also entitled to remission admissible to Bhumidhars in the current agricultural year.

The Bill came under heavy fire and a number of Congressmen faced a crisis of conscience in supporting this measure whereas the opposition was all out against it threatening even civil disobedience if it was passed into an Act. Both the objectives of the Bill were assailed. It was pointed out that the Bill would fail to bring about a single tenure system of peasant proprietorship as it fails to put into effect a uniform rate of land revenue. The main controversy has centred round the first objective: bill as a measure to raise financial resources for the Plan.

The case in favour of the Bill may be stated thus. U.P. has a Third Plan with an outlay of Rs 497 crores. The Central Govern-

ment would contribute Rs 350 crores and the State would raise Rs 147 crores by itself. The central aid is made available on the understanding that the State would raise its own resources to the full. If there is a shortfall on the part of the State, central assistance would be proportionately cut down. It is necessary, therefore, for the State to raise its own share; for if it does not, the plan has to be whittled down. That would be undesirable as well as objectionable in view of the fact that this State did not make any significant progress during the first two Plans. It has a huge leeway to make up and therefore every effort should be made to see the Third Plan through. The Government is thus committed to the Planning Commission and to its people to see the Plan through and therefore it is its duty to find resources for the same. Out of the total expenditure a little more than 50 percent-about Rs 250 crores would be spent in the rural sector. Hence it would be appropriate to look forward to this sector to contribute its mite to the economic development of the State.

There is another justification in tapping the rural sector for the resources to finance the Plan. According to the supporters of the Bill there has been an all round improvement in the peasant's condition: his health has improved, malaria has been eradicated, life expectancy has increased, rural income as also consumption of cereals has gone up. They further point out that it would be unjust to tax the urban sector alone for the overall development of the State.

The controversy would, thus, seem to centre round the source of taxation. The opposition feels that the rural sector should not be taxed as is proposed in the Land Tax Bill, instead industrialists and middlemen should be taxed. The supporters of the Bill do not want to tax the urban sector and, by implication, the industrialists and the middlemen, for the overall economic development of the State which is predominantly agricultural.

It may be pointed out at the outset that an aversion to tax the industrialists and middlemen can be justified if this sector is already heavily taxed and can no longer bear any further taxation. But it cannot be justified on the

ground that the proceeds realised as tax from it would be spent for the overall economic development of the State as a whole and by implication not on it. In the first place this argument is against all canons of taxation; for a tax is without quid proquo. Secondly, the overall economic development would benefit the industry as well, by raising the effective demand for the goods that it produces. The supporters of the Bill have, in fact, questioned the propriety of taxing the urban sector only (tacitly assuming that the other sector is equal in capacity in this respect) for financing the overall economic development. They do not seem to imply that the urban sector cannot bear further taxation. One would, however, agree with them if it could be proved that the rural sector has capacity to bear taxation and that the urban sector, as it is today, does not have any further capacity to bear taxation in comparison to the rural sector.

There is good reason for the view that the rural sector does not have adequate capacity to bear additional taxation and the plea that the economic conditions have improved to create taxable capacity is a myth. Improvement in health, eradication of malaria and consequent rise in life expectancy may point to the success of the health measures of the Government, rather than to an increase in the peasant's income and his taxable capacity. The increase in the consumption of cereals by farmers does not mean that his capacity to pay more taxes has risen; for if the cultivator was already well-fed there would hardly be an increase in the consumption of cereals. If, however, he was underfed due to excessive pressure on land, the consumption would go up because excess population has been transferred to industrial sector releasing thereby enough food to those remaining on land. Has such a transfer of excess population taken place? If the answer is taken to be in the affirmative (which it is not) it again goes to point to the fact that the increase in consumption of cereals has not been due to an increase in the income of the peasants and it is therefore unjustified to subject the peasantry to further taxation on the plea that the income in this sector has gone up. If, however, an increase in the consumption of cereals is due to an increase in the production of cereals, it may reflect itself in increased incomes;

for increased production may lead to an increase in the marketable surplus of agricultural produce and thus add to the income of the rural sector.

It does not seem to be correct to hold such a view; for increase in income as a result of increased production can take place when the agriculturist markets the additional surplus. A large number of the cultivators have holdings so small in size (for example nearly 43 per cent of the owned land in U.P. consists of holdings below the size of 2.5 acres) that increase in production on such farms can hardly be of an order as to lead to an increase in consumption and make marketable surplus available to the cultivator to earn additional income at the same time. In the absence of relevant data it would be in the nature of a guesswork to contend that the agriculturists having bigger holdings have reaped the benefit of larger incomes. The State farms with all the resources at their command have run into losses and failed to contribute to the exchequer. How then could one be led to believe that cultivators with bigger holdings have earned sufficient additional income to bear the new tax?

It is, thus, difficult to lend credence to the view that the rural income has gone up. The Third Plan of U.P. itself admits that the income of the State has been more or less stationary throughout the past decade. The overall position from the point of view of the income of the State on Government's own admission has not improved at all. How then could the income in the rural sector have gone up and how then could land holdings tax be justified on this ground?

Nor can a case be built up in favour of the land holdings tax on the ground that the land revenue in the State compares on the low side with other States. Authoritative sources have said that the incidence of the land revenue in U.P. is the highest. The Minister for Agriculture quoted figures to prove it. It was said to be 5 per cent in U.P., between 3 per cent and 4 per cent in West Bengal, Andhra Pradesh and Bihar and only 2 per cent in Punjab. Another source put it at Rs 5.4 per acre in U.P. whereas the corresponding all-India average was stated to be Rs 2.8 per acre. The incidence of land revenue in this State would thus seem to be much higher than in other States and land tax cannot be recommended as a measure to bring the level of land revenue at par with other States. On the other hand a comparatively higher rate of incidence points to the undesirability of imposing any land tax in the State.

Judged from the point of view of its long term effects upon the economy, land tax is a far more objectionable measure. We have witnessed in our country the fact that the people so manage things as to evade the law before it becomes operative. Thus, before the law prescribing ceiling on holdings became effective it was found that the people who could do it had already taken measures to ensure that the law did not affect them. It is not relevant for our purpose to discuss the causes of such behaviour. Let us only note it as a fact and, so in the present case, if the land tax bill turns into an Act, holdings will be partitioned in such sizes as would not be subject to taxation. The law would thus aggravate the evil of fragmentation. In due course of time the working of the law of inheritance may reduce these holdings further into tiny parcels of land. On the one hand we are trying to consolidate holdings and thus make them more viable economic units of cultivation, and on the other hand we are introducing a measure that would have the effect of splitting up the existing small number of viable economic holdings of today into fragmented and uneconomic holdings of tomorrow.

It is, however, true that resources must be found if the economic development of the State at the rate envisaged in the Third

Plan is to be achieved. It has already been noted that the Government is not inclined to tax the urban sector further. Resources have, therefore, to be found elsewhere. Luckily, there are alternative sources of revenue which provide strong ground for agreement between the Government and the opposition in the State inasmuch as they do not depend upon a tax on the rural sector (land holdings tax) nor additional taxation of the urban sector.

In the course of the debate on the bill it was suggested that the exemption limit should be raised from 1 acre to 3.5 acres for the purposes of land tax. It was also said that it would result in a loss of revenue of Rs 4 crores, i.e. the State would get Rs 6 crores per year. As things stood the Bill could not be passed without a further upward revision in the exemption limit and, therefore, a drastic curtailment in the revenue expected from it. On the basis of the exemption limit of 3.5 acres the measure would yield a revenue of Rs 30 crores over a period of 5 years. Luckily there are alternative sources which can provide revenue without taxing any sector.

The alternative sources of revenue would consist in (1) measures of economy; and (2) new sources of revenue without involving further taxation of industry and

agriculture. Under the first there is a scope for economy by reducing the size of the Ministry in the State. It has been pointed out that many ministerial assignments appear superfluous. There seems to be no justification for a Cane Development Minister and a Minister for Co-operation. The Minister for Agriculture can look after the work of both. There is also scope for economy in the tours of Ministers and the expenses of the Ministers in Punjab on tours vividly point out the extent of scope in this direction in any State. Punjab has since shown the way that the UP can well emulate.

An alternative source of revenue lies in the realisation of tax arrears which is estimated at between 13 to 15 crores of rupees. The evasion of sales tax is a scandal and there is scope for realising the arrears of sales tax, electric cess, sugar cess, etc. There is a considerable area of fallow land that can be brought under the plough. According to the Statistical Abstract, 1957-58, fallow land other than current fallows was approximately 31,65,000 acres in the year 1955-56. If all this land is brought under the plough, it will yield a substantial amount of land revenue.

There is scope for the expansion of the public sector to bring in more revenue. Thus, private

routes can be nationalised and add to the income of the already earning Transport Ministry of the State. It would be in the fitness of things to do so; for at present private routes and State routes exist side by side. Since the ultimate policy is to nationalise transport, why not do it now?

If the Government so desires it can also tap the middlemen who buy foodgrains from the farmers to sell them to the consumers. This is a class which can be legitimately taxed to finance the plan as it serves both the sectors.

To sum up, if measures of economy are introduced, fallow land is brought under cultivation, tax arrears are realised, private routes are nationalised and middle-men are taxed, it would not be difficult to raise the required revenue for financing the Plan. We have already stated that on the basis of the proposed upward revision of the exemption limit the land tax would yield Rs 6 crores per year. The measures that we suggest ensure this income for a number of years. The tax arrears if realised fully would provide income equal to the land tax revenue over 3 years. In future if no tax arrears are allowed to accumulate and the measures suggested above are undertaken it should not be difficult to raise the necessary finance for implementing the Plan.

a clean,
bright,
spacious look
with
Glass

JWTHP 5663A

Office space seems to grow when cumbersome partitions are replaced with glass. Rooms look lighter, brighter and so much more elegant. It's not surprising glass is finding its way into more and more homes, stores, schools and restaurants—wherever light and space are important considerations.

Glass is so practical too. It keeps out noise and dust and lets in natural light. And keeping glass clean is the easiest thing in the world.

Available in a wide variety of sizes and thicknesses, and quality tested at every stage of manufacture, there's an HPG sheet glass to suit every purpose.

For the finest,
most durable glass
you can depend
on HPG

Torture del passato

Siate moderni!

Non più camicette che diventano un supplizio

Certamente voi sapete per esperienza che portare una camicetta che si restringe è una vera e propria tortura. Ma questa "tortura" si può evitare senza difficoltà!

Quando acquistate camicette, pantaloni, giacche, vestiti da lavoro, abiti per uomo o donna o tessuti di cotone, sapete l'unico modo per non aver problemi di restringimento è di acquistare tessuti "Sanforized".

Cluett Peabody & Co. Inc. di New York vi garantisce che i tessuti "Sanforized" sono per ogni uso e che, dopo averli lavati, non si restringono. Questo vi garantisce che i vostri abiti resteranno sempre come nuovi.

Sanforized

The trademark 'Sanforized' is trusted everywhere in the world. One reason is that Cluett Peabody & Co. Inc.—the owners of the trademark—maintain in India, as in other countries, technical representatives who are like watchdogs protecting the interest of the consumers and helping the Textile Industry to produce cotton cloth which will meet rigid anti-shrinkage standards. Cotton cloth that is labelled 'Sanforized' has the same international standard of performance: "it will not shrink out of fit".

Issued by Cluett, Peabody & Co. Inc., (incorporated in the U.S.A. with limited liability) proprietors of the Registered Trade Mark 'Sanforized'. The use of the trademark 'Sanforized' is permitted only on fabrics that meet this Company's rigid anti-shrinkage requirements.

LIC's Investments

By
'SHYLOCK'

LIFE insurers with huge funds under their command are generally the biggest investors in any country. The Life Insurance Corporation of India, having a virtual monopoly in its field, holds an unchallenged position as the doyen of investors. As such, it has a special responsibility not only to its policyholders but also to the investing public and the nation.

Life insurers' liabilities consist of long term contracts depending on life contingencies. Their principal sources of income are the premiums payable on policies. These are invested and, out of the total income, managerial expenses are met and claims paid. Expenses are under insurers' control and claims are predictable within safe limits through the instrument of mortality table. It is with the third element, viz. investment income, that enters the premium formula that we are concerned. This is allowed for by assuming a constant net rate of interest to be earned in future. It is obvious that at least this rate should be earned throughout the term of the contract. A higher rate would go to augment the profits of the Corporation and strengthen its financial position.

Actuaries have devoted considerable thought to the question of life office investments and have over the years evolved certain basic principles that should be followed. The objectives of a life insurer's investment policy are that (i) the contractual obligations are duly fulfilled and that (ii) subject to this, the highest level of profit is attained. The principles flow directly from these objectives.

The first principle is that the assets should be matched to the liabilities. That is, the distribution of the maturity dates of the assets should be close to that of the liabilities. The Corporation's report for the year, 1961, gives the maturity distribution of only Central and State Government securities. By treating loans on mortgages of property and on policies as short term contracts (being redeemable at any time) and equities and house property as irredeemable and by distributing other shares and securities according to the Government securities, the following maturity distribution is attained.

Outstanding maturity term	Investments distribution	Endowment Assurances distribution
0-5	29	8
6-10	21	13
11-15	16	20
16-20	10	27
Over 20	24	32
	100	100

Alongside is given the distribution of the maturity dates of Endowment Assurances of a fund such as the Corporation's. Endowment Assurances form the greater part of LIC's contracts and the effect of Whole Life Assurances, the other major type of contract, is to lengthen the terms. New business has a similar effect. The table thus shows that the Corporation's investments are maladjusted vis-à-vis its liabilities with the result that the maturing securities have to be reinvested on terms obtainable at that time. The present trend is towards increasing rates of interest and the Corporation has nothing to lose if the trend persists. But when the trend is reversed there will be fall in income on new investments compensated to some extent by capital appreciation of existing investments. But actuarial studies show that a bias in favour of long-term investments reduces losses and increases profits due to changes in interest rates. Hence, the Corporation should strive to attain a maturity distribution of investments with a long-term bias.

Other principles are concerned with the attainment of the highest level of profit. These may be briefly put in as security, marketability, diversification and advancement of the business and the interests of the nation. To examine Corporation's performance in respect of these principles, we may consider its assets as on 31-12-61 given in Table II. The corresponding distribution of the life assets, taken over by the Corporation, as on 31-12-1955 is given alongside for comparison with prenationalisation position.

Taking security first, it is a relative concept. Investment entirely in risk-free, gilt-edged securities gives only a comparatively low yield. Further, the gilt-edged may not prove to be so glittering if interest rates fall resulting in loss of income. Hence, risk is worth taking particularly

Another reason is no doubt the paucity of other suitable investments to the desired extent. In Britain, the percentage is between 25 and 30 only and even this is considered high. The main advantages of these securities are their unimpeachable security, diverse terms of redemption and easy marketability. On the other hand, they generally carry the lowest yields. Because of the growing tempo of development, Government borrowings would be on the increase and hence, it would be difficult to reduce the proportions held under this head.

(ii) Mortgages & Loans (a) Mortgages on Property, are suitable investments provided there is adequate cover and the personal covenant is good. There is also some scope for the fire business of the subsidiary. Before nationalisation, insurers were not always careful in their choice of mortgages and the Corporation had to incur heavy legal charges on the recovery of the loans. Even now a good number of cases are pending.

In view of this position, the LIC refrained from this line of investment from the outset. It is only for the last two or three years that it has started granting such

...not exactly
astronauts, of course,
but we do manage
to circulate
—about twice
every year

The BINNY Group of Mills manufactures over 50,000 miles of cloth every year—enough to encircle the world twice at the equator!

From their inception the Madras and Bangalore Mills have unfailingly concentrated on the production of high grade materials so that the name 'BINNY'—synonymous with superior quality and durability—has been carried to the remotest corners of the country. The volume of their production bears ample testimony to the popularity of BINNY fabrics, the fine quality of which has not only created a large and growing following in India but has also succeeded in winning the goodwill of buyers in many countries overseas—sure proof that BINNY fabrics are equal to the best in the world.

BINNY — a great name in textiles

loans in selected areas. These are necessarily short term investments as borrowers would tend to redeem and take new loans in times of falling interest rates. Hence, in order to offset the risk of getting lower yields, a greater proportion should be invested in long term and irredeemable investments.

(b) Loans on Policies. are riskless and provide a useful service to policyholders.

(c) The big jump in "other loans" since nationalization is almost entirely on account of loans granted to State Governments and Cooperative House Building Societies and such other bodies for house building purposes. These provide a moderately attractive yield and are adequately secured.

(iii) Shares & Debentures: (a) The fall in the proportion invested in debentures is perhaps due to a change in company financing; otherwise, there are excellent investments where the borrower is good and carry higher yields than Government Securities. It is noticed that the Corporation never misses the opportunity whenever a good debenture issue comes along. There is a strong case for investing more in this direction.

Preferences have only moderate degree of risk, but carry relatively attractive yields. They have poor marketability nowadays and are not preferred by the general investing public. The Corporation's position is different and it can afford to hold them to maturity. With the very attractive rates of return now offered, the Corporation can again increase its proportion of investments in Preference Shares.

(c) It is the jump in equities that is most welcome. These provide a hedge against inflation. If the shares are selected with care and purchases are timed properly, they give rise to excellent yields and appreciate in capital value also. While there may be periodical troughs as at the present moment—the long term trend with which alone the Corporation is concerned is clear. It is essential to keep every share under constant review and sell readily whenever the price appears to be higher than the share's intrinsic value. The Corporation is slowly increasing its holdings in equities and with their greater availability in the coming years, their proportion in its investment portfolios is bound to increase. One general fear is that already the Corporation has come to hold large blocks of shares in a number of companies and there is the possibility of it being used for nationalising some industries at the appropriate time. However, there is a statutory prohibition that LIC's holdings in one company should not exceed 30 per cent of the total loan and share capital. Further,

the Corporation will be in a position to take remedial action if a company falls into undesirable hands.

(iv) Land and House Property. These too provide a hedge against inflation and whatever be the change in economic condition, nothing would affect "the solid brick and mortar." The Corporation's investments here are warranted by its own needs.

Marketability enables the Corporation to follow an active investment policy. Further, some portion of the funds should always be readily cashable in order that opportunities of good investment are not lost. Hence, while a greater portion of the assets should be held in high yielding investments on a long-term basis, a fraction should always be readily available for switchings and new investments. In this respect, the Corporation's position is more than satisfactory.

'Don't put all your eggs in one basket,' is an adage of great practical wisdom. Diversification is considered desirable not only over categories of investment, but also over geographical regions, industries etc etc. The Corporation's experience in this respect also is quite happy. Table III below shows that its investments are spread over almost every type of industry, and Table 4 shows that all States get a share. Certain concentration in Maharashtra and West Bengal may be noticed but the reasons therefor are obvious.

TABLE III

Distribution of Shares and Debentures among Industries as on 31-12-1961.

(The statement includes foreign investments also).

Source:—LIC: Report and Accounts for the year ended 31-12-61.

The Corporation can increase its own business by investing in life interests and reversions where a life policy has to be taken, but these are uncommon in India. Similarly, there is scope for advancement of business when loans are granted on the additional security of capital redemption on life assurance policies. But all such investments should be considered first on their intrinsic merits. Recently, the Corporation has decided to grant house building loans to its policy holders on the collateral security of their policies.

Life Assurance is one of the channels through which the savings of the community are canalized into useful investment. LIC's fund is increasing at the rate of about 60 to 70 crores of Rupees every year. Most of this huge amount goes to augment the resources of both the public and the private sectors by way of Government Securities and shares and debentures. The important role played by the LIC over development plans hardly needs to be emphasized.

One important service performed by the LIC in this context is its underwriting of new issues. The method adopted by it is to underwrite a certain amount on the

understanding that part or whole of that amount would be firmly allotted to it. The net result is simply that the LIC is able to subscribe to new issues at a discount of 2½%. Some of the shares so subscribed are sold in the market at the earliest opportunity. LIC would perhaps call this active investment policy but in the process it has forgotten its role as a long term investor. What is thus gained in the swings may be lost in the roundabouts of subsequent purchases. Further, some new issues were quoted at heavy discounts and, while the LIC could not always be too choosy in the matter, these shares could have been acquired in the stock market at cheaper prices. A perusal of the Boards of these Companies indicates that some of the underwritings may have been influenced by the presence of a member of the Corporation in the Board of the Company.

Another important role played by the LIC is its stabilising influence on the stock market. It is in fact in its own interest that it should play an active part in this regard for a stable market safeguards its investments. The recent purchase of large blocks of shares by striking a hard bargain is an instance of successful operation of this policy. The stock

market was benefited to the extent of getting rid of its floating scrip and the LIC was on to a good thing and policy holders were pleased. The Mundhra transactions were also supposedly meant to stabilise the market, but the transaction was vitiated by the fact that prices above the market rates were paid in some cases and many of the scrip that were bought turned out to be bogus. Otherwise, prima facie, there is no objection to such transactions. Similarly, the LIC can help curb speculative booms through phased sales. The Corporation's activities in either direction are at the moment perhaps small and there is scope for a creative role for the LIC in judicious 'open market operations' in much the same sense in which the Reserve Bank has in respect of its open market operations in gilt-edged. The Indian Stock markets are notoriously plagued by speculative operators and the Corporation can do a lot to reduce their pernicious influence on prices.

The LIC has rightly come to be recognised as an important national institution. To some greedy eyes, it appears as the goose that laid the golden eggs appeared to the eyes of the foolish farmer. The temptation to reenact the old story is too strong for them. Suggestions that have little justification either in prudence or equity have been made

off and on about what should be done with the LIC's huge funds. Investment entirely in government paper at a guaranteed rate of interest was peddled last year, among others, regrettably, by the then Chairman of the LIC. The idea was mercifully dropped. It is to be remembered that the funds of the LIC are made up of the savings of thousands of middle class homes and the government has no right to deny these the advantages of a higher return by pegging the return on LIC's investment at an arbitrary "guaranteed" rate and no more. The LIC would be abdicating a task that insurers all over the world regard as theirs if in a chicken-hearted fear of making mistakes it divested itself of its duties as an intelligent investor on a wide front. Finding funds for the government, which is another motivating factor behind the suggestion is no part of the LIC's primary duties, certainly not more than that of any other citizen or institution. Thirdly, future investments exclusively in government securities would deprive the private sector of an important source of finance to which, by past practice and profession, no less than the well-understood conventions of insurance practice, it is entitled to look up. In fact, the earlier paragraphs have indicated the reasons why the LIC should invest more in shares and debentures, particularly equities.

Higher income and capital appreciation providing its hedge against inflation are provided by equities. Government securities offer bal-

last. A balanced maturity distribution is aided by a policy in which funds are deployed intelligently in different categories of investments.

TABLE IV

PEOPLE ARE TALKING ABOUT LIC

One of LIC's objectives is to extend the protection of Life Insurance to every insurable person who can afford it. Since most of our people live in villages, LIC have intensified rural publicity. Travelling by jeep and bullock-cart and even by boat and camel, LIC workers spread the message of Life Insurance to every nook and corner. They take films and cine-projectors with them to explain the benefits of Life Insurance more effectively. Such intensive publicity pays handsome dividends; often villagers come forward to take Insurance policies immediately after such a propaganda session.

Capital Requirements of Petroleum Exploration

[An extremely valuable report on the capital requirements and mode of financing of exploration of petroleum resources has been prepared by the UN Secretary-General with the assistance of expert consultants. The following article, based on this report, deals with the staggering capital needs of exploration. India's known resources of oil are relatively small and her meagre capital resources have obviously other contending claimants. Even so, India has a modest oil exploration programme, largely under State auspices. The article should, therefore, be of interest to our readers.—Ed.]

With the exception of mainland China and the other centrally-planned economies, well over one-half of the world's petroleum investment has been devoted to exploration and production. This world-wide average is undoubtedly heavily influenced by the fact that, in the United States (which account for 58 per cent of world investment in the petroleum industry during the nineteen fifties) more than two-thirds of petroleum investment has been channelled into exploration and production in the past decade. Nevertheless, the tendency for exploration and production to account for the major part of investment in petroleum is a universal characteristic (see table 1.)

Because of the importance of petroleum resources to modern economies, there has been a substantial expansion of exploration and prospecting has been extended to increasingly numerous and less accessible areas. Recent research on the formation of petroleum deposits has made it possible to determine the combinations of geological conditions which warrant exploration. Nevertheless the presence of the necessary geological strata and rocks in a given area does not necessarily justify

the assumption that there are commercially exploitable accumulations of hydrocarbons; the deposits must also be accumulated in particular geological formations known as 'traps'. Even when all the theoretical conditions seem to be present, exploration is often unsuccessful and sometimes results only in the discovery of reservoirs of water, occasionally accompanied by a little gas. The speculative nature of petroleum exploration is notorious. The risks involved in the job are stupendous and it is impossible to predict, results until

a deposit has been reached by drilling, and its size has been estimated.

It is likely that the majority of the most easily discovered deposits have been found in the areas already explored. There are, however, still some virgin territories which may hold large resources. Moreover, the exploration of deeper strata is now possible as a result of the steady advances in exploration techniques—i.e., in the detection of structural or stratigraphic traps which may contain exploitable deposits—and the improve-

ment of drilling equipment. It is not uncommon for new deposits to be found below fields already in production.

The extension of exploration to new areas has already resulted in increasingly marked changes in the world production picture. Although world production has increased over the past fifteen years at a fairly steady rate of about 6 per cent per annum, the overall figure conceals substantial changes in the position of the main producing areas. A number of instances of these changes may be deduced from table 2.

Percentage of world production (194 million tons)	98.0	Percentage of world production (1,119 million tons)	89.0
Total number of producing countries	23	Total number of producing countries	52

As the table shows, the number of producing countries increased from twenty-three to fifty-two between 1930 and 1961, and the list of the ten largest petroleum producers has changed considerably. Furthermore, the share of the ten largest producers in total production fell from 98 per cent in 1930 to 89 per cent in 1961, an indication of the trend towards more widespread production which appears to be gathering momentum at the present time.

Exploration, in this context, is the stage of operations during which various techniques are applied with a view to finding whether there is a commercially exploitable accumulation of hydro-

carbons in a given region. In other words, it is necessary to demonstrate not only that such an accumulation of hydrocarbons is present but also that the oil and gas can be extracted on economic terms, taking into consideration exploitation and development costs and local conditions. Petroleum exploration essentially comprises preliminary reconnaissance work and prospecting. Preliminary reconnaissance includes general geological surveys of the whole area or basin, photogeological mapping and, where necessary, gravimetric surveys. These operations, which provide an initial, very general idea of the potentialities of the area, usually require only a provisional exploration

permit, and not an exclusive license.

Prospecting consists of a series of intensive field surveys to determine the possible structures of the area under study. Geological and geophysical methods and procedures are used, leading, where appropriate, to coring. The next step is test-drilling, the only method of ascertaining that a deposit exists. In many cases, supplementary seismic surveys are necessary. These operations may only be undertaken by the holder of a title to mineral rights such as a grant of sole exploration rights, where such titles are required by law.

When the results of exploration are favourable, development fol-

lows. Development drilling is the only means of determining the extent of the deposit and of estimating its reserves. Development work (geophysics, drilling) is therefore included in the exploration stage because a great many uncertainties are still present even after oil has been struck. Nevertheless, these risks are to some extent comparable to those faced by other industrial ventures. This "normalization" of the risks is a fortiori applicable to the calculation of the investment necessary for collecting systems, exploitation and storage facilities and means of transport for the petroleum produced.

The first step in initiating an exploration programme is a critical and detailed appraisal of all the available geological literature. The preliminary reconnaissance of the territory should also include a survey of general conditions in the area, geographical features, transport facilities, prospective industrial development, etc. All of this information will be required in preparing a more detailed exploration programme. If exploration of the area is not ruled out on the basis of this preliminary general survey, various other methods are used to provide additional data, the choice of methods being dependent on the results of the initial survey. Among these methods are aerial photography, surface geological surveys and geophysical methods, such as gravimetry and magnetometry.

Given good weather and flying conditions, the cost of aerial photographs on a scale of 1:50,000 is about \$1.20 per square kilometre of coverage. The preparation of a topographical map and the geological examination together cost approximately \$4 per square kilometre. According to E. Shearer, a consultant geologist, the generally accepted figure is about \$2.50 per square kilometre. P. Leicester indicates that costs range from \$3.25 to \$6.50 per square kilometre, depending on conditions. The cost is of course substantially affected by the scale adopted. The most common scale is 1:50,000, but a larger scale may be required for detailed work.

It is very difficult to specify any average unit cost for geological survey teams because of the great variation in conditions, particularly as regards the nature of the terrain and remoteness from bases. The published material frequently makes no distinction between the costs of geological and geophysical work (as in the case of the Soviet Union). However, C. T. Jones, consultant geologist at Tulsa, puts at \$29,000 the cost of 360 days' work by a surface geological party exploring an oil basin in the south-western United States measuring 4,650 square kilometres, half of which is difficult of access. The generally accepted figure for a light

geological survey party is about \$3,000 per month or about \$35,000 per year. The cost may, however be greatly increased if air transport is used. In any case, the cost of surface geological surveys is slight compared to that of the other operations.

C. T. Jones estimates that the gravimetry operations required to survey the typical basin under consideration would take a survey party 150 days and cost a total of \$48,000 or approximately \$9,000 per party per month. P. Leicester quotes a figure of \$5,600 to \$28,000 a month for land operations and \$8,400 to \$28,000 for marine operations. A 1959 study of costs in the franc zone provided the following figures (representing the cost of one gravity survey party for one month):

	\$
Continental Europe	10,800
Sahara (land)	37,300
Sahara (using helicopters)	60,800
Equatorial Africa (land survey)	27,800

The average figure for a great variety of different types of area is approximately \$34,200. The figures are not comparable to those given by C. T. Jones except for operations in Europe. It is probable, however, that the items covered by the estimates are not identical.

C. T. Jones estimates that a ground magnetometer survey would require 150 working party days and cost a total of \$12,300 or \$2,500 per month, whereas an air survey would take sixty days and cost \$12,500, or \$6,750 per month. According to P. Leicester, the cost of an aero-magnetic survey, per kilometre of flight, is approximately the same as that of aerial photography. The previously cited study of operations in the franc zone gives a figure of \$8,000 for a ground magnetometer survey (in the Sahara) and \$5,000 for an air survey (in Equatorial Africa).

B. PROSPECTING

The more elaborate methods of exploration are not employed until the decision has been taken to make a detailed survey of a particular area and any necessary mining rights have been obtained. This does not mean, however, that geological survey work is at an end. The various methods may be combined. In detailed exploration operations, seismic methods and exploratory drilling are used.

Seismic surveys are very expensive because they involve large-scale operations requiring complex equipment and highly trained personnel for firing the charges and recording data and for interpreting results. Surveys are generally carried out by specialist firms. It may be useful to quote a few examples indicating the unit cost of seismic surveying, i.e. the cost of one survey party for one month.

According to Leicester the cost may range from \$11,000 to \$110,000 for reflection surveys. C. T. Jones gives the cost of seismic operations in the typical area under consideration as \$48,000 per survey party-month. In Libya, between 1955 and 1960, the cost appears to have been about \$80,000. In the Sahara, in 1959, the average cost of seismic reflection operations was about \$110,000 and that of refraction operations about \$140,000. In the course of a detailed survey of a small area in South America, the unit cost was as high as \$150,000. In the light of these considerations, the following estimates might be accepted as average figures representative of the likely cost of operations in developing countries:

	Per team-month
	\$ \$
Truck-operated work under desert conditions	64,000 ± 14,000
Portable equipment in heavy bush	45,000 ± 4,000
Swamp operations supported by launches	50,000 ± 4,000

The cost of seismic work per survey party-month is much higher for operations over water than for those over land, but much larger areas can be covered in a given length of time. In Equatorial Africa, for example, the cost of a party conducting a seismic survey over water was \$260,000 per month, but the party's output was roughly ten times higher than that of a party operating during the same period in the Sahara.

DRILLING HAZARDS

At some stage in any exploratory programme it is necessary to obtain direct information concerning the subsurface formations by drilling.

Skipping the technical details, the majority of exploratory wells drilled are "dry holes" in the sense that they contain no oil or gas in interesting amounts. According to Levenson, in the United States the ratio of successes to failures in drilling wells, irrespective of the magnitude of the discovery, is of the order of one to eight in areas where the traps are structural and geological and geophysical studies can provide accurate information, and of one to twenty in areas where such studies are often useless because the traps are mainly of the stratigraphic type. The Leduc oilfield, which made Canada a major oil producing country, was discovered in 1947, after twenty-eight years of prospecting and the drilling of 133 wells. On the other hand, the first thirteen fields were discovered in Saudi Arabia, Kuwait, Qatar and in the Bassora region of Iraq by only seventeen wildcats, for proved reserves of the order of 10,000 to 15,000 million tons. Finally, in the Sahara,

23 per cent of the exploratory wells drilled from 1952 to 1958 inclusive were successful.

DRILLING PROGRAMME AND COSTS

After oil has been discovered and the necessary outstep wells have been drilled, the next step is the drilling of development wells. Drilling programmes vary considerably and in practice they can never be drawn up in detail and in advance of the commencement of exploration in virgin territory. There are wide differences in unit costs of drilling due not only to the differences in depth but also to the geological and other conditions encountered. According to the American Petroleum Institute, in 1956, the average cost of 14,006 wells between 750 and 1,150 metres in depth was approximately \$26,500, whereas the average cost of 150 wells over 4,600 metres deep was \$761,700. In this particular example, average cost increased more than five times faster than average depth. A Bureau of Mines' census indicated that from 1954 to 1956 the average cost of dry holes in the United States rose from \$35,400 to \$41,600, or by 20 per cent. On the other hand, in recent years there has been some decline in costs owing to the fierce competition in the industry. The examples cited help to furnish an order of magnitude and some interesting data on the relationship between rising costs and depth of drilling.

In Venezuela, in recent years, contract costs for drilling under easy conditions have been around \$16.50 per metre drilled. To this must be added the cost of site preparation. Substantially higher contract prices were reported in 1957 for drilling on land, \$28 per metre for wells 1,950 metres deep in Lake Maracaibo, \$80 per metre for wells 2,500 metres deep.

In the franc zone, a study was made for the year 1959 on the costs of development and exploration wells. The costs were analysed with reference to type of drilling—in other words, type of rig required—and are expressed in terms of average costs per metre drilled and rig months. Heavy rigs are used for wells deeper than 2,500 to 3,000 metres. Medium rigs are suitable for drilling to a depth of 1,200-1,500 to 2,500-3,000 metres. Light rigs cannot be used at a depth beyond 1,200 metres.

According to P. Leicester, with a drilling outfit costing from \$85,000 to \$110,000 and utility services and transport costs totalling \$55,000 to \$110,000, operating expenses in the strict sense of the term may amount to only a few thousand dollars per month. For a 3,700 metre exploration well on land, excluding road construction, site preparation, transportation and water supply, drilling costs average about \$150,000 per month.

although the variation on either side of that amount may be considerable—\$42,000 per month—depending on local conditions, mainly formation conditions. Since it may take from three months to a year to drill a 3,700-metre test well, it is obvious that there is a wide range of possible costs, running from \$330,000 to \$2,350,000, according to the estimates indicated above. Marine drilling costs average about double those of land drilling.

RECENT TECHNICAL DEVELOPMENTS

Every year the sciences applied in exploration make important advances, which are eventually reflected in a relative reduction in costs and the possibility of solving increasingly difficult and complex problems. While it is not the purpose here fully to describe the progress that is being made, it would seem useful to mention this as a factor which may affect both the technical and financial planning of operators.

There has been very substantial progress in drilling techniques during the last few years. This is the result both of the improvement of conventional (rotary) systems and of the development of new methods, such as turbo drilling which is commonly employed in France and more especially in the Soviet Union, where geological conditions often require the use of very thin circulating muds or even water for drilling. In the Soviet Union turbo drilling techniques have permitted drilling at speeds 1.5 to 3 times faster than can be achieved with rotary equipment. Work is also being done on the development of electrical drilling equipment. One factor which substantially increases drilling costs is the need for the frequent replacement of worn-out bits. Research is being done in many countries on the methods of prolonging the useful life of drilling bits. The improvement of seismic methods of exploration and the increasingly effective use of data through the application of logging methods should make for greater precision in the analysis of problems. All of these factors may well lead to substantial improvement in the conditions of exploration. Nevertheless, exploration will continue to be a risky and generally costly operation.

CHAPTER 2

Capital requirements of petroleum exploration operations

It is thus evident that the production of petroleum is the culmination of a process which is invariably lengthy and which necessitates the employment of considerable technical and financial resources. Moreover, the volume of activity and expenditure required generally increases from the initial phases until the point where an equilibrium is reached. Again each operation is a special case, affected by a series of factors such as local conditions, the speed at which the operators work, the time spent on exploration operations before the first discovery and the time that elapses before exploitation begins.

The length of the exploratory period is a particularly important factor. Although geographical conditions and the intensity of operations may decisively affect the length of the exploratory phase, chance plays a major role. For this reason programmes comparable in other ways may require widely differing periods of time.

Some extreme examples may be quoted in this respect: in Australia, where government-subsidized petroleum exploration has been going on since the beginning of the century, \$90 million has been spent in the last ten years, without encouraging results until recently. In West New Guinea, \$112 million has been spent in twenty-five years, leading to the discovery of only three small deposits, the annual production of which has never exceeded 400,000 tons. In Nigeria, \$168 million has been spent since exploration was begun (just before the Second World War); production began in 1958 and exceeded 2 million tons in 1961.

In Canada it took twenty-eight years and 133 drillings to find the Leduc field in 1947. In the Middle East, petroleum was first found in 1908, at Masjid-i-Sulaiman in Iran. Exploration was halted by the First World War and resumed in 1920, leading to the discovery, between 1923 and 1939, of large fields in Iran and northern Iraq. Although they were known to be very large even before the Second World War, the petroleum reserves of the Middle East were found to be much greater than had been thought; the discovery from 1945 onwards of the oilfields of Bahrain, Saudi Arabia, Qatar, Kuwait, southern Iraq and the Neutral Zone makes the Middle East now the foremost of the world's great petroleum areas. Furthermore, the total number of exploration and development drillings carried out in the Middle East up to 1956 was roughly 1500, a thousand times smaller than in the United States, while the size of the reserves discovered represents the greatest yield (per metre drilled) obtained in the history of petroleum exploration. In this area, several thousand cubic metres of reserves were discovered for every metre drilled as against some ten cubic metres in the United States and thirty to thirty-five cubic metres in Venezuela.

TIME REQUIRED TO REACH PRODUCTION STAGE

Several years are needed for the development of an oilfield and the construction of transport facilities, even if very rapid progress is made, as has been the

case in the Sahara and in Libya. The drilling which led to the discovery of the Hassi-Messaoud field in the Sahara was finished in July 1956. By the end of 1957 temporary transport arrangements were installed (pipeline to Touggourt and railway to Philippeville) and in October 1959 the permanent system was put into operation, consisting of a twenty-four-inch pipeline to the port of Bougie. In Libya, the Zelten field discovered in 1958 was put into production in the last quarter of 1961, as soon as the pipeline had been laid to Port Brega.

Petroleum production in Nigeria began to develop in 1961 after the completion in August of that year of the new Bonny Island terminal, at the mouth of the river. Hitherto, 18,000-ton tankers had to go up the river as far as Port Harcourt, fifty-six kilometres inland, and leave only half loaded to enable them to clear the bar. Thus, the effort undertaken, which is always a gamble, will certainly not produce substantial results until several years after the operation is initiated. This presupposes the ability to commit the necessary capital over a long period.

B. EFFECT ON THE COST OF OPERATIONS

The various factors affecting the duration of the different phases of exploration operations

have an obvious bearing on the financial aspects of the problem. The amount of capital required for exploration grows rapidly as the operation proceeds from the preliminary reconnaissance to the production stage. Although the available experience does not provide a basis for the formulation of a general rule, it may be of value to consider some examples where analysis of the operations is relatively simple. Where all the phases of development in hitherto virgin territories have been passed through in a few years and the main discoveries have been concentrated in a relatively short period, exploration and production costs may be fairly easily separated.

In Canada, the Leduc field was not discovered until 1947. In 1950 the reserves were estimated at 170 million tons; production expanded rapidly, rising from 6.5 million tons in 1951 to 25 million tons in 1959, in which year the reserves were estimated to total 500 million tons. During this twelve-year period (1947-1958), exploration costs totalled \$2,216 million, development costs \$1,147.3 million (roughly half the cost of exploration) and production costs some \$510.1 million. Over-all expenditure thus amounted to \$3,873,600.

In British Borneo, where production began to be developed after the Second World War,

exploration costs over an eleven-year period (1947-57) amounted to 168 million Malayan dollars. This figure includes the cost of topographical, geological and geophysical surveys, and the cost of exploratory drilling on land and, in recent years, off-shore. In addition, once petroleum was found, 668 million Malayan dollars (\$223 million)—four times the exploration costs—were invested to bring the operation to the production stage (drilling, permanent installations, housing, etc, but not including operating costs).

The trend of exploration and development costs in the United States and the USSR is also of interest. According to one estimate, recent experience in the US has shown that development costs represent 53 to 58 per cent of total expenditure. According to Brenner the relative proportions of the various stages of exploration in the Soviet Union in the period 1946-1955 were as follows:

	Percentage
Aerial photography	.. 5.2
Geology and geophysics	.. 10.4
Exploratory drilling	.. 72
Structural drilling	.. 12.4

In two specific instances it has been possible to take the analysis a stage further: in one case, preliminary reconnaissance totalled approximately \$4 million; the cost of exploratory and appraisal drilling, \$100 million; and development costs (including transport systems), about \$600 million. The figures are only approximate but are none the less useful. Roughly, 75 per cent of the over-all requirements, amounting to over \$760 million, were financed by the companies from their own capital. Loan funds were obtained to cover a part of the development costs.

Another example taken from a different area, throws additional light on this subject. In this instance, preliminary reconnaissance cost about \$4.5 million, prospecting and appraisal \$35 million and development \$40 million. The development costs in this latter example were relatively low due to the fact that the transport system required had been simple and inexpensive.

C. CONCLUSIONS

A number of conclusions may be drawn from the various cases analysed.

(a) In the first place, the preliminary reconnaissance of an area is relatively inexpensive compared with the investments needed for exploration and production. The cost of preliminary reconnaissance was one-twenty-fifth of the cost of exploration and appraisal drilling in the first case and one-eighth in the second. The order of magnitude of the capital required changes, but no proportional rule can be formulated. (b) Secondly, the need for capital does not end with the discovery of a field. Although, in one case, the development cost was very little greater than the exploration cost, in the other case, the investment required for development and transport facilities was six times greater than that required for exploration and appraisal. The operator must therefore be prepared for a sustained effort if he wishes to secure the fruits of his initial venture.

A hypothetical exploration programme budget prepared by P. Leicester clearly indicates the relative importance and cost of the various phases of petroleum exploration, as well as their timing. The first two years are mainly

taken up with preliminary reconnaissance (photogeology, field geology, gravimetry). Exploration proper begins in the third year with a seismic survey, which provides a basis for initial drilling to an average depth of 2,000 metres: this is completed in the fourth year, while field geology and seismic operations continue. Deep drilling (5,000 metres) begins at the end of the fourth year. The data furnished by drilling supplements the information previously obtained and may provide a basis for the revision of the seismic programme. There is a close interrelation between geophysical surveys, drilling and the geological interpretation of the results; these operations proceed simultaneously from the fourth year onwards and should, sooner or later, confirm or disprove the presence of petroleum in the area. It should be noted that just as a discovery of hydrocarbons in the course of drilling may lead to nothing if the field is not commercially exploitable, an unsuccessful exploration programme does not necessarily mean that the area should be completely written off as a potential oil producer.

USHA HELPS NATIONAL PROGRESS

Usha is playing a vital role in actively assisting the country to earn valuable foreign exchange. The largest exporters in the light engineering field, Usha sewing machines and fans are warmly welcomed in about 50 countries around the world. Besides giving technical know-how to other countries, Usha have taken a major step forward in export promotion by setting up sewing machine assembly plants in Saigon and Colombo.

We look to the future with confidence and in a spirit of dedication to serve the country well.

US Economic Assistance to India

U.S. economic assistance to India consists of both grants and loans. The total commitments of the United States under various agreements with the Government of India stand at \$4,563.9 million (Rs 2,173.2 crores) as in the middle of December 1962. (See Table I).

Chronologically the first is the wheat loan. In 1951 the U.S. Congress enacted legislation for a loan of \$189.7 million (Rs 90.3 crores) to India to finance the purchase of two million tons of wheat to meet an acute food shortage. The loan is repayable in dollars and carries an interest rate of 2½ per cent. Repayment was scheduled to commence on June 30, 1957. However, in view of India's serious foreign exchange difficulties, the U.S. Government postponed the 18 semi-annual instalments of interest and principal due from December 31, 1959 and re-scheduled them to fall due from December 1966 to June 1995, without additional interest payments.

Apart from this, American assistance to India is channelled by three agencies. These are:

(a) USAID (to use its most recent name) (b) PL 480 programme and (c) The Export-Import Bank.

The US Agency for International Development (USAID) was created on November 3, 1961 to bring American economic assistance under a unified administration. It is in charge of activities previously administered by the International Cooperation Administration, which was represented in India by the Technical Cooperation Mission (TCM), the Development Loan Fund, the Food for Peace Programme (Public Law 480) in its relation with other countries, and other staff and related functions.

USAID gives both developmental loans and grants. Grants have been made to the Malaria Eradication Programme, Smallpox eradication, higher education, National Productivity Council, craftsmen training, dairy development, crop production and a number of other projects. USAID and its predecessor, TCM, have also aided India by making available American experts to work on specific technical and economic problems in the Indian development programme, by giving advanced training to Indian participants both in India and abroad, and by the provision of supplies and equipment. The names of the principal divisions of USAID (Agriculture, Industry, Health, Education and Labour) indicate the comprehensive scope of its activities. Developmental grants

total \$359.3 million (Rs 171.1 crores). These, of course, do not involve repayment.

Developmental loans given by USAID since its establishment in November 1961 total \$468.7 million (Rs 223.2 crores). (See Table III) These loans are repayable in dollars, but they are free of interest and carry an extremely low credit fee of only three quarters of one per cent. To avoid an excessive foreign exchange debt servicing burden to India, the terms of the loans are set at a long period, taking into account such factors as other foreign debt and the foreign exchange earnings of the country. Repayment is scheduled over 40 years, with a 10 year grace period; that is, no payments of principal during the first ten years.

Prior to November 1961, the Technical Cooperation Mission had given the Indian Government loans totalling \$156.1 million (Rs 74.3 crores). These could be repaid in either rupees or dollars at the option of the Government of India.

The US Development Loan Fund, which has now been absorbed into USAID, gave India credits totalling \$513.4 million (Rs 244.5 crores) between 1958 and September 30, 1962. These loans are repayable in non-convertible rupees. (See Table IV).

Public Law 480 (Food for Peace) Programme: Public Law 480, which is playing a significant role in ensuring the availability of agricultural commodities to India at reasonable prices at a time of intense economic development has three titles (or chapters).

Under Title I of PL-480, the United States has entered into agreements with India for the supply of large quantities of wheat, rice, coarse grains, cotton, dried milk powder and tobacco. The total value of the commodities covered by these agreements amounts to Rs 1,156.3 crores. Of this, Rs 147.6 crores is reserved for U.S. Government use; Rs 78.7 crores will be given in loans to private enterprise under the Cooley amendment; Rs 375.3 crores is to be granted to the Indian Government for economic development and the balance (Rs 554.7 crores) is to be loaned to the Indian Government for the same purpose. Thus 87 per cent of the value of agricultural commodities supplied under Title I of PL-480 will be utilised in financing irrigation dams, power projects, industries, the expansion of educational and research facilities, the malaria eradication programme, and similar development undertakings in this country.

Title II of Public Law 480 enables the U.S. President to furnish emergency assistance to foreign countries in meeting famine or other urgent or extraordinary relief requirements. Under this title India has received agricultural commodities worth \$9.2 million.

Under Title III of Public Law 480, \$161.8 million worth of dried milk, wheat, rice, corn, cotton seed oil and other such commodities have been distributed in India through voluntary agencies. Some 25 lakh school children receive free lunches through programmes assisted under this Title.

The Cooley amendment to Public Law 480 (named after Congressman Harold D. Cooley, Chairman of the Committee on Agriculture of the U.S. House of Representatives) provides that up to 25% of the local currency proceeds from the sale of American agricultural commodities shall be made available to USAID for lending in the private sector to two categories of borrowers: 1) American firms or their subsidiaries operating in the host countries or indigenous firms having an affiliation with an American firm; 2) Indigenous firms of the host countries with no American

affiliation but which are facilitating the disposal of American agricultural products, e.g. local private warehouses storing grain or flour mills processing the grain etc. The eight agreements between India and the United States under PL-480 provide for Rs 78.7 crores to be given in loans to private enterprise under the Cooley amendment.

THE EXPORT-IMPORT BANK: The Bank has authorised ten loans to India totalling \$271.9 million (Rs 129.5 crores). The Bank extends loans and guarantees for the primary purpose of promoting the export and import trade of the United States. Loans given by it are repayable in dollars. In determining the rates of interest to be charged on loans, the Bank takes into consideration the maturity of the loan and the extent of credit risk to be assumed by the Bank as affected by such guarantees as may be offered, as well as prevailing United States commercial and government rates. For instance, the First Line of Credit of \$150 million to the Government of India authorized in 1958 carries an interest rate of 5½ per cent. The principal is repayable in 20 semi-annual installments beginning in January 1964.

CONSULT US ON YOUR FOREIGN BUSINESS PROBLEMS

Do you have any special problems connected with your trade or travel abroad?
Do you wish to know more about the currency or customs of foreign countries?
Do you require any specific information on trading opportunities in overseas markets?

The State Bank of India has now established for the benefit of its constituents a full fledged INFORMATION SERVICE to provide answers to these questions and many more—all free and without obligation.

Here is an opportunity for expanding existing connections and building up new ones in your overseas trade. Your enquiries will receive individual and prompt attention.

Why not talk things over with your nearest Bank Agent or write for information?

STATE BANK OF INDIA
India's Leading Bank

Manufacturer of:

Storage Tanks for Oils, Fuels and Chemicals Pressure Vessels and Specific Equipment required for Chemical Industries in Mild Steel, Stainless Steel and Aluminium.

Oil Tanker Boilers and Query Bodies.

Bright Bars Commercial and Free calling qualities.

Sole Agent in India of:
Messrs. CRANE LIMITED
for Pipe Fittings, Valves of all sorts.

INDIA TUBE MILLS & METAL INDUSTRIES PRIVATE LIMITED
Agra Road, Vikhroli, Bombay-79.

The break-up of the aid in terms of grants and loans and in terms of the currency of repayment is interesting. As is evident from Table II, only 20 per cent of total American aid to India involves foreign exchange repayments. Twenty-nine per cent of the total aid represents grants. The remainder (50.6%) represents loans repayable in rupees. These repayments do not involve the utilization of India's foreign exchange earnings or the export of goods from this country.

PUBLIC LAW 480

The United States has entered into eight agreements with India under Title I of U.S. Public Law 480 covering agricultural commodities valued at \$2,428.3 million (Rs 1,156.3 crores).

Payment is made by India for these supplies in rupees. The agreements provide for the utilization of the sale proceeds in the following manner:

	(Rs. crores)
1. For grants to Indian government for economic development ...	375.3
2. For loans to Indian government for economic development ...	554.7
3. Cooley Fund for loans to private enterprise ...	78.7
4. For U.S. government use ...	147.6
Total Rs. ...	1,156.3

As of October 31, 1962 a sum of Rs. 675.1 crores had accrued as sales proceeds of commodities supplied to India.

	(Rs. crores)
1. For grants to Indian government ...	186.1
2. For loans to Indian government ...	321.5
3. Cooley Fund for loans to private enterprise ...	75.1
4. For U.S. government use ...	92.4
Total Rs. ...	675.1

GRANTS FROM U.S. PUBLIC LAW 480 SALES PROCEEDS

The eight agreements between the United States and India under U.S. Public Law 480 provide for the grant of Rs 375.3 crores from the sales proceeds of agricultural commodities to the Indian government for economic development projects.

As of October 31, 1962 a sum of Rs 186.1 crores had become available from sales proceeds for grants to the Indian government. Agreements have been concluded for grants to be made to the following projects.

	(Rs. crores)
1. River Valley Development (Chambal, Hirakud, Damodar Valley, Mahi Right Bank Canal, Kakrapar, Nagarjunasagar, Kosi, Bhadra, Tungabhadra, Mahanadi Delta Irrigation, Kundah and Koyna Projects) ...	5.9
2. Malaria Eradication ...	31.0

LOANS FROM U.S. PL-480 SALES PROCEEDS

The eight agreements between the United States and India under U.S. Public Law 480 provide for loans totalling Rs 536.6 crores from the sales proceeds of agricultural commodities to the Indian government for economic development projects.

As of October 31, 1962, a sum of Rs 321.5 crores had become available from the sales proceeds for loans to the Indian government.

Agreements have been concluded for loans to the following projects:

	(Rs. crores)
1. Refinance Corporation ...	26.2
2. River Valley Development (Chambal, Hirakud, Damodar Valley, Mahi Right Bank Canal, Kakrapar, Nagarjunasagar, Kosi, Bhadra, Tungabhadra, Mahanadi Delta Irrigation, Kundah and Koyna projects) ...	124.1
3. Sharavathi Hydro-electric Project ...	34.5
4. Industrial Credit and Investment Corporation of India ...	10.0
5. Industrial Finance Corporation ...	10.0
6. Chandrapura Thermal Power Project ...	20.5

8. Durgapur Thermal Project ...	3.4
9. Kanpur Thermal Power Project ...	1.0
10. Barapani Hydro-electric Power Project ...	6.4
11. Trombay Fertilizer Plant ...	13.4
12. Rihand Valley Development ...	5.6
Total of loan agreements ...	256.4

Commitments have been made for loans to the following projects, for which agreements are expected to be signed shortly:

	(Rs. crores)
1. Talcher Thermal Power Project ...	8.5
2. Birsinghpur (Amlai) Thermal Power Project ...	6.6
3. Cambay Thermal Power Station ...	9.0
4. Pamba-Kakki (Sabarigiri) Hydro-electric Project ...	18.4
5. Bandel Thermal Power Project ...	7.7
Total commitments ...	50.2
Total of loan agreements ...	306.6

COOLEY FUND

The Cooley amendment to U.S. Public Law 480 (named after Congressman Harold D. Cooley, Chairman of the Committee on Agriculture of the U.S. House of Representatives) provides that up to 25% of the local currency proceeds from the sale of American agricultural commodities shall be made available for lending in the private sector to two categories of borrowers:

- (1) American firms or their subsidiaries operating in the host countries (India) or indigenous (Indian) firms having an affiliation with an American firm;
- (2) Indigenous firms of the host countries with no American affiliation but which are facilitating the disposal of American agricultural products, e.g. local private warehouses storing grain or flour mills processing the grain, etc.

As of October 31, 1962, a sum of Rs 75.1 crores had become available to the Cooley Fund.

The following loans have been given from the Cooley Fund:

	(Rs. crores)
1. Otis Elevator of India Ltd. ...	0.10
2. Goodyear Tyre and Rubber Co. of India Ltd. ...	2.25
3. Mysore Cements Ltd. (Ms. Sarangapani Mudaliar/Kaiser Inc.) ...	0.55

16. Victor Gasket India (Private), Ltd. ...	0.08
Total ...	14.26

U. S. EXPORT-IMPORT BANK LOANS TO INDIA

Loans given by the U.S. Export-Import Bank are repayable in dollars. The following tabulation shows the loans given by the U.S. Export-Import Bank to India:

Name	Amount	Date Authorized
1. Sundatta Cotton Seed Utilization Ltd. ...	\$ 60,000	March 29, 1957
2. National Rayon Corporation ...	\$ 1,800,000	October 4, 1957
3. First Line of Credit to Government of India ...	\$ 150,000,000	February 27, 1958
4. Hindustan Aluminium, Ltd. ...	\$ 13,650,000	January 1960
5. Air India International (first loan) ...	\$ 4,100,000	September 8, 1960
6. Second Line of Credit to Government of India ...	\$ 50,000,000	December 23, 1960
7. Orient Paper Mills, Ltd. ...	\$ 18,500,000	January 6, 1961
8. Air India International (second loan) ...	\$ 8,100,000	June 19, 1961
9. East India Hotels ...	\$ 717,000	July 27, 1961
10. Third line of credit to Government of India ...	\$ 25,000,000	Subject to approval
Total ...	\$ 271,927,000	

DESIGNED

In Kuljian's air-conditioned design offices in Calcutta about a hundred designers and draughtsmen bend over their drawing boards, preparing blueprints for projects worth crores of rupees. And Kuljian's team of trained Indian and American construction engineers—civil, mechanical, chemical and electrical—transforms these blueprints into humming plants as far afield as Dhuvaran and Delhi, or as near at hand as Bandel and Barauni. ■ Kuljian Corporation of India has specialised in consulting engineering service. Fully-equipped and fully-staffed to handle diverse and exacting assignments Kuljian has both hard-earned experience and a great tradition—the experience of a decade in power engineering in India and the tradition of its American collaborators whose famous name it bears. ■ From feasibility reports to initial operation is the scope of Kuljian service. Whatever be the project technique and resources—to do full justice to it in designing, engineering and in construction supervision.

The Rationale of Dividend Policy

By

RAJ K. NIGAM and N. D. JOSHI

[This paper is an adaptation from the forthcoming publication entitled 'Corporate Dividend Trends during the period of industrial growth and planned economic development in India 1947-57' by the authors of this paper. The views expressed in this paper are the personal views of the authors and the Department of Company Law Administration is in no manner committed to them. The responsibility for the accuracy of the data is also that of the authors. The authors were assisted, in the preparation of this paper, by their colleague, Mr N. Natarajan, Investigating Officer attached to the Research and Statistics Division of the Department.]

GENERAL CONSIDERATIONS

The considerations which usually determined the quantum and rate of dividend distribution are many. No single consideration in particular could be named as the prime regulator of dividend distribution policy. It is in fact the result of the balancing of many business, accounting managerial and financial factors. Sometimes fears and prognostications of the company directors act as powerful influences over the size and shape of the equity dividends. Among the financial and economic considerations, the more important ones are the adequacy of profits, the liquidity position of the company, financial strength of the company as measured by the accumulated reserves, the stability and prospects of the company in the context of business conditions for the industry to which it belongs, the prospects of the company to withstand possible future losses, stabilisation of dividend rates, share value etc. Special interest of management groups and their business customs also determine the course of dividend policies. Among the fears and hazards which often influence dividend decisions, fear of dividend curbs through legislative measures is a serious upsetting factor in the matter. However, apart from these, there are many other imponderables as the business strategy to promote one's own interests in the industrial fields by ousting other powerful competitors, the future planning nurtured in the minds of the ruling oligarchy, etc. which determine the size of equity dividends behind the facade of other operative considerations.

Among the financial considerations, the adequacy of profits and liquid position of a company have a more visible and direct impact upon the quantum and rate of equity dividends. If the profits are inadequate, many a company would not normally declare any dividends and if perforce they did, it would be for certain other extraneous considerations and would be done only by whittling down the credit worthy position of the company. Besides the availability of net surplus, it is also necessary that the net surplus earned during the year should be available in liquid realisable form and not tied in the inventory of finished goods and

raw materials or committed to financing monthly wage bills and other contingencies. Here, it may be pointed out that the company managements usually keep a fair working margin for meeting certain short-term commitments such as monthly wage bill, purchase of materials, etc. Managements have also to take into account such facts as what proportion of this surplus could be realised by the reduction of inventories through sales easily and at what point of time during the financial year of the company. Next in importance is the consideration of the question of expansion or growth of the company which is dependent upon the prospective volume of demand for its products. The prospects for such growth also depend partly on the governmental policies. Under such conditions there would be a strong pressure for building up the reserves position of the company so that it could avail of future opportunities. Apart from this on grounds of business prudence also the company management may like to create a comfortable bed of reserves for meeting losses during years of depression or for putting the finances of the company on a stable footing.

There are certain statutory restrictions also with regard to dividend distribution. For instance, Company Law contains a statutory prohibition to the effect that dividends cannot be paid out of capital. Apart from this, lavish distribution of profits is also very often penalised by fiscal measures such as by imposition of a special dividend tax or bonus tax worked out on graduated scales. Sometimes, the ceilings of dividend distribution are also prescribed. Here it may also be pointed out that the tax laws in certain countries, as the Income Tax in our country, have laid down that where the shares of a company are closely held (Section 23A companies), a certain proportion of the profit is also compulsorily distributed to the shareholders. This is done so that the individual shareholders having substantial income might not escape the supertax. Besides, the year to year fluctuations in the rates of corporation tax and dividend policy of the companies. While the Corporation tax

directly affects the quantum of available profits for distribution, the fluctuations in individual income tax might act as an incentive or otherwise for the management whose total personal income might be attracting higher rates of income tax and supertax. In cases where a good proportion of the dividends received by the directors with controlling interest, being subject to high or very high percentages of income tax and supertax, is to be absorbed by taxes, such directors normally favour a policy of high reinvestment ratio to dividend distribution; such a policy leads to greater appreciation in share values giving a higher margin of capital profits which are subject to a lower capital gains tax as compared to taxes paid on dividends. Thus very often managements are guided by tax considerations relevant to their personal incomes.

It may also be mentioned here that where the company management is very much professionalised, that is to say, where the board of directors consists of executive or service directors, of which there are very few instances in this country, it is not the personal tax consideration which keeps the dividend rates on the low side, but the professional attitude towards expansion of business through higher-investment policies.

Sometimes, the prevailing customs of high or low dividend in vogue in various industries at a particular time influence the management decision on its policy to avoid switches in shares and depression in share values. But it may be pointed out here that it is not always possible for companies to follow a particular practice in vogue for certain financial reasons. On occasions it is also seen that companies declare higher dividends so as to make their scrip comparatively more attractive than those of others.

However, apart from these general considerations governing dividend distributions, there are a few other specific factors which play an important role. Firstly, the dividend rates are influenced by different considerations in different industries. For instance in distributive trades, where

reserves are not to be built, in periods of prosperity, entire profits earned could be distributed, whereas in the case of capital goods industry the opportunity might be seized for building up reserves for the growth of the industry in the future and as a result, lower dividend rates might be declared. Secondly, the age of the company also matters. A company 'young' in age would give a greater priority to the current needs of working capital and to the building up of contingency reserves, etc. than to the need of dividend distribution whereas an old and established company which has established its financial position and creditworthiness can afford to follow a more liberal dividend policy. Next comes the size of the company. Several research studies in the U.K. and U.S.A. have established a positive correlation between the size of company and the dividends. In theory, a company which is yet to reach the optimum size wherein economies of production could be fully effected, would not pay out its current earnings in dividends as apart from using these resources for building up fixed assets it would utilise the same for current financial needs for which alternative sources of finances such as bank credits, etc. would not ordinarily be available. Similarly, the large-sized companies which have no immediate expansion programme would probably distribute a larger proportion of net profits as dividends. Fourthly, the type of management in position accounts for the differences in dividend distribution policies in different companies. Apart from the general proposition that the separation of ownership from management, often has brought into play cross purpose approach to the reinvestment and distribution policies of companies, the dividend policies are actuated by highly individualistic motives of the management in control of the company. Lastly, sometimes the historical dividend record of companies determines their future dividend distribution policy.

Out of the many determinants of dividend policies, Professor P. Sargeant Florence has singled out the following three principles which underline the dividend policies of the board of directors of companies in the U.K. in allocating a proportion of the net earnings of the companies to dividend:

(i) The policy of required reinvestment: According to it, a certain definite amount or proportion of profits is considered to be an essential requirement for reinvestment purposes in view of the technical and market conditions of different industries.

(ii) The policy of fair allocation: According to it a certain specified proportion is considered to be a 'fair share' as between dividend to shareholders and allocation to reserves. This proportion can be different for different industries. For instance, in America, according to Graham and Dodd, quoted by Prof. P. Sargeant Florence "10% reflects the average

Authorised Capital Rs. 10,00,00,000

Issued and Paid-up Capital Rs. 7,00,00,000

Total Loans Outstanding (as on the 30-6-1962) ... Rs. 49,61,58,295

AUTHORISED BUSINESS

(a) (i) Granting of medium and long-term loans and advances in Rupees to or subscribing to the debentures of public limited companies or registered co-operative societies engaged in or proposing to engage in the manufacture, preservation or processing of goods, or the generation or distribution of electricity or any other form of power, or mining, or shipping or hotel industry with an option to convert at its discretion the loans and/or debentures into stock or shares.

(ii) Granting of loans in foreign currency under arrangement with the Development Loan Fund of the U.S.A. to industrial concerns.

(b) Guaranteeing of loans raised by industrial concerns (i) which are floated in the public market and are repayable within a period not exceeding twenty-five years and (ii) from scheduled banks or state co-operative banks.

(c) Guaranteeing loans raised from or credit arrangements made with any bank or financial institution in any country outside India by industrial concerns in foreign currency.

(d) Underwriting the issue of stock, shares, bonds or debentures by industrial concerns

(e) Subscribing to the stock or shares of industrial concerns;

(f) Guaranteeing of deferred payment in respect of import of capital goods from abroad or their purchase in India by industrial concerns;

PURPOSES FOR WHICH LOANS ARE SANCTIONED

Purchase of new or second hand machinery, renovation or modernisation or replacement of worn-out or obsolete machinery, purchase of land for factory site, and construction of factory buildings.

IMPORTANT TERMS AND CONDITIONS OF LOANS

(i) SECURITY: First charge of all the fixed assets such as land, buildings, plant and machinery and fixtures. Raw materials, stock-in-process and finished goods will not be mortgaged and will, therefore, be available for raising working capital from elsewhere.

(ii) MARGIN: Generally 50% of the value of total assets including those to be acquired with the loan. This margin may be reduced to 40% in case of industrial concerns importing plant and machinery under the U.S. Export-Import Bank Loans or other foreign currency loans (tide credits) taken by Government from foreign governments or financial institutions abroad where the cost of imported plant and machinery is 60% or above of the total capital cost of the project. The margin may be further reduced to 35% in special cases.

(iii) INTEREST: The current rate of interest for rupee loans is 7½% per annum subject to a rebate of ¼% for punctual repayment of instalments of principal and payment of interest. D.L.F. loans carry interest at 8½% p.a. less a rebate of ¼% p.a. for prompt payment (net 7½%) plus an extra ¼% p.a. to provide for incidental expenditure.

(iv) REPAYMENT: Rupee loans are repayable within a period not exceeding 25 years to suit borrower's convenience. D.L.F. Loans are repayable within a period not less than 5 years and not more than 15 years from the date of the disbursement of the final instalment of the loan. Repayments shall not however, commence earlier than one year, from the date of the final disbursement of the loan.

D. R. MADHOK,
General Manager.

K. P. MATHRANI,
Chairman.

practice of independent operating electric utilities over a period of years" and "in the case of industrial and rail-road companies, an average pay-out in dividends of about 2/3rd of earnings may be considered as normal and appropriate", and "for soundly capitalised public utilities, the desirable pay-out ratios may be settled as high as 85%.

(iii) The policy of dividend rate stability: Many well-known American and British companies in practice have treated their ordinary shares as though they were preference shares or debentures to be paid a fixed income. For instance, American Telephone & Telegraph Company paid 9% for very many successive years.

Prof. Florence tested the validity of the aforesaid three principles on a 4-year period dividend data (1948-1951) belonging to 20 industrial groups with companies therein classified in three size groups, viz., very large companies (with paid-up capital of £3 million and over) medium large companies (with paid-up capital of £1 million upto £3 million), small-large companies (with paid-up capital of £0.2 million to £1 million).

Apart from Prof. Florence's study in U.K. certain important investigations have also been carried out in the U.S.A. by Prof. W. L. Crum and Prof. Epstein and other workers under the auspices of the National Bureau of Economic Research.

In our present paper we have attempted to study the influence of such factors as (a) availability of profits, (b) growth of assets in companies (c) capital formation and dividends distribution, (d) dividend rate stability, (e) nature of industry,

(f) size of the company, (g) age of the company, (h) management pattern etc. With the help of financial data relating to 336 public companies for the period 1947-57, the selected companies belong to nine principal industries viz. cotton jute, coal, Iron and Steel (including engineering) Cement, Sugar, Paper, Tea and Coffee and Rubber and account for about 40% of the total paid-up capital of all public companies at work belonging to the aforesaid industrial Groups. All the selected companies have their shares quoted on the stock exchanges and the ownership of their shares is widely dispersed. The inferences drawn are tentative and would require further verification.

AVAILABILITY OF PROFITS

As stated above, availability of profits is an important determinant of dividend rates. To what extent this factor did determine the course of dividends during 1947-57 in our country has been examined by us with the help of double frequency table relating equity dividends as percentages of paid-up capital to the class intervals of net profits as percentages of paid-up capitals. Our study shows that with the increase in the availability of profits, companies have stepped up the dividend payments to the equity shareholders. This is true in respect of all the 9 industries with one minor departure noticed in the case of tea industry. In the tea industry in the highest net profit bracket, the dividend rate tapered off slightly from the previous lower net profit bracket. The following Table I gives the average dividend return on paid-up capital correlated to four size strata of net profits.

TABLE 1
Correlation of Dividends to the size of net profits, 1947-57.

Industries	Size strata of net Profits as Percentage of Paid-up Capital			
	0 to 10%	11 to 25%	26 to 50%	Above 50%
Cotton ...	6.0	11.1	17.8	20.5
Jute ...	6.3	11.2	14.3	33.0
Coal ...	3.2	7.7	18.4	18.5
Iron & Steel ...	...	7.5	15.8	...
Cement ...	3.4	4.0	...	...
Sugar ...	4.0	10.4	14.9	24.3
Paper ...	10.3	14.3	...	...
Tea ...	4.7	12.8	21.7	11.7
Coffee and Rubber ...	5.5	9.2	15.5	33.0
All Industries ...	5.0	10.5	18.8	23.6

However, as against the conclusion emerging from the foregoing table that generally the size of the equity dividends has increased with the availability of profits on the average, it would be proper also to mention that in the cement industry we came across some instances of companies whose dividends did not have any direct relationship with the net profits. These companies distributed dividends in the face of losses or inadequate profits. But the number of such companies, however, worked out roughly to 10% of the total. The following two Tables 2 and 3 give the average number of companies which declared dividends despite losses or in which cases net profits fell short of the quantum of dividend declared over the 11 year period.

TABLE 2
Distribution of Companies declaring dividends despite losses or inadequate Profits 1947-57.

MANAGEMENT PATTERN:

To bring out the influence of form of management over the dividend policies of companies in our study, we grouped the companies under 2 groups, viz., companies managed by managing agencies and those not managed by managing agencies. Of the 336 companies in respect of which information regarding the form of management was readily available, 272 were managed by managing agencies and 64 had other forms of management. Our study of the average dividend distributed over the 11-year period by the companies under the two groups showed that by a slight edge companies managed by managing agencies had a better dividend record than that possessed by the Companies not managed by managing agency companies. The average dividend for the managing agency managed companies worked out to 11.2% as against 8% for the other group of companies. But here readers have to bear in mind the fact that our results are over weighted with the number of managing agency managed companies and also many of these happen to be of the better type. The following Table 4 gives the average dividend results for managing agency—managed companies and those managed by other forms of management in each of the 9 industrial groups covered in this study.

TABLE 4
Distribution of Dividends according to Management:
(Average for 1947-57).

Industrial group.	Managing agency managed companies.	Others.
	(1)	(2)

Jute ...	11.2	5.0
Coal ...	9.1	8.1
Iron & Steel ...	11.0	6.7
Cement ...	4.0	4.0
Sugar ...	11.8	9.0
Paper ...	11.8	10.9
Tea ...	17.8	15.6
Coffee & Rubber ...	12.0	12.2

NATURE OF INDUSTRY

Because of a restricted selection of industrial groups in this study it has not been possible to make a more comprehensive and broad-based generalisation with regard to the dividend policies and the nature of borrowings. However, one conclusion, that does

emerge from our limited study, is that in the old established industries such as cotton, sugar, plantations (tea, coffee and rubber), the dividend returns have been higher than those in the cases of other classes of industries which are in the process of further development like the iron and steel (including engineering), paper and cement, jute, Coal industries are a class by themselves in so far as processes of modernisation and consolidation are afoot.

The average dividend paid by the companies belonging to the 9 industrial groups in this paper over the period 1947-57 are given below:

A. Stationary or less fast-growing Industries:

Tea ...	16.3
Coffee & Rubber ...	12.7
Cotton ...	10.4
Sugar ...	9.5

B. Fast-growing industries:

Paper ...	7.3
Iron & Steel ...	8.6
Cement ...	6.9

C. Industries undergoing modernisation:

Jute ...	9.9
Coal ...	8.7

SIZE OF COMPANIES:

A study of the correlation of equity dividend to the size of companies based on their paid-up capital reveals a positive relationship of dividend to the size of the companies. For this study, in Table 7 below we divided the companies under three size groups, viz., companies having paid up Capital (i) under Rs 25 lakhs, (ii) Rs 25 lakhs and below Rs 50 lakhs and (iii) Rs 50 lakhs and more. The average percentage dividends for the 11 year period have been observed to go up from one paid-up capital bracket to another.

TABLE 5
Average dividend percentage for eleven years 1947-57 in various industries in various Size-groups (percentages).

Industry	Paid-up Capital		
	Upto Rs 25 lakhs	Rs 25 lakhs to Rs 50 lakhs	Rs 50 lakhs and above

CORPORATE AGE AND DIVIDENDS RATES

In regard to the correlation between the life span of the company and the dividend, our investigation reveals that there is some relationship between the two. Of the 336 companies covered in this study 190 were set up before 1919, during 1919-1938 and 39 during 1939-1951. The study reveals that the older companies paid higher rates of dividends. Companies which were started before 1919 paid an average dividend of 14.0% as against 11% paid by those started during 1919-1938 and 6.7% by the companies registered during the period 1939-1951. This generalisation is generally true in respect of the various industries individually excepting in one or two instances as will be noticed from the Table 6 given below:—

TABLE 6

Distribution of average Dividend Rate according to the age groups of companies (1947-57).

Industry	(Percentages)		
	Upto 1918	1919-38	1938-51
1. Cotton	12.7	11.3	2.5
2. Sugar	9.6	13.6	5.0

5. Paper	14.7	10.3	...
6. Jute	10.3	10.7	13.5
7. Coal	10.6	9.1	3.0
8. Iron & Steel	16.1	10.8	3.8
9. Cement	...	4.0	4.0

GROWTH OF ASSETS:

A study of the sub-sample of 45 companies taken from the 336 companies covered in the study revealed that the dividend rate and the rate of growth of assets over the period 1950-57 are positively correlated. The analysis as given in Table 7 brings out that companies which registered a faster rate of growth of assets had also paid dividends at higher rates. Companies whose assets increased by 10% during the period 1950-57 paid an average dividend of 9.3% as against which the companies whose assets increased by 10 to 25% over the same period paid an average dividend of 9.8% and the companies whose assets increased by more than 25% paid an average dividend of 13.6%.

CAPITAL FORMATION AND DIVIDEND DISTRIBUTION

Basically, capital formation and dividend distribution are two competing phenomena one prospering at the expense of the other. At times reliance is placed on self-financing on grounds of a sound financial policy and yet at other times it is a sheer necessity owing to the non-availability of alternative sources of finances, such as, cheap borrowings, easy access to capital market for fresh capital, etc. However, when profits are bountiful, the conditions for restricted dividend distribution do not arise as the companies can then distribute higher dividends simultaneously with substantial ploughing back of profits for their expansion. But if the profits are not bountiful and alternative sources of finances are not easily accessible, the question of choosing either of the competing considerations, viz., dividend distribution or the expansion through self-finance becomes a vital issue, particularly in industries which are expanding at an accelerated rate. In our present study which covers the nine principal industries, six industries viz., coal, iron & steel, cement, sugar, paper and coffee and rubber plantations show a continuous rise in the net worth during 1951-57 (vide Table 8). All of these industries were not, however, during this period called upon to exercise this difficult choice. The iron and steel industry for instance could declare continuously higher dividends throughout this period because of easy access to

capital market for borrowings and for fresh capital. The cement industry, excepting in the years 1952 and 1956, and the sugar industry, excepting in the year 1952, followed the policy of high dividend distribution as did the iron and steel companies throughout the period under study. Paper companies, however, reduced the quantum of dividend during the first three years (i.e. 1951, 1952, 1953) but increased it continuously during the rest of the period. The coal companies reduced the quantum of dividend payments in 1951, 1953 and 1957 while the coffee and rubber plantations did so during 1952, 1955 and 1957. The remaining three industries cotton, jute and tea showed uneven trends. The shareholders interests seemed to be considered by the management uppermost in the cotton industry. Though the dividends were reduced in this industry in 1952 to augment the reserves, in the very next year they were increased by bringing down the reserves. The dividend quantum was reduced in the years 1953 and 1955 in the jute industry and in the years 1952, 1955, and 1957 in the case of the tea industry.

To sum up it may be said that Indian management did not display any particular preference in favour of self-financing as they declared reduced dividends only during three years out of the seven years studied but in the remaining four years passed on the fruits of better financial performance to the shareholders in the shape of higher dividends.

Source: Statistics on Company Finances published by R. B. I. in its bulletins.

DIVIDEND DISTRIBUTION AND LIQUIDITY POSITION:

Dividend can be paid out of cash and bank balances, from cash realized by disposing of current assets or through borrowings. The ultimate result of the dividend payments from any of the above sources is a deterioration in the liquidity position of the company. The company management which aims at a certain level of which aims at a certain level of liquidity position would declare dividend only if the liquidity position improves beyond the basic minimum held in view. With such a company management the liquidity position

measured by current ratio is thus an important consideration in dividend distribution. The Table below which gives the figures of current ratio and dividend distribution (indexed with 1950 as base) for years 1951-57 can roughly be used to assess how far the consideration of liquidity affected the policy of dividend distribution in various industries as a whole. In tea industry this consideration alone seems to have exercised a considerable influence in the formulation of the dividend policy as its dividend policy followed the ups and downs in liquidity position in six out of the

seven years studied. At the other extreme, iron and steel industry with bright future could afford to be unmindful of liquidity consideration as its dividend policy was not in tune with liquidity in six out of the seven years studied. In between these two extremes come other seven industries. The sympathetic movement of dividends distribution with that of liquidity level has been recorded in four out of the seven years in the cotton and other plantation industries, in 3 out of the seven years in the case of jute and coal and in 2 years in the case of the cement and sugar in-

dustries. In the paper industry the management followed a conservative dividend policy by reducing dividends despite improvement in its liquidity positions for the first three years of the period studied, probably to strengthen the liquidity position but it subsequently stepped up the dividend distribution to such an extent as to nullify the good effects of its earlier dividend policy, with consequent deterioration in its liquidity position.

For all industries together, the liquidity position is almost continuously declining as a result of dividend payments having been stepped up.

ASP-171-22

Certainly much more than we have. With the fast economic growth of the country the demand for telephones and telecommunication equipment has been rapidly rising. To meet this demand I.T.I. has now launched an expansion scheme for doubling its capacity.

Since its establishment in 1948, I.T.I. has been steadily growing and with the new expansion programme, it hopes to serve better, the country's increasing needs for telecommunication equipment.

PHILIPS RESEARCH SPELLS TECHNICAL EXCELLENCE

A great deal of thought and research goes into the design of every Philips product used every minute of every day to satisfy countless human needs.

Yet research work, conducted in the Philips laboratories, is only one of the responsible factors. To complete the picture, add to it the invisible plus of international experience and know-how. You will not wonder Philips products are of the highest technical standard, the last word in reliability.

PHILIPS

contributing today to India's future

PHILIPS INDIA LIMITED.

IMPACT OF BORROWINGS ON DISTRIBUTABLE PROFITS

If the conditions in the capital market be such that funds can be easily borrowed at a rate of interest lower than the rate of return obtainable in the industries, the use of such borrowed funds results in an element of surplus to shareholders by way of addition to disposable profits over and above that earned by the use of more shareholders' funds. The size of the surplus varies from industry to industry and from company to company, depending upon the extent of divergence between the rate of return and the rate of interest and also on the availability of substantial amount of such funds to an individual company. Whether such additional increase in the profits is distributed to shareholders by way of dividend payments or not, depends on the discretion of the management. Nevertheless, the use of cheap borrowed funds definitely connotes the likelihood of a more liberal policy of dividend distribution than it would otherwise be. The prevalence of this practice in the Indian industries, can be studied by comparing the rates of returns on the shareholders' equity alone (vide Table No. 10). Among the nine industries studied, iron and steel industry, wherein the rate of return is very high, shows the prevalence of this practice. The increase in the rates of return on the shareholders' equity by the use of borrowed funds in this industry varied between 2 percent to as high as 7 percent in 1955. The average increase in the rate for the entire period 1951-57 comes to 4.5 per cent. The other prosperous industries, viz., sugar, paper and cement showed the average rates of increase of 2.7%, 1.7% and 1.3% respectively. Though the average return on capital in tea and other plantations was very high

(viz., 13% and 15.8% respectively) these industries did not use borrowings on long term basis to a great extent. The average return in the remaining industries namely cotton, jute and coal being comparatively very low, these industries did not have much scope in increasing disposable profits by resort to borrowings.

Lastly, it may be mentioned that the use of borrowings is not only resorted to when its cost is cheap but sometimes it is used to tide over financial crises even when it is costly. In the latter case, the borrowings eat into the disposable profits. In the year 1952, the cotton industry had to pay interest by reducing the rates of return to share holders.

UNIFORM RATE OF DIVIDEND DISTRIBUTION.

The following Table 11 gives the number of companies in the various industries which declared uniform rate of dividends for 6 and more years. It will be seen that the maximum

number of companies declaring a uniform rate of dividends is in the cotton industry. Next to the cotton, coal and sugar industries have 5 and 4 companies respectively which have declared the same rate of dividends.

STABILITY OF DIVIDENDS.

Excepting the size of profits and the desire to maintain an approximately uniform rate of dividend distribution, all other factors studied in the foregoing paragraphs, affect the dividend distribution policy through profit earning capacity. The two factors, viz., the size of profits and the management's decision to hold the dividend line have often been singled out for the application of advanced statistical technique to assess their influence on the dividend policy in countries like the U.K. and U.S.A.

The usual technique adopted in this respect is to build up a model not only on the current year's profits but also

on the long term estimates of profits. Dobrovolsky has used the following equation:—

$$dt = BPT + ydt - 1$$

where 'dt' means dividend distributed during the current year 'dt-1' means dividend distributed during the previous year, 'pt' means profit available for distribution in the current year, 'B' denotes short-term propensity to distribute dividends while 'y' denotes long-term propensity to distribute dividends.

The following Table gives the values of short-term propensity and that of the ratio of short-term to long-term propensity observed in the case of a sample of British and American com-

panies as compared with those calculated by us for some Indian companies. It will be noted that the value of B and (1-y) are of equal magnitude as it should be:

Country	Short-term Propensity (B)	Short-term Propensity (1-y)
UK		
1953	0.08	0.04
1951	0.07	0.14
1928	0.20	0.21
USA		
1940-41	0.36	0.32
1925-26	0.22	0.35
India		
1957	0.23	0.32
1955	0.15	0.04

The low value of short-term propensities obtained in U.K. in 1953-54 is explained by the dividend restraint in these years in the U.K. But in 1928, there being no dividend restraint, the short-term propensity is higher probably because the managements of companies in that country wanted to pass on the benefits of higher profits to the shareholders immediately. The low values of short term propensities obtained in case of Indian Companies, show that the pattern of dividend distribution in India is similar to that in U.S.A. and U.K. The low values of short-term propensity as compared to those of long term propensity in all these countries show that the company managements in these three countries attach more importance to the principle of stability in dividend distribution than to its tagging with the changes in the level of profits.

We have stated in the foregoing paragraphs the various factors influencing the dividend distribution. Now we summarise the general findings regarding the influence of these various factors below:—

1. Availability of Profits: The higher the level of profits as percentage of paid-up capital, the higher the rate of dividend record.
2. Management: Companies managed by managing agents show better dividend record.
3. Class of industry: The order of industries according to the rates of dividends paid is tea, coffee and rubber, cotton, sugar, coal, iron & steel, paper and cement.
4. Size of the company as reflected by its paid-up capital: The bigger the size, the more the dividend.
5. Age of the Company: The older the Company, the higher the dividend.
6. Rate of growth as reflected by increase in assets: The higher the rate of growth of assets, the higher the dividend.
7. Stability in Dividend payments: Companies generally follow the policy of maintaining an approximately uniform rate of dividend distribution over a long period.
8. Liquidity: The liquidity position has not influenced much the policy of dividend distribution.
9. Borrowings: But for the availability of Borrowed funds at cheaper rates dividend distribution would have been low.
10. Capital Formation: The need for self-financing has not materially affected the policy of dividend distribution.

Dredging Problems of India: Survey and Assessment

A HISTORICAL RESUME

The great German philosopher Goethe had prophesied in 1827 after the successive failures of Spanish, Portuguese and Dutch hydraulic engineers to link the Atlantic with the Pacific Ocean that only the young and energetic nation of the USA could cut across the Isthmus of Panama. History has recorded how Count Ferdinand de Lesseps, the Conqueror of Suez, had made no tangible progress in 1880 and the eventual failure of the French Project resulting in one of world's greatest fiasco.

In 1903 Goethe's dream became a reality. The USA rolled up its sleeves and within a space of ten years solved a technical problem that had baffled mankind for four centuries. A 50-mile channel was made so that "the commerce of the world and a world of commerce may pass through the lock gates of the Panama Canal."

INTERNATIONAL EXPERIENCE: DREDGING IN AMERICA

The secret of America's success in Panama was primarily due to her mastery over the science and art of dredging. Behind the progress of the modern hopper dredger lies the indefatigable efforts of the US Army Corps of Engineers. The early colonists had recognised that America needed new harbours and ports, improvement of river navigation, control of floods and construction of a large number and variety of civil engineering projects on the MISSISSIPPI River and the Atlantic seaboard. To undertake this stupendous tasks on a nation-wide scale and for the advancement of their trade and commerce the US Congress empowered General Washington to raise a new wing of the Army for the specific purpose of solving the nation's hydraulic problems on their mighty rivers and lakes and upon their tempestuous seacoasts.

Thus on the 16th June 1775 was laid the foundation of the US Army Corps of Engineers (Dredging) who adopted as their motto a new and inspiring slogan "ESSA-YONS" (Let us Try)—which eventually became the gyrating centre for the beginning of a glorious saga of marvels of civil engineering.

As a result of the foresight and sagacity of President Thomas Jefferson, the policy of the Corps has been able to undertake civil duties for the protection of the American people both in war and peace. This has been largely achieved through close cooperation of military and civilian personnel. For 134 years, the Corps

*Col. M. C. Harrison, Panama Canal Authority.

By

U. SHANKER RAO

of Engineers has built and maintained the nation's harbours and navigable waterways, flood control activity, beach erosion, and completed more than 2390 projects in America.

Ever since its inauguration the Corps of Engineers made dredging an integral part of its engineering policy. The Atlantic seaboard offered wide scope for pioneering skill and development of dredging technology. In 1855, a cargo vessel of 365 tons, the 'General Moultrie' was converted as a dredger by adding a large bin in its hold, a centrifugal pump, and a suction pipe—thus bringing together the basic essentials and the principal characteristics of hopper dredging. This combination became as a result of research and development one of the world's most efficient and powerful tools of the civil engineer. Without the hopper dredger it would never have been

possible to execute such gigantic projects as the Mississippi River Control, the Ambrose Channel of New York Harbour, the State Barge Canal, and the Intercoastal Waterway a triumph of water transport. Tying the entire Gulf Coast Area into the nation's network of 28,000-mile system, the Waterway has transformed inland cities into busy harbours cutting down the cost for movement of basic raw materials at rates anywhere from 25 per cent to 50 per cent cheaper than by rail and road.

Twelve years later when the Suez Canal was being constructed, it was largely due to the invention of the hydraulic hopper dredge that the project became a commercial success. After dredging in Charleston Harbour, the next major job performed by the Corps of Engineers was the dredging of the Gedney Channel in New York, 28 feet deep, 1,000

feet wide and 4,000 feet long. Impressed by this work the Congress set up the Hopper Dredge Board for the design and construction of hopper dredges.

Unlike its contemporaries in the UK and the Continent where the bucket and the grab dredgers held sway in most civil engineering projects, the American dredge has been principally designed to work in exposed conditions of weather, in rough sea and swell of 10 feet heights, and keep open the entrances to ports on the sea coast or work against strong currents in the river. Thus while as early as 1885 a trailer was employed in the U.S.A., Europe still struggled with the stationery type of unwieldy box-shaped suction dredgers that were largely confined to working in sheltered and protected waters without any cross currents and ocean swell. Suction dredging was never a speciality of the Continental builders. Even upto World War II the Fruehling type of suction head—one of the most influential members of the "Pump-Suction-Assemblage"—was the dominant design in Europe and the U.K. Though the Fruehling head is primarily designed for working in sand, its output fell short of requirements when handling fine grained sand and silt.

As against the conventional Fruehling suction head, the Corps of Engineers were well in advance in technological science and in view of the vast quantities of sand that had to be primarily handled by their dredgers in America, invented three principal types known as the Ambrose Fixed Head, the California Self-adjusting and the Power Loaded Drag for operations in fine and hard packed sand.

ORGANIZATION OF THE CORPS OF ENGINEERS

A primary factor in contributing to the successful work of the Corps of Engineers was its civilian policy in this department of the U.S. Army. The Congress considered that the scope of deepening harbours and improving their inland waterways was a national undertaking. No private enterprise could have such vast resources as the Government for executing large scale projects that involved billions of dollars of American money and took into consideration long range aspects of national safety and strategic defence. So the Government itself took upon the work.

For purposes of administration, organization, and technical operations, the work of the Corps of Engineers is run with its headquarters at Washington under the

Taming of the Mighty Mississippi—Bank erosion or 'caving in' is a serious problem for dredging the shoals and channel alignment on the 'Father of Waters'. Reminiscent of the havoc done to the Benares Ghats, the jetties for transshipment for the Assam Rail Link, Dibrugarh Ghat, and in many other Indian rivers corrective action can help to save vast sums of money. The US Army Corps of Engineers tackle erosion by a new system. Special type of plant spread a continuous course of hot mixture of asphalt and bar-run sand to an average thickness of five inches, uncompacted, at specified locations on the Mississippi so as to stabilize the river banks. In dredging the Hooghly approximately 40 per cent of the total quantum of spoil lifted by the dredgers consists of material eroded from the banks—a primary factor in shoaling of the river crossing and in reducing drafts for ships.

supreme command of the Chief of Engineers. The United States is geographically divided into certain principal divisions as for example the North Atlantic Division. Each division embraces several districts. The principal activities of the Corps include the improvement and maintenance of coastal and inland harbours, navigable waterways, planning, construction, and in certain cases the operation and maintenance of flood control projects. The civilian nature of their work has adequate provision with other agencies such as the American Red Cross, the US Public Health Service, the Air Force, the Coast Guard, the Navy, Weather Bureau, the Department of Agriculture (fisheries and wild life) for co-ordination.

A characteristic of the role of the COE is that all civil work is normally done on a lump sum contract basis awarded to the lowest bidder as a result of competitive bidding. When a private entrepreneur fails to make a satisfactory bid, the District Engineer, may with the approval of higher authority, do the work by the COE using Government-owned plant and hired labour. Dredging contractors also lend their staff and equipment to the

Government and in the execution of large projects excellent team work exists between the State and private enterprise.

The importance of these dredges to national commerce* and prosperity is indicated by the fact that 100 years ago, when the British Steamer "Great Eastern" was completed with a draft of 30 feet, Portland, Maine was the only American Atlantic port she could enter. The entrance channel to New York Harbour at that time was only 23 feet deep; to Philadelphia, 17 feet, and to Norfolk, 19 feet. The Port of New Orleans, some 210 miles upstream from the Gulf of Mexico, on the Mississippi River, had no more than 19 feet depth.

Today the United States has been provided with 42 harbours ranging in depth from 35 to 45 feet, of which 20 are on the Atlantic Coast, under the Corps of Engineers' programme for building, operating and maintaining navigation, flood control, and other Rivers and Harbour Projects. In addition many harbours of lesser depths are constantly improved. The present strength of the dredging fleet of the Corps

*President, Mississippi River Commission.

of Engineers consists of 15 hopper dredgers, 19 pipe line dredges (11 Cutter Head Type, 9 Dust Pan Type), 2 Dipper Dredges, several bucket dredgers, a Training School at Fort Belvoir, Virginia, a large technical staff and a Research Station at Vicksburg for testing drag heads, study of soil mechanics and other hydraulic problems.

As a result of more recent development* directed toward the improvement of the efficiency of the hopper dredge, this Government organization is today removing annually with 15 hopper dredges, approximately the same quantity of material (75 million cubic yards) that was removed by 27 vessels in 1941, and the newer vessels have but two-thirds of of the combined hopper capacity possessed by the 1941 fleet. The Corps of Engineers can take pride in the fact that during the 12-year period 1941-53 operating crews and supervisory personnel have consistently held the percentage of increase in hopper dredging costs well below that encountered in other fields of construction—just under 30 cents per cubic yard.

Dredging work of the Corps of Engineers is divided between river and sea coast work, between Government plant and contract

work, and between new construction and maintenance. About 25 per cent of the annual dredging is new work on channels in river dredging. Channel dredging is done by cutter-head dredges while crossing bar maintenance on the rivers such as the Mississippi and Missouri are done by Dust Pan dredges.

The basic policy of the Corps of Engineers although a Government organization, is to work on a commercial basis. All dredging operations are done on a fixed contract price within a time limit. This has the advantage of having government plant available for keeping bid prices at a reasonable level and a considerable influence on the cost-structure of any national project apart from utilising the State's resources in carrying out a job in an efficient manner.

STRATEGIC VALUE OF DREDGING

During World War II American Hopper dredges travelled far from their home coasts to open entrances to Pacific Islands and atolls to naval supply fleets, while still others worked in War congested harbours of Europe. Often under

*The Hopper Dredge Board, USA.

aerial bombardment. After the War, when the historic battle-ship "MISSOURI" went aground off Old Point Comfort, Virginia, on 17th January 1950, she was refloated largely with the aid of the Corps of Engineer Dredge "COMBER".

THE UK

In the UK** the dredging requirements for naval ports is carried out under the Director General of Navy. He is responsible to the Admiralty for all dredging commitments for the Navy ports at home and abroad. There are 4 major naval ports in the UK and 3 abroad. Maintenance dredging in varying quantities is a continuous commitment and capital dredging may arise at any time. The Admiralty is also responsible for dredging to meet the requirements of the Army or the Navy force. The annual dredging programme in all ports is controlled from the Admiralty. Each

December reports are submitted with proposed requirements for the next financial year together with estimated cost. The work in each area is sized by the Queen's Harbour Master in combination with the local Navy Officer who is responsible for all dredging operations in this area. The overall annual programme is then considered by the Admiralty in the light of priorities. Dredging course followed the consideration and official programme is approved.

The Royal Navy has built up an efficient dredging organization to meet both peace and War requirements.

Numerous schemes of economic development rely first and foremost on dredging. No industry can exist without good ports and waterways to guarantee the supply of raw materials and the distribution of finished products. Both the young countries who are just beginning to flex their muscles, and the countries with established industries know that 'dredging for prosperity' is no hollow phrase: it is a necessity.

In the UK dredging contractors have formed into a body for undertaking various national projects. What wonders systematic dredging can do is revealed by the outstanding example of the port of Southampton*. In 1882, there were depths of only 25 feet at MLWS at the entrance channel, in 1883, the Southampton Harbour Board, increased the depths to 30 feet, in 1932 the transatlantic liners Aquitania needed 35 feet; and in 1936, the port was able to handle the "Queen Mary" with a loaded draft of 39 feet.

One of the three large dredging and reclamation operations recently completed* by this Company in England was the reclamation of

**Director General, Navy Works, Admiralty.

19

marshes on the Isle of Grain alongside the River Medway at Port Victoria on behalf of the British Petroleum Co. Ltd. (in conjunction with Mears Bros Contractors Ltd), where over 900,000 cubic yards of material were pumped ashore for reclamation purposes. This material was obtained from the Nore Sand, at the confluence of the Rivers Thames and Medway, by Suction Dredger and transported in barges to a large Reclamation Dredger which pumped the material ashore through a long length of pipeline.

HOLLAND

In Holland—the "cradle of dredgers"—the Dutch soon realised that they had either to 'dredge or drown' and they have made its science and art a national tradition. To meet the needs of the export market in the Eastern countries and other undeveloped areas six of the leading firms of dredge builders, who were spe-

cialists in construction, reclamation, cranes, and towage, merged into single unit known as the IHC Holland.**With their research laboratory at Delft, they have been able to provide many types of new dredgers for India and Pakistan. Over 3,000 dredgers, ships and cranes have been constructed by the six Dutch Ship-builders.

JAPAN†

In Japan, the Government established the Japan Dredger Technical Society with the prime objectives of developing its ports and harbours, undertaking new construction, and adapting the knowledge of European countries to suit their local requirements. A significant development since the War was the close collaboration between USA and Japan in dredging technology. This helped to build one of the largest dredgers in the world—the 'COA' of

**Agents Messrs Bird & Co.
†Courtesy: K. Ono, Esqr.

16,700 ton 'Boom Dredge'**. Specially built for the Venezuela River for export of its ore, this dredge has the capacity of moving spoil from the open sea around 168,000 tons of solids during a 24-hour period—enough to load a Liberty ship in a little over one hour. Deeper navigable depths in a port increase in a higher ratio not only the earning capacity of a port but also benefit shipping in providing a quicker turn-round. Thus with the same basic equipment in a port such as wharves, cranes and docking facilities, more trade can be handled.

For example it is interesting to mention that for the past few years the governing depths for the port of Calcutta have been hovering around 10/12 feet in the Upper Reaches. If these depths could be increased even by 25 per cent the traffic handled can be raised

BOMBAY DYEING FOR COTTON FABRICS

For over 20 years, BOMBAY DYEING have been exporting their wide and ~~just~~ ^{most} colourful range of cotton fabrics to U.K., Europe, U.S.A., Canada, West Indies, East and West Africa, Sudan, Middle East, Australia, New Zealand, Burma and the Far East. That's how BOMBAY DYEING came to be one of India's first and largest single exporters of cotton fabrics!

The BOMBAY DYEING range of cotton fabrics includes Bedsheets, Sheetings, Mattress Materials, Casement, Upholstery, Damask Table Linen, Shirtings, Drills, Coatings, Poplins, Cotton Blankets, Towels and Towelling Materials. These are now available in the Indian market. And, for their price, they are all excellent value for your money!

BOMBAY DYEING

THE BOMBAY DYEING & MANUFACTURING CO. LTD.

by 3 times. Every vessel, on a fair approximation, at a TPI of 50/55 tons, loses, on each voyage 4,500 to 5,000 tons of cargo each way.

INDIA AND THE US

No apology is needed for this detailed survey of historical experience, especially of the U.S. A careful analysis of the dredging problems of the two great countries would show that there is a great similarity in the nature of dredging, requirements of plant, auxiliary equipment, and various other aspects. Like India the long coast line of the United States are washed by two great oceans, the Atlantic and the Pacific. The mighty Mississippi, an alluvium stream has many hydraulic characteristics to that of our Ganga and the Hooghly—erodible banks, channel thread continuously changing, strong currents bringing down vast quantities of sand and debris, the floods

causing shoals and serpentine meandering into crossings and reaches. The familiar paddle-wheel steamer, a picturesque descendant of the glorious days of Mark Twain still carries more than 60 per cent of the supplies of tea from Assam through the tortuous channels of the Brahmaputra and the Sundarbans to Calcutta.

Tremendous problems of the littoral sand drift, wide scale erosion of coastal areas, bank caving on the rivers, water transportation, flood control, large scale hydro-electric schemes, river-valley projects involving dams, irrigation canals, reservoirs, in India and the USA have a close similarity.

The work of the Corps of Engineers is an outstanding example of efficient systematic organization and administration. Its fleet of hopper dredgers, techniques of working, surveys, spoil disposal,

reclamation and other services are a working model for a country like India where efficient dredging can transform the whole structure of port development and expansion of Indian shipping.

The turbulent waters of the mighty rivers is rich with "liquid history"—not the grim out-dated records of battles lost and won but with history of the two nation's common objective for industrial prosperity through peaceful means.

THE SURINAM PROJECT—

REMINISCENT OF CALCUTTA

Somewhat reminiscent of the problems of Calcutta due to draft restrictions an outstanding feat in dredging gave dramatic aid to the supply of strategic aluminium in World War II. The Aluminium Co. of America had its principal sources of bauxite up the Surinam (Dutch Guiana) South America.

*Port of London Authority, London.

Deep draft ships could not cross the bar off the mouth of this river in the Atlantic Ocean. Ore had to be shipped in partially loaded vessels, which were topped off to full draft in Trinidad. Re-handling of the ore resulted in high costs and long delays, often critical.

Called upon for quick help, Construction Aggregates* geared its operations to do the following three assignments simultaneously.

1. Dredge a channel across the Surinam Bar.
2. Re-design and convert the re-handling facilities to speed up the "topping off" of partially loaded bauxite ships.
3. Survey and design facilities for permanent solution of the problem.

The Surinam Bar channel was extended and deepened eleven miles out to sea—beyond the sight of land. The re-handling equipment at Trinidad was re-designed and re-built, tripling its production. The shipment of required bauxite tonnage was speeded up to schedule. The Surinam project demonstrated that seagoing hopper dredges can operate efficiently in seas too rough for other types of dredging equipment.

On another World War II project C.A.C. placed sandfill at the Norfolk, Va., destroyer base to raise the yard level and build a foundation for the dry dock while other phases of construction were proceeding.

DREDGING IN INDIA—NEED FOR GREATER ATTENTION

Paradoxical as it may seem though India has a long coast line of 3,000 miles and a large number of ports whose development could help to transform the nation's economy only 7 of them are known as "major" ports.

These provide docking and berthing facilities for ocean going vessels—and the rest are "lighterage ports" on the coast. These lighterage or roadstead ports can play a vital role in improving the transport economy of the country if dredging can be done in the entrance channels and enable lighters to navigate the bars and link with internal road, canal, and rail systems. It has been widely recognised that transport has been the main bottleneck and the International Bank for Reconstruction and Development went as far as to remark "we are struck by the extent to which the lack of adequate transportation facilities threatens to constitute a bottleneck in the country's economic development".

Apart from the 7 "major" ports there are 226 minor ports notified open for traffic, of which 150 are working ports.

ANALYSIS OF INDIAN DREDGING PROBLEMS

By and large, dredging works can be principally classified into three categories:—

I Category—Dredging in outer Channels (River Estuary) Alluvial soil.

II Category—Dredging of Sea Entrance (Littoral sand drift).

III Category—Dredging inside docks and harbours, inland water-ways, and protected waters.

Categories I and II require hopper suction dredgers of different sizes. The generally accepted depths in Indian ports is 33 feet MLWS for vessels of a length of 600 feet.

Category III requires various types of smaller units of grab, bucket and cutter suction dredgers. Portable units of cutter/suction type 10" to 14" are in wide use in inland areas where they can be transported in sections and re-assembled on the site. Such units are useful for dredging of the cooling tanks, inlets of power stations, flood control, and reclamation work.

A dredging project can be further divided into three principal types:—Capital or New Work Dredging, Corrective Dredging and Maintenance Dredging. Capital dredging is the construction of new works such as building of new ports out of virgin areas, new alignment, and large scale reclamation of land for industrial sites. This type of work is now generally done in India by inviting global tenders on a contract basis.

Contract dredging incurs large sums of foreign exchange. The work may last for a period of 2 to 5 years and in view of the limited nature of the work contract bids are comparatively high. Unlike Europe and USA when a tender is invited for any project owing to the absence of Indian dredging capacity or an organization which can compete with outside tenderers, like USA, costs are comparatively high in spite of the fact that the lowest tender is usually accepted. In principle this bid may not be the "lowest" if India had sufficient dredging capacity, know the technical "know-how", an efficient fleet of dredgers, and trained technical staff for carrying out the project. It is time that initiative was taken for the execution of future schemes with the assistance of Indian Engineers and Contractors. Some examples of capital dredging works by foreign contractors may be of relevant interest in assessing the extent and scope for the formation of an Indian Dredging and Reclamation Company, long overdue.

Capital Dredging Works	(Approximate) Rs. crores
The Fulta Point Scheme, Calcutta	5.5
The Balari Bar Alignment, Calcutta	1.0
Reclamation of Salt Lakes, Calcutta	12.5
Dredging of Outer Harbour, Bombay	5.0
Reclamation Scheme for BEST Station, Bombay	0.25
Back Bay Reclamation Scheme, Bombay	10.0

RECLAMATION IN BOMBAY*

Practically the whole of the Port Trust Estates are of land reclaimed from the sea. The magnitude of the operations involved may be gauged by the extent of these estates which total 1,880 acres, or approximately one-eighth of the whole area of the City and Island of Bombay. The revenue from rents collected during 1958-59 amounted to about

*Courtesy Bombay Port Trust.

Rs. 148 lakhs. The principal reclamations effected by the Trust are the Mazagaon-Sewri Reclamation, 583 acres, which was filled by the material dredged from the harbour, the Wadala Reclamation of 325.84 acres and the Ballard Estate of 27.40 acres.

The Wellington Island in Cochin has been built up from the dredged material from the harbour. In every large city of India there are many areas that could be economically reclaimed and made commercial prepositions.

Besides the above there are a number of large indents for carrying out dredging in the Farakka Barrage, Bhagirathi River, Brahmaputra River, Ganga, D.V.C Navigation Canal, and Inland Waterways and Artificial BARGE Ways to Assam 8 feet deep 30 feet wide.

SYSTEM OF ORGANIZATION—DREDGING CONSORTIUM

Like shipping, an "invisible earner" of foreign exchange, contract dredging provides wide scope for national income. The USA Britain, Holland, Belgium, and

France, and lately Japan have been bidding for global tenders and undertaking dredging and reclamation work. Paradoxically though contract dredging can be included in the category of a heavy industry as it involves the expenditure of large sums of money, and foreign exchange the capital equipment is comparatively small. Usually one dredger, hopper barges and some auxiliaries. If reclamation work has to be done, then it would include a few "booster" pumps and pipe lines but in no way involve such complicated machinery, as for example like setting up a steel plant, ship yard, or other heavy engineering project.

In many European countries and in the USA general contractors have formed national organizations representing all types of construction work in dredging and civil engineering. Dredge plant, hopper barges, booster units, pipelines, ship/delivery and towage agencies, work in close collaboration somewhat on a 'co-operative basis, different units or agents, supplying some specialised requirement for the benefit of a com-

UNION CARBIDE

What's on the other side of this hexagon?

Although the world is familiar with this hexagon as the corporate symbol of an international company, most people have little idea of the many-faceted activities in the exciting universe of Union Carbide.

The starting points of nearly all the products of Union Carbide are the simplest tangible substances...the basic chemical elements. From the air, earth and ocean the scientists of Union Carbide extract gases, wrest minerals and ores, the "building blocks" of nature, to create thousands of new products...chemicals, plastics, carbon products, industrial gases and metals.

In this country, too, Union Carbide India has kept pace with the changing times. Beginning with a small plant in Calcutta 27 years ago, the Company today has large factories in Calcutta, Madras and Lucknow making it India's largest manufacturer of dry cells and flashlights. The Company's zinc rolling mill in Calcutta is the only one of its kind in India and serves the

nation's industrial requirements of zinc strip. And now Union Carbide India has spent Rs. 4.5 crores on a plant at Trombay Island, Bombay which is producing chemicals and polyethylene resins and compounds that serve as raw materials and intermediates for numerous end-products for industry and the home.

Yes, on the other side of the Union Carbide hexagon is a world of scientific endeavour sparked by man's imagination...endeavour which has created hundreds of useful products that did not exist before, a world in which scientists are seeking the wonders yet to come, the completely new things of tomorrow.

THE HYDRAULIC SUCTION DREDGER "ESSAYONS"

There is a close similarity between the dredging problems of India and the USA. In 1959 President Eisenhower had leased the dredger to the Suez Canal Authority on a token rent in order to help Egypt overcome some of her difficulties. The "Essayons" worked at the northern end of the Suez Canal and deepened it from 37 feet to 43 feet. Working around the clock before returning to her home port—New York. Technical collaboration and lease of dredgers from the Corps of Engineers could materially assist in the improvement of our ports and rivers.

The "Essayons" is of 22,000 tons, 525 feet long 72 feet beam, her dredging machinery is a marvel of engineering and represents the culmination of more than a century of experience. On each trip the dredger can cut a passage one foot deep, 56 feet wide, and 2½ miles long. The big dredger operates like a gigantic vacuum cleaner. Two 90-foot-long 40-ton drag arms are lowered on to the bottom and two centrifugal pumps suck 7,000 tons of material an hour as the vessel moves along 3 knots over the ground. One inch of additional depth can mean a pay-load of 60/65 tons of cargo for a modern ship.

Courtesy: U. S. Army Corps of Engineers

mon project. A few illustrations may be of relevant interest to Indian entrepreneurs and civil engineering firms as there is considerable scope for undertaking dredging contract work in our country—both on a large and small scale basis.

In the USA dredging contractors and leading engineering industries have formed themselves into a representative organization known as the Associated General Contractors of America (AGC).

The AGC was organized in 1918, at the end of the First World War, as the result of a direct suggestion by the President of the United States, Woodrow Wilson. The government's experience with construction problems during the War had led President Wilson to point out the need for a national organization of general contractors through which the Government could have direct contact with the construction industry.

Since its founding in 1918 the AGC has identified the construction industry as basic to America's progress and as the nation's greatest single production activity, thus enhancing public understanding of its true social and economic importance. Among its principal accomplishments, the AGC

has established itself as a spokesman for the general contracting industry and as the authoritative source of information on which law-makers may base legislation and governmental agencies may base their regulations affecting construction operations, co-operated with the Army and the Navy in the organization of construction, reserve units for the national defence, and a number of other achievements.

Holland has excelled in undertaking large-scale capital dredging projects in various parts of the world. The system generally followed is for a number of dredging and reclamation firms to form a company and have subsidiaries affiliated to them. A notable example of a dredging consortium is the HAM* which with a total capital of D. fl 7,200,000 has an annual turnover (average period 1956-59) of D. fl 15,400,000. A glimpse of their dredging activities in various parts of the world is specially given here to show the wide scope there exists in dredging projects. The projects are:

Reshaping of Sourabaya Harbour as a major naval and mercantile port,

*Courtesy HAM Holland.

Harbour Development works at Cape Town and New Terminal for Oil Refinery at Aden.

Dredging and Harbour extension of certain ports in Britain, Scotland, Venezuela, Sierra Leone.

Dredging contract in Bombay (Outer channel).

DREDGING AND RECLAMATION AS SMALL SCALE INDUSTRY:

The economic role that small cutter/suction dredgers can play in a number of civil engineering projects is perhaps not fully appreciated, in India. Midget Dredging is a speciality in other countries. In Holland there were in 1961-62 a total of 150 private companies, in Belgium 120, Britain 80, and the USA 210. The dredging fleet ranged from one or two cutter suction dredgers of 8 to 10 inch power to well over 5 vessels of varying capacities. The work involved is deepening of canals, small irrigation projects, reclamation, removal of silt from the intake of power house cooling tanks, sand filling, and other civil projects. 50 per cent of the work in USA is reclamation work.

The Ellicott's of the USA is one of the pioneers in the building of

small portable* dredgers and have a wide range of quality products known as 'Dragons'. A few examples of the use of small dredgers in industries, canals, sand and gravel contract may be of relevant interest to private dredging companies for carrying out similar work in India:—

PULP MILLS & PAPER MILLS

In Canada the Abitibi Power & Paper Co. operates three paper mills whose log ponds' capacities were reduced by a 30-year accumulation of silt, bark and other affluent materials. To restore and maintain these areas at proper depths the company employed a 10-inch Dragon type of dredge.

ELECTRIC POWER UTILITIES

In Nebraska, Indiana Tennessee and North Carolina, "Dragons" are utilized by power plants to restore capacity to their water reservoir systems and for removal of silt built-up in the intake points of their condensing ponds.

CHEMICAL PLANTS AND REFINERIES

In Louisiana and New Jersey, company anti-pollution programme to prevent harmful sludge from contaminating nearby waterway are being carried out by the use

of an 8-inch dredger while a company in Kentucky uses one to pump calcium hydroxide sludge for reprocessing.

A 10-inch suction dredger is used to reclaim land to keep up with the demand for high quality real estates. Dredging out main channels and filling in submerged land can help to solve the housing problems in large cities like Bombay, Calcutta and Madras where there is heavy pressure for new building.

SAND GRAVEL PRODUCTION:

A building materials dealer produces sand gravel with an 8-inch dredger. The unit is equipped with a hydraulic apparatus which dislodges the material from the bank so that they fall into the pit where the dredge pumps them to a classification plant ashore.

MOSQUITO CONTROL

To overcome a serious mosquito control problem, the Toledo area Sanitary district purchased a 8-inch Ellicott Dragon dredge for clearing the snags in the various pools and backwaters of the Ten Mile Creek (a waterway which meanders for approximately 25 miles through four public parks in Toledo and the campus of the University of Toledo). This creek about 45 feet wide, heavily silted, could not carry off the extremely high waters which flood it at each spring. As a result of studies made of this waterway, it was decided that the Ten Mile Creek be thoroughly dredged and widened to achieve mosquito control.

FLOOD CONTROL AND IRRIGATION

Third Plan allocation for flood control and irrigation is Rs 61 crores. Recently the Ministry of Irrigation and Power drew up a scheme for the acceleration of irrigation projects in the States. In this connection it is of relevant interest to note that as a measure of flood control and channel improvement the Jammu and Kashmir Government* recently installed two 12-inch hydraulic pipe line dredgers of the portable type built by the well known firm of Ellicott's for work on the Jhelum River.

This waterway, which flows through the Srinagar valley in Kashmir, floods adjacent agricultural areas each year washing out important crops and rendering many people homeless. The flooding is caused by the raising over the years, of the level of the riverbed which makes the Jhelum incapable of handling the maximum volume of water flowing into it each spring when the snows on the surrounding Himalayas melt.

As a result of contract negotiations by Ellicott's authorised representatives Blackwood Hodge (India) the "Dragons" were par-

*Courtesy: Chief Engineer: J. & K. Flood Control Project and 'Dredging Progress' No. 3. 1961.

20

tially manufactured in India by Ellicott's licensee. The Hooghly Docking and Engineering Co., Calcutta. These dredgers have been sent to Kashmir in match-marked packing cases to be re-assembled at the site. As no rail communications is available from Pathankot to the dredging site at Buramulla, it was necessary to convey them by truck over some 300 miles inland.

DREDGING OF MINOR AND FISHING PORTS

In 1956 the National Harbour Board had appointed a sub-committee to examine the various problems of dredging and make suitable recommendations as regards the scope and extent of dredging, types of dredgers and the financial implications involved

for setting up an administrative organization to carry out the work.

The sub-committee visited various ports and as a result of the investigations recommended a Dredger Pool consisting of 3 dredgers—2 suction and one bucket dredger having a capacity of 500 cu yds. of solid material per hour. All the three dredgers are to be of a sea-going type and self-propelled. The auxiliary craft and equipment required with the above dredgers would consist of the following:—

- With each suction dredger 2,000 feet of pipe line mounted on tubular pontoons with suitable flexible joints and a Tug to work in conjunction with the dredger.
- With a bucket-ladder dredger there would be 3 Dumb

Hopper Barges each of 300 cu. yds. capacity and one Tug for towing these barges.

It was suggested that one of the dredgers would be based at Vizagapatam for service on the East Coast and the other based at Bombay and Kandla respectively for service on the West Coast. The capital cost involved in carrying out the proposals for the Dredger Pool would be about Rs 1.90 crores initially consisting of Rs 65 lakhs each for the two suction dredgers with pipe lines for disposal of spoil and tugs and Rs 60/- lakhs for the Bucket Dredger. The operational cost was estimated to be about Rs 3 lakhs per year per unit making a total of Rs 9/- lakhs per annum for the whole unit.

GENERAL SERVICES Screwed and Socketed Tubes, Light, Medium and Heavy (Galvanised and Black) to I. S. 1239 (1958) upto and including 6" n.b., and Pipe Fittings. **POWER** Hot finished and Cold drawn Seamless and Electric Resistance Weld Boiler Tubes. **POLES** Tramway, Transmission and Lighting. **PUBLIC SERVICES** Air, Gas, Water and Sewage Mains. **INDUSTRIAL** Seamless and Electric Resistance Weld Tubes for Roller Conveyors and other industrial purpose. **STEEL STRIP** Cold Rolled Steel Strip for manufacturing purposes and High Tensile Steel Box Strapping.

Enquiries and Orders for Screwed and Socketed Tubes and Fittings ex-stock should be addressed direct to our Warehouse Offices.

NATURE OF DREDGING WORK IN INDIA

A brief survey of the general nature of dredging work would be of relevant interest. Indian ports are principally affected by two serious problems—siltation and erosion.

Siltation can be divided into two types; due to the enormous littoral sand drift of the East Coast and the periodic siltation of the entrances of minor ports situated in the estuaries of small rivers and creeks as a result of the sand and other material brought down from the catchment areas.

Littoral Sand Drift* largely affects the East Coast ports. It has been widely accepted that the East Coast is an eroding coast, being exposed to the prevailing ocean currents which bear northwards from Australia and that the sea has a general tendency to encroach landwards.

This sea action is counteracted by the accumulation of silt brought down the coast by the big rivers, the Mahanadi, Godavari, and Krishna and the Cauvery. The silt from these rivers being washed northwards up the coast by the South West Monsoon and down by the North East, replaces the soil eroded by the sea and so maintains the coastline in a rough equilibrium. Where, however, the coastal flow of silt and sand is obstructed, as for instance by an artificial groyne built from the coast to make a harbour, the sand tends to accumulate on one side of the obstruction and natural erosion to continue in an aggravated form on the other side. This sand travel is a menace on the East Coast and problems of dredging in Madras and Vizag are primarily due to this littoral drift.

From data collected from Madras and Vizag ports the annual movement of sand is of the order of approximately one million tons. According to the experience of the port authorities at Madras in carrying out dredging south of the sand screen at the Madras Harbour, it has been estimated that roughly half the quantity is the movement of the belt area which covers a width from about the high water mark to a depth of about 8 feet below low water.

In the circumstances sand travel on the East Coast presents a major issue and high dredging costs for capital and maintenance work is an inevitable feature in the economics of the ports.

The only port on the East Coast free from the injurious effects of the littoral sand drift is the port of Calcutta. Nature has indeed endowed this port with a wide and

*Report of the Ports (Technical) Committee.

STATEMENT I

Statement showing the Assessment of Dredging required in Minor Ports.

Chandabali: A minimum depth of 15 feet is desired from the sea to the port. Kakinada: The Kakinada Bay is tidal, the range of springs being 5½ ft. and that of neaps 3 feet. Length of proposed channel 4,000 ft. and 250 feet wide. Dredging depth 8 feet below LWOST. Average annual quantity to be dredged—1,50,000 tons. Swell. 2½ feet. Masulipatnam: Dredging in the approach channel through the open sea to a depth of 6 ft in order to allow 30 ton lighters of a loaded draft of 4½ feet to navigate into the creek. Length of proposed channel 2,000 feet, width 250 ft. Annual quantity to be dredged—5 lakh tons between the shore and the One Fathom Contour—dredging through surf conditions. Cuddalore: The entrance lies over a bar at the mouth of the Paravani river—open through out the year—depths of 2/3 ft. in summer and 6 feet winter—range 2.6 feet. Cyclic tendency for the bar to shift due to littoral sand drift 3 to 4,000 feet. Outer Bar to be dredged 1,000 ft by 200 ft.—proposal for a pier over the bar with mobile sand pumps for dredging. Nagapattinam: Entrance impeded by a shallow bar at the mouth of the Kaduvayur River—liable to shift—two groynes partially help to stabilise the bar. Dredging a channel 900 feet long by 200 ft. is suggested—depth 6 ft navigation channel. Beyrpor: The bar where the Beyrpor River joins the sea is 5 to 6 feet deep at LWST. Width of navigable channel about 800 ft. Dredging required to deepen to 12 ft. depths, 1,200 ft. long and 210 ft. to permit larger sailing vessels to handle the large traffic in tides. Considerable siltation upstream around the tile factories. Mangalore: A bar is situated about 3,000 feet off the mouths of the Netravati and Gurpur Rivers with depths of 7 to 9 feet LWST. Width of navigable channel is 400 feet—maximum range 5 feet. Estimated maximum discharges of Netravati and Gurpur Rivers are approximately 1,20,000 cusecs and 60,000 cusecs respectively. Estimated littoral draft from south to north amount to 0.1 million tons per year. Dredging required 700 feet by 400 feet by 7 feet and deepening the inner channels as necessary. Malpe: Tidal port—range 5 ft. A bar leading to the inner anchorage needs dredging—400 ft. by 150 ft.—8 to 10 ft. below LWST. The bar is formed at the mouth of the Udiyavar River. Honavar: A bar at the mouth of the Sheravadi River with depths of 8 ft. at low water. A cut of 6 ft.	has been proposed—total dredging 12,000 cu. yds. Bore hole samples to a depth of 37 ft. show laterite rock, very fine la-erite sand, fine laterite sand, fine sand. Spoil disposal off in the sea or 500 ft. away on the banks. Karwar: Proposal for dredging central portion of Baikal Cove. An approach channel has to be dredged—1,50,000 cu. yds. Minimum depth 10 ft. Currents 2.6 knots. Ratnagiri: A sand bar at the mouth of the creek with present depths of 4 ft. Channel needs widening and deepening to a further 4 ft. quantity of dredging: 60,000 cu. yds.—silt sand, and soft rock. Disposal area in the sea or 1,000 ft. on land. Jaigad: Sand bar at the mouth of the Jaigad river—12 ft. at low water. Dredging required 62,000 cu. yds. Dabhol: Sand bar at the mouth with depths of 7 ft. Steady siltation occurring at the entrance and narrowing the channel. A cut of 13 ft. is proposed which can facilitate entry into the port. Quantity to be dredged 46,300 cu. yds. The Vashisty river is navigable inland upto Govalkot (30 miles) from the sea. Several bars in the creek need dredging to enable depth. Bankot: Sand bar at the mouth of the Bankot creek—5 ft. A channel 6 ft. deep and 100 ft. wide is to be dredged—67,000 cu. yds. Disposal area about 3 miles in the sea or 1,000 ft. on the bank. Rewas: Tidal port—range in springs 14 ft. neaps 9 ft. Steady siltation occurring continuously alongside the jetty. Quantity to be dredged 40,000 cu. yds. Mora: A cut 4 ft. deep. to make a basin 500 ft. by 200 ft. 14,800 cu. yds. Bulsar: Sand bar at the mouth of the Bulsar river—gets dry at LWST—spring rise 9 ft. neaps 5.6 ft. A cut 8 ft. deep and 200 ft. wide is proposed. Quantity 41,500 cu. yds. Okha: Classified as an Intermediate port—deep channel 5,600 ft. long and 400 ft. wide with depths of 15 ft. restricts ship movements. Dredging of 2,09,000 cu. yds. Navalakhi: Shoal at the entrance to the port—high range of tides—24 ft. in springs and 16 ft. in neaps. Mundra: A channel about 1,500 ft. long and 200 ft. wide is required to be cut upto—8 ft. (Cut of only 4 ft.) High range of tides. Mandi: A sand bar formed due to silt deposits from the river Rukma. A typical feature is wind-borne sand deposited in the harbour near the wharf. Enormous sand dunes are formed on both sides of the river. Capital and maintenance dredging is required estimated quantity 3,00,000 cu. yds. Source: National Harbour Board.
---	--

beautiful estuary where strong local rotatory tidal currents together with a deep submarine gutter in the swatch of No Ground have helped to keep the channels of the Hooghly free from this trouble.

EROSION OF THE WEST COAST PORTS: DREDGING FOR BEACH NOURISHMENT

As against problems of the littoral sand drift on the East Coast, the West Coast ports principally suffer from erosion. Most of the minor ports suffer from this problem and it is nothing uncommon

for large areas to be eroded away leaving behind a trail of fallen buildings, warehouses, and jetties like for example in Malabar and Ratnagiri.

Beach erosion is also a serious problem even in Europe, Britain and the USA. The US Army Corps of Engineers also study and tackle this problem and various schemes are undertaken for remedying this. Modern research in asphalt grouting of stone groynes and other structure has helped fight against the tempestuous winter gales of the North Sea and the Atlantic Ocean.

PLASTIC SURGERY (GEOLOGICAL)

A method which require dredgers and which can be commended for use in certain areas of the Indian coast line is what is known as Artificial Nourishment of Beaches.* Once again America has taken a lead in this problem. Two active institutions the Beach Erosion Board and the Bureau of Reclamation, of the USA have carried out research and experiments for the control of erosion. They have now come to the conclusion that prevention of erosion by means of protective structures is a dangerous practice in the sense that such protection is obtained at the expense of producing an ever-increasing problem area. Construction and maintenance of beaches through artificial nourishment, is, however, considered to benefit not only the foreshore upon which it is placed but the adjoining shore as well. There are four principal methods of artificial nourishment of the beaches. One of them the offshore deposit where dredged spoil made available from harbours is excavated by hopper dredge operations at a comparatively low cost and placed in certain positions on the floor of the sea in the form of a ridge, about a half mile from the shore in depths of 30 feet below low water so as to activate nourishment of the eroded beach by wave action.

DREDGING PLANT—INDIAN REQUIREMENTS

To sum up, it will be evident from a study of the relevant facts in Statements I and II that a heavy programme of dredging can be anticipated in the near future. In Statement III showing the list of dredgers available in Minor Ports it will be seen that they are mostly intended for service in sheltered waters and primarily meant for internal maintenance dredging.

An outstanding feature of our dredging is that sand forms the over riding factor affecting the navigable depths in our ports. This is also the case with our rivers the Ganga and Brahmaputra. Mechanical analysis of the bed samples would reveal that apart from mud, silt, clay, gravel and a minor percentage of stone fine and medium grained sand forms more than 70% of the type of material that has to be handled by dredgers in Indian Ports, and rivers. Fine sand from a dredging point of view are those of grains of 0.5 mm or less in size.

Owing to early political and commercial links with the U.K. and Europe the design and type of dredgers in India have been largely influenced by the types commonly used in these countries. Unfortunately the problems of dredging in India and in the U.K. or the Continent are not similar. There is a great difference in the natural topography, tidal prism.

*Director: Beach Erosion Board, U S A.

THE BIG HURRY IN THE WORLD OF NUCLEAR PHYSICS

The hurry is to find a compact source of energy that will be as prodigious as the sun and will not exhaust though the world live a million years. ■ Closest to the ideal is Uranium 235, a scant one milligram of which, when fissioned or 'exploded', releases more energy than that obtained by burning millions of tons of coal. This great world of power will keep all of us going, and going well, when the present natural sources such as coal give out. Already atomic power stations are an actuality in many countries including India. ■ Shaping the giant pressure vessels enclosing the reactor cores demands a very specialised knowledge of welding. ■ It is this specialised knowledge and application of industrial gases that Indian Oxygen affords Indian industry.

problems of salt water wedge, the result of the littoral drifts, and the monsoon discharges. A deep study would show that there is need for an early examination of our problems of dredging in India. Up to the last War the Suez Canal formed some sort of a bottleneck. The pattern of trade was largely controlled by various "conferences", and political considerations. But with Independence in India and in other Eastern countries there has been a steady alteration in the economy and general pattern of trade. This is likely to progress as industrialization rapidly advances and would call for deeper navigable depths in our major and minor ports, inland waterways, and in our rivers so as to make an over-all increase in the transport capacity of the country. The impact of the super-tanker, construction of Oil Refineries, and transport of large quantities of crude oil and petroleum products was also negligible before Independence.

STANDARDIZATION OF DREDGE PLANT

In the USA, the UK and the Continent there is a growing tendency for standardization of dredge plant so as to reduce cost/economics. Standardization has helped in the possibilities of equipping a fleet of varying types of vessels with machinery installation having identical units. Practices now currently accepted as normal using a trailing suction hopper dredger were held to be impossible in former times. In the future it will certainly become possible to deal with even more difficult material than is being handled today. I.H.C. Holland laboratories are making an important contribution to research in this field. Further it may be said that the sizes of the trailing dredgers tend to fall into certain standard groups which have been economical. The first of these have hopper capacity of about 53,000 cu. ft. and the second in the region of 90,000 cu. ft. Apart from a few specially designed vessels, the tendency is to build general purpose dredgers with hoppers of between 90,000 and 105,000 cu. ft. capacity. The question of single or twin suction is one which has not yet been resolved. It is expected that both types will have their application in the future. The need for economy is apparent and there is a growing tendency amongst various Governments and builders to produce dredgers of a standardized type in the form of series. For example, the I.H.C. Holland built the H.A.M. 302 for a Dutch Contractor with numerous overseas business relations. Later on a suction vessel in the same series was built H.A.M. 303 for the same contractor. While the H.A.M. 303 was still on the stocks, two other contractors placed orders with I.H.C. Holland for similar vessels.

STATEMENT II

Statement Showing Annual Quantum of Dredging in Major Ports, 1960-61.

Calcutta: The various bars and crossings in the navigable channel were dredged for a period of 5333 hours and 10,586,152 tons of spoil were lifted. The total expenditure on dredging including dredging of the navigable channel, berths, lock entrances, and dock basin amounted to Rs 88,16,792. This figure does not take into account the capital depreciation of the dredging fleet.

Vizagapatam: The three dredgers S.D. 'Visakha', S.D. 'Vizagapatam', D. D. 'Waltair' and three Grab Dredgers were engaged in Maintenance and Development dredging* Summary:

Dredger:	Hours.	Total dredging time.	Total quantity dredged L.Cft.
Vizagapatam	2225.46		238.31
Visakha	523.39		91.70*
D.D. Waltair	1249.45		6143†
			2,60,214‡

Madras: Dredging-Hydrographic observations, sand travel—During the year 220,667 tons of spoil (insectional quantities) were dredged outside the Harbour and its approaches and 649,934 tons (in sect. quant) inside the Harbour at the ship berths, moorings, including new ore and coal berths and entrance channel by the 'Sir Godfrey Armstrong'.

The Sand Pump dredged 202,376 of spoil (in sect. quant from the Sand Trap north and South of the Sand Screen.

The annual survey of 1961 has revealed accretion of sand drift around the Harbour during 1960-61 to a tune of about 1,056,483 tons.

Expenditure on Dredging: Rs 8.11 lakhs. (4.17% of total).

Cochin: S. D. 'Lord Willingdon' with the pipeline was engaged in dredging the Outer Channel and the Dry Dock approach channel. B. D. 'Lady Willingdon'

and barges were employed in dredging the Inner Channel and berths and the Hopper Suction Dredgers worked as Drag Suction Dredgers for clearing the narrow strip of 15' wide along the wharf frontage and other quay berths. The total quantity dredged was 2,212,290 C. Yds. as against 2,571,570 C. Yds during the previous year.

Expenditure on Dredging. Rs 13.91 lakhs (21.23% of total).

Bombay: The entire fleet of eight dredgers were fully deployed. The three suction dredgers were used for maintaining the required depths in the Alexandra Dock Approach and Entrance Channels Prince's and Victoria Docks Channels and Pir Pau Access Channel, while the five Grab Dredgers were mainly employed for dredging the dock berths, Turning Basins, Harbour Wall Berths, and Bunders, The Grab dredgers 'Chelura,' 'Flamingo' and 'Mayur' worked in double shift. The quantities dredged in 1960-61 were as follows:—

	(In 00 c.ft.)
Docks ...	1,24,783
Docks and Harbour Wall Chan ...	4,42,710
Bunders & Basins	23,814
Pir Pau Access Channel	41,300
Outside parties ...	1,104
Total ...	6,33,711

The total expenditure on the operation, maintenance, and repairs of the dredging plant was Rs. 36,35,807 during the year under report as against Rs. 32,58,023 in 1959-60.

Expenditure on Dredging: Rs. 36.18 lakhs (3.88% of total).

*Worked at Kandla 9/5/60 to 22/9/60.

BANK EROSION

Perhaps one of the most acute and difficult problems of Indian rivers is bank erosion. It not only affects navigation on the river, but destroys river stations, railway ferry crossings and countless acres of fields, and villages are cut into the river each year.

From the navigator's point of view, it is a menace, for a heavily cutting or eroding bank means the formation of a shoal below it, caused by the silt from the cut away bank being deposited on the river-bed below.

Rail-heads and rail ferries such as exist at Mokemeh/Semaria, MANIHARI/Sakri, etc., cost crores of rupees to build new ghats and ramps as the old are cutaway into the river or become silted up as a result of a cutting bank above them. This is a recurring seasonal expenditure.

Various methods have been tried to stop banks from eroding but perhaps the most advanced of all in this respect are the methods of the river engineers in the U.S.A.,

where large sums of money have been expended in harnessing the river banks of the Tennessee, Missouri and Mississippi Rivers.

AGGREGATES FROM THE SEA**
—COMMERCIAL VALUE OF DREDGED SPOIL:

In the USA and around the English Coast the littoral sand drift has also provided some commercial benefits which may be of relevant interest in India. The demand for building material has been steadily increasing as the need for new houses has been rising with the growth of the population.

In the English Channel hydrographers had long advanced the opinion that a vast stream of gravel and sand moves continuously from west east along the north side of the English Channel. The South Coast Sand and Ballast Co. Ltd., was founded in 1946 with the object of using this source to extract concrete aggregates from

**Report on I.W.T. Problems UNO

the sea. The first task of the Company was to locate an area which could be regarded as a natural reservoir of material fed by littoral drift. A shoal area south of the Needles was proved for this purpose and for ten years and more an expanding fleet of vessels has been engaged in extracting materials of consistent quality, without affecting the configuration of the sea bed. Some of the principal advantages in this way are:

- The retention of valuable land for agriculture,
- A consistently high quality material,
- The ability to carry large quantities of the materials economically to all ports on the South Coast.

A number of depots for marketing the aggregates have been established on the coast. To supply the South Coast ports it has been necessary to build a fleet of suction dredgers which are managed and operated by an associated company, South Coast Shipping Co. Ltd., the earlier vessels in service were converted from coasters but the latest vessels 'Sand Dart' and 'Sand Grebe' have been specially designed and built for the traffic. All the vessels are diesel powered.

Today, as a result of the increasing demand, the Company has a fleet of 7 suction dredgers ranging from 275 tons to 760 tons. The vessels load their cargo by pumping from the sea bed, the material then being carried to one of the ports for discharge.

NEW DESIGNS AND TECHNIQUES NEEDED

What is urgently wanted in India is a new approach to problems of dredging. New design in dredging plant and new techniques are needed. To this obviously, we have to look to the USA—the original home of the trailer suction dredger—that marvellous product of modern engineering which can handle such vast quantities of our littoral sand drift, work during the monsoons, and take full advantage of the natural scouring power of the flood discharge from the rainfall in the catchment areas.

Two essentials that need early introduction in Indian dredging plant is the modern trailer suction pipe and the remarkable improvements in the technique of agitation dredging. The advantages of trailer dredgers are as follows:—

- It is the only type of dredger that can work exclusively, safely and economically in exposed waters of approach channels subject to heavy waves action and ocean swells of upto 10 feet.
- It is a self-contained dredger and no auxiliary equipment is needed. Cutter-suction dredgers are handi-

NOTE: The States of Orissa, Travancore-Cochin and Bombay including Okha have no dredgers.

Source: Report on Minor Ports.

capped due to their long pipe lines and can only work effectively in calm waters and in a stationery condition. Consequently dredging yardage is less, time involved in making a "cut" is longer and cost higher. The use of pipe lines hampers navigation channels.

(c) The trailer hopper dredger is a sea-going vessel and can operate independently. It can also move from one

site to another during the monsoon conditions of the Indian coast. Thus work need not be confined to the fine weather season in the entrance channels.

In the U.K. dredge builders are now beginning to realise the advantages of trailer dredging. The Westminster Dredging Company of London, one of the leading firms of dredging contractors has built up a modern fleet of trailing hopper dredgers and the latest addition is the "W. D. Mersey"

with a capacity of 5,000 tons and a dredging depth of 65 ft. 8 inches. In order to assess the advantages of the Trailing Hopper Dredger with the conventional method previously employed, the Westminster Dredging Co., carried out an interesting experiment and the following are the results:—

The length of the dredging area is about 4,000 feet and the company maintains a channel width of 500 feet. The dredging area is subject to tidal conditions; springs rising about 30 ft. and neaps 24 ft.

(high tidal range is also typical of our Saurashtra Ports).

In order to assess the results of suction dredging as compared with the method previously in operation, the period 17th May to 30th November 1962 has been selected for comparison with a corresponding period in the previous year. In both periods the working conditions and the siltation pattern were similar, the only significant difference being in dredging technique. The material dredged consists of fine sand containing a proportion of silt which varies from

5% to 15%. The results are as follows:—

PERIOD 17th MAY TO 30th
NOVEMBER 1962

1961: Quantity dredged
Suction .. 420,637 cu. yd.
Bucket .. 1,022,483 "
Total .. 1,443,020 "
Decrease in
average depth 7 inches.

1962: Quantity dredged
Trailer suction Dredger 870,146 cu. yds.
Increase in
average depth 18 inches.

Dredging Co., London.

AGITATION TECHNIQUE— BOOM DREDGING

Agitation dredging is an old technique that has undergone some remarkable improvements in the USA. It first originated in the Mississippi river and today 90% of the dredging carried out in the South West Pass of the Mississippi is by the agitation technique. It

is also exclusively used on the Delaware.

In 1907 it was introduced in the Hooghly. The first dredger brought out by the Port Commissioners for their work on the Hooghly River was an agitation dredger where during certain states of the tide the fine material of the bed spoil could be pumped overside and allow the current to carry away.

In an interesting Paper* on Sidecast (Boom) Dredging on the results of dredging in the Orinoco River, presented by Henry G. A. Hayward, former chief of the Marine Division of the U.S. Army Corps of Engineers, now as Consulting Engineer, the following facts are of relevant value:—

Boom Dredge "Zulia"—Annual production, all in New Work, to a total of 57,000,000 cu. yds. which almost equals the production of the entire 15 dredge fleet of the Corps of Engineers, U.S. Army, for Fiscal Year 1960 which was approximately 44,000,000

*Technical Bulletin, PLANCO.

cu. yds. of Maintenance Work and 16,500,000 cu. yds. of New Work for a total of 60,500,000 cu. yds. at a cost of approximately 28 cents per cubic yard.

A significant comparison between "Zulia" production in December 1960, which was over 7,000,000 cu. yds. and the entire output of the fleet of 5 hopper dredges working in the River Hooghly below the Port of Calcutta which has been reported as being about 7,000,000 cu. yds. per annum is of relevant interest and shows the superiority of Boom Dredging.

The unit cost of Boom Dredging works out to about 15 cents per cu. yd.

MOONSOON FRESHETS— NATURE'S DREDGERS

Primarily the controlling factor all along our ports is the monsoon. The littoral drift influences depths by its direction and the amount of bed load moving past a particular entrance. Variation of depths also occur in shore through instabi-

lity of the natural channels that may be cyclic and unpredictable depending upon the vagaries of the monsoon.

In most cases the monsoon floods scour out a channel which keeps deep enough for several months but at a time of the year when there is no shipping in the minor ports! Siltation and low tides coincide during the fine weather season, when a port is 'open' or in operation. This results that in a year only 4 to 5 months the ports are open and when a dredger can work on the bar often hampering the movement of lighters and country crafts.

There is also another aspect—instability of the approach channels—a common factor in most alluvial estuaries. Wide river mouths cannot be stabilized and hydraulic mechanism of the locality creates a combination of forces which results in the opening of new channels if an old one is silted or shut. A typical example of this is the case of Masulipatam where the approach channel frequently shifts from 3 to 4,000 feet in a horizontal axis—cyclic changes every 5 to 7 years.

Nature's dredger is indeed the monsoon. The muddy discharge from the back-waters and from the catchment areas scours out a bar and its depth depends upon the velocity of the stream pouring out into the sea.

DREDGING IN THE MONSOON— AGITATION TECHNIQUE

Dredging in the monsoon in our coastal ports by the agitation technique could revolutionise the depths at the entrance channel in most ports. A small shallow drafted sea-going vessel that can stand local weather conditions (wind force 4/5 and moderate sea and swell) with twin suction pumps and trailer pipes and a rotating boom which can eject the material at a safe distance from the channel would be a useful type of dredger for local operations.

This possibility needs further examination as it has immense scope for improving the navigable depths for the movement of loaded lighters and can in certain ports allow a depth of 10 ft. This draft would allow a small cargo vessel to operate in the coastal trade and improve the transport economy, relieve pressure upon railways and make minor ports a major asset to India. Small ships like the Amber Jahaj can revolutionise the coastal trade.

THE CONCUITTER—MULTI- PURPOSE POCKET DREDGER

The conception of designing a small cutting tool in the form of a multipurpose pocket dredger may be viewed with much scepticism.

However, to those who have an intimate knowledge of the hydraulic geometry of the Hooghly River or for that matter for any stream of water that has a velocity of more than 2.5 knots will admit

that there are certain enormous forces in nature inherent in the hydro-dynamics of any great river like the Hooghly whose latent potentialities could be harnessed for the benefit of navigation. A simple but graphic illustration of this tremendous cutting force of water is the ever present menace of bank erosion. It has been estimated that more than 40 per cent of the dredged spoil in the Hooghly is what has been washed away from the banks of the river. This material eventually deposits itself in the shallows and becomes a bar across a river crossing.

Every stream has a certain amount of scouring power. Calculations have shown that at certain states of the velocity and in favourable hydraulic conditions the total intensity of the scouring power can be as high as 200% of its original power—that is a cut made 2 feet deep by a dredger, in favourable scouring factors, produce a depth of 4 feet. Unlike bucket dredgers in the performance of a suction dredger a number of mechanical and hydraulic factors occur simultaneously.

The CONCUITTER is a new type of multipurpose pocket dredger that relies basically for its effici-

ency in the scouring power of a stream. The method of operation is simple. The secret of its success lies primarily in placing the dredger at the right place at the right time. Its function at a particular stage may not be of direct benefit for the achievement of a deep navigable channel at a required moment but nevertheless its gentle application at a tender spot on the river bed is enough to release a multitude of tractive forces that will make the water work for man. Briefly, the purpose of the CONCUITTER is for "Controlled Erosion of the River Bed" for corrective dredging and new alignment for a pilot channel. Because of its small and handy size it is termed a pocket dredger. The tentative specifications are as follows:—

CONCUITTER (Contour-Cutter)

A Gentle Touch At a Tender Spot (An axiom based on a new conception of hydro-geometry of tidal streams).

Steel hull 10 lb. rivetted.
Length: 187 feet, Beam: 40 feet,
Draft: 6 feet.

Main Engines: Twin Screw Kirloskar/Man Diesel engines of 210 H.P. 1,000 r.p.

Twin Rudders: Interchangeable Suction Heads.

Cobbled stern to protect the propeller and scantlings of frame strengthened to enable the dredger to ground on a bar at low water at necessary.

Hydraulic jets as cutters for loosening hard material.

Dredge Pumps: Twin 12" Gwynne Centrifugal Gravel pumps for removal of approximately 250 tons of sand, 20 cu. yds. at 15/20 per cent of solids.

Trailer Suction Dredger: Twin pipes; suction Head; California Adjustable type. New design for Hooghly River.

Dredging Boom for discharge of spoil: 50 feet (Revolving Nozzles with Universal Rotator).

Dredging Depth: 30 feet. Central Pneumatic Gyrator

For Calcutta Hooghly MK1. Type For Coastal ports-Type Digby-beste MK II.

Swell compensator-6 to 8 feet height (General lines of Admiralty type MFV) Weather conditions-Moderate Monsoon-Wind SSW/SW force 4/5, moderate sea and swell. Rain squalls.

Conjugal Factors: Sieve analysis of the material to be removed to determine the proportion of solids of various grain sizes of Soil.

(b) Velocity and direction of prevailing water current. (Range/Velocity Curves of cross section).

(c) Distance through which the material must be carried out to be deposited outside the project area;

(d) Depth of water where it is to be deposited. [Sieve analysis—Hooghly River—Fraction range of very fine sand. .0625—.125 forming bulk of the material (45-67%) fine to medium sand (8.5-31%) and silt (7.9-43%). Subject to seasonal variations on different sites—CWPRS—Poona]

DREDGING IN INDIA—AN ANOMALOUS POSITION

An analysis of the dredging problems would show that there is a vast field for expansion and scope for undertaking new projects. Various types of dredge plant and auxiliaries would be necessary. The target in the III and successive plans for increasing the cargo handling capacity in Indian Ports is put at 61 million tons.

PATRIC LESLIE
1833-1917

Century in MALABAR

1862
1962

All history resolves itself very easily into the biography of a few stout and earnest persons ... EMERSON

The story of our own company is largely the life-story of pioneers like Peirce, Leslie, Gilkison, Macrae, Christie and others—the story of a dynamic, dedicated band. From modest beginnings, a century ago, PEIRCE LESLIE & CO., LIMITED has built itself into a great house of ramified commercial activity—of tremendous importance to the national economy.

A centenary merely marks for us the coming-of-age, the acquirement of some measure of wisdom for a further long, and, we humbly hope, useful period. Today, we count our hundredth birthday thankfully and celebrate the occasion as a reminder of our obligations of tomorrow.

TYPICAL DUSTPAN
DREDGING OPERATION

DUST PAN HYDRAULIC DREDGE

Dust Pan hydraulic dredges are special type developed in America for cutting channels through crossing bars. The name "Dust Pan" has been given to them because of the shape of the suction head and the manner in which they work—like a gigantic vacuum cleaner. The suction head is 32 feet wide with a number of vertical bars, the lower side of head is provided with jet nozzles every 12 inches apart. The Dust Pan dredge is used on the Mississippi and Missouri Rivers.

This type of dredger is recommended for operations on the Ganga and Bhagirathi rivers for dredging of shoals.

Courtesy: U. S. Army Corps of Engineers.

In view of such large and varied commitments in the future many aspects of dredging need attention.

Dredging is a wide subject involving many hydraulic and mechanical aspects. Above all the question of cost/economics has also to be borne in mind. In this Survey only a brief outline of the relevant issues and problems has been undertaken so as to focus attention for a more comprehensive assessment of our future requirements. A common objective and co-ordination in the design and construction of plant, choice of auxiliaries, hopper barges, in dredging techniques and manning would be beneficial. The system of administration differs from port to port. For example, the major and minor ports which together own and operate 80% of the dredge plant work their dredgers on an individual basis. Each maritime State has a separate dredging department or section. The work is under a chief engineer or a port officer.

The next large user of dredge plant is the irrigation and waterways department. Here again there is division between the Centre and States. Certain projects fall under the care of the former and others are supervised by the latter. Canals and inland waterways are under the P.W.D. The work of "bandalling" and river conservancy in the Ganges is primarily done by them. There are proposals for undertaking large scale dredging projects on the Ganga with a view to move coal from the Bihar coalfields to Alla-

habad due to a shortage of rail transport. This work would presumably fall to the Centre.

The War had intervened in the purchase of new plant and in many ports there is a back log to be made up. This particularly refers to the minor ports where the existing fleet of dredgers need early attention. But despite restrictions imposed due to the War it is creditable to place on record that local port authorities rose to the occasion and converted some of the self-propelled hopper barges into small suction dredgers. In Calcutta, Vizagapatam, Cochin and Bombay such conversion were made and gave good results. During an emergency the Cochin dredger was lent to Vizag and at a later stage when there was a similar emergency in Kandla, the dredger Visakh was sent there to clear up the navigation channel. This opens up the possibility of building vessels of standard specifications to suit certain basic requirements.

LACK OF SPARE DREDGING CAPACITY

Another serious handicap that needs early attention is the provision of spare dredging plant for carrying out any emergency work in a port. Cyclonic disturbances or high floods often cause sudden shoaling in a port. The position is quite alarming. In the event of sudden shoaling or for undertaking "Corrective" dredging for opening out a new pilot channel, there is no suitable vessel that can handle the job efficiently and meet the crisis. The result of in-adequate dred-

ging capacity shows itself in making ships carrying less cargo. Capital or Improvement dredging is hardly undertaken. This is largely due to lack of dredgers. 90 per cent of the operational time is spent in maintenance work, and the rest of the period for annual overhauls and repairs.

For efficient dredging it is essential to have two types of dredgers one for capital work for either operating in virgin areas or improving new channels and a second set for day-to-day maintenance dredging. No single port could be expected to own two types of dredgers, for a plant for capital dredging can become an economic liability after its initial work is done. It is also uneconomic to combine in a dredger both the requirements—capital and maintenance work. For example to make a virgin cut a stationery cutter/suction dredger would be used—but once open for navigation, maintenance work may need self-propelled dredgers.

LACK OF ADEQUATE TRAINED STAFF

There is an urgent need to increase training facilities for the manning of dredgers. There is no MOT Certificate as a Dredging Master. This proficiency has to be attained after getting a foreign going master's certificate and from experience of serving on board a dredger. Various ports have different systems of manning their vessels depending upon the size of the dredger. In the smaller ports the plant is worked by an Inland Master or Home Trade Master. In

others a marine engineer operates the dredger while on the site and the navigation is left in charge of another person.

While the present system is good enough for day-to-day maintenance work in our country, it is time that a new system of training of dredging personnel both for the executive and engineering side was introduced. Dredging is a science and an art. A basic knowledge of civil engineering, river hydraulics, soil mechanics and dredging technology are essential apart from capacity for ship handling. Such background knowledge particularly with reference to working conditions in Indian ports would be of considerable assistance in improving the efficiency of dredging. It has to be remembered that a dredger operated in the right place, at the right time and with the right techniques can increase the output and bring immediate benefits to navigable depths.

POLICY ON PRIME MOVERS

Another aspect that needs attention is policy on Prime Movers particularly with reference to larger units. In our successive Plans there will be need for large re-placement programme of dredgers, and small craft for the ports. In the absence of a policy on Prime Movers, Diesel and diesel-electric are considered an advancement from the conventional types already in use in our ports. From some aspects there is no doubt certain advantages may be had but on the other hand the high cost of maintenance, specialised training and experience of crew, and frequent replacement

of working part that have to be imported are matters of concern.

In regard to a policy on Prime Movers there is much wisdom in what the British Admiralty has adopted. Its fleet of dredgers are all steam-fired boilers. This has given excellent results and efficient service reliable both in war and peace. Decision on Prime Movers also involves certain aspects of strategic defence and long-term measures.

CONCLUSION AND SUGGESTIONS

To sum up, the present survey would have revealed the vast field and the wide scope for expansion of dredging activities in India. Various types of plant are necessary—from 8-inch cutter/suction dredgers to large suction dredgers that can handle large quantities of spoil. The economic role dredgers have played in other countries in transforming shallow draft ports to major shipping terminals should show that dredging is both a science and an art and one of the basic requirements for prosperity. An assessment of the major issues has shown the close similarity between the dredging problems of India and the USA.

With a view to co-ordinate the present work and organise dredging so as to make an all-round improvement the following suggestions are made:—

1. Form a Central Dredge Board—to be constituted on similar lines as the United States Hopper Dredge Board. The creation of a central authority for organization, administration and on policy matters as regards design of craft, specifications, and aspects of standardization of dredge plant would be helpful. Registry of Indian Dredge Plant.
2. Inaugurate an Indian Corps of Dredging Engineers—a new body of trained personnel is necessary for operation. This should compose of both executive and marine engineers who have specialised in dredging.
3. Provide Training Facilities in Dredging—It is recommended that a course in dredging be introduced in the DMET (Calcutta) and in the Nautical College (Bombay) which would offer a specialised training in dredging technology. A short Refresher Course under the TCM in Dredging for those already working in dredgers is suggested. This should cover various aspects of dredging, reclamation and capital work in other countries. A number of technical films on dredging are available from IHC Holland Ellicott's Dredging Corporation and the U.S. Army Corps of Engineers. Display and

demonstration would be useful.

4. Dredging Section in the Poona Central Water and Power Research Station—It is recommended that a new section for experiments in dredging techniques and machinery be set up in the Hydraulic Model Station at Poona.

A new dredger is an expensive unit. A basic requirement for designing a dredger and preparing correct specifications is accurate data on local topography, working conditions, type of spoil, density of water, temperature, the chemical and physical qualities of the output and what is required from the builders.

A closer liaison between the Research Station at Poona and field operations on board dredgers is recommended. Cavitation losses is a disturbing phenomenon and a harmonious combination of dredge pump revolutions, speed over the ground, and angle of attack of the suction head can play a vital role in the economics of dredging. Only Laboratory tests can assist in trying out new techniques and experiments on board dredgers.

5. Statistical Data and Research—Historical records of dredging in Indian Ports has to be collected. Statistics on navigable depths, transport of bed material, data of old records, log extracts of dredgers operating in various parts of India in varying conditions of weather should be collected. Annual records of shoaling and siltation may be maintained.
6. Radio Active Tracer Study Unit—Valuable work has already been done for the study of silt movement in some of our ports. (There is, however, need to put this Unit on an organized basis with special craft and equipment). Isotope studies are a hand-maiden of dredging and can provide useful data for selection of dumping grounds and problems of siltation.
7. Indian Manual of Dredging—At present there is no authoritative hand book on dredging in India. Old techniques must be reviewed and examined in the light of modern developments, constantly re-shaped or new ones developed as new problems arise in such broad and varied fields as the development of flood control, river valley schemes, deepening of rivers and canals. Practical experience of dredging masters in dredging has to

be recorded. The Manual should prescribe the policies governing the accomplishment of dredging operations, and new techniques.

In this connection the U. S. Corps of Engineers have a number of hand-books and an authoritative book entitled the "The Hopper Dredge"—Its history, development, and operation, prepared by the Office of the Chief of Engineers U. S. Army, under the direction of the Hopper Dredge Board which can be taken as a standard guide in suction dredging. The publication of an Indian edition is suggested.

8. The formation of an Indian Dredging and Reclamation Company is suggested—The survey has shown the vast scope for capital dredging projects in India. In signing contracts with foreign firms opportunities must be provided for training of Indian personnel in participation, administration and technical operation.
9. Scheme for Manufacture of Small Dredgers—A scheme should be undertaken for the construction of small portable dredgers (suction, bucket and jet) under the small scale Industries Unit and provision made for hire/purchase of such plant for dredging by private companies. There is a growing demand for such plant which is necessary in desilting ponds, reservoirs and canals irrigation and drainage.
10. Pool for Capital Dredging—Under the aegis of the Central Dredge Board to own a pool of dredgers for carrying out Capital Dredging, provision of plant for
11. Technical collaboration with the U. S. Army Corps of Engineers—It is recommended that a team of experts from the U.S. Army Corps of Engineers be invited to study our dredging problems. Technical collaboration with the USA would be very invaluable owing to the similarity of dredging problems in the two countries.
12. Set up an Indian Beach Erosion Board and a Bureau of Reclamation.
13. Survey possibilities of working the Agitation Technique in the coastal ports in the monsoons.
14. Standardisation of dredge plant, machinery and auxiliary equipment has to be examined.
15. Policy on Navigable Depths—The ultimate objective to aim at is to provide similar depths as are available in the Suez Canal. It is suggested that dredging in Indian Ports should be re-orientated so as to achieve this purpose. There are however, certain limitations as to which ports would be suitable for dove-tailing with the Suez Canal depths where natural factors and hydrographic conditions assist in reducing heavy cost of maintenance dredging. It is also too early to have a clear picture of the future size of ships visiting Indian ports particularly bulk carriers.

In the post-war years similar problems arose in Europe and a

Planning TOWARDS A BETTER PORT

As the life-line of Eastern India's trade and commerce, the Calcutta Port faces recurring problems every year. The emphasis on industrial progress in the Second Five-Year Plan period has considerably changed the type of cargo to be handled. Steel and mechanical equipment, heavy machinery and huge plant form a considerable bulk of the import. On the export front it is coal or ore.

To-day's well-equipped Port needs be made into a better Port to-morrow. But this is possible not by more equipments alone. The Calcutta Port needs most the whole-hearted co-operation from all fronts,—from those who use and also from those who serve it.

COAL IN THE THIRD FIVE YEAR PLAN

The All-India production of coal in 1961 was approximately 56 million tons. The target for coal production set for attainment by the end of the Third Five Year Plan is of the order of 97 million tons per annum. The increase in output required to achieve the target poses a tremendous challenge to the Coal Industry.

Given realistic rail transport facilities, sufficient explosives, adequate power supply and a fair return on capital invested, the Private Sector is ready and able to play its full part in the achievement of the coal target which is essential for the economic expansion of our country.

CALCUTTA.**

critical stage was reached as to what extent it was advisable or indeed economically possible to increase the depths and widths of their approach channels to cater for the future. Bearing in mind the enormous capital costs involved in bringing about even minor improvements in channel depths and the recurring costs and technical difficulties in maintaining them, the Permanent International Association of Navigation Congress undertook a special study of the various problems involved. An Indian Committee of the PIANC is suggested which should make a competent study of the relevant facts and advise the Indian authorities as regards a national policy on navigable depths, Manoeuvring Lanes Clearance below keel Squat and other technical details. In this connection, it is relevant to note that the British National Committee of P.I.A.N.C. have sounded a note of restraint in recording that not every port will require to provide facilities for the largest vessels operating in the world.

16. Survey of Reclamation sites in large cities and construction of Artificial Barge ways to Assam.

CONCLUSION

When Egypt achieved Independence one of the first national projects undertaken by President Nasser was the deepening of the Suez Canal. Behind the success story of the recovery of war-shattered Europe and the drama of the E.C.M. was the impetus given to her ports and harbours by a systematic process of dredging. Old stationary type of suction dredgers with rigid suction tubes were replaced by modern trailing suction dredgers. The federal German Government commissioned two hopper dredgers, the "Johannes Gaehrs" and the "Geheimrat Gaehrs" with outstanding results—the former working during three weeks of continuous bad weather, equalling the annual production of her predecessor for "Geheimrat Goekar".

Recently as a result of siltation in some of the Mersey channels, the Mersey Docks and Harbour Board instituted extensive research into the entire problem of siltation and dredging on the River Mersey with the Hydraulic Research Station of the Department of Scientific and Industrial Research.

This investigation showed that one of the basic factors for efficient dredging depended upon the technique of dredging and not so much upon the size of a dredger. The Westminster Dredging Co who undertook the contract put one of their modern trailer suction dredgers "W. D. Mersey" on the bar.

Instead of digging large holes as was done in the past on the Mersey, the New dredger effected a "skimming process over the

dredged area" (similar to what has been envisaged in the pocket dredger CONCUTTER which has a minimum speed over the ground of 2 knots while dredging and make long, shallow, cuts) and demonstrated that a small dredger about half the size of the 10,000 ton giant "Leviathan" formerly operated by the Board apart from cutting down costs of maintenance dredging could give greater benefits to shipping.

The sublime achievement for any port is what has been possible in New York Harbour—"the wide, deep bays and pier-studded rivers surrounding the close-packed steel and glass cliffs of the great city, the hundreds of miles of ship berths and rail trackage, the terminals, the warehouses, and above all, the highly skilled workers comprise the mightiest complex of transportation facilities and services on the face of the earth—making New York at once an oil port, lumber port, ore port, grain port, banana port, no less a passenger and general cargo port functioning with matchless efficiency."

We are on the threshold of an industrial renaissance and a stage has undoubtedly come when we should exceed the limits of conventional methods and equipment and devise practical solutions for our varied problems of dredging and reclamation by original thinking, invention, and adaptation of what is most suitable for us from Western Countries.

The author wishes to state that he has taken out no patent on CONCUTTER dredger described in the article. It is a gift to the public in the interests of dredging technology.

FERTILIZER CORPORATION OF INDIA

**PLAYS AN IMPORTANT ROLE
IN
INDIA'S EXPANDING ECONOMY**

The Corporation is the nation's biggest producer of chemical fertilizer.

The constituent units of the Corporation at present are the two operating factories at Sindri (Bihar) Nangal (Punjab) and three new projects under implementation, namely, Trombay in Maharashtra, Namrup in Assam and Gorakhpur in Uttar Pradesh. The Government of India has entrusted another project to the Corporation for location in Madhya Pradesh.

Chemical fertilizers are one of the best and quickest means of increasing agricultural production. In the forefront of indigenous production of chemical fertilizers, the Corporation serves agriculture and helps farmers to grow more food and cash crops.

THE STAR THAT HAULS A FORTUNE

There's a Star in your future!

Babulal was once an ordinary truck driver, but it wasn't long before he followed his employer's example and saved enough to buy his first TATA MERCEDES-BENZ truck.

There were signs of prosperity soon after Babulal hitched his future to the three-pointed Star: a house in a new colony—full of shining happiness; a good education for his children; medical care...

Today, Babulal's fleet of T-M-B trucks hauls his fortune;

many years hence they will continue to be Star performers for his children.

Is it any wonder that more and more operators choose to hitch their loads to the TATA MERCEDES-BENZ Star?

Engineering Industries: Progress and Problems

Starting practically from scratch Engineering industries in India, both in the public and the private sectors, have an impressive record of development to their credit which has been achieved during the past one decade of planning. In regard to a wide range of consumer goods industries such as electric fans, lamps, motors, wires and cables, radios, bicycles, sewing machines, and sheet metal ware like buckets, the country is now not only self sufficient but has an export surplus. A large number of undertakings have also been established for manufacture of various categories of producer goods and an impressive programme for the development of machine building is the main feature of the Third Five Year Plan for Industries. The machine tool industry has been firmly established and is marked out for massive expansion in the public sector. The country is already producing Rs 200 crores worth of industrial equipment and Government policy is oriented towards increasing this figure to a substantial extent. It has been frequently stated by persons in authority that Government support will be readily forthcoming for any well conceived programme of machinery manufacture or diversification and that foreign exchange necessary for import of components would be made available.

Under the Third Plan, it has been proposed that the public sector will mainly concentrate on projects for production of heavy machinery and machine building. The targets proposed for the private sector cover a wide range of manufactures, including agricultural machinery and construction equipment, like tractors, diesel engines, road rollers, dumpers and shovels; power distribution and measuring equipment; equipment of road and road transport equipments; plants for setting up new units for sugar, paper, cement and textile industries as well as certain chemical industries; durable consumer goods like passenger cars, sewing machines, bicycles, electric fans etc.

The engineering industries as a whole show a faster rate of growth than other sectors, both in the erection of new capacity as well as in the volume of output. While the general index of industrial production increased from 103.6 in 1952 to 181.2 in 1961 and further to 189.5 in June 1962, the growth of engineering industries has been much faster. The index for general engineering industries which stood at 92.8 in 1952 increased nearly fourfold to 354.2 by the end of 1960. The index for 1961 was 419.6 and the figure had increased by another 30 points by June 1962. In absolute terms it is estimated that the output of general and electrical engineering products has increased from Rs

152 crores in 1956 to Rs 325 crores in 1961. If to this is added the value of the heavy engineering industries, the total for 1961 would be about Rs 500 crores. All the

	1956.	1957.	1958.	1959.	1960.	1961.
General Index of Industrial Production...	132.6	137.3	139.7	152.1	169.7	181.2
Basic metal industries ...	117.1	119.5	121.1	160.5	199.0	236.7
Manufacture of metal products ...	223.3	225.2	216.4	249.7	290.4	365.3
Manufacture of Machinery ...	215.0	296.2	364.4	427.7	549.6	620.1
Manufacture of electrical machinery, etc. ...	210.3	246.7	274.2	296.5	385.0	431.5
Manufacture of transport equipment ...	178.7	186.6	173.7	219.2	288.0	296.8

Among the industries which have shown substantial increases in production are railway wagons, screws, typewriters, razor blades, motor cycles and scooters, power driven pumps, power transformers, electric motors, house service meters, and winding wires etc. Apart from the organised sector, there has also taken place rapid proliferation in the small scale sector, but there are reasons to think that shortages of one kind or another have hampered the realisation of the full potential for increased production.

The presidential address to the last meeting of the Engineering Association of India, which was held in New Delhi towards the end of December last, has highlighted the substantial progress made by engineering industries during the period covered by the two five year plans, as well as the valuable contribution this group of industries could make to the defence effort. The defence effort will make large demands on the resources of talent and manufacturing capacity in the engineering industries. In his address referred to above, the President of the Engineering Association of India had drawn pointed attention to the fact that about 50 per cent of the capacity is currently remaining idle. It appears that in several sectors manufacturing capacity has outrun the availability of the basic raw materials and power. However it should be possible to draw upon the reserve capacity that has been built up and which is now under-utilised in the interest of the defence effort.

Engineering industries, it has been authoritatively stated, can help the defence effort in two ways: firstly the units equipped with precision tools can be engaged for the manufacture of defence stores directly required for the defence forces; and secondly, these industries can be geared to manufacture plant and machinery which have so far been imported and thus save valuable foreign exchange for import of defence requirements. The actual contribution that the industry can make will however depend on the success attending the efforts to make full use of existing capacity as well as to create the conditions for the

branches of the engineering industry have participated in this steady increase as can be seen from the table of production indices given below:

manufacture of industrial plant and machinery of all types in the country.

A policy of making the fullest use of the capacity in the private sector to supplement the production of Ordnance Factories has been authoritatively announced and reiterated more than once. The Minister for Defence Production declared emphatically in his address to the quarterly meeting of the All India Manufacturers' Organisation in Bombay that, as Defence Production was concerned, there was only one ideology—to produce whatever is necessary for the defence of the country and to take every assistance from every sector to the extent required. And a Ministry for Economic & Defence Co-ordination has been set up to draw up programmes for the coordinated utilisation of the manufacturing capacities in the public and the private sectors. But the implementation of the policy has been halting. To judge by what the Minister for Economic and Defence Co-ordination had to say when he inaugurated the annual meeting of the Central Board of Irrigation and Power, Co-ordination in this field apparently has not made much headway.

The Minister for Economic and Defence Co-ordination had stated that the Co-ordination was still in the realm of thinking. The time spent in thinking and working out practical programmes need not be regretted if it leads to the identification of the shortcomings in the formulation and implementation of programmes for development of industries in this sector. Attention may be drawn in this connexion to the unequal development of certain vital sectors of the engineering industry as compared with the related programmes of development.

For instance, the programmes for the manufacture of electrical machinery and equipment is clearly out of step with the programmes for the development of power. The imbalance is greatest in the field of manufacture of heavy electrical machinery which has been reserved to the public sector. This is an area of development which requires immediate attention if the programmes for generation of power in the Third and subse-

quent plans are not to be hampered by shortage of foreign exchange for import of generating equipment. The survey of the growth of demand conducted by the Central Water and Power Commission indicates that the total planned capacity required to meet the anticipated demand would be 24 million kW in 1961, and increase to 36 million kW in 1976 and to 50 million kW in 1981. It will be possible to find the resources for carrying through a programme of this magnitude, unless adequate capacity for manufacture of generating plant and other equipment is established before the end of the current plan. The difficulties encountered by the Heavy Electrical Project in achieving its targets indicate the need for a flexible policy in regard to the manufacture of heavy electrical equipment. There is no reason why the private sector which is prepared to share the burden should be shut out.

Another difficulty experienced by the engineering industries arises from the fact that many lines of production have been built up on the basis of imported components, and their requirements add up to a sizable import bill which it is difficult to meet, because of the tight foreign exchange position. This is one of the reasons for the failure to make full and effective utilisation of installed capacity. While efforts are concentrated on increasing indigenous content, the industry can help itself and the country by improving its export performance.

The Engineering Export Promotion Council has done splendid work in making the country aware of the prospects for export of engineering items. The delegations they have sent out to various countries have been impressed by the scope for export of engineering goods. A beginning has also been made in this direction. At present as many as 113 items manufactured in India are being exported to 75 countries. The exports are not confined to consumer goods. Items like diesel engines, centrifugal pumps, machine tools etc are also being exported. While an encouraging beginning has been made in introducing Indian engineering goods in foreign markets, and especially in neighbouring countries, it should be remembered that, as yet, exports of these goods constitute only a very small percentage of the country's total exports. In relation to the total production of engineering goods in the country, exports do not make an impressive showing. Exports have to be developed to a much greater extent, not only to find the resources for necessary expansion, but even to enable the industry to maintain the levels of production already achieved.

Road Transport

Historical and ideological factors no less than physical limitations have made road transport the Cinderella of transport but the demands likely to be made on the nation's transport capacity by the needs of defence no less than that of development require a rational policy of road development and road transport industry. The two aspects of the problem are obviously the development of roads and of the creation of conditions for their optimum use. The latter involves thinking on the obstacles in the way of use of roads by existing vehicles as also on the creation of new carrying capacity. Both in terms of availability of roads and of carrying capacity old and new, and of getting the most efficient return from them, we have enormous leeway to make.

In many ways, road transport has the economic edge over rail transport. Capital cost of road making is lower than that of laying new railway lines, some estimates putting it as low as a fourth. Road transport vehicles have also the advantage of greater freedom of movement and manoeuvrability and of the ability to reach the very door of those they serve. Above all it has the greater speed. Even if the notoriously slow movement of the goods train, more noticeable in recent years, is improved, movement of freight by rail is unlikely to have the attribute of quickness consequent greater turnover and reduction of cost. The economic advantages of speed, in the transport of perishables for example, would be progressively appreciated when the integration of rural economy with the urban becomes more pronounced as the process of economic development acquires greater and greater momentum. Again, the importance of speed in defence need hardly be over-emphasised. The development of Autobahns in Germany was a direct result of the felt needs of military movement and though our intentions are far different from Hitler's, the creation of the capacity for quick transport for essential movement of defence personnel and equipment cannot be shirked.

According to the interim report by the Neogy Committee, road transport is carrying only 16% of the total freight transported in the country. As against 54700 million ton miles carried by the railways, in 1960-61 roads carried only 10600 million ton miles. The Nagpur Plan which was drawn up in 1943 envisaged for that part of India which did not go to Pakis-

tan, a total length of 1,23,000 miles of surfaced roads and 2,08,000 miles of unsurfaced roads. By the end of 1960, this target has nominally been hit, the estimated surfaced road and mileage being 144,000 and that of unsurfaced roads being 2,50,000. This, however, gives a rather flattering picture of the actual achievements because quite a large proportion of even the surfaced roads is not capable of standing the strain of modern heavy traffic. For instance, only 13% is black-topped and there are only about 3000 miles of cement concrete roads. Of the 15000 miles of National Highways, only 2500 miles have a two lane carriageway. Even the National Highways and the State Highways have a crust thickness of 9 to 19 inches considered inadequate for the present volume and intensity of traffic. Moreover there are numerous missing bridges on the arterial roads necessitating transshipment by country craft and the railways. On the National Highways alone 80 major bridges still remain to be provided at the end of the Second Plan.

The Government of India appointed an Advisory Committee consisting of Chief Engineers of the State and Central Government who drew up a twenty year programme for road development for the period 1961-81. The recommendations of this committee which have been mentioned in the Third Five Year Plan though not formally adopted, envisage a total of 252,000 miles of surfaced roads and for unsurfaced roads the length envisaged is 405,000 miles. The broad objectives of this programme were that no village in a developed agricultural area should be more than 4 miles from a metalled road or 1½ miles from any type of road. Secondly, there should be no unbridged interruption in an arterial road and all arterial roads in the approaches of large towns should have at least two lanes each. The Committee also laid stress on the necessity of bringing of rural roads to fair-weather standards.

The Second Plan expenditure on roads was Rs 224 crores as against the estimated Rs 324 crores in the Third Plan. The utter inadequacy of this allocation will be realised if it is recalled that the Twenty Year Plan envisages an investment of Rs 590 crores during the Third Plan for realising its 1981 target. No details of the actual physical target have been given in the Third Five Year Plan, it is expected that 25,000 miles of surface

roads will be added against 22,000 miles added during the Second Plan. This is less than the quinquennial average envisaged in the Twenty Year Plan.

ROAD TRANSPORT

If this is the position with regard to roads, the prospects for road transport industry are obscured by a variety of vexatious taxes and regulations. India has made striking progress in road transport in the last decade. The number of goods vehicle was only about 30,000 in 1938-39 in undivided India excluding the princely states. This rose to over 40,000 in 1946-47. After independence the goods vehicles in the Indian Union rose from 17,000 in 1948-49 to 116,000 in 1960-61. Passenger vehicles increased from about 27,300 in 1948-49 to about 50,000 in 1960-61. It has also been estimated that vehicles of all types rose from over 3,00,000 at the Third Plan to over 6,12,000 at the end of 1959-60. Freight handled has also substantially increased from 3,358 million ton miles in 1950-51 to 10,600 million ton miles in 1960-61. In 1950-51 the ton miles of road haulage was about 1/8 of the ton miles haulage of the railways. In 1960-61 it has been estimated that road haulage in terms of ton miles is about 1/5 of the ton miles carried by the railways. Passenger traffic has also increased substantially in the same period. In the economic developments envisaged for the coming years the importance of road transport will increase progressively. The Third Plan has targeted for production of 30,000 cars, 60,000 commercial vehicles and 10,000 jeeps and station wagons for the year 1965-66. The emergency is likely to make some difference in the relative priorities in cars and trucks. But the need for making road transport a viable economic activity will increase rather than decrease because of the emergency.

BACKWASH OF PREJUDICES

The obvious lack of enthusiasm for roads as an item in the infrastructure of industry is attributable to historical reasons. The 19th century was understandably an era of expansion of rail locomotion, motor cars not being known then. The Second Industrial Revolution brought about by discovery of petrol and the spark plug towards the beginning of 20th century brought a new dimension to the economics of transport. All over the world, road transport has since then been gaining at the expense of rail transport in sur-

face transport. But not so in India. Statistics of road mileage and per capita use of road vehicles show that India is among the poorest users of road. It has been estimated that India has less than 1/3 mile of road per square mile of territory against 2.02 miles, in the UK, 3.60 miles in France and one mile in the US. India is estimated to have 89 (another estimate puts it at 135), vehicles for a population of 100,000 against 38,000 in the USA and 22,000 in Australia. Even Asian countries are doing better in this respect. Ceylon has 900 vehicles (another estimate puts it at 1000) and Malaya 1300, Japan 1700 and Viet-Nam about 800 per 100,000 population.

The reasons for the comparative neglect of the road system in India is to be sought in the backwash of earlier prejudices. The slump of the thirties hit Indian Railways so badly that it was unable to carry its full freight capacity and at that time competition from roads, especially in long distance haulage, was keen. It was considered then expedient that fiscal methods should be used for diverting traffic to the railways and the consequence was the beginning of Motor Vehicle Taxation which has assumed monstrous proportion since then. The relative strength of the railways has increased enormously and to such an extent that the problem is not one of railways having surplus traffic capacity but of being unable to cope with the volume of available traffic. But, at the back of the authorities' mind is the fear of a future in which an expanded road transport system will be a serious menace to Railways prosperity. Experience of certain other countries where this has happened is the contributing factor to this near psychosis. It is feared that, though the Indian Railways, unlike many elsewhere, are still commercially profitable, the time is not far off when the marginal profitability, that is to say, increase of profit for every unit of additional investment, will be less than what it was before. Apart from this being too pessimistic a view of the future in the light of traffic potentialities of the scale of growth of the economy needed for making us catch up with the advanced nations, it is too short-sighted a view. If forces of history make earlier technology obsolete, the transition can be made painless but it will be expensive in the long run to hinder the change.

It is also true that the railways have been carrying freight of some essential commodities at much

lower rate than what the economies of the situation and even of comparative costs warrant. This has been done deliberately as a matter of policy as a species of public service by a public utility. But this is at best an argument for increase of rail freight as recommended by the Railway Freights Enquiry Committee and partially implemented in the last budget—and for a greater share of short distance traffic and higher rated commodities.

It is a pity that we still have to wait for the Neogy Committee to make its detailed recommendations on the policies that should govern an expansion of future transport capacity. But it seems clear that in any perspective planning for transport for a period of the next 25 years would have to provide for larger scope for road transport than for the railways even with larger allocations. It will be long before we will reach the stage in which road transport will overtake the railways in the matter of freight movement, as has happened elsewhere.

OBSTACLES

At the moment road transport is subject to a variety of vexatious taxes and operating conditions. The problem is complicated by the fact that the States have come to think that they have struck a gold mine in road transport taxation. The report of the Motor Vehicles Taxation Inquiry Committee had made a number of important recommendations and these have lain unimplemented. Apart from the quantum of the tax which makes our road transport probably the heaviest taxed in the world, the multiplicity of the authorities that do the taxing is a serious vexation. The Third Five Year Plan says "that the Ministry of Transport and Communications has requested the State Governments to consolidate all the existing taxes into a single levy to be collected by one agency as far as possible and to consider abolishing double taxation of road transport services on inter-State routes". But nothing tangible has emerged from this piece of advice. Single point taxes are levied only in some cases as a result of bilateral agreements. Often inter-state rivalries, stemming from the disparity in relative economic sophistication are standing in the way of evolving acceptable principles of sharing the revenue. The Inter-State Transport Commission, which was expected to resolve the difficulties arising from a multiplicity of authorities is not backed by enough power—for instance it has no power to issue permits for inter-State operations—and is largely ineffective in situations in which the States are not amenable to persuasion.

The consequence of all this is that every time you move even with permission into another State, for however a short duration, you are taxed. Added to the taxation

on the industry as such excise duties on components and fuel like tyres, petrol and diesel and taxes on passengers and octroi (the last one more a vexation than a burden) add to the capital and operational costs. The problem is complicated by the fact that the State Governments have come to consider taxation of road transport industry as a gold mine. For instance last year many States levied additional "goods and passenger taxes".

THE 300 MILE LIMIT

More harassing than even the taxes is the procedural straight-jacket that stifles the industry. The administrative delay in the issue of permit, and the attendant civil is a serious impediment in the way of the industry. One of the anomalies stemming largely from the prejudices of a bye-gone age is that permits are still largely limited to traffic upto 300 miles only. In many states it is restric-

ted to only one district. The Masani Committee recommended that the three hundred mile limit should be relaxed at least to the extent of permitting an operator to cover the whole State since no inter-State considerations are involved. This suggestion has not been implemented, reportedly at the instance of the Railways, who are gaining time by the transparent ruse of wanting to await the recommendations of the Neogy Committee's report on the matter. Moreover, permits from operators for over 300 miles are stated to be referred to the Railway Ministry by the State Governments and if the Railway objects, the matter is referred to the Inter-State Transport Commission, whose decision takes time. It is evident that operators have to contend with a multiplicity of conflicting interests.

REMEDIES

The nature of the difficulties outlined above itself would suggest that the first charge on the

gest some of the possible remedies. At the conference on Transport and Power held under the auspices of the FICCI, in December some of these were spelt out. First, the three hundred miles limit for permits should be removed and at least the whole State should be freed of its many vexations, most important of which is multi-point taxation, which should be removed by a unified levy. This single important reform would make for increased transport and consequent increase in tax receipts. The innumerable procedural bottlenecks will have to be broken. The Inter-State Transport Commission must be vested with greater authority. Local taxes like octroi should be abolished and Local Authorities may, if necessary, be compensated by a share from the single-point levy. The roads themselves need greater attention and it seems not unreasonable to suggest that the first charge on the taxes on road transport industry

the heart of progress—transport

With the advancement of scientific knowledge man has been able to tame the powerful forces of nature and to utilise them for the service and good of mankind.

The Hirakud Dam is one such monument of natural resources harnessed for the good of man by human ingenuity, knowledge and endeavour. The result is that availability of hydro-electric power generated here has led to the localisation of a number of large scale industries including aluminium.

The Railways have played a vital role in transporting the materials for building the Hirakud Dam and they continue to serve the industries located in this area by meeting their ever-increasing requirements of transport for moving raw materials and finished products.

**SOUTH

**'RAILWAYS CONTINUE'
TO SERVE INDUSTRY**

should be the improvement of roads. The impact of the emergency on the road transport industry is indicated in greater detail in the succeeding paragraph: meantime, it seems that at least for the duration of the emergency, some liberalisation of load requirements and use of trailer combinations seem justified.

ROADS AND THE EMERGENCY

Before considering the measures that might be taken, it will be necessary to examine the demands that the requirements of defence are likely to make on road transport. The intensified defence effort will have its impact on road transport as on other sectors of the economy, but from all indications, its effects are more likely to be indirect, and consequential to the increased demands on the railways. To take one instance, the revised production targets of the steel industry mean that the railways will have to allot more wagons for the carriage of the raw materials required by the steel plants, as well as for the transport of the finished products to destinations other than those envisaged when the railway plan was drawn up. As the operations of the railways are reoriented to meet the requirements of defence and industries supplying defence requirements road transport will have to take on a larger share of other categories of traffic, both passen-

gers and freight. The projections made by the Planning Commission of the growth of road traffic, which are based on targets of production of commercial vehicles or those made by the Neogy Committee which are related to the growth of national income are largely irrelevant in the present context. Roads will have to carry a much larger share of the traffic which ordinarily would have been moved by rail. And they will have to deal with this larger load without the assurance that more vehicles will be available.

The first step that has to be taken, therefore is to rationalise the existing road transport services in order to secure the maximum utilisation of the available vehicles. This should be the main preoccupation of State Transport Advisory Committees and the Inter-State Transport Commission should determine the number of permits required for long distance operation of motor vehicles on a regular basis. At least, in view of the emergency, the historical attempt we described earlier to protect the railways should be suspended if not given up. The objective now should be not to press for diversion of traffic from railways to the roads, but rather to lighten the load on the railways as much as possible so that they could concentrate on the essential services which can be efficiently performed only by the railways.

The removal of the irrational restrictions which have stunted the growth of road transport, such as those relating to pay load, routes, the frequency of services and the distances over which motor vehicles could operate, would have an immediate effect in enlarging its carrying capacity. Road transport is a concurrent subject in which the executive authority rests with the State Governments. But now, with the promulgation of a state of emergency it should be more feasible than in the past to draw up and implement a programme, on a national basis for the development of road transport, or at least to eliminate the impediments at the State level. While this is being done it will also be necessary to increase the number of vehicles that will be available to carry the larger volume of goods that will have to be carried by road.

According to experienced road operators, the pay-loads of trucks could be straightaway increased without any harmful effects in large parts of the country and truck-trailer combinations could also be permitted to increase the carrying capacity. Purposive action to enable heavier vehicles and truck-trailer combinations to operate safely on Indian roads should be taken. And side by side with the efforts to speed up the production of these vehicles in the country and to raise the production

targets of lighter commercial vehicles to the maximum extent feasible, it will also be useful to consider imports of such vehicles from friendly countries as an emergency measure, either as part of the defence equipment that they have come forward to supply or separately on terms which will not impose an unduly heavy burden of repayment. In this connection, it will be recalled that the government has placed an urgent order for 2000 heavy trucks with Japan. Even used vehicles could be vulnerable.

Apart from the availability of vehicles there is the question how the individual operators are to find the money to acquire these vehicles. In this connexion attention may be drawn to the amendment of the State Financial Corporations Act which came into effect from the beginning of last year under which road and inland water transport industries are placed on the same footing as other industries in respect of direct financial assistance and guarantee facilities from the State Financial Corporations. The limit of accommodation has been fixed at Rs 20 lakhs in the case of a co-operative society or a limited company and Rs 10 lakhs in any other case. With these facilities, there should be no difficulty in finding buyers for the additional vehicles that may be available for expansion of road transport.

The Volume of Gold in India

By

Dr K. K. SHARMA

Secondly, smuggling of gold must be checked. Thirdly, pressure on foreign exchange which smuggling of gold brings about must be reduced so that the foreign exchange spent on getting smuggled gold should be available for other purposes.

Whether the purpose is to mobilise the sterile stock of gold in the country or to bring under control the smuggling of gold, the factual basis for policy is a clear idea of the actual extent of the stock of gold in all forms in the country. There is, not surprisingly, no unanimity on the question. We may therefore assess the extent of

gold hoards in the country. From very early times, India has shown a considerable attraction for bullion. The use of the precious metals in this country for ornaments and jewellery is quite extensive and large stocks of bullion are believed to be held in the form of hoards. Of course, no reliable and up-date estimates of the stocks of gold and silver are available. At times, the estimates made have given rise to exaggerated notions regarding the extent of such hoards.

The following table shows the position of gold in India since 1850-51 to 1947-48:—(*)

Period	(Figures in thousand ounces)			
	Imports	Exports	Net Production	Net absorption (3+4)
1850-51 to 1885-86	—	—	+30,000	30,000
1886-87 to 1918-19	70,733	24,358	+48,375	12,435
1919-20 to 1930-31	57,024	7,448	+49,576	4,708
1931-32 to 1936-37	1,113	36,618	—35,505	1,980
1937-38 to 1941-42	465	8,024	—7,559	1,541
1942-43 to 1947-48	904	170	+734	1,173
Total	130,239	76,618	+83,621	21,837

*Prepared on the basis of material on page 385-386 Reserve Bank Bulletin, April 1958. Import (+) Export (—)

Before the onset of world wide depression in 1931, India was a net importer of gold and between 1850-51 and 1930-31, gold imports net came to 126 million ounces. Thereafter, up to 1941-42, India became a net exporter to the extent of 43 million ounces. During this period, distress gold was exported and Indian businessmen and statesmen advocated a ban on exports of gold, but the Government paid no heed to this demand. The acceptance of the 1 sh. 6 d. ratio in 1927 as a result of the recommendations of the Hilton Young Commission reduced our exports and aggravated the fall in the prices of agricultural commodities, which aggravated the intensity of the depression. This led to the sale of distress gold. Thereafter, net imports upto 1947-48 came to 0.7 million ounces.

The aggregate net imports of gold 1850-51 to 1947-48, a period for which firm data are available, for undivided India, were of the order of 83.7 million ounces. Including production from 1882 upto 1947 at about 22 million ounces and sale of about 7 million ounces on behalf of the Allied Governments, a net absorption of about 113 million ounces can be estimated between 1850-51 and 1947-48.

*Includes 7.5 million ounces sold in India during 1943-44 to 1945-46 on behalf of the Allied Governments.

Estimates of absorption of gold are available even prior to 1850, but it is not possible to verify their accuracy. Mr D. M. Barbour's estimates placed gold imports into India since 1835-36 upto 1886 at 33 million ounces and since net imports from 1851 to 1886 were put at 30 million ounces, the net imports from 1835-36 to 1850 may be put at 3 million ounces. Mr G. Findlay Shirras, a former Director of Statistics of the Government of India, and Mr Joseph Kitchen, Manager and Director of the Union Corporation, London, put the imports at £7.6 million and £9 million respectively. At the then prices, they would amount to 2.3 million ounces.

Mr G. Findlay Shirras in his book Indian Finance and Banking published in 1919 estimated the total gold stock in India at 93 million ounces in March 1919. According to him "a careful examination of all available data (import and export statistics and production including world production) leads us to estimate the total stock of gold in India today at £372 million", which would come to 93 million ounces.

Mr. Joseph Kitchen estimated the gold stocks of India between 1493 and 1924 at £553 million or 130 million ounces. He has, how-

ever, clearly stated that the figure has been derived roughly as a guess in order to give the data from the time of the discovery of America. No estimates of any kind are available for the period prior to 1493. On the basis of Mr Kitchen's estimate, the Bank for International Settlements in its Annual Report for 1934-35 had tentatively estimated the gold hoarded in India by the public during the period 1493 to 1930 at a minimum figure of 16,500 million swiss francs or roughly 170 million ounces.

Gold could be imported after the second world war only through licence obtained from the Reserve Bank of India. Between 1948-49 and 1957-58, gold imports as indicated by the licences granted by the Reserve Bank came to a small quantity of 63,000 ounces; but owing to a great disparity between the prices of gold in India and the international prices, smuggling is suspected to have been considerable. The supplies of smuggled gold have been uneven, depending upon the variation in the disparity between the Indian and international prices and the effectiveness of vigilance exercised by the customs authorities in checking the smuggling activity. Since 1947, the average price of gold in India has been Rs 103 per tola or Rs 257 per ounce as compared to the international parity price of Rs 167 per ounce or Rs 62/50 nps. per tola. According to the Report of the Forward Markets Commission on the Recognition of Associations in respect of forward contracts in gold and silver* "the value of gold smuggled into India is roughly estimated at between Rs 30 to Rs 40 crores annually." It is not, however, possible to check this estimate. Gold production in India between 1948 and 1956 has been estimated at 1.9 million ounces.

In 1947, the total amount of gold in India on the basis of the above estimates can be put at 130 million ounces as below:

Period	Quantity*
1. 1493 to 1834	14
2. 1835-36 to 1849-50	3+
3. 1850-51 to 1947-48	113+
Total	130

*Gold absorbed in million ounces. As above.

Source: Estimates given by Mr. Joseph Kitchen.

A portion of this quantity must be allowed for Burma and Pakistan, because the estimates are for the undivided country as a whole. In the absence of statistical information regarding the share of Burma and Pakistan, population may be taken as the basis of criterion. That would bring the share of Burma and Pakistan to 20 million ounces, including 0.8 million ounces transferred to the State Bank of Pakistan. Of the balance

*Forward trading in gold and silver was banned in 1963.

TATA INDUSTRIES PRIVATE LIMITED

about 7 million ounces comprise the currency reserve of the Reserve Bank of India. Private stocks of gold would thus roughly amount to 93 million ounces. Adding a few million ounces by way of production and smuggling in recent years, the total private stocks would thus amount to about 105 million ounces. The average price of gold in India in 1957-58 was Rs 289 per ounce. At this price, the value of the private gold stocks would be about Rs 3,000 crores. Their value at the international price would be about Rs 1750 crores.

Eighty per cent of the private gold stocks are guessed as being in the form of ornaments with families both in the villages and towns. It is only a guess and that means that gold worth about Rs 250 crores at international price may be in the form of pure gold and can be added to the stock of the Reserve Bank of India without much difficulty.

About the rest, unless the public is asked to declare the quantum of gold ornaments and the holding of gold in ornaments too beyond a reasonable limit is declared illegal, it will not be possible to bring this gold out. After the announcement

of the gold rules by the Finance Minister, gold ornaments of 22 carat gold were selling at about Rs 110 per ten grams. If an announcement to declare gold ornaments were made, it is difficult to estimate how much gold would be declared. The difficulty would arise for two reasons. First, a minimum exemption limit would be fixed. Secondly, many people would not declare even if they hold in excess of the minimum. That gold would go underground almost permanently. It is likely that about 25 to 50 percent might be declared. In other words, if a declaration about gold ornaments were to be asked by the Government, it is likely that in all gold about Rs 1,000 crores in value might be declared.

A portion of it would be invested in gold bonds. That would depend upon the persuasion and inducements offered for investment in gold bonds. That would, of course, add to the incomes and the rising incomes would add to purchasing power and also to production. The way in which this increase in income could be mopped up in the form of taxes, loans, small savings, etc would be help-

ful in getting increased imports and add to the strength of industrial equipment.

Inflation could also be checked by utilising this gold for getting foreign exchange for essential imports of capital goods and industrial raw materials. That equipment would add to production and if increased production were to exceed or even offset the rate of increase in currency and money supply, inflationary conditions need not appear.

An appropriate gold policy is thus necessary. Its efficacy and effectiveness would be judged by the extent to which it is able to bring private gold hoards to the surface. It would also depend upon how the additions to incomes and to increased purchasing power is neutralised by suitable fiscal syphons and by increased production.

While framing the gold policy, international trends in respect of gold must be kept in view. On October 24, 1962 the price of gold in the London Market was set at \$35.18.5/8 an ounce, which meant an increase of 5 cents on the price at the beginning of that week, and the highest price reached since,

November 22, 1961. The increase in price was attributed to heavy demand, mainly from the European Continent but partly from the Near East and Far East, caused by the heightening of international tension. The price would have risen higher but for the arrangement between Central Banks to meet the heavy demands. With the easing of the international situation, the price fell to \$35.11.1/4 an ounce on November 5, 1962.

The markets in gold and foreign exchange have remained distinctly unsettled in some respects. The 40 million dollar outflow of gold from the United States during the week ended October 27 indicated the size of the speculative activity in the London gold market. Moreover, because of cooperation of central banks this figure is bound to be much less than the total drain imposed through the bullion and foreign exchange markets.

In the last week of October, 1962 private buying of gold in London reached 45.50 million dollars and this sum had to be provided by the concerted gold pool of central banks. The pool was set up in December, 1961 and each participating country was given a quota for the amount of gold it was willing to provide against dollars. The total commitment was \$220 million with quotas for individual countries as below:

	\$ million
The United States	135
The Federal Republic of Germany	30
The United Kingdom	25
France	25
Italy	25
Switzerland	10
Belgium	10
Netherlands	10

The pool is managed by the Bank of England. Purchases of gold are confined to supplies from Russia or from private sellers. Newly mined gold from South Africa is left to be taken up by the Bank of England. At the end of each month the net balance between the month's sales and purchases is communicated to members. The deficit or surplus is divided among them according to their quotas. At the end of March 1962 the pool had a deficit of \$ 13 million, but by the end of June it had repurchased gold to have a stock of \$ 46 million. Thereafter deficits continued till the cumulative deficit at the end of October 1962 stood at \$ 80 million.

These international developments in respect of gold should be kept under consideration while we frame a gold policy in our country so that surplus private gold stocks may be attracted to the Government or to the Reserve Bank of India to finance essential imports of capital goods and industrial raw materials.

*For details see International Financial News Survey, Vol. XIV, No. 44, p. 357 and Vol. XIV, No. 47 p. 381.

Chemical Industries

NEXT to engineering industries, the large group of chemical and allied industries have achieved the highest rate of increase during the Second Plan. The index of production had increased from 171.1 in 1956 to 283.2 in 1961, and was running at 290 during January to June 1962. The industries comprised in this group cover a broad spectrum of products and the enumeration of the individual items which are being manufactured or proposed to be manufactured in India, will itself run to several pages. The main sub-groups coming under this head include Fertilisers, Heavy Inorganic Chemicals, by-products of Coal Carbonisation, a numerous group of Organic Chemicals, Dyestuffs and Intermediates, Pharmaceutical Drugs and Pesticides, Plastics, Photographic Films and Papers, Paints and Varnishes, Soap and Synthetic Detergents, Starch and Glucose, Industrial Gases and so on. The Third Plan programmes envisage substantial expansion of the manufacture of fertilisers and basic chemicals whose production is already well established as well as a broad range of new items. The programmes for some of the basic chemicals which serve the requirements of other industries are briefly indicated in what follows:

SULPHURIC ACID

The group of Heavy Inorganic Chemicals includes sulphuric acid, soda ash, caustic soda. Sulphuric acid is a basic material which is used by a large number of industries. The acid finds application in the production of fertilisers, rayon, paints, explosives and a large number of organic and inorganic chemicals. It is used as a dehydrating agent, a refining agent, as a catalyst and as an electrolyser in storage batteries. It is also used in metallurgical operations and in textile processing. With the heightened tempo of industrial development, production of sulphuric acid has been stepped up rapidly during the Second Plan to meet the growing requirements of the new industries that were coming up. Production of the acid had increased from 1,67,853 tons in 1956 to 425,000 tons in 1961. At the end of the Second Plan there were 44 units engaged in the manufacture of this product with a combined output of 425,000 tons. Two more units went into production during 1961, raising the capacity to 597,400 tons per annum. A target of 1.75 million tons capacity has been laid for the Third Plan. With the implementation of licences already issued, it is confidently expected that the targeted capacity will be fully achieved. In addition to this, a total capacity of nearly 500,000 tons of acid will come up in the new for-

tiliser factories, so that the total capacity already approved adds up to 2.25 million tons a year. During the first nine months of 1962, production was running at an average rate of 36,859 tons per month which works out to an annual rate of 442,308 tons.

One of the major handicaps the industry has to face is the dependence on imported sulphur. The requirements in 1961 exceeded 150,000 tons involving expenditure of foreign exchange of about Rs 3 crores. So far it has been possible to meet the entire demand for imported sulphur in spite of the stringent foreign exchange position. But it is doubtful whether it will be possible to base further expansion that is contemplated on imported raw material. Part of the additional capacity that will be set up during the Third Plan will be linked with by-product smelter gases from zinc and copper smelters. There is also a programme for the utilisation of the pyrites deposits found in Amjora in Bihar for production of sulphur.

The economics of the use of pyrites as a source of sulphur for manufacture of sulphuric acid has yet to be completely worked out. According to some authorities, manufacture of acid based on pyrites will be more costly than use of imported sulphur. The use of pyrites in existing acid manufacturing plant will involve extra cost on transporting the pyrites. About three tons of pyrites will be required in place of one ton of sulphur. Moreover, additional expense will also have to be incurred on the installation of capital equipment required for roasting the pyrites. It will, therefore, be clearly advantageous if the pyrites are reduced to sulphur near the mines for distribution to the different acid manufacturing plants. A project has been set up in the public sector, the Pyrites and Chemicals Development Co., for the economic utilisation of the pyrites for the manufacture of acid.

SODA ASH

Next to Sulphuric acid, soda ash is a basic chemical which finds wide application in chemical industries and for other purposes. Hitherto the largest consumers of the stuff were dhobies. At the end of the Second Plan, about half the total output was used by dhobies. With the development of the consuming industries in the Third Plan, a change in the pattern of consumption is envisaged. Soda ash is used in the glass industry, and for the manufacture of chemicals such as caustic soda, bichromates, silicates etc. It is anticipated that, at the end of the Third Plan, about 30 per cent of the total production will be used by the glass industry, 35 per cent

for manufacture of chemicals and the rest by dhobies and laundries.

By the end of the Second Plan the country had reached self-sufficiency in regard to requirements of light soda ash, but the heavy ash required by the glass industry was being imported. Production increased from 84,233 tons in 1956 to 174,000 tons in 1961 and a beginning has been made in the manufacture of heavy soda ash. The capacity target fixed for the Third Plan is 5.3 lakh tons with an estimated production of 4.5 lakh tons. There are now four units engaged in the manufacture of soda ash with a total capacity of 260,796 tonnes. Expansion programmes under way envisage increase in the capacity of these plants to 398,000 tons by 1965-66. Part of the capacity of the existing plants will be converted to production of heavy ash required by the glass industry. In addition a new unit has been licensed with a capacity of 400 tons per day. Of the existing units three are in Gujarat where the raw materials of the industry, namely, salt and limestone are readily available. The fourth unit, in UP, is based on the modified Solway process. The fifth unit will be located in Bombay. As compared with the target of 5.3 lakh tons, the capacity already licensed, including existing installed capacity, stands at 5.73 lakh tons. In 1962 the total capacity had increased to 260,796 tons and production was running at the average monthly rate of 17,751 tons for the first nine months of the year.

CAUSTIC SODA

Production of caustic soda has been rapidly stepped up during the Second Plan period from 39,416 tons in 1956 to 117,100 tons in 1961. It is likely that production will be stepped up three-fold during the Third Plan to meet the anticipated requirements of consuming industries, estimated at 350,000 tons. Caustic soda is used in a large number of industries such as for the production of soap, rayon, aluminium as well as for the processing of textiles, vegetable oils, petroleum refining etc, and the demand is rising rapidly. There are 18 units engaged in the manufacture of caustic soda, with a total manufacturing capacity of 131,040 tons. The monthly rate of output during the first nine months of 1962 was 10,262 tons. By the beginning of 1962, the entire capacity required for reaching the target had been licensed.

Disposal of by-products chlorine presented a big problem for the industry in the past. But with the expansion of the paper industry as well as other industries using chlorine or chlorine-based products, the difficulties have been largely overcome. Apart from paper,

chlorine is used in the manufacture of DDT, Benzene Hydro-chloride, Ammonium Chloride, Stable Bleaching Powder and PVC. Liquid Chlorine is also being used to an increasing extent for sanitation purposes. The expansion of PVC manufacture which is under way, it is expected, will absorb the increased production of chlorine following the expansion of the caustic soda industry. The demand for chlorine has increased more than fourfold in the last six years.

Apart from the items mentioned above, the Third Plan has also set up targets for other inorganic chemicals like titanium oxide, calcium carbide, sodium hydro-sulphite, sodium sulphate, potassium hydroxide and barium chemicals. Following the build up of demand for organic chemicals, as a result of the development of allied industries like plastics, dyestuffs and drugs, programmes have also been drawn up, both in the public sector as well as in the private sector, for the manufacture of a number of these chemicals, including acetic acid, carbon di-sulphide, methanol, benzene, naphthalene, phenol by-products, phthalic anhydride, synthetic rubber and rubber chemicals. The programme for the project in the public sector, namely, Basic Chemicals and Intermediates, covers the manufacture of forty organic intermediates with a total output of 25,160 tons. This plant will supply the intermediates required for the drugs project to be set up at Sanatnagar near Hyderabad. Provision has been made for the expansion of its output in due course to over 40,000 tons.

Manufacture of organic chemicals other than alcohol is being undertaken for the first time in this country during the Third Plan. The tentative capacity and production targets for some organic chemicals is given below:

	(In tons)	Capacity	Production
Carbon di-sulphide	50,000	45,000	
Acetic acid	31,000	28,000	
Methanol	25,000	21,500	
Benzene	68,000	52,000	
Naphthalene	17,500	15,300	
Phenol byproducts			
and Synthetic	16,000	14,300	
Phthalic anhydride	15,000	10,000	
Synthetic rubber	50,000	50,000	
Rubber Chemicals	3,000	3,000	

The programmes for organic chemicals is still in the preliminary stage, and the targets indicated above are tentative. In addition to the traditional source materials for production of organic chemicals such as alcohol, benzene, calcium carbide etc., it is also proposed to develop production linked with petroleum feed stock and the detailed programmes will necessarily depend on the progress achieved in expansion of Oil refining capacity.

Heavy Engineering Corporation

Heavy Engineering Corporation Limited, a fully owned Government of India Undertaking, was incorporated in Bihar on 31st December, 1958 with Headquarters at Ranchi for developing the manufacture of heavy capital equipment in India. Considerable foreign exchange is currently being spent on the import of such capital equipment and the needs of such equipment have been on the increase and are going up still more. The Corporation is now engaged in establishing the following projects:—

In Ranchi—

1. Heavy Machine Building Project
2. Foundry Forge Project
3. Heavy Machine Tool Project

In Durgapur—

4. Coal Mining Machinery Project

These projects will contribute to a great extent in laying the foundation for the basic heavy engineering industries in the country. From these will flow a wide range of large and small industries and the entire economy will get stimulated. As a composite unit, the Heavy Engineering Corporation is the biggest engineering enterprise of its kind in India and one of the largest in the world. Next to Hindustan Steel, it is the largest industrial undertaking of the Government of India. The value of the entire output of the plants may be considered as savings in foreign exchange because in the absence of the productions, the country's needs of these items would have to be met through imports. At full capacity, the projects will provide employment to a total of approximately 23,300 staff, engineers and workers. The salient features of the projects are tabulated below:—

Projects and Location	Annual rated production (in tons)	Employment.
RANCHI—		
Heavy Machine Building Plant 80,000 tons capacity.*	80,000	4,500
Foundry Forge Plant corresponding to 80,000 tons of H.M.B.P.†	Grey Iron Foundry ... —46,600 Steel Foundry ... —88,382 Non-Ferrous Foundry ... —700 Steel Forgings ... —32,954 Surplus castings and forgings for outside users ... —32,000	8,000
Heavy Machine Tool Plant 10,000 tons capacity†	10,000	2,000
DURGAPUR—		
Coal Mining Machinery Plant 45,000 tons capacity.	45,000	4,300
Others ...	...	—4,500
Total ...	...	23,300

*Collaboration—USSR.

†Collaboration—Czechoslovakia.

A few details of the plants are given below:—

HEAVY MACHINE BUILDING PLANT:

The plant is being set up at Ranchi in technical collaboration with the USSR. The plant has been designed to produce diverse types of heavy machinery items. Initially, the project was being implemented for a production capacity of 45,000 tons of machinery. But in view of the increasing demand of the heavy capital equipment, the Government of India decided to expand the capacity and set up the plant for an annual production of 80,000 tons of machinery items. Adequate provision has also been made for further expansion of the capacity to 1,60,000 tons of finished machinery items or to any other intermediary stage as deemed necessary. The plant is intended to produce primarily machinery and equipment for the iron and steel industry—to the extent of approximately 60,000 tons out of the total production of 80,000 tons per year. It will also possess adequate facilities and capacity to meet the requirements of machinery and equipment for other major industries like mineral oil, coal mining, chemical, fertiliser, cement, etc. as well as for the manufacture of general engineering items like heavy cranes, excavators, oil drilling rigs, crushing and grinding equipment. An approximate typical break-up of the machinery items which are proposed to be

produced in this plant is given below:—

Description of items	Figures in tons	
	1st stage (45,000)	2nd stage (80,000)
Coke Ovens & By-Product equipment ...	6,000	7,700
Blast Furnace equipment ...	4,000	5,500
Steel Making equipment ...	5,000	7,000
Crushing & Grinding equipment ...	2,100	3,150
Crane equipment ...	4,400	6,570
Rolling Mill equipment ...	20,000	34,500
Spare parts for metallurgical equipment ...	1,500	1,080
Heavy Mining equipment ...	...	880
Excavators ...	...	4,950
Press Forging equipment ...	...	1,360
Heavy Oil Drilling Rigs ...	...	5,500
Miscellaneous Heavy Machine Parts & Assemblies ...	2,000	1,810
TOTAL ...	45,000	80,000

Most modern tools and machinery, latest technical know-how and design facilities will be employed for production in this plant. There will be wide flexibility for the manufacture of diverse types of machinery for any heavy industry, based not only on standard designs. To enable the customers to have the benefit of the latest design facilities, a fully equipped Design Bureau with more than 600 Design Engineers trained in most advanced plants and industries is being established. This Bureau will be capable of undertaking various designs for any heavy industry.

The plant, covering an area of 57,00,00 sq. metres will be one of the largest and most modern of its kind in the world. It will consist of 4 main production shops, viz., the Heavy Machine Department, the Medium and Small Machine Department, the Block of Department for Coke Oven, By-product and Handling equipment and the Reduction Gear Department along with a large number of other auxiliary and service unit. The aggregate areas of roofed buildings, roofed gantries and open gantries will be of order of 1,36,000; 15,000 and 44,000 sq. metres respectively, served by a total of 97 electric overhead travelling cranes ranging in capacity from 3 tons to 150

tons. In all 738 items of machine tools and 116 items of overhead cranes, jibs and other handling equipment, aggregating in all to about 25,000 tons, will be erected in this plant. The bed of the largest lathe in this plant will measure 20 metres i.e. 66 ft. and the table dimensions of the largest planing machine will be 12 x 4 metres, i.e. approximately 40 x 13 ft. The plant is expected to go into pilot production by the end of 1963 and will have on its roll over 4,500 workers and staff at 80,000-ton stage.

Contracts for a total amount of about Rs 22 crores have so far been entered into with the USSR for the supply of plant and equipment and technical services upto the 80,000-ton stage of this plant.

Construction work on all major units of the plant has made good progress on all fronts such as foundation, erection of columns, structural, cranes, etc. One of the special features of construction of this plant is the extensive use of pre-cast reinforced concrete members cast in situ. Railway sidings have also been established giving direct access to the various areas within the plant site. Machinery and equipment and other stores materials are now being transported direct to the plant storage shed. A fully equipped construction work shop is also being set up not only to cater to the requirements of construction works of all the three projects in Ranchi, but also to produce non-standard equipment and industrial furnishings for the projects. Pending completion of this unit, a small workshop has been in operation for the last few months catering to the diverse needs of construction works.

FOUNDRY FORGE PROJECT:

The Foundry Forge Plant is also being set up at Ranchi in collaboration with Czechoslovakia near the Heavy Machine Building Plant. In this plant, castings and forgings of practically any type and composition from a few kilos to as much as 100-ton piece weight will be produced. The production of this plant will be used primarily to meet the requirements of Heavy Machine Building and Heavy Machine Tool Plants for grey iron, steel and non-ferrous castings and forgings. Provision has also been made to establish some surplus capacity to meet the requirements of heavy castings and forgings of various other industries both in the private and public sectors. The Foundry Forge Plant as it is now

being implemented, is expected to have the following production capacity per year:—

Description of items.	Capacity in tons.
Grey Iron Foundry ...	46,600
Steel Foundry ...	88,382
Non-ferrous Foundry ...	700
Forge Shop ...	32,954
Rough Machine Shop ...	64,015
Machine and Heat Treatment Shops for Rolls ...	21,310

Equipped with the latest casting and forging techniques, the plant will be one of the biggest of its kind in the East. The fenced area of the plant exceeds 13,000,000 sq. metres and the length of the entire factory is about 1½ miles. The

individual production units of the plant will be almost as big as the large factories in the country. For example, the length of the steel foundry is about 310 yards, nearly three times the length of a football field. In all, about 40,000 tons of machinery will be installed in the plant. Some of the buildings will be about 130' high with chimneys going up to 240' and with adequate inside clearance to accommodate 10 storeyed buildings without touching any of the structures. Some of these buildings will have the capacity for carrying huge cranes of 200 tons. Some of the big steel columns will weigh 140 tons with steel base of about 300 sq. ft. A special feature of this plant is underground soaking furnaces

—big ones measuring about 67' long x 47' wide x 84 dec. Another very significant feature of the project is that for the first time in India all the detailed designs and drawings required for a project of this complexity and size are being developed in India by Indian Engineers under the technical guidance of Czech experts. In terms of size, specification and quantum, some of the castings and forgings of this plant will be produced for the first time in India—the maximum piece-weight being 100 tons for iron casting, 90 tons for steel casting and about 50 tons for forging. The plant will be equipped with a modern Roll Shop for the manufacture of 13,000 tons of grey iron, steel and forged rolls per

year for meeting the requirements of the iron and steel industry. The manufacturing programme includes iron rolls of both alloyed and unalloyed variety in semi-chilled, chilled and S. G. class besides steel forged rolls. The manufacture of these is now confined only to a few countries in the world, and so far India's requirements of these Rolls had to be imported. The demand for these Rolls has been increasing and the Foundry Forge Plant will have a vital role to play in this field, as it will be fully equipped to meet the country's demand for these items to a very great extent. Rolls will be finished machined to the extent possible and fully heat-treated. Special and heavy duty shafts which might

A view of the Block of Auxiliary department of HMBP Ranchi, intended for maintenance of equipment, etc.

A view of the Central Castings and Forgings Stores of Heavy Machines Building Plant under construction at Ranchi. The stores will be provided with two gantry measures each weighing 90 tons and having lifting capacity of 50 tons, besides four other cranes.

A view of the building for the installation workshop of the Foundry Forge Project, Ranchi, intended for repairs and overhauling of metallurgical and foundry equipment.

A view of the equipment and machinery received from USSR and Czechoslovakia ready for unloading at the Hatia Storage Godown of HMBP, Ranchi.

form part of Turbine generating sets can be supplied in machined and heat-treated condition.

Heat treatment facilities consist of annealing, normalising, quenching and tempering and also induction hardening wherever required. Shafts upto 18 metres in length can be suitably heat treated in special furnaces provided for this purpose. Such is the scope of this project in the field of castings and forgings that one feels tempted to venture and say—you name it and we will make it—be it an item of steel industry or equipment for mining, heavy earth moving, machine tool, power generation or for that matter anything that the country is likely to need in the near future. The project will have four major production units viz, (i) Grey Iron and Non-ferrous Foundry, (ii) Steel Foundry, (iii) Forge Shop and (iv) Rough Machine and Roll Shops. In addition, the plant will have its own well equipped pattern shop, fettling shop, battery of Gas producers, besides the power and gas services. The plant will manufacture its own ingots for forgings and is equipped to make steel of any composition including the highly alloyed type. The plant will also be equipped with a 6,000/8,000 ton press—the biggest so far in India. About 8,500 workers and staff are to be employed in this plant, which is expected to go into production by 1964-65.

The Foundry Forge Project will help to open new spheres of industrial and technological development, which have so far been the

privilege of only a few industrially advanced countries in the world.

HEAVY MACHINE TOOL PLANT:

In November 1960, the Government of India entrusted the Corporation with the responsibility of setting up a Heavy Machine Tool Plant at Ranchi, in the vicinity of Heavy Machine Building and the Foundry Forge Plants, in collaboration with Czechoslovakia. The plant as it is to be implemented now will have an annual production capacity of 10,000 tons of certain diverse items of heavy machine tools. Machine tools of these larger sizes and capacities will be produced for the first time in India. Adequate provision has been made for increasing the capacity of the plant to 20,000 tons per year or to any other intermediary stage, if considered necessary. When in full production, the plant is expected to manufacture approximately 278 complete machine tools—the average weight of each machine being 25/30 tons, the maximum weight of an individual machine is expected to be approximately 180 tons, the maximum weight of a single component being 50 tons. The production range includes seven different groups of machine tools with 22 different capacity models.

The plant is expected to go into trial production by 1965. At full production, it will provide employment to more than 2,000 staff and workers. A site for the plant, measuring an area of 130 acres, to the north of the Heavy Machine Building Project has been finalised. An approximate production programme of the plant is given below:—

Sl. No.	Description of items	Range of sizes to be produced in H.M.T.P.		Nos.*	Weight in tons*
1.	Central Lathes ...	Swing	1000 mm to 3150 mm	70	3455
2.	Radial Drilling Machines ...	Spindle dia.	80 mm to 100 mm	36	412
3.	Double Column Planing Machine ...	Table Width	1000 mm to 2000 mm	38	1410
4.	Horizontal Boring ...	Spindle dia.	100 mm to 160 mm	53	1069
5.	Vertical Boring and Turning Mills ...	Table dia.	1250 mm to 4000 mm	31	1029
6.	Planing-Milling Machines ...	Table Width	1250 mm to 1600 mm	20	1000
7.	Precision Cylindrical and Roll Grinding Machines ...	Swing	400 mm to 800 mm	30	429
8.	Spares & Accessories	—	—	—	1186
TOTAL				278	10000

*Peak production, per annum

COAL MINING MACHINERY PROJECT:

The plant is being set up at Durgapur, West Bengal, in collaboration with the USSR. The unit was initially designed to produce 30,000 tons of coal mining machinery. But in view of the increase in the target of coal production in the coming years, the Government of India decided to expand the capacity of the plant immediately to 45,000 tons of machinery per year. The plant will occupy an area of 86 acres (400 metres in breadth and 1200 metres in length along the Grand Trunk Road) and will have 15 Main Production and Ancillary Shops and 5 Storage Buildings. The unit will be self-sufficient in respect of its castings

and forgings, except for the heavier pieces, which will be obtained from the Foundry Forge Plant at Ranchi. On the other hand it will have a spare capacity to supply to other industries about 2,000 tons of Steel Castings, 50 tons of Non-ferrous Metal Castings and 750 tons of Forgings per annum. The main units of the plant and their capacities are Grey Iron Foundry (11,000 tons); Steel Foundry (9,000 tons); Forge Shop (10,000 tons); a Structural Shop and two Machine and Assembly Shops. There will be other Ancillary Shops, viz, Melting and Heat Treatment Shops, Skull Cracker and Scrap Preparation Yard, Oxygen Plant, Boiler House, etc. The three shops for machining, fabricating and assem-

bling operations will contain about 882 machine tools and accessories. This is for the first time that such a comprehensive and integrated plant is being set up in the country to manufacture such a wide range of diverse types of coal mining machinery. The factory has been designed to be almost fully mechanised and will be using approximately the following mechanical handling equipment:—

(a) Overhead Travelling Cranes ...	84 nos.
(b) Conveyers & Elevators ...	262 nos.
(c) Jib Cranes ...	80 nos.
(d) Industrial Trucks and Automobile Fleet ...	200 nos.

The plant will produce its own Oxygen and Compressed Air.

When in full production (45,000 tons), the plant is expected to produce the following items of Coal Mining Machinery per annum:—

Description of items	Quantity	Weight in Pieces	Tons
1. Coal Cutters ...	600	1704	
2. Loaders ...	250	1371	
3. Conveyers ...	1800	22487	
4. Trolley & Battery Type Electric Mine Locomotives ...	150	1300	
5. Haulages ...	400	3804	
6. Main Axial Fans ...	100	1154	
7. Electric Winders ...	25	1167	
8. Booster Fans ...	250	50	
9. Centrifugal Pumps ...	500	998	
10. Sand Pumps ...	300	550	
11. Automatic Cage Keps for use in Vertical Shafts & Safety Detaching Hooks, Clips, etc. ...	—	2000	
12. Light Drill Rigs for exploration drilling ...	25	28	
13. Spare parts ...	—	8323	

The plant is expected to provide employment to about 5,000 staff and workers. The major contract for the supply of plant and equipment, fabricated steel structures and other stores materials of a total value of Rs 7.50 crores was entered into with the USSR in March, 1960 for the 30,000-ton stage. Against this contract, plant and machinery are already being received from the USSR. Contract for additional plant and equipment for the 45,000 ton stage has also been signed.

Contracts for all the major plant buildings have been awarded and work on all of them has started and has made good progress. Permanent roads are almost complete and the main railway siding is already in operation. The plant is expected to go into production by the end of 1963.

CENTRAL PRODUCTS DESIGN INSTITUTES:

In addition to the Design Bureaus at each of the Projects of this Corporation, the Government of India is contemplating to set up a Central Products Design Institute for machine building at Ranchi.

The Central Institute will be engaged in evolving new designs as well as effecting modifications to designs of machinery and equipment to be manufactured in these plants and elsewhere, while the Design Wings at each project will be responsible for developing the details, shop drawings, etc for those items to be produced in each of them.

DRAWING & DESIGN OFFICE (CONSTRUCTION STAGE):

Drawing and Design Offices for the construction stage of the projects have already been established. This is now engaged in the preparation of detailed drawings or effecting running modifications to the same to meet construction needs. A similar drawing and design office has been set up at Durgapur to meet the construction needs there.

CONSTRUCTION WORKSHOP & LABORATORY:

A construction workshop to undertake the manufacture of various items required during construction and erection stages, is being established. It has also been proposed to have a Central Plant Laboratory to check the quality of civil work being done and to ensure that only good quality materials are used. A similar workshop is also being set up at Durgapur.

TRAINING PROGRAMME:

To ensure a regular flow of technical personnel, skilled and semi-skilled workers, so essential to run such large and complex plants, a comprehensive programme of training has been worked out. As a part of this programme, arrangements have been made for advanced and specialised training both in production technique as well as in design documentation of over 650 Indian Engineers and Technicians in Russia and Czechoslovakia for periods varying from six to eighteen months. A large number of our engineers is already undergoing training in the factories and institutions of these two countries. Experts of our collaborators experienced in designs are also being drawn to assist our staff for training in design. The Corporation is also setting up at Ranchi a modern Training Institute complete with workshop facilities to provide specialised training to diverse categories of skilled workers and graduate engineers to meet the needs of its projects both at Ranchi and Durgapur. Approximately 800 trade apprentices and 200 graduate and technical apprentices will be trained at a time in this Institute. The building of the Institute as well as the training workshop is almost ready. Construction of two blocks of apprentice hostels, each of 100 rooms near the plant site was completed some time back. Construction of another three sets of Hostels is progressing.

Similarly, a double storeyed Apprenticeship Hostel with 100 rooms is being constructed at Durgapur of which 50 rooms have already been completed. To meet the initial requirements of skilled and semi-skilled workers till this Training Institute is ready, training facilities have been arranged in various technological institutes and industrial undertakings in India. With the progressive ope-

ration of our plant units, adequate facilities will also be established for in-plant training for our engineers and workers.

PROGRESS OF WORK:

The levelling and grading of the factory sites for the Heavy Machine Building, Foundry Forge and Coal Mining Machinery Plants was taken up in January, 1961 and completed by the end of the same year. The construction of miles of interplant roads, laying of construction water pipelines, establishment of construction power grid and necessary storm-water drainage facilities, all of which form essential preliminaries, were also taken in hand expeditiously and many of these have been already completed. The construction of the 37-metre road, one of the widest in this area leading to the factory plaza, has been completed. The actual construction work in some of the factory buildings was also commenced in the middle of 1961 and has been making rapid progress.

RAILWAY SIDINGS:

Approximately, 20 miles and 5 miles of track length are required to be constructed within the fenced area of the Foundry Forge and the Heavy Machine Building Projects respectively. About 4.5 miles of railway lines are to be constructed within the factory area of the Coal Mining Machinery

Plant. Work of laying railway lines in all the three projects is being done departmentally and has made good progress. The Railway lines up to the Storage Sheds of the Plants have been opened and transporting of train-loads of stores materials, machinery and equipment received at Calcutta Port from Russia and Czechoslovakia direct into the Storage Sheds is a common sight to-day. In Durgapur also the plant siding is in operation and equipment and machinery are being transported direct to the plant site.

FIELD OFFICES AND STORAGE SHEDS:

A major part of the office, specially the engineering staff and others connected with construction work is now operating from the temporary field offices near the factory sites, both at Ranchi and Durgapur. So far more than 20 temporary buildings have been built in Ranchi to accommodate these offices; some more are being constructed. For the storage of building materials and general items of stores, a number of temporary godowns has been completed both at Ranchi and Durgapur.

To ensure adequate storage space for the incoming plant and equipment from the USSR and other costly materials for the Heavy Machine Building Plant, the construction of six 120' x 60' co-

vered godowns and a similar number of open type platform godowns has already been completed. The godowns have been provided with facilities of water, electricity and railway sidings. Similarly, for the Foundry Forge Plant, a set of 10 covered godowns with an equal number of platform godowns has been constructed to the south of the plant for equipment weighing less than 7 tons. In addition, one large godown has been constructed near Hatia railway station for plant and equipment weighing more than 7 tons to serve both the Heavy Machine Building Plant and the Foundry Forge Plant. Similar storage facilities and godowns have been established also for the Coal Mining Machinery Plant at Durgapur. For repairs, maintenance and servicing of the large fleet of vehicles and items like road-rollers, etc. the construction of a modern transport workshop has been completed and it has been functioning for some time.

WATER AND POWER:

Arrangements for the supply of drinking and process water for the projects and the township at Ranchi are being made by the Government of Bihar. They are constructing an earthen dam across the river "Subarnarekha" near the factory site. For the supply of electric power to the township and the plants, Thermal Power

Station with plant and equipment from the USSR is being set up by the Government of Bihar at Patratu—about 30 miles from Ranchi. Bihar State Electricity Board has made alternative arrangements for the supply of power during construction stages till the power station is ready. The supply of water and power for the Coal Mining Machinery Project at Durgapur has been arranged by the Durgapur Industries Limited. The pumping station and all other arrangements for the supply of construction water at work site have been completed.

So far, contracts of a total sum of over Rs 64 crores have been entered into with Russia and Czechoslovakia for the supply of plant and equipment and for technical services. About Rs 20 to Rs 25 crores worth of additional contracts, some of which are under negotiation are still to be finalised with them. The value of diverse types of structural and civil works both temporary and permanent already executed or placed and in hand or those on which progress has been made so far, amounts to about Rs 33 crores. The total c.i.f. value of all contracts so far effected for all the projects, works out to over Rs 100 crores. In addition, tenders for various construction works amounting to several crores of rupees have been invited. Orders for many of them will be placed soon.

Railways' Operational Efficiency

To ears that have become depressingly familiar with complaints about transport bottlenecks impeding production, the Railways have good news. Statistical confirmation is now available for the general experience of a decisive change for the better in the movement of goods in the last year. A comprehensively heartening picture of operational efficiency of the Railways has been presented in the Review of performance by the Directorate of Statistics of the Railway Board. The accompanying tables will give some indication of the improvement.

During the first ten months of the current year the daily average loading shows an increase of 1853 wagons on the broad gauge and of 177 wagons on the metre gauge as compared with the corresponding period of 1961-62. The increase is of the order of ten per cent on the broad gauge and of about five per cent on the metre gauge. The movement of coal, to which industry is particularly sensitive, also shows steady improvement. The daily average loading in 1961-62 was 5999 wagons as against 5668 wagons in 1960-61. The daily average loading in Bengal-Bihar coalfields rose from 4481 wagons in 1960-61 to 4799 wagons in 1961-62, an increase of about seven per cent.

The improvement has been maintained during the current year. During the first ten months of 1962-63 the daily loading from Bengal-Bihar coal fields at 5199 wagons shows a rise of 8.7 per cent over the corresponding period of the previous year. The daily loading from all coal fields has averaged 6552 wagons as against 5976 wagons in the previous year, an increase of 9.6 per cent.

Figures of freight loading, especially of coal loading also speak of steadily improving efficiency. During the first ten months the requirements of coal for the Steel Plants and the Washeries continued to be met in full. The Railway Plan was drawn up primarily to meet the requirements of the Steel Plants which, moreover, have not come up to expectations. The fact that the requirements of Steel Plants have been met in full cannot therefore be counted as a major achievement. The real test of the Railways' performance as regards movements of coal is the improvement in supplies to 'Other Consumers.' It is gratifying that Railways are able to report progress in this field also. Movement to 'Other Consumers' during the first ten months of the current year from Bengal-Bihar

coal fields has been of the order of 3725 wagons a day as against the daily average of 3580 wagons in the previous year, and it is expected that the rate of increase will be progressively stepped up in the remaining years of the Plan. Movement of coal to destinations to the West of Moghalsrai has also shown improvement, an average of 1986 coal wagons being moved during the period April 1962 to January 1963 as compared with 1891 wagons in the corresponding period of the previous year.

The improvement in the movement of coal indicated by these figures does not mean that the requirements of consumers are being met in full. But it cannot be denied that complaints of shortage of wagons for coal movement are now much less frequent than they were even a few months ago. Further improvement in coal movement should be possible if the difficulties in the way of transporting coal in block rakes to selected destinations are overcome. Immediate improvement in the transport of coal, as well as of other goods, should be possible, if industry and trade are able to ensure that there is no interruption of loading on Sundays and holidays. The shortfall in loading on Sundays is estimated at about 850 wagons per day for coal alone, while the overall shortfall is of the order of 1800 to 2000 wagons.

The total goods loading during the first ten months of the current year has registered an increase of 13.2 million tons. The target of additional freight to be carried by the Railways during the year is 15 million tons, and by present indications, there is a reasonable expectation that actual performance will be above rather than below the target set. The figure of 15 million tons includes about 7.5 million tons on account of the Steel Plants. But requirements of the Steel Plants have not developed to the expected level and the additional freight carried by the Railways during the year includes about 3 million tons of general goods more than was provided in the Plan. The facilities created for Steel Plants cannot be transferred elsewhere to cater to other traffic, and the actual performance would have been far better if Steel Plant traffic had been up to expectations. For the coming year, the target for additional traffic has been set at 17 million tons, which includes two million tons of coal from Bengal and Bihar for 'Other Consumers.' To judge by performance during the current year, the

Railways should be able to achieve this target for additional traffic and availability of coal for 'Other Consumers' during 1963 should show a distinct improvement.

The performance of the Railways stands out in clear relief when viewed against the background of the Emergency which has made heavy demands on the Railway system. It is relevant to point out in this context that the increased goods traffic discussed above is additional to the emergency movements of men and material (included in the category of coaching traffic, which the Railways have undertaken at short notice. It is a matter of the greatest credit to all concerned with running the Railways, that the additional traffic resulting from the Emergency an increase of 65 per cent on North Eastern Railway—has been carried with practically no interruptions or curtailment of normal passenger services and movements of civil supplies.

An approximate overall operating-cum-efficiency index has been

worked out in the Review. This takes into account the average indices worked out for 15 criteria of performance among which are engine-kilometres per engine-day, wagon-kilometres per wagon-day, tonne-kilometres per goods-train-hour, kilogram-consumption of fuel ton-kilometre. A composite figure for both gauges is arrived at in the proportion of the sum of passenger kilometres and net tonne kilometres, on each gauge, to the total. Very rough operating-cum-efficiency index figures with 1938-39 as base are as follows:

1938-39	..	..	100
1950-51	..	..	98.8
1951-52	..	..	100.6
1952-56	..	..	105.2
1956-57	..	..	107.2
1957-58	..	..	109.7
1958-59	..	..	109.0
1959-60	..	..	112.7
1960-61	..	..	115.1
1961-62	..	..	114.3
1961-62 (April-Dec.)	..	..	115.4
1962-63 (April-Dec.)	..	..	117.5

HEAVY MACHINE BUILDING PLANT

at RANCHI
will be fully equipped
to produce Machinery
and Equipment
for any Heavy Industry

THE PLANT...

One of the largest and most modern of its kind in the world, the Heavy Machine Building Plant is being set up in collaboration with the U.S.S.R. to produce 80,000 tons of diverse types of heavy machinery items per year at full production. Covering an area of 5,70,000 sq. metres, its shops will be equipped with 780 items of machine tools, 97 electric overhead travelling cranes with capacities ranging from 3 tons to 150 tons, and 116 items of jib cranes and other handling equipment. The bed of the largest lathe in this plant will measure 20 metres, i.e. 66 ft. and the table dimensions of the largest planing machine will be 12 x 4 metres, i.e. approximately 40 x 13 ft.

LATEST TECHNICAL KNOW-HOW AND DESIGN FACILITIES...

Most modern tools and machinery, latest technical know-how and design facilities will be employed for production in this plant. There will be wide flexibility for the manufacture of diverse types of machinery for any heavy industry, based not only on standard designs and specifications of proved performance elsewhere but also to customers' own designs. To enable the customers have the benefit of the latest design facilities, a fully equipped Design Bureau with more than 600 Design

Engineers trained in most advanced plants and industries is being established. This Bureau will be capable of undertaking various designs for any heavy industry.

WIDE MANUFACTURING FLEXIBILITY...

Although, the plant is primarily intended to produce machinery and equipment for the iron and steel industry, it will have adequate facilities and capacity to meet the requirements of machinery and equipment for other industries like mineral oil (Oil Drilling Rigs), coal mining (Heavy Mining Equipment), chemical, fertiliser, cement, etc. The plant will also be in a position to manufacture heavy cranes, excavators, crushing & grinding equipment and diverse types of other general engineering items. The Heavy Machine Building Plant will go into pilot production by the end of 1963 and begin to supply items like cranes and structurals almost immediately thereafter.

INDIAN FINANCE Annual & Year-Book 1962

JUTE

THE outlook for the jute goods industry has considerably improved over the last one year. With a plentiful supply of raw jute, mills have been enabled to maintain the highest rate of production. The industry is working to its full installed capacity for several months now and the production in 1962 was the highest in the last 20 years. The total production of jute goods during the year amounted to 1,186,800 tonnes. Of this hessian accounted for 482,700 tonnes, sacking for 551,800 tonnes and other goods for 152,300 tonnes. This compares with the total production in 1961 of 962,400 tonnes comprising 342,700 tonnes hessian, 479,800 tonnes sacking and 139,900 tonnes other goods. On the export front too significant gains have been recorded during the past year as exports have surpassed the Third Plan targets both in volume and in value. As against Rs 145 crores in 1961, export earnings of the industry in 1962 are estimated at Rs 150 crores. Despatches of gunnies for export purposes in 1962 amounted to 834,900 tonnes made up of 426,800 tonnes hessian, 302,500 tonnes sacking and 105,600 tonnes other goods. Despatches for internal consumption were also higher at 298,500 tonnes. In recent years following the rising trend of economic activity in the country, internal consumption of jute goods has been steadily increasing. Last year internal consumption accounted for more than a fourth of the total production.

The vital position the industry occupies in the economy of the country, especially at the present juncture, when our foreign exchange requirements have gone up on account of the national emergency, will be evident from the fact that it accounts for nearly one-fourth of the total foreign exchange earnings of the country as a whole, and 40 per cent of the dollar earnings. This superlative performance has been made possible largely because raw jute was available in plenty to enable mills to embark on a programme for working up to their full capacity almost the whole of the year. As a matter of fact the period of such working continues to be extended from month to month. Thanks to the energetic measures initiated mainly by the government, jute production has made rapid strides in recent years. Great progress had been made in the jute season 1961-62 with the result that that year's crop turned out to be a bumper one, and what is more the Third Plan target of jute production was achieved in the very first year itself. While the 1961-62 crop was quite big, the 1962-63 crop despite a fall in acreage too has proved to be big enough to cause difficulties in respect of its satisfactory absorption. The current year's (1962-63)

crop is estimated to yield an outturn of 7.1 million bales and since there had been a carryover from last season of as much as 2.6 million bales, the total jute availability during the season can be placed at 9.7 million bales. The grand total of the jute supply, however, will be much more than this figure because due to the prices in India ruling higher than those in Pakistan, lot of jute has been smuggled from that country and it is estimated that such unauthorised receipts would be anything between 5 lakhs and 10 lakh bales. As is to be expected such a large supply brought in its wake a number of problems, mainly connected with the maintenance of an equitable return to the cultivator. It has been realised by Government that unless the grower continues to have confidence in his crop, the objective of obtaining a uniformly large supply of raw material for the jute mills will be defeated. Government therefore announced that a minimum price of Rs 30 per maund basis Assam Bottoms will be in force for the current crop. The minimum price, however, was not enforced by a promulgation, but had been sought to be maintained by persuasion. The Jute Buffer Stock Association was given quotas from time to time to purchase jute at the minima, while the jute mills were allotted monthly minimum purchase quotas making it obligatory for all jute mills to effect purchases of a certain minimum quantity of jute every month and hold a certain minimum level of stocks at the end of each month. Other measures taken by Government include the directive issued to the State Trading Corporation to buy raw jute through the agency of the National Agricultural Marketing Federation at the operational price of Rs 30 per maund for Assam Bottoms at Calcutta.

The past year has also shown that, provided the industry is able to ensure a measure of price stability for its products, overseas customers will continue to take an active interest in jute goods. Though the industry has achieved significant progress last year, there can be no feeling of complacency. For international trade in jute goods is getting more and more difficult partly because of the growing competition from Pakistan and partly because erstwhile consuming countries are either ever ready to switch over to substitute packaging materials at the slightest indication of a hardening in prices of jute goods or are trying to become self-sufficient in jute goods. In recent years Pakistan has established itself as the supplier of the cheapest ranges of jute cloth. This growing competition is felt most in sacking as 70 per cent of Pakistan's output is heavy goods. If the Pakistani jute industry is able to

ou bid Indian goods in world markets, it is largely because it enjoys a number of advantages over its counter part in India. It gets raw jute of superior quality at a comparatively cheap price while its exports are subsidised by its government through a system of transferable import licenses linked to exports which in other words is an export bonus scheme. As production is being stepped up, Pakistan's exports have been increasing rapidly. The present annual rate of exports of sacking is 120,000 tons and it compares with India's 260,000 tons. Pakistan has an ambitious programme of expansion of its jute goods industry. When all the additional 6,000 looms to be installed during that country's Second Five-Year Plan go into production by 1964-65, the total output of its jute industry is expected to go up from 260,000 tons a year to 490,000 tons. As internal consumption in that country by that time is expected to increase from the present level of 60,000 tons a year to 90,000 tons, there will be an exportable surplus of 400,000 tons, the major portion of which will be sacking. The implication of the growing stature of the Pakistani jute industry to our own industry is quite obvious: our sacking exports will meet with stiffening competition from Pakistan. Already the position is rather discouraging in that in most sacking markets our goods get business only when there are no supplies from Pakistan. In some of its traditional markets India has yielded considerable ground to Pakistan. In 1960-61 exports of sacking to Australia were placed at 60,400 tonnes, but in the next year they came down to 37,200 tonnes. UK's offtake has been reduced to 8,700 tonnes in 1961-62 from 11,800 tonnes two years ago. There is a sharp fall in the offtake of sacking by Far Eastern Countries from 135,000 tonnes in 1959-60 to 55,800 tonnes in 1961-62. However, exports of sacking to Africa have risen substantially during the period to 92,200 tonnes in 1961-62 from 61,500 tonnes in 1959-60. In

almost all the markets in which India has lost ground, Pakistan has gained. As for hessian, although in the long run Pakistan will be able to place sizable quantities of this category of goods also on the world market, there does not appear to be an immediate threat to India's exports of hessian. Even so, the recent slow down in burlap consumption in US and the high level of stocks in that country have revived the apprehension that US consumers may be steadily developing resistance to high prices. It would appear that while there is considerable scope for stepping up hessian exports, especially specialties, to the US, increased burlap consumption in that country will largely depend on the extent of price stability that is achieved.

Though price movements were rather irregular on alternate buying and selling, conditions in the Jute Goods market were fairly stable during the year 1962. The dominant feature of the market was the scarcity of ready delivery manufactured goods the demand for which was not satisfied till the middle of the year. Except for a brief period in the middle of the year, the Raw Jute section passed through a crisis, as the problem of disposal was a complicated one. One of the main difficulties was that the percentage of low quality jute was unusually large, while the demand for the classes of goods for which this fibre could be used had fallen. There were, however, certain factors contributing to a slightly steadier tendency in prices during the closing month of the year. Mainly amongst these were the effective measures taken by the Government and the industry to step up purchases in Assam at reasonable prices; growers in Assam being advised not to sell jute in distress; increase in the number of wagons made available for transport and the steps taken to buy jute through the co-operative agencies for supply to the State Trading Corporation.

PRICE TRENDS IN 1962

Following were the opening, highest, lowest and closing rates for the year:—	Opening Rs	Highest Rs	Lowest Rs	Closing Rs

TEA

Encouraging Export Performance

AS the nation's number one foreign exchange earner, the fortunes of the Tea industry are a matter of vital importance to the country's economy as a whole. At a time when we are on the Third Five-Year Plan with its vast requirements of external finance, it is essential that India should not only maintain, but extend its markets abroad.

Again tea, as the one industry, directly affected by the emergency, is deserving special consideration. The situation created by the strike of the Pakistani crew of the Joint Steamer Companies for nearly two months towards the end of last year was further aggravated by the Chinese incursion, which not only caused damage to production, but also imposed a strain on transport. But for the arrangements made by the Government to move consignments and the strike being called off, all the tea, including the stocks which had accumulated in Assam, would not have moved to Calcutta within the normal season.

The following table shows the production figures of the major producing countries (in million pounds):—

Countries	Total up to	1962	1961	1960
North-East India	Decr.	578.1	603.2	529.8
South India	Decr.	175.0*	175.3	167.3
Pakistan	Decr.	51.5	59.0	41.8
Ceylon	Decr.	466.3	455.2	434.7
Indonesia	Aug.	65.7	64.2	64.2
B.E. Africa	Novr.	79.3	70.9	67.1
Mozambique	Novr.	17.7	20.4	17.8
Total		1,433.6	1,448.2	1,322.7

*Estimate.

It is gratifying to note that, despite a shortfall in output, the performance of the Indian tea industry in the field of exports has shown a further improvement in 1962 over 1961. The total quantity exported was 188.89 million kgs (416.42 million lbs) as against 180.83 m. kgs. (398.65 million lbs) in 1961 and 168.06 million kgs. (370.50 million lbs) in 1960. Had the trend of exports not been hampered temporarily by other extraneous factors, total exports, during the year under review, might have reached a level of 227.3 million kgs (500 million lbs) against 205.25 million kgs (452 million lbs) in 1961. The foreign exchange earnings would also, in all probability, have reached a level of Rs 132 crores against Rs 124.6 crores in 1961.

There is little doubt that the increase in exports has been due to the tax relief announced last year—a reduction in the ex-

port duty from 44 nP to 25 nP per kilo and a refund of excise duty on tea exported at the rate of 15 nP per kilo. This relief has certainly yielded handsome dividends. If this healthy outlook in exports is to be maintained, the Government should give urgent thought to ways in which the industry can be helped to overcome new handicaps, not its own making. No estimates are yet available as to how much war risks insurance will add to production costs. If the incidence is substantial, it is hardly calculated to help Assam teas. As it is, these teas have to pay excise at the highest rates for any zone. This additional burden, on top of the rise in costs by 10 nP to 15 nP per kilo this season on account of increased payments to labour, will more than offset the benefit conferred by the reduction in export levies.

Again, Indian tea is being gradually priced out of the world markets, because of its high cost of production. Far from enjoying a position of monopoly, India has to face severe competition from other tea-producing countries. Teas produced in Ceylon,

tion lies in reducing production costs, there is a difference of approach between the Government and the industry. While the Government likes to see this come about as a result of increased yields and other economies, the industry places the emphasis on lower taxes.

There is need, therefore, for rethinking on the way in which the tax burden is at present distributed, under which the areas most promising from the export viewpoint carry the highest levy. This rethinking should also include a careful assessment of the comparative incidence of taxes upon teas entering the export trade and those retained for consumption within the country. In this connection, the Tea Association of India has stated that two years of continued slump had hit the industry in West Bengal so much that many gardens had been finding it a problem to procure necessary finance from commercial banks for tea cultivation. The Association has, therefore, requested the Government of India to abolish the Entry Tax on tea, so that the industry can pursue its efforts without much hindrance from the burden of taxes, in achieving the target fixed for export under the Third Five-Year Plan.

In regard to prices that were obtained at the auctions during the year, they were consistently higher than in the last year, at both Calcutta and London. The Chinese aggression and the consequent threat to Assam teas, the smaller arrivals and offerings at Calcutta as well as smaller despatches to London—all these factors combined gave an upward thrust to prices all over the world.

The early sales of the 1962-63 season yielded excellent prices for the best teas; but the common and low medium varieties fetched prices which were lower than the corresponding figures in the last two years. This trend continued up to the later sales of second flush teas and there were signs of recovery in the prices of the cheaper descriptions. In fact, more buyers appeared to be actively participating in the sales which were in sharp contrast to 1961 and which were perhaps indicative of a feeling of uncertainty about the scope of future supplies. While this improved demand was encouraging to the producers of common and low medium teas, it was, nevertheless, inadequate to raise prices to 1961 levels.

A significant feature of the market was the absence of any indication of a glut of teas in the various consuming countries des-

pite an unprecedented increase in world supplies. While a buyers' market prevailed during most part of the year, no country was reported to be holding unusually large stocks. It was, however, realised that the world's production was also increasing at a rapid rate and consumption in this country although a potent factor, had not yet assumed sufficient magnitude to transfer a buyers' into a sellers' market.

It was, therefore, with some optimism that the trade circles received the changes, announced with the 1962-63 Budget proposals. It was proposed to reduce the export duty by 19 nP per kilogram and refund the excise duty to the extent of 15 nP per kilogram on all tea exported. In order to compensate for the loss arising from the refund, it was proposed to increase the excise duty by 5 nP to 10 nP per kilogram—zone I to IIIA will have to pay 5 nP more, while zones II and IIIB will have to pay 10 nP more. These changes in levies were expected to make Indian tea more competitive on the world market and should provide a welcome fillip to exports.

Although a favourable climate was thus created for the expansion of exports, there was a considerable speculation as to the effect of Britain's entry into the ECM would have on the imports of Indian tea to the six countries of the European Community, especially if some of the African countries were to be treated as associated members and their produce was allowed free entry into Britain. While some circles felt that this only could put India at a great disadvantage in her trade with the UK, others felt that the entry of Britain into the Common Market could have beneficial effects. In this respect, the decision taken by the ECM deputies, at the end of July, to abolish the common external tariff in tea was considered to be a distinct gain. Moreover, it was felt that the removal for the present at least, of the threat to tea exports was regarded as a temporary reprieve, allowing the Tea Board and the industry to consolidate their recently-initiated efforts to promote exports more actively.

The outlook for the next year's crop is considered to be uncertain. Gardens, especially in Assam, are finding it difficult to obtain financial accommodation from banks for the new season. It is generally felt that, although the Government has persuaded the banks to maintain their advances to gardens, more vigorous measures need to be taken to ensure an adequate supply of credit to the industry during the present emergency, if production is not to suffer.

All under one roof

India Pistons has attained self-sufficiency from the raw material to the finished product, manufacturing under one roof all the components that go into the piston and liner assembly. The range includes the Chromium plated, Duaflex and Expander rings; single cast and centri-

fugally cast piston rings; wet and dry centrifugally cast cylinder liners; die cast and forged pistons to any specification, drawing or design.

India Pistons Quality Products cover the most exhaustive range in India with a wide application.

We Manufacture and Supply:

1. For the HOME:

Aluminium Utensils and Fancy Articles, which are easy to clean, modern in design and light to handle, THERMIC JUGS to keep your beverages hot or drinks cold for hours together. PICNIC and CONVENIENT TIFFIN CARRIERS in different sizes and elegant colours and Meals Carrier which is ideal for carrying a complete North Indian or South Indian Meals for two persons.

2. For the OFFICE:

Typewriter Covers, Typists Stationery Racks, Book-rests, Paper Weights, Waste paper Baskets, Attache Cases, etc.

3. For the DEFENCE FORCES:

Aluminium Degchies, Katorahs, Parats Chamchas, Mess Tins, Water Bottles Ladles etc. and various other Aluminium Articles of their specifications.

4. For the INDUSTRIES:

We supply the needs in Aluminium of Railways, Tea Plantations Industry, Textile Industry, Rubber Plantations Industry, Dairy Industry, Electrical Industries, Light Engineering Industries, Chemical Industries and Hospitals.

We supply Aluminium in all forms such as Sheets, Wires, Rivets, Ingots, Shots, Mouldings, Extruded Sections, Angles, Strips, Channels, Rods, Tubings, Staircase Railings, Step edgings, Wall facings, Fluted strips, Thresholds, Beadings, Powder, etc.

Here is what eminent Authorities on Science and Medicine say about the absolute harmlessness of food cooked in Aluminium Utensils:—

"After gold and platinum, Aluminium is the best metal for cooking utensils; it is even better than silver"—British Medical Journal.

"There can be absolutely no objection to Aluminium from the standpoint of hygiene"—The German Board of Health.

"No harmful effect to the health is incurred by the use of Aluminium cooking Utensils"—National Research Council, Ottawa.

Please do not be carried away by malicious propaganda against Aluminium made by unscrupulous sales people and misguided food faddists. 'CROWN' Brand Aluminium Utensils are made from Virgin Aluminium metal and are safest for use.

FOR ANY SPECIFICATION, ANY SIZE, ANY QUANTITY,
IF IT IS
OF ALUMINIUM, YOU CAN RELY ON US.

COFFEE

Outlook

INDIA is one of the few Coffee-producing countries in the world with an internal market which absorbs the bulk of its produce and has an almost unlimited consumption potential for the future. Coffee is the only commodity marketed by a Statutory Body in India. All coffee-growers have to surrender their entire crop to the Board's Coffee Pool. On the question of efficient disposal of the crop, a decision has to be taken not only by those who produce the coffee, but also by groups and interests who have no abiding interest in the produce. But the Board is not the ultimate authority. The Board and all its action and its officers are controlled by the Government of India.

An important fact about coffee which strikes even the lay observer is the phenomenal production during the post-war years. It is now recognised by all that the co-operative system of marketing under the aegis of the Coffee Board, which started with small beginnings towards the close of the thirties and grew up into its present comprehensive structure in response to the industry's needs from time to time, has afforded the opportunity to the coffee grower to put his farming on a scientific basis. For obvious reasons, the output of coffee, which was of the order of only 20,000 tons in the forties, rose by leaps and bounds; it doubled in the fifties and has nearly trebled in 1962.

But, the history of coffee production throughout the world has been one of generally regulating production with a view to avoiding burdensome surpluses. At present, many of the coffee-producing countries are withdrawing quantities from the world markets and endeavouring to bring about an agreement among the producers, whether they subscribe to the world coffee agreement or not. In this situation, India's problem of marketing its coffee in the international markets are rendered even more acute, particularly at a time when it is more than ever necessary for India to export her coffee and contribute to the external earnings of the country. In spite of the fact that India's exports are marginal from the point of view of the world markets, to India the export quantities represent a very substantial share of its production and determine in a very significant manner the eventual return to the grower.

An India's exports amount to about 1 per cent of the world ex-

ports, it has no control over the price. The Indian production is expected to reach 80,000 tonnes by the end of the Third Plan, period out of which 45,000 tonnes will be exported. This export is necessary, mainly for two reasons. First, all coffee grown in India cannot be consumed by the home market. Secondly, coffee, as an exportable commodity, will earn valuable foreign exchange and has to be exported. If India supplies good quality coffee at competitive prices, there may not be much of a difficulty to get its share of increases in export.

A word about the domestic scene. For the Indian coffee industry, the internal market is of great importance. First, it acts as a main support for the industry and provides an assured market for about two-thirds of the present production. Secondly, in the world coffee markets, there is at present a surplus of production over consumption and the prices are falling. India has joined the International Coffee Agreement and thus accepted a limitation of the quantities of its exports to certain specified levels. Under these circumstances, an expanding internal market in India for coffee seems to be all the more desirable.

Although no regular surveys regarding actual consumption of coffee in households, restaurants, etc., have been made, a fairly good idea of the trends in the consumption of coffee in India may be had from the following statistics:—

Steel	Total Production (In Metric Tonnes)	Internal Release
1939-40	15,796	6,955
1948-49	22,864	18,923
1958-59	46,915	30,120
1960-61	68,020	35,523
1961-62	45,675*	26,675†

*Subject to revision.

†This figure does not necessarily indicate a decline in internal consumption in India since the actual releases in the internal market in a calendar year include the carry-over from the previous season's coffee also.

The main types of coffee cultivated in India are Arabica and Robusta. Arabica coffee is produced either as Plantation coffee or Arabica Cherry coffee. The Plantation coffees are washed coffee. The Plantation coffees are washed coffees and are noted for their quality in the cup. The Cherry coffees are prepared after drying in the sun. An idea regarding the trend in the consump-

tion according to the main types may be had from the following table (figures in metric tonnes):—

Calendar Year	Plantation	Ar. Cherry	Robusta	Total
1948 ...	4,790	3,532	8,654	16,976
1957 ...	11,282	4,117	11,223	26,662
1960 ...	12,021	4,284	13,699	30,004
1961 ...	12,501	4,792	16,580	33,873
1962*	12,000	4,000	18,000	34,000

*Estimated and subject to revision.

The above table shows that the total consumption of coffee in India has increased. Analysed according to the types, consumption of Plantation and Robusta coffee has also shown a remarkable increase during the last few years. Consumption of Plantation coffees has more than doubled since 1948, while the consumption of Robusta coffee has nearly doubled in the same period. The Robusta coffee seems to account for nearly half the consumption of coffee in India during the last two years.

The various factors, which seem to influence the consumption of coffee in India, are the size of the crop, the size of the national income, the extent of competition from other beverages like tea, and effect of the propaganda made by the Board for promoting the consumption of coffee in India. No

detailed investigations have been made to assess the influence of these factors or to estimate the elasticities of demand for coffee with reference to either the national income or the prices. These, are, however, fields of further study and research.

The commodity can yet take long strides in consumption due to various favourable factors, such as the vastness of population, rising prosperity and the spread of coffee habit among all classes of people. But, the Indian consumer is price-conscious and will react sharply to any rise in the price. The home market needs expansion to absorb the growing surpluses. Careful planning for increasing internal consumption of coffee, that will be subject to severe competition from other world growths, needs immediate attention.

In the matter of exports, care should be taken to honour the provisions of the International Coffee Agreement. It will be unrealistic on our part to imagine that the mere allotment of an export quota by the ICA for five years has automatically ensured us foreign markets for our product. While an outlet for exportable coffee has been provided within limits, the vital task of building up and maintaining overseas markets remains. This can

only be carried out by supplying products of high quality and competitive price and by establishing direct contact with importers.

Meanwhile, average prices realised in Pool sales during the year under review were generally higher than those obtained in 1961. Though the prices for certain types/grades showed a tendency to rise in Pool sales in the recent months, the Board took timely measures to bring them to reasonable levels by increasing the quantities to be released in the internal market. This was in line with the policy of the Government to hold the price line.

A very important change in the method of export sales during the year was the conduct of open auctions for exports. Out of 20,000 tonnes allocated for export out of the 1961-62 crop, more than 90 per cent was sold by the end of November. The Marketing Committee also decided to allocate 21,300 tonnes for export out of the 1962-63 crop, keeping in mind the quota restrictions and various other factors.

After years of agitation, it was at the beginning of the year that the open auction system was adopted. The opponents of open auctions felt that the system did not help all participants to share in the coffee offered, as the highest bidder used to walk away with

the whole lot. Those who opposed the reversion, felt that the open auctions did not prove a failure. Thus, the half-hearted open auction system could not possibly succeed, because sufficient distinctions in qualities and grades did not exist in a bulked, grade-wise sale of a limited quantity. With the result, the Coffee Board has now decided by a majority to return to the closed bids or tender system for coffee sales for export.

In the context of the deteriorating foreign exchange position, it is natural that there should be a sense of urgency in maximising the export of every exportable commodity—traditional and non-traditional. One such commodity, which calls for optimum effort, is Coffee, not only because of the dire need to augment foreign exchange, but also because of the continually mounting surplus stocks at our disposal. From a careful analysis, it will be found that the quantum of our export trade can still show an improvement if only two of these factors—and they are very important—are taken serious cognisance of and effective measures launched to rectify them. These are, first, the quality of the goods and secondly, marketing policy. The vital need is the improvement in quality. "Let us take care of the quality and the price will take care of itself."

KAMANIS IN THE MARCH TOWARDS INDUSTRIAL SELF-SUFFICIENCY

RUBBER

Gap Between Output and Consumption

WE are now witnessing a period of expansion and, in that, Rubber seems to be contributing in a really big way its role to the general well-being of mankind. In substantiation of this observation, rubber's contribution to our changing conception of the universe itself as one nation vies with another to reach across space to another planet, alone is sufficient proof. For instance, the Goodrich Rubber Company of the USA was reported to have developed and produced the space suit for the America's first astronaut on his historic rocket flight. Thus, Goodrich became the "first tailor" of the space age. While this kind of expansion into highly specialised fields will increasingly become manifest in the years ahead, the consumption of rubber throughout the world, in already existing fields, has been and is steadily increasing.

The International Rubber Study Group estimated world output of natural rubber in 1962 at 2,110,000 tons and synthetic rubber at 2,225,000 tons, the balance tilting slightly in favour of synthetic for the first time in the history of rubber. In the 12 years since 1950, synthetic rubber production advanced by 313.8 per cent and natural production by 15.3 per cent. Thus, the share of natural rubber in total world production has shrunk from 77.7 per cent to 48.7 per cent, whereas synthetic rubber advanced from 22.3 per cent to 51.3 per cent in 1962. During the next decade, the estimate of consumption increase is placed at 1,800,000 tons. By 1971, the total world demand for rubber of all kinds will be 6,157,000 tons. How much that will be met by natural in competition with synthetic rubbers? That is the challenge of the next ten years. Can natural rubber face up to this challenge in time and weight? This is, of course, a world problem facing some twenty producing countries.

India's rubber industry cannot stand aloof and pretend that this challenge does not affect it. It is estimated that 65 to 70 per cent of the total consumption of raw rubber in India is accounted for by the transport industry. The automobile industry alone consumes a large quantity of rubber components, such as spare parts, batteries, belts, washers, rings, etc.

Besides, beltings, hoses, packings, gaskets, mats, cushioning materials used in the assembled cars, are all made of rubber. Similarly, the rubber components in an aeroplane are quite numerous. In the railways, rubber fittings and upholstery are increasingly used. The rubber foot-wear industry claims 15 per cent of the total consumption of rubber.

In the small-scale sector, rubber toys, balloons, valves and various moulded rubber goods are being manufactured, right from flexibles required for domestic lighting to heavy power cables required in industry and communications. Many units, on a large scale, have gone into production with foreign technical and financial collaboration. Very soon, some units will go into production of rubber prophylactics also. Again, industrialisation, particularly the expansion of major industries like steel and coal is going to enlarge the scope for the production of conveyor belts, V-belts and other mechanical parts.

The road transport industry also will have to play an important part in the coming years. There has already been a regular boom in the road transport industry in the past few years. Indications are, that there will have to be further intensive development of transport facilities in all directions if the increasing volume of originating traffic has to be handled without delay and bottlenecks. The number of commercial vehicles has almost doubled in a period of ten years, from about 73,000 in 1948-49 to 160,000 in 1960-61. During the same period, the number of passenger vehicles has also recorded a rise from 27,725 to 50,000. With the annual rate of production around 50,000 units at the present moment, the number of cars on the road can be expected to be nearly 500,000 units, if not more, by 1965-66, leading to a trebling of the demand for tyres and tubes in a short period.

Production of rubber in India is much less than the requirements of the industry and, therefore, the gap between production and consumption has to be filled by imports from rubber-producing countries like Malaya and Ceylon. The following table gives an idea of the wide gap between production and consumption for the last

few years (figures in metric tonnes):—

Year	Production	Consumption
1952	20,181	21,398
1958	24,717	35,312
1959	23,772	39,282
1960	25,192	45,941
1961	26,992	48,319
1962:		
Feb'y.	951	4,075
April	2,277	4,211
May	2,195	4,449
August	2,580	4,273
Sept'r.	2,900	4,024
Oct'r.	2,902	3,579

From the figures given above, it is evident that, though the production has gone up slightly, the consumption has risen to more than double the figure. Although efforts are being made by the Government of India and the Rubber Board to raise production, much more is needed to be done to avoid heavy drain on our foreign exchange. In 1962, it was estimated that consumption was over 66,000 tons and that, in the absence of adequate internal output, it was necessary to import 20,729 tons of natural rubber, 11,224 tons of synthetic rubber and 5,000 tons of reclaimed rubber. The internal production of natural rubber rose only slightly to 30,325 tons from 29,992 tons.

The following table shows the imports of natural rubber (in metric tonnes) during the past few years:—

Year	Imports
1952	3,912
1958	12,068
1959	14,718
1960	22,949
1961	21,693
1962:	
Feb'y.	1,645
April	1,498
May	2,188
August	1,436
September	1,629
October	1,871

The Chinese aggression has emphasised the need for intensive production of rubber, which is a strategic war material. In this hour of trial, the industry has to perform a duty the importance of which cannot be exaggerated. It is, therefore, necessary not only to produce more rubber, but to see that it reaches the right place in time and at the fair price fixed by the Government.

Arrangements are, no doubt, being made to increase the area through a vigorous replantation programme. But, there will not be any sharp rise in the output of natural rubber before 1970. A more powerful factor arresting

the progress of replanting is, that the resources available to the industry cannot support a higher rate of replanting than what has been laid down in the scheme. Apart from resources and the size of the scheme, expansion of replanting programme involves a loss of production, perhaps too great against our needs.

The production of synthetic rubber from the huge plant at Bareilly in the next few weeks will undoubtedly be helpful. It is, however, felt that there will have to be larger imports of rubber even during the current year, while consumption would have increased further in 1964. It is, therefore, argued that there is scope for another synthetic rubber plant, while greater emphasis should be laid on improving the yield per acre.

Luckily, the plant for producing synthetic rubber, at Bareilly, is expected to be in operation early in 1963. This unit may probably provide about 15,000 tons of synthetic rubber in 1963. But, it will still be necessary to import about 45,000 tons of rubber, as indigenous production of natural rubber and synthetic rubber cannot be expected to be more than 40,000 tons, while the total consumption is estimated at 85,000 tons.

Rubber growers in India cannot ignore the fact that ten years from now a well-entrenched synthetic rubber manufacturing industry will supply more rubber to the factories than the 70-year-old plantation industry; that more technical adjustment and re-orientation would have taken place in the equipment and techniques and training of personnel in the rubber goods industry for handling and using a larger volume of synthetic rubber than natural; that the volume of production of synthetic in a few factories allows for advantage to be taken of large scale operations and for a more concerted research programme and sales policy; that a well-organised synthetic industry will be able to present its case far more effectively than a relatively unorganised rubber plantation industry and that continuing foreign collaboration in synthetic rubber ventures ensures the fruits of international advancement in research to reach these units faster than contemporary advancement elsewhere in natural rubber to reach producers here. If the plantation rubber industry is to face up to the challenges of a well-established synthetic rubber manufacturing industry within the country, it must first look at its own weaknesses and strengthen more objectively.

CALCUTTA STOCK EXCHANGE

The Year in Retrospect

AFTER presenting a more or less cheerful appearance till the middle of May, Lyons Range was in the grip of a weak spell during the remaining part of the year although there were signs of the market returning to life from the middle of December. The market finished at slightly above the lowest levels for the year.

In general, the year under review was not particularly pleasing from the point of view of investors and speculators alike. It was a fact that there was an anxiety on the part of investors to take advantage of the lively conditions that prevailed in the capital market during the first half of the year. For, they found it comparatively cheap to invest their funds in good new shares, especially when companies offering new shares often had an assured demand due, among other things, to the incidence of import restrictions. But the main factor contributing to their apathy during the latter half of the year was, that the growth prospects of several industries were being re-assessed in the light of the present difficulties. They felt that developments in the corporate sector were not entirely encouraging except that here and there the corporate horizon was brightened by bonus and right issue announcements.

Fears with regard to the disproportionate growth of industries in certain sectors, particularly those relying more on imported machinery and raw materials, prompted further thought on the extent of idle capacity that would result from the scarcity of foreign exchange. Moreover, their confidence in the market was rudely shaken since the declaration of a state of emergency in the country following Chinese aggression. As a matter of fact, they were in tears to find that a number of their investments in blue chips were quoted below par. Despite the fact that prices came down to attractive low levels, they were not inclined to enter the market as they preferred to wait and see how the stress on defence production would exercise its influence on the economic pattern. The major factor responsible for the reluctance on their part was the almost certain load of taxation to come, especially when the failure of the Gold Bond issues implied that a larger amount of money would have to be raised by taxation than was previously contemplated. They were also inclined to await the outcome of the Indo-Pakistani talks. They were even under the feeling that the improvement in prices, noticed during the

closing week of the year, was not one of any durable significance.

As far as the professional operators were concerned, they remained active in the initial part of the year; but they were inclined to lighten their commitments when the downward trend in equity values during the second half of the year created a feeling of gloom. It was clear that political uncertainty figured prominently, which paralysed their capacity to go "short" or "long". They felt that the existing industries would have to undergo much travail on the production front, especially when a bigger portion of the foreign exchange allotment had to be used for importing defence equipment. The worry to them became the greater when the chances of fresh funds flowing into the stock markets were reduced because of the tremendous response from the public to the call for donations to the NDF. They feared that the heavy fall in the price of gold would have an unsettling effect in many directions and that the heavy loss sustained by the bullion dealers would have its effect on the stock markets as well.

The trend of prices during the year can be divided into distinctive phases—bullish and bearish. The bullish phase lasted till the second week of May. It had been earlier feared that the Budget proposals for 1962-63 might have a depressing effect on the stock markets. Although there was an increase in the tax burden, it was mainly of an indirect nature. In fact, the budget proposals were well received by the market. It was felt that all well-managed industries would be able to bear the additional burden without any cut in dividends. Besides, the incentives given to exports of 'ea by way of a cut in export duty and a rebate in excise duty and the reduction of tax on inter-corporate dividends were welcomed by the market. In fact, near buoyant conditions prevailed from the beginning of May when the buying support was extended even to several non-speculative shares—a development which caused some surprise even to market observers.

The period beginning from the last week of May to the middle of December was, however, a memorable one. This left behind a disastrous period of trading. In spite of many encouraging factors which helped the market to recover slightly at intervals, the fall in prices was so precipitous that the stock exchange authorities had to take various measures—curtailment of trading hours, fixa-

tion of minimum prices, suspension of day-to-day jobbing business, banning of fresh sales, the imposition of margins and the compulsory carryover of all accounts—to prevent an onslaught by the bears. To make matters worse, activity in the market was further curtailed following the Government decision to stop forward trading in shares.

But the sudden turn in market sentiment from the middle of December was provided by the news about the withdrawal of Chinese forces from some areas and the gradual setting up of Indian administrative posts. The hesitancy of the operators gave way to a feeling of expectancy that the worst was perhaps over. Some of them nibbled at selected shares and this tendency spread slowly. As a matter of fact, sentiment brightened up to such an extent that the authorities were able to remove the minimum price regulations in respect of preference and jute shares. It was also decided that there would be no compulsory carryover in respect of certain cleared shares. Naturally, bear operators, who were sitting on the fence for many days, were forced to cover their sales.

Section-wise, Engineering shares came in for a good deal of attention earlier in the year as the order books were reported to be well-filled for a long time ahead. There was, however, an appreciable fall in prices during the general shake-out in the latter half of the year, not to speak of the fact that operators became cautious in view of the outlook for the industry being considered uncertain. It was thought that the working might be hampered by the shortage of raw materials, coal and transport.

Jute shares behaved exceedingly well during most part of the year as the outlook for the industry was very much brighter than what it was for some time past in view of the abundant supply of the fibre. Many of the mills, which came out with the proposal to pay interim dividends in respect of their working for the current year and which did not pay anything in 1961, gave rise to a feeling that the mills were earning decent profits.

Although a mild flurry was witnessed in the Coal section early in the year following the news of the grant of a World Bank loan for about Rs 17 crores for expansion, turnover declined considera-

bly in subsequent dealings. Operators were inclined to attach only academic significance to the high output target under the Third Plan owing to a doubt whether the necessary transport would be available to move coal from the production areas. There was also no disposition to take a hopeful view about the outlook for the industry, as the price at which collieries were obliged to sell their coal had been statutorily fixed at an uneconomic level.

Except for a few selected shares which met with good enquiry during the first quarter in the hope of bonus issues, trading in the Tea section was generally restricted. Operators seemed to be waiting to see how the new cropping season would start in view of the border situation, not to speak of the fact that many tea gardens were experiencing financial difficulties.

After initial firmness following the issue of bonus or right shares by some companies and the diversification of activities by certain others, Textile shares displayed an easier tendency during the second half of the year, reflecting the obscure outlook for the exports of piecegoods and yarn and the mills being financially embarrassed by the heavy accumulation of stocks.

Except for the consistent support lent to Dyer Meakins, the Sugar section was practically neglected. Operators seemed to be taking a gloomy view about the outlook for profits of the industry, as the factories were still embarrassed by the large accumulation of stocks, not to speak of the reports that the companies were finding it difficult to finance current production.

Generally speaking, Miscellaneous issues received constant attention, although sustained profit-taking wiped out extreme gains towards the close of the year.

The market for gilt-edged securities remained depressed during the major part of the year owing to a predominance of sellers.

The depression in gilt-edged securities had an adverse effect on the shares of banks which had to sell securities at losses in order to meet the increased requirements. It was also feared that profits for 1962 might not be as satisfactory as was expected earlier.

CIBA Research Centre, Goregaon

Spotlight on CIBA

CIBA's first connection with the Indian sub-continent dates back to almost 75 years ago when synthetic dyes—its initial product placed on the market were obtained by leading free importers located in Bombay and Calcutta. Today, CIBA spans the world and comprises of more than 50 companies and has about 25,000 employees. CIBA in India emerged in 1928. At first, it imported dyestuffs only, leaving the pharmaceutical business—which followed the dyes imports several years later—in the hands of local agents. Soon after the termination of World War II, CIBA Limited, Basle (Switzerland), sent a team of top executives for an on-the-spot survey. They recommended the setting-up of an Indian manufacturing unit. As a result, land was obtained at Bhandup, Greater Bombay, in 1948, for the erection of a pharmaceutical and cosmetic plant. A dyes factory, located at Mazagaon (Bombay), was also enlarged and modernized. Almost simultaneously, CIBA collaborated with a newly-constituted and wholly-Indian-owned chemical organisation, Atul Products Limited, in the production of sulphathiazole. In 1948, an agreement was finalised with Atul under which CIBA's technical and scientific know-how were given to the former firm to produce this important chemical and drug.

More recently, among other expanding CIBA activity, CIBATUL was formed for the manufacture of sulphonamides and synthetic resins. The factory is located at Bursar. Also at Bursar, in another joint venture of CIBA OF INDIA LIMITED and Atul Products, will be a new urea formaldehyde synthetic resin adhesive factory. Plans have been completed and equipment is now being ordered from CIBA Limited, Basle. Design of the plant will be based along

the modern lines of the CIBA resin unit located in Monthey, Switzerland.

The main manufacture of this forthcoming project will be the well-known product AEROLITE. It will first be made in syrup form, which will be spray dried and supplied to the consumer in powder. The planned annual capacity of the factory is 1,500 tons of AEROLITE in addition to 250 tons of other resins for the textile and paper industries. AEROLITE is a urea formaldehyde adhesive for all kinds of wood bonding. The other resins to be manufactured include melamine formaldehyde and dicyanodiamide resins for textile and other uses, and melamine resins for paper laminates and production of wet strengthened paper.

But, by far the most important single phase of CIBA endeavour in India was the conception and construction of a gigantic basic research centre. A pioneering venture has just been completed at Goregaon, Greater Bombay. CIBA's success rests on scientific achievement, and with the completion of this Rs 250-lakh project, the organisation in India will be endowed in the research

field with a potential as great as that of its sister groups in Europe and America. The idea for the project for India took shape early in 1960 when Dr Robert Kaeppli, President of CIBA Limited, Basle, visited the sub-continent and noted that quite a few leading scientists here—who were trained both at home and abroad—were harassed by the lack of scientific opportunities adequate to their talents, training and qualifications.

Twenty-four outstanding Indian scientists will form the nucleus of the CIBA RESEARCH CENTRE. Coupled with the technicians, assistants and operators, a total staff of about 170 is gradually taking its place at the Centre. When the centre's foundation stone was laid in May, 1961, Dr. Albert Wettstein, Director of Research

CIBA Limited, Basle, and a member of the Board of Directors of CIBA OF INDIA LIMITED, emphasized: "Initially, basic research will be conducted in the fields of dyestuffs and pharmaceuticals, including chemical and biological investigations of Indian medicinal plants and the elaboration of new synthetic medicines. For this purpose, every modern facility will be provided as generally used today for research in organic chemistry, biochemistry, physical chemistry, pharmacology, bacteriology, and parasitology. CIBA's worldwide experience and tradition of research, and its know-how in all these research fields, will be invaluable for the successful achievements of the high goal for which we aim, namely the beginning of fundamental research within India's chemical industry by early 1963."

It is the intention of the CIBA RESEARCH CENTRE to cooperate fully with university and government research institutions not only in India but also in other parts of Asia. When completed, the Goregaon unit will be one of four major global CIBA

Ampoules examined under powerful light.

Dyes Technical Service Laboratory, CIBA

research centres. The others are in Switzerland, the United States of America, and Great Britain.

As it will be devoted to fundamental scientific research, CIBA management believes it is important that the centre be free of the pressures of business and industry in order to provide the atmosphere best suited for this type of study. In a recent statement made by Mr. E. E. Bernet, the Executive Director of CIBA of India Limited, "Research has always been a tradition of CIBA the

world over and the new CIBA Centre at Goregaon will conduct fundamental biological and chemical research. Mr. Bernet went on to say that, "Although most of the basic research will be done in the search for new and improved medicines for India's particular needs, it is also the aim of the Centre to co-operate fully with our sister organisations in Europe and America in order that all people can best benefit from new discoveries." Mr. Bernet also pointed out that a portion of the

laboratories will be set aside for applied research in the field of dyestuffs. In a recent contract between CIBA and Atul, the research centre will provide these facilities.

Although CIBA has no immediate plans to incorporate research at the new Centre in the fields of plastics and agrochemicals at this time, it is interesting to note that eighteen Government Agricultural Research Stations in India are testing new wide-range CIBA pesticides.

Analysis for Quality Control

The question, is often asked: "When can we expect to begin exporting new drugs discovered in India?" The CIBA management has no pat answer to this question. But one thing is plain. If we are at all going to compete in world markets, we must invest more in research. Such investment may take time in yielding, dividends, but when it does, it will do so in handsome measure. It is in this faith that the CIBA Research Centre has been conceived.

Fertilizer Corporation of India: A Survey of Progress

The formation of the Fertilizer Corporation of India in January 1961, integrating fertilizer units in the public sector and bringing them under a unified control, marks a significant step toward in the progress of the fertilizer industry in the country. The underlying object of this integration of fertilizer units in the public sector into a single Corporation is to secure coordination in policy and ensure efficient and economic expansion and working of fertilizer factories in the public sector.

As a result of this integration, the constituent units of the Corporation now are the two operating factories at Sindri (Bihar) and Nangal (Punjab) and three projects under implementation, namely, Trombay in Maharashtra, Namrup in Assam and Gorakhpur in Uttar Pradesh. The installed capacity of Trombay factory will be of the order of 90,000 tonnes of nitrogen and 45,000 tonnes of phosphate annually in the form of 3,30,000 tonnes of nitro-phosphate and 97,500 tonnes of urea, of Namrup (Assam) 45,000 tonnes of nitrogen in the form of 1,00,000 tonnes of ammonium sulphate and 55,000 tonnes of urea annually and of Gorakhpur (UP) 20,000 tonnes of nitrogen in the form of 1,80,000 tonnes of urea annually.

The responsibility for setting up a fourth fertilizer plant in the public sector and locating it in Madhya Pradesh has just been assigned to the Corporation. This

plant, which will be based on coal, will have installed capacity of 1,00,000 tonnes of nitrogen per year in the form of urea. Work on the project is expected to begin in six-months' time.

Four types of nitrogenous fertilizers are at present being produced in the Corporation's operating factories, ammonium sulphate double salt (ammonium sulphate nitrate) and urea at Sindri and calcium ammonium nitrate at Nangal. Sindri's installed capacity is 974 tonnes of ammonium sulphate, 406 tonnes of double salt (calcium ammonium nitrate) and 71 tonnes of urea per day. Nangal's capacity is 1,176 tonnes of calcium ammonium nitrate per day. Ammonium sulphate contains 21 per cent of nitrogen, while ammonium sulphate nitrate 26 per cent, urea 46 per cent and calcium ammonium nitrate 20.5 per cent.

Sindri has so far produced 33,03,417 tonnes of fertilizers valued at over Rs 100 crores and Nangal 3,31,000 tonnes, valued at over Rs 8 crores.

The associated heavy water plant at Nangal has been commissioned and has started producing heavy water annually. The plant has cost nearly Rs 2 crores. This heavy water, produced for the first time in India, will be used as a moderator in India's atomic reactors.

During 1960-61, the first year of its working, the Corporation de-

clared a dividend amounting to Rs 39,27,140, paid to the Government of India.

The Corporation spends, including its contributions to provident funds, about half a crore of rupees annually for the welfare of its employees in its two operating units at Sindri and Nangal.

The Corporation is also expanding the existing facilities for training of technical personnel in order to man new fertilizer factories. These facilities already exist at Sindri and Nangal and will be expanded to the Corporation's new divisions.

ROURKELA FERTILIZER PROJECT

The technical experience and know-how built up by the Corporation have already been pressed into service. The Corporation's engineers and technicians have designed and built the two major plants, namely nitric acid and nitrolimestone plants, with storage and bagging and other ancillary facilities, at Rourkela for M/s Hindustan Steel Ltd. The installation of these plants of the Rourkela Fertilizer factory, for which the Corporation is responsible, is now complete and ready for commissioning as soon as sufficient ammonia and other facilities are made available by Hindustan Steel.

This is the first time that Indian engineers and technicians have designed and built such major plants.

FERTILIZER TECHNOLOGY INSTITUTE

The combined resources of these public sector fertilizer units under the Fertilizer Corporation constitute a vast accretion of technical knowledge and experience. A Central Institute of Fertilizer Technology has already been set up at Sindri where engineers and scientists of the Corporation are engaged on research and technological experiments, on development of designs and processes and construction and operation of pilot plants. In addition, there will be 'centrally directed' planning and development wings, technological laboratories and training centres at each of its operating divisions. The Central Institute will serve as a storehouse of valuable technological knowledge and will be an effective instrument for the planning and execution of new projects.

ECONOMIC GAINS

Chemical fertilizers produced by the Corporation's factories by the end of 1965-66 will save the country annually about Rs 70 crores in foreign exchange. Already Sindri and Nangal units of the Corporation between them have saved the country over Rs 108 crores in foreign exchange.

In terms of money value, the total additional food that will be produced as a result of the application of fertilizers by 1965-66 will be well over Rs 200 crores.

Usha Martin Black

At Tatisilwai, near Ranchi once a place covered by thick jungles and inaccessible to transport of any kind, now stands the factory of USHA MARTIN BLACK (WIRE ROPES) LIMITED, manufacturers of steel wire ropes. Though not pioneers in the field, Usha Martin has already earned a name as a manufacturer of quality products in this particular line.

The Company was incorporated in December 1960 with the object principally to carry on the manufacture, sale and distribution of all types of steel wire ropes. It was sponsored as a collaboration venture between Usha Automobile & Engineering Private Limited, and Messrs Martin Black & Co (Wire

respecting the construction, erection, installation, start-up and operation of the plant."

Six months after the incorporation of the company, work on building the factory was started and was completed in record time. This is an achievement which the company can look back upon with pride. In a large measure this was made possible by the Indian management and their foreign collaborators. The company went into trial production during March 1962, while commercial production began from June.

The factory is situated a few yards from the main road and railway line at Nankum and thus

A view of the Normalizing Furnace (Kerosene)

Ropes) Ltd, leading manufacturers in the UK. Of the total issued capital of Rs 50.00 lakhs, the foreign collaborating firm was allotted equity shares worth Rs 10.40 lakhs while the Indian firm of Usha Automobile & Engineering Private Ltd, were allotted equity shares valued at Rs 11.09 lakhs, the rest being allotted to the investing public. Apart from capital participation, the collaboration agreement provided for technical help for design, erection and start-up of the Plant. Messrs Martin Black were to provide the company with various services including "complete process designing and selection of plant and machinery and permit use by the company of the relative trade names, marks and patents". Further, they are also under obligation "to train Indian engineers in their factory in the UK and to provide technicians from the UK to advice, assist and give such information as may be required

commands the advantages of excellent transport facilities, an essential requisite for the successful working of an industrial enterprise. The factory site covers, in all, an area of about 50 acres. Equipments and machinery installed would bear comparison with the best in the world, the foreign collaborating firm having left nothing to be desired in this matter. The quality of workmanship and the competence of the management personnel are also factors which give it a decisive advantage.

The process of production at the factory begins with the treatment of raw materials in the form of coiled rods in the ovens. The ovens which are now fired both by kerosene and electricity have been specially designed to permit the utilisation of alternative fuels should difficulties develop in respect of the availability of kerosene. The material coming from

Martin Black Directors on Inspection trip

the ovens contains a good element of dirt and rust and to eliminate this, it is given an acid treatment in the pickling plant. From here the material is taken to a long row of machines to reduce the thickness to the size required for the manufacture of ropes. The thickness of the wire at this stage ranges from 0.130" to 0.018". Subsequently, they are again wound up in a coil form and mechanically carried to Stranding-Closing machines to wind the wires into the final solid rope with a thickness ranging from 3/8" to 15/8".

During the manufacturing process special attention is being paid to maintain the quality of the products. At every stage of manufacture, the ropes are tested to gauge the actual strength of the ropes. By this process, the users of these ropes are assured that these ropes can stand heavy load. Similarly each and every coil of wire is tested at various stages before it is sent for being made into ropes. The ropes are again

tested to conform to British and Indian Standard specifications. Production is under the control and supervision of the technical personnel lent by M/s Martin Black and this has ensured a strict vigilance over quality.

Production at the factory should go a substantial way in meeting the country's requirements of wire ropes and thus save precious foreign exchange entailed in their imports previously. The demands are particularly great from Steel Plants, Collieries, Port Trusts and the Railways. Despite the commissioning of production, the company is far from wishing to rest on its oars. Schemes are already under way for further expansion with proposals for electric furnaces for a doubling of the present output, and preliminary steps in this regard in acquiring further land have also been taken. When this is completed Usha Martin Black will represent one of the most fruitful collaboration ventures undertaken in the country.

Mr. R. Fox, giving instruction to an Aditya trainee on Rope closing, watched by Martin Black Directors and Usha Martin Black Workmen.

The Story of Hindusthan-Pilkington Glass Works Limited

Glass manufacturing in India was originally a traditional craft confined to the process of non-mechanised glass-blowing. After the Second World War sporadic attempts were made by a few small-scale factories for the production of Sheet Glass by automatic and semi-automatic machines. Nevertheless indigenous production was still at an inordinately low level, and in 1949 total production came up to only 3.45 million square feet. The Sheet Glass industry, therefore, continued to be in the doldrums upto the year 1950, when the Tariff Board recommended a protective duty to help it establish itself on a sound footing. It is in such a background that the nucleus of the Hindusthan-Pilkington Glass Works Ltd. was formed.

Towards the end of 1950, Mr. P. N. Talukdar, the eminent industrialist representing the Hindusthan Group of Companies, went to Europe on a business mission. His principal aim was the setting up of an important industry in West Bengal that would be a landmark in India's industrial progress. While in England, he came in contact with Sir Harry Pilkington, Chairman of Pilkington Brothers Ltd. of St. Helens, Lancashire, who are one of the premier glass making concerns in the world, and started negotiations with him for establishing a new enterprise for the manufacture of high quality Sheet Glass on a regular basis for the first time in India.

Mr Talukdar's efforts came to fruition, and out of his negotiations in England emerged the great Indo-British collaboration scheme between the Hindusthan Group and Pilkington Brothers that culminated in the formation of the now well-known HPG Works Ltd. with an initial capital of Rs 1 crore. The Company was registered in India in the summer of 1951 with Pilkington Brothers as its Technical Consultant and

Mr Talukdar as Managing Director of its Managing Agents, Dr. N. N. Law joined the Company as Chairman of its Board of Directors.

Asansol was selected as the site for the Works. Situated in an ideal setting within the hive of rich coal mines, it had also direct access to the nearest source of silica supply in the South-East of

the drawing plant was made. Very soon thereafter the factory was running at full capacity, producing at the annual rate of 30 million square feet and established a quality target not attained in the country before. Thus, by relieving India of its dependence on imported sheet glass, the factory considerably helped the saving of valuable foreign exchange.

mediately after the works started production, it was flooded with orders from all over the country. HPG started to feed the markets of Calcutta, Delhi, Madras and Bombay.

To meet the ever increasing demands for quality sheet glass in the country, HPG lately embarked on a substantial expansion project at a large additional capital cost, whereby its production capacity was almost doubled. Moving with the times they discarded the old Fourcault process and introduced for the first time in Asia, the most modern process viz. PPG or the Pittsburgh Plate Glass Process, as a result of which the quality of the Sheet produced has vastly improved, in that it is now equal to, if not better than, the best made anywhere in the West. This glass is being widely used for such specialised work as lamination, toughening, silvering etc which requires the quality of glass to be of a very high order.

Equipped with the most modern plant and machinery, the HPG project possesses every feature of a major progressive industrial concern. Planned construction of the latest type of factory buildings, labour quarters, good canteens and modern residential flats for the factory staff are all parts of this project.

HPG provides glass in a varied range of weights and thicknesses, which are supplied in three standard qualities, CQ, SQ, SSQ. The factory opened a new chapter in sheet glass manufacture by producing sheet glass of thicker varieties viz. (3/16" & 7/32") which were not produced in our country before.

Recently the Company issued Equity Shares of Rs 1 crore to finance a new project for manufacturing Wired and Figured Glass in technical and financial collaboration with Pilkington Brothers Ltd. The installation works for this factory have already started and they are expected to be completed by the middle of 1963.

Batch Mixing Room

the Uttar Pradesh. Despite many early setbacks, construction was effected with amazing alacrity. The prompt completion of the works was in no small measure due to the co-operation of both the Central and State Governments.

In May 1954, i.e. in less than a year and a half after construction started, the first charge on the glass furnace and the first run of

The quality of HPG glass has been highly commended. Drawing deep from the well of experience possessed by Pilkington technologists, continuous quality control was ensured. In fact, the quality of sheets produced even at the initial stages was acclaimed as equal to that of any good imported variety. The response from the consumer and the trade was highly encouraging. Almost im-

The opening in 1962 of SIMON HOUSE, the new Design and Administrative offices of Simon-Carves Limited, crowns more than half a century's service to

the Indian Chemical and Metallurgical Industry.

Staffed with designing engineers who have on-site experience of construction problems, the modern Drawing and Designing office is a step forward in the completion of the full cycle of Consulting, Designing and Construction activities of Simon-Carves Limited in India.

Simon-Carves are responsible for the design, procurement and erection of numerous plants in India: Coal Washery, Power Plant, Coke Oven and ancillary plants at Durgapur; most of the Coke Ovens in the private sector of the Indian Steel Industry; Sulphuric acid plants that account for approximately half the entire acid production in the country; India's first Polythene plant; and a completely integrated compound fertiliser plant.

As a result of their experience extending over half a century in India, Simon-Carves Limited have acquired vast 'know-how' of local conditions and it is now available for the execution of new projects.

Banking Supplement

The Tasks Ahead

Much has happened since the Banking Supplement was planned; but the problems that then obtained have merely gained in urgency since the emergency came upon us. Whether it is the cost of labour or the need for a Deposits drive, the problem of liquidity or the imperativeness to strengthen reserves, all these are questions that need to be dealt with more strenuous effort now that banking is being called upon to finance the emergency.

What the defence effort may be costing Government it is not possible to guess at with any kind of certitude; but some assessment can be made of the demands that will be made upon the money market and of the pressures that will be faced by the banking system. Production for defence and output and supplies for civilian needs both mean that, in the next few months, the expansion in bank Advances could conceivably set a new peak, comfortably exceeding during the busy season a level of Rs 200 crores.

But the Reserve Bank, in a move with which we are not in agreement, set a limit on banks' borrowings; the objective of this measure is to engender greater caution and selectivity in banks' extension of credit. The announcement revising the terms of its lending to Scheduled Banks was in the nature of a considerable shock. While some interest on borrowings will be saved, with the second fifty per cent of quota available at 6 per cent instead of a rate of 6½ per cent that was intended to be charged for the last 25 per cent of quota, the simultaneous notification that normally banks would not be permitted to borrow in excess of 100 per cent of quota has been interpreted as constituting a too severe restriction on banks' advances. Busy season financing has to proceed apace; to the extent that new Deposits are forthcoming—which the Reserve Bank clearly believes will happen—additional resources can be pressed into service for meeting the busy season expansion in bank Advances. But if the defence effort for production were to throw up a sharp demand for funds, banks will inescapably need to seek Reserve Bank assistance; and that assistance has been restricted as to quantum.

It is only the bank which, as it were, confesses to very stringent pressure upon its resources which will be permitted to borrow beyond that quota. Hence banks will be able to replenish resources only by way of sale of securities; but here too the gilt-edged market is extremely narrow, and the Reserve Bank in pursuance of its policy is unlikely to be a ready purchaser.

The Reserve Bank thus ceases to be a lender of last or any resort; the Reserve Bank's facilities for sale to it of securities are unlikely to be available.

★

Is this measure well thought out? Obviously, we regret to say, no. A credit squeeze, that banks will be compelled in turn to impose upon their constituents, will hardly contribute to additional production, agricultural or industrial. While the intention to reduce the quantum of advances available for non-productive purposes would be a laudable one, a blanket squeeze that will now occur will do the economy, or the war effort, no good.

The Government needs funds; and the 4½ per cent National Defence Bonds (on sale on tap from 10 November and redeemable ten years after the date of purchase) is intended to mobilise funds, particularly from the banking system. The new Prize Bonds (repayable in 5 years) and the 4½ per cent Defence Deposit Certificates (maturing in ten years) may both secure support from individuals. But will banks go in for the National Defence Bonds—except that the patriotic impulse may move them? As we shall presently see the answer to the question is “No.”

The rub is, that if prices are to be kept stable, financing of internal trade and commerce will be necessary on a greater scale than ever before; and the difficulty will be to glean out such demands for accommodation as appear to be intended to be used for the speculative withholding of stocks. At the same time, as we have already noted, both industrial and defence production has to be kept up at a high pitch. Inescapably, therefore, the banks will be called upon to meet a considerable increase in the demand for funds.

Partly the resources would be found from gathering Deposit accruals; the pace of flow of new Deposits has in recent months been satisfactory, and the Reserve Bank has itself expressed confidence in such a trend continuing. Partly the 100 per cent of quota of borrowings from the Reserve Bank could be pressed into service. But there would still remain a gap to be covered, and disinvestment in gilt-edged can decidedly be ruled out of order.

One final significant factor, that might somewhat reduce the need of banks to have recourse to central banking assistance, may be mentioned. The defence effort, as we have stated at the outset, will be costing Government dear. Without doubt Government will need to rely on deficit financing rather more heavily than it had budgeted for earlier this year. Created money, as we have seen during the Second Plan, does result in faster accruals to Deposit resources of the banking system.

★

But the financing of production—agricultural, industrial and defence—will be merely one of the responsibilities that banks will have to shoulder during the emergency. Mobilisation of resources is equally essential, and for this purpose banks will need to open up new branches in, monetarily speaking,

virgin tracts. The cost involved in such expansion cannot be small, but it is a cost that in the national interest must be cheerfully borne. Studies made by the Reserve Bank show that it is the smaller centres that, during the Second Plan period, registered the proportionately highest increases in Deposits of the banking system. Logically, therefore, banks can best “mobilise” the economy by undertaking as swiftly as possible to reduce the size and magnitude of the “unmonetised” sector. By giving service those to whom banking is unknown must be persuaded to keep their funds with banks; and these funds accruing as they would on top of the normal expansion in Deposit resources, would become available for financing every facet of production.

Furthermore it will become necessary for banks to subscribe directly to Government's borrowing efforts in behalf of defence needs. The 4½ per cent National Defence Bonds are to be available on tap for a specified period of months. The banking system must decide of its own accord that it will set apart 25 per cent of all new Deposits for investment in the Defence Bonds.

Unfortunately, except for stray indications that, moved by patriotic impulses, certain individual banks have purchased parcels of the 4½ per cent Defence Bonds, the regrettable fact is that support for the new loan is generally weak; and quite paradoxically this lack of interest in gilt-edged is pronounced at a time when the money market is easy. How can Government ensure larger subscriptions for the Defence Bonds, and why is it that, though the 1962-63 busy season has notionally started, money is apparently both cheap and plentiful?

The two questions are inter-related. The plenitude of funds in the money market is not we believe, due to any shortfall in demand. On the contrary, it is more or less certain that, with Government's anxiety to foster both defence and civilian production, the pressure upon the money market will pick up, and possibly grow acute by the end of January or so. It is indeed precisely this expectation on the part of bankers which has influenced them to keep cash on hand. Ordinarily such surplus resources would have found at least short-term sanctuary in Treasury Bills even if they were not attracted to Government's dated loans. Hence, unfortunately, banks' reluctance to tie up funds in the new Defence Bonds.

★

Two reasons have been standing in the way of bank purchase of the bonds. Firstly, the Reserve Bank's categorical assertion (subsequently thankfully withdrawn) that banks would not ordinarily be permitted to borrow more than 100 per cent of their quota (equivalent to their statutory Deposits with the Reserve Bank) left the banks with no other alternative than to keep spare resources for meeting busy season demand. Secondly, the continuance of the multiple-tier bank Rate acts as a powerful dissuader in that the gilt-edged yields at the peak of the busy season would be far below the rates that banks would have to pay on the bulk of their borrowings from the Reserve Bank.

We urge that a revision of monetary policy is immediately called for. The multiple-tier bank Rate must go, and we must return to

Indian Finance

the old basis of an honest bank Rate that is both de facto and de jure. It is meaningless to discourage or thwart banks' borrowings, if the central purpose of economic policy is to foster defence and civilian production in every way. True, bank finance must not be made available for non-productive or speculative purposes: but penal rates of interest in no wise bring about qualitative control of bank Advances. It is selective monetary control, which can as far as practicable reduce the quantum of bank finance put to or made available for undesirable use.

In the second place, it is not enough that the Reserve Bank should have indicated that it would liberalise advances to banks. As happened in 1956, on the eve of what was apprehended would be a busy season of unprecedented pressure upon the money market, the Reserve Bank should start by approving lines of credit for individual banks, so that they in turn can proceed to make funds available for defence and civilian production. On the last occasion, in 1956, the then Finance Minister saw to it that lines of credit to the banking system for a total of Rs 150 crores were approved. This is the minimum that the Reserve Bank should now, in anticipation of stringency in the latter part of the busy season and in order to permit banks to plan their lending policy for increasing production, also approve.

If the multiple-tier bank Rate is removed, and if lines of credit are given then we have no doubt that banks in turn will set apart a proportion of new Deposits for investment in the Defence Bonds.

★

Bank labour for its part must also rise to the occasion. It has recurrently been the unvoiced complaint of managements that “productivity” of bank labour has been low. Improved efficiency will lead to reduction in costs, and such a reduction is necessary if banks are to be able to pay for the new branches that they need to open.

Investors in bank shares have also to be prepared for a measure of sacrifice. While fuller utilisation of resources that can be expected from an energetic production drive will add to profits, it needs to be remembered, firstly, that part of such additional earnings will be offset by branch expansion programmes and, secondly, that in order to hedge against risks inherent in financing defence production both published and inner reserves have to be strengthened more massively than has been the case in recent years.

Every industry will be gearing itself to the needs of the defence effort. By far the crucial sector will be banking. Defence production must be financed. Defence production and to ensure stability in price behaviour there needs to be uninterrupted flow of credit for industrial production. The seasonal or busy season financing has to be undertaken. Banks will have to make doubly sure that their scarce resources do not become available for anti-social and treasonable withholding of commodities in short supply within the country. Money lying idle in the countryside has to be mopped up through a vigorous branch expansion programme. Government's borrowing programmes have to be supported.

Here is an opportunity for Indian banking to show what stuff it is made of.

Banking Supplement

I

Liquidity

BANKING liquidity is basically dependent upon the state of the economy of the country. And in the natural process banking liquidity will tend to bear a correlation with the overall liquidity in the economy. In a developed economy with well organised money markets and having an overall liquidity in the economy, the liquidity in banks would be higher than in a developing economy where the demand for finance for development of industries outstrips the rate of growth of saving. Whether the present pattern of liquidity of the banks in this country is normal or not should be considered in the context of the state of the economy of the country.

During the war years, note issue was increased, not for the purpose of assisting investments in productive assets, but for the purpose of private and war consumption. At the same time, normal industry and trade requirements being limited openings for bank advances were reduced. As a consequence, the liquidity of the banks went sharply upwards.

However, from 1950 onwards, the country's economy was geared to planned production based on preferred industries, perspective planning, installations for producing durable consumer goods to match the demands and also, for defence needs, are bound to lead to a state of investment, which will continue, particularly during the period of transition, to be considerably inadequate and unbalanced. There is no escape from this until the economy reaches the self-sustaining stage. A goodly portion of the investments during the First and Second Plan periods have yet to com-

mence producing fully upto the rated capacity. The capital outlay during the Third Plan period is going to be about double the size of the 2nd Plan.

A study of the break-up of advances for the last few years would show that the rise in the total quantum of advances to non-industrial requirements has been proportionately less compared to rise in advances to the industrial sector. It is also possible, from the break-up of bank advances, to locate the spheres where speculative activities could be there and a study of the concerned figures for the last three or four years would indicate that the contribution of these items towards overall expansion of bank credit is relatively small. The shrinkage in the liquidity ratio has thus been caused by the demand owing to economic development and not due to speculative activities.

It may, therefore, safely be concluded that the growth of advances was inherent in the management of the economy and, therefore, the trend in residue liquidity would be natural.

The credit and safety of the banks depend first of all on their strength to build up the reserve and on their ability to obtain more capital from the market from time to time. If that is so, with the growth of operating expenses, which continues to rise unchecked, the banks would be left with two options, (a) expansion of earning assets even at the cost of liquidity or (b) a substantial upward revision of bank charges. The banks in India do not have the third alternative which is to economise on or control the operating expen-

ses. This is because the main item of such expenditure is the salaries and wages on which the banks have no control. Being faced, therefore, with the two alternatives the banks had to take recourse to the first one which is the easier of the two.

It was seen in 1957 that a lesser utilisation of bank's resources in risk assets considerably reduced the profit. Allowed to continue the consequence of such a state would have been detrimental to the needs of strengthening the banks. Recourse to the 2nd alternative, that is raising bank charges, could not by itself have compensated for the loss of earnings that would have been incurred by maintaining a higher liquidity ratio. The decline in the liquidity, therefore, has to be deemed as natural even from the point of view of banking operations.

A natural feature, however, may not always be desirable or satisfactory. Of late, the trend in the liquidity ratio of the banks is attracting attention. Views about the adequacy or otherwise of the present level are being expressed on either side. In order, therefore, to assess the situation properly it is necessary to examine the following issues, viz:

- Why do the banks need to maintain liquidity?
- What should be the state of such liquidity? and
- Is the formal liquidity ratio the only important factor?

Liability of the commercial banks being mainly demand in nature and their operation being sensitive to the periodical and

other variations in the trend of economic activities as a whole, banks are required to carry an amount of liquidity so as to be able to meet the demand, preferably without loss and without having recourse to call up their advances. Such demands may be varied in nature. Starting from the normal day to day requirements of operation, the demands may range upto panicky withdrawals or an unusual demand on account of a slack in the economy or similar other reverses. The actual liquidity requirement, therefore, can arise from potential demands which can be grouped into three broad categories, viz:

- those that will surely occur (such as in the normal business transactions),
- those that are likely to occur but are not certain. (such as owing to seasonal variations) and
- those that are less likely but could possibly occur in certain circumstances.

It would, therefore, not be enough for the banks to provide liquidity only for such demand “as will surely occur”. For, by any method of assessment this category of potential demand cannot cover more than the normal day to day requirements. There would yet remain two types of potential demands and these may develop into actual demand when it may be rather too late for the banks to provide for them. So it is necessary that the liquidity is built in a manner as may be considered adequate to provide also for the “likely” and “less likely” demands.

A slack in the economy may, at present, be a "less likely" situation, yet it cannot be said with any certainty that the tempo of economic activity will be maintained or accelerated, and that there is no likelihood of any type of recession during the next decade. Again, without a general reverse being felt in the entire economy certain industries may be faced with difficulties and to the extent bank finance is involved, bank money may become sticky in that industry; it is with adequate liquidity that banks may be able to withstand such strain which, otherwise, may even be fatal.

The level of liquidity requirement would vary as between individual banks depending on the nature of business and also on the structure of their deposits. It is very difficult to determine a common level which can be applied to all banks irrespective of the nature of their business. For instance, a bank having a high proportion of its deposit in the form of 'hot money' would be requiring a higher liquidity than a bank having a rather small proportion of this type of deposit. Again, liquidity requirements of a bank operating in a limited area and in limited spheres may not be as high as that of another bank which operates over an extensive area and in an extensive sphere of the economy.

By and large, however, a minimum level of a formal liquidity

ratio has been accepted, either by legal provision or convention, in various countries. But this level has to be regarded as the minimum. The actual liquidity requirement is not to be confined only to this formal ratio. Again, the protective liquidity of the banks lies not so much in the formal liquidity ratio as in its other assets. For instance, a bank may be maintaining the liquidity ratio required under the law, yet, its other assets may be entirely illiquid. It will be entirely difficult for such a bank to absorb the slightest shock that may arise owing to fluctuations in price; or owing to a quick change in the pattern of economic activity or to similar other variations in the economy in general. Further, a phenomenon in the industrial development in the private sector, that is currently attracting notice, is the inadequacy of the capital base of the industries. When expansion of bank credit to industries is encouraged, this phenomenon opens the bank to the risk that slightest deviation in the programme or disturbance in the execution of the programme, (such deviations or disturbances can never be ruled out), may place the industries in a tight position and thus have an adverse repercussion also on the commercial bank.

It is thus evident that while in the natural course the liquidity ratio of the banks would tend to

be low there is need for achieving an overall liquidity in the quality of bank assets. An overall bank liquidity may be achieved by any or all of the following methods, viz:

- (a) Raising the legal requirement of the liquidity ratio;
- (b) Taking recourse to the lender of the last resort;
- (c) Devising a suitable money market to allow funds from the non-banking sector to flow in.

It may not be possible to raise the legal liquidity requirement, firstly because the legal liquidity ratio by itself, as has been seen, is incapable of taking care of the entire liquidity requirement. Secondly, such a step might result in curtailment of bank credit towards financing development activities; that would lead to other undesirable complications. A study of the growth of note issue, demand deposits and advances would show that expansion of money supply, during the recent years, has more been in the field of currency expansion than in the field of demand deposits. Any attempt to raise the legal requirement of the liquidity ratio may, therefore, be unrealistic as well as detrimental to the growth of the economy.

It is also well known that too much dependence on the lender of the last resort, for providing

liquidity, is neither desirable nor pragmatic, particularly when there is a substantial portion of the economy outside the organised sector. The only other alternative, therefore, would lie in devising means for providing shiftability to the various assets of the commercial banking system. As has already been discussed in the foregoing, this, besides being the only alternative, is also the most desirable and healthy objective to be aimed at.

There is thus an urgent need for developing a suitable money market, where the organised and the indigenous bankers could be suitably integrated and flow of funds from outside the commercial banking system could be ensured to provide shiftability of assets accepted for transaction in such a market. If the need is felt, it may not be altogether impossible to organise such a money market in this country. Money markets have been successfully organised in some other countries and it is not always necessary that such markets should grow by themselves from within the economy as a natural growth. It is possible for the central banking authority to organise and encourage development of such a market acting itself as a lender of the last resort. It is only when such a market is organised that the liquidity situation can be improved without the risk of putting the lender of the last resort to constant use.

II Capital

THE initial function of bank capital is to establish and keep a bank as a running business by providing fixed investments and necessary equipments. But after this function is over and the bank gets going, the capital assumes its importance from two basic major considerations. One is that of the depositors and the other creditors, who regard capital as a protection against loss; the other is the consideration of shareholders who would expect the capital to earn and pay an adequate return. In both these considerations there is one common feature, i.e., maintaining public confidence, which is the most important consideration for maintaining adequate capital funds in regard to an established bank. Capital funds can instill confidence in the public, because it enables the bank to absorb losses arising from realisation of assets and other contingencies.

Yet despite conventional notions capital funds cannot, in actual practice, be expected to fulfil this function except only at the extreme stage of liquidation. For, as long as the bank continues to function, its non-operational losses must be absorbed from the operational income or from its internal reserves. This must be so, again, on the consideration of maintaining public confidence by keeping the published capital funds unimpaired. The real function of capital, therefore, is to keep the bank open by inspiring confidence in the public and to allow time to the bank to work out the poorer assets with relatively little losses and to earn enough to absorb the losses.

Such being the function of capital, it is evident that with the growth of business and deposit liabilities, capital funds of the banks should also rise. In any active economy growth of deposits, to an extent, would be generated almost automatically, as long as confidence is maintained, although there is also need for an amount of effort on the part of the banks themselves. But the growth of capital funds would be less automatic and would require initiative on the part of the bankers mainly. Besides other factors, such as the capital market, profit consideration, etc., building up of a suitable capital structure in any bank would be the result of a planned and determined financial management. Unless this is done the proportion of capital funds, whether to the assets or to the liabilities would continue to shrink from year to year, while the bank progresses.

This is amply demonstrated by the fact that the ratio of capital funds to deposits of the scheduled banks, during the last few years has been relentlessly declining. This is because, while during these years there has been a steady rise in deposits, there have hardly been any noticeable new issues or corresponding appropriation to the published reserve.

In 1961 at the instance of the Reserve Bank, a convention has been initiated under which every bank will endeavour to reach a target of capital ratio of 6 per cent of its deposits, and until that is done the bank will continue to appropriate at least 20 per cent of its published net profit to the published reserve. Following up this convention all the banks have made the required appropriation to the reserve and a number of banks have also decided to make fresh issue of shares.

The convention has two major aspects. First, a standard with regard to the adequacy of capital funds has been determined; and second, the method for raising the capital funds has been laid down.

The question is: on what basis to determine the adequacy of capital funds? Admittedly, since its function is to inspire and maintain public confidence, it must be so as would be accepted by the public as adequate. Theoretically that would be the real standard. But since the greater part of the public is uninitiated and incapable of assessing or judging the adequacy, the supervisory authority assumes on itself the responsibility to determine the standard.

The Reserve Bank has related the adequacy measure to the deposit liability. There is logic in it, inasmuch as of the two considerations, viz: of the depositors and the shareholders,—the consideration of the depositors is more important in banking business. Yet, it cannot be denied that since basically the confidence which the capital funds are expected to generate in the public mind, stems from its capacity to absorb the non-operational losses, its relationship to deposits by itself cannot be regarded to be a complete protective device.

It should, at the same time bear a suitable relationship to the assets of the bank with proper appropriation for the various categories of risk assets, such as, doubtful, sticky, high risk, low risk etc. For instance, a bank with the bulk of its assets in 'non-risk' 'minimum risk' and 'average risk' groups will have lesser risk of losses and, therefore, lesser capital requirement, compared to another with equal or similar deposit but having the bulk of its assets, say, in 'sub-standard risk' 'doubtful items', 'fixed and non-banking assets' categories.

The supervisory authorities in the USA apply the measure of 'risk ratio', and judge the adequacy of capital with regard to the risk assets of the banks. Such risk ratio is enforced under law in Canada.

Whatever basis is applied, however, the question still remains, what shall be the norm for such measure? The norm applied by the Reserve Bank has been 6 per cent of the deposits. It is not known by which method the Reserve Bank has arrived

at that particular percentage figure. It is true that a suitable method has yet to be devised for arriving at the correct norm. Since the early part of the century the bank examining authorities in the USA have been applying the rule-of-thumb ratio of capital funds to risk assets; the ratio was so long around 5 to 1 (that is capital has to be 20% of the risk assets), but in recent years the ratio has been somewhat relaxed to 6 to 1 (that is 16%). But this rule-of-thumb has not altogether been imaginative and has a historical back-ground. It has been found that during the period 1930-35 the actual losses of the member banks aggregated slightly over 10% of the total loans and these would be much more if doubtful and sticky assets are added to it. It is also on record that in an analysis of the experience of 50 banks during 1929-38 it has been found that the actual losses comprised nearly 20% of the total risk assets of these banks.

Such study of our experience during the crisis periods in this country, particularly during 1948-50, could have provided some basis. Again, the situation in the USA in the 1930s and also the situation in 1948-50 in this country were altogether different from the present situation here. Benefiting from varied experiences and under the impact of knowledge and experience of other countries, modern bank management in India has been improved and is bound to improve further in the years to come. Bank supervision by the Reserve Bank has also improved considerably. Again, in the present type of managed economy, apart from occasional jolts and bumps, (which cannot altogether be avoided), there hardly is an occasion to fear the recurrence of serious crises as of the past. Furthermore, it has also to be remembered that with the introduction of the Deposit Insurance scheme one can expect that any wide spread loss of confidence in the banking system may not be experienced again.

Another important consideration, which must not be overlooked in determining the level of capital requirement, is the fact that in the matter of absorbing non-operational losses, it is the internal reserves, besides the operating earnings, that are available, but not so the published capital funds. The real function of capital, in a bank as a going concern, is performed by the internal reserves and not by the published capital funds. Such reserves, therefore, constitute what may be called "built-in" capital and therefore must be taken into consideration when assessing the overall capital adequacy of a banking institution.

Again, as has already been pointed out, the capital requirement cannot be uniform and it must differ from bank to bank. According to

New York State Bankers Association (A Report of the Committee on the Risk Assets Study—March, 1952), any capital ratio must serve only the purpose of a screening device and no more. According to the Association "it is impossible to arrive at a uniform standard or ratio which will be applicable to even a few banks, each bank is different from all others with respect to the quality of the management, quality and the nature of its investments, and the manner in which it conducts its business". A capital ratio must, therefore, be used purely as preliminary indication of the cases where a close study is indicated to determine the actual situation in relation to the circumstances of the particular case. Such view is also held by the Federal Reserve.

The basic standard for assessing the capital requirement (for this purpose capital must comprise the published capital funds as well as the internal reserve), must be the measure of actual impairment and the potential losses involved in the assets structure of the concerned bank. That being so, the capital content would also vary in relation to the liquidity content of bank assets. Any effort to strengthen the banks by building up an adequate capital structure must, at the same time, be accompanied by an adequate device for providing suitable liquidity through shiftability of banking assets to outside the commercial banking system.

Whatever standard is applied in assessing the capital requirement, by and large it is clear that the capital structure of banks is rather low. Table I shows that of the 13 banks, except two, the ratio of capital funds to deposits is 5% or below. Such ratio in relation to the risk assets cannot be very much higher. Also by the standard fixed by the Reserve Bank through the convention, the ratios are rather too low. There is thus a case for improvement.

There are two methods of raising the capital content, (a) by attracting new capital and (b) by ploughing back current profit. These two methods individually cannot be adequate to meet the needs of the situation and therefore, both of them must be taken recourse to. The method adopted in the convention, has, therefore, rightly been based on both these approaches. More stress, however, has been given to the method of ploughing back. In this regard again, appropriation to the published reserve only has been required and building up of inner reserves has been left to the banks themselves.

But such ploughing back has been related to the published profit. Admittedly, that could have been the only pragmatic approach, otherwise, the banks would have been left with little scope for building up

ALL KINDS OF BANKING SERVICES UNDER ONE ROOF

THE BANK OF

INDIA LIMITED

(Estd. 7th September, 1906)

Registered Office: 70/80, MAHATMA GANDHI ROAD, BOMBAY-1

CAPITAL		
Authorised	-	Rs. 10,00,00,000
Issued & Subscribed	-	Rs. 5,50,00,000
Paid-up	-	Rs. 3,00,00,000
Reserve Fund and other Reserves	-	Rs. 3,28,00,000
Working Funds	-	Rs. 1,47,18,00,000

Directors:

Mr. A. D. SHROFF (Chairman)
Mr. KRISHNARAJ M.D. THACKERSEY (Vice-Chairman)
Mr. AMBALAL SARABHAI

T. D. KANSARA, General Manager.

BANKING BUSINESS OF EVERY DESCRIPTION INCLUDING FOREIGN EXCHANGE BUSINESS TRANSACTED through a net-work of Branches in India, 13 Branches abroad and over 500 correspondents all over the world.

satisfied that a process of reconstruction and/or amalgamation is necessary in the case of any particular banking company or banking companies, (i) in the public interest, or (ii) in the interests of the depositors, or (iii) in order to secure the proper management of the banking company, or (iv) in the interests of the banking system of the country as a whole.

In this connection, a question has arisen whether the small size of a bank is in itself an evidence of its non-viability, and whether elimination of small banks should not be regarded as a task to be undertaken in the interests of the banking system as a whole and as visualised in section 45 of the Banking Companies Act. The question was dealt with in a speech delivered by the Governor of the Reserve Bank in August 1961 at the Annual General Meeting of the Indian Institute of Bankers. The Governor distinguished three classes of banks; banks which are being unsoundly managed, banks which though not unsoundly managed "do not basically serve the banking needs of the community" and banks which are "so small that there is no prospect of their ever becoming viable units." He expressed disagreement with the traditional arguments in favour of small banks, namely, that it is the managements of small banks and not branches of big banks that can provide that close touch with the borrowers and intimate association with local events which ensure proper attention to the banking needs of the local community. The Governor felt that the controversy over the comparative advantages of big banks and small banks is devoid of intrinsic merits and is only part of historical developments; fear of "money trusts" has led to active encouragement of "unit banking" in the USA while in the UK emergence of big banks with large numbers of branches has popularised what is known as "branch banking". In the opinion of the Governor, the question should be determined not in a doctrinaire spirit but on the basis of actual position and performance of individual banks; nevertheless, the result of his observation is that "by and large", "small unit banks have not been particularly successful in our country".

It is, perhaps, in line with the thinking disclosed in the above-noted speech that implementation of the provisions of the now famous section 45 has followed three phases. Nine banks subject to run and unable to meet withdrawals even with the assistance of the Reserve Bank were brought within the purview of the section, apparently without further examination of other aspects of the soundness of their position. Then came to be dealt with, the banks whose capital funds and deposits had suffered erosion to such extent that their survival was considered highly improbable. It is

understood that cases of banks "limping along for years in an unsatisfactory manner," are now being examined though there may not appear to be any immediate danger facing them, and that action has already been taken against about 20 of these banks. Banks so far dealt with under section 45, account for one-fifth of the total deposits of the unlicensed banks; the rest await further examination of their position. It is also possible that fresh thought is being devoted to the question of usefulness of small banks; the speech delivered by the Reserve Bank's Governor on the subject of "Central Banks and Governments" at a meeting held in Bombay on January 23, seems to indicate that the controversy over the special role of small banks is not yet over.

In this connection it may be useful to take particular care against being overweighed by the very influence of doctrines which the previous Governor of the Reserve Bank has inveighed. It seems odd to argue that the refusal of licence to the large number of small banks "with numerous small depositors" will produce "undesirable repercussions in the banking system" and, then, to prescribe compulsory amalgamation preceded by a period of moratorium; surely, a period of moratorium creates no smaller disturbance than the refusal of licence.

Historical developments and evolution of doctrines are interwoven. An urge to gain membership of the London Clearing House inspired the movement for amalgamation in the UK. The Birmingham and Midland Bank which was established in 1836 as a small bank in Birmingham led the way. Its absorption of the Union Bank of Birmingham in 1883 followed by that of the Central Bank of London in 1891 stimulated the process. The movement seemed to have exhausted itself with the amalgamation of Messrs. Cox & Co. and H. S. King & Co. with the Lloyd's Bank in 1923. Though the amalgamation movement in the UK was considered to have exceeded proper limits and an agreement was arrived at in 1918 between the Treasury and the banks that further amalgamations would not be undertaken without the previous consent of the authorities, the example of the UK imparted particular respectability to the method of amalgamation as a measure of reconstruction of the banking system. It does not however, seem to have been properly realised that the success of the amalgamation movement in the UK was facilitated mainly by the circumstance that deposit money had not yet come to occupy a dominant part of the money supply and consequent lightness of the impact of the course of bank deposit on the circulating medium, and, partly, by the unconscious working of the principle of collective absorption of losses

and deficiencies which infused the movement. It is, also, worthwhile to notice that while the method of amalgamation has been advocated in countries like Japan and Czechoslovakia, its extensive use has been discountenanced in countries like the USA and Sweden. The theoretical justification urged in favour of amalgamation usually relates to economies of large scale operation, evils of unhealthy competition, advantages of diversification of risks, centralisation of control and availability of experienced management. On the other hand, concentration of money power and failure of adequate attention to the needs of the economy at its lower reaches, are put forward as arguments against amalgamation.

It is true that a voluntary movement of amalgamation gathered momentum in India with the amalgamation of the Tata Industrial Bank with the Central Bank of India in 1923. But the movement has not produced substantial results and has been checked by the operation of section 44A of the Banking Companies Act. It is, however, interesting to note that the introduction of the provisions for compulsory amalgamation has been authoritatively justified on the ground of failure of the voluntary method.

It may not be irrelevant, here, to enquire why the elaborate machinery of supervision and control set up by the Banking Companies Act has not succeeded in promoting the soundness of a preponderant number of banks. The yardstick of usefulness of a bank as applied in the USA and known as "banking factors" relates to (i) the financial history and condition of a bank, (ii) the adequacy of its capital structure, (iii) its future earning prospects, (iv) the general character of its management and (v) the convenience and needs of the community to be served by the bank. The last factor takes into account the consideration that small needs require the services of small banks as the barrier of psychological resistance and complex procedures prevents fruitful contacts between a small depositor or borrower and a big bank. The other factors involve the question of soundness of banking assets. It is, perhaps, fatuous to measure soundness in a scale of set theories. The soundness of a banking asset, and for that matter, of a banking institution is a co-efficient of institutional arrangements and prevailing economic conditions. Real estate loans account for about 25 per cent of the total loans of commercial banks in the USA and personal loans aggregate about 23 per cent. Again, advances have been extended by the banks in Japan to the extent of 100 per cent of their deposits. Yet "granting large advances against immovable properties", "unsecured advances (high proportion in relation to total advances)" and high-advance-

deposit ratios are regarded by the banking authorities in India as serious defects indicating unsound management. It is apt to be overlooked that soundness and liquidity of banking assets depend, on the one hand, on institutional arrangements available for shiftability and, on the other, on the vigorous functioning of the economy ensuring their orderly use or exhaustion. And it tends equally to be forgotten that while the above conditions for soundness and liquidity are very inadequately if at all, met in a developing economy, losses arising from miscalculations and misadventures are frequent in an undeveloped but changing economy.

There are several alternative methods of dealing with the question of small banks in India. If it is deemed necessary to permit the continuance of small banks in the larger interests of the economy (especially, having regard to the fact that per capita income is not expected to exceed Rs 530 at the conclusion of the fifth five-year plan in 1976 while the present per capita income in the USA is more than Rs 12,000), the prevailing system of control may require to be revised. It may prove to be a more realistic approach if executive control is substituted by statutory control; it may be considered whether the existing provisions of the Banking Companies Act should not be elaborated to prescribe specific requirements relating to liquidity ratios, advance-deposit ratios, permissible proportions of different classes of advances and other assets and whether the Reserve Bank's powers of control should not be limited to enforcement of such specific requirements, while the responsibility of determining whether a banking unit is otherwise viable and sound is allowed to belong to the share-holders and depositors. Meanwhile, steps may be taken to develop institutional arrangements for liquidity and collective absorption of losses. The above-sketched method of allowing small banks to continue to function may be described as one of "confederation" as opposed to "amalgamation". The Reserve Bank's powers of guidance and "moral suasion", the statutory rules governing the conduct of a bank's business, improved facilities for remittance of funds as provided by the Reserve Bank and its agents and suitable arrangements for "correspondent banking" may help secure the advantages of "branch-banking" without losing the benefits of "unit banking".

If, however, it is not considered prudent to entrust the share-holders with the responsibility of ultimate decision, the method of compulsory amalgamation as embodied in section 45 of the Banking Companies Act may seem to be the only other alternative available. But it has not been found possible to devise the com-

pulsory method so as to prevent discontinuance of banking services; and this method may, therefore, seem indistinguishable from the straightforward method of refusal of licence. It may be contended that there is considerable difference between liquidation of a banking Company as will follow refusal of licence and realisation of assets under the control of a well-managed bank as will take place in the case of compulsory amalgamation under section 45. But the fact remains that the period of moratorium as prescribed by this section will tend to disrupt the economy as seriously as the situation arising from liquidation. Moreover, it remains to be seen whether compulsory amalgamation and compulsory reduction of depositors' or creditors' claims against a banking company do not infringe the "Right to Freedom" as enunciated in Article 19 of the constitution. It is true that the rights to hold and dispose of property and to carry on business as provided in sub-clauses (f) and (g) of clause (1) of the Article are whittled down by clauses (5) and (6) which allow reasonable restrictions to be imposed upon the exercise of these rights by duly enacted law and in the interests of the general public; nevertheless, issues involved in "subjective determination" of execu-

tive officers seem to call for further clarification.

It may, therefore, be useful to explore the possibility of new alternatives. It has been suggested in competent quarters that the banking system may be reorganised on regional lines and on the basis of effective collaboration between different classes of banks; there may be banks confining their operations within the limits of a village or town, banks operating in a district, banks operating in a state and banks spreading their activity all over the country. Banks operating in narrower regions may be affiliated to or otherwise associated with banks operating over wider areas whether through participation in share capital, representation on the Board or otherwise. Capital structure of a bank may, where necessary, be strengthened by allowing redeemable shares to be purchased by the bank with which it is associated. Banks which are associated with one another may formulate mutually acceptable programmes regarding the areas of operation, procedures of business, training of personnel, participation in loans and other matters when there is room for fruitful cooperation. It may be noted that banking systems have evolved in many countries on regional lines; there are

"big" banks, "State" banks, "regional" banks and "local" banks in West Germany and "City" banks and "local" banks in Japan.

It is to be hoped that in examining the different alternative methods for reconstruction of the banking system, the authorities will not allow themselves to be influenced by conventions or doctrines; pragmatic approach represents the best method in a changing economy. The requirements of successful working of the five-year plans demand that the circulating medium should flow undisturbed. The flow of legal tender money is not allowed to be disturbed because of failure of government projects or deficiency in tangible assets held as cover against government liabilities. Cheque currency built on bank deposit plays a more important part in economic development than legal tender money; a deficiency in the value of assets of a bank may not, therefore, be a ground justifying disruption of the cheque currency based on its deposits. Measures for securing collective absorption of losses thus become overwhelmingly important.

So long as the Indian economy does not evolve definitive patterns, it may be more helpful and productive to allow the force of mar-

ket mechanism to operate subject, of course, to legislative control as distinguished from executive control, than to prescribe tests of soundness and enforce regimen of control. It might, then, appear that the authorities will have to choose between the method of replacing executive control by statutory control and the method of regional grouping of banks; the method of compulsory amalgamation seems calculated to bring about a worse disorganisation of the economy than even the painful process of liquidation. It remains, however, the overriding obligation of a welfare state to protect the economy from financial and monetary disturbances. Irrespective of the method of reconstruction chosen by the authorities, it will, therefore, be necessary to revise the scheme of deposit insurance in the light of the American experience and to provide for strengthening the capital structure of weaker banks on the lines adopted in the USA and several other countries. It may, also, prove useful to promote development of built-in stabilisers like State-sponsored guarantee of real estate loans. Such stabilisers may make particular contribution towards the growth of a 'market' for loans which is the basis of conventional soundness and liquidity of banks and banking assets.

'Central'
helps develop industries

C.B.I. provides a complete financial service to Industry & Commerce throughout India and abroad. Special facilities for the provision of loan to cover development and help planning of building new Industries.

The services of our Foreign Department are at your disposal to assist you in connection with any business you wish to transact abroad.

**THE
CENTRAL BANK OF INDIA LTD.**

N. K. KARANJIA: Managing Director

Enlarged banking service is an absolute necessity for development of national economy. Your banking transactions make direct contribution in that regard. Spending or saving, do it through a bank and help us increasingly to serve the Five Year Plans.

Paid-up Capital and Reserves - over Rs. 3.59 Crores
Deposits - over Rs. 58.86 Crores

IV

Industrial Finance

THE role of commercial banks in industrial finance has been under the glare of public scrutiny since the Macmillan Committee of England submitted its report in 1931. The Committee found that there was a gap in industrial finance which was filled neither by share issues nor by bank lending. There are certain needs which fail to attract finance from the organised market. Replacements and additions, sometimes, involve finance for too short-term a period to appeal to the stock market and, yet, for too long-term a period for commercial banks to feel interested. Again, there are small and medium sized industrial concerns whose managements are not known widely enough to inspire confidence in prospective purchasers of shares or debentures, on the one hand, and whose financial structure and business operations do not conform to ratios which are a conventional index of the soundness of a business, on the other hand. This void in the scheme of industrial finance has since come to be known as the "Macmillan gap".

The Indian Central Banking Enquiry Committee which submitted its report in 1931, also, examined the question of industrial finance with particular reference to the part played by the commercial banks. In this connection, the mechanism of mixed banking as employed in Germany received particular attention. The Committee advocated closer association of commercial banks with industrial finance and recommended a lead by the (then) Imperial Bank of India. It may be observed that the question of industrial finance has been growing in complexity with quick and vast changes brought about by war-time devastation (entailing problems of reconstruction and rehabilitation), rapid technological progress and shifting markets. The urge for economic advancement swelling in under-developed and developing economies has lent a new urgency

and added fresh complications to the question in countries like India.

Industrial finance relates to the different needs of (i) promotion, (ii) operation, (iii) expansion and (iv) protection. Promotional finance relates to the initial requirements of plant and machinery and minimum levels of inventory and receivables; this finance is expected to be provided by share capital or owners funds. Operational finance is necessary when inventory and receivables grow above the minimum levels, and is normally available from commercial banks. Needs of expansion and modernisation require what has been classed here as expansional finance; debentures and bonds are usually issued to raise this finance. Failures of projects, losses arising from unforeseen competition and tie-up of stocks due to sudden changes in market involve protective finance which, according to the best traditions of business finance, should come out of reserves and undistributed profits. When additions and expansions are of comparatively small scale, they, also, in many cases, are met by funds represented by reserves and undistributed profits. Again, when the needs of expansion or modernisation are on a large scale or relate to structural changes, recourse is had to share issues instead of debentures or bonds; similarly, when minimum levels of inventory and receivables call for upward revision as a result of expanded activity, changes in terms of sale or other market conditions, recourse to sources of finance other than banks is considered proper.

The trouble arises, however, because the above scheme of finance does not always work with the requisite ease. Flow of finance from the expected sources is disturbed not only under the conditions creating the above-noted "Macmillan gap", but, also because of demand for funds exceeding supply and failure of

availability of foreign money needed for import of capital equipment or essential raw materials. Special financial institutions are being evolved to deal with the problem of the "Macmillan gap", and to encourage flow of funds from the unorganised market to appropriate sources. And international co-operation is being cultivated to organise special agencies for meeting the foreign exchange component of industrial finance. Institutions like the Industrial Finance Corporation of India, State Financial Corporations or the Industrial Credit and Investment Corporation of India, the National Industrial Development Corporation Ltd., the National Small Industries Corporation and the Refinance Corporation for Industry Ltd., are intended primarily to attend to the internal gap, and if possible, also to take part in the provision of external funds.

The Industrial Finance Corporation of India which was established in 1948 has since its inception and upto March 31, 1961, sanctioned 371 proposals for loans involving a total amount of Rs 99.67 crores, of which Rs 54.90 crores was disbursed and Rs 40.74 crores was outstanding for repayment as on the last Friday of March 1961. The other activities of the Corporation include guaranteeing deferred payments in respect of machinery and equipment imported from abroad and the underwriting of shares. The Corporation has been stepping up its activity in the field of underwriting; it underwrote jointly with other agencies, 3 issues of preference shares and one issue of preference shares with its liability restricted to Rs 1.60 crores during the year ended 31-3-61 as against only 2 issues of preference shares involving Rs 88 lakhs during the previous year. The Corporation was called upon to redeem its underwriting obligations for the year 1960-61 by taking up preference shares to the extent of Rs 67 lakhs and equity

shares to the extent of Rs 40 lakhs. As regards the business of guaranteeing, the Corporation approved eight applications during the period 1960-61 for a total sum of Rs 13.13 crores as against six application aggregating Rs 7.79 crores during the preceding year. It may, also, be noted that loans in external money were sanctioned for the first time in 1960-61; 12 concerns were granted loans in US dollars to the total extent of the equivalent of Rs 3.48 crores. The corporation, in its turn, has arranged a foreign currency loan of 10 million dollars from the Development Loan Fund of the USA to be re-loaned to industrial concerns in the private sector. Apart from its paid-up capital of Rs 5 crores, the Corporation's financial resources as in March 1961 consisted of borrowings from the Central Government to the extent of Rs 15.25 crores, borrowings from the Reserve Bank to the extent of Rs 51 lakhs, bonds and debentures of the total amount of Rs 22.24 crores and reserves and undistributed profits to the extent of Rs 1.72 crores.

The Corporation is expected to develop dynamism in its activities and is being afforded the necessary scope. The Industrial Finance Corporation Act was amended in December 1960 to provide for the widening of the powers of the Corporation and permitted it to subscribe directly to the shares of stocks of industrial concerns (independently of underwriting commitments) and to convert loans granted by it and debentures subscribed by it into shares or stocks of the borrowing concern. The Corporation has further been authorised to guarantee (i) loans sanctioned to industrial concerns by Scheduled banks or State Co-operative banks, (ii) deferred payments relating to internal purchases of capital goods and (iii) (with the previous approval of the Central Government) loans raised or other credit arrangement made by industrial concerns from or with any financial institution outside India. Again, the definition

of "industrial concern" has been enlarged to include concerns engaged or to be engaged in the preservation of goods.

A State Financial Corporation has, also, been set up in each state under the State Financial Corporations Act passed in 1951 except that the Madras Industrial Investment Corporation Ltd which functions as a State Financial Corporation has been formed under the Indian Companies Act. Loans and advances disbursed by the 15 Corporations and outstanding as on the last Friday of December, 1961 amounted to a total of Rs 21.32 crores. Paid-up Capital aggregating Rs 15.73 crores and bonds and debentures providing Rs 9.18 crores constituted the principal sources of funds for these corporations.

The Industrial Credit and Investment Corporation of India Ltd was incorporated under the Indian Companies Act in 1955 in collaboration with foreign financial institutions. This Corporation has, also, obtained from the World Bank three lines of credit totalling 40 million dollars and a loan of 5 million dollars from the Development Loan Fund of the USA, to be able to meet the foreign exchange requirements of the Corporation's industrial borrowers. The Corporation has sanctioned assistance to 95 companies amounting to a total of Rs 31.41 crores during the period of its operation since inception till December 1960; 61 per cent. of the sanctioned total took the form of loans and guarantees 31 per cent underwriting operations and 8 per cent direct subscriptions to ordinary and preference share issues; about two-thirds of the loans and guarantees were authorised in terms of foreign currency. It may be noted, however, that the amount disbursed till December 1960 reached a total of only Rs 12.46 crores comprising Rs 3.97 crores in rupee loans, Rs 3.54 crores in foreign currency loans and Rs 4.95 crores in subscriptions to shares (of which Rs 2.98 crores represented fulfilment of obligations in underwriting operations).

The objective of the Corporation as outlined by its Chairman at the sixth annual general meeting is to foster the growth of the investment market; and its contribution is to be judged in qualitative rather than in quantitative terms.

The National Industrial Development Corporation Ltd is a concern wholly owned by the Government of India. It was registered in 1954 under the Indian Companies Act. This Corporation's activities relate mainly to financing modernisation and rehabilitation of Jute and Cotton textile industries. Loans sanctioned to these industries aggregated Rs 19.59 crores as in March 1961; the amount disbursed, however, showed a total of Rs 6.58 crores representing 34 per cent of the

sanctioned total. The Corporation has been extending its activities so as to include (i) financial assistance to the machine tool industry and (ii) short-term financial assistance to Jute and cotton textile industries in connection with hire-purchase of indigenous machinery.

The National Small Industries Corporation, also a Government-owned concern, was established in the same year 1954, for the purposes of (i) securing orders to small-scale industries from the Government Departments and (ii) arranging supply of machinery to small-scale industries on hire-purchase basis. The orders secured by the Corporation upto September 1960 numbered 2431 of the total value of Rs 7.58 crores; and machines undertaken to be arranged on hire-purchase basis involved a total sum of Rs 13.4 crores against which machines of the value of Rs 3.6 crores were delivered. A loan of 10 million dollars has been secured for the Corporation from the Development Loan Fund of the USA, in order to facilitate the Corporation's operations in connection with supply of imported machinery on hire-purchase basis.

It will appear that the activities of the special financial institutions described above have resulted in provision of industrial finance not exceeding a total amount of Rs 100 crores spread over the different periods of operation commencing from inception till the respective dates of last available report. Though this assistance represents an insignificant portion of the total investment in industries during the last decade, its usefulness will require to be assessed in terms of its contribution to the growth of the capital market in India as emphasised by the Chairman of the ICICI. The capital market operates successfully when not only the outflow of its funds is matched by the inflow, but the financial assets created by its funds are capable of smooth turnover. It should be noted that funds employed by the agencies referred to above do not represent direct inflow of internal savings, except to a small extent in the form of shares and debentures subscribed by the public. The contribution of these agencies is, therefore, limited to stimulating inflow of savings into security markets, creating proper conditions for banking loans to industries and helping the evolution of markets to facilitate necessary turnover of financial assets.

There is no available means of estimating the effect of activities of the above agencies on stock exchanges. Published figures show that the total amounts raised by non-government companies through issue of shares and debentures aggregated Rs 55.5 crores in 1958 and Rs 71.2 crores in 1959; the preliminary estimate for 1960 was Rs 71.6 crores but the final

figure is expected to reach Rs 83 crores. It may be noted, however, that consents granted by the Controller of Capital Issues for floatation of shares and debentures in the private sector amounted to Rs 66 crores in 1959, Rs 112 crores in 1959 and Rs 114 crores in 1960. The gap between the investment intentions of non-government companies and investment performance of capital markets may, therefore, seem significant.

It appears from a study covering the year 1960 as published in the February, 1962 issue of the Reserve Bank of India Bulletin that 812 selected public companies with paid-up capital of more than Rs 5 lakhs raised during the year Rs 18.61 crores through issue of shares and Rs 3.55 crores on debentures and that gross value of their assets showed an increase of Rs 242.76 crores. The amount provided by the capital market, therefore, represented a little above 9.1 per cent of the total resources required by the companies; depreciation reserve contributed about 30.4 per cent, other reserves and undistributed profits furnished about 28.3 per cent, borrowings from banks yielded 19.5 per cent and trade dues and other current liabilities accounted for 12.7 per cent. It appears that transactions relating to borrowings from industrial finance corporations, on mortgages and otherwise involved a net repayment amounting to about Rs 28 lakhs. The increase in assets is accounted for by gross fixed assets to the extent of 46.2 per cent, inventory 34.5 per cent, receivables 10.3 per cent, cash and bank balances 3.6 per cent, investments 2.7 per cent, advance payment of Income tax 1.4 per cent and miscellaneous assets 1.3 per cent.

Another study relating to 698 public companies with capital of Rs 5 lakhs and below similarly published but covering the year 1959 shows that share capital and debentures account for about 7.6 per cent, depreciation reserve about 24.6 per cent, other reserves and undistributed profits about 31.6 per cent, borrowings from banks 13.3 per cent, trade dues and other current liabilities about 11.6 per cent and borrowings from industrial finance corporations, on mortgages and otherwise about 10.6 per cent of the increase in funds. And the percentages relating to uses of fresh funds are as follows: (i) gross fixed assets about 47 per cent, (ii) inventory about 17 per cent, (iii) receivables about 19 per cent, (iv) cash and bank balances about 3.3 per cent (v) investments about 2.6 per cent, (vi) advance payment of income tax about 10.3 per cent and (vii) miscellaneous assets about 0.3 per cent.

Yet another study relating to 333 selected private limited companies covering a longer period of four years 1956-59 and published in the November 1961 issue of the

R.B.I. Bulletin shows the sources of fresh funds of these companies as (i) share capital and debentures to the extent of about 6.6 per cent, (ii) depreciation reserve to the extent of about 24.7 per cent, (iii) other reserves and undistributed profits about 25.3 per cent, (iv) borrowings from banks about 8.7 per cent, (v) trade dues and other current liabilities about 29.4 per cent and (vi) borrowings from industrial finance corporations, on mortgages and otherwise about 5.3 per cent. As regards uses of these funds, a break up on lines similar to those in the case of the above-noted public companies shows gross fixed assets represent about 49.6 per cent, inventory 22.7 per cent, receivables 19.2 per cent, cash and bank balances 4.1 per cent, advance payment of income tax 6.4 per cent while investments and miscellaneous assets together have suffered a net reduction of about 2 per cent.

The above three studies show that gross fixed assets account for between 46 and 50 per cent of total accumulation of assets, and current assets comprising inventory and receivables represent between 32 and 36 per cent in the case of private companies and smaller public companies and about 45 per cent in the case of larger public companies. On the other hand, security issues provide between 7 and 9 per cent of total new funds. Internal resources comprising various reserves and undistributed profits provide between 50 and 59 per cent and the share of borrowings from banks varies between a little less than 9 per cent in the case of private companies and a little less than 20 per cent in the case of larger public companies.

A clear picture of the position relating to company finance may, however, be obtained if depreciation reserve is deducted from both liabilities and assets sides. The position so adjusted shows that internal resources contributed 40.6 of new funds in the case of 812 big public companies, 42.2 per cent in the case of 698 small public companies and 33.7 per cent in the case of 333 private companies. Security issues contributed 13 per cent, 10.2 per cent and 8.8 per cent, respectively and bank borrowings accounted for 28 per cent, 17.8 per cent and 11.5 per cent respectively. As regards uses of new funds, net fixed assets represented 22.6 per cent, 29.8 per cent and 33.3 per cent respectively and current assets comprising inventory and receivables 64.5 per cent, 48.0 per cent and 55.8 per cent respectively.

It may also be observed that another study relating to 1001 selected public companies covering the years 1956 to 1959 and published in September 1961 issue of the R.B.I. Bulletin shows that internal resources provided only 24.2 per cent of the adjusted new funds

Banking Supplement

while security issues contributed 16 per cent and bank borrowings 19 per cent, and that net fixed assets represented 59.4 per cent of the total increase in assets and current assets only 39.0 per cent.

Though it may appear that no positive trends are disclosed by these studies, the broad fact is clearly brought out that borrowings from banks are more than covered in each case by accretion to current assets but that addition to net fixed assets has failed to be financed by internal resources in the major case of 1001 public companies who have been unable to provide for fixed assets without increasing their outside liabilities as is apparent from the fact that internal resources and security issues aggregate 40.2 per cent of fresh resources as against the increase in net fixed assets of 59.4 per cent.

It will, however, be rash to rush to any conclusion on the basis of the above figures; but it may not be injudicious to infer that there is adequate scope for expansion of bank advances to industrial borrowers without involving violation of orthodox tenets of lending provided there is corresponding increase in bank deposits and the possibilities of mobilising savings for investment in shares and augmenting internal resources by increasing profitability of industrial operations are properly explored.

It is intriguing that the question of banks' industrial loans often tends to be mixed up with questions of advances against fixed assets and advances on long-term basis. It should be obvious that term loans and industrial loans are not synonymous; retail trade and service fields receive a substantial proportion of funds made available by the banks in USA in the form of term loans. Again, banks in the USA do not ask for any tangible security (whether fixed or current) in respect of term loans of large amounts; it is only in the case of small term loans that the banks seek charge on equipment or real estate. It has indeed been said that term loans really represent rationalisation of bank advances in the USA because they are "a more systematic substitute for the large amount of loans which was only nominally short-term in previous banking practice." It has been noted earlier that the question of bank finance should generally be limited to the amount of operational finances and that initial capital equipment and additions to or expansions thereof and minimum needs of inventory and receivables should be financed by shares, debentures, reserves and unappropriated profits. So long as these limits are adhered to, it does not seem to be of material significance if a bank loan is charged on fixed assets if it is payable at a fixed future date and not on demand. The capacity of

repayment of an industrial borrower depends obviously on his capacity to sell his goods at remunerative prices and in sufficient quantity to yield reasonable profit after providing for all outgoes and amortisation of fixed assets. Even repayment of loans tied to current assets may prove difficult if the turnover of the borrower's business fails to come up to this standard; forced sale of otherwise readily saleable goods may encounter resistance, trouble and loss. Again, "receivables" whether in the form of book debts or outstanding bills may represent highly liquid assets so long as the industrial concern is operating successfully; if, however, the concern at any time slows down its activity as a result of shrinking market or other factors, realisation of such "receivables" may get slower still. The factors relating to terms of repayment or security should, therefore, be matters to be decided by the lending banker on the basis of his own liquidity requirements and institutional arrangements for shifting financial assets, on the one hand, and his judgment of integrity and business honesty of the borrower, on the other hand. But the factor relating to sound proportions of different sources of funds can be disregarded by the bank at its peril: it is a fairly dependable indicator of the adequacy and profitability of sales of an industrial unit.

The question has, however, frequently arisen whether the above pattern of finance is consistent with the needs of development of an underdeveloped economy. It has been pointed out that when there is no reasonably active or wide share market it may be unpractical to require that finance for equipment and minimum levels of current assets should be raised through issue of shares or debentures and that banks in countries like Germany and the U.S.A. have not hesitated to extend finance to meet initial or bridge-over needs. But the examples provided by the German and the U.S.A. bankers are now only of historical importance; the lessons learnt from their experience are being written into state-sponsored measures for promotion of market and liquidity guarantee of industrial loans and collective absorption of losses. In this connection, it appears that the Refinance Corporation for Industry Ltd. established in 1953 represents a useful move in the direction of creating bank liquidity, but its real success will be measured in terms of the contribution it makes to evolution of market for industrial loans; again, the scheme of guarantee of bank loans to small-scale industries introduced in July, 1960 seems calculated to promote initial and bridge-over finance, especially necessary in a changing and developing economy.

It has further been suggested that formation of consortium of banks and establishment of unit

trusts may provide for distribution of risks and foster the growth of investment market and thus create favourable conditions for banks' participation in the business of underwriting, and even, direct subscription of, shares in industrial concerns. While it is true that shares, easily transferable in an organised market, meet the requirement of liquidity or shiftability, it should be realised that the ultimate worth of a share will depend on the solvency of the relative company and that a term loan charged on the assets of the company may consequently prove more acceptable than purchase of shares both because such loan will secure priority of claim for the lending banker and, also, because it will enable the banker to maintain a closer watch on the affairs of the concern.

It has been assumed in the third five-year plan that total industrial investment in the private sector (including transport, village and small industries, large and medium industries and minerals) will be of the order of Rs 1675 crores over the five-year period 1961-66 and that increase in inventories following from enlarged operations will amount to Rs 600 crores. Industry will, also, require finance for replacement and modernisation to an extent estimated at between Rs 250 and 300 crores and for carrying increased book debts and other receivables which (on the basis of the Reserve Bank's studies of company finance discussed above) would not be less than 25 per cent of the additional investment in fixed assets and thus amounting to about Rs 420 crores. Before considering whether the banks will be in a position to provide finance to a reasonable extent, say, 50 per cent of the additional requirements of inventory and receivables, it may be useful to enquire whether the economy itself can provide and sustain the necessary amount of monetary resources. The total investment in the two sectors will amount to Rs 10,400 crores over the period of the third plan and current operational outlay which is not represented by investment is computed at Rs 1200 crores for the public sector. It has been estimated that national income will rise from Rs 14500 crores at the end of the second plan to Rs 19000 crores at the end of the third plan and that net investment will rise from 11 per cent to between 14 and 15 per cent of national income while savings will experience an increase from 8.5 per cent to 11.5 per cent during the same period, external aid being expected to narrow the gap between savings and investment.

The vigour and success of industrial finance will, therefore, depend ultimately on the efficient working of the plan with particular reference to the course of savings and foreign aid and the flow of money into the banking system.

Bank deposits in the U.S.A. amount to about 54 per cent of national income while bank loans run up to more than 28 per cent of national income. Bank deposits in India aggregated to a little above 12 per cent of national income at the end of second plan and the corresponding per centage of bank loans was less than 10 per cent. Recent figures, however, show rising trends of these proportions. If it is assumed that the rise in national income will follow a graduated course, the average national income during the plan period will be about Rs 16750 crores; if, again, money flows into the banking system at an average rate of, say, 15 per cent of national income, bank deposit should maintain an average level of Rs 2500 crores during the period of the third plan and bank loans may reach an average level of Rs 1675 crores. Industrial advances represented 51.2 per cent of total bank advances as on October 28, 1960; there is, on the basis of this percentage, scope for additional advance to industry, to the extent of about Rs 115 crores (being 51.2 per cent of the estimated increase in total advance of Rs 225 crores). Scheduled banks' advances against shares and debentures of Joint Stock Companies amount to about 8 per cent of total advances and investment in these securities does not exceed 4 per cent of total deposits. There is, therefore, a possibility of the banks being able to contribute to the extent of not more than Rs 48 crores towards promotion of capital or investment market. Apart from the question whether this contribution will be of an effective use, it is obvious that bank finance to meet half of the requirement of additional inventory and receivables involving, say, Rs 510 crores will fail to be available if there is no substantial rise in the present ratios of bank deposits and advances to national income.

Again, the banking authorities do not view with complacency the prevailing high ratio of advances to deposits; if it is considered prudent to reduce the ratio to the traditional proportion of 50: 50; the existing level of industrial finance will suffer shrinkage, not to speak of a scope for an increase.

The outlook of industrial finance is, therefore, to say the least, uncertain. Fiscal policy, the effect of price levels and taxation on internal resources, the availability of foreign aid, efficiency of special institutions for promoting investment market, and last but not least the flow of money into banking channels,—all will have a share in the moulding of the future pattern of industrial finance. At all events, it is evident that it is not popularisation of fixed assets as acceptable banking security or advocacy of term loans, but that it is an increasing flow of money into banking channels, that is required to stimulate bank lending to industry.

V Expansion

OPENING of new branches has continued to be an important step that the banks have resorted to in their effort to expand their business activities. In recent years, there has been a further realisation of the fact that expansion of banking offices is equally needed for economic development. An adequate spread of bank offices would tend to stimulate the banking habit, succeed in mobilising idle money and saving, into the banking system and reduce, in the process, the sphere of the unorganised sector. The State Bank has been required to establish new branches according to an intensive programme, which it has been successfully doing. Other commercial banks also have been opening new branches in relatively large numbers and they are being urged to further intensify their programmes.

As a result, the number of banking offices has increased from 4119 in 1951, to 5026*,—a net increase of 907 offices during a period of nine years. That during this period the banking habit has also increased can be judged from the fact that total debits to current accounts (including cash credit and overdraft accounts) have risen from Rs 12,472.30 lakhs in 1950-51 to Rs 22,598.04 lakhs in 1959-60* and that the monthly average number of cheque clearance has registered a rise from 2,178,000 in 1950-51 to 4,539,000 in 1959-60*. Further, the number of bank accounts has risen by about 55% during 1956-60, as compared 13% during the First Plan period. Increased activity in existing accounts, owing to general economic progress, must have contributed to an appreciable measure to this growth of banking transactions. The spread of banking offices, however, could not have failed to make an important contribution in this development.

Yet, in the face of the magnitude of the problem of quick expansion of banking offices, the progress cannot but be regarded as rather slow. In order to achieve the objective of stimulating a wide spread banking habit, it is necessary that there must be a banking office to service the needs of every little community. Whereas in the USA, the UK and Japan, the distribution of population per banking office ranges between

6,000 and 12,000, in India there is a banking office for about every 80,000 of its population. This is the magnitude of the problem. It is further complicated by the urgency stemming from the requirements of economic development.

It may be said that until the banking habit in India develops to the same level as it is in the more advanced countries, distribution of population per banking office need not be as small. At the same time it would be equally true that unless every small community is provided with a banking office, it would be idle to expect the banking habit to develop. Further as the Plans progress, banking needs grow in various areas and the need for new banking offices to cater to these new demands, is more and more keenly felt. It is thus not merely a question of making up the leeway 'in due course', but catching up with the needs of a fast growing economy and keeping pace with it.

In 1951 there were 4119 banking offices at 1306 places. While by 1960 there has been a net increase of 907 offices, the coverage has increased only by 363 places to 1669. A break down of the places indicates that between 1951 and 1960 while the number of banking offices in areas having population of 10,000 and more have increased by 281 (from 813 to 1094), net addition to bank offices at places having a population below 10,000 has been only 200 (from 388 to 588). However, it is noticed that a tendency has developed amongst the banks during the 2nd Plan period to open more offices in places with a population of less than 10,000 as is evident from the fact that between 1956 and 1960 there has been a net addition of 196 bank offices in these areas as compared to 99 in areas having a population of 10,000 and more.

The fact, however, still remains that there exist, even now, nearly 1400 townships without any banking offices, whereas most of the covered places have more than one or two banking offices. The impression thus cannot be helped that firstly there is a tendency to go to places where on account of existing banking facilities, the banking habit has developed at least to a certain extent and secondly that there is hardly any deliberate planned effort in achieving a quick,

but at the same time realistic, spread of banking offices. This is the crux of the whole problem. There is an urgent need for pioneering extension to the untapped areas.

In the absence of any plan and direction, the present trend must be said to be natural. For, what with the rising establishment charges and the vagaries of workman's output and job preferences, and what with the high cost of new deposits, stationery, house rent and other miscellaneous items branch expansion is an expensive venture. It is found that an average branch office needs a minimum recurring expenditure of about Rs 20,000/- annually at the initial stages, to mount up with the passage of time. Where the scope of business is ready, a branch can be expected to break even in say 3 or 4 years; but in less developed areas it takes a much longer period. It would therefore be a natural propensity for a bank to select a place where it could expect to break even the quickest.

But this is taking the line of least resistance and not the line of greatest advantage. Such an approach in the present case, will result in slipping back; it is certainly not progressive. If the banking system will be judged by its performance as to whether or not it is capable of carrying the responsibilities it is expected to carry, for its future, it must face facts squarely. If it leaves a gap, some other mechanism will be devised to fill it. The nation cannot and will not wait.

There is need for a comprehensive plan to be drawn up immediately, both in regard to the manner in which the task can be tackled as well as in regard to the function that the individual banks, in the system, would be expected to perform. Individual plans of branch expansion of different banks, including the State Bank, must be co-ordinated to the comprehensive total plan. It is only when that efforts can be expected to be purposive and effective.

The first issue that has to be decided upon is the question of priority with regard to places where banking facility must be extended. Such priority must be related to the question of time available. In fixing the priority, it may be enough to limit the

consideration at present to covering the 1400 townships, that remain without any banking facility, during the Third Plan period. The target should not be difficult of achievement if efforts are made in a co-ordinated and planned manner.

Having fixed the target, a time schedule has to be drawn up, on the basis of priority as amongst these 1400 places. For this purpose a survey of these places has first to be completed. Such a survey can quickly be done, if a central body, be it a Federation of banks or any other organisation under the aegis of the central banking authority, allocates various townships in different regions to different banks for survey and report. In doing so, it will be necessary to enumerate, (a) the facts to be enquired into, (b) the manner in which the survey should be made and (c) the probable sources to be tapped. The process of the survey will thus be decentralised and being standardised will expedite collation of the survey reports in the desired manner. On the basis of the survey reports, then, the priority list can be drawn up and an appropriate programme chalked out.

The next step would be to decide how these places should be covered; whether by branch offices of various banks or by strengthening the existing smaller banks or by establishment of small subsidiaries of major banks or if it should be a combination of all these steps, depending on the potentiality and the assessed banking requirements of these various places. It is important to bear in mind in this regard that opening of new branches is an operation which cannot and should not be undertaken by every type of bank.

Since the urgency of economic development requires quick extension of banking offices, opening of new branches at a rate so as to match the urgency, will entail a heavy burden on bank profitability, and not many banks in the country are able to bear it. That being so, if the task has to be achieved through expansion of branches, the responsibility will devolve mainly on the major banking institutions. But, partly on account of the difference in salary rates and partly on account of the elaborate system of manage-

*Trend and Progress of Banking in India, 1960.

ment of these banks, the cost of operation of the major banks is very much more than the small ones. The major banks would thus be reluctant, as they are even now, to go to places where the potentiality, either of the growth of deposits or of the growth of other business, is rather limited.

Again, it is common knowledge that in a remote area an office of a smaller bank is capable of catering to the local banking requirements better than an office of a major bank. Further, while there is an overall dearth of banking personnel at all levels, this is all the more acute with the larger banks where the standard of skill required is somewhat higher than smaller banks, particularly, on account of the varied and complex nature of their operations. An attempt quickly to expand banking offices will immediately generate further demand for bank personnel at all levels. Shifting of personnel from one bank to another may be helpful to an individual bank, in the short run, but it does not help in solving the overall problems.

There may be two approaches to this problem of personnel. One would be large scale mechanisation, particularly in bigger banks, with a view to releasing personnel for opening new branches. Bank managements have already been initiated to the idea of mechanisation. It can be said to be true

also of the bank personnel; they are realising the need for mechanisation and appreciating the fact that mechanisation need not necessarily restrict employment or result in retrenchment. The necessary climate is, thus, not wanting.

The only draw back now is non-availability of suitable machines. Licenses are being refused for importing machinery and spares even for maintenance of existing installations. It is reported that some well known manufacturers are establishing factories in this country to manufacture some of these machines, but till the supply of the machines from within the country is available in the market it would be necessary to allow imports. Import of machinery for bank mechanisation has to be considered with the same urgency and as in the same category as that of importation for the purpose of modernisation of the manufacturing industries.

The other approach would be—this may also be necessary even if it is possible for bigger banks to mechanise their existing branches and release personnel for new branches—to allocate the smaller towns to the smaller banks either existing or to be formed as subsidiaries of bigger banks. The business of these banks in such smaller areas, would naturally consist principally of handling deposits and making small advances based mainly on personal

knowledge of borrowers and intimate connection with the local economy. The requirement of personnel skill for this type of bank offices, thus, will be more or less of an elementary nature compared to the requirement of the bigger banks. This is particularly true with regard to the officers and supervisory cadre; for their services being transferable, the bigger banks would be reluctant to reduce the level of skill they generally consider necessary. The training requirement with regard to personnel at the smaller bank's offices, in the smaller areas, would accordingly be a comparatively easier matter, and can be fulfilled with the help of bigger banks either as sponsors or as correspondents.

Having decided the issue with regard to the types of banking offices with which the various uncovered townships shall be provided, decisions will have to be taken about the method by which to establish these offices. On account of the vastness of the country, inadequacy of communication and difficulties of centralised administration of offices in far flung areas, thought has, rightly, been gaining ground that the matter should be approached on a regional basis. The question, however, remains to be decided whether such regional distribution should be rigid or should only be an expediency, subject to variation in special circumstances where the banks in a particular region are either incapable of or fail in establishing offices according to the time schedule. It would, again, be unrealistic to apply this regional basis also with regard to important towns and centres where major industrial activities are expanding and which serve a large hinterland covering extra regional areas. Bigger banks having branches spread out in the country, having a nationally extensive business, would need to establish their branches in such centres, if they are not already established there, not only to service the growing industrial and trade requirements at these centres but also to provide an important link to their other existing branches. While therefore the regional distribution would be welcome with regard to places where potentialities are too limited to attract any sizeable bank, the important industrial centres should be kept open, subject, however, to the normal regulations of the Reserve Bank.

The question of losses on the new offices is no less important. The matter will require particular consideration specially in view of the fact that establishment of new offices has to be undertaken at a very fast rate, which, as has already been mentioned, will put an extra load on bank profits. It is further complicated by the fact that the margin of banking profit is decidedly narrow and that over and above the recent imposition

by way of premium of Deposit Insurance, it is expected that there will be an additional imposition in the establishment account, with the enforcement of the National Tribunal Award. Since the urgency for quick enlargement of the spread of banking offices in less potential areas has stemmed from the requirements of the national economy and since left to voluntary efforts, most of the banks might not think of covering most of these areas, it has at a rate envisaged in this discussion, it has to be considered whether some relief should not be given to the banks in the matter of losses arising from establishment of offices in these 1400 unbanked townships. It may be interesting to note here that one of the recommendations of the Credit Enquiry Commission appointed by the Government of Pakistan in 1959, was to extend the subsidy arrangement with the National Bank of Pakistan, or opening new branches, to other Pakistani commercial banks. The idea may also be considered in the country; at least with regard to establishment of new offices according to a given plan, and at the listed places, either by way of branch offices or by formation of smaller subsidiaries as well as by servicing the existing smaller banks for this purpose.

Admittedly, all these efforts will have to be blessed and supported by the central banking authority and the Government. But in a democratic set-up initiative must come from the private sector, i.e. the banks themselves. A pragmatic approach will require a thorough consideration of all the relevant issues, and drawing up of a tentative plan and programme by the banks themselves. The matter can then be taken up with the central banking authority. To do so there has to be strong and efficient Association activity amongst the banks, which, unfortunately, appears to be missing. Such association activity is necessary also for tackling various other problems of the banking system, the present one being only one of the major items.

Before any practical step can be taken in this regard, it is therefore essential that all the banks of the country must be co-ordinated under a Federation of banking associations where the State Bank may also participate. Such a Federation can then form an active Planning Committee to go into the whole range of banking problems including the present one, and in its turn appoint sub-committees for the important problems charged with the responsibility for following up the plan decided upon and ensuring its effective execution. Individual or group action will not only continue to be inadequate, but may,—and this is not ultimately—result in waste of money, energy, resources and time. The nation itself can ill-afford this waste, much less, the banking system.

VI Direction

After his last public speech as Governor of the Reserve Bank of India, Mr H. V. R. Iengar could justifiably take pride in the efforts he made during his tenure in office to educate students of the money market as to the role of a central bank; and his address at a joint forum provided by the Democratic Group of the Indian Merchants' Chamber, the Commerce Graduates' Association and the Progressive Group not only fell into the pattern of his public utterances but was also in the nature of a fitting finale. For his topic he took up the relationship between a central bank and Government, and his analysis is important for drawing attention to the spheres in which inevitably conflicts occur and which therefore call for the exercise of mutual adjustments. Mr Iengar made it clear at the outset that he was not indulging in "personal reminiscences," though of course the views he expressed "would be coloured by my own experience of office."

In Canada last year so great was the conflict between Governor and Minister of Finance, that the latter called upon the former to resign; and which he did, but only after acrimonious public debate in Parliament and outside. In Sweden in 1957 there was another dramatic case of conflict, which however ended with the resignation of the Governor and the clarification that the Riksbank (the central bank) would consult Government before making any changes in bank rate. President Truman's anxiety to preserve "public confidence in Government's credit and in Government securities" triggered off yet one more publicised case of conflict between Treasury and central bank, with Mr Marriner Eccles (then Chairman of Federal Reserve) issuing a public statement contradicting the White House.

Why has it happened in recent years, and quite often at that, that there have been disagreements between Government and central bank? Mr Iengar furnished what may be one of the main factors. The traditional function of

a central bank "is to regulate the issue of currency and to control bank credit"; and the older central banks for this purpose enjoyed a virtual independence from Government. But today, it is now universally accepted, Mr Iengar pointed out, that "Government have a direct responsibility in the matter of maintaining full employment and keeping prices at a stable level". So, the newer central banks have begun clearly to recognise the ancillary function of catering to the welfare not only of the currency but also of the people: the preamble to the Bank of Canada Act enjoins on the Bank the responsibility

for regulating credit and currency in the best interest of the economic life of the nation, to control and protect the external value of the national monetary unit and to mitigate by its influence fluctuations in the general level of production, trade and prices so far as may be possible within the reach of monetary action and generally to promote the economic and financial welfare of the dominion.

Even so, the Reserve Bank of Australia has been set up to

ensure that the monetary and banking policy of the Bank is directed to the greatest advantage of the people of Australia and that the powers of the Bank are exercised in such a manner as will best contribute to the maintenance of full employment in Australia and the economic prosperity and welfare of the people of Australia.

Thus, the "welfare state" acts to reduce the importance (that is to say, the independence) of a central bank; instead it requires that the central bank shall perform its duty not only within prescribed limitations tantamount in the economic policy or objective of Government. Mr Iengar in this regard quoted the Radcliffe Committee:

The central bank is one of the principal authorities concerned with the framing and operation of monetary policy... It follows that this policy whatever form it may take from time to time must include the general plan-

ning of monetary policy and monetary operations and that the policies to be pursued by the central bank must be from first to last in harmony with those avowed and defended by Ministers of the Crown responsible to Parliament. The true position, as we see it is that the bank carries an equal measure of responsibility, to advise to the best of its ability and, having advised, to execute within the limits of the determined policy.

Mr Iengar laid down three prerequisites to a sound working arrangement between central bank and Government:

- Government must have confidence in the central bank and its Governor and in turn the central bank must be conscious that Government is directly answerable to the people and recognise the Government's ultimate responsibility.
- The establishment of cordial relationship should not be at the expense of the Governor's ability to be forthright in the expression of his views even to the point of being considered difficult. It would be fatally easy for a Governor to have the pleasantest relationship with the Treasury by just subordinating himself to Treasury views. As Montagu Norman said, "I look upon the bank as having the unique right to offer advice and to press such advice even to the point of nagging; but always, of course, subject to the supreme authority of the Government."
- The Treasury should not interfere with the operational or administrative responsibilities of the bank so long as the general policy pursued by the bank is in harmony with Government's economic policy.

Mr Iengar emphasised that, so far "no directives have actually been issued by Government to the Reserve Bank." Nevertheless, for various reasons the extent of control of Government over the cen-

tral bank is greater in India than, for example, in the United Kingdom. A planned and controlled economy is inevitable; so, "non-official members of statutory Boards taken from industry and commerce, however high their sense of duty, may possibly, on occasions, feel somewhat inhibited in expressing their views with complete frankness". Mr Iengar added that the Reserve Bank's directors "have always shown notable candour" and his mention of the point was to emphasise the need for such independence to be "consciously nurtured and welcomed." Similarly, the anxiety on the part of a post-revolutionary Government to speed up progress will often come into conflict with the caution to be expected of a central bank. But here, too, Mr Iengar was in a position to state that, "so far as Government and the Reserve Bank are concerned, adjustments have taken place with a great deal of mutual understanding." An apposite definition of the relationship between central bank and Government is constituted by a quotation from a speech made by the Finance Minister in the Rajya Sabha in 1957:

The Governor of the Reserve Bank is not an officer of the Government. The Reserve Bank happens to be the supreme autonomous body that is created.... He is a non-official. He is entitled to criticise the Government, to differ from Government.... we can, in matters where Government's policies are to be carried out, issue directives; but the Reserve Bank can hold a different opinion though they have to act according to the directives issued by the Government for good reasons.... He is bound to carry out the direction but in doing so he is entitled to tell me and also publish it in his report that the Government of India was advised in the matter....

There are, according to Mr Iengar, four areas in which there will arise the need for mutual adjustments between Government and Reserve Bank. These four areas are:

METROPOLITAN BANK LIMITED

- (1) interest rate policy.
- (2) the volume of accommodation to be given to Government (deficit financing).
- (3) the manner of handling sub-standard banks.
- (4) policy in regard to accommodation to co-operative institutions.

As we see it, the difficulty in the matter of interest rates is that the Reserve Bank, in order to wage an anti-inflationary war, may sometimes be in favour of a tough money policy, whereas Government both to keep down the cost of borrowing and to ensure the success of borrowing programmes would greatly hesitate before agreeing to any change in the basic interest rate. Indeed, Mr Iengar stated that "active use has not been made of the bank Rate instrument as such." We must remember that in the years that Mr Iengar held office there have been two sets of measures initiated which de facto and de jure caused the cost of borrowing to rise. In February 1957 the Reserve Bank announced that, though bank Rate at the time was 3½ per cent, banks would have to pay 4 per cent for any accommodation that they sought or obtained from the central banking institution. It was some three months later that de jure raising of bank Rate took place. The changes that occurred in February and May were not, it is interesting to note, by way of active use of bank Rate weapon. The great

monetary stringency in the 1956-57 busy season produced chaos in the interest rate structure. Bank Rate was often exceeded by the rates of interest that banks were willing to pay in order to entice Deposits or to take up call money for balancing their daily accounts. The February and May measures in regard to bank Rate were therefore in the nature of an upward adjustment in the primary rate, after increases in other constituents in the interest rate structure had made a farce of bank Rate.

On the other hand, the introduction in 1960 of the three-tier bank Rate was, in our view, a monetary measure. It was intended so to raise the cost of central bank credit that banks would be inhibited from borrowing more and hence from lending more. It has happened that the penal rates of 5 per cent and 6 per cent become applicable only during the busy season. But another Reserve Bank directive, whereby banks were called upon to raise their lending rates by a half per cent all round and in any case to a minimum of 5 per cent, enabled banks easily to afford the penal rates for short-term needs.

The next point that needs to be clarified relates to the question whether or no money is cheap in India. Certainly, the impression abroad of India's foreign friends is that the monetary authorities in this country have permitted money to be unduly cheap. Mr Iengar

remarked that, "while the rates in the organised sector are relatively low, those in the unorganised sector are indeed high"; and he added that "the unorganised sector finances a substantial part of internal trade and remains largely outside the purview of the Reserve Bank's control". With the Reserve Bank directive of autumn 1960, we believe that money ceased to be cheap even in the organised sector. The minimum rate on Advances, as stipulated by the Reserve Bank, is 5 per cent; and moreover this rate is available only to prime risks or most favoured customers. We have seen that, as happened in 1956-57, there is a tendency for the banking interest rates to be re-adjusted as a result of excessive demand for and inadequate supply of money. Mr Iengar pointed out that, in the case of the private sector, a shift in the direction of higher interest rates has already taken place. But the general impression to be gathered from Iengar's views on interest rates is that, firstly, he considered cheap money might be dangerous and, secondly, he would have a constant process of adjustments between the Reserve Bank and Government.

There is also the fact that, for their own reasons, Governments like to keep interest rates low. Mr Iengar said: "This becomes an important consideration especially when the Government has a large borrowing programme over a period of years." We need at this juncture also to have regard

for what President Truman considered the supreme importance of preserving "public confidence in Government's securities." In the sense that the Indian Government does have a large borrowing programme, it would seem that it would be greatly reluctant to permit an increase in bank Rate. From the Reserve Bank point of view, tough money policy is already introduced by the automatic application of the multiple-tier bank Rate, and it is consequently possible that India may be able to get away with a status quo in interest rates.

Nevertheless, it would be wise to recognise that there could be circumstances in which an increase in bank Rate is inescapable; 1957 offers a case in point. We believe that bank Rate in India does not set the pace for the structure of interest rates. It is demand for and supply of money that determines whether or not banking interest rates are pushed up. If it should happen that for a sustained period demand exceeds supply, then the disparity between banking interest rates and bank Rate has to be set right with a raising of the latter. From the monetary point of view, in any event, any increase in interest rates is not quite desirable. As it is we have seen that interest rates in the unmonetised sector are high enough; and we repeat that except for the prime risks money is not cheap even in the organised sector of the money market.

VII Award

A national industrial tribunal with Mr K. T. Desai, Chief Justice of the Gujarat High Court, was set up in March, 1960, to adjudicate the dispute between banks and their workmen. Twenty-two issues concerning 84 banks were referred for adjudication to the tribunal. The 84 banks include the State Bank of India and its subsidiaries. The following is a summary of the principal recommendations.

THREE CLASSES OF BANKS

While the Sastri Tribunal classified the banks into four categories according to their working funds the Desai tribunal, on the same basis, has classified them into three classes.

Class A banks are those with working funds amounting to Rs 25 crores and above and all exchange banks. Class B banks are those with working funds amounting to Rs 7.5 crores. Class C banks are those with working funds below Rs 7.5 crores. The Desai tribunal has placed six banks under what is called the "excepted list" for whom separate scales of pay have been recommended as it is felt that they cannot pay the scales recommended for Class C banks.

Twenty-three banks, come under Class B. Twenty-six banks come under Class C.

Six small banks are placed under the excepted list.

The demand of the workmen for putting the State Bank in a separate class has been rejected by the tribunal.

THREE CLASSES OF AREAS

Under the award, the country has been classified into three areas and scales of pay have been recommended according to the class of bank and the area.

Under the award, "Area I" comprises (1) the city of Bombay, including Greater Bombay, (2) the city of Calcutta, including Howrah, Barrackpore, Behala, Alipore, Cossipore, Garden Reach, Baranagore, Kaliganj, the south suburban municipal area and Dum Dum, (3) the city of Delhi, including New and Old Delhi and Delhi Shahdara, (4) the city of Madras, (5) the city of Ahmedabad, (6) the city of Hyderabad, comprising areas falling within the Hyderabad municipal limits, Secunderabad and the outlying urban units, (7) Bangalore, comprising areas within the Bangalore Corporation limits, the area notified under the Bangalore City Improvement Trust Board Act, excluding satellite towns and townships, (8) Kalyan, (9) Thana, (10) Uttar Para and all places having a population of more than 12 lakhs.

"Area II" comprises all cities other than those included in Area I which have a population of one lakh or more, and Bhivandi, Chandernagore, Chandigarh, Chinsurah, Cochin, Dombivli, Ferozepore, Kakinada, Nasik, Pimpri, Pondicherry, Rajpur, Shillong, Tirunelveli and Tuticorin.

"Area III" comprises all places not included in I and II.

For the purpose of the classification of areas, the tribunal has directed that the latest available all-India census figures should be taken into account. Until the final population figures of the 1961 census are available, provisional figures as finally published are to be adopted.

The Desai tribunal has abolished the Class IV area created by the Government. Justifying the abolition, the award says that the inducement offered by the creation

of Area IV and the lower scales of pay fixed for workmen in this area have not resulted in providing any appreciable incentives to the commercial banks in opening branches in such area.

The tribunal has, however, observed that the change consequent on the abolition of Area IV should be gradual.

PAY STRUCTURE

While recommending higher scales of pay for bankmen, the award says that the future of banking and of banks except a few smaller units is bright and that the banks should be able to bear the additional burden.

Under the award, the minimum basic salary of a bankman employed in "A" class bank in Area I will be increased from Rs. 85 to Rs 140. The maximum for the same employee has been increased from Rs 280 to 405.

The tribunal has also recommended a formula by which bankmen should be fitted into the new scales.

The following are the new scales of pay recommended for workmen other than those belonging to the subordinate staff, with reference to the base year 1949:

"A" CLASS BANKS

Area I: Rs. 140-6-182-11-281-13-307-15-322-E.B.-15-337-16-369-18-405.

Area II: Rs. 130-5-140-6-182-11-281-13-294-E.B.-13-307-15-337-16-369.

Area III: Rs. 120-5-140-6-182-11-270-E.B.-11-281-13-307-15-337.

"B" CLASS BANKS

Area I: Rs. 130-5-140-6-182-11-281-13-294-E.B.-13-307-15-337-16-369.

Area II: Rs. 120-5-140-6-182-11-279-E.B.-11-281-13-307-15-337.

Area III: Rs. 112-4-120-5-140-6-182-11-248-E.B.-11-281-13-307.

"C" CLASS BANKS

Banks in the excepted list are excluded.

Area I: Rs. 120-5-140-6-182-11-270-E.B.-11-281-13-307-15-337.

Area II: Rs. 112-4-120-5-140-6-182-11-248-E.B.-11-281-13-307.

Area III: Rs. 104-4-120-5-140-6-182-11-226-E.B.-11-281.

(The combined running scale will, therefore, be as follows: Rs. 104-108-112-116-120-125-130-135-140-146-152-158-164-170-176-182-193-204-215-226-237-248-259-270-281-294-307-322-337-353-369-387-405.)

BANKS IN THE EXCEPTED LIST

Area I: Rs. 96-4-120-5-140-6-182-11-204-E.B.-11-259.

Area II: Rs. 88-4-120-5-140-6-182-E.B.-11-237.

Area III: Rs. 80-4-120-5-140-6-170-E.B.-6-182-11-215.

The following are the pay scales for members of the subordinate staff with reference to the base year 1949.

"A" CLASS BANKS

Area I: Rs. 86-1-105-E.B.-1-108-2-112.

Area II: Rs. 80-2-86-1-102-E.B.-1-107.

Area III: Rs. 74-2-86-1-99-E.B.-1-104.

STATE BANK OF JAIPUR

(A Subsidiary of the State Bank of India)

Head Office: JAIPUR

Having branches at all important centres in the country

Offers complete Banking services including Foreign Exchange Business.

Interest on Savings Bank Accounts allowed @ 3% p.a.

Liberal Financial Assistance given to Small Scale Industries.

Safe Deposit Lockers available at many branches.

Agency Arrangements throughout India.

A. RAGHAVACHARI,
General Manager.

"B" CLASS BANKS

Area I: Rs. 80—2—86—1—102—
E. B.—1—107.
Area II: Rs. 74—2—86—1—99—
E. B.—1—104.
Area III: Rs. 68—2—86—1—96—
E. B.—1—101.

"C" CLASS BANKS

Banks in the excepted list are excluded.

Area I: Rs. 74—2—86—1—99—
E. B.—1—104.
Area II: Rs. 68—2—86—1—96—
E. B.—1—101.
Area III: Rs. 62—2—86—1—95—
E. B.—1—98.

(The combined running scale will, therefore, be as follow: Rs. 62—64—66—68 — 70—72—74—75 — 78—80—82 — 84—86 — 97—88 — 89—90—91 — 92—93 — 94—95 — 96—97—98—99 — 100—101—102 — 103—104—105 — 106—107—108 — 110—112.)

As regards the objection of the banks to the merger of any part of the dearness allowance with the basic pay on the ground of the increase in the burden in regard to provident fund and gratuity, the tribunal has stated that this can be met by suitable provisions which may prevent increases the e-in except to the extent intended (actually, the tribunal has made suitable provisions in connection with issues relating to gratuity, provident fund and pension).

APPRENTICES EXCLUDED,

The scales of pay provided by the award are not applicable to apprentices. But they will be applicable to probationers.

The tribunal has rejected the demand of the employees that separate scales of pay should be fixed for those doing supervisory work. However, it has fixed special allowances for employees doing supervisory duties as was done by the Sastri tribunal after applying to them the scales of pay provided for the clerical staff. It has increased the special allowance for different classes of banks.

For supervisors, superintendents, sub-accountants, accountants and men in charge of departments the allowance has been increased in the case of A class banks from Rs 50 to Rs 65 in the case of B class banks from Rs 45 to Rs 60, and in the case of C class banks from Rs 40 to Rs 55.

SUPERVISORY ALLOWANCE

In deciding whether a workman is entitled to supervisory allowance, the designation of the "workman" would not be decisive, but the nature of duties and functions assigned to him would determine whether he would be entitled to a special allowance. The banks have been given discretion to give higher allowances or separate grades for supervisory staff if they so desire.

The tribunal has also enhanced to a certain extent the special allowances payable at present to the clerical staff. Special allowances have also been provided for certain new categories of employees such as compositors, pressmen in the State Bank of India, cyclostyle machine operators, hundi presenters etc.

For the purposes of fitting the employees in the new scales of pay which will come into operation on January 1 1962, the tribunal has classified the employees into two groups: (1) consisting of workmen who were drawing pay on 1-1-62, according to the scales of pay provided by the Sastri award, and (2) consisting of workmen who, on 1-1-62, were employed in banks not governed by the Sastri award and were not drawing pay on the footing of scales of pay provided in the Sastri award.

FIRST GROUP—FITMENT

So far as the persons falling in the first group are concerned, the tribunal has directed that the employees should be fitted in the new scales of pay from 1-1-62 on a stage-to-stage basis, that is, a workman who was drawing a basic pay at a particular stage in the time scales provided by the Sastri award will draw at the same stage in the new scale applicable to him under this award. Whatever may be the stage which he may have reached in the existing scale in the Sastri award as on 1-1-62 will be the stage in the new scale of pay in which he will be fitted.

For instance, a clerk employed in a "A" class bank in area I who was entitled on 1-1-62 to a basic pay of Rs 140, which is at the tenth stage of the existing scale of pay, will be entitled on 1-1-62 to a basic pay of Rs 204 which is at the tenth stage in the new scale of pay applicable to him. Increments in the new scale will generally fall due on the same date on which the increment would have fallen due in the existing scale.

SECOND GROUP—FITMENT

As regards employees falling under the second group, that is those who are not governed by the provisions of the Sastri award they will, on 1-1-62, be first fitted in the appropriate scales of pay provided under the Sastri award for the appropriate class and area. After the employees have been so fitted into the new scale of pay provided in this award on the basis of the provisions applicable to workmen in the first group. For the purpose of fitting these workmen into the scale of pay under the Sastri award, the tribunal has given directions similar to those given by the Sastri award with certain changes.

As a result of the adjustment as given in the award, if the total emoluments (basic pay, D.A., spe-

cial allowance and house rent allowance) fall short of the total emoluments as on 1-1-62, the difference shall be given by way of an additional allowance to be called the temporary adjustment allowance until such time the difference is fully absorbed by future increments in the new scale of pay.

For the purpose of making the requisite adjustment for making payments, the banks have been given a maximum period of five months' time from the date the award becomes enforceable.

"D" CLASS BECOMES "C" CLASS

Banks now classified as "D" class will become "C" class as from 1-1-62 except those put under the "excepted list."

With the abolition of Area IV, the tribunal says there would be a sudden rise in the burden which the banks in this area would have to bear under the award. To lighten the burden, the tribunal has recommended that the new scales should be implemented gradually. It considers that the relief it has provided will be an incentive for banks to open branches in Area IV within the Third Plan period.

A special concession has also been given to certain banks in the old "D" category. The increase in total emoluments to the employees of these banks will be paid on a gradual basis.

The final index figures as published in The Indian Labour Journal should be the basis for calculating the new D.A.

The tribunal has also recommended slightly higher house rent allowances.

Under the Sastri award in Calcutta and Bombay an employee whose pay does not exceed Rs 100 gets Rs 8 as house rent allowance. Under the present award an employee whose pay does not exceed Rs 150 per month in Bombay, Calcutta and Delhi will get Rs 12 as house rent allowance.

The subordinate staff will also get house rent allowance.

The tribunal has rejected the demand for children allowance, city compensatory and local allowances. However, in the case of employees of "A" class banks, it has recommended leave fare concession once in three years. Such employees should be paid the actual railway fare or steamer fare incurred by him for himself and members of his family up to a distance of 860 kilometres.

LIBERAL GRATUITY BENEFITS

The award recommends liberalised gratuity benefits.

Under the award, gratuity will become payable on the death of an employee while in the service of the bank—on an employee becoming physically or mentally in-

capable of further service or on his termination of service by the employer—on voluntary retirement or resignation after ten years of continuous service, the amount of gratuity in "A" class banks shall be equal to one month's pay for each year of service subject to a maximum of 15 months' pay. In the case of "B" and "C" class banks, including the banks in the excepted list, the maximum is 12 months' and nine months' pay respectively. In the case of workmen, who have put in over 30 years of service, an extra amount by way of additional gratuity at the rate of a half month's pay for each completed year of service beyond 30 years will become payable.

For the purpose of calculation of gratuity, basic pay for all classes of banks, except banks in excepted list, shall be deemed to be 80 per cent, of that provided under the award for the clerical staff and 75 per cent. for the subordinate staff.

PENSION SCHEME

Where there is a pension scheme in existence already, the employees will have to choose between gratuity under this award, and banks' pension scheme unless any bank desires to give the benefit of both to a workman.

The leave rules have been slightly liberalised, particularly in respect of sick leave and extraordinary leave.

There is no material change in the hours of work.

For the subordinate staff, the tribunal has directed that at least two sets of cotton uniform should be supplied by banks every year and one set of woollen uniform once in three years.

RETIREMENT AGE, 53

The age of retirement has been fixed at 58.

The tribunal has given option to the employees to retain the present terms and conditions, of service if they find the award is unfavourable, but the tribunal opines that the award is, by and large, very favourable to bank employees. It has directed that all employees in banks on the date when this award becomes enforceable will have the right to exercise option in respect of matters set out in each of the following groups within four months from the said date:—

(1) The scales of pay, D.A., the special allowance, the house rent allowance, the officiating allowance, the hill allowance, the fuel allowance, and the P.F., (2) leave rules, and (3) gratuity and pension. On failure to exercise the option in respect of any group of matters within the specified time, the employees would be deemed to have chosen the totality of the provisions contained in this award in connection with such groups of matters.

VIII

Viewpoint

How bankers looked back on 1961—some of them in anguish—and what they considered to be the matters most deserving of immediate action were clearly brought out in the Chairmen's speeches or statements. Although (as for example in the case of a differential for medium banks) action in certain instances has since been taken, the sampling that follows is a useful index of the different shades of banking views. Interest rates appeared to be the topic of urgent importance.

Dr. N. N. Law, Chairman of the United Bank of India Limited, suggested that there was an obsession that banks had in regard to interest rates, and this undue stress had already produced "complications." Firstly, a good part of the money with banks is masquerading as Time Deposits, whereas the facilities for Deposits are such as to make such draws are such as to make such Deposits really Demand in character. So, "there is an urgent need that the nomenclatures of different categories of Deposits should be precise and adhered to."

Secondly, "the unrealistic emphasis on rate of interest" caused the category of banks called medium to threaten to opt out of the inter-bank agreement, if they were not given a differential vis-a-vis the large banks. Of course, that impasse is over.

Thirdly, it has not, we think, so far been proved that an increase in the rate of interest has caused an improvement in Deposits. Dr. Law in this regard said: "There may be slay individual cases where growth of Deposits might have followed a rise in interest rate but if the position is thoroughly analysed, it will, I am sure, be found that such growth has been by way of diversion from other banks rather than by attracting

fresh Deposits from outside the banking system." Just as investible funds earmarked for gilt-edged will not be available for equities and vice versa, money that has to be banked will be banked, because there is no other effective competitor and funds get Deposited because of the need of a bank account and not because of the " lure " of interest rates. In such a scramble, "the net result is that unavoidable additional load is added to the already high operating costs of banks, with no corresponding benefit either to the banks themselves or to the economy at large."

Lastly, Dr. Law disproves the notion that small savings compete with banks, and that therefore there is the necessity for interest rates on Deposits to be increased: "The small savings scheme has a definite function, that is, mopping up the small savings from areas where banks do not or cannot operate; the scheme thus is to be regarded as complementary to the banking system and not as competitive."

Dr. Law overlooked one more reason why the trend toward higher interest rates on Deposits is to be deplored. The need for strengthening banks calls for considerable transfers to Reserves; and it is only if the profit margin is enlarged that the surplus available will be of a magnitude to allow of increased transfers. One method of augmenting earnings is to raise the minimum rate for Advances; another is to restrain expenditure especially as to interest paid on Deposits. Is it worth-while to have costs of production go up? For, surely that is what would happen if the minimum for Advances is to be raised from its present de facto level of 5 per cent. On the other hand by more precise definitions of time money and by pre-

venting further increases in Deposit rates the margin of profitability for banks can be assured.

Mr G. D. Birla, in his speech at the annual general meeting of the United Commercial Bank Ltd., also viewed with disfavour any sort of drift in the matter of interest rates on Deposits. He called categorically for "a stable structure of reasonable interest rates" and has added that "it would be undesirable to permit a material departure from the structure of interest rates and permit more and more banks to quote higher rates of interest."

But any upward revision of Deposit rates will be, let it be clearly recognised, self-defeating in two ways. On the one hand, the new Deposits so attracted will be analogous to the hot money that the UK for instance succeeds in acquiring every time the Bank of England rate is unconscionably raised. The loyalty, as it were of such funds is open to doubt, and in the event of a Deposits war being waged, the turncoat characteristics of the hot money would be immediately exposed. On the other hand the "spending" of earnings on Deposits will so eat into profits that the glamour of an increase in resources may often times get nullified by lower profits—and, may be, an enforced reduction in the rate of dividend.

If the Chairmen's speeches of some of the major Indian banks disclosed a stiffening of attitudes on their part in the matter of allowing a differential to medium banks in the rates of interest the latter may pay on Deposits the address of Dr P. V. Rajamannar, Chairman of the Indian Bank Ltd., made equally clear the determination of the medium banks to resile from the interbank agreement on Deposit rates if that became ne-

cessary. After giving the background to the whole question of Deposit rates, Dr Rajamannar pointed out that in the wake of the failure of two Scheduled banks in 1960, "confidence in banks other than the very big ones was somewhat shaken and the tempo of further accretions to Deposits slowed down in the case of small and medium banks." Though the state of stagnancy in Deposits has since ended, the Indian Bank's Chairman remarked that it was still found that Deposit growth with the small and medium institutions compared unfavourably with the experience of the large banks. Accordingly the medium banks had represented to the Indian Banks' Association that the inter-bank agreement on Deposit rates stood in need of revision in order that the capacity of medium banks to attract new Deposits could be improved.

In fact a Special Committee of the IBA was entrusted with the task of going into the question. But Dr Rajamannar apparently had good reason to apprehend that for some reason or other, the major banks might not be agreeable to any change. And so he warned that in the event of a decision to the effect that a differential in favour of medium banks was not necessary, "the responsibility for the abandonment of the agreement" would lie on the shoulders of the big banks.

The attitude of the medium banks, let it be recognised, was not altogether unreasonable. What, however, was arguable was whether the two tiers of differential would not so raise operating costs of medium and small banks as to cancel out any benefits that might accrue from an increase in Deposits.

The speech of Mr Lalitchandra C. D. Nanjee, in his capacity of Chairman

Banking Supplement

of the Devakaran Nanjee Banking Co. Ltd., was noteworthy for his definition of the role of and need for small banks in the Indian economy. His was not a plea for artificial respiration being given to sub-standard banks or non-viable units, which of course need to be "eliminated" through a process of amalgamation and merger. But it does not follow, Mr Nanjee added, that "small banks are necessarily weak and not playing their proper role."

In fact, if the banking habit is to spread not only from the point of view of the mobilisation of resources but also from the standpoint of "creating" new businessmen and small industrialists, then the small banks can discharge a duty that perhaps will be beyond the capacity of large ones. "In a country like India with diverse languages", Mr Nanjee stated, "it is only the personal approach which can build up local contacts; the larger the controlling unit of an organisation the greater the impersonal nature of its work."

The speech delivered by Mr Hari Singh, the Chairman of the Bank of Rajasthan, at the annual general meeting was a very able exposition of the role of the small (or regional) banks. Mr Hari Singh pointed out that there are about 1,400 townships which do not today possess any banking facilities, and naturally if branches are opened in areas which are already "banked" it will tantamount to waste of resources; but the Third Plan will need considerable mobilisation of funds, and not least by the banking system. Therefore, said Mr Hari Singh,

in order to get the maximum benefit, the branch expansion should be done in a planned way. After discussion with the banks, including the co-operative banks individually the Reserve Bank should allot to each bank running on sound lines some specified untapped places in its area of operation for opening branches within 5 years as convenient to it. Further, in the branches established at small places, there is generally a large number of accounts with small balances. The ratio of establishment and other expenses at such places is always high. Therefore, to encourage the banks to open branches at places in rural and semi-rural areas where there is no bank such branches should be exempted from the provisions of all labour laws and Bank Award and no other Bank should be allowed to open a branch for at least 5 years.

Mr T. A. Pai, Chairman of the Canara Industrial and Banking Syndicate referred to extension of banking service as an important problem to which the Banks had to address themselves with vigour and energy. He said that "unless banks make a positive effort in reaching larger sections of the people to make them bank-minded and cover a larger sector of the unorganised money market in this country, we would not have done our duty for the country." Opening of new branches is one important aspect of this problem and it has to be recognised that there is increasing awareness of its importance on the part of the banking system itself. Mr

Pai also testified to the anxiety of the banks to spread banking facilities and points as one important piece of evidence to the fringe benefits that are being offered by Banks. While the formation of the Deposits Insurance Corporation which started functioning from 1 January 1962 was a measure that restored public confidence in the stability of the banking system, in the matter of deposit creation, the Banks have to take into account the recent trend for surplus money in the hands of the people to flow into other sectors. The utility of the Deposit rates was to attract larger Deposits has been demonstrated by the increase in the cost of operation that the banking system as a whole has experienced. Along with maxima on Deposit rates, the need for minima on Advances rates is also being keenly felt. Mr Pai hailed the move for an agreement in the matter of interest rates of Advances as a step in the right direction. "A well-knit and well developed banking system must be able to render its services, whether in the matter of accepting of Deposits or making advances or collection of bills at fairly the same rates all over the country." Such uniformity of banking charges invariably implies the need for both a ceiling on interest rates on Deposits and a floor for the Advances rates.

"Unlike the first two Plan periods," said Mr Ramnath Goenka of the Punjab National Bank Ltd. "the Third might well find the Deposit resources of the banks lagging far behind the demand for Advances." In fact the early part of the Second Plan did constitute a period when Deposit resources were practically stagnant while the expansion in Advances assumed record proportions. Hence the considerable over-extension of the banking system in 1956-57. Thereafter for a variety of reasons the situation improved, though from time to time there were periods when banks were compelled to rely heavily upon borrowings from the central banking institution in order to meet the legitimate, industrial demand for bank finance.

The problem, as Mr Goenka put it was one of increasing "the Deposits not of this bank or that, but of the banking system as a whole." It follows that the PNB Chairman should consider differentials in interest rates to be in this context unavailing. Mr Goenka instead called upon the banks to agree "not only to pay the same rate of interest on similar Deposits but also agree upon a minimum rate". Now, of course, we have the fait accompli of a differential in favour of the newly classified medium banks: but that is no reason why we should not proceed with the second half of Mr Goenka's suggestion.

The strengthening of the banking system is of paramount importance: it is certain that the banking system will be increasingly expected to help the establishment and running of small industries. Here the risk potential is greater. To that extent inner reserves have to be augmented. As it is, the considerable growth of resources during the Second Plan has meant that the capital ratio of banks

has fallen to too low a level; and the Reserve Bank has quite correctly desired the banks, by convention rather than by compulsion, to transfer to reserves and/or raise fresh equity capital so that, as soon as may be possible, a capital ratio of 6 per cent is achieved.

So, both in order to improve the capital ratio and to guard against loss experienced in the new kind of services that banks will be called upon to offer, it is necessary that banks are assured of a good earning margin. And that means that maxima for Deposits are not enough; nor, for that matter, is it sufficient that minima are fixed for rates of Advances. (It may be noted that, with the Reserve Bank directive of autumn 1960 there is already in force some kind of floor for Advance rates: what now needs to be done is to raise the floor a bit).

More than these we need a rationalisation of banking charges which, as Mr Tulsidas Kilachand pointed out, have changed but little in the last two, three decades. If banks are to be expected to go in for a vigorous programme of branch expansion, they have automatically to be ready for some losses being experienced. And so, there is now a variety of banking services available free and gratis, for which properly the constituent should henceforth be required to pay. 1961 was a good year, Sir Homi Mody made plain in his introductory remarks at the annual general meeting of the Central Bank of India Ltd, of which he is Chairman, but the fact remains, he seemed to insinuate, that prospects are not altogether cheerful. Warnings of industrialists in the matter of prospective shortage of the "basic" industrial raw materials proved unavailing, and "conditions of acute scarcity were allowed to develop in respect of coal, power and transport". The trouble is, that Government now appears belatedly to have recognised the threat that such shortages will pose to the growth of production, and there is the possibility that "even the existing productive capacity in the country may be seriously affected."

With a good deal of justice Sir Homi accused Government of harbouring "a certain distrust and suspicion" of the Indian industrialist and this at a time when foreign experts are in great demand. It is dissipation of effort and energy to indulge in arguments about the roles of the private and public sectors; what is necessary is the recognition of the fact that they are really complementary, and that to the extent that the private sector "depends" upon the public sector it has both the duty and right to inform Government about the problems that it experiences or apprehends. The private sector has not, we may add, shirked from this duty; it has been the failing of Government that it has not paid adequate attention, possibly shrugging off any complaints as emanating from an "interested" source. We would emphasise that planning will yield best results if there is really co-operation between the private and public sectors—and not competition.

We may round off this feature with Mr Tulsidas Kilachand's views as expressed at the annual general meeting of the Indian Banks' Association of which he is Chairman.

The range of banking problems that he dealt with is breath-taking; and as commendable is the fact that it was a robust commonsense point of view to which he has given expression. By far the most heartening news he had was that the IBA was in the process of bringing into being a voluntary agreement on the minima of advance rates. Similarly, also, the IBA Chairman referred to the fact that many services were being rendered by the banking system free and gratis, while others were available "at very low charges, which have not been revised since pre-war times." Indian Finance has long pressed for requiring banks' constituents to pay for services, since an addition to banks' earning potential is vital if the banking system is to be strengthened. Unfortunately Mr Kilachand revealed that a scheme of service charges recently drawn up "could not be put into operation on account of the unwillingness of a few banks to accept it unless it was accepted by the State Bank of India, which could not see its way to do so." Mr Kilachand raised another important point. While undoubtedly in the last decade the banking system has shown welcome initiative, in opening about 1,300 new offices, it is necessary, Mr Kilachand correctly asserted, that the Indian banks "must establish more and more branches in the interior." There are, according to his reckoning, about 1,400 townships which are totally devoid of banking facilities. So, branch expansion has to be planned with a view to preventing dissipation of efforts. The IBA Chairman's suggestion was that "member banks of the Association should co-operate in drawing up a programme of healthy branch expansion, according to regional spheres of their operations." This stress on regionalisation is also the more desirable in as much as banks, by concentrating on areas of their own influence, will be enabled to imbue their operations with a more personal approach.

Mr Kilachand's remarks on banks and term financing were provocative. While the authorities would no doubt like the commercial banks to extend medium and long-term loans to foster industrial growth, the IBA Chairman doubted that the banking system had the capacity greatly to augment such form of accommodation. The resources of banks are already fully, if not over extended; term loans cannot be recalled, as short loans can be; and the fact that the bulk of Deposits are 'demand' in nature prevents the banking system from earmarking much by way of resources for term loans. He suggested the formation of a Consortium of Banks, which would be better fitted to provide such a facility. Mr Kilachand also reckoned that the proposed Consortium would be in a position to secure an allotment from Cooley Amendment funds (arising from Public Law 480 counterpart funds) so that at least the Indian companies with American associates could be helped to find medium-term industrial finance.

IX Analyses

Allahabad Bank

WHILE in common with other banks' results for 1961, the Allahabad Bank Limited reported an increase in both earnings and Deposits, what probably was unique was the smart rise it showed in its giltedged portfolio.

Deposit resources were up from Rs 51.95 crores to Rs 57.41 crores; about half of the rise was under the head of Fixed Deposits, higher by Rs 2.94 crores at Rs 37.05 crores. Savings Bank Deposits also improved satisfactorily by Rs 1.41 crores to Rs 8.13 crores, but Current Accounts, Contingency Accounts, etc., showed a smaller rise of Rs 1.11 crores to Rs 12.23 crores.

In another sense, too, the Allahabad Bank balance-sheet was unmatched—care had been taken to keep the accommodation extended to clients at a prudently low level, and in fact a small decline in Advances was shown in the accounts, from Rs 31.93 crores to Rs 31.63 crores. As a result, the Advances/Deposits ratio also went down from 61.5 per cent in the 1960-end balance-sheet to 55.1 per cent. No doubt during the busy season peaks the ratio will be higher, but the policy of the bank seems clearly enough to avoid any over-extended position.

Instead the additional available resources were utilised to augment the giltedged portfolio by Rs 4.92 crores to Rs 17.45 crores. Also, cash balances, including money at call and short notice, improved by Rs 77 lakhs to Rs 9.86 crores. Borrowings were shown slightly lower at Rs 8.50 lakhs against Rs 10.82 lakhs.

The income by interest and discount rose from Rs 2.53 crores to Rs 2.88 crores, while commission, exchange and brokerage also fetched more at Rs 43.78 lakhs against Rs 38.76 lakhs. The additional income was only partly used to meet higher expenditure: interest paid cost about Rs 19 lakhs more at Rs 1.54 crores, while salaries and allowances absorbed a little less than Rs 12 lakhs more at Rs 1.08 crores. The balance of profit (net of taxation) consequently improved from Rs 17.33 lakhs to Rs 22.49 lakhs—a rise over the previous year of 29.6 per cent.

There was a transfer of Rs 4.50 lakhs to Reserve against nil; the provision for bonus to staff raised to Rs 9.25 lakhs from Rs 8.32 lakhs; the ordinary dividend maintained, and so also the bonus on the ordi-

nary shares and the preference dividend. The carry forward was at Rs 6.10 lakhs against Rs 5.01 lakhs brought in.

In heeding the Reserve Bank's directive to strengthen the capital plus reserves ratio to Deposits, the bank last year made a final call of Rs 50 per share on the 29,000 contributory ordinary shares. By 26 February 1962 all but about Rs 10,000 was received. Thus, the issued and subscribed capital of the bank is now (though not in the 1961 balance-sheet) at Rs 60 lakhs, and Reserve Fund (inclusive of this year's transfer) at Rs 1.125 crores. The two together add up to Rs 1.725 crores as against Deposits at Rs 57.408 crores. The ratio thus works out to 3 per cent.

Bank of Baroda

The Bank of Baroda Ltd reported a spectacular increase in its profit for 1961; and the balance-sheet figures indicated how such enlarged earnings were possible.

Deposit resources rose by Rs 10.47 crores to Rs 95.46 crores—an increase of 12.3 per cent. The improvement was equally noticeable in Fixed Deposits (up by Rs 4.65 crores at Rs 53.12 crores) and in Savings Bank Deposits (higher by Rs 4.49 crores at Rs 19.71 crores) whereas Current Accounts showed a more moderate rise of Rs 1.33 crores to Rs 22.63 crores. It will be noted that higher-costing Deposits (Fixed and Savings Bank) account for 76.3 per cent of total Deposits.

Almost the whole of new accretions to Deposits went to augment the total of Advances by Rs 10.19 crores to Rs 70.37 crores. The credit ratio, placed at 70.8 per cent in the 1960 accounts, moved up to 73.7 per cent.

Cash balances, at Rs 8.20 crores, showed little variation from the previous year's figure of Rs 8.17 crores. Giltedged investments, however were up by Rs 1.13 crores at Rs 21.40 crores.

The profit and loss account showed that the income by interest and discount was up sharply by Rs 67 lakhs to Rs 4.22 crores, while commission, exchange and brokerage also fetched some Rs 15 lakhs more at Rs 88.45 lakhs.

A commendably tight rein was kept on expenditure, with interest paid rising only by Rs 22 lakhs to Rs 2.45 crores and salaries and allowances costing just under Rs 17 lakhs more at Rs 1.37 crores. The result was, as already noted, a very sharp increase of almost

exactly Rs 27 lakhs in the balance of profit (net of taxation) to Rs 67.63 lakhs, a rise that works out to an improvement of 66.3 per cent over the previous year.

The provision for bonus to staff was raised by Rs 3.10 lakhs to Rs 20.20 lakhs. The dividend, including the interim already paid, was at 17 per cent and absorbed Rs 25.05 lakhs as against a dividend at 15.66 per cent last year absorbing Rs 23.59 lakhs. There was a transfer of Rs 20 lakhs to Reserve, and the carry forward at Rs 3.03 lakhs was substantially higher than the Rs 1.09 lakhs brought in. The ratio of capital plus reserves to Deposits, in the 1961 accounts worked out to 3.47 per cent.

Bank of India

The Bank of India Ltd, which was the first of the 'large' Indian banks to publish accounts for 1961, could have been proud of a spectacular performance. Deposit resources improved by 14.2 per cent to Rs 125.02 crores. Of the increase of Rs 15.58 crores in Deposits, the lion's share was claimed by Fixed Deposits, higher by Rs 9.53 crores at Rs 60.79 crores. Savings Bank Deposits also moved up appreciably by 25.2 per cent (Rs 4.12 crores) to Rs 20.48 crores. The rise in Current Accounts, Contingency Accounts, etc., was a rather smaller one of Rs 1.93 crores to Rs 43.75 crores.

The increased resources enabled the Bank of India to extend a larger quantum of accommodation to constituents. The total of Advances rose from Rs 83.86 crores (representing 76.6 per cent of Deposits) to Rs 98.53 crores (or Rs 78.8 per cent). But it is important to note that the expansion in Loans, Cash-credits and Over-drafts (Rs 7.09 crores) was smaller than the rise in Bills Purchased and Discounted (Rs 7.57 crores). There were no borrowings as shown in the balance-sheet (as against a nominal figure in the 1960 accounts), and Cash Balances dropped slightly from Rs 12.09 crores to Rs 11.59 crores.

The profit and loss account revealed a substantial rise of Rs 70 lakhs to Rs 5.10 crores in the income by interest and discount; and we may take it that, but for provision for taxation being made from this item in respect of the 1961 accounts, the increase would have been more pronounced. Commission, exchange and brokerage also fetched more at Rs 88.98 lakhs against Rs 75.32 lakhs.

Interest paid was marked up by Rs 43 lakhs to Rs 2.60 crores, reflecting (a) the higher volume of Deposits; (b) the higher rates of interest paid from around March 1961; and (c) the possibility that the bank found it necessary to have recourse to central banking credit fairly substantially during the peak of the 1960-61 busy season. On the other hand, the rise in salaries and allowances was a more modest one of Rs 18 lakhs to Rs 1.61 crores. Fair-sized increases were also noticeable under two other heads of expenditure. Stationery, printing and advertisement etc, have cost Rs 4.71 lakhs more, and this may be attributed to the general trend of banks to wage campaigns for attracting new Deposits. Secondly, Other Expenditure moved up by over Rs 10 lakhs to Rs 27.80 lakhs, and it is just barely possible that a transfer to inner reserve was concealed in this wise. Development Rebate Reserve got Rs 3 lakhs against nil, and the balance of profit was spectacularly higher at Rs 110.32 lakhs against Rs 78.37 lakhs (net of Rs 25 lakhs provided for tax) in 1960. The rise in profit works out to 40.8 per cent.

Appropriations from the 1961 profits were generally higher than was the case in 1960; though it is necessary to add that the 1961 balance of profit was net of taxation, whereas a sum of Rs 25 lakhs was provided for the purpose out of profits in 1960. The transfer to Reserve was Rs 15 lakhs against nil, and the provision for bonus to staff stepped up by Rs 1 lakh to Rs 19 lakhs. The dividend, comprising both the interim paid and the final proposed was maintained at 20 per cent, absorbing Rs 60 lakhs. The carry forward was sharply higher at Rs 29.16 lakhs against Rs 12.85 lakhs brought in.

There are two more points to observe. Firstly, the ratio of reserves plus capital to Deposits works out to 5.0 per cent, the corresponding figure for the 1960 balance-sheet being 5.6 per cent. Secondly, the new provisions for audit raise the cost in this behalf (for Branch Audit Fees to Statutory Auditors).

Canara Bank

In its 56th Annual Report, Canara Bank Ltd reported an appreciable increase in both Deposit resources and Advances; and despite an increase in the cost of interest paid as well as in the salaries and allowances payable to the staff of the four banks taken over

during the year under Section 45 of the Banking Companies Act, Canara Bank's balance of profit rose more than proportionately.

Deposits went up by Rs 6.74 crores to Rs 37.56 crores; the bulk of the increase was shared by Fixed Deposits (up by Rs 3.27 crores to Rs 17.87 crores) and by Savings Bank Deposits (higher by Rs 2.07 crores at Rs 7.71 crores.) Current accounts were better, also, by the smaller amount of Rs 1.40 crores at Rs 11.97 crores.

The increase in resources was used almost equally in augmenting the gilt-edged portfolio and in extending greater accommodation to constituents. Investments in Government securities were higher by Rs 4.03 crores at Rs 14.00 crores, while the total of Advances rose by Rs 3.76 crores to Rs 20.39 crores. The credit ratio went up fractionally from just under 54 per cent to 54.3 per cent. Cash balances, including money-at-call and short notice, receded slightly from Rs 5.41 crores to Rs 5.14 crores.

The income by interest and discount improved by about Rs 13 lakhs to Rs 1.48 crores. Similarly, commission, exchange and brokerage earned about Rs 3½ lakhs more at Rs 36.23 lakhs. Roughly Rs 13 lakhs of the enlarged earnings were absorbed by a rise to Rs 85.49 lakhs in the charge of interest paid, and salaries and allowances cost Rs 10.53 lakhs more at Rs 60.74 lakhs. The balance of profit appeared to be only nominally higher at Rs 21.24 lakhs against Rs 20.30 lakhs, but the increase was really an impressive one in as much as the 1961 profit was net of taxation whereas the 1960 profit was subject to a tax provision of Rs 7.65 lakhs.

Bonus to staff got Rs 1.40 lakhs more at Rs 4.50 lakhs. Over and above a transfer of Rs 6.70 lakhs to Reserve Fund (against Rs 3.50 lakhs to inner reserve in 1960), a sum of Rs 4.50 lakhs was, in respect of the 1961 appropriations, transferred to contingencies. The dividend on equity shares, maintained at 15 per cent, absorbed Rs 5.40 lakhs. The carry forward was slightly higher than the amount brought in.

The ratio of capital plus reserves to Deposits is lower at 3.01 per cent against 3.45 per cent, but with the issue of Rs 25 lakhs of equity capital last year, the ratio will have shown an improvement.

Attention may be drawn to the fact that Canara Bank's credit ratio is probably the lowest for any Scheduled Bank—excepting, of course, the State Bank.

Canara Banking Corporation

Yet another bank to report a sizable rise in the profit for 1961 was The Canara Banking Corporation Ltd; and the balance-sheet for the latest year was moreover for the fact that Deposits

have crossed the Rs 10 crore mark.

Deposit and other accounts were higher by Rs 1.40 crores at Rs 10.12 crores, and by far the bulk of the increase was accounted for by the rise of Rs 0.81 crore to Rs 6.70 crores in Fixed and other Time Deposits, though it is necessary to add that Savings Bank Deposits (up by Rs 33 lakhs at Rs 1.84 crores) and Current Accounts (higher by Rs 35 lakhs at Rs 1.58 crores) also registered an improvement.

Almost the whole of the new accruals to Deposits was utilised to expand the total of Advances by Rs 1.27 crores to Rs 6.15 crores. As a result the credit ratio moved up from 56.0 per cent to 60.8 per cent—but still, it will be noted, a very satisfactorily low percentage.

There was a small increase in the gilt-edged portfolio from Rs 3.33 crores to Rs 3.85 crores, and a fractional decline in cash balances including money at call and short notice, from Rs 1.07 crores to Rs 1.05 crores. Borrowings were, as a result some Rs 3 lakhs odd higher at Rs 12.77 lakhs.

The profit and loss account disclosed an increase of Rs 5.31 lakhs to Rs 53.94 lakhs in the income by interest and discount and a rise of Rs 2.53 lakhs to Rs 13.62 lakhs in the amount brought in by commission, exchange and brokerage. Interest paid cost only Rs 1.82 lakhs more at Rs 32.71 lakhs, but the rise in salaries and allowances was a larger one of Rs 3.44 lakhs to Rs 18.31 lakhs. Nevertheless, the control on expenditure resulted in an improvement of Rs 1.48 lakhs to Rs 8.22 lakhs in the balance of profit subject to tax.

The transfer to Reserve Fund was stepped up from Rs 1.35 lakhs to Rs 1.65 lakhs, while tax claimed Rs 1.10 lakhs more at Rs 3.90 lakhs. The dividends were maintained, the distribution on equity shares being at 15 per cent. The carry forward was somewhat higher than the amount brought in.

The Reserve Fund and other Reserve are placed at Rs 21 lakhs against the issued and paid-up capital of Rs 25 lakhs. The capital plus reserves ratio to Deposits, in the 1961 balance-sheet, works out to 4.54 per cent.

Syndicate Bank

The Canara Industrial and Banking Syndicate Limited had a year of eminently successful working in 1961.

Deposits and other accounts marked a rise of Rs 5.76 crores to Rs 24.63 crores. Much the bulk of the increase was under the head of Fixed Deposits, which moved up by Rs 4.39 crores to Rs 16.98 crores. Savings Bank Deposits improved from Rs 3.57 crores to Rs 4.27 crores, while Current Accounts, etc, also showed a rise at Rs 3.39 crores against Rs 2.71 crores.

The improvement in resources enabled Canara Industrial to expand its accommodation to consti-

tuents by Rs 3.21 crores to Rs 15.45 crores. This rise was almost wholly in respect of loans, cash credits and overdrafts, which were higher by Rs 3.03 crores at Rs 13.11 crores.

Canara Industrial also took the opportunity to augment its gilt-edged portfolio by Rs 2.73 crores to Rs 8.84 crores. Cash balances, including money at call and short notice, also marked a rise from Rs 1.72 crores to Rs 1.96 crores.

The profit and loss account showed that the income by interest and discount went up from Rs 1.21 crores to Rs 1.42 crores. There was also a small increase in the earnings by way of commission, exchange and brokerage, which brought in Rs 8.65 lakhs against Rs 7.46 lakhs. While expenditure rose, no doubt due to enlarged activity, the increase was kept within bounds. Interest paid on Deposits Borrowings, etc, absorbed Rs 8.40 lakhs more at Rs 60.78 lakhs; and salaries and allowances cost Rs 6.90 lakhs more at Rs 46.84 lakhs. It is interesting to note that Canara Industrial is probably the only bank whose cost of audit was lower in 1961 than in 1960. The result is that the balance of profit, subject to taxation, increased from Rs 25.23 lakhs to Rs 32.10 lakhs.

The higher profit naturally entailed an increase in the provision for taxes from Rs 9.63 lakhs to Rs 12.25 lakhs. The provision for bonus to staff was also higher at Rs 2.25 lakhs against Rs 1.75 lakhs. Thirdly, the transfer to Reserve was higher by Rs 3.50 lakhs at Rs 11.00 lakhs.

The dividend on the equity shares was at 20 per cent, including a bonus at 10 per cent. The carry forward at Rs 0.35 lakh compares with the amount brought in of Rs 0.28 lakh.

Canara Industrial was one of the few banks which in 1961 reported a reduction in the credit ratio, despite a fair increase in the Advances portfolio. The ratio of Advances to Deposits came down from 64.8 per cent to 62.7 per cent.

A record increase in the balance of profit was shown in the Central Bank of India Ltd's 51st annual report.

Deposits of the bank rose by Rs 20.67 crores to Rs 220.19 crores, and this gave Central Bank the distinction of being the second institution to pierce the Rs 200 crore mark in Deposits. Fixed Deposits and Cash Certificates were higher by Rs 13.19 crores at Rs 114.52 crores; Savings Bank Deposits up by Rs 2.56 crores at Rs 38.13 crores and Current Accounts, etc, improved by Rs 4.88 crores to Rs 67.55 crores. Just about half of the fresh accretions was utilised to expand the Advances portfolio by Rs 10.21 crores to Rs 161.00 crores. Investments in gilt-edged were shown to have gone up by almost exactly Rs 2 crores to Rs 49.10 crores with market value at Rs 49.25 crores, exceeding book value.

Cash balances at Rs 23.91 crores were added to by Rs 1.21 crores. Another important use for the new

Deposits was a reduction in borrowings from Rs 13.48 crores in the 1960 balance-sheet to Rs 3.24 crores.

The Rs 10 crore mark was pierced in regard to income by interest and discount, which, for 1961, was placed Rs 1.76 crores higher at Rs 10.16 crores. Commission, exchange and brokerage brought in Rs 1.96 crores against Rs 1.68 crores in the previous year.

There was a considerable increase in the cost of interest paid on Deposits and Borrowings, an item which went up from Rs 4.34 crores to Rs 5.26 crores; and, similarly, salaries and allowances absorbed Rs 4.02 crores as compared with Rs 3.66 crores in 1960. Even so, the earnings of the Central Bank were so considerable, that the balance of profit (net of taxation) took a great leap forward from Rs 1.33 crores to Rs 1.83 crores. In fact, the 1961 profit should be deemed Rs 10 lakhs higher still, in as much as such an amount, absorbed by additional Golden Jubilee Bonus, is an extra-ordinary expenditure.

The interim dividend at Rs 2.40 per share absorbed Rs 30.24 lakhs; the final at Rs 2.60 per share (and making up a dividend of 14 per cent for the year) needed Rs 32.76 lakhs. The transfer to staff Gratuity Fund was maintained at Rs 10 lakhs, but Contingency Fund got nil against Rs 8 lakhs. Bonus to staff got Rs 9 lakhs more at Rs 60 lakhs and there was a massive transfer of Rs 45 lakhs to Reserve Fund. The carry forward at Rs 23.37 lakhs was rather higher than the amount brought in of Rs 18.61 lakhs.

And now the ratios: Advances as a percentage of Deposits moved down from 75.6 in the 1960 balance-sheet to 73.1. The ratio of Reserves plus capital to Deposits moved down slightly from 3.4 per cent to 3.3 per cent in the 1961 balance-sheet.

Altogether, it was a magnificent performance by the Central Bank in 1961.

Dena Bank

The Devkaran Nanjee Banking Co Ltd, the first of the "medium" banks to report published a set of accounts which was difficult to equal or surpass. Whether in respect of Deposits or earnings, transfer to reserve or dividend, Dena Bank fared extremely well.

Deposit resources rose by Rs 7.55 crores (or 21.1 per cent) to Rs 43.36 crores. The increase occurred mainly under the head of Fixed Deposits, which were marked up by Rs 3.79 crores to Rs 19.77 crores. Savings Bank Deposits also showed an appreciable rise of just over Rs 2 crores to Rs 10.71 crores; and a smaller share was ascribable to Current Accounts, Contingency Accounts, etc, marked up by Rs 1.76 crores to Rs 12.88 crores. Accordingly, Dena Bank was able to increase the total of Advances by Rs 5.71 crores to Rs 30.06 crores; the Advances/Deposits

Banking Supplement

ratio thereby rising slightly from 68.0 per cent to 69.3 per cent. Gilt-edged investments showed small change at Rs 11.99 crores against Rs 11.57 crores. Cash Balances were practically unaltered at Rs 4.78 crores, but borrowings were lower at Rs 2.19 crores against Rs 4 crores.

There was an innovation in the balance-sheet to which attention may be drawn. Borrowings from the Refinance Corporation, at Rs 65.25 lakhs, were shown as a contra item, though not explicitly so in that there was not a similar notation on the other side of the ledger under the head of Advances. (Incidentally, the State Bank in this respect showed borrowings from the RFC as a true contra item).

The income by interest and discount, as a result of the higher volume of business, was higher by Rs 19.56 lakhs at Rs 1.83 crores, even as commission exchange and brokerage brought in about Rs 4 lakhs more at Rs 31.44 lakhs. The rise in interest paid was a moderate one of Rs 5.09 lakhs to Rs 98.14 lakhs, but the increase was sharper at Rs 9.29 lakhs to Rs 65.13 lakhs in the case of salaries and allowances. There was a breath-taking rise in the profit from Rs 14.55 lakhs (net of Rs 9 lakhs provided in the 1960 accounts for tax) to Rs 26.15 lakhs—a rise of 79.7 per cent. Auditors' Fees, as expected, rose.

As already noted, the 1961 profit was net of tax, as against an appropriation of Rs 9 lakhs in 1960. The transfer to Reserve was almost doubled from Rs 8 lakhs to Rs 15 lakhs. The dividend was raised from 8.76 per cent to 11 per cent, the carry forward being much higher at Rs 13.51 lakhs against Rs 7.86 lakhs.

With the transfer, Reserve Fund and Other Reserves are placed at Rs 75.16 lakhs as compared with the subscribed capital of Rs 50 lakhs. The ratio of capital plus Reserves to Deposits was placed at 3.1 per cent in the 1960 balance-sheet, and has now declined to 2.9 per cent.

Panjab National Bank

The Punjab National Bank Limited had an exceedingly satisfactory year in 1961 as witness the latest accounts. Deposit resources rose considerably by Rs 11.20 crores to Rs 150.68 crores. But the bank preferred to adopt a cautious policy in regard to Advances, choosing instead to improve liquidity. In fact, the total of Advances was nominally lower at Rs 93.22 crores against Rs 93.53 crores in the 1960 balance-sheet. Accordingly the credit ratio came down to 61.0 per cent from 63.5 per cent. But borrowings, which were at Rs 4.74

crores in the 1960 balance-sheet, stood reduced at Rs 0.33 crore; and cash balances, including money at call and short notice, nearly doubled from Rs 12.75 crores to Rs 23.69 crores. Investments in gilt-edged rose slightly from Rs 40.74 crores to Rs 41.56 crores.

Whereas Other Receipts had contributed Rs 8.49 lakhs to the 1960 gross income of Rs 8.71 crores, the latest profit and loss account showed increases in the main heads of revenue so that the gross income rose to Rs 9.16 crores. Commission exchange and brokerage brought in about Rs 15 lakhs more at Rs 1.63 crores. The figures relating to income by interest and discount were not strictly comparable in as much as the 1961 figure of Rs 7.32 crores was presumably arrived at after providing for taxes, whereas the corresponding amount in 1960 of Rs 6.97 crores was not net of tax.

Expenditure was kept well in check. Interest paid was higher only by Rs 29 lakhs at Rs 3.71 crores, and salaries and allowances absorbed about Rs 22 lakhs more at Rs 3.27 crores. The result was that the balance of profit net of tax for 1961 jumped up sharply to Rs 1.18 crores from Rs 65 lakhs (after tax provision of Rs 53 lakhs) in 1960.

The appropriation account was noteworthy for the spectacular transfer of Rs 45 lakhs to Reserve as against Rs 11 lakhs from 1960 profits. Bonus to staff absorbed Rs 10½ lakhs more at Rs 37.50 lakhs. The provision for charity was unchanged at Rs 1 lakh and the dividend at 20 per cent, there being a pro rata distribution on the rights shares issued during 1961. All in all, last year was a superb one for Punjab National.

State Bank

The State Bank was perhaps the only major institution which disclosed in its 1961 accounts a decline in its Deposit resources. But the fact should be borne in mind that the State Bank was under commitment to repay Public Law 480 counterpart fund Deposits at the rate of Rs 12 crores a month for a year from 1 July 1960. The loss in Deposits under this head would thus have worked out to Rs 72 crores during 1961; this in fact was reflected in the fall of Rs 61.51 crores to Rs 251.30 crores in Fixed Deposits, and the implication was that exclusive of PL 480 transactions, the Fixed Deposits of the State Bank rose by about Rs 10½ crores. The total of Deposits shrank by Rs 44.99 crores to Rs 531.33 crores; and again excluding PL 480 moneys, Deposit resources of the State Bank were seen to have risen by Rs 27 crores. (Incidentally, we are at a loss to comprehend why, in the report of the Central Board of Directors,

the magnitude of such increase was placed at Rs 37.7 crores).

More or less corresponding to the amount involved in repayment of PL 480 funds, gilt-edged investments were placed lower by Rs 69.87 crores at Rs 215.19 crores. The disinvestment thus almost fully offset the loss of PL 480 Deposits. The improvement in Deposits from the public therefore was more than sufficient to "finance" the expansion of Rs 23.07 crores (a rise of 9.9 per cent) to Rs 255.32 crores in the total of Advances. Cash Balances (including money at call and short notice) receded slightly from Rs 69.66 crores to Rs 69.32 crores. As a result of the fall in Deposits, the credit ratio moved up from 40.3 per cent to 48.1 per cent.

In the end result, borrowings were shown lower at Rs 2.05 crores against Rs 9.96 crores. It is interesting to find a note under the head pointing out that Rs 17 lakhs of the borrowings were from the Refinance Corporation "as per contra"; and under Advances we find the contra notation that, against Rs 3.77 crores of term Advances, refinance was obtained from the RFC as to Rs 17 lakhs.

The profit and loss account also reflected the loss of counterpart funds. On the one hand, reduction in the gilt-edged portfolio was responsible for a fall in income, and hence for the decline of Rs 75 lakhs to Rs 14.12 crores in the income by interest and discount. Expansion in banking business was attested to by the rise of Rs 1.11 crores to Rs 5.40 crores in the income from commission, exchange and brokerage.

On the other hand, the loss of Deposits also reduced the cost of interest paid, substantially lower at Rs 6.89 crores against Rs 8.05 crores. But salaries and allowances cost rather more at Rs 7.93 crores against Rs 7.32 crores. Auditors' Fees were higher in conformity with the generality of banking experience for that year. The net result was that the balance of profit jumped up sharply by Rs 53.4 lakhs to Rs 2.71 crores—an improvement over 1960 of 24.5 per cent.

The transfer to Reserve Fund was tripled to Rs 75 lakhs; and Reserve Fund and other Reserves are now placed at Rs 8.20 crores against the capital of Rs 5.62 crores. The ratio of capital plus reserves to Deposits worked out to 2.6 per cent as against the corresponding figure of 2.3 per cent in the 1960 balance-sheet. The transfer to pension funds was nominally higher at Rs 7.42 lakhs; bonus to staff got Rs 3 lakhs more at Rs 45 lakhs; the transfer to Staff Welfare fund was doubled to Rs 10 lakhs; and the transfer to Staff Co-operative Housing fund was maintained at Rs 10 lakhs. The dividend rate, also nominally higher, involved distribution of Rs 1.29 crores against Rs 1.23

crores. The carry forward at Rs 50.41 lakhs was about Rs 6 lakhs lower than the amount brought in.

The impression gained from the 1961 balance-sheet of the State Bank of India was that earning potential had been increased rather than reduced by the repayment of counterpart funds. The contra investment in gilt-edged, it is true, was a windfall profit. But the margin thereon appears to have been rather smaller than the State Bank can earn by lending its available resources to constituents in the form of Advances; the margin between Deposit rates and Advance rates is, it is certain, a more profitable one.

The Associated Banks

A study of the balance-sheets of the eight subsidiary banks of the State Bank is a useful exercise in that it shows, in common with the parent institution itself, generally a tendency to keep the credit down and the investments portfolio high. Secondly, the resources commanded by the subsidiary banks in the aggregate amount to a significantly large sum, and it would appear that as Deposit growth continues to be experienced, the eight subsidiary banks will lay equal importance on support of Government's borrowing programme and on the extension of credit to trade and industry.

Deposit resources of the eight banks amount to Rs 127.23 crores, and the State Bank of Hyderabad tops the list in this regard with Rs 24.29 crores though ranking only second in the number of offices. Even the smallest—the State Bank of Indore—commands Deposits exceeding the Rs 10 crore mark at Rs 10.86 crores. Deposit growth of the eight subsidiaries during 1961 just slightly fell short of Rs 24 crores. Only two of the banks report Advances exceeding Rs 10 crores, Hyderabad and Mysore. Nevertheless by reason of adequate Deposits the credit ratio in both cases is not far higher than the average for the eight of 53.5 per cent. Only one bank, Bikaner, has a credit ratio exceeding 60 per cent at 62.1 per cent. There are, it is interesting to note, two institutions—Patiala and Travancore—whose Advances/Deposits ratios are rather lower than 50 per cent. In the case of Patiala, in fact, it is at an incredible 34.7 per cent. The total Advances of the eight subsidiaries are placed at Rs 68.03 crores.

As already noted the investments (which include holdings other than securities, but only nominally so) are rather higher than the ratios obtaining for the Scheduled Banks taken together. Aggregate investments are placed at Rs 50.01 crores, accounting for 39.3 per cent of

STATE BANK OF INDIA AND SUBSIDIARY BANKS OF STATE BANK AS ON 31st DECEMBER, 1961.

(In Rs lakhs)

	Paid-up Capital	Reserves	Total Deposits	Advances	—As Percentage of Deposits—	Investments	—As Percentage of Deposits—	Profit	Subsidy from State Bank	—As Percentage of Profit—
State Bank of India	14.75	15,78.63	9,80.37	62.1	5,47.83	34.7	7.10	1.51	21.3	
Hyderabad	33.00	24,29.39	13,99.88	57.6	8,70.02	35.8	12.19	1.61	13.2

Total	4,95.00	2,39.75	127,23.26	68,02.88	53.5	50,01.15	39.3	71.09	9.58	13.5

Deposits. As was to be expected the highest investments/Deposits ratio—62.0 per cent—is reported by Patiala, while the lowest at 28.2 per cent is claimed by Indore.

Outstanding profits have been earned by Mysore at Rs 20.67 lakhs, and a not very close second is Hyderabad with Rs 12.19 lakhs. What makes the Mysore achievement even more remarkable is that the subsidy it has received from the State Bank, as a proportion of total profits, is lowest at 6.0 per cent as compared with the average of 13.5 per cent for the eight banks. The profit of the eight banks taken together comes to 71.09 lakhs.

In terms of the relevant act each of the banks has received subsidies from the State Bank. The largest amount went to Travancore at Rs 2.19 lakhs and Patiala is at the other end with Rs 0.59 lakh. The total received as subsidy by the eight banks is placed at Rs 9.58 lakhs.

The subsidy expressed as a ratio of the profit is highest in the case of Jaipur at 29.5 per cent, and close behind is Travancore's ratio of 26.2 per cent; one other bank, Bikaner, also has a ratio exceeding 20 per cent in being placed at 21.3 per cent. The lowest, as already noted, is Mysore with 6.0 per cent. Another single-figure is Indore whose subsidy worked out to 7.3 per cent of its profit.

Only three of the banks,—Mysore, Saurashtra and Travancore—have paid-up capital placed at Rs 1 crore, and the aggregate paid-up capital of the eight banks is Rs 4.95 crores. None of the eight has reserves equivalent to the paid-up capital. The largest reserves are carried by Mysore with Rs 60 lakhs and Saurashtra just slightly lower at Rs 57.59 lakhs. The aggregate reserves of subsidiaries total Rs 2.40 crores.

During the year Travancore took over the Travancore Forward Bank Ltd, the Kottayam Orient Bank Ltd and the Bank of New India Ltd under Section 45(7) of the Banking Companies Act of 1949. All the subsidiaries save Travancore transacted Government

business as agents of the State Bank, the exception being due to some delay in the handing over of Government business by the Kerala Government. Forty-eight new branches were opened in 1961 by the eight subsidiaries, and one was closed. With the amalgamation referred to there was an acquisition of 112 branches of the merged banks, of which 49 were closed. Thus, as at the end of 1961, the subsidiaries had a total of 443 branches (a rise of 110 over the year) and 47 pay offices (or one less than as at the end of 1960).

The role envisaged for the subsidiaries and the progress achieved so far in this regard can be gathered from the following extract from the Report of the Central Board of Directors of the State Bank for 1961: "The subsidiary banks made further progress in the financing of small scale industries and co-operative institutions. As at the end of December 1961, the number of small scale units assisted, the credit limits sanctioned and the amount outstanding were 463, Rs 339.7 lakhs and Rs 145.9 lakhs as compared to 384, Rs 266.7 lakhs and Rs 113.6 lakhs respectively as at the end of December 1960. Similarly, the total limits sanctioned to co-operative institutions as well as the relative outstandings rose from Rs 345.0 lakhs to Rs 381.5 lakhs and from Rs 159.5 lakhs to Rs 162.3 lakhs respectively. Limits sanctioned against warehouse receipts increased from Rs 79.3 lakhs in December 1960 to Rs 272.8 lakhs in December 1961, outstandings going up from Rs 45.1 lakhs to Rs 103.3 lakhs."

United Bank

The United Bank of India Limited is in the unique position of having capital plus reserves ratio to Deposits which exceeds the target of 6 per cent that has been set by the Reserve Bank for the banking system. That, nevertheless, a fair-sized transfer to Reserve was made from 1961 profits would indicate that the growth in the bank's Deposits is at a rate as will necessitate such transfers to Re-

serve in the future. In fact, the relevant ratio dropped during 1961.

UBI's Deposits rose by Rs 7.13 crores (or 13.8 per cent) to Rs 58.37 crores. The rise was most marked under the head of Fixed Deposits and Cash Certificates, which were higher by Rs 3.85 crores at Rs 19.04 crores, while Savings Bank Deposits also rose to Rs 20.53 crores. The improvement in Current Accounts, Contingency Accounts, etc., was a more modest one of Rs 0.68 crore to Rs 19.21 crores.

The bulk of the increased resources was naturally utilised to enlarge accommodation to constituents. The total of Advances rose by Rs 5.99 crores to Rs 37.61 crores. The Advance-Deposits ratio was placed in the 1961 balance-sheet at 63.9 per cent as compared with the relative figure of 61.1 per cent in the 1960 balance-sheet. Not quite typical of banks' experience in 1961, UBI enlarged its gilt-edged portfolio by Rs 1.46 crores to Rs 15.05 crores. The ratio of gilt-edged investments to Deposits fell slightly from 26.3 per cent to 25.6 per cent in 1961.

Borrowings as at the 1961 balance-sheet were at the nominal figure of Rs 6.79 lakhs against Rs 18.01 lakhs. As a result, cash balances, including money at call and short notice, went up from Rs 7.04 crores to Rs 8.10 crores.

The income by interest and discount rose from Rs 2.16 crores to Rs 2.38 crores, while a smaller rise of Rs 4.17 lakhs to Rs 43.19 lakhs was registered in the income from commission, exchange and brokerage. Notwithstanding the much greater increase in higher-costing Deposits, the rise in Interest Paid was a small one of just under Rs 10 lakhs to Rs 89.09 lakhs; and salaries and allowances cost Rs 8.58 lakhs more at Rs 1.44 crores. The net result was a smart rise of Rs 5.87 lakhs—or 40.1 per cent over the previous year—to Rs 20.52 lakhs in the balance of profit net of taxation.

The transfer to Reserve was Rs 4.11 lakhs, and the "capital" ratio to Deposits worked out to 6.1 per cent as compared with 8.9 per cent in the 1960 balance-sheet. In

accord with the much better results the dividend was raised from 4.3 per cent to 6 per cent.

United Commercial Bank

The accounts of the United Commercial Bank Limited for 1961 once again provide irrefutable testimony to the swift progress and eminence the institution can claim to.

The Deposit resources of United Commercial rose by nearly Rs 10 crores from Rs 88.94 crores to Rs 98.90 crores; the Rs 100 crore mark, which has proved to be elusive since 1959, will certainly be achieved in the 1962 balance-sheet. Rather more than half of the rise in Deposits was under the head of Fixed Deposits higher by Rs 5.71 crores at Rs 54.95 crores. Savings Bank Deposits registered an increase of Rs 1.64 crores to Rs 10.89 crores. There was an extremely satisfying rise of Rs 2.62 crores in Current Account, etc., in as much as Demand Liabilities of the banking system have in recent years tended to be stagnant.

Restraint was observed in the utilisation of the additional resources: the total of Advances was higher only by Rs 2.83 crores at Rs 64.21 crores; and, accordingly, the credit ratio moved down from 69.0 per cent to 64.9 per cent.

Thus, the United Commercial added the respectable sum of Rs 2.05 crores to its gilt-edged portfolio, raising it to Rs 32.98 crores; and considerably reduced its borrowings from Rs 9.32 crores to Rs 2.69 crores. In the event cash balances were somewhat run down from Rs 9.57 crores to Rs 8.66 crores.

According to the profit and loss account, the income by interest and discount rose modestly by Rs 0.31 crore to Rs 4.10 crores while commission, exchange and brokerage fetched a shade more at Rs 1.424 crores against Rs 1.417 crores. The charge of interest paid on Deposits and borrowings went up by a little over Rs 8 lakhs to Rs 2.61 crores while salaries and allowances cost Rs 15½ lakhs more at Rs 1.56 crores. The balance of profit net of taxation was in the result improved by Rs 5.18 lakhs to Rs 72.61 lakhs.

The transfer to Reserve was maintained at a massive Rs 30 lakhs, raising the Reserve Fund to Rs 2.35 crores. Bonus to staff got Rs 1 lakhs more at Rs 14 lakhs. There was a provision of Rs 4 lakhs for Gratuity Trust Fund against nil in 1960. The dividend unaltered at 12 per cent absorbed Rs 24 lakhs.

The "capital" ratio (that is, capital plus reserves as a percentage of Deposits) receded slightly from 4.4 per cent in the 1960 balance-sheet to 4.3 per cent in the latest accounts.
