(a) After transferring Rs 20,838 from General Reserve No. 1.
 (b) After transferring Rs 80,000 from provision for contingencies.
 (c) It is proposed to capitalise Rs 2,125,300 from General Reserve and issue Bonus shares.
 (d) After transferring Rs 50,000 from General Reserve.
 (e) After transferring Rs 151,000 from General Reserve.
 (f) After transferring Rs 80,100 from Dividend Equalisation Reserve.
 (g) After writing back Rs 645,151 being excess provision in previous years.
 (h) After transferring Rs 500,000 from Rehabilitation Reserve; Rs 281,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.
 (i) After transferring Rs 250,491 from General Reserve.
 (j) After transferring Rs 250,000 from Dividend Equalisation Reserve.
 (k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.
 (m) After transferring Rs 119,826 from Development Rebate Reserve.
 (n) After transferring Rs 120,000 from Dividend Reserve.
 (o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.
 (p) After transferring Rs 1,137,451 from Contingency Reserve.
 (q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.
 (r) After transferring Rs 580,170 from General Reserve and Rs 47,990 from Investment Reserve.
 (s) After transferring Rs 1,207,838 from General Reserve.
 (t) After writing back Rs 289,747 being provisions made in previous year.
 (u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 320,000 from General Reserve No. 1.
 (w) After transferring Rs 98,240 from Dividend Equalisation Reserve.
 (x) After transferring Rs 113,089 from General Reserve.
 (y) After writing back Rs 65,163 being excess provision in previous years.
 (z) After transferring Rs 450,000 from Dividend Equalisation Reserve.
 (a1) After transferring Rs 1,075,000 from General Reserve No. 1.
 (a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.
 (a3) After transferring Rs 300,000 from General Reserve.
 (a4) After transferring Rs 308,000 from General Reserve.
 (a5) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 86,529.
 (a6) After transferring Rs 780,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

Neighbours

THE last fortnight has given several occasions
for reflecting on the state of our fences. The
grim conclusion is that they are in a bad state
of disrepair. China has been intensifying its
trouble-making after shifting the scene of
action to the eastern border. Pakistan has
been quick to seize opportunities for making
itself unpleasant in various ways. Nepal has
gone into sulks, emerging only occasionally
therefrom into inarticulate truculence against
India.

Undoubtedly the most menacing of our
neighbours is China—whose most recent aggres-
sion has been in the Nefu area. At first the
Chinese tried to mislead the world by giving
the wrong coordinates of the scene of conflict
and thus locating the clash as on Chinese terri-
tory. When the Government of India exposed
this falsehood by giving the exact geogra-
phical particulars of the actual scene of con-
flict, the Chinese quietly abandoned their
earlier version of events but claimed that the
place of conflict mentioned by India was in
Chinese territory. Even this assertion has
been shown up to be false by the de-ailed
T'ienan note of 10 October. China has also been
making wild allegations of violation of its air-
space by Indian planes. Meantime intermittent
exchange of fire continues.

The most heartening thing in this anxious
situation has been the firmness and taken by the
Government of India. Both the Prime Minis-
ter and the Defence Minister have made it
clear that the aim of Indian military action is
to clear the Indian territory of Chinese intru-
ders. Even as recently as two months ago
this was not the position with ambiguities
about exploratory talks to relieve tension and
creating atmosphere for discussion of border
disputes. There has also been a reorganisa-
tion of the Eastern Command with the crea-
tion of a new corps charged with the exclu-
sive responsibility of defending the McMahon
line and dealing with the Chinese aggression
in the Nefu area. This organisational tight-
ening is further evidence of streamlined defence
preparedness in the eastern region.

The chances of early diplomatic resolution
of the Sino-Indian dispute have indefinitely
receded with this further evidence of Chinese
expansionism. At the earlier stages of the
dispute, the Chinese appeared willing to
accept the McMahon line as constituting the
border between the two countries in the past.
This, it is true, was part of an overall bargain
in return for our acquiescing in their inroads
in the Ladakh area. Even so, there is some
evidence that at some time the Chinese were
willing to consider the McMahon line as
inviolable. Indeed they settled their dispute
with Burma on the basis of this line. Thus,
in every way, the sudden activating of the
Eastern border is a clear case of adventurist
provocation. There is welcome evidence that
the country is solidly behind the Government
in its determination to deal with the situation
effectively. This is in many ways a heart-
breaking decision because of its repercussions
on our economic ambitions.

Living with Pakistan as a neighbour has
been a harassing experience for so long now

that we are enured to its attendant miseries.
For months now, Pakistan has been making
the Tripura border unquiet in addition to in-
filtrating into Assam. There has been actual
shooting in the Tripura border recently,
though there has since been agreement between
local authorities to avoid clashes. Pakistan
has seen in the Sino-Indian misunderstanding
an opportunity for obtaining some highly
dubious international sanction for its claims
on Kashmir. It has been staking a claim to
negotiate with China about the border that
divides Ladakh and China. In recent weeks,
Pakistan papers have had the hardihood to
suggest that it was India that was spoiling
for a fight with China. What can one do with
a neighbour who insists on being disagreeable
all the time?

The deterioration of our relations with Nepal
is not something that we can view with
the same kind of fatality. Precisely what
Nepal would have us do to please it is still
obscure. We try to be friends with it and
we are assisting its economic development
with men and money despite our considerably
strained resources in both. It used to be cyni-
cally suggested once that Nepal was only giving
us a taste of our own medicine by accepting
aid from both sides and ostentatiously being
neutral. Things have gone far worse since the
days when this quip had its point. Nepal's
ostensible complaint is that some Nepalis who
are opposed to the present regime are operat-
ing from India. In their wilder moments,
some of those who profess to speak on behalf
of the Government of Nepal hint at official
Indian connivance and even assistance. The
simple fact is that short of becoming guilty of
international delinquency by handing over
political refugees to the tender mercies of the
present regime in Nepal, India is prepared to
do everything to stop hostile activities in the
border. A little co-operation with India by
Nepal will bring about what Nepal wants
most. Meanwhile, China has not been idle.
Most recently, it has offered assistance against
unspecified aggressors against Nepal. Should
Nepal fall for this bait, it will rue the day
it agreed to have road links with Tibet for
"economic reasons."

In their sum, therefore, our relations with
our neighbours are not such as to make us
feel particularly elated. The pity of it is that
without being self-righteous, we can claim
to have done nothing that could be seriously
held against us. Is it then a failure in com-
munication, an inability to establish en-
rapport? Partly, and only partly, as in the
case of Indo-Nepalese relations. It is partly
in the nature of neighbours, who, with rare
exceptions, quarrel more often than love each
other. Again, at least in regard to China we
have been simple-minded. The last two years
have succeeded in knocking some of the ruf-
fete out of our foreign policy without seri-
ously impairing the more enduring impulses
that inform it. We are now less ready to get
heady with the Bandung spirit and talk of
Pancha Sheel with beady eyes. This has
been a lesson worth learning though we wish
it had been possible to have had it imparted to
us in less painful ways.

“Forests a Natural Wealth”—But in India, Untapped

In its Report on the state of food and agriculture in 1961, the Food and Agriculture Organisation (FAO) has presented an interesting study of the role of forestry in the attack on economic under-development. It discusses the various aspects of forest development and highlights the propulsive possibilities of the forest industries in the development of the under-developed areas. The present pattern of production of forest products shows a high degree of concentration, the less developed countries relying on the advanced regions for a substantial proportion of their supplies of certain categories. Prospect for foreign exchange saving is thus one of the most important and compelling aspects of forest development for the less developed countries. Average figures for 1957-59 show a net overall deficit of \$467 million in the consumption requirements of the less developed areas. Projections of future demand for the regions, have indicated a further substantial rise in industrial requirements, i.e., 22 million cubic meters of sawn wood, 8.6 million tons of paper board and 8 million cubic meters of plywood, fibre-wood and particle board. If the foreign exchange burden that will be thrown up by requirements of this order is to be reduced to any tolerable level it is necessary that concrete measures be taken to foster forest industries.

From this standpoint, the Report has given a fairly detailed analysis of the economics of the major forest industries, namely, the saw-milling, pulp and paper, plywood, fibre board and particle board industries. The factors underlying the growth of these industries are not uniform in all cases though there is a broad affinity in the essential basis of their operation. Wood costs are a dominant factor in saw milling but have less significance in the pulp and paper industry where chemicals assume some importance. The capital intensive nature of the paper and pulp industry has to be compared with the heavy working capital requirements of the saw milling sector. Economies of scale prominent in the pulp and paper industry are relatively absent in the saw milling industry. In terms of investment costs, the plywood and fibre board industry occupies a position in between saw milling and paper and pulp. Heavy requirements of power and fresh water are another important point for comparison between the pulp and paper industry and the saw-milling industries. Apart from these major sectors there are other innumerable openings of secondary importance for processing of forest products.

In the development of the forest-based industries the import saving potential is not the only consideration since such saving could be effected by expanding production of other goods which at present entail an equal drain on foreign exchange. The FAO's study in this connection draws attention to a number of other advantages that are associated with the development of forest industries. The transport problem and the weight-losing character of forest industries, the wider range of the production function and the greater flexibility relative to scale are among the major arguments in favour of their development in almost every country. The relatively low demands on mechanisation, is a special

feature that lends them to easy development in the under-developed countries. The scope for employment potential may also be mentioned. The most overriding consideration in favour of their development is the relationship with general industrial development. As the FAO survey has stated, “forests are as important a source of natural wealth as mineral deposits; if properly exploited, forests represent a most important incentive to the beginning of industrialisation.” Special attention has been drawn to the growth of complementary sectors and the scope for the development of the hinterland which forest development opens up.

In the light of these advantages inherent in the development of forest industries, the need for a coherent forestry plan as a prerequisite for sound long-term development is obvious. More than in other sectors perspective planning has special significance in connection with forestry development. Provision of transport facilities and also of trained technical personnel is also an important consideration in the development of forest industries. In every country the responsibility for maintenance and development of forests rests with governments. The main weakness on the organisational side, according to the FAO, has been the lack of an effective link between the authorities responsible for the forests and those responsible for planning and encouraging industrial development. It is to this lack of collaboration that the FAO puts down the general failure to recognise, plan and realise perfectly sound and feasible forest industry projects.

In India forestry has formed an integral part of the development programmes. As early as in 1951 the Central Board of Forestry was constituted at the ministerial level “with a view to ensuring an all-India integration of forest policy pursued by various States.” The new forest policy framed in 1952 lays down that “India as a whole should aim at maintaining one-third of its total land area under forests.” The First and Second Plan also envisaged measures for extensive plantings of forest trees. But, as recently disclosed by Dr Ram Subhag Singh, Union Minister for Agriculture, progress in the direction of new plantations has not kept pace with the anticipated requirements of the country. For instance, during the first two plan periods, about 1,202,000 acres have been planted over and above the normal planting programmes of the Forest Departments. But the bulk of these represented plantings on land already under the forest department and there has hardly been any increase in the total forest area. It is significant that while the forest policy has laid down that 33 per cent of the land surface should be under forest, the forest area now amounts to no more than 24 per cent. On the contrary, pressures on forest resources have considerably increased in recent years. Conversion of hill slopes for food production, submersion of large sylvan tracts in the vast lakes forming part of the river valley projects, and the damages caused by refugee rehabilitation projects may be mentioned as among the more important factors that have in recent times caused a gradual erosion of the forest wealth of the country. There are also demands on forest lands for raising crops of tea, coffee, rubber, spices, etc. The policy pursued by the State Governments has also not been helpful as they have been generally inclined to permit diversion of forest lands to the cultivation of commercial crops. The main weakness has so far lain in the field of implementation of policies relating to plantings. It has now been estimated that the country will be faced with a shortage of about 215 million cubic feet of industrial wood by 1975. To what extent the gap can be reduced in the course of the next decade cannot be predicted. But this should underline the fact that without an intensified and co-ordinated programme of development the country cannot escape a further aggravation of shortfalls in the years further ahead.

Licensing, Power and Prices

INDUSTRIAL licensing, Power and Prices were the three topics on which attention was focussed at the meeting of the Central Advisory Council of Industries last Saturday. The threefold objective of the new restrictive licensing policy, which was explained by the Minister for Commerce and Industry, is to ensure rational use of the limited foreign exchange that is available, full utilisation of existing capacity and elimination of wasteful licences. For the achievement of the Third Plan targets it has become necessary to draw up a new order of industrial priorities in view of the limited foreign exchange that is available. The Minister formally announced a list of 21 industries which are included in the top category. As a matter of general policy, he said, additional capacity will be allowed to be established only when the production required cannot be secured from full capacity working of existing units. He also mentioned that licences already issued were being scrutinised with a view to revocation of infructuous ones and fresh issue of licences to projects which are likely to be implemented quickly. So far licences had been cancelled in 129 cases. The Minister also stated that, having regard to the availability of foreign exchange, the list of industries for which applications under the Industries Act are as a rule rejected, would be substantially enlarged. No purpose, he said, is served by issue of licences if there is no reasonable prospect of foreign exchange being made available when required for import of capital equipment.

Several suggestions were made in the course of the discussions for enlargement of the priority list by including particular industries. There was also an apprehension in the minds of industrialists that no foreign exchange would be allotted to the industries outside the list. It was explained by official spokesmen that the inclusion of an industry in the list only meant that it would be freely licensed without going to the Capital Goods Committee until the target of capacity was reached. Then it will be deleted from the list. In other cases, the applications for licences will have to be considered by the Capital Goods Committee and licences may be issued on the basis of scrutiny of individual cases. It was also stated that in many industries outside the priority list, clearances already given would enable substantial progress to be made towards achievement of plan targets.

While the restrictive industrial licensing policy was generally accepted by the spokesmen of industry as inescapable, Mr Shriyans Prasad Jain, President of the Federation of Indian Chambers of Commerce & Industry, urged that existing units should be allowed to develop to their optimum capacity. Mr Arvind Mafatlal suggested that, in licensing,

due consideration should be given to costs. In several industries such as cement, rayon and sugar, expansion of capacity was less costly than setting up new plants. Mr Jain also pleaded for a flexible policy regarding revocation of licences, which would take into account action taken by the party for implementing them, without applying a rigid time limit.

The discussion on power shortage yielded two novel suggestions in addition to the familiar ones. Mr Neville Wadia estimated that considerable saving in the requirements of power could be effected by advancing the clock by one hour. Another interesting suggestion was for the setting up of a pool of mobile thermal units which could be used to relieve acute temporary shortages of power. Many industrial concerns would find it a costly proposition to install captive units to meet such contingencies. Generating units from the pool would help them to tide over the situation till regular supplies became available.

Mr C. M. Trivedi, Member, Planning Commission, quoted figures to show that both generation and consumption of power in 1961-62 were substantially higher than in 1960-61. And he made the point that if industrial production had gone down, it was in spite of increased supply of power. He also detailed the steps that were being taken to increase power supplies to the coal-fields in Bengal-Bihar to which special reference was made by Mr Tallack. Out of the 20 MW made available to the DVC from Rihand, half was allotted to the collieries and the rest to other consumers. Hirakud will supply 25 MW to the DVC system, of which five or six megawatts would go to the coal-fields. Conceding that these additional supplies were only temporary, he pointed out that there would be a sizable increase in installed capacity in the area in the coming year. There was also a proposal under consideration for inter-connected operation of generating stations, which would result in substantial increase in the availability of power for industrial use.

Regarding the demand that was reiterated for allowing setting up of generating plants in the private sector, both the Minister for Commerce & Industry and Mr Trivedi pointed out that, within the framework of the Industrial Policy Resolution, specific proposals would be considered on their merits. Mr Trivedi also said that, apart from the Third Plan provision of Rs 50 crores for private sector plants which would generate about 80 MW, additional schemes had been sanctioned in the private sector for 180 MW (Trombay—125 MW, Calcutta—50 MW and Dishergarh—5 MW). He also drew the attention of Mr Sahukar (who, in the course of a fervent plea for the rapid development of border areas, had recommended small hydel sets on hill streams) to the provision already included in the Plan for such schemes.

In a speech packed with constructive suggestions, Mr Sahukar, former President of the AIMO, also drew attention to the need for growing industrial timbers in the hilly areas of border districts. The timber that is now available from our forests is not suitable for packing heavy machinery. The supply of soft woods for packing would grow in importance in the next ten or twenty years with the development of the country's export trade. Early action is necessary to grow the required varieties where climatic conditions are suitable as in the border districts.

On the problem of rising prices, Mr Jain urged that the question should be viewed in correct perspective, while Mr Tallack felt that the inflationary rise in prices was probably

the result of psychological factors. Most of the speakers who dealt with the problems stressed the importance of increased agricultural productivity. Striking a different note, Mr Lakshminpat Singhania drew attention to the slow growth of agricultural income and asked how price control of agricultural commodities would help to increase agricultural incomes or production. He agreed with Mr Jain that holding the tax line was as important as holding the price line. Mr Jain had drawn attention to the increasing tax component in the prices of manufactured articles and had urged re-examination of the basic principles of the levy of excise duties.

As regards concrete measures to deal with rising prices, it is learnt that the Planning Commission is still grappling with the problem. The two Study Groups that have been set up are engaged along with the officials of the departments concerned in collecting data for detailed assessment of the individual commodities responsible for the sharp rise in the cost of living. Some progress has been made in the studies relating to rice and other cereals, oil seeds, fruits and vegetables, fish, and sugar. The study of manufactured articles covers cloth, drugs and medicines, paper and kerosene.

The Advisory Committee of distinguished economists that has been recently set up will also participate in the review of prices policy. The appointment of the Committee, which consists of Professor D. R. Gadgil, Dr V. K. R. V. Rao, Dr P. S. Lokanathan, Professor M. L. Dantwala and Dr Bhabatosh Dutta, was announced. Members of the Planning Commission feel that discussions with the Committee, which is expected to meet frequently on important matters of policy will help to create better understanding in the country of the decisions that are finally arrived at.

Government's action in setting aside the recommendations of the Tariff Commission was strongly criticised by the President of the Federation in his speech at the meeting of the Central Advisory Council. While conceding that Government had the right to alter the recommendations of the Tariff Commission, Mr Jain said that at least a fair opportunity should be given to the interests concerned to put forward their view before the Government took decisions. Though the Minister for Steel & Heavy Industry was present at the morning session of the Council, he did not choose to reply to the criticism of the Government's decision on steel retention prices. But his colleague, the Minister for Commerce & Industry, in the course of his concluding remarks referred to this topic and said that Government was not doing anything arbitrarily. He also invited the attention of the critics to the detailed explanation given by Mr C. Subramaniam, when he met the Press, justifying the Government's decision on retention prices.

Bhilai's Expansion Programme

Details are now available of the schedule of construction under the expansion programme for raising the annual output of the Bhilai Steel Works to 2.5 million tons of ingot steel which will be rolled into 1,965,000 tons of

finished and semi-finished products. The programme is expected to be completed within four years.

The expansion programme envisages construction of three Coke Oven Batteries of 65 Ovens each in addition to the existing three batteries, two Blast Furnaces of 1,719 cubic metres each in addition to the existing 1,033 cubic metre furnaces, four Open Hearth Furnaces of 500-ton capacity and a new Wire and Rod Mill. When the programme is completed Bhilai Steel Works will have six Coke Oven Batteries, five Blast Furnaces, ten Open Hearth Furnaces and five rolling mills. For dealing with the increased output of ingot steel, the existing mills will be enlarged and renovated. The new Wire Rod Mill will produce 400,000 tons of wire rods annually.

According to the present schedule, two more Coke Oven Batteries, one more Blast Furnace of bigger size and two more Open Hearth Furnaces, each of which will be double the size of the existing ones, will be erected and commissioned during the first two years. Some additional soaking pits will also be put up in the Blooming Mill, besides installation of additional machinery and equipment in the Rail and Structural Mill and the Merchant Mill. The construction of the sixth and last Coke Oven Battery, the fifth and last Blast Furnace and one more Open Hearth Furnace will be carried out in the third year, besides some modifications in the Billet Mill. The construction of the new Wire Rod Mill in the Rolling Mill, the tenth Open Hearth Furnace and doubling of one of the existing furnaces, the last soaking pit in the Blooming Mills as also erection of the third machine in the Sintering Plant will be carried out in the fourth year.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

MONEY MARKET

Interest Rates . . .

The beginning of October, presumably as a result of Puja expenditure, caused considerable strain to the banking system and the money market. As the Reserve Bank returns for the first two Fridays show, expansion in currency circulation has been enormous; and it is significant that outflow of Rupee Coin has been in very large amount. Scheduled Banks' Deposits have been drawn upon and bank credit has risen in these two weeks. Inevitably the pressure upon the money market, though not acute, was severe enough. Recourse had to be had to the Reserve Bank, and the inter-bank call money rate was steadily pushed up. But now a semblance of normalcy as befitting the tail-end of a slack season would seem to have returned. The call money rate even in Calcutta has fallen below bank rate.

It seems unlikely that we shall have a return to the stringency that was witnessed at the beginning of September (for tax payments) and at the beginning of October (for Puja disbursements) for some weeks hence, though it needs to be noted that Divali falls at the end of this month. A slow-down in Deposit growth accentuated the pressure early in October, and it may be that the Divali demand for funds will also cause some strain; soon thereafter there will be the beginning of the month disbursements in November. But by and large we are of the view that except for about two weeks of tightness spreading over the last week of this month and the first week of the next, money conditions should be relatively easy till the end of November; it may even be, as we shall presently see, that the 1962 slack season will seem to drag on into the middle of December.

... Busy Season ...

That industrial production has been stagnating there is little doubt. Though the raw material position for jute goods is very satisfactory this year it is generally correct to take the view that industry is being compelled to work well below capacity. If it is not shortage of power or of coal or transport, the precariously low level of our foreign exchange reserves leaves hardly anything to spare for maintenance imports. And the private sector licences that have been issued for the Third Plan, and such of them as have been proceeded with, are mostly still a far distance away from commencement of production.

Meantime the efforts to export sugar are beginning to succeed; stocks both of raw materials (saving raw jute) and finished goods appear to be on the decline. The result is that expansion in industrial Advances is not likely to "exaggerate" the busy season's increase in bank credit. As such we consider it very likely that, till may be into the second week of December, the total of Advances of Scheduled Banks will show but a small rise. It seems almost certain, therefore, that the 1962-63 busy season will seem to get off to a late start. Indeed, it is possible that the next busy

season will be comparable to the 1957-58 busy season, when also industrial stagnation caused the expansion in bank Advances to be moderated.

... Giltedged And ...

If, as we expect, the next busy season is patterned after the experience in 1957-58, we should also anticipate steady and sustained demand for giltedged on the part of the banking system. For, with the high Deposit rates and with the bulk of Deposits constituting Time Liabilities, banks will be compelled to hedge by investing in giltedged. At the moment, however, prospects of this nature seem bleak. The securities market is weak and dull and listless: State loans, issued this year at terms more advantageous to the institutional investor, are a drag on the market.

But what else can the banks do, if Deposits happen to accrue smartly and if expansion in Advances fails to materialise in sufficient magnitude? Aside from cutting losses, with fresh purchases of giltedged for the interest that can be earned thereon banks may (or should) cut Deposit rates. Unfortunately in the middle of a busy season (notional though it may prove to be) banks would consider such a step unthinkable. Treasury Bill market, it is a thought, may become more active.

... Foreign Exchange ...

In the face of the failure of our foreign exchange reserves to pick up, despite the start of the favourable season for exports, an official statement would have us believe that a second drawal (the first drawal was for \$20 million) upon the standby credit of \$100 million secured from the International Monetary Fund is, for the time being at any rate, being avoided. We do not see why there should be reluctance to make use of what is "money in the bank." If exports do improve by March to such an extent that by that time we have added to reserves, why, we could always effect re-purchase from the IMF well before stipulated dates, and in that fashion strengthen our creditworthiness. But it is absurd to gnaw at the nails in anxiety, the while our balances recede to levels that are barely safe for meeting import bills. For all Government's determination in this regard, we believe that a second purchase of currencies from the standby before the end of November is inevitable.

BANK RETURNS

Sharp Currency Expansion

Beginning of the month disbursements have been rather heavy in October, as evidence the latest banking returns.

The two weeks' statements that we shall be analysing refer to 5 and 12 October, as far as the Reserve Bank and the State Bank are concerned, and to 28 September and 5 October in the case of Scheduled Banks.

Active Note Circulation has expanded steeply in the fortnight, in marking consecutive rises of Rs 42.86 crores and Rs 16.80 crore to Rs 2,071.14 crores. There has similarly been outflow of Rupee Coin in both weeks, with the amounts placed at Rs 2.58 crores and Rs 0.94 crore. Also in both weeks, small adjustments have been made in Foreign Securities, which declined over the period by Rs 0.26 crore to Rs 88.08 crores. In the week ended 5 October, currency was expanded for Rs 35 crores against Rupee Securities by transfer from the Banking Department, thus resulting in a drain of Rs 11.45 crores in the Reserve Bank's cash in the till; in the following week, the transfer from the Banking Department was slightly lower at Rs 20.26 crores raising Rupee Securities to Rs 1,763.31 crores and causing cash in the till to be short a shade higher by Rs 2.27 crores at Rs 20.12 crores.

The Central Government has shown consecutive declines of Rs 0.92 crore and Rs 1.38 crores to Rs 59.49 crores in its balances. On the other hand, State Government's improved their balances by Rs 4.19 crores and Rs 3.26 crores to Rs 21.20 crores; and may be there is an element of inter-governmental transactions. However, we doubt this, for reasons that we shall shortly enumerate. But the States have successively increased their ways and means borrowings from the Reserve Bank by Rs 4.07 crores and Rs 2.30 crores to Rs 13.74 crores. Thus, it would appear that the States found need to replenish balances. This they presumably did by rediscount of Treasury Bills. The Reserve Bank has reported considerable rises of Rs 34.46 crores and Rs 18.29 crores to Rs 155.08 crores in its portfolio of Treasury Bills purchased and discounted, and there is no indication that either the State Bank or other Scheduled Banks disinvested in giltedged in this wise.

But the banking system has had problems of its own. Reserve Balances of Scheduled Banks have fallen successively by Rs 0.45 crore and Rs 1.64 crores to Rs 81.84 crores; and, after adding to their borrowings by Rs 6.63 crores, the Scheduled Banks in the latest week have somewhat reduced indebtedness by Rs 0.83 crore to Rs 10.35 crores. State Co-operative Banks, with two-way fluctuations in balances, have over the period kept their Deposits almost unchanged at Rs 1.82 crores; but their borrowings from the Reserve Bank have gone up during the fortnight by Rs 1.39 crores to Rs 130.29 crores.

Investments, in being marked down by Rs 36.12 crores and Rs 20.70 crores to Rs 115.94 crores, merely reflect the transfers to the Issue Department for expansion of currency.

Lastly, it may be mentioned that Balances Held Abroad have in the two weeks fallen by Rs 1.01 crores to Rs 4.58 crores; and the drain, inclusive of the transfer from the Issue Department, works out to Rs 1.27 crores. Foreign assets held by the Reserve Bank just exceed Rs 92½ crores.

The State Bank has of late been experiencing a steady increase in Deposit resources, which in the last two weeks have risen by Rs 5.55 crores and Rs 3.18 crores to Rs 589.63 crores; and at this rate it is almost certain that Deposits will cross the Rs 600 crore mark once again before the end of the year. The total of Advances, after creeping up by Rs 2.80 crores, has in the latest week receded by Rs 1.89 crores to Rs 268.94 crores. Nevertheless the State Bank has disinvested in giltedged in the small amount of Rs 3.01 crores over the two-week period, reducing its holdings to Rs 280.04 crores. Unusually,

in each of the two weeks Other Assets have been added to, by Rs 5.20 crores and Rs 14.11 crores to Rs 45.84 crores. Acquisition of giltedged from the Reserve Bank is seen to be in the offing. The result is that cash balances have been drawn down to what most surely is very near the statutory minimum: declines of Rs 1.24 crores and Rs 5.84 crores now place cash balances, including money at call and short notice, at Rs 23.62 crores.

The experience of other Scheduled Banks, in the matter of accrual of new Deposits, runs counter to that of the State Bank. In the week ended 28 September Deposits of Scheduled Banks rose by Rs 3.93 crores; but the State Bank's rise in that week was placed at Rs 7.07 crores, so that the drain of other Scheduled Banks is seen to have exceeded Rs 3 crores. It may be mentioned, in detail, that net Demand Deposits rose by Rs 4.24 crores to Rs 897.87 crores, while net Time Deposits were fractionally lower by Rs 0.31 crore at Rs 1,272.11 crores. In the week ended 5 October, again, Deposits of Scheduled Banks rose by Rs 3.31 crores—fall of Rs 1.14 crores to Rs 896.73 crores in net Demand Deposits much more than offset by a rise of Rs 4.45 crores to Rs 1,276.56 crores in net Time Deposits; but the State Bank's rise in Deposits in that week worked out to Rs 5.55 crores, so that the inference is clear that other Scheduled Banks suffered a drain of over Rs 2 crores in their Deposit resources. After a fall of Rs 4.45 crores, the total of Advances, owing to beginning of the month disbursements during the week ended 5 October, has risen fairly sizably by Rs 11.29 crores to Rs 1,397.19 crores. Recourse to additional borrowings was inevitable. In indebtedness to the State Bank rose by Rs 4.87 crores, and then fell slightly by Rs 0.72 crore to Rs 20.26 crores. Borrowings from the Reserve Bank receded by Rs 1.67 crores, then rose considerably by Rs 6.11 crores to Rs 10.62 crores. In the week ended 28 September, giltedged holdings (as a result of State Bank purchase of Rs 8 crores' worth of securities) were marked up by Rs 6.11 crores at Rs 689.93 crores; in the following week, the further rise of Rs 2.64 crores to Rs 692.53 crores is on account of Scheduled Banks other than the State Bank. The net result is that cash balances were lower by Rs 2.80 crores, and then rose by Rs 7.62 crores to Rs 197.32 crores.

Stimulus to British Trade?

By A Special Correspondent

IN its latest report on the state of industry the Federation of British Industries stressed the need for more effective Government action to stimulate production. The result of the answers the Federation received from its members shows that output is still stagnant and that the extent of unused capacity only declined very slightly during the past four months. The day before these figures were made available the Chancellor of the Exchequer took the line in a speech at the annual conference of the Conservative Party that he must proceed with caution. In the light of the figures there is likely to be increased pressure on the Government in favour of more effective reflationary measures. It is now considered to be reasonably safe to stimulate the economy, in view of the remarkable stability of sterling during recent months and of the favourable balance of payments during the first half of this year.

The main reason why, in spite of these favourable indices, Mr Maudling is inclined to err on the side of caution lies in the labour situation. The trade unions are not prepared to submit to wage restraint and it seems reasonable to assume that the Government's ability to enforce that policy will weaken as and when a trade revival is making progress. Thinking in terms of domestic politics a revival would be somewhat premature on the assumption that a general election will not be held until the autumn of 1964. By that time a revival initiated this year might pass its peak and its effect on the balance of payments might call for fresh restrictive measures. It may seem, therefore, expedient to delay effective reflationary measures until after the turn of the year, partly in the hope of coming to terms with the trade unions about wage restraint and partly in order to avoid expending ammunition prematurely.

In any case, the uncertainty of the international political situation and a possibility of an acute crisis over Berlin or Cuba during the next few months may make it appear inexpedient to adopt reflationary measures which might be rendered ineffective by the paralysing effect of a crisis. There is also the uncertainty in respect of the Common Market. Many manufacturers are likely to hold back until they can form a better idea which way that cat will jump. Most firms feel that, even if they knew whether Britain would join or not, they have no means of knowing how either decision would effect them. They may feel justified in risking an increased use of their existing producing capacity, but they are likely to avoid the risk of engaging in capital expenditure to increase that capacity. For this reason alone, the outlook for capital goods industries is distinctly less favourable than the outlook for consumer goods industries.

✱

End of Credit Squeeze

By Paul Einzig

THE credit squeeze, which was initiated in July 1961 as part of the Government's measures in eliminating the adverse balance of payments, has been called off. The Governor of the Bank of England has informed the banks that they no longer need to exercise restraint in their lendings. At the same time the possibility for a credit expansion has been created through the release of some £80 million of Special Deposits, as a result of which the cash reserves of banks will expand. This is being done in order to stimulate a

trade revival as it is felt that with sterling steady and with the balance of payments more or less in equilibrium Britain can afford to indulge in the luxury of prosperity. To stimulate the demand for credit that has now become available the Government has also released some £42 million of post-war credits and is increasing its expenditure on public investment.

Some such measures have long been anticipated and the reason for their delay has been the Government's reluctance to create conditions in which wage inflation would proceed at an even faster rate than it has been proceeding lately. However, fear of prolonged stagnation has now proved to be stronger than fear of rising costs, and the Government has therefore deemed it advisable to take some cautious steps toward reflation. Most people expected the new Chancellor of the Exchequer, Mr Maudling, to proceed further in that direction. A bank rate reduction has been predicted for practically every Thursday during the last two months. It was also widely expected that there would be some cuts in taxes in an autumn Budget which would also provide incentive for an increase in investment expenditure in the private sector.

For obvious reasons, however, the Government does not dare to proceed very far in the direction of reflation. In order to be able to do so without risking a return of disequilibrium it would be necessary first to persuade the trade unions to accept some measure of wage restraint. Even though there has been some inclination among the more moderate trade unionists toward attempting to arrive at some form of wage policy the outlook for reaching an agreement to that effect is very remote. It would become hopeless if as a result of reflationary policy conditions of over-full inflation were to return. For this reason the Government prefers to restrict its reflationary efforts and its aim. In any case the uncertainty about the outcome of negotiations with the Common Market and also about business outlook in the United States would exercise a restraining influence on trade revival even if the Government were prepared to risk proceeding faster.

BOKARO The Green Signal

After considerable uncertainty and delay, the Bokaro Steel project now looks like getting started. The main hurdle so far has been the inability to obtain foreign exchange coverage. After some initial dilly-dallying, Americans have again expressed interest in the project. A US team now in the country to make a study of the project is reported to have formed a favourable impression of the feasibility of the project. And once this is established, American assistance in the setting up of the project is certain to become available. This point was made clear by American Ambassador Prof. Galbraith in his recent talk with pressmen at Bokaro. A firm decision by the US Government is expected to be taken after the submission of the report by the visiting US technical team sometime by the end of 1962. Prof. Galbraith observed that the American Government in deciding aid for the project would be mainly concerned with the competitive nature of the project and its ability to export part of its production. Judging from the results of the study made on the Indian side, its competitive character should be the least

doubtful aspect of Bokaro. From the locational point of view the sites chosen at Bokaro leave nothing to be desired. As explained by Mr P. P. Dani, Officer on special duty, a steel plant at Bokaro would command apart from plentiful water supply, easy access to coal, while the transport position will also be favourable. It has been stated that a number of wagons carrying coal from Bihar to Bhilai and Rourkela are now returning empty adding to the cost of steel production. In Bokaro, on the other hand, the returning wagons could carry good quality iron ore from the various mines nearby.

The fact that Bokaro will mainly produce flat steel products is another fact that gives the project some priority and significance. At present the deficit in steel products is greatest in respect of flat products which are known to account for more than half of the total foreign exchange spent on import of steel products. A fourth steel plant at Bokaro specialising in the production of flat products can, in this circumstance, make a great difference to the future pattern of steel imports and save valuable foreign exchange.

SFCs FICCI's Suggestions

In a memorandum submitted to the Reserve Bank, the Federation of Indian Chambers of Commerce and Industry has made a number of suggestions for improving the working of the State Finance Corporations. Though these Corporations have been functioning for more than 6 years, judging from either the amount of loans disbursed or the results achieved, their working can hardly be considered satisfactory. This failure is reflected most glaringly in the continuing dependence on State subventions for payment of the guaranteed dividend. Apart from this, the low amount of loans outstanding and the gap between the loans sanctioned and the loans disbursed should also throw light on the ineffective functioning of these corporations. Since their inception up to the end of March 1962, the SFCs had sanctioned a total amount of only Rs 49.10 crores while the amount disbursed at Rs 30.22 crores represented barely 62 per cent of the total sanctions. Such poor show can only be attributed to the conservative policies pursued by the Corporations in the sanctioning of loans. Further the criteria for grant of loans to industries are also unduly

rigid. A common point of criticism in this regard has been the high margin requirement at 50 per cent of the net value of assets insisted on by the Corporation. Reducing of this limit to more reasonable levels is essential if the SFCs are to play a more effective role in the development of industries.

Legislation has recently been passed raising the limit of loans extended by the SFCs to public limited companies from Rs 10 lakhs to Rs 20 lakhs and also enabling them to borrow from the Reserve Bank. It will take time for the effects of this legislation to register, but there can be no doubt that they should enable the Corporations to play a more dynamic role in the growth of medium and small-scale industries. Lack of facilities for borrowing has been a major handicap for the Corporations in as much as they had to keep a large volume of money in the form of cash to meet demands from industries. The borrowing power should now enable the Corporations to reduce their volume of cash and ready money which otherwise would be earning nothing.

The FICCI memorandum has also drawn attention to the underwriting role of the SFCs. This however is an aspect in which performance has been most disappointing: with the exception of the Madras Industrial and Investment Corporation, no State Finance Corporation has so far done any sort of underwriting business. This is to be deplored, considering that the State Finance Corporations Act originally empowered the Corporations to take up such underwriting work. This failure has to be made good as underwriting offers one of the most potent means of stimulating capital formation to cater to the needs of the medium and small-scale industries which have presently very limited access to the capital markets. The FICCI has also emphasised the need for further raising the limit of loans sanctioned by the Corporations.

To minimise risks to the SFCs from the enlarged lending activities, the FICCI has suggested that they should associate with other bodies like the IFC, ICICI and also commercial banks. Such co-operative and joint participation will not only ensure more effective working, but also lead to considerable reduction of administrative expenses which at present are fairly high in the case of the State Finance Corporation.

TOURISM Snail's Pace Progress

Among the various measures taken by the authorities for fostering earnings of foreign exchange, the development of the tourist industry, by dint of its vast potential, has been allotted a prominent role. India's exquisite scenic beauty, attractive hill stations, places of archaeological and historical interest, the natural game sanctuaries, cultural heritage: all these offer immense scope

for developing tourism on modern and healthy lines. But the fact is that despite these abundant natural resources the pace of progress hitherto has been far from satisfactory. Not that the activity was totally lacking, but it has not been commensurate with the rich potential and the needs of the country. The development of tourist resorts, hill stations for instance, has been proceeding at a snail's pace; the misconception among many foreigners that India is a land of snake charmers and renowned for rope tricks still remains unclarified is a pointer to the lack of propaganda abroad. Therefore, it is only natural that Mr Jagjivan Ram, in his address to the sixth meeting of the Tourist Development Council held at Cotacamund, stressed the paramount importance of accelerating the pace of development of one of the vital foreign exchange earning industries in the country.

It is a matter for gratification that the inflow of tourists from abroad during the past five years has more than doubled from 65,887 in 1956 to 139,804 in 1961. But the earnings from tourism did not, disconcertingly enough, keep pace proportionately with the increase in the number of tourists. It should be noted that the tourist market has of late become highly competitive and the inflow will more or less depend on the publicity and selling techniques that we employ abroad. In the domestic sphere also the arrangements in these centres are scanty, transport is still a bottleneck, not to speak of the inadequate housing and sanitary conditions which are genuine sources of irritation to the tourists. The complaints about the ordeals the tourists have to undergo in many of the

departmental offices and the harrowing touts they have to pay on several occasions will certainly constrain them to leave out many of the places of interest from their itinerary.

CENTRAL RAILWAYS Traffic Doubles in Decade

By virtue of its geographical position, the Central Railway has a pivotal role in the transport of materials and goods. Both the First and Second Plans threw up considerably increased demands on transport facilities on the Central railway and under their impact, remarkable improvement has been witnessed in the Railway's performance. The freight ton miles at 1,187.30 million in 1950-51 was 101.0 per cent more than in 1951-52 and 28.5 per cent more than in 1956-57. The increase in freight train miles from 615,000 in 1951-52 to 1,282,000 miles in 1961-62 is no less remarkable. Improvement in loading and wagon turn-round has also been satisfactory. At the end of 1960-61, the total year of the Second Plan, the tonnage lifted (originating traffic) amounted to 21.3 million tons which compares with 14.6 million tons in 1955-56 and 12.6 million tons in 1951-52. A similar increase has also been registered in respect of total tonnage carried which stood at 35.5 million tons in 1961-62 against 21.2 million tons in 1956-57.

With the greater stress on industrialisation in the Third Plan, it is natural that the traffic problems for the Central Railway should also be considerably aggravated. For example, the originating traffic on the Central Railway, which was 21.30 million tons at the end of the Second Plan, is expected to increase to 36 million tons at the end of the Third Plan. Difficulties arise mainly in respect of coal traffic in which greater demands are expected in view of the targeted increase in coal production to nearly 100 million tons at the end of the Plan period. A hand out issued by the general manager of the Central Railway highlighting this problem draws attention to the various measures that are being taken to provide the requisite facilities. Mainly a vast programme of doubling of railway tracks covering a length of 430 miles is to be undertaken during the Third Plan. Chheoki near Allahabad and New Kaimi in Bihar are the two important points for movement of coal. Liberalised supply of wagons for coal movement is also an important aspect of the coal transport problem. While the wagon supply position has considerably improved in recent months, the entire requirements are far from being met and the transport bottleneck arising from wagon shortage will have serious repercussions on the general industrial progress in the country. The wagon manufacturing programme being undertaken by the Central Railway in its three workshops at Malunga, Jhansi and Lalasauda has therefore considerable significance.

EMPLOYMENT More Jobs Available—

According to the Labour Bureau of the Ministry of Labour and Employment, Government of India, there was in 1961 an upswing in the level of employment thanks mainly to the expansion programme of the public and private sectors. Total number employed in the public sector rose from 6,936 million at the commencement of 1961 to 7.3 million at the end of 1961. This increase was shared by the Central Government (+4%), State Government's (+3.6%), quasi-Government establishments (+0.9%) and Local Bodies (+9.6%). The index of employment (January 1961=100) in this sector went up to 105.2 by the end of 1961.

In the private sector employment in the larger establishments indicated an increase in the first and last quarters while there were seasonal declines in the second and third quarters of the year under review. Declines were observed in manufacturing industries such as sugar, tobacco, cotton gins and presses, rice mills, etc., and in construction operations during the wet season. Taking the employment situation on an annual basis there was an increase in the level of employment with the index (January 1961=100) moving up to 100.9 toward the close of the year.

UNEMPLOYMENT But Registrations Rise Too

A review of the employment situation in June 1962 shows a considerable rise of 33,185 in number or 10.4 per cent in the registrations at the employment exchanges in comparison with the previous month. The number of applicants on the live registers totalled 2,062,917 as against 1,981,616 at the end May—an increase of 81,301 or 4.1 per cent. On the contrary, there was a marked decrease in the overall number of vacancies notified to the exchanges to the extent of nearly 11 per cent when compared with that of the preceding month. The vacancies notified to the exchanges by the Government, quasi-Government establishments and Local Bodies constituted 77.1 per cent of the total number. The number of employers who utilised the services of exchanges stood at 11,836 in contrast to 12,338 in the previous month. The particulars of 268,931 applicants, as against 273,600 in the preceding month, were forwarded for available employment opportunities while the number of placements at 39,249 showed a fall by 5.3 per cent from 41,354 recorded in May.

**DO I
REALLY
NEED A**

BANK ACCOUNT ?

Of course you do. If kept in a bank, your savings will earn interest. Besides, they'll be safe from theft and misplacement. And a bank account might induce you to save more.

But what happens when I need money for an emergency?

You can easily withdraw—quickly and without notice. Savings are intended for use on a rainy day.

But you know, we don't have much money!

No matter! You can open a savings bank account with the State Bank of India with as little as Rs. 5/-.

Really?

Yes, the State Bank of India. With over 1,000 offices throughout the country, the State Bank of India is serving the nation. And what is more by lodging your savings with the State Bank, you will not only benefit personally, but will also play your part in the development of the national economy.

The State Bank of India?

Yes, the State Bank of India.

do not reveal any notable variation in the employment situation during the month under review.

US VIEWPOINT Indian Market's Potential

A special report in the 8 October issue of International Commerce, a publication of the US Department of Commerce, draws attention to the growing trade relations between India and the US and particularly highlights the potentials of the Indian market for American goods. In line with this trend, sales of US manufactures and industrial raw materials shot up to \$194 million in the first half of 1962 which compares with \$242 million for the whole of 1961. Indian exports, mainly of jute manufactures and vegetable food products, have also kept pace with the rate in 1961 when Indian exports totalled \$255 million. Aid-financed shipments are an important element in

the American exports to India. The US has committed \$980 million for the first two years of the Third Plan most of which will finance Indian purchases. The commitment of aid for the first year amounts to \$543 million, over \$154 million being for electric power projects and \$43 million for purchases of US diesel engines. A number of other projects in coal mining, coal washery machinery, construction and excavating machinery, fertiliser industry machinery, pulp and paper making machinery, etc., have also been covered by US aid commitments. It is significant that the AID has departed from normal loan policy and has extended a loan of \$220 million for nonproject purposes. This will help purchase in the US of non-ferrous metals, synthetic rubber, wood pulp, sulphur, petroleum, coke, etc.

An aspect of the growing Indo-US relations is the interest being evinced by American businessmen in setting up collaboration ventures with Indian industrialists. The number of such collaboration ventures approved by the Government of

India amounted to 68 for the first half of 1962 which compares with 75 for the entire year 1961. 46 of the new ventures approved in the first half of 1962 were on a licensing basis while 22 involved American equity investment in a widely diversified range of Indian industries. The book value of US direct investment in India at the end of 1961 has been estimated at \$189 million, which was \$30 million more than in the previous year.

ELECTRICITY & POWER Bedrock of Development

The President, Dr S. Radhakrishnan, recently described "electricity and panchayat" the twin bedrock of India's development.

Nearly 200 engineers who met recently at Ootacamund at an Irrigation and Power Seminar seemed to deliberate under the shadow of the slogan. For, the

country's hunger for power was never more emphasised than at the seminar.

The pace was set by Mr Hafiz Mohd. Ibrahim Union Minister for Irrigation and Power, when he underlined the role of power generation as a pre-requisite to industrial expansion and economic growth. The country had a sizeable power programme for the Third Plan involving an outlay of Rs 1,089 crores. The outlay included Rs 105 crores earmarked for rural electrification sufficient to cover 20,000 to 22,000 additional villages.

The draft outline of the Fourth Plan for power development had been drawn up and was under examination. He advised the seminar to help the Government in giving shape to programme for the Fourth Plan and also in finding solutions to the problems coming in the way of speedy implementation of the current programme.

The seminar acted on the advice. The engineers suggested territorial demarcation of the country into electricity zones for economic utilisation of power potential. It was also felt that power generation being a costly venture it was not possible for individual States to set up units within their resources. The Planning Commission was advised to persuade States to pool their resources in the larger regional interest. The coordination role of the Centre in the matter was also emphasised by a large number of delegates.

It was also suggested that inter-State circuits that had already been proposed for the States in the southern regions of India should be carried forward by the Central authority and other States persuaded to follow suit.

In this connection the studies done by the Super-grid Cell in the Central Water and Power Commission were commended by delegates who suggested speedy establishment of the supergrid scheme to be ultimately transformed into an all-India grid.

Discussions on the power need inevitably touched the problem of rural electrification. It centred on the general pattern of economic development programme for rural India.

It was agreed that the extension of power to villages was a pre-requisite to any rural economic development scheme and the consideration of mere return on investment in the scheme of rural electrification should not be allowed to govern the implementation of the programme.

Welfare of the people must gain precedence over administrative and financial expediencies in a socialist scheme of things, it was emphasised.

Rural electrification, it was also felt, must form part of an integrated scheme along with the community development and other programmes of irrigation, animal husbandry, agriculture and small scale industries development.

Pooling of technical experiences gained during the last two five year plans for expeditious and efficient execution of projects in the Third Five-Year Plan was suggested by a large number of participating delegates.

The role of proper investigation and collection of relevant data before starting a project and the important part played by the research and design were also underlined.

It was suggested that a team of technical experts consisting of representatives from all the projects be created for the benefit of the entire country. A cadre of mechanical men well-versed in the practical handling of equipment to avoid waste was also suggested.

Maximum delegation of powers and trust to the project engineers with specific instructions to keep the execution of projects within the target date was emphasised by some delegates who made references to unnecessary delays caused by the financial control which they felt was not always exercised with understanding and foresight.

A pool of spares and equipment for inter-State utilisation so as to effect economy and saving of time was urged by some delegates who also suggested better maintenance of equipment and machinery to avoid depreciation. The setting up of central mechanical units in various regions of the country was also advocated as a practical solution.

The Union Minister for Irrigation and Power had also informed delegates about the outlay provided for irrigation. From Rs 300 crores in the First Plan the outlay on irrigation was increased to Rs. 370 crores in the Second Five-Year Plan. In the Third Plan it was Rs. 661 crores.

India expected to create an irrigation potential of over 29 million acres. For the inevitable time lag between the creation of the potential and its utilisation, irrigation facilities would be provided for an area of 22 million acres by the end of the Third Five-Year Plan.

In spite of the sizeable programme for expansion of irrigation facilities India would still be utilising by the end of the Third Five-Year Plan only a little more than one-third flow of river water which was estimated to be 450 million acres feet.

INDIA Quarterly Review of Economic Trends

The review of Indian economic trends in the quarter ending June 1962 shows only moderate gains in the various fronts. Final crop estimates indicate increased production of castorseed (13.5 per

cent) sesamum (15.8 per cent) Bajra, (10.5 per cent), Barley wheat (7.4 per cent), Ragi, (5.7 per cent) Maize (1.2 per cent), e.c. Against this, cotton, sugarcane, jowar and black pepper have recorded declines of 16.5 per cent, 6.3 per cent 16.8 per cent and 0.1 per cent respectively. Industrial production was marked by a halting trend and the index reveals monthly fluctuations since December 1962 when it stood at a high of 193.2. Sector-wise industrial performance has been far from uniform. Increase in monthly output of industries like power-driven pumps, dry cells, e.c. has been offset by declines in machine tools, refractories etc. In the category of intermediate goods also no uniform trend has been discernible. Among items which recorded increase in production are copper (19.0 per cent), rayon, (10.5 per cent), soda ash (4.0 per cent), and cement (3.1 per cent). But nota-

ble declines have been registered by iron ore (16.6 per cent), aluminium (13.6 per cent), caustic soda (6.7 per cent) and ammonium sulphate (3.3 per cent). In non-durable consumer goods, production registered marked declines in sugar (50.7 per cent), vanaspathi (15.0 per cent) and matches (9.1 per cent). The decline in the wagon loading capacity from 878.2 thousands in January-March to 843.6 thousands in April-June has also to be noted.

The employment situation has also shown very little improvement. Employment in the cotton mill industry, which accounts for nearly 25 per cent of the labour force in the organised factory sector, registered a decline during the quarter ending March 1962. On the other hand, employment in the coal mines, which accounts for more than 50 per cent of the total labour force in the mining sector registered an uptrend in the

January-March quarter. The figures of registrations in the employment exchanges also reflect the growing pressures of unemployed seeking new opportunities. The average rate of monthly registrations, which had advanced from 247.8 thousands during the quarter October-December 1961 to 252.2 thousands during January-March 1962, shot up to 327.5 thousands during April-June 1962.

The balance of payments position also showed a deterioration in the last quarter of 1961-62 as compared with the previous quarter. Against a deficit of only Rs 29.5 crores in the third quarter, the deficit amounted to Rs 90.0 crores This reflected mainly the rise of Rs 51.2 crores in import payments and a decline of Rs 12.3 crores in export receipts. It is, however, noteworthy that the trade gap, which amounted to as much as Rs 134.03 crores in the quarter ending March 1962, declined

One man with fifty-one problems

Our Sales Manager, in addition to considering the varied needs and tastes of the people of India, must cater for the requirements of customers in 51 countries overseas—a formidable task but one to which the BINNY GROUP OF MILLS devotes itself with an ingenuity and enthusiasm which has made 'BINNY' a name trusted and respected the world over.

Quality Control

BINNY'S reputation for the excellence of their fabrics is in no small part due to their system of rigid quality control—a system of laboratory testing designed to eliminate defects at every stage of production—a system of control that guarantees the strength and durability of all BINNY fabrics.

Every year BINNY manufactures over 82 million metres of Shirts • Khaki Drills • Bleached and Dyed Drills • Towels • Crease-resistant Suits • Yussorees • Union Fabrics • Silk Sarees

Buy your requirements of BINNY fabrics at controlled rates from authorised BINNY Stockists who display this sign board.

ned to Rs 89.0 crores in the quarter ending June 1962. This was brought about by a scaling down of imports by nearly Rs 50 crores. But the persisting downward movement in the value of exports should be a matter for concern. The monthly average of the value of exports was only of the order of Rs 50 crores in the quarter ending June, against Rs 54.37 crores in the preceding quarter. The decline was shared by most of the groups, intermediate goods being an exception. In the context of this decline in the value of exports, measures taken for export promotion like free licensing in respect of some items, extension of the facility of drawback of duty on exports, and ocean freight re-cession have considerable significance.

In the banking and monetary spheres, signs of the slack season were in evidence. Money supply at the end of the quarter April-June 1962 was pegged down at about the same level as at the end of the previous quarter. Reflecting the onset of the slack season, bank credit recorded a slower rate of expansion. The credit-deposit ratio registered a decline to 72.44 per cent in April from 73.44 per cent in March and stood at 70.53 per cent in June.

The price situation also showed deterioration in the quarter ended June 1962. The index number of wholesale prices at 127.5 in June 1962 compares with 124.2 in April

and 126.3 in May. The rise was mainly brought about by a rise from 120.5 to 125.4 in the group index for food articles. On the other hand the group index for industrial raw materials has remained more or less stationary in the quarter ending June while that for manufactured articles recorded only a slight rise by 2.0 per cent.

NATIONAL INCOME Quick Estimates for 1961-62

The national income of India in real terms recorded a rise of 2.2 per cent in 1960-61, according to the "quick" estimates prepared by the Central Statistical Organisation. These estimates are based on the trends disclosed by the current available data.

There was a slight fall of 0.3 per cent in the net contributions from agriculture during the year 1961-62 over the previous year, which was more than offset by an increase in other sectors, which taken together recorded a rise of 3.8 per cent in 1960-61. Based on partial data only, these estimates are provisional and likely to undergo revisions in the annual paper on national income to be released early next year.

The contribution of some individual sectors to the change in the

overall percentage in national income in 1961-62 over 1960-61 at

Sector	(at 1948-49 prices)		
	Contribution to total national income 1960-61 %	Change in 1961-62 %	Contribution to the overall rise in 1961-62 %
Agriculture (proper) ...	39.2	(-0.3)	(-0.1)
Mining and factory establishments ...	4.2	6.7	0.6
Communications ...	0.5	5.2	neg.
Railways ...	2.5	6.6	0.2
Organised banking and insurance ...	1.0	12.6	0.1
Other commerce and transport ...	15.3	3.7	0.5
Other sectors ...	32.3	2.9	0.9
All sectors ...	100.0	2.2	2.2

The following table presents the estimates of national income and per capita income at 1948-49 prices for the years 1950-51 and 1955-56 to 1961-62.

Year (financial)	National income at 1948-49 prices*	Per capita income (in Rs) at 1948-49 prices†
1950-51 ...	88.5	247.5
1955-56 ...	104.8	267.8
1956-57 ...	110.0	275.6
1957-58 ...	108.9	267.4
1958-59 ...	116.5	280.2
1959-60 ...	118.5	279.0
1960-61 ...	126.9	292.3
(preliminary)		
1961-62 ...	129.7	292.5
provisional)		

* (In Rs. 100 crores).
† (Based on 1941, 1951 and 1961 population census figures).

From these figures, it will be seen that the rise in national income in real terms during the first year of the Third Plan was 2.2 per cent. This comparatively small increase is largely due to the following reasons: (a) the foodgrains output in 1961-62 which was earlier anticipated at a little over 80 million tons is now estimated at about 78.6 million tons; and (b) the increase under mining and factory establishments last year was somewhat smaller than was anticipated earlier.

MMC Production Exceeds Original Capacity

After 15 years of growth the Machinery Manufacturers Corporation has emerged as one of the relatively stable and progressive manufacturing units in the textile machinery manufacturing sector. Production at 35 units a month is ahead of the capacity originally envisaged at 50. The Corporation is now preoccupied with diversification of production, progress of which has been halted by the scarcity of foreign exchange precluding import of machinery. The Speed Frame is stated to be still in the prototype stage, while the detailed work on the engineering of the Turret Lathe has been completed. The Corporation has already taken in hand the contract work for castings and machining for diesel engines.

1948-49 prices are shown in the following table:

Sector	(at 1948-49 prices)		
	Contribution to total national income 1960-61 %	Change in 1961-62 %	Contribution to the overall rise in 1961-62 %
Agriculture (proper) ...	39.2	(-0.3)	(-0.1)
Mining and factory establishments ...	4.2	6.7	0.6
Communications ...	0.5	5.2	neg.
Railways ...	2.5	6.6	0.2
Organised banking and insurance ...	1.0	12.6	0.1
Other commerce and transport ...	15.3	3.7	0.5
Other sectors ...	32.3	2.9	0.9
All sectors ...	100.0	2.2	2.2

In his address to the annual general meeting of the Corporation, Mr K. C. Mahindra, the Chairman, has drawn attention to the uncertainty spelt to the progress of the industry by the vacillations in the operation of Government controls over the machinery industry. An anomalous feature of Government's policy is the encouragement it is giving to the import of two articles which are now being regularly produced in the country and which have proved themselves equal in quality to imported ones. The major problem before the industry is to reduce the import burden as early as possible and this calls for a firm and categorical statement of its policy by the Government for the production of textile machinery in the country. Dependence on imports is pronounced in respect of special steels, aluminium alloys and ball bearings and will continue to be so until sufficient indigenous capacity is developed to cater to the needs of the industry. Apart from dependence on imports, supply of indigenous raw materials like pig iron and coke has posed a problem to the textile machinery manufacturing industry underlining the need for early and effective measures by the Government to further increase their production capacity in the country.

MYSORE SPINNING Modernisation Proceeds Apace

The Mysore Spinning and Manufacturing Company Limited has shown considerable improvement in turnover and profit during 1961-62. Most importantly, the change-over from two shifts to three shifts has contributed to economies of scale though part of them has been wiped off by the higher prices of cotton. The policy of renovation and modernisation, on which the company had embarked, has also had salutary effects on its working. In the spinning section renovation has been completed on about 143 spinning frames while in the weaving preparatory department 130 rooms have been renovated. A programme for replacement of 144 old plain looms is under way and arrangements have been made for the installation of new automatic looms under the export promotion scheme. The company has installed new Whittin combers which have enabled higher counts to be spun on about 75 per cent of the total spindlage. The full

effects of some of the modernisation being undertaken now will be registered from 1963-64.

Along with the parent company, the subsidiary company, Modern Mills, and the new processing factory at Rajajinagar in Bangalore have also registered commendable progress. Modern Mills have now embarked on an ambitious programme of expansion to new fields of organic chemicals and cellulosic man-made fibres. For the financing of the expansion project, a foreign aid loan from the Agency for International Development to the tune of Rs 2.38 crores is expected to be come available. The new processing factory has also been working satisfactorily and has been catering to the processing requirements of the parent mill and its sister concern, Minerva Mills.

Performance on the export side has also been creditable. The total export of the group during 1961-62 has been estimated at about Rs 1 crore. The efforts being made to further increase exports should be appreciated. The company has appointed a Resident Manager in England to establish closer contacts with consumers of Indian cloth. The proposal to establish a joint export house with a branch in England should also prove a timely measure.

TRAVANCORE SUGARS Profits Hit by Manifold Factors

Several adverse factors such as the fall in the price of sugar and withdrawal of excise duty rebate on excess sugar production, lower profit margins on spirits and Indian made foreign liquors, substantial loss incurred by the closing of Pharmaceutical Works and an increase in bank as well as other interest charges on account of heavy accumulation of sugar stocks have combined to produce the somewhat unfavourable results of the Travancore Sugars and Chemicals Limited for the year ended 30 April 1962. However, their impact was partially offset by a lower loss on exports of sugar and a reduction in the commission payable to the Kerala Government consequent on the termination of the company's agreement, but the net result has been a reduction of Rs 2.50 lakhs in the net profit after taxation. The Directors have recommended the transfer of Rs 1.5 lakhs from the general reserve to the profit and loss account which, along with the net profit, will enable the declaration of the dividend on preference shares and 5 per cent on the ordinary shares.

The year under review witnessed brisk sugarcane crushing operations but the recovery was slightly less owing to inclement climatic conditions. 1,119.7 tonnes of sugar were allotted for export and the loss under this head has been charged to the accounts.

The company, like other sister concerns, is groping in the dark as to its liability with regard to cane payments under the price-linking formula. Though no clear picture

has so far emerged, press reports indicate that the formula will apply for the four seasons from 1958-59 to 1961-62. The restriction placed by the Government on production in the 1961-62 season amounting to 10 per cent of the previous year's output due to increased sugar stocks and inadequate storage facilities is another development. The threat to the regular supply of cane to the factory with the starting of another factory on the edge of the company's cane growing area has happily been overcome by a mutual agreement under which the cane areas of each factory will be clearly demarcated.

PANIPAT WOOLLENS Impressive Increase in Sale and Profits

Around improvement in production and rise in the total of reserves and surplus are among the notable features of the working of the Panipat Woollen and General Mills Co Ltd for the year 1961-62. The improvement in sales from Rs 83.65 lakhs in 1960-61 to Rs 1,77.14 lakhs is particularly remarkable. Reserves and Surplus are higher at Rs 5.71 lakhs as against Rs 3.13 lakhs in 1960-61. The increase in pre-tax net profits (after providing for depreciation etc) from Rs 5,36,655 to Rs 10,57,181 is of a substantial order and works out to 97 per cent over 1960-61. The company has launched on an expansion programme under which 12,000 cotton spindles plant will be installed. Plans are in an advanced stage for the implementation of the scheme. To finance the programme, the company has under consideration issue of new equity shares.

In his speech at the annual general meeting of the company, Mr G. L. Gupta, Chairman of the company, referred to the difficulties being experienced in obtaining raw materials like wool and wool tops in the wake of the drastic restrictions imposed on their imports by the Government. The raw material shortage will necessarily limit the scope for export which has been made obligatory for the mills. The increase in Corporate tax in the last budget and the levy of higher excise duties on woollen and worsted yarn is a discouraging factor. Efficiency of production in the mills is also low as most of the machinery is obsolete. Rehabilitation of the out-of-date machinery is one of the pressing problems facing the industry. The total cost that a full-scale rehabilitation will entail has been estimated at Rs 11.25 crores by the working group of the National Development Corporation. Necessarily priority has to be given to the rehabilitation needs of the industry. There is also further scope for encouraging the use of

indigenously produced wool tops for processing in the mills. The Panipat Woollen Mills has achieved signal success in manufacturing wool tops from blends of Indian wool with foreign raw materials. Popularisation of indigenous wool tops will go a long way in filling the gap in raw material requirements which at present place severe limitations on production of woollen goods in the country.

RAGHUVANSHI MILLS Cotton Production Inadequate

Despite higher production costs, the Raghuvanshi Mills Ltd. has reported higher profits for 1961-62. Profits subject to depreciation and taxation are higher at Rs 26.77 lakhs as against Rs 21.70 lakhs in the previous year. The higher profits have also enabled the company to increase the dividend to Rs 12.00 per share from Rs 10.50 for 1960-61.

In his speech at the annual general meeting of the Company, Mr Ravindra Maganlal, Chairman of the Company, emphasised the need for increasing the production of cotton to attain early self-sufficiency. Presently the per acre yield of cotton in the country is very low, being only about 80 to 90 lbs while a number of other countries have yield which is four to five times that figure. Scarcity of cotton is the major problem facing the industry and with the expansion in the production of cotton textiles envisaged during the Third Plan, it is doubtful whether it would be possible to meet the requirements of the industry from indigenous production. In this circumstance, the suggestion made by Mr Maganlal for the building up of a buffer stock is worth considering. This would not only ensure steady supplies of cotton to the mills but also enable prices of cotton to be kept at a stable level.

Mr Maganlal also referred to the need to increase the export of cotton textiles. Considerable importance attaches to the scheme formulated by Government in this regard. In accordance with this scheme, exports have been made obligatory for individual mills. The country has been facing considerable competition in the international markets from other cheap producing countries like Japan and Hong Kong. But a more uncertain element in the prospects for exports is the projected entry of the UK, India's main consumer of cotton textiles, into the Common Market. To increase exports of Indian cotton textiles in this circumstance, it is necessary that vigorous efforts should be taken to bring down the cost of production.

SNIPPETS

Bhilai

Two more old monthly production records were smashed in the Bhilai Steel Works during Sep-

tember 1962 when production of blooms and billets during the month totalled 78,243 tonnes and 49,722 tonnes respectively.

The Steel Works produced 89,000 tonnes of ingot steel during the month. Pig iron production during September was 97,067 tonnes. The Rolling Mills rolled 87,002 tonnes of ingots.

The production of rails during the month under review was 18,030 tonnes. The Rail and Structural Mill also produced 4,061 tonnes of structurals during the month.

The Merchant Mill produced 15,312 tonnes of merchant products. The production of gross coke and blast furnace coke during September totalled 98,572 tonnes and 90,535 tonnes respectively.

Lab Meters

A new electronic plant for the manufacture of laboratory meters and component test equipment will be constructed at Palghat, in Kerala State, with the collaboration of British Physical Laboratories Ltd. To finance the scheme a company with £90,000 capital, known as British Physical Laboratories (India) Private Ltd., will be set up. The new industrial partnership will be owned 49 per cent by the British company and 51 per cent by Universal Refrigeration Corporation of Bombay, manufacturers and distributors of mechanical and electrical machinery. Agreements signed in this connection include provision for long-term technical aid to the Indian firm. Production is expected to commence by January 1964.

Insulators

Promoted by Seshasayee Brothers (P) Ltd., with a capital of Rs 80 lakhs, Seshasayee Industries Limited is manufacturing porcelain insulators and associated hardware in its factory at Vadalur, near Salem. The present annual capacity of the factory at 1,200 tons of both HT and LT insulators for power transmission lines and other electrical porcelain and associated hardware will be raised to 3,000 tons by the beginning of 1963.

With the completion of the expansion programme, the company will undertake production of 25 KV solid core insulators required for railway electrification schemes sub-station insulators, high voltage transformer bushing and lightning arrester housing. The expanded foundry facilities, apart from meeting the hardware requirements for the ceramic section, will also make special abrasion resistant and heavy duty castings. The special attention laid on production techniques and subsequent rigid testing is notable, and the electrical testing laboratory is considered the most modern one in South India. When in full production, the company will help save the country foreign exchange to the tune of about Rs 50 lakhs per annum.

HEAD OFFICE: PARLIAMENT STREET, NEW DELHI

The Statistical Tables Relating to Banks in India, 1961, issued last week by the Reserve Bank of India, contains detailed statistical information on the working of banks in India during 1961. The data are presented in two sections. The first section gives a consolidated picture of the various constituent units of the Indian banking system, viz. Scheduled Banks, non-scheduled banks and co-operative banks. The second section contains detailed information on the various items of assets and liabilities as well as profits of individual scheduled and non-scheduled banks based on their balance sheets as at 31 December, 1960 and 1961 and the profit and loss accounts for 1960 and 1961. This publication is a useful supplement to the Report on the Trend and Progress of Banking in India, 1961 released in June last, which reviewed in detail developments in the sphere of commercial banking in India as also the Reserve Bank's policies.

An interesting feature of Indian Scheduled Banks' balance sheets for the year 1961 is that their owned funds (comprising paid-up capital and reserves) showed a significant rise of Rs 2.7 crores in 1961, as compared to a nominal rise of Rs 0.86 crore in 1960. Some of the banks, the reserves of which had already equalled their paid-up capital, strengthened them further through transfers from their profits in 1960 and 1961.

BANKS IN INDIA

Statistical Tables for 1961

Scheduled Banks' Deposits registered a sizeable rise in 1961 compared to only a small increase noticed in 1960. The rise in bank credit, however, was less than that in 1960. This enabled the banks to reduce their reliance on the Reserve Bank of India. Investments in Government securities of Scheduled Banks, other than the State Bank of India, also recorded an increase as against a fall in 1960. The decline in investments of the State Bank of India is attributable to the phased transfer of Public Law 480 and Public Law 665 Deposits to the Reserve Bank of India. The non-scheduled banks registered a further decline in their Deposits and loans mainly as a result of liquidation of some banks and amalgamation of some weaker units with the bigger banks.

Scheduled banks' earnings registered a further rise in 1961. This was mainly due to the increase in the level of Advances and partly to a rise in their lending rates. In respect of Indian Scheduled Banks, earnings from loans and advances showed an increase of Rs 10.7 crores to Rs 56.6 crores as compared to a rise of Rs 6.0 crores to Rs 45.9 crores in 1960. On the other hand, earnings from investments in Govern-

ment securities declined by Rs 3.8 crores to Rs 16.1 crores as a result of reduction in the level of investments of the State Bank of India. Total current operating earnings rose by Rs 10.9 crores to Rs 103.3 crores, as compared to a rise of Rs 9.2 crores in 1960. Their current operating expenses went up by Rs 4.6 crores to Rs 78.8 crores as compared to a rise of Rs 5.0 crores in 1960. As a result their profits showed a larger rise of Rs 6.1 crores to Rs 23.5 crores in 1961, as compared to an increase of Rs 3.8 crores to Rs 17.4 crores in 1960. As a ratio to the current operating earnings also the balance of profit showed a rise from 18.9 per cent to 22.7 per cent. As regards foreign scheduled banks, their current operating earnings showed an increase of Rs 4.9 crores to Rs 22.9 crores in continuation of a rise of Rs 2.5 crores in 1960. Their current operating expenses rose by Rs 3.7 crores to Rs 17.8 crores, as compared to a rise of Rs 1.2 crores in 1960, resulting in an increase in profits by Rs 1.3 crores to Rs 5.1 crores in 1961 as compared to a rise of Rs 1.2 crores in 1960.

The number of Scheduled Banks' offices in the Indian Union increased by 243 to 4,393 as compared to a rise of 224 in 1960 and 297 in

1959. The number of offices of non-scheduled banks, however, continued to decline. The increase in the offices of the State Bank of India was 45 as compared to increases of 78 in 1960 and 111 in 1959. According to the 1961 census figures, 1,427 offices of Scheduled Banks were located in places with population of less than 25,000 and represented 31 per cent of their total number of offices as at the end of 1961. Non-scheduled and co-operative banks had 320 and 1,199 offices at these places and they formed 52 per cent and 62 per cent respectively of their total number of offices.

The latest population figures are given in Appendix I, which gives the town-wise location of bank offices. The population also contains information regarding Indian banks' offices abroad, agents and correspondents of scheduled banks in London and elsewhere, members and sub-members of clearing houses, etc.

The publication can be obtained from the Administrative Officer, Economic Department, Reserve Bank of India, Post Box No. 1036, Bombay-1, or from Manager of the nearest office of the Reserve Bank of India at Rs 8.50 per copy (postage extra). An abridged edition containing only the Appendices referred to above is being printed and will be available at Rs 2.50 per copy (postage extra) towards the end of October 1962.

THE Third Five-Year Plan estimates that developmental and maintenance imports during the Third Plan period will amount to Rs 3,750 crores. In addition, capital repayments of the order of Rs 550 crores have to be made. These include repayment of past loans and credits to the extent of Rs 450 crores, the balance being for various other capital transactions including payments under the Indus Water Treaty Agreement. To meet these obligations, it is estimated that we shall have to export goods worth Rs 3,700 crores over the Third Plan period and try to secure foreign assistance of the order of Rs 2,600 crores. Invisible earnings which contributed sizeably to relieve the pressure on the balance of payments would disappear altogether because of increasing interest payments on our loans for development and diminishing interest earnings from our rapidly declining sterling reserves. It was felt that Rs 3,700 crores of exports were the minimum to be aimed at; while actually the needs of the situation may turn out to be much larger.

Although such an export requirement would mean an average of Rs 740 crores a year the actual step up in exports would have to be from around Rs 640 crores in the beginning of the Third Plan to about Rs 840 crores in the last year of the Third Plan. Again since development is to continue through successive Five-Year Plans and since our aim is to build up a self-generating economy which will dispense with foreign assistance for development within a decade from now, the need to increase our exports rapidly is very urgent. It has been estimated that in the first year of the Fifth Plan our exports will have to be in the neighbourhood of Rs 1,400 crores per annum if the development potential built up by then is to be sustained. Exports, therefore, have to have the priority in any way of thinking, if our aim is to build up a self generating economy and maintain a modest rate of growth.

Since the step up of Rs 200 crores in our exports in the Third Plan can only be achieved gradually it was natural to assume that every year exports would rise by about Rs 40 crores. At least that would be a realistic and modest way of setting a target to work to. Actual performance in the past 17 months has not at all been encouraging. Exports during the first year of the Plan were only Rs 660 crores, Rs 20 crores short of the target for 1961-62. Exports during the first five months of this year are not very much different from those during the same period last year and offer very little hope that they will reach the level of Rs 700 or Rs 720 crores which may be considered the target for this year. Tea and cotton textiles, which account for about 30 per cent of our exports, show hardly any improvement. Exports of jute goods have maintained a satisfactory rate of growth. Exports of ores, iron and steel, cashew kernels, fish, foot-wear and leather manufactures are stagnant. It is only in the exports of items like vegetable oil and oilcakes, sugar, and

Role of Commercial Banks in Export Promotion

By Manubhai Shah

tobacco that some improvement is being registered.

The reasons for such a poor performance are well known. High cost of production, non-maintenance of quality standards, lack of after-sales services and a buoyant market at home make exports unattractive. Competition from other countries makes the going so difficult in world markets that our exporters do not venture out from the comfortable and secure pastures at home. The scope for the expansion of traditional export items like tea, jute and cotton cloth—though good—is limited when viewed in the context of the needs of expansion of our export trade. We cannot place all our hopes on these for achieving the target figures mentioned above. Increasingly we will have to turn to new items like ores, iron and steel, fish, fruits, engineering products, chemicals and pharmaceuticals and various manufactured articles which alone have an elastic market. And these cannot be sold in foreign markets unless there is aggressive and scientific salesmanship. The products have to be familiarised, a reputation for quality and service has to be built up and trading connections have to be developed with planning and care. All this takes time and the results of our efforts will only be seen a few years hence. But we must begin now if we wish to export annually up to Rs 1,400 crores worth of goods nine to ten years later.

Commercial banks have an important role to play in the matter of selling our goods abroad. Their branches abroad can function as very useful agencies for commercial intelligence and market information. Since they have an intimate contact with the business communities in these places, they are in a position to make useful introductions for intending exporters, advise on the financial soundness of importers and exporters, mediate in disputes and so on.

This is on a personal plane. On a more general plane foreign branches of our banks can provide excellent information regarding economic conditions of the countries in which they operate, indicate the scope for pushing our wares in particular lines, assess the tastes of people and the peculiar features of a market and evaluate competition from others. This is more in the nature of work being done at present by commercial representatives of Government, but as bankers move more closely with businessmen, they are likely to have a better feel and confidence about these things. Being men on the spot, they are able to assess any situation much more clearly than others. They know the heart of the matter. The range of services which banks can render to exporters can be clearly seen from the activities of foreign commercial banks in this country or in South East Asia, the Middle East or Africa. Some of the

"Reviews" which they produce are often the only source of information regarding some of these countries.

Our export promotion drive would have been helped greatly if our commercial banks had branches in all the areas which we want to reach, like the Middle East, South East Asia, Africa and Europe. Unfortunately Indian banks have very few branches abroad and even those few are located only in areas where there is a large Indian population. A perusal of the history of some of the British Commercial Banks shows how those ventured during the 19th century into distant and unfamiliar lands in search of profits and assisted British trade greatly in the process. They went to India, South East Asia and China, Africa and South America. Venturesomeness of that kind is necessary on the part of Indian banks today.

Of course, it is true that regulations imposed by Governments on foreign banks accepting deposits, etc., make expansion on that scale difficult today. Again, expansion of banking activity abroad has taken place only in the case of those countries which have surplus capital to export and, therefore, a country securing substantial assistance and private foreign capital cannot hope to emulate their expansion. Nevertheless there is scope for far greater branch expansion than has taken place so far. Our banks, I feel, have been over-cautious in this regard.

The second field in which commercial banks can help promotion of exports is by making readily available financial facilities to exporters. These facilities would take two forms: one is the provision of credit to the exporter by banks for periods at least as long as the exporter has to wait to receive payment from his customers or for as long a period as the bank can liberally afford to advance. The second, which is strictly non-financial, is the insurance against the risk that the customer may not pay at all. The latter has been taken care of by setting up the Export Risks Insurance Corporation. The Export Risk Insurance Corporation was set up towards the end of 1957 and up to the end of 1961 it has been able to underwrite risks of the order of Rs 13 crores. The risk cover given by the Corporation offers additional security to the exporter wanting to borrow money from a bank against that particular transaction and should normally make the bank more willing to lend. It has been found that some banks are not willing to extend credit on this basis even to parties who are otherwise suitable financial risks. A reconsideration of this attitude and approach by Indian Banks would help exports to a large extent.

By and large Indian Commercial Banks have been providing some short term credit to Indian exporters. Exporters sending goods to countries which are members of the Inter-

national Monetary Fund can draw export bills against which banks do lend money. Demand bills on sight involve locking up bank funds for only 10-12 days and other demand bills involve lending for longer periods usually not exceeding 90 days. These are eligible for rediscount with the Reserve Bank of India under the Bill market scheme and therefore the lending Bank is not unduly worried about its liquidity position. Over half of our exports are covered by export bills and banks find them lucrative to hold because the yield on them is higher than on inland bills or loans.

It has often been argued that many of our exportable commodities are priced out of world markets because of high domestic costs of production and, therefore, it would help them to be more competitive if the rate of interest on export credit were lower. It is pointed out that Germany and Japan which have built up their exports so well in the post war years give preferential discounts in favour of export bills and a similar practice in India would give a stimulus to our exports. The analogy however does not strictly hold because both Japan and Germany were high interest countries whereas India, because of Government's need to borrow large sums for development, has remained a low interest country. As a matter of fact, the criticism has often been levelled that the rate of interest hardly reflects the scarcity of capital prevalent in a poor country. Even so a further reduction in the rate of interest on export credit is very desirable and I hope something will be soon done in this direction. The difference in interest rates between lending rates and charges for internal marketing and external marketing finances lowering them in favour of the latter will mitigate to some extent the existing terrible "internal pull" of the market for local sales as against exports. For a long time to come, the export sector of the economy has to be more favourably treated. Also what the commercial banks can do is to keep the export sector free from the effects of a credit squeeze and make money available to exporters even when other sections of the economy have to do with a smaller supply of funds.

The real problem regarding credit which exporters are facing is more with regard to the medium-term and long-term credits. Now that world markets have turned into buyers' markets and there is greater competition among sellers, intending importers expect the exporter from whom they buy to provide the credit they require. This is because private foreign investment does not go adequately into developing countries and because the flow of international assistance is not commensurate with the countries' needs. The richer countries are in a position and seem quite willing to provide such credit. So even developing countries like India which aspire to sell engineering and other manufactured goods have to provide such credit if they want to be in the export field.

The period for which export credit is required varies with the

...WRONG? NO. ARITHMETICAL JUGGLERY? NO.

It's the magic of the RECURRING DEPOSIT SCHEME—

our latest savings scheme. You deposit, say, Rs. 10 every month in this account, and it becomes Rs. 383 in 36 months; Rs. 521 in 48 months; Rs. 665 in 60 months. An attractive scheme. It makes regular saving a habit — a good, profitable habit. For, month by month, your account grows, earning compound interest. You can save larger amounts too, in multiples of 10, upto Rs. 1000 per month.

For full information, please ask for a copy of the Rules of our RECURRING DEPOSIT SCHEME.

THE BANK OF INDIA LTD.
T. D. KANSARA, General Manager

Monthly Deposit:	Total amount repayable at the end of 36 months	Total amount repayable at the end of 48 months	Total amount repayable at the end of 60 months
Rs. 10/-	Rs. 383/-	Rs. 521/-	Rs. 665/-
Rs. 30/-	Rs. 1,149/-	Rs. 1,563/-	Rs. 1,995/-
Rs. 50/-	Rs. 1,915/-	Rs. 2,605/-	Rs. 3,325/-
Rs. 100/-	Rs. 3,830/-	Rs. 5,210/-	Rs. 6,650/-
Rs. 1000/-	Rs. 38,300/-	Rs. 52,100/-	Rs. 66,500/-

nature of the commodity. Light engineering consumer durables like sewing machines, fans or bicycles may require credit for a period of 18 months. For trucks and automobiles and their parts the prevailing period is three years. For machinery and equipment, e.g., ring frames, boilers, sugar machinery, machine tools, locomotives, etc., credit up to five years may have to be given.

I feel that banks should undertake such medium-term and long-term financing of exports, if the export transactions are found to be other-

wise satisfactory. The maximum duration of such export credit need not be more than five years as decided upon at present by the "Berne Union". Commercial banks in India have been able in recent years to go beyond the limits of strict commercial banking and provide medium-term credit to industry. A similar step will have to be taken with regard to exports as well.

Any one who makes such a suggestion has to confront the question: what happens to the liquidity of the banks if they lock up funds for such a long time? Again,

how is the risk of non-payment to be covered over a longer period? The latter is taken care of by the Specific Contract Policy of the Export Risks Insurance Corporation.

Banks can undertake such extended term finance only if they have adequate rediscount facilities. The present rediscount facilities may not quite meet the situation and we may have to think of setting up a special institution for providing such facilities. Most countries in Europe have such specialised institutions.

Like every other agency in this country, the banks also have been

slow in realising the urgent need to promote exports. Since our future development depends to a large extent on our being able to step up our exports, they have to participate actively in the drive for exports. A little more venturesomeness like that of the merchant bankers of the 19th century, a little more of the glory and honour of our sea-faring ancestors and a little less harking backwards to comfortable domestic pastures will enable our commercial banks to participate significantly in this great adventure and supreme national task of export promotion.

This one aircraft from Pan Am's huge cargo fleet offers you a capacity of 18 tons!

THE WORLD'S MOST DEPENDABLE SUPPLY LINE IS THE WORLD'S MOST EXPERIENCED AIRLINE

Pan American—The world's largest air cargo carrier—brings your world-wide operation closer together, helps it run more smoothly. More economically!

You can depend on Pan Am Clipper Cargo to deliver your shipments *on time*—every time. In factory-fresh condition! Pan Am links 114 cities on all 6 continents—and frequent departures and arrivals keep your orders on the move.

You save money, too! Insurance is less than by surface. Insurance companies know that careful Pan Am handling assures you of far less chance of

loss or damage. You save on packing and crating. You can cut inventories and free capital for other uses. And Clipper Cargo rates are down as much as 63% on some routes.

Reserve cargo space in advance for one shipment or hundreds. For details on Pan Am's world-wide Jet routes, schedules and many savings, call your Cargo Agent, Freight Forwarder, or Pan Am in:

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I DO WISH that my first post-holiday reflections in these columns didn't have to be so lugubrious, but I don't think it is possible to shrug off the Nefas incidents of the last two weeks. It is not so much the actual extent or nature of the conflict, which, though more sustained than ever before, is still pretty primitive by modern standards. It has been mostly exchange of fire and some shelling, with not even planes being used by either side. But coming as this new series of aggression does after the earlier engagements in Ladakh, it seems we are to have no respite from needling. It is a profoundly depressing thought, but it does look as if the pretence that these conflicts are peripheral to our lives cannot be sustained any longer. For as far ahead as we can see, containing China will be our major pre-occupation and this is going to play havoc with the whole range of our hopes for our people. Mr Nehru has come out with the clearest statement today, that the task is to throw the Chinese out of Indian soil, and even in Nefas, this is going to be a long-drawn-out affair. The latest report is that the Chinese are moving South in the Longju area and have even reoccupied Longju which they had vacated about two years ago and whose original occupation by them was the first serious indication of their predatory intentions in this area. This means that the present inconclusive engagements in Dho'a will by no means be the only armed conflict in the area. Meanwhile, other unfriendly neighbours have not been idle. Pakistan is deliberately angling for trouble by fomenting border incidents near Tripura and covering it up by a propaganda offensive making it appear that India is, as its lurid papers put it, on the warpath. And Nepal has perversely set its face against India. Quite predictably, the Chinese have responded to nothing in particular, offered aid to Nepal in the event of an attack. I do hope that Nepal does not fall for so contemptible a ruse and antagonise India further. All this adds up to a grim picture of Pancha Sheel in ruins, which might not be in itself a great disaster if it taught us the lesson that the power game is not played with platitudes. The more heart-breaking thing is that, with China nibbling away at our border, our entire priorities will get distorted with inevitable consequences on our economic preoccupa-

tions. The thought that we were, in Mr Nehru's words, the condemned generation was bearable when 1975 seemed to offer the beginnings of a better life for our people. These hopes are in danger of deferment.

★

Mr Nehru has spoken again on the question of official language and spoken sensibly. But the very fact that he has to speak about it so often and so combatively shows the extent of the pressure that but for him will overwhelm those who have little or no Hindi. It is the general feeling among such people that only Mr Nehru stands between their interests and the strident trampling thereof by Hindi enthusiasts. The status of an associate official language for English was promised long ago but the necessary legislative sanction is yet to be provided. There was suspicion of some quiet sabotage last session but this is now seen to have been unfounded, for the bill is coming up before the next session of Parliament. The proposed legislation is modest enough in all conscience and falls far short of Mr Nehru's assurances. For instance, his view that the abandonment of English for official purposes should be only at the instance of those who don't know any Hindi is not specifically provided for. What he sees clearly and what Hindi whole-hoggers refuse to see is that any forcible imposition of Hindi on the Bengalis or the Tamils is sure to estrange them into anti-national sullenness and even revolt. A substantial part of the support for the DMK in the south stems from nothing more than inchoate anger at Hindi being thrust down the throats of people, sometimes blatantly and at other times surreptitiously. I have repeatedly heard people who have their other quarrels with the DMK aver with every appearance of seriousness that but for the DMK the Hindi-wallahs would have had their way long ago. This is far from the truth but it is a fairly wide-spread feeling. The drift from this mood into one of acceptance of the other untenable and even unexamined DMK premises for a separate Dravidistan is easy, especially when Hindi threatens to knock the bread out of your mouth. The whole trouble about the controversy over the official language is that it is, in its essentials, an economic argument. "Hindi or English" is a bread-and-butter question involving job opportunities and prospects in government. That is why ap-

parently permissive provisions like Hindi being allowed as an alternative medium in UPSC examinations are, not unreasonably, considered sinister.

Language indeed seems destined to plague our national life in every way. The dismal fact is that, as far as India is concerned, language is a dividing rather than unifying force and national unity will have to be forged in spite of rather than by language. More than enough trouble was (and still is) caused by the redrawing of State boundaries on linguistic lines. In education too, it is creating problems that many other countries are spared. The vice-chancellors of universities who met in Delhi recently grappled manfully with the question of medium of higher education. The papers report that there was general endorsement of the official view that it should eventually be the regional language. The practical outcome of this agreement seems doubtful: it is no secret that many of the participants have misgivings of their own unavowed in the final communicate but which they have made public in other contexts. Even the limited Madras experiment of teaching "ar's" subjects in Tamil in a Coimbatore college was officially admitted to have been not a conspicuous success. Mr Nehru himself had, in his speech at the conference, indicated the dangers of several islands of learning incapable of establishing contact with one another arising in consequence of adopting the regional language as the medium. The very desirable mobility of students and teachers all over the country would become difficult and the revival of the Indian Educational Service may well turn out to be farcical in such a set-up. Here we have a crucial clash between educational and political ideals and he would be a rash man who would rush with an answer about their relative importance or even priority. In any event, nothing like the headlong plunge into teaching in regional languages by 1965—a prospect once threatened by Mr Shrimani with every show of impatience with those who doubted its wisdom or even possibility—seems imminent. All this, of course, is not to say that English is necessarily the best medium for teaching in universities. The preference for English arises from his'orical rather than educational compulsions. Uneasy bilingualism and even trilingualism seems to be the fate of Indians for many decades to come.

★

Sentimental piety mixed nicely with public relations in Mr

J. R. D. Tata's duplication this week of his flight that thirty years ago brought into being the Tata Airlines, Air India's parent. The approximation to the original flight was not easy, quick obsolescence being literally and figuratively of the essence of air transport and aircraft enterprises. A leopard moth did duty for the original puss moth and an unexpected aid to verisimilitude was provided by radio trouble. "Thirty years ago, this could not have happened," quipped Mr Tata. "There was no radio." Air India has come a long way from those early days and even the pictures seem to prove it. The photograph of Mr Tata with the puss moth he piloted reminds one of early Chaplin films and comparing it with the glossy pictures of the sleek Boeings we see today, we get some idea of the progress in both air transport and photography. The original flight carried a little over 100 lbs of postal packages and no passengers from Karachi to Bombay whereas today, Air India spans the whole world carrying men and material to all corners of the earth. Air India has thus good reasons to preen itself on this occasion. Why, it has even made profits, a thing exceedingly rare in the history of international airlines! Nostalgia for the early days did not prevent Mr Tata from looking ahead for the supersonic aircraft. Well, when it does come, we may be sure that well-beloved flying Maharajah will be among the first to unroll the red carpet for you.

(From Our New Delhi Correspondent)

Shipyard, Iron ore, PTC

Mr Raj Bahadur, Minister for Shipping, who visited Japan earlier in the month, has brought back the impression that Japanese industry could make a big contribution to India's industrial development. Hitherto, for various reasons, the tendency in India has been to turn to the West whether it was a question of technical assistance or financial collaboration for new industrial projects. There is no lack of appreciation in this country of the tremendous advance made by Japan in industry and technology. But it is not as widely known as it should be that Japanese industrial techniques are more suitable for adoption in this country than those developed in Western countries. Both in the economic use of materials and full utilisation of manpower, Japanese industry can give very useful guidance.

The main purpose of Mr Raj Bahadur's visit was to discuss prospects of Japanese collaboration for the construction of the second shipyard at Cochin. Though this project has been included in the Third Plan, progress has been hampered by the difficulty of securing assistance to cover the foreign exchange cost, estimated at Rs 3.5 crores by the British team of experts who prepared a project report some years ago. Neither the friendly governments nor the international agencies which have come forward to extend assistance for India's development plans, consider that a shipyard comes under the category of projects quali-

BURN AND COMPANY LIMITED.

NOTICE is hereby given that the Registers of Members and Share Transfer Books for 6% and 7% Preference Shares in the Company will remain closed from the 26th October to the 31st October, 1962, both days inclusive for the purpose of payment of Preference Dividends for the half-year ending 31st October, 1962, on or after the 10th November, 1962, to those Preference Shareholders whose names appear on the Company's Registers of Members for 3% and 7% Preference Shares on the 31st October, 1962, or to their nominees.

By Order of the Board,
MARTIN BURN LTD.,
S. GUPTA,
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta-1.
15th October, 1962.

ifying for external aid at governmental level. A proposal received from a West German shipyard offering financial collaboration on the basis of equity participation was apparently allowed to lapse, while Government debated the pros and cons. In view of the importance of ensuring efficient and economic working, it will be advantageous if the foreign collaborator has a stake in the undertaking. Recently the Government of India had taken a decision to consider proposals for equity participation in the second shipyard. The discussions held by Mr Raj Bahadur with well known ship-building firms in Japan afford hopeful indications of such collaboration materialising in the near future.

Mr Raj Bahadur told correspondents last Monday, that two Japanese ship-building firms have evinced keen interest in the project. As far as technical assistance is concerned, there is no difficulty. But as their own resources are stretched to the utmost, the possibility of financial collaboration depends on their success in obtaining credit facilities from the Japanese Government. The financial aspects were also discussed with the Japanese Premier and the Finance Minister by Mr Morarji Desai who was also in Japan at the time. It appears that in the course of the talks the Japanese Government had indicated that part of the Yen Credit already promised by Japan for the Third Plan might be used to cover the foreign exchange cost of the shipyard. But the full amount of \$95 million credit has already been earmarked for other projects; and neither the Finance Minister nor the Planning Commission is ready to disturb these arrangements. It has been made clear that any assistance that may be provided by the Japanese Government to enable financial collaboration in the project by Japanese ship-building firms will have to be outside the existing yen credit. There is as yet no positive commitment on the part of the Japanese Government. It is, however, pointed out that the credit already provided is intended to cover the foreign exchange requirement of the first two years of the Third Plan. Part of the credit that may be extended for the subsequent years, when work on the shipyard is likely to commence, may be used to cover its foreign exchange requirements. It has also been suggested that the Japanese shipbuilders, who are prepared to collaborate in constructing the shipyard, could seek the assistance of the Overseas Economic Co-operation Fund. In the meantime, a team of Japanese experts will be coming in November to study the proposals for financial collaboration. They will also draw up a new project report and prepare fresh cost estimates. It is hoped that the foreign exchange component may turn out to be less than the

Rs 3.5 crores estimated by the British team.

Transport of Iron Ore

The claims of Indian shipping for a larger share in the transport of iron ore from India to Japan were also successfully pressed by Mr Raj Bahadur when he discussed this topic with Japanese authorities and representatives of the steel industry. At present only 5.4 per cent of the total annual ore shipment of 5 million tons is carried by Indian ships. Out of the balance, 62 per cent is carried by Japanese freighters and the remaining 32 per cent by third flag carriers. The question of increasing the share of Indian ships in this trade is of some urgency in view of the programme already under way for expansion of the merchant fleet. It is learnt that all the eight bulk carriers under construction in a Japanese shipyard for Javanti Shipping Company are likely to be delivered before the end of 1963. With this addition, Indian ships would be in a position to transport two million tons of ore in a year.

In this connexion it may be noted that a team of 18 experts from Japan will be coming next month at the invitation of the Government of India to survey and negotiate the project for stepping up export of iron ore from Paradip, in Orissa, to two million tons by 1965. The project (estimated to cost from Rs 32 to 35 crores) includes schemes for the development of the mines, an Express Highway, (already under construction by the State Government, from Daitari to Paradip and improvement and expansion of the handling and berthing facilities at the port. It is considered likely that the Government of Orissa will undertake the construction of the Port as an agency of the Central Government. The heavy trucks required for transport of ore by road, it is expected, will be made available within the next two to three years by the Heavy Truck Manufacturing Project of the Defence Ministry and other automobile manufacturers. The proposals for improvement of transport facilities in the region also include a railway line between the mines at Naya-garh and Paradip which will further serve as a connecting link to Talcher coalfields. It is estimated that the Talcher deposits are among the biggest in the country.

PTC, Okhla

The first High Precision Laths, made at the Prototype Production and Training Centre, Okhla, (PTC) under licence from the manufacturers, Messrs Weiler & Co. West Germany, was presented to the Union Minister for Commerce & Industry by the West German Ambassador last Monday. To mark the occasion the PTC celebrated the "Open House Week" when its workshops were thrown open to the public and industrialists interested in its activities. An exhibition of machine tools which are being developed as well as standard parts, components and accessories, also formed part of the celebration.

The Prototype Production and Training Centre is a joint venture of the Government of India and the Federal Republic of Germany which was set up last year to help the development of industries in the small scale sector. Its main activities are (1) training of technicians from and for small industries (2) design and development of machine tools to be manufactured by small industry and (3) a planned and phased programme for machine tools, to support the training programme in inplant production training.

Besides the High Precision Lathe, the Centre has also obtained through the West German Government, designs for the manufacture of the two other machine tools, namely, Tool & Cutter Grinder from Messrs. Hahn & Kolb of West Germany and Milling Machine from Messrs. Steinel of West Germany. With these licences, drawings and technical knowhow, the Centre has worked out a detailed programme for these machine tools as the first phase. Apart from these, a second generation of three more machine tools—Capstan Lathe, Mechanical Surface Grinder and Vertical Milling Machine—is also being developed at the Centre.

What is of greatest interest to small entrepreneurs is the transfer programme drawn up by the Centre, for each machine tool as soon as the final stage of its manufacture is reached. The manufacturing processes and rights will be transferred to small units that are prepared to undertake the manufacture of the machines or components, to prescribed standards of quality, under the supervision of PTC.

It is proposed to hand over to the transferees the complete designs, planning instructions, operation plans, jigs, fixtures and special tools, gauges, etc, for each of the products so transferred. In the initial stage the Centre will also train the officers, technicians and workmen of the small manufacturer to enable them to become conversant with the products and manufacturing processes. As Dr. H. Vollrath, the German Director of the Centre, explained, the transfer programme will enable the small industrialist to secure the benefit of collaboration with well known manufacturers of West Germany, which, ordinarily, only large units will be able to get.

It is recognised that few small units will be in a position to make investment on the scale necessary to undertake manufacture of a complete machine tool. Mr C. R. Sundaram, Chairman of the NSIC, explained to newsmen last week that a number of units may take up the manufacture of the different parts, one of them undertaking the assembling. The PTC also undertakes to supply to the successor units, castings, forgings, or any other components for which they may not have adequate manufacturing equipment. The Centre has also developed a range of secondary products, which can be taken up for manufacture by small scale units as ancillary units of the machine tool industry, which are now ready for transfer. The Centre expects to reach the peak of its activity early in 1964.

Markets

JUTE

Too High a Minimum Price?

THE first step to be taken to minimise uncertainty in the supply of raw jute to mills from year to year is to convince the jute grower that he will have an equitable return. Jute prices have thus far been ruled by the law of supply and demand, and little attention was paid to the plight of the jute cultivator. The result was that a season of bumper jute crop (with, automatically, low prices) was sure to be followed by a season of low output. In other words, the cultivator's enthusiasm for the new jute crop depends directly on the return he got for his produce in the previous season. This is an unsatisfactory state of affairs and can be effectively remedied only by ensuring an equitable return to the cultivator. This is exactly what is being sought to be done by Government since the last jute season. There is now the Jute Buffer Stock Association which buys surplus jute, with Government fixing the minimum price of jute at Rs 30 per maund basis Assam Bottoms for supplies delivered at the Calcutta mills. But the decision to maintain the minimum price this season on at last year's level is not quite justified. For the jute industry has to sell the bulk of its output overseas; the Indian mills have to sell their production in world markets in competition with Pakistani mills which are obtaining their raw jute supply at a comparatively cheap price. The export bonus scheme that is in force in Pakistan also confers great advantage on its jute industry.

Discussing the question in its latest issue, the Jute Bulletin of the Indian Central Jute Committee says that the maintenance of the minimum price for raw jute should present no insuperable difficulty. It points out that considerable quantities of raw jute have been bought by the Buffer Stock Association and by the mills with the result that there is a shortage of high quality jute. But there is a large quantity of average quality jute which is not attracting buyers even at the minimum prices. This too may not constitute a big problem if the jute industry continues to work at full capacity. The Bulletin itself concludes: "Provided the world demand for the sacking goods, in which the Indian stocks have been accumulating fast for the last four months, picks up during the remainder of this year, it is quite possible the heavy mill consumption will take care of the entire marketable surplus from the current jute crop."

That there is more than one view on how to ensure a fair return to the cultivator will be evident from the speech of Mr. Thisidas Kanoria, Chairman of the Calcutta Baled Jute Association. According to Mr Kanoria, the real solution to the pro-

blem lies in granting permission for the export of more raw jute. So far, 200,000 bales of low grade jute have been permitted to be exported. Mr Kanoria thinks that much more should be freed for export as the crop is estimated at about 6.8 million bales; and there is a sizable carry-over from the last crop.

In the meantime, the mounting stocks of heavy goods with mills is

be expected, the steady rise in sacking stocks is being kept under close study by the Indian Jute Mills Association. At its meeting last Thursday, Committee of the IJMA considered the market situation in the light of the stock position at the end of September. The decision has been taken to extend the present maximum level of production until 10 November and to review the position then in the light of October stock figures. The market has apparently already decided what should be the decision of the IJMA early next month: a reduction in the production of sacking. This explains the comparative steadiness of sacking this week.

Buffer Stock to Buy Jungli Jute:

In view of the recent fall in the prices of the lower grades of jute, a special meeting of the Committee of the Jute Buffer Stock Association was convened Wednesday to consider the question of supporting the market. With this object in view, the Committee decided to direct members of the Association to purchase a further quantity of 2 1/2 lakh maunds of jute for the buffer stock with a very strong recommendation that purchases should be confined to jungli jute.

TEA

Crop Prospects

THE North-Indian Tea-growing season has passed the half-way mark. This is, therefore, an opportune time of the year to make a forecast of market and crop prospects. Such carryover as there may have been from the previous year has already been absorbed by now. Secondly, the offerings of second-flush teas, for

which premium prices are paid depending on their quality, have been completed. Thirdly, the forthcoming offerings will consist mainly of teas of "rains" manufacture prices for which are governed, by and large, by the quantum of supply and demand. Fourthly, from June onwards, despite the best efforts of the producers, the monthly production figures started lagging behind last year. Lastly adverse growing conditions, in particular the recent heavy floods in Assam, made matters even more difficult. With the result, the outturn for the six months ended September 1962 is lower at 415.31 million pounds as compared to 435.71 million pounds in the similar 1961 period.

While the general level of exports, during this season, has been satisfactory, the trend of shipments to the UK has been particularly encouraging. Export figures are currently running ahead of the past 14 years. The early sales of the season yielded excellent prices for the best teas; buy the Common and Low Medium varieties fetched prices which were lower than the corresponding figures in the last two years. In fact, more buyers appeared to be actively participating in the sales which was in sharp contrast, to last year and which was perhaps indicative of a feeling of uncertainty about the scope of future supplies.

In the above connection, the latest monthly report, issued by Messrs J. Thomas & Company, states "while this improved demand is encouraging to the producers of Common and Low Medium teas, it is nevertheless inadequate to raise prices to last year's levels and their current sale averages continue to be disappointing. If the North Indian crop were to show a further downward trend during the remaining months of the year, this will inevitably be reflected in smaller Calcutta offerings and there may well be a relative shortage of teas in the closing stages of the season. Although this year's crop is likely to fall short of last year's record figure, production should, in the coming years, show an inexorable increase".

The Chairman of the Tea Board has also stated that the recent reduction in the duties is intended to remove the price differential and make Indian tea competitive in international markets. But the benefit will be of little avail unless it results in a larger export figure at the end of the year. This seems to be rather doubtful at any rate in the near future. For, Ceylon, Indonesia, Formosa and East Africa can all place cheaper teas in foreign markets than India.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 41,773 packages of Leaf teas. Demand was stronger than in the previous auction. Plain orthodox descriptions were sold readily at firm to dearer rates with their BCPs again a stronger feature. Orthodox Assams met with keen competition especially the brighter liquoring BOPs, which were sold at considerably dearer rates. CTC descriptions were irregular; but often sold at prices which were up to 20 nP a kilo easier. Legg-cut teas were also slightly lower.

Whole Leaf grades met with useful enquiry, but were often sold with

the more stylish kinds having more enquiry and selling at dearer rates. Tippy sorts registered a further advance in prices. Darjeeling teas were well supported, but prices were irregular. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.20 to Rs 4.50; Plain BP Rs 3.70 to Rs 4.00; Plain Fannings Rs 3.80 to Rs 4.10; Medium Assam CTC BP Rs 5.30 to Rs 5.70; Medium Assam CTC Fannings Rs 5.30 to Rs 5.70; Best Assam CTC BP Rs 6.40 to Rs 7.00 and Best Assam CTC Fannings Rs 6.40 to Rs 7.00.

In the Colombo market, offerings were 5,788,070 pounds. Quality generally showed a decline. At the opening, Uva teas were lower according to quality. Highgrown broken from Western districts were also about 5 to 10 cents per pound lower although demand continued to be strong. Medium broken were slightly lower on average. Tippy low-grown teas were often substantially lower; but small leaf descriptions were fully firm.

The Pakistani Government has deferred the next external auction

of tea with a view to increasing supplies for the internal auction. Producers are now allowed to withdraw more than 10 per cent of tea offered for the auction. These steps have been taken to overcome the tea shortage in Pakistani markets.

According to official statistics, the carryover from last season was 17.44 million pounds. Production, during the current season on the basis of conservative estimates, is expected to be 52 million pounds. Out of the total of 69.44 million pounds, internal consumption should be about 42 million pounds as against 43 million pounds last year, leaving a surplus of 88.44 million pounds. If the allocated 10 million pounds of tea is exported, there will still be a carryover of 12 million pounds to the next season.

According to a report issued from Cochin, exports of South Indian tea amounted to 9.4 million pounds in August, 1962 as compared to 11.22 million pounds in the previous month and 3.52 million pounds in August last year.

Exports of tea from East Africa were lower at 4.14 million pounds in June, 1962 as compared to 4.69 million pounds in the previous month.

SUGAR No Restrictions on Production

IT has now been announced that there will be no restrictions on the production of Sugar in the 1962-63 season and that the sugar mills will be free to utilise their capacity to the maximum extent. The order to restrict production was issued in the factories last year as one of the urgent remedies to the problem of mounting sugar stocks. In the Government's estimate of the export prospects, rising internal consumption and a decrease in cane acreage, there is no need to continue the cut. In its expectation, the accumulation of stocks will not present a problem next year and hence the

present is the most propitious moment for taking a step forward on the road to normalcy.

The current season's production of a little over 2,700,000 million tons is expected to be easily absorbed. In fact, the carry-over of 1.2 million tons from the last season will also be utilised to a certain extent, as internal consumption is currently estimated at around 2,500,000 tons annually. Exports may also be about 350,000 tons. The increase in internal consumption has been more pronounced after the controls over selling prices and distribution of the commodity were removed with effect from November last year. The upward trend has continued to be in evidence, while it is expected that exports in the next season may be about 500,000 tons.

The arrangements for selling sugar on a barter basis and shipments to the USA and some countries may easily account for 500,000 tons. If internal consumption rises further to 2,800,000 tons, even an output of 3,000,000 tons in 1962-63 may not present any problem of marketing. This may probably be the reason that the Government is not bothered about the problem of surplus stocks which, it thinks, will be wiped out next year.

It is, however, feared in certain circles that the withdrawal of the cut in production, though welcome, will not be helpful in increasing the production of sugar. It is even felt that the output, during the next season, will not be even equal to this season's figure, because of the likelihood of large-scale diversion of cane for conversion into gur. Moreover, the acreage under cane and cane production had considerably been reduced in anticipation of the continuance of the cut. According to the industry's estimate sugar production this year will not exceed more than 2,500,000 tons, about 200,000 tons less than last year's.

As a matter of the fact, Mr Mehta, the Secretary of the Indian Sugar Mills Association has stated that the domestic offtake of sugar, curbed by high excise and other duties, will remain well below the industry's productive capacity for some years. He says that the Government, while refusing to ease restraints on consumption, persists on a policy of indiscriminate licensing of new units. Mr Mehta takes the view that there is hardly any scope for licensing additional capacity in the industry.

Meanwhile, conditions in the sugar market have remained quiet with prices displaying an easier tendency, thanks to the release of 250,000 tons of sugar for sale by factories in the open market. Trade circles fear a further fall in prices despite brisk demand.

GUR Fear of a Fall in Output

It is feared that the removal of the cut in sugar production will affect adversely the gur production. It is stated that the gur industry will

find it increasingly difficult to acquire its requirements of cane.

Cane-growers are generally prone to sell cane to the sugar factories because of the regular payments and other facilities. Besides, the acreage under sugarcane has, this season, already gone down in anticipation of the continuation of the cut on sugar production. The crop position is generally satisfactory; but it may not be adequate to meet the requirements of the sugar industry if it decides to increase the production.

The only redeeming factor for the gur industry is the attractive price level. The demand for the commodity has been fairly good and the entire arrivals are being lifted by the stockists. New gur production has commenced, while stocks of old gur are reported to be negligible. In the Hapur market, Fagun delivery was quoted at Rs 21.50.

OILS & OILSEEDS Groundnut Touches Ceiling

A sharp advance in Groundnut provided the main feature of trading on the Bombay Oilseeds Exchange. The recent upward trend in groundnut prices gathered further momentum with the January contract touching the permissible limit of Rs 231.37. The main influence was provided by the strong fears of a decline in production in Saurashtra and Andhra due to adverse weather conditions towards the end of the monsoon. The brisk demand from the crushers and vanaspathi manufacturers also aided the upward tendency in prices. Groundnut Bold ready was quoted at Rs 46.15 and Groundnut Oil at Rs 19.25.

Trading in the Castorseed section was devoid of any new factors; but the market derived inspiration from the sharp increase in the prices of groundnut. Castor ready was quoted at Rs 36.62 and Castor Oil commercial quality at Rs 12.35.

The Linseed section presented a firm front in sympathy with groundnut. The seasonal demand for oilseed also aided sentiment. Ready was quoted at Rs 41.50 and Linseed Oil at Rs 17.10.

PEPPER Forward Trading in Bombay

Prospects of opening a market for forward trading in Pepper in Bombay seem to have brightened. A three-member delegation, sponsored by the Indian Pepper and Spices Trading Association, Cochin, is presently discussing the question with the Forward Markets Commission.

At present, Cochin is the only centre with facilities for forward trading in this commodity. A proposal for providing hedging facilities in Bombay was already recom-

mended by the FMC; but it was opposed by the IPSTA, Cochin, on apprehensions that the export trade there might be adversely affected. However, with the increasing importance attached to export promotion by the Union Government of late and the Bombay Port accounting for a major share of the country's export of pepper, the idea of having a second forward market in Bombay has been revised.

Conditions in the pepper market have been generally steady. In the Cochin market, the rate is quoted around Rs 309 per quintal for the ready position.

RUBBER Supply Problem

Reports from the Singapore market indicate a firm tone in rubber. In fact, the market for the commodity has been moving up during the past two weeks due to a technical squeeze in the October position. This is said to have resulted in a shortage of physical rubber. The squeeze itself, it is said, has been brought about by local covering for October shipments on Russian account, which are supposed to be around 25,000 tons. Some other East European markets are also said to be in the Singapore market. This has induced sellers to keep off the market.

As far as India is concerned, the consumption of rubber is growing at a fast rate. During the next year, it will be necessary to have much larger supplies, as two new units will be operating at full capacity, while a third factory may also be commissioned. Besides, established producers will be expanding their capacity. It will be necessary to import about 45,000 tons of rubber, as indigenous production of natural rubber, and synthetic rubber cannot be expected to be more than 40,000 tons, while total consumption is estimated at 85,000 tons. As consumption increases, there will need to be heavier expenditure in foreign exchange on imports unless the output of synthetic rubber can be stepped up further and planters are successful in producing tangible results in the next few years.

NON-FERROUS METALS Mixed Trend in Prices

Prices in the Bombay Non-Ferrous Metal market showed a mixed trend. While Copper and Zinc suffered a sharp setback from the high levels of the previous week, Tin maintained a firm front.

The fall in the prices of Copper and Zinc was due to a withdrawal of buying and increased selling pressure. These resulted from the growing pressure of arrivals from the upcountry centres and by foreign shipments through the State Trading Corporation.

The firmer tendency in Tin prices was the result of a paucity of the material in the market against fair

demand. The strength was well maintained even though reports from Singapore and London indicated a lower tendency.

On the London Metal Exchange, the amount of buying remained small. It seems that, for the moment, US consumers are getting all the metal they require from the stockpile, though stockpile Tin has, in fact, been released at a comparatively slow rate.

As it is sales by the producing countries have fallen off in the USA, because of the stockpile sales and it is thought that more metal may consequently be shipped to the London market. Unless demand improves, it will have to be absorbed by the Buffer Stock if the prices are to be prevented from falling.

GOLD & SILVER Upswing in Prices

The uneasy situation on India's northern border inspired fresh buying interest in precious metals. Gold gained much ground due to buying on a big scale from the upcountry centres and local covering. Delhi and Rajasthan operators are reported to have bought gold contracts to the tune of 15,000 tolas. Spot gold changed hands at Rs 117.60 to Rs 113.65, while Sovereign was quoted at Rs 94. Arrivals amounted to 12,000 tolas as against an offtake of only 8,000 tolas.

Pirces in the Silver section, moved up on bear-covering. Spot Silver (below .996) changed hands at Rs 221.45 to Rs 222.60, while Mangsir delivery moved between Rs 223.05 and Rs 223.50. Arrivals were 45 bars as against an offtake of only 12 bars.

International silver prices, now fluctuating within striking distance of their record level of 103½ an ounce, seem set for further strength. This is the view of some leading British

bullion circles following a bout of active market last month. There is still a very good industrial demand and considerable amounts of the metal are needed by various European mints for coinage.

COFFEE Larger Quota Sought by India

Although India's share of world coffee trade is small, developments in the field are worth watching, because the commodity is all the same a foreign exchange earner. India is expected to indicate her willingness to join the International Coffee Agreement or not by the end of next month. It appears that she has asked for a higher quota and that a decision will be taken on the basis of the reply to this request.

Among the countries that may signify their willingness to join the Agreement are the world's two largest producers—Brazil and Columbia—and, among consumers, the USA, Britain and France. Germany may also come in. The Agreement will come into force, provisionally upon declaration of intention to ratify by at least 20 exporting countries representing 85 per cent of world exports of the commodity and 10 importing countries making up the same percentage of world imports.

According to the report issued by the Coffee Board from Bangalore, total receipts during the season up to the end of September, 1962 were lower at 45,332 metric tons as compared to 67,332 metric tons in the corresponding period of last year. Total releases for internal consumption, in the first nine months of the current year, are higher at 25,281 metric tons as against 25,095 metric tons. Sales for export, out of the 1961-62 crop, up to 26 September amounted to 14,451 metric tons. This compares unfavourably with 24,798 metric tons sold for export out of the 1960-61 crop up to the end of September last year.

The Mysore Spinning & Manufacturing Co. Ltd.

Steady Uptrend in Manufacturing Capacity

Renovation Makes Headway

Joint Export House to Increase Exports

Mr N. D. Sirur, Chairman, on Modernisation and Expansion

Following is the statement of the Chairman, Mr. N. D. Sirur, circulated at the 69th annual general meeting of the shareholders of the Mysore Spg. & Mfg. Co. Ltd. held on 28th September 1962.

Gentlemen:

A little over two weeks ago, I returned from a visit to Europe and the United States which, though not directly on your Company's behalf, was intimately connected with its long-standing investment portfolio in the Modern Mills Ltd., Bombay. Some of our older shareholders will remember that Modern Mills was set up in Bombay as a subsidiary of your Company in 1934. In spite of hard beginning, that Company, with the financial backing of your Company, has since expanded, flourished, and even outstripped your own Company in some respects. Modern Mills is now embarking on a major expansion into the new fields of organic chemicals and cellulosic man-made fibres by setting up a cellulose acetate flake and fibre project.

As the parent Company, there has always been a dual loyalty in the desire to participate in the expanding Capital of Modern Mills and at the same time meet its own needs of expansion and development. You are aware that the recent amendment to the Companies Act permits a Company to take up Rights Shares offered to it, and your Company will not hesitate to take up such Rights Shares in Modern Mills whenever it is necessary to do so. However, with a view to broadening the public holding in Modern Mills, your Directors have, over the years, been following a policy of gradual dis-investment, and in 1957 the parent-subsidiary relationship was severed.

At present, your Company's holding is approximately 40% of the equity capital of Modern Mills, and it is now felt by your Directors that the public holding in Modern Mills should be still further increased, particularly in view of their new project. Accordingly, as was done on a similar occasion in 1945, the recent issue of Rights Shares by Modern Mills to your Company has, in turn, been offered

to you, to enable you to participate in the capital of Modern Mills.

The present issue of Modern Mills has been made for its own textile mill expansion as well as to prepare the ground for its major expansion into the chemical and fibre field next year. On the recommendation of the Government of India, the project is expected to receive, from the United States Government Agency for International Development (AID), a long-term loan of Rs. 2.38 crores (\$5.0 million) to finance the major portion of the foreign exchange component of the project. In the meanwhile, all arrangements for technical and financial participation are being firmed up, and necessary permission will be sought by Modern Mills from the Controller of Capital Issues for the issue of further equity Rights Shares as well as for the issue of equity and preference shares to the foreign participants and the public.

A total foreign financial participation of approximately Rs. 75 lacs is anticipated in the capital of Modern Mills, of which approximately Rs. 30 lacs is proposed to be issued in preference shares to the Hercules Powder Co. of Wilmington, Delaware, U.S.A., against the appraised value of key portions of the cellulose acetate flake plant which they are supplying. Hercules Powder Co. will also be the principal suppliers of know-how to the Modern Mills' project. Their support has assisted in attracting equally well-known overseas fibre manufacturers to offer Modern Mills equity participation against the subsidiary know-how for the manufacture of acetate rayon fibre from cellulose acetate flake.

I must however, add that the stability and standing of your own Company with its background of over half a century has been no small factor in shaping the Modern Mills' project, in which your Company will remain the major Indian participant by virtue of its sizeable holdings.

Reverting to your Company's own working, you will notice a steady uptrend in its manufacturing activity. The year 1961-62 represented a considerable improvement on the

previous year both in turnover and profit, and the trend continues. The change-over from two shifts to three shifts in the No. 2 Spinning Block entailed considerable dislocation of work during the first half of the year under report and by the time the working had settled down, the higher prices that had to be paid for cotton, offset, to a certain extent, the economies gained. Although the Company has been following a steady policy of renovating and modernising the spinning department, out of the total of 143 spinning frames, 67 are still to be renovated or replaced.

Therefore, other than the new Waste Spinning Plant of 1200 spindles, which will go into production in the beginning of 1963-64, the Company does not contemplate any major expansion in the existing spindlage of over 50,000, since the prime task is to bring up the efficiencies of the existing spindles. The new Whiting Combers installed have enabled higher counts to be spun on approximately 25% of the total spindlage principally to feed the weaving shed for production of finer fabrics.

In regard to the weaving preparatory department, we have already ordered a Barber Colman Spooler and Warper which will go into production in the year 1963-64 and contribute substantially to improving the weaving shed efficiency. In regard to the weaving shed itself, out of the 530 plain looms, we have already renovated 130 looms in the period under report, and the process is continuing. Moreover, we have recently received permission to replace 144 old plain looms with new automatic looms and have also arranged to instal, in the year 1963-64, 144 new automatic looms under the Export Promotion Scheme. Thus, a total of 288 new automatic looms will be installed, representing nearly half the entire weaving shed.

It will be seen from the above that the year 1963-64 should mark the turning point in bringing up the basic textile activity of your Company to a high degree of efficiency and quality of production. We have already spent about half the planned expenditure on

modernisation and expansion, principally on the Company's new Processing Factory at Rajajinagar in Bangalore which, in the opinion of your Directors, required first priority. It is now getting into smooth operation and catering to the processing requirements of both your Mills and your sister Mills, the Minerva Mills Ltd. I dare say that this factory would make the largest single contribution to the prosperity of both the Mills, which so far have been forced to produce grey cloth on a large scale owing to the chronic shortage of water in Bangalore. This problem has now been overcome by pooling the water resources of both Mills for use in one processing factory, while, at the same time, setting up modern processing facilities which economise on the use of water.

During the current year, your Company has concentrated on exports to a considerable extent, particularly because some of the new processing machinery has been imported under export guarantee. We have appointed a Resident Manager in England, who works on behalf of your Company and its sister Companies, and we are endeavouring to establish a closer link with the consumers of Indian cloth, particularly in made-up goods such as towels. The results so far are quite encouraging. We are now considering the establishment of a joint Export House owned by all the three Mill Companies and Sundatta Foods & Fibres Ltd., with a branch in England to begin with, to co-ordinate the export activities of the group which at present exports in total nearly Rs. 1 crore worth of goods a year. We hope to make our due contribution to the drive for increased exports.

Our employee relations have been very satisfactory during the year under report, and I wish to express appreciation on your behalf to the staff and employees at Bangalore as well as at Bombay for their part in improving the Company's working.

Note: The above Statement does not purport to be a report of the Proceedings of the General Meeting.

The Panipat Woollen & General Mills Co. Ltd.

Spectacular Rise in Pre-tax Net Profits

Mr G.L. Gupta, the Chairman on Shortage of Raw Materials

Speech delivered by Shri G. L. Gupta, Chairman, at the Fifteenth Annual General Meeting of the Company at Kharar, (near Chandigarh) on 29th September, 1962.

Dear Friends,

I have the pleasure and the privilege of extending to you on behalf of the Directors and the Managing Agents a very cordial welcome on the occasion of this Fifteenth Annual General Meeting of your Company. It is a matter of genuine pride for all those who have been associated with the Company, especially, in the management and direction of its affairs, that these momentous fifteen years which coincide with the fifteen years of freedom of our great country and have been years of hard struggle, have been followed by a signal success.

Some facts given hereafter would show that the year 1962 marks a new era of great importance in the history of your Company. The accounts for the year 1961-62 have been circulated, and I am sure, you have noted with great satisfaction the all-round improvement which has taken place in production and the working results of the Company during the year under review. While the sales have shot up from Rs. 83,64,834/- during the previous year to Rs. 1,77,14,443/-, the pre-tax net profit after providing for Depreciation, Managing Agents' remuneration and Development Rebate has gone up from Rs. 5,36,655/- to Rs. 10,57,181/- which means an increase of 97%. This is due largely to the contribution from the Tent Factory but in no small measure to the high qualities of fabrics and knitting wools etc. manufactured by the Woollen and Worsted Departments.

2. CAPITAL AND RESERVES

While it is proposed that a sum of Rs. 3,12,630/- be transferred from the General Reserve to Capital for the issue of Bonus Shares, steps have already been taken to transfer a sum of Rs. 4,00,000/- from out of the profits of the year to General Reserve with a view to maintain this reserve at a proper level. This will have the effect of increasing the Capital to Rs. 13,96,930/-. It would be noted that as compared with the previous year, the reserves and surplus would stand increased by Rs. 5,70,832 even after a sum of Rs. 3,12,630 has been utilised for the issue of Bonus Shares. A part of this in-

crease would be available for implementing the expansion programme of the Worsted spinning, Weaving and some other departments. It may be mentioned here that on account of the increase in Corporate taxation in the new Budget, there will be an additional tax liability in the case of your Company, and so it has been considered advisable to provide Rs. 5,30,000/- as a reserve for taxation as against Rs. 2,50,000/- provided during the previous year.

3. NEW PROBLEMS AND EXPORT

Along with the issue of Bonus shares, your Directors have decided to maintain the Dividend at 12%. On account of the curb imposed by the Government on the import of foreign wool and wool tops, your Company shall have to face increased difficulties in fulfilling its requirements of finer raw materials. It is anticipated that in order to avoid any further cut in the import of raw materials, exports of manufactured goods will be made compulsory by the Government. Although your Company realised the necessity of an export drive even some years ago and has already taken steps in that direction, yet compulsory export of goods, not only at no margin of profit, but positively at some loss will be no easy task. Further, in addition to the increase in Corporate tax, the Government has levied higher excise duties on woollen and worsted yarns and also heavy additional duties on the processing of blankets and cloth by the aid of power. So your Company has to face these new problems with courage and resourcefulness.

In connection with exports, it is necessary to recall that three years ago Shri Shiv Kumar Gupta, the General Manager of your Company made a general survey of 34 countries in Middle East, Africa and Europe to study the export possibilities, and we have already established some connections in Middle East. These efforts are likely to lead to some good export business in the near future.

4. REHABILITATION & MODERNISATION

The woollen machinery in the country is old and obsolete which leads to indifferent output and higher costs while exports on any large-scale necessitate not only rehabilitation of the old machinery but also replacement in most cases by modern and up-to-date machinery. The Working Group

of the National Development Corporation has estimated the total cost at Rs. 11.25 crores. The Estimate Committee of the Lok Sabha have recognised the need for rehabilitation and modernisation and have proposed facilities for import of machinery and machinery parts, and Government assistance even in the shape of loans, if necessary. In view of the difficulties of foreign exchange, there has been no implementation as yet of the above recommendations. It is likely however, that export incentives will be linked with imports of machinery.

5. INDIAN WOOL

Your Company along with some others in the country has been manufacturing wool-tops out of Indian wool. Successful experiments have also been made in manufacture of wool tops from blends of Indian wool with foreign raw materials. It is high time that the Defence Department of the Government of India fulfils many of its requirements by goods manufactured out of Indian wools. That will be a great factor in filling up the gap created by the shortage of foreign raw materials. It will also help in utilisation of the idle capacity of Worsted Machinery in the country.

This brings us to the necessity of Government Departments making intensive efforts for making sheep-breeding experiments an immediate success. There appears to be no reason why India with its varied climate and pasture lands in the sloping hill tracts should not be able to produce wool of finer qualities in abundance.

Apart from this, there is the imperative need of Government Departments devoting their attention to the proper shearing and grading of the good wool being produced even at present in the country. The wool growers have to be educated that it is in their own interests to do the shearing in rather a scientific way and to grade the different qualities properly so that finer wool is kept separate, according to different grades, from the coarser wool. The Government should also exercise control on the traders who lower good-quality wool by mixing it with coarser and short-fibre wools.

6. COTTON SPINDLES AND FRESH CAPITAL

The Gross Assets of your Company including lands stood at Rs. 34,46,775 on 31-3-62. All this has been achieved without any fresh capital. The new schemes which

your Directors have in view, necessitate, however, that the capital of the Company be increased considerably by the issue of new Equity Shares. You will be pleased to know that the Industrial Licence for the installation of a 12,000 cotton-spindles plant has been sanctioned by the Government in favour of your Company, and your Directors are going ahead with the execution of the scheme. Large funds will be required for the purchase of land and machinery and for construction of buildings. Quite a large part of the machinery has already been booked, and orders for further machinery will be placed as soon as the necessary import licence is received. By the diligence and foresight exercised by the Management, combined with the whole-hearted co-operation and guidance received from a number of friends, the plans are already in a much advanced stage. This would be another step forward of great importance in diversification of the products and activities of your Company.

7. DIVERSIFICATION

While Woollen Industry is regarded as a seasonal one in the sense that goods have to be manufactured and stocked over long periods of time, and the clearance period is restricted in most cases to four winter months only, cotton industry is comparatively in a position of great advantage because of its products selling all through the year, and under normal circumstances, there being no accumulation of stocks. In spite of the difficult problems of woollen industry, your Company having made a success of it, can be trusted, to achieve even greater success in the wider field of cotton industry.

8. A RETROSPECTIVE VIEW

At a time when your Company is taking a great forward step, it may not be out of place to study in retrospect some of the problems your Company has faced in the past and solved them successfully. It is no mere accident that this success has been achieved during the fifteen years of freedom that came to our country, as in absence of the facilities which became available for industrial development in the new administrative set-up, this success would not have been possible. It must be said to the credit of the Congress Administration with the stewardship of Prime Minister Nehru that by their foresight and quick action they have given great stimulus

and encouragement to the new industries that have come up in the country.

9. INDUSTRIAL FINANCE

One of the very first steps taken by the Government when the country became free, was the establishment of the Industrial Finance Corporation of India, and your Company was among the first few loanees of the Corporation. It is not only the financial assistance received that matters but we should also be grateful to the officers of the Corporation for the wise counsel given by them and for looking at the problems of industry with foresight and imagination.

10. PLANS AND PEACEFUL CONDITIONS

Another important feature of the new administration of the country has been wise planning and peaceful conditions in the different States without which the agricultural and industrial activity that we see all around us would

not have been possible. While our own State has justly been proud of the headway that has been made in the field of small-scale industries, it goes further to the credit of the present Government headed by Sardar Pratap Singh Kairon that steps are also being taken to develop several essential large-scale industries.

11. POWER AND FUEL

I will now refer to power and fuel difficulties that have come up in the wake of large-scale development. While our electric power difficulties have largely been overcome, those of fuel have assumed large proportions. The industrial development in the country has taken place at a great speed, and the supply of coal has not been keeping pace with the growing demand. The shortfall has been attributed mainly to insufficient rail movement capacity and partly to the inadequacy of good quality coal raised from the mines. It is a matter for satisfaction that your Directors foresaw the diffi-

culties of obtaining adequate supplies of coal for the increasing requirements of steam for the finishing of cloth in your factories and installed another boiler which is fired by oil. The Government of India itself saw recently the necessity of suggesting that certain industrial units, particularly those situated far away from the coal-fields should have recourse to a complete or partial oil-firing but this does not solve the problem on account of the excessive cost of oil. In the case of cement factories the Government have agreed to grant ad hoc increases in the retention prices to offset the incidence of the higher cost of oil. Textile and other industries in the Punjab are situated far away from coal fields and it is imperative for the Government to look into their difficulties and give proper relief in one form or another.

12. CONCLUSION

I am glad to inform you that industrial peace continues to be

maintained at your factories and the relations between the Management and the workers have been cordial. A Rest House for the workers was completed during the year and several schemes of physical and cultural developments have been initiated. As a result we have a Cricket Team, and the Dramatic Society of the mills has made itself very popular by giving a number of performances over a wide area. It has been instrumental in awakening the people in the rural areas to their duties towards their fellowmen and the country.

Before I conclude I wish to place on record our sincere appreciation of the services rendered by the high officers of the Company, other Administrative and clerical staff and the workers, without whose whole-hearted co-operation the successes achieved by the Company would not have been possible.

Jai Hind!

matter of gratification to me and to my colleagues on the Board and I have no doubt it will be to you also, that I am able to report that all agreements and arrangements with the Lending Institutions for financing the expansion scheme have been completed. In terms of the Agreement with CDFC and IFCI and ICICI, a Debenture Trust Deed has been executed and registered and the State Bank of Mysore have been appointed Trustees who will look after the interests of the three Lending Institutions.

Arrangements have been made to secure a complete range of equipments necessary to step up production to 18,000 tons. Contracts have been concluded with M/s. J. M. Voith, West Germany original Suppliers of our Plant and Machinery for the supply of Pulp Plant with a capacity to produce 10,800 tons of Bamboo Pulp which together with the present capacity will be sufficient to feed all the three Paper Machines. Besides, contracts have been concluded with Messrs. Escher Wyss, Ravensburg, Germany, a firm of International repute for supply of Paper Machine and Stock and Chemical Preparation Plant with a capacity to manufacture 35/40 tonnes of paper per day of 24 hours. Likewise, contracts have been entered into with the well known firms of Messrs. Millspaugh, Sheffield, England, for supply of Modern Stock-Makers, with Messrs. Babcock & Wilcox, London, for supply of Boiler and Black Liquor Recovery Unit, with Messrs. Ernest Scott and Co., Laven-Fife, Scotland, for supply of

Standard Vacuum Evaporators, with Messrs. Masson Scott and Co. Ltd., London, for supply of Duplex Super Cutter, and with Messrs. Dorr Oliver Co. Ltd., Surrey, for Save-all Filter. The value of the orders placed in U.K. is to the tune of Rs. 58 lakhs and in Germany to the tune of Rs. 56 lakhs and the two loans from CDFC and ICICI would provide the necessary funds for these purchases. Of the equipments ordered, the first shipment of Coal Fired Boiler has already reached the Mills' site and part of Soda Recovery Plant and Oil Fired Boiler are on their way from Madras Harbour to Bhadravati. The bulk of the remaining equipments is scheduled to reach the Mills at Bhadravati by about June-July 1963.

The Civil Engineering works at the Mills are making satisfactory progress.

It is hoped that the work of erection and installation would be completed by the end of 1963 and operations commenced. In August this year I and our General Manager, Sri B. K. Swamy visited U.K. and Germany for purposes of clarifying and settling certain outstanding matters with CDFC, arranging advance delivery of certain equipment from Germany and to check up drawings and designs of the Plant and Machinery with a view to ensure that they answered our local requirements. I am happy to say that all outstanding matters have been settled with the CDFC. Messrs. J. M. Voiths of Germany have agreed to advance the date of delivery of Pulp Plant.

We visited several of the Workshops in U.K. and Germany, where our Plant and Machinery are being manufactured and were happy to see that the work was progressing satisfactorily.

As you are aware, last year with the consent of the Controller of Capital Issues, Govt. of India New Delhi, 10 lakhs Equity Shares of Rs. 10 each attaching a premium of Rs. 2 per share were offered to the existing shareholders and I am glad to acknowledge that the response was good. At the time of seeking your Approval to the increase of authorised capital to Rs. 1 crore and 50 lakhs, I informed you that the amount would be collected as and when necessity for funds arose. In October last, we have collected a sum of Rs. 3 (being the application and allotment money and part of premium) and further calls will be made in the next few months, having regard to the expenditure to be incurred in the implementation of the expansion scheme. I have proposed to fix the dates of the next calls well ahead and publish the same to enable shareholders to arrange for payment as and when the calls fall due. I hope you will agree with me that ample time is being given to the shareholders to make payments without undue strain or stress.

A sum of Rs. 1,500 has been contributed towards the Chief Minister's Flood Relief Fund and I hope you will appreciate and approve the same.

On behalf of the Company I should express my grateful thanks

to the Govt. of India and the Govt. of Mysore for their abiding interest in the progress of the Company. On behalf of the Company, I should also express my grateful thanks to the Board of Directors of CDFC, London, ICICI, Bombay and IFCI, New Delhi, the State Bank of Mysore, and the Canara Banking Corporation Limited, for having rendered valuable aid and assistance in making satisfactory arrangements for financing the scheme of expansion.

I am grateful to my colleagues on the Board for the uniform courtesy, consideration and valuable guidance I have been receiving. I wish also to express on behalf of the Directors and myself our warm appreciation of the willing and efficient co-operation of our employees.

Last, but not the least, it is my pleasant duty to thank you all for your support and encouragement in the implementation of the Scheme of Expansion, and I look forward with confidence for a full measure of support in the years to come.

Ladies and Gentlemen, I now move that the Director's Report and the Audited Balance Sheet and the Profit and Loss Account for the year ended 31-3-1962 be APPROVED AND ADOPTED.

N.B. This does not purport to be a Report of the proceedings of the Shareholders Meeting a copy of which shall be sent to the Shareholders separately.

The Mysore Paper Mills Limited

Expansion Scheme Making Good Progress

Shri M. D. Shivananjappa, I.A.S., on Difficulties of Paper Industry

Sri M. D. Shivananjappa, I.A.S., Chairman and Managing Director, speaking at the Twenty-seventh Ordinary General Meeting of the Company held at Bangalore on Wednesday, the 26th September, 1962, said:

Ladies and Gentlemen,

I have very great pleasure to welcome you all to this 27th Ordinary General Meeting of the Shareholders and particularly those who have become members for the first time by acquisition of new Equity Shares issued recently. As usual the Report of the Directors and the Audited Balance Sheet for the year ended 31-3-1962 have been circulated already and with your permission I shall take them as read and before requesting your approval to them I would like to review the main features of the year's operations.

In exercise of the right to appoint a Director on our Board as provided in their Agreement with us, the I.F.C.I. have appointed Padma-bhushan Sri V. Narahari Rao, C.S.I., C.I.E., Retd. Comptroller and Auditor-General of India, as a Director on our Board. I welcome him and I am sure his wide knowledge and administrative experience will be of great advantage to the Company.

PRODUCTION OF PAPER

I am glad to inform you that production of paper during the year under review was higher than

last year by 172 tonnes. However sales realisation was Rs. 119,30,299 as against Rs. 123,21,728 last year. As indicated in your Directors' Report, the slight fall in turnover was due to the manufacturing of large quantities of lower priced paper owing to inadequate supply of wood pulp due to import restrictions. In this connection, I wish to point out that with the installation of the Recalcitrating Unit there has been much improvement in the working conditions of the Soda Recovery Plant resulting in smooth operations in the Bamboo Pulp plant and this has contributed to increased production and higher efficiency reducing production costs. It is this increased production and higher efficiency that has helped to maintain financial result about the same level as that of last year. Last year while telling you that the efforts of the Paper Industry to move the Government of India for a suitable revision of prices had not borne fruit, I expressed the hope that the Government of India would view this question with sympathy. The Indian Paper Industry as a whole and more particularly the smaller and unfavourably situated Mills like ours which are working on progressively diminishing margins attach very great importance to the question of increase in the selling prices of paper to correspond with increased costs of labour materials, chemicals and spare parts which have all risen steeply and continue to rise. I am glad

to say that the Government of India have sanctioned an ad hoc increase of 6 nP per kg. on all qualities of paper and boards for both Government and Civil supplies effective from 21st June, 1962 and have also discontinued the rebate of 4 nP on reels. I should state that this small increase is not adequate in view of the mounting manufacturing costs. However, this slight enhancement will increase our turnover during the running year to some extent. I am grateful to Government of India for their awareness to Industry's needs and I take this opportunity to impress on them the necessity for periodical revisions of prices so as to absorb such increases in cost over which the Industry has no control.

BALANCE SHEET

In regard to Balance-Sheet, I have to mention that provision has been made for depreciation on fixed assets calculated in accordance with the rates allowed for normal depreciation and extra shift allowances as per Income-tax Act amounting to Rs. 6,67,750, Rs. 59,200; towards Development Rebate and a further sum of Rs. 50,000 towards Retirement Gratuity. A provision of Rs. 6,00,000 has been made towards taxation.

In regard to disposal of surplus, namely Rs. 6,72,432 including carry over of last year which stood at Rs. 36,664 your Directors have decided to transfer Rs. 87,500 to Dividend Equalisation Reserve,

which fund now stands at Rs. 3,12,500. Further, your Directors, after a careful consideration of all relevant factors and having regard to the satisfactory working result have recommended declaration of dividend at 15% or Rs. 1.50 nP subject to deduction of tax, on every Share of Rs. 10 each fully paid up for the year and proportionate dividend on partly paid up Shares of Rs. 2.50 each for the proportionate period subject to deduction of tax, absorbing Rs. 5,46,500, the balance being carried forward and I am confident these proposals will meet with your approval.

The Industrial Finance Corporation of India have communicated their approval to our declaration of 15% dividend subject to tax in terms of the Agreement for which I am grateful to them.

I am very happy to inform you that the Labour-Management relations continue to be cordial. Your Directors have been pleased to sanction a bonus of four months salary or wages to the Employees of the Mysore Paper Mills for the year ended 31-3-1962 and the same has been disbursed. Further, your Directors in accordance with their policy to provide all necessary amenities to our employees have taken steps to start a High School of our own to meet the growing needs of our Paper Town.

You will certainly be interested to hear the progress made since we met last in the implementation of the Expansion Scheme. It is a

The Raghuvanshi Mills Limited

Higher Profits Despite Increased Production Costs

Mr Ravindra Maganlal, the Chairman, on Modernisation

Following is the speech delivered by Shri Ravindra Maganlal, Chairman of the Board of Directors, at the Thirty-third Annual General Meeting of the Company held at the Registered Office of the Company at 3-33 P.M. on Saturday, the 29th September 1962:

Dear Friends,

I have great pleasure in extending to you a very cordial welcome to the Thirty-third Annual General Meeting of the Company and I thank you all for attending this Meeting.

You have been in possession of the Directors' Report and Audited Accounts for the year ended 31st March 1962 since some time now and I am sure you have gone through them with interest. With your permission I take them as read.

Before I turn to other matters I should like to draw your attention to some salient features pertaining to our Company's working. You will notice that the Profit subject to depreciation and taxation for the year under review is Rs. 26.77 lacs, as against Rs. 21.70 lacs last year. This has been achieved in spite of the increasing cost of production. It will be noted that the fixed capital expenditure during the year amounted to Rs. 13.27 lacs as against the previous year's figure of Rs. 11.23 lacs. Similarly the total turnover has increased from Rs. 1.75 lacs to Rs. 1.89 lacs.

In view of the accelerated tempo in introduction of new types of machinery and also of improvements in the existing ones, it is necessary to spend large sums of money on machinery from year to year. In short,

modernisation has become a continuous programme. Your Board has always borne this fact in mind when recommending disposal of the profits. Admitting that it is essential in the interests of all concerned that a substantial portion of the profits earned by the Company be retained to finance cost of modernisation, it is but fair that the Shareholders too participate in higher profits with increased earnings of the Company. It will be noted that dividend for the year has been stepped up from Rs. 10.50 to Rs. 12.00 per share.

To meet the long felt need of the Shareholders to list your Company's Shares on the Bombay Stock Exchange, your Managing Agents have recently released for sale 6,000 Shares of your Company out of their holdings to fulfil the requirements of the Bombay Stock

Exchange. The Company's application is before the Stock Exchange Authorities and we can shortly expect to receive their approval for entering your Company's Shares for official trading on the Stock Exchange.

The control of distribution of cotton both imported and indigenous continued during the year. The indigenous crop had fared very badly. The Government was admittedly vigilant to meet any situation and in spite of the failure of the indigenous crop, at no time serious difficulty was experienced in the working of the industry and in the maintenance of production. The ceiling prices for indigenous cotton for the current year have been increased and I have no doubt that necessary adjustments will also be made in the prices of yarn. It is a general grievance of our farmers that

the price of Indian Cotton is very cheap as compared to other commodities and world cotton prices. However, by the recent increase given and looking to the prices of much superior varieties of foreign cotton, it cannot be said that such a position now exists. Scarcity of cotton will be continued to be felt with the increased manufacturing activities envisaged in the Third-Five-Year Plan through which we are now passing.

With the growing shortage of foreign exchange, procurement of cotton will be also a problem. I believe that looking to the very favourable prices of foreign long staple cotton the Government should consider building up a substantial buffer stock thus ensuring for our country not only steady supplies of cotton but also a stability in the price factor. Whilst saying this I am aware that this is no solution. Our country cannot afford to continue to spend Rs 66 crores every year on importation of cotton. The remedy lies in increasing the yield of cotton lint per acre. Our yield per acre is the lowest in the world, being 80

to 90 lbs. per acre while a number of other countries have an yield which is 4 to 5 times as much as ours. There must be awareness at all levels of the administration that this position needs quick action, rectification and improved achievements.

I have no doubt that in spite of all difficulties, the target laid down for the Third Five-Year Plan will be achieved. The target will largely keep pace with the anticipated increase in population and leave a little margin for securing progressive rise in the living standard and to increase our exports.

In my last speech I had made a reference to the advisability of allowing existing units to expand which will mean immediate contribution to the increased production without involving much of time and finance. Your Company has made an application to the Government for permission to install 6,788 additional spindles as partial reinstatement of its ore-fire capacity. If this application is granted your Mills' installed capacity will be 40,000 Spindles and the Company's working and capa-

city to export will undoubtedly be considerably improved.

The working conditions throughout the year have been satisfactory and the trading conditions quite good. This is mainly due to the sustained large demands from the Powerloom and Handloom Sector. The recent levy of Central Excise Duty on Yarn, Powerloom and on Processing has brought medium sized and large Powerloom Units some distress. It cannot be denied that this decentralised Sector has largely contributed to the economy of the Nation by fulfilling the target productions allotted and thus making available to the country cheaper priced fabrics for consumption. It is therefore necessary that this Sector is properly organised and allowed to play its part in the economy of the Textile Industry and the country as a whole.

During the current year exports have been made obligatory. I am glad to say that your Company has by now fulfilled its obligations and it will be possible for the Company to make even larger exports than its obligation. The U.K.'s entry

into the European Common Market appears to be more or less a certainty. What special conditions will apply to India is a point apart from this. It is therefore necessary that a country like ours should try to bring down its cost of production so that under adverse conditions too, we can continue our Export Trade which becomes necessary for balancing our imports for implementing the Plan Projects.

On behalf of the Management I have pleasure in recording their deep appreciation of the unstinted co-operation received by them from the Staff and the Operatives without which it would have been difficult for the Company to achieve the results as shown in the Report and the Accounts. I thank them all and expect they will continue to give the same co-operation in future.

I thank you again all, Gentlemen, for attending this General Meeting of the Company.

NOTE: This does not purport to be a record of the proceedings of the Annual General Meeting.

NISCO Fares Better

Thanks to the rise in sales from Rs 1.42 crores to Rs 1.53 crores, the National Iron & Steel Company Limited has reported a net profit of Rs 2.62 lakhs for the year ended 31 March 1962 as against a loss of Rs 5.53 lakhs incurred in the previous year. The Depreciation amount is raised to Rs 5.75 lakhs from Rs 5.22 lakhs. The dividend is passed again.

The net profit is adjusted against the previous year's debit balance. There is still a debit balance of Rs 6.93 lakhs, which is carried forward.

The directors state that, if the present tempo of production is maintained and the supply position is improved, with regard to power, coal and raw materials, still better results can be expected in future.

New Central Jute Skips

The difficulties experienced by jute mills in regard to supplies of raw material and the unsatisfactory working of the chemical plant, along with higher freight charges for transporting ammonium chloride, are responsible for the loss incurred by the New Central Jute Mills Company Limited during the year ended 31 March 1962.

Although sales are shown higher at Rs 15.10 crores against Rs 12.08 crores, the accounts reveal a trading loss of Rs 18.53 lakhs for the year. After crediting Rs 2.87 lakhs being the income-tax rebate on dividend declared in November 1961, there is a net loss of Rs 15.67 lakhs and this compares with a net profit of Rs 34.99 lakhs for the preceding year.

The Depreciation amount is raised to Rs 47.47 lakhs from Rs 36.22 lakhs. After transferring Rs 3 lakhs from General Reserve No. 1 and Rs 16.30 lakhs from General Reserve No. 2, the directors have been able to provide Rs 47,437 for Taxation for previous years and recommend the dividend on the preference shares. The dividend on the Ordinary shares is skipped as against a taxable dividend of 15 per cent paid previously.

The directors state that the demand for the company's backing cloth has been steadily growing and the company has received industrial licence for installing a total of 350 broad looms. Efforts are also being made to improve the output of Ammonium chloride with suitable modifications to the plant, while the railways have agreed to revert to the old classification in respect of freight charges for this fertilizer from the middle of last month. The directors have added further that, with the better profitability in the jute industry for the current season and the higher production expected during the winter in the Sahu Chemicals & Fertilizers plant, the workings of the company for the current year should be better.

Basti Sugar Pays Less

Despite a rise in sales from Rs 2.08 crores to Rs 2.50 crores, the Basti Sugar Mills Company Limited has shown a net profit of only Rs 2.43 lakhs for the year ended 30 April 1962 as against Rs 4.66 lakhs for the previous year, reflecting an appreciable fall in the total quantity of cane crushed and the recovery percentage.

Apart from providing Rs 15,000 for Charity Reserve and raising Investment Depreciation Reserve to Rs 1.08 lakhs from Rs 58,816, other allocations have been reduced:—Depreciation to Rs

2.72 lakhs from Rs 2.91 lakhs and Taxation to Rs 5.70 lakhs from Rs 6.80 lakhs. The directors have reduced the dividend from 15 to per cent, subject to tax.

Kh tau Makanji Repeats

The Khatau Makanji Spinning & Weaving Company Limited has produced excellent working results for the year ended 30 June 1962. With sales having risen to Rs 5.83 crores from Rs 5.24 crores, the net profit, before providing for Depreciation and Taxation, is substantially higher at Rs 68.39 lakhs as against Rs 45.81 lakhs for 1960-61.

In respect of allocations, Depreciation is increased to Rs 17.40 lakhs from Rs 16.78 lakhs and Taxation to Rs 23.50 lakhs from Rs 13 lakhs, apart from providing Rs 14 lakhs for General Reserve. The provision for Development Re-bate Reserve is, however, lower at Rs 3.00 lakhs against Rs 4.30 lakhs. The dividend on the Ordinary shares is maintained at 16 per cent, subject to deduction of tax.

The company has obtained a licence to install 5,400 additional spindles for the purpose of balancing and the same have been put into commission since the close of the year under review.

Company Reports

Reduced Profits for Rohtas Industries

An all-round decline in production accompanied by a rise in costs due to higher prices of raw materials, additional railway freight and excise duties without a corresponding increase in the prices of finished products, particularly in respect of paper and boards, are reflected in the working results of Rohtas Industries Limited for the year ended 31 March 1962. While sales have declined to Rs 15.88 crores from Rs 16.24 crores, the net profit, after providing for Depreciation and Taxation, is substantially lower at Rs 49.03 lakhs as against Rs 66.00 lakhs in the preceding year.

The allocation for Depreciation is increased to Rs 59.84 lakhs from Rs 58.32 lakhs, while the provision for Development Re-bate Reserve is lower at Rs 3.20 lakhs against Rs 5.05 lakhs. The directors have proposed a taxable dividend of 8 per cent and this compares with a taxable dividend of 10 per cent paid previously.

The production of paper and boards has declined from 50,936 tonnes to 46,585 tonnes and this is the second year in succession that production has suffered a setback. The output of cement has declined from 314,945 tonnes to 287,885 tonnes; clinker from 286,981 tonnes to 285,860 tonnes and vanaspati from 10,655 tonnes to 9,795 tonnes. There is a marginal increase in the output of caustic soda from 5,484 tonnes to 5,575 tonnes and asbestos cement from 15,510 tonnes to 17,770 tonnes.

The directors are more hopeful about the outlook for the current year with the benefit of increase in cement price being available for a full year and the anticipated increase in the production of paper and boards. The company has received a licence for the import of wood pulp and assurance of leases of bamboo areas for ad-

ditional supply from the Bihar Government. The company has applied for licence to import equipment for expansion of the existing pulp and paper mills by 36,000 tonnes.

Nil from Malwa Sugar

The Malwa Sugar Mills Company Limited has earned a net profit of Rs 3.11 lakhs for the year ended 30 April 1962 as against Rs 4.65 lakhs for the previous year. The former figure, however, includes Rs 8.48 lakhs being excise duty rebate in respect of previous years. Sales are shown higher at Rs 1.03 crores against Rs 86.37 lakhs.

Apart from Rs 13,700 provided for Development Rebate Reserve, the Depreciation amount is Rs 7.37 lakhs from Rs 5.85 lakhs. The dividend is passed again for the year. There is a debit balance of Rs 44.83 lakhs, which is carried forward.

The Punjab Government's attention has been drawn to the continued losses of the factory due to inadequate supplies and low recovery of cane and the management has drawn up detailed programme for all-round development of the area with a view to assuring economic crush and better quality cane. The matter is being pursued vigorously.

Travancore Sugars Earn Less

The working of the Travancore Sugar & Chemicals Limited has resulted in reduced earnings for the year ended 30 April 1962. Although sales have continued to be at a satisfactory level at Rs 1.15 crores against Rs 1.18 crores, the net profit, before providing for Depreciation and Taxation, is lower at Rs 6.53 lakhs as against Rs 8.80 lakhs for the preceding year.

Depreciation is raised to Rs 3.10 lakhs from Rs 3.08 lakhs and Taxation to Rs 2.96 lakhs from Rs 2.82 lakhs, while the provision for Development Rebate Reserve is reduced to Rs 6,000 from Rs 29,000. The dividend on the Ordinary shares is lower at 5 per cent, taxable, as against 7.5 per cent, taxable, paid previously.

During the year, 124,879 tonnes of cane were crushed and 10,769 tonnes of sugar produced at a recovery of 8.62 per cent which compares with 118,281 tonnes crushed and 10,502 tonnes of sugar with a recovery of 8.88 per cent.

The Pharmaceutical Works was closed down on 31 December 1961 due to the Government of Kerala discontinuing to place orders with this company on the basis covered by the agreement until then in force.

For the Investor

INVESTMENT GOSSIP

Lack of Confidence

It is a measure of the intensity of the depression in stock markets that even the news of the maintenance of dividend by TISCO has failed to restore confidence. Earlier indications were that if the TISCO dividend was at the previous year's level, there would be a revival of interest. For, it was generally believed that after the meagre increase in the steel retention price, the steel companies would not be able to maintain their dividends. The TISCO dividend did lead to a rally which, however, proved to be shortlived as follow-through support was almost non-existent. Market men have now started saying that one has to wait for the TISCO dividend, which is expected to be announced in the first week of next month, before coming to any conclusion. One probable reason for the continued apathy is the rather serious news from the Sino-India border. Till recently, there were only reports of incursions without any serious clash between the two sides. The situation has deteriorated in the past few days. As the Prime Minister has himself said, the situation is such that it is difficult to say where it will lead the country. A major clash may be averted; but there is need for the vigilance against further aggression and national preparedness to meet any eventuality. In the event of a further deterioration, the border situation may become the main preoccupation of Government. So long as the Chinese attitude continues to be threatening, investors may not like to include the border news from their calculations.

Even otherwise, investors are in no mood to take active interest in equities. For one thing, credit is by no means cheap. What appeared to be fair return for investment some three or four months ago is no longer nearly as attractive. The glamour of growth shares has considerably diminished because of the growing stringency of foreign exchange for import of raw materials and tallies of a priority list of industries being drawn up by Government with a view to allocating available foreign exchange only to what are considered important industries from the official point of view. Idle capacity has already reached considerable proportions and far from there being an assurance that there will be a smooth flow of essential imported raw materials, there is the threat of a further cut in imports in the coming licensing period. The fact that maintenance imports are to be yoked to export earnings gives little comfort, as our principal exports are meeting with stiffening competition. There will be a sizable dent in export

earnings when Britain joins the ECM as no worthwhile concessions are likely to be obtained for Commonwealth exports.

In the meantime, the corporate sector has begun to report diminishing profits. Already private enterprises are feeling the pinch as will be evident from the annual accounts of a number of companies published in recent weeks. Corporate profit is squeezed, between rising production costs and unremunerative selling prices, as in the case of the coal, textile, paper and cement industries. The outlook for profits has become further dim in the light of Government's determination to hold the price line. Lastly, with the publication of the report of the Central Board of Directors of the Reserve Bank, the bogey of additional taxation has been revived.

INVESTMENT SPECIAL

Hindustan Lever

Hindustan Lever Limited announces that it has applied to the Controller of Capital Issues for his consent to the issue of 8,42,725 new shares of Rs 10 each, to be offered to the shareholders of the company for cash at Rs 35 per share.

Apart from the Milk Scheme at Etah, which continues to make satisfactory progress, the company has several new projects under active consideration. The Industrial Credit and Investment Corporation of India Ltd. has granted to the company a loan of Rs 25 lakhs to meet a part of the foreign exchange cost of the Milk Scheme. About Rs 100 lakhs more in foreign exchange is needed for this Scheme and the other projects under consideration.

Hindustan Lever Limited and Unilever Limited appreciate the stringent foreign exchange position of the country and consequently Unilever Limited has agreed, subject to the necessary UK Government consents, to provide the additional foreign exchange required by participation in additional equity. Unilever Limited has also agreed to use the opportunity to increase the proportion of the public's investment from 10 per cent to 15 per cent.

Although Unilever Limited owns 90 per cent of the equity in the company and on its existing holding would be entitled to 7,58,452 new shares, it has agreed to take up only 2,85,725 new shares, thus increasing the number of shares to be offered to the public. A total of 5,57,000 shares will, therefore, be offered to the other shareholders of the Company in the proportion of 25 new shares for 37 shares already held. If all the shares are accepted, the public's participation in the equity of the company will be increased from 10 per cent to 15 per cent.

A notice will be issued in due course to convene an extraordinary

general meeting to authorise the creation and issue of the new shares.

The company also announces its decision to pay an interim dividend in respect of 1962 of 0.60 nP per share, subject to deduction of tax, such dividend to be payable on 12 November to shareholders registered in the books of the company, at the close of business on 7 November. The new shares will not rank for dividends payable in respect of 1962, but will rank for all subsequent dividends.

NEW ISSUE NOTES

Braithwaite

The directors of the Braithwaite & Company (India) Limited announce that, in respect of the 20,000-9 per cent Redeemable Cumulative Preference shares of Rs 100 each recently offered for public subscription, 1,537 applications were received for a total of 73,515 shares. With the prior approval of the Calcutta Stock Exchange, allotments have been made on the following basis: Applicants for 10 to 15 shares will get 5 shares; 20 to 35—10 shares; 40 to 50—15 shares; 60 to 90 shares—20 shares; 100 to 140—30 shares; 150 to 170—40 shares; 200 to 270—50 shares; 350 to 490—70 shares; 500 to 600—100 shares; 1,000 to 1,500—150 shares; 3,000—450 shares and 10,000—1,505 shares. Allotment letters with pay orders for the amounts refundable in respect of applications for shares in excess of the number allotted will be posted under registered cover on 22 October 1962.

The allotment letters in respect of applications for the balance of this issue, amounting to a further 20,000 shares, which were subscribed for by the underwriters and their friends, and which in terms of the prospectus dated 13 August 1962 have been allotted in full, will be posted on the same date.

Unichem

Unichem Laboratories Limited has proposed to enter the capital market some time next month with an offer of 22,050 equity shares of Rs 100 each for public subscription. The authorised capital is Rs 75 lakhs and issued capital will be Rs 45 lakhs, all in equity shares. Of these, 22,500 shares will be allowed to the vendor and 450 shares will be reserved for allotment to promoters, directors and their friends. The company was incorporated in August 1962 to take over the business of Unichem Laboratories carried on in Bombay by Mr Amrut Vithaldas Mody as a proprietary concern. The company has sufficient import licence as an actual user for the import of goods required in the manufacture of various drugs. Negotiations for collaboration with a leading Italian firm are almost complete.

National Standard Duncan

National Standard Duncan Limited, to be incorporated in West Bengal, has been authorised to issue capital of Rs 50 lakhs, divided into 50,000 equity shares of Rs 100 each

at par. Half of the total capital will be contributed by the American collaborators. The company will manufacture bead wire for automobile and cycle tyres.

Autofin

Autofin, which is proposed to be established in Andhra Pradesh, will raise equity capital of Rs 25 lakhs for cash, at par. The money will be used for hire purchase of automobiles.

Indo-Swedish Pipe

Indo-Swedish Pipe Manufacturers Limited, Bombay, has given consent to issue capital of Rs 35 lakhs divided into 35,000 equity shares of Rs 100 each. Shares of the value of Rs 2.26 lakhs will be offered to the foreign collaborators against the supply of a part of machinery to be imported. The balance will be issued for cash, at par.

Rockwell India

Rockwell India Limited, Bombay, is to raise fresh capital of Rs 30 lakhs for cash, at par, in equity shares of Rs 100 each. Of this, 15,000 shares will be issued to Rockwell International S. A. Geneva. The money will be utilised for establishing the manufacture of wood-work machinery.

lakhs for consideration other than cash. The issue will be made to the shareholders of Eastern Syndicate Limited, Kamptee Collieries Limited, Jharia and Raneeunge Collieries Limited and the Real Jambund Coal Company Limited in lieu of their existing shares in the proportion of one share for every share held.

Vinar

Vinar Limited is to issue capital of Rs 19 lakhs in equity shares. The capital is required for the manufacture of warp-knitted art silk, etc.

National Buildings

National Buildings Construction Corporation Limited, Delhi, a Government undertaking, is raising further capital of Rs 16 lakhs, divided into 1,600 equity shares of Rs 1,000 each, for cash, at par.

Southern Structurals

Southern Structurals Limited proposes to raise fresh capital of Rs 30

THE BARNAGORE JUTE FACTORY COMPANY, LIMITED.
(Incorporated in England).

LIABILITY OF MEMBERS LIMITED.

DIVIDENDS.

The following Dividends have been recommended in respect of the year ended 31st March, 1962, payable on the 14th November, 1962:—

(1) On the Preference Shares @ 5% (Five Shillings per share)

less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

(2) On the Ordinary Shares @ 10% (Ten Shillings per share)

less U.K. Income-tax of seven shillings and nine pence in the £ Sterling.

Payment of any Dividend declared will be made only to those Members whose names are registered in the Books of the Company on 7th November, 1962 or to their Mandatees.

Dividend Warrants to Members on the Calcutta Register will be made payable in Calcutta.

No applications for warrants will be necessary. Claims on behalf of holders of shares on which transfer will not be entered.

The Share Transfer Books will be closed from 25th October to 7th November, 1962, both days inclusive.

By Order of the Board,
JARDINE HENDERSON LIMITED.
C. EVANS,
Acting Secretary,
Agents.

4, Clive Row,
Calcutta-1, 3rd October, 1962.

lakhs in equity shares of Rs 10 each, at par. The company is seeking the permission of the Controller of Capital Issues for the same. Metro Oil-Tan-Cammel Carriage and Wagon Company, Limited, the company's foreign collaborators, will take up 40 per cent of the present issue. The directors have proposed to call the capital in three calls—Rs 5 per share on application on 2 January, 1963; Rs 2.50 on 1 April and Rs 2.50 on 1 July.

Sun Paper

Sun Paper Mills Limited, Madras, will shortly be in the capital market with a public issue of Rs 20 lakhs for setting up a paper mill in Tirunelveli district, South India. The authorised capital of the company is Rs 1 crore of which the company is presently issuing Rs 20 lakhs in equity shares of Rs 10 each. The company has obtained a licence for the manufacture of 3,000 tons of writing and printing paper and an equal quantity of paper pulp per annum. Part of the machinery has arrived and the erection work is in progress. The plant is expected to go into production early next year.

BONUS ISSUE NOTES

Neo-Pharma

Neo-Pharma (Private), Limited, Bombay, is issuing bonus shares of the value of Rs 3.50 lakhs, divided into 3,500 equity shares of Rs 100 each, to be made in the ratio of 7 bonus shares for every 15 shares held.

Oldham & Son

Oldham & Son (India), Limited, Madras, is to issue equity bonus shares of the value of Rs 2.50 lakhs, in the proportion of one bonus share for every four shares held by the existing shareholders.

INVESTMENT NOTES

Baroda Rayon

The construction of the factory of the Baroda Rayon Corporation Limited has been completed and the rayon plant has been undergoing trial operations successfully for some time now. The initial capacity is 64 tons of rayon yarn daily on the basis of 100 deniers. This is to be increased to 74 tons daily. There are proposals for putting up a caustic soda plant with a capacity of 20 tons daily and a staple-fibre plant with an output of 40 tons a day. The applications for industrial licence have been submitted to the Government.

Indian Rayon

There has been some delay in completing the construction of the factory of the Indian Rayon Corporation Limited. But, it is now expected that yarn production will commence early next year with an initial capacity of 5 tons daily. The Corporation has been permitted to raise its capacity to 10 tons a day. Negotia-

tions are being carried on for securing the necessary foreign exchange and the required credit will probably be obtained from the US Export-Import Bank for installing a pulp plant.

STOCK EXCHANGES Subdued Trading in Post-puja Session

Watch-Dog Writes:

SENTIMENT in stock markets does not seem to have improved as yet and prices of many shares have declined further to touch new lows of the year. There is a general reluctance to enter the market till the economic and political picture is clear. Bears are, therefore, dominating the stock markets and pressing sales. Any technical recovery is bound to meet with renewed offerings for some time to come.

After the long Puja vacation, Lyons Range opened on a quite note and prices developed a sagging tendency due to renewed offerings in the speculative issues.

It was a dull week on the Bombay Stock Exchange with only mild activity in selected shares.

The Madras Stock Exchange witnessed a quieter tone though selective buying was seen in Cement and Chemical shares.

A rebound in gilt-edged securities after initial dullness and the marked firmness of shipping shares were the outstanding features on the London Stock Exchange.

Efforts to extend the stock price improvement on Wall Street were blocked by profit-taking and other selling including tax loss operations.

CALCUTTA

Calcutta, Friday Evening

THE local stock exchange opened the post-puja session on a subdued note. The reluctance of the professional operators as well as investors to add to commitments was very pronounced. The unwillingness to do any business, specially on the part of the bulls, was due to a sense of depression. It cannot be denied that, in the absence of any encouraging news coupled with the reports of tension over the Sino-Indian border, bulls were not in a position to extend any support.

Dealings were, therefore, characterised by a state of uncertainty and there were no signs of effective support even at lower levels. The extraordinary delay in the announcement of the dividend by the Indian Iron and Steel Company, the proposal by the Government to bring down the prices of essential articles, anxiety over the new import policy and fears of a drop in corporate profits, were also factors which induced the bulls to liquidate their holdings in a declining market. Taking advantage of the situation, bears dominated the market and reaped a good harvest.

In the week's dealings, the worst affected were the speculative issues. Hopes were initially entertained that the Indian Iron and Steel Company

Limited might make the dividend announcement immediately after the Puja holidays. But, the subsequent feeling that the announcement would not be made before the end of the month caused great disappointment, resulting in renewed offerings in the scrip and, along with it, the values of other shares slipped.

Jute shares continued to remain depressed. Apart from lower advices from the gunny market, anxiety was growing that the surplus of sacking stocks might reduce the profits which the jute mills had so far been making on simultaneous business.

Coal shares were extremely dull. In the absence of any incentive, the tendency for prices was to sag slowly on scattered liquidation.

In the Tea section, operators seemed to be worried about the shortfall in the North Indian crop and the disappointing results obtained at the recent auctions.

Losses were widespread in the Textile section and popular shares touched new low levels.

In the Sugar section, dealings were few and far between.

Miscellaneous issues moved in sympathy with the general trend of the market.

The gilt-edged section was dull and quiet with business at a low ebb in the absence of any demand from banks and other institutions. The worst sufferers were some of the State Government loans which were floated a couple of months ago.

Bank shares met with little or no interest.

Following were the price trends of from those during the same period a few selected shares:—

	Pre-Puja	Pre-Closing	Puja Closing

The Third Five Year Plan
Bird-Heilgers' part in it...

FOURTEEN MILLION NEW JOBS

Employment. A word that translates into a meaningful future for millions of people without jobs. India's Five Year Plans are aimed at the concept of full employment. The intensified drives of the Third Plan are estimated to create 14,000,000 new job opportunities—more jobs for more people than ever before in the economy's history! To achieve the employment target calls for a single-minded national effort. It must be co-ordinated, dedicated, complete...

75,000 jobs—and more in the offing

Bird-Heilgers is convinced that the quickening tempo of industrial activity must be accelerated if unemployment is to be checked and full employment brought about. Wedded to this concept, the group provides well-paid employment for approximately 75,000 people. They are concerned with iron ore and insurance policies, bridges and writing paper, gunny sacks and laboratory tests—a complex of goods and services which involves the group heavily in the industrial resurgence of India.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...provide employment for many more thousands...join the national drive to economic independence.

The Hour of Peril

COMMUNIST China has dropped all pretence and has embarked on its career of unabashed aggression against India. The border skirmishes of which we wrote last week have developed into a full-scale attack against India. On Saturday last, Chinese forces moved in vast numbers into NEFA and succeeded in wresting from Indian hands frontier posts at Dhola and Khinzemane. In the Ladakh area also our gallant troops have had to fall back after fierce resistance to take better defensive positions. Since then fighting has been going on and at the moment of writing, four frontier posts in NEFA and eight in Ladakh have had to be abandoned by Indian troops. Thus China has forced an all but declared war on India. In his stirring broadcast to the nation on Monday, the Prime Minister described the Chinese action as "unabashed aggression by an unscrupulous opponent." In crossing the Namkha Chu river, the Chinese have taken as decisive a step as Caesar did when he crossed the Rubicon.

Speculation about the reasons for Chinese action is a profitless exercise. Basically it is nothing but predatory expansionism. Other explanations may be sought in Communist China's desire to provide an adventurist smoke-screen to hide basic failures at home. It has also been suggested that this desperate involvement in conflict with India is the coming to head of China's ideological struggle with the Soviet Union. The most immediate reason however, is the strategic one of seizing as large a chunk of Indian territory as possible before winter sets in with a view to subsequent consolidation.

The most heartening thing in an otherwise disturbing situation has been the remarkable morale of our fighting troops who have put up stout resistance before yielding a position. As is well-known, the advantages of terrain and logistics are all with the Chinese. But our troops have shown remarkable gallantry against heavy odds. The country's morale also is in a fine fettle and response to the Prime Minister's stirring call on Monday has been tremendous. Political parties in the country have declared themselves as wholly behind the Government in its tasks of opposing Chinese aggression, though suggestions of a national coalition Government (made, among others, by the Orissa Assembly on the sponsoring of the Chief Minister) seem somewhat premature. It is clear that the nation has responded to the call of the Prime Minister as one man. Even Communists who were inclined to equivocate in the beginning are avowing, at least in public, the view that the Chinese have acted in a perfidious and unprincipled way.

It is very difficult to assess precisely the impact of these new developments on the course of our developmental plans. In his broadcast to the nation, the Prime Minister said that "there can be no question of our giving up the Plan or reducing any important

section of it. We must make a few adjustments here and there. But it is essential that major projects of the Plan must be implemented." In one sense this reading of the probabilities and intentions is not far wrong. The Plan itself having been oriented toward basic industrialisation, the core of the Plan will not need to be substantially changed in the light of the new situation. The Prime Minister's oft-repeated remark that the nation's defensive power depends largely on its economic power is a correct appraisal. Mr Subramaniam has already indicated the Government's intention of putting the Steel Ministry to work on a war-footing. This is a transformation that is not particularly difficult from the point of view of production. But the increased demands on the nation for the defence of the country is sure to impinge on various other expectations from the economy and is sure to involve considerable modifications of priorities. Obviously, diversion of resources for defence purposes will throw into disarray earlier calculations of resources for the Plan, both internal and external. No clear indications are available of the steps taken for meeting the increased defence needs. Imports of equipment and raw materials for defence purposes may take the form analogous to lend-lease during the war years; even if this could be arranged, immediate pressure on foreign exchange is inescapable.

Internally, the pressure on savings will increase with mounting demands on the economy for defence purposes. Most importantly, inflationary impulses, already powerful, may get further aggravated. It would therefore be necessary, more than ever before, to impart the nation with a sense of urgency in respect of increased production, especially in the agricultural sector, so that shortages of essential commodities do not take place. The Government has been flooded with offers from various quarters of readiness to be of use against the enemy. Such readiness is most encouraging but opportunities for sacrifice may not arise in dramatic and romantic forms of taking up arms against the invader. Our patriotism will have to take the more humdrum form of doing our appointed tasks better and putting up with inconveniences. All of us can best show our willingness to defend the country's freedom by husbanding the productive resources carefully and making the economy yield more for less expenditure. This means avoidance of all waste, increased efficiency and a greater awareness of productivity. Labour and management must co-operate in avoiding stoppages of production of any kind. These must in any case have been done in the interest of economic development. Now that the country's very existence is threatened by an unprincipled neighbour, the importance of taking to heart the lessons of working the economy efficiently is very urgent. There has been very gratifying response to the Prime Minister's call for unity in the face of common danger. This response should not only be emotional but practical.

Pipeline to Economy

Pipeline supply of industrial gases leads to a remarkable reduction in production costs by decreasing cylinder handling, greatly reducing wear and tear on regulators, taking up less space, ensuring unbroken supply and cutting down gas wastage. Pipelines deliver oxygen, acetylene and other industrial gases at various work-points at controlled pressures.

There is a pipeline system to suit every individual requirement. Please consult us for details.

INDIAN OXYGEN LIMITED

Trends in Public Finance

Steady increase in both receipts and expenditure and average annual surplus of over Rs 40 crores are the main features of the revenue position of the Government of India during the period covered by the Second Five Year Plan. The Accounts for the concluding year of the Plan period show a rise in actual receipts from Rs 591.15 crores in 1956-57 to Rs 971.77 crores in 1960-61. Expenditure has increased at a faster rate, from Rs 497.89 crores to Rs 921.94 crores. The Accounts show a revenue surplus in each year of the Plan period except 1958-59 when there was a deficit of Rs 3.81 crores. The total surplus from current revenues over the entire Plan period amounted to Rs 226.51 crores.

Union Excise duties and Corporation tax account for the larger part of the total increase in receipts of about Rs 381 crores over the five years. Wider coverage and increased rates of Excise duties explain the substantial increase of Rs 225.92 crores under this head, from Rs 190.43 crores in 1956-57 to Rs 416.35 crores in 1960-61. The figures for Excise duties represent the total collection before payment of the share of the States which in 1960-61 amounted to Rs 75.10 crores as compared with Rs 18.22 crores in 1956-57.

Receipts from Corporation tax, which were round about Rs 50 crores during the first three years of the Plan period, registered a steep rise in 1959-60 to Rs 105.54 crores as a result of changes in the system of taxation of company profits introduced during that year. Receipts under this head at Rs 109.70 crores in 1960-61 show a rise of Rs 59.30 crores as compared with the first year of the Second Plan. Receipts under the heads Industry & Supply and Currency & Mint, also show sizeable increases. On the other hand there is a fall in revenue from Customs and Income tax over the Plan period. Income tax dropped sharply in 1959-60 to Rs 69.86 crores as compared with Rs 96.98 crores in the previous year and Rs 92.44 crores in 1956-57, but recovered to Rs 81.37 crores in 1960-61. Other items of revenue show small increases while the net contribution of Railways and the Posts and Telegraph department show decline of Rs 1.09 crores and Rs 5.86 crores respectively.

The total receipts from new direct taxes introduced during the Second Plan amounted to Rs 86.67 crores. This total is made up of:

Taxes on wealth	Rs 37.04 crores
Taxes on Expenditure	Rs 2.33 crores
Taxes on Gifts	Rs 2.67 crores
Taxes on Railways Fares	Rs 44.63 crores

While there are variations in trends of the receipts under different heads, almost all items of expenditure show a steady upward trend over the five year period. The largest rise—Rs 119.44 crores—is in respect of expenditure on Social and Development Services. Expenditure under this head increased from Rs 95.22 crores in 1956-57 to Rs 214.66 crores in 1960-61. The biggest item of expenditure, namely, on Defence Services, has only increased by Rs 55.41 crores from Rs 192.14 crores to Rs 247.55 crores over the five years. In fact expenditure on Defence Services has decreased from 32.5 per cent of the revenue in 1956-57 to 25.5 per cent in 1960-61.

Expenditure on Administrative Services, which accounted for 6 per cent of the revenue in 1960-61 as compared with 6.1 per cent in 1956-57, increased by Rs 22.64 crores from

Rs 36.02 crores to Rs 58.66 crores. On the other hand, expenditure on Social and Development Services has increased from 16 per cent of revenue in 1956-57 to 22.1 per cent in 1960-61. While the separate sets of figures of expenditure on Social and Development Services and on Administrative Services are intended to correct the impression of a disproportionate increase in the cost of civil administration, a clear picture will be available only if the administrative expenditure under the former head are also clearly indicated.

The total capital outlay of the Central Government at the end of the Second Plan stood at Rs 4,121.54 crores. The largest item of Rs 1,503.69 crores was on account of the Railways (commercial); and construction of strategic railways accounted for another Rs 8.96 crores. Outlay on Industrial Development comes next with Rs 614.61 crores, followed by Defence outlay Rs 454.34 crores; Currency and Coinage Rs 365.56 crores; Civil Works Rs 180.38 crores; Posts and Telegraph Rs 139.99 crores; Grants for Development Rs 138.26 crores; and State Trading Rs 122.09 crores. Transfer of Development assistance from the Government of the United States of America accounts for Rs 129.83 of the total outlay of Rs 4,121.54 crores.

Corresponding to the increased outlays, the total debt of the Central Government has also increased, from Rs 3,222 crores as on 1 April 1956 to Rs 6,821 crores as at the end of the financial year 1960-61. The figure of Rs 6,821 crores as at the end of 1960-61 consists of Public Debt Rs 4,760 crores and Unfunded Debt Rs 1,521 crores. The break up of the Public Debt is given below.

1. Rupee debt	
Permanent	Rs 2,598 crores
Floating	Rs 1,380 "
2. External debt	Rs 782 "
	Rs 4,760 "

Out of the total debt of Rs 6,821 crores, a net amount of Rs 2,685 crores was recoverable in respect of loans and advances to State Governments, etc. A sum of Rs 19 crores was recoverable from the United Kingdom and State Governments on account of purchase of annuities for sterling pensions, while about Rs 300 crores are shown as the debt due from Pakistan.

The total amount of loans raised during the Second Plan was Rs 1,424 crores. The amount of loans discharged adds up to Rs 395.08 crores and the net addition to the permanent rupee debt during the Second Plan works out to Rs 1,029.12 crores. In addition an amount of Rs 47 crores representing the Hyderabad Loan taken over in 1956-57 is also included in the total figure of Rs 2,598 crores shown above. During this period ad hoc Treasury Bills of the value of Rs 509 crores were converted into dated securities and included in the permanent debt.

Treasury Bills accounted for Rs 1,106 crores out of the total floating debt of Rs 1,389 crores as on 31 March 1961; the remaining Rs 74 crores consist of special securities issued to the IBRD, the IMF and IDA. Out of the outstanding Treasury Bills, Rs 9 crores were on account of issues to the public, while ad hoc Treasury Bills held in the Issue Department of the Reserve Bank of India amounted to Rs 1,077 crores. Consequent on the decision to invest Public Law 480 counterpart funds in special securities of the Government of India through the Reserve Bank of India, instead of depositing the amounts with the State Bank, a sum of Rs 240 crores

became available to the Government of India during 1960-61, reducing the amount of the floating debt by Rs 190 crores as compared with the previous year. During the five years covered by the Second Plan, the floating debt increased by Rs 572 crores.

Foreign Trade Problems

THE crop of new ideas produced by the Foreign Trade Seminar held in Calcutta last week under the auspices of the Indian Chamber of Commerce was disappointingly meagre. The statement on Trade Policy and Export Problems adopted at the end of the seminar is made up largely of unexceptionable generalities. The need for removal of impediments in the way of production, like power and coal shortage and transport difficulties, is mentioned. This imperative, as also the importance of cost reduction, of increased productivity of labour and agriculture, and of modernisation of plants, are of larger relevance than export trade. The need for market research abroad and study of factors that cramp our competitive capacity and export incentives are no doubt directly related to thinking on exports but even these are mentioned in general terms. Even the problems of particular industries are indicated in broad and familiar terms. Except for certain specific suggestions (which are discussed later on in the article) the discussion, at least in so far as can be gathered from the statement, is not of much assistance in indicating the precise changes in policy that are desired. One hopes the discussion itself was more rewarding and that the colourless bundle of platitudes that the statement is, is the normal hazard of summarising.

The fact is any thinking on export problems that does not concern itself with details tends to be woolly. In our opinion, therefore, the seminar ought to have concentrated on specific solutions for specific problems. Moreover, the subject has been discussed so often that it is not necessary to "begin at the beginning." Instead we should measure the progress made in specific policy decisions already taken. For example, it would have been worth while to have examined the extent to which the various suggestions made in the past have been adopted in practice both by the Government and by industry. In particular the seminar could have usefully examined the extent to which the recommendations of the Mudaliar Committee have been implemented. The statement no doubt makes a passing reference to the Mudaliar Committee but what we have in mind is a specific item-by-item progress report of the implementation of the Committee's recommendations. Likewise, the seminar could have indicated the progress—if any—that has been made in market research abroad. It could also have indicated the organisational and other details of any such research, the area or areas that it would have liked to explore in the near future. The suggestion that a study should be made of the impediments in the way of competitiveness abroad is good; but one would have thought that the seminar itself would have been able to offer some indications of such impediments.

Among the specific ideas that were thrown out by the seminar was the suggestion that quotas should be negotiated for non-traditional items with other countries wherever possible and that in fixing such quotas trade opinion should be consulted. Another sug-

gestion was that the duration of trade agreements between India and East European countries should be for longer periods than is the case now in order that exporters may plan their production better. The scope for non-traditional items of export to the Middle East and South East Asia is admittedly vast, and co-ordinated market research on, and vigilance in spotting opportunities by better-organised commercial intelligence from abroad are an immediate necessity. But here again, particularisation of programmes would have been welcome.

Quite the most interesting, (though not the nearest) suggestion made in the seminar was that of Mr S. P. Jain, who wanted India to think in terms of becoming an exporter of capital goods, completed plants and technical expertise. Such vistas will at least give a psychological shot in the arm to our export morale. Something along these lines is already being done. For example a package deal involving export of Railway rolling stock, equipment and technical personnel to assist in the expansion of Railways in Malaya has been under negotiation for some time now. There have also been cases of Indian interests succeeding in obtaining contracts in some African countries in the face of competition from more developed countries. Many newly-freed African countries offer vast scope for export of capital goods and technical knowledge. In many ways we should be able to meet such requirements better than more advanced countries in view of the similarity of experience. Even export of capital to such countries would be worth while, despite its adverse immediate implications for balance of payments, if adequate safeguards for repatriation of earnings and capital are ensured. In other words, India should think of becoming a sophisticated exporter despite our comparative underdevelopment.

Trade of Developing Countries Lower

INTERNATIONAL trade during 1961, analysed in the annual report of the GATT, has shown continuance of the expansionary trend that set in in 1959. The value of world exports in reaching a figure of \$131,000 million in 1961, touched a record level and was \$5,400 million more than in 1960. The rate of growth in 1961 at 4 per cent in value was lower than that witnessed in 1960 when the growth rate was of the order of 11 per cent, but this reflected the setback to total world output and also to the one per cent decline that occurred in the average prices in world trade. In 1961 itself, trends were divergent in the first half of the year the pace of expansion was somewhat subdued reflecting the falling off in North American imports. But with industrial production in the USA gaining new momentum in the second half, there was a substantial increase in import demand and this led in turn to a marked expansion in international trade.

In respect of the movement of world trade and the pattern of its distribution between different areas and countries, the developments during 1961 can hardly be considered encouraging. The significant feature that stands out is the continuing imbalance in the payments position of the under-developed areas. The improvement has been mostly accounted for solely by the developed industrial countries and areas. About two-thirds of the rise in world exports were accounted for

by trade among the Western European countries. In contrast, trade between the industrial and non-industrial countries has remained stagnant in both directions. The disparity in the trade position between the industrial and non-industrial countries has been rendered somewhat worse by divergent trends in the prices of primary commodities and in those of manufactured goods. While prices of primary commodities, which constitute the staple exports of the developing countries, registered a two-per cent decline in 1961, prices of manufactured goods continued their uptrend. The GATT survey of commodity prices shows that prices of both temperate and tropical zone foodstuffs, with the exception of cereals, continued to weaken in 1961 mainly owing to ample supply in the exporting countries and the growth of domestic production in importing countries. Additions to stocks were particularly marked in the case of butter, sugar and coffee. In respect of cocoa and tea, which constitute two of the most important sources of export earnings for the non-industrial areas, there was a pronounced increase in production which in its wake brought about a slight decline in prices in the international markets. Prices for agricultural raw materials like vegetable oils, cattle hides, natural rubber, etc. were also lower, jute constituting a solitary exception by virtue of a 20 per cent gain in prices.

Taking non-industrial areas as a whole, though there was a five per cent increase in the aggregate volume of goods shipped, since the average unit value of exports declined by about 3 per cent the total export earnings were only slightly higher at \$31,900 million against \$31,280 million in 1960. For the developing areas, the gain was very little as the rise in volume of exports was only of the order of 3.5 per cent which was more or less neutralised by the 3 per cent decline in the average prices of exports. Notable declines occurred in the non-industrial areas' exports to the USA and the UK which was to some extent made up by increased sales to the EEC.

In contrast to the non-industrial areas, the industrial countries, and particularly the western European countries, further improved their relative position. Exports from North America tended to level off during 1961, but in the EEC and the EFTA, trade showed signs of vigorous expansion. The total export of the industrial countries is estimated to have gone up from \$79,600 million in 1960 to \$83,800 million in 1961. North America improved its trade position vis-a-vis the rest of the world by about \$1,000 million, the US alone showing an export surplus of about \$6,000 million.

In Western Europe, the developments in the direction of integration of markets within the EEC and the EFTA led to high rates of increases in trade among the countries inside the two trading areas. The growth rate in trade was higher for the EEC than for the EFTA and reflected the more energetic efforts at integration which the countries of the EEC had taken during 1961. The increase in the value of intra-trade of the EEC during 1961 amounted to about 16 per cent while the increase in intra-EFTA trade was lower at 9 per cent. There was also a pronounced increase in the EFTA's exports to the EEC, more than half of which was accounted for by the UK.

As is to be expected the improvement in the trade position of the industrial countries was mainly accounted for by increase in the export of manufactured goods and here the benefits of greater volume were multiplied by the upswing in the average prices of manufactured goods. It is, in this connection, noteworthy that the increase in the value of world trade in manufactures during 1961

was greater than that for primary products, being about \$3,600 million as compared with \$2,400 million for primary products. The increase in value of manufactures worked out to about 7 per cent and was mainly accounted for by trade between the industrial countries. Commoditywise, the largest rise occurred in respect of capital goods, the total exports of which (from the main producing areas during 1961) were higher by \$2,500 million. The greater part of the additional exports was directed to the industrial countries, imports into the EEC alone being more than \$1,000 million higher than in 1960. In contrast to capital goods, cotton textiles showed a substantial decline in exports. With the exception of North America and Hong-kong, most of the producing countries experienced a fall in their total exports of cotton textiles.

In the light of the trends in international trade revealed by the GATT study, the problem is to mitigate the continuing imbalance in the trade relationship between the developing countries and the industrial countries. This relationship has resulted in a substantial increase in the payments deficit of the developing countries in the course of the last two years. From \$200 million in 1959 the deficit has gone up to \$1,150 million in 1960 and further to \$1,750 million in 1960. Projections of the import needs of the developing countries made in the GATT report for 1975 show a substantial increase in such requirements, i.e., \$10,500 million each for Latin America and the countries of South East Asia. This obviously is also the minimum level to which exports have also to be increased by these regions if they are to sustain a level of economic expansion at the minimum rate of 3 per cent considered to be desirable.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

BANK RETURNS

Deposits Again on the Uptrend

The brief pressure upon the money market in the early part of October, as a result of beginning of the month disbursements combined with Puja expenditure, clearly ended by the week ended 19 October; the returns of the Reserve Bank for that date disclose a sharp fall of Rs 23.26 crores to Rs 2,047.88 crores in active note circulation and an inflow of Rupee Coin in an amount of Rs 1.28 crores. Currency has been contracted against Rupee Securities for Rs 25 crores by transfer to the Banking Department.

The return for the Banking Department reveals that investments have been marked up by Rs 24.12 crores to Rs 140.06 crores—apparently wholly reflecting the transfer from the Issue Department. But the State Bank is known to have purchased securities for Rs 6 crores during the week, and so it would seem that the Centre has resorted to deficit financing in such an amount or thereabouts. The Central Government's need to sell ad hoc in favour of the Reserve Bank can be seen to have arisen because Treasury Bills purchased and discounted by the central banking institution matured during the week in the fairly large amount of Rs 15.41 crores; and to meet this maturing liability the balances of the Centre had also to be drawn by Rs 7.07 crores to Rs 52.42 crores. The States continue to be uncomfortably placed in so far as their ways and means are concerned.

Banks have got over any strain they may have experienced earlier in the month. Their Reserve Balances have improved by Rs 6.20 crores to Rs 89.88 crores, and the indebtedness of Scheduled Banks to the Reserve Bank has been substantially cut by Rs 8.82 crores to Rs 1.53 crores.

An encouraging feature of the latest Reserve Bank returns is the rise of Rs 1.69 crores to Rs 6.27 crores in Balances Held Abroad; and foreign assets in the possession of the Reserve Bank as a result are placed at something below the Rs 95 crore mark.

The return of the State Bank for 19 October similarly shows a sizable reduction in the demand for funds. The total of Advances has further fallen by Rs 4.47 crores to Rs 264.46 crores, though it needs to be added that, after a bout of steady accretion, Deposits in the week under review have declined by Rs 3.04 crores to Rs 586.59 crores. Such additions to resources have been utilised to add Rs 6 crores to the gilt-edged portfolio, now making it worth Rs 286.08 crores; but this figure is still about Rs 5 crores short of the peak touched this year. Other Assets have been "liquidated" to the tune of Rs 4.38 crores and therefore are placed at the slightly more reasonable level of Rs 41.56 crores. The State Bank strangely has been figuring as a consistent borrower from the Reserve Bank, though the amount involved is negligible. The latest week's return, for example, indicates a rise of Rs 4 lakhs to Rs 52 lakhs. The end result is an improvement of Rs 1.33 crores to Rs 34.95 crores in cash balances.

After a lag of nearly a month Deposit resources of Scheduled Banks are once again looking up. The statutory statement for 12 October places the rise in net Demand Deposits at Rs 9.88 crores, raising the relevant total to beyond the Rs 900 crore mark at Rs 906.61 crores; this is but partly offset by a decrease of Rs 1.17 crores to Rs 1,275.39 crores in net Time Deposits. Of the total rise of Rs 8.77 crores in net Deposits, a sum of Rs 3.18 crores is attributable to the State Bank. However, spillover of month-early disbursements has caused the total of Advances to rise slightly by Rs 1.27 crores to Rs 1,398.46 crores; and if regard is had for the State Bank reporting in the relevant week a contraction in the portfolio of Rs 1.85 crores, it is obvious that other Scheduled Banks lent about Rs 3 crores more during the week under review. As such there is little change to be noticed in borrowings: those from the State Bank are in fact a shade higher by Rs 0.87 crore at Rs 20.26 crores, while indebtedness to the Reserve Bank has shown a nominal decline of Rs 0.22 crore to Rs 10.41 crores. However, it may be noted that in the week ended 19 October (vide the latest Reserve Bank returns) borrowings from the central banking institution have been reduced to a very low level indeed. The fall of Rs 2.42

crores to Rs 690.15 crores in the gilt-edged portfolio is wholly on account of the State Bank, the other Scheduled Banks apparently adding to theirs by a little over half a crore. Finally, cash balances, including money at call and short notice, are higher by Rs 1.40 crores at Rs 198.72 crores.

European Monetary Policy

By Paul Einzig

The outlines of an integrated monetary policy of an enlarged Common Market have emerged from a resolution passed by the Strasbourg meeting of the European Parliament on 17 October. The resolution stresses the need for integration, but it seeks to remove any expectation that it would mean unrestricted automatic mutual assistance. The Report endorsed by the resolution states that assistance would not be granted automatically to member States which have an adverse balance of payments, since in doing so incentive for them to work out their own salvation would be weakened. There was no immediate need for laying down such a rule, since all the Six member countries are at present in a reasonably strong position. The rule was considered necessary in view of the possibility of Britain joining the Common Market.

It was realised in Strasbourg that Britain's entry would create grave new monetary problems for the Common Market. It was deemed necessary to make it clear well in advance that Britain's admission would not mean that the Six would underwrite sterling. The Report stresses the need for enlisting the support of the International Monetary Fund in order to find the solution to the new problem. It also stresses by implication the necessity for Britain to endeavour to keep its international accounts reasonably balanced instead of relying excessively on assistance from the EEC.

It seems probable that at the beginning at any rate Britain would need some assistance, owing to the effect of increased continental competition on the balance of payments. The official British attitude is that such need would be essentially temporary, as the increased competition would produce, in the long run, beneficial effect on British industries. During the transition period the issue of loans by British firms on Western European market and the placing of British shares would offset the deficit without any official support on a large scale.

It seems that the hard money school has definitely gained the upper hand in the Common Market. Hitherto France was the principal exponent of that school, but now West Germany, too, is taking a similar line. While American and British experts outbid each other in producing plans for bigger and better increases of international liquidity, representative French and German experts deny the need for such plans or the wisdom of finding a solution on the lines suggested. The official Franco-German attitude favours international arrangements such as the swap arrangements between Central Banks, purely for the purpose of meeting temporary abnormal pressures and not as a means for achieving permanent increase of international liquid resources. The contrast between the West European and the British attitude in this respect foreshadows clashes within an enlarged Common Market in respect of the basic principles of monetary policy.

Notes

IMPORTS

Substitution the Answer?

The question of imports figured less prominently in the discussion of the Foreign Trade Seminar but it is nevertheless of importance in the context of foreign trade. In this connection, the deliberations of the technical panel on import substitution that met in Delhi recently is of some relevance. No firm decisions have been taken at the first meeting of this panel which has dispersed after appointing five sub-committees to examine in detail the problem of import substitution in the textiles, steel, oil fertilizer and machinery industries. These will report in a month's time. Import substitution is really an exercise in thinking on details and therefore we have to wait for the reports of these sub-committees before making any detailed comment. Mr G. L. Mehta drew attention to some of the relevant considerations in his inaugural address. The present parlous foreign exchange position may make import substitution a necessity, but there is such a thing as marginal import production which cannot be ignored

in reckoning its economic price. Substitution can either be by indigenous manufacture for an imported one or by import of a primary product in the place of a more finished product. Import substitution may also involve in the short run a higher import of capital goods. There is also the question of cost and quality, which impinges on both what is due to the domestic consumer and export prospects. A certain amount of ad hoc adjustment and putting up with inferior indigenous products in the emergency in which we find ourselves is inevitable. In any event, the need for the closest scrutiny of the necessity of every import both on Government and private account and the exploration of possibilities of avoiding it by suitable indigenous equivalent is paramount.

CENTRAL REVENUES

Collections

Exceed Budget

Estimates

The buoyancy in Central revenues that has been noted in the first months of the current financial year has continued to be in evidence in August also. Figures of Central revenue collections show substantial increases in some of the major heads for the first five months of the fiscal year. Collections under Customs in the first five months have, for example, improved to Rs 95.99 lakhs from Rs 78.28 lakhs in the corresponding period of last year. Similarly collections under Union Excise duties are also substantially higher at Rs 2,23.48 lakhs against Rs 1,90.36 lakhs in the corresponding period of last year. The improvement in revenue collections that has taken place under these two heads is substantially greater than the increase envisaged in the Budget estimates for 1962-63. In the case of Customs revenue, the increase of Rs 17.71 lakhs in 5 months compares with the increase of Rs 7.80 lakhs for the whole year in the Budget estimates. In year in the Budget estimates, the respective figures are Rs 33.12 lakhs and Rs 52.13 lakhs. Assuming the buoyancy in revenue collections under these two heads to continue, the total collections should substantially exceed the Budget estimates in this regard.

Revenue Head.	August	April-August	Rs in Lakhs 1961-62 Revised Estimates	1962-63 Budget Estimates
Cus,oms	19.39	17.04	95.99	78.28
Union Excise Duties	45.87	38.26	2,23.48	1,90.36
Excluding Cesses on	9.67	3.53	31.31	27.70
Salt, Coal & Iron Ore	9.83	8.53	36.67	38.01
Corporation Tax	14	14	96	95
Income Tax	23	26	1.02	1.08
Estate Duty	—	3	2	11
Taxes on Wealth	5	5	18	19
Expenditure Tax	34	57	1.52	2.21
Gift Tax	—	—	—	—
Opium	—	—	—	—
Total	85.52	68.41	3,91.15	3,38.89

In regard to direct taxes, an increase of the order of Rs 3.61 lakhs has been registered under Corporation tax in the first five months, as compared with the corresponding period of last year. The rise is pronounced in August being of the order of Rs 6.14 lakhs and making up for the relatively lower collections in the preceding four months when total collections were lower than in the first four months of 1961-62 by about Rs 2.00 lakhs. However, collections under Income-tax in the first five months of 1962-63 are not of the same order as in the previous period and show a fall of Rs 1.34 lakhs. But even here collections during August have shown a handsome increase by Rs 1.39 lakhs. For both Corporation tax and Income-tax, collections are generally concentrated in the last quarter of the fiscal year. For this reason, there is an inherent liability to error in any forecast of revenue for these two based on realisations for the earlier quarters or periods.

POWER

Green Signal Again for Tata Group

A 17.9 million dollar loan to finance the full foreign exchange cost of the expansion of the Trombay thermal station has been announced by Mr J. K. Galbraith, United States Ambassador in India. The loan is the fifteenth in the series granted by the Agency for International Development and the DLF for power development; and, as in previous loans granted by the IDA, the terms are extremely easy. The loan is repayable over a period of 40 years, the first instalment being due only after 10 years. Further, the loan carries no interest though there will be a service charge of three-fourths of one per cent. The loan is repayable by the Government of India, though the loan agreement is with the Tata power companies, which, however, are required to repay the loan to the Central Government over a period of 20 years at an interest of 3½ per cent.

The expansion plan will involve the installation of a 125 mW generator which will be the big-

gest in the country. The only other generator of similar size would be located at the Chandra-pura thermal power station in the Damodar Valley. The project, which has considerable significance in the current context of power shortage in the country, will alleviate the situation in the industrial complex in North Bombay. Attention may also be drawn to the interesting and somewhat stormy background to the consummation of the thermal power schemes at Trombay launched by the Tatas. It was in 1952 that the Tatas applied for sanction for two thermal units to be installed at Trombay to meet the power requirements of the growing industries. But the then Bombay Government was opposed to giving sanction to the Tata scheme for fear that if and when it came up, power generated in the State plant would remain unsold. The State Government's policy has been proved to be shortsighted and subsequently it had to surrender its own claims. The background to the development of the Trombay power station by the Tatas and the issues involved should certainly have relevance at the present time when the coun-

try faces chronic power shortage. In fact one of the fundamental causes of the present power shortage is the doctrinaire exclusion of the private sector from any substantial share in power development. Government's policy has not suffered any change in spite of the most compelling reasons to the contrary. In the Third Plan, the private sector has been given a share only to the tune of Rs 50 crores for power development while the public sector's allotment amounts to more than Rs 1,000 crores. With the private sector's claims for a greater share ignored by the Government, there can be no way of filling the gap in power supplies that is now certain to be experienced at the end of the Third Plan.

BIHAR Poised for Great Leap Forward

The industrialisation of Bihar State has aroused considerable interest in recent times and the subject formed the major theme at the proceedings of the fourth annual meeting of the Bihar Mineral Advisory Council held in the second week of this month at Dhanbad. On the basis of the per capita income and the level of industrial growth, Bihar at present ranks among the economically backward States. This is deplorable considering the immense potential particularly in minerals which the State possesses. In fact the contrast between potential for industrial growth and the actual progress achieved is nowhere so glaring as it is in the case of Bihar. Some basic facts regarding the proportion of total mineral production which Bihar State produces at present should bring this out clearly. Taking coal first, nearly 80 per cent of the total resources, and almost the entire resources in coking coal, are accounted for by the State. An equally dominant position is also held in other basic minerals like copper, kyanite, mica, etc. The country's entire production of copper is at present concentrated in Bihar. The State also accounts for 95 per cent and 97 per cent respectively of the total production of apatite and kyanite. The State's contribution to the production of iron ore is also substantial. In fact some of the richest iron ore deposits of superior grade are situated in Bihar.

On the basis of these figures of mineral production, the State could be rated as most advantageously placed for rapid industrial growth. But the dominance in mineral production has not so far been reflected in any corresponding progress in the growth of industries. Oddly enough the only industry that is fairly widespread and which has attained a measure of importance is the sugar industry for which the locational ad-

vantages in the State are least favourable, and even in this regard, Bihar's position, which was only second to that of Uttar Pradesh, has been slipping in recent years reflecting the shift to more advantageous regions in the Southern Peninsula.

The lag in industrialisation in spite of abundant mineral resources can only be explained in terms of the lack of a dynamic policy on the part of the authorities. The situation is however changing and there are signs that the State now stands well poised for a big stride forward in the direction of faster progress in the industrial front. Most importantly, the State Government has become alive to its industrial possibilities and has taken a number of steps to create an appropriate organisational set-up which could stimulate industrial advance. Mention may be made of the setting up of organisations like the Bihar Industrial Development Council, the Bihar Mineral Advisory Council, and the Bihar Small-scale Industries Board. Further, schemes have also been launched for the establishment of some basic industries. Dhanbad has already become a major centre of industries, the potential of which is only beginning to be tapped. Even more significant are the new projects that are scheduled to be taken up for the development of heavy industries at Ranchi. The projects include the establishment of a heavy foundry, forge plant, a machine tool plant and a heavy machinery plant. The investment entailed by the establishment of these industries in the heavy sector will be second in size only to that incurred by the Hindustan Steel Limited for the three public sector steel plants. The fourth steel plant at Bokaro, when it comes up, may further raise the industrial stature of the State. In view of these projects, the vision of the Ranchi-Bokaro area developing as the future "Ruhr" of India may not go wrong.

The heavy machinery project represents only one aspect of the industrial prospects for the State. Besides these, there are possibilities held out in the direction of coal-based industries, of utilisation of pyrite ores of which the State has abundant deposits, and of refractories. The Ranagarh-Patratu plateau adjoining the South Karanpur coal-field is already developing as an important centre for coal-based industries. A number of refractory industries have also been coming up. A low temperature carbonisation plant has been projected in the Third Plan. A large factory projected at Amjhore near Shahabad will process pyrite ores which may enable the country to save considerable foreign exchange at present entailed by import of sulphur. On the basis of the present schemes and some of the projected ones, the Bihar State can look forward to early rectification of the present

imbalance in its economy reflected in the relatively lagging growth of industries.

AIMO Alarm Expressed About the Economy

Addressing the second quarterly meeting of the Central Committee of the All-India Manufacturers' Association held recently in Indore, Mr Prabhu V. Mehta raised an alarm about the general economic situation and the industrial development of the country. According to the Planning Commission's review on the progress of the Plan, the national income rose by about 2.2 per cent in 1961-62 in striking contrast to 7.1 per cent in the preceding year and an average of 4 per cent during the Second Plan period. Similarly industrial production also sustained a rude set-back in that it was only 6.7 per cent higher in the year under review against a rise of 11.1 per cent in the previous year and an average rate of 8 per cent growth during the last Plan period. This trend was attributed to the interplay of different factors but the most important are the inadequate supply of indigenous raw materials coupled with further import curbs necessitated by foreign exchange difficulty and the paucity of energy resources. It has to be admitted that in a developing economy like ours these factors are inevitable but stagnation doesn't necessarily mean that the elements of dynamic economic growth are completely exhausted. But the continued stringency in foreign exchange reserves and inadequate availability of power resources are hampering the pooling of the country's resources for fruitful economic development.

In this context the need for augmenting foreign exchange resources through expansion of exports becomes imperative. But that the present arrangements for exports are not commensurate with the country's needs is obvious, and the creation of the Board of Trade substantiates this point. The immediate problem confronting the country at present is to meet the foreign exchange requirements for maintenance imports, and also for the repayment of liabilities of foreign exchange loans through exports. Besides, the dependence on foreign countries for financing Plan programmes will also have to be done away with in due course. But as is evident there is no open sesame for solving this complicated problem and efforts should be made to enable the primary sectors to set the pace for the economy as a whole. Substantial expansion of agricultural production, can be achieved without much foreign exchange involvement. Thus the imports of

agricultural products can be reduced and the availability of surplus exportable products will be another advantage. The under-utilisation of installed capacity in many of the industries was responsible for the slackening of industrial development. Such wastage should be eliminated as the country cannot lose foreign exchange due to the high cost of production.

COTTON TEXTILES High Costs Hamper Working

The Indian cotton textile industry is passing through a critical period. Various factors like the high cost of raw materials, inflated wage bills, increase in freight charges, levy imposed on consumption of cotton and the uneconomic working condition of most textile mills are plaguing the industry at present. As indicated last week by Sir Padampat Singhania, Chairman of the UP Cotton Textile Mill-owners' Association, the prohibitive cost of production is a headache to the cotton textile industry as well as to the authorities. The rise in the prices of raw cotton and other materials required by the industry, the increase in the wages of the labourers on the recommendations of the Wage Board, and the outmoded machinery have all made a reduction in cost of production rather difficult. A speedy programme for rehabilitation and modernisation of cotton mill machinery will have to be undertaken not only for improving the production techniques but also for strengthening the competitive capacity of the Indian textiles in the international markets. But considering the high cost involved in even a modest scheme of modernisation and rehabilitation (the NIDC has estimated it at Rs 180 crores) over the next five years, the outlook is not at all promising. Moreover the industry is required to raise Rs 80 crores from its own resources and obtain the balance from financial institutions. The industry's ability to raise the required amount is doubtful as the margin of profits has been further curtailed by the downward revision in the rate of development rebate from 25 per cent to 20 per cent and by the increase in corporate tax from 45 per cent to 50 per cent.

The prices of cotton have also moved up mainly due to the failure of the crop last season. Imported cotton is also costlier. The need for raising the cotton output by both extensive and intensive cultivation is inescapable.

The emphasis laid on enhancing exports of cotton textiles is laudable; but compelling the mills to export 12½ per cent of their total turnover of cloth and 3 per cent of yarn does not appear to be the correct approach. Most of the mills will be required to export

at a considerable loss and the seething competition abroad makes it obligatory on the part of exporting countries to manufacture cotton textiles according to the overseas buyers' choice and that too at competitive prices. To meet the challenge it is imperative to concentrate more on cost, prices and quality. Utilisation of modern machinery, rationalisation of operational methods, and catering to the needs of the demand abroad can greatly improve our competitive ability. Relaxation of export proceedings, reductions in export duties and taxation and exploration of potential markets in foreign countries will all be helpful.

DAIRIES Danish Offer of Assistance

A team of three experts from Denmark, Professor Aksel Milthers, Mr Axel Dam Kofoed and Mr K. Kissmeyer Nielsen arrived in India early in the month, to survey suitable sites for setting up a dairy farm on the Danish model under the auspices of the Danish Committee for Technical Co-operation. The dairy farm will demonstrate Danish methods of farming, cattle maintenance and milk production. The farm will be stocked with Red Dane cows and a dairy will also be set up for the processing and distribution of milk. Bulls reared on the farm will be used for evolving improved breeds of cattle in the surrounding rural areas.

After preliminary discussions with Mr A. M. Thomas, Deputy Food Minister, and officials of the Food Ministry, the experts visited the national Dairy Research Institute, Karnal, Rajpur and Dehra Dun. The survey of possible sites that is being made by the team includes Bangalore and other areas in Mysore State as well as Ranchi in Bihar. The team will visit Anand to study the working of the Kaira Cooperative Milk Union; it will also study the milk schemes of Bombay, Madras and Calcutta. The team is expected to complete its survey by the end of October. It will later report to the Danish Committee for Technical Co-operation for grant of assistance to India for the project.

NEPA The Corner Turned

After an initial period of shakiness and financial imbalance, the National Newsprint and Paper Mills Ltd (NP) can now be said to have found its feet. The Company has now almost wiped off the burden of loan and the interest commitments thereon, thanks largely to a run of surpluses registered in the last four years. The gesture of the Central and the

Madhya Pradesh Governments in agreeing to convert some part of their loans granted to the NEPA Mills into equity capital was also an important factor in the reduction of the loan capital of the Company. There is at present only one non-interest-bearing loan of Rs 77 lakhs which is owed to the MP Government. The net profit during 1961-62 amounted to Rs 40.85 lakhs and was utilised to reduce the debit balance of Rs 65.68 lakhs. With the improvement that has been registered in the financial position it should not be long before the shareholders are

paid a reasonable return on their investments.

With the increasing demand for newsprint, production at the NEPA Mills was also considerably stepped up in the last year. Supplies to newspapers were higher at 18,500 tons as compared with 13,250 tons in the previous year. A further increase in production to 28,000 tons is being envisaged for the current year which may enable a foreign exchange saving of the order of Rs 2 crores. The enforcement of the full excise duty at 22 nP per kg in this year's Budget precipitated an embarrass-

sing situation for the NEPA mills since, following this measure, orders from newspapers began to fall off. The situation, however, was subsequently relieved with the Government agreeing to reduce the level of excise duty to 5 nP per kg.

Under the impact of the rise in raw material prices and wages of labour, etc., the cost of production at the NEPA Mills has gone up considerably in recent years. Difficulties have also been experienced in procuring chlorine which is an essential raw material in the manufacture of newsprint. The

4½ PER CENT ORISSA STATE ELECTRICITY BOARD BONDS, 1972 (SECOND SERIES) For Rs. 200 Lakhs

(Payment of interest and Repayment of Principal
guaranteed by the Government of Orissa)

The Bonds will be trustee securities under the Indian Trusts Act and also approved securities for the purpose of the Insurance Act and the Banking Companies Act.

ISSUE PRICE Rs. 99.50 PER CENT
REDEEMABLE AT PAR ON THE 11th NOVEMBER, 1972

Subscriptions will be received in cash or by cheque. Applications will be received at the branches of the State Bank of India at Calcutta, Bombay, Madras, New Delhi, Cuttack, Berhampur and Sambalpur from the 8th November, 1962 to 10th November, 1962 both days inclusive. Subscription may however be closed earlier without notice if the total subscription is reached.

Copies of loan prospectus and application forms are available at all the Offices of the State Bank of India mentioned above and at the Office of the State Electricity Board, New Capital, Bhubaneswar.

setting up of a caustic soda chlorine plant, which is now programmed, should serve to meet its requirements and by virtue of the saving in freight costs should also help to bring down the cost of production. Unsparing efforts are also being taken to improve the quality of newsprint produced at the Mills, and the implementation of the measures recommended by an American expert team should contribute to further improvement of quality.

PAKISTAN

Progress Report

The agricultural and industrial development programmes of Pakistan are reported to be proceeding on an even pace. The agricultural sector, the mainstay of Pakistan economy, is showing symptoms of gradual but steady recovery from its backwardness. Though the problem of agricultural development can be traced back to the days of yore a sustained development effort on a broad front was initiated after independence. The creation of the Agricultural Development Corporation (West Pakistan) was an important milestone in tackling the agricultural sector. The ADC came into existence on 1 October 1961, and was called upon to shoulder the herculean task of bringing about revolutionary changes in the agricultural sphere by employing modern methods of cultivation, educating the farmers for pursuing the latest methods, harnessing rivers for irrigation and power generation purposes and the like and thus improve the economic well-being of the population. Considering the magnitude of the task undertaken, the first annual stock-taking of the operations of the Corporation makes impressive reading. The most striking of its achievements is the successful completion of the organisational set-up both at the headquarters and the fields. Having thus laid the foundation, naturally enough, the ADC has buckled down to tasks like land development, colonisation, irrigation, agricultural betterment, and allied matters for ensuring a speedy completion of this multi-pronged programme. The arrangements for procuring and distributing seeds, fertilisers, implements and pesticides have also happily been finalised. The ADC has also assumed the responsibility for colonising the areas commanded by the Ghulam Mohammed and Guddu barrages which will bring in several thousands of acres of land under the plough. Like-wise the Small Dams Organisation is forging ahead with its plans of ensuring reliable irrigation facilities to several districts which were hitherto sparsely irrigated or not irrigated at all. Preparations for evolving a suitable cropping

pattern with special emphasis laid on practical demonstration and tangible achievements in the field are also proceeding apace. This will be followed up with a thorough reorganisation of the co-operative system and the creation of such societies in the uncovered regions in order to arrange credit facilities to the cultivators and provide them with adequate marketing arrangements for their agricultural products.

A survey of the progress of industrial development of West Pakistan also gives cause for satisfaction. The feat of exceeding the Second Five Year Plan targets in the industrial sector three years ahead of schedule—though it has exposed a glaring loophole in planning—has necessitated the revision of the investment schedule to provide fresh openings. The Government's commitment during the first two years of the Plan, totalling Rs 376 crores to private enterprise in the industrial sector as against the investment schedule of Rs 284 crores. Another notable trend is the shifting to large-scale undertakings during the current Plan period. Nearly 50 per cent of the investment has been directed to large-scale industries such as steel, petro-chemicals, industrial chemicals and paper boards.

The Industrial Development Bank of Pakistan with its avowed objective of stimulating the growth and development of industries has had another fruitful year of operation. The annual report of the bank for the year ended 30 June 1962 recording a profit of Rs 37.32 lakhs before providing for taxation, gives a comprehensive review of its operations toward this end. The total accommodation sanctioned during the year under review aggregated Rs 26.69 crores against Rs 14.57 crores sanctioned from 1 July 1960 to 30 June 1961. The amount of rupee loans sanctioned is placed at Rs 5.57 crores while the disbursements are shown at Rs 2.99 crores, and outstanding loans as on 30 June 1961 amounted to Rs 7.50 crores. The IDBP's policy has been oriented toward meeting the long-term credit needs of small and medium industries with a reasonably balanced distribution between new and existing ventures. Generally 35 per cent of loans sanctioned is allotted to new undertakings but the high proportion of loans for new industries in East Pakistan has been warranted by the deficient capital formation in that part and its poor industrial development. Moreover, in advancing loans, the bank sticks to its policy of distributing loans and investments fairly widely among several types of industries and among regions which minimises considerably the risk involved in long-term investment apart from promoting a balanced growth of industries and regions vitally need-

ed for the country's rapid industrialisation.

Contrary to these heartening trends in the different sectors of national economy, the decline in literacy revealed by the 1961 census is a matter for serious concern. Though the standard for measuring literacy of the people stands slightly modified to-day, it does not any way mitigate this alarming trend. The apathy of the women folk for higher education, particularly in West Pakistan, is equally disconcerting viewed in the context of the recent awakening of female population for placing themselves on an equal footing with men.

USA

New Export Insurance for Heavy Equipment

Foreign buyers of US capital equipment, such as machinery, industrial and construction equipment, and heavy vehicles, are likely to find financing much easier now that US medium-term export credit insurance is available.

The new export insurance programme, which became effective on 16 July 1962, removes almost all hazards to export sales of high-value producers' goods on "installment payment" plans running as long as five years. Coverage can be obtained for a single transaction. US exporters can now offer installment purchases terms comparable to those offered by exporters of some 20 major trading nations.

A new field of export financing of heavy equipment purchases has been opened up by the new medium-term insurance programme. The proceeds of export credit policies issued for such purchases are assignable to banks and other lending institutions, thereby making the policies a prime collateral for export financing.

Government officials say the new credit insurance will give banks and other lenders more confidence in export loans. They see this as the main basis for expecting that foreign purchases of US producers' equipment will greatly expand in the future.

The new medium-term policy, providing insurance against political and commercial risks on foreign sales on one-to-five-year credit contracts, supplements short-term credit insurance, providing coverage up to 180 days and, in special cases, up to one year. The short-term policy, which became effective on 5 February covers only revolving sales to a single foreign buyer and "whole-turnover".

The extension of the export insurance programme up to five years is seen by foreign trade experts here as a strong private financial stimulus to US export

expansion—the most constructive remedy to the nation's persistent deficit in its international balance-of-payments account.

The current insurance programme, including both short-term and medium-term coverage, is a joint operation by the Government's Export-Import Bank and the Foreign Credit Insurance Association, representing a group of 71 private insurance companies.

The medium-term export insurance policy will cover up to 85 per cent of losses from both commercial and political risks on a single transaction. Coverage of the political risks is borne entirely by the Export-Import Bank. Coverage of the commercial risks is shared on a 50-50 basis by the bank and the insurance association. On "whole-turnover" policies, coverage of the political risks is increased to 90 per cent.

Commercial credit risks are insolvency of the buyer and protracted default of payment by the buyer; political risks include such actions taken by governments as currency convertibility restrictions, export and import restrictions, war, revolution, civil commotion, and expropriation.

Henry G. Sheehy, president of the insurance association, said that the new medium-term insurance will make it possible for exporters to extend more credit to customers and also obtain more credit financing from banks and other lending institutions.

The short-term policies have already demonstrated their effectiveness. They cover up to 85 per cent of commercial risk and 95 per cent of political risk. According to recent figures, more than 700 short-term policies have been written covering \$350 million in aggregate insured liability. About 1,500 applications covering more than \$1,000 million of anticipated shipments have been received.

In describing the medium-term insurance policies, Mr Sheehy estimated the US premium rates are somewhat higher than in the British Export Credit Guarantee Department but lower than Germany's Hermes programme. Coverage may be extended through the period of fabrication of the export product.

A 20 per cent down payment by the buyer is required. The amount of credit information on the buyer required by the insurance association depends on the size of the transaction. For deals valued above \$100,000 a financial statement or guarantee from the buyer's home bank, or both, will be required.

According to Mr Sheehy, the limit now set by the Government on the export credit insurance programme, which is currently at \$1,000 million, is likely to be increased with exporter demand. Mr Sheehy noted that military crises in Laos and South-East Asia in general, as well as economic

troubles in Argentina, would normally cut back US export sales to those areas. However, with credit insurance available, there has been no appreciable decrease of business with these areas.

The export insurance programme also serves a main objective of the Government's export expansion programme by encouraging newcomers to enter the export field. Up to 15 per cent of concerns covered by the new export insurance are small businesses or those not previously engaged in exports.

"It is probable," he said, "that these companies would not even have entered the export field if the large inherent risks entailed had not been considerably reduced by the new export credit insurance."

COLOMBO PLAN

Council's Annual Report for 1961-62

Colombo Plan Technical Co-operation activities, which have been steadily growing from its inception in late 1950, have reached the highest figures so far in 1961-62, the twelfth year of operation of the Plan.

The total value of technical assistance that has flowed into the region since the inception of the Plan has amounted to over £ 102 million.

Since the inception of the Colombo Plan, 24,062 persons from countries in South-East Asia have received training in other Colombo Plan countries.

4,163 Colombo Plan experts in many agricultural, industrial, administration and other fields have visited the area to perform a wide variety of highly technical tasks.

Scientific, technical and training equipments to the value of over £32 million have been supplied to the area as an integral part of technical co-operation under the Plan.

These figures are revealed in the Annual Report (1961-62) of the Colombo Plan Council for Technical Co-operation in South and South-East Asia.

The Report deals with one of the three main aspects of the Colombo Plan—Technical Co-operation—that is to say, the provision of training and the supply of experts and equipment. It does not deal with the other two aspects, the national development plans of the region and the capital aid from outside. The Consultative Committee (of Ministers of Colombo Plan countries) which meets in November this year in Melbourne, Australia, will deal with all three aspects in its Report, that is, on the progress of economic development in the countries of the region, the provision of capital aid from outside, and technical co-operation.

The Report points out that the proportion of spending on technical co-operation has been of the order of over 25 per cent on some 24,062 trainees, nearly 40 per cent on 4,164 experts and advisers and the balance on books, films and technical assistance equipment ranging from eye-pieces for microscopes to shipyard equipment and road constructing and testing machinery.

The Report records that during the year 1 July 1961 to 30 June 1962 the number of new trainees rose from 4,417 to 4,529 and that of experts—not counting those already in the field—from 786 to 1,008. The cost of equipment rose from £5.6 million to £17.5 million which brought the total expenditure of Colombo Plan Technical Co-operation during the year to nearly £36 million, compared with £20.2 million in 1960-61.

The 21 statistical tables in the appendices to the Report are pointers to the direction in which economic and social development is taking place in the region. The

Council adds: "They by no means show the results reaped from twelve years of technical co-operation activity in South and South-East Asia, for totals of experts or trainees or cost in terms of money are not measures but only indicators of development activity. Further, much of what has been done in the past 12 years of Colombo Plan Co-operation will yield full returns only in years to come."

The statistics reveal that the United States is the largest donor of training places having provided 2,223 places last year—i.e., nearly 50 per cent of the total training awards made last year, with Britain (656), Australia (541) India (369), Canada (246), New Zealand (218) and Japan (189) following in that order. Thus India is the largest donor of aid in the region and ranks as the fourth biggest donor of training places.

India has taken position as the recipient of the largest number of training awards (830), follow-

ed by Indonesia (737) Thailand (569), Pakistan (436), Vietnam (341), Nepal (340), Philippines (293), Federation of Malaya (242) and Ceylon (200).

An analysis of the fields in which training has been provided indicates that General Education (685) has taken first place on account of the large numbers following University degree courses in India, Australia and the United States, while Food, Agriculture and Forestry (668) and Administration (544) occupy second and third places and Medical and Health (528) fourth.

The greatest demand during the year has been for specialists in the field of Transport and Communications, some 253 experts (a quarter of the total number of expert personnel sent) having been assigned to the region. This is followed by Engineers (194) Educationists (130) and Food, Agriculture and Forestry Experts (122).

The Council states: "It is in keeping with the spirit of the

Firestone

Here's another reason why motorists who know always choose

New Deluxe Champion Tyres

GIVES MORE KILOMETRES PER RUPEE INVESTED

As an end product of over 20 years experience in the manufacture of tyres in India for Indian road conditions, and backed by Firestone world-wide technical research, the Firestone New Deluxe Champion is a tyre exclusive in quality and construction. The specially compounded wear-resistant tread and strongly reinforced cord body ensure more trouble-free mileage—means more kilometres per rupee invested.

Your Mark of Quality

Colombo Plan that all member countries which have good training facilities to offer are willing to make them available to others that still lack them. The member countries of the region have already trained over 2,303 people. Burma, Ceylon, Federation of Malaya, India, Indonesia, Pakistan, the Philippines, Sarawak, Singapore and Thailand are all donors.

India has provided 1,914 training places during 1950-1962 and taken on 369 trainees in the course of last year. Other countries of the region which have made significant contributions in 1961-62 are Singapore (38), Federation of Malaya (24) and Pakistan (15). Sarawak appears on the list of donors for the first time.

The Report emphasises that the developing countries in the region as elsewhere are dedicated to the revolutionary philosophy that there must be 'planned, accelerated' economic development. They have flatly rejected the notion that poverty, squalor and disease are pre-ordained. It is a 'revolution of rising expectations'. It is a *sine qua non* that if these developing countries are to grow more rapidly than has historically been the case with today's advanced nations, they must be prepared to think in terms of long-term economic growth based on a rational use of manpower and material resources rather than short-term expediency. They must develop the stamina to do the hard things which are necessary to bring it about. In this sense accelerated economic development is a moral challenge to the leaders and peoples of the countries in the region. Without this spiritual stamina which they need to help themselves in order to secure planned, accelerated economic growth, the effectiveness of external aid including technical co-operation, however, massive it may be, will be considerably vitiated. The Colombo Plan has rightly focused attention on this point by emphasising the co-operative nature of the Scheme, by extending help so that the countries of the region may be helped to help themselves. The Colombo Plan Council, in its second decade, considers it necessary that this important spiritual or moral aspect of Colombo Plan assistance should continue to be emphasised.

The Council adds: "In spite of the progress in economic and social development to which external aid under the Colombo Plan has made no small contribution, the situation is still acute. The Council drew attention last year to the unprecedented growth of population of the area which has added to the problems of economic development—the rate of increase during the last decade being higher than ever before. The very success of the Colombo Plan in fields such as

health and medicine has brought a dramatic fall in the death rate and a sharp rise in the natural increase. To the Colombo Plan partners it is a challenge to create the conditions for a fuller and better life for the peoples of the region. In this context, the continuing importance of technical cooperation as a means of overcoming the short-fall of trained manpower required for an increased tempo of economic development of the region cannot be over-emphasised."

The Council, which functions in Colombo, Ceylon, consists of representatives of high diplomatic level of Colombo Plan countries. There are 21 countries in the Colombo Plan fraternity. Of these 15 are in South and South-East Asia: Burma, Cambodia, Ceylon, Federation of Malaya, India, Indonesia, Laos, Nepal, North Borneo, Pakistan, the Philippines, Sarawak, Singapore, Thailand and Vietnam; and six are outside the region—Australia, Britain, Canada, Japan, New Zealand and the USA.

* CUSTOMS & EXCISE Procedures to be Simplified

The Customs and General Excise Advisory Council met in New Delhi last week to consider a 75-point agenda. Forty items related to Customs and 35 concerned Central Excise. Several of the items tabled were withdrawn at the meeting as they had been satisfactorily settled in the meantime.

Among the important decisions relating to Customs were:

The procedure for valuation of cotton waste for levy of export duty would be simplified.

Procedure would be worked out for giving some duty relief on sludge left over in bonded tankers containing black oil if the sludge was destroyed under Customs Supervision.

Duty would not be charged on stores brought by a ship so long as it was actually in the foreign trade.

The procedure for Customs clearance of post parcels would be streamlined, a special committee having been set up for this purpose.

Government accepted in principle that separate sections should be set up in the Customs Houses for dealing with appeals to Collectors.

Administrative procedure in regard to Central Excise would be simplified provided the security of revenue was safeguarded.

A liberal appreciation of the audit type of control recently introduced would be considered provided the manufacturer undertook to maintain the safety of revenue and agreed to periodical and surprise checks of accounts by officers deputed for the purpose.

The present instructions regarding the charging of overtime fees

for clearances outside scheduled hours would be simplified.

A suggestion not accepted by Government was that sugar factories should be permitted to have bonded godowns for storing sugar without payment of duty anywhere in the collectorate concerned.

Government agreed on the necessity for the expeditious disposal of complaints and references from the public.

Addressing the Council, the Finance Minister, Mr Morarji Desai, said that in the last four years, complaints had become less. But he was not yet satisfied for he believed that there should be no complaints at all. Better standards were necessary and they had to be constantly watchful. He pointed out that it was easy for standards to deteriorate and if they did, it would be very difficult to restore them. If there were any defects in law, he gave the assurance that Government would try to rectify them to the advantage of the public. He referred to the Income Tax Act which had recently been passed by Parliament and to the Customs Bill, now under consideration of Parliament and said that the aim was to see that the intentions of Government and people were carried out properly. The Finance Minister said that generally, individual complaints should not be brought up before the Council. But sometimes some individual complaints might be an indicator of a larger malady. These, of course, would be given serious consideration.

The Finance Minister laid great emphasis on the need for the utmost co-operation between the administration and the duty-paying public. Goods should be cleared in good time so that the public were not put to inconvenience. At the same time, the proper duties due to Government should be collected. The Finance Minister also called for moral standards of a big order in which there would be no temptation to resort to corrupt practices either on the part of the public or on the part of the administration. Morality in administration and on the part of the public would be a guarantee for efficient discharge of work.

* COMPANY LAW Quarterly Review for Eastern Region

One hundred one new limited companies with a total Authorised Capital of 23.39 crores were incorporated in the Eastern Region comprising West Bengal, Orissa and Assam during the quarter ended 30 September 1962. 34 companies went into liquidation and the names of 37 companies were finally struck off under Section 560(5) of the Companies Act 1956 during the same period.

84 companies with a total authorised capital of Rs 15.37 crores were

registered in West Bengal during the quarter. Of these 13 were public limited companies having total authorised capital of Rs 12.25 crores; 70 private limited companies with a total authorised capital of Rs 3.11 crores and one was a guarantee company.

29 companies having total paid-up capital of Rs 20,52,000 went into liquidation while 15 companies with a total paid-up capital of Rs 6,00,530 were finally dissolved. 30 companies with a total paid-up capital of Rs 16,86,000 were finally struck off under Section 560(5) of the Companies Act 1956 during the period under review. In 323 cases, prosecutions were launched against certain companies as well as their managements under various provisions of the Companies Act. Most of them related to the commission of default in respect of non-filing of Annual Returns, Balance-sheets and not holding of the Annual General Meeting. Of these cases disposed of out of the above and those pending at the beginning of the quarter, in 205 cases, the accused were convicted and fined by the Magistrate.

In Bihar 2 Public companies with a total authorised capital of Rs 3.05 crores and 2 private companies with a total authorised capital of Rs 4,00,000 were registered during the quarter. One company with paid-up capital of Rs 18,000 went into liquidation, while 2 companies with a total paid-up capital of Rs 19,000 were struck off under Section 560 of the Companies Act 1956. 24 Prosecution cases were instituted against certain companies and their managements under the Act. Of the cases disposed of in 2 cases, the accused were convicted and fined.

In Orissa, 4 Public companies and 4 private companies with a total authorised capital of Rs 4.15 crores and Rs 57,09,000 respectively were registered. Two companies with a total paid-up capital of Rs 22,37,000 went into liquidation while 3 companies with a total paid-up capital of Rs 1,000 were struck off under Section 560 of the Companies Act, 1956. 77 Prosecution cases were launched against companies and their managements under the Companies Act 1956. Of the cases disposed of in 74 cases, the accused were convicted and fined.

In Assam, 5 Private companies with a total authorised capital of Rs 20,90,000 were registered. Two companies with a total paid-up capital of Rs 4,000 went into liquidation while two companies with a total paid-up capital of Rs 1,11,000 were struck off under Section 560 of the Companies Act, 1956. No Prosecution cases were launched during the quarter but out of the pending cases which were disposed of during the quarter, in 11 cases the accused were convicted and fined by the Magistrate.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

WE have certainly a good deal to thank the Chinese for. But for their reckless aggression against India, I doubt whether we would have woken up to a new sense of national purpose. One can sense, almost physically, the stilling of much noisy factiousness that all these days had us all worried about our ability to stay together as a nation. One had, of course, read in text books of political science that nothing fashions a nation out of warring sub-nations as external peril. But even so, it was in many ways a revelation to see the actual process. Indians are experiencing to-day an emotion that has not been theirs for over a century now. No doubt our quarrel with the British was rooted in patriotism, but there was no sense of menace in it, only a sense of injury. Again, though India was officially at war in the two world wars, we were never involved in them. The Churchillian emotion of stark defiance that thrilled British hearts is only now intelligible to us. For this extension of our area of experience, much thanks to the Chinese. We ought also to thank them for quickening our sense of the imperatives behind the Plan. Greater production, greater productivity, greater efficiency, less ostentation, less waste and so on are no longer the Plan's plaintive whinnings but the behests of a nation in peril. Quite how our lives will get transformed in the next few months is difficult to predict. Conceivably, nothing much may outwardly change. With the winter setting in, actual fighting in the border will get a respite. But there is no holiday for the nation from now on till the Chinese are thrown back, and this fact will affect our lives in various ways. But for most of us, getting the best out of our economy with probably much less to do it with will remain the only way we can help the country. We also need to show greater readiness to put up with minor and even major deprivations. In particular, the inflationary situation is likely to get further aggravated. Self-discipline and conscientious dedication to increasing production would then be indispensable. The tendency to profligate on the one hand and the disposition to shirk work on the other may have so far had the dubious sanction of economic opportunism and class war respectively. Their respectability was never very high, and they will now have the odium of treason attached to it. There is evidence

that these are widely shared feelings in the country. Grim days are certainly ahead, but it is something that the Chinese invasion of India has had a cathartic effect on the nation.

Should the Cuban situation develop to the fullest extent of its horrible potentialities, you may well be reading these lines in a world reduced to an atomic rubble for the most part. I should be flattered, of course. The fact that I am flippant in this fashion shows that I don't quite believe in the possibility. But it may be more than my self-preservative instinct, which I fancy is equally operative in Mr Kennedy and Mr Khrushchev. Should this not be the case, we may as well say our prayers and wait for the end. For look at the possibilities of the situation. When American ships do stop Russian ships bound for Cuban ports, the Russians may or may not submit to a search for "offensive" military equipment. If they do, they may or they may not have the objectionable cargo. If the Russian do not submit to the search or if they do and there are offensive weapons the Americans wish to confiscate, the Russians may precipitate a war. Mr Kennedy's statement does not indicate precisely whether the completed medium range missile sites in Cuba and uncompleted but presumably half completed sites already possess the missiles or not. If they do, then even if they were only medium range missiles, (capable of carrying nuclear war heads of enough power to strike, among others, Washington D.C.) an irate Russia may unleash them and if that happens, Mr Kennedy has grimly promised a full dress thermo-nuclear war with no holds barred. Even if Cuba does not as yet possess the actual missiles and it is to prevent their reaching its shores that this desperate quarantine has been planned, Russia, (which denies the basic American charges) nevertheless threatens to use the long-range rockets from stations inside its own territory which, it boasts, are quite capable of striking at American cities. In either case, the consequence would be disastrous. On the other hand, if Russia desists from sending its ships to Cuba, or even if it does, they do not resist a search and there is no cargo therein that the US objects to, then nothing may happen. Will Russia really submit to all this? It is difficult to say, for in

nuclear poker bluff succeeds only until it is called. Or Russia may retaliate with its own version of quarantine by submitting US aircraft in the Berlin corridor to the same indignity. This, ironically, would be the least dangerous thing that could happen, except of course, a face-saving formula evolved at the UN, to whom everybody has complained. A fact-finding mission to ascertain the truth of American assertions seems reasonable enough, though whether the Soviet Union and Cuba will acquiesce in one is doubtful. The air is murky with uncertainty. Only the ultimate hope rooted in hopelessness, the feeling that neither Mr Kennedy nor Mr Khrushchev will allow the world to drift into a full-scale atomic war stands between us and destruction.

A Parkinsonian dekho at the usefulness of seminars seems overdue. The word itself is of recent origin, the well-thumbed pre-war Concise Oxford on my table not listing it. Far too often, it is a get-together of like-minded buds rather than what its etymology would suggest—alert and uncommitted minds chasing germinal ideas, impromptu, even wayward in their cerebration. One would imagine that on such occasions, any opportunity for pursuing new lines of thought would be eagerly seized. Alas, this is an expectation that rarely gets fulfilled. Most often, it is a spectacle of participants living on each other's platitudinous washings. Take, for example, the World Trade Seminar that met in Calcutta recently. Why did it not examine the implications of the suggestion made by Mr Manubhai Shah in his inaugural speech that exporters should be ready to sell goods abroad at a loss and recoup such losses from

profits made in the sheltered internal market? Surely not because the idea was beneath discussion? Indeed, coming as it did from the minister for International Trade, it had even disturbing practical implications for those that heard him make it. The logic of the suggestion is also not so self-evident. Surely, one does not normally deliberately embark on a venture to suffer loss. Patriotic impulses behind such ventures cannot last long. Secondly, the suggestion indicates a tendency to think in terms of lumps rather than of individuals: it is not always true that the exporter is also a profiteer in the internal market though, of course, a man who is making his pile in the internal market, may act on Mr Shah's suggestion and set apart a portion of the goods he deals in for export, at a loss, if necessary. In any case, whether one agrees with Mr Shah or not, here was an interesting and even practically important suggestion which needed debating. If it was indeed debated, it is not evident in the statement summarising the results of the discussion that was released to the Press. If it was not, why this coyness? One probable reason is that there still persists a certain obsequiousness in our attitude to Authority. Our businessmen as a class are vocal enough with general complaints about the Government, but they have a curious reluctance to expose the logical infirmities of particular arguments that emanate from it. There is nothing wrong in disputing the proposition that suffering loss is somehow patriotic. It is as though there is a secret shame lurking in the minds of these people about the profits they make. In my view, none who has made profit the legitimate way need be abashed about professing a faith in the profit motive and when some one lectures you on the need for suffering losses as a matter of duty, you may tell him without impropriety that there are ways of doing one's duty in less painful ways.

Defence and the Plan

ECONOMIC topics, which till recently dominated the front pages of news papers, have been pushed out of the headlines by the latest developments on the northern border. And apprehensions have been expressed in some quarters about the likely repercussions on the implementation of the Third Plan. But those directly concerned with policy and plan implementation do not consider that there is any conflict between the requirements of defence and the programmes and priorities as they have taken shape under the stress of the foreign exchange shortage. In fact, it is claimed that one consequence of clearer appreciation of defence requirements will be to give a forward push to the Plan, which for the last few months had got bogged in a morass of interminable discussions on transport, power and prices. It should now be clear to all concerned that further discussion will be a costly luxury. What is required above all at this juncture is to speed up the process of decision making. It is hoped that this will be facilitated by the clearer order of priorities that will emerge when all activities in the economic field have to be geared to the defence effort. And the problems which have been discussed threadbare in recent months are just the ones on which early decisions followed by appropriate action are as essential for stepping up the defence effort as for the development of the economy.

JESSOP & CO. LTD.

Notice is hereby given that in compliance with the provisions of the Preference Shares (Regulation of Dividends) Act, 1960, the Board of Management has sanctioned the payment of an Interim Dividend on 5% Cumulative Preference Shares for the half year ending 31st October, 1962, at the rate of Rs. 3.25 per share subject to deduction of tax in accordance with the Finance Act currently in force.

The Preference Share Transfer Register will be closed from 13th November to 16th November, 1962 both days inclusive.

Dividends will be paid only to the Shareholders whose names are registered in the Books of the Company on the 16th November, 1962 or to their Mandatees.

By Order of the Board,
K. S. BASU,
Secretary.
63, Netaji Subhas Road,
Calcutta, 23rd October, 1962.

On the question of prices a consensus appears to have emerged. To judge by reports of the meeting of the sub-committee of the Congress Parliamentary Party, and the way is now clear for taking decision on the recommendations of the study groups set up by the Planning Commission. As far as the principal commodities are concerned, namely, food products, the aim is to reduce the price spread between the producer and the consumer without harassing either. A lively sense of national obligation on the part of the business community and appreciation of the present emergency, for which the President of the Federation made a fervent appeal at Madras, should make it possible to achieve this aim by a system of regulation willingly accepted by those who largely control the machinery for the distribution of essential commodities. Other steps, which may involve some measure of hardship, will have to be thought of only if the requisite co-operation is not forthcoming. In this connection considerable regret is felt that even the hint of regulation should have met with resistance in certain quarters and suggestions made that reduction in prices of foodgrains should be achieved by pushing down the prices paid to the primary producer.

As far as industrial production is concerned, the primary task is to make the fullest use that is practicable of existing capacity. Shortage of foreign exchange has already restricted the field open for new licensing. The priorities even in this restricted field should now be more clearly discernible. Prompter action in dealing with infructuous licences is also indicated. At the same time it is recognised that the problem of maintenance imports may be further aggravated by the need to divert free foreign exchange resources to the purchase of defence equipment. The campaign for import substitution will have to be pushed forward with emphasis on what could be achieved in the short run instead of being used to push applications for new industrial licences.

As regards transport the Railways are now in a comparatively happy position. Aided by seasonal factors and, more important, the completion of development works, especially the remodelling of the marshalling yards at Moghalsara, the Railways have been able to achieve remarkable improvement in the transport of coal. This was acknowledged when a delegation of the Federation met the Planning Commission to follow up the recommendations made by the Transport and Power Conference. The major task now is to effect the necessary improvements in Road Transport.

Uneconomic limits set to the permissible pay-loads of road vehicles have been among the principal obstacles in the way of effective utilisation of existing transport

capacity. The existence of weak links, such as weak bridges and culverts, is often adduced as the reason why it is not possible to permit larger vehicles or truck-trailer combinations on our roads which would enable economic transport of bulky articles. According to experienced road operators, in many instances, this difficulty is exaggerated and the pay-loads of vehicles now in service could be safely increased. Anyway, the Road and Inland Water

Transport Committee, which met here this week, is understood to have recommended that a master plan of the national transport system should be prepared showing the weak links standing in the way of introducing transport vehicles with a capacity of 12 tons or more. These weak links, that is, the weak bridges and culverts, would be strengthened under a scheduled programme, so that heavier vehicles could be introduced and maximum advantage taken of existing transport facilities. This is a programme which could be co-ordinated with defence requirements and deserves to be taken up on an urgent basis.

Keep Right?

The urgency of another programme which the Council has also recommended is not equally clear. This relates to the proposal that the rule of the road should be changed and that motor vehicles in this country should circulate by the right. The Committee, it is learnt, has suggested that the Transport Ministry should undertake a study of the various problems involved in a change-over, such as the cost of the necessary changes that have to be effected in traffic signs, the time likely to be taken in educating the public and the cost of changing the steering wheel from the right to the left. After the adoption of decimal coinage and the metric system, it may seem eminently reasonable to adopt the rule of the road which prevails in most of the countries of the world except the UK. The officials of the Ministry of Transport, however, feel that it could be taken up at leisure, when the more pressing problems have been got out of the way. It is true that Britain has undertaken such a study. But that is in preparation for entering the EEC. At any rate, no one to date has suggested that a change from "Keep Left" to "Keep Right" would strengthen our hands in dealing with the Chinese intruders.

Oil Programme

Addressing a press conference last week, Mr K. D. Malaviya emphatically refuted the reports that gave the impression that the ONGC was inclined to go slow on its exploration programme or that any of the areas where it was prospecting had been abandoned. On the contrary, it proposed to stick to the target and even to better it. In all areas taken up for exploration, work was proceeding apace, and had met with success, except in the Punjab. Even in the Punjab, where drilling so far had proved infructuous, Government had been advised by its experts as well as Russian advisers that the pro-

gramme of exploration should not be given up.

Reviewing the progress in the different fields, Mr Malaviya said that in Rudrasagar three wells had been drilled in the last 16 months and all three yielded oil. As is usual with wells in the Assam region, trouble was caused by water admixture in the initial stages. The Minister said that two of the wells had been "repaired" and were now yielding oil of acceptable quality and the third is being repaired. There is no doubt that an oilfield is located in this area and the Government, he said, is going ahead with its programme.

In Cambay the present assessment of gas production, he said, is better than what appeared to be the case a few months back. Now there are more than a dozen wells producing gas and the ONGC has entered into a contract for supply of gas to the Gujarat Electric Supply Board.

Production of oil in Ankleshwar is at present being kept down to the level of requirements of the refineries in Bombay. The production will be boosted to the target of 1.5 million tons, when the Koyali Refinery goes on stream by 1964. Production from Ankleshwar, he admitted, could also be increased earlier, were a positive decision to be taken to permit the private sector refineries to increase their "throughput". Mr Malaviya added that, for the present, Government had expressed its inability to permit expansion of their refining capacity. Three months ago they had been permitted to raise "throughput" to the maximum capacity, pending conclusion of new agreements to replace the original refinery agreements. Negotiations on these agreements are continuing. Though Mr Malaviya refused to be drawn by further questions, it is permissible to infer that further expansion of capacity may be considered if the negotiations now under way regarding the new agreements reach a satisfactory conclusion.

Mr Malaviya also gave an outline of Government's programme of oil exploration and for expansion of refineries in the public sector. The programme of exploration has to be intensified and it has been revised accordingly. It includes exploration in the Gangetic Plain and in the basin of the Cauvery, and offshore drilling in Cambay. In the Gangetic plain, it was proposed to drill, with the help of ENI, several deep wells ranging in depth from 400 to 600 metres. Drilling to gather information would soon begin in the Cauvery basin near Arantangi. One shallow rig was on the way and the further programme in this region would be drawn up on the basis of the assessment of the information obtained. Seismic survey in the off-shore region of Cambay is also expected to begin in a few months.

Regarding the expansion of refineries, Mr Malaviya stressed the need for forward planning to cover the Fourth Plan. The programme includes a refinery in the South and completion and expansion of the other refineries proposed under the Third Plan. The experts of the Ministry were also considering proposals to set up a refinery in Calcutta during the Fourth Plan.

Markets

JUTE Bitter Fruit

EARLIER this year we were told that the Pakistani raw jute crop for 1962-63 would be in the environs of 7 million bales; and of course such estimate was taken with the proverbial pinch of salt. So used have we become to the Pakistani ruse of ever understating its crop. Came the floods and unfavourable weather, and the yield this season as a result is "reported" to be lower at around 5 million bales. But the behaviour of raw jute prices in our neighbour country makes a mockery of the estimates that have come our way. Raw jute, except for the variety of tossa, is unsaleable at the minimum prices that the Pakistan Government imposed; and in most cases the ruling quotations are barely fifty per cent of the official minima. Indeed it is learnt that current prices are the lowest in Pakistan since partition.

Steps to arrest the downtrend in prices have been unavailing. A scheme for building up a buffer stock was announced on the basis of the earlier estimate of 7 million bales with its concomitant promise of supplies far exceeding demand; what though in the event the crop is alleged to be sharply smaller. And despite the operation of the buffer scheme, there are, to put it bluntly, no takers.

The trouble seems to be that the jute mills industry in Pakistan is not deeply concerned. For if, the buffer scheme notwithstanding, the trend in raw jute prices is downward, the manufacturing industry (with assured prospect of success) would press for getting its requirements at below the minima; in the event of successful operation of the scheme, the raw jute would again be made available at a favourable price.

This fact has some significance for India, the manufacturing industry in Pakistan not only gets a superior quality of raw material; it gets it at a cheaper price also. The result of course is that Pakistani jute goods are embued with much greater competitive strength. For the manufacturers besides enjoy exemption from duty at the rate of Rs 20 per bale of five maunds and stand to receive the export bonus.

To revert to Pakistan's scheme for buffer stocks: allegations are rife in that country of malpractices on a wide scale. The Jute Marketing Corporation, it is said, purports to buy raw jute at the specified minima; but the sellers do not see the colour of the money for which they issue the bills and get the receipts. Black-marketing in reverse is the order of the day, in that official minimum prices get under-cut, but the result is the same one of creating tax-evaded incomes.

The situation of course is vastly different in India. It is in the vital self-interest of the jute mills industry that to the extent possible the agriculturist is assured of a fair and satisfactory price for his raw jute. For, inescapably if glut in supplies this year should corrode the earnings of the agriculturist, sowings for the next season will decline; shortages of raw jute supplies will follow, the jute goods market will get disrupted; and the industry as a whole will experience losses.

Far be it from our intention to preach to our neighbour country. But in the longer-term the prosperity of the jute goods industries in India and in Pakistan are inter-linked. So it will be to our mutual advantage if Pakistan were to jettison its short-sighted raw jute policies of the last decade and more and instead to adopt measures intended to inspire stability—a quality without which there is little hope for the jute goods industry.

The Pakistani jute mills, for one, should come forward with an assertion of their determination to "lift" raw jute to the extent of their needs at prescribed minima; by so doing they will be losing no more than the windfall profits which the peculiar circumstances of this year will enable, a kind of profit which, moreover, may even be anti-social. At the same time the Pakistani agriculturist, assured of a fair earning, will be emboldened to stick to the cultivation of raw jute. This is important, too, from the viewpoint of the general economy of Pakistan. For, at no time in the foreseeable future will Pakistan manufacturing industry be able wholly to absorb the indigenous output of the raw material; and exports of raw jute have therefore to be effected at prices which will not in the foreign customers, induce consumer-resistance. What is in the balance is Pakistan's foreign exchange earnings from raw jute.

Also, the Pakistan Government must make sure that there are no malpractices in the purchase of raw jute by the Jute Marketing Corporation. Else its efforts at rendering unto the agriculturist his just due will prove self-defeating; tax evasion will be the only bitter fruit of its endeavours.

TEA Good General Demand

THANKS to the fall in the crop in almost all the producing centres, there has been a good general demand at the tea export auction held in Calcutta this week. In Northern India, the crop amounted to only 415.3 million pounds up to the end of September 1962 as

against 435.7 million pounds in the corresponding period of 1961. Although October is another good cropping month, the overall output is expected to be smaller than in the previous year.

Production of tea in South India was lower at 15.3 million pounds in September as compared to 16 million pounds in the corresponding month of last year. Production in Pakistan is reported to have fallen to 8.1 million pounds in the same month from 8.8 million pounds in August. These compare with 9.0 million pounds in September last year. In British East Africa, production was only 4.3 million pounds in July as compared to 5.0 million pounds in the preceding month. In Indonesia also, production showed a fall to 8.7 million pounds in May from 9.4 million pounds in April. The output in East Africa has, however, shown a small rise to 3.82 million pounds in July from 3.3 million pounds in the previous month.

Apart from the shortfall in the crop, another encouraging feature is that the general level of exports, during the current season, has been satisfactory and export figures are at present running ahead of the past few years. Exports reached the record figure of 308 million pounds during the first nine months of the current year. Compared with the corresponding periods of 1960 and 1961, exports during January/September 1962 were higher by 58 million and 24 million pounds respectively. The foreign exchange earnings from such exports amounted to Rs 81 crores, which was higher by Rs 11 crores and Rs 1.3 crores respectively during the corresponding periods of 1960 and 1961.

In the Export Sale held in Calcutta on Monday this week, offerings were 67,086 packages. Plain orthodox descriptions met with useful enquiry and were sold at about steady rates with the brighter BOPs and OFs a strong feature. The better liquoring orthodox Assams were keenly competed for and were again generally dearer. CTC descriptions came to a selective market and, though well supported, followed a lower trend. Legg-cut teas were about steady.

Whole Leaf grades met with keen competition and came to a dearer market. Tippy teas were very irregular. Demand for Darjeeling teas was only fair and prices were irregular and often easier. Following rates (per kilo) were quoted:—Clean Plain Pekos Rs 4.40 to Rs 4.80; Plain BP Rs 3.80 to Rs 4.10; Plain Fannings Rs 3.80 to Rs 4.20; Medium Assam CTC Rs 5.30 to Rs 5.70; Medium Assam CTC Fannings Rs 5.30 to Rs 5.70; Best Assam CTC BP Rs 6.20 to Rs 6.70 and Best Assam CTC Fannings Rs 6.20 to Rs 6.70.

In the Cochin market, a quantity of 260,000 kilogrammes of tea dusts was offered for internal consumption. Against good general

demand, prices were fully firm for colour mediums and residuals. Other sorts were fairly steady. Good mediums were well supported; but prices for these declined up to 10 nP a kilo..

According to official sources, exports of South Indian tea amounted to 9.4 million pounds in August 1962 at against 11.22 million pounds in the preceding month and 3.52 million pounds in August last year. The figures for the five months of the current year (April to August 1962) show that exports at 41.7 million pounds are running ahead of last year when they totalled 30.04 million pounds up to August. Out of the total exports in April-August 1962, the UK accounted for 21.77 million pounds and other countries for 19.93 million pounds as compared to 19.33 million and 10.71 million pounds respectively in the corresponding month.

COTTON Buoyancy Prevails

The Bombay cotton futures market presented buoyant conditions toward the latter part of the week deriving inspiration from the announcement of the new cotton distribution scheme. The ruling contract, Jarilla March 1962 moved up by Rs 5 to Rs 745.50 after the announcement was made. The ready rate also went up by Rs 10 per candy. Sentiment was also fanned by the adverse weather reports from up-country centres like Berar. But on account of realising pressure at higher levels the firmness could not be maintained. The new crop movement was reported to be satisfactory.

The Textile Commissioner has outlined the new cotton distribution scheme imposing further conditions for manufacturers taking delivery of domestic cotton, mode of payment for cotton, limitation of stocks with manufacturers and the appointment of supervisors. The mills in the Punjab, Rajasthan, Delhi, UP, MP, Bihar, Orissa, West Bengal and Assam will be allowed to purchase indigenous cotton to the extent of 30 per cent of their total consumption of foreign "B" cotton and Indian cotton during the season 1960-61 season. Mills in other areas will be permitted to purchase 70 per cent. The purchase may be made from the old crop or from the new crop only on the receipt of individual quota letters which will be released soon by the Commissioner.

According to the new distribution scheme on no account will purchase of new crop against the unutilised portion of the quota for Indian cotton issued for the 1961-62 season be allowed and the outstanding quotas will automatically lapse.

Conditions in the spot market at Sewri were on the whole phlegmatic save for the spirited buying in 197/3 toward the close of the week in anticipation of the new quota. This growth was commanding a premium of Rs 20. Cotton houses were eagerly awaiting the announcement of the Government pertaining to the

import of 700,000 bales of cotton from America under the PL 480 programme. It was also reported that the Government was trying to secure 200,000 bales of cotton more from that destination under a barter deal.

In the import section routine demand in African cotton was reported. Egyptian and lower grades of Sudan cotton also met with stray enquiries. In the export front Bengal Deshi ruled firm.

The September-October review of the International Cotton Advisory Committee released recently states that a turning point has been reached on the world cotton situation consequent on a renewed upsurge in output. On a world basis production is expected to reach new heights in the 1961-62 season. Some increase in the carryover stocks is also predicted. Consumption of cotton looked up considerably in the non-communist world last season but owing to reduction in offtake in the mainland of China, world consumption has remained in the neighbourhood of 48 million bales during the past three seasons.

Cotton production in Japan remained depressed in the second quarter of this year. Similarly output of cotton in Continental West Europe slipped by about 5 per cent. Italy and Spain were the only countries to maintain last year's level.

The All-India fourth estimate of cotton places the total area under the crop in the 1961-62 season at 18,552,000 acres as against 18,302,000 acres in 1960-61. The estimate has its own limitation as it covers only the period up to 31 January 1962. Past experience indicates that the area at the fourth estimate forms nearly 98 per cent of the area finally reported. This year's increase in area has been shared chiefly by Maharashtra, Punjab, Andhra Pradesh and Rajasthan thanks to congenial climatic conditions during the sowing season. This increase was however partially offset by the decrease in Mysore.

Variety-wise the increase occurred in American, Broach, Vijay, Bengais, and Malvi. But there was substantial fall in the output of Virnar including Jharilla, Dholleras and Omars. With regard to staple lengths there was rise in the medium staple acreage and to some extent in the area under short staple while a slight decline was noticed in long staple cotton acreage.

The eighth trade estimate finalised in April last places production of cotton during the current year at slightly over 4.7 million bales in comparison with the previous estimate of 4.675 million bales.

PIECEGOODS

Listless conditions prevailed in the cotton piecegoods market during the week under review. As the cartmen and porters struck work there was practically no movement of goods. Moderate booking was reported to have been made by a few mills and merchants. Goods accumulated with the trade owing to the lack of transport facilities and a large quantum of cloth, which was despatched by the mills in the up-country centres to merchants in Bombay, still remains unlifted. Ex-

port business was also adversely affected as loading was rendered impossible by the strike. Naturally the market sustained considerable loss during the week. Even the approach of the Diwali festival failed to generate brisk activity in the market. The dealers from up-country centres are reported to have covered their requirements from Ahmedabad.

The export front was also generally featureless. Only some of the foreign countries were active and are reported to have placed orders for prompt and distant deliveries. The UK's enthusiasm focussed on the usual qualities, though only on a moderate scale. Sudan was satisfied with a small quantum of sheetings and voiles for prompt shipment and for shipments extending up to the middle of December.

PEPPER Favourable Weather— Bright Prospects

WEATHER conditions in Malabar—the only pepper-producing area in the country—are reported to have all along been favourable. It is, therefore, expected that India may reap a better harvest of black pepper in the next season commencing from November. The crop is estimated at 32,000 tons against last year's crop of 30,000 tons.

India's black pepper crop has stabilised around 30,000 tons. The fact that it takes a long time for the plants to bear fruits has been a limiting factor against increased production.

India's normal consumption of the commodity is placed around 10,000 tons a year. Consumption during the current season has not reached even this mark, mainly due to the fact that the demand for exports has been brisk.

The export outlook for the next crop is, by and large, considered good, although this depends on the export policy to be adopted by Indonesia—the second largest pepper producer in the world and India's competitor in international markets.

Indonesia is stated to be in possession of a huge stock of unsold pepper. According to one estimate, about 10,000 tons from last year's crop of 20,000 tons have piled up in that country. There is, therefore, the likelihood that Indonesia may try to sell off the stock by under bidding India.

Conditions in the pepper market have remained steady. In the Cochin market, the rate for the garbled variety is quoted at Rs 299 per quintal for the ready position, while December delivery is quoted at Rs 287 to Rs 291.

Except for small offtake, conditions in the New York market have remained generally dull, as sellers are willing to do business at slightly lower rates. Afloat and October delivery material is continued to be offered at steady levels. Malabar/

Lampong black pepper spot delivery is quoted at 40 cents and Muntok white variety at 47 cents per pound.

COFFEE Need for Higher Quota

The Mysore State Planters' Association has welcomed India's proposal to enter the International Coffee Agreement. Its President has stated that, if India is to gain a foothold in international markets, it should join the Agreement and be a part of the world coffee community. The President has, however, pointed out that the quota of 21,000 tons fixed for India under the agreement is satisfactory only in a short-crop year and this will have to be doubled in 1965 when the total yield is expected to rise to 80,000 tons.

The Coffee Board has released 1,345,500 kilos for export from the 1961-62 crop to any destination. The auction will be held on 8 November 1962 at Mangalore. The quantity consists of 264,300 kgs of Plantation A; 172,200 kgs of Plantation B; 210,600 kgs of Plantation Triage; 90,300 kgs of Arabica Cherry AB; 3,000 kgs of Arabica B; 13,500 kgs of Arabica Gleanings; 3,000 kgs of Arabica Strippings; 28,200 kgs of Arabica Bulk; 48,000 kgs of Arabica Bulk; 48,000 kgs of Arabica CT; 7,200 kgs of Arabica Tails bulk; 420,900 kgs of Monsooned Malabar AA; 52,500 kgs of Monsooned Basan hally; 28,500 kgs of Arabica Monsooned Triage; and 3,300 kgs of Arabica Monsooned BB.

SUGAR Lower Production

The total production of sugar in September 1962 was 9,000 metric tons as against 16,000 tons produced last season during the corresponding month. This brings the total production for the season 1961-62 up to 30 September to 2,728,000 tons as against 3,037,000 tons in the corresponding period of the last season. The closing stock of sugar with factories, as on 30 September 1962, was 1,300,000 tons as against 1,451,000 tons on the corresponding date of last year.

Meanwhile, conditions in the sugar market have taken a turn for the better with prices displaying a slightly steadier tendency, thanks to brisk buying support on account of Diwali. Mills are reported to be eager sellers as they want to reduce their stocks. Spot delivery prices remain almost unchanged.

The new crushing season will officially start on 1 November; but because of delayed rain, cane is reported to be not ripe enough. Mills may, therefore, start crushing a bit late.

According to the latest review of the UN Food & Agriculture Organisation, world trading in sugar achieved equilibrium during the season ended August 1962. Despite a sharp setback in production, the

supply position continued to be favourable from the viewpoint of importing countries. The total quantity of sugar actually produced in the world during 1961-62 was lower at 53.16 million metric tons as against 56.55 metric tons in the previous season. Total available supplies also declined, but very slightly, to 69 million metric tons from 69.9 metric tons.

The excessive supplies continued to have a depressing effect on the market and world prices fell to 2.92 cents per pound on an average during 1961 from 3.14 cents in the

previous year in spite of the International Sugar Agreement which aimed at holding prices above the minimum of 3.25 cents per pound.

OILS & OILSEEDS

A halt was cried to the steady rise in prices noticed on the Bombay Oilseeds Exchange till the end of last week. This was mainly due to the fact that the Forward Markets Commissions issued a fresh warning to the trade in respect of deals above the weekly ceiling. Consequently, a

sub-Committee was appointed to keep a watch over the market and report to the authorities the cases of violation of the restrictions on the movement of prices.

In the case of Groundnut, the reactionary tendency in prices was influenced by the heavy pressure of the commodity at the primary markets. It was also stated that Karnatak was presently receiving about 25,000 bags a day, while arrivals at Davangere mounted to 14,000 bags and at Adoni to 2,500 bags. With the result, groundnut and its oil were on offer. Ready

Bold was quoted at Rs 45.75 and Groundnut Oil at Rs 19.40.

In the Castorseed section, however, trading revealed a bullish fervour on prospects of business in castor oil with UK and France. The Commodities Import and Export Limited, which is a distributing agency of the State Trading Corporation, is understood to have exported 200 tons of commercial castor oil to the UK and 400 tons of BSS oil to France. Meanwhile, castor ready is quoted at Rs 33.62 and Castor oil, commercial quality, at Rs 12.60.

This one aircraft from Pan Am's huge cargo fleet offers you a capacity of 18 tons!

THE WORLD'S MOST DEPENDABLE SUPPLY LINE IS THE WORLD'S MOST EXPERIENCED AIRLINE

Pan American—The world's largest air cargo carrier—brings your world-wide operation closer together, helps it run more smoothly. More economically!

You can depend on Pan Am Clipper Cargo to deliver your shipments *on time*—every time. In factory-fresh condition! Pan Am links 114 cities on all 6 continents—and frequent departures and arrivals keep your orders on the move.

You save money, too! Insurance is less than by surface. Insurance companies know that careful Pan Am handling assures you of far less chance of

loss or damage. You save on packing and crating. You can cut inventories and free capital for other uses. And Clipper Cargo rates are down as much as 63% on some routes.

Reserve cargo space in advance for one shipment or hundreds. For details on Pan Am's world-wide Jet routes, schedules and many savings, call your Cargo Agent, Freight Forwarder, or Pan Am in:

For the Investor

INVESTMENT GOSSIP

"Quarantine" is a Fighting Word

PRESIDENT Kennedy called it quarantine; but Russia describes the measures taken by the USA to prevent shipments of offensive equipment reaching Cuba by quite another word, "blockade"; and blockade is an act of war.

Prime Minister Nehru has stated that India must abjure the slow peacetime pace of work, and has not said that a state of war exists; but the world realises that in the absence of peace what we have is war, limited and restricted one though might be.

War talk or apprehensions of war in the past have often led to spurt in Indian stock exchange, sometimes even a boom. That was what happened in 1950, when the Korean War broke out.

No such bullish fervour has taken hold of stock exchanges today, whether here in India or half world away in London or New York. Millions in terms of sterling a day, dollars, lakhs and may be even crores in terms of rupees, have been

ly been caught unawares by the unscrupulous and unprincipled Chinese aggression; but, certainly, we were unprepared. And we need time.

Time is what we will get when the borders get snow-bound. An uneasy truce for six months will enable India to build up strength so that we can proceed to fight back with a view to driving the Chinese aggressor back to the border.

But in the meantime all is in a flux. What will be the fate of the Third Plan? Will industry, already hard hit by shortages of power and coal, steel and transport, be further compelled to work below capacities? or will industry be called upon to "re-tool" for defence production?

The outlook for equities, over the next few months is going to be obscure. Gilt-edged should come back into its own.

INVESTMENT SPECIAL Oil India Limited

THE success, which met with the efforts of Assam Oil Company Limited—a wholly-owned subsidiary of the Burmah Oil Company Limited and established in 1899, to discover oil in Nahorkatiya, was a landmark in India's endeavour to locate sources of oil within the country. Further, it led to the formation of Oil India

Limited, which was destined to play an important role in the nation's effort to develop its indigenous sources of oil.

Oil India Limited, which is now a joint partnership (50 : 50) venture of the Government of India and Burmah Oil Company, was incorporated as a rupee company on 18 February 1959 following the signing of the Promotion Agreement between the Government of India and the Burmah and Assam Oil companies on 14 January 1958. The second supplemental agreement, signed on 27 July 1961, covered Oil India into an equal partnership venture; and it is now engaged in the search for more oil, development of its existing fields and construction of a 720-mile long pipeline to transport crude oil to the Refineries in the Public sector at Gauhati (Assam) and Barauni (Bihar).

Oil India Limited is now offering Debenture stock for Rs 30 crores, carrying an interest of 6.5 per cent and maturing in 1968-77. The stock will be sold in units of Rs 5,000, at par. The list will open on 30 October 1962 and will close at the discretion of the directors, but not before the closing of the banking hours on 1 November, 1962.

Out of a total issue of Rs 30 crores, the Government of India has agreed to take Rs 12.50 crores. Of the remaining balance of Rs 17.50 crores, financial institutions and banks have agreed to take a total amount of Rs 8.75 crores, which is fully underwritten, will be offered to the public for subscription. The funds from the present debenture issue will be used to finance the pipeline project. In view of the good yield, the issue is expected to meet with a good response.

NEW ISSUE NOTES Mohatta & Heckel

Out of the authorised capital of Rs 1 crore, Messrs Mohatta & Heckel Limited will shortly issue their prospectus for subscribed capital of Rs 55 lakhs, comprising Rs 10 lakhs worth in preference stocks and the rest in equity shares of Rs 10 each. Full details may be made available before the end of November. It is learnt that the West German firm of George Heckel, foreign collaborators, will participate in the capital issue for the equity shares while the promoters and their friends will take up about Rs 17 lakhs in the preference and equity capital. The company will set up a factory for the manufacture of steel wire and wire ropes in the Thana district. The necessary land has been acquired and plant and machinery in this behalf have also been ordered. The factory will turn out 5,000 tons of the above products with a room for further expansion.

Wellman Incandescent

Wellman Incandescent (India) Limited, a new public company, formed in collaboration with the Wellman Smith Owen Engineering Corporation and the Incandescent

Heat Company Limited of UK, has been granted permission by the Controller of Capital Issues to issue shares worth Rs 25 lakhs. Out of this amount, the collaborators in the UK will take Rs 12.5 lakhs; directors and their friends Rs 1.5 lakhs and the balance of Rs 11 lakhs will be offered to the public. The company's plant at Howrah is now being equipped. It is hoped that the plant will go into full production early in 1963. The company intends to manufacture industrial furnaces and mechanical handling equipment.

Tropex Batteries

Tropex Batteries Limited, Bombay, a new company, is issuing capital of Rs 30 lakhs, at par, divided into 1,00,000 equity shares of Rs 50/- each, of which Rs 7 lakhs will be for other than cash and the remaining Rs 43 lakhs for cash. The proceeds of the issue would be utilised for the manufacture of dry cells, layer or flat-type cells and batteries.

Lake Palace Hotel

The Lake Palace Hotel, and Metals Private Limited (Proposed), Udaipur, will issue capital of Rs 20 lakhs in equity shares of Rs 1000/- for cash at par, privately. The proceeds will be utilised for running of hotels and motels at Udaipur.

Galileo Instruments

Galileo Instruments Limited, Bombay will raise capital of Rs 35 lakhs in equity shares of Rs 100/- each, at par. Out of this, shares worth Rs 8 lakhs will be issued to Officine Galileo SPA, Florence, Italy, for other than cash against supply of machinery. The balance of shares will be issued to Indians for cash. The proceeds will be utilised for the manufacture of instruments, gas meters etc.

Kerala State SIC

Kerala State Small Industries Corporation Limited, Trivandrum, will issue further equity capital of Rs 8 lakhs in shares of Rs 100/- each, to be subscribed entirely by the State Government of Kerala. The proceeds will be utilised for providing working capital.

Nataraj Spinning

Nataraj Spinning and Weaving Mills Limited is to issue capital of Rs 25 lakhs for cash, at par, in 2,00,000 equity and 50,000 9.5% (subject to tax) preference shares of Rs 10/- each for establishing a spinning mill.

Suryalakshmi Cotton

Suryalakshmi Cotton Mills Limited, Hyderabad, is issuing capital of Rs 25 lakhs for cash, at par, in 2,00,000 equity and 50,000 9.5% preference shares of Rs 10/- each for establishing a spinning mill.

Mysore Iron & Steel

The Mysore Iron & Steel Limited, Bhadravati, is issuing equity capital of Rs 4 crores in shares of Rs 100 each for other than cash to the Mysore Government in consideration of part payment for the transfer of the assets of the Mysore Iron & Steel Works, Bhadravati, as a going concern, to the company.

Gayday Iron & Steel

Gayday Iron & Steel Company Limited, Calcutta, will issue capital of Rs 75 lakhs equity shares of Rs 10 each and 15,000 cumulative redeemable preference shares of Rs 100 each in supersession of an earlier consent for Rs 53 lakhs.

INVESTMENT NOTES

The Premier Automobiles

The Premier Automobiles Limited is reported to have placed an order for \$7.2 million worth of equipment for its car and truck manufacturing plant at Bombay with the Chrysler Corporation of Detroit, Michigan. The company will soon produce its own sheet metal components and achieve a measure of self-sufficiency in the field in which the company had to import its requirements hitherto. Purchase of the equipments is financed under a loan of the Agency for International Development.

Sholapoor Spinning

Sholapoor Spinning & Weaving Company Limited has not been able to make any progress because of the delay in implementing the modernisation and renovation programme. It is explained that the modernisation programme could not be taken up as the necessary sanction was not forthcoming from the Managing Agency.

Ashok Leyland

In spite of foreign exchange and power shortages, production at the factories of Ashok Leyland Ltd, Madras, during the financial year ending 20 September 1962 was 37 per cent higher than in the corresponding period in 1961. The production of Ashok Leyland diesel engines for installation in plant and machinery was also substantially higher. The value of spare parts sales increased by over 22 per cent.

The increase in chasis production was equally shared between goods and passenger vehicles and orders received from both public and private sectors indicate a growing preference for Comet vehicles both for long distance and short haul work.

Relaxation of GVW restrictions has enabled a large number of articulated tractor-trailer units to be sold and has resulted in an increased demand for long-range heavy haulage vehicles.

One of the main contributing factors to the larger output of

spare parts is the ability of the company to obtain an adequate supply of high quality castings from its sister concern, Ennore Foundries Ltd.

In spite of the substantially higher output, the number of unfulfilled contracts held by the company as on 30 September 1962 was 10 per cent higher than at the end of the previous year and represents over 12 months' production valued in excess of Rs 15 crores.

STOCK EXCHANGES Debacle

Watch-Dog Writes:

SENTIMENT in stock markets has been greatly upset during the week by the reports of the deteriorating situation on the India-Chinese border, critical situation in Cuba and the weakness in foreign stock exchanges. Fears appear to centre on the likely repercussions of increased defence expenditure on the budgetary resources. Another important factor to worry the marketmen is the possibility of a further cut in imports of industrial raw materials. The prevailing conditions in the stock markets do not seem to portend a bright Moorat trading this year.

Conditions akin to panic were witnessed on the Calcutta Stock Exchange where substantial decline in prices was recorded all-round due to nervous liquidation.

Sentiment on the Bombay Stock Exchange was demoralised and prices suffered a sharp setback to finish around the lowest levels for the week.

The Madras Stock Exchange remained easy with the forward shares in the forward list meeting with heavy selling pressure.

It was another week of extremely unsettled conditions on the London Stock Exchange where prices fell back continually and sharply following Mr Kennedy's statement on the Cuban situation.

On Wall Street, many shares sank to new 1962 lows due to heavy liquidation, which included tax-loss selling and stop-loss orders. It was feared that a request might be made for some more defence funds.

CALCUTTA

Thursday Evening.

LYONS RANGE presented a very gloomy appearance this week with prices recording sharp and perpendicular losses on nervous bull liquidation and bear hammering. Reports about the launching of a major offensive by the Chinese against the Indian army on many points led to heavy selling pressure by the professional operators. Investors were also inclined to lighten their commitments on the fear that the Third Plan might be pruned in the context of the mounting defence expenditure and a serious cut might be made in imports of industrial raw materials for the October, 1962—March, 1963 period. Naturally, great anxiety was shown by the professional operators as well as investors with regard to

the profitability of various industries in the context of a military flair-up at the border.

In view of the steep decline in equity prices, the Calcutta Stock Exchange Committee called an emergency meeting on Tuesday and decided to limit the volume of sales and impose margins on blank sales of the cleared shares. The margin was imposed at the rate of Re 1 per share on shares priced below Rs 20, at Rs 2 per share on shares priced between Rs 20 and Rs 30 and at Rs 3 per share on shares priced above Rs 30. As a special case, however, the margin was fixed at Rs 2 in the case of Hindustan Motors; Rs 3 in Indian Irons; 50 nP in Indian Copper and Re 1 in J. K. Cotton.

Even the above proposal made by the Committee seemed to have no effect on the market, as the subsequent reports of mobilisation in Cuba induced further heavy unloading in popular shares. The Committee was again compelled to fix up interim clearing rates on Wednesday for some of the shares in the forward list (Indian Iron Rs 24.00; Birla Jute Rs 31.50; Dunlop Rubber Rs 37.25; Guest, Keen, Williams Rs 36.50; Hindustan Motor Rs 17.25; Indian Aluminium Rs 34.50; Kesoram Industries Rs 23.50; TEXMACO Rs 21 and Orient Paper Rs 38).

Normally clearing rates are fixed at around the closing rates quoted on the particular day. In this respect, it is encouraging to note that the Stock Exchange Committee is wise enough to fix up the interim clearing rates at well above the closing rates on Wednesday in order to enable the operators to minimise their losses. The effect of this measure is to be watched in the light of every fresh development on the border as well as in Cuba. If present indications are any guide, the outlook for Moorat trading on Saturday (between 5.30 PM and 7.00 PM) cannot be bright.

In the week's dealings, speculative issues were the worst affected under the lead of Indian Irons. Although most of the operators were still entertaining the hope that the Indian Iron & Steel Company might maintain the dividend, others held the fear that there was a possibility of the dividend being reduced even to reflect the dis-satisfaction over the increase in steel retention price. With the result, the size of the dividend continued to be an uncertain element of the market psychology.

Despite stronger advices from the gunny market, Jute shares were in the doldrums in sympathy with the general trend of the market.

Coal shares were extremely dull in the absence of any buying support.

Tea shares were selectively supported, thanks to reports of a strong general demand at this week's auction. Prices, however, displayed a slightly easier tendency towards the close due to scattered liquidation. Textile shares were subdued following the Planning Commission's suggestion to fix a coarse cloth production quota for mills.

Although the general depression in the market affected Sugar shares,

investors did not show any interest. They feared that the results of the sugar companies for the 1961-62 season might be disappointing.

Miscellaneous issues suffered a sharp setback on sustained liquidation by weak holders.

The following table shows the extent of the decline in the prices of a few selected shares during the week:—

	As on 20 Oct. Rs.	Low- est Rs.	As on 25 Oct. Rs.

Company Reports

Muttra Electric Repeats

The increase in the units sold from 6.15 to 6.65 million is reflected in the working results of the Muttra Electric Supply Company Limited for the year ended 31 March 1962. The net profit is higher at Rs 3.60 lakhs as against Rs 2.69 lakhs for 1960-61.

In respect of allocations, a sum of Rs 75,328 (Rs 69,679) is set apart for Depreciation; Rs 1.31 lakhs (Rs 70,000) for Taxation; Rs 13,278 (Rs 12,500) for Statutory Contingency Reserve; Rs 25,240 (Rs 39,418) for Development Reserve; Rs 20,776 (nil) for Tariffs and Control Reserve and Rs 15,000 (Rs 7,500) for General Reserve. The dividend is maintained at 9 per cent, subject to tax.

Kalinga Industries Fare Well

KALINGA Industries Limited, Cuttack, has reported satisfactory working results for the year ended 31 March 1962, thanks to the earnings of Rs 34 lakhs by way of exports. Out of the production of 29,584 tons, about 12,700 tons of pig iron, manufactured by the Low Shaft Furnace Plant, were exported directly or through the company's agents. This is the first and only Low Shaft Furnace Plant making foundry grade pig iron in India.

While sales have risen to Rs 1.44 crores from Rs 1.18 crores, the net profit, before providing for Depreciation and Taxation, amounts to Rs 16.85 lakhs as against Rs 14.01 lakhs for the preceding year. Apart from providing Rs 2.70 lakhs for Taxation, the Depreciation amount is raised to Rs 4.35 lakhs from Rs 4.16 lakhs and Development Rebate

Reserve to Rs 40,127 from Rs 27,140. The dividend is maintained at 5 per cent and the balance of the profits, amounting to Rs 8.62 lakhs (Rs 1.36 lakhs in the previous year) is ploughed back for the various expansion schemes under contemplation.

The expansion programme includes the putting up of two more furnaces, raising the annual capacity to 100,000 tons of pig iron, a Power plant of 7,500 KW using the rich excess top-gas from these furnaces, and a Cast Iron Spun Pipe Plant with a capacity of 36,000 tons per annum. The Government of India is endeavouring to include the foreign exchange requirements for completion of this expansion scheme within the German loan which is under negotiation and finalisation. Preliminary work on expansion has already commenced.

The cooling unit factory of Electrolux India Limited, at Choudwar, is expected to go into production during the current month. The construction of the New Cabinet factory, which is situated adjacent to the Electrolux Cooling Unit factory, is well in hand and the cabinets manufactured in this factory are expected to be available for assembly by April 1963.

The company has redeemed Rs 8 lakhs worth of Debentures during the year under review and, as on date, has repaid Rs 15 lakhs in all. The balance outstanding is only Rs 10 lakhs.

The Government of India has revalidated the sanction for capital issue until the end of December 1962. As soon as the formal letter from the Government is received about the allocation of foreign exchange for the expansion, it is intended to issue further capital for Rs 54 lakhs.

Encouraging Results of American Refrigerator

American Refrigerator Company Limited has produced encouraging working results for the year ended 30 April 1962. Sales have risen to Rs 85.98 lakhs from Rs 61.76 lakhs with the profit, after providing for Depreciation and Taxation, amounting to Rs 2.40 lakhs against Rs 2.04 lakhs.

Apart from providing Rs 1 lakh for General Reserve, allocations have been increased:— Depreciation from Rs 41,109 to Rs 61,710; Taxation from Rs 1.60 lakhs to Rs 2.88 lakhs and Development Rebate Reserve from Rs 9,922 to Rs 35,528. The directors have proposed a taxable dividend of 10 per cent on the capital raised by the issue of additional shares as against a taxable dividend of 15 per cent on the old capital.

WITH India at war with China in all but form,
the reorientation of the economy from the
preoccupations of peace to those of defence
becomes inevitable. In the first place defence
requirements are to have the highest priority.
A good deal of the arms and equipments that
we need will have to be obtained from abroad.
Friendly foreign countries have responded
with encouraging alacrity to our requests for
arms. The terms on which these are to be
got have not been made public and however
sympathetic our friends abroad may be, it is
inevitable that the pressure on our foreign
exchange would become greater than ever
before. This has obviously several conse-
quences, the most important of which is the
need for finding the wherewithal for the arms
and equipments that we require. Situated as
we are, the best way we can find it is by
activising the sterile hoards of gold in the
country. This, as we have repeatedly urged
in the pages of Indian Finance, should have
been done long ago in the interests of the
Plan itself, but at this hour of crisis it is a
duty we can neglect only at our peril.

In response to Mr Nehru's appeal, gifts of
gold and gold ornaments are pouring in. But,
obviously, there is a limit to such generosity.
There may be many who, for various reasons,
may not find themselves in a position to make
an outright gift of the gold in their possession.
These people may be asked to make a more
limited sacrifice. One of the objections raised
sometime ago to the idea of gold bearer bonds
arose from the disparity in the Indian and
world prices of gold. This can now be par-
tially met by bringing into play the patriotism
of the people of which we have had such
heart-warming evidence since China started
its aggression. People not willing or able
to gift gold may be asked to exchange their
gold at the world price and the foregoing of
the difference between the world price and the
Indian price will be their sacrifice for the
sake of the country. Considering how spor-
taneous the response for gifts of gold has been,
we have no doubt that the more limited sac-
rifice involved in loaning gold to the Govern-
ment at international prices will not be
grudged by those who are not able to part
with the gold without any consideration at all.
The Government also will not, under this
scheme, be obliged to pay for obtaining the
gold a price far higher than what the gold
itself will be worth to it in making payments
abroad for the armaments it requires. The
need of gold is so paramount at this hour
that no attempt should be spared to get it in
as many ways as possible.

Though a good deal of our defence require-
ments have to be imported, we will still have
to produce a sizeable quantity of our needs
from indigenous sources. The considerable
surplus capacity of our defence industrial
establishments will now have to be fully
extended. Apart from enlarging defence pro-
duction, production in steel, in heavy industry
and other allied lines will have to be geared
to the maximum extent. In a larger context,
production of all kinds in both industry and
agriculture will have to increase massively.
In secondary and tertiary industries, there
will be some necessity for discipline and eli-

The Economics of Defence

mination of the less essential lines of goods.
Textiles production, for example, will have to
be less wastefully various though it will be-
come less colourful in consequence.

A sizeable expenditure directed to defence
purposes doesn't add to the stock of goods in
the country. Inflationary pressures will there-
fore get out of hand if production, especially
agricultural production, doesn't keep the coun-
try supplied with essential goods. Shortages
and consequent rise in prices, the attendant
evils of hoarding, profiteering and black-
marketing (if controls are imposed), will play
havoc with the poor man's morale. Again,
this increase in production will have to be
brought about with less funds than what was
originally hoped for. This means greater
ingenuity on the part of the government and
the people, greater resourcefulness in pressing
into service available facilities. In agriculture,
minor irrigation programmes, better seeds and
more scientific farming, in short, greater pro-
ductivity, should be the key note.

In some ways, the failures in planning and
performance which we have been deplored in
the last two or three years become even more
lamentable in the changed circumstances.
Power and transport that had proved the two
crucial areas of failure, have in the defence
context assumed central importance. Greater
and uninterrupted production is tied up with
uniform, if not steadily increasing, power
supply. Quick and regular movements of de-
fence requirements and articles of civilian use
to areas of shortage are of the utmost impor-
tance in the present situation and transport
bottlenecks will have to be broken if we
are not to be faced with serious difficulties.

Another important economic consequence of
the Chinese aggression is the need for increas-
ing savings sizeably and making them avail-
able. In the first instance, for defence purposes.
Mr Morarji Desai indicated in his broadcast
last week several new loan programmes, both
big and small, for channelising these savings.
Contribution to these defence savings schemes
is a national duty. Apart from the fact that
they are to be used for driving the enemy out
of the country, they will act, as an infla-
tionary syphon of excessive purchasing power
in a situation in which there will, perforce, be
less goods. Waste and ostentation of any kind
are to be eschewed both because they reduce
the quantum of savings and because of the
unseemliness of personal extravagance and
luxury at a time of national crisis.

By far the most difficult economic task
would be the assembling and co-ordinating
of the organisational apparatus that the new
situation demands. A state of emergency has
no doubt been declared and extensive powers
conferred on the Executive under the Defence
of India Ordinance. But detailed thinking on
every aspect of the task of keeping the econ-
omy on an even keel is as important as
arranging to fight the enemy on all fronts.
Much planning ahead will have to be done
and if physical controls have to be imposed,
every effort should be made to make its ad-
ministration smooth, efficient, and uncorrupt.
Fortunately for us, we shall be having the ex-
perience of the Second World War and the
lessons of the mistakes then made to guide us.

THE MIDDLE EAST Economic Trends

The supplement of World Economic Survey 1961 of the United Nations Organisation, reveals significant economic trends in the Middle East in the last few years. Between 1957 and 1960 the combined gross income of nine important countries of the region registered a 44 per cent increase to \$22.3 billion. However, in view of the increase in the population by 8.9 per cent during this period, the growth in the per capita income was of a lower order being only 32.4 per cent the actual figures for 1957 and 1960 being \$183 and \$242 respectively. The sharp rise in the general price level that occurred during this period further depressed the growth rate in real income to 6 per cent. Sector-wise, the growth rate in real income was marked only in industries which recorded an increase of nearly 27 per cent in real terms. On the other hand, agriculture which contributes the substantial part of the national income in the region made only meagre gains at 6 per cent. In some countries like Cyprus, Jordan and Syria etc. there were notable declines in real agricultural income and this was an important factor for the poor rate of growth at 6 per cent for the whole region.

With few exceptions, the countries of the Middle East reveal common features in the structure of their economies. The most significant fact is this regard is the predominant agrarian character of the economies with the rural population constituting about 60 to 73 per cent of the total. With the exception of oil industry, industries represent only an insignificantly small sector of the individual economies and industrialisation has only begun to make headway under the impact of the development plans that have been launched in almost all the countries. Dependence on foreign trade with the resulting vulnerability of the economies to changes in the international commodity prices is also a significant characteristic of the Middle East countries. The composition of exports from the region reveals a predominance of agricultural products in total exports which has been a major source of instability in the balance of payments.

Trends in agriculture for the period covered by the UN Survey reveal divergent patterns both for individual countries and also for the major commodities grown in the region. Taking commodities, the cereals group registered marked decline in production between 1957-58 and 1960-61. Wheat production which rose to 120 per cent in 1957-58 with 1956-57 as the base, went down to 170 in 1958-59 and further to 107 in 1960-61. The decline was even more marked in the case of barley production of which went down from 122 in 1957-58 to 97. In rice production also, though the index for 1960-61 at 105 represented some gains as compared with 1958-59 when the index was only 81, it was lower than in 1957-58 when the index stood at 111. Only cotton and tobacco provided the significant exceptions to this falling agricultural production. The index for cotton production at 134 in 1960-61 was the highest since 1956-57 and reflected a substantial increase in the per acre yield. In tobacco also the index of production at 117 in 1960-61 represented the highest production since 1956-57 though extension of the acreage under cultivation was a major factor in this rise. The fall in the production of the major cereals has served to highlight the basic handicaps of agriculture in the

Middle Eastern countries and particularly the lack of proper irrigation facilities. Vagaries of the weather are still untamed and are an important source of variations in agricultural output.

Within the region, performance of individual countries in the production of agricultural commodities has markedly varied. Jordan and Syria were the two countries hardest hit by the decline in agricultural production. The indices of wheat output in Jordan stood at 27.43, and 18 in 1958-59, 1959-60 and 1960-61 respectively as compared with 100 in 1956-57. In Syria, the indices of wheat output were 53.60 and 53 respectively for 1958-59, 1959-60 and 1960-61 while comparable indices for barley were 49.47 and 34. In rice production the largest fall was recorded by the United Arab Republic where the index fell to 69 as compared with 100 in 1956-57. Substantial decline in rice output was also registered by Iraq. Most other countries of the region also registered falls in cereals production, though it was only moderate as compared with Jordan and Syria. With reduced availability of food-grains from internal production, imports of foodgrains showed a marked rise. Between 1958-59 and 1960-61 alone, the Middle East countries received over 5.5 million tons of grains, the United Arab Republic being the largest recipient, being followed by Israel, Turkey, Syria and Iran. In view of the continuing instability in agricultural production considerable emphasis is being placed on agricultural development in the development programmes launched by these countries. The proportion of such investment that is envisaged for agricultural development varies from 20 per cent in Iraq to 51 per cent in Syria. Besides development programmes, agrarian reform also constitutes a significant aspect of the agricultural reorganisation that is being attempted in all the countries. Ceilings on individual land holdings have been fixed in countries like UAR, Syria and Iran.

In respect of industrial development, the period 1957 to 1960 has witnessed continuance of the expansionary trend. But, between countries of the region there has been marked variations in growth rate in the industrial sector reflecting the degree of participation in industrial growth, the availability of raw materials etc. There are also significant variations in the relative positions of industry in the individual economies of the countries. The share of industry in total income, for example, varied from a minimum of about 11 per cent in Jordan to a maximum of 29 per cent in Iraq in 1957. The most outstanding feature of industrial growth was the increase in the regional output of electricity from 7.5 billion kw in 1957 to 11.4 billion kw in 1960. With the exception of Jordan where electricity production was stagnant throughout this period, output in all the other countries of the region showed significant increases. In other manufacturing industries the rates of growth during this period were somewhat divergent. Sugar production with an index of 145 in 1960 (1957=100) recorded the highest increase while the increase in cement production was of the order of about 40 per cent. Nitrogenous fertilisers registered an increase of 33 per cent, cotton yarn 22 per cent, superphosphates 14 per cent and cigarettes 8 per cent. In contrast production of iron and chrome ores registered notable declines by 28 per cent and 47 per cent respectively as compared with 1957. Among the countries of the regions substantial progress in industrial development was made by Israel, Iraq, Syria and the UAR. In Iraq there was considerable expansion of the industrial base

since 1955. Output of electricity in 1960 was 77 per cent higher than in 1957. In recent years a number of new industrial units has been set up under the initiative taken by the Ministry of Industry. In Israel continuing high levels of foreign demand for its products led to substantial increase in the output of some of the manufacturing industries, the increase ranging from 9 per cent in cigarettes to 300 per cent in the case of sugar. Significant increases in output were also registered by other manufacturing industries like rubber tyres, paper and cardboard, cotton fabrics, cotton yarn etc. In Syria industrial development in this period was marked by an upturn in the production of cement increase in that of cotton yarn and textiles and growth of a number of new industries. In the UAR, major gains were recorded by textile industry and besides there was a steady rise in the production in many other industries. With decline in the production of iron ore and phosphates, mining provided the only exception to the general upturn in industrial production.

Oil industry has a preeminent importance in the Middle East and the region has continued to be the second largest producer of crude oil. At an estimated 25.2 billion tons, the estimated reserves of crude oil in the Middle East constitutes about 61 per cent of the total world reserves. The major part of these reserves are concentrated in four countries namely Iran, Iraq, Kuwait and Saudi Arabia. During the period covered by the UN study, the oil industry in the Middle East has continued to expand and from 215 million tons in 1958 production rose to 281 million tons in 1961. There has also been further intensification of the exploration and drilling programmes with some successes in the UAR and other places. A major development in the oil industry has related to the setting up of new refineries. While the Middle East accounts for about 25 per cent of total world crude oil production, the refining capacity stands only at 6 per cent of the world total. Along with the increase in production in the area, there has also been a corresponding increase in the total exports of crude oil from the region, the value of exports in 1960 being estimated at \$3.6 billion as compared with \$2.8 billion in 1957. Foreign exchange earnings from exports of

oil are an important means in meeting the payments requirements for imports for all the countries.

Foreign trade of the Middle East countries has also continued to expand during the period 1957 to 1960. Exports registered an increase of 18.6 per cent from \$4.3 billion in 1957 to \$5.1 billion in 1960. At the same time imports also increased from about \$3.7 billion to \$4.4 billion. The favourable balance of trade increased from \$600 million to \$700 million. The high value of petroleum exports from the region was a major factor in the favourable trade position enjoyed by the Middle East countries. When the petroleum exports are excluded, the balance of trade position shows large deficit which was as much as \$2.9 billion in 1959. Very few countries were able to improve their balance of trade position during this period. In Iran the trade deficit which amounted to \$257 million rose by about 57 per cent by 1960. In Iraq the increase in the trade deficit was of the order of about 13 per cent as compared with 1957. Other countries like Jordan and Lebanon also experienced similar worsening in the balance of trade, but the steepest rise was registered by Syria where the index of trade deficit with 1957 as the base stood at 646 in 1960. With the increase in the trade deficit, the system of compensatory finance has also shown changes. It has been revealed that during this period official and private transfers constituted an increasing percentage of total means of payment their share rising from 38 per cent in 1957 to 43 per cent in 1960. The share of private, official and banking capital on the other hand dropped from 32 per cent in 1957 to 19 per cent in 1960.

Defence and Road Transport

THE recent meeting of the Road and Inland Water Transport Committee which held a two day session in New Delhi on 22 and 23 October should have been an opportunity for formulating recommendations for the effective utilisation of road transport in the present emergency. It is true that the Minister for Shipping who inaugurated the meeting referred to the vital role of road transport in the defence of the country and made a fervent appeal for total dedication to the defence effort. But to judge by the conclusions, after the Minister's introductory exhortation, the Committee appears to have settled down to the routine items on the agenda. Besides discussing these items which ranged from taxation and productivity in the motor transport industry to the development of tourist facilities in our inland waters, the Committee could have given a clear lead on the measures that should be taken immediately, to enable road transport to play what Mr Raj Bahadur has described as its "vital role in the mechanism of defence." But there is little to show that the Committee even discussed these matters.

Before considering the measures that might be taken, it will be necessary to examine the demands that the requirements of defence are likely to make on road transport. The intensified defence effort will have its impact on road transport as on other sectors of the economy, but from all indications, its effects are more likely to be indirect, and consequential to the increased demands on the Railways. To take one instance, the revised production targets of the steel industry mean that the Railways will have to allot more wagons for the carriage of the raw materials required by

the steel plants, as well as for the transport of the finished products to destinations other than those envisaged when the Railway plan was drawn up. As the operations of the Railways are reoriented to meet the requirements of defence and industries supplying defence requirements, road transport will have to take on a larger share of other categories of traffic, both passengers and freight. The projections made by the Planning Commission of the growth of road traffic, which are based on targets of production of commercial vehicles, or those made by the Neogy Committee which are related to the growth of national income, are largely irrelevant in the present context. Roads will have to carry a much larger share of the traffic which ordinarily would have been moved by rail. And they will have to deal with this larger load without the assurance that more vehicles will be available.

The first step that has to be taken, therefore, is to rationalise the existing road transport services in order to secure the maximum utilisation of the available vehicles. This should be the main preoccupation of State Transport Advisory Committees and of the Inter-State Transport Commission which, as the Minister stated, has been requested to determine the number of permits required for long distance operation of motor vehicles on a regular basis. Hitherto the principal aim of the regulation of motor transport has been to safeguard what were considered to be the interests of the Railways. In view of the emergency there is no excuse for persisting with this approach whose justification was never very obvious in Indian conditions. The objective now should be, not to present diversion of traffic from Railways to the roads, but to lighten the load on the Railways as much as possible, so that they could concentrate on the essential services which can be efficiently performed only by the Railways.

The removal of the many irrational restrictions which have stunted the growth of road transport, such as those relating to pay-load, routes, the frequency of services and the distances over which motor vehicles could operate, would have an immediate effect in enlarging its carrying capacity. Road transport is a concurrent subject in which the executive authority rests with the State Governments. But now, with the promulgation of a state of emergency, it should be more feasible than in the past to draw up and implement a programme, on a national basis, for the development of road transport, or at least to eliminate the impediments at the State level. While this is being done, it will also be necessary to increase the number of vehicles that will be available to carry the larger volume of goods that will have to be carried by road.

According to experienced road operators, the pay-loads of trucks could be straightaway increased without any harmful effects in large parts of the country and truck-trailer combinations could also be permitted to increase the carrying capacity. The Committee has recommended that a master plan of the national transport system should be prepared and that 'weak links' should be strengthened under a scheduled programme so that heavier vehicles could be introduced. This is a programme which, even apart from the present emergency, should have been taken up on a priority basis. The Committee, it is understood, has also suggested that the existing capacity for the production of commercial vehicles should be geared up for the production of vehicles with a higher pay-load. It has also been suggested that a study

should be conducted so as to decide whether tractor-trailer combinations or heavier vehicles will have to be manufactured in the context of the road construction programme now under way with IDA assistance.

What is required at the present juncture is not a leisurely study of the pros and cons of the manufacture of these items, but purposive action to enable heavier vehicles and truck-trailer combinations to operate safely on Indian roads. And side by side with the efforts to speed up the production of these vehicles in the country and to raise the production targets of lighter commercial vehicles to the maximum extent feasible, it will also be useful to consider imports of such vehicles from friendly countries as an emergency measure, either as part of the defence equipment that they have come forward to supply, or separately on terms which will not impose an unduly heavy burden of repayment. Even used vehicles could be valuable.

Apart from the availability of vehicles, the question may be raised how the individual operators are to find the money to acquire these vehicles. In this connexion attention may be drawn to the amendment of the State Financial Corporations Act which came into effect from the beginning of this year, under which road and inland water transport industries are placed on the same footing as other industries in respect of direct financial assistance and guarantee facilities from the State Financial Corporations. The limit of accommodation has been fixed at Rs 20 lakhs in the case of a co-operative society or a limited company and Rs 10 lakhs in any other case. With these facilities, there should be no difficulty in finding buyers for the additional vehicles that may be made available for expansion of road transport.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

MONEY MARKET

RBI Policy Needs Reappraisal

The Reserve Bank announcement revising the terms of its lending to Scheduled Banks has been in the nature of a considerable shock. While some interest on borrowings will be saved, with the second fifty per cent of quota available at 6 per cent instead of a rate of 8½ per cent that was intended to be charged for the last 25 per cent of quota, the simultaneous notification that normally banks will not be permitted to borrow in excess of 100 per cent of quota has been interpreted as constituting a too severe restriction on banks' advances. Busy season financing has to proceed apace; to the extent that new Deposits are forthcoming—which the Reserve Bank clearly believes will happen—additional resources can be pressed into service for meeting the busy season expansion in bank Advances. But if the defence effort for production were to throw up a sharp demand for funds, banks will inescapably need to seek Reserve Bank assistance; and that assistance has been restricted as to quantum.

It is only the bank which, as it were, confesses to very stringent pressure upon its resources which will be permitted to borrow beyond that quota. Hence banks will be able to replenish resources only by way of sale of securities; but here too the gilt-edged market is extremely narrow, and the Reserve Bank in pursuance of its policy is unlikely to be a ready purchaser.

The Reserve Bank thus ceases to be a lender of last or any resort; the Reserve Bank's facilities for sale to it of securities are unlikely to be available.

Is this measure well thought out? Obviously, we regret to say, no. A credit squeeze, that banks will be compelled in turn to impose upon their constituents, will hardly contribute to additional production, agricultural or industrial. While the intention to reduce the quantum of advances available for non-productive purposes would be a laudable one, a blanket squeeze that will now occur will do the economy, or the war effort, no good.

The Government needs funds; and the 4½ per cent National Defence Bonds (to be on sale on tap from 10 November and redeemable ten years after the date of purchase) is intended to mobilise funds, particularly from the banking system. The new Prize Bonds (repayable in 5 years) and the 4½ per cent Defence Deposit Certificates (maturing in ten years) may both secure support from individuals. But will banks go in for the National Defence Bonds—except that the patriotic impulse may move them?

It would be much better, we feel, if the banks amongst themselves could agree to investing a specified percentage (say, 25 per cent) of new Deposit resources in the new Defence Bonds; but this the banks could do only if they had the confidence that to tide them over their periods of temporary stringency they could borrow from the Reserve Bank; and let it be clear that temporary stringency in the current context may relate to the whole of the second half of the next busy season.

We are confident that the banking system would of itself reach such a decision—if the Reserve Bank repeals its restriction on the upper limit of borrowings of banks. Thus, if the limit were to be removed, the Government would be helped in two ways.

Firstly, the banks would be able to finance defence and other vital production.

Secondly, the banks would be in a position to lend sustained support to the Defence Bonds.

A reconsideration of the Reserve Bank's new monetary policy is thus urgent. We trust that the proper conclusions will issue from such reappraisal.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on 30 October 1962. Total amount offered was Rs 2,04,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Lower tenders were rejected. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New

Delhi) up to the close of business on Monday, 5 November 1962. Successful tenderers should make payment on Friday, 9 November 1962 at all centres. Other conditions are as usual.

During the week ended 26 October 1962 Government of India Treasury Bills for Rs 68,47,75,000, were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 31 October to 3 November 1962 at Rs 99.431 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 24 to 27 October 1962 amounted to Rs 49,00,000.

Trouble Everywhere

By Paul Einzig

IT is indeed unfortunate that the invasion of India by Communist China should coincide with the crises over the penetration of Communist Russia into the Western hemisphere. Otherwise India could be certain to receive, as a matter of course, all the external financial support it requires. Even as things are I am sure assistance will be forthcoming, in spite of urgent requirements in other directions. It is to the interest of Western countries to assist India financially to enable it to resist the aggression. But it would be a mistake to rely exclusively on Government assistance. Indeed, the situation that has arisen, precisely as a result of Communism showing itself in its true colours, should provide an opportunity for attracting more private capital from abroad.

This may sound paradoxical. For private capital usually avoids countries at war. Nobody can possibly imagine, however, that the Chinese invading forces would be allowed to penetrate into Indian territory so deeply as to endanger districts where foreign capital is or could be employed. The reason why I think India is now more suitable and not less suitable territory for foreign capital and enterprise lies in the fact that the behaviour of China has utterly disillusioned the Indian people about the true nature of Communism. No foreign investors could be really happy about their money in a country where the Communists are the second largest political party and where the non-Communist political party in power has to secure popular support by a hostile treatment of foreign capital and enterprise.

Owing to the effect of the Chinese invasion on Indian public opinion, Mr Nehru's Government could now well afford to treat foreign capital and enterprise in a way as to attract them instead of treating them in a way that repels them. Surely the lessons taught by the Chinese invasion must have made Mr. Nehru realise that India's interests lie in a rapprochement with the West. India is now paying the price for the policy of non-alignment. Its neutrality is evidently not respected by expansionist Chinese bent on world conquest. Soviet Russia, too, has proved to be a fair-weather friend, quite determined not to get on the wrong side of Communist China by rendering India the slightest economic, political or military assistance when in trouble. Even though the Western countries have now more than a handful of trouble of their own, I am certain they would be willing and even eager to help India in every possible way if it became evident that it has at long last realised where its true interests lie.

Notes

THE EMERGENCY

A Nation Geared to Defence

The declaration of a state of emergency by the President last week marks the most crucial step in the preparations to repulse the Chinese aggression on the country's frontiers. The purpose and justification of this measure is to give a central and unified direction to defence preparations in the face of the most serious danger to the territorial integrity and freedom of the country. As a sequel the Government has invoked the Defence of India Ordinance conferring extra-ordinary powers upon the Government in all spheres of life. From the political aspect, the democratic and federal character of the constitutional set-up will remain in suspension as long as the state of emergency lasts. Apart from the abrogation of the fundamental rights guaranteed by the Constitution, the state of emergency also empowers the Central Government to give directions to the States on matters that in normal time will be purely States' concern.

The significance of the declaration of the state of emergency from the point of view of economic life and relations in the

country is no less important. The powers that may be assumed extend to almost all aspects of economic activity. Included in this are ports, dockyard etc, railways, roads etc, telegraphs, post offices etc, vessels and aircraft, warehouses, mines, oilfields and industrial undertakings, scientific institutions and laboratories. Special mention has to be made of the right to requisition any immovable property except property exclusively used by the public for religious purpose and also the right to control of trade and industry and also control of agriculture. In short, the economic powers that will be assumed by the Government will be all pervasive and implies a reversal of the normal economic relationship. By democratic standards the powers are drastic and total but can hardly be grudged in view of the menace to freedom that has crossed our frontiers.

COAL

Imponderable of the Third Plan

In his address to the seventeenth annual general meeting of the Coal Consumers' Association held at Calcutta, Mr Darab C. Driver, President of the Association raised some important points regarding prospects for availability of coal in the Third Plan to sustain the rate of industrial growth envisaged in it. Quite apart from new uncertainties arising from the state of emergency declared last week and its impact on the economy, coal supplies will be one of the most uncertain and imponderable elements in industrial prospects. Concern arises because of the grave shortfalls both in production and the facilities for movement of coal. Production in the first year of the Third Plan was only of the order of 55 million tons which was considerably short of the production level attained in the previous year. Improvement in the wagon allotment has also not matched up to requirements and in January 1962 there was a deficiency of the order of nearly 2,078 as compared with the requirements assessed by the coal controller. Movement of coal by alternative means like road transport has only raised fresh problems to industries for which coal is supplied by trucks. It has been disclosed that the Titaghar Paper Mills had to incur additional expenses by 50 per cent on account

of the movement of coal by trucks. Deterioration in the quality of coal supplies to industries has also added to cost of production in certain other important industrial units. Apart from all these, the actual shortage in supplies to major consumers like cement is also chronic and has led to marked falls in output. It has been estimated that the cement industry lost about 6.27 lakh tons in production because of shortage of coal. Because of the generally low quality of coal supplies to industries, it has been estimated that the total demand for coal at present is higher by 5 to 6 million tons per year.

Apart from wagon shortage there are also other factors impinging on coal production like power shortage in the West Bengal-Bihar coal fields, delay in the disbursement of the foreign exchange loan provided by the World Bank and the relatively low profit margins which leaves hardly any incentive for increasing production in the private sector. Power shortage in the West Bengal-Bihar fields temporarily alleviated by diversion of supplies from the Rihand power station and the Hirakud is likely to recur unless alternative provision is made. Further the expansion in production envisaged in the Third Plan is of such dimensions as to call for massive investment on machinery and equipments.

As regards transport, prospects by the end of the Third Plan are not as bad as would seem on present trends. For important developments are also under way which would not only reduce the present long haulage in rail transport but also reduce the demand for coal in regions far removed from coal centres. It is important to note that the long term coal transport policy of the Government envisages more rational movement involving realignment of the present pattern of coal distribution. According to this scheme, the requirements of Punjab will be met from Kashmir, of Bombay and Gujarat from the Central India coalfields and of UP from the Singrauli mine and also from Assam. When this becomes possible, it would save considerable number of wagons from long distance transport for diversion to other lower priority industries. There are also other schemes like electrification of rail transport in the Bengal-Bihar areas, the substitution of coal by gas in Assam and Gujarat, the introduction of the Box wagons for carrying coal, construction of washeries by railways for washing the low quality coal required by them etc which hold out considerable potentials for improving coal supplies to industries. Mr Driver has also drawn attention to further scope in the same direction by encouraging the substitution of coal by furnace oil, use of truck by railway instead of wagons for transport of coal from coalfields to depots within 50 miles distance, and improving the turn-

round of wagons. The major argument against the substitution of coal by furnace oil is the revenue losses that may be entailed by reduction of excise duty to make it competitive with coal. But, it is Mr Driver's contention that this loss would be much less compared to the crores of rupees industry loses by not being able to work to capacity owing to the inadequacy of coal received and its poor quality. Already some industrial units in and around the Calcutta area have switched over to furnace oil in view of the difficulties experienced in the availability of coal. The subject obviously needs a thorough probe to determine the suitability of particular industries for conversion to oil-fired working.

Two other aspects touched on by Mr Driver relate to prospects for supplies of coking coal and pig iron. Official estimates of availability and requirements for coking coal by the end of the Third Plan and in the Fourth Plan show serious gaps. The total requirement of raw coking coal for steel and merchant coke ovens will be 25 and 2.5 million tons respectively against which production will be only of the order of 26 million tons including about 4 million tons of grade 11 coking coal. The shortfall is expected to further widen during the Fourth Plan. There is no doubt scope for economising the use of coking coal and also to add to its resources. Mr Driver has in this connection drawn attention to the importance of sintering operations, possibility of oil injection and steam injections which may reduce consumption of coke, the production of pig iron in low shaft furnaces using non-coking coal etc. While the possibilities in these directions are yet to be fully ex-

explored there seems one immediate solution to the problem of coking coal shortage. This is to import foreign coke or coal in exchange for our iron ore without involving any foreign exchange. Such imports may be utilised to meet the demands of States like Mysore, Madras and Bombay and will do much to relieve the present strain on railway transport. Incidentally it will also lead to a more balanced development of the iron and steel industry in the country.

ELECTRICITY Squeezing the Producer

The conference of the Federation of electricity undertakings of India held in Bombay last month focussed attention on the problems faced by the supply undertaking in the power industry. The main issue confronting the Electricity Supply Industry is the absence of incentive for raising development capital which "apart from resulting in disinvestment in the industry is also seriously affecting the capacity of undertakings to raise new capital for expansion." An increase in the standard rate has been long overdue especially since on the other side, expenses incurred by the units in the industry have gone up substantially. Under pressure of this profit squeeze, the industry has been demanding concessions to make the going less difficult. Among these are permission to charge all taxes including the tax deductible from dividends payable to the shareholders as an item of operating expenditure and incorporation of a provision in the Act for enabling the licensees to charge the interest payable by them on the loan capital as an item of operating expenditure and for allowing a return of half per centum thereon. It is a pity that though these concessions were sought as early as 1958, the subject has been kept pending so long by the Government. What is even more discouraging is that the licensees have to operate under the shadow of a threat of possible acquisition of private electric supply undertakings and of encroachments by some of the State Electricity Boards on licensees' areas of supply. The statements made by Mr O. V. Alagesan, Union Minister for Power, regarding these matters had not done much to allay the fears of the licensees. Foreign exchange scarcity has also posed problems to the smooth expansion of the supply undertakings. The President of the Federation has pointed to instances where delay in granting import licences for small items leads to the holding up of major installation schemes. Delay in acquisition of land for installing power facilities have had similar effects. On the whole, it is in a very unenviable situation that the electricity supply undertakings now find themselves.

EDUCATION Progress in some Directions

The chasm between our educational needs and actual performance should not be allowed to cloud the considerable headway made during the past decade. Measures have been taken to liquidate illiteracy while greater attention has come to be paid to the creation of conditions conducive to the mental development of children of all classes. Provision of midday meal to school children has proved to be a valuable innovation. This scheme is already working with remarkable results in a number of States and the Central Government has now worked out a scheme under which one-third of the total expenditure incurred by States is available to them.

The list of achievements enumerated by Dr Shrimali Union Minister of Education while addressing the State Education Ministers Conference in New Delhi recently is quite impressive. The target of enrolment in primary schools in 1961-62 has been exceeded by 13 lakhs. At this rate, the Third Plan target of enrolment will be reached even by the end of the third year of the Third Plan. Child welfare is to be given special attention and for the first time an allocation of Rs 3 crores has been made in the Third Plan for this purpose. Adult literacy plans are to be greatly accelerated and the Planning Commission will provide additional resources for this purpose. Special Central assistance schemes have been introduced to help State Governments improve the service conditions of and improvement of old-age pensions for teachers.

It is obvious that with the rapid progress of enrolment in primary schools, there should be an adequate number of teachers and enough textbooks if the resounding success in enrolment is to have any meaning. There is already a serious shortage of trained teachers and the position will become further acute before long. According to Dr Shrimali it has been estimated that the additional teachers required during 1961-62 and 1962-63 over and above those for which provision has been made in the Plan, will be about 80,000. Dr Shrimali has pointed out that special measures will have to be taken both for the recruitment of additional teachers and also to arrange for their proper training. The Central Government has decided to set up one special institute in each State for providing intensive in-service training to inspectors of elementary schools and to the staff of training institutions. Extension services at the elementary stage have been introduced in 30 training institutions and another 30 more will have this facility by the end of the Third Plan. It is evi-

dent that the various State Governments have to take up the question in right earnest by establishing training institutions for teachers. Perhaps the crux of the problem of recruitment of teachers lies in the fact that there is need for making the teaching profession much more attractive than it is at present so that it is not considered the last resort of educated unemployed persons.

ALUMINIUM Higher Targets

The decision to increase the Third Plan target of aluminium production from 80,000 tons to 115,000 tons is not unexpected. For the consumption of this metal is increasing by leaps and bounds because of its versatile properties. A large number of industries use it in preference to traditional metals. In recent years aluminium has increasingly come to replace copper in electrical industries mainly in the form of ACSR cables. With the rapid economic progress, the demand for aluminium will further increase sizably in view of the new uses it can be put to with profit.

The progress of building up aluminium ingot capacity however has so far lagged behind. During the Second Plan, aluminium output was much below the target. As against a capacity of 30,000 tons of aluminium ingots by 1960-61 envisaged, the total installed capacity reached only 18,100 tons by the end of the Second Plan. This disappointing result is due to the fact that out of the three projects planned, one did not materialise at all while the expansion programme of another did not make any progress.

Since then additional capacity to the tune of 69,205 tons has been licensed and when all the sanctioned schemes are implemented, total capacity will reach 87,305 tons to give an output of 90,000 tons of aluminium ingots. All the projects are making good progress except one. It is now disclosed that the Koyna project has not made much headway and that the Government is considering an alternative proposal. The proposal to set up a factory in Mysore State is meeting with unexpected difficulties but here too a factory may come up in course of time as the State Government is showing keen interest in an aluminium plant of its own. A significant point in respect of this plant is that the requisite bauxite ore is to be obtained from the neighbouring Maharashtra State. The commissioning of the plant is however dependent on the Sharavati hydro electric project which has already been considerably delayed. Another plant is to be set up in Madhya Pradesh in the public sector with Hungarian collaboration. These new plants when imple-

mented will raise the installed capacity to 115,000 tons.

The need for revising upward the Third Plan target could not have been realised by Government all on a sudden after the Third Plan has completed more than one year. For, a Committee of the Ministry of Commerce and Industry had already estimated the total requirements of aluminium by 1965-66 at 115,000 tons. In arriving at this estimate the Committee has made some major assumptions such as a realistic provision for substitution of copper by aluminium in electrical industries and nominal provision for exports. If it is desired to increase the quantum of export of aluminium manufactures sizably, it is obvious that the target of aluminium production will have to be further stepped up.

ROAD TRANSPORT The Crushing Tax

It is a truism in transport economics that facilities at every point should be somewhat in excess of demand. None denies that but there has been no serious attempt in the last two Plans to achieve this very desirable objective. Transport planning for the Third Plan holds out no spectacular results either. This is largely due to the still half-hearted attempt at developing road transport. And yet everybody knows that road transport will be called upon to carry much heavier traffic than earlier estimated. There are, no doubt, difficulties. Thanks to the acute shortage of foreign exchange, the development of road transport cannot now be much accelerated even if Government wants. Another obstacle, as pointed out by Mr Raj Bahadur, Union Minister for Shipping at the Road and Inland Water Transport Advisory Committee is the disparities in the economic resources of the different States.

But, notwithstanding the shortfall in internal and external resources, development of road transport could have progressed farther than it has actually been able to do. The chaotic state of motor vehicles taxation and the regulations governing inter-State road transport have for long been discouraging the growth of road transport. Mr Raj Bahadur has also referred to a general feeling that the tax burden is causing a severe strain to the industry. Heavy taxation coupled with the need to comply with a multiplicity of procedures in various States has made inter-State road traffic a venture which can be attempted only by a daring few.

Latterly, both the Central and State Governments seem to have realised the need for removing at least some of the handicaps of road transport. Now that all States have agreed to a single

point taxation in regard to vehicles operating on regular permits, road transport operators will have much less bother in filling forms and arranging for payment of taxes at various points. Further relief will come if all States accept the suggestion that all taxes payable by operators should be collected by a single agency. Another welcome indication of the growing official interest in road transport is the decision to constitute an economic division in the Transport Ministry for systematic collection and interpretation of all essential transport statistics. Some of the handicaps of the industry can be directly traced to the absence of important statistical information pertaining to road transport. Reliable statistics will strengthen the case of road transport for relief. One thing however, is even now obvious: the need for reducing tax burden on this, what Mr Raj Bahadur himself calls, nascent industry. The Union Minister for shipping too seems to think that there is scope for a downward revision. Anyway he has emphasised the need for ensuring that "tax burdens are not disproportionate to the capacity of an industry to bear them and do not curb or cripple its healthy growth and development."

COMPANIES Decline in New Registration

There was a notable decline in new company floatations in September 1962 which at 110 is marked lower by 48 from the total registrations in the preceding month. However the total authorised capital of the new formations in the month under review at Rs 26.62 crores is placed higher by Rs 3.42 crores from the relevant figure in the previous month. (New registrations in September 1961 totalled 159 with an authorised capital of Rs 46.68 crores). Of the total 110 companies, 22 companies with a total authorised capital of Rs 22.05 crores were in the public sector while 88 with an authorised capital of Rs 4.57 crores were in the private sector.

A size-wise split of the companies places 9 as giant sized ones carrying a total authorised capital of Rs 1 crore and above and 8 as big sized companies having a total authorised capital of Rs 50 lakhs and less than Rs 1 crore. Out of the 9 giant sized companies, two with Rs 1 crore each (Industrial Plants Ltd; and Universal Chemocrafts Pvt. Ltd.) were registered in West Bengal, two with a total authorised capital of Rs 3.5 crores and Rs 7 crores each (Lakshmi Machine Works Ltd; and Chemicals and Plastics India Ltd.) were in Madras and one company each was registered in Bihar (Thakur Shipping Co. Ltd; Rs 2 crores), Gujarat (Arvind Ceramics Ltd; Rs 2 crores), Maharashtra (Nirmar Textiles Ltd; Rs 3 crores), Orissa (Orissa Forest Corporation Ltd; Rs 2 crores) and UP (Madan Industries Ltd; Rs 1 crore, a Government company).

The largest number of new registrations in September at 25 was accounted by Maharashtra followed by Delhi (22), West Bengal (21) and Madras (18). The remaining 24 companies were shared by other States in the Union.

RUBBER Poor Progress in Replanting

Demand for rubber in India has been increasing at a rapid pace and on present trends, even without the pressure of defence needs development schemes with a view to stepping up output acquires considerable importance. The scope for such improvement is indicated by the great difference in the per acre yield of rubber in India and Malaya (about 400 lbs per acre in India and more than 1,000 lbs in Malaya) which accounts for the major part of the total world production of natural rubber. The low per acre yield of rubber is at the root of the shortage of natural rubber for industrial uses and has inevitably entailed considerable expenditure of foreign exchange on imports from abroad. In this connection, the methods of cultivation followed in Malaya present a striking contrast to that in India. In Malaya, as a recent delegation after a tour of that country has revealed, considerable advance has been made in replanting methods, packing and processing. A striking feature of the rubber cultivation in Malaya is that nearly half of the total rubber acreage of about 4 million acres in that country is under estates of over 100 acres. On the other hand, the low per acre yield in India reflects the poor headway that has so far been made in the direction of replantation. About one-third of the area are still under low-yielding varieties and this is owing to the considerable delay in the replantation work. As early as 1951 the Development Council evolved a scheme for replantation which for reasons not known came to be taken up only in 1957 by the Rubber Board.

Even the programme that was taken up in 1957 could make only poor progress in view of the inadequacy of the subsidy that was given to the growers. Considerable significance attaches to the new scheme of replanting that is being put into effect under the Third Plan. As a measure of incentive to the growers, the subsidy has been increased from Rs 750 per acre to Rs 1,000 repayable over a period of seven years. The scheme also provides for interest-free loans to small holders for extending their planted area upto 15 acres. Another aspect in which also we have been left far behind by Malaya relates to research. The rubber research institute at Kottayam has been long in coming. The pressing

requirements of the rubber plantation also include adequate supply of improved seeds. Offers of Malayan help in this field hinted at by Mr Rama Varma in the course of his talk with pressmen, are welcome news.

SALT LAKE Reclamation Plans

With the rapid growth of population and the ever increasing influx of people from outside, the Calcutta city is groaning under the heavy pressure on its accommodation space. Among the several measures in hand to solve this problem come the reclamation of the salt lake stretching at one end of the city. The reclamation programme envisages the conversion of the swamps into an area fit for human habitation and agricultural purposes. The process will be undertaken in two separate phases. The entire region measuring about 18 miles will be divided by dykes into separate lakes which will be covered with sand successively. In the first phase reclamation operations will be conducted in the northern part of the marshes with a surface space of nearly 3.75 square miles while the second stage will reclaim the remaining marshes (of nearly 14 square miles) by employing Dutch methods.

The reclamation programme will be carried out by "Invest-Import" Business Association in collaboration with "Ivan Milutinovic" Enterprise of Belgrade. The work of draining the ground is estimated to spread over a period of seven years at an approximate cost of Rs 7 crores and when completed will accommodate about 1.5 lakhs of habitants.

The machinery to be employed for the reclamation will include two barges, two pusher-boats, five barges and two inspection boats. Besides three pump relay stations and a pipeline of ten kms long will be installed on the shore. The method of operation will be in the following manner: A floating suction dredger with a capacity of 27,500 cubic feet per hour of solid material will dredge

the river Hoogly upto 34 feet under water level and the sucked material will be funnelled into barges of 1,400 tons capacity which will subsequently be pushed by pusher-tugs to the unloading dredger permanently anchored to the shore at the commencing point of the pipeline. The material will be jettisoned through the pipeline by the dredger to the sanding spot amply supported by three boosting stations with strong pumps of the same capacity as at the unloading dredger. In the final stage the levelling will be undertaken by bulldozers when the surplus water from the mixture carried along with sand will be drained into canals Dhapa which will ultimately converge into Hoogly.

PLATE GLASS Hindusthan Pilkington's Venture

For the first time, the manufacture of plate glass is to be undertaken in India and the steps in this regard are being taken by M/s Hindusthan-Pilkington Glass Works Ltd who have already established themselves as the leading manufacturers of glass in the country. Under the scheme a new plant is expected to be set up beside the company's sheet glass works at Asansol with the collaboration of Messrs Pilkington Brothers Ltd.

Messrs Pilkington Brothers Ltd have been pioneers in the world's glass industry and their collaboration in the manufacture of plate glass, itself a new field of manufacture in India, should be most welcome. With the extensive scientific and technological knowledge and resources at their command, M/s Pilkington Brothers Ltd, have succeeded to a high degree in perfecting the most efficient process for the manufacture of plate glass in their laboratories. This has been known as the Float Process and was discovered in 1959. Combining the best quality

4½ per cent National Defence Bonds

Subscriptions to the Bonds will be received at the following places with effect from 10th November, 1962:—

- Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
- Branches of the subsidiary banks of the State Bank of India conducting Government Treasury work; and
- Branches of the State Bank of India at other places in India.

Subscriptions will be in multiples of Rs. 100/- and will be paid in the form of cash or cheque. Interest will be paid half-yearly at the rate of 4½ per cent per annum and the Bonds will be repaid at par after 10 years from the date of sale. The interest paid will be liable to tax but tax will not be deducted at source in case of Bonds held by individuals.

ties of all other modes of sheet and plate glass manufacture and eliminating the need for complicated and expensive polishing and grinding, the float process has almost revolutionised glass making in the world. It is no small gesture that the company should come forward with offers of technical and financial assistance to help in the manufacture of plate glass through the float process.

The capital outlay on the proposed project is estimated at about Rs 4 crores of which 49.5 per cent will be contributed by M/s Pilkington Brothers Ltd. Full-scale production at the factory is expected to start in 1964 and monthly output will amount to 2,750 tons.

National Defence Fund

The Government of India has announced the setting up of a "National Defence Fund" with immediate effect. The Fund will be administered by a Committee under the Chairmanship of the Prime Minister of India. The Union Finance Minister will be its Treasurer. The Committee will decide the purposes for which the Fund is to be utilised.

The Fund will receive contributions from the public in cash of amounts not less than Re 1 or in gold or gold ornaments. Contributions may, at the option of the contributors, be made without disclosing their identity.

Cash subscriptions will be accepted at offices of the Reserve Bank of India conducting Government treasury business, all branches of the State Bank of India and its subsidiaries and at all Post Offices. Contributions in gold or in gold ornaments will be received only at the offices of the Reserve Bank of India conducting treasury business and the branches of the State Bank of India and its Subsidiary Banks. Moneys deposited in cash at the banks will be remitted to the State Bank of India, New Delhi, at the end of every week by bank drafts issued at par for credit to the account of the National Defence Fund with the Reserve Bank of India, New Delhi. Similarly, moneys received by the Post Offices will be remitted by Money Order to the Reserve Bank of India, New Delhi, and no Money Order commission will be charged on such remittances.

The value of the gold in the contributions received in the form of gold and gold ornaments will, after they are assayed, be remitted for credit to the account of the Fund at New Delhi.

The contributions to the Fund will qualify for income-tax exemption with the limits prescribed in section 88 of the Income-tax Act, 1961.

The accounts of the Fund will be maintained by the Accountant General, Central Revenues, and will be subject to audit by the Comptroller and Auditor General of India.

CAPITAL UNDERWRITING

Remarkable Growth

Dr. G. Balakrishnan of the Company Law Administration has examined in an useful study the trends in underwriting of capital issues during the period from 1 April 1956 to 31 March 1962. The study covers 185 major announcements of capital issues made by the manufacturing public limited companies in the form of prospectuses during the period from 1 April 1956 to 31 March 1962 and thus has covered the whole of the Second Five Year Plan period and the first year of the Third Plan. During the Second Five Year Plan period, there were 125 issues and during the financial year 1961-62 there were 60 issues and they have all been covered by this study.

It is revealed by the study that the amount of capital underwritten which formed about Rs 1 crore in 1956-57, i.e. the first year of the Second Five Year Plan, increased to about Rs 14 crores by 1961-62, that is the first year of the Third Plan period. The amount of capital underwritten as a percentage of the issued capital increased to 50% in the first year of the Third Five Year Plan compared to about 10% in the first year of the Second Five Year Plan. It can be said that on the whole about half of the floated issues are being underwritten at present compared to about 1/10th about six years ago.

The rate of underwriting commission which stood at 2% in the first year of the Second Five Year Plan increased to 2½% during the first year of the Third Five Year Plan. It is at the rate of 2½% that a very large part of capital is being underwritten at present.

Thus along with the rapid growth in the amount of capital underwritten, a small increase in the rate of underwriting commission is also seen by the study. The rate of brokerage, however, continued to be 7 per cent.

Year to Year Growth in Underwriting Facilities

There has been a steady progress in the amount of capital underwriting facilities during the past six years, if the fact that some of the popular issues which were sure to have been taken by the market was not underwritten is taken into account. Thus in the first year of the Third Five-Year Plan about Rs 14 crores out of the total issued capital of Rs 26 crores was underwritten, i.e. slightly more than half of the total amount of issues compared to about one-third in 1960-61, when out of Rs 34 crores of issued capital only about Rs 12 crores was underwritten. This was mainly because a few of the popular issues which were sure of being subscribed were not underwritten at all. In the first year of the Second Five-Year Plan of the total capital issued of Rs 11 crores slightly over Rs 1 crore was underwritten. In the Second year of

the Second Five-Year Plan about Rs 3 crores of capital was underwritten compared to the total issues of Rs 5 crores. Thus although the total amount of capital issues declined in 1957-58 compared to the previous year, the amount of capital underwritten continued to increase. From this, it is only reasonable to conclude that the absence of underwriting facilities did not stand in the way of floating a larger amount of capital. The reasons for the decline in issues in 1957-58 is to be found in the budget proposals for additional taxation enforced by the November 1956 supplementary and May 1957 budgets and in particular to the levy of wealth-tax on companies which adversely affected the sentiments in the market. Again the amount of capital underwritten increased in 1958-59 to over Rs 3 crores and thus formed slightly over one-third of the total issued capital. In 1959-60, the amount of capital underwritten recorded a very sharp increase and touched the peak of the period covered by the study and amounted to Rs 15 crores and formed about half of the total capital issued during the year, viz. Rs 32 crores. In the final year of the Second Five-Year Plan which recorded the highest amount of capital issued, viz. Rs 34 crores, the amount of capital underwritten formed only Rs 12 crores and this was, as stated earlier, due to the fact that some of the popular issues were not underwritten at all. Along with the increase in the amount of capital underwritten during the period of the Second Five-Year Plan, it is seen that there is also a growth in the number of underwriters. Thus the number of underwriters which varied between 4 to 7 during the first three years of the Second Five-Year Plan increased to 26 in the fourth-year and to 52 in the fifth-year of the Second Plan. In the first year of the Third Five-Year Plan, the number of underwriters recorded the maximum number of 86. Thus, during the last six years there was a remarkable growth in both the number of underwriters and also in the amount of capital underwritten.

The study has also analysed the performance of leading underwriters like the Industrial Credit and Investment Corporation of India, the Industrial Finance Corporation and the Life Insurance Corporation. During the six years ended 30 June 1961, the Industrial Credit and Investment Corporation had executed agreements for underwriting the issues for a total amount of Rs 13.34 crores. Out of this, it had to subscribe for the shares of the value of Rs 4.03 crores as a result of commitment for non-subscription and had earned a commission of Rs 19.40 lakhs. Although the Industrial Finance Corporation was empowered under Section 23(b) of the Industrial Finance Corporation Act 1948 to underwrite issues of stock, shares, bonds and debentures by industrial concerns, the Corporation actually

started underwriting only from December 1956. Upto 30 June 1962, the Corporation had approved applications involving about Rs 5 crores and rejected applications for about Rs 2 crores. In pursuance of the underwriting agreements, the Corporation had to take up till June 1962, shares worth about of Rs 1.85 crores. The Life Insurance Corporation had executed 63 underwriting agreements of the value of Rs 8.15 crores upto the end of 1960. The Life Insurance Corporation entered the field of underwriting only in 1958-59. The study reveals that in the first year of the Second Plan, the Industrial Credit and Investment Corporation was the leading underwriter and continued to be so in the second year of the Plan. In the third year and fourth year, the Central Bank of India occupied the leading position. In the final year of the Second Plan the Madras Industrial Corporation occupied the leading position. In the first year of the Third Plan, the Life Insurance Corporation of India occupied the top position with a capital underwritten of Rs 3 crores compared to total capital underwritten of Rs 14 crores. The commanding position of the Life Insurance Corporation in the field of underwriting may be seen from the fact that there is a big gap between the Bank of Baroda which occupied the second position in 1961-62 and the Life Insurance Corporation and they had during the year underwritten only about Rs 64 lakhs compared to Rs 3 crores by the Life Insurance Corporation. The growth of underwriting of capital in India has been greatly helped by the underwriting facilities provided by the Life Insurance Corporation.

The study also contains a brief description of the underwriting of new issues in USA and UK. One of the interesting differences in capital underwriting in India compared to USA is that in USA, the number of underwriters who participate in one issue is very high compared to India. Thus in the case of US Steel Corporation which had issued capital for 300 million dollars, there were 301 underwriters who had participated whereas the number of underwriters in the biggest issue covered by his study in India amounted to nine. It is also seen that whereas in India the rate of underwriting commission is about 2½ per cent, in USA it ranges anywhere between 5 to 8 per cent. In UK, although the UK Companies Act of 1948, allows commission of upto 10 per cent, certain issues floated recently carried an underwriting commission of between 1-7/8 per cent and 5 per cent only.

The study has also analysed some of the underwriting agreements entered into between the underwriters and the companies issuing the capital. All the underwriters invariably put a condition that in case any favourable terms is offered to any underwriter in respect of the same issue, the same benefit should also be given to the underwriters, who had done the underwriting before the favourable term was given. This has the effect of keeping the same set of conditions for both large and the small underwriters.

Book Reviews

BONUS: INDIAN LAW & PRACTICE—By G. B. Pai, Published by N. M. Tripathi Private Ltd., Bombay, Pages 517, Price Rs. 25/-

The law relating to payment of bonus has crystallised within the short span of a decade and a half as a result of judicial pronouncements made in the process of holding the scales even between labour on the one hand and employer on the other. From a payment which was, to begin with, of a gratuitous nature, it has now assumed the characteristics of a legal right which our courts will enforce. Though bonus has come to stay in the field of industrial relationship, the law relating to it is not to be found in any one statute or in any single pronouncement of the highest court of the land. A book like the one under review is therefore invaluable.

The concept of bonus cannot be satisfactorily defined or explained in a few words. The term "wages" may, by definition, include bonus, but bonus is not a species of wages and is a separate concept by itself. It is not deferred wage either. Although bonus is paid out of profits, it is not a share of profits in the sense that what the partners or share-holders are entitled to is a share of profits. It cannot be likened to dividend nor is it always a term or condition of service.

Though there are thus many conceptual difficulties in the abstract in regard to bonus, in practice the concept has now acquired a certain definition in a formula known as the "Full Bench Formula" which was first formulated by the Labour Appellate Tribunal in the case of the Mill-owners' Association, Bombay versus Rashtriya Mill Mazdoor Sangh, Bombay. This formula removes bonus from the class of payments which used to be regarded as gratuitous to a class of payment which employees can justly claim at the end of each year, subject to two main considerations. These are:

- there is a gap which bonus is intended to shorten between their present wages and a living wage; and
- there is an available surplus of profit for the year, out of which bonus may be paid.

In its decision in Associated Cement Companies Ltd. vs its workmen, the Supreme Court has finally and categorically held that the law regarding payment of bonus out of profits is fairly stated in the said Full Bench Formula

and, until suitable legislation is undertaken, would continue to be the law governing the payment of bonus in the country. In the words of the Supreme Court. "This Full Bench Formula has been working throughout the country since its enunciation as aforesaid and has been found in the main fairly satisfactory. It is conducive to the benefit of both labour and capital and even though certain variations have been attempted to be made therein from time to time, the main features thereof have not been substantially departed from. We feel that a formula which has been thus adopted throughout the country and so far worked fairly satisfactorily should be adhered to, though there is scope for certain flexibility in the working thereof in accordance with the exigencies of the situation."

Mr Pai has analysed admirably the ingredients of this formula. Inasmuch as bonus is considered to be a payment that shortens the gap between the living wage and the actual wage, the concept of a living wage becomes important. Mr Pai has drawn extensively from various judicial decisions, committee reports and authorities on the subject to elucidate the concept. In its decision in the case of Standard Vacuum Refinery Company Vs its workmen, the Supreme Court has laid down clearly that approximation to a living wage is the purpose of bonus payments and such approximation has constitutional respectability. In the words of Gajendragadkar J: "There would be no justification for ignoring the idealistic character of the living wage as specified in Article 43 of the Constitution. . . . The question which we must now consider is whether the appellant has succeeded in showing that its wage structure has reached the standard of the living wage which has been specified as one of the ultimate objectives by Article 43 and which is the ideal that the working population of the country hopefully looks forward to achieve"

What is the nature of the available surplus out of which bonus is payable? The Full Bench Formula lays down that the gross profits of a particular year should be ascertained in the first instance, and out of such gross profit certain charges will have to be allowed before ascertaining the net available surplus which could be distributed among the interests concerned. It is only when there is a net available surplus in a particular year that a claim for bonus

can be made in that year. In the estimation of gross profits only certain permissible deductions can be made from the income of the year. For example, capital expenditure is not an allowable deduction. It has also been held that donations, however charitable, cannot be deducted for the purpose of ascertaining gross profits. Normally, business expenses, arrears of wages, guarantee claims, insurance premia, are deductible charges. Legal charges are allowable as business expenditure and salary paid to partners, salary paid to proprietors, managing agents' commission, commissions to executives and bonus paid to executives as well as voluntary bonus and cost of repairs are allowable deductions.

Out of this gross profit, certain allowances are to be made in arriving at the net available surplus. First among these is depreciation which is called the first prior charge in the Full Bench Formula. From an examination of authorities on the subject, it would appear that the notional allowable depreciation for the purpose of bonus in our country is not always the same as the depreciation allowed by the income-tax authorities in arriving at taxable profits of the business. A second allowable deduction, or what is known as the second prior charge, is income-tax on profits. Here again as a result of judicial and other pronouncements the entire income-tax is not allowed. Certain deductions are made for the purpose of notionally estimating what should have been allowed. The Supreme Court has stated that, in determining the amount of deduction by way of income-tax, the tribunal should not take into account all the allowances which are made under relevant provisions of the Income-tax Act. For example, there is no doubt that in taxing the employer for the bonus year the income-tax act would make allowances not only for the normal depreciation but also for the additional and initial depreciation. For the purpose of the formula, however, income-tax should be determined notionally without reference to such additional allowances. Other taxes which are deductible are wealth tax and dividend tax (now abolished) and other similar direct levies.

The next prior charge is what is known as the annual appropriation toward rehabilitation of assets. This is a vast subject and there have been a number of judicial pronouncements as to the manner in which the reserves for the purpose of rehabilitation and/or modernisation of plant and machinery should be calculated. The Full Bench Formula provides for a multiplier and a divisor. Mr Pai has given practical instances of the application of the formula in order to make the subject intelligible. The courts

have recognised that labour can question claims for such deductions, although the balance-sheet of the company or the firm has been duly audited and certified. The Supreme Court has laid down that the onus of proving what amount, if any, should be allowed as rehabilitation costs is on the employer and this burden has to be discharged by adducing proper evidence and giving the other party an opportunity to test the correctness of the evidence by cross-examination.

The fourth prior charge is "return on capital." This is a subject bristling with difficulties and Mr Pai elucidates it with the help of decided cases. What constitutes "capital", whether it is only paid-up capital or working capital and what is the extent of higher return that should be given for business with a higher degree of speculative risks, like oil, are not easy questions to answer. The rate of return is also arguable and depends on the facts of each case. Mr Pai has also indicated certain other prior charges that may be considered for the purpose of arriving at the available surplus. Some examples of such charges are a gratuity reserve, a service fee or a debenture redemption fund.

What should be the quantum of bonus payable? In Mr Pai's words, "Where the capacity of an employer to pay unlimited bonus is accepted, as in the case of oil companies and concerns like the Lever Brothers (India) Ltd; the question will arise as to how much bonus should be given to the workmen and this has been answered in a series of decisions of the Appellate Tribunals dealing with oil companies and other such concerns." In Burmah-Shell and other oil companies' cases, it was observed by the Tribunal: "Bonus must have some relation to wages. It is intended to supplement wages and not to double or multiply it; wages are not fixed solely on the capacity of a concern to pay. Care must also be taken to see that the bonus which is given is not so excessive that it creates fresh problems in the vicinity. The interest of the community as a whole should not be overlooked." While considering the grant of bonus, Tribunals should take into account the case of all the employees, investigate the facts about existing wages and the gap between it and the living wage and should not grant a bonus by a rough and ready method, and should not overlook the possible repercussion of the award on the bonus in other industries.

Besides examining the legal principles behind the concept of bonus, Mr Pai has also gone in some detail into the working of the Full Bench Formula in relation to certain special kinds of industries and business. There are, for instance, statutorily controlled industries like electricity under-

takings. There are, again, wasting industries like the mining industries and the oil companies. Insurance companies and banking companies stand apart with statutory provisions in this behalf. Colliery labour has special provisions like the Coal Mines Provident Fund & Bonus Scheme Act, 1948. Mr Pai deals also with other types of bonus such as customary, contractual, festival and what is known as production or incentive bonus. He also examines the prevailing practice of statutory profit-sharing bonus in foreign countries.

From the foregoing, it will be seen how an attempt has been made to examine all facets of the problem as indicated by the trend of judicial pronouncements. The development of the concept of bonus has reached a stage when the Supreme Court itself has been compelled to observe that further development of the concept will be in the shape of legislation on the subject. The Bonus Commission (whose terms of reference have been set out in the book) has already begun to gather material for its report on the reference made to it. It is hoped that as a result of the report of the Bonus Commission, Government of India will take in hand suitable legislation for making the concept of bonus statutory and for providing clearly what can be claimed as bonus and by whom. Meantime, Mr Pai's expert and extensive guidance will be indispensable not only to employers and employees but also to others interested in the subject. The volume is produced with the sober elegance one always associates with this publisher.

SOUTHERN ECONOMIST, Dasara Special Number, Editor: Mrs. Susheela Subrahmanya.

The Dasara Special Number of Southern Economist (which, as an industrial and financial fortnightly from Bangalore has, in the few months since it began publication, established itself as an informed journal concerning itself with the problems of the nation's economy with particular reference to the southern region) makes interesting reading. Apart from the usual adequate coverage of the southern region, the Dasara Number contains a number of interesting special articles. Mr T. T. Krishnamachari's now famous Feroze Memorial lecture, which has been reproduced in full, contains some provocative reflections on the constitutional provisions that try to reconcile, not always successfully, individual property rights with the needs of society. Mr Krishnamachari also discusses knowledgeably the need for devising a new judicial apparatus to deal with revenue matters expeditiously and in this connection draws attention to the French system of administrative tribunals. There is also a

passing reference to the institution of Ombudsman, a sort of built-in protector of the little man in dealing with executive vagaries. Mr Krishnamachari also pleads for greater power for the States. Another article deals with the concept of regional approach to economic growth. A statistical analysis of the general election in Mysore, early this year, is made in another article, but no general inferences are drawn from the analysis. Among other articles of interest are a general survey of the economy of Hyderabad, Karnataka districts and another on India's trade with ECM in the context of Britain's application for entry.

INDIAN SUGAR—Special Number August, 1962, Published by The Indian Sugar Mills Association, Editor: J. S. Mehta, Price Rs. 3/-

The problems that the Sugar Industry is confronted with in India have been discussed threadbare in the course of the last year and half in which the spectre of over-production and uneconomic costs has been haunting the industry. At the moment, however, the outlook for the industry would appear to have eased somewhat in view of the fall in production, increase in internal consumption and in export commitments. Even so, the industry's basic problems remain. The core of the problem is that unless the agricultural part of the industry is imbued with a passionate interest in productivity, manufacturing will be hamstrung by periodic crises of under-production and over-production. Yield per acre of sugarcane and the sugar content of the cane are notoriously low in India, especially in Northern India where, by historical accident, the sugar industry predominates. Every article in this special number dealing with the economics of the sugar industry draws attention to this fact and points out that unless this problem is solved by intensive application of science to sugarcane agriculture, the entire sugar economy will be queered. The politically explosive question of sugarcane prices is also capable of rational economic solution only if the mills are able to get better value in terms of sugar content for the price they pay. In this connection the attempt to link cane prices to sugar content is a welcome move.

On the question of competitiveness of Indian sugar the Special Number contains a number of interesting articles. Here again, the most important element in the cost is the low sugar content of the cane used. Mr Venugopal Naidu points out that the price fixed for sugarcane compared to its quality is one of the highest in the world. In India about 10.5 tons of cane have to be crushed to produce 1 ton of sugar against 7 tons in Australia, 7.8 tons in Cuba and 8.5 tons in the Philippines for the

same quantity of sugar. Though labour is cheap comparatively, the unit cost of labour is high. Both Mr Naidu, and Mr Pittie point out that comparisons with the so-called free market world prices for sugar could be misleading. The lower free-market price is made possible because it represents only 12 per cent of the total world production and 74 per cent of the rest is consumed within the producing areas and the balance (i.e., 14 per cent) is exported to "preferential markets" at rates higher than world prices. Though this may be true, the fact remains that the unit cost of production of Indian sugar is quite high for reasons mentioned earlier.

Taxation which works out at Rs 13 per maund is also higher than in many other countries. The ex-factory price (excluding taxes) per maund is Rs 24.65 in India, and only the Philippines, Mexico and Egypt have lower ex-factory prices. Most other countries have higher such prices from Rs 25.70 per maund in Cuba to Rs 61.17 per maund in Java. According to a table given by Mr Pittie in his article taxation at Rs 13 per maund is the highest in India except for Egypt and even countries which have higher ex-factory prices before taxation like Australia and Cuba are able to sell in retail markets at prices well below the Indian retail price which takes into account taxation. The fact that the Indian ex-factory price without taxes is so low in spite of the low productivity of the agricultural part of the industry shows the tremendous competitive advantage that Indian sugar can have if only its radical and basic defects are removed.

In his article on Sugar Industry in the Third Plan, Mr J. S. Mehta has analysed perceptively the problems of the industry in the context of targets of production, internal consumption and exports. The draft outline of the Third Plan placed the target of sugar production at 3 million tons, and this was achieved by the end of the Second Plan itself. The target finally fixed for the Third Plan was 3.5 million tons, with the extra 500,000 tons being earmarked for export. Mr Mehta fears that these calculations may be upset by the lower rate of growth of internal consumption with the result that there will be excessive stock on hand. It is a measure of the uncertainties clouding the industry that the latest figures would appear to make Mr Mehta's fears somewhat pessimistic. The prospects have brightened enough for the Government to have decided to remove the 10 per cent cut in production imposed last season. Last season's production fell by about 300,000 tons to 2.1 million tons, consumption in the country increased by about 400,000 tons to 2.5 million tons and exports by another 200,000 tons during 1961-62. Though the carry over at the end of the 1961-62 season

is still sizable at about 1 million tons, firm commitments for export for the coming year at 400,000 tons would bring the problem of excess stock within sight of manageable dimensions. Even so, the expectation of domestic annual consumption of about 3 million tons may prove optimistic despite increase in population and better living standards. Indian sugar's emergence as an export earner (Rs 13 crores last year) is a gratifying development, though there is much that is fortuitous in the circumstance. Technological innovations (like production of unrefined sugar for export) and greater competitive cost are necessary to keep the ground gained in foreign markets. Apart from the economics of sugar, some aspects of which have been touched above, there are some technical articles in the Special Number. Most of them concern themselves quite properly with the problem of low recovery of sugar and improved cultivation of sugarcane. Mr D. Puri's and Mr S. K. Patil's speeches at the annual meeting of the ISMA are also reproduced and add to the value of the publication. Detailed sugar statistics have been gathered together and should prove useful for reference. On the whole, the Special Number is an indispensable source of facts and figures for those interested in the Sugar Industry.

WHOLESALE PRICES

Slight Fall

The official wholesale price index (with the year ended March 1953 as 100) receded by 0.3 per cent to 129.6 during the week ended October 6, 1962 as compared with 130.0 (revised) for the earlier week. The index was lower by 0.9 per cent when compared with the corresponding week of the previous month but was higher by 4.7 per cent than that of a year ago.

Lower prices of Betelnuts (—8 per cent), Rice at Cooch Behar (Sadar) (—7 per cent) and Nandgarh (—6 per cent), Urat at Patna and Maize (—6 per cent each), Groundnut Oil (—3 per cent) Ghee and Meat (—2 per cent each) and Bajra, Ragi and Eggs (—1 per cent each) brought down the index for 'Food Articles' by 0.3 per cent to 128.6 as compared with 129.0 (revised) for the previous week. The prices of Black Pepper (+5 per cent), Masur, Potatoes, Coconut Oil and Chillies (+2 per cent each) and Jowar, Barley, Gram, Cashewnuts, Milk, Gingelly Oil and Coffee (+1 per cent each), however, moved up.

The index for 'Industrial Raw Materials' declined by 0.6 per cent to 139.1 due to a fall in the prices of Groundnuts (—4 per cent) raw Wool (—2 per cent) and raw Silk (—1 per cent), although the prices of Castorseed, Rapeseed and Copra (+1 per cent each) showed advances.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

WHEN Parliament meets next week, it will have a clearer perspective than was the case a week ago of the national scene. This should make for better debates, sober and constructive, but not necessarily acquiescent. With Mr Krishna Menon relieved of direct responsibility for defending the country—of which job he has not, by all accounts, made an outstanding success—some opposition and even Congress knives that had been sharpened will have to be reluctantly put back on the shelf. I do hope that MPs will come prepared with specific ideas on particular subjects, doing some homework before they reach Delhi. It may even be a good idea for them to have an informal division of labour, with particular MPs assigned particular aspects of the present situation to study in detail. What would be intolerable is interminable profession of solidarity, which we are entitled to take for granted in MPs in an hour of national crisis. A reasonable amount of post-mortem ticking off will do the government good, though its mea culpa stance of the past week would make any but token flagellation pointless. Carping will have largely to be confined to what has happened since the Chinese woke us all from slumber and there is plenty to carp on. First, about keeping the country informed. We are ready to forget all the prevarication that went on before the eighth of September, but since then too there has been much avoidable muddle. The Press is ready to co-operate, perhaps too ready; but when it finds that it has assisted at clumsy evasions, as over the news of General Kaul's bronchitis, it gets, not unreasonably, sore. There is then the question of allowing correspondents to cover the operations. I don't deny that part at least of the impatience of the Press to get to the front stems from some of its members fancying themselves as Ernie Pyle or William Howard Russell. But that is neither here nor there. The need for getting a view of the front other than that of a 'military observer' is a well-acknowledged democratic right. The All India Radio has suddenly woken up to its responsibilities; additional bulletins and news commentary have been put on the air from the first of this month. But it will have to do

far better than its corny effort at the end of the nine o'clock news bulletin on Thursday before it can congratulate itself. Parliament may do some plain speaking on this. Above all, it should elicit information which at the moment is most scanty. For example, we have no idea of the terms on which military equipment is coming from foreign countries. I agree reasons of security are to be respected but there are quite a lot of things on which the government would be best advised to tell the truth and tell it promptly. Another task that awaits Parliament is to find out if steps have been taken to get into some shape the organisational apparatus that will control and channelise the heavy floods of patriotism the crisis has released. Most people simply don't know what they could do to help. Again, the multiplicity of agencies engaged in collection of gifts and donations has quickly to be brought under unified control.

Whatever the rights and wrongs of the Cuban imbroglio, few will grudge Mr Khrushchev the thanks that are his due for his prompt and constructive response to U Thant's appeal and his subsequent concessions. No doubt much deviousness and ulterior diabolism will be read into this sudden access to sweet reasonableness—with what justice I don't pretend to be able to say. There may too be some disposition to gloat at what might be fancied his discomfiture; and some, in the lunatic fringe of American politics, may even consider him an "yellow." If indeed he is one, let God be thanked for once for cowardice. Much will also be said, again with some plausibility, of the power of the deterrent to deter. But the irony of our predicament is that it requires statesmanship to be deterred. Mr Khrushchev could so easily have taken umbrage and it certainly took uncommon courage not to flinch from a decision that might well have been shirked for reasons of "face." It is clear from the sequence of events that Mr Khrushchev was feeling his way cautiously all along the line and once he decided to give in he did his cunning best to extract every ounce of propaganda advantage. He first agrees to "freeze" the situation in response to the UN

secretary general's request and diverts ships bound for Cuba to avoid incidents. Would the Russian ships have proceeded to Cuba if U Thant hadn't intervened? One does not know. Mr Khrushchev then essays what looks like horse trading, but is really nothing of the kind. He asks the US for reciprocity in dismantling, the American missile bases in Turkey being pulled down along with the Russian in Cuba. This was more a gesture of "tu quoque" than a serious attempt at removing a present threat to the Soviet Union. Mr Khrushchev knows very well that the missile bases in Turkey are, as Mr Walter Lipmann put it, "hopelessly obsolete." The Americans refused—whether because they took the offer seriously or didn't, I cannot quite make up my mind. Any way, Mr Khrushchev is ready with his next concession, this time substantial, even surprisingly so. He not only offers to pull down the installations that the "Americans considered offensive", but to do so under UN supervision. Even as he makes this offer, he makes it appear that it was President Kennedy's quite general assurance of invading Cuba that made up his mind for him. The implication is that the missile bases are defensive, whatever the Americans might say and if there was no possibility of an American attack on Cuba, the one reason for their existence was gone and they may as well be pulled down especially since they seem to bother the Americans so. It certainly was neat, the way Mr Khrushchev got out of the hole he had more or less dug for himself. Compared to this, the American handling of the crisis has been ham-handed and inflexible.

For another reason too I am disposed to be considerate to Mr Khrushchev. Outsiders do not often realise that Khrushchev has his own battle to fight at home. Back home, the Stalinist faction may make it out that Khrushchev's gesture was craven submission to threat and in this they will be in the company of extremists in the West. This is not true, at least not in its emphasis. And the fact would fit into a theory that will show Mr Khrushchev in even a better light. His offer to dismantle Cuban bases was not in itself surprising but his agreeing to do so under UN supervision was something wholly unexpected. For years, the Geneva talks on disarmament have got bogged on the issue of inspection. And now the Soviet Union offers to submit itself to international supervision. There is, of course, a slight difference in

that the inspection is in Cuba and not in Soviet Russia. Even so, it can be used as the thin end of the wedge which, I, for one, don't believe Mr Khrushchev has thoughtlessly thrust into the hands of the West. Can it be that he has deliberately created a sort of precedent which he hopes the West will use to good purpose and in good time? He may then be obliged "reluctantly to acquiesce in inspection in the Soviet Union itself." This reading would fit in with the not inconsiderable body of belief that regards Khrushchev as willing to go a long way to meet the West if only he could be sure that Molotov won't conspire with Mao tse Tung to overthrow him.

It may sound far-fetched, but it seems to me barely possible that the present incursion into Nefas, is really a feint. An expensive feint, perhaps, especially in men, but human lives have always been held cheap by the Chinese. The Chinese calculation may well run along these lines: Move in and then offer to withdraw to lines of actual control and India is sure to reject this. But, in its morbid absorption for proving its desire for peaceful settlement, it is equally sure to agree to talk if the Chinese moved to positions before the present trouble started. The advantage? Why, this offer would wash out the earlier Indian demand that the Chinese should withdraw even further beyond Ladakh. About the time fighting flared up in the Galwan Valley, Mr Nehru suggested as a precondition for talks that the Chinese should move back to the territory shown as Chinese in their 1959 maps. This led to a storm of protest in the country because this seemed to imply the writing off of earlier losses. Mr Nehru then made some fine-spun distinction between talks to reduce tension and negotiations to settle the dispute. Any way, the Chinese didn't agree and there was a stalemate. The present commitment to talk would appear to supercede the earlier condition for talks. The Chinese anxiety to get India to discuss the issue across the table may arise in this way. Suppose the Chinese never had any real intention of disputing the McMahon line's status as the international border and all that they wanted was the formalising of the present position in Ladakh, with, if necessary, some concessions—say, moving to the position indicated in 1956 Chinese map. If so, they probably also reckon that there could be some quiet horse-trading at the conference table with India being obliged to yield, especially if the withdrawal beyond the McMahon line could be played up as a great concession in the interests of peace. If these indeed are the Chinese calculations, we had better beware.

(From Our New Delhi Correspondent)

STEEL

Reorientation of Production Programmes

The first clear indication of the revision of production targets to meet urgent defence requirements was given by Mr C. Subramaniam at the Conference of General Managers of the Public Sector Steel Plants here last week. While there will be changes in the pattern of production the overall targets in all cases will be revised upward. Later he explained to correspondents that the cooperation of the producers in the private sector will also be sought to achieve this objective of increased output and talks were under way. Action was also being taken in consultation with the Railways to ensure movement of adequate supplies of materials for the steel plants.

Besides agreeing on higher targets of production, the Conference of General Managers also discussed in detail the costs of production at each of the public sector steel plants. Mr Subramaniam said that the efficiency of a steel plant would hereafter be judged not only by the quantity of steel produced, but by the quality and cost of the product. The general expectation here was that costs would be progressively reduced as the plants increased production to their rated capacities. But this expectation has not been fulfilled in the case of Bhilai, where costs have not been reduced in spite of full output. The Conference had decided that each plant should review every month the costs of production at different stages with a view to reduce the basic cost of steel ingots. The retention prices that had been sanctioned by the Government would give an indication of the standard costs which the public sector plants should strive to achieve. The costs of finished products would, of course, vary because of the different rolling programmes. It was also explained that the differential costs of raw materials would be taken into account in evaluating the performance of each plant. Rourkela and Durgapur are expected to achieve 90 per cent of capacity before the end of this year and full rated capacity is now taken as 1.2 million tonnes.

Mr Subramaniam said that it was necessary to produce as much as possible of various categories of steel to meet the defence requirements and to change the pattern of production accordingly. When plans switched over to defence production, the necessary security measures will automatically follow. Regarding supplies to the public, while products for defence requirements would have top priority, it does not necessarily mean there would be cuts in the supplies to the general public except in the special categories required for defence.

The need for reorientation of production targets and for streamlining procedures in order to meet the present emergency was again stressed by the Minister when he addressed the Iron and Steel Advisory Committee on the following day. The meeting was also attended by Sardar Swaran Singh, Minister for Railways, who took an active part in the discussions. The proceedings were notable for the constructive spirit in which the representatives of the steel producers and others responded to the Minister's appeal to consider the problems in the context of the challenge to India's territorial integrity. The Minister for his part showed a welcome readiness to consider all suggestions put forward, including some about which the officials of his Ministry appeared to be dubious, and he also promised that early decisions would be taken.

While the spokesmen of both TISCO and IISCO gave the assurance that whatever materials were required for the defence of the country, they would go all out to make them available, Mr G. L. Bansal, representing the Federation, recalled that, even during the second world war the steel plants produced different varieties of special steels and, given the same facilities, they could do the same now. He also pointed out that more pig iron would have to be produced to meet the needs of the foundries which have a very important part in production for defence requirements.

Mr A. D. Ogilvi for the Associated Chambers pointed out that, apart from pig iron, there was also shortage of foundry coke. He briefly referred to the memorandum submitted by the Associated Chambers on the measures necessary to ensure the most efficient use of available resources and pointed out that both imports of steel and local steel production

should be planned with a view to ensuring a balanced supply of matching steel to fabricators. At present there is a great deal of waste with large stocks of finished steel lying unused with fabricators owing to the lack of matching sections or components.

While drawing attention to the recent improvement in the production of steel, the Minister had also referred to the unsatisfactory position regarding pig iron and the steps under consideration to meet the deficit. Against the Third Plan target of 1.5 million tons of foundry grade pig, requirements by 1965-66 are now estimated at 2 million tons. On the other hand, because of delay in setting up the Bokaro plant and the schemes licensed in the private sector, the availability, to judge by present trends, is not likely to exceed one million tons in 1965-66. To make up the deficit a number of schemes are under consideration. These include: an additional blast furnace at Durgapur with capacity of 2000 tons a day, which could be subsequently utilised for the expansion of the steel plant during the Fourth Plan; licensing of low shaft furnaces using local ore and non-metallurgical coal as well as of small plants near the big steel works for manufacture of pig iron using nut coke which cannot be used in the larger furnaces of the integrated steel works. The possibility of setting up a pig iron unit in Goa, the Minister said, is also being actively considered.

In regard to the measures to meet the pig iron shortage, the proposal for setting up small plants was vigorously supported by Mr V. Ramakrishna. Units of ten to fifteen thousand tons could be easily set up in different parts of the country he said, and though costs may be high, they should be encouraged at the present juncture. Government, he said, could acquire the licences for new processes of manufacture, for instance, of products like sponge iron, and transfer them to small units.

Mr Ramakrishna also felt that there was no need to go in for large units for alloy steels. Small units of two to three thousand tons which could be set up in a short time would serve the purpose. Government should take steps to get the drawings for manufacture of the necessary equipment from friendly countries. (It was pointed out by some other speakers that small units were technically better suited for manufacturing certain types of steel, such as sulphur steel, than large plants.)

Another suggestion made by Mr Ramakrishna was that part of the existing capacity of the ferromanganese industry, which experienced difficulties in exporting its surplus production, could be diverted to the production of ferro chrome, and part to produce pig iron. The spokesman of the ferromanganese industry pointed out that the difficulty experienced in finding export outlets for ferromanganese was re-

lated to the high cost of production. The industry at present is compelled to use metallurgical coke though it could do as well with non-metallurgical coke of low phosphorus content, as the latter is not at present available, and Government has not given the licence for setting up of a coke oven plant to produce the cheaper variety of coke. A suggestion was made in the course of the discussions that the ferromanganese units should try to use "pearl Coke" or 'coke breeze' which is freely available. The Railway Minister gave the assurance that all the wagons that were required would be made available if Hindustan Steel could find customers for coke breeze from Bhilai or Rourkela.

The difficulties faced by the steel plants and the washeries on account of the deterioration in the quality of the coal supplies in regard to ash content was also raised during the discussions. The point was made by Mr Nanavati of Tatas, that the grade for which the price is paid should be maintained and that steel plants should not be called upon to pay higher price for higher ash content. Mr Pran Pershad Thapar speaking for the coal industry described the difficulties faced by them on account of the progressive deterioration of coal seams. The downgrading of the mines as suggested by some speakers would not improve matters. The only answer to the problem, he said, was beneficiation of the stuff that is available.

WORKING CLASS Rise in Index Number

The working class consumer price index numbers (base shifted to 1949=100 except where otherwise indicated) increased in 11 centres during August 1962, according to the Labour Bureau of the Union Ministry of Labour of Employment.

The maximum rise of 4 points was recorded by the index for Bhopal (base 1951=100) which stood at 125. The index numbers for Jamshedpur, Monghyr and Kharagpur appreciated by 2 points each to 130, 105 and 129 respectively and those for Delhi, Cuttack, Berhampur, Ludhiana, Jabbalpur, Mercara and Satana (base 1953=100 in the last two cases) by one point each to 134, 139, 135, 114, 135, 152 and 110 respectively.

In this group of centres, the food group index numbers appreciated at all the 11 centres, the fuel and lighting group index numbers at 5 centres, the clothing group index number at one centre and the miscellaneous group index numbers at two centres.

The provisional all-India index appreciated by one point and stood at 132 during August 1962. The final figure for June 1962 was 130.

Markets

JUTE

Quiet Trend

There has been a substantial fall in the prices of jute goods during the past week although rates have tended to stabilise at the lower levels toward the close. The upturn in prices noticed in the previous week is to be attributed to the cumulative effect of the severe clash on the country's northern border and the general apprehension about a further deterioration in the international situation because of Cuba. Evidently speculators had calculated that the war with China would bring in large orders for jute goods from the Government of India. What however seems to have given the actual fillip to the bullish trend is the sizable purchases made by the US. In view of the rapid fluctuations in prices US buyers have naturally thought it advisable to take their requirements while prices are still cheap. They should have calculated that price levels would go up in the event of further deterioration in the international situation. The pressure of enquiries seems to have lessened in the past few days presumably on account of the fact that the threat of war over Cuba has receded. Even so, the hessian section has been ruling fairly steady during the past few days

and further business in ready and near delivery positions has been reported done. Though the statistical position of hessian continues to be good, the heavy selling that hit the market early during the week under review has affected this section as well. On Friday 40x10 oz Hessian October delivery was more than a point to be placed at Rs 54.15. In subsequent trading most of the ground lost has been regained with the quotation improving to Rs 55.65. The trend in the futures market was on a similar pattern. Hessian futures November after having been done down to Rs 52.94 revived to close on Wednesday at Rs 54.50.

Fluctuations in Sacking clearly show that the earlier interest in this category of goods is mainly speculative. The expectation seems to be that war preparations in the country will bring substantial orders for sacking before long from the Government of India. Otherwise there is little to support the bullish fervour. Although there has been reports of some buying of woolpacks by Australia, overseas interest in sacking continues to be at a very disappointing level. Mills are even now faced with the problem of disposal of mounting sacking stocks and a decision as regards the continuance of capacity work-

ing of mills is due to be taken early this month. It may be recalled that the IJMA has only extended capacity working of mills up to 10 November with a view to reviewing the position anew in the light of the stock figures for jute goods with mills at the end of October. A steep fall occurred in B Twills October delivery on Thursday at Rs 119.85. The downtrend continued unabated next day also with the quotation hammered down to Rs 117.70 on selling pressure and lack of buying interest. Since then the rates have not declined much as prices have tended to stabilise at the lower levels. The arrest of the downtrend in sacking however was largely in sympathy with hessian which met with renewed support following fresh foreign enquiries. In the futures market, B Twills November which closed on Thursday at Rs 119.20 after coming down to a low of Rs 115.60 recovered to close on Wednesday at Rs 117.35.

The steadiness noticed in raw jute in the previous week has proved to be temporary as with the reactionary trend in goods, mill interest also has considerably diminished. To the pressure of heavy supplies has been added the anxiety as regards availability of adequate transport facilities. In view of the national emergency, wagon supplies for jute loading has been severely cut with allotment almost completely stopped in some centres. This has resulted in lack of buying interest and at the same time selling pressure has increased. Though sellers are keen to conclude business even at rates below minimum levels, buying has continued to be at a meagre level. One of the reasons for mills' reluctance to buy large quantities appears to be want of storage space. It remains to be seen how the authorities are going to fulfill their promise to ensure that the jute grower gets an equitable return on the basis of the minimum prices. For apparently there is still a large quantity of raw jute with the growers to be disposed off. The difficulty has been considerably accentuated because the bulk of the available supplies seems to be of a low quality which is not in great demand. There is a shortage of high quality jute and mills even now seem to be prepared to buy it at prices higher than the minimum level. It is with regard to the disposal of low quality jute difficulty seems to have arisen. The problem has been sought to be tackled in some measure by the Jute Buffer Stock Association asking mills to concentrate on jungli jute in fulfilling their recent purchases on its behalf. It is however believed in some circles that these measures are not enough and that permission for further exports of raw jute will be necessary if the cultivator is to get an equitable return.

TEA

Demand Well Maintained

THE demand for Leaf Tea, that was noticed in the previous week, has been well maintained during the week under report. In the export sale held this week, offerings amounted to 67,865 packages. Plain orthodox brokers met with a fair enquiry and were sold at barely steady rates with similar Fannings a strong feature. Medium broken and Fannings were readily absorbed and often realised high prices. Low medium and medium Assam BOPs and Orange Fannings were keenly competed for, often registering considerable advances.

CTC descriptions were sold well and were often dearer, especially the best kinds. The plainer liquoring and more fibrous sorts were irregular. Legg-cut teas were sold at about steady rates. The low priced whole Leaf grades were well supported and generally sold at enhanced rates. Tippy sorts were, however, a weak feature of the sale and prices displayed an easier tendency. Some withdrawals were also made.

Darjeeling teas met with limited enquiry and were easier. Following rates were quoted:—Clean Plain Pekoe Rs 4.50 to Rs 4.80; Plain BP Rs 3.80 to Rs 4.10; Plain Fannings Rs 4.00 to Rs 4.40; Medium Assam CTC BP Rs 5.50 to Rs 6.00; Medium Assam CTC Fannings Rs 5.50 to Rs 6.00; Best Assam CTC BP Rs 6.50 to Rs 6.80 and Best Assam CTC Fannings Rs 6.50 to Rs 7.00.

According to the tea trade, stocks of tea in warehouses at Calcutta were higher at 622,438 chests at the end of September as compared to 617,295 chests at the close of the previous month. While stocks in public warehouses rose from 338,773 chests in August 1962 to 355,638 chests in September, those in private warehouses fell from 280,522 chests to 266,800 chests. Besides the stocks in warehouses, there were 130,285 chests of teas "afloat" at the end of September. In the preceding month there were no "afloat" stocks.

With a shipment of 51.72 million pounds in September 1962, total exports of North-East Indian tea, in the first nine months of this year, rose to 230.91 million pounds from 223.5 million pounds in the same period of 1961.

With arrivals of 12.8 million pounds in August 1962, total tea imports into the USA, during the first eight months of the current year, were higher at 84.88 million pounds as against 73.76 million pounds in the corresponding period of last year. Imports from Ceylon rose to 32.17 million pounds in January, August 1962 from 30.79 million pounds in the corresponding 1961 period as did those from India to 17.88 million pounds from 16.69 million pounds and Africa to 8.48 million from 6.35 million pounds. Supplies from other countries also rose to 17.48 million from 9.99 million pounds.

In the Internal sale, offerings were 30,310 packages of dusts. There was a good general demand, which im-

proved as the sale progressed. Medium CTCs were once again well competed for, but at irregular rates. The powdery descriptions commenced selling at lower rates, but improved with the sale. Good CTCs were readily absorbed and sold well.

Plain and medium orthodox teas come in for satisfactory support and were sold at around last levels with some selected lines selling at a premium. Legg-teas were the strongest feature and sold readily at prices which were up to 25 nP above last levels. Following rates were quoted:— Plain Orthodox Dust Rs 4.00 to Rs 4.40; Medium Assam Dust Rs 4.45 to Rs 4.90. Legg-cut Dust Rs 4.90 to Rs 5.40; Medium Assam CTC Dust Rs 5.50 to Rs 5.85 and Good Assam CTC Dust Rs 6.20 to Rs 6.70.

In the Cochín market, a quantity of 481,000 kg of Leaf tea was offered this week. Against strong demand, the poorest low medium sorts were about steady, while all other mediums were dearer. Higher grades were steady according to quality of teas offered, while unorthodox descriptions were much higher.

In the Colombo market, offerings were 5,874,286 pounds. There was an active demand and prices for both Lva and Western broken were generally dearer on last week's closing rates except where quality showed a marked decline. High and medium-grown BOP Fannings also met with better demand; but prices were irregular.

Production of tea in East Africa was higher at 3.88 million pounds in August 1962 as against 3.45 million pounds in the corresponding month of last year. This increased the total crop in East Africa to 38.8 million pounds in the first eight months of this year from 28.51 million pounds in the corresponding period of last year.

In the auction held at London, offerings were 26,875 packages including 25,465 packages from North India and 390 packages from Pakistan. A strong demand was in evidence and bidding was brisk for all types with prices tending dearer for all good medium teas. Plain sorts were the strongest feature of the sale and, in most cases, advances of about 2d per pound were made.

COTTON Futures Steady

The trading in the new cotton crop has started in Bombay and upcountry centres. Despite the fact that the mills have not yet received their quotas they are reported to have commenced covering their requirements unofficially. The L 147 growth from Vidarbha was offered at official ceiling with the addition of two per cent commission whereas 197/3 variety was available at Rs 20 per candy above the ceiling plus a commission of 3½ per cent. The transactions will officially be put through with the assistance of supervisors with the implementation of the new distribution scheme. (The Textile Commissioner has released to the public the first list of 31 supervisors).

The cotton futures market in Bombay during the past week ruled generally steady. The sentiment was largely influenced by the firm support from the spot market and also owing to the apprehension of delay in the imports of US cotton arising out of the turmoil in Caribbean. Consequently the Indian cotton textile mills were constrained to lend support to the ruling contract Jarilla March 1963 which moved up smartly by Rs 10 to Rs 748 per three quintals.

The UAR's cotton crop this season is reported to have snowed a marked increase of 290 million lbs compared with relevant figures in the previous season. There was an astounding increase in the average per acre yield which shot up to 582 lbs from 338 lbs last year. This increase in cotton production has to be appreciated in view of the steep reduction in the crop area by 32½,640 acres.

There was an average decline of nearly 80 nP per square yard in price realised on exports of Indian cotton textiles as a result of the obligatory export scheme foisted on the mills. But it has to be conceded that exports are maintained at current levels only on account of this scheme. The fall in the price of Indian cotton textiles has to be viewed in the light of the general landslide in the international prices of cotton textiles and the fierce competition from other exporting countries. According to a recent estimate the exports of textile goods are expected to reach about 50 crore yards against 57.5 crore yards shipped in 1961.

Consumption of cotton by the mills in India from 1 September, 1961 to 30 June, 1962, moved up smartly to 4,728,439 bales of 180 kgs from 4,408,652 bales in the same period in 1960-61. Notable improvements were recorded in the consumption of Indian, Pakistan, Sudan and East African growths while the trend of consumption of American, Egyptian and those falling under "other varieties" showed declines. Relevant particulars are provided in the table shown below:

Varieties	Sept. 1960 to June 1961		Sept. 1961 to June 1962	
	1960	1961	1961	1962
Indian	3,457,373	3,887,849	3,457,373	3,887,849
Pakistan	16,687	25,638	16,687	25,638
American	562,196	411,843	562,196	411,843
Egyptian	99,297	93,676	99,297	93,676
Sudan	100,635	135,055	100,635	135,055
East African	142,786	151,518	142,786	151,518
Others	29,766	22,860	29,766	22,860
Total	4,408,652	4,728,439	4,408,652	4,728,439

Imports of cotton from foreign countries to India from 1 September to 6 October 1962 declined by 11,664 bales to 261,371 bales.

Description	(1 Sept. to 6 Oct.)		1961	
	1961	1962	1961	1962
American	215,130	185,630	215,130	185,630

Markets React to Political Situation

PRICES of commodities have been showing a mixed trend during the past few weeks in response to the developments in the international situation. Although the reaction has not been very pronounced, traders are generally inclined to hold on to stocks at an uncertain time like the present. Even the commentators in London are reported to have warned that a prolonged period of international tension may now be experienced. When making this forecast, they have been thinking not only of Cuba, but of Berlin and the Chinese invasion of India as well. They add that the commodity markets are bound to react sharply to any major fresh development and prices will, therefore, probably continue to move erratically according to the way the situation goes.

Some circles entertain a feeling that any big sustained rise in commodity prices is unlikely though there can be exceptions to the rule. Generally speaking, world stocks of commodities are high at the moment and it will take a major interruption to supplies to cause a serious shortage. The US Government is known to have large stockpiles and this is believed to be the case with Russia as well. A prolonged international crisis is, therefore, not expected to create major difficulties in commodity markets.

The repercussions, on the other hand, can be considerable on the bullion market. If the political tension remains as at its present pitch for any length of time, business confidence can easily be affected. The price of bullion has recovered smartly after an earlier fall caused by rumours that the Government might seize hoarded stocks and stop futures trading. The rise in prices of the precious metals is not surprising, especially when they are first-class hedge against inflation and favourites in times of uncertainty. Higher advances from the London and New York markets have been an additional stimulating factor.

On the London market, the turnover in gold during the week-end was reported to be the highest on record. Heavy buying orders came in from people who were switching out of currencies, notably the American dollar, as a hedge against a serious upheaval in the world situation. The authorities intervened in the market to prevent a sharp

rise in prices. Nevertheless, there was still a significant increase. In the New York market, the price of silver declined by ½ per cent towards the week-end after ruling steady from 19 October to 26 October at the 4-year peak of 1.22 dollars a fine ounce. There is, however, continued heavy offtake of gold in the London market and the price for the metal has advanced further. Talks have even developed that, if the buying persists, the market can get out of the control of the authorities.

Prices of Non-Ferrous Metals have also hardened as expected. It is feared that imports, especially of copper, zinc and tin, will be affected if the international situation worsens. On the London Metal Exchange, the strength in all the base metals is mainly influenced by the Continental demand and good buying from influential quarters.

Prices of jute goods have been boosted in Calcutta. The USA has bought hessian heavily to the extent of 30 million yards for delivery up to March 1963; but this purchase has been made for normal commercial requirements. It is also hoped that this country will make more purchases as the ruling prices are reasonable and before the international situation deteriorates further. Another factor, which has imparted renewed strength to the market, is the receipt of a tender from the Government of India for the supply of 70 lakh sand bags. Prices of sackings have moved up on speculative support inspired by the rise in hessian prices.

The raw jute section has also developed a steadier tendency. Apart from higher advances from the manufactured goods section, the slightly steadier tendency in prices is influenced by the reports of the Government having taken steps to stabilise prices. The State Trading Corporation will purchase jute through the co-operative marketing societies in the various jute-growing States.

Rubber is one of the most sensitive commodities of all and always tends to react sharply to any major international development. The price of the commodity has now become steadier in response to the increase in the international price.

Among Spices, Cloves and Cinna have risen sharply as their requirements are largely met by imports. Pepper has also developed a firmer tendency during the past few days. Within a week, the ungarbled variety has shot-up from Rs 161 to Rs 168 per 50 kilos in Bombay and from Rs 287 to Rs 324 per quintal in the Cochín market. The bullish fervour in the market is attributed to the sudden revival of demand from overseas customers as a sequel to the deteriorating international situation. The USA, which has been keeping away from the Indian market pending the outcome of the new crop, has started buying substantial quantities of black pepper.

On the other hand, there are strong reports that Russia is a heavy buyer in Singapore. It is reported to have bought about 6,000 tons in the last few days. The price there has also improved by about 2½ Straits

dollars per picul. Expectations are that the prices will move up further. In the circumstances stockists in India, who were anxious last year to dispose of their goods before the arrival of the new crop, are now revising their ideas. The domestic demand, however, is not encouraging.

Chemicals and Dyes have also moved up following heavy demand induced by the border conflict with China. Among the imported varieties, Caustic Soda has advanced from Rs 56 to Rs 60 and Bleaching Powder from Rs 93 to Rs 97 for the big packing and from Rs 108 to Rs 115 for the small packing. There are also fears that supplies of chemicals and dyes from foreign countries will be interrupted. Some traders fear that even the arrivals of the goods against licences already issued will be delayed. They also fear that the announcement of the import policy for the second half of 1962-63 might be delayed further.

In response to international news, the price of Cashewnut has also advanced. Currently, prices are favourable with the New York market quoting 43 to 44 cents per pound. The USA, German Democratic Republic and some other East European countries are our main customers. That Egypt is interested in Indian cashewnuts and that a delegation has come to India to negotiate the import of a small quantity is welcome although, at present, India is doing very well with the exports of her cashewnuts. A total quantity of 52,231,300 pounds of cashew kernels was exported from India during the first six months of this year as against 45,568,550 pounds for the corresponding period of last year. While offtake by two of the three major importers — USA and USSR — showed an increase, that by the UK declined sharply during the first six-month period this year.

Prices of Oils and Oilseeds have generally moved down partly due to heavy arrivals and partly to poorer export prospects. Moreover, most of the Communist countries are reported

AVIATION SNIPPETS Automatic Flight Recorder in KLM DC-8

An apparatus has been installed in one of the KLM DC-8 jet planes for several months, recording the behaviour of plane and engines accurately during flight. It is a so-called automatic flight recorder which has kept an eye on the behaviour of the PH-DCH "Orville Wright" during 800 flying hours. This apparatus has been developed by the National Aviation Laboratory, Amsterdam, as a universal recorder, while its adaptation to the DC-8 took place in close consultation with the KLM Research Bureau.

Though the principle of the automatic flight recorder is not new, the present Dutch version offers far greater possibilities and it is the first in the history of world aviation with which flight-technical data can be registered on such an extensive scale. Air-speed, altitude, thrust, course, but also data about the mechanical condition of plane and engines—such as turbine temperatures and revolutions—all this is recorded regularly by this ingenious apparatus. In this way a complete and detailed up-to-date survey is obtained of each flight. These data can be analysed later on.

If KLM will decide to equip all aircraft with this recorder, it is certain that it will be simpler and more compact than the experimental model which weighs 135 kgs and measures 150 x 60 x 20 cms. During the test period this experimental model has been placed under the bench in the lounge of the DC-8. The automatic flight recorder has collected a wealth of data during this test, including indications of how the performance of the DC-8 fleet as a whole could still be improved.

Jet planes with their high fuel consumption may profit greatly from this apparatus. A slight deviation from the optimum speed may cause an additional fuel consumption of several hundreds of kilograms on a transatlantic flight. Turbine engines are extremely sensitive to any excess of the maximum admissible temperatures. The automatic flight recorder—so much more accurate and more rapid than human perception—records every deviation and thus supplies a clear insight in the performance and service life of the engines.

The recorder operates entirely without any supervision and registers the data on a magnetic tape. At Schiphol Airport the tape is processed in such a way that the data can be converted into legible matter with the aid of the IBM-705 electronic computer. One of the most important aspects of the use of this flight recorder is no doubt the possibility of spotting any technical trouble in time. In

practice it has been found that trouble becomes only apparent when it is clearly perceptible. With the aid of the automatic flight recorder it will be possible to locate any developing trouble more rapidly so that measures can be taken to prevent it. In course of time it will revolutionize maintenance methods completely. The data collected are now being studied by the KLM Research Bureau at Schiphol Airport, after which a second test period will probably follow.

A New QANTAS Record

A Qantas Boeing 707-V-Jet "City of Adelaide" set a new air record for any aircraft when it flew 3,980 miles non-stop from Singapore to Sydney in 6 hours 55 minutes on 17 October bettering the previous record by 17 minutes. This service flies each week non-stop Singapore to Sydney. Its average speed was 575 m.p.h. and carried 83 passengers.

DIRECT SERVICES

Qantas now operates once weekly direct service from Sydney to Djakarta and direct services from Singapore to Sydney and Brisbane. These new services followed the build-up from five to six weekly Boeing 707 V-Jet services a week each way between Australia and England via the Middle East. The Sydney/Djakarta service which operates out of Sydney every Saturday flies the 3,580 mile journey in 7½ hours or an hour less than the time taken by flights which normally call at Darwin on this route.

Every Tuesday a Qantas V-jet flies non-stop from Singapore to Sydney—a distance of 3,975 miles in 7 hours 35 minutes cutting an hour off times taken by aircraft which break the journey at Darwin. The non-stop flights from Singapore and Sydney are not the longest direct services on the Qantas routes.

Every Saturday a V-jet flies direct Singapore/Brisbane—a distance of 3,890 miles in just under 7½ hours, an hour less than aircraft calling at Darwin.

V-jets now fly Sydney to Manila direct—a distance of 4,100 miles.

The longest non-stop flight ever by a Qantas aircraft was Sydney/Hong Kong direct—a distance of 4,760 miles—but this was not a regular service.

The new Kangaroo Route schedules now allow for non-stop service once weekly between London and Cairo.

This particular service leaves London on Mondays and stops at only Cairo, Karachi, Calcutta, Bangkok and Singapore and then flies direct Singapore/Sydney—total flight time of only 22 hours from London to Sydney makes it the fastest service available between London and Sydney.

Company Reports

Had it not been for these two factors, the company's gross profit for the year would have been some Rs 43.60 lakhs higher than shown now.

In respect of allocations, Depreciation is raised to Rs 35.75 lakhs from Rs 28 lakhs, mainly due to a change in the rates of depreciation in respect of machinery and plant used at the Chemical Works. As the revised rates of depreciation are applicable retrospectively to the company's accounting year ended 30 June 1961, the total allocations to Depreciation and Development Rebate Reserve, made in last year's accounts, are now found to have exceeded the statutory requirements by about Rs 7 lakhs. Out of this excess of Rs 7 lakhs, the directors have decided to transfer Rs 4 lakhs to the Profit and Loss Account for the year under report. As there are no assessable profits this year after providing for depreciation, no statutory provision is being made for Development Rebate Reserve.

The decrease in profits is almost due to the loss of the larger part of the salt harvest, which necessitated the purchase of 1,25,000 tonnes of salt at an additional cost of Rs 26.60 lakhs. Another contributory factor was the cut of Rs 20 per tonne in the ex-Works price of Light Soda Ash, recommended by the Tariff Commission.

The production of Soda Ash during the year was 1,02,000 tonnes, an increase of 28 per cent over the previous year. The Dense Ash plant is now on regular production. The output of Sodium Bi-carbonate is higher than in the previous year and steps are now being taken to increase its production to 30 tonnes per day. The manufacture of Caustic Soda by the electrolytic process is continuing and will be expanded by the addition of a second batch of 28 Hooker Cells within the next few months.

DCM Repeats Despite Lower Profits

In spite of an increase in sales from Rs 35.89 crores to Rs 38.52 crores, the Delhi Cloth & General Mills Company Limited has reported a substantial decline in net earnings for the year ended 30 June 1962, mainly on account of higher provision for depreciation. The net profit, after providing for Depreciation and Taxation, amounts to only Rs 1.34 crores as against Rs 1.49 crores for the preceding year.

Apart from providing a sum of Rs 5.70 lakhs for General Reserve, the Depreciation amount is raised to Rs 90.85 lakhs from Rs 77.80 lakhs and Taxation to Rs 1.74 crores from Rs 1.71 crores. The provision for Development Reserve is lower at Rs 40 lakhs against Rs 50 lakhs and "Reserve for fall in prices" at Rs 40 lakhs against Rs 50 lakhs. The dividend on the Ordinary shares is, however, maintained at 13 per cent, subject to tax.

According to the directors' report that, notwithstanding adverse conditions of trade and the downward trends in the performance of the textile industry as a whole, the DCM has been able to maintain its position. The company has set up the nucleus of a Chemical Plant manufacturing section, which is undertaking fabrication and supply of equipment against outside orders. Two Sulphuric Acid plants, each of 50-ton capacity, have been designed, fabricated and delivered against such orders. One of these units has started operations and the reports of its working are very satisfactory.

In respect of the programmes for renovation and modernisation in the textile and other units, the directors state that the company has been granted an industrial licence for putting up another spinning unit at Hissar with a capacity of 23,000 spindles. The plant is expected to start production early next year.

The PVC project at Kota is progressing according to plan. During 1963, it is expected that the company's PVC will be on the market.

During the year, the company obtained a loan of 9.8 million dollars (about Rs 4.68 crores) from the United States Agency for International Development for meeting foreign exchange requirements of the Rayon Tyre Cord project.

Brooke Bond Tea Pays 7½ p.c. against 10 p.c.

Following a fall in the net profit from Rs 5.12 lakhs to Rs 2.94 lakhs, the Brooke Bond Estates India Limited has been able to pay a taxable dividend of only 7½ per cent for the year ended 30 June 1962 as against a taxable dividend of 10 per cent paid previously. This is mainly due to the fact that, although production has shown an increase in the manufactured crop by nearly 210,000 kgs, the average price realised per kilo is substantially lower at Rs 4.75 against Rs 5.31 previously.

The Depreciation amount is raised to Rs 2.88 lakhs from Rs 2.62 lakhs and Development Rebate Reserve to Rs 44,000 from Rs 5,400. The provision for taxation is, however, lower at Rs 2.85 lakhs against Rs 3.35 lakhs, while no allocation is made to Capital Reserve against Rs 21,986.

The directors state that there may be a surplus of plainer teas later in the year, which can have a depressing effect on the general level of prices.

Lower Profits for Okayti Tea

The Okayti Tea Company Limited has made a net profit of Rs 2.38 lakhs for 1961 as against Rs 3.16 lakhs for 1960, reflecting the decrease in the crop outturn from 101,473 kg to 99,223 kg as well as average price from Rs 9.95 to Rs 8.77 per kg. The Depreciation amount is raised to Rs 24,866 from Rs 22,649, while Taxation provision is lower at Rs 90,000 against Rs 1,24,500. No provisions are made for General Reserve and Development Rebate Reserve against Rs 7,000 and Rs 3,000 respectively. The dividend is maintained at 25 per cent less tax.

Year ended Dec.	1961 Rs.	1960 Rs.	1959 Rs.

For the Investor

INVESTMENT GOSSIP Outlook for Equities

For the first time ever, stock market operators in India have been obliged to analyse the implications of a war which threatens national security. Unlike the earlier wars in which we were not concerned, the present war with China calls for

THE INDIAN IRON & STEEL COMPANY, LIMITED.

NOTICE

At a meeting of the Board of Directors held today the Directors have recommended payment of a final gross dividend for the year ended 31st March, 1962, of 8% or Rs. 0.80 per share on the Ordinary Share Capital subject to deduction of tax at the appropriate rates. This final dividend, which awaits sanction by the shareholders at the Annual General Meeting to be held on Tuesday the 11th December, 1962, along with the interim dividend of eighty paise per Ordinary share being at the rate of eight per cent declared by the Directors on the 31st July, 1962, will amount to a total dividend of 16% or Rs. 1.60 per share on the Ordinary Share Capital for the year ended 31st March, 1962.

The net profit after provision of Rs. 3,35,24,699 for depreciation, Rs. 3,95,50,000 for taxation, and net transfer of Rs. 2,98,38,026 to Reserves is Rs. 2,24,90,390. For the previous year the net profit was Rs. 2,22,68,363, after provision of Rs. 2,96,46,835 for depreciation, Rs. 1,66,00,000 for taxation and net transfer of Rs. 3,11,13,302 to Reserves.

As announced at the time of declaration of the interim dividend, the final dividend if sanctioned will be paid to those shareholders whose names appeared on the Register for Ordinary Shares on the 13th August, 1962. Payment will be made to such shareholders or their mandatees on or after the 12th December, 1962.

By Order of the Board,
MARTIN BURN LIMITED,
S. GUPTA,
Managing Director,
Managing Agents.

Registered Office:
12, Mission Row,
Calcutta 1.
Dated the 30th October, 1962.

national preparedness of a thorough kind. While industrial production is to be kept up at as high a level as possible the emphasis will be on those industries which help strengthen national defence. The outlook for industrial profits is uncertain, since it will be near-treason to think of increased profits from higher selling price of manufactures as a result of increased demand. Holding the price line is as important as war preparedness during the national emergency.

The radical change in national thinking has been responsible for the steep decline in equities noticed a few days ago. Thanks to the emergency steps taken by the stock exchange authorities, the downward has been arrested. The fact that minimum prices have been fixed not only for the cleared shares but also for cash shares will ensure a measure of stability in equity prices. Even so, fresh buying is unlikely as long as the tension persists. The country has already witnessed in howsoever small a measure, the impact of the rising tempo of war effort. The needs of general industry will get a low priority. Industry has to make do with reduced transport and other facilities. The position with regard to foreign exchange allotment may well get worse in view of the priority that is to be given to defence purchases.

The chances of fresh funds flowing into stock markets are being reduced what with the tremendous response from the public to the call for donations to the National War Fund. The National Defence Bond issue that is opening next week and the new series of Defence Deposit Certificates afford an opportunity for people to help in the war effort with reasonable return to themselves. Subscriptions to these is bound to siphon off large amounts of money. In the meantime the Reserve Bank has announced certain changes in the system of quota and lending. The decision not to allow except in special cases any borrowing beyond the limit of 100 per cent of a Bank's statutory reserve will not be conducive to easy flow of funds to industry.

NEW ISSUE NOTES Central Bank

The Central Bank of India Limited Bombay, will raise further capital of Rs 3.15 crores (nominal) divided into 6,30,000 new ordinary shares of Rs 50/- each, to be issued for cash at a premium of Rs 10/- per share, Rs 25/- paid.

Bombay Suburban Electric

Bombay Suburban Electric Supply Limited, Bombay, is issuing capital of Rs 187.50 lakhs consisting of convertible debentures of Rs 37.50

lakhs and Mortgaged Debentures of Rs 1 crore

Precision Bearings

Precision Bearings India, Limited, Bombay, a new company, is raising Rs 105 lakhs in equity shares of Rs 100/- each for cash, at par. Out of this, shares of the value of Rs 30 lakhs will be offered to Norme-Hofmann Bearings Corporation, USA, and Rs 18 lakhs to IFC, Washington.

Trianthrene

Trianthrene Dyes, Drugs and Organics, Limited, Bombay, a new company, will issue capital of Rs 50 lakhs in equity shares of Rs 100 each for cash at par.

Nepa Chemicals

Nepa Chemicals Limited, a public company, registered in the State of Madhya Pradesh and engaged in the manufacture of heavy chemicals, is issuing capital of Rs 50 lakhs (including Rs 3.35 lakhs already issued) divided into 40,000 equity and 10,000 9.5% cumulative redeemable preference shares of Rs 100/- each, for cash at par.

Rajasthan Textiles

Rajasthan Textile Manufacturing Company Limited is to issue capital of Rs 40 lakhs, divided into Rs 17 lakhs in equity shares and Rs 9 lakhs in preference shares.

Yemmiganur Spinning

The Yemmiganur Spinning Mills Limited, Andhra Pradesh, is issuing capital of Rs 25 lakhs for cash, at par, divided into 20,000 equity shares and 5,000 9.3% (subject to tax) preference shares of Rs 100/- each.

Sen-Raleigh

Subject to the approval of the shareholders at the general meeting to be held on 19 November 1962, Sen Raleigh Industries of India Limited has proposed to raise Rs 65 lakhs of additional equity capital. Raleigh Industries of Nottingham, England, has agreed to subscribe about half of this amount, which will pay for the foreign exchange component of Sen-Raleigh's production programme to double present bicycle output. The additional capital will also help to raise bicycle chain output to 10,80,000 units per year consolidating Sen-Raleigh's premier position in the components market. Moreover, it will enable Sen-Raleigh to add house service meters to its range of production for which purpose technical collaboration is being secured with the Associated Electrical Industries Limited, UK.

More important, some of the plant to be imported will enable radical technical improvements in regard to several processes, immediately cutting down wastage or imported and scarce materials like bars and strips. The present processes in shaping components involve in many cases, about 60 per cent wastage of material. The cold-flow

or "cold forged" process, that will be substituted for the first time in India's bicycle industry, will reduce such wastage to about 20 per cent. In view of such an increase in production and its diversification along with the use of improved processes, Sen-Raleigh can be expected further to strengthen its sound financial position.

INVESTMENT NOTES HISCO

STOCK EXCHANGES

Sentiment Demoralized

Watch-Dog Writes:

REOPENING after the Diwali holidays, stock markets have given a discouraging performance with prices showing sharp and widespread losses. Anxiety over the developments on the NEFA and Ladakh fronts coinciding with the reimposition of the Cuban blockade by the USA have induced nervous liquidation in a market bereft of buyers. The declaration of the state of emergency has also affected the psychology of the operators. The Reserve Bank's further tightening of credit facilities to scheduled banks was another contributory factor. But for the authorities of the various stock exchanges having acted with commendable promptitude and instituted new measures, the activities of the bear operators would not have been checked.

Trading on the Calcutta Stock Exchange was generally confined to the clearing section, while the cash list was practically neglected.

On the Bombay Stock Exchange, prices sagged heavily on reports that the President of the stock exchange had asked some brokers to either reduce their holdings within the next seven days or alternatively to deposit the required margin before the next settlement.

Conditions on the Madras Stock Exchange were extremely dull and the general mood was hesitant.

CALCUTTA

Friday.

REOPENING on Tuesday after the holidays, the local stock market witnessed extremely dull condi-

tions. Although the news that the Chinese progress on the NEFA and Ladakh fronts had been halted inspired some confidence in the minds of the operators and the market started the week on a firm note, higher levels attracted considerable profit-taking. This was mainly due to the fact that the operators were in no mood to commit themselves freely following the various measures taken by the authorities to curb speculative dealings. Even the news of the Indian Iron & Steel Company Limited having maintained its dividend for the year ended 31 March 1962 failed to enthuse the operators.

As a matter of fact, conditions on the settlement day were far from encouraging as operators continued to liquidate their holdings in a market devoid of any support, resulting in prices drifting downward. With the result, the Stock Exchange Committee ordered for compulsory carryover of all accounts at officially fixed "salto" charges. Further, making-up prices, different from the usual closing prices of the settlement day, were fixed. Separate making-up prices were also fixed for the bulls and the bears.

Even the above measures seemed to have no effect on the market. For, subsequent news of the reimposition of the Cuban blockade by the USA and tightening of credit facilities to the scheduled banks in view of some inflationary pressure induced further liquidation, resulting in prices touching fresh lower levels. But for the recent imposition of heavy margins on fresh sales and the fixation of minimum prices, there would have been a continuance of the bear phase and further hammering down of prices.

The gilt-edged section presented a dull front with hardly any business worth the name. Buyers were few, while sellers predominated. Medium

and long-dated issues were on offer at the quoted rates, 3 per cent 1986 Conversion Loan moved down further to Rs 65.75 from the previous week-end level of Rs 66.60.

In the present crisis of the market, the news of the final dividend of the Indian Iron & Steel Company had not the favourable impact as expected. Against the closing rate of Rs 23.32 quoted in the special "Diwali" session on Saturday last, Indian Irons opened higher at Rs 23.74 and advanced further to Rs 23.82. Renewed selling pressure at this level brought down the scrip to close at Rs 23.30. TEXMACO were marked down to Rs 20.00 from a high of Rs 20.40 and Guest, Keen, Williams to Rs 35 from Rs 35.81. Jessop were on offer at Rs 22.00.

Despite firmer advices from the gunny market, Jute shares came in for restricted trading. Birlas changed hands at Rs 30.12 to Rs 30.37 while Ganges were easier at Rs 13.12 against Rs 13.19. New Central were, however, better at Rs 13.62 against Rs 13.50, thanks to the announcement of an interim dividend of 50 p.p. per share for the current year.

Coal shares were completely neglected with Burrakur being on offer at as low as Rs 16.12 against Rs 16.44.

Although better prices obtained at this week's auction had a favourable effect on the Tea section, dealings were few in the absence of buying interest. Hantapira were done at Rs 106.00 with Jay Shree changing hands at Rs 16.50 Rs 16.56.

Sugar shares continued to remain depressed. There was practically no business during the week. There was a general fear that the working results of the sugar mills during the 1961-62 season might be disappointing.

Textile shares were subdued following the Planning Commission's suggestion to fix a coarse cloth production quota for the mills. The only exception to the general trend were Dunbar, which were enquired up to Rs 27.37 from Rs 27.60. Kesaram were on offer at Rs 22.25 to Rs 22.81 and J. K. Cotton at Rs 15.00 to Rs 15.19.

Miscellaneous issues moved in sympathy with the general trend of the market. The exit of the decline in the prices of a few selected shares will be clear from the following table:

	Week's Week's Week's		
	High	Low	Closing

ROLE OF SOIL CONSERVATION

Soil conservation programme, being the only land improvement measure applicable to the vast unirrigated area, particularly in the drier parts of the country, should be placed in the same order of importance as irrigation. This observation has been made in a study recently conducted by the Programme Evaluation Organisation of the Planning Commission.

The study points out that unless the policy making and executive agencies in the States were strengthened and streamlined, the achievements of the Third Plan might not be realised.

The Community Development blocks and people's institutions, particularly block samitis and village panchayats, had an important role to play in preparing the villagers for bunding and other soil conservation work and including the cultivators to adopt conservation farming methods and practices.

In all, 22 districts were selected for the study. Field data were collected from 123 randomly selected villages, 87 covered by the soil conservation scheme and 36 not so covered.

The object of the study was to examine in the context of the Third Plan, the progress achieved in soil conservation extension on agricultural lands and to analyse at different levels the hindrances and difficulties encountered in administering the programme. It was also intended to assess, in a general way, the impact of the programme and its acceptance by the cultivators and to suggest lines of improvement.

Progress in Plans

The report says that the bulk of the achievement in soil conservation programme in the First Plan was in erstwhile Bombay state and in Madras. A total of about seven lakh acres of agricultural land was brought under soil conservation treatments in these two States. Some progress was also reported from Andhra, Gujarat, Kerala and Mysore.

Is the Second Plan, a sum of about Rs 18 crores was the total estimated expenditure on soil conservation programme in all States and Union Territories. About 2.3 millions acres of mainly agricultural land was covered by soil conservation treatment during the Second Plan period. Of this more than 50 per cent was in Maharashtra and between five and 16 per cent each in Madras Mysore and Gujarat.

As compared with the Second Plan, the Third Plan provision had been increased by about four times, and the target by five times. In the total provision for all States and Union territories in the Third Plan, Gujarat and Maharashtra accounted for nearly 50 per cent of the outlay.

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs.1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy : stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and tops the list of Bird-Heilgers exporting activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Hellgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

INVESTOR'S SUPPLEMENT

4 NOV 1982
"Equities" in the Doldrums
GOVERNMENT OF MADRAS
In October

Stock market sentiment remained depressed throughout October with equity prices recording sharp losses by the close of the month necessitating the imposition of special margins on blank sales and later an interim clearing. Trading during the month was first of all severely restricted on account of the long Pujā holidays on Lyons Range. For a time in the pre-Pujā trading, sentiment seemed to improve mainly on hopes of a favourable response to the representation of IISCO for a reconsideration of the Government decision on steel retention prices. But by the time the market closed for the holidays bull enthusiasm was once again at a low ebb partly because of discouraging production figures of IISCO for September and partly on account of the many uncertainties in the general investment situation.

Both investors and bull operators were chary of extending commitments in view of the declining trend in corporate profits. In the first place authorities made no secret of their intention to hold the general price line and that applied equally to manufactured articles. Because of the move it was believed that attempts at securing higher selling prices would meet with stiff opposition. There was also the question of the growing idle capacity in industry. Official pronouncements gave little hope of increased allotments. The report that a list of industries was drawn up with a view to allocating available foreign exchange to important industrial units only served

to emphasise the extreme stringency of foreign exchange. Similarly the fact that maintenance imports were to be yoked to export earnings failed to enthuse investors because of the stiffening competition in world markets.

markets. The post-Puja session found the market men on Lyons Range in no better spirits. One of the reasons for the continued depression was the delay in the announcement of the final dividend by TISCO. Even the news of maintenance of dividend by TISCO failed to engender optimism. Operators began to be greatly disturbed by the serious news from the Sino-Indian border and especially after the Prime Minister declared that the position was such that it was difficult to say where it would land the country. Before long, it became clear that it was no longer a question of a border dispute but a large-scale offensive by the Chinese. Developments followed in quick succession in the country and before the month was out preparations for meeting the national emergency were in full swing. The stock market operators found themselves in an entirely changed situation. Unlike previous wars, the Chinese invasion was a threat to be met by the country with all the resources it could mobilise. Hence as long as the

emergency lasts there can be no question of making large profits. On the contrary everything should be geared to the war effort and the profit motive was to yield place to a staunch determination to promote the defence effort in every possible way by one and all in the country. It is no surprise therefore that there was a steep fall in equity values. Even without a war to divert national attention, the corporate sector was not getting all it wanted. Although official spokesman continued to say that the Third Plan should be implemented, there was no gainsaying the need for pruning it in view of the vast resources that would be diverted to defence needs. Foreign exchange allotment would become much more stringent as large quantities of arms had to be imported. By the close of the month, therefore, there was panic in the stock markets with selling pressure increasing from day to day. The authorities of the stock exchanges first tried to stem the selling pressure by imposing margins on blank sales in cleared shares. An interim clearing was later ordered.

Sectionwise, Jute shares met with little interest throughout the month first in view of the steadily rising stocks of heavy goods with the

industry and then in sympathy with the general depression in the rest of the market. Even though prices in the gunny market improved toward the close of the month, the jute section failed to evoke enthusiasm as prices of equities elsewhere recorded steep declines.

Textile shares were under selling pressure partly in sympathy with the general trend and partly in view of the apprehension that mills would be obliged to produce a minimum quota of coarse cloth.

Extremely dull conditions prevailed in the coal section in the absence of incentives. The conditions of neglect in the section had continued for a considerable time as investors seemed to have rated prospects for private sector collieries rather gloomy especially after the meagre increase in selling price allowed by Government to the industry.

The main depressant in the tea section was the disappointing results obtained in the weekly auctions for some time. The indications that there would be a fall in North Indian tea production was another restraining influence. Even so toward the close of the month selected shares found some support presumably following an improvement in auction prices.

Sugar shares continued to be neglected as investors seemed to believe that last season's results of companies would not be very satisfactory.

(a) After transferring Rs 20,628 from General Reserve No. 1.

(b) After transferring Rs 81,000 from provision for contingencies.

(c) It is proposed to capitalise Rs 2,15,300 from General Reserve and issue Bonus shares.

(d) After transferring Rs 50,000 from General Reserve.

(e) After transferring Rs 151,000 from General Reserve.

(f) After transferring Rs 80,100 from Dividend Equalisation Reserve.

(g) After writing back Rs 645,151 being excess provision in previous years.

(h) After transferring Rs 500,000 from Rehabilitation Reserve Rs 2,19,943 being excess provision for depreciation; Rs 41,942 being excess provision for bonus and including Rs 18,428 being refund of income-tax.

(i) After transferring Rs 250,491 from General Reserve.

(j) After transferring Rs 250,000 from Dividend Equalisation Reserve.

(k) After transferring Rs 200,000 from Dividend Equalisation Reserve.

(l) After transferring Rs 300,000 from General Reserve.

(m) After transferring Rs 119,825 from Development Rebate Reserve.

(n) After transferring Rs 120,000 from Dividend Reserve.

(o) After transferring Rs 1,400,000 from Dividend Equalisation Reserve.

(p) After transferring Rs 1,137,451 from Contingency Reserve.

(q) After transferring Rs 500,000 from Reserve for taxation and Rs 201,988 from General Reserve.

(r) After transferring Rs 500,170 from General Reserve and Rs 47,990 from Investment Reserve.

(s) After transferring Rs 1,207,838 from General Reserve.

(t) After writing back Rs 289,747 being provisions made in previous year.

(u) After transferring Rs 200,000 from General Reserve.

(v) After transferring Rs 320,000 from General Reserve No. 1.

(w) After transferring Rs 98,240 from Dividend Equalisation Reserve.

(x) After transferring Rs 113,079 from General Reserve.

(y) After writing back Rs 63,183 being excess provision in previous years.

(z) After transferring Rs 450,000 from Dividend Equalisation Reserve.

(a1) After transferring Rs 1,075,000 from General Reserve No. 1.

(a2) After transferring Rs 100,000 from General Reserve and Rs 125,000 from Dividend Equalisation Reserve.

(a4) After transferring Rs 300,000 from General Reserve.

(a5) After transferring Rs 308,000 from General Reserve.

(a6) After transferring Rs 40,000 from Dividend Equalisation Reserve and writing back surplus provision of Rs 96,420.

(a7) After transferring Rs 750,000 from General Reserve and Rs 45,088 from excess provision for Bonus.

M A D R A S

(a) After transferring Rs 113,182 from provision for taxes.

(b) After writing back Rs 236,451 being excess provision no longer required.

(c) After transferring Rs 6,658,949 from General Development Reserve and transferring Rs 1,500,000 from Taxation Contingencies Reserve.

(d) After transferring Rs 1,300,000 from Taxation Contingencies Reserve and Rs 10,349,296 being General Reserve, (h) After writing back Rs 4,250,000 being Steel Prices Equalisation Reserve.

(e) After transferring Rs 75,343 being excess provision of taxation. (i) After writing back Rs 63,999 being excess provision of Development Rebate and Rs 571,425 being in previous years excess provision. (j) After transferring Rs 46,504,499 from General Reserve No. 1, and Rs 12,700,000 from General Reserve No. 2. (k) After transferring Rs 840,000 from Deferred Taxation Reserve.

(l) After transferring Rs 140,000 from General Reserve No. 1 and Rs 75,000 from General Reserve No. 2.

(m) After transferring Rs 5,659,790 has been increased to Rs 10,000,000 by capitalising a sum of Rs 4,340,210 from General Reserve and issuing as fully paid-up Bonus shares to the existing shareholders as per resolution passed at a meeting held on 10th May, 1962.

Banks and the Defence Effort

What the defence effort may be costing Government it is not possible to guess at with any kind of certitude; but some assessment can be made of the demands that will be made upon the money market and of the pressures that will be faced by the banking system. If, two months ago, it appeared greatly that, owing to slackening in the rate of growth of industrial production, the 1962-63 busy season would get off to a rather late start, it is now obvious that the situation has completely been transformed. There will be little delay in fostering production for defence; there will be little reluctance to ensure output and supplies for civilian needs. The result will be that, in the next few months, the expansion in bank Advances could conceivably set a new peak, comfortably exceeding during the busy season a level of Rs 200 crores.

But the Reserve Bank, in a move with which we are not in agreement, has set a limit on banks' borrowings; the objective of this measure is to engender greater caution and selectivity in banks' extension of credit. The rub is, that if prices are to be kept stable, financing of internal trade and commerce will be necessary on a greater scale than ever before; and the difficulty will be to glean out such demands for accommodation as appear to be intended to be used for the speculative withholding of stocks. At the same time, as we have already noted, both industrial and defence production has to be kept up at a high pitch. Inescapably, therefore, the banks will be called upon to meet a considerable increase in the demand for funds.

Partly the resources would be found from gathering Deposit accruals; the pace of flow of new Deposits has in recent months been satisfactory, and the Reserve Bank has itself expressed confidence in such a trend continuing. Partly the 100 per cent of quota of borrowings from the Reserve Bank could be pressed into service. But there would still remain a gap to be covered, and disinvestment in gilt-edged can decidedly be ruled out of order. Hence we believe that the Reserve Bank will be compelled, at the latest by the end of January, to relax its policy of restricting its loans to the banking system.

One final significant factor, that might somewhat reduce the need of banks to have recourse to central banking assistance, may be mentioned. The defence effort, as we have stated at the outset, will be costing Government dear. Without doubt Government will need to rely on deficit financing rather more heavily than it had budgeted for earlier this year. Created money, as we have seen during the Second Plan, does result in faster accruals to Deposit resources of the banking system. But there is, we repeat, the near certainty of the Reserve Bank relaxing its quota restriction before the end of January—despite the possible "windfall" Deposit accruals enabled by deficit financing.

But the financing of production—agricultural industrial and defence—will be merely one of the responsibilities that banks will have to shoulder during the emergency. Mobilisation of resources is equally essential, and for this purpose banks will need to open

up new branches in, monetarily speaking, virgin tracts. The cost involved in such expansion cannot be small, but it is a cost that in the national interest must be cheerfully borne. Studies made by the Reserve Bank show that it is the smaller centres that, during the Second Plan period, registered the proportionately highest increases in Deposits of the banking system. Logically, therefore, banks can best "mobilise" the economy by undertaking as swiftly as possible to reduce the size and magnitude of the "unmonetised" sector. By giving service those to whom banking is unknown must be persuaded to keep their funds with banks; and these funds, accruing as they would on top of the normal expansion in Deposit resources, would become available for financing every facet of production.

Furthermore it will become necessary for banks to subscribe directly to Government's borrowing efforts in behalf of defence needs. The 44 per cent National Defence Bonds are to be available on tap for a specified period of months. The banking system must decide of its own accord that it will set apart 25 per cent of all new Deposits for investment in the Defence Bonds.

Bank labour for its part must also rise to the occasion. It has recurrently been the unvoiced complaint of managements that "productivity" of bank labour has been low. Improved efficiency will lead to reduction in costs, and such a reduction is necessary, if banks are to be able to pay for the new branches that they need to open.

Investors in bank shares have also to be prepared for a measure of sacrifice. While fuller utilisation of resources that can be expected from an energetic production drive will add to profits, it needs to be remembered, firstly, that part of such additional earnings will be offset by branch expansion programmes and, secondly, that in order to hedge against risks inherent in financing defence production both published and inner reserves have to be strengthened more massively than has been the case in recent years.

Every industry will be gearing itself to the needs of the defence effort. By far the crucial sector will be banking. Defence production must be financed. To cater to civilian needs and to ensure stability in price behaviour there needs to be uninterrupted flow of credit for industrial production. The seasonal or busy season financing has to be undertaken. Banks will have to make doubly sure that their scarce resources do not become available for anti-social and treasonable withholding of commodities in short supply within the country. Money lying idle in the countryside has to be mopped up through a vigorous branch expansion programme. Government's borrowing programmes have to be supported.

Here is an opportunity for Indian banking to show what stuff it is made of. Let us hope that next week's meeting of the Indian Banks' Association will draw up a clear-cut plan of its role in the national emergency, and how it proposes to meet the challenges that face it.

SOUTHERN BANK LIMITED

(Scheduled Bank)

Head Office: 24, NETAJI SUBHAS ROAD, CALCUTTA-1.

Phone: 22-5988 & 22-5989

Branches:—Burrabazar, Shyambazar, Bhowanipur, Basirhat & Khulna.

...WRONG? NO. ARITHMETICAL JUGGLERY? NO.

It's the magic of the **RECURRING DEPOSIT SCHEME**—our latest savings scheme. You deposit, say, Rs. 10 every month in this account, and it becomes Rs. 383 in 36 months; Rs. 521 in 48 months; Rs. 665 in 60 months. An attractive scheme, it makes regular saving a habit—a good, profitable habit. For, month by month, your account grows, earning compound interest. You can save larger amounts too, in multiples of 10, upto Rs. 1000 per month.

For full information, please ask for a copy of the Rules of our **RECURRING DEPOSIT SCHEME**.

THE BANK OF INDIA LTD.
T. D. KANSARA, General Manager

World of Finance

GOLD BONDS

Success Assured

WILL the gold bonds be a success? That is to say, are they commercially an attractive proposition? Some element of support for the gold bonds can be expected on the score of patriotism, but if any worthwhile or significant amount is to be raised through gold bonds, a precondition is that the gold bonds are thought of as offering enticing opportunities for investment. We may state at the outset that we believe that the response to the gold bonds will be more encouraging than appears to be the possibility at a first and hurried assessment.

What is the species of gold that Government hopes will be exchanged for the bonds? Not, let us be clear in our mind, ornaments or jewellery. For the market value of gold ornaments includes the making charge; and this would be lost to any intendant subscriber to the gold bonds; similarly, secondly, the fineness of gold used in ornaments is lower than would be acceptable as subscription to the bonds—and the would be tenderer of ornaments would again stand to lose. Thus it is primarily gold in the form of bullions and coins that will be attracted to—or is intended to be attracted by—the gold bonds.

Who are the holders of bullion gold or coins? To some degree any Indian family may be said to possess gold of this sort, set apart for a marriage in the family or for some particular religious ceremony. The call to patriotism, and the prompt response, may conceivably result in a quantity of gold being "de-hoarded." But in the main it is the gold coins and bullions representing incomes on which tax has not been paid which necessarily must account for the bulk of anticipated receipts from the sale of bonds.

The question therefore, is there sufficient incentive for holders of such tax-free gold now to come forward and tender it to Government? We believe that the answer is "Yes".

Firstly, as heretofore, such owners of gold will not be liable to wealth tax—assurance in this regard has been given.

Secondly, no questions are to be asked as to how the gold was purchased—the assurance is that income-tax will not now become payable retrospectively.

But there would remain a snag. To abide by the regulations of the International Monetary Fund the Government may not purchase gold at a higher price than the equivalent of \$35 an ounce; for any higher price would be tant and de facto admission of depreciation of the Rupee. But the "free" price of gold is much higher in India than the value set upon gold by the IMF. Government has sought to get over this difficulty by offering the very attractive interest coupon of 6½ per cent; and with the bonds maturing in 15 years the gap between the two prices will be wholly made up by the interest payments. The subscriber to the gold bonds, it is true, is not a gainer, because the interest he receives will merely "make up" for his loss on the basis of the "face value" of the bonds. But in any case the gold holder was not earning interest on

his sterile hoards of gold; and the attraction would be that he is offered the alchemic opportunity of converting tax-evaded wealth to legitimate resources; and at the same time he would have done service by his country.

Again, in the short run, the gold bond is likely to quote at the ruling "free" price of gold in this country; for subscription to the bonds can be made only in the form of gold. Any purchaser of gold bonds could therefore in time of his own need dispose of them and credit the proceeds to his account for meeting his business expenditure. It may be noted that such seller of the bonds would notionally be making capital gains, being the difference between the sale price (which would depend upon the ruling "free" market price of gold) and the purchase price (determined in accordance with the value of gold fixed by the IMF). But here too the snag has been got out of the way, with the assurance that no capital gains tax would be levied on profit from sale of the bonds.

One estimate made of gold in this country placed its value at over Rs 4,000 crores; in terms of the international price the value would be somewhat under Rs 2,000 crores. But the Government can count the bonds a success if total subscriptions (at the international price) add up to Rs 100 crores, or just 5 per cent of the gold in this country. It will be a sad commentary upon the national character if subscriptions of this order fail to come forth.

RBI

Revised System of Lending

The Reserve Bank of India has notified all Scheduled Banks of the following changes in the system of quotas and lending rates, for both bills and Government securities, regarding the borrowings of banks from the Reserve Bank. As at present, a bank will be able to borrow up to 100 per cent of its basic statutory reserve at different rates up to 6 per cent, as follows:

Rate	Quota for Borrowing
4 per cent	25 per cent statutory reserve
5 per cent	Another 25 per cent of statutory reserve
6 per cent	Another 50 per cent of statutory reserve

But the Reserve Bank will not normally permit any borrowing beyond this limit, viz., 100 per cent of a bank's statutory reserve. Should any bank find itself in a special situation requiring further assistance over and above its ceiling limits, the Reserve Bank will consider the grant of such assistance only after making a detailed assessment of the bank's overall position and satisfying itself that the additional accommodation is justified. A penal rate of interest will also be charged by the Bank for such special accommodation. The Bank at present grants additions to basic quotas of individual banks (viz., 25

per cent of statutory reserve which is permitted to be borrowed at bank rate) equivalent to the excess of a bank's lending to small industries and co-operatives during each half-year over the corresponding half-year of the previous year. This is intended to stimulate the supply of bank credit to this sector, based on current performance of banks in improving the flow of credit to small industries and co-operatives. It is necessary to ensure that the overall ceiling set by the Bank on banks' borrowing from the Reserve Bank is not extended owing to operation of this scheme of additions to basic quotas. Arrangement is, therefore, being made to offset the addition to basic quota of a bank by adjustment in its borrowing quota at the higher slab rates (viz., at 5 and 6 per cent).

In recent months economic trends in the country have given evidence of some inflationary pressure. With a fairly high rate of increase in money supply and a comparatively slow expansion in production, prices have hardened. The external payments situation remains difficult. The recent turn of events on the northern border makes it all the more incumbent to take adequate precautionary measures to ensure stable economic conditions for both development and the defence effort. One of the measures necessary is to prevent any excessive impact of money supply on the economy. The rate of Deposit accretion to the banks has in the recent past been fairly satisfactory. The prospect of future growth of banks' Deposit resources is also rated as good. In view of this, it appears clearly advisable that the credit policy in the impending busy season should, to start with, be operated in terms of a ceiling for banks' access to the Reserve Bank. The ceiling could be relaxed, if necessary, on a detailed assessment of its operations and credit requirements in any particular case. This policy should cause little difficulty to banks as, by all indications, they should be able to meet the normal demands for expansion of credit during the forthcoming busy season with only marginal recourse to the Reserve Bank. On the other hand, this policy will ensure that banks will renew and sanction Advances only where they feel it is fully justified and thus restrict their access to the Reserve Bank to the minimum necessary. The Bank expects that these measures, inter alia, will, in the current situation, strengthen the incentive of the banking system to mobilise Deposits further.

EMERGENCY

Defence Savings Certificates

The Government of India announced last week the issue of 4½ per cent 10-Year Defence Deposit Certificates and 12-Year National Defence Certificates with effect from 10 November 1962 and 15 November 1962 respectively. These would be in replacement of the existing 4 per cent 10-Year Treasury Savings Deposit Certificates and 12-Year National Plan Savings Certificates.

It is now announced that purchasers of the existing 10-Year and 12-Year Certificates on or after 1 November 1962 will have the option to get their Certificates exchanged for the new Certificates of an equivalent amount. In other words, the advantage of the increased return on the new Certificates will be available to Certificates purchased on or after 1 November 1962.

BANK RETURNS

Impact of Defence Spending

The returns of the Reserve Bank for 2 November reflect not only the demand for funds arising from month-early disbursements but also the pressure upon Government in respect of the defence effort.

Active Note Circulation has expanded by Rs 14.58 crores to Rs 2,063.79 crores, and there has been outflow of Rupee Coin for Rs 1.68 crores. Currency has been expanded for Rs 20 crores against Rupee Securities by transfer from the Banking Department; and the Reserve Bank's cash in the till moves up by Rs 3.74 crores to Rs 21.48 crores. Foreign Securities are unchanged at Rs 88.08 crores.

The return for the Banking Department shows that Investments despite the transfer to the Issue Department are higher by Rs 16.55 crores at Rs 159.80 crores. Part of the increase, or just under Rs 13 crores, can be traced to State Bank disinvestment in gilt-edged during the week. It would nevertheless appear that deficit financing has been instituted for about Rs 25 crores. Part of this, again, has been used by the Centre to meet the maturing liability in respect of about Rs 9 crores of Treasury Bills purchased and discounted by the Reserve Bank. The balance of deficit financing has patently been undertaken because of defence needs: for the Centre's balances, the created money notwithstanding, have moved down by Rs 1.06 crores to Rs 49.95 crores. State Governments report a small rise of Rs 0.23 crore to Rs 10.38 crores in Deposits as also a fall of Rs 3.06 crores to Rs 16.54 crores in ways and means borrowings from the Reserve Bank.

The demand occasioned by beginning of the month disbursements has compelled the Scheduled Banks to draw down their Reserve Balances by Rs 6.89 crores to Rs 72.38 crores; but in the event they have been able to reduce indebtedness to the Reserve Bank by Rs 3.37 crores to Rs 5.97 crores.

It may be recorded, lastly, that Balances Held Abroad show a welcome rise of Rs 1.05 crores to Rs 5.54 crores; and foreign assets in the possession of the Reserve Bank now exceed Rs 93½ crores.

Beginning of the month demand for money has denuded the Deposits of the State Bank, as at 2 November, by Rs 5 crores to Rs 576.93 crores; and the institution's total of Advances has also risen by Rs 2.03 crores to Rs 270.66 crores. The bank has disinvested in gilt-edged for Rs 12.70 crores, but even so, with Other Assets marked up by Rs 8.31 crores, cash balances have dropped by Rs 4.50 crores to Rs 20.25 crores. A change of unusual magnitude is the rise of Rs 1.52 crores to Rs 10.41 crores in the Other Authorised Investments of the State Bank. What is the nature of the purchases?

Deposits drain and expanding Advances have been experienced by Scheduled Banks during the week ended 26 October. Net Demand Deposits are lower by Rs 13.27 crores to Rs 901.84 crores, but this has been partly offset by the rise of Rs 1.40 crores to Rs 38 crores in net Time Deposits. The total of Advances has climbed up by Rs 9.78 crores to Rs 1,393.87 crores. The increase of about Rs 14 crores to Rs 711.16 crores in gilt-edged investments is mainly on account

of the State Bank. So, additional borrowings were inescapable: while indebtedness to the State Bank is down by Rs 1.86 crores at Rs 20.76 crores, borrowings from the Reserve Bank have increased by Rs 7.32 crores to Rs 9.08 crores. Lastly, the net result is a small decline of Rs 4.03 crores to Rs 199.89 crores in cash balances, including money at and short notice.

Lend-Lease For India?

By Paul Einzig

Speaking in the House of Commons on behalf of the Opposition Mr Harold Wilson urged the Government to initiate a scheme on the lines of the war-time lend-lease in order to support India more effectively in its struggle against the imperialist invasion by Communist China. The alacrity with which the Government spokesman, Mr Heath, accepted the suggestion subject, of course, to its acceptance by the Government of India—indicates the spirit that prevails in British official quarters about the question of aid to India. It is not often that a Government takes in a matter of minutes a decision which might easily entail the expenditure of millions, possibly tens of millions, or even hundreds of millions of the taxpayers' money. But the British Government and British public opinion have fully realised what what is at stake. I am convinced that, should the need arise, financial support and military support would be forthcoming to the full extent required in order to save India from the Chinese invasion. The delivery of supplies of arms on a non-commercial basis, suggested by Mr Wilson, would only be a first step and would be followed by arrangements to supply India with everything it needs for its defence right to the limit of possibility.

Several speakers stressed the need for helping India to help itself—that is, to facilitate its exports so that it should be able to pay for at least a large part of the abnormal increase of its imports. The United States and the countries of Western Europe together with Britain and the Commonwealth countries (with the notable exception of Ghana) could between them absorb a very substantial amount of additional Indian goods. There is yet another way in which India could be helped, which has not been suggested so far in any quarter. It is through a limited remonetisation of silver. If the governments friendly to India agreed to accept silver at current market prices in payment for Indian purchases this would enable India to mobilise an immense amount of silver hoarded in the

country. A large proportion of the patriotic contributions by Indians toward the defence funds consists of silver coins or objects. Unless arrangements are made for increasing the absorbing capacity of the West for such silver its export by India is bound to cause a setback in the London and New York price of the metal. If only the leading Western governments were to agree to include in their metallic reserves a certain amount of silver this would create such a potential demand that the price would tend to increase rather than to decline. I can see no valid objection to this proposal. It is to be hoped that the Government of India would take it up with the friendly governments.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on 6 November 1962. Total amount offered was Rs 2,04,00,000. Tenders at Rs 99.415 per cent and above were accepted in full, and those at 99.410 per cent were allotted approximately 98 per cent. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.360 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 12 November 1962. Successful tenderers should make payment on Friday, 16 November 1962 at all centres. Other conditions are as usual.

During the week ended 2 November 1962 Government of India Treasury Bills for Rs 81,21,75,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 7 November 1962 to 10 Nov. 1962 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 31 October to 3 November 1962 amounted to Rs 13,00,000.

NDF Crosses Rs 1 Crore Mark

Upto 6 November 1962 an amount of Rs 1,20,00,000 has been received by the Prime Minister toward the National Defence Fund. In addition, gold equivalent to 1,400 tolas was also received and credited to the fund. The amount of gold and cash is exclusive of the donations made directly to the State Bank of India.

EMERGENCY

Gearing Steel to Defence Needs

With the new situation created by the Chinese aggression on our frontiers, shifts in production pattern to meet the defence requirements have become an urgent and inescapable necessity. One of the most important sectors that requires special attention in this regard is steel production. Already the Authorities have shown a wholesome awareness of the importance of steel production in the defence preparations and it is understood that the three steel units in the public sector have been asked to gear their production pattern to defence requirements. The technical feasibility of such a change is not expected to throw up any insuperable problem. Already a process of rationalisation is under way with emphasis on higher production of fewer sections in the three steel plants.

Among the three public sector steel plants, Rourkela is better equipped than the other two to meet the emergency requirements particularly because it specialises in the production of "flats" vitally needed for the manufacture of armaments, trucks,

etc. For this reason, the plant at Rourkela should permit of easier adaptation for production for defence purposes. The recent smooth working at Rourkela should in this regard be a matter for gratification. There has been a substantial increase in the capacity production attained not only in respect of iron, but also of ingot steel and finished products. Production of iron during October amounted to 72,523 tons and represented attainment of nearly 95 per cent of the production capacity. The ingot steel capacity also rose to 76 per cent in October as compared with 70 per cent in September, actual production being estimated at 63,072 tonnes and 57,600 tonnes respectively. Substantial increase has also been registered in the production of major finished products like plates, pipes and sheets. Considering the shortfalls at Rourkela last year, the step-up in its working should be held to be heartening. With increased steel production being a primary requisite for the success of the defence efforts, it is incumbent upon the authorities to see that nothing stands in the way. Special attention must be bestowed to the raw material and transport requirements to facilitate higher output. In this light, the suggestion to use coastal ships for transport of some categories of steel required by States in the South and the West should be welcomed.

Orissa Shows the Way

The country has rallied in a spectacular manner behind the Prime Minister in facing up to what has turned out to be most serious challenge to our sovereignty. This awakening of the dormant feelings of national solidarity is the most heart-warming development in the face of the threat posed by Chinese invasion of our frontiers. There is not another instance in history so far when a country's people have come forward with such generous offers of help and assistance for the war effort. In the wake of the appeal made by the Prime Minister contributions to the national defence fund have been pouring in overflowing measure from all classes and quarters. That people should feel the need even to part with gold (which in normal times cannot be lured by any means) is a measure of the sacrifice which the

people are prepared to undergo in defence of the country's hard-won freedom. While contributions have taken all conceivable forms the action of the Orissa Government in setting apart an amount of Rs 1 crore to be sent to the Prime Minister is a singular one. This was done at last week's meeting of the Orissa Legislative Assembly and it is remarkable that the voting in favour of such a measure to transfer Rs 1 crore to the Centre was unanimous. This reflects the overwhelming sentiment in the country to spare nothing by way of resources mobilisation to help the war effort. Orissa is the first example of a State which has come out with such a gesture. On present indications mobilisation of money for defence purposes should present the least problem. On the other hand the problem is to create the requisite machinery to ensure speedy collection and its prompt canalisation to the Centre. The present multiplicity of agencies is not desirable as it leads to needless duplication of effort besides also opening the door to possible misuse. In this connection the scheme whereby the five leading banks have agreed to accept collections at all their branches has to be commended as the most desirable in the present conditions. This would go a long way in streamlining the collection machinery and considering that the transfers will be made free of any charge should also result in saving in cost.

Grow More Food

The present emergency brought about by the ruthless Chinese aggression calls for thorough-going national preparedness. The battle fields are not the only places where the war is to be waged; it is also to be fought at our factories and farms. As the Prime Minister has put it, for every Jawan who fights in the front, there should be quite a few people working to the best of their abilities in the fields and factories to keep him well supplied with food, fighting equipment, clothing and other essential things. But there is one basic thing that is to be provided for all: food. Failure to ensure adequate food supply will thwart the defence effort. The need of our armed forces has no doubt to be given top priority. But for a successful defence effort, the basic needs of the population at large have to be met. It is, therefore, of utmost importance that food is available in sufficient quantity and at reasonable prices. Thanks to the satisfactory food situation in the country at present, it should not be difficult for the authorities to ensure that food supply is adequate. With a view to strengthening the position still further, Government is reported to be seeking additional supplies of wheat and rice from the US. Presumably this additional supply

is specifically to meet the requirements of the armed forces.

But the need for achieving self-sufficiency in food cannot be over-emphasised. The fact that the food supply position has been greatly augmented by PL 480 imports from the US should not be allowed to engender a false sense of self-sufficiency. A nation which wants to take big strides in industrialisation cannot hope to attain its objective, if it slips up in one of the vital sectors of its economy. Apart from the drain massive food imports involve on the national exchequer, to be dependent perennially on outside sources for food supply when our entire requirements can be produced within the country itself is humiliating in the extreme. The record of our achievement during the Second Plan is not quite satisfactory. As against a target of 80.5 million tons, production in 1960-61, the last year of the Second Plan, amounted to only about 78 million tons. A redeeming feature, however, is that while the increase of 17 per cent in agricultural production during the First Plan was almost entirely due to an increase in acreage, the increase in production by about 16 per cent during the Second Plan is almost entirely due to increased productivity. The Third Plan envisages food grain production in 1965-66 at 100 million tons. When this level is reached there will be increased per capita availability of food from 16 oz in 1960-61 to 17.5 oz per day in 1965-66. Although there is an appreciable increase in outlay on production programmes in agriculture to about Rs 1,280 crores as compared with the Second Plan outlay of Rs 667 crores, the target may prove elu-

sive as food production is still largely dependent on weather conditions. In order therefore to minimise the effects of the vagaries of weather, concerted steps have to be taken to increase the yield per acre. A measure of success in this direction has been achieved during the Second Plan. Emphasis on this aspect is placed in the Third Plan also as will be evident from the anticipated yield in the course of the next few years. As against a yield per acre of 575 lbs achieved during the period 1956-57 to 1960-61, the average yield per acre is expected to be 670 lbs during the Third Plan period.

The present emergency has stimulated urgent consideration of the problem of food supply. At this week's meeting of the National Development Council in New Delhi, Mr S. K. Patil, Union Minister of Food and Agriculture, has outlined a new programme for maximising food production during the current Plan period. Further intensification of effort toward increasing food output beyond the Third Plan target is to be made by an upward revision of targets under certain development programmes. In revising the targets, the main considerations have been quick results, and non-dependence on foreign exchange and scarce raw materials. Minor irrigation was originally given a target of 12.8 million acres. Now it is to be raised to 19 million acres. The target for soil conservation has been increased to 16 million acres from 11 million acres while that for dry farming has been more than doubled to 50 million acres from 22 million acres.

The new targets afford a great opportunity to the agriculturists to demonstrate their patriotism. For in the extension of minor irrigation, soil conservation and dry farming, even individuals and small groups can participate without waiting for official direction or help. The Planning Commission has noted that these development programmes have so far largely failed to arouse the enthusiasm of farmers. And these programmes if carried out in right earnest can go a long way toward minimising the vagaries of the weather and increasing the overall foodgrains output.

Mr Heath on Lend-Lease

Britain's Lord Privy Seal, Mr Edward Heath, speaking in the House of Commons debate on the Queen's Speech, said on 31 October that the Government and the Opposition were united in the shock felt at the Chinese aggression on India.

Earlier, speaking for the Opposition, Mr Harold Wilson suggested that a massive lend-lease programme should be instituted to

help India. The Government agreed to examine this possibility.

Mr Heath said it was only five years ago that China signed with India the Five Principles of Co-existence and it was, therefore, "deplorable that this aggression should have occurred". The invasion had clearly been premeditated and carefully planned.

He said that the Government had been in close contact with the Indian Government since the beginning of the invasion to see how Britain could best help India. The first consignment of small arms was on its way by air within a few hours of the request being made. He went on: "We are now examining urgently other inquiries which have been made about different equipment." Britain, he said, had been heartened by the support of the United States for the Indian Government in a similar way.

Mr Heath assured the Opposition: "We will do everything possible to help India in this situation, both in aid of the kind described and also in trade with this great country."

"We will examine speedily the suggestion put forward by the Opposition for a lend-lease arrangement for India and discuss with the Indian Government to see whether this is a method by which we can help them further, and to see whether this is a means which would be acceptable to them."

He said the Government had also discussed the situation in a general way with the Pakistani Minister of External Affairs. It was their impression that Pakistan recognized that the invasion of India was a matter of grave concern to the whole subcontinent. He said: "In these circumstances we feel quite sure that Pakistan will not wish to take any advantage of the situation."

"The Government have the most profound sympathy with Mr Nehru and the Indian people, and fully understand the position they are adopting."

He went on: "We urge most earnestly the Chinese Government to show a proper understanding of the situation before events have moved too far."

Grants or Loans: Rupees or Dollars

America has indicated that it will do all it can to ease India's acquisition of arms needed in the face of the attack by the Chinese Communists. Terms under which arms will be furnished have not been fully determined but they could include outright grants, long-term loans, sales for rupees or sales for dollars. Responding to questions from newsmen, the State Department Press Officer, Mr Lincoln White, said that India would pro-

bably prefer to pay cash and in dollars for the US arms and equipment but that in view of the magnitude of India's needs, other terms are being considered.

When Mr White was asked if the United States had made any approaches to India and Pakistan with respect to their long border dispute, he replied: "There are a number of unfortunate differences between India and Pakistan for which solutions so far have not been found. However at the present moment the most urgent and potentially dangerous development on the subcontinent is the unwonted Communist Chinese aggression directed at India. Both India and Pakistan are aware of our views on this point." But he declined to comment on a reported US communication to Pakistan.

COTTON TEXTILES

Downtrend in Exports Continues

Figures of cotton textile exports in the first eight month of 1962 show continuance of the declining trend that has been noted in the last two years. From a level of 850 million yards in 1959, exports of cotton textiles went down to 724 million yards in 1960. The fall in exports that occurred in 1961 was of an equally serious order in as much as exports amounted to only 603 million yards. It was exports to the UK, the principal market for the Indian product, which registered the major decline in 1961. UK's imports of Indian cotton textiles in 1961 were 60 million yards less than in the previous year. Export promotion with reference to the cotton textile industry acquires transcendental importance in the context of the new situation created by Chinese aggression and the resulting need for increased requirements of foreign exchange. The object should obviously be not only to reach the Third Plan target for cotton textiles export but to exceed it.

The main obstacle to increase in exports has been the uncompetitive price of the Indian products resulting from the high cost of production in the country. That this should be so is not unnatural considering the preponderance of worn-out machinery and the "ther ratio of labour to machinery which are the characteristic features of Indian cotton textile manufacture. The backlog of modernisation and rationalisation is heavy and is capable of being solved only in a gradual manner. The effect of the low manufacturing efficiency has been further aggravated by physical impediments to higher production like shortage of raw cotton. In 1961 particularly the shortage was severe and underlined the need for effective measures for increa-

sing cotton output in the country itself. It is heartening that this aspect of the problem has received considerable attention from the Government which has drawn up package schemes for increasing cotton production in the short run.

One important factor that clouds prospects for exports of cotton textiles is the attitude of the countries of the European Common Market to cotton textile exports from the developing countries. With Britain having agreed to impose the common external tariff in a phased way on imports from the Commonwealth countries, a further setback might be experienced when Britain joins the EEC. Though the Common Market countries have given the assurance that the situation will be watched for any adverse effects, such assurance may not avail in the face of an actual decline that may follow the imposition of the external tariff. It is therefore necessary that the country spares no efforts to stimulate increased exports of cotton textiles. As part of the export promotion measures, Government has made exports obligatory upon every individual unit in the country. Among the significant incentive measures that have been promised to the units for stepping up export is increased import entitlement for machinery. This in itself is a useful measure and should help, particularly in the rehabilitation and modernisation of cotton textile machinery. But facilities and incentives have to be further liberalised in view of the imperative need to increase foreign exchange earnings.

EEC

Indian Exports Discussed

The three-day ministerial session on Britain's negotiations to join the European Economic Community ended last week with discussions on the problems of India and Pakistan. The six Common Market countries put forward their ideas—which for the most part the British delegation found somewhat disappointing. The next ministerial meeting will begin on 15 November.

Three separate subjects were discussed at the meeting just concluded in Brussels: the request that negotiations for comprehensive trade agreements with Pakistan and India should begin immediately on Britain's accession to the enlarged Community; the request that there should be a tariff suspension while these agreements were being negotiated; and the request for nil tariffs on the nine products on which no agreement was reached in July.

The first point has been met by the Six and it was agreed that negotiations for the trade agreements will begin "within three months" after Britain's accession.

S. T. SADASIVAN
General Manager

On the second point the Six said they were unable to accept a tariff suspension while agreements were negotiated because this would upset the balance of the provisional agreement which has already been reached. But they did not exclude the possibility that, at the end of the present negotiations for Britain's entry, some way might be found of improving the trade arrangements for India and Pakistan.

It might at that stage be desirable to simplify the decalage arrange-

ments (for the gradual application of the common external tariff of the Community) in all the provisional agreements so far reached. In that case, India and Pakistan would be given the most favourable treatment and this might help them.

The British Lord Privy Seal, Mr Edward Heath, stressed the political importance of avoiding damage to Indian and Pakistani trade while trade agreements were being negotiated, and he emphasised the importance which the

Indian and Pakistan Governments placed on what might seem to European countries to be minor items of trade. The fears and apprehensions of the Indian and Pakistan Governments are very real.

Mr Heath noted that the Six had given careful consideration to all these factors and had concluded that a tariff suspension would upset the balance of the provisional agreement reached. But he welcomed the idea that the arrangements for India and Pakistan

would be looked at again with the idea of improvements.

On the nine products, the Six said these would all be dealt with in the comprehensive trade agreements. Meanwhile, they proposed the partial suspension of the tariff from the moment of Britain's entry until the completion of the trade agreements or the end of the "Kennedy round" in GATT.

The duty suspensions would reduce the effective level of the common external tariff as follows:

East India kips from 9 to 3 per cent.

Heavy duty goods: new jute bags from 23 to 20 per cent and used jute bags from 11 to 9 per cent.

Hand-knitted carpets from 32 to 28 per cent.

Coir mats and matting from 25 to 20 per cent.

Castor oil from 8 to 7 per cent.

There was no proposal from the Six on linseed oil. For shellac, lemon-grass oil and handloom products, subject to technical arrangements, there would be a nil tariff.

Mr Heath told the Six that these proposed tariff reductions were very small and disappointing. For example, on East India kips (partially tanned hides) there was an important British industrial interest as well as an Indian interest because the British leather industry used them as basic raw material.

The Six said that they had spent several hours in working out their proposed tariff reductions and they did not see how they could improve their offer.

After discussion, it was agreed that Mr Heath should circulate a memorandum about British interests in the various products concerned and that the matter should be reconsidered at the next meeting of Ministers.

LABOUR

More on the Live Register

An analysis of the employment situation in India in July does not reveal any significant variation. In contrast to the preceding month, registrations at the various employment exchanges recorded a sizable increase of 34,483 or 9.8 per cent. Applicants on the live register at the end of the month also looked up to 21,46,981 from 20,62,917. Similarly, there was an overall increase to the tune of 6.1 per cent in the number of vacancies notified to the employment exchanges. Vacancies in both the private and public sectors registered and the number of employers who utilised the services of the exchanges rose to 12,701 from 11,886 in June 1962. Placements effected in the same month also went up to 41,878 from 39,248.

Total closures in Andhra Pradesh, Gujarat, Madras, Mysore, UP, Punjab, Delhi and Tripura amounted to fifty-five, out of which nineteen were ascribed to the end of the season, two to uneconomic operation and financial stringency and due to the levy of excise duty while the reasons for the closure of the remaining were not available. States furnishing information reported twenty-four cases of retrenchment in which 1,084 employees were thrown out of employment on account of completion of work, heavy accumulation of stocks, surplus labour force, slackness of business and economic

measures. Likewise, 4,547 workers were laid-off in 65 cases owing to paucity of raw material, work, coal, failure of power and defects in the machinery employed.

The prospects for the better utilisation of the able-bodied unemployed in the country are encouraging as a result of the declaration of emergency which brings to the fore the need for waging war not only on battle fronts but in other productive spheres as well. Industrial as well as agricultural production has to be stepped and this means more jobs.

Disputes in July

A study of the returns pertaining to industrial disputes in July last in Bihar, Maharashtra, Uttar Pradesh, West Bengal and Delhi gives a comprehensive account of the origin of and the resultant losses from them. The strikes notified by these centres involving 1,000 or more workers in the month have resulted in a total

time-loss of nearly 150,000 man-days, wage-loss of over Rs 4.3 lakhs, and production loss in one instance estimated at nearly Rs 2.8 lakhs. In the majority of cases, employees struck work to press home their demand for the enhancement of dearness allowance. But the strike of the workers of Rameshwar Jute Mills Limited, Bihar, was occasioned by the management's insistence on working on Sundays while the Simplex Mills Co's strike was to voice their protest against the prohibition on third shift workers to enter the mill premises before 9 P.M. However, all these strikes were of short duration, and in all cases save one the settlements were in favour of the employees.

Though these figures make disconcerting reading, a gradual but firm reversal in this trend is already in evidence with the unabashed aggression of the Chinese on the border. The workers have not been slow to respond, and there are many pledges of higher pro-

duction and forbearance from strike. Some of their tribe have gone a step further, as in the case of coal mining industry, and are to work round the clock so that the nation's economy can be Chinese infiltration and maintaining intact the country's integrity and freedom.

AVIATION

BOAC is planning to introduce direct jet services between New Zealand and Britain next year. They will be the first jet services to New Zealand, and the first through-plane service from New Zealand to Asia, Europe and London. Comet 4 jetliners of BOAC will fly twice weekly between Auckland and London, calling at Sydney, Singapore and other Asian and European cities. The decision to run the services follows an agreement between the British and New Zealand Governments on the future of air services between the two countries.

Grand Canyon, Arizona, is one of the great wonders of the world—14 miles wide, 1 mile deep and 215 miles around, with the Colorado River rushing across its floor.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the USA but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the USA.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sightseeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense. However,

Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire USA.

Result: \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra fare on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6053 economy class from Calcutta for Europe and the Pacific, and North America as well!

BONUS COMMISSION

CIE's Memorandum

The general issues confronting all industries and business in regard to the vexed question of bonus are dealt with in a memorandum submitted by the Council of Indian Employers to the Bonus Commission set up by the Government of India. No single issue, as the memorandum points out, has been productive of more industrial strife, litigation and inter-union rivalry than the demand for bonus which has now become a hardy annual. A dispassionate analysis of the economic facts alone will not point the way to a workable solution as the economic aspects are obscured by emotional postures and political dogmas developed in the years since independence. During this period bonus, which formerly some industries used to pay as a gift during certain festivals, has come to be regarded as an industrial claim and right which accrues to labour. Representatives of

employers, on the other hand, have come to feel that the prevailing system of payment of bonus has failed to serve any useful purpose. It has not resulted in increased productivity, nor, in most cases, has it served to improve industrial relations. The formula of the Labour Appellate Tribunal, even with the clarification by the Supreme Court, has not been able to eliminate bonus disputes. A seven-man Commission was set up by the Government of India about a year ago to study the question of bonus and to make suitable recommendations. By its terms of reference the Commission was asked, among other things, to define the concept of bonus, to recommend principles for its computation and to suggest appropriate machinery and methods for settlement of bonus disputes.

The complexities of the task assigned was perhaps the reason

why the Commission was not able to move faster in the matter. Now it is a question of the utmost importance that this potent source of industrial disputes should be eliminated without delay. And in the present atmosphere of co-operation and readiness to make sacrifices to meet the emergency, any reasonable solution will be more readily accepted on all hands than in the recent past. A constructive approach which will lead to an equitable solution of the problem is presented in the memorandum submitted by the Council of Indian Employers. This Council has been constituted by the two central organisations of employers, namely, the All India Organisation of Industrial Employers, New Delhi, and the Employers' Federation of India, Bombay. Between them these two organisations represent, directly and indirectly, almost all the organised industries and non-manufacturing concerns in the country.

The importance of the memorandum is further enhanced by the fact the Council has looked beyond the interests of employers as a class and framed recommendations in the light of the claims of the masses of the population and the requirements of industrial growth. The Council also recognises that the prerequisite of economic growth cannot be based on mere technical considerations, that the human factor cannot be ignored and that the aspirations of the working class for social betterment must be given due weightage. It is suggested that the following three principles should govern the approach to this problem.

- (i) The interests of the community are paramount and it would be unfair to deal with the claims of the industrial workers in isolation, by ignoring the lot of the working class as a whole comprising non-industrial and agricultural workers.
- (ii) The long-term requirements of industry should be reconciled with the immediate needs of labour.
- (iii) The arrangements to be evolved should give optimum satisfaction to all and increase the earnings of workers as well as the efficiency and productivity of industry.

As each industry is faced with its own peculiar problems, while its relations with labour are governed by past practices, it may not be practicable to devise a uniform formula of bonus payment applicable to all industries. A flexible approach is necessary to identify and find solutions for these diverse problems. After referring to the improvements effected in the emoluments of labour in recent years, the memorandum points out that, if our industries are to be operated on efficient and modern lines, the present system of bonus related to profit should be replaced by a system related to productivity/efficiency in a period of two years but not exceeding five years. It is also urged that the system should not be introduced

in industries where, for valid reasons, it has not been prevailing.

Bonus, the memorandum points out, can best be conceived as payment made in addition to normal wages or salary to employees for their direct contribution to the efficiency or prosperity of the undertakings, such payment depending upon the different circumstances prevailing in different industries. Such a concept, it is clear, does not rule out the payment of bonus related to profits where the industries concerned desire to continue the system of payment of bonus based on the Labour Appellate Tribunal (LAT) formula suitably amended or where bonus related to profits is paid on some other basis by mutual agreement. It may not be practicable immediately, to effect the changeover from bonus related to profits to one related to productivity and, in the interim period, it may be advisable to continue the present system with necessary improvements. Each industry should be free to adopt the system which is most suitable to it and to suggest what "prior charges" should be taken into account before arriving at the available surplus, in terms of the LAT formula. However, it is desirable that different systems should not be applied to the same industry unless otherwise agreed upon by bipartite agreements between employers and workers. The memorandum has also emphasised that whatever bonus formulae or arrangements are ultimately decided upon in respect of the private sector undertakings should be extended and made applicable to all the units in the public sector engaged in the same industry.

Hitherto the general tendency has been to regard bonus as a matter entirely for the managements and workers to be decided by a tug-of-war tempered by adjudication. The claims of the community as a whole have rarely been taken into account in deciding the method of determining the bonus. The Council has done well to underline that the interests of the community should be paramount. A system of bonus based on productivity, if one could be devised, would be a definite improvement on the system of bonus related to profit; for, in a developing economy, the community as a whole may be expected to share in the gains of increased productivity. But the attempt to determine the share of increased productivity that may be attributed to labour in any particular instance will raise its own problems. Attempts that have been made in recent years to introduce productivity techniques have shown that, beyond a certain limit, there is little that the workers can do to increase productivity. The conclusion has been repeatedly stressed that productivity is a function of the management and is largely a matter of the organisation of operations, management of materials, layouts, techniques and equipment. On the other hand, a simple production bonus related to the quantum of production may lead to a situation where industry is obliged to pay bonus when its profits are declining or it is actually incurring losses as a result of over-production.

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

I REALLY cannot fathom the reason why Mr Nehru didn't straightaway accept Mr Krishna Menon's resignation from government when it was tendered to him on 30 October. If the PM really thought that he could assuage anti-Menon feeling in the party by such half measures, it was an odd misjudgment for a man of his political experience. And it was no kindness to Mr Menon in the event. His opponents were at once unappeased and encouraged and if reports are to be believed, spoke in sanguinary terms like wanting to press on for the kill since they had already drawn blood. Opposition to his continuance in government, especially in the Defence Ministry—one wonders whether the issue would have been different if Mr Nehru had transferred Mr Menon to some Ministry other than defence—grew in volume and shrillness and Mr Nehru was obliged to yield. Not that I think that after all that had happened Mr Menon could have continued for long even as Minister for Defence Production. The dissipation of national energy in the effort to dislodge him and the real threat to national unity in the hour of peril that his continuance in office posed were both strongly in favour of his leaving. Even if opposition to him hadn't been so clamant, the widely shared misgiving about his heart not being in the fight, however unjustified, would have made his quitting the government expedient. These, rather than his alleged past lapses as a Defence Minister, were what made his exist inevitable. On the latter, I cannot help feeling that Mr Menon is being made the ritualistic scapegoat for sins for which the responsibility is far more diffused, if not actually elsewhere. The first substantial act of Chinese aggression—the making of the Aksai Chin Road—took place long before Mr Menon became Minister for Defence in 1957. And for subsequent errors, he can be held solely responsible only if some others make the galling confession that they never applied their minds to the problems posed by the Chinese. Now that Mr Menon is no longer in government, I hope that those who engineered his exit will have the grace and good sense to resist the temptation to crow. Mr Menon deserves well of the country for many reasons. It cannot have been forgotten that it was he who salvaged our case on Kashmir

from the fumbling apologetic squeak it was before he took up the brief.

I don't suppose any of us will grudge the abrogation of some of the formalities of law in the interests of the Emergency, but it is possible to overdo it. Take, for example, the Ordinance promulgated last Saturday enabling boards of directors of companies to bypass the shareholders in the matter of contributions to the National Defence Fund. I find it difficult to justify this either on grounds of expediency or urgency, let alone the principle of the thing. It is not as though the law as it stands now is in the way of generous contribution by companies to funds meant for national defence. Section 293 of the Companies Act merely stipulates that the consent of the shareholders at a general meeting is necessary before sums larger than Rs 25,000 or 5 per cent of the average net profits of the three years immediately preceding are voted to any charitable or other fund. Since section 166 permits general meetings other than the annual, and the articles of companies usually give the board of directors the power to convene such meetings, a meeting could easily be called to vote the necessary funds. Should it be considered that the twenty-one-day notice statutorily required for such meetings is too leisurely—though, considering how long the Emergency is likely to last, this argument seems rather specious—the Ordinance could have shortened the period of notice for meetings for this purpose. This way, nothing is done to diminish further the already tenuous dominion of the shareholder over funds that are nominally his. Again not only promptness but generosity in contribution is stated to have been the reason for the Ordinance. Surely, it cannot be that the Government thinks that shareholders will be less forthcoming than directors. And if they were, this would hardly be a defensible way of defeating their parsimony. I am labouring this point at some length because such diminution of rights has a way of getting unconsciously extended and is habit-forming. It should never be forgotten (and some among us must do the reminding) that the emergency powers are to be used sparingly and with reluctance, and when they are, in ways that least do

violence to rights that are not surrendered but only voluntarily kept in abeyance.

*

I was intrigued, as you no doubt were, by the silence of President Tito in the midst of the chorus of sympathy from abroad. He is not only a good friend of India and Mr Nehru but also China's bete noire and it certainly seemed odd that we shouldn't have heard from him earlier. I even wondered uneasily whether it didn't prove once again that one cannot set too large a store by one's Bandung or Belgrade buddies. In the event, however, there is a simpler—and to the Government not very creditable—explanation. Mr Nehru's letter to him on the Chinese aggression was, believe it or not, mislaid and wasn't sent at all! Can you beat it? perhaps I am fussy but I do think that we need to be a great deal more efficient if we are throwing the Chinese out. And this perhaps is the occasion to gather together some more of my miscellaneous complaints about many things happening around. Take the All India Radio for example. I am sure it is doing its best, but its best is simply not enough. The Emergency seems to have thrown its news readers (with one or two exceptions) into a dither of incoherence and they are not able to read a fifteen minute news bulletin without making ludicrous mistakes. One particular evening, I heard the news reader confuse AITUC with the INTUC and read

GOVERNMENT OF INDIA

4½ per cent Ten-Year Defence Deposit Certificates
(FREE OF INCOME-TAX)

Interest at the rate of 4½ per cent. will be payable free of income-tax annually from the date of deposit and will not be taken into account in calculating the total income of the Depositor for the purpose of income-tax.

The maximum amount that may be held in these deposits including the amount invested in 3½ and 4 per cent. Ten-Year Treasury Savings Deposits will be—

- | | |
|---|----------|
| (a) For an individual | 25,000 |
| (b) For an individual jointly with another | 50,000 |
| (c) For an association or institution donations to which are exempt from payment of income-tax under Section 88 of the Income-tax Act, 1961 (43 of 1961), and a local authority | 1,00,000 |
| (d) For institutions and associations other than Provident Funds and those covered by item (c) above | 50,000 |
| (e) For Provident Funds | No limit |

Deposits (in multiples of Rs 50) in cash/cheque or in matured 3½ per cent Treasury Savings Deposit Certificates will be received from 10th November 1962 until further notice. Such deposits will be refundable at any time after the expiry of one year from the date of deposit at a certain discount.

Applications will be received at the offices of the Reserve Bank of India, Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi branches of the State Bank of India and its Subsidiary Banks conducting Government treasury business and treasuries and sub-treasuries in India at places where there is no such office or branch of the aforesaid banks.

Deposit Certificates will be accepted for safe custody by Public Debt Offices and interest remitted to holders, if so desired. The Certificates will be transferable by deed and will also be eligible for nomination.

For full particulars please apply to any of these offices, branches or treasuries.

(From Our New Delhi Correspondent)

Rephrasing of State Plans

THE lines on which the Plan should be reoriented to back the Defence effort were decided at the emergency meeting of the National Development Council which concluded a two-day session last Monday. While it was agreed that certain priorities in the Plan would have to be rearranged and adapted to meet the present requirements, the Plan as a whole, it was suggested, will have to be strengthened in several directions. The details of the rephrasing of the State Plans on the basis of the directives of the National Development Council were also considered at a meeting of the State Planning Secretaries. The State Governments are expected to send in their revised proposals for 1963-64, within a month, to the Planning Commission. In this task they will be assisted by the Programme Advisers of the Planning Commission who will be visiting the State Capitals for the purpose.

It has already been indicated that there will be no change in the quantum of Central assistance already promised for the State Plans during the current year. But it is understood that Central assistance for the annual plans for 1963-64 may be reduced to Rs 400 crores from the figure of Rs 450 crores envisaged earlier. The contribution by the States will be maintained at the level of Rs 275 crores. While it has been emphasised that the State Governments will have to intensify their efforts to mobilise resources, it has been agreed that only the Central Government would enter the market for loans. The States, however, would receive a reasonable share of the loans that are raised.

The State Chief Ministers, it is learnt, had come prepared for substantial reductions in Plan outlays. But a drastic reduction is not considered necessary and will not be really helpful in the defence effort. On the other hand, though some reductions in the magnitude of financial outlays may be unavoidable because the foreign exchange allotted to certain projects may have to be diverted to more essential requirements, in several directions physical targets may have to be increased where this can be done by more effective utilisation of internal resources of material and manpower. The Minister for Planning had placed before the Council proposals to raise the Third Plan targets for minor irrigation from 12.8 million acres to

about 18 million acres, the target for soil conservation from 11 million acres to over 16 million acres and that for dry farming from 22 million to about 50 million acres.

The necessary financial resources for achievement of targets in the vital sectors of the economy are expected to be found through greater economy in the implementation of schemes, as well as diversion of resources from programmes having a lower order of priority. For instance, while the road programme as a whole will have to be strengthened with special attention to the trunk routes and provision of missing links, schemes for roads of low priority in the States sector may be deferred. Similarly in the sphere of education, the Council is understood to have decided that double-shift working should be introduced in primary schools. This will help to reduce the outlay on construction of school buildings and enable achievement of the targets of enrolment for a lower total outlay.

This Council of Secondary Education which also met here last Monday has suggested several measures to reorientate the educational pattern to meet the requirements of the present situation. It has been suggested that educational institutions should actively participate in productive work. In rural areas, pupils can help on the farm during holidays and vacations, and in other schools, on producing simple, but useful articles. Another suggestion made by the Council is that the possibility of utilising the workshops and laboratories of secondary schools and training colleges, after working hours, for training skilled workers might be explored. Arrangements would also be made for training students in essential services like first aid and nursing. The Council also recommended that a co-ordinated and integrated programme of physical education should be introduced immediately in all secondary schools which would include junior NCC and National Discipline Scheme and similar schemes.

The National Development Council also considered the reorientation of the Community Development Programme with emphasis on its production aspects. The Village Level Workers will hereafter be asked to concentrate on measures to increase agricultural output instead of engaging in a variety of activities.

The National Development Council has also approved the proposals made by the Planning Commission for holding the price line. With the co-operation of the business commu-

nity that is now assured it is hoped that the objective could be achieved without resort to stringent measures of control. An indication to this effect was given by Mr Morarji Desai at the emergency meeting called by the Federation of Indian Chambers of Commerce and Industry. This meeting was convened to discuss measures for increasing the production of essential commodities as well as to consider ways and means of holding the price line.

FICCI Decisions

It is understood that a decision was taken at this session that the central organisations of manufacturers would make arrangements to ensure that the products of their industries reached consumers through normal trade channels at prices they were expected to pay. The retailers in large cities would also be required to display in their shops price lists of the commodities on sale. Mr Desai is understood to have told the meeting that, if the steps taken by the Federation to prevent profiteering and rise in prices proved successful, Government would not step in.

The Federation has also decided that contributions to the National Defence Fund should be organised on a regular basis and in this connexion has suggested that Section 88 of the Income-tax Act, should be so amended that the maximum limit laid down in that Section was not applicable to contributions to the Defence Fund.

Steel for Small Industries

The stepping up of the activities of small industries was one of the topics emphasised at the NDC meeting. An interesting suggestion for increasing the availability of steel sections for the small scale sector was made at the last meeting of the Iron & Steel Advisory Council. It was pointed out that the limitation on the items which could be imported as scrap could be revised with considerable saving in foreign exchange, in order to meet the needs of small industries. Mr Tarachand K. Gupta, President of the Iron, Steel & Hardware Merchants Chamber of India, Bombay, said that if the restrictions on the size of items importable as scrap were lifted, larger and more useful materials could be imported at the same prices if not cheaper. He said that, because of higher labour charges in foreign countries, foreign suppliers of scrap did not take the trouble of sorting out the materials to conform to the size restrictions imposed by the Iron & Steel Controller and, if they did sort out, the selling prices of foreign materials went up. Almost all consignments of scrap that are imported are found to contain larger sizes of material and are subjected to penalty by Customs authorities. Many items like plates, sheets and wires which are in short supply and are allowed to be imported as prime steel, could be imported in useful sizes at cheaper

prices, if the size restrictions are removed. He said that such materials are available abroad in what is called de-classified quality which is not actually different from prime quality steel. This method of disposal is adopted by foreign manufacturers, when they have a large surplus on their hands. The country, he said, could take advantage of the cheap prices at which these materials could be imported. This proposal is now under study by the Department of Iron & Steel. Mr Gupta had also suggested that supply of billets for re-rollers could be improved straightaway if "second class rails" which are not acceptable to the Railways were made available to the re-rollers in the small scale sector. They could easily use such rails which are accumulating at the steel works for re-rolling of bars and thus help in increasing the supply of bars.

Management Seminar

Attention was focussed on certain aspects of the problem of increasing industrial production at the Seminar on Effective Manufacturing Management which was inaugurated by Mr K. C. Reddy, Minister for Commerce & Industry, last Monday. Mr Reddy invited the Seminar to consider certain issues having a direct bearing on increasing production in the present context, such as Use of Substitute Materials, Quality Control, Waste Reduction and Machine Utilisation. While the Seminar, he said, may not be able to discuss what the specific substitute materials should be, they could evolve an organisation and methodology for making an inventory of alternative materials evaluating them and deciding on the substitutes.

Mr Nityanand Kanungo, Minister for Industry, said in the course of his welcome address that this Seminar was the beginning of the third series of seminars organised by the National Productivity Council. The other seminars in this series will be held at Calcutta, Madras and Bombay, commencing on 12, 19 and 26 November respectively. He also acknowledged the co-operation of the USAID and the Council for International Progress in Management of the USA, in arranging for the participation in the Seminar of a four-man team of top executives from the USA. We have been really fortunate, he said, in getting this high-level team from the USA, which consists of Mr H. W. Johnson, Vice-President of Inland Steel Company, Chicago, who is also leader of the team; Mr A. P. Lancaster, Vice-President of Western Electric Company of Chicago; Mr D. W. Fentress, Director of Research Division of Calumet and Hoola incorporated and Mr E. Caldwell, President of the Baker-Raulang Company of Cleveland. Mr Kanungo also extended a hearty welcome to Mr F. J. Poppelen, an official of the CIPM, who is accompanying the team for co-ordinating its activities with NPC, and expressed the hope that his visit to India would further strengthen the already existing bonds of friendship between the NPC and the Council for International Progress in Management of the USA.

The Calcutta Electric Supply Corporation

Great Progress Made at New Cossipore Extension

Sir William Lamond, the Chairman, on Revision of Rates

The 65th Annual General Meeting of The Calcutta Electric Supply Corporation, Ltd., was held on November 1 at Victoria House, Vernon Place, London, W.C. Sir William Lamond, chairman, presiding.

The following is his review, which had been circulated with the report and accounts:—

It is with very deep regret that I have to record the death on 19th November, 1961, of Sir Harry Burn who had been a member of your Board since 1947 and was Chairman from 1954 until his death. Sir Harry worked tirelessly in the interests of the Company and his experience was of great value. He is missed by all his colleagues. The Board elected me to succeed him—an honour which I greatly appreciate. Mr. I. A. Macpherson has been appointed Deputy Chairman.

To fill vacancies on the Board Sir Owain Jenkins and Mr. A. R. Colley were appointed to be Directors. Both Sir Owain and Mr. Colley with their wide experience in their respective spheres will give valuable assistance to the Board. Those two appointments now come up for confirmation.

It is also with deep regret that I record the death on 1st July, 1962, of Dr. B. C. Roy, Chief Minister of West Bengal. Successive Chairmen and Agents of this Company have been honoured by his friendship and have been privileged to have the benefit of his advice and guidance.

In the Chairman's Review for the year ended 31st March, 1961, mention was made of the series of breakdowns of plant that occurred at our New Cossipore Generating Station towards the end of that year and at the beginning of the year 1961/62. These breakdowns had a two fold effect in the year under review: first, to the extent to which the output of the machines which were out of action could not be covered by increased generation elsewhere or by increased import from the Damodar Valley Corporation, the demand on our system was unsatisfied and the consequent load shedding involved us in loss of Revenue; and secondly, to the extent to which these outages could be covered by increased generation with less efficient plant elsewhere in our system and by increased import (which in fact happened to a substantial degree) they involved us in enhanced Revenue Expenditure, quite apart from the actual cost of repairing the damaged machines. This abnormal Revenue Expenditure, is, under the provisions of the Elec-

tricity (Supply) Act, 1948, being recovered from the Contingency Reserve Fund.

Serious as were the effects of these breakdowns on our Revenues they were equally serious for our consumers, particularly our industrial consumers, who had to bear the brunt of the drastic load shedding that was necessary and I welcome this opportunity of expressing once more the Board's great appreciation of their co-operation during this difficult period. The load shedding and the load spreading which were then necessary unfortunately still persist, as was predicted last year, though of course not to the extent that was the case when our New Cossipore machines were out of action.

EXPANDING ECONOMY

India is on the threshold of an industrial revolution which obviously generates pressures within an economy, the expansion of which has of necessity been planned against the background of an acute shortage of foreign exchange. One of these pressures is a shortage of power which has for some years now been manifest throughout the country. We can regard this as one of the growing pains of an expanding economy, but whilst it persists, the electricity supply industry must make every effort to expand its generating capacity, and at the same time, to ensure maximum utilisation of existing capacity.

In Calcutta we are doing both: the latter through the instrumentality of the Electricity Supply Control Advisory Committee on which our industrial consumer interests are represented and which makes recommendations to Government with regard to load spreading and also to the amount of, and the conditions under which, new load should be connected to our system. But, of course, the real remedy lies in the increase in generating capacity which is so desperately needed in the area.

NEW COSSIPORE EXTENSION

Last year you were informed that Government, reversing its previous decision, had at last authorised our 50 MW extension at New Cossipore. During the year under review great progress has been made on the foundation raft and the new pump-house monolith, both of which were completed ahead of time; the plant manufacturing programme in this country is also well up to schedule and I have every confidence that this new machine will be on commercial load in October of next

year—about the same time as we have been promised the first tranche of the power we shall be importing in increasing quantity from the West Bengal Government State Electricity Board in the future. The present shortage will thus continue for at least another year and the position between now and then can only be alleviated by an increase in the import of power from the Damodar Valley Corporation hitherto pegged at the contractual figure of 105 MVA. Any surplus in the Damodar Valley Corporation system which can be transmitted to Calcutta, even if only during the evening peak hours when our own system is so hard pressed brings great relief to industry in the area and particularly to the jute industry which is of such national importance from a foreign exchange earning point of view.

We realise that the Damodar Valley Corporation is at times itself hard pressed and often has the same difficulty that we have experienced in taking plant out for overhaul. It is, therefore, with pleasure that I record our appreciation of the fact that the Damodar Valley Corporation has recently been able to increase its export to us; we are grateful to them and to the officials in Government and the State Board whose good offices have made this possible.

YEAR OF EXPANSION

It will be noted from the Report of the Directors that during the year ended 31st March 1962, there were increased sales of energy for Power Purposes, Lights and Fans. Public Lighting and Bulk Supplies. 80% of the energy sold for Power Purposes is supplied to High Tension Industrial consumers and the effect of the load shedding, to which I have already referred, has been almost entirely confined to those consumers. Consumers using energy for Lights and Fans and those receiving Bulk Supplies suffered only slightly. Thus, if there had been no load shedding the energy sold for Power Purposes would have shown a much larger increase.

In addition to large industrial consumers energy sold for Power Purposes covers a large number of small industries supplied at Low Tension. It also includes energy sold for Domestic Power Purposes the demand for which again showed a substantial growth due to the popularity of small air-conditioning units in residences and offices. Although the jute industry holds its predominating position as our largest industrial consumer supplies to that industry

were less than the previous year owing to the severe shortage of raw jute in the middle of 1961. But in recent months the demand from the jute mills has greatly increased, as supplies of raw jute became more plentiful. Other important industries on our supply are Rolling Mills and Engineering Workshops, Cotton Mills, Chemical Works and Paper Mills, and with the exception of the last mentioned, their consumption has increased.

Sales of energy for Lights and Fans again increased. Various housing estates, both in the Calcutta suburbs and in other parts of our area, are still being developed.

Almost all of the increased sales for Public Lighting were for the Calcutta Corporation. Our sole consumer for traction purposes is the Calcutta Tramways Company Ltd., whose demands are not likely to show any appreciable increase.

The West Bengal State Electricity Board, which distributes entirely outside the Company's licensed area, takes 95% of our Bulk Supplies. The large increase was almost entirely for that Board whose demands will continue to expand. Most of the sales under Special Contracts were at our special tariff to owners of large office and residential buildings, public institutions, cinemas and hotels. Demand from such consumers was little changed and is not likely to show much increase in the near future.

REVENUE ACCOUNT

The Revenue Account shows that gross revenue from the sale of current at £10,494,687 was just short of £700,000 more than last year—an increase of 7%. This compares with percentage increases of 11% in 1960/61 and 8.9% in 1959/60 and reflects the effect of load sheddings on our power sales, already mentioned. On the other hand, Revenue Expenditure has increased by about £1,120,000 owing for the most part to an increase of some £870,000 in the cost of power imported from the Damodar Valley Corporation. It must be realised that the price paid for bulk supplies necessarily includes interest and depreciation charges whereas such charges are not included in our own operating expenditure, being shown separately in the Accounts. The large increase in the import from the Damodar Valley Corporation has thus resulted in a disproportionate increase in our total operating expenditure.

Cost of Generation, Transmission and Distribution is about

£190,000 up on last year, despite a saving of about £75,000 in the cost of coal, brought about by the breakdowns at New Cossipore, as a result of which the output of our generating stations, at 1,666 million units generated, was some 177 million units less than in 1960/61. This net increase can be attributed, for the most part, to increased salaries and wages arising out of a general revision of scales of pay which came into effect from 1st September, 1961. In 1960/61 our purchases from the Damodar Valley Corporation totalled 390.4 million units at a cost of £1,070,194; in the year under review the figures were 664.9 million units and £1,940,775. Administration and General Establishment Charges increased by about £60,000, due again, for the most part, to higher salaries and wages.

I deal now with the Net Revenue Account. Despite the uninterrupted increase in sales, the Company's rates have in recent years produced insufficient revenue to meet the increasing costs and in addition, to earn the full Reasonable Return to which we are entitled by statute; the short-fall has been made good by transfers from reserves accumulated in the past specifically for this purpose. As is explained in the Directors' Report, the shortfall in revenue this year was £515,618 which has been reduced to £327,802 by the transfer of the balance remaining in the Tariffs and Dividends Control Reserve, namely £187,816. These reserves being now exhausted, we have, in the future, to look to current revenues to earn our Reasonable Return. We are hopeful that our recently revised rates, which I refer to below, will have this result. The Indian tax charge at £945,310 for the year is some £220,000 less than last year, due of course to the fact that, for the reasons referred to above, the balance on the Revenue Account at the end of the year was some £458,000 less than last year. This tax charge does not take into account certain demands we have received from the Indian taxation authorities, which we are contesting, and which are referred to more specifically in the notes on page 10 of the directors' report. After providing for Debenture Interest and making the other usual appropriations, including the transfer of £300,000 to Special Appropriations for Plant Expansion, Replacements and Contingencies and providing for dividends on the same scale as last year, the balance on Net Revenue Account, including £124,585 brought in, amounts to £100,524

BALANCE SHEET

The Balance Sheet shows a decline in our holding of Treasury Bills of some £400,000 as compared with last year. This represents funds used in London for the purchase of plant exported to India and for the payment of

Sterling Debenture Interest, Dividends, etc. Apart from the normal expansion of the transmission and distribution system which involves capital expenditure averaging £1¼ million per annum paid, for the most part, from depreciation monies and other sources of internal finance, the extension to our New Cossipore Generating Station is estimated to cost £3¼ million. To the extent by which our liquid resources are insufficient to meet the cost of this plant, when this would normally be payable, it will be met by finance specially arranged with our Bankers in India and by deferred payments which have been negotiated with certain British manufacturers. Capital Expenditure during the year amounted to approximately £1.4 million of which about £225,000 was on account of the extension at New Cossipore

REVISION OF RATES

I have referred above to the recent revision of our rates which, because of the increasing cost of imported power and of rising taxation, could no longer be delayed. Despite the continual rise in all costs since the war, our existing rates for lights and fans and for domestic power have remained unaltered for over fifteen years and other rates have altered only to the extent necessary to reflect the greatly enhanced cost of coal. In fact, our rate for high voltage industrial power was, for energy supplied from coal-fired plant, almost the lowest in the world for which statistics are available. We have endeavoured to revise our rates on the general principle that each class of consumption should bear its proper share of the cost of production and distribution. For many years now our industrial high voltage consumers have not provided an adequate share of our overall cost and so our first call has fallen on this class of consumer whose rates have been increased by about 17½ per cent on average. For the present, our other very important rate, that for lights and fans, will remain unchanged, as will also the rate for the smaller low voltage power users. The rate for the larger low voltage power users has, however, been increased by about 17½% on average and our rate B (high voltage energy for domestic and commercial supplies) by about 13½%. In addition meter rents have been increased. It was also our intention to increase the rates for low voltage domestic power and for distributing licenses, but at the express request of the State Electricity Board we have agreed to forgo, for the time being, the increase contemplated in these two rates. We have, however, the right to review the position.

Although the impact of the charge for Indian taxation is not always predictable year by year, we hope that this revision of

rates, which came into effect from the beginning of May, this year, will result, in a full year, in more nearly equating our Clear Profit with our Reasonable Return than has been the case in the recent past. Whether it does so or not will depend also largely on the cost of imported power. If the State Board from whom, as from a year hence, we shall be importing power on an increasing scale, is able to let us have this power at a basic price, comparable to that now charged by the Damodar Valley Corporation, then our present cost structure will not be radically disturbed—otherwise a further increase in rates in 1965 when the State Board supply is expected to be fully available, may be necessary.

VISITS TO CALCUTTA

During the year Mr. Macpherson and Sir Owain Jenkins visited Calcutta where they had the great benefit of discussions with the Chief Minister, the Chairmen of the State Electricity Board and the Damodar Valley Corporation, officers of the Government of West Bengal and leaders in commerce and industry in Calcutta. They inspected all sections of our organisation and were satisfied that all was being conducted with efficiency and economy. Despite the anxious period through which we have passed and are still passing, because the power shortage still persists, the prestige of the Company in the City remains high—a tribute to the efficiency and devotion with which the Company's affairs are conducted by our Staff in India who have the great responsibility entrusted to them of running this important public service.

Our thanks are again due to the Electricity Council, the Area Boards and the various manufacturing companies who have provided facilities in this country for the post-graduate training of young Indian Engineers under our Technical Training Scheme. This scheme was introduced shortly after the war and has been a great success. It gives me much satisfaction to record that some of our earlier trainees are now holding responsible positions with our undertaking in Calcutta.

TRIBUTE TO STAFF AND EMPLOYEES

In conclusion I would remind shareholders of the debt we owe to our Staff and Employees in Calcutta. It is difficult for anyone who was not in Calcutta at the time to appreciate the difficulties with which the breakdowns of our plant at New Cossipore confronted them—difficulties which, because of the continuing power shortage, still persist. It gives me the utmost satisfaction to report that, ably led by our Agent in Calcutta, Dr. Bowker, by our Chief Engineer, Mr. Kanga, and by our Commercial Manager, Mr.

Pugh, the staff proved equal to the severe calls that were made on them. Mr. Pugh has since retired after nearly 26 years with the Company in India, the last 10 in the important position of Commercial Manager. We wish him many happy years of retirement. I also wish to record the Board's appreciation of the able manner in which Mr. Colley has discharged his responsible duties as Secretary.

The report and accounts were unanimously adopted and an alteration to the Articles of Association was approved.

The above statement is not a report of the proceedings of the Annual General Meeting referred to.

NEW CENTRAL JUTE MILLS CO. LTD.

Regd. Office: 11, Clive Row, Calcutta—1.

NOTICE

The Board of Directors have declared an interim dividend of 0.50 nP. per Ordinary Share subject to deduction of tax for the year ending 31.3.63, and is payable to registered shareholders as on 30.11.1962.

The Register of Members and Share Transfer Books of the Company shall remain closed from 22nd November, 1962 to 30th November, 1962, both days inclusive.

By Order of the Board
for NEW CENTRAL JUTE MILLS CO. LTD.

G. S. MAHESHWARI
(Secretary)

Dated, Calcutta
the 31st October, 1962.

COMPANY NOTICE.

THE INDO-BURMA PETROLEUM COMPANY LTD.

Registered Office: Gillander House, Netaji Subhas Road Calcutta-1.

Notice is hereby given that the Board of Directors have declared an Interim Dividend of Re. 1.00 (Rupee, One only) per share less tax to be deducted in accordance with the provisions of Section 194 of the Indian Income Tax Act, 1961, on the Ordinary Share Capital of the Company for the year ending 31st December, 1962, payable on the 10th December 1962.

The Ordinary Register of Members of the Company will be closed from the 22nd November 1962, to 10th December, 1962, both days inclusive.

By Order of the Board
STEEL BROTHERS AND COMPANY LTD.
Managing Agents.

Gillander House,
Netaji Subhas Road,
Calcutta.
2nd November 1962.

New Central Jute Mills Company Limited

All-Out Efforts to Increase Production

Mr. A. K. Jain, the Chairman, on Export

The following is the speech of Shri A. K. Jain, Chairman, New Central Jute Mills Co. Ltd. delivered at the Annual General Meeting held at 11-30 a.m. on 31st October, 1962 at 11, Clive Row, Calcutta.

I welcome you all to this Annual General Meeting of the shareholders of the Company.

We are meeting in the wake of a national emergency caused by the naked and unashamed aggression committed by the treacherous Chinese. The aggression has aroused the entire nation as one man. We have been found lacking in adequate preparations to meet the aggression. Our friends, the USA and Great Britain in particular, have offered us in this crisis, speedy and magnanimous help and more is coming and we are extremely grateful to them. The initial setbacks have only served to forge an indomitable spirit throughout the nation and there is no doubt in our ultimate victory.

Our Prime Minister has given a call to make all sacrifices to strengthen the defence forces and increase production in fields and factories. Your Directors have decided to contribute a sum of Rs. 1,00,000/- to the Prime Minister's National Defence Fund. Your company's employees have also shown their readiness to contribute a part of their earnings to the Defence Fund. They in large numbers have offered to donate blood. We are all standing at the call of the Government for undertaking any task or responsibility that may be entrusted to us. I am sure this will have your whole-hearted support.

The need of the country to earn larger foreign exchange was already acute. Its importance has been further enhanced by the aggression committed by the Chinese. Your company is making all possible efforts to increase both production and earnings of foreign exchange and are confident to achieve the same in an appreciable measure.

The report year has been one of the most difficult in the history of jute industry and your company has shared in the misfortunes of the industry last year. According to the practice followed by your company, stock of raw jute is valued at market rate, whereas most of the jute mills follow the mode of valuation at cost or the lower of cost or market rate. In view of high prices

of jute fibre prevailing as on 31st March 1961, the valuation of the year's opening stock of raw jute in case of your company was higher compared to most of the other jute mill companies. This further affected the financial results of your company. Your Directors regret that they have been unable to recommend any dividend for the report year on ordinary shares. Your Directors were very unhappy that the record of continuous payment of handsome dividend of over a decade during which the company has been under the present management had to be broken. The working of the current year is encouraging and your Directors have just decided payment of an interim dividend for the current year at 50 nP. per ordinary share, subject to tax, payable to the Registered Shareholders as on 30th November, 1962.

Although the production in Sahu Chemicals & Fertilizers has not increased as fast as was expected, the plant is running in a more balanced and stable manner. On the advice of the technical collaborators several modifications have already been made in the plant and the full effects of these modifications already made should be available during the coming winter season. After a full study of the results obtained further steps for improvements and/or expansion will be considered. The rigid price structure and other handicaps under which this plant is operating, are already known to you.

Your company has been making rapid progress in the installation of wide-looms. During the report year 42 broad-looms were added raising the complement from 110 to 152 at the end of March 1962. Since then 45 broad-looms have been further installed raising the total complement to 197. Installation of further looms and spinning and ancillary machinery and construction of buildings is proceeding satisfactorily.

Your company during the last five years has built up a substantial portfolio of direct exports primarily of jute carpet backing. Export of Rs. 41 lakhs in 1957 rose to Rs. 293 lakhs during 1960-61. Due to decline in the price the value of direct exports in 61-62 amounted to Rs. 266 lakhs. The company's export performance during the current year is expected to be substantially better. You would thus be happy to note that your company is playing its

proper role in the export efforts of the nation as a whole. The capacity of your company to produce more specialities and earn foreign exchange would have been greater if they had received prompt permission to import essential spares and machinery which are not locally available. It is heartening to note that Shri Manubhai Shah, our Minister of International Trade has acknowledged the importance and needs of the jute industry, and its requirements are receiving quicker attention of the Government.

It is not clear whether the profitability in the jute industry will be maintained at the present levels in the coming months. The competitive strength of Pakistan is increasing and their exports are showing increasing trend.

The sacking stocks in India are gradually mounting up and the jute goods market had shown some signs of weakness. Your company has, however, sold substantial proportion of its production for the first quarter of 1963 and has thus booked profits for the current financial year.

In view of the said position and present trends in the jute industry, the working of your company should show substantially better results in the current financial year.

I take this opportunity to thank all members of the staff and workmen.

N.B. This does not purport to be a record of the proceedings of the Annual General Meeting.

Markets

JUTE Steps to Stabilise Raw Jute Prices

REFERRING to the continued weakness of raw jute, it was pointed out in this column last week that "it remains to be seen how the authorities are going to fulfil their promise to ensure that the jute grower gets an equitable return on the basis of the minimum prices." Government has since moved in the matter and last Friday the Jute Commissioner has issued an order under which mills have to purchase a minimum weekly quota for the next four weeks ending 1 December. A total quantity of 1 million bales are to be purchased by IJMA mills during the current month. Besides the minimum purchase quotas, the order also stipulates the minimum stock levels to be maintained by the mills at the end of November and December. This is the first time that the authorities have issued orders direct to mills in regard to minimum purchase of jute. So far it was the Indian Jute Mills Association which was issuing minimum quotas. It is evident that the IJMA is not in agreement with Government over the question of fixing minimum

purchase quotas for mills during November. The Association is reported to have requested Government to withdraw the order presuably on the plea that minimum quotas at this juncture when there is little storage space left with mills, will put them in a sad predicament. Indications are that Government will point out that the order has been issued after due consideration of all relevant factors. Raw jute prices have not been maintained at the minimum levels fixed by Government. Even now most varieties, especially low quality jute, are selling at considerably below the minimum prices. It is evident that Government expects steadier conditions to be restored in the raw jute market once mills start purchasing in quantity. In arriving at the figure of 1 million bales for mills' purchase during the current month Government is reported to have taken note of the quantum of mills' purchases in November last year and in October this year.

Wide price fluctuations have characterised trading in the jute goods market during the past week. Hessian continues to be stronger of the two main categories in view of the sustained overseas demand. Thanks to the higher trend of burlap consumption in US, hessian has been receiving good support for the past

several months and the big purchases by the US in the last week of October following the Cuban crisis has further strengthened its statistical position. Besides foreign enquiries, hessian is expected to receive increased support locally on Government account. This explains the sizable business in the futures market during the week. With stocks at a meagre level coupled with sustained buying enquiries, it is not surprising that hessian prices are ruling steady. The fact that technical difficulties preclude easy transfer of additional looms to hessian production will continue to sustain interest in this category. Although the position of sacking is rather difficult in view of the declining trend of exports the section has profited from the present emergency which operators believe will result in an expansion of demand.

Gunny prices steadily rose during the first half of the week under review and in Saturday's trading rates were marked up by about two points all along the line. B Twills November closed at Rs 121.15 on that day with Hessian 40" x 10 oz November placed at Rs 59. In subsequent trading BTwills November steadily lost ground to be placed at Rs 119.50 on Tuesday. Hessian 40" x 10 oz November improved further to Rs 59.10 before coming back to Rs 58.50 on Tuesday.

B Twills November futures was done up to a high of Rs 121.20 before closing on Tuesday at Rs 118.45. The highest level of Rs 58.48 touched by Hessian 40" x 10 oz November was not maintained to the last as it closed lower on Tuesday at Rs 57.06.

But for a brief spell of steady conditions, the raw jute market

has ruled quiet. While transport difficulties continue to add to the pressure of sales, mills too have not been eager buyers presumably on account of shortage of storage space. The Jute Commissioner's order making it compulsory for mills to complete purchase of 1 million bales of jute by 1 December is yet to bring the desired result, as jute continues to be offered in larger quantities with sellers keen for business.

After five months, heavy goods stocks have shown a welcome decline by 1,500 tonnes at 54,000 tonnes at the end of October. Total stocks at 90,700 tonnes are 3,200 tonnes lower than at the end of September. All categories have contributed to the decline: hessian is down by 100 tons while other goods are lower 1,600 tonnes. While offake of hessian has been good last month, this category continues to be in good demand thanks to sustained US enquiries and fresh enquiries from Russia as well as from local buying interest. Heavy goods too have been meeting with increased buying support since last week of October and it is expected the trend will further strengthen in coming weeks. It is significant that the Committee of the IJMA has decided at its meeting this week not to recommend any change in the working hours of member mills.

OCTOBER-END STOCKS.

TEA

Strong Demand Persists

THE Tea market has so far taken the developments in the political situation calmly and the demand for the commodity continues to remain strong with prices moving in sellers' favour.

In the Export Sale held in Calcutta this week, offerings were 69,767 packages. There was a strong general demand at dearer rates. Plain orthodox descriptions met with useful competition and advanced by 10 nP to 30 nP kilo with BOPs and all Fannings grades again selling particularly well. Medium Assam BOPs and Fannings again registered a marked advance in prices, while the best liquoring sorts were generally firm.

Medium CTC descriptions came to a strong market and were considerably dearer, BPs meeting particular enquiry. Best Sorts were fully firm at last rates. Legg-cut teas shared in the general trade, being dearer by 10 nP a kilo. The lower-priced whole Leaf grades were often sold at higher prices; but the better sorts were only firm at last rates.

The best Darjeeling teas met with less enquiry; but others followed the upward trend of the market and were generally dearer. Following rates were quoted:—Clean Plain Pekoe Rs 4.60 to Rs 4.80; Plain BP Rs 4.00 to Rs 4.40; Plain Fannings Rs 4.40 to Rs 4.80; Medium Assam CTC BP Rs 5.80 to Rs 6.50; Medium Assam CTC Fannings Rs 5.80 to Rs 6.50; Best Assam CTC BP Rs 6.50 to Rs 6.80 and Best Assam CTC Fannings Rs 6.50 to Rs 7.00.

In the Internal Sale, offerings were 29,104 packages of Dusts. There was a strong general demand at dearer rates. Medium CTC types received good support and were sold at firm to dearer rates with buyers paying particular attention to the more fibrous kinds, which advanced considerably. Good CTC were sold well at around last levels.

Plain and medium orthodox teas were keenly competed for and prices were dearer by up to 50 nP a kilo. Legg-cut teas continued to be a strong feature and realised much higher prices. The following rates were quoted: Plain Orthodox Dust Rs 4.60 to Rs 5.00; Medium Assam Dust Rs 4.80 to Rs 5.40; Legg-cut Dust Rs 5.40 to Rs 5.65; Medium Assam CTC Dust Rs 5.80 to Rs 6.10 and Good Assam CTC Dust Rs 6.30 to Rs 6.70.

In the Colombo market, offerings were 6,504,330 pounds. There was active demand. High-grown broken from western districts were irregularly dearer except for the plainer light liquoring sorts which declined by 5 to 15 cents per pound. Medium Broken Orange Pekoes were 5 to 10 cents

a pound dearer. Uva Broken were irregular following quality. Small leaf low-grown were 5 to 10 cents dearer. Middle East descriptions were irregular and slightly dearer.

According to a report issued from Colombo, production of tea in Ceylon increased to 31.5 million pounds in September from 29.3 million pounds in the corresponding period of last year. This puts the total tea outturn, in January/September 1962, higher at 348.5 million pounds as against 340.9 million pounds in the similar 1961 period.

Some response to the India-China situation was also evident in the London tea auctions where very firm conditions prevailed among North Indian teas. Buyers were undoubtedly anxious to acquire additional supplies against the possibility of delays in the movement of tea, because of transport difficulties bearing in mind that some transport has already been requisitioned by the Indian Government and that North Indian tea constitutes a good part of total UK imports. Over the period January to September, for instance, imports from all sources were 400.7 million pounds of which some 169.3 million pounds were from North India.

The demand for plainest types was the strongest feature of the sale and was reflected in the higher indication for plain tea at 2sh to 3sh 11d a pound as compared with 1sh 9d to 3sh 8d in the previous week. South Indian teas met with a good demand and prices tended in sellers' favour, particularly for the plainer sorts which were often 1d to 2d a pound above valuations. The Ceylon teas encountered a rather better demand with low medium invoices often 1d to 1d a pound dearer. Other types were generally unchanged.

COTTON

Small Turnover

TRANSACTIONS in the Bombay cotton futures market during the past week were largely influenced by Moorat trading. The turnover was pretty small. Fluctuations were restricted to a narrow groove. The undertone was generally steady. Though the adverse rainfalls in Moglai and Betar areas tended to fan prices up the uncertainty in the nation's political and economic fronts acted as a brake. The Jarilla March contract which opened the week at Rs 745.00 per three quintals moved up to Rs 747.50 at one time and finally closed the week at Rs 746.25.

The spot market at Sewri also maintained a steady trend. Toward the close of the week under review all the growths were quoted above the ceiling. Business on a small scale with upcountry centres was reported. Varieties like 197/3, L-147, CO2 and Kalyan met with good enquiry. The scramble in the market for 197/3 was viewed with concern as it may eventually defeat the pur-

pose of the new marketing system for cotton.

The Textile Commissioner has last week announced that those mills to whom letters had been forwarded about the purchase of new crop cotton before 19 October could obtain their quotas from him by depositing Rs 100 per bale of such purchases.

A frantic mill buying of superior spinnable qualities of cotton waste was reported obviously due to the adverse impact on the cotton crop of the unfavourable rains in many of the cotton growing tracts. Enquiries were prominent in medium and supergrades of combers and strip-pings.

The Textile Commissioner has prohibited the movement of cotton in ginned or pressed form from Nasik, Jalgaon or Dhulia districts, excluding the Nawapur and Akkalkuwa taluks, to other places without obtaining special sanction from him. Those desirous of exporting cotton from these places will have to apply to the Commissioner furnishing all requisite information. This ban will be inapplicable to cotton parcels weighing not more than 15 kg for samples and domestic purposes. This restriction imposed on cotton movement is considered as a prelude to large-scale requisitioning in the near future. There is also every likelihood that the control order will be extended to other areas as well whenever the prices tend to ride above the official ceiling. This move was received with mixed feelings by trade circles. Cotton merchants in Maharashtra hail this as an appropriate step to control price movements in the prevailing political conditions, while another section of the trade suspects that it may lead ultimately to restricting the volume of trade by cotton merchants and enhancing that by the Indian Cotton Mills' Federation.

Piecegoods

After a short period of moderate transactions in the Moorat trading, the Bombay cotton piecegoods market slumbered into inactivity mainly owing to the absence of support from upcountry centres. The political tension in India and abroad had also cast a depressing spell on the market. The local dealers as well as commission agents engaged in supplying goods on a credit basis developed an indifferent attitude and effected a drastic curtailment of credit facilities to the dealers from the upcountry centres. They were also reported to have declined to negotiate any fresh transactions with the mills. The mills, on the contrary, were willing to dispose of their stocks at the prevailing prices, though they were reluctant to enter into any contract for future deliveries. The undertone of the forward contacts of the mills was on the whole firm.

The tension in the political situation has rendered the exports of cotton textiles extremely difficult. Several cotton houses have expressed their inability to put through fresh export business with countries like Japan over the past couple of weeks. With the declaration of the state of emergency in India foreign buyers are compelled to keep away from Indian markets for an indefinite period.

The Ahmedabad cloth market depicted sluggish trends due to the absence of enthusiasm on the part of dealers at the commencement of the Moorat trading. Upcountry dealers were dormant during the period. Business in fine and superfine varieties was transacted at ruling prices while check shirtings were offered at slightly reduced prices.

Sharp Break in Gold Prices

CONDITIONS akin to panic have been noticed in the bullion market during the past few days after the Union Finance Minister's broadcast to the nation. His announcement, that measures will soon be taken to make it difficult to market smuggled gold, has brought furies of selling orders. Speculators are apprehensive that a large quantity of smuggled gold, which was not so far unloaded on the market, will

find its way out immediately as the smugglers will not like to hold on.

Mr Morarji Desai has also announced the issue of gold bonds as a means to strengthen the country's foreign exchange reserves. Gold will be valued at the international price fixed by the International Monetary Fund, viz., Rs 62.50 per tola or Rs 53.58 per 10 grammes. In order that the sale of gold at the international price may not prove an undue burden, the Government has also decided to offer favourable terms for the gold bonds. These bonds will be exempt from Wealth Tax as well as the Capital Gains Tax. Also, there is no obligation to give explanation as to the origin of the gold acquired.

Although the bonds are not attractive commercial propositions as gold will have to be given to the Government at half the market price, nervousness has been accentuated by fears of confiscation of hoards. Naturally, there is now stampede to unload gold, not to speak of the apprehensions on the

part of bullion brokers that futures trading may come to a close at an early date.

Trading in the bullion market has, therefore, come to almost a standstill and prices have declined sharply. Gold Magsir delivery, which was quoted up to Rs 120.75 for 10 grammes, slumped at one time to Rs 110 after the Finance Minister's announcement, before settling down at Rs 112.50. In sympathy, Silver Magsir delivery dropped down to Rs 220 from a high of Rs 224.85, to settle down at Rs 221.50.

NON-FERROUS METALS

The Non-Ferrous Metal market in Bombay ruled distinctly buoyant with many of the metals touching their peak levels. The buoyancy was attributed to a speedy offtake of the available supplies in the market and the distant possibility of augmenting them in the context of the undeclared war with China. Buyers predominated in number, while sellers were scare as

stocks with them were reported to be inadequate to meet the increasing demand. Arrivals are also reported to have declined considerably during the past few months.

The rise in Tin prices was more pronounced. The rate for the metal, which was quoted at only Rs 241 per 10 kgs in mid-September, was pushed up to Rs 277 on reports of a considerable decline in arrivals.

In Bombay, electrical copper wire bars moved up by Rs 5 to Rs 385 per 50 kgs; copper ingot by Rs 6 to Rs 341 and blister copper by

Rs 4 to Rs 336. Total free world output of refined copper is reported to be lower at 173,000 tons in September 'as against 182,000 tons in August. The output of primary crude copper has also declined from 202,503 tons to 202,177 tons in September and of crude copper from 2,810 tons to 2,388 tons.

Among other metals, Zinc also rose by Rs 10 to Rs 139 per 50 kgs on encouraging advices from foreign markets. In London, Zinc is reported to have risen to the highest level for some time on increased consumer demand.

CHEMICALS & DYES

Conditions were quiet in the Bombay market for Dyes and Chemicals. Business was extremely limited with prices tending to move down. Demand was at a low ebb in view of the uncertain political situation and the non-availability of bookings. On the other hand, stockists were not in a mood to part with their holdings on expectations that prices would move up.

Despite reports that the Government of India would not slash essential imports at this critical time, stockists feared that the im-

ports of dyes and chemicals would be further reduced because of defence requirements. It was also likely that a part of the indigenous production would be diverted to defence requirements. All these factors, it was felt, would lead to a shortage of goods in the coming months and a rise in prices.

★

OILS & OILSEEDS

Faced with a sudden selling wave, prices on the Bombay Oilseeds Exchange slumped on heavy hull liquidation in view of reports of suspension of trading in the local exchange. Groundnut met with heavy offerings from prominent bull operators. On Monday itself, about 15,000 candies were reported to have been liquidated, resulting in the January delivery contract quoting in prices was, however, more due as low as Rs 226.87. The slump to the absence of buyers than because of sellers' onslaught. Khanchesh bold quality drifted to Rs 45.25 from Rs 46.75 and the millers were reluctant to purchase even at this lower rate.

Meanwhile, the Bombay Oilseeds Exchange has lowered the ceiling rate by 5 points at Rs 236 against the previously contemplated rate of Rs 241. The Forward Markets Commission is likely to make an announcement in this regard shortly.

★

SPICES

Prices of Spices showed a mixed trend in Bombay. While the markets for Cinnamon and Cardamom remained steady, those of black Pepper, Copra and Cloves ruled easy.

★

RUBBER

Rubber prices have been showing an irregular tendency during the past few days. After initial easiness, prices in the New York market steadied up following development of further obstacles to settling the Cuban situation. Factories bought lightly in physical rubber, while dealers made routine purchases.

★

SUGAR

Sugar markets remained depressed during the week when the demand decreased and support from the consuming areas was lacking. The supply position continued to be easy. In the Hapur market, the rate for spot was quoted at Rs 106 per bag.

In accordance with the decision announced earlier, that the minimum price of sugarcane would be linked with sugar recovery from the year 1962-63, the Government of India has fixed the minimum prices for sugarcane payable by individual sugar factories in the country with effect from 1 November 1962. The prices vary from Rs 1.50 to Rs 2.13 per maund of cane.

For the Investor

INVESTMENT GOSSIP

Put an End to Bear Raids

The two weeks of national emergency have produced a crisis in Indian stock exchanges, with Lyons Range (traditionally biased in favour of bear operations) alone showing some semblance of courage. As far as markets are concerned it all began on 25 October when the Calcutta Stock Exchange Association under the pressure of price behaviour felt obliged, in order to stem the rot, to initiate certain emergency measures, which were:

1. Minimum prices were fixed, for both forward and cash scrip, these minima being the closing quotations on 24 October.

2. With a view to reducing the opportunities for further panicky transactions, the duration of the trading session was cut short.

3. And naturally, of course, business outside hours was totally banned.

By and large these measures achieved what they were intended to do. Some stability was there and a landslide in values was averted. Trading was restricted and dull—but there was no surrender to unreasoning fright.

In Bombay on the other hand the professionals took charge of the situation and the hold of bear operators was relentless. Bear hammering on 5 November was so sustained and powerful that without let or respite prices ranging over the gamut of the list tumbled down fast and apparently with bottom unsighted. No other recourse was open to the Bombay Stock Exchange than to suspend trading until further notice; that period of further notice has not yet ended.

Even so, other Indian Stock Exchanges have been smarting under the repeated onslaughts of bear operators—and official transactions suspended.

How shapes the future? Plainly the apprehensive reaction to the emergency has been an exaggerated one. And the country can little afford the signs of instability in a key sector of the economy like the Stock Exchanges. Bear raids are totally unwarranted and unpatriotic at a time when other kinds of raids cause anxiety.

After all the prospect before industry is bright: defence production or the defence effort cannot be possible in isolation, for without industrial production and progress no defence manufacture will be possible. The investor, we may be sure, will not panic nor seek to dispose of his holdings; the speculator must not be permitted to disrupt stock exchange working.

NEW ISSUE NOTES

TELCO

THE Tata Engineering & Locomotive Company, Limited has applied to the Controller of Capital Issues for his consent for a new issue of 200,000 ordinary shares of Rs 100 each at a premium of Rs 50 a share or such other amount as may be finally fixed by him. The new ordinary shares will be offered to the existing shareholders or their nominees in the ratio of—as nearly as the circumstances permit—one new ordinary share for every four shares held. The amount will be called up in two equal instalments, the first instalment being payable on or before 31 March, 1963 and the second on or before 30 September, 1963. The approval of the shareholders will be obtained (1) for increasing the authorised capital of the company to permit the new issue of ordinary shares and (2) for the issue of 200,000 new ordinary shares as soon as the consent of the Controller of Capital Issues is obtained.

Kangan

Kangan (Private), Limited, Bombay, is issuing capital of Rs 30,000 in the form of 1,500 bonus shares of Rs 25 each by capitalisation of company's general reserve to a like extent. Shares will be issued to the existing shareholders at the rate of one share for every five shares held.

Uttar Pradesh Pulp

Uttar Pradesh Pulp & Paper Mills Limited, a public company incorporated in the State of Uttar Pradesh, for undertaking the manufacture of writing, printing and wrapping paper, is raising capital of Rs 300 lakhs, divided into 25,00,000 equity shares of Rs 10 each and 50,000 cumulative redeemable preference shares of Rs 100 each carrying dividend of 9 per cent (free of company's income-tax, but subject to deduction of tax at source at the prescribed rates). Out of this issue, equity shares of the value of Rs 25 lakhs and preference shares of the value of Rs 25 lakhs will be offered to a US company against supply of plant and machinery to be imported and the balance will be issued for cash, at par.

East Anglia Plastics

East Anglia Plastics (India), Limited will issue 21,25,000 equity shares of Rs 10 each out of which 1,25,000 shares will be issued to the foreign collaborators—a French firm—against supply of plant and machinery and 20,00,000 shares will be issued to the existing shareholders at par in the ratio of two new shares for every share held. The capital is required for the establishment of a factory in Andhra Pradesh for the manufacture of cellulose acetate flakes.

STOCK MARKETS & THE EMERGENCY

On 25 October the Calcutta Stock Exchange initiated some emergency measures as under:

1. Minimum prices fixed both for forward and cash scrip at closing prices on 24 October.
2. Trading Session Reduced.
3. Business outside hours banned.

In Dalal Street the bear pressure became excessive on 5 Nov. with prices losing ground rapidly. Stock Exchange authorities took the extreme step of suspending trading until further notice. Bombay Stock Exchange still remains closed. Other Stock Exchanges are also under emergency conditions.

Devidayal Tube

Devidayal Tube Industries (Private) Limited, Maharashtra, Bombay, now proposed to be converted into a public limited company, is issuing further

capital of Rs 61 lakhs out of which shares of the value of Rs 19.91 lakhs will be allotted to Devidayal (Sales) Private Limited in consideration of the balance assets transferred and the balance to the public for cash at par.

GOVERNMENT OF INDIA

GOLD BONDS

Subscriptions for 6½ per cent Gold Bonds 1977 will be received from the 12th of November, 1962, in the form of gold, gold coins and/or gold ornaments.

The value of the gold will, after assaying, be calculated at the rate of Rs. 53.58 nP. per 10 grammes of .995 fineness equivalent to Rs. 62.50 nP. per tola of the same fineness.

Interest on the Bonds will accrue from the date of issue and will be payable half-yearly on the 12th of May and the 12th of November. Interest will be liable to tax but no tax will be deducted at the time of payment of interest on the Bonds held by individuals if the holder gives a declaration that the total nominal value of the Bonds held by him, or on his behalf, does not exceed Rs. 10,000.

The Bonds will be exempt from Wealth Tax and any capital gains from their sale will not be subject to Capital Gains Tax.

Subscription lists will open on the 12th of November, 1962 and close on the 11th of February 1963 or earlier without notice.

Applications for the Bonds will be received at:—

- (a) Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
- (b) Branches of the subsidiary banks of the State Bank of India conducting Government treasury business; and
- (c) Branches of the State Bank of India at other places in India.

For full particulars apply to any of these receiving offices or branches.

ISSUED BY

GOVERNMENT OF INDIA

Facit Asia

Facit Asia Limited, Madras, will issue 30,000 equity shares of Rs 100 each for cash, at par. Out of this, 15,000 shares will be issued to the Swedish collaborators. The proceeds will be utilized for the manufacture of calculating machines.

Gaskets and Oil

Gaskets and Oil Seals (Private), Limited, Baroda, is to issue Rs 20 lakhs in equity shares of Rs 100 each for cash, at par (inclusive of Rs 10 lakhs issued by the company during July 1962). The proceeds of the issue will be utilized in the manufacture of spare parts of automobiles.

INVESTMENT NOTES
Permanent Magnets

Permanent Magnets Limited has made good progress in spite of difficulties. Constructional work on the factory has been completed as well as the erection of plant and machinery. Raw material supplies on hand will last for six months. Trial operations have already started. Commercial production is expected to commence sometime next month.

Hind Cycles

An agreement has been reached between the management and the workers of the Hind Cycles Limited over certain outstanding issues, which have been unduly hampering production. It is now expected that production will recover the normal tempo.

INVESTMENT BRIEFS

Indo-Burma Petroleum Company, Limited has announced an interim dividend of Re 1 per share, less tax, for 1962, payable on or after 10 December, 1962.

New Central Jute has proposed a taxable interim dividend of 50 p per share for the year ended 31 March, 1963, payable to those shareholders whose names are registered in the books of the company as on 30 November, 1962. Transfer Books will be closed from 22 to 30 November, 1962.

Asher Textiles Limited has proposed a taxable dividend of 15 per cent for the year ended 30 June, 1962 as against 30 per cent, taxable, paid for the preceding year.

Cauvery Sugars & Chemicals Limited has maintained the dividend at 6 per cent for the year ended 30 June, 1962.

Neelamalai Tea & Coffee Estates Limited has maintained the dividend at 7½ per cent, taxable, for the same year.

Bababudin Coffee & Produce Company, Limited has reduced the dividend from 8 per cent to 6 per cent, taxable, for the year ended 30 June, 1962.

Shevroy Estates Limited has also reduced the dividend from 7½ per cent to 6 per cent, taxable, for the same year.

West Coast Paper Mills, Limited has announced a gross dividend of Rs 8 per share for the year ended 30 June, 1962 as against Rs 7.50 (gross) paid previously.

STOCK EXCHANGES
Recovery After Crisis

Watch-Dog Writes:

ALTHOUGH stock markets have suffered a severe crash early in the week, there are now signs of returning confidence, thanks to the Press Note issued by the Union Finance Ministry advising investors and industrialists to be calm and optimistic of the situation.

Reports that the LIC has bought a big way, have also influenced a number of shares, some in a measure of hope for stability in the market. There is some expectation in market circles that it may not be long before normal conditions return; but the present mood continues to be cautious.

It was an extraordinary week on the Calcutta Stock Exchange. Perhaps, for the first time in the history of Lyons Range, Indian Irons were not traded at all for the first two days of the week. But the mood of returning confidence was reflected in some clearing shares being traded at or above minimum prices toward the close of the week. There was also a broadening of enquiry in the cash list.

Although the Bombay Stock Exchange remained officially closed throughout the week, unofficial deals revealed a better tendency in prices. There were a few transactions on the Madras Stock Exchange at the minimum prices, fixed by the authorities on Monday.

Generally quiet conditions prevailed on the London Stock Exchange where no definite trend was established. Operators were cautious in view of current labour uncertainty.

CALCUTTA

Friday.

SENTIMENT on Lyons Range was much demoralized till the middle of the week when trading was virtually at a standstill. Though official measures appeared to have checked any further fall in prices, they did not help to bring back confidence to the market, as operators were not able to take a constructive view about the future outlook for the stock markets.

Quite unexpectedly, there was a sharp break in the prices of industrial securities in Ahmedabad and Bombay. There were fears that a heavy fall in the prices of gold would have an unsettling effect in many directions and that the heavy loss sustained by the bullion dealers would have its effect on the stock markets as well. There were also conflicting reports and opinions about the effect that the issue of gold bonds would have on share values.

Moreover, the discussions at the National Development Council emphasised the need for mobilisations of resources for the defence of the country, which hinted at higher taxes in the next budget. Taking advantage of the situation, bear operators from Calcutta rushed to sell in Bombay as there was no restriction on trading in that centre, apart from fixation of heavy margins.

On the whole, the lack of co-ordinated action by the authorities of the principal stock exchanges brought about a general crisis in stock markets; but the course of action adopted by the Committee of the Calcutta Stock Exchange should be regarded as the most appropriate in the present circumstances. Though there was a tendency on the part of the operators to await fresh developments from Bombay, the minimum price system stood the crisis well during the past few days.

As a matter of fact, a welcome recovery in prices in unofficial deals in Bombay from Wednesday, being influenced by the reports of the LIC having made good purchases, induced a return of confidence in the market. The improvement in sentiment was aided by the reassuring announcement by the Government of India stating that there was no reason to be pessimistic about the outlook for industry or the return for the investor.

Indications that the Government was quite alert over the recent developments in the stock markets also impressed the operators favourably. There was also a general feeling that the LIC might continue to buy for some time to come. The mood of returning confidence was reflected in some clearing shares being traded at or above minimum prices. In the cash list, however, enquiry was confined to only a few selected shares, as will be clear from the following table.

Wholesale Prices

REVIEW FOR WEEK ENDED
20 OCTOBER

The official wholesale prices index (with the year ended March 1953 as 100) rose by 0.2 per cent to 129.9 during the week ended October 20, 1962 as compared with 129.7 (revised) for the earlier week. The index was lower by 0.2 per cent when compared with the corresponding week of the previous month but was higher by 4.4 per cent than that of a year ago.

Higher prices of Betelnuts (+9%), Rice at Calcutta (+8%) and at

Nizamabad (+5%), Wheat at Rewa, Barley at Motihare and Maize (+5% each), Arhar, and Masur (+4% each), Gur (+3%), Mung and Milk (+2% each) and Gram, Urad, Eggs and Chillies (+1% each) raised the index for 'Food Articles' by 0.4 per cent to 129.2 as compared with 128.7 (revised) for the previous week. The prices of Oranges (-15%), Fish (-10%), Rice at Cuttack (-7%), at Tihu (-6%) and at Nagpur (-5%), Jowar and Cashewnuts (-3% each, Potatoes, Bananas and Groundnut oil (-2% each) and Bajra, Rangi, Onions, Coconut oil and Meat (-1% each), however, moved down.

The index for 'Tobacco' advanced by 0.5 per cent to 97.0 due to a rise in the prices of Tobacco raw (+1%).

The index for the 'Fuel, Power, Light & Lubricants' group worked out to 124.8 as against 124.7 for the earlier week. The prices of Castor oil (+1%) showed an increase during the week under review.

The index for 'Industrial Raw Materials' rose by 0.4 per cent to 139.0 as compared with 138.5 (revised) for the previous week due to an advance in the prices of raw Hemp (+5%), raw Wool and Copra (+3% each), raw Silk (+2%) and Linseed and Castorseed (+1% each) although the prices of Tanning Materials (-4%) and Lac (-1%) showed a fall.

An increase in the prices of Linseed oil (+3%), Rayon yarn (+2%) and Cotton yarn (+1%) was responsible for a rise of 0.9 per cent to 144.9 as against 143.6 (revised) for the previous week in the index for 'Intermediate Products'. The prices of Zinc (-5 per cent), however, moved down.

Manufacture of Hot Plates in Small Scale Sector

A survey conducted by the Central Small Industries Organisation has disclosed that there are 28 small units in the country engaged in the manufacture of hot plates. There is only one large scale unit in this line. This industry is concentrated chiefly in Delhi, Jullundur Amritsar, Calcutta and Bombay, and combines production of several other electrical appliances.

Hot plate is a domestic electrical appliance used for cooking purposes. It is a compact type of heater having the heating elements sealed beneath a single or a double plate.

The total manufacturing capacity has been assessed at 25,000 hot plates per annum. Actual production of hot plates in 1961 was approximately 10,000 valued at Rs 4.5 lakhs. Separate import figures for hot plates are not available.

During 1961, the import of hot plates and electric toasters was 8,512 numbers valued at Rs 1.98 lakhs. The import of complete hot plates is banned according to the current import policy.

Demand for hot plates is mostly confined to higher income groups and in urban and industrial centres. Their consumption is estimated at 15,000 to 18,000 during 1961. Demand is anticipated to go up in future at the rate of 15 per cent per annum. There is additional scope for creating further capacity of 13,000 to 15,000 numbers.

Construction of an annular kiln using ACCOSET-50

ACC'S REFRACTORY CEMENT ACCOSET-50

makes linings and joints as strong as the firebricks themselves

Composed of finely ground plastic clays, high alumina burnt refractory materials and special chemicals, **ACCOSET-50** gives good bonding strength and high heat resistance. Once it is dried and burnt **ACCOSET-50** becomes one with the bricks.

YOU CAN USE ACCOSET-50

for jointing, repairing and patching
for bonding and laying firebricks of any shape
for protective wash for furnace walls and floors
for monolithic and rammed linings

ACCOSET-50 — your refractory monolithic cement that makes strong joints to improve furnace thermal efficiency.

ACCOSET-50 — saves your time, saves your money.

Technical literature sent free on request.

Prices: The First Phase

Discussion on holding the price line, that has been going on listlessly in the last two years, has assumed immediacy in consequence of the national emergency. We have had last week what is officially described as the first phase of action in the Government's determination to maintain prices of essential commodities at reasonable levels. The plan of action outlined confines itself to the distributive aspect of the price situation, the productive and monetary aspects being taken for granted. The steps contemplated fall far short of physical control of commodities and their movement and full-scale rationing. Though extensive powers have been taken under the Defence of India Ordinance and the Rules made thereunder, there appears to be no present intention of invoking them fully. The measures announced are largely regulatory and supervisory and depend for their success on voluntary co-operation and self-restraint on the part of the community, especially on that part of it that constitutes trade and industry. On current evidence, such co-operation and self-discipline will be readily forthcoming.

Two decisions of a general nature have been taken. These are the creation of a committee on price stabilisation and the improvement of the channels of price intelligence. That the latter should still be considered a desideratum is a measure of the shadow-boxing that has been going on the price front so far. The committee on price stabilisation will presumably be analogous to the one suggested by the Ashoka Mehta Committee years ago and inconclusively debated off and on since. The committee, presumably official, will keep a close and continuous watch on the price situation and recommend suitable action in the light of its study of the situation.

The principal agency through which the Government hopes to defeat attempts at fleecing the consumer is a net work of co-operative and other consumer stores for supply of essential commodities. Two hundred wholesale and central stores with about 4,000 branch and primary stores are expected to function in all the urban areas of the country. Besides, Government departments, industrial employers, trade unions and voluntary organisations are to be encouraged, with funds if necessary, to start consumer co-operatives. The intention is probably not so much to make private channels of trade superfluous as to make profiteering by them impossible by providing additional sources of supply.

Two reservations have to be made in respect of this, generally unexceptionable, proposal. One is the vagueness of the official programme about the steps to be taken to ensure uninterrupted supply of goods to the co-operatives and consumer stores. All that the official statement has to say on the subject is that the "appropriate Government authorities are being asked to ensure the necessary supply for these stores and the intermediary charges are eliminated to the greatest extent possible." Such a large number of new retailers would create a scramble for the available goods with all its attendant evils. This problem will have to be thought out in greater detail. Presumably some kind

of rationing at the source will have to be enforced so that neither the old nor the new retailers suffer short supply. The second reservation arises from the record of the co-operatives so far. It is well known that the consumer co-operatives have all along obtained three-quarters of their requirements not from co-operative producers but from the large unorganised private sources. This means that the efficacy of these co-operative retailers to influence price movements is marginal, though regularity of supply would be a not inconsiderable benefit.

Short of full-scale rationing the price policy for food-grains in the distributive context resolves itself into the regulation at the source and at the retail-end. It involves licensing of wholesale trade, inspection and control of stocks and movements, and restriction of traders' margin, both wholesale and retail. Besides, open market operations by Government would help stabilise price within a desirable range. Buffer stocks built by open market purchases and compulsory levies will have to be deployed judiciously. Fair price shops and co-operatives are useful here as in other contexts. Fixation of prices, both floor and ceiling, may become expedient both to reassure farmers and to give a frame of reference for prices, both wholesale and retail.

In respect of cotton textiles, many of the steps suggested are already in operation. Stamping of prices as fixed by the Textile Commissioner is the most obvious protection to the consumer, although it is often nullified now by uncertainty about description of yarn quality. Stamping of prices without exception will help. Ensuring adequacy of supply is to be made by prescribing percentages of output to be distributed under official instruction and by official restrictions of accumulation and movement of stocks. Supply of cotton to mills is to be regulated and mills are to increase production of lower-priced varieties of cloth. Wholesale distribution is to be regulated and the network of retail shops extended.

The measures announced add up to a coherent policy and are sure to keep prices down, if implemented effectively. Public co-operation can take several forms. The producers can, as they have promised, help keep prices down. The consumer too can help. In the first place, he can consume less, and where possible, not at all. This would constitute at once a symbolic gesture of self-deprivation, and a doubly-useful economic act. The money not spent is saved and the commodity not bought is to that extent not in short supply. Meticulous examination of our personal life and habits with a view to cutting consumption of all kinds to the bone is the most effective way of fighting rises in prices. "Mend and make do" should take the place of the philosophy of quick obsolescence and keeping up with the Jones that has, unhappily, been overtaking a large section of our people in the recent past. Social values and even vagaries of fashions should be consciously made to subserve the supreme need for economy. Above all, the public can help by "going on strike", when prices go up by refusing to pamper the profiteer.

Steel Price Anomalies

SIR BIREN MOOKERJEE'S statement on the affairs of the Indian Iron and Steel Company for 1961-62 (appearing elsewhere in this issue) is more than usually comprehensive and combative. The reasons for this are not far to seek. The facts, figures and charts that he has provided are intended to bring into perspective the controversy over the niggardly increases in the retention price for steel that government announced last September. For the rest, Sir Biren has brought into focus the travails of the steel industry from vagaries of poor quality of raw materials and transport difficulties. This capsular presentation of widely dispersed facts should make for a better appreciation of what steel makers in the country are up against. He has also indicated the development programmes the company has on hand and made tentative appraisals of future plans of expansion.

The first attempt at fixing a retention price by examining cost data was made in 1949 by the Tariff Board at a time when Steel Corporation of Bengal had not become merged with the Indian Iron and Steel Company. Thereafter, in 1955, a uniform retention price of Rs 393 was fixed for both IISCO and TISCO on the recommendation of the Tariff Commission. Since then increases in the retention price were allowed from time to time to provide for increases in cost of raw materials etc. Four such "escalations" were made in the five year period 1955-60 and as at the end of 1959-60, the retention price stood at Rs 475 per ton. A reference was made again to the Tariff Commission in 1961 for recommending new retention prices for the period 1960-62. Apart from normal considerations, the Commission was asked to look into the question of providing for the "special element" of repayment of the "special advance" that the government had made in 1953 as also for the payment of interest thereon. The Commission went into the question and made its recommendations.

The principal recommendation was that the average retention price of saleable steel should be Rs 550 per tonne for this period. This included Rs 8 per tonne in respect of the 'special element'. The basis on which the Commission arrived at this finding was as follows. It estimated Rs 1300 as the 'fair average block per tonne of saleable steel on which a return of 8 per cent is to be allowed. This figure was arrived at by assuming that under present circumstances, a production of 90 per cent of capacity alone can be assumed in calculating the average block. Secondly, the provision for working capital was fixed at six months' average. (The industry's claim in respect of both was 80 per cent and eight months respectively.) And in working out the provision for repayment of special advance and interest thereon, the Commission envisaged a twenty-year period of equated payment for liquidation of the entire liability.

The government has departed from these recommendations in three important ways and arrived at an average retention price of Rs 522.50 per tonne of saleable steel. In the first place, it has decided (after all the trouble the Commission went to in determining the question) that the companies can make alternative arrangements for repaying the special advance and interest thereon. No provision need be made for it in the retention price. Secondly, it has fixed the 'fair block' on which return is to be calculated at

Rs 1176 per tonne. This result has been achieved in three ways. First, it has assumed that steel plants in India are hundred per cent efficient and the rated capacity should be the divisor in arriving at the fair block per tonne. Secondly, by a totally perverse process of reasoning, it has subtracted from the gross block the equivalent of the special advance before reckoning the per tonne fair block. And lastly, it has taken into account only four months working expenses in reckoning the cost.

Sir Biren has exposed the fallacies in each of these variations. As regards the first, government has suddenly decided to reverse its earlier stand and asked the companies to raise fresh capital for repayment of the special advance and interest thereon. The history of this advance as given by Sir Biren is interesting. When in 1952 available resources were matched against the requirements of finance for expansion, a shortfall of Rs 10 crores was discovered after taking into account World Bank's loan, government's loan and an equivalent amount from internal resources. It was argued with some success by the World Bank representatives that government, which had prevented the steel industry from reaping the benefits of the market forces and had a sizable fund with it accumulated at the expense of the industry, should make available the required sum at least as an interest-free loan. Subsequently it was agreed that interest should be paid.

It is true that in the agreement between the company and the government the alternative mode of repayment by issue of further capital was provided for. But in the light of the government's own initiative in asking the Tariff Commission to determine the element in respect of the special advance in the retention price, this volte-face seems indefensible. Nor does it take into account the difficulties of raising fresh capital of such large magnitudes.

Enough has been said about the absurdity of assuming a hundred per cent productive efficiency. Such an assumption of uniform only hundred per cent efficiency is not true of any steel plant in the world let alone the Indian plants. How with the record of the public sector steel plants this contention could be seriously urged is difficult to see.

Sir Biren has also given some telling figures that expose the hollowness of certain self-righteous reasons that government has given in support of its allowing only four months' expenses as adequate working capital. It is not true that the industry takes 25 per cent of its sale price in advance. Sir Biren also disputes vigorously the claim that large sums of the government are lying with the company. He rightly points out that on the other hand, the delay in determining the retention price has deprived the companies of the use of large sums that are theirs legitimately.

The only saving grace about the whole business is that the price now fixed is for a period that has already elapsed. Though these prices are to continue to be effective even after 1 April 1962, they are only provisional and the final price is to be fixed at a later date. This gives government an opportunity of approaching the problem more scientifically than it has shown itself capable of so far.

Perhaps it is a little late in the day to question the economic equity of an artificial pegging of prices of the products of the steel industry while a number of other industries, (some of them beneficiaries, like steel, of protection), are allowed to charge what the market will bear. But this invidiousness should

be borne in mind when discussing the return to be permitted to the industry. Few persons seem to remember today that the system of retention price was a child of the war and that even during the war there was no price control up to the middle of 1944 for sales other than war supplies. In the post-war years, the system of differential between selling price and the retention price was at least partially conceived as a mode of subsidy for the consumer who would pay a uniform price both for high cost imported and low-cost indigenous steel. The element of consumer subsidy has since become progressively insignificant. Indeed, an interesting fact that emerges from a chart given in Sir Biren's statement is that the average price paid by the public from 1959-60 onwards is higher than the (estimated) average UK basic price for steel landed in India. Even if we are to take into account (possibly) more expensive imports from other countries, the fact that indigenous production has increased should make the element of consumer subsidy increasingly marginal, especially in view of the increases in prices for the consumer. In the light of this circumstance, it is difficult to resist the conclusion that the principal beneficiary of the niggardly retention price is the government itself. Neither concern for the consumer nor even socialist zeal at restraining profit margins of giant industries but the more tangible (though not necessarily overt) motive of obtaining funds for the government indirectly would appear to be at the back of the pegging of retention prices at low levels. Some colour is lent to this hypothesis from the fact that the Third Five Year Plan takes credit for a net accrual of Rs 105 crores in the Steel Equalisation Fund in reckoning the resources for the public sector outlay. A by no means inconsiderable sum.

Reorientation of State Plans

AREAS of development of crucial importance to the implementation of the National Plan are covered by the Plans in the State sector. These include, besides Agriculture, Community Development, Co-operation, and Village Industries, Irrigation & Power, Transport, Education and Social Services. While increased agricultural output, which is as essential for defence as for development, is bound up with the expansion of irrigation facilities, transport and power are even more directly linked with the war effort and the production of defence oriented industries. Educational programmes have to be reoriented to meet the increasing requirements of trained manpower in a short period. The priorities of the health schemes have also to be revised to meet the urgent needs of the situation. The Centre, it is clear, will have to bear heavy financial burdens. It is equally likely that the expenditure of States also will increase. In this situation priorities will necessarily have to be rearranged to release adequate resources for the projects which are important for the defence of the country.

Hitherto central assistance for State plans has been allocated for specific projects or heads of development. The greater flexibility in the pattern of central assistance which is now promised should facilitate the necessary rearrangement of priorities, by enabling transfer of funds from one head to another as circumstances warrant. Effective and speedy action in this regard by the States will

however depend on the existence of suitable machinery for taking decisions without detailed instructions from the Planning Commission. Since speedy decision is of the utmost importance, the utility of setting up Planning Boards which has been suggested in this connection is open to question. A high level committee of the State secretariats can perform the function more adequately than a Planning Board.

The directions of the National Development Council to State Governments in regard to the reorientation of the State Plans give a fairly clear indication of the manner in which the Plan as a whole will be reshaped and its implementation accelerated to meet the requirements of the situation facing the country at present. Increased emphasis on Agriculture and a selective approach to Social Services are among the obviously important suggestions that have been made for readjustment of the State Plans. Achievement of increased agricultural output is the most important contribution that State Governments can make to the common effort. In addition to the targets already set, it will also be necessary to step up the targets for particular commodities like cotton and oil seeds. But targets to be really effective should be broken down into programmes of action and efforts should be concentrated in those directions where, to judge by past experience, it has been possible to achieve tangible results. Attention may be drawn in this context to the comparatively slow rate of progress in the agricultural sector in recent years. While the failure to achieve the targeted rate of progress may be attributed in part to seasonal factors, there is also need to re-examine the contents of the agricultural programmes, to see how far they are suited to the agronomic situation in the countryside. It appears that official doctrine tends to emphasise use of improved seeds, increased use of fertilisers, Pesticides, etc. Inadequate response on the part of cultivators to the official recommendations is too readily put down to ignorance and conservatism without a serious attempt to identify and eliminate the obstacles to the adoption of an integrated programme of improved cultivation all over the country.

To take one instance, programmes for the manufacture of new types of fertilisers have been undertaken without adequate field work to test the response of crops to the new fertilisers in different climatic regions or to popularise their use among the cultivators. The result is that there is a gap between the availability of fertilisers in Government godowns and their effective utilisation. It has been suggested that the Community Development programme and the programmes for Backward Classes will hereafter be concerned exclusively with agricultural matters. The mere concentration of administrative effort will not carry far, unless there is a programme of action which will be feasible in existing circumstances over large parts of the country and yield results in the short run.

In regard to social services it will be readily agreed that a number of activities whose importance cannot be gainsaid will have to be deferred or scaled down. But this is also a field in which many gaps can be filled through mobilising voluntary effort and the more effective use of existing facilities. Nevertheless some hardship and sacrifice may be inescapable. It has been suggested that urban water supply schemes may have to be staggered over longer periods. Likewise the different housing programmes like the subsidised industrial housing programme, village housing programme, plan-

tation housing programme, etc., may have to be slowed down. The aggravation of conditions in overcrowded cities can be avoided if casual labour that drifts to urban areas is organised for the defence effort and accommodated in emergency camps. The unavoidable reduction in housing programmes can be kept within limits, if a determined effort is made to achieve the economies of construction on which considerable work has already been done. With slowing down of urban house construction, it will also be necessary to tighten the rent control regulations.

State Governments have been asked to re-examine the priorities of the different projects included in their plans and to rephrase the larger ones so as to reduce the claims on scarce resources, especially foreign exchange. The suggestions that have been made in this connection indicate how the Plan as a whole, including many central projects, is likely to shape. While projects that are far advanced should be completed as speedily as possible, two basic criteria—relevance to defence requirements and early addition to production—should determine the projects that are taken up for immediate implementation. Projects with long gestation periods will have to be stretched out and, on the other hand, projects of comparatively smaller size which could be expected to yield results in a short period will have to be given priority. The applicability of this policy is most clearly indicated in the case of irrigation projects.

World Bank Loan For Collieries

The Minister for Mines & Fuel informed the Lok Sabha on 10 November that 116 out of 180 applications received from private sector collieries, for import against World Bank Loan of machinery and equipment required for opening new mines and expansion of existing mines, were recommended by the Government and all these have been approved by the World Bank. So far applications for import of machinery and equipment required for the above projects valued at about Rs 5.74 crores have been received and licences have been issued for Rs 4.12 crores. The Minister added that Licensing authorities have been asked to expedite grant of licences in the remaining cases. The colliery companies are also constantly being persuaded to submit applications for import licences expeditiously so that the loan is utilised by due dates. The World Bank loan to meet foreign exchange requirements for opening new mines expires on 30 September 1965 and that for expansion and maintenance of existing mines expires on 31 July 1963.

WOOLLEN INDUSTRY

Geared to Defence Needs

The Woollen Industry is perhaps the first consumer goods industry to switch over to defence production. The pattern of production is to be finalised within a week so that, by 20 November, all the mills and factories in all the sectors of the woollen industry can be geared to the defence effort. Government has appointed a Woollen Controller to super-

vise the implementation of the various measures decided upon at the meeting of the representatives of the Woollen Industry held in New Delhi last Monday, at which the Minister for International Trade presided. A Woollen Production Advisory Committee consisting of Mr K. K. Birla, Mr V. Galloway Mr B. M. Grover and Mr G. K. Singhania will advise the Controller in fixing the production schedules of each of the composite and spinning mills. Two other committees will assist the Controller in the work regarding the hosiery and small scale weaving sector.

At the meeting mentioned above it was decided that all stocks of specified varieties of woollen cloth and fabrics in the possession of mills, producers or manufacturers are to be sold only against the indents of the Director General of Supplies and Disposals. All yarn produced by the spinning mills will be distributed to hosiery and small-scale units through the DGS&D. Officers will be posted to look after power loom production in Amritsar, Panipat and other areas, hosiery production in Ludhiana and other centres and mill production in the northern region. Decisions have also been taken to modernise the existing units in the industry, and to increase wool combing capacity to make the country self-sufficient in combing.

Future imports of raw wool and wool-tops will be confined to those varieties included in a list which will be drawn up by the Woollen Controller in consultation with the Textile Commissioner. The Controller will also arrange for the maximum utilisation of Indian wool for the production of the fabrics and knitting yarn for which it is suitable.

Individual well-being is linked with national prosperity and only planned efforts can ensure both in the shortest possible time. And planning, for its success, largely depends on savings, individual as well as national. Saving in the form of Bank Deposits provides resources for the National Plan.

World of Finance

EMERGENCY

Created Money Inescapable

THE defence effort, as far as the money market is concerned, is already reflected in sustained and not inconsiderable recourse to deficit financing on the part of the Central Government. The supplementary grants asked for defence in Parliament during the week give an indication of the additional expenditure that will have to be met; not all of it, naturally, will be financed through created money. But the reliance on Nasik will be there, and its magnitude will be determined by the success or otherwise of the defence borrowing programme.

The National Defence Bonds have got off to a flying start, thanks to the initial contribution of Rs 5 crores by the Life Insurance Corporation. But will the banking system be in a position to extend any worth-while support? And even if it were in possession of some spare resources at the moment, would not the Reserve Bank's recent insistence on limiting the accommodation it will offer be likely to influence the banks in keeping cash as cash?

The new Deposit Certificates and Savings Certificates offer a most attractive return, and with patriotism rising to the surface, on the one hand, and every manner of persuasion, on the other, it is indeed very possible that collections will turn out to be most heartening. But very little is being heard of the new Prize Bonds; not enough publicity, and thus the prospect is that response will be disappointingly meagre.

We come last of all to the Gold Bonds. No figures have as yet been made available but inquiries since the lists opened are reported to be encouraging. We had, it may be recalled, hoped that Government would succeed in enticing Rs 100 crores (at the international prices) worth of gold hoards. With the prompt action taken by Government to minimise speculation in the bullion market, and in the prospect that smuggling, too, will be checked, there is now reasonable grounds for believing that such a target will not be found impossible.

But there is, too the other question to consider. It is anybody's guess as to what actually will be the increase in the revenue expenditure of the Central Government during the balance of the current fiscal year. No estimates are of course possible; but we shall be pleasantly surprised if the additional recourse to deficit financing is kept within a limit of Rs 100 crores.

BANK RETURNS

Large dose of Deficit Financing

Spillover of beginning of the month disbursements, and possibly the cost of the defence effort, are both reflected in the returns of the Reserve Bank, for 9 November.

Active Note Circulation is up sharply by Rs 23.17 crores at Rs 2,086.96 crores; and this comes on top of the currency expansion for nearly Rs 15 crores last week. In addition there has been outflow of Rupee Coin for Rs 0.82 crore. Currency has been expanded for Rs 20 crores again. Rupee Securities, raising the relevant figure to Rs 1,778.29 crores. Foreign Securities are unchanged at Rs 88.08 crores, and thus the Reserve Bank's cash in the till has been drawn down by Rs 3.98 crores to Rs 17.50 crores.

Investments in the Banking Department are found to be higher by Rs 15 crores at Rs 174.23 crores; and the Reserve Bank's portfolio of Treasury Bills Purchased and Discounted has gone up by Rs 7½ crores to Rs 103.51 crores. While the latter is on account of disinvestment by the State Bank in the week under review, the increase in Investments plus the rise in Rupee Securities in the Issue Department are roughly equivalent to the deficit financing that Government found necessary. Such recourse to created money became necessary because:

(1) The Centre had to make payments to the States, whose balances consequently have improved by Rs 7.79 crores to Rs 17.86 crores and which have also been enabled to reduce indebtedness to the Reserve Bank for ways and means borrowings by Rs 6.83 crores to Rs 9.71 crores; and

(2) The Centre is incurring considerable expenditure upon the defence effort.

The result is that the Centre's balances are marked up slightly by Rs 0.48 crore to Rs 50.43 crores.

The pressure upon the banking system as such has been less. Reserve Balances of Scheduled Banks were added to by Rs 0.23 crore to Rs 80.81 crores largely on account, it is true, of the State Bank. Also, this category of banks has been able to reduce indebtedness to the Reserve Bank by Rs 2 crores to Rs 3.98 crores. Even so, balances of State Co-operative Banks are a shade higher by Rs 0.23 crore at Rs 1.95 crores and their borrowings almost exactly correspondingly risen by Rs 0.24 crore to Rs 133.32 crores. It may be noted lastly, that Balances Held Abroad continue to hold steady, in being marked up by Rs 0.39 crore at Rs 5.92 crores. Foreign Assets held by the Reserve Bank in both Departments now exceed Rs 94 crores.

The return of the State Bank for 9 November does not lend itself to much of interpretive analysis. The bare facts are that Deposit resources (possibly swelled by subscriptions to the National Defence Fund?) have improved by Rs 3.52 crores to Rs 580.49 crores; that, in order to improve the cash position, the bank has sold securities (possibly involving discount of Treasury Bills) in an amount of about Rs 8½ crores; that the total of Advances has receded by Rs 1.11 crores to Rs 269.56 crores; that Other Assets have been marked up by Rs 5½ crores to Rs 37.10 crores; and that, finally, cash balances, including money at call and short notice, move up by Rs 7.78 crores to Rs 28.03 crores.

The statutory statement of the Scheduled Banks for 2 November largely reflects changes in the relevant week in the return of the State Bank. Net Deposit resources have been marked down by Rs 2.03 crores; but the State Bank in that week suffered a drain of Rs 5 crores in this regard. Thus, other Scheduled Banks experienced a fresh accretion of the order of Rs 3 crores, mainly in the form of Demand Deposits, which are higher by Rs 12.77 crores at Rs 914.61 crores as offset by a fall of Rs 14.80 crores to Rs 1,265.58 crores in net Time Deposits. Again, the rise of Rs 2.96 crores to Rs 1,396.63 crores in the total of Advances is almost wholly on account of the State Bank. So also, the fall of Rs 3.61 crores to Rs 193.38 crores in cash balances, including money at call and short notice, is traceable to the State Bank. The disinvestment of Rs 17.51 crores to Rs 693.65 crores in gilt-edged holdings relates as to Rs 14.70 crores to the State Bank. Under one head alone a change in the return for Scheduled Banks is purely that of other banks: indebtedness to the Reserve Bank has been cut by Rs 3.06 crores to Rs 6.02 crores.

UK

Technical Co-operation under Colombo Plan

WHEN the Colombo Plan was started in 1950, one of its avowed purposes was to hasten the process by which South and South-East Asia would reap the advantages of scientific and industrial advance. The Plan recognised that the increased adoption of modern equipment would be possible only if the knowledge and skills of the peoples of the region enabled them to use it effectively.

An essential part of the Colombo Plan is therefore to provide additional skilled men and women to carry out projects already in hand, to initiate new schemes in the development programmes already outlined, and to raise the level of technical skill among agricultural and industrial workers.

The need for outside help varies from country to country. It depends upon the extent of local technical resources and the size of new demands arising from the various development programmes. This is where technical co-operation comes in.

Member countries of the Plan exchange experts and students between themselves; but much technical assistance is provided by those member countries outside the region which have the facilities for providing training and experts. Technical assistance falls into three parts: student trainees, provision of experts, and the supply of equipment. Of the £102,500,000 spent on technical assistance under the Plan in the last 11 years, 25 per cent has gone to training in a wide variety of technical fields.

Britain has played its full part in all aspects of technical co-operation and assistance since the inception of the Plan, not least in providing places in Britain for the training of skilled manpower. Now the 5,000th Colombo Plan student has arrived in Britain.

Some people are inclined to think that these trainees go only from the Asian Commonwealth countries, but although India, Pakistan and Ceylon do send more people for training in Britain than other Plan members from

South Asia, a great many nevertheless are from non-Commonwealth countries. The 5,000 trainee, for example, comes from Manila in the Philippines; and there have been hundreds from Burma, Indonesia, and Thailand as well. There is, naturally, a problem of language with non-Commonwealth trainees, so that those from India, Pakistan and Ceylon who have learned to speak English during their early life find it easier to work in England than others perhaps would. Nevertheless, between 1951 and June this year, 1,166 trainees went to Britain from non-Commonwealth countries of the Colombo Plan area.

Trainees do not go to Britain to undertake basic training. They follow more advanced and specialist courses for which their own countries cannot normally provide facilities. The object is to give the trainee the knowledge concerned with a particular kind of skill. He returns to his own country to work at a specific project, and to help train others in the same skill.

A good example of this was the four-year programme started in 1957 by Britain under which 400 Indian engineering graduates received training in Britain for periods from six months to one year. Their training was aimed at their filling supervisory posts at the steelworks at Durgapur. The training was provided jointly by the British Government and by Britain's steel industry, especially by the manufacturers of the plant which was installed at Durgapur.

But industrial training is not by any means the only kind provided in Britain. The key to the economic development of countries in the Colombo Plan area lies in agriculture. Great emphasis is placed by all countries helping in technical co-operation on the training of people in some aspects of agriculture. Britain has helped in this sphere too, and this year trainees are in Britain learning the technology of stored products, entomology and rodent control. The course is of 14 weeks' duration and includes a close study of the control of rodents, insects and other pests.

Also under the category of agriculture comes veterinary science, and here a laboratory assistant was recently accepted for training in Britain on a two-year course at the Central Veterinary Laboratory of the Ministry of Agriculture.

Likewise, for forestry, an important aspect of development in South and South-East Asia, the Imperial Forestry Institute in the university city of Oxford has a post-graduate course of one year's duration specially meant for forestry officers from tropical countries with field experience.

Transport plays an important role in the economic growth of countries. It is necessary for the expansion of both domestic and international trade. The importance of training in transport and communications cannot be over-emphasised—shipping, railways, road transport, and so on.

Britain, at India's request, arranged this year for a lecturer from the Nautical Engineering College in Bombay, where Colombo Plan students go, to spend a year doing advanced navigation and seamanship at the Liverpool College of Technology in the North of England. This trainee will return to India with advanced knowledge which he can then impart to other students from Colombo Plan countries.

The same kind of thing has happened with aviation. Three trainees from Indonesia's Civil Aviation Academy have gone to England

for six months to gain advanced knowledge in aircraft maintenance. They will have the advantage of some of the most highly skilled techniques in the world at Britain's leading aviation establishments.

Because the economic condition of a country is, in a sense, the product of the prevailing social environment, training is also given in various branches of the social services.

There are trainees in Britain taking courses in public health, parasitology, Pharmacy and many other medical subjects. The supervision and an instructor of Thailand's School of Dentistry are being trained in oral surgery at the Institute of Dental Surgery in London.

The list of subjects is never-ending but, like all aspects of technical assistance, it helps the developing countries of the Colombo Plan to put their economies on a sounder basis.

Indian Gold de-hoarding

By Paul Einzig

If, as seems possible, the efforts of the Government of India to mobilise large quantities of the Indian people's gold hoards should be successful it would introduce a new element in the international gold situation. For the second time within the life of this generation, de-hoarding of gold in India would make an important contribution toward increasing international financial liquidity. After 1931 the depreciation of the rupee and the prolonged depression resulted in large-scale de-hoarding in India, which provided a welcome addition to the world's monetary stock of gold. If estimates of the present size of gold hoards in India are reasonably correct, and if a fair proportion of it could be mobilised, it would mean a welcome reversal of the world-wide trend of gold hoarding which is absorbing an unduly large part of the current output and is indirectly largely responsible for the pressure on the American and other gold reserves. The right thing would be happening for the wrong reason. It is unfortunate that Indian de-hoarding should be the result of Communist-Imperialist aggression on India, but if the result should be an improvement in international liquidity in the Free World, it would work out to the disadvantage of the Communist Bloc. For any material consolidation of the economic situation in the Free World would further reduce the chances of Moscow and Peking to fish in troubled waters.

It would be wrong, however, if the Western Governments were to rely entirely on de-hoar-

ding in India. The extent of hoarding all over the world has been grossly excessive and should never have been permitted. It is of course understandable that gold mining interests should be anxious to sell their output at prices above the official American buying price. It is equally understandable that the principal gold producing countries should be in favour of enabling them to do so. But it is to the interest of the Free World as a whole that its total monetary stock of gold should be increased and from this point of view it was surely deplorable to have allowed so much gold to disappear into private hoards.

It is to be hoped that should considerable amounts of de-hoarded Indian gold find its way to the world market the resulting declining trend in the market price of gold would not be allowed to stimulate hoarding in other parts of the world. The best arrangement would be if the Western Governments were prepared to pay for de-hoarded Indian gold the same price that the Government of India could obtain if it sold the gold in the free market. In doing so the Western Governments would kill two birds with one stone—they would prevent the disappearance of the de-hoarded gold into other hoards and they would also assist the Government of India.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on 13 November 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.40 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.360 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 19 November 1962. Successful tenderers should make payment on Friday, 23 November 1962 at all centres. Other conditions are as usual.

During the week ended 9 November 1962 Government of India Treasury Bills for Rs 65,90,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 14 to 17 November 1962 at Rs 99.426 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 7 to 10 November 1962 amounted to Rs 16,50,000.

EMERGENCY

Mr Sadasivan Calls for Production Drive

The Chinese aggression on the country has brought to the fore the question of its repercussions on the economy and the efforts that have to be mobilised to build up the defence strategy. With everything being subordinated to the single objective of repelling the enemy on the frontiers, it is of the utmost importance that the productive machinery is geared up to produce the essential things needed in the new situation. It is obvious that priority will attach to production in industries closely related to defence materials like iron and steel and chemicals. However, pressure on other sectors will be of no less magnitude and can be met only by concerted efforts to increase production all along the line.

In his address to the quarterly meeting of the Indian Chamber of Commerce, its President, Mr S. T. Sadasivan, underlined the responsibilities of both the Government and the business sector in contributing to a successful production drive. The major lesson to be learnt from the Chinese aggres-

sion is to close all ranks to support the defence effort. As Mr Sadasivan has stated, economic or political controversies can have no place in the present emergency. The Government has already been seized of the priorities forced by the new situation. Production targets have been raised in the crucial sectors like steel and food-grains. In what other manner the Third Plan will have to be re-phased with realignment of priorities can not at present be known. But, considering the vital urgency of the production drive, the tardiness in drawing of concrete schemes for implementation is unfortunate. Unless the governmental machinery is prodded out of its bureaucratic pace, it will not be easy to make fast headway. There is prime need for infusing the working of the Government departments with a new outlook and a sense of urgency. In this connection the suggestion made by Mr Sadasivan to divert many of the Government Departments at present operating for peaceful purposes toward defence efforts is not without relevance.

Two important matters that should receive special attention are the potentials for inflation that the new situation may present and the need for increasing foreign exchange earnings. Foreign exchange assumes critical significance in view of the anticipated rise in demand for goods for both military and civilian consumption. With scope for short-term improvement in this regard being extremely limited, it is essential that friendly foreign countries should be persuaded to be more generous with their aid and assistance. The price situation will need close watching to prevent any possible rise arising from increased demand. Mr Sadasivan has rightly underlined the futility of physical control measures. The Government's own thinking would seem to conform to this line. However, regulatory measures are unavoidable and steps in this regard have already been indicated by Mr G. L. Nanda. The private sector can lend a big hand by maintaining an effective system of distribution and by exercising a measure of self-restraint in the fixation of prices.

OIL

Award for Assam

The Nehru award on oil royalty announced last week has at long last brought an intricate issue between the Oil India Limited and the Assam Government to an

amicable settlement. The dispute on royalty, inordinately protracted by the stubborn attitude of the contending parties, posed an impediment of a serious nature in the oil exploration programme in the Assam region. The controversy started with Oil India's decision to revise downward the royalty paid to the State Government from Rs 10.00 to Rs 4.80 per ton, and it reached such a dismal height that the latter refused to grant licence for oil exploration in new areas as the slash on royalty meant a heavy drain on its revenue resources to the tune of Rs 1.50 crores per annum. This was followed by a series of futile discussions between the officials of Central and State Governments to arrive at a mutually acceptable formula. Eventually the parties consented that the Prime Minister should arbitrate on this issue after studying its various aspects.

According to the award the Assam Government is entitled to Rs 7.50 for every ton of oil drilled. The royalty fixed by the award will remain in force for a period of four years after which it will be open to suitable revision. Though the award was occasioned by the Assam Government's discontentment, the issue was viewed on an all-India basis and has laid down a uniform formula with a nation-wide import. There is a striking departure in the norm of calculating royalty which will, hereafter, be on a flat rate based on cost of production in lieu of linking it with the international price. Though the State's demands were not fully met, its acceptance of the award is of supreme importance viewed in the context of the present national emergency which demands stabilisation of the economy and gearing every sphere of activity for the defence needs. Moreover, with the settlement of the dispute the oil exploration programmes can be pursued vigorously so as to make up the time lost in the controversy.

INVENTIONS

Increasing Fecundity

Research is an important adjunct of industrial activity and a vital basis for its development. To judge by the results already achieved by the National Research Development Corporation, the record of the country in this regard can be considered remarkable. The latest annual report of the Corporation shows a crop of 32 inventions reported by 12 research institutes during the year ending March 1962. The limiting factor to more impressive results has been the sparsity of facilities. While the Government has been zealous with measures to stimulate and encourage industrial research, it is the private sector that has proved to be the laggard.

Comparing the progress achieved by industry in the advanced countries, the ground to be covered in India is enormous. However, with a total figure of 616 inventions till March 1962, there can be no doubting the increasing fecundity of the inventive talent in the country. Qualitatively also there have been instances of spectacular success. Special attention may be drawn to the latest discovery of a new device in South India which cuts off the current in the main line (alternating current) the moment a body comes into contact with it. This should rank among the spectacular of the new inventions reported from the country in recent years as its significance is tremendous. Already there is a switch in the country to alternating current from direct current for domestic purposes and with the relatively higher voltage (220) in India as compared with other countries (110) this has brought in an element of danger from contact with the live wire of the high voltage alternating current. With the application of the new invention, the danger should be completely eliminated.

Apart from research, follow-up action to put into practical implementation the fruits of the laboratory experiments is also an important consideration. Activity in this regard is also proceeding apace. Eighty licences have been negotiated for commercial development during the year as against 50 in the previous year. The annual report of the NRDC also points to instances of completion of projects undertaken earlier. Mention may be made of the project on White Cement from Felspar. Other projects include production of Lightning Arresters,

Phthalic Anhydride, Aromatic chemicals, etc. The increased activity in the field is reflected in the rise in developmental expenditure on projects already sanctioned. Such expenditure during 1961-62 has been placed at Rs 6.76 lakhs and compares with Rs 2.22 lakhs for the preceding year. The amount is no doubt small, but in view of the limitations of public funds that can be diverted for the purpose, there can be no way of accelerating expenditure except by promoting private sector participation in such developmental projects.

DEVELOPMENT

Growing Urban-Rural Gulf

In a frank and candid assessment of the progress made by underdeveloped countries, Mr E. F. Schumacher, the noted British economist, warned against the dangers of a dual economy developing in these countries. It was the opinion of Mr Schumacher that even after 15 to 20 years of developmental efforts, the under-

developed countries had made very little progress. This may seem somewhat of a sweeping statement at least in the context of the mighty strides that India has taken in such directions as increasing capacity for production in key industrial sectors, and of the measures for improving social welfare. But Mr Schumacher's observation regarding the relative absence of progress had reference mainly to the gulf between the rural and urban areas in prosperity and development. This disparity is a continuing feature in all the developing coun-

tries and the developmental programmes so far undertaken have only served to accentuate it. Most significantly population in the course of the last two decades had grown at an explosive rate in the developing countries, and according to Mr Schumacher, this increased size of the both the urban and rural population is the only point of difference between now and 20 years ago. "If one compares the present position in these countries with that obtained about twenty or thirty years ago, one finds the only difference is that the population has increased very much, the

In normal times, we use gold for adornment. But today, when the country's security is threatened by a ruthless invader, GOLD means precious foreign exchange for more armaments, ammunition and other vital equipment for our brave jawans who are fighting to rid our soil of the aggressor.

metropolitan areas are slightly bigger and slightly more assimilated in the modern way but more dissimilated from the indigenous ways." Such increasing disparity can hardly be considered a welcome development as it leaves the major proportion of the population in the developing countries without the essentials of comfortable living. Mr Schumacher has warned that apathy would only lead to further poisoning of the metropolitan and the rural areas, with the former submerging all non-industrial areas and the latter by sending its unemployed population to the urban areas.

Thoughtfully conceived measures are called for to correct the present discrepancy in development. The present situation is mainly the result of the unsuitability of the measures taken so far to accelerate progress. What is required is a kind of method and technology specially devised to suit the particular conditions and circumstances of the rural areas. In this connection Mr Schumacher has recommended the adoption of an "intermediate" technology suitable to the rural areas, people and resources and which will be self-perpetuating. Mr Schumacher has laid special emphasis on programmes for rapid rural industrialisation. His ideas on this subject have already been incorporated in the schemes which the Government has drawn for the development of small-scale industries and particularly for the development of the backward areas. Taking industries to rural areas is very desirable and would offer the only basis for a lasting and permanent solution to the problems posed by massive unemployment and under-development characteristic of the rural areas. However, while underlying the importance of an immediate programme for total employment, Mr Schumacher seems to have overlooked some of the obvious factors that would place serious limitations on speedy progress. Attention has particularly been drawn to the barrier constituted by the limited market for the products of the rural industries. The results of the programmes already implemented in the rural areas are far from encouraging.

COMPANIES

Quarterly Review for Southern Region

A review of the working of the Companies Act 1956 in the Southern Region, comprising Andhra Pradesh, Kerala, Mysore and Madras, for the quarter ending 30 September 1962 puts new floatations at 112 with an authorised capital of Rs 1790.57 lakhs. Though the bulk of new registrations at 85 is in the private sector as against 27 in the public sector

the total authorised capital of the former comes to a mere Rs 278.08 lakhs in contrast to Rs 151.49 lakhs of the latter.

A state-wise split-up of new companies reveals the disproportionate location of new ventures. Madras, as usual, occupies the top position with 74 companies—12 in the public sector and 62 in the private sector while Andhra Pradesh which comes second accounts only for 15 followed by Kerala with 14 and Mysore with 9. Considering the industrial advancement in Madras there will be an irresistible urge on the part of entrepreneurs to start new undertakings in developed industrial complexes: but viewed in the light of the industrial backwardness of other States in this region a balanced distribution of industries becomes incumbent for accelerating the tempo of industrial development on an all-round basis.

As in the past, the majority of new companies in Madras falls under the category of transport companies. The total investment by way of increase in paid up capital of companies amounts to Rs 594.38 lakhs. Amongst the 15 giant floatations 11 are for the promotion of the textile industry while the rest are for establishing general machinery, manufacture of accessories, automobiles and spare parts like fly wheels ring starters and gears.

In the quarter under review 31 companies with a paid up capital of Rs 13.74 lakhs were removed from the register as defunct whereas 21 with Rs 32.94 lakhs went into liquidation. 77 prosecutions were launched against some companies and their officers guilty of not holding the annual general meeting and not filing annual returns and their balance sheets as specified. The total amount of fines imposed in this quarter amounted to Rs 14,540.

POWER

CESC Chairman Speaks Out

The sizable decline in the revenue of the Calcutta Electric Supply Corporation during the year ended 31 March, 1962 has been mainly brought about by load sheddings necessitated by breakdowns of plant in the company's New Cossipore Generating Station which occurred towards the end of last year and at the beginning of 1962. It was not possible for the company to make up the entire loss of production by alternate arrangements. There was some generating elsewhere in the system and also a large import from the Damodar Valley Corporation. But there was still a gap between demand and supply. Moreover, these measures of getting power supply involved the company in increased expenditure. Such uneconomic working has made a serious dent in its re-

serves. The position now is that all accumulations in the Tariffs and Dividends Control Reserve have been exhausted. With the revised rates already brought into force (the rates for high voltage consumers and low voltage power users have been enhanced of 17½ per cent while users of high voltage energy for domestic and commercial supplies have been asked to pay 13½ per cent more) current revenues may be expected to rise and enable the company to earn its reasonable return. Speaking at the annual meeting of the shareholders of the company early this month, Sir William Lamond the Chairman has pointed out that the continuance of the revised rates without further upward revision depends on whether the State Electricity Board will be prepared to sell power to the company at a basic price comparable to that now charged by the DVC.

If all the expansion programmes both of the company and the State Government are carried out according to schedule, power supply in the region now served by the CESC should greatly improve in about a year. For, the CESC's 50 MW extension at New Cossipore is making rapid progress as both the foundation raft and the new pump-house monolith have been completed ahead of schedule. It is expected that this plant will be on commercial load in about a year from now. Increased power supply from the State Electricity Board is also expected to be made available at about the time. In the meantime, any improvement in the supply position will be dependent on the availability of increased power from the DVC.

The need for augmenting power supply in the Calcutta region is emphasised by the experience of the CESC during the past year. Demand has increased from all sources, high tension industrial consumers, small industries, and domestic power purposes. With more industries coming up all over the region and with increased building activity in the suburbs the demand for power is bound to increase further in coming years. It is, therefore, imperative that power generation is stepped up so that capacity is always ahead of demand and not behind it as at present.

US Loans for Delhi and Andhra

Two US loans to India amounting to Rs 11.6 crores for stepping up power generation capacity in Delhi and Andhra Pradesh are in line with the donor's policy of assisting India to build up a strong industrial base. Like their predecessors these loans will only carry a service charge of three-fourths of one per cent and are of a long term character spreading

over 40 years with repayment commencing after the first ten years. These loans will be utilised for augmenting by three-fold thermal generation in the Delhi area and at Ramagundam in Andhra Pradesh.

The loan for Delhi will be deployed for purchasing three 50,000 kW turbine generator units, cooling towers, switch-gears, transformers, coal-handling equipment and other useful machinery from the US. The power to be generated at the Delhi thermal plant, which is at present under construction, will be extended to Punjab, and the station will be inter-connected with Punjab State Electricity's Bhakra-Nangal hydro-electric plants.

The other loan for the Ramagundam power station will be expended for the installation of a 60 MW turbo-generator along with boiler and other facilities for enhancing power output. By dint of its pivotal position it is well placed for catering to the power needs of several industrial areas and coal mines. For instance, its linking with the northern Andhra Pradesh grid will facilitate power supply to nearby coal mining areas and to the industrial undertakings in Sirpur and Mancherial. This apart, it will also partially meet the needs of the metropolitan areas of Hyderabad.

JUTE

Higher Exports by New Central

The disappointment of the shareholders of the New Central Jute Mills Company Limited over the passing of dividend for last year will be mitigated to some extent by the announcement that an interim dividend for the current year at 50 nP per ordinary share will be paid. This encouraging step has been made possible by the considerably improved working of the company during the current year. Speaking at the annual general meeting of the company recently, the Chairman, Mr A. K. Jain, has pointed out that prospects are brighter this year in view of the general improvement in the jute industry as a whole. With the official emphasis on export promotion, New Central should make further sizable headway in our markets. It has already built up a growing business in this direction as will be evident from the fact that its export earnings have increased from Rs 41 lakhs in 1957 to Rs 268 lakhs in 1961-62. The progressive improvement in export performance is not surprising because the company is mainly concentrating on the export of jute carpet backing, which has an expanding market. In recent years the demand for carpet backing has considerably increased and it would

appear that there is a large unsatisfied demand in this category. Over the past few years, New Central has been steadily increasing the installation of widelooms whose number at present stands at 197. Arrangements are well in hand for further increasing the complement of broad looms. Indicative of the good overseas demand for jute goods during the current year is the fact that New Central has sold substantial proportions of its production for the first quarter of 1963.

The current year's performance

of the industry, however, should not be taken to mean uninterrupted prosperity for the industry hereafter. It is true that much has been done both by the industry and Government to stabilise the market not without a measure of success. But one should not forget the growing competition of Pakistan in the world market. Aided by plentiful supply of high quality jute at low prices coupled with an attractive export bonus scheme made available by its Government, the Pakistani industry is able to underquote India in all its tradi-

tional markets with the result that overseas buyers take Indian jute goods only when they are not able to get them from Pakistan. In coming years this competition is bound to intensify as the Pakistani industry is being expanded rapidly. The growing strength of the Pakistani jute industry is a challenge which has perforce to be met. Unless steps are expeditiously taken to counter this competition, it may become increasingly difficult for us to dispose of our jute goods overseas, especially sackings.

DECCAN SUGAR

Lower Profit—Reduced Dividend

The Deccan Sugar and Abkhari Company Limited has, despite various odds, reported satisfactory manufacturing operations during the past year. But the net profit before taxation was marked lower by Rs 1.75 lakhs from that of the preceding year while the dividend declared declined to 12.50 per cent

30 YEARS AGO...

On the 15th day of October 1932, 30 years ago, a Puss Moth took off from Karachi on its flight to Bombay via Ahmedabad. The Pilot of that plane was a man by the name of J.R.D. Tata.

He landed on a grass strip at Juhu and Indian Air Transport was born. This was the first scheduled air service in our country.

He carried no passengers, because the mails had priority, and because his little aeroplane was not big enough for the carriage of both.

Life was simple then. There were no runways, no radio facilities in the aircraft or on the ground. There were no pretty hostesses, no aerodrome officers, no airport buildings.

The Puss Moth that made history 30 years ago, lies buried with the old stalwarts of the air, and the good earth lies warm on its noble fabric and wood.

The fabric and wood are no more. Beautiful metal has taken their place. And seventy thousand pounds of thrust have replaced the gentle power of a hundred and thirty horses. Space has been annihilated, the heavens shattered by the roar of the deep throated jets that have taken possession of the earth and the skies. The Puss Moth is now a giant Boeing.

But the man with the flying goggles is still here. And he who flew that aeroplane 30 years ago, has flown his company ever since, in the

cockpit, at the controls. For he is the Chairman of his Corporation. And the Aviation Department of Tata Sons is now Air-India, with 77 offices throughout the world, with 5,800 faithful men and women of 40 nationalities, who help to fly the flag of India from Moscow to Sydney, from Tokyo to New York.

And as the 30 candles flicker on our cake, we express our gratitude to those who have dedicated their lives to the cause of Indian Aviation.

And to you dear passenger, to you our agent friends, and to you our well-wishers, we say, thank you for everything—for our 30 years are your 30 years.

AIR-INDIA

from 13.50 per cent thus bringing down the total for the year to 18 per cent from 21 per cent last year. Prices of sugar were reasonably steady until December last after which, consequent on the heavy release of sugar coupled with larger exports, the average price realised slipped down to a lower level.

The year under review witnessed considerable improvement in the quality of cane thanks to the conducive climatic conditions, and sugar recoveries at both Samalkot and Pugalur were better compared to the previous season. Though the company has had to confront several difficulties such as high costs and delayed machinery deliveries the extension and rehabilitation programme at Samalkot and Pugalur factories is proceeding apace and when completed will result in economy of production.

The production of spirits also registered a steady improvement in recent years largely due to installation of new distilleries. But

further headway was impeded by fierce competition and a transport bottleneck which curbed the Samalkot distillery's operations to only 91 days in the year under review. The situation has, however, picked up and the distilleries need to operate to the optimum capacity in future to fulfil the company's commitments.

Dealing with total sugar production in the country (which is in excess of internal requirements), Mr H. V. R. Iengar, the Chairman, favours the stimulation of domestic demand to pressing exports which entails a heavy loss to the national exchequer. But the plethora of levies on sugar and the tendency to impose additional duties will have a dampening effect on the consumers locally.

Sugar exports continue to be a ticklish problem. The slash in the US quota to 20,000 tonnes leaves no alternative but to explore fresh markets elsewhere. Here too the prospects are dim as the demand for white sugar is restricted and

the tariff regulations in the importing countries makes the price of Indian sugar prohibitive and their preference for raw sugar spotlights the need for focussing more attention on raw sugar production.

Though the future of the sugar industry is clouded, Mr Iengar expects better operation of the company with the expansion of capacity at Pugalur and the modernisation of the Samalkot factory.

USA Trade in September

The United States achieved record levels in both exports and imports during September, the latest month for which such data are available. This is in line with the general rise in international trade this year, and reflects the high level of economic activity

being maintained in the United States and other parts of the world.

US commercial exports, when adjusted for seasonal variations, reached a monthly high of \$1,936 million last September. This represented a jump of 16 per cent from September 1961, and of 17 per cent from August 1962, despite the fact that exports usually dip by some 10 per cent from August to September.

The previous monthly export record of \$1,879 million was set in March 1957, when US shipments abroad were swelled abnormally by the trade disruptions that followed the Suez Crisis.

Imports in September, also seasonally adjusted, were valued at \$1,468 million, up 7 per cent from August 1962 and 14 per cent from September 1961. The former record was \$1,450 million, established in September 1959.

The September trade totals reinforce the likelihood that both US exports and imports will be setting new annual highs in 1962. In the first nine months of this year, commercial exports from the United States reached an annual rate of \$21,200 million, about six per cent above the rate for the same 1961 period. Imports meanwhile, reached a rate of \$16,400 million, some 13 per cent above the rate for the first nine months of 1961.

The old records so clearly on the way to being surpassed are last year's \$20,100 million of exports and 1959's \$15,600 million of imports.

Some experts feel that the anticipation of possible shipping tie-up last October first might have been an important contributing factor to the surge in September trade. A work-stoppage did close east and Gulf Coast ports for a brief six-day period. However, in releasing the September trade data, the US Department of Commerce noted that it had checked carefully and specifically into this point, and had found little evidence that an anticipated dock shutdown had unduly inflated either exports or imports.

A significant by-product of the September results was a widening of the all-important trade surplus. The excess of exports over imports is an important plus in over-all US financial accounts with the rest of the world, as it helps offset to a substantial degree the large US outlays abroad for such purposes as economic aid, defence and private improvement.

This underscores the importance that US Government officials and private businessmen attach to the expansion of US commercial shipments to the rest of the world. Last year, a substantial trade surplus contributed importantly to the improvement of the US balance of international payments, as the payments deficit declined to \$2,500 million from more than \$3,500 million in 1960.

Early last week, the US Federal Reserve Board had published figures indicating a noticeable

worsening in the US payments deficit for the July-September quarter of 1962, after many months of steady improvement. But this early estimate was based partly on incomplete trade figures, Commerce Department officials now say that the complete September trade data—in particular, the contra-seasonal rise in exports—are likely to produce a smaller third-quarter payments deficit than originally estimated.

For the year as a whole, the US balance of payments position is virtually certain to show another significant improvement, with the deficit falling well below last year's reduced level. Given the current trends, there is a good chance that the 1962 deficit will decline to the \$1,500 million or thereabouts that was estimated by the Kennedy administration earlier in the year.

Cooley Funds

The Agency for International Development (AID) has announced a new list of 27 countries which are to receive loans from the "Cooley" funds. Named after Harold D. Cooley, an American Congressman who was the sponsor of the scheme, the loans from this fund are received in local currencies from the sale of US agricultural products. Mainly, loans from the fund are granted to US and businessmen operating locally and in foreign countries or their affiliates for expansion or develop-

ment of their foreign operations. Loans are also made to foreign firms if the use of such loans will lead to expansion of markets for US agricultural products.

The total amount of the funds for disbursement now announced by the AID amounts to \$213 million including \$7 million to Brazil. With an allocation of \$75.2 million, India figures as the recipient of the largest share and is followed by Egypt which has been allotted an amount of \$47 million. Among others only Indonesia with \$16.4 million, Pakistan with \$14.1 million and Turkey with \$10.6 million have received sizable allocations. The allocations to other countries are less than \$10 million.

STEEL Output at Bhilai...

At least four monthly and eight daily new production records were set up in Bhilai Steel Works during October 1962. Bhilai produced 95,230 tonnes of ingot steel in that month, the highest monthly production so far and twelve per cent above the projected capacity of the Shop.

During October 96,112 tonnes of pig iron were produced, which was more than the rated capacity of the furnaces. The production of gross coke was 102,477 tonnes,

the highest monthly production figure so far.

In the Rolling Mills of the Bhilai Steel Works, 86,079 tonnes of steel were rolled during October. The production of rails during the month was 25,285 tonnes, which was fourteen per cent more than that planned for the month, while the production of heavy structural steel totalled 7,255 tonnes. Some 42,559 tonnes of billets and 76,254 tonnes of blooms were also produced during October. The Merchant Mill rolled 22,276 tonnes of finished products during the month under review. The Sintering Plant produced, during October, 57,343 tonnes of sinter, the highest monthly production so far.

...And Durgapur in October

All round improvement was registered and a number of records were broken at Durgapur Steel Plant in October 1962 at its Blast Furnaces, Steel Melting Shop and different units of the Rolling Mills. The Coke Oven also had an excellent output during the month.

The Blast Furnace production reached a new record of 94,009 metric tons which is equivalent to 85 per cent of the full rated capacity of the Plant. On two days during the month, this Plant exceeded its rated capacity. The output of 3961 metric tons of iron on 30 October is believed to be a record daily output for any 3 furnace plant in India.

At the Coke Ovens, the monthly output came to 118,004 metric tons amounting to 96 per cent of the rated capacity of the Plant. Here also, there were daily records which exceeded the designed capacity.

There was a big step forward in the performances of the Steel Melting Shop where the highest output of 58,735 metric tons during the month represented the attainment of 70 per cent of the rated capacity. The Plant exceeded its capacity by producing 2,913 metric tons on one day during the month.

The Rolling Mills also gave a creditable account of performances in different units. The Merchant Mill operating on 16 mm rounds notched up a new monthly record of 13,802 metric tons. In the Section Mill, there was good progress on a number of products and the rated capacity was exceeded in the case of bearing plates on one day when 740 metric tons were rolled.

AVIATION From Orchids to Elephants

Trevor Edwards writes: The concept of air freighting has progressed tremendously in recent

years and commercial firms are now increasingly meeting the high-pressure demands of world markets by sending cargo by air. More and more business houses are "tailoring" delivery dates to this sort of transport. Indeed, so much is this case that airlines everywhere are continually taking stock of their handling capabilities and seeking means to improve techniques. The whole essence of success in this sphere lies in a carefully-gearred system which not only disposes of the packages on the outward journey as quickly as possible but also takes care of hold-ups from the destination airport. The complete service is the one which catches the trade.

The year 1970 has long been quoted as the target year when, weight for weight, cargo carried will more than likely overtake that of passenger traffic. Sir William Hildred, Director-General of the International Air Transport Association, has prophesied that world cargo carriers will probably exceed 2,000,000,000 ton-miles this year.

An obvious question automatically poses itself: How in fact can air companies, with their high overheads and extremely expensive equipment, combat the lower rates offered by surface operators? The answer to this, say air salesmen, must not be decided merely by looking at side-by-side basic rates. A closer investigation of all aspects shows that comparable insurance charges against such things as damage and pilferage, plus the reduced warehousing fees for air cargo because of quicker movement, brings the final bills from both sides very much into line and often in favour of airborne freight—especially when dealing with high value goods: and this is quite outside the time-saving factor. Crating is another major expense, as exporters well know, and one manufacturer of printing machinery on the final count evaluated that it accounted for 78.7 per cent of the overall charges when using road, rail and sea.

This crating charge becomes so very much less with present-day aircraft and specialised handling arrangements. A case in point is the Armstrong Whitworth "Rolammat" conveyor system mated for aircraft and cargo warehouse working. The items consigned after delivery to the centre are lashed to a pallet (secured perhaps with a nylon net) which is easily pushed over the free-running rollers from the loading bay on to a waiting lorry. This in turn backs up to the aircraft where the pallet is placed aboard by either a forklift or, in the case of the Whitworth Gloster Argosy, simply by moving the load across a small connecting bridge straight into the freight hold—the aircraft having a truck-bed height floor. The speed and ease of movement is such that problems

AVERY Portable Platform Scale spells

ACCURACY • EFFICIENCY • RELIABILITY

More than 230 years experience plus unrivalled manufacturing facilities combine to make AVERY scales the finest now available for precision weighing...out in the field or at work-site.

AVAILABLE EX STOCK

- 2 models, for loads between 300 kg. and 1,000 kg.
- Fully complying with Weights & Measures Regulations
- All parts are interchangeable

associated with handling on the airport are minimised. Again, it offers the thought for the future of a possible internationally-sized pallet which can be simply switched from one aircraft to another.

British European Airways Corporation is using "Rolamat" with its Argosy fleet, and the time-on-ground dividends are high—with the aircraft's entirely unobstructed freight hold of "box car" proportions.

This particular aircraft is one of several designed especially for the freight business, and while it goes without saying that there are many loads which must go by sea and road and rail, present trends are a significant guide to the way the aviation industry is viewing freight prospects. Aircraft are costly items which not only have to pay for themselves and any built-in development charges, but also earn a profit for the airline.

In the past the pattern has been to use airliners with the internal

fittings removed and floor strengthened. While they have done first-class work there were obvious problems associated with loading and unloading and the size of items able to be stowed—even with extra-large doors fitted. The new generation of freighter is altering all that. The stepped-up pace of modern existence has, in the space of 10 years, outmoded distribution methods that have been traditional for centuries.

All this comes to one thing—service, with a smile certainly, but nonetheless slick, effective service.

Although these figures paint a picture of healthy trade, and this is undoubtedly good, there still remains much for the salesman to do, for it must be remembered that alongside the all-freight services there are still large holds of passenger airliners to be filled. This is very much a part of their revenue earning, and the holds are large—think, for example, of the Vickers VC.10, built by the

British Aircraft Corporation, with a capacity of 1,350 C.ft. (38 c.m.) in the Standard version and an additional 600 C.ft. (17 c.m.) in the Super model. The respective freight loads for this aircraft are 6,800lb. (3,085 kg.) and 12,000lb. (5,440 kg.) and these with all seats taken. BEA rates its trade prospects in this direction, that is on passenger services alone, as a cargo potential of 100,000,000 ton-miles capacity in two to three years time.

Where then must the salesman go to get this sort of business?

There is but one answer—everywhere. Medical products, specialist machinery, spare parts, motor-cars, fruit, fish, zoos, agricultural products, instruments... the list is endless, and BOAC has wrapped it up rather nicely with its advertising slogan "Orchids to Elephants." And that is not an exaggeration in the slightest degree. There are even trained animal handlers for livestock.

SINPPETS

Indian Plastics

Indian Plastics Limited have begun the manufacture of transistor radios in Bombay in collaboration with the Hayakawa Electric Co Limited, Japan.

Indian Plastics Limited, pioneers of transistor radio manufacture in India, have been marketing their radios under the trade name JHANKAR. The Hayakawa Electric Co Limited, pioneers of radio and television manufacture in Japan, have been selling their product under the brand name SHARP.

The transistor radios manufactured under the technical collaboration agreement between the two firms will be marketed in India under the trade name SHARP-JHANKAR.

Under the terms of the agreement the benefits of up-to-date modern research will be made available to Indian Plastics Limited by the collaborating firm.

Indian Plastics Limited is one of the concerns of Birla Brothers Limited who have a century of industrial activity to their credit. The Hayakawa Electric Co Limited, have completed 50 years of industrial leadership in Japan.

In addition to Radio & TV, Hayakawa are marketing a full range of Electrical appliances in Japan, such as refrigerators, washers, cleaners, air conditioners, fans and other home electrical appliances as well as sound equipments, like tape recorders and organs.

Mr A. Saeki, Executive Director of Hayakawa, said that the company is prepared to collaborate technically as far as possible with Indian Plastics Ltd for the manufacture of superior quality products to benefit Indian customers.

*

Pandyan Bricks

The Government of India has given an industrial licence to Pandyan Brick Works for the manufacture of table-moulded bricks by mechanised process for an annual capacity of 15 million.

Pandyan Brick Works have brick manufacturing kilns at Maduraiyaval, 7 miles from Madras, and have been producing bricks by manual process. It is an extensive organisation with large land area, very well located from the standpoints of raw material, transport and labour.

Negotiations are complete for the importation of necessary plant and equipment from Czechoslovakia. The new unit is expected to be ready for production in the course 1963. An important feature of this new enterprise is that its promoters have been in the brick business and are experienced in its efficient manufacture.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"

—As You Like It.

DEMOCRACY lumbering into action is an ungainly sight but much should be forgiven it for its other blessings. Even so, I found this week's parliamentary garrulity appalling. "I wish I had a dollar for every word I have spoken in vain"—so runs the corny wisdom of American folklore. Were such a barter possible, the week-long debate in which a hundred and sixty members (from the Lok Sabha alone) insisted on taking part would have produced the foreign exchange we need for the defence effort. As I feared two weeks ago, there was much superfluous profession of determination to fight the enemy, some condescending praise for the people rising to the occasion and most disconcertingly, a lot of logic-chopping about non-alignment. It must be the famous metaphysical streak in us that, at a moment like this, makes us bandy words about something so remote from our immediate tasks. (It is a mercy that we have not been asked by a latter-day H. G. Wells to define our war aims or to work on the draft of a Himalayan Charter on the lines of the Atlantic. It is an assignment to which many will cheerfully turn. What I should like to know is who is worried about non-alignment. None, to my knowledge, that probably ought to be. Certainly not the US and the UK, our principal benefactors in this hour of need and who may be said to have some interest in getting the matter elucidated. Mr Macmillan said handsomely that Britain will help us in ways that we want and rapid President Nkrumah on the knuckles when he made some neutralist noises. And the American Ambassador spoke with finality on the subject and begged not to be bothered any further with this particular irrelevance. This ought to have shut up those among us who are more royalist than the king and ask for a formal declaration of change of heart and of a new-found loyalty to the West. (Plainly, ideological itch is not confined to the ostentatious neutrals). By the same token, the sensible western attitude should have made assertions of our uninvolved status inexpedient. Whom then are we trying to reassure by such postures? The Soviet Union? I am not at all sure that this will make any difference, despite the ambiguity in the Soviet Union's attitude to China. In any event is it worth alienating proven friends in a needless attempt

at preventing the cat on the wall from jumping to the wrong side? If logic thus rules out both the US and the USSR as the audience for our debate on non-alignment, for whose benefit are we performing? Why, our own! The cross-talk act between those who want us to jump on to the western bandwagon and those who oppose them is irresistible. And I thought we had all forsworn needless controversy for the duration.

*

And where was the tearing hurry about discussing the liberation of Tibet? I should have thought we had a more urgent task on hand in liberating Towang. The two resolutions nominally debated should have been made the occasion for searching questioning of what precisely is being done to bend the nation's energies for the defence effort. And such curiosity is not necessarily military. I cannot escape the feeling that except for arranging swiftly for the supply of arms, the only other thing that has got off to a flying start is the mobilising of resources for defence. And even here it was popular enthusiasm that swept the Finance Ministry into action. Other decisions are in varying stages of inconclusiveness. What, for example, are the new industrial priorities? What are their targets? What part of the Plan is being jettisoned for the duration? These are not academic questions nor are they such as can be answered at leisure. Thousands of individual decisions are being held up because of uncertainty on these matters. I know that detailed answers for these questions take time, but unless we know the broad outline of changes in the offing, those connected with industry are not able to make their plans. Early and clear answers on what each of us can do to help should also have been obtained from Government.

*

I hate to have to bring it up again, but something ought to be done about All India Radio's broadcasts and done quickly if they are not to be a caricature of what they presumably are trying to be. This certainly could be AIR's finest hour, but its rising to the occasion has been elephantine. It is not the news broadcasts I am complaining about now. These, in justice, have become less fumbling in the last week, though there was an interesting Freudian slip on Thursday morning. Giving

details of parliamentary proceedings of the previous day, the news reader quoted Mr Nehru as saying that the Indian Communists were now one per cent (sic) nationalist in their attitude to Chinese aggression. (Mr Nehru had, of course, been kinder and put the percentage in question at one hundred). Again, Government policy being what it is, it is not quite fair to blame AIR for the paucity of news from the front in its bulletins, since such news cannot be manufactured in its news room. (Still, it is disconcerting to have to turn to the BBC for details). But my principal grouse is against some of the feature programmes that are being put out these days. I find the five-minute feature "Topic for Today" that precedes the nine o'clock news bulletin every evening particularly trying. The idea seems to be to project an image of China that would want us to spit on it. In point of fact, however, the programme's incredible naivete makes at least one listener squirm with embarrassment. For some obscure reasons, the narrators work themselves up into a frenzy and sound like ham actors emoting for all they are worth. The irony is leaden and the anger synthetic, and certain expressions like "Chinese dragon", "perfidious aggressor" and "lying tyrants" are worked to death. I suspect that some bogus theory about mass persuasion is at the bottom of this sudden lapse into verbal brutality. It is as though AIR has taken to heart the familiar complaint that it is too namby pamby and is out to prove that it can be as tough as the next hundred kilowatt transmitter. I think that AIR is totally ill-advised in thus distorting the persona, on the whole

creditable, which it has built itself all these days. I agree with Mr Nehru that we should not allow the present emergency to vulgarise and brutalise us. After all there are enough authentic responses from our people to the emergency—AIR's own feature "A Nation Prepares" partially proves this—for AIR to eschew ersatz broadcasting thrills. And while on the subject, how about AIR enlisting talent outside the Broadcasting House? Somewhere around there should be a Priestley waiting to be discovered.

*

The mid-term congressional elections in America have in the result turned out to be a personal triumph for President Kennedy—or so you would believe if you read Newsweek to get your information about America. It is, on the other hand, a victory for the Republican party if the paper you subscribed to was Time. Where does the truth lie? I think somewhere in between. Mr Kennedy's achievement lies in having obtained a larger majority in the Senate and in more or less maintaining the status quo in the House of Representatives; and also in the fact that a number of "New Frontier" congressmen, whom he personally backed, have been elected. This is only the second time since the turn of the century that at a mid-term election the party in power has not suffered significant losses in its congressional strength. The silver lining, as far as the Republicans are concerned, is that in the gubernatorial elections they have been able to seize control of some of the bigger States (that is, with a larger electoral vote)—important among these being Pennsylvania, Ohio and Michigan. A signal failure for the Republicans has been the inability of Mr Richard Nixon to win the governorship in California.

EAVESDROPPER

GOVERNMENT OF INDIA GOLD BONDS

Subscriptions for 6½ per cent. Gold Bonds, 1977 are being received from the 12th of November, 1962, in the form of gold, gold coins and/or gold ornaments.

The value of the gold will, after assaying, be calculated at the rate of Rs. 53.58 nP. per 10 grammes of .995 fineness equivalent to Rs. 62.50 nP. per tola of the same fineness.

Interest on the Bonds will accrue from the date of issue and will be payable half-yearly on the 12th of May and the 12th of November. Interest will be liable to tax but no tax will be deducted at the time of payment of interest on the Bonds held by individuals if the holder gives a declaration that the total nominal value of the Bonds held by him, or on his behalf, does not exceed Rs. 10,000.

The Bonds will be exempt from Wealth Tax and any capital gains from their sale will not be subject to Capital Gains Tax.

Subscription lists opened on 12th of November, 1962 and will close on the 11th of February, 1963 or earlier without notice.

Applications for the Bonds will be received at:—

- Offices of the Reserve Bank of India at Bangalore, Bombay, Calcutta, Madras, Nagpur and New Delhi;
- Branches of the subsidiary banks of the State Bank of India conducting Government treasury business; and
- Branches of the State Bank India at other places in India

For full particulars apply to any of these receiving offices or branches.

"LIC had another good year, I'm told."

"Yes, they did a lot of new business in 1961"

PEOPLE
ARE
TALKING
ABOUT
LIC

LIC's new business in 1961 totalled Rs. 608 crores—an increase of 22% over the 1960 figure of Rs. 497.5 crores. A good record, by any standard. Especially so because 1961 was a bad year for field activity, with vast areas affected by floods. Greater reliance on Life Insurance as a means to safeguard the financial security of the individual and the family, and confidence in LIC as a stable organisation devoted to the welfare of the nation and its policy-holders, have been the main reasons for the phenomenal growth of LIC's business year after year.

[From Our New Delhi Correspondent]

Fair Trading Practices

The practices and procedures that might be adopted by trade and industry in order to inspire confidence in the minds of the consumers regarding the prices and the quality of the goods they buy have been recommended in the Report of the Committee on Fair Trading Practices. This Committee was set up following the inaugural meeting of the Board of Trade on 9 June, which discussed the question of fair trading practices, both in internal and external trade, in response to a suggestion made by the Prime Minister in his message which was read out at the meeting.

The problem handed over to the Committee was a complicated one to which no single solution could be applicable. India is a vast country of nearly 600,000 cities, towns and villages, served by hundreds of thousands of processors, wholesalers, merchants, traders and retailers. It would be a very facile generalisation to make, says the Committee, that they are not following any code of business conduct and that all but a minority indulge in unethical business practices. The same applies to our export trade. Even as it is, the country has built up an export trade which earns nearly Rs 650 crores a year. In some commodities we are the largest exporters. We are also breaking ground in new lines. Obviously, says the Committee, all these could not have happened if our export trade was as unethical and irresponsible as it is made out to be. Having said this, the Committee recognises that it is bound to create a better atmosphere all round, if trade and industry, on a voluntary basis, formalised a code of conduct and began as widely and universally as possible certain practices and procedures which will help in ensuring greater confidence in the minds of those who have to deal with it.

Some organisations concerned with the export trade, particularly Export Promotion Councils, had formulated Codes of Fair Trading Practices, and their members had to adhere to them. Similar Codes, however, are not in vogue in the Associations and Chambers concerned mainly with internal trade. In order to formulate a universally acceptable Code of Fair Trading Practices,

the Committee went into the type of complaints which generally arise in the course of business dealings and dealings of merchants and consumers. It was found that these complaints generally related to one or more of the following matters:

- Quality.
- Delays in delivery.
- Non-fulfilment of contractual obligations.
- Short delivery, i.e., in terms of weights and measures.
- Non-payment of commission agreed to be paid.
- Incorrect invoicing.
- Delay in the settlement of claims.

The Code of Fair Trading Practices, the report says, should, therefore, aim, by and large, at the elimination of complaints which occur on one or more of the above grounds, and Chambers of Commerce, Manufacturers and Trade Associations, Export Promotion Councils and Commodity Boards should formulate codes for their members which will embody appropriate instructions for avoiding them. As in the beginning there is likely to be some resistance on the part of some to the adoption of such codes, it has been suggested that the Organisations concerned should be requested to formulate Codes which will suit their specialised lines of activities or trades and declare that their members abide by the Code which they have formulated. In short, the Code should become part and parcel of the By-laws or Rules and Regulations of these Organisations. It will then be for the concerned Organisations to take such action against the defaulting members as is enjoined on them by their membership Rules.

The Report attaches great importance to the speedy settlement of such disputes particularly those which arise in the course of international trade. In many cases, the settlement of such disputes has proved dilatory and caused quite a lot of heart-burning, because there has been no arbitration clause in trade contracts. The Report suggests that all trade contracts should have suitable arbitration clauses.

The practices and procedures recommended by the Committee are of particular relevance in the present context in view of the policy for holding the price line that has been announced by the Government of India. The Committee has recommended that

price marking, tagging and displaying should be resorted to on as wide a scale as possible. It is recognised that this may not be entirely practicable in rural areas and that it may be neither feasible nor necessary at certain stages in the sale of commodities, as for instance wholesale trade in grains. Therefore the Committee has suggested that a beginning should be made with the following in respect of certain selected commodities: (a) Price marking; (b) Price tagging; (c) Display of price lists. The last two, it is suggested, will have to be confined to towns with a certain minimum of population. It is also suggested that a beginning may be made with the following commodities in which one or the other of the above methods of price display can be used:

1. Food grains.
2. Cloth (cotton textiles, rayon as well as woollen) including ready made garments and hosiery goods.
3. Sugar.
4. Oils and Vanaspati.
5. Cycles.
6. Sewing Machines.
7. Domestic utensils.
8. Radio Receivers.
9. Fountain Pens.
10. Electric Fans.
11. Clocks and Watches.
12. Footwear.
13. Drugs and pharmaceuticals.
14. Paper and paper board including stationery.
15. Patent Foods.
16. Fruits and Vegetable Products.
17. Tyres and Tubes.
18. Matches.
19. Cigarettes.
20. Soaps and Synthetic Detergents.
21. Toilet articles.
22. Electric Lamps.
23. Storage batteries.
24. Paints and Varnishes.
25. Kerosene Oil.

(The list is illustrative and can be altered and added to as more experience is gained.)

Price stamping, the Report points out, has to be undertaken at the stage of manufacture. Factory and retail prices, as also excise duty payable may be shown separately wherever considered feasible. This is already being done in the case of cotton textiles. The same practice, it is suggested, can be followed in items like vanaspati sold in packs of standard sizes, woollen and rayon piece-goods, paper and paper-board, patent foods, paints and varnishes, footwear, tyres and tubes, cigarettes, matches, kerosene oil, etc. In some cases it might also be possible to indicate the specifications of the article for sale. In respect of commodities which lend themselves to price tagging, it is suggested that retailers should be asked to use this method. In regard to such items as foodgrains, sugar, oils and other articles of day-to-day

consumption, shopkeepers should be asked to display their prices on a board or some other convenient medium in some prominent place in their shops.

Apart from the methods mentioned above, the Committee has also suggested that Associations of Manufacturers, or Manufacturers themselves, of items like vanaspati, cycles, sewing machines, radio receivers, fountain pens, electric fans, clocks and watches, footwear, drugs and pharmaceuticals, patent foods, paper, tyres and tubes, cigarettes, soaps, toilet articles, electric lamps, storage batteries, should be prevailed upon to advertise, jointly and/or individually, the prices which consumers should reasonably pay for them in various areas. This method has already been experimented upon during the periods of emergency in certain selected articles like soaps and cigarettes. By suitably adjusting and replacing their advertisement campaigns, manufacturers and their Associations, it is suggested, can undertake this on a more regular and widespread basis.

While it would be desirable to cover as large a population of the country as possible, the scope for adoption of the practices recommended will depend on the existence of well-organised local trade associations or chambers of commerce. Taking a practical view of the situation, the Committee has suggested that to begin with, the efforts should be confined largely to urban areas and, even in urban areas, to cities with a population of over 100,000 persons. According to the 1961 Census, the number of such cities is 107 with a total population of 35.11 million. The Committee has also called upon the Federation of Indian Chambers of Commerce & Industry and the Associated Chambers of Commerce to exert their influence with the business community to bring about a self-imposed discipline in the matter of serving the interests of consumers and buyers in India and abroad.

* The Committee consisted of Mr. Shriyans Prasad Jain (Chairman); Mr. H. Mackay Tallack; Sir A. Ramaswami Mudaliar; Dr. P. S. Lokanathan; Mr. T. Chakraborty; Mr. Chandulal Premchand; Mr. L. K. Jha; Mr. R. Doraiswamy; Mr. L. K. Sehgal (Secretary); Mr. G. L. Bansal; and Mr. I. P. Gupta.

A Regional Conference of industrial and trading interests of the States of Assam, Bihar, Orissa and West Bengal is being convened on Saturday 17 November 1962 in Calcutta. This is the fourth of such conferences; the first three having been held in Bombay, Delhi and Madras in April, July and October this year to cover the Western, Northern and Southern regions.

The Indian Iron & Steel Company Limited

Statement by the Chairman,
Sir BIREN MOOKERJEE,

Dealing With the Year Ended 31st March 1962

The following statement by Sir Biren Mookerjee, Chairman of the Indian Iron & Steel Company Ltd., dealing with Company's working for the year ended 31st March 1962, has been issued to shareholders. The Annual General Meeting of the Company will be held on Tuesday, the 11th December, 1962, at 3 p.m. at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry, 6, Netaji Subhas Road, Calcutta-1.

The production of iron for the year at 1,187,397 tonnes and of steel ingots at 934,498 tonnes shows a small increase over the previous year. Yet in fact the rate of production remained more or less the same in the two years.

This apparent anomaly is due to the fact that there was a railway strike last year during which period there was a stoppage of all raw material coming into the works. As stocks of coal had run down to only four days' requirements, it left no alternative other than to carefully damp down all the four blast furnaces one by one as well as to reduce the input of coal into the coke ovens just to maintain sufficient heat to prevent damage to those plants. This calculated shut down last year, carried out under careful scientific observations by Works' executive experts, resulted in a computed total loss in production of some 27,000 tonnes of ingot steel. It will be seen, therefore, that while this year's production shows an increase over last year of 20,339 tonnes, it is in fact on the basis of actual rate of production less by some 6,000 tonnes.

In this connection I would like to emphasise, that ever since the new blast furnace and melting shop expansions were completed some time round about the middle of 1959, every effort has been made to go all out to reach the rated capacity of iron and steel production. But we failed each year to achieve this owing to the poor quality of raw material and particularly in the case of coal, a quality almost unusable. Added to these difficulties there was the ever persistent irregularity of transport. How then in the face of these insurmountable difficulties can Government insist that 100 per cent production is to be maintained? They have merely to look at the production of their

own steel plants, where in the case of one plant the quality of raw material can be termed excellent compared to ours, with little or no transport difficulties. In the case of the other two Government plants, raw material and transport problems do arise, but it is nothing compared to that of your Company. Steel qua steel may be made at the cost of quality. Is that then what the Government desire, a sacrifice in quality and a mass rolling of unrequired sections of steel for the sake of production records? I shall refer to this and many other points later on in my statement.

ACCOUNTS

In my statement last year I made reference to the Tariff Commission's enquiry in connection with the fixation of the retention price of steel effective from 1st of April 1960. After conducting the usual careful investigations, visits to the works and discussions with the representatives of the Steel Companies, the Tariff Commission submitted its report to the Government in April 1962, having made such deductions and adjustments in costs as it thought fit. It was not until the 7th September 1962, that Government's decision on this important matter was announced in Parliament according to which steel retention prices were increased by Rs. 10.50 per tonne on an assumed product mix basis commencing from the 1st of April 1960, as against the Tariff Commission's recommendations of an increase of Rs. 38 per tonne over the provisional increase announced by Government in February 1961. A reference to which was made in my statement to you last year.

Curiously enough Government apparently did not consider the retention prices of individual categories of steel as important, as these details were only made available on the 12th October 1962. This delay in announcement on Government's part of the category-wise retention prices of steel prevented the Company from closing its annual accounts and presenting them to you along with the auditors' report within the prescribed period; hence two appeals had to be made to the Company Law authorities to extend the permissible date of the annual general meeting to the maximum limit of 3 months, namely, the 31st December 1962.

The most surprising part of Government's decision was the drastic and unconventional manner in which the Tariff Commission's carefully considered recommendation and mature judgment were turned down flatly in respect of the normal retention prices for the past two years, ending on 31st March 1962, as well as a special element that should have been allowed in the retention price in addition, for payment by the Tata Iron & Steel Company and your Company, of interest on and towards repayment of special advance of Rs. 10 Crores each made to these Companies by Government. I will deal with this in greater detail later on.

The salient points of the accounts for the year have been fully dealt with in the report of the Board of Directors, but there is one point, a very important point indeed, on which I would like to make some observations.

On the recommendation of the Tariff Commission in 1959, the Government of India in terms of their Resolution No. PS45(112)/57 dated the 25th November 1959 decided that the interest on the Special Advance should be charged to the Company as from 1st July 1958 at 5 per cent per annum and the calculation of a special element in the normal retention price for steel for meeting this interest charge was postponed until after 31st March 1960, when it was necessary to work out the fair retention price of steel produced by the main producers. As the interest accrued from the 1st of July 1958, your Company had to, under the Indian Companies Act, make provision for this accrued liability in the past years' accounts and as in terms of an Agreement with the Government of India dated the 15th July 1953, it was expected that in fixing the retention prices of steel for the two years ended 31st March 1962, a special element should be included in such prices to fully cover interest upto the end of this period, a corresponding amount was included in Sales Retention Prices in those years as the anticipated earnings from such special element. This expectation has, however, been belied. Although a special element to cover interest and Repayment of Special Advance was recommended by the Tariff Commission, the Government of India has, in reversal of their earlier decision, rejected this recommenda-

tion. This has put your Company in a very awkward situation. The Interest on Special Advance charged in the previous two years' Accounts has to remain as such but the anticipated compensatory element in steel retention prices amounting to Rs. 1,40,01,141 included in the Accounts of those two years had to be written back from the current year's "Sales"; besides, whether Interest is actually paid in cash or not, your Company has to go on charging such accrued interest from year to year without a corresponding compensating element in "Sales". Repeated representations have been made to the Government, but it does not seem to realise this difficulty of your Company; it appears to be under the impression that so long as the Company has not to make actual cash payment to Government, it is immaterial whether any special element is included in the prices or not. Government just cannot realise that your Company does not keep its Accounts, as Government departments do, on a Cash basis but on the normal Commercial basis where any liability accrued, whether paid or not has to be duly provided in the Accounts.

TARIFF COMMISSION'S RECOMMENDATIONS AND GOVERNMENT'S DECISION

At long last, that is, after two and a half years, Retention Prices of steel were announced by Government on the 7th of September 1962 on an estimated product mix basis on which, as I have already stated, your Company's accounts could not be closed. Apart from the fact of Government's rejection of the Tariff Commission's deliberations and conclusions it has come to an ad hoc decision totally divorced from the conditions specially laid down in 1953 for the calculation of retention prices of steel, after taking into consideration repayment of loans to Government and the World Bank (International Bank for Reconstruction and Development), maintenance of regular dividend and putting into reserve statutorily or otherwise sufficient sums in order to enable the Company to remain healthy and to continue to increase production and achieve expansion out of its own resources as and when the country needed extra steel. It now appears from Government's latest announcement in the papers that the Tariff Commission's sins are that it arrived at

IISCO.—Chairman's Statement —Contd.

its conclusions according to these formulae and conditions laid down by Government earlier and according to which your Board of Directors agreed to accept loans on your behalf for the expansion schemes. If now these conditions and formulae for calculating retention prices are changed for the worse, it has been announced recently, there is little or no hope of further expansions to your plant.

Government's decision regarding cutting down the retention prices recommended by the Tariff Commission has, as announced on 7th September 1962, been arrived at by:

- Reducing the value of the block considered fair, after careful study by the Tariff Commission, from Rs. 1300 to Rs. 1176 per tonne.
- Reducing the working capital provision to 4 months' cost of production as against 8 months' claimed by us in our representation and 6 months allowed by the Tariff Commission.
- Disallowing the inclusion of Rs. 3 per tonne as recommended by the Tariff Commission towards interest on Special Advance and its repayment.

The reasons stated for making a reduction in block are:

- The operational efficiency of the plant should be taken at 100 per cent as against 90 per cent optimum considered by the Tariff Commission.
- The capital block of Rs. 10 Crores received as Special Advance from the Government should be excluded.

Apart from reduction of Rs. 3 per tonne on account of the Special Element towards payment of interest and repayment of Special Advance, the total reduction effected by Government per tonne of steel from what was recommended by the Tariff Commission comes to Rs. 19.50 per tonne as shown below:

	per tonne
(1) Reduction in capital block due to deduction of special advance	Rs. 10.30
(2) Reduction of block by taking operational efficiency at 100 per cent	6.20
(3) Reduction in working capital	3.00
Total	19.50

As a result of this, your Company has been deprived of approximately Rs. 2.8 Crores on despatches of 1.4 million tonnes of saleable steel during the 2 years and will also suffer in future as

we fear, this will also apply to the provisional price to be fixed from 1st April 1962 onwards.

But the story is actually different. The new prices fixed by Government for individual categories of steel will only enable the Company to earn an increase of Rs. 8.53 per tonne as against Rs. 10.50 per tonne announced by Government on the despatch of steel made during the last two years.

The target of operational efficiency as contemplated by Government recently should have been based on an approach inspired by lessons of realism and past experience rather than dogmas. Nowhere in the world have steel plants been rated to operate at 100 per cent of their rated capacities. It can only be expected over short spells. The Tariff Commission very rightly adopted 90 per cent efficiency as a factor of normal operation. I quote below some interesting figures of capacity utilisation as published by the U.K. Iron & Steel Board (vide para 65—Annual Report—1961):—

Year	% capacity utilisation assumed by the Board	Actual Operation
1954	90	98.0
1955	90	98.0
1956	90	97.0
1957	90	96.4
1958	90	87.1
1959	90	78.9
1960	90	93.9
1961	90	88.5
Average over 8 years	92.2	

Although the average of actual operation works out to 92.2% the Board for calculation purposes maintains 90% as the target of capacity utilisation.

It may not be difficult to attain 100 per cent efficiency occasionally, but provision must be made for bad weather and unfavourable circumstances which do arise more often than not and over which no management control can be exercised; in our case the transport and raw material difficulties are well-known. The fixation of block value at 100 per cent utilisation of capacity in the steel industry is unrealistic and I am afraid, will be of no help to the industry. It is my sincere suggestion that the matter should be reconsidered and given a second thought by Government. It must also be remembered that when vital issues of this nature are referred by Government to an independent semi-judicial and expert body like the Tariff Commission, its recommendations should not be flouted in the manner in which it has been done in this case, as it is bound to undermine confidence in the private sector and definitely make foreign aid participation very doubtful.

As regards the disallowance of the Special Advance of Rs. 10 crores from the block a great deal has been said, both in Parliament and outside it, about this interest-free loan to your Company by the Government. I have so far refrained

from answering queries from stock holders, financial journals and papers, as I thought it to be Government's duty to explain the reasons and motive behind such a loan first to Parliament. Since 1952 Government's ideas on the repayment of the interest-free loan have been undergoing many changes, some even contradictory. It is only fair to stock-holders that I should now take them into confidence and explain how this interest-free loan of Rs. 10 crores came into being.

At the request of the Government of India, Mr. Eugene R. Black, the World Bank President, paid a visit to India in February 1952 to acquaint himself of the broad aspects of the country's development programme in the light of the Five-Year Plan. On the 17th February he, accompanied by Mrs. Black, Messrs. Joseph Rucinski, Chief Economist of the Loan Department, Leonard B. Rist, Director of Economic Department and Harold N. Graves, Director of Public Relations, arrived at Burnpur on a two-day visit to have a first-hand study of your Company's expansion programme.

Being satisfied with the merit of your expansion scheme, he was kind enough to send to India in June 1952, a Fact Finding and Feasibility Probing Mission of four members headed by Mr. George D. Woods, one of India's best friends outside the World Bank and the President of the First Boston Corporation of New York. The Commission consisted of Mr. Woods, Mr. Maccurda, his personal adviser, Mr. Joseph Rucinski of the World Bank and Mr. Carl Fiesher, Technical Consultant to the Bank. They visited your Works and went into the details of the First Expansion Scheme with the Company's Consulting Engineers and the Works' senior executives. On being satisfied with our scheme generally in every respect, discussions with Government were started in Delhi directly afterwards. At these discussions, the then Finance and Commerce & Industries Ministers were present along with their respective secretaries and advisers. You were represented by my colleague, Mr. F. G. Liversedge and myself. At the conclusion of these discussions, the World Bank's representatives agreed to put the matter up to the World Bank Directors, subject to a detailed scheme of the plant proposed, its costs broken up into foreign exchange and local currency, the legal aspects of mortgage of all lands and property of the Company etc., considered. The foreign exchange requirement to be met by the World Bank was approximately estimated to be Rupees 15 Crores or 31½ million dollars. Government's loan to the Company on the same terms and conditions, but ranking second to the World Bank and the then debenture holders, was set up approximately to be Rs. 7.9 Crores. The Company was to find an equal amount, namely,

Rs. 7.9 crores from its own resources. It was then found, a further Rs. 10 crores was needed for financing the entire scheme, as well as to meet the working expenses. The question then arose how to bridge this gap. The Woods Commission came to the conclusion that the then Tariff Board's function as directed by Government in the case of the steel industry, was not so much as to find ways and means of protecting the indigenous industry from foreign invasion, but to prevent it from claiming a higher world price for its commodities, obviously for Government's own benefit; Government, therefore, in all fairness could hardly refuse to find for the industry the needed amount, and they said, if I remember correctly, "Whose money are you giving away and to whom; in the case of jute, tea, sugar, copper and other such commodities, the industries are allowed to claim or sell at the highest prices the World market was willing to pay, but in the case of steel, the industry was beaten down by the Tariff Board on a framed up formula fixed by Government. All Government has to do is to remove it and the steel industry would no longer need financial aid from Government, other than a guarantee of the repayment of foreign exchange loan". After a couple of days' thinking Government agreed to find the money as a loan which the World Bank's representatives thought should be "rent free", meaning interest free. The Ministers agreed to the loan to be termed as a Special Advance and interest free, but thought in order to avoid questions being asked in Parliament, the whole or part of the corpus should be repaid sometime, i.e., when the Company was opulent enough to do so and no further expansions were contemplated. The World Bank representatives were of the opinion that so long as it was agreed that the amount would only be paid, both interest, if any, and the corpus out of a special element to be included over and above the normal retention price, they would have no objection. The Government agreed to it, but later thought they should also include the clause wherein they would reserve the right to ask the Company to raise additional share capital for the repayment of whole or part of the corpus as and when the Company was in a position to do so. The World Bank's representatives were of the opinion that this should only be done subject to mutual agreement between the Government and the Company.

The World Bank's representatives then went on to explain that the primary function of the I.B.R.D. whose capital was subscribed by a number of nations, was to rehabilitate and/or expand industry in the private sector only and in doing so to enable such industry to remain in a healthy financial position in order that it could expand on its own, and further, the Tariff Board must be instructed by Gov-

IISCO.—Chairman's Statement —Contd.

ernment that it must not, as in the past, take away incentives from the Company in the way of any operational efficiency or savings in the cost of production or by increased depreciation and a reasonable return on capital etc., should be maintained. Both Government and your Company agreed to these principles and Government issued new directions to the Tariff Board which later on was converted into the Tariff Commission with statutory powers. It appears Government now wishes to resile from its previous commitments and undertakings it had then made.

The recommendation by the Tariff Commission of Rs. 8/- per tonne relating to the repayment of Special Advance and interest thereon has not been accepted by Government. The reason, in their own words, being "Finally, in revision of their earlier decision taken in 1959, Government now consider that it is not necessary to provide an element in the retention price for the payment of interest on and repayment of special advance. The agreement with the Companies provided for an alternative method of repayment of a part of the Special Advance with interest, namely, issue of share capital by the Companies at such time or times as the Government of India may, in agreement with the Companies, decide."

For the benefit of the stockholders I give below the relevant extract from the agreement between the President of India and your Company dated the 15th July, 1953:—

Clause 1 (iv) (c): "The Government of India shall decide, on the advice of the Tariff Commission, whether after the 30th June 1958 (or such later date as aforesaid), the Company should be charged any interest on the said advance and at what rate the Company should repay the advance. PROVIDED that the interest and repayment of the advance shall to the extent to which the same is not paid out of the share capital to be raised by the Company in accordance with Clause 3(c) be payable by the Company out of its earnings arising from a special element in the prices of iron and/or steel over and above the normal retention prices, after deducting from earnings all taxes payable by the Company to the Government of India on such earnings at the rate or rates applicable to the Company's total income during the period ending the 31st March 1960."

It is further amplified later in Clause 3(c) which reads as follows:— "Notwithstanding the provisions in paragraphs (c) and

(d) of Sub-clause (iv) of Clause 1 laying down the manner of payment of special advance to make an issue of share capital at such time or times as the Government of India may call upon the Company to do and to repay out of the proceeds of such issue a portion of the special advance. The proposals for any such issue (including the timing, amount of the share capital to be so raised and the portion of the special advance to be repaid out of the proceeds of the issue of shares and other particulars relating thereto) shall be as may be agreed between the Government and the Company."

It will be seen, therefore, the intention of Government in 1953 in regard to expansion of the steel industry in the Private Sector has undergone a very great change, for if your Company has to raise capital to repay the advance of Rs. 10 crores, and this contention is upheld by Government, it virtually means saying good-bye to any future expansion, even if it be for merely balancing of your plant and thereby effecting a fully economic unit.

Apart from all that I have said in this connection I utterly fail to see any logic or justification in the Government's action in deducting the corpus of the Special Advance of Rs. 10 crores to arrive at the standard block on which overheads are to be allowed. If Government has now changed its mind and treats this money as a free gift, i.e., neither interest nor repayment of the corpus being required, then there may be something in the Government's contention. But in its recent statement made on the 19th September, Government has reiterated its stand regarding the repayment of the advance and indicated that it could ask the Company to repay this Special advance out of an issue of fresh capital. Therefore, it is not a gift and if that be so, then on what ground can Government take this totally unreasonable and unrealistic stand?

It can be safely vouched and nobody will deny the special position and importance of the steel industry in our country, particularly in an era of expanding economy based on rapid industrialisation. Contribution made by this industry in the past, specially in the field of saving foreign exchange is very considerable, and this is explained clearly in the appended two charts (A & B) showing—

A. The net price per tonne of steel given to the producers, the price paid by the public and what it would have cost the country if imported from overseas.

B. Saving of foreign exchange effected due to indigenous production over the

past ten years, in other words, the cost of a new one million ton capacity integrated steel plant.

That then has virtually been the contribution of the two steel plants in the Private Sector. Does it therefore behove Government to accord to this industry the perfunctory and niggardly manner of treatment it has been subjected to? Is it not a matter of elementary economics that the benefit of maximum possible incentive should be extended to the industry to allow it not only to exist, but to function and produce on as high and efficient a level as is possible? Why then this ire as if the industry has done something terrible, and deny it a healthy climate all round to earn a reasonable return on the capital employed, which is largely being ploughed back from profits and maintain an increasing output, thereby enhancing the growth of national wealth?

When Government's decision on the retention price of steel was released there was widespread criticism and Government made a statement on the 19th of September 1962 in an attempt to justify its official action for reducing substantially the prices recommended by the Tariff Commission. I will now deal with the arguments advanced by Government item by item and prove to you how futile these are.

It was stated that Government had accepted the Works costs as calculated by the Tariff Commission and this constituted 70 per cent of the total retention prices. This statement seems to imply that a great favour has been done to the steel industry by Government, by its acceptance of this ma-

jor element of the retention price. This is no favour at all. Government could not help but accept as correct, calculations of Works costs by the Tariff Commission, as these were not estimates of future Works costs, but facts based on historical costs on the actual performances of the producers during the period of price fixation, namely from 1st of April 1960 to 31st of March 1962.

In regard to reduction by Government of the working capital of your Company to 4 months' cost of production as against 8 months' claimed by the Company in its representation and 6 months' allowed by the Tariff Commission, the reasons given by Government to justify its stand are based on two grounds:—

(a) That every indenter of steel has to pay in advance 25 per cent of the total value of his order in cash to the steel producer before it can be booked, and therefore, the Companies invariably had a fairly large sum of money at their disposal.

(b) That at any given time the Companies had large sums of money belonging to the Government in their possession and these were not actually paid into Government account.

In regard to (a) the statement made by Government that every indenter had to pay 25 per cent security deposit against order is absolutely baseless. This could easily have been verified from any Government Accounts Officer and it would have been found that no Government department gives any security deposit whatsoever, whereas on the other hand Government takes months to pay your bills. It

IISCO.—Chairman's Statement —Contd.

is a fact that producers dare not ask for any security deposit from Government, including the Railways, and large well-established customers which constitute more than 80 per cent of their sales. It is only in the case of small bazaar parties that the producers take a security deposit and this too with the Iron and Steel Controller's acquiescence, as no order can be booked without his approval. Some years ago it was found that some of these small bazaar parties having booked orders (for reasons best known to them) were found to be nonexistent, or refused to accept bills when the railway wagons arrived at the destination. What then could your Sales Organisation do other than to run to the Iron & Steel Controller for his approval to divert the railway wagons to some other party—in the meantime demurrage accrued as well as the extra freight for diverting the wagons. Who then was responsible for the extra cost of freight and demurrage as your sales organisation was in no way responsible for the order? The then Iron and Steel Controller thereupon decided that for these unknown and unreliable parties the producers were entitled to demand 25 per cent with the order, in order to reimburse them in such cases of default. These advances are mostly in G. P. Notes and fixed deposits in banks. The interest accruing is payable to the customers and the Company has no access whatsoever to these funds. To make my point clear, I append below a statement for the 3 years, 1959-60, 60-61 and 61-62 showing the gross steel sales from Burnpur and the security deposits and advance payments in cash received by your Company:—

	1959/60 Rs.	1960/61 Rs.	1961/62 Rs.
Gross Steel sales	39 crores	46 crores	50 crores
Security deposits and advance payments in cash	26 lakhs	30 lakhs	29 lakhs
Percentage	0.67	0.65	0.58

In view of these actual figures from the Company's audited accounts the statement made by Government seems to be most irresponsible, as during the three years under reference the maximum amount lying with the Company was between 0.67% to 0.58% which is nowhere near 25% stated by Government.

In regard to (b) the statement that at any time the producers owe large sums of money to Government is again just a myth. Both Mr. Bhoothalingam and Mr. N. N. Wanchoo, Secretaries to the Ministry of Iron & Steel have written to me complaining about the large outstandings from the Company to Government and every time we have written back in reply to prove that Government's statements were incorrect. Moreover

Government seems conveniently to forget that it is your Company that do it a favour by collecting surcharge moneys on its behalf and further all collection expenses including cash discount allowed by us on the amount of the surcharge are being borne by the Company. Besides, whether the Company receives payment of a bill or not, it is required to pay the surcharge portion of the bill immediately to the Iron & Steel Controller. How can Government then quibble over a few lakhs of rupees worth of surcharge money that necessarily must remain outstanding at any time with the Company as claims cannot be finalised within the period.

On the other side of the picture, apart from outstanding bills for materials supplied by the Company, it has to wait years to get reimbursement from the Equalisation Fund in respect of any increases in the retention prices. These increases are due to the Company as costs and overheads have gone up in the meantime and which are beyond the control of the Company. Although it has already been out of pocket to these extents it cannot claim any reimbursement from Government unless Government so deigns at its leisurely pace to decide on the revised retention price. As an example, in the case of the recent increase in steel prices which are really due from the 1st of April, 1960, the notification by Government of such increase in the retention prices is dated 7th of September 1962, and the category-wise retention prices were made available to the Company only on the 12th of October 1962, i.e., a time lag of about two and half years. This, in other words, means that cores of rupees due to your Company has been lying with the Equalisation Fund

In my previous statements to you as well as in the Annual General Meetings in the past, I have made it known that these large sums of money, which you are investing in the Company from year to year will one day be partly converted into equities. But your Board of Directors were precluded even from thinking about it owing to the penal tax of 30 per cent, now reduced to 12½ per cent levied by Government on bonus issue. From these figures it will be seen that your Company has made contributions towards the expansion scheme in no mean measure. No integrated modern steel plant, no matter what part of the free world it is situated in, can be expanded or modernised with stock-holders' money only. It has to take recourse to borrowing funds from banks and the most enterprising and sensible Governments come forward to give them such help as needed in order to reap the benefit of extra production of iron and steel, thereby creating extra expansion in the country's heavy industries etc., as well as finding an outlet for foreign exchange by exporting goods.

For the reduction in the return on capital it has been stated by Government that your Company, like Tata Iron & Steel Company, had no more than one-fourth of the total capital of the Company in the form of equity capital and that this ratio may have still fallen further. The Government's contention is that the rest of the capital has been borrowed and therefore should be treated differently as it was not the stock-holders' money. For your information I append below a statement showing that during the 10 years, i.e. from the date of the Expansion Scheme until 31st of March

this year your Company has contributed out of its own resources—and which really is your money—

CAPITAL EXPENDITURE AND SOURCES OF FUNDS DURING THE TEN YEARS 1952/53 TO 1961/62

EXPENDITURE ON EXTENSIONS:	Rs. crores	Rs. crores	Rs. crores
Burnpur—			
1950 Extensions	4.97		
1953	37.64		
1955	18.46		
General	5.97	67.04	
Kulti		3.76	70.80
Less: Outside Sources of Funds for Extensions:			
World Bank Loans		21.28	
Government of India Loans		7.35	
Special Advance		10.00	
New Shares Issued		7.00	45.63
Extensions financed out of own Resources			25.17

CAPITAL EXPENDITURE FINANCED OUT OF OWN RESOURCES UPTO 31-3-62

For Extension as above	Rs. 25.17 Crores
World Bank Loans Repayment	5.80 "
Govt. of India Loan Repayment	2.13 "
Sterling Debenture Repayment	1.59 "
	Rs. 34.69 Crores

This, in other words, means that in addition to a sum of Rs. 7 Crores contributed by you as a rights issue in July 1957 a sum of Rs 34.69 Crores has already been ploughed back from your profits during these years, making a total contribution from you of Rs 41.69 Crores, and this process will continue until all loans, past and future, are repaid.

Government also seems to argue that if a part of the gross block is financed by loan capital the structure of the Company's finance should be different and the return on such capital should accordingly be calculated on different lines. To say the least, this is a strange way of thinking on the principles of economics, as it is both unorthodox and unheard of. If Government had these ideas in mind it should have, in all fairness and to all concerned, declared them in unequivocal terms when these very loans were being negotiated. It would then have been for the Board of Directors and the stock-holders either to accept or reject the terms and conditions at the time and not to have a surprise suddenly sprung on them as at present.

As already stated, Government's latest contention has been that on account of the special capital structure of the Company and on account of not achieving 100 per cent production, the return on capital should be correspondingly reduced, and for this purpose Government has decided to cut a slice into the block which is standing up proudly at your Works. But as depreciation is calculated on block, this has also resulted in a reduction in the total quantum of depreciation allowed by the Tariff Commission. Are we not justified in enquiring, why this unwarrantable reduction in depreciation? I can only term this action as adding insult to injury. It has also been openly said in Parliament the other day that your

IISCO.—Chairman's Statement —Contd.

Company has earned huge profits during the year under review. I do not know, in the case of a Company like yours, what the yardstick for this "hugeness" is. All I can say is that your Company has earned only a reasonable profit, commensurate with its requirements and obligations. Besides, uniform retention prices were fixed for all Producers, and if any one Company has earned a little extra due to efficient working, that I should have said, would have been a matter for congratulation and not resentment. I am sure it is not Government's desire to discard all cardinal principles of economic aid to penalise efficiency.

PRODUCTION DIFFICULTIES:

The quality of raw material, if anything, has deteriorated from what it was last year, and added to this, irregularity of transport as well as wrong type of wagons for transporting the materials do not help to make the Works Executive's life a happy one.

I append a few charts (No. 1 to No. 6) which will show the difficulties that have to be surmounted in order to utilise the raw materials. The object is to bring out some

of the obstacles which prevent the Company from achieving a production rating of 100% of its installed capacity. Apart from these obstacles, there is also the question of the quality of the raw materials, particularly Coking Coal. The average ash content of our Coke has now reached 24% but the average figure does not indicate the true

* The Company has always objected to being forced to accept B.O.B. wagons in lieu of B.O.B. wagons as with the full knowledge and approval of the Railway Board our mechanical off-loading equipment was designed and installed to handle only B.O.B. wagons.

CHART NO. 3 SHOWING THE IRON ORE PROGRAMME & RECEIPT POSITION AGAINST THE PRODUCTION OF IRON OF VARIOUS STEEL PLANTS

This Chart brings out clearly that whereas Durgapur Steel plant was never intended to be supplied with BOBS wagons but rather BOX wagons, it is, in fact, now being given BOBS wagons at the expense of your Works and that your Works are being forced to accept a greater and greater number of BOX wagons in consequence. It will also be observed from this Chart that Bhilai remains unaffected as far as BOBS wagons are concerned.

The Company has always objected to being forced to accept BOX wagons in lieu of BOBS wagons as with the full knowledge and approval of the Railway Board our mechanical off-loading equipment was designed and installed to handle only BOBS wagons.

CHART NO. 4 SHOWING DAILY RECEIPTS OF BFRs (BOGIE FLAT RAIL TRUCKS) DURING AUGUST 1962

Burnpur Works require an average of 40 BFRs per day but, as can be seen from the Chart, this figure is rarely supplied.

CHART NO. 1 SHOWING DAILY RECEIPTS OF BOBS WAGONS (SPECIALLY DESIGNED SIDE DISCHARGE FOR HANDLING ORE AND LIMESTONE) DURING AUGUST 1962

It will be observed that against the normal daily requirements of 107 BOBS Wagons, the number fell very much below this figure on most days. The Railway authorities substituted BOX type wagons in place of BOBS wagons in spite of the fact that the Works are unable to off-load BOX wagons except by manual means.

CHART NO. 2 SHOWING MANUAL HANDLING OF IRON ORE—IN AND OUT STOCKING PER DAY DURING AUGUST 1962

Here it will be observed that apart from ore handling in our normal mechanical stock handling Ore Gantry, we had to handle in and out of stock as much as 5,775 tonnes in one day.

CHART No. 1
DAILY RECEIPT OF BOBS WAGONS (SIDE DISCHARGE TYPE WAGONS) DURING AUGUST '62

CHART No. 2
MANUAL HANDLING OF IRON ORE—IN AND OUT STOCKING PER DAY

CHART No. 4
DAILY RECEIPTS OF BFRs (BOGIE FLAT RAIL TRUCKS) DURING AUGUST '62 FOR DESPATCH OF FINISHED STEEL

CHART NO. 5 SHOWING EASTERN RAILWAY DESTINATIONS & ROUTE RESTRICTION DETAILS

Charts Nos. 5 and 6 have been prepared to show that practically every day the Railway authorities impose restrictions on the despatch of finished materials on numerous routes and to numerous destinations. The practical result of this is that wagons already loaded with materials are not accepted by the Railway authorities at the last moment, thus causing detention and demurrage liabilities, and also in many cases, your Works are unable to load wagons because they have no material available for the destinations which are free of restrictions. Again, there is wagons detention and demurrage liability.

In effect, the Railway authorities supply wagons for despatch of finished material and at the same time dictate to us where these materials shall be sent and in many cases against the Iron & Steel Controller's orders. This is an absurd situation and would require a considerable tonnage of finished goods to be held in stock to cover such a wide field of variation of free destinations.

The object of our Colliery Expansion Scheme is to provide the bulk, if not the entire needs of our Coking Coal, approximately 85% of which will be crushed,

[illegible]

washed and blended to produce a consistent grade of Coking Coal of approximately 17.5% Ash.

The major development will take place at your Chasnalla Colliery where the Coal will be extracted:—

- (1) from Open Cast Quarries and
- (2) Underground Mines.

The run-of-mine Coal will be crushed and washed in a Coal Preparation Plant and the resultant blend product transported to the Burnpur Works by two Aerial Ropeways costing approximately Rs. 4.5 Crores over a distance of

approximately 32 miles. This development will take place over a period of approximately five years, the production progressively increasing to the target of 4,200 tonnes of washed Coal per working day.

The Coal reserves in your Jitpur Colliery at the present working levels are almost exhausted making it necessary to sink the existing shafts to proven lower levels and also to make provision for Sand Stowing to permit maximum extraction. The production will thus be raised from the present 800 tonnes per day to 1,500 tonnes per working day over a period of

five years. This Coal will be conveyed by Aerial Ropeway about six miles to the Chasnalla Coal Preparation Plant for blending and washing, yielding approximately 1,200 tonnes of washed Coal per working day.

The Company's Ramnagore Colliery is being modernised to increase the production of Coal from the present 400 tonnes per day to 1,000 tonnes per working day. The modernising includes the new Sand Gathering Plant and a Sand Transportation System. A new Ventilation Shaft and a ventilating fan have already been installed. Ramnagore Coal will be transported by Rail Car to Burnpur via the Company's own Kulti/Burnpur track. This Coal does not need to be washed as it will readily blend with the Chasnalla/Jitpur blend.

Experiments carried out at your Works over a period have shown that if we are to achieve greater productivity from our blast furnaces, our Iron Ore must be subjected to treatment to obtain a smaller and more uniform size and to remove the deleterious gangue. The smaller fractions of our Ores cannot be used without further processing. This problem is being closely studied and practical tests made in order to obtain sufficient basic information to enable us to select the most suitable process of agglomeration. In the meantime, it is proposed to instal the appropriate plant at your Gua Ore Mines to enable us to wash the Ore and screen to the desired size fractions.

The assessment of the future demand for steel in India is a

futile exercise of mind and brain
as the quantum is so large as
to outstrip the ability to achieve
it by any specified period of time.

The maximum achievement can only be accomplished by first concentrating on making available predetermined and realistic quantities of the necessary raw materials, its transport and the power required by predetermined dates and planning the simultaneous completion of matching Steel capacity

To erect Iron & Steel Plants first, with the pious hope that the raw materials, power and transport will 'turn-up' is the mistake of the past and would be a criminal waste of money and energy if blindly followed in future.

Although the type of product required in the future has to be estimated, the estimate must be subjected to continual review as the pattern of product will inevitably change as time goes on. In adopting long-term planning for the development of new capacity, the development potential of the existing capacity must not be lost sight of as it is cheaper and quicker to achieve this than putting down a new plant of the same capacity. Development of capacity should be a continual process and to obtain maximum production with utmost efficiency from existing units, it is imperative that they be kept up-to-date technologically. In these days of advancement in new steelmaking, long before the building of a new Steel Plant is complete, it is more often than not out of date, making it necessary to adopt newer techniques and equipment to maintain an efficient economic and technological balance.

The location of new Steel Plants is of vital importance, the principal influencing factors in the past have been the proximity of raw materials, power, water and adequate rail transport. It is thus very tempting to proceed to locate new Steel Plants along the traditional Iron Ore/Coal rail route. Unfortunately, in our country this route is grossly overloaded now, and in the absence of large scale railroad development and modern techniques of handling it, the addition of one or more Steel Plants is bound to have a detrimental effect on the units already in existence. Throughout the world the trend is for bigger and bigger Steel Plant capacity until new plants of 3/5 million tonnes are not uncommon. Therefore, any designing of plan's should take into account the probable ultimate size. If the intention is to develop larger plants for export purpose, then the ideal place for them is on a navigable river or sea-board.

The reserves of the basic Iron & Steelmaking raw materials in

India have been variously quoted, some of the figures are such that if accepted, would discourage longterm planning of Steelmaking capacity. One such item is limestone, but it is difficult to believe that a country the size of India is relatively short of good quality limestone. To establish the truth of the matter large-scale prospecting must be carried out, uninhibited by thoughts of distance from the consumer. Transport facilities must be developed to match the sources of supply and this would be a much better proposition than spending large sums of money benefiting local inferior limestones and run into the vexed transport problem.

It has to be accepted that the quality of Coking Coal in India has never been and never will be 'good' and that it is worse today than ever before. Here again the calculated reserves are based on inadequate knowledge of the possible existence of coal lying below the normal working depth of Indian Coal Mines. It has not been conclusively proved that Coking Coal does not exist as valuable reserves below a depth of 2,000 ft. In the meantime, the existing Coking Coal quality must be improved by washing to produce a product of consistent ash level even if the ash is still not as low as desirable. Conservation of existing reserves is imperative even to the extent of prohibiting the use of any Grade of Metallurgical Coal for purposes other than Metallurgical. Every effort has to be made to reduce the consumption of Coke per tonne of Pig Iron by resorting to modern Technology in regard to preparation of Blast Furnace Raw Materials and the use of fuel injection coupled with refractory materials to withstand the maximum blast heat attainable.

Of all the raw materials, Iron Ore is the most plentiful in India and is of high Fe content. Unfortunately, most, if not all, of the ores also contain a high Al_2O_3 content, a factor which contributes to a greater Coke consumption (an expensive item) than would otherwise be the case, particularly where Pig Iron is manufactured specifically for Steel-making.

The beneficiation of ore in the form of uniform and smaller sizing together with washing should greatly improve Blast Furnace operation and the quality of Pig Iron obtained.

The measures taken to obtain a smaller and regular Ore size will result in a substantial quantity of under-size Ore at the Mines. Many processes have been developed to agglomerate under-size ore for use in Blast Furnaces, each of them having their own merit for a particular set of conditions. None of them has universal application which makes the selection of one or the other a matter of the greatest importance. It is suggested

that in view of the vast Iron Ore reserves in this country compared with the reserves of the other raw materials there is plenty of time to study all methods of agglomeration in an effort to find the best possible solution to India's particular problem; which may or may not be the popular method of Sintering.

The washing of Coking Coal will simultaneously produce a discard fraction of middlings, the disposal of which will not be a problem if used for the generation of electrical power. Here is opportunity to alleviate the chronic shortage of electric power. Such Power Generating Stations should be erected in conjunction with or adjacent to several Coal Preparation Plants.

Due to the rapid industrial development of India there is a great dearth of experienced technicians. Training programmes have been organised to create an army of trained personnel required to man the new Steel Plants. This is a gigantic task in itself, unfortunately it cannot be said to have been wisely handled. Far too many trainees without previous Works experience have been sent abroad for a training of doubtful value when instead they should have been employed in the construction of the plant they would eventually have to operate. Thus a valuable opportunity was lost in which a large number of selected men destined to be Supervisors or Managers would have matured with the experience of working with their own hands. It is suggested that in future, training programmes should be designed in such a manner that all trainees, irrespective of their ultimate destiny, are required to 'work on the job' for an extended period of time before final selection. Training abroad should be limited to those who are already mature to some extent and who can profit most from specialised training. General overseas training is useless. Until such time, and in my humble opinion of some thirty-two years' experience, the country has to bring out highly experienced overseas staff to train our men to man our plants—a matter of ten to twelve years.

At the last Annual General Meeting I mentioned to members present that your Company in conjunction with our old friends, Stanton & Stavely Ltd. were contemplating on starting a new Works as a subsidiary of this Company at some suitable place in Madhya Pradesh which would be convenient from its transport point of view to cover Kashmir, Punjab, Rajasthan, Delhi, Himachal Pradesh, parts of Uttar Pradesh, Gujarat and Maharashtra, etc., in other words, areas where freight costs made sale of your Spun Iron Pipe products from your Kulti Works unremunerative. I am happy to report to you that an Agreement has been concluded

Another matter, which I am sure, will be of great interest to you is the balancing of the Burnpur plant and its future expansion to make it an economic unit. This came up for discussion at Washington while my advisers and I were engaged in concluding our loan arrangement of \$19.5 millions with the World Bank for the Colliery Expansion scheme. A day before we left for Washington, Mr. E. De'Alba of the World Bank requested us to make a chart on the historical performances of the blast furnaces as from the time the quality of coal started deteriorating up to the present, and projecting the same to show the effective improvement in

IISCO.—Chairman's Statement —Contd.

iron production as a result of the use of increased quantities of washed coal from the Colliery Expansion Scheme. When this chart arrived at Washington it was found from historical past records of your Blast Furnace practice that performance and production once we reverted back to the 1955 quality of coal, when free purchase of coal in regard to quality and price was permitted, your Blast Furnace would produce more iron than they are doing at present, and what is more, the right quality of iron suitable for steel making. It will be seen from Chart No. 7 that as

apart from the increased production, the beauty of the scheme was not only the low cost and the quickness with which the plant could be installed, but also that no further coal would be required other than what we shall mine ourselves and transport by our own ropeway system, thereby relieving the Railways of their responsibility of transporting some 6400 tonnes of coal a day, a not too insignificant problem and headache, effecting at the same time a considerable financial saving to Government.

Government at first was not responsive, but later suggested that the scheme be phased out into two parts, the first phase merely to embrace the balancing of the exist-

personal views are, however, that we must not rush where angels fear to tread. By that I mean, whilst the transport and raw material situation is as it is, it would be foolhardy on our part to even think of a larger expansion at Burnpur than 2 million or thereabout tonnes of equivalent ingot steel. I have been dealing with your Company's affairs in one way or another for 32 years as Managing Agents' representative, Director and Chairman. I can assure you that our conservative views have so far paid you well. Your new plants have been brought into commission well ahead of the scheduled time and as for results, you are the best judge.

APPEARANCE OF WAR CLOUDS

The Steel Corporation of Bengal tapped its first cast of steel ingot on the 10th November 1939 when the Second World War had just started. I distinctly remember, that at the request of the then Munitions Board and the Roger Mission, which had come out to investigate the possibilities of manufacturing in India the latest types of ballistic missiles and other requirements, as well as augmenting the production of the existing Ordnance Factories, this infant was called upon from that early stage to produce special quality steel. As the War proceeded, more and more such steel was produced and at times almost at a moment's notice.

The Steel Corporation of Bengal was amalgamated with your Company by an Ordinance promulgated by the Government of India on the 29th October 1952 to make it effective from the 1st January 1953. Since then your Company has been making both, different qualities as well as categories of steel to suit the country's requirements, and I am sure, the country can rely on your Company to bring forth its best efforts to meet all emergency

requirements needed by the Defence Ministry and thereby help to enable them to throw out this naked aggression committed on a peace-loving nation like ours by the barbarous communist-minded Chinese.

ACKNOWLEDGMENTS

I would again this year express on behalf of your Directors our appreciation of the services rendered by your General Manager, Mr. J. McCracken, and his able team of executives at the Burnpur and Kulti Works, as well as at the Ore Mines & Collieries. Production has been achieved in the face of constant operational difficulties and I would like to make special mention of the Blast Furnace and the Steel Melting Shop Supervisory staff who have so ably faced up to the ever changing problems with which they have been, and continue to be, confronted in the maintenance of production under existing conditions. I should also mention about the Supervisory staff at your Kulti Works, due to whose untiring efforts the Kulti Foundries have once again created a record by achieving a production of 2,30,423 tonnes.

In concluding my statement to you I would add that I have not had any difficulty in endeavouring to state facts and include figures and charts as they stand, as I have not indulged in the luxury of painting a picture by letting my imagination run riot, nor in one of the modern trends of impressionism, thereby obscuring matters. I have given a photostat of facts and figures as they exist so that you may view them in their true perspective with the vision God has given you. May He bless us all!

The above statement is not a document purporting to be a report of the proceedings of the Annual General Meeting.

we proceed with the Colliery Expansion Schemes, the quality of coal after washing will improve yearly till work is completed, when it will be better than what we had in 1955. It was then confirmed by our Consulting Engineers that with the right quality of steel making iron being available, the present steel melting capacity could, with inclusion of a few ancillary plants of the latest technique, be almost doubled. This was indeed an intriguing situation! What then were the missing links? Your Consulting Engineers were of the opinion that with the help of oil injection in Blast Furnaces and oxygen injection in the Steel Furnaces coupled with continuous casting, electric furnaces, a rolling mill and an additional Blast Furnace to take care of the Foundry, requirements of your Kulti and Ujjain plants could be installed at a figure not exceeding 1/5th or 1/4th of the cost of a new integrated steel plant of a million ton capacity installed in a new place. All these figures were, of course, approximate and needed further careful looking into. The World Bank authorities were, however, appreciative of these findings and expressed a genuine desire to help the Company with the necessary foreign exchange requirements (for the fourth time) subject to Government's blessings and agreement to guarantee the repayment of the foreign exchange. On the 17th of January this year the matter was discussed with Government when

it was explained to them that ing plant due to improvement of coal and the second to cover the full scheme. The Company submitted to Government the two phases of the Scheme on 9th June this year and stated that Phase I would cost the Company Rs. 12.2 Crores, increasing the ingot production by approximately 3,10,000 tonnes and finished steel by 2,48,000 tonnes, and further suggested that final details regarding Phase II would be submitted at a later date about the time when Phase I would be nearing completion, depending on the then market demand of the type and quality of steel to be made, as well as incorporating the latest improvement in plant design. In this connection your Board of Directors have invariably accepted your Managing Agent's advice on the principle of consolidation and experience gained thereby first before further expansions are undertaken, ever since 1950, 1953, 1955 and the present 1961 colliery expansions were taken on hand as well as this latest one now under consideration of Government.

Phase I would increase steel production in terms of ingots or its equivalent by about 3,10,000 tonnes and finished steel by about 2,48,000 tonnes.

Phase II may bring the total production of your Company to anything up to a total of 2 million tonnes of ingot equivalent and 1.6 million tonnes of finished steel. My

Markets

JUTE Mesta Firms Up— Not so White Jute

Although sentiment in the raw Jute market has improved somewhat over the past week following the directive issued by the Jute Commissioner to mills to complete purchase of 1 million bales of jute during the current month, an overall improvement is yet to ensue. This situation would appear to have been brought by the fact that mill purchases have been mainly confined to mesta. While the prices of this variety have hardened with sellers even becoming cautious in making large offerings, the selling pressure has increased in some varieties, especially white jute. The situation may be expected to show marked improvement in coming weeks as the authorities have already initiated steps to speed up the movement of jute to Calcutta and mill stations. In its recent discussion with Government the Indian Jute Mills Association has drawn pointed attention to the problem of moving the crop. It was then indicated that the Director of Transport in the Ministry of Commerce would soon be visiting Calcutta and other centres with a view to facilitating

jute movement. It is expected that with more wagons made available and the resolving of the bottlenecks in rail transport, jute arrivals in Calcutta will sizably increase. With an improvement in jute despatches, selling pressure may be expected to abate. The steep decline in prices in the past few weeks has been caused mainly by the accumulation of stocks in the upcountry markets as wagon allotments had either been drastically curtailed or stopped completely on account of the present national emergency. In the meantime other steps have been taken to support the market. The State Trading Corporation is arranging to purchase jute at the minimum prices through co-operatives in the jute growing areas. A further stabilising influence may well be the fact that according to the final estimate jute production in Pakistan for the season 1962-63 will be considerably lower than last year (5,144,847 bales against 6,963,635 bales last year).

The decision to extend capacity working of mills for another month will also ensure that jute consumption will be at the present level. Whether it would be possible for the industry to extend capacity working any further however continues to remain a matter for conjecture. For the

IJMA observes: "The stock figures at the end of October gave no indication that the fall in offtake of sacking had been arrested. While sacking stocks had declined by 1,500 tons, the decrease was less than could have been expected at the end of a short working month, and hessian stocks had fallen by only 100 tons." The position is to be reviewed by the IJMA as soon as the November stock figures are available.

It is now clear that the decline in stocks of jute goods as at the end of October is due to a decline in production. Total production in October amounted to 90,900 tonnes as compared with 100,500 tonnes in September. The fall in production is due to the fact that October is a short working month with 192 hours worked as compared with 200 hours in September. While output of hessian amounted to 39,600 tonnes as compared with 41,600 tonnes in September, that of sacking was 42,900 tonnes as compared with 47,200 tonnes. The production of other goods was at 8,400 tonnes compared to 11,700 tonnes in September.

The jute goods market opened the week on an encouraging note aided by the news of the decline in October-end stocks. In earlier dealings sentiment especially in heavy goods was further helped by reports of fresh inquiries for this category on Government account and from Burma. On the strength of the news sacking prices improved while hessian showed little variation. In the latter half of the week interest generally slackened partly because of the absence of fresh enquiries and partly on account of the IJMA decision to continue capacity working of mills for another month ending 10 December.

The raw jute market showed some welcome improvement in rates aided by mill buying. With the improvement in the transport position and with the promise of further steps to come to facilitate movement of jute from the upcountry markets to Calcutta prices tended to be upward. However selling pressure continued to be encountered in certain varieties.

TEA

Concern over Tea Outlook

THOUGH the situation created by the Chinese invasion has had little repercussion on the Tea industry and production continues normally in North-East India, there exist at present certain extraneous factors which must inevitably have an effect on the future trend of the market. The strike of the Joint Steamer Companies' staff, which started early in October in East

Pakistan, is by far the most important of these factors.

As a result, reports are now pouring in to the effect that there is a virtual stoppage in the movement of teas by river transport, which normally handles over 60 per cent of the North Indian crop. Today, there has been no indication of the prospects of the strike being settled and this may well develop into a protracted stalemate causing disruption and delay in the movement of vital stores as well as manufactured tea.

[At the time of going to Press, it is learnt that, at the meeting held on Sunday last at Gauhati, the workers of the Joint Steamer Companies had suggested that the vessels held up in the Pakistani part of the Brahmaputra as a result of the strike by Pakistani ratings be taken over by Indian crews, possessing passports and visas and brought back to the Indian side or be carried to the destination with their help.

The workers also requested the Assam Government to impress upon the Union Government the need to dig canals for both irrigation and navigational purposes so as to keep an alternate river route between Assam and other parts of the country to meet such a situation as was posed by the Pakistani strikers.]

About 27 steamers and some 50 flats of the Joint Steamer Companies to and from Calcutta, all loaded with cargo, are held up in the Pakistani waters of the Brahmaputra for the last one month as a result of the strike. In other words, about 33,000 packages of tea have been held up at Barisal and points further up-river, while most factories in Assam have large stocks of ready teas awaiting despatch. Only small quantities are coming into Calcutta by other methods of transport, since rail bookings have been interrupted owing to the national emergency. Air and road transport are also scarce.

In the above connection, the latest monthly report, issued by Messrs J. Thomas & Company states: "The present spot position is that there are enough stocks in Calcutta for normal sales of Leaf teas to be maintained for another month, while Dust auctions will continue to the end of December. There will, therefore, be very little available for export during December, depending on the limitations of rail and road transport. There is a danger of the strike being prolonged and, in this event, there may well be a long break in the Calcutta auctions. This is an extremely serious situation for the industry. Prices must inevitably harden during the next few sales; but when the flow of tea is resumed and auctions become normal, there should be a reaction."

The export position this season has been extremely satisfactory;

but the present interruption will affect future shipments to out-markets at a time when these are vital to the country's interests, while the disposal of the 1962 crop will also be considerably delayed causing further hardship to the producers.

It is estimated that about 60 per cent of the teas expected to be sold on the Calcutta market during this season have been sold, or are in hand awaiting sale, leaving a balance of about 40 per cent which has been held up in transit

or is yet to be despatched. Cultivation and pruning in preparation for the new season are due to commence shortly and the present stalemate is likely to result in further financial tightness for the tea producers. It is, therefore, imperative that the strike of the the steamer crews is resolved at an early date and that, in the meantime, other means of transport are placed at the disposal of the industry.

Meanwhile, the output during the first half of October declined

by 1 million kilos. There are reports of an early advent of the cold weather, which may further affect the crop for the season. From the latest available figures of the South Indian crop, there appears to be a net shortfall of about 5 million kilos in Indian production as compared with 1961. The overall world production has barely kept pace with last year and, taking into account minor increases in world consumption, it is not unlikely that the demand will outstrip supplies the incidence

of which may be particularly felt on the Indian internal market during the coming months.

In the Export Sale held in Calcutta this week, offerings were 71,698 packages. There was a strong general demand. Plain orthodox descriptions, especially Fannings grades met with useful enquiry, selling at enhanced rates. The brighter BOPs were keenly competed for, while liquoring PFs were considerably dearer. CTC descriptions came to a strong market and were fully firm with the plainer kinds selling particularly well at higher rates. BP's were again stronger than their corresponding Fannings. Best liquoring sorts were sold readily and were sometimes dearer. Legg-cut teas followed the upward trend of the market, registering an advance of 20 nP to 30 nP a kilo.

Plain Whole Leaf grades were again slightly dearer, while the better sorts were irregular. Tippy teas, although keenly sought after, were sold at irregular prices. There was strong enquiry at dearer rates for the lesser Darjeeling descriptions. The higher grades were, however, irregular and sometimes withdrawn. Following rates were quoted:—Clean Plain Pekoe Rs 4.70 to Rs 4.90; Plain BP Rs 4.30 to Rs 4.60; Plain Fannings Rs 4.60 to Rs 5.20; Medium Assam CTC BP Rs 6.00 to Rs 6.60; Medium Assam CTC Fannings Rs 5.90 to Rs 6.60; Best Assam CTC BP Rs 6.70 to Rs 6.90 and Best Assam CTC Fannings Rs 6.70 to Rs 7.20.

In the Internal Tea sale, offerings were 28,654 packages of Dust. There was a strong general demand. Medium CTCs came in for keen competition and were sold at rates which were fully firm and sometimes dearer with buyers' emphasis on the grainy descriptions. There was once again a strong demand for the fibrous types. The good CTCs were keenly competed for and realised dearer prices, particularly the grainy descriptions which were considerably dearer.

Plain orthodox teas opened easier; but at the close realised considerably higher prices. Medium orthodox teas continued to be in demand at firm levels with a few lines tending slightly easier. Legg-cut teas were readily absorbed at fully firm rates. Following rates were quoted:—Plain Orthodox Dust Rs 4.80 to Rs 5.10; Medium Assam Dust Rs 4.80 to Rs 5.40; Legg-cut Dust Rs 5.40 to Rs 5.70; Medium Assam CTC Dust Rs 5.80 to Rs 6.20 and Good Assam CTC Dust Rs 6.40 to Rs 6.80.

In the Colombo market, offerings were 6,828,740 pounds. At the opening, better liquoring high-grown broken from Western districts met with a strong demand; but prices were often lower following quality. Better medium BOPs were firm; but plainer sorts were up to 10 to 15 cents per pound

dearer. Small leaf low-grown were active and 5 to 10 cents dearer. All BOP Fannings met with a better demand at dearer rates. Low-grown, suitable for the Middle East buyers, advanced by about 5 cents, while Tippy types were frequently higher.

In the London auctions, offerings were 17,886 packages including 13,682 packages from Northern India and 636 packages from Pakistan. Demand continued and the market generally remained fully firm. There was an improved enquiry for Legg-cut Doars and prices for these tended dearer.

The Malayan Government has started to take an active interest in the tea industry. It has been forecast that, in the next 10 years, there will be a substantial increase in tea production in Malaya with the low lands production generally overtaking the best-known tea areas in the Cameron Highlands.

Ironically, while Malayan-grown tea is very popular on the London market because it maintains the same quality throughout the year, it is not over-popular with Malaysians themselves. Backed by considerable research in the past four years, Malaya's tea industry is now on the threshold of becoming important. Malaya has the right climate, and in many areas the soil conditions are conducive to tea-growing.

COTTON Prices Tumble Down

The Bombay cotton futures market during the past week sustained a severe set-back and prices tumbled down like a house of cards from Rs 746.75 to Rs 719.15 per three quintals. The slump in the market was ascribed to the interplay of various factors like the emergency closure of the stock exchange, the apprehension of further curtailment on bank advances against commodities, the weakness in spot prices and the dull trading in the cloth market. Lack of buying support along with heavy selling pressure adversely affected the market sentiment. The financial stringency arising out of the debacle in the bullion and share markets also accentuated the downward drift in prices.

The spot market at Sewri depicted a distinctly easier tendency mainly on account of the encouraging arrivals in Khandesh and Berar and the lack of mill demand. However, L 147, Berar, Moghlai and Khandesh met with scattered mill buying.

In the export section, Bengal Deshi cotton was almost neglected. Japan, which is the leading buyer of this growth, kept away from the market in anticipation of a further decline in prices. The

total registrations of this variety till 31 October aggregated only 9,417 bales out of the current export quota of 200,000 bales.

In the foreign section African, lower Sudan and Giza 45 cotton met with stray enquiries. It is reported that India is likely to get 300,000 bales of long staple cotton from the USA under F.L. 480 arrangement immediately. The Government has approached the US Administration for the import of at least 600,000 bales of this variety to tide over the present tight supply position.)

The persistent downtrend in cloth exports from India has been arrested in the third quarter of this year when exports moved up to 124.78 million yards valued at Rs 10.1 crores against 119 million yards worth Rs 9.8 crores in the same period last year. The reversal in the trend was obviously due to the simplification in incentive procedures and the extension of export promotion programmes in the recent past.

According to the Cotton Textile Export Promotion Council, the scope for exporting high quality cotton textiles to Italy is bright. India's traditional items such as grey sheeting and bleached cloth have only restricted demand as that country is not having a processing industry. In 1961 Italy imported nearly 30 million yards of cloth out of which India's contribution was only 13,000 yards of bleached cloth and grey sheetings. As the Italians rate quality above price high quality piecegoods from India can make good headway and the absence of any quantitative restriction in imports is an advantageous factor which can be exploited to a considerable extent.

The Government of Maharashtra has envisaged the possibility of extending the area under cotton cultivation particularly of the L 147 variety in some of the districts. The State produces every year cotton of the order of 1.61 million bales valued at Rs 64.4 crores accounting for nearly 22

per cent of the total output in India and 28 per cent of the long staple variety. It may be noted that the Government has already launched a package programme in those areas amply served by irrigation facilities.

The Government will soon open about 100 fair-price shops in the State for cloth distribution like those for foodgrains. The details of the distribution scheme will be worked out at the joint meeting of the millowners, retailers and co-operative societies. The millowners have already promised to supply ten per cent of their cloth production to the fair-price shops.

Egyptian cotton stocks on 26 October totalled 10,330,867 metric kantars in contrast to 8,018,429 kantars at the same period in the previous season. Exports during the current season are placed at 76,919 kantars. The leading purchasers of Egyptian cotton during the past season were the USSR, Czechoslovakia, China and India accounting for 74,707 kantars.

THE ROAD TO BURNPUR

A detour at 200 km. on the trunk route from Calcutta. Less than forty years ago it would have led to a cluster of sleepy hamlets, named severally—Hirapur, Santa, Narsinghband, Napuria and Dharampur. The same road today takes you instead to a purposeful steeltown—Burnpur.

There, at the million-ton integrated steel-works, production records are quietly being set and excelled and production efficiency is currently the highest among all steel units in India. For us it is all in the day's work and we seldom talk about it. Where there is a challenge to be met, IISCO takes it naturally, in its stride.

Piecemeals

Sluggish trends continued to hold sway in the cotton piecemeals market during the week under review. There was an unusual slackening in demand, particularly from the upcountry dealers. The limitation on railway bookings to certain places was also responsible for the poor demand from upcountry centres. Above all the troubled conditions on the political front forced several purchasers to keep aloof from the market.

The export section was a shade better thanks to the favourable enquiries from the UK and Sudan. Those destinations accounted for a moderate quantum of grey and bark weave cloth.

Woolen textiles were practically deserted. A few varieties such as panama, fancy suitings and light weight suitings were in good demand but the restricted offerings prevented any appreciable offtake. The shortage of woolen textiles is bound to continue for long as the bulk of output will be absorbed by defence requirements.

The powerloom section was featureless. Barring a small demand in dhoties and saris from local dealers and processors there was practically no activity. Prices of grey powerloom mulls slipped down by about 3 nP per yard.

Co-operative Sugar Factories Forge Ahead

ACCORDING to a Press Note issued by the Government of India, 34 co-operative sugar factories are now in production all over the country, while 17 more are under various stages of installation. Another 6 are finalising arrangements for machinery.

The total daily cane-crushing capacity in operation of the country's sugar industry for the season 1961-62 was about 174,000 tons. This compares favourably with the total licensed daily capacity of the industry which is 235,000 tons of which the co-operatives' share is about 56,500 tons.

The 34 working co-operative sugar factories in the country crushed nearly 4,300,000 metric tons of sugarcane and produced nearly 470,000 metric tons of sugar during 1961-62 as against a crush of 4,152,000 metric tons and production of 442,000 metric tons of sugar by 30 co-operatives during the previous season. The share of the co-operative sector in the total production of sugar for the 1961-62 season will be about 17.5 per cent as against about 14.7 per cent in 1960-61 and 1.4 per cent at the beginning of the Second Plan.

The overall sugar recovery for co-operatives during the year 1961-62 was about 11.01 per cent excluding the 4 co-operatives that had only a trial crush during the

season, as against 10.74 per cent for the preceding year. There is thus an increase of about 0.27 per cent in recovery during 1961-62. It is significant that the highest percentage of recovery of sugar from the country for the 1961-62 season was 12.82 per cent and this was recorded by the Malegaon co-operative sugar factory in Maharashtra. The second and third highest recoveries of 12.77 per cent and 12.69 per cent were also recorded by the Krishna and Warna co-operative sugar factories in Maharashtra.

Meanwhile, sugar prices have continued to decline owing to reduced purchases from the consuming centres despite the fact that there are prospects of reduced cane production and higher exports. In the Meerut market, ex-mill sugar prices have fallen by 10 nP to 70 nP per quintal. Ex-mill D/29 and E/29 qualities have declined from Rs 103 and Rs 103.75 to Rs 102.50 and Rs 103.25 per quintal respectively.

The Indian Sugar Mills Association has urged upon the various State Governments to ensure adequate cane supplies to factories and also assured the Government that it will strive its utmost to see that there is no undue rise in

The following table shows the in packages of 74.6 kgs each:—

1962: Month	Shellac	Seedlac	Buttonlac	Others	Total
January	10,420	6,576	498	1,612	19,106
February	13,890	3,520	335	1,893	19,368

October	10,920	9,231	302	1,059	21,512

OILSEEDS

The Bombay market for Oils and Oilseeds showed a weak tendency with prices suffering a sharp decline under the lead of groundnut futures. Trading in Groundnut was subject to influences pulling in opposite directions. Operators were not inclined to build up a bull position in the prevailing political uncertainties. The Government's determination to hold the price line in respect of essential commodities and the suggestion that the banks should restrict advances for hoarding and speculation also induced them to be cautious in their dealings. Groundnut Bold was quoted at Rs 45.50 and Groundnut Oil at Rs 18.80.

In the Castorseed section, trading was largely of a speculative nature with the prices moving generally in line with those of groundnut. The price of Castor Oil in the UK was placed at £111 for the commercial quality and £116 for the BSS grade; but the Indian parity was stated to be higher by £2 to £3 per ton. Castor ready was quoted at Rs 33 and Castor Oil, commercial quality, at Rs 12.80.

In the Linseed section, prices suffered a substantial decline in

Sugar prices. The ISMA has also requested the Government not to disturb the market sentiment by frequent releases. It is also pointed out that the present price level is unremunerative and is not adequate to meet the production costs.

A Singapore firm is reported to have placed orders for 70,000 tons of sugar. There are also reports that the Union Government has stopped further exports of sugar for the 1962-63 season as export commitments have already totalled about 400,000 tons. Japanese sugar refineries have decided to import 77,800 tons of crude sugar from India as Cuba has now become an uncertain market. Next year, Japan's import of crude sugar from Cuba is expected to be reduced drastically from this year's 390,000 tons to 100,000/150,000 tons.

SHELLAC

The Shellac market in Calcutta is now affected by the emergency caused by the Chinese aggression. The price of Pure TN quality has remained more or less static around Rs 84 per package of 74.6 kgs.

According to the Indian Lac Exporters' Association, lac exports declined to 21,512 packages in October this year. The decline in shipments is shared by all grades, shipments during the current year (all

the absence of any buying interest. Ready was quoted at Rs 4.12 and Linseed Oil at Rs 16.75.

SPICES

Among Spices, the market for Pepper continues to rule quiet as buyers, in anticipation of increased arrivals of the new crop, have refrained from entering into commitments. In the Cochin market, the rate is quoted around Rs 291 per quintal as against Rs 300 in the previous week.

In the Cochin market, 12,031 kilogrammes of Cardamom was offered this week. The market opened somewhat hesitant; but the demand improved as the sale progressed. Slightly less competition was noticed for the best varieties, which were sold at barely steady rates. Mediums and inferior sorts found more support and tended dearer. The next sale will be held in Cochin on 25 November.

It is learnt that the Quality Control Scheme for exports of cardamom will be implemented from 1 December. A decision to this effect was taken at a meeting of the Committee of the Spices Export Promotion Council in Bombay on Friday last. The scheme pro-

vides for pre-shipment inspection of cardamom meant for exports. It will ensure that cardamom of good quality alone is supplied to overseas buyers.

The Indian Cashew Trade Mission, which has just returned after a month's tour of Europe, has stated that exports of cashew kernels to West European countries can be substantially increased, provided there is proper publicity abroad to create consumer interest in the product. The trade mission, therefore, suggests that the cashew Export Council and the Government of India should implement a five-year publicity plan for West European countries to create and maintain consumer interest.

With the commencement of the new crop arrivals, business in Ginger is expected to pick up. Already, in anticipation of consignments from Cochin reaching Bombay, enquiries have started pouring in both for internal consumption and for export. At the moment, the rate is quoted steady at Rs 210 per 10 kg.

Forward Trading in Bullion Banned

The Government of India has banned with effect from 13 November 1962, forward trading in gold throughout the country. The Government has accordingly issued a Notification under Section 17 of the Forward Contracts Regulation Act, 1952. Under Sec. 16 of the same Act the Government has ordered all outstanding contracts to close at the rates prevailing as at the close of business on Tuesday, 13 November, 1962. The Government has also rescinded the current Notification under Section 16 permitting forward trading within the limits of Greater Bombay.

GOLD & SILVER

It would be recalled that the announcement about the issue of Gold Bonds by the Government of India had a depressing effect on gold prices last week. But the section has given an encouraging performance this week under revival of support, mainly prompted by reports of seizure of a large quantity of contraband supplies. Receipts totalled 6,000 tolas; but the offtake was higher at 7,000 tolas. Gold Mangsir delivery moved between Rs 106.50 and Rs 106.75, while the ready rate was quoted at Rs 106.25 to Rs 106.50. Sovereign was quoted at Rs 25.50.

Silver, however, failed to consolidate the early moderate gains owing to profit-taking induced by increased arrivals. Turnover was moderate. Arrivals amounted to as much as Rs 85 bars as against an offtake of 15 bars. Silver Mansir delivery moved between Rs 213.95 and Rs 214.95, while silver (below .996) was quoted at Rs 213.45 to Rs 214.45.

INVESTMENT GOSSIP

IISCO Accounts Ought to Enthuse

Stock exchanges are slowly recovering; prices both in Lyons Range and Dalat Street are gradually looking up, though many a scrip continues to quote but nominally. How long this process of consolidation will take it is hard to say. But the advent of the new busy season, with its attendant tight money conditions, can hardly hold out much hope of any significant

improvement either in sentiment or in prices over the immediate future. And there is, of course, now forever looming on the horizon the prospect that, in order to pay for the country's defence effort, further taxes will be imposed in the next Budget.

And yet, considered from another viewpoint, there is hardly any reason why a particularly pessimistic attitude should be warranted. Industrial production will receive a fillip; for Government necessarily must ensure adequate civilian supplies, though in the emergency more and more of the productive apparatus must be defence-oriented.

If care is not taken to keep the market supplied with civilian goods, an inflationary impetus to prices will be given, and inflation is almost the last economic phenomenon that Government or the country can afford at the present moment.

Again, there is in Sir Biren Mookerjee's statement, released together with the accounts of the Indian Iron & Steel Co. Ltd. for '61-62, much that should enthuse the market. True, and very justifiably, Sir Biren has objected vigorously to the flouting by Government of the recommendations of the Tariff Commission. (Incidentally, why has comment upon or reference to this aspect of Sir Biren's statement seemed extremely reluctant?) But for the rest Sir Biren's mention of the expansion programmes that are in prospect for Indian Iron should be a welcome tonic to the stock exchanges.

Also, the Indian Iron accounts (which will be analysed in detail

in next week's Indian Finance; are such as to gladden the heart of even the meekest shareholder. Profits, partly for fortuitous reasons, have touched record levels; and provided Government reconsiders its decision on retention prices. the outlook for Indian Iron is extraordinarily good.

NOTICE

Notice is hereby given that the Annual General Meeting (being the Forty-Fifth Ordinary General Meeting) of the Company will be held at the Royal Exchange Hall of the Bengal Chamber of Commerce & Industry, Calcutta-1, at 3 p. m. on Tuesday, the 11th December, 1962, for the following purposes:

1. To receive and adopt the Audited Accounts for the year ended 31st March, 1962, and the Directors' and Auditors' Reports thereon.
2. To declare a final dividend for the year ended 31st March, 1962, on the Ordinary Share Capital. The dividend if sanctioned will be paid on or after the 12th December, 1962.
3. To appoint a Director in place of Mr. Gokul Chand Bangur, who retires by rotation and is eligible for re-appointment.
4. To appoint a Director in place of Mr. Sachindran Chaudhuri who retires by rotation and is eligible for re-appointment.
5. To appoint a Director in place of Mr. H. A. Fowler who retires by rotation and is eligible for re-appointment.
6. To appoint Auditors and fix their remuneration.

Special Business

To appoint a Director in the vacancy caused by the death of the Maharajadhiraja Sir Kameshwara Singh of Darbhanga and to consider and if thought fit, to pass the following resolution as a Special Resolution, of which a Special Notice, as required by Sections 190 and 261 of the Companies Act, 1956, has been received by the Company.

tal of Rs 50 lakhs in equity shares
of Rs 10 each for cash, at par.

The Andhra Pradesh Mining Corporation Limited, Hyderabad, will issue further equity capital of Rs 20 lakhs in equity shares of Rs 1,000 each, to be issued, entirely to the Government of Andhra Pradesh, for cash at par.

Kerry Jost Tool Company, Limited, Maharashtra is, issuing equity capital of Rs 20 lakhs in shares of Rs 100 each. Of this, shares worth Rs 6 lakhs will be issued to Kerry's (Great Britain) Limited UK, for other than cash against supply of technical know-how and machinery and the balance shares will be issued for cash at par in India.

NOTICE

Resolved: "That pursuant to the provisions of Sections 261 and 314 and other relevant provisions of the Companies Act, 1956, Mr John McCracken, General Manager of the Company's Works, be and he is hereby appointed a Director of the Company in the vacancy caused by the death of the Maharajahadhiraja Sir Kameshwara Singh of Darbhanga and that consent be and is hereby accorded to his continuing to hold an office of profit as General Manager of the Company's Works."

The reasons which make the above Resolution necessary are that although according to the Articles of Association of the Company and Section 262 of the Companies Act 1956, the Directors have power to fill any casual vacancy amongst themselves, they cannot appoint Mr McCracken as a director in the casual vacancy because he holds an office and place of profit under the Company and because Martin Burn Limited, the Managing Agents of the Company, have power under the Articles to appoint two directors to the Board. The appointment of Mr. McCracken in the vacancy can only be made by a Special Resolution.

A member entitled to attend and vote at the meeting is entitled to appoint a proxy to attend and vote on a poll instead of himself and a proxy need not be a member.

By Order of the Board,
MARTIN BURN LIMITED
S. GUPTA
Managing Director
Managing Agents

Registered Office,
12, Mission Row,

12th November, 1962

Note:—An Explanatory Statement is annexed to the convening notice issued to Members of the Company.

Punalur Paper Mills Limited,
Punalur, is to issue capital of Rs
10,03,600 in 40,144 equity shares of
Rs 25 each for cash at a premium of
Rs 10 per share on rights basis

Bombay Burmah

Trading

The Bombay Burmah Trading Corporation has decided to celebrate the company's centenary with the issue of bonus shares. Subject to the permission of the Controller of Capital Issues, part of the accumulated Reserves is proposed to be capitalised for issuing bonus shares in the following manner. Holders of fully paid-up shares of Rs 2,500 each will get one bonus share of Rs 2,500 fully paid for every such share held. Holders of fully paid-up shares of Rs 125 each will get bonus share of Rs 125 fully paid for every share held. Likewise, the holders of shares of Rs 125 each but on which a sum of only Rs 50 has been paid up will get their shares paid up to the extent of Rs 100 per share as result of the capitalisation of reserves.

After these adjustments have been made, it is proposed that shares having a paid-up value of Rs 2,500 should be sub-divided into 100 shares of Rs 25 each fully paid. The shares have a paid up value of Rs 125 each and will

be sub-divided into 5 shares of Rs 25 each. Similarly, the partly-paid shares will be sub-divided into five shares of Rs 25 each on which Rs 20 per share would have been paid up. In order to issue bonus shares on the above lines, it will be necessary to capitalise reserves to the extent of Rs 133.75 lakhs. The increased paid-up capital will be Rs 267.50 lakhs.

Kirloskar Electric

Kirloskar Electric Company Limited has proposed to capitalise part of the reserves for the issue of bonus shares to extent of Rs 17.52 lakhs in equity shares of Rs 10 each to the existing shareholders in the proportion of two shares for every five shares held. The new shares will not be ranking for dividend for the year ended 30 June 1962. The permission from the Controller of Capital Issues has already been obtained.

Motor Industries

Motor Industries Company Limited, Bangalore, will issue bonus shares of the value of Rs 45 lakhs in the proportion of one bonus share for every four equity shares held by the existing shareholders.

United Breweries

United Breweries Limited, Mysore, is issuing bonus shares of the value of Rs 25 lakhs to the existing shareholders on capitalisation of reserves to a like extent.

Electrical Manufacturing Company Limited, Calcutta, is to issue bonus shares of the value of Rs 14,79,200 on capitalisation of its reserves.

INVESTMENT NOTES

New Vitamin Project

The Rs 2 crore synthetic vitamin 'A' plant, which is considered to be Asia's most advanced chemical plant, set up at Thana near Bombay by the Swiss firm of Roche in partnership with Voltas Limited, is reported to have gone into production. Voltas have invested Rs 11 lakhs so far by way of foreign exchange component towards the plant and equipment. The plant will manufacture 10 mega million international units of synthetic vitamin 'A' from indigenous raw materials every year. By the end of this year, the company will effect a net saving of Rs 1 crore worth of foreign exchange.

TWA

Trans World Airlines has amended its Application in the Trans-Atlantic route renewal case, to include Lebanon as an additional area to be served by TWA, if the Civil Aeronautics Board embraces a policy of area competition for US flag carriers operating overseas. Adoption of an area concept envisioned by TWA would authorise TWA as the exclusive carrier in the Mediterranean areas of Spain, Italy, Greece, North Africa and points in the Middle East. The addition of Lebanon at the eastern end of the Mediterranean should thus be included in the route pattern proposed by TWA.

New Glass Factory

A new glass factory is proposed to be erected at Asansol at a cost of Rs 4 crores for the manufacture of plate glass by the 'float' process for

the first time in this country. This new venture will be sponsored by Pilkington Glass Works Limited and 50 per cent of the issue capital will be taken by Pilkington Brothers of UK, who will also make available their technical know-how and train Indian personnel.

IN BRIEF

Mysore Chemical & Fertilizers Limited has proposed a taxable dividend of 5 per cent for the year ended 31st March 1962 as against 10 per cent, taxable, for the preceding year.

The Hindustan Construction Company Limited has recommended a taxable dividend of Rs 20 per annum for the year ended 31 August 1962. The new bonus shares, issued in the proportion of one for one during the year, will also be entitled to the dividend from the date of allotment. The dividend on the bonus shares amounts to Rs 7.45, taxable.

BALANCE-SHEET BRIEFS

The net profit of the Rajagiri Rubber & Produce Company Limited has risen to Rs 11.01 lakhs for the year ended 30 June 1962 from Rs 10.14 lakhs for the previous year. The directors have proposed a taxable dividend of 20 per cent for the year.

The Nelliampathy Tea & Produce Company Limited has made a net profit of Rs 8.28 lakhs for the same year as against Rs 6.44 lakhs. The dividend on the equity shares has been maintained at 15 per cent, subject to tax.

STOCK EXCHANGES

Buyers at Minimum Levels

Watch-Dog Writes:

AT long last, stock markets are showing some signs of returning confidence, thanks to the timely measures taken by the authorities and the absence of any adverse news from the border areas. Although leading shares

are trying to look up, the pace of recovery is slow in view of a number of uncertainties.

Sentiment on the Calcutta Stock Exchange showed a slight improvement. More transactions were recorded in the cash list at fractionally rising prices.

On the Bombay Stock Exchange, squaring-up business predominated following relaxations by the authorities, who gave freedom to square up their outstandings, whether sales or purchases.

Trading on the Madras Stock Exchange was featureless. As the professional operators as well as investor were sitting on the fence, the volume of business in the market could not but be normal.

On the London Stock Exchange, buying interest was mainly centred upon industrial shares. The gilt-edged section remained out of favour.

The trend of prices on Wall Street remained generally upward, subject to normal technical corrections.

CALCUTTA

Friday Evening.

LYONS RANGE experienced another dull and uninteresting week of trading when business showed hardly any improvement. The release of a lengthy statement by the Chairman of the Indian Iron & Steel Company Limited failed to have any effect on the market. Operators looked to Bombay wherefrom advices also proved to be disappointing. Even the downward revision of the minimum prices for 20 shares failed to attract the attention of the investors.

Although it looked as if the worst was over, confidence in the market was still lacking. Political uncertainties, the credit curbs imposed by the Reserve Bank, the uncertain outlook for industries, fears of dividend control and increasing monetary stringency induced the bulls not to lend any fresh support. As far as investors were concerned, they were in tears to find that a number of investments in blue chips were quoted below par. They thought that the near-term prospect was not encouraging and that

the growth prospects for many shares were hampered by the shortage of foreign exchange.

Thus, in the absence of any improvement in the conditions of the market, the authorities of the local stock exchange were compelled to make a compulsory carry-over from Clearing No. 375 to No. 376. They also fixed the making-up prices for the cleared securities and the carry-over charges as under:

	Making-up Prices	Carry-over Charges
	Rs	nP
Indian Iron ...	23.30	8½
I. Aluminium ...	32.50	12½
Indian Cable ...	34.50	10
Indian Copper ...	4.28	1½
Dunlop Rubber ...	36.00	10
G. K. Williams ...	34.87	13½
Hind. Motor ...	16.50	6½
Jaipur Udy ...	11.12	4
Birla Jute ...	30.00	11½
Burrakur ...	16.12	6½
Howrah ...	19.00	7½
TEXMACO ...	20.00	8
Kesoram Industries ...	22.25	8½
Rohtas ...	12.00	4½
Orient Paper ...	36.20	14½
Orissa Cement ...	15.25	6
J. K. Cotton ...	14.75	6
Shree Gopal ...	23.25	9

Towards the close of the week, however, there was a slight improvement in sentiment. This was mainly due to the hope entertained by the marketmen that the LIC Investment Committee, which was scheduled to meet on Friday, 16 November, might make some purchases. Prices, therefore, improved to a moderate extent at places. But, it was clear that the prices were vulnerable owing to a tendency to press offerings even on the modest upturns.

An event, which would have a far-reaching effect on the gilt-edged market, was the announcement of the issue of Gold Bonds. The effect of this and the previous announcement of the Defence Loan and Certificates on the market was to mark down the quotations of the existing issues. With hardly any support and the sellers dominating, business transacted remained meagre in the extreme. 3 per cent 1980 Conversion Loan hovered idly around Rs 63.

Firmer tendency in gunny prices seemed to have no effect on Jute shares, which came in for only restricted trading. Birlas were supported up to Rs 30.81, while New Central were well maintained at Rs 13.62.

Little or no interest was shown in the Coal, Tea, Sugar and Sugar sections.

In the Engineering section, no business was done in Indian Irons till the middle of the week after which the shares were quoted on the ex-dividend basis at Rs 22.18. Jay Engineering met with some enquiry up to Rs 24.31 from Rs 24.19 and Guest Keen, Williams up to Rs 34.94 from Rs 34.87. J. K. Steel were enquired up to Rs 16.37.

Miscellaneous issues remained practically unchanged. Business was reported done in some of the shares at the minimum levels.

Company Reports

Tube Investments Repeat

DESPITE power-cut, Tube Investments of India Limited has continued to maintain a high level of production of cycles. As a matter of fact, the company has reached nearly the target set for the factory. As a result, sales for the year ended 31 July 1962 have risen to Rs 6.19 crores from Rs 5.73 crores for the previous year.

The net profit, after providing for Depreciation and Taxation, is, however, slightly lower at Rs 1.36 crores against Rs 1.40 crores, mainly due to the increased raw material cost in view of the necessity of importing certain raw materials under the DLF scheme. In addition, there has been an imposition of excise duty on skelp, tubes and other items, which has increased the price of brought-out components. The labour cost has also increased considerably.

In respect of allocations, the Depreciation amount is raised to Rs 37.11 lakhs from Rs 27.74 lakhs and Development Rebate Reserve to Rs 20.76 lakhs from Rs 9.46 lakhs. Taxation provision is, however, lowered to Rs 44.60 lakhs from Rs 48 lakhs; General Reserve to Rs 15 lakhs from Rs 17 lakhs and Dividend Equalisation Reserve to Rs 2.00 lakhs from Rs 4.25 lakhs. The dividend is, however, maintained at Rs 10 per cent, subject to tax.

The directors have stated that, in spite of the best efforts of the company, the export of bicycles and components was not satisfactory. They add that potential export markets are being surveyed and hope to export larger quantities of bicycles and components in the coming years.

In connection with the Tube Products of India, it is stated that improved techniques and additional equipment resulted in a diversification of production and the diversified products led to increased demand on all sections of the plant. While the factory was approaching its installed capacity, the power-cuts, starting at the end of May last caused disruption of production. Far more serious was the shortage of strip.

The directors have been making every possible effort to secure as much as of the supplies of strip required as possible. Transport and other problems have further prevented maintaining balanced stock.

In the case of the Cold Roll Mill, suppliers of indigenous hot rolled strip have not been keeping up their promises and consequently, the mill could not work to its capacity. In this connection, the directors expect the supply position to improve and hope for better results.

Though the company has received an industrial licence for the manufacture of cold-formed metal sections, this unit was not able to go into production in view of the fact that the Capital Goods Committee had not so far granted the import licence for plant and machinery.

The company has received an industrial licence for the manufacture of push rods for the automobile industry and its application for an industrial licence for the manufacture of "Bundy Tubing" (copper-coated tubing), which is largely used in automobile and refrigeration industries, is used in automobile and refrigeration industries, is pending with the Government of India. The company expects to receive favourable orders shortly. It is proposed to form a new subsidiary company in partnership with Bundy Tubing Company of Detroit, USA, to undertake the manufacture of these articles.

New Savan Sugar Pays Less

The decline in the total quantity of cane crushed from 33,85,358 maunds to 28,42,235 maunds is reflected in the working results of the New Savan Sugar and Gur Refining Company Limited for the year ended 31 May, 1962.

The net profit amounts to Rs 2.37 lakhs for the year as against Rs 2.89 lakhs for the preceding year. All allocations have been reduced:— Depreciation from Rs 1.37 lakhs to Rs 1.31 lakhs; Taxation from Rs 73,000 to Rs 66,000 and Development Rebate Reserve from Rs 17,096 to Rs 4,500. The dividend is reduced from 56 nP to 37 nP per share, subject to tax.

As a reaction of the restriction on the sugar production for the 1961-62 season, the cane area for the 1962-63 season has been reduced. It is reported that there has been a general fall in the cane area in the Saran district of Bihar. The company's factory is, therefore, making arrangements to supplement the home-zone cane with cane from outside resources for the coming season.

Hingir-Rampur Coal Earns More

The Hingir-Rampur Coal Company, Limited reported improved results for the year ended 30 June, 1962. Thanks to rise in raising and sales, the gross profit for the year has moved up from Rs 5 lakhs to Rs 10 lakhs. The company has enabled the company to wipe out the arrears of the dividend on the Preference shares for six years ended 30 June, 1962.

Raisings for the year total 158,612 tonnes as compared with 157,198 tonnes. Raisings would have been higher, but for the reduction in output caused by wagon shortage during the first two months of the year, which led to the accumulation of stocks. The position since then is reported to be satisfactory.

After providing Rs 1.72 lakhs for Depreciation and Amortization (Rs 1.50 lakhs); Rs 13,602 for Development Rebate Reserve (Rs 18,407); Rs 80,795 for agents' commission (Rs 26,571) and Rs 3.80 lakhs for Taxation (Rs 1.24 lakhs), the net profit for the year is Rs 3.05 lakhs as against Rs 1.82 lakhs. A sum of Rs 2.50 lakhs (nil) is transferred to General.

Consequent on upgrading of the company's coal with effect from 7 September, 1961, the company became eligible to receive a subsidy from the Coal Board under its scheme for assistance as applicable to gassy mines.

The directors have decided to reopen the old workings, known as Pit No. 5, which were closed 30 years ago. It is expected that this can be brought into full production in two years and the workings will then yield a further 10,000 tonnes a month, bringing the total raisings of the colliery to 25,000 tonnes a month as compared with the present figure of 15,000 tonnes. Preliminary operations in this connection have already commenced.

PLANNING FOR PROSPERITY THROUGH INDUSTRIALISATION

The framers of India's Third Five Year Plan have put targets of development in black and white. J. K. ORGANISATION strives to show them reality's light through its varied industrial activities, ever increasing and always expanding.

The Third Five Year Plan
Bird-Heilgers' part in it...

MADE IN INDIA

**A SIMPLE PHRASE ...
...VITALLY IMPORTANT!**

"...special emphasis is being placed on... steel and machine-building and the manufacture of producer goods". The Third Plan very rightly stresses the need for rapid industrial development. Every new project for domestic production creates employment, saves foreign exchange, adds to the national striving for economic independence. The expansion of indigenous manufacture is critically important, and Bird-Heilgers is deeply committed to this decisive aspect of the Plan.

Steel for a solid industrial base

Steel is the very life-blood of an economy. Industries, utilities, homes, all depend on steel. Steady steel production depends, in turn, on the uninterrupted supply of minerals to the nation's blast furnaces. Bird-Heilgers supplies these minerals. Between 1957 and 1961, the group's output of minerals—coal, dolomite, iron and manganese ore and limestone—shot up almost 100% to well over 6,000,000 tons. The group will continue to help meet demand...to feed the blast furnaces with the minerals they must have.

"Made in India"—by Bird-Heilgers

A vast range of products, hitherto imported, are now manufactured in India by

Bird-Heilgers. The group produces jute goods, paper and board, water treatment equipment, air compressors and springs, castings and fabricated steel. The refractory manufacturing plant is the largest single unit in the East. A factory for the production of coal washeries was the first in India.

The group's engineering units are extremely flexible. They contribute, with equal facility, to projects as far removed as blast furnaces and ceramic plants. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. The agency department handles everything from heavy capital equipment to light consumer goods.

Towards a self-generating economy

A phrase on everyone's lips. A phrase that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group is alive to the problems of a growing economy. It deploys the full potential of a century's resources, technical knowledge and executive skill to broaden its activities...increase domestic production...join in the national drive to economic independence.

Friends in Need

NEWS of the situation on the frontiers has been grave and alarming. The reverses suffered in the NEFA region have rudely undermined earlier assumptions of our ability to contain the Chinese advance in that area. After the fall of Bomdila, the Chinese army has further penetrated south increasing thereby the imminence of danger to Assam. At the other end also danger is undiminished and Chinese eyes are still fixed on Chusul where there are reports of massive military build-ups for a surprise attack. The latest Chinese offer of cease-fire unilaterally made would, however, seem to give a different colour to the prospects for continuance of the fighting in the border areas. But in the light of China's past record of treachery and deception, India should be extremely wary in putting any faith in it. Failing a cease-fire, the prospect, as the Prime Minister has visualised it, seems to be for a long drawn-out struggle with the enemy until we are able to recapture the territory lost to them. Defence preparations have to be stepped up to that end.

The arrival of the top level missions sent by the UK and the USA to ascertain our military requirements in this situation marks an important stage in the defence preparations to meet the Chinese menace. One consequence of the Chinese aggression on our frontiers has been to shatter the mood of smug self-assurance that characterised Government's attitude to the country's defence preparedness. In its place, there is now a welcome realisation of the importance and urgency of securing from abroad military equipment to match the Chinese strength. The US and the UK have been among the first to declare their unreserved sympathy for us and besides have been foremost in backing up such sympathy with positive measures of help. This was in the fitness of things considering their abiding interest in the survival of democracy in our country and the large-scale participation with aid in foreign exchange and technical personnel in economic development.

By sending the top level mission, the USA and Britain have given resounding evidence of their readiness to help us in whatever measure we may require them to do. The British mission is headed by Mr John Tilney, Parliamentary Under-Secretary at the Commonwealth Relations Office, and includes General Sir Richard Hull, Chief of the Imperial General Staff and other supporting officers. The American mission is headed by Mr Averell Harriman, Assistant Secretary of State for Far Eastern Affairs, and also includes members drawn from the American Congress and the Defence Department. The main purpose of the visit is to make a first hand appraisal of the arms and other needs that India would require to meet the Chinese invasion. The precise nature and scale of the help that would be available from these two countries would thus be determined only after the study made by the respective missions. Having regard to the deficiencies of our armaments and defence materials, there should be no mistaking our needs of such military hardware as tanks and equip-

ments for mountain fighting. The visit of the two missions should be taken advantage of to strengthen these weak links in the existing defence structure.

The terms and conditions of aid are also expected to figure in the discussions, but these are least likely to present snags to the consummation of the negotiations. That aid provided will not carry any conditions that may be inconsistent with our policy of non-alignment has been clarified by the chief governmental spokesmen in America and England. As far as America is concerned, some of the conditions that will have to be observed with regard to defence articles obtained under special arrangements have already been laid down in 1951. One such condition stipulates that the Government of India offers to return to the Government of United States such articles furnished by the Government of the United States as are no longer needed for the purposes for which they were originally made available.

The British and American offers of assistance have been followed by similar gestures from other countries particularly Australia and Canada. With such moral and material backing it should be possible for us to put some more heart into the defence effort. Significantly enough, the response to the country's request for help has also made clearer the line of demarcation between those who are our true friends and those who are not. The attitude of Russia will have a crucial significance in determining the military equation on either side. Its attitude has so far been marked by its evident desire not to displease either party. But how long its neutral stance will be preserved remains to be seen. The acid test will come when it has to honour its commitments for delivery of the Mig planes for which the contract has already been signed. Whether or not the Russian planes are coming, it would not be prudent to base our military preparations on that expectation. Nearer home Pakistan has been prickly in its reaction to offers of American and British assistance to us. Repeated assurances given by India and the western countries have not availed in overcoming its opposition to such Western military deliveries. But it is very unlikely that the Pakistani attitude will be allowed to come in the way of our consolidating our defence preparations.

While the presence of the two missions in New Delhi is heartening, with its implicit promise of any further military equipment we will need, the danger we have to guard against is any relaxation of the defence effort consequent upon China's unilateral cease-fire. Indeed, we must reckon that the uneasy stalemate along the borders has purchased as the time wherewith to prepare ourselves better to throw back the enemy. It is entirely possible that till next spring we shall not be called upon to meet much by way of further inroads into our territory. But the country must prepare itself, emotionally no less than militarily, for the repulsive action when the thaw comes next year.

Firestone

World's Leading Producer of Rubber

Nobody builds tyres like Firestone, world's leading producer of rubber. Nobody tests tyres like Firestone—and millions of punishing tyre miles each year prove it. In fact, no part of a car is more thoroughly proved than its Firestone tyres. Motorists everywhere in the world, trust the tyre that's built, tested and backed by the Firestone name. It's their surest sign of value. They know what they are getting when they buy Firestone.

Your Symbol of Quality and Service

Mr Tata on Steel Prices

Mr J. R. D. Tata's statement to the shareholders of the Tata Iron and Steel Company on the affairs of the company during the year 1961-62 covers substantially the same ground gone over by Sir Biren Mookherjee in his statement to the IISCO shareholders for the same year. We went into some of the points made by Sir Biren in these columns last week. Briefly, both Mr Tata and Sir Biren have exposed the logical infirmities of the variations that Government have made in the recommendations of the Tariff Commission on the retention price for steel for the two years 1960-61 and 1961-62. Mr Tata considers that the assumption of even 90 per cent productive efficiency measured in terms of production as a percentage of rated capacity is somewhat unrealistic under Indian conditions. The Tariff Commission, however, arrived at this finding after going into all the relevant data including those supplied by the companies on the basis of which they claimed that 80 per cent production should be assumed in working out the fair block. But Government has gone further than even the Tariff Commission's calculations. Quite apart from the poor quality of unwashed coal allocated to the companies, the high degree of ash content therein and the transport bottlenecks that hold up production, not enough allowance has been made by Government for the over-extending of the plants during the war years and consequent wear and tear. Mr Tata also mentions the teething troubles of the additional plants as a factor that should have been taken into account in the reckoning of the productive efficiency for purposes of price-fixation.

As regards the elimination from the gross block the sum equivalent to the special advance made to the company, Mr Tata rightly points out that the procedure involves the mental obliteration of tangible assets standing at Jamshedpur. In consequence, the quantum of permissible return is reduced. This is probably considered not entirely inequitable on the dubious ground that return should be only on block-equivalent of equity capital. Secondly, depreciation on such block which undoubtedly exists and which, equally undoubtedly, is subject to wear and tear, is automatically denied by the elimination of the block equivalent of the special advance. Such an approach can hardly be called scientific.

Similarly, Government's assumptions regarding the provision of interest on working capital, are shown up to be untenable. Shortly after the retention price was announced, it was reported in the Press that the Minister for Steel adduced certain reasons in support of Government's decision to take into account only four months average working capital for reckoning interest. If those were the only reasons, for Government's decision on the question, then in the light of the information provided by Mr Tata and Sir Biren, Government is bound to revise its earlier decision. In the first place, Mr Tata has shown that there is no basis for the belief that the steel companies have access to large interest-free funds in the shape of advance from customers to the extent of 25 per cent of the value of the indents. The fact is advances are taken only from bazar parties and such advances, as far as TISCO is concerned, never exceeded Rs 1 crore. Secondly, the

basis is slender for the Government's belief that large sums by way of surcharges collected by the companies from customers on behalf of Government are with the company. Mr Tata puts the extent of such arrears at the end of July 1962 at Rs 2.5 crores as against the reported official estimate of Rs 12 crores. As against this, the sums due to the company by way of arrears toward increases in retention price is substantial.

Mr Tata has also made a reference to Government's decision to eliminate from the retention price the 'special element' in respect of provision for repayment of the special advance and the interest thereon. This is admittedly in reversal of Government's earlier intentions in the matter and is particularly indefensible in view of the history of this advance. It would appear that Government is taking technical advantage of a clause in its agreement with the companies in which it reserved the right to ask them to raise fresh capital for repayment of the special advance and the interest accruing thereon. As far as TISCO is concerned, Mr Tata told the shareholders that Government has been informed that the issue of fresh capital would be unthinkable in present conditions.

Mr Tata has raised some questions of principles in the arbitrary variations made by Government in the considered recommendations of an expert body like the Tariff Commission. It is true that it is not bound to accept all the recommendations of such bodies. But it is equally true that convention decrees that Government should have impregnable reasons for deciding to depart from them. As it is, the variations made by Government, (apart from the elimination of the 'Special element' in which no technical question is involved) are entirely arbitrary. A rational approach to the problem of price fixing by the application of accepted principles of scientific costing has been thrown overboard without compunction or embarrassment the moment it was felt that the price so arrived at was high. Particularly indefensible is the latest variations by Government in view of the fact that the period for which the retention price was fixed had already elapsed when Government took its decision and there was a factual frame of reference to test the estimates and hypotheses on which the Commission based its findings. In particular, the quantum of production was available. Government's ignoring these facts would easily have led to absurdities if it were not for the fact that the ostensible percentage of return permitted acts as a sort of cushion. It would be better to avow openly a lesser percentage of return than to erode it in this surreptitious manner.

Coir Exports

EARNINGS of foreign exchange from coir exports, which fluctuated between rupees eight and nine crores during the Second Plan, have registered a substantial increase of Rs 2.69 crores in 1961-62. Part of the increase is accounted for by the sharp increase in prices during the year. But the volume of exports has also increased. According to the annual report of the Coir Board, the quantity exported has increased by 7.25 per cent while in terms of value the increase has been of the order of 30.98 per cent. Total

exports of coir and coir goods during the year was 1,497,186 cwts valued at Rs 11.33 crores as compared with 1,396,014 cwts valued at Rs 8.67 crores in 1960-61. While total exports have increased, the increase is not evenly distributed over the different categories of coir products. Exports of fibre and yarn have increased both in volume and value. But the declining trend in the export of manufactured products persists. Exports of coir products such as mats, matting, carpets, rugs etc touched a new low during 1961-62 though the full extent of the fall in the volume of exports is not reflected in the value because of higher prices. The decline in the exports of coir manufactures, however, was not unexpected. On the basis of actual exports during 1960-61, it was anticipated that during the Third Plan period there might be an increase of 5 per cent in coir yarn exports, and a fall of 20 per cent in the export of mattings, rugs, carpets, etc.

It may be seen from Table I that while the quantity exported in 1961-62 has increased as compared with the previous year it is still less than the level of exports reached in 1956-57. The report of the Coir Board states that it is becoming increasingly difficult to expand coir exports on account of the severe competition that coir has to face from other fibres such as sisal, aloë, hemp, manila etc, and that the prospects of registering any significant increase in exports are not bright unless production is diversified and bristles and mattress fibre are manufactured.

The variations in the exports of coir products to different countries show interesting trends. As in previous year, Italy imported the largest quantity of fibre followed by East Germany, West Germany, Spain Japan and Poland. While exports of fibres to Italy have remained more or less stationary, exports to East Germany have more than doubled while exports to West Germany have increased from 185 cwts in 1960-61 to 2,669 cwts in 1961-62. Exports to Spain have also increased substantially as compared with the previous year. Exports of yarn to West European countries have increased in most cases, but there is a decline in the volume of exports to the UK, the USA, Japan and the USSR. A number of East European countries like Poland, East Germany, Hungary, Czechoslovakia have taken larger quantities of yarn as compared with the previous year. The Netherlands and West Germany are the largest importers of coir yarn, each taking nearly two lakh cwts followed by Italy, the UK, France and Burma in that order.

As in the past the United Kingdom is the largest importer of coir manufactures, but there is a substantial fall as compared with previous years. Exports of coir manufactures to the UK have been declining in post war years, and this trend may be aggravated if Britain joins the European Common Market. On the other hand, there is an encouraging increase in the offtake of coir manufactures by West Germany, Italy, Denmark, the USA and Canada, to mention some among the principal importing countries.

The USSR entered the market for coir products for the first time in 1958-59 and purchased over 44,000 cwts. But the expectation that exports to the USSR in subsequent years would be maintained at about the same level have not been fulfilled. On the other hand, the offtake of coir manufactures by Russia has steadily declined from 44,617 cwts in 1958-59 to 31,462 cwts in 1959-60, to 12,491

Year	Quantity cwts million	Fibre & Yarn Value Rs crores	Manufactured Quantity cwts million	Products Value Rs crores	Quantity cwts million	Total Value Rs crores
1955-56	1.117	5.86	0.402	3.23	1.519	9.09
1956-57	1.281	6.76	0.373	3.05	1.654	9.81
1957-58	1.054	5.22	0.388	2.90	1.442	8.12
1958-59	1.057	5.03	0.415	3.19	1.472	8.22
1959-60	1.100	5.47	0.430	3.39	1.530	8.86
1960-61	0.999	5.46	0.397	3.21	1.396	8.67
1961-62	1.135	7.95	0.362	3.40	1.497	11.35

cwts in 1960-61 and to 8257 cwts in the year under report.

The experience of coir exports to the USSR should serve as a reminder of the hazards of seeking to build up exports on the basis of rupee payment agreements, especially with countries where the entire foreign trade is controlled by the State. A large offtake by such countries in a particular year does not mean that there is a steady market for such goods in that country. It only means that the country in question had large unutilised rupee balances which it wanted to utilise within the period of the current trade agreement. So long as trade on this basis accounts for only a small percentage of India's total foreign trade, as it is at present, no great harm is done. But the fluctuations can be very unsettling in their impact on production and prices if a sizable proportion of the foreign trade is on this basis.

The figures of exports of coir manufactures, such as mats, mattings, carpets, rugs etc. to some of the principal importing countries are given below:

Country	1958-59 cwt	1959-60 cwt	1960-61 cwt	1961-62 cmt
U.K.	58,103	46,194	147,917	1,21,392
USSR	44,617	31,462	12,491	8,257
USA	10,544	9,674	44,871	50,905
Iraq	9,873	15,834	13,780	6,957
Australia	5,088	5,176	24,431	21,813
Canada	3,938	4,200	13,843	14,874
W Germany	1,152	3,545	14,067	18,891

It can be seen from the above table that, while exports of coir manufactures to the USSR have declined to one fifth from 1958-59 to 1961-62, exports to the USA have increased nearly five-fold, to Australia more than four times, to Canada nearly five times and to West Germany nearly seventeen times during the same period.

The total annual exportable surplus of coir products during the Third Plan period has been estimated at about 1.6 million cwts. The estimates of the exportable surplus for different categories and the actual exports during 1961-62 are given in the following table:

Item	Exportable Surplus Cwt	Exports in 1961-62 Cwt
Coir fibre	28,750	29,422
Coir yarn	1,171,500	1,105,286
Coir mats, carpets etc.	359,300	315,095
Coir rope and cordage	59,950	47,403
Total	1,619,500	1,497,186

At 1,497,186 cwts, the actual exports during the year 1961-62 are very nearly equal to the estimated export surplus. The Report states that the limiting factor in exports is not the availability of supplies but export demands. However, a study undertaken by the Coir Board into the causes of the increase in prices

in 1960 seems to point to a different conclusion which is also indicated by the figures in the table above. The finding of the study was that in 1960, there was increased world demand for coir and coir products which was not met by a corresponding increase in production, mainly on account of the shortage of raw material, viz. coconut husk. It is significant that total exports registered a decline of 7.5 per cent in that year as compared with the previous one. If exports of coir products are to be stepped up in future, it will be necessary to pay particular attention to increased and diversified production. At present coir manufacture is confined to Kerala, and it may be assumed that almost all the husks available in that State are being utilised by the industry. The industry has not been established in other States because of lack of trained labour and of the necessary retting facilities, and these difficulties are not easily overcome.

While efforts may be made to develop the industry in the areas where it is possible to provide retting facilities, the aim in other regions should be to utilise the husks which at present are being wasted, or burnt as fuel, for production of bristles and mattress fibre for which it is possible to find export outlets. Research has also indicated uses for coir pith which is now entirely wasted, as fillers for thermosetting plastics and for expansion joint-fillers required for the construction of concrete roads.

End of Gilt-edged Boom

By Paul Einzig

Optimistic anticipations of a substantial recovery in the gilt-edged market have proved to be disappointing. The 3½ per cent War Loan, having appreciated by some 10 points from 52 to 62, appears to have settled in the vicinity of 60. There are no more signs of sanguine forecasts about a rise to 80. Indeed, many quarters even doubt whether the present level could be maintained. It is true. The recent successful 'tap' issue of a long-term loan has enabled the Treasury to buy back some of the bonds if it wished to support long-term Loans. The authorities are not likely, however, to de-fund large amounts of the debt in an attempt to bolster up the gilt-edged market in face of a major adverse trend. Such a trend might easily develop as a result of the revival of inflation. One of the reasons for the firmness in the gilt-edged market during the second and third quarters this year was the feeling that the post-War boom has now come to an end and that there is more likely to be a deflation than an inflation. On that assumption a switching over of investments from equities into fixed-interest-bearing securities appeared to be an attractive proposition.

As a result of the recent adoption of an expansionary policy by Mr Maudling and of the abandonment of any pretence at wage restraint, this assumption is no longer tenable. It now seems more than probable that we shall experience another period of inflation. To be more precise, the existing trend of cost inflation will become greatly accentuated and the stagnation of demand will give way to a renewed demand inflation. On that assumption fixed interest bearing securities are becoming once more unattractive. Whether this means that equities will become once more attractive depends on the trend of profit margins. It is just conceivable that, notwithstanding the revival of demand inflation, profit margins will remain under pressure as a result of growing international competition.

This is not the general expectation, judging by the boomlets on Wall Street and other stock exchanges. The sharp recoveries of equities from the levels to which they had dropped as a result of the Cuban crisis are only justified on the anticipation of a business boom. Whether such booms will in fact occur depends on the rate at which rises in prices of manufactures can keep pace with wage increase and on the extent to which increases of production will assist in a revival of prices of primary products. It is just conceivable that since industries in general are now underemployed a rise in the output resulting in demand inflation will keep down the cost of production per unit in spite of higher wages, in which case profit margins might benefit. Unfortunately, the extent of the latest wage demands clearly indicate that wage increases will once more outdistance output increases.

EMERGENCY

Need for New Monetary Policy

EXCEPT for stray indications that, moved by patriotic impulses, certain individual banks have purchased parcels of the 4½ per cent Defence Bonds, the regrettable fact is that support for the new loan is generally weak; and quite paradoxically this lack of interest in gilt-edged is pronounced at a time when the money market is easy, when the call money rate in Calcutta quotes under 2 per cent. How can Government ensure larger subscriptions for the Defence Bonds, and why is it that, though the busy season has notionally started, money is apparently both cheap and plentiful?

The two questions are inter-related. The plenitude of funds in the money market is not, we believe, due to any shortfall in demand. On the contrary, it is more or less certain that, with Government's anxiety to foster both defence and civilian production, the pressure upon the money market will pick up, and possibly grow acute by the end of January or so. It is indeed precisely this expectation on the part of bankers which has influenced them to keep cash on hand. Ordinarily such surplus resources would have found at least short-term sanctuary in Treasury Bills even if they were not attracted to Government's dated loans. Hence, unfortunately, banks' reluctance to tie up funds in the new Defence Bonds.

Two reasons have been standing in the way of bank purchase of the bonds. Firstly, the Reserve Bank's categorical assertion (subsequently thankfully withdrawn) that banks would not ordinarily be permitted to borrow more than 100 per cent of their quota (equivalent to their statutory Deposits with the Reserve Bank) left the banks with no other alternative than to keep spare resources for meeting busy season demand. Secondly, the continuance of the multiple-tier bank Rate acts as a powerful dissuader in that the gilt-edged yields at the peak of the busy season would be far below the rates that banks would have to pay on the bulk of their borrowings from the Reserve Bank.

We urge that a revision of monetary policy is immediately called for. The multiple-tier bank Rate must go, and we must return to the old basis of an honest bank Rate that is both de facto and de jure. It is meaningless to discourage or thwart banks' borrowings if the central purpose of economic policy is to foster defence and civilian production in every way. True, bank finance must not be made available for non-productive or speculative purposes; but penal rates of interest in no wise bring about qualitative control of bank Advances. It is the selective monetary control, which can as far as practicable reduce the quantum of bank finance put to or made available for undesirable use.

In the second place, it is not enough that the Reserve Bank should have indicated that it would liberalise advances to banks. As happened in 1956, on the eve of what was apprehended would be a busy season of unprecedented pressure upon the money market, the Reserve Bank should start by approving lines of credit for individual banks, so that they in turn can proceed to make funds available for defence and civilian production. On the last occasion, in 1956, the then Finance Minister saw to it that lines of credit to the banking system for a total of Rs 150 crores were approved. This is the minimum that the Reserve Bank should now, in anticipation of stringency in the latter part of the busy season and in order to permit banks to plan their lending policy for increasing production, also approve.

If the multiple-tier bank Rate is removed, and if lines of credit are given then we have no doubt that banks in turn will set apart a proportion of new Deposits for investment in the Defence bonds.

BANK RETURNS

State Bank's Advances Fall

The noteworthy feature of the latest banking returns is the sharp fall reported by the State Bank in its Advances as at 16 November.

Active Note Circulation has contracted by Rs 9.70 crores to Rs 2,077.26 crores, according to the returns of the Reserve Bank for 16 November, and there has been inflow of Rupee Coin for Rs 1.65 crores. With Foreign Securities unchanged at Rs 88.08 crores, currency has been contracted for Rs 15 crores against Rupee Securities, lowering them to Rs 1,763.29 crores, and the Reserve Bank's cash in the till moves down by Rs 3.55 crores to Rs 13.85 crores.

Expenditure on the defence effort, notwithstanding, the Centre's balances have improved by Rs 10.34 crores to Rs 60.77 crores; there would appear to have been payments made by the States, whose Deposits are down by Rs 10.82 crores to Rs 7.06 crores on top of an increase of Rs 10.08 crores to Rs 19.79 crores in their borrowings from the Reserve Bank.

The banking system is feeling but little pressure: Reserve Balances of Scheduled Banks are higher by Rs 10.24 crores at Rs 91.05 crores, almost wholly on account of banks other than the State Bank; and indebtedness to the Reserve Bank has been further reduced by Rs 1.50 crores to Rs 2.48 crores.

Investments are higher by Rs 20 crores at Rs 194.12 crores; of this Rs 15 crores are traceable to the transfer from the Issue Department. Having regard to the fact that, besides, the State Bank figured as a purchaser of gilt-edged for Rs 5 crores, the inference may be made that the Centre has instituted deficit financing for about Rs 15 crores.

Lastly, Balances Held Abroad, after relative steadiness for a few weeks, have inched down slightly by Rs 0.78 crores to Rs 5.14 crores.

The State Bank's return for 16 November discloses a substantial fall of Rs 11.63 crores to Rs 257.92 crores in its total of Advances. Deposit resources have also declined by Rs 2.97 crores to Rs 577.52 crores. The gilt-edged portfolio has been added to by Rs 5 crores to Rs 281.96 crores. Cash balances are practically unchanged at Rs 28.02 crores, but Other Assets have moved up by about Rs 4 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on 20 November 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.40 per cent were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 26 November 1962. Successful tenderers should make payment on Friday, 30 November 1962 at all centres. Other conditions are as usual.

During the week ended 9 November 1962 Government of India Treasury Bills for Rs 14,08,00,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 21 to 24 November 1962 at Rs 99.431 per cent. Sales can be stopped at any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 14 to 17 November 1962 amounted to Rs 1,62,50,000.

Notes

EMERGENCY

Coal—A Crucial Sector

In the all-out drive to increase industrial production, critical importance attaches to coal. Success in this, it should be obvious, will determine the extent of the economic preparedness with which we can face the external challenge. The coal industry has already demonstrated how it can rise to the occasion and has lost no time in stepping up production. This should be a matter for extreme gratification since till lately all evidence only seemed to point to a continuing slow pace in the production programmes. Obviously it is the private sector that has proved to be the more resilient of the two and accounts for all of the increase registered in production. It has exceeded its target by about 300,000 tons whereas the National Coal Development Corporation had been lagging behind.

As long as the present emergency lasts, there should be no relaxation of efforts to increase production in this crucial sector. It is essential that the outlook in this regard should not be conditioned by the schedule of targets fixed in the Third Plan. With the private sector in the coal

industry having shown greater adaptability, measures to step up production here should pay greater dividends in the short run. It may be recalled that the private sector had shown long before the present emergency a readiness to accept and implement a higher production target than what is allocated in the Third Plan. Measures to galvanise the public sector cannot also brook any delay, and such measures are particularly called for in the NCDC's mines in the Bengal/Bihar region where the Corporation has been meeting with special difficulties. When the NCDC is able to accelerate its rate of production, the country should be better placed in the matter of coal supplies.

It is essential to see that transport facilities are also ensured to the extent required to match the desired increases in production. In the past the burden has fallen preponderantly on the railways, but the limitations of the railways in this regard have been glaringly revealed by the shortfalls during the first year of the Third Plan. Though alternative modes have been sought, the improvement has not been as great as was expected. With the rising pressure of demand anticipated in the context of the state of emergency and defence requirements, it is necessary to rush through a crash programme for production as well as for movement of coal. Some promising lines of action have been indicated by Mr K. D. Malaviya, Union Minister for Mines and Fuel, in the course of his meeting with representatives of coal industry in the city last week. These include setting up reception dumps for strategic industries and power houses and opening up of more effective road and river transport system. All these form part of the policy that has been outlined for implementation as a long term measure to solve the coal problem.

FOOD

No Anxiety, No Apprehension

A redeeming feature of the present grave emergency is that the food supply position is, at least for the time being, quite satisfactory. It is inconceivable that a nation can fight a ruthless aggressor effectively if it has to worry unduly about the food situation. Thanks to the realisation of the need to build up food stocks ade-

quate to meet demand as an essential pre-requisite to planned development, effective measures have already been taken. While concerted efforts are being taken to step up domestic production, supplies are being augmented in a big way from imports under Public Law 480 from the US. Domestic production though not up to expectations has not been discouraging. The cumulative effect of rising internal production and the regular inflow of P L 480 imports is that the Food and Agriculture Minister is now able to tell the country that "in the matter of food, we are placed in a situation in which apprehension or anxiety is a thing of the past and we have stocks of important commodities like wheat, rice and sugar which should enable us to meet any unforeseen contingencies or sudden liabilities." In a broadcast to the nation a few days ago Mr S. K. Patil has outlined the manner in which Government hopes to meet the extraordinary situation created by the Chinese invasion. As storage points are well distributed all over the country supplies can be maintained easily. The US has promised additional quantities under PL 480. Normal commercial imports are also to be made from Burma, the UAR and Australia. Simultaneously, measures are to be taken to intensify domestic production. In this no effort is to be spared.

The emergency has given a new urgency not only to foodgrains production but to the production of other supplementary foods such as fish, poultry, meat and milk. The Food Ministry's broadcast gives welcome indication of a firm resolve to step up production of all foods. Improved methods of agricultural practices are to be made known to the farmer who is also to be supplied with adequate seeds and other requisites. These measures if effectively carried out are bound to result in an increased yield which is already recording a welcome uptrend.

There is also every indication that the task of the Food Ministry will be considerably lightened as there is growing evidence of a general awareness all over the country that the present emergency is no time for profiteering or hoarding. It is significant that although the emergency is one month old now, prices of essential commodities have not only not risen but, according to Mr Patil, have declined in some places. While the majority of the businessmen may be relied upon to respond to Mr Patil's call to demonstrate their patriotism through ensuring that essential commodities flow freely in the market and are available at reasonable prices, the consumer too is unlikely to engage in hoarding. The identification of the people at large completely with the Government in this hour of crisis will prove to be the greatest ally to the authorities in meeting the grave situation. Even so, it

should be Government's endeavour to take all possible measures to maintain stocks of foodgrains at an adequate level by timely imports. A constant review of the supply position will pay rich dividends in the shape of smooth flow of foodgrains to all points of demand. Perhaps it will be prudent to plan for a bigger stock pile than was thought enough before the emergency in view of the indication that the war with China may prove to be along-drawn-out affair.

FICCI

Eastern Region's Problems

The various problems facing industry in the Eastern region were highlighted at last week's conference of the constituents of the Federation of Indian Chambers of Commerce and Industry in Assam, Bihar, Orissa and West Bengal. In the context of the present national emergency the Eastern region has a vital role to play in more than one respect. It occupies a predominant position in the economy of the country. In the words of Mr Shriyans Prasad Jain, president of the FICCI, the region holds the most strategic place. It produces 81 per cent of the country's coal, 72 per cent of the iron ore, 55 per cent of the mica, 35 per cent of the manganese and bauxite, 150 per cent of the copper and 95 per cent of the kyanite. "About 35 per cent of our total industrial employment as also industrial production originates from this region. In the field of exports also the share of this region in our total foreign exchange earn-

ings is about 40 per cent." Three of the nation's five steel plants are situate in this region while a wide variety of important industries have been established here. This does not however mean that industrialisation has reached a saturation point in this region. On the contrary it can sustain many more industries as vast areas have yet to be fully exploited. For instance industrial development in Assam, a state with vast untapped natural resources, is still to be taken up in right earnest. One of the main impediments in the way of the rapid industrialisation of Assam is its extremely inadequate transport facilities. Likewise, both Orissa and Bihar have great potentialities for industrialisation. When the two oil refineries are put up, one each in Barauni and Nummati, some regions of Bihar and Assam may benefit. Hirakud, in Orissa, is another centre of growing inustrial activity in this region. Mr Jain has rightly pointed out that the industrialisation of the backward areas in the Eastern region can be considerably quickened if their industrial development is planned in relation to the country as a whole.

Some valuable suggestion have been made at the conference which if adopted by Government should go a long way toward reorienting industrial production to the needs of the present emergency. One of these is for setting up a high powered body to make a quick assessment of the unutilised capacity is known to exist in a number of industries due mainly to paucity of imported raw materials. A large part of this capacity can be made productive if a proper assessment is made. The conference has naturally laid special emphasis on the urgent need to improve and increase transport facilities. If transport proves to be short of requirements, all efforts at increasing production will be nullified. In this connection an extremely urgent problem that brooks no delay is the transport of goods to Assam especially since movement to the State has been disrupted by the strike in the inland waterways. If power supply has already assumed urgency in view of the rapid progress of industrialisation in the Eastern region, the emergency points more starkly to inadequacies. The very good principle in planning that power supply must always be ahead of demand should be adopted.

TRANSPORT

Paralysis in Assam Waterways

The four-week old strike by the Pakistani sea-men has confronted the Government with a grave situation in the movement of goods to and from Assam. Most affected by the stoppage of movement facilities has been tea the flow of which from the North Indian

areas by river transport has now come to a virtual stop. Even in the best of normal times such paralysis of river transport connecting Assam with Bengal will have serious repercussions. In the context of the developments in the NEFA area where the Indian soldiers are fighting their battle for the country's honour, the situation has assumed a grim aspect.

Efforts at settlement through negotiations have so far failed mainly because of the political motivations behind the strike. The demands of the steamer crew for moving the company's office to Pakistan and for exclusive recruitment of Pakistani hands were on the face of them unacceptable. Rumours of "official" instigation are without basis. Obviously the striking seamen have been holding out in the hope of wearing down resistance in a moment of danger from external aggression. This is hardly likely to succeed in view of the determination of the steamer companies not to yield to pressure tactics. Also frantic efforts are being taken to open alternative routes for movement of supplies to Assam. While at Calcutta last week, Mr Raj Bahadur, Union Minister for Transport indicated that a permanent road transport organisation was being set up by the Centre with the co-operation of the Assam, West Bengal and Bihar Governments to implement haulage by private carriers. As a sequel additional trucks are being pressed into service to cope with the increased volume of road transport necessitated by the traffic diversion. It is hoped that movement by road will be normalised in about a fortnight's time permitting smooth and uninterrupted supplies to Assam. According to present plans trucks from Calcutta will proceed to Bhagalpur in Bihar for being ferried across the Ganges to Karagola. From this river-side town, trucks will move over a broad 280-mile highway to Dhubri in Assam. Beyond Dhubri further movement will be taken care of by river transport operated by the joint steamer companies to destinations in upper Assam.

In this circumstance, the seamen's strike has the least chance of succeeding and they would therefore be well advised to give up their indefensible claims and resume work. The consequence of any other course may be loss of occupation which none would desire. It is however comforting that the point of no return has not yet been reached and with moves being initiated on a governmental level with Pakistan, an early end of the strike can be hoped for.

SMALL INDUSTRY

Prototype Centre

The prototype production and training Centre that was switched on last year was inaugurated last

week by Mr K. C. Reddi, Union Minister for Commerce and Industry. A monument to Japanese co-operation in India's industrial development, the genesis of the project dates back to the visit of our Prime Minister to Japan in 1957 when an offer of assistance was made by the Japanese Government for setting up the centre in Howrah. The project inaugurated last week is one among the many that have been planned to be established in different parts of the country as a spearhead of the programme for stimulating the growth of small-scale industries.

With a preponderant rural population and with large-scale industrialisation making but slow progress, only small-scale industries offer prospects for large employment and more equitable distribution of national income. Sizeable allocations were made both under the First and Second Plans for their development, but the results have not matched the liberal scale of outlay mainly for reasons of basic shortcomings like out-dated tools and designs and shortage of technical personnel. The prototype centres were designed essentially to make good these deficiencies. The specific objectives of the Centre are (1) to impart training to different categories of technicians of small-scale units and to the technical staff of the Central and State Governments; (2) to undertake development of prototype of machine tools and accessories and make them available to small units for production on a commercial scale; (3) to supply to small units designs, drawings patterns and jigs together with processing instruments; and (4) to engage itself in the development of special purpose machinery to assist small units to improve their production techniques.

With such significantly diversified functions, the prototype centres should help in undertaking a massive and effective programme of setting up small-scale industries. The services so far rendered by Central Small Industries Organisation and the National Small Industries Corporation, while useful, have been meagre compared to the dimensions of the country's requirements. The prototype centres represent more specialised units for the rendering of such vital services and will be in a position to give even the latest scientific knowledge about production and the results of advanced research in machines and processes of manufacture, etc. One important aspect of the setting up of the prototype centres is the scope they offer for saving foreign exchange now entailed in the import of some specialised machinery and equipment. With the beginning now made in the setting up of such centres, the development of small-scale industries can be considered to be put in the right direction.

CHEMICALS

Export Decline Disturbingly

Among the more important of the non-traditional exports, chemicals have assumed a position of significance and their exports in recent years have shown a steady uptrend. From Rs 12 crores in 1958, their exports went up to Rs 15 crores in 1960-61. The increase is substantial and is besides indicative of further scope for exports.

There has however been a disturbing decline in exports during 1961-62 when they were lower at Rs 14 crores. Industry-wise study shows marked variations in export performance by individual industries. Among those which have recorded increases are pharmaceuticals and fine chemicals, acids and fertilisers, alcohol and dyestuffs. The value of exports of pharmaceuticals and fine chemicals rose to Rs 1.01 crores from Rs 96.4 lakhs, of acids and fertilisers from Rs 2.32 crores to Rs 3.14 crores and of alcohol from Rs 21.63 lakhs to Rs 44.63 lakhs. In contrast items like alkalis, salt and heavy chemicals, paints and soaps and toilets have lost some of their ground in foreign markets. In the case of salts and heavy chemicals and paints the decline registered in 1961-62 has been somewhat pronounced, the total exports being estimated at Rs 15.85 lakhs and Rs 11.87 lakhs which compares with Rs 51.77 lakhs and Rs 20.4 lakhs respectively for the preceding year. If further damage is not to be done corrective measures have to be put through without further delay. The fact is that exports declined mainly due to the non-competitive character of Indian prices. While such higher prices are derived from many sources, requiring prior attention is the excessively higher cost of the indigenous basic raw materials. Benzene which is priced at Rs 0.75 per Kg against only Rs 0.38 in Italy is an example. The price of imported materials is also such as to preclude the basis for competitive exports of the final product. There is much to gain by effective substitution especially when the landed price is disproportionately higher than the price ruling in the country of source.

Transport difficulties have also impinged on export performance in a number of cases. Lack of an assured and regular service in respect of both railways and shipping is only one aspect; and has been aggravated by the inequitous freight rates. A glaring case of such anomalous freight rates is presented by glass bottles. While the price obtainable in Iraq per 100 bottles is Rs 34.50 the shipping and incidental charges alone constitute as much as Rs 26. The other exports are in no more enviable position in regard to freight rates. The question naturally arises whether any fast and tangible head-

way can be made in export promotion in the face of such crippling burdens. It may be recalled that the Mudaliar Committee included a flat concession in freight rates in its recommendation of measures to promote exports from the country. With export promotion having assumed a basic aspect to pay for the maintenance imports during the Third and subsequent plans, the Government should feel no inhibition about measures that may earn valuable foreign exchange.

NON-FERROUS METALS

Internal Output Far Short of Needs

With the growth of industrialisation the demand for non-ferrous metals has increased considerably. If domestic production has not kept pace with demand, it is primarily because deposits of some of the metals such as copper, lead and zinc have so far been found to be limited. Among the non-ferrous metals, the prospects of self-sufficiency are indeed bright with regard to aluminium. As a matter of fact, the Third Plan target for aluminium production has recently been upgraded to 115,000 tons from the earlier figure of 80,000 tons. The higher production of this versatile non-ferrous metal will quicken the process of substitution of this metal in the place of copper in electrical industries and elsewhere also where efforts are being made to minimise the use of scarce non-ferrous metals like copper, zinc and lead. Aluminium may be expected to replace zinc in galvanizing steel sheets if the experiments already successfully carried out in the country are found to be commercially feasible. Even so, the problem of providing adequate supplies of copper, lead and zinc to numerous industries which need these non-ferrous metals will continue to demand solution. Even allowing for substitution possibilities, it is estimated that the demand for copper in 1965-66 will be about 150,000 tons. Of this no more than 35,000 tons will be available from indigenous sources. The present production in the country comes from one company. During the current Plan, however, a smelter with a capacity of 11,500 tons of electrolytic copper is to be set up at Khetri yielding 10,000 tons of copper per annum by 1965-66 and another 2,000 tons are expected to be produced from Daribo and Sikkim deposits. About 15,000 tons are expected to be available from scrap. It will be seen that despite the increased production the bulk of copper requirements will have to be imported. The position with regard to lead supply is no better. As against an estimated demand of about 60,000

tons of lead by 1965-66, domestic production is expected to be only about 10,000 tons. In the case of zinc, there is practically no production within the country at present. (About 8,000 tons of zinc concentrates are annually smelted for an Indian company by a foreign firm). A zinc smelter is to be established in the near future with a capacity of 18,000 tons while 12,000 tons of zinc may be produced from imported concentrates. Demand for this metal is however expected to reach 185,000 tons annually by 1965-66.

The urgent need for augmenting domestic production of non-ferrous metals has been recognised by Government which is undertaking intensive and rapid exploration of known deposits of non-ferrous metals in the country through the Geological Survey of India and the Indian Bureau of Mines. These efforts are bound to yield some result. But it would appear that indigenous production can be sizably increased by giving sufficient incentives to our mineral and metal industries. This point has been emphasised by Dr D. P.

Antia in his presidential address at the Thirteenth Annual General meeting of the Indian Non-ferrous Metals Manufacturers' Association. It is unfortunate that the request of the Association to consider giving incentives to the mineral and metal industries on the lines obtaining in other countries, has not evoked favourable response from Government. For, the development of metal mining and smelting is a risky business often involving abortive expenditure on exploration and wasting assets. In countries where metal mining

THE TYRES MOST TESTED AND PROVED

Dunlop Truck and Bus tyres have been tested under the toughest conditions you can imagine. It has proved itself to be the tyre that can stand up longest to shock treatment. You will be surprised at the tremendous strength of its casing and the safety and long mileage which it offers.

incentives are available to the industry. It is significant to note that the Taxation Enquiry Commission has recommended that special tax concessions be given to the metal mining and smelting industries.

TRADE
Promoting
Engineering
Exports

The Engineering Export Promotion Council which met recently at Calcutta addressed itself to the task of boosting production of engineering goods in such a measure as to meet the country's defence requirements and to provide a comfortable exportable surplus. The industry's products, particularly light engineering goods such as fans and sewing machines, have in the recent past made great inroads into international markets and they have in fact captured some ground in Latin American countries and other industrially advanced countries in the Western hemisphere. A recent survey has also spot-lighted the immense scope for exporting engineering goods to East African countries and the Middle East.

But as Mr Anil Kumar Bhattacharya, the Chairman of the Council, has stated, engineering undertakings are experiencing serious difficulties in securing an adequate supply of raw materials and coke, and the transport bottleneck is causing considerable delay in the movement of raw materials and finished products. Though there had been a slight improvement in the supply of iron and steel in many sections the industrial units are experiencing difficulties in getting inch sections and some special sections. While these factors urge speedy action for enabling the undertakings to work to their full capacity the need for exploring all possible venues abroad for our products should not be forgotten. The present national crisis when top priority is accorded to defence there is likely to be a deterioration in supplies of raw materials to engineering units. Though the exact impact on these manufacturing units cannot be presaged at this juncture there are bound to be repercussions on the production schedules which will result, as in the 1961-62 season, in failure to fulfil the target. Mr Bhattacharya's suggestion to form a consortium for submitting joint quotations in the export market needs special consideration as it can eliminate needless competition among the domestic interests. Allocation of more wagons, supply of necessary raw materials and other incentives like a downward revision of freight rates need to be provided to the engineering industry in order that it may compete favourably with other exporting countries in the international markets.

Indo-GDR
Agreement

The renewal of a long-term trade and payment agreement between India and the German Democratic Republic for another year confirms the unflagging enthusiasm in developing and stimulating trade relations and co-operation between the two countries. The negotiations held last month have resulted in agreement on 1963 reciprocal goods deliveries as well. Even a cursory glance at the facts and figures dealing with the goods exchange between the parties in the recent past will reveal the mutual benefits that have accrued to them. The exports from the GDR to India fall under the category of productive equipments like machine tools, printing and textile machines and products of the electric, electro-technical, precision-mechanic and optic and chemical industries. In return India delivers jute products, spices, nuts, iron ore, mica products, tobacco, tea, coffee, albuminoid fodder and the like. The GDR has, during the past, been adjusting its export programme to the requirements of the Indian economy to a commendable range. This apart, for the extension of technical collaboration to acquaint Indians with products of the GDR it has been envisaged to organise exhibitions of selected branches of its industry, for instance, electro-technics, in the coming year.

Regarding imports from India the GDR has greater consideration for India's export potentialities for which reason alone new items like electric batteries, tinned fishes, linoleum, etc. were included in the 1962 schedule. And for the first time the import of major quantities of engineering goods has been envisaged for 1963. With a view to popularising Indian products in the GDR, India's participation at the Leipzig fair will be of immense advantage.

Exports to and
Imports from
UK Fall

Figures of Indo-British trade for the first nine months of the current year show a disturbing decline in Indian exports to the UK. Exports during January-September 1962 were only of the order of £95.77 million while during the corresponding period of last year they were valued at £106.15 million. With the exception of oilseed cake and meal, which shows an increase in exports from £7.97 million to £10.41 million, all the other principal items registered a fall. Notable among these are tea (from £41.19 million to £35.96 million) cotton yarns and woven fabrics (from £10.74 million to £7.75 million) and leather and

leather manufactures (from £8.44 million to £6.98 million). Among other important items, tobacco recorded a decline in exports to £8.06 million from £9.20 million. Considering that total exports to the UK during the full year 1961 amounted to £144.93 million, there does not appear to be even a remote chance of reaching this level during the current year. Mainly the fall in exports would seem to reflect the effects of the uncertainty created by the intended move of the UK to join the Common Market.

On the side of imports, there has been a notable fall in Indian offtake, the total in the first nine months of 1962 being valued at £86.07 million against £123.34 million in the corresponding period of 1961. The magnitude of the decline at £37.26 million is larger than of exports which in the first nine months showed a drop in value by £10.37 million. Most of the principal items of imports from the UK have recorded a fall, machinery other than electric and chemicals alone constituting the exception. Two major items to show steep declines in imports are iron and steel and road vehicles and aircraft. Imports of iron and steel dropped from £10.07 million to £6.77 million and of road vehicles and aircraft from £11.75 million to £8.45 million. Among others petroleum and petroleum products declined from £2.28 million to £1.58 million and of metal manufactures from £4.25 million to £3.26 million. Significantly enough imports of machinery with the exception of electric machinery show no marked variation. Total figures under this head show an overall decline of about £2 million for the first nine months of 1962. But imports of individual items have shown divergent trends. A notable increase has been registered in respect of aircraft engines and of textile machinery. Against this, imports of electronic and nuclear valves etc and other mechanical handling equipment have gone down in the first nine months of this year. The fairly stable level of machinery imports is a feature that goes to prove that in pruning down imports in the interests of foreign exchange saving, the Government has been aware of the crucial significance of machinery imports for sustaining development efforts.

UK
Exports at Record
Level

Britain's exports in October were a record, the Board of Trade announced in London on 14 November. The value of exports was £336,000,000—but imports also rose to a total of £393,000,000. Both figures are seasonally adjusted. The recorded export and import values are £346,700,000 and

£413,100,000 respectively, but the adjusted figures are the more reliable because they bring out the underlying trend. These provisional figures suggest that British exports are still on an upward trend.

BONUS
EAI's Views

A comprehensive picture of the numerous aspects pertaining to thorny problem of disbursement of bonus to the industrial employers is embodied in the Engineering Association of India's (EAI) memorandum submitted to the Bonus Commission in response to its questionnaire circulated among the various associations and vested interests in the country. The bonus issue has been a focus point which has let loose innumerable wrangles in which various interests, notably political parties, strive to create a muddled outlook and thus fish in troubled waters. Even though several norms of bonus disbursement, by their customary usage, have been interwoven into the industrial fabric, the conspicuous absence of an accepted standard is a glaring lacuna which needs immediate rectification. Predictably enough, the Bonus Commission has been constituted with a view to arriving at a mutually acceptable standard after hearing from the interested parties. It should be noted that though two memoranda from the AIMO and the Council of Indian Employers have preceded this, the EAI's views will also add much light on the topic.

The Association has emphatically stressed that since the payment of bonus related to profits will not serve as a propelling force for improved productivity the present practice should be replaced by a system interrelated to productivity/efficiency. In a developing economy like ours, and particularly in the context of emergency created by Chinese infiltrations in our soil, stepping up production is vital. The aim should, therefore, be to augment production and productivity by means of introducing an acceptable system of payment, while keeping in view labour's claim for a share in profits. As far as the engineering industry is concerned, it is well set for a great leap forward; with its pivotal role in India's rapid industrialisation, an early settlement of this issue will be most welcome which will eventually result in improved efficiency, lower costs and greater competitive stability. As due credit has to be given for the time element an immediate switch-over to another formula, in utter disregard for the present practice in vogue, will be a harsh step. In the interim period, the memorandum suggests that the Full Bench Formula, with relevant improvements, will have to be permitted to govern all payments.

PLANTATIONS
The UPASI
Brochure

The United Plantations Association of South India has, in a recently published booklet, presented to the general public in a compendious form, with apt charts and illustrations, factual information on the various facets of plantation economy and its vital role in earning foreign exchange. But the statistics are somewhat outmoded in the sense that the latest available relate to 1960. It is nevertheless a useful publication and the major plantation products (tea, rubber and coffee) are dealt with in great detail. Out of the total acreage under tea of 429,154 hectares approximately 22.5 per cent or 73,980 hectares are in South India. It is distributed among the three States of Kerala, Madras, and Mysore in the following manner:

		Hectares.	Percentage of South India.	Percentage of India.
Kerala	...	39,693	53.6	12.1
Madras	...	32,484	43.9	9.9
Mysore	...	1,803	2.5	0.2

In recent years there has been a considerable improvement in the area under tea in South India, the rise being nearly 28.0 per cent in thirty years. There was a sizable rise in output to the extent of nearly 216 per cent. The per acre yield also looked up smartly from 646 kilos per hectare in 1930 to 1,085 kilos per hectare in 1960. In 1900 South India exported 2.2 million kilos of tea which in 1950 went up to 36.3 million kilos. Another fact to be noted is that the tea tea plantations are employing nearly 200,000 persons.

The area under coffee rose to 124,000 hectares in 1960-61 from 73,010 hectares. Production also moved up from 18,173 tonnes to 67,550 tonnes. The area under coffee in India is as follows:

		Area in Hectares	Percentage of total Indian Coffee Area
Kerala	...	19,321	17.5
Mysore	...	64,959	58.9
Madras	...	25,801	23.5
Other States	...	114	0.1

As far as rubber plantation is concerned 94.3 per cent of the total area under rubber is concentrated in Kerala while 4.4 per cent is in Madras, 1.2 per cent in Mysore and 0.1 per cent in other States of the Union.

DCM
Considerable
Progress

Speaking at the annual general meeting of the Delhi Cloth and General Mills Co Ltd, Lala Bharat

Ram, its Chairman, has outlined the considerable progress that has been made by the various units constituting the company. The work of modernisation and renovation of the textile mills goes on apace: the new waste plant replacing the old one is expected to be in production in the course of the next few months while spinning capacity is to be increased by an additional 23,000 spindles. Cotton textile exports have been maintained, and during the current calendar year exports are expected to record a sizable rise in view of the decision of the cotton

textile industry as a whole to export 12½ per cent of mills' output. The crushing capacity of the sugar mills is to be increased while the department concerned with designing, construction and erection of chemical plants has already completed some units. This section is to be further expanded to cover all types of Chemical plants. The PVC project is progressing well and foreign exchange has been arranged for the Tyre-cord project.

Lala Bharat Ram has devoted the best part of his speech to the national emergency. He has made some valuable suggestions for

harnessing the grim resolve of the people to throw the invader out of our territory. He has rightly pointed out that in the tremendous enthusiasm, some important aspects of the economy should not be allowed to be clouded. The earning of foreign exchange has become doubly urgent now because we have to import large quantities of arms and equipment and industrial raw materials. It needs to be emphasised that the enormous strength that we have to muster to meet the ruthless invader can truly be attained only when production picks up as never

LET US TAKE A WALK

Toughies 11.95-15.50

Ava 12.95

Comfort 24.95

Bata

Now let's take a deep breath, and go forth into the open air. Now for the open road, the world out of doors, source of all health and pleasure. Surely there's no more healthy and enjoyable pastime than walking. And to keep on walking, two feet deep in comfort, in a pair of Bata shoes.

before. Increased production is needed not only to bring down the internal price, but also to expand our exports which alone will bring in the additional foreign resources needed by the nation. Lala Bharat Ram has done well to stress the need for reducing the demand for foreign exchange for the import of essential raw materials by making strenuous efforts to find out indigenous substitutes. And import substitution will also have the very desirable effect of stimulating new industries.

DEVELOPMENT Flow of Long-term Funds Rises

The outflow of long-term capital and official donations from the developed private enterprise countries to the less developed countries rose substantially from \$5.2 billion in 1959 to \$6 billion in 1960, and to a new peak of \$7.2 billion in 1961.

This trend is indicated by data presented in a United Nations report on the international flow of long-term capital and official donations in 1959-61.

The report adds that, as in the past, the United States was the largest contributor of funds to the underdeveloped countries, followed by France, the Federal Republic of Germany and the United Kingdom.

This report on the economic development of underdeveloped countries, "The International Flow of Long-Term Capital and Official Donations, 1959-61," is the second major report to be prepared on the new basis adopted by the General Assembly in 1957 calling for a major report every three years and interim reports in intervening years.

The report consists of two parts, with the first part indicating the extent of progress reached in the aim to increase the flow of international assistance and capital to underdeveloped countries. The

second part represents the second major or triennial survey on the international flow of private capital.

The report points out that the flow of long-term funds to the underdeveloped countries is estimated to have risen from the equivalent of 0.6 per cent of the combined gross product of the developed private enterprise countries in 1960 to 0.7 per cent in 1961.

While some part of this rise represented their increased contributions to international institutions, notably capital subscriptions to a number of newly established multilateral lending agencies, the major part was accounted for by bilateral transactions with underdeveloped countries.

During 1959-61, the report points out, average annual aid commitments by the centrally planned economies to underdeveloped countries amounted to over \$1 billion. These were substantially higher than those of earlier years. Although commitments in 1961 were somewhat smaller than in 1959 and 1960, the actual flow of funds to underdeveloped countries, under existing agreements, can be expected to remain substantial for some years to come.

The report further notes that the public sector has become increasingly important as a source of developmental funds for underdeveloped countries. In 1959-1961, official donations and loans, inclusive of capital subscriptions to international institutions, contributed on the average 30 per cent of the total net flow of long-term funds from developed private enterprise countries.

Official donations alone accounted for well over half of this total, although their share tended to decline during the three-year period in favour of that of official capital. The relative share of private long-term capital in the total showed wide year-to-year fluctuations during these years.

The report points out that the flow of long-term funds into underdeveloped countries in 1959-1960 contributed about 16 per cent of the total supply of foreign ex-

change available to them. The contribution was largest in South-East Asia, where it amounted to almost 25 per cent.

In the Middle East, Latin America and Africa the contributions were 18.12, and 7 per cent respectively. However, the growing inflow of long-term capital increased to some extent the burden of interest and dividend payments of the underdeveloped countries as a group. In 1960 such payments absorbed 10.7 per cent of the total supply of foreign exchange.

In reviewing the development of flows of private long-term capital since 1958, Part II of the report points out that the average annual net flow from the major private capital exporting countries during the years 1958-1961 exceeded the average for the decade of the nineteen-fifties. However, the net outflow declined sharply from 1958 to 1959 and remained well below the 1958 level in subsequent years.

AVIATION Avro 748's Tour of India

The first-built Avro 748 Series II turbo-prop aircraft—the type which, in a few years, will be flying on most of India's internal airline routes—has just returned to Britain after a demonstration tour of India.

The Series II Avro 748 is a more powerful version of the Series I being built in Kanpur for India's defence services. The civil airline aircraft will also be built in India.

During the visit the aircraft was demonstrated to the Indian Air Force from high altitude airfields—some of them well over 5,000 feet—in the north-west of the country.

Officers who saw the demonstrations were said to have been greatly impressed by the short take-off capabilities under conditions which the pilots described as "shocking" and "most difficult".

While the aircraft was on tour in India, the Series II version was granted its official certificate of airworthiness, and the first production aircraft was handed over to a Brazilian airline. The latter is the first of a Brazilian order of six.

SNIPPETS Roche

The formal inauguration by Mr Y. B. Chavan of the Rs 2 crores chemical plant of the Roche Products Limited at Balkum, Thana, Bombay constitutes a significant landmark in the country's fight against malnutrition. Nutritional standards in India are deplorably enough still at low levels and the explosive population growth, demands greater efforts in future.

In the circumstance, the Roche plant incorporating the most modern techniques of production with an annual capacity of 10 mega million international units of synthetic vitamin A is of absorbing interest and there is a possibility of reaching the Third Plan target in synthetic vitamins. The utilisation of domestic raw materials for the production of synthetic vitamin A by this plant augurs well for ensuring abundant supplies of this essential vitamin, demand for which from the pharmaceutical, vanaspati, food processing and animal and poultry feed industries is mounting rapidly. Considering the strategic importance of vitamin A in the development and maintenance of national health and in the fortification of animal feeds, the plant's contribution will be significant. The saving of foreign exchange to the tune of Rs 1 crore per annum by the indigenous manufacture of this essential "component" is another notable attraction.

Manufacture of Formica in India

Formica International Limited, a member of the De La Rue Group, announced last week in London the formation of Formica India Limited, which will undertake the manufacture in India of industrial and decorative laminates in collaboration with the Bombay Burmah Trading Corporation Limited.

The issued capital of the new company will be Rs 1.5 crores (£1,125,000). Formica International holds 50 per cent of the shares of Formica India Ltd.

MACHINE TOOLS

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 23 leading member-firms during the month of September 1962 was as under:—

Description of Machine Tools Manufactured	Quantity Nos.	Value Rs.
Lathes	306	38,84,075
Milling Machines	49	22,00,000
Portable Tools	2,038	6,82,958
Radial Drills	25	6,55,000
Portable Air Compressors	16	4,95,877
Drilling Machines	105	2,94,209
Regulators	1,812	2,83,230
Planing Machines	6	2,31,716
Shaping Machines	23	2,75,690
Blowpipes	789	1,76,480
Capstan Lathes	3	1,05,000

Total	7,595	98,71,871

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

TO misquote Virgil, "I fear the Chinese even when they bring gifts." Exactly what they are up to with their latest overtures of peace is difficult to say but whatever it is, it bodes no good to India. As I write, the proposals lack official status being no more than a handout to foreign correspondents. The audience gives the clue to the purpose of the stunt—the ensnaring of world opinion by a show of reasonableness that cloaks sundry diabolical designs. Ostensibly, the Chinese are planning a unilateral cease fire as from the midnight of Wednesday; this is to be followed by a withdrawal "to positions twenty kilometres behind the lines of actual control which existed between India and China on 7 November 1959". This withdrawal, curiously, is not to start immediately but from 1 December 1962. The trap is obvious enough from the time-lag of ten days between the "cease fire" and the beginning of the withdrawal. That is the respite the Chinese need for the next leap forward, and reciprocal inactivity (which is plainly expected) will secure it. Once ready, any trumped-up excuse will do to start the offensive well before the deadline for withdrawal. Even if the withdrawal takes place, "checkposts" are to be set up on the Indian side of the "line of actual control". These can be expected to find all the occasion they need to start a fight.

As for the substance of the proposal, apart from the importation of confusion by the bringing in of yet another date (viz. 7 November 1959) there appears to be no advance over the offer made by China on 24 October which was rejected by India for reasons that should be obvious to the meanest intelligence. But this persistence in the same offer with variations calculated to confuse is characteristically devious. The proposal of 24 October spoke of withdrawal by both sides of twenty kilometres behind the line of actual control at a time when the Chinese had moved 40 to 60 kilometres into India from where they were at the beginning of September. This was hardly acceptable to India. Mr Chou En-lai explained in a letter on 4 November what he meant by his earlier proposal. According to him, it would involve in the eastern sector the Chinese moving "in the main" to the "so called McMahon line." How this was worked out is not clear, but this elucidation was muddled by

another part of the letter in which Mr Chou said that the "return to the boundary prior to 8 September was unfair and pregnant with the danger of border conflict and hence should not be restored." It is not clear whether this reluctance to go back to the positions on 8 September was only in regard to Ladakh and not in regard to the eastern frontier. If it were, there was no reason why the Chinese didn't say so. Indeed, the farthest that Mr Chou went in his letter of 24 November in respect of the eastern frontier was that the Chinese would move "in the main" behind the "so called McMahon line." Since the Chinese draw the McMahon line differently, this appears to suggest that they would still be not where they were on 8 September.

The latest offer pretends to be at once a repetition of the old and an improvement on it. The element of confusion introduced, in so far as it relates to the eastern frontier, arises thus: the Chinese are, according to the latest note, to withdraw twenty kilometres farther back from the "illegal McMahon line." In consequence, it is claimed that "they will be far beyond their positions prior to 8 September." This seems to meet the Indian demand at least as far as the eastern sector is concerned. But if this was really the intention of the Chinese, why was it that Mr Chou's elucidation on 24 November said that they would move "in the main behind the McMahon line" and why did he protest that the demand to move to positions as on 8 September was unreasonable? One can only conclude that the purpose of such equivocal elucidations, one part of which cancels out another, is to addle world opinion which is already bewildered by the news. The Chinese have also provided escape routes even as they were self-righteously waving their latest peace proposals: they have reserved the right to hit back and to police the area they will evacuate. Look at it whichever way you like, it is a trap, for which there are theoretical sanctions in Mao's writing and practical precedents in past Chinese behaviour.

Is Pakistan waking up at last to the true proportions of the Chinese menace? There is some evidence that it is. President Ayub Khan was at first reported to be of opinion that India was exaggerating into the dimensions

of a war what were merely border skirmishes. This may have been an honest, though, as events have since shown mis'ake, appraisal. On this premise and in the background of Indo-Pakistani relations, it was only tragically plausible that India was making this an excuse for arming itself beyond its true needs. And who, except Pakistan, could be the target? I for one wouldn't be too quick to take umbrage at such unworthy reflections on us considering that we ourselves have been entertaining precisely the same thought in reverse about military aid to Pakistan. Again, it can only be human if President Ayub derived a certain schadenfreude at our predicament. Were we not rather brusque about his proposal, some two years ago, of joint defence of the Himalayas?

Despite all this, we would have had a more sympathetic neighbour in Pakistan (at least at the official level) if there hadn't been some clumsy slipping up in staff work. This led to the misfiring of the initiative taken by the US and Britain in bringing about, if not a reconciliation, at least a detente, between India and Pakistan. Not quite enough allowance was made for appearances and the premature announcement of unofficial assurances (which had to be denied as a matter of course later) were played up by interested politicians and (more sadly) the Press. The military aid to India was obviously

worrying Pakistan, though God knows we have too much trouble with China for us to take on Pakistan also. There may also have been some idea in some Pakistani circles of exacting concessions on Kashmir from India as a price for letting us fight China unhampered by threats from Pakistan. And in the lunatic fringe, there are some whose hatred of India is pathological. These have even suggested that now that the US has befriended India, Pakistan should align itself with the communists.

But, as I said, there is some evidence that responsible opinion in Pakistan is changing. President Ayub Khan must have since modified his military assessment of the Chinese attack on India. Declaration of a State of Emergency in Pakistan is reportedly imminent and seasoned politicians like Chaudhury Khaliq-uz-zaman have shown a better appreciation of what is at stake in India's heroic resistance against Chinese aggression. He is reported to have said that he agreed with Mr Nehru's reading of the Chinese invasion of India as "a historic event full of dangerous possibilities." Other Pakistani voices have also risen above the din. Perhaps an official gesture from Delhi would be an excellent idea, despite preoccupation with the defence effort.

Post Script: News from Pakistan since I wrote these lines suggests that the straw in the wind I thought I noticed was really something I was clutching at in the rather desperate hope (which never quite dies in my heart) of Indo-Pakistani reconciliation. What a pity!

(From Our New Delhi Correspondent)

Industrial Mobilisation

After more than a decade of planning and plan publicity, the public is hardly likely to react with enthusiasm to announcements about projects which are expected to be completed at some indefinite date in the future. At the present juncture when all eyes are on NEFA, such announcements will be particularly annoying. However, as the US Ambassador stated here last week, weapons in themselves were rarely decisive. They have to

be supported by the organisation of manpower, supplies, and industrial production. It has now become clear that the fight to throw back the aggressor will be a long-drawn affair. Even if it becomes possible to end hostilities in a short period, the state of preparedness will have to be maintained. The Chinese attack on NEFA has brought about a change in the direction of the country's economic development which is irreversible. All the resources of the country have to be mobilised for the war effort and to strengthen the defence potential.

Government has already announced measures for the mobilisation of monetary resources as well as the outlines of the programme for holding the price line. The lines on which development projects in the State sector have to be rephased have also been indicated by the emergency session of the NDC. The Planning Commission is now engaged in finalising a new list of priorities for industrial projects directly related to the war effort. What remains to be done is to draw up detailed production schedules for existing industries in the private and public sectors and to plan ahead to provide the facilities and resources to carry out the schedules. There has been some speculation about the scope of functions assigned to the newly set-up Ministry of Defence Co-ordination. The drawing up of the detailed schedules of production and supplies, co-ordinated with the defence requirements, will be the first task that will be taken up by the Ministry.

The recording of priorities that

has now become necessary will increase the immediate requirements of foreign exchange, for in many cases, the priority assigned to a project in the Plan was determined by the ready availability of foreign exchange. Many programmes of direct importance to defence production have been delayed pending arrangements for the necessary foreign assistance. The full utilisation of existing industrial capacity will also add to the requirements of free foreign exchange. This problem will be discussed with the World Bank Mission which is now in the city for detailed talks on foreign aid requirements for the third year of the plan. The question of economic aid in general is also being discussed with the four-man team of US Senators which has come for an on-the-spot assessment of the situation facing the country. The suggestion has been made that it would be helpful if aid earmarked for particular projects could be switched over to other projects of greater urgency in the present context, and if a part of the aid promised is made available for import of materials required by industries engaged in defence production. It is felt that, at the present juncture, the request for "untied" aid will meet with favourable response from the members of the World Bank Consortium.

In rephrasing the projects, the Planning Commission, it is understood, will accord priority to the completion of projects for the manufacture of metals, ferrous and non-ferrous, machinery and electrical and electronic equipment. New projects for production of metals like magnesium, titanium, zirconium, etc. will also be included in the Plan. In this connection, the information given by the Minister for Heavy Industries in the Lok Sabha last week about the progress of utilisation of licences issued for development of machine tools, small tools, ferro-alloys, alloy steel, etc., is some interest.

Utilisation of Licences

Out of the total of 162 licences issued for the manufacture of machine tools, "effective action" to implement the schemes has been taken by the licencees in 140 instances. The largest number of the licences have been issued and are being implemented in Maharashtra and in West Bengal. In the former action has been, or is being, taken by the parties to implement the schemes in the case of 61 licences and in West Bengal in the case of 37 licences.

The necessary steps to implement licences have also been taken in respect of 79 out of 127 licences issued during the same period for the manufacture of small tools and in respect of 17 out of 20 licences issued for manufacture of alloy steel. The position is not equally satisfactory in regard to ferro-alloys. Three out of five licences for ferro-manganese, four out of five for ferro-silicon, both the licences for ferro-chrome and the one for ferro-molybdenum and ferro-vanadium remain unutilised. The Minister also added that, out of the total of 83 licences that have not been utilised, 28 were issued only recently,

THE BANK OF INDIA LTD.
T. D. KANSARA, General Manager

B/C/133

and that it was too early to expect their implementation. The progress made by the licencees in implementing the schemes sanctioned is being watched and whenever they fail to take effective steps within the time specified therefor, a show cause notice is issued to them. Replies received from the licencees, the Minister said, would indicate that among the reasons for non-utilisation are lack of interest on the part of the licencees, inability to raise the required capital, failure to secure suitable technical and or financial collaboration from abroad paucity of foreign exchange for import of capital goods from free sources. Import licences could not be issued in ten cases for import of equipment due to the paucity of foreign exchange.

In answer to another question the Minister indicated that adequate capacity for achieving the production target of Stainless Steel (50,000 tons) had been covered by the proposals already approved including capacity in the public sector. The proposals that have been approved include the scheme of Messrs. Vumidiars (Mfrs) Private Ltd., Madras, for a 7,000 ton plant to be set up in Madras, and the scheme of Messrs. V.H. Shah, Bombay, for a 10,000 ton plant at Vatva, near Ahmedabad.

Minor Irrigation

In the proposals considered by the emergency session of the NDC for increasing agricultural output, considerable stress was laid on the expansion of the minor irrigation programme. The State Governments had already been asked by the Centre to review the programmes included in the state plans, rephrase them for accelerated action and to indicate what additional programmes they could take up during the remaining period of the Third Plan. They were also asked to forward specific proposals before 20 September for extra allocations that they would be in a position to utilise during the remaining months of the current financial year. Mr A. M. Thomas, Deputy Minister of Food, informed the Lok Sabha last week that proposals had been received from eleven State Governments for extra allocations totalling Rs 968.02 lakhs. Considering the past performance of each State Government and its programme for the current financial year, the Government of India has so far made additional allocations to the tune of Rs 593.15 lakhs to the various State Governments. The Governments of Uttar Pradesh and West Bengal have intimated that they do not need any additional allocation during the current financial year, while no reply has been received from the Governments of Madras and Jammu and Kashmir.

Indo-German Agricultural Project

The inauguration of an Indo-German Agricultural Development Project at Mandi (Himachal Pradesh) synchronised with the Prime Minister's birthday. The German Ambassador, who called on the Prime Minister to convey the greetings of

the Government of the Federal Republic of Germany, said that there were many instances of Indo-German co-operation in other spheres, but this project, was the first in the field of agriculture in which German experts were working with their Indian counterparts. The Ambassador expressed the hope that India would soon get rid of the menace on its frontiers and that the new joint Indo-German Project would make a substantial contribution to its economic development. Mr Nehru said that he was exceedingly happy to receive this birthday gift and acknowledged the valuable assistance which the Federal Republic of Germany had given to India.

The Mandi Project, which will follow the pattern of the Package Programme, is based on an agreement entered into between the Governments of India and the Federal Republic of Germany on 14 May, 1962. In accordance with the terms of this agreement, the Government of the Federal Republic of Germany undertook to provide an advisory service as well as other

auxiliary equipment and machinery for the implementation of this project. The first group of seven advisers and technicians arrived at Mandi on 25 October, bringing with them by road from Bombay the equipment needed for the first phase of this development project. The development activities will include better soil management and practice plant cultivation and plant breeding, fruit and vegetable growing, plant protection and pest control animal husbandry and dairying, poultry farming and pig breeding and development of services for marketing, storage and processing on a co-operative basis.

INDUSTRIAL DEVELOPMENT POTENTIALITIES IN TIRUNELVELI DISTRICT

The Small Industries Service Institute, Madras recently carried out an area survey of the Tirunelveli district of Madras State to determine potentialities for industrial development.

The district is rich in natural resources like agriculture, forest, minerals and marine fish to support development of industries. These resources have not yet been fully exploited for industrial purposes. Other facilities necessary for the development of industries like availability of power, good transport, technically trained labour, factory space and entrepreneurship and capital are available in the district.

Industrial which are reported to have bright prospects are potassium chloride and magnesium carbonate, anhydrous calcium sulphate, calcium carbonate, rice bran oil, boat building, wooden bobbins, shark liver oil, and items to be manufactured from chanks. Amongst the existing industries, lacquer, toys and foundries are recommended for further expansion.

The importance of this district is likely to grow with the development of the Rs 5-crore Tuticorin harbour when industrial development is expected to be faster.

The Tata Iron and Steel Company, Limited

Statement of the Chairman

The following statement by Mr. J. R. D. Tata, Chairman of the Tata Iron and Steel Company, Limited, dealing with Company's working for the year ended 31st March, 1962, has been issued to shareholders. The Annual General Meeting of the Company will be held on Thursday, the 13th December, 1962 at 4-30 p.m. at the Birla Matushri Sabhagar, 19 Marine Lines, Bombay 1."

To the Members,

This statement comes to you at a time of national emergency created by the Chinese invasion of India, when our own problems and difficulties must be viewed against this background of war and peril to our country. Whatever our differences with Government may be in regard to their attitude towards our industry and although we may disagree with some of their economic policies, I am sure we are all agreed that, as in previous emergencies involving the country's security, the Company should offer unstinted co-operation and assistance to Government in the prosecution of the war effort.

2. The year under review was dominated by the Tariff Commission's Inquiry and Report and Government's orders thereon. The main features of both have been explained in the Directors' Report. We are mainly concerned here with the reduction which Government have effected, unjustifiably in our view, in the retention prices recommended by the Commission. In this context it is important to bear in mind that the Commission's Inquiry and recommendations related exclusively to a two-year period which had already elapsed by the time the Commission reported. One would have therefore expected that here, if ever, was an occasion when Government could hardly disagree with the Tariff Commission since the Commission's recommendations were based not on estimates, theories and assumptions relating to a period still in the future, but on actual known figures, facts and conditions about the truth and reality of which there could be no argument.

3. After nearly five months of cogitation, Government not only disagreed with some of the Commission's principal findings but even reversed their own previous decision and instructions to the Commission on the important question of the repayment of the special advance.

4. The changes made by Government resulting in a total reduction of Rs. 27.50 per ton in the average retention price recommended by the Commission for

the two years 1960-61 and 1961-62, are explained in paras 12 and 13 of the Directors' Report. The most serious change has been in regard to the provision for depreciation and return on gross block. Government rejected the Tariff Commission's view that, for purposes of calculating the incidence per ton of depreciation and return, an output of saleable steel at a rate of 90% of capacity was reasonable. Apart from the fact that it normally takes several years to overcome "teething" troubles and train staff in the use of new equipment and techniques, before so complex a unit as a new steel plant can be made to operate smoothly, the additional handicaps imposed on the steel companies by the conditions prevailing in the country were so serious that, if anything, the Commission was unduly severe in adopting a rate as high as 90% as a basis for their calculations. Yet Government, although well aware that the inability of the steel plants to make more steel was largely due to the appalling quality of unwashed market coal allocated by the Coal Controller and the deficiencies in transport, for both of which they were themselves mainly responsible, decided that the steel plants should have worked at 100% of capacity during these two years and deserved to be penalised for not having done so. Government accordingly reduced the retention prices on that account by Rs. 16.5 per ton which cost our Company Rs. 4 crores over the two-year period, and thus unfairly deprived both the steel companies of the full depreciation and return prescribed by the Commission. (This action, coupled with the Minister of Steel's subsequent speeches or statements at Press conferences in which he equated with inefficiency the industry's failure to achieve 100% performance, was particularly hard on our Company which has had to struggle against heavy odds during and after the last World War, and which undertook, at considerable risk, a crash programme of expansion at the express request of Government.

5. Government, according to their resolution dated 7th September 1962, also excluded from the capital block the Special Advance made to the Company between 1954 and 1956. This must mean that in Government's view Rs. 10 crores worth of physical assets should earn no depreciation, let alone a return, on the ground that their cost was initially met from a Government advance. Apart from its unfairness, such a view ignores the obvious reality that plant and machinery are subject to

wear and obsolescence, irrespective of the manner in which they were originally financed, and that failure to provide depreciation would clearly be contrary to sound principles of accounting and financial management.

6. In justifying the reduction in the provision for interest on working capital, Government, according to a statement by the Minister as reported in the papers, based their decision on the assumption that the Steel Companies enjoyed the benefit of large interest-free deposits from customers and of large arrears of surcharge not paid into the Iron and Steel Controller's Equalisation Fund. This assumption is totally incorrect in both respects. Advance deposits which are taken only against so-called "bazaar" indents have at no time exceeded a crore, while our dues to the Equalisation Fund were at the end of July 1962 only about Rs. 2½ crores and not Rs. 12 crores as the Minister is reported to have stated in Parliament.

7. Government's reversal of their previous decision that the retention price should include an element for the repayment, with interest, of their Special Advances in terms of their agreements with the two Companies is disturbing although it may not immediately affect our financial position. However, their announcement that, as an alternative, they are considering the possibility of a part of special advances being repaid out of fresh capital, raises fundamental issues of grave concern to the Companies and their shareholders. This is not the occasion for me to discuss the legal aspects of the matter, but I am sure shareholders will be relieved to learn that the Company has informed Government that an issue of fresh capital would be unthinkable in the present circumstances and, for a number of cogent reasons, would be unacceptable to the shareholders whose consent would be required for the purpose.

8. In our representation to Government we have pointed out that the low retention prices fixed by them, if maintained in the future, will seriously affect our ability to finance the heavy commitment which Government themselves have asked us to undertake to double our coal output in the Jharia Field. The whole of the cost of this project, if it ultimately materialises, will have to be financed from borrowings, including a further loan from the World Bank to meet the foreign exchange cost. Our capacity to service and repay such fresh borrowings in

addition to our existing loans must obviously depend on the resources we are able to raise over the years from retained earnings.

9. If the steel industry of the country in both public and private sectors is to remain healthy and to make its full potential contribution to the security of the country, it is imperative that it be ensured the wherewithal to finance the continuous process of replacement and development essential to maximum production and efficiency.

10. We do not ask for favours at the expense of the consumer or the taxpayer, nor do we expect that prices fixed by Government should reward inefficiency, but we do ask that a more realistic account be taken of the conditions under which the steel industry is compelled to operate in India and, particularly, of the shortages and deficiencies in raw materials, transport and other factors over which it has no control.

11. I regard with dismay Government's growing propensity to brush aside the carefully calculated and reasoned recommendations of the Tariff Commission, which consists of 'men of ability and standing who have shown capacity in dealing with problems relating to commerce or industry or in administration'—to quote the relevant section of the Tariff Commission Act, 1951. I do not suggest of course that Government should automatically accept every recommendation of the Commission, but I do urge that their advice should be set aside only in the most exceptional circumstances and for the most convincing reasons. From a speech made by the Minister for Steel to the Committee of the Indian Merchants' Chamber in Bombay, it would seem that Government consider the Tariff Commission and their approach as completely out-dated and that some other method of fixing prices should be evolved. As the only practical alternative I can see would be for the Ministry concerned to determine prices at its sole discretion and thus become the exclusive arbiter of an industry's destinies, one cannot but view with alarm this indication of Government's intention to scrap the long-standing and salutary practice of seeking independent and impartial advice in fixing prices in major controlled industries. In a planned and controlled economy such as ours, it is only by exercising restraint in the use of their enormous economic powers that Government can retain the confidence of the people in the fairness and impartiality of their policies and actions.

12. Before I close, I cannot, in fairness to the Company, leave

unanswered the criticism voiced by the Minister for Steel, that the Company's expansion programme was originally estimated to cost Rs. 66 crores but had actually cost Rs. 120 crores. In my statement to the shareholders two years ago, in answer to a similar criticism, I gave the true facts, of which Government should therefore be well aware. The estimated cost of the two million ton programme, as accepted by the World Bank in 1956, was Rs. 95 crores. The actual cost including subsequent additions and modifications was about Rs.

110 crores. Excluding about Rs. 6 crores of expenditure arising from subsequent increases in import duties and manufacturers' escalations, over both of which the Company had obviously no control, and additional purchases of spare parts decided upon for the sake of added safety, the total excess came to about Rs. 9 crores, equivalent to only 10 per cent, over the estimates, a remarkably low figure of excess for a project of such magnitude and complexity. It is somewhat disheartening to find that the Steel Minister should have been provid-

ed with such incorrect data despite the fact that correct information was available to Government.

13. The tenor of this Statement may sound out of tune with my opening remarks but its main purpose is to clear the air and set the record straight. Having done so, I can assure Government of the Company's unstinted support and cooperation in the Defence effort. We fully realise the importance of steel production to a country at war. In the grievous and complex tasks ahead, we place our-

selves, our staff, our technical and human resources and our long experience of the steel industry at the disposal of Government in the furtherance of the country's total war effort.

J. R. D. Tata.

Chairman.

Bombay, 8th November, 1962.

The above statement is not a document purporting to be a report of the proceedings of the Annual General Meeting.

Markets

JUTE Wide Price Fluctuations

HEAVY fluctuations marked trading in the jute goods market this week. Starting on a fairly steady note, the futures market encountered heavy pressure around midweek mainly because of speculative activity in the futures market. Presumably the news of the continued advance of the Chinese Army in the Nefu was responsible for the near panic conditions noticeable on Monday and in early trading on Tuesday. B Twills November futures receded to a low of Rs 115.05 before slightly recovering to Rs 115.45 on Monday although at one time in the day it was done as high as Rs 118.10. The worst was still to come and Tuesday found the market at the low ebb of Rs 113.30. Before the close of the day's session, B Twills Nov. staged a smart recovery to Rs 116.95. Wide fluctuations, however, continued to mark trading on Wednesday also but further recovery was recorded by close as the quotation was finally placed at Rs 117.50. Fluctuations in hessian were less violent and Hessian Nov. futures touched a low of Rs 55.20 before closing on Wednesday at Rs 56.44.

The earlier weakness of the gunny market, especially sacking, may be partly due to the growing anxiety as regards the declining trend in exports of heavy goods. Stocks of heavy goods have been steadily rising in the past few months and there has been no indication so far of a pick-up in demand. The difficulty of selling sacking overseas is borne out by the figures for goods despatches from mills in October. Last month despatches of sacking from mills for export abroad amounted to only 25,500 tonnes as against 28,100 tonnes in the previous month. Total sacking despatches however were higher at 43,400 tonnes because despatches for local consumption were higher at 17,900 tonnes as against 14,900 tonnes in September. Hessian too had not fared very well: for despatches of hessian for export abroad were at 36,500 tonnes against

39,000 tonnes in the previous month while despatches for internal consumption were higher at 4,100 tonnes against 3,200 tonnes. Total hessian despatches were 40,000 tonnes against 42,200 tonnes in the previous month. Total Despatches of other goods were at 9,300 tonnes as compared with 11,600 tonnes. The grand total of despatches of goods in October was lower at 93,300 tonnes against 96,800 tonnes. It is clear from these figures that despatches of heavy goods for export continue to be disappointing and but for the improved domestic off-take, the problem of mounting sacking stocks would pose an urgent problem. Not that the position is quite satisfactory now. Far from it. The marketmen no doubt expect increased off-take in coming weeks first, on account of government ac-

count for defence needs and secondly on revival of overseas interest. Even so, the problem of the disposal of sacking goods will crop up again when internal off-take comes back to normal. May be, with the growing agricultural and industrial production, internal off-take will show a steadily increasing trend. But since the bulk of sacking production is to be exported measures have to be devised from now on to expand, sacking exports. As the transfer of sacking looms to hessian production has been going on for some time now it may not be practicable to transfer any further sizable sacking looms to hessian. The growing strength of the Pakistani industry with its natural and other advantages constitutes the greatest threat to our sacking exports.

The comparatively steadier trend in later dealings this week is mainly due to indications of revival of overseas interest. Business in woolpacks with Australia has been reported. As for hessian, fresh enquiries have been reported from the US. Burlap Consumption in US in October is higher at 74.5 million yards as compared with 71 million yards in September. The unusually large buying

in the last week of October following the Cuban crisis accounts for the sizable increase in the month end-stocks to 248 million yards from 236 million yards at end-September. The coming months usually record high consumption in US and consequently buying may be well maintained.

The improvement in raw jute noticeable last week has proved to be short-lived. Once again sellers are keen for business even at discounted rates. The reason for this is not clear especially since mills have been asked to complete purchase of 1 million bales of raw jute by the end of the current month. There are however, reports that presumably due to shortage of storage space and some other reasons mills are unable to lift their weekly quotas in full. Even so, there has been steady buying by mills during the past two or three weeks and prices should have stabilised. A probable reason for the return of weakness to the market is that with the improvement in the transport position especially after the personal intervention of the Director of Transport in the Union Commerce Ministry couple of weeks or so ago, there has been a sudden increase in arrivals. This may prove to be a temporary phase as supplies this season are not expected to be unduly large. For according to the final estimate of the jute crop, acreage during 1962-63 is lower by 14.3 per cent at 1.7 million acres. Total available production is expected to be about 5.1 million bales as compared with last year's crop of 7 million bales.

TEA Strong Demand in Mincing Lane

WITH no sign of settlement of the strike of the river steamer personnel, arrivals of tea in Calcutta from the gardens have continued to be on a very small scale. As a result, export freight bookings of tea, particularly for the United Kingdom, are reported to have now dwindled to a fraction at this time of the year and several UK loaders have consequently been withdrawn from Calcutta.

In the London market, the week's price indication for Plain tea is 2sd 6d to 4sh 5d per pound as compared with 2sh 3d to 4sh 2d in the previous week. The good tone of the market continues to

reflect the India-China border fighting as well as the river-boat strike on the Brahmaputra which is now over a month old and has brought traffic almost to a standstill on the main cargo route between Calcutta and Assam. In view of the situation, buyers in London have been turning their attention to plainer descriptions of other origins.

As a matter of fact, there has been no abatement in the general level of demand at the Mincing Lane tea auctions. Among the 76,500 packages put up for sale, the North Indian and other miscellaneous growths were strongly supported. Buyers showed keenness to acquire bright Africans, CTC types from the Dooars and teas from Cachar, Sylhet and Vietnam and the prices of these types showed advances of 3d per pound. Best Assams, particularly those of orthodox manufacture, were in strong demand. Prices, where changed, were in sellers' favour.

Meanwhile, in the Export Sale held in Calcutta this week, offerings were 70,334 packages. Demand was strong, but less general than in the previous week. Plain orthodox descriptions met with useful enquiry and were sold readily at fully firm prices with broken and exportable fannings generally registering advances. Medium OFs were also often dearer. The better liquoring Assam BOPs were irregular and easier with considerable withdrawals. Medium CTC descriptions came to a fully firm market with the better liquoring types and the best Assam Fannings selling at considerably dearer rates. The more fibrous kinds were also sold well as did legg-cut descriptions which quoted dearer.

Whole Leaf grades met with useful enquiry sometimes at dearer levels; but Tippy teas came to a quiet market and these kinds were easier with a number of teas having to be withdrawn. Darjeeling teas

followed a similar trend with the lesser sorts again dearer and the more stylish kinds selling at slightly lower rates. Following rates (per kilo) were quoted:—Clean Plain Pekoe Rs 4.80 to Rs 5.00; Plain BP Rs 4.40 to Rs 4.80; Plain Fannings Rs 4.80 to Rs 5.20; Medium Assam CTC BP Rs 6.00 to Rs 6.60; Medium Assam CTC Fannings Rs 6.10 to Rs 6.80; Best Assam CTC BP Rs 6.70 to Rs 7.00 and Best Assam CTC Fannings Rs 7.00 to Rs 7.50.

In the Internal Sale, offerings were 29,074 packages of Dusts. There was a strong demand. The keen competition continued for medium CTC teas which realised fully firm to dearer prices although, towards the close, a slightly easier tendency prevailed. The good CTCs, once again, were sold well at last levels. Plain orthodox teas were a strong feature and were sold readily with the more fibrous descriptions realising considerably dearer rates.

Medium orthodox teas were well

supported and generally sold above last prices. There was a good demand for the legg-cut teas at around last levels. Following rates (per kilo) were quoted:—Plain Orthodox Dust Rs 5.00 to Rs 5.20; Medium Assam Dust Rs 5.00 to Rs 5.50; Legg-cut Dust Rs 5.50 to Rs 5.70; Medium Assam CTC Dust Rs 5.90 to Rs 6.20 and Good Assam CTC Dust Rs 6.40 to Rs 6.80.

In the Cochin market offerings were 666,000 kilogrammes of Leaf tea. Against strong general demand, low mediums and mediums were 10 nP to 20 nP a kilo dearer, while good mediums were fully firm. Highgrowns were irregular, but tended dearer. Un-orthodox descriptions were steady.

According to trade sources, total exports of North-East Indian tea rose to 279.5 million pounds in the first ten months of this year from 265.24 million pounds in the corresponding period of last year. Exports to the UK improved sharply from 162.7 million pounds in January/October 1961 to 172.09 million pounds in the period under review, as also supplies to other out-markets from 102.54 million to 107.41 million pounds.

The Indian Tea Association has estimated the production of North-East Indian tea at 95.27 million pounds in October as compared to 99.06 million pounds in the previous month and 100.04 million pounds in October last year. The total outturn of tea this year up to the end of October was 510.57 million pounds as against 535.74 million pounds in the corresponding period of 1961, showing a shortfall of 25.17 million pounds. Production in the period under review was, however, 13.69 million pounds higher than the average for the last three years for the same period.

With shipments of 7.63 million pounds in September, total exports of South Indian teas, in the six months ended September 1962, increased to 49.33 million pounds from 34.4 million pounds in the corresponding period ended September last year. Destination-wise, exports showed an all-round improvement. Supplies to the UK rose from 21.83 million pounds in April/September 1961 to 25.41 million pounds in the period under review as did those to Australia from 1.31 million to 4.98 million; to Egypt from 2.01 million to 4.80 million; to the USA from 2.94 million to 3.37 million and to the USSR from 400,000 pounds to 3.02 million pounds.

COTTON Steadier Condition

Contrary to the landslide in the cotton futures market in the previous week, the ruling Jarilla March contract maintained a somewhat steady trend in the past week. The contract, which looked up from the

previous week's closing of Rs 719.75 per three quintals to Rs 729.75, slipped down to Rs 721.25 before finally closing at Rs 721.50. The initial spurt was ascribed to the frantic bear covering to regain the lost ground. The Government's decision to step up production of cloth, particularly of coarse and medium varieties, also aided the sentiment in the market. Price fluctuations were restricted to a narrow groove on account of the interplay of bearish and bullish factors. Fresh developments in the market were conspicuously absent. Mill demand did not broaden while arrivals from up-country centres were appreciable. The market, however, closed the week on a subdued trend.

As easy sentiment prevailed in the spot market at Sewri. Scattered enquiries in Moglai, CO 2 and Berar growths were reported. The mills during the week were rather inclined to book transactions at lower prices. Owing to the ban on movement of cotton from godowns and jathas of the Bombay Port Trust at the cotton depot area business was unusually limited.

In the foreign section Sudan, Egyptian Karnak and Giza 47 growths met with good support. The prices of Sudan crop went up approximately by Rs 30 per candy.

With the revival of demand from abroad in Bengal Deshi cotton the export section was active. Local buyers were found eager to cover their earlier sales. Total registration for shipment of this variety as on 13 November stood at 21,000 bales.

According to a recent estimate India's import requirements of cotton for the current season are put at nearly 1.2 million bales. The latest estimate of cotton production in the current season gives much room for enthusiasm. As against the earlier anticipation of under 5.2 million bales of cotton the latest figures come to approximately 5.6 million bales, an improvement of about 900,000 bales over the previous season.

Piecegoods

The Bombay cotton piecegoods market during the past week depicted divergent conditions. The turnover in the domestic sector was pretty meagre while the export section presented cheerful conditions.

The primary dampening factor in the domestic sector was the disturbing conditions that emanated from the war-fare on the border between India and China and the volume of transactions dwindled into a mere trickle. Another bearish factor was the apprehension of a downward revision by the Government in the prices of the popular varieties of piecegoods. In the context of the emergency the proposal for setting up fair-price shops was greeted with wide acclaim but pending the announcement of details on which they are to be run business was confined to a low level.

Transactions on the export section did not flow to the expected level as shippers were reluctant to augment exports on account of the border disturbance. Most of the mills were reported to have fulfilled their compulsory export obligations for the current half-year.

The UK accounted for a fairly good quantum of grey sheetings and furnishings. Sudan was active and the offtake also moved up as shippers from that destination are showing greater enthusiasm in Indian goods at the expense of cloth from China. The abolition of import of textiles under the OGL led to improved business in this sector Canada, France and West Germany also sent enquiries at a good level.

Quality Control Scheme for Spice Exports

THE Spices Export Promotion Council has announced that the compulsory pre-shipment inspection and quality control scheme for black pepper and Cardamom will come into operation from 1 December, 1962. Under the scheme, the Council will administer the overall supervision of the Agricultural Marketing Adviser to

the Union Government and black pepper and cardamom for exports will have to be graded and marked with the Agmark labels prior to shipments. Individual traders or firms or organisations engaged in the export of black pepper and cardamom and registered with the Spices Export Promotion Council will be eligible for grading these commodities in accordance with the grading and marking rules formulated by the Government of India.

In the above connection, exporters of black pepper are perturbed by the compulsory pre-shipment inspection and quality control scheme. They consider it a needless burden, which will make Indian pepper less competitive in the international markets. They point out that the scheme will impose a burden of about Rs 4.5 lakhs or Rs 500 per ton on export. They also add that the pre-shipment inspection certificates will not satisfy the buyers, as the importers are more guided by the condition of the goods on arrival. They also express surprise that, at a time when all obstacles in the way of increasing exports have to be removed in order

to earn more foreign exchange a scheme is to be taken on hand which will add to the existing burden, not to speak of the fact that the recent Indonesian offers have been 3 to 4 cents per pound lower than Indian prices.

Throughout last season, Singapore and Indonesian prices were higher than the US level. In fact, Indonesia was not a keen seller last year. During the last week, however, Singapore and Indonesia have done business at 1 to 2 cents below the Indian price of 34 cents a pound. Stray sales have been reported at 30 cents and distant deliveries (January-March) at 29 cents. It is understood that the Indonesian authorities have lowered the 'check' price so as to enable the exporters to compete on better terms.

In the case of Cardamom, too, the quality control scheme for exports has created resentment among export circles in Bombay. The major part of the export business in this commodity is with the Middle East countries. Importers' representatives there come personally to inspect the goods prior

Branches: CALCUTTA & COIMBATORE

to shipment. Complaints of sub-standard quality are mostly from Scandinavia and some other European countries.

The authorities have introduced only four grades in the scheme. No distinction has been made on the basis of colour, damaged quality and moisture which have a great bearing in determining the quality and price. Bombay and Mangalore exporters, who handle 75 per cent of the total exports, have not been consulted by the authorities before the finalisation of the scheme. An agmark levy of Rs 4 per 50 kg on export has been proposed by the authorities, and the exporters consider that the size of the levy is rather too heavy and feel that this will ultimately weaken our competitive strength in the international market.

CASHEW Slackness in Business

Exports of Cashewnut from India have tended to slacken. The quotations from the overseas buyers have declined by about 2 cents per pound, while Indian shippers are not inclined to transact business at the present level. The slackness in new business is due to reluctance on the part of the American buyers to enter the market. They are not as keen to buy as they were during the Cuban crisis.

Similarly, business with the Communist countries has also shrunk. Shippers are also not inclined to commit large business on account of the political situation. In spite of such sporadic spells of slackness, the overall performance in cashewnut exports this year is likely to turn out better than last year. From the pace of the exports during the current year, it is estimated that the total shipments from India, at the end of the year, will be about 2 million cases, valued at about Rs 20 crores.

RUBBER Production up, Consumption Down

According to the figures released by the Rubber Board, production of rubber has shown a rise from 2,580 tonnes in August to 2,900 tonnes in September this year. Consumption has, however, declined from 4,273 tonnes to 4,024 tonnes. This is mainly due to the fact that the stocks with the estates and dealers have risen to 5,268 tonnes from 3,798 tonnes. Stocks with the manufacturers are, however, lower at 7,455 tonnes at the end of September as against 8,420 tonnes at the end of the previous month.

The opening stock of rubber as on 1 September was 12,218 tonnes. Adding production of 2,900 tonnes and the imports of 1,629 tonnes during the month, there was an available balance of 16,747 tonnes. Out of this, consumption was only 4,024 tonnes, leaving a balance of 12,723 tonnes. Stocks of synthetic rubber was given at 3,023 tonnes. Thus, there was a total balance of 15,746 tonnes.

COFFEE Releases and Exports

According to the figures released by the Coffee Board, the receipts into the 1961-62 Pool, up to the end of October, amounted to 45,534 tonnes as against 67,386 tonnes in the corresponding period of 1960-61. Total releases in the internal market, for the ten months of the year, amount to 28,072 tonnes as against 28,308 tonnes.

Inclusive of the sale on 8 November 1962, the total quantity of coffee sold for export from the 1961-62 crop amounted to 17,018 tonnes, made of 10,981 tonnes of Plantation variety; 2,458 tonnes of Arabica Cherry and 3,579 tonnes of Robusta. A quantity of 1,877 tonnes of coffee will be put at the export auction on 28 November 1962.

GOLD & SILVER Business at Standstill

Gold prices on the Bombay Bullion Exchange tumbled down, touching new low levels for the year. The spot rate has come down from Rs 105 to Rs 97 per ten grammes following the Union Finance Minister's statement on Tuesday that he would soon take measures to bring down prices in the country. Panicky holders brought down the price of sovereign to Rs 78 from Rs 86.

The Finance Minister's statement has caused wide confusion among the bullion traders. Rumours are also current that only the Reserve Bank will be permitted to deal in ready gold at regulated and fixed prices. There is also a proposal to stop imports of smuggled gold at any cost.

In the Calcutta market, business has come to a standstill as prices have been showing a downward trend. The rate for acid gold, which was quoted at Rs 126.49 on Tuesday, came down to Rs 118.00 per tola on Wednesday. Even with the gradual fall of about Rs 26 within the space of a fortnight, few buyers were reported to have turned up.

In Bombay, prices of silver eased in conjunction with the counterpart. As a result of the sharp fall, the authorities called for a special clearing and the clearing rate has been fixed at Rs 208.95. The ready metal has lost much of its glamour, being quoted at a discount of Rs 3, at Rs 205.95. Arrivals have been heavy around 50 bars, while the offtake was of the order of 12 bars. In Calcutta, silver ready was quoted at Rs 202.70 and forward at Rs 207.70.

OILS & OILSEEDS

Prices on the Bombay Oilseeds Exchange suffered a sharp setback following the news of the military reverses in NEFA. The fall was more pronounced in Groundnuts due to persistent selling pressure. Arrivals remained fairly large with the marketing of the new crop gathering momentum in the major producing areas.

The outlook for the market was regarded bleak in view of the expected improvement in the arrivals of the new crop after a few days. The inflow of the new crop from Uttar Pradesh, Saurashtra and Gujarat was stated to be gradually increasing. The marketing in Andhra was expected to pick up after about a fortnight. Groundnut Bold ready was quoted at Rs 43 and Groundnut Oil at Rs 18.30.

In the Castorseed section, trading revealed an uncertain tone. There were reports of an increase of £1 per ton in the price of castor oil in the UK; but stray business was reported done in commercial oil at £111 per ton. Castor ready was quoted at Rs 32.75 and Castor Oil, commercial quality, at Rs 13.80.

The market for Linseed was influenced on the one hand by lower up-country advices in respect of rapeseed and the weakness in groundnut and on the other by a modest broadening of demand for linseed oil. Linseed ready was quoted at Rs 41.12 and Linseed Oil at Rs 17.50.

SUGAR

Market Depressed

Sugar markets have continued to remain depressed during the week following the selling pressure from factories. Apart from the Government of India's decision to release a further quantity of 200,000 metric tons for sale in the open market, new production has already commenced in most of the factories in the Uttar Pradesh State. There is, therefore, a lack of demand even at lower rates, while the mills are inclined to clear their godowns to provide space for the new produce. Spot delivery price is almost stationary at Rs 106 per quintal while mill delivery prices eased by 25 nP to 75 nP per quintal for different varieties.

About 1.5 million tons of sugar have been carried over to the 1962-63 season. Production during the current season is expected to be not more than 2.7 million tons, which were manufactured in the 1961-62 season. Domestic consumption may be more than 2.6 million tons, as more sugar will be used for defence. Exports are expected to be nearly 0.5 million tons. Hence, the 1962-63 season should end with a small surplus.

TIN

Jump in London Prices

There has been a major turn-round in the tin market in London. In mid-October, the Buffer Stock Manager of the International Tin Council had to buy the metal to prevent the spot price falling below £850 a ton. But the price has now shot up to £890, having gained £40. This upswing has been accompanied by an increase to as much as £22 in the premium of spot over forward position.

The primary reason for the market's big jump has been a squeeze on nearby supplies. Because of the Buffer Stock Manager's earlier purchases to support the market, the amount of immediately available metal in London is now small and this has created a tremendous pressure on the spot position. The rise in prices has also been helped by increased UK consumer interest; but Continental and American demand has remained small. American consumers still appear to be getting all they want from the Government stockpile releases. Once the squeeze has been relieved, dealers expect that the spot quotation will come back as it showed signs of doing last week.

MERCURY

Overall Shortage of Supplies

In spite of the latest supply made by the State Trading Corporation to the dealers, the prices of Mercury have continued to rule high in the Bombay market. Firmness, in the face of fresh supply, is attributed to a broadening of demand. The consumers have tended to cover their requirements in anticipation of a further rise in prices. The overall shortage of supply is also responsible for the present rise in prices. Stocks in the local market are estimated at 200 flasks.

The supplies made by the STC are placed at about 60 flasks, each individual dealer having received only two flasks. Presently, mercury is quoted at Rs 2,300 per flask. Only a fortnight ago, it was available at Rs 2,100.

SILK

A Steady Trend

The Bangalore silk market presented a somewhat steady trend during the previous week. Filature raw silk of 20/22 Dr. was quoted between Rs 84.89 and Rs 89.29 per kg. Cottage basin and Charka raw silk decreased to rule between Rs 81.57 and Rs 89.29 and Rs 61.73 and Rs 79.37 per kg respectively.

Spun silk yarn of 2/210's was steady at Rs 74.96 per kg.

Cottage basin and charka silk waste fluctuated between Rs 11.00 and Rs 13.23 and Rs 4.40 and Rs 7.70 per kg respectively.

Reeling cocoons ranged from Rs 3.50 to Rs 5.50 per kg. Foreign and Mysore race seed cocoons ruled easier between Rs 5.00 and Rs 12.00 and Rs 4.75 and Rs 5.37 per thousand.

The Bhagalpur silk market maintained a steady trend during the past week. Prices of tasar raw silk, silk waste as well as of spun silk yarn remained firm. Daba and Bogal varieties of reeling cocoons remained unchanged at Rs 90.00 and between Rs 60.00 and Rs 80.00 per kahan. Eri cocoons and yarn were stagnant.

In the Malda silk market, cottage basin and charka raw silk were quiet during the previous week. Matka yarn prices went up and ruled between Rs 24.00 and Rs 43.94 per kg. Reeling cocoons and silk waste remained steady.

The f.o.b. price and landed cost of Japanese raw silk of 20/22 dr. were Rs 65.63 and Rs 100.55 per kg respectively during July, 1962.

Company Reports

Assam Sillimanite's Expansion

It would be recalled that the Assam Sillimanite Limited issued fresh capital for Rs 29 lakhs on 18 June, 1962 for the expansion of the company's refractory project. In terms of the agreement with the International Finance Corporation, Washington, the company received the sum of dollars 873,526 (equivalent to Rs 41.30 lakhs) being the finance for the foreign exchange requirements for plant and machinery for the first stage. Orders for the plant and machinery have been placed with the foreign suppliers in Germany. Shipments are expected to arrive in December 1962 to January 1963 and production is expected as scheduled.

Meanwhile, sales are higher at Rs 27.75 lakhs for the year ended 31 March, 1962 as against Rs 25.26 lakhs for the preceding year. However, the net profit, after providing for depreciation and taxation, is slightly lower at Rs 1.53 lakhs against Rs 1.77 lakhs, mainly due to the provision for taxation being doubled to Rs 2.70 lakhs. The Depreciation amount is lower at Rs 3.19 lakhs against Rs 4.31 lakhs. Although the amount distributed as profit remained the same as in the previous year, the rate of dividend recommended is 5 per cent, since the nominal value of shares entitling to participation in profits has been increased from Rs 30 lakhs to Rs 36 lakhs by the issue of right shares since the end of the financial year.

West Iamuria Coal Skips

A substantial decline in raisings from 253,565 to 175,442 tonnes as well as in despatches from 243,088 tonnes to 179,509 tonnes is reflected in the working results of the West Jamuria Coal Company Limited for 1961.

The accounts reveal a loss of Rs 4.62 lakhs as against a net profit of Rs 4.88 lakhs for the preceding year. The Depreciation amount is reduced to Rs 1.88 lakhs from Rs 2.10 lakhs, while no provision is made for Taxation against Rs 2,608. The dividend is skipped again.

The directors state that, apart from West Jamuria colliery having already been upgraded, the Koithera Seam of Ackhalpur Colliery has also been upgraded to Grade I. Consequently, the position of movement is expected to be considerably improved. Moreover, the management is seriously considering the re-opening of Ponati Seam at Ackhalpur Colliery the grade of which is Selected "A". These factors, it is hoped, will go a long way to improve the overall working of the company during the current year.

Associated Mining Pays Less

The Associated Mining Industries Limited has reported a lower net profit of Rs 2.05 lakhs for 1961 as against Rs 2.48 lakhs for 1960. In respect of allocations, the Depreciation amount is raised to Rs 38,367 from Rs 31,181 and Taxation to Rs 68,935 from Rs 45,000. The directors have proposed taxable dividends of 6 per cent on the Ordinary shares and 2 per cent on the Deferred shares as against 11 per cent and 9 per cent, taxable paid respectively in the preceding year.

The subscribed capital of the company is Rs 18,02,000 divided into 89,200 Ordinary shares of Rs 10 each; 10,000-5 per cent Cumulative Preference shares of Rs 100 each (Rs 50 per share called up) and 82,000 Deferred shares of Rs 5 each. The gross block is shown at Rs 7.42 lakhs and the total depreciation at Rs 3.01 lakhs, leaving a net block of Rs 4.42 lakhs.

IGN Fares Better

The India General Navigation and Railway Company Limited has fared well during the year ended 31 December 1961. Despite the fall in freight income from £3.45 million to £2.48 million, the net profit, before providing for Depreciation and Taxation, works out to £141,322 as against £164,161 for the previous year. After providing £7,133 for Taxation, the Depreciation amount is reduced to £91,374 from £145,149. The dividend is passed again. The net profit is adjusted against the previous year's debit balance. There is still a debit balance of £42,039, which is carried forward to next year.

For the Investor

INVESTMENT GOSSIP

Outlook for Equities

There has been a welcome improvement in stock market sentiment in later dealings this week although business passing continues to be at a very low ebb. A few buyers have appeared for selected scrip at around the minimum prices. It would appear that the unilateral cease-fire of the Chinese peace move is rightly suspect in the eyes of Government of India and whatever is the outcome of this latest development, one thing is absolutely certain: that is, war

preparedness will be continued at the present high tempo for a considerable time to come. One lesson that has been well learnt in this crisis is that it would be too much of a risk to depend on the gentlemanliness of some of our neighbours. So, the implications for the stock market are clear. Every thing in the country will be war oriented, if not for actual warfare, at least for national preparedness to meet effectively any further aggression. Defence industries ancillary to defence production will receive the highest priority, from the allotment of foreign exchange to the supply of adequate electricity and other essential facilities. The rest of the industries have to take the

second place, though even here units producing essential consumer goods may get better facilities than others. It is inconceivable that Government can allow industries to become stagnant when all the time it is talking about the need for maintaining the price line. As essential prerequisite for stabilisation of prices is increased production.

It is true that despite increased production, corporate profits may not be high in view of the possibility that Government will be the largest buyer and it may not pay a high price for what it takes from industry. But against this apprehension there is the statement of the Union Finance Minister that equitable prices will be paid by Government for its purchases. So, considering all points and the extraordinary situation in the country, there is no reason for concluding that the outlook for equities has become so bleak as to justify the debacle witnessed in the past one or two weeks. This point has been emphasised in the Government press note issued some days ago. In the short term, the outlook may not appear to be very

bright. But the long term outlook is quite bright and it is with the long term outlook that investors should concern themselves when dealing in equities at this juncture.

It is gratifying that both the Government and the Stock Exchange authorities are taking steps from time to time to curb unduly heavy selling pressure. These measures have so far only achieved limited result as sellers begin to predominate whenever some bad news is received. In a sense keeping the stock market in a healthy state is also an important task in this emergency. Only when there is confidence in the stock market, will industrial units, especially the new ones, thrive. In this regard a more realistic pattern of minimum prices for equities will be found to go a long way toward attracting investment interest to the stock market. For, in view of the rise in the interest rates in the country equities can be made quite attractive by the device of a suitable downward revision of the minimum prices.

NEW ISSUE NOTES

TELCO

Tata Engineering Locomotive Co. Ltd., Bombay, has been granted consent to the issue of Rs 2 crores equity capital. The amount is divided into 2,00,000 equity shares of Rs 100 each, to be issued for cash, at a premium of Rs 50 per share.

Indian Drugs & Pharmaceuticals

Indian Drugs & Pharmaceuticals Ltd., Delhi, is to issue further capital of Rs 100 lakhs, divided into 10,000 equity shares of Rs 1,000 each, for cash, at par. India Drugs is a Central Government undertaking.

Mazagon Dock

Mazagon Dock Limited, Bombay, an existing Government Company will raise further capital of Rs 50 lakhs, divided into 50,000 equity shares of Rs 100 each for cash, at par.

Leir-knit Gelatine

Leir-knit Gelatine Company Ltd., Delhi, is to issue further capital of Rs 16.5 lakhs, divided into 16,500 equity shares of Rs 100 each. Of this, shares for Rs 3 lakhs will be allotted to a UK firm against supply of machinery and the balance will be issued for cash at par.

Globe Motors

Globe Motors Limited, Delhi, is raising further capital of Rs 10 lakhs divided into 10,000 equity shares of Rs 100 each as 'rights' to its existing shareholders, for cash, at par. The proceeds will be utilised for purchasing shares of M/S Luk Auto Ancillary (India) Private Ltd.

BONUS ISSUE NOTES

Kirloskar Electric

Kirloskar Electric Company Ltd., Bombay, is issuing capital of Rs 17,52,840 divided into 1,75,284 equity

shares of Rs 10 each, to be issued as bonus shares to the existing shareholders of the Company in the proportion of two such shares for every 5 equity shares held, on capitalisation of the Company's General Reserves to a like extent.

Kores (India)

Kores (India) Limited, Bombay, is raising Rs 5,00,000 dividend into 500,000 equity shares of Re 1 each, to be issued as bonus shares to the existing shareholders of the Company in the proportion of one such share for every two equity shares held, on capitalisation of the Company's Central Reserves to a like extent.

INVESTMENT NOTES

Central India Spinning

In view of the emergent situation in the country and the sharp decline in the market value of equity shares of the company, the Central India Spinning, Weaving & Manufacturing Company Limited has declined to postpone the issue of additional capital until such time conditions in the capital market are more propitious. The shareholders have been assured that, if and when fresh capital as previously contemplated is issued at a later date, Tata Sons Private Limited and Sassoon J. David & Company Limited will abide by their offer to accept at par such right shares as they will then be entitled to and such additional equity shares as will not be subscribed by the then registered ordinary shareholders.

Meanwhile, the working of the company for the year ended 30 June 1962 shows an improvement over the previous year. The profit for the year, after providing Rs 13.55 lakhs for depreciation, amounts to Rs 25.87 lakhs. Total turnover is Rs 599 lakhs as against Rs 543 lakhs. The directors have, however, decided not to recommend any dividend on the ordinary and Preference shares in view of the losses carried forward from the previous years and the accumulated arrears of depreciation.

INVESTMENT SPECIAL

Spectacular Rise in Indian Iron Profit

THE profit of the Indian Iron and Steel Company Limited, before tax and depreciation, has risen spectacularly in the year to 31 March 1962. However, we need to take note of the assertion in the Directors' report that the trading results for the year are "exceptional and unrepeatable" since they include additional retrospective income for previous years, the total amount involved in this regard being Rs 2.285 crores. Nevertheless, before making the allowance for such exceptional receipts, the net profit, before tax and depreciation, has risen from Rs 9.963 crores to Rs 12.540 crores. Even if this special element of Rs 2.285 crores is deducted, the relevant figure of net profit is seen to have risen from Rs 9.963 crores to Rs 10.255 crores. Furthermore, if adjustment is made for deduction of the retrospective windfall, we have equally to take note of the fact that a sum of Rs 1.400 crores relating to retention prices included in the accounts for

Cooper Engineering

The management of the Cooper Engineering Limited is understood to have assured the shareholders that the company will not make a rights issue at the present juncture. The company has sought the permission of the Government to raise an additional equity capital of Rs 45.20 lakhs for financing its expansion programme. The necessary consent is awaited. Further capital is expected to be made only after the working results of the company improved considerably.

IN BRIEFS

Kil Kotagiri Tea & Coffee Estates Company Limited has proposed an interim dividend of 8 per cent, taxable, for the year ended 31 October 1962.

STOCK EXCHANGES

Signs of Improved Business

Watch-Dog Writes:

STOCK markets are slowly but steadily returning to normal. Although the reports regarding further reverses in the border kept buyers on the sidelines early in the week, sudden turn in events, viz., the Chinese decision to cease-fire unilaterally from mid-night on 21 November contributed to a steadier feeling towards the close.

The decision by the Bombay Stock Exchange authorities to impose a margin of 20 per cent on short sales and by the Calcutta Stock Exchange Committee to revise downward the minimum prices of certain shares, are the main contributory factors. There is, however, a general disposition to proceed cautiously, pending fresh developments in the political situation.

Lyons Range almost succeeded to return to its normal trading. Some of the clearing shares tried to look up with a broadening of enquiry in the cash group.

A better undertone was evident on Dalal Street where prices rallied in slightly broadened activity.

Trading on the Madras Stock Exchange struck a hesitant note and business continued to be meagre in all the sections.

It was generally a satisfactory week on the London Stock Exchange where there was some recovery in places.

Wall Street witnessed a major rally on reports of the Cuban President having agreed to ship back the Soviet Jet bombers and the China's announcement of a cease-fire all along the entire China-India border.

CALCUTTA

AFTER remaining depressed till the middle of the week, conditions on the local stock exchange took a slight turn for the better towards the close. The initial weakness of the market was mainly due to the absence of any incentive-bearing news. As reports regarding the military situation had been disturbing there was an anxiety early in the week to know how the Chinese advance would be checked and whether these would be fresh complications. Support was, therefore, conspicuous by its absence, while many of the professional operators were inclined to liquidate their "long" positions even around the minimum levels.

Investors, too, seemed to be adopting a hesitant attitude in spite of the of the attractive low level of prices. They thought that, on the basis of the increase in interest rates, many shares had become over-priced on consideration of dividend yields. The political uncertainties and the fears of additional taxation to meet the increased defence cost also exercised a depressing influence.

But the main factor, that helped the market to recover slowly from the middle of the week, was the news of the Chinese decision to cease-fire unilaterally from mid-night on 21 November and their announcement to withdraw troops from 1 December. Moreover, a section of the market had been canvassing support for the downward revision of the minimum prices as, in the prevailing situation, the present floor levels had no meaning.

As a matter of fact, at a special meeting held by the Stock Exchange Committee after official trading on Thursday, it clearing shares (Indian Irons from Rs 22.17 to Rs 22. Hindustan Motor from Rs 16.50 to Rs 16.25 and Indian Copper from Rs 4.28 to Rs 4.22) with effect from Friday. It was also decided that there would be no compulsory crossover from Clearing No. 376 to No. 377 in respect of Burrakur Coal, Dunlop Rubber and Indian Cable. From this move, it was clear that the outstanding position in the market for these three shares would be squared up on the next settlement day, Wednesday 28 November.

Regarding clearing shares, it was decided that members making fresh purchases would have to take delivery at the end of the relative clearing from the Clearing House. Apart from these measures taken by the authorities the present emergency in the country gave rise to a hope that the shortages of transport, power, coal and raw materials would be relieved more speedily than was originally anticipated. Thus, there were signs of improved business with not only clearing shares changing hands at or slightly above the minimum levels, but also more enquiry being noticed in the cash group.

A notable feature of the week's trading was the leader of the market—Indian Irons—was conspicuously idle. This peculiar behaviour of the scrip was due to the analysis of prospects recently made by the chairman of the company.

Coal shares remained dull, notwithstanding the fact that the industry would be called upon to play an important role in the field of production.

Despite an improvement in the prices obtained at the recent auctions, there was a predominance of sellers in the Tea Section. This was due to two factors. The first was, that the supply of the commodity had been interrupted by the strike of the Joint Steamer Companies' staff in Pakistan.

Sugar shares were practically neglected on fears that the prospects for the industry during the current season were not so bright as was made out earlier.

crores to Rs 13.691 crores. We may also note that interest on the World Bank and Government of India loan, after rising from Rs 1.121 crores to Rs 1.190 crores is placed a shade lower in the year under review at Rs 1.189 crores. Interest on special advance from Government is unchanged at Rs 50.91 lakhs although in 1959-60 a higher allocation of Rs 89.10 lakhs had to be made. The provision for repairs and renewals has after rising from Rs 4.391 crores to Rs 4.947 crores, shown a further increase to Rs 5.149 crores. The provision for Depreciation was shaded slightly to Rs 2.965 crores from Rs 3.000 crores, but has now been raised to Rs 3.352 crores.

Praiseworthy is the fact that both the commission to managing agents and the remuneration to directors have shown successive falls. Managing agents' commission absorbed Rs 37.22 lakhs in 1959-60, Rs 30.95 lakhs in 1960-61 and Rs 30 lakhs in 1961-62. Over the same period, the total remuneration to directors decided from Rs 4.35 lakhs to Rs 3.39 lakhs and Rs 3.29 lakhs. Thus, after depreciation and meeting all expenditures, including interest on the special advance from the Government, the balance carried down has shown a rise from Rs 5.614 crores in 1959-60 to Rs 6.998 crores and Rs 9.188 crores.

The most important beneficiary of such enhanced profits has been Government. The provision for Taxation, which was placed at a modest Rs 64.28 lakhs in 1959-60, has risen sharply to Rs 1.66 crores in 1960-61 and even more steeply to Rs 3.95 crores in 1961-62. The transfer to Reserve for Plant Rehabilitation under the Tariff Board Scheme unchanged at Rs 51.15 lakhs in the previous two years, has not been found necessary in the year under review. So also, with the virtual completion of the expansion programmes of the company, the provision for Development Rebate Reserve has gone down from Rs 2.593 crores in 1959-60 to Rs 1.666 crores and Rs 21.57 lakhs. On the other hand, the transfer to General Reserve has been stepped up from Rs 1.11 crores to Rs 1.75 crores and Rs 3.00 crores. As is widely enough known, the dividend on the Ordinary shares, subject to deduction of tax, has been maintained at 16 per cent.

(To be concluded next week).

See the
USA
The **PAN AM**
\$15-A-DAY
WAY

Niagara Falls — one of the world's most spectacular natural attractions in the U.S.A.

Pan Am now introduces a unique low-cost way to visit any one or all of 32 major U.S. cities.

Have you always wanted to see the U.S.A. but thought it far too expensive? If so, Pan Am's \$15-a-day-way is your way to the U.S.A.

Here's how: You may spend 3 days and 2 nights in any of 32 major U.S. cities and pay only \$15 for your hotel room with bath and, in most cities, a full sight-seeing tour. Average cost for each full 24 hour stay—only \$7.50!

Food? You'll be free to dine where you like, at your own expense.

However, Pan American has surveyed every one of the 32 places included in this plan and can assure you that 3 substantial meals at popular restaurants need not cost more than \$7.50 per day through the entire U.S.A.

Result? \$15 a day for room with bath, meals and sightseeing in any or all of 32 fabulous U.S. cities.

Fares? No extra fare on a Pan Am 'round-the-world trip for many of these U.S. cities. Only Rs. 6053 economy class from Calcutta for Europe and the Pacific, and North America as well!

Travel a New World—See the U.S.A.

MORE PIPES to meet the nation's needs

With the addition of a second plant at the Kulti Works of The Indian Iron & Steel Co. Ltd., the production of spun iron pipes has increased from 60,000 to 150,000 tons per year. Besides helping to satisfy India's growing demands for large diameter pipe mains, the increased tonnage saves India many crores of rupees annually in foreign exchange. Employing latest techniques, the Kulti Works of IISCO is the first to produce 3" to 30" diameter spun iron pipes in the country.

A Hungry World

If it is still a world of strife, evidence of which has come to us recently with painful immediacy, it is also largely a hungry world. How hungry has been vividly brought out by a small brochure published by the FAO arrestingly entitled "Statistics of Hunger". The figures and the graphic charts given in it should stir the conscience of the overfed and the apathy of the underfed. The FAO's initiative, both in disseminating information and setting in motion programmes that will alleviate mass hunger, is too well-known to need comment. The world-wide "Freedom from Hunger Campaign" and the "World Food Programme," jointly sponsored by the FAO and the United Nations are steps in the direction of bringing about a rational deployment of world's food resources both actual and potential. But a basic equipment for the success of these programmes is a clear understanding of the facts of world's hunger.

Familiar facts like the galloping world population, mostly in backward countries living on subsistence levels are graphically presented in the charts. The regions showing the largest increases in populations are also regions in which food is scarce. Nations most dependent on agriculture are finding themselves increasingly dependent upon nations least dependent on agriculture to eke their meagre rations out. The area containing the largest number of people viz. the Far East, with 52.3 per cent of the world's population is also the poorest, getting only 12.3 per cent of the world's income. The top layer of 6.7 per cent of the world's population has nearly forty per cent of the world's income. Shortage is the problem among the underfed while surplus is the problem among the well-fed. Other figures show how in a more rationally ordered world, these two situations need not co-exist. For instance, world surplus of 1960 (130 million tons or grains) could, for example, have made up the current deficiency in the caloric intake of Asian population for over three years. The annual average increase in grain surpluses—about 10 million tons—would be sufficient to provide for the full intake of 85 per cent of the annual increase of population.

The brochure has divided the whole world into three nutritional categories, in terms of calories and animal protein. An average intake of over 2,700 calories and over 30 grams of animal protein would indicate a well-fed country. On the other hand, an average intake of less than 2,200 calories and 15 grams of animal protein would indicate the areas of hunger. In between there is a third category. Two maps in which the various countries have been stylised in proportion to their population show the world's hungry, half-fed and overfed areas. The conclusions are not unfamiliar: Large parts of Asia and Africa and some parts of Latin America (which interestingly, has a better showing in terms of protein-intake than in terms of calories intake) are ill-fed. Almost the whole of Europe and North America is well-fed and those that are not are not exactly going hungry. India's average intake of animal protein is lowest except for El Salvador and

its average calorie intake is among the lowest and most of it is supplied by cereals.

Another fact brought out by the figures is that though, on a world-scale, food production is outstripping the growing population in the fifties, for the Far East (excluding China), the fifties was a decade in which there was always less food than people. However, the trend has been for the former to catch up with the latter. This has been the result of awakening among the masses of the people all over the world and the determined efforts of governments and international cooperation, both bilateral and through the agency of the UN. The heartening thing has been that the agricultural situation in the world is not static.

But it must be realised that not all the changes have been encouraging. In an FAO projection recently made, trends in the sixties have been plotted and these reveal some disquieting possibilities if changes in policies are not made by governments. The absolute quantum of production was static in 1961-62; but there are indications that it will resume the trend noted in the fifties of progressive rise. But the race between population and food production is being otherwise lost in the less developed countries. The per caput production that showed appreciable annual increase in the fifties has tended to fall in the last few years. If this trend is not reversed, the under-developed countries will have to depend increasingly on imports of food from outsiders. Ironically, such dependence will be on advanced countries in whose national product agriculture figures less importantly than do industry and other tertiary economic activity.

The obverse of this development is equally disturbing. The trend in the sixties will be for the advanced countries to have even more unmanageable surpluses. Internally, these surpluses will upset the balance between agriculture and industry while policies of price support will create further problems. Exports will create other problems connected with world prices of primary commodities. The situation may not turn out as bleak as now feared in view of rising world demand, especially for certain commodities from an increasing population. But restrictive trade practices and conflict of interest of rival producers are bound to cause a lot of difficulties. Many schemes of commodities agreement on a world-wide scale to deal with these problems have been debated in international forums as also in contexts of regional groupings. Given goodwill, constructive solution should be available. Generally, these schemes have tended to deal with the problem in the lump and in terms of ad hoc financial compensation to those whose terms of trade in primary commodities are adversely affected by the operation of the laws of supply and demand. The problem could conveniently be broken into manageable proportions if such discussions were held commodity-wise. In either case, the integration of the needs of the hungry millions all over the world into what essentially is a scheme of price management would be an excellent by-product of a solution.

Oil (Vegetable) for The War Effort

THE National Defence Council at its first meeting has rightly stressed that "every productive effort in every sector of the country's economic life" is an essential part of the national defence effort. This general exhortation will become meaningful when it is followed up by detailed programmes of action to increase the output of goods and services, particularly those items for which the demand will increase as a result of the intensified defence effort. Special attention will have to be devoted to the vulnerable sectors where the increased requirements of defence forces will add to the pressure on inadequate supplies and programmes will have to be drawn up accordingly to increase production to the extent possible as well as to regulate civilian demand. For instance, one group of commodities for which the demand is likely to increase sharply on account of the larger requirements of defence forces, and of which supplies are inadequate, is the group consisting of edible oils and fats and the industrial products manufactured out of them.

The urgency of increasing the output of oils and oilseeds has been frequently emphasised. According to the estimates prepared for the National Nutrition Advisory Council, the availability of vegetable oils for human consumption, would be hardly equal to half the total requirements, even at a reduced allowance of one ounce per head per day. The requirement in 1960-61 has been estimated at 3.84 million tons and this will increase to 4.31 million tons in 1965-66. As the production of oils is mostly in the decentralised sector, it is difficult to arrive at a reliable estimate of the production. The estimates of production are derived from the estimates of the output and utilisation of the principal oilseeds. On this basis the production of oils extracted from the five principal oilseeds, viz: groundnut, rape/mustard, sesamum, linseed and castor, has been estimated to be of the order of two million tons. Including the output of coconut oil, about three lakh tons, the total production of vegetable oils will be about 2.3 million tons. Apart from the requirements for human consumption, large quantities of vegetable oils are used in industry, for the manufacture of soap, paints and varnishes, lubricants etc. Though the indigenous production of oils is far less than requirements, the country is also obliged to earmark a part of the output for export. Almost the entire quantity of castor oil consumed in the country and about two-thirds of the linseed oil are used for industrial purposes. About a third of linseed oil is used for human consumption. About three per cent of groundnut oil is used for soap manufacture while about one per cent of rape/mustard oils and 12 per cent of sesamum oil are used for industrial purposes, and the rest are used for human consumption either as oil or as vanaspathi. A large proportion of the coconut oil is used for manufacture of soap.

The shortage of supplies is reflected in the movement of prices. Among the items listed in the category of food articles, the wholesale index of edible oils has registered the largest increase. The index (base 1952-53) has increased from 81 in 1955 to 158 in 1961. The index for August 1962 was 159.4 as com-

pared with 153.3 in August last year, an increase of 3.5 per cent.

The problem of oilseeds was considered at a meeting of Agricultural Experts of the Government which was held in New Delhi toward the end of July to devise measures to increase the output of cotton and oilseeds. The conference recommended the introduction of the "package programme" for both cotton and oilseeds. It was also decided that the package programme for groundnuts, which had already been introduced in eight areas, should be extended to 24 districts in the groundnut growing States in the country.

Reviewing the progress achieved in the cultivation of oilseeds, the conference noted that the increase in overall production during the ten years ending 1960-61 was not commensurate with the spectacular increase in acreage during this period. While the acreage has increased by 32.4 per cent, the increase in production is not more than 27 per cent over this period. There are large fluctuations in the estimates of annual production which bear little relation to the acreage. This indicates that the crop is particularly susceptible to seasonal vagaries. The most striking feature is that yield per acre has gone down in respect of all oilseeds except groundnut.

In view of the conditions under which many of the oilseeds are raised, in marginal lands or as a catch-crop in the off-season, it is not clear how far, the cultivators will be in a position to adopt the combination of practices recommended under the package programme, except in the case of groundnut. In the case of sesamum, no combination of improved practices has been worked out, as very little research has been done on this oilseed.

Apart from increased production of the principal oilseeds, attention has also been drawn to other sources of oil for human use and industry. Increased production of cottonseed oil has been suggested in this connexion. Out of the estimated annual output of 17 lakh tons of cottonseed, only about six to seven per cent is at present used for extracting the oil which is used in the manufacture of vanaspathi. The output of oil in 1960-61 was estimated at 30,000 tons. The Third Plan has fixed a target of one lakh tons for cottonseed oil. An edible oil can also be extracted from tobacco seeds, but supplies from this source cannot exceed a few thousand tons. A small quantity is now being produced in Andhra Pradesh where most of the tobacco is grown. Rice bran, which contains about 15 to 20 per cent of oil, is a more promising source of edible oil. The production from the solvent extraction plants to be set up under the Third Plan is estimated at 30,000 tons. It has also been emphasised that extraction of the residual oil from oil cakes by the method of solvent extraction would add about two lakh tons to the total supply. But these schemes are still in the preliminary stages of development. The technological problems regarding production of cottonseed oil acceptable to human beings have not yet been completely overcome. And in any programme for the utilisation of oilseeds, the needs of animal nutrition should also be taken into account.

There is also need for caution in the use of solvent extraction procedure for edible oils intended for human consumption. The possible longterm effects of even small residues of the solvents used cannot be ignored. Therefore, it is desirable to take measures to ensure that oil manufactured by solvent extraction plants is used exclusively for

industrial purposes, releasing a corresponding quantity of oil produced by conventional methods for human use.

The availability of oils for industrial use can also be increased, if the non-edible oils, from the oil-rich seeds of many well known species of trees, (such as neem, manua, karanja, sal, undi, etc.) are made available in quantity. Pioneering work in the collection of seeds, extraction of oil and manufacture of soap from these oils, has been undertaken under the auspices of the Khadi and Village Industries Commission. The Commission has also sponsored research to overcome the technological problems of processing these seeds and oils which present peculiar problems of their own. The work done in this field, which is set out in the Commission's annual report, deserves to be better known. It should also be expanded so that larger quantities of non-edible oil may be made available for general industrial use. This will become possible if the oil consuming industries take interest in the matter, and also undertake or sponsor research to see how far the edible oils which they use at present could be released for human use. It has been estimated that the production of non-edible oilseeds might be of the order of over one million tons, which when processed could yield two to three lakh tons of oil.

The main problem in effective utilisation of this potential source is the difficulty of collecting the seeds of the trees which are widely dispersed in the countryside and in the forests. If the importance of tapping all available sources of oil is realised, this should not prove an insuperable difficulty. In the forest and hill tracts, a programme for collection of oilseeds can prop up the schemes for the uplift of scheduled tribes and backward classes. It should also be possible at the present juncture, to direct toward this task the runaway enthusiasm of school children.

Foreign Investments

THE Reserve Bank of India has in the October issue of its Bulletin presented an interesting analysis of the inflow of foreign investments in the country. It covers all the important aspects of foreign investment and is embellished with extensive data regarding the industry-wise inflow of foreign capital, the proportions constituted by private and official capital and the relative shares of the contributing countries. Though the data relate only to 1960, this does not seriously impair the utility of the study. The limitation is owing to lack of firm and precise data for 1961, but partial amends have been sought to be made for this by projections on the basis of trends that have become discernible in a few sectors. The study assumes particular interest in view of the widespread misgivings about the effects of the Government's economic policy in promoting the flow of foreign investment into the country.

On the basis of what the Reserve Bank study has disclosed, there should be cause for satisfaction about the trends and prospects in respect of the inflow of foreign capital into the country. During 1960, there has been a record inflow of such investments into the private sector the net figure in this regard being estimated at Rs 78.4 crores which compares with

the net inflow at Rs 37.9 crores in 1959. The composition of the flow and the industry-wise and country-wise shares show very interesting features that contrast in some significant ways with the trends in the preceding year. It is noteworthy that the entire rise in the foreign capital inflow was accounted for by foreign private sources, the relevant figure showing an increase from Rs 11 crores in 1959 to Rs 53.3 crores in 1960. On the other hand, the net inflow of official capital at Rs 25.1 crores was of a lower order than in 1959 when it amounted to Rs 26.9 crores.

The composition of the net inflow from private sources also shows significant variations from 1959. Almost the entire increase in the inflow of capital from private sources during 1960 is accounted for by fresh capital receipts, which registered a steep increase to Rs 48 crores from Rs 10.5 crores in 1959. In contrast, there was a slight decline in the amount of retained earnings from Rs 15.3 crores in 1959 to Rs 14.5 crores in 1960. The predominance of non-cash inflow in the total of fresh capital receipts from private sources is also a noteworthy feature and is explainable in terms of the tendency for fresh investments to take the form of investments in kind. Retained earnings were highest in 1956 when they amounted to Rs 19.5 crores, and had not fully recovered after the steep decline in 1957 when they fell to Rs 9.5 crores. The relatively modest decline in retained earnings in 1960 does not, according to the Reserve Bank study, reflect any corresponding decline in earnings in different industries. With the exception of the petroleum industry, such earnings during 1960 were generally higher than in 1959.

Industry-wise details of the inflow show petroleum industry to be the single largest beneficiary, the net inflow to this sector being estimated at Rs 31.5 crores in 1960. Considering the net disinvestment in this sector to the tune of Rs 15.7 crores in 1958 and the rather negligible net inflow of Rs 2.5 crores in 1959, the size of the inflow during 1960 is striking. As the Reserve Bank study has underlined, mainly it reflects the oil exploration and development activities in the country and the reduced level of capital repatriation. The reduced level of capital repatriation was also an important factor in this. Outflow of petroleum capital during 1960 amounted to Rs 6.9 crores which compared with Rs 12.9 crores in 1959 and Rs 21.9 crores in 1958. It is also remarkable that the major portion of the total capital inflow into the petroleum sector comprised the contributions from private sources, while the total inflow from official sources amounted to only Rs 1.8 crores. On the other hand, the total inflow into the manufacturing industries at Rs 38.8 crores was shared more or less equally by private and official sources. Among manufacturing industries chemicals and allied products, metals and metal products, machinery and machine tools figured with fairly sizable shares in the total net inflow.

Country-wise break-up of the inflow of foreign investment during 1960 also shows features that are markedly divergent from those in 1959. Most significantly, the UK has assumed the top position having put the USA to second place. The net inflow from UK during 1960 amounted to Rs 44.5 crores and reflecting a sharp increase as compared with net inflow of Rs 1.5 crores in 1959 and net outflow of Rs 2 crores in 1958. At Rs 28.5 crores, the net inflow from the USA was also the highest since 1956, but the increase over 1959 is only of the order of Rs 4.3 crores. The composition of the respective

inflow from the UK and the USA also presents important points of contrast. While almost the whole of the net inflow from the UK is composed of private capital, it is the official capital that predominates in the inflow from the USA. During 1960 the inflow of such official capital amounted to Rs 23.5 crores while private capital was only of the order of Rs 5 crores. It is also noteworthy that while the inflow of official capital from the US showed an increase to Rs 23.5 crores from Rs 16.5 crores in 1959, there was a modest decline in the inflow of private capital from Rs 7.6 crores to Rs 5.0 crores.

The Reserve Bank study also throws light on the total outstandings of foreign investments in the country with country-wise and industry-wise break-up. The total at the end of 1960 has been placed at Rs 690.5 crores being more than double the figure in June 1948 when they amounted to Rs 255.8 crores. With Rs 289.4 crores, Manufacturing industries account for the major proportion of this investment and among the manufacturing industries, metal and metal products and chemicals and allied products figure with prominent shares. Petroleum figures as the next largest group with a share of Rs 152.4 crores. It is remarkable that since 1948 there has been considerable acceleration in the rate of inflow of foreign capital into these two sectors. On the other hand, there has been a relative stagnancy in capital inflow into the mining sector. Its total at Rs 13.7 crores in 1960 may be compared with Rs 11.5 crores in 1948. The rate of growth in inflow into the plantations has also been modest, the outstandings in 1960 at Rs 99.5 crores comparing with Rs 52.2 crores. This only reflects the effects of the Government's policy in discouraging the flow of capital into old and established industries like plantations and mining while offering incentives and other facilities for their participation in other sectors where the country has been lagging behind.

Country-wise, the UK figures as the major participant in the total of foreign investment and out of a total of Rs 690.5 crores, accounts for Rs 446.4 crores. The total of these investments is fairly evenly distributed between the four major groups, plantations, petroleum, manufacturing and services. On the other hand, the major part of the US investments are concentrated in two sectors namely petroleum and manufacturing.

This difference in the relative shares of the UK and the USA is obviously to be traced to the historical connections with Britain. To this is also to be attributed the fairly sizable British investments in plantations and services and the lower level of such investments by other countries. There is also a marked difference in the relative proportions of direct and portfolio investments in the total of US and UK investments in the country. At Rs 42.6 crores, portfolio investments constitute only a tenth of the total of UK's investments in the country and it is direct investments that predominate. In the case of the US on the other hand, the two proportions are nearly equal, the outstandings being Rs 68.6 crores in direct investments and Rs 44.1 crores in portfolio investments. It is also noteworthy that the greater part of the US portfolio investments is concentrated in the manufacturing industries, while direct investments are greater in the petroleum industry than in others, the relevant figure being Rs 47.1 crores in petroleum against only Rs 19.1 crores in the manufacturing industries.

As regards official capital, the total of outstandings at the end of 1960 has been placed at Rs 124.1 crores, the major part of it at Rs 78.1 crores representing IBRD capital. US share at Rs 40.1 crores is also fairly sizable while that from UK is relatively small at Rs 3.1 crores, being the UK Government's loan for the oil pipe-line project. It may also be noted that outstandings of IBRD capital was higher at the end of 1959 there having occurred a net outflow of Rs 2.3 crores during 1960. With outstandings at Rs 105.1 crores, manufacturing industries account for the major portion of the total outstandings of official capital and within the manufacturing group, metals and metal products account for as much as Rs 76.0 crores. It is to be noted that the greater part of the inflow of official capital took place since 1957. For, at the end of 1956 the outstandings were only Rs 14.8 crores while it was still lower at Rs 2.7 crores at the end of 1955. Roughly it was the Second Plan which marked the turning point for the impressive rise in the rate of inflow of foreign official capital into the country.

Trends in 1961 as projected in the Reserve Bank study would seem to indicate a somewhat moderated inflow of foreign capital into the country. The inflow of official capital is expected to be larger than in 1960. Preliminary estimates place the probable receipts at Rs 35 crores against only Rs 25 crores in 1960. However lesser store is set on the receipts of private capital during 1961. Mainly a fall in receipts is anticipated in the petroleum sector. The Reserve Bank's estimate of likely receipts of private capital during 1961 is Rs 30 to 35 crores. On this reckoning, the total inflow including official and private capital during 1961 may amount to only Rs 70 crores, marking a slight fall from the 1960 level.

What is the War Effort

Our Prime Minister says :

"Our War effort essentially, apart from the actual fighting done, is the effort to greater production in the field and in the factory."

Banks facilitate financial transactions and supply the financial needs of production and distribution of goods. Every monetary transaction that you put through your bank account, directly helps war effort by expediting production. Use less cash; make your money transactions through the Bank.

United Bank of India Ltd.

Regd. Office : 4, CLIVE GHAT STREET, CALCUTTA-1

World of Finance

EMERGENCY

Financing of 1963 Tea Crop Inhibited

The busy season in respect of financing of the tea industry is about to commence; but the money market is, in view of the emergency and particularly since the tea crops will be manufactured in the vulnerable areas, in a state of doubt as to whether banking finance will be as readily forthcoming. For in the tea industry finance has to be made available well before the crop is ready or the tea manufactured, and the main security or collateral that banks will have in this regard is the prospective crop that will be ready six to eight months hence. The difficulty lies in the fact that while normal conditions may obtain during the actual growing of the crop, it may happen that tea may not at all be plucked and the production totally lost. In such a contingency, it is clear that it could conceivably happen that the prospective security against which banks may have extended finance might by the time repayment of loans would normally be expected and take place, would simply cease to exist.

There can be no two opinions, however, about tea financing - being an essential task which the banks will, whatever the risk, have to undertake. Such financing is necessary as much from the viewpoint of ensuring the manufacture of India's most important foreign exchange earner as also from the stand point of ensuring sufficient supplies within the country of a basic consumer good. But, as we have seen, the present circumstances are such as would justifiably make banks hesitate to extend such tea finance. In the national interest, therefore, we urge upon the Government without any delay to formulate and to commence a scheme of guarantee such that the banks will be enabled to finance the 1963 crop of tea. It is apparent that the financial burden involved should be distributed as widely as possible over the country as a whole. While there is still time to work out the details of such a scheme, we would emphasise that brooking no delay is a clarification to the effect that any contingent hazards in the financing of the next tea crop would be made due provision for on a national basis; and there is as much need here for what may be called the safety consideration as for ensuring banks'

liquidity. If action is not promptly taken, it may well happen that the 1963 crop of tea will be confronted at the very start with inhibiting problems.

A welcome increase in the Foreign Assets held by the Reserve Bank is indicated in the returns of that institution for 23 November. The defence effort notwithstanding, Active Note Circulation has declined by Rs 9.35 crores to Rs 2,067.90 crores, and there has been return of Rupee Coin in the sizeable amount of Rs 1.89 crores. Foreign securities are unchanged at Rs 88.08 crores, and currency has been contracted for Rs 10 crores against Rupee Securities. Consequently, the Reserve Bank's cash in the 'ill moved up by Rs 1.24 crores to Rs 15.09 crores.

There has been a slight improvement of Rs 4.55 crores to Rs 65.32 crores in the Deposits of the Central Government. This is not, apparently, consequent upon deficit financing, since Investments, in being marked up by Rs 9 crores, merely reflect the transfer from the Issue Department.

Balances of banks have been run down by Rs 9.72 crores to Rs 83.17 crores. As noted already, Balances Held Abroad have improved although by the nominal amount of Rs 0.92 crore to Rs 6.06 crores.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on 27 November 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.40 per cent and above were accepted in full. Total amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.345 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 3 December 1962. Successful tenderers should make payment of Friday, 7 December 1962 at all centres. Other conditions are as usual.

During the week ended 23 November 1962 Government of India Treasury Bills for Rs 17,08,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 28 November to 1 December 1962 at Rs 99.431 per cent. Sales can be stopped at

any time without notice if Government think it necessary.

91 days' Intermediate Treasury Bills sold from 21 to 24 November 1962 amounted to Rs 5,77,50,000.

After the Sino-Indian War

By Paul Einzig

AT the time of writing it is far from clear whether the "cease-fire" just announced by the Chinese Government would bring the undeclared war to an end. If so, the lesson taught by the Imperialist-Communist aggression against India may prove to be beneficial in the long run. Up to now the financial and economic cost of the conflict have not placed an unbearable extra burden on the Indian economy. It is true, in order to prevent a repetition of the experience India will in future have to be better prepared to resist an invasion. But this problem could be solved without any extra cost through an amicable settlement of the Kashmir dispute with Pakistan.

What matters at least as much as military preparedness is a general improvement of economic conditions. The standard of living of the masses must be raised in order to accentuate the contrast between their progress toward prosperity and the abject poverty of the oppressed masses in Communist China, ruthlessly exploited in the interests of a handful of megalomaniacs. Even if no spectacular progress can be achieved, evidence of the trend pointing in the right direction should go a long way toward preventing successful infiltration which will presumably be the next method attempted by the heirs of Ghengis Khan in Peking.

In this effort to achieve noteworthy progress India will need the wholehearted assistance of the West. It seems certain that in the future such assistance will be forthcoming in more generous measure than in the past if, as seems reasonable to expect, India should draw nearer to the West. Until now the frequent anti-West pronouncements of Mr Nehru and the undisguised hostile attitude of Mr Krishna Menon discouraged the Western world to no small extent from doing its best for India. It would indeed have been too much to expect the Western statesmen to plunge into a policy of wholehearted assistance to India so long as India's appreciation of their efforts was expressed in unfriendly words and actions. Now that it seems probable that the atmosphere in New Delhi will be more favourable to them I am sure they will reconsider the extent to which their respective countries could and should provide economic aid to India.

Private capital too, is likely to find more inducement to take a hand. The spectacular recovery of Assam tea shares on the London Stock Exchange following on the report of the "cease-fire" gives some indication how British investors are likely to respond to the removal of the danger of Communism gaining the upper hand in India. Mr Krishna Menon's departure alone is likely to yield to India many millions of additional influx of much-needed capital. The process would be greatly accentuated if it became evident that the change in Mr Nehru's attitude will survive the emergency that caused it.

Notes

EMERGENCY

Steel for Defence

The manner and expedition with which, after the proclamation of emergency, New Delhi has set about gearing the production of iron and steel industry to cater to the defence requirements has been most heartening. The first essential step taken in this regard has been to alert all the major five steel producing units in the public and private sectors about the specific requirements of the types of steel to meet the defence needs. It is also a matter for gratification, that the Government has allowed no time to be lost in giving effect to the measures required to achieve the objectives in iron and steel production. All the major steel plants have now been working without pause and round the clock to deliver the most important essential for the success of the defence effort. The atmosphere of co-operation, with workers having pledged their everything to step up output, has been most helpful in bringing about the increased momentum in steel production. But credit should also go to Mr C. Subramaniam who has brought to bear a new attitude of dynamism in the planning of steel production ever since he took charge of the Ministry.

In his recent speeches at New Delhi Mr Subramaniam has elaborated other measures, both short and long-term, that are being considered for improving the supply position of steel with particular reference to defence requirements. The long-term projects include the setting up of a plant at Goa or Hospet and another one at Bellary. That project reports and other preliminary work connected with these projects are being expedited is indicative of the new outlook that the Chinese aggression has infused into the planning of iron and steel production. Among the short-term measures, most significant are those that have been indicated for increasing the production of special steels in the country. This is most timely considering the grave shortage of capacity for production of special steels at present in the country. All the five major units are being asked to consider possibilities of manufacturing special steels in their plants. To what extent the major plants will be able to do this is not known. A more feasible and promising scheme is for the manufacture of special steels in the Mysore Iron and Steel works. That the plant here could with very little difficulty be adapted to manufacture special tool and alloy steels has been vouched by a team of German experts connected with Demag. As the project report relating to this reorientation of production at the Bhadravathi Steel Works is already with the Government, there should be no difficulty in having an early decision. The position could be improved still further if, as is now being sought, all the private sector firms which have got electric furnaces and rerolling capacity could also be persuaded to undertake the manufacture of special steels wherever possible.

Pressure of Demand on Oil

With the declaration of the emergency and its implications for strengthening the economic base, the question of the production and demand for oil has again come to the fore. In the short period that has elapsed since the declaration of emergency, there has been clear evidence of an intensification of the pressure of demand for the important petroleum products. However, Mr Malaviya, Union Minister for Oil and Fuel has been very reassuring about the sufficiency of the present stocks to

meet any short-term emergency requirements. The Minister's confidence is obviously based on the measures he has taken to step up stock-piling programme and the heartening measure of response to requests for supply of petroleum products from the producing countries.

While the Government's efforts to build up stocks of petroleum products and to expand storage capacity with collaboration from private sector are praiseworthy, it is disturbing that New Delhi should continue to shirk the serious second thoughts it should bestow on the development of the oil industry. With pressure of demand already evident and its further aggravation implicit in the continuance of the emergency conditions, the Third Plan estimates of demand for oil can no longer be considered as adequate to meet the full requirements. While the Third Plan programmes for oil industry are based on an estimate of demand at 13 to 14 million tons, on present trends, it appears hardly likely that the Government will be able to hold down demand even at 17 million tons without leaving serious shortages in key products. The total capacity projected in the private and public sectors is about 13 million tons consisting of about 6 million tons in the public sector and 7.5 million tons in the private sector. In estimating capacity for the public sector, credit has been taken for production from the Koyali refinery to be set up with Russian collaboration. In view of the political repercussions of the present military entanglement with China, there is room for doubt whether Russian aid will be forthcoming according to schedule. In this circumstance, the only scope for increasing indigenous production during the Third Plan period is by allowing the private sector refineries to expand. The Government's objections to such expansion in the present circumstances can't bear any scrutiny. In may be mentioned that both Burma Shell and Esso have a prepared plan for expansion of their production capacity entailing very little additional cost and which will hardly involve any drain on the country's foreign exchange resources. In fact this saving in foreign exchange is the main point in the programme that should lend advantage in letting the private sector to expand. With the refineries having agreed to scrap the refineries agreement and replace these by licences under the Industries Act, one major impediment to the negotiability of the question of refinery expansion should have been removed.

Set-back to Exports

The present emergency has brought into sharp focus the increasing need of foreign ex-

change: for, besides paying for normal imports, large amounts will have to be diverted to purchase overseas defence equipment and strategic materials, urgently needed. It is not going to be easy to find the resources to pay for the increased imports. For, it would appear that hopes of maximising exports to augment foreign exchange earnings is unlikely to materialise in the short term at least. If as the Prime Minister has often been saying the war with China proves to be a long drawn out affair, export promotion may be further retarded. There are already indications of a setback to exports. It is now believed that in the current year targets for exports will not be hit. Export earnings were expected to reach a level of Rs 720 crores, Rs 40 crores more than last year, during the current year. But from the performance in the past few months, it looks as though the annual rise may not be more than Rs 20 crores.

Referring to the declining trend in exports, Mr Manubhai Shah, Minister for International Trade, told Parliament a few days ago that the export outlook is now vitiated by the present emergency which has placed an additional strain on the transport system as well as the need to divert goods for defence requirements. Had it not been for the present emergency, however, there would have been good chance of exports showing a marked rise. For, considerable spade work has been done by the Ministry for International Trade in recent months toward reorienting export promotion. Targets for export industries have been fixed and export promotion measures have considerably been simplified and liberalised wherever possible. The export promo-

tion organisation has been strengthened with the appointment of a Director of Incentives, Director of Movement and Director of Production and the export promotion functions have been divided on a commodity-wise basis. Another important incentive has been the exclusion of export earnings from the increase in Corporation Tax on companies from 45 per cent to 50 per cent in the last Finance Act.

The declining trend in exports should not however unduly depress our spirits. For, thanks to the emergency there is a new awakening in the country as to the need for stepping up not only defence production but industrial and agricultural production as well. In this new task, there is promise of the utmost cooperation from all sections of the population. There is no doubt that production will soar higher provided adequate supplies of power, fuel and transport are made available. The Board of Trade which is meeting at the end of this week for its half yearly review should have as its principal preoccupation the devising of ways and means of ensuring adequate facilities so that industry can work to its full capacity and in certain cases even three shifts if the need arises.

Export promotion will also be aided greatly if Government is not averse to extend increased facilities to industry. Perhaps it will be too much to expect our Government even in this emergency to emulate Pakistan in the matter of export promotion. The Pakistani jute industry, is able to compete effectively with the latter in world market mainly because of the export bonus scheme and other facilities available to it. It is the complaint of the Indian industry that not only is there no such facilities but it is obliged to pay a high price for its raw material as minimum prices of raw jute have been fixed at uneconomic levels. Mr Manubhai Shah pointed out that a number of measures have been taken to increase export potential of the jute industry: the mills have been taken to stabilise jute prices by fixing minimum prices and establishing a jute buffer stock association. As demand for carpet backing cloth is increasing mills have been permitted freely to install broad looms. It is however necessary that while considering export promotion for jute goods, the growing strength of the Pakistani industry is not ignored.

... But Chemicals Earn More

It is however gratifying to note that some of the new entrants in the field of export are making a good showing. Exports of chemicals and allied products have recorded steady improvement in the past few years. Earnings from exports of chemicals and

allied products have increased from Rs 3.4 crores in 1958-59 to over Rs 4.8 crores in 1961-62. The industry's confidence in stepping up the sale of its products overseas is reflected in the considerably increased targets set for its various products for the current year. It expects to step up its export of pharmaceuticals and drugs by 200 per cent, that of soap and toiletries by 100 per cent, the export of glass and glassware by 66 per cent, that of ceramics by 65 per cent and that of rubber products by 40 per cent over actuals during 1961-62. It is expected that the industry will be vigorously taking up the export programme and in this regard will be fixing export targets for each factory or unit. This will however not be in the form of a compulsory scheme but it is reported that every member unit will accept export obligation.

But fixing of higher targets alone will not increase export earnings. Our products should firmly establish themselves in world markets by dint of their quality and competitive price. In this regard, chemical and allied products have a difficult task for the simple reason that they have often to compete with manufacturers who are in the field for a considerably longer time and who have a high reputation. It would however appear that this is no great handicap to our products as their exports have been steadily increasing. Even so, there is need both for reducing cost and improving quality. While inaugurating the conference of the Chemicals and Allied Products Export Promotion Council, Mr R. Venkataraman, Minister for Industries, Madras State, has referred to the frequent complaints about the inconsistency of the quality of Indian goods. The maintenance of a high quality is particularly important in chemical products, especially pharmaceuticals and drugs. Even a faint suspicion about quality will do permanent damage to the export trade in these products. Mr Venkataraman also has referred to the poor publicity to our products in overseas markets. This is a matter which needs the close cooperation of the Government. Publicity is an integral part of export promotion and the authorities in our country do not seem to have fully grasped the need for telling buyers overseas about our products.

... But Smaller Markets for Salt

Export of salt mainly to neighbouring countries has shown marked variations in recent years. The most disturbing feature in this regard is the disappearance of markets where once we held a firm ground. For example, Indonesia which imported 89,631 tons in 1957 has since then ceased to purchase

Indian salt, while East Pakistan has resumed imports only last year after an interval of seven years. Coupled with such loss of export markets, there has also been a failure to explore the scope for exports in other countries which held out fair prospects for Indian salt. Underlining the scope for such exports in neighbouring countries like Japan, Malaya, Singapore, the Philippines, Nigeria etc. Mr M. M. Gurunath a spokesman of the East Coast Salt Industry, urged upon the Government to take measures to increase production. Frankly speaking, it is the stagnant production that has proved to be the most serious limiting factor to improved performance in exports. Production in the Madras region during 1962 has for example shown a decline to 715,000 tons from 734,000 tons in the previous year. Mr Gurunath, has pointed to scope for encouraging production in the coastal waste lands in Ramanathapuram, Tanjore, and Chinglepet districts of the Madras State. Encouraging production in these places will also be advantageous from the point of view of export to the Far East. But for stimulating exports other basic requirements have also to be satisfied. Mr Gurunath has suggested shipping facilities between India's East Coast and Malayan and Singapore ports should be available for salt exports at about Rs 20 to Rs 23 per ton to maintain the competitive power of the Indian goods. On the basis of the CIF value of salt at the Malayan ports, Mr Gurunath sees no reason why Indian salt could not compete successfully in the Malayan market. It is noteworthy that Indian exports to Malaya amounted to only 335 tons during 1961 while the total of Malayan imports amounted to 75,000 tons. A properly planned scheme to increase exports to Malaya should certainly prove rewarding. Japan is the other country which holds out bright prospects. Though even now it is the main consumer of Indian salt, it does not seem that we have exhausted the scope for increasing exports to Japan.

Diverting to Defence

With the declaration of the state of emergency, consequent on the Chinese penetration into our soil, the Indian economy which has hitherto been geared to all-round development was constrained to an immediate switch-over to cater to defence requirements. The unexpected Chinese aggression dealt a rude shock to the various spheres of production. Predictably the steel industry, by dint of its pivotal role, was called upon to bear the brunt of the emergency and the primary producers of steel in both public and private sectors were alerted to tune their production to defence needs. In

the circulation to the steel producing units the Union Ministry has laid special stress on the manufacture of alloy and armour plates. As Rourkela steel plant is best suited for this purpose special orders have been given to work to the maximum capacity while the other plants are asked to step up their production to the possible extent and explore the possibility of the production of special steel.

The Ministry is also adopting necessary measures to gear up other industries to meet defence needs on what may be termed as "an operational priority basis". Accordingly some of the fertiliser plants are being switched over to the manufacture of strategic materials. The automobile manufacturers have been instructed to enhance their assembly line for augmenting the production of trucks and jeeps. Those units engaged in the manufacture of chassis and engine parts have been called upon to take up body-building as well. For ensuring uninterrupted operation of these units adequate quantum of foreign exchange has been allotted for importing equipment and other requisite components. Necessary incentives are being provided to automobile ancillary industries to facilitate regular supply to large undertakings. In addition, the cement industry has been required to boost its production by additional installations at the existing factories.

TEXTILES Maintaining Standards

The introduction of the Textile Committee Bill in the Lok Sabha by Mr Manubhai Shah last week, by which the existing Cotton Textiles Fund Ordinance of 1944 is sought to be repealed, is a significant stride in the history of Indian cotton textile industry. The new bill is meant for empowering the Cotton Textiles Fund Committee with additional statutory powers to ensure the quality of cotton textiles both for internal consumption and export purposes apart from the use of standard textile machinery. The emphasis on quality of products and machinery is of immense importance in the context of the fierce competition from other exporting countries like China and Japan and the prohibitive cost of production of Indian goods which greatly undermines the competitive ability of our goods in the international markets.

The functions of this Committee include the undertaking, assisting and encouraging scientific, technological and economic research in textile industry; promotion of exports of textiles and textile machinery and to set up an adequate propaganda machinery for this

purpose; evolve standard varieties of textiles for both internal and foreign consumers; rigorous inspection of machinery and textile products; gather relevant statistics regarding the textile industry and advise on all matters relating to the development of the industry and the production of textile machinery. Apart from this, the Committee will be empowered to appoint ad hoc committees for the exercise of its powers and discharging its duties. Prohibition of the production and sale of sub-standard cotton textiles should be a congenial step toward this end and the offenders should be meted with deterrent punishments.

EMPLOYMENT Educated Have More Jobs

The quarterly employment review made by the National Employment Service, Madras, has recorded some interesting findings in respect of the trends in employment in the public and private sectors. It has been noted that in the private sector the maximum increase in employment has been recorded by the manufacturing industries during the period January to March 1962 over the previous quarter. Employment in this sector rose to 327,662 persons from 320,653 in the previous quarter. In contrast, in the public sector the maximum increase has been recorded by services, employment in this sector having gone up to 355,254 from 353,709 in the previous quarter. It is also noteworthy that manufacturing industries in the public sector accounted for an increase of only 584 persons. In the private sector a decline in employment was recorded by trade and commerce, while in the public sector such decline occurred in the construction industry. It is also remarkable that in the entire public sector there was a net decline in employment from 652,932 to 648,835 while employment in the private sector as a whole registered a small rise of 4,458.

The district-wise break up of the employment position also reveals varying levels of achievement. While Coimbatore figures with the highest increase in employment, the South Arcot district has reported grave decline. The review of employment registrations and unfilled vacancies has shown a sparsity of technologists among the increasing number of registrants. The number of unfilled vacancies on account of shortage is reported to be highest in respect of civil engineers. Shortage of drafters and fitters is also shown to be acute. The unfilled vacancies in these two fields have been placed at 487 and 447 respectively. Other fields in which there are more jobs than men seeking them are welding, store-

keeping, pharmacy, nursing and truck-driving.

A redeeming feature of the employment situation is the decline noted in respect of the educated unemployed. Their number has come down to 40,767 from 41,191 in the previous quarter. During the period January-March 1962, unemployed graduates numbered 2,830, undergraduates 1,921 and matriculates 36,016.

PORTS Developing Paradip

The development of port facilities in the country has been engaging the attention of the authorities ever since independence. But owing to inadequacy of foreign exchange and technical know-how headway in this sphere was ren-

dered difficult. Thanks to the abiding interest of foreign countries in India's economic development various schemes have been formulated through foreign collaboration. Japan's assistance in improving our ports facilities is an instance in point. The recent visit of the Japanese delegation in connection with the expansion of the facilities in Paradip port in Orissa has stirred considerable interest in the country. After the first round of talks with the authorities in New Delhi, the team has proceeded to Orissa to have consultation with the State Government and to conduct an on the spot survey prior to the launching of the development programme. In the Third Plan the development of this port as an intermediary port has been included but the State Government's demand is to convert it into a deep-sea port providing adequate facilities for the export of iron ore from its

mines. According to a recent estimate nearly 10 million tons of iron ore per annum can be exported through this port by about 1970.

According to present indications, the port expansion programme will be undertaken in two phases. The first phase envisages the expansion of Diatari-Tomka iron ore mines, development of the express highway from Diatri to the port and the completion of the development programmes. The second stage will see the development of the Nayaragh mines and the inter-linking of mine areas with the port by means of broad gauge railway system. The development of the Talcher coal deposits and internal transport of coal by coastal shipping through the port to other ports of the country is also included in this phase. The discussion with the Japanese delegation, by far the most high power and biggest ever sent abroad,

would apart from the speedy completion of this project throw-up vast scope for trade and technoeconomic cooperation between the two countries for their mutual benefit.

PAKISTAN Need for Export Drive

Although Pakistan has made considerable progress in the past few years in industrialisation, it is still a long way from having a self-sustaining economy. Like other developing countries, Pakistan is also handicapped by inadequate resources, both foreign and internal, with the result that its development programme is leaning heavily on foreign assistance which comes in the shape of loans and grants. Speaking at the annual banquet of the Federation of Pakistan Chambers of Commerce and Industry, President Ayub Khan has pointed out that the country's export earnings are meagre and nearly 20 per cent of these earnings goes to meet the foreign loan obligations. In this context of an acute stringency of foreign exchange resources, it is not surprising that Pakistan is finding it difficult to undertake big plans for national economic development. The necessary resources have to be first found and it has been rightly emphasised by President Ayub that there is no easy way to a self-sustaining economy. The necessary resources have to be earned and the only way it can be properly done is through maximising exports. The realisation of the importance of export earnings to the national economy is borne out by the various measures already initiated by Government to facilitate the export trade. Some of the facilities made available to industry are liberal allowances for modernisa-

tion, technological development, etc. Many other concessions are also given to industry. Salaries of foreign experts employed by industry are exempt from income-tax for two years, while cost of scientific and technical research is deemed as expenditure for tax purposes. There is then the export bonus scheme which confers sizable benefits on exporters who are allowed bonus imports. Export industries are given special facilities in regard to their raw material and spares requirements. These requirements are efficiently met by means of a scheme under which licensing for raw materials and spares becomes automatic. The export bonus scheme has been found to be of great help in fostering the growth of industries. For instance, the jute goods industry in Pakistan has made rapid strides and more expansion is in the offing during the country's Second Five Year Plan. The industry has been enabled largely by means of the export bonus scheme to compete effectively with its long established counter-part in India. Pakistani jute goods have made considerable headway in a number of India's traditional markets as they are much cheaper than goods from India. Big expansion is envisaged for the cotton textile industry also. The targets set for the industry are 2.83 million spindles and 43,480 looms. It is expected that when the expansion is completed there will be substantial quantity of textiles available for the export market.

Even so, the problem of export promotion will have to be tackled vigorously. If more and more of Pakistan's manufactures are to find their way into overseas markets, it is essential that both in quality and price Pakistan's products are competitive with the products from other exporting countries. There is a buyer's market in almost all manufactures and commodities in world

markets what with almost all countries, especially the developing countries, vying with one another to increase their export earnings. The difficulties confronting Pakistan's export trade will be still further increased in the event of the UK joining the European Common Market. At this point to the urgent need for taking concerted measures to maximise exports. At the same time Pakistan would do well to cut down unnecessary imports. As the president of the IPCCI has pointed out, there appears to be considerable scope for this. It would appear that many unproductive items are allowed to be imported against bonus vouchers. These vouchers should be fully utilised for import of capital goods.

ECM Of Kips and Jute

The officials engaged in the Brussels negotiations on the European Economic Community (the Common Market) began on 22 November with an agenda that included a number of items which the Six said they were not yet ready to discuss with the British because they had not yet concluded discussions among themselves.

On items of interest of India and Pakistan for which the British delegation had suggested a nil tariff (e.g., kips, certain heavy jute goods, and hand-knotted carpets) the chairman said that the Six had nothing to add to their previous offer of tariff reductions of approximately 15 per cent. The Six had reviewed the position again and were convinced that no economic difficulties would be caused to India and Pakistan by the application, on Britain's accession, of 15 per cent of the reduced common external tariff on these products in accordance with the scale agreed for Indian, etc., manufactures, since this would only be a symbolic tariff. The eventual tariff on these products could then be discussed with the Indian and Pakistani Governments during the negotiations for comprehensive trade agreements.

The Six also pointed out that Article 25 of the Treaty of Rome would apply to East India kips, implying that Britain might be able to obtain a duty-free quota or suspension of the tariff on these items. The discussion of this subject will be taken up next week.

SNIPPETS Indian Lead-Zinc News Centre

An Indian Lead-Zinc Information Centre is being established in Calcutta by UK interests. The centre will serve as a technical advice bureau for the zinc and lead

using industries in India. Many Indian manufacturers and fabricators, and Government agencies, are already familiar with the work of the two British organisations and have been using their advisory and other services for several years. Establishment of the office in India will mean that direct assistance will be more readily available to Indian industry.

One of the main functions of the new Indian Office will be the dissemination of technical and scientific information on the wide range of processes in which zinc and lead are used. The publications issued by the ZDA and LDA on galvanizing, diecasting, cable manufacture and on the use of zinc and lead in building and many other applications will in future be available through the new office. Many of these publications are the most authoritative that are available. In particular the Proceedings of the International Conferences on galvanizing and die casting which have been published by the ZDA contain information on the most recent developments in those fields.

In due course, the Indian Office will be arranging small conferences and discussions which will bring together experts in each sector of the Indian zinc and lead using industries. The exchange of ideas and views on problems of common interest, as well as discussion on European practices will encourage technical progress here and the more efficient use of the two metals.

The LDA and ZDA have also expanded their library and abstracting services through the assistance of the Expanded Research Programme of the American Zinc Institute and the Lead Industries Association of New York. In the past, the abstracting service covered mainly the principal zinc and lead using processes. This has now been more comprehensive to include most of the minor uses of the two metals.

Reports on the research work now being sponsored by the AZI/LIA Expanded Research Programme as well as information on the research and development work being carried out in the UK, Europe and elsewhere will be available through the Indian Office.

AEI

Associated Electrical Industries has received an order worth over £500,000 to supply signalling cables for Indian Railways, the firm announced in London recently.

The cables will be used in the current electrification programme, and the order involves the supply of 2,000,000 yards (12,000,000 'core yards' in all) of single- and multi-core rubber-insulated cables.

The order will be met by AEI's cable division. The bulk of the cable will be made at Lydbrook, Gloucestershire, and Birtley, County Durham.

IN PARLIAMENT

[Question hour in Parliament last week yielded some important items of economic intelligence and official policy. These are given below as likely to interest our readers—Ed.]

Mr. C. Subramaniam, Minister for Steel and Heavy Industry, said: The prices of Lamoretti and Vespa scooters have now been brought to the same level, but unless the annual production is increased to 50,000 or 100,000 it is not possible to bring down the prices further. The Government was not in a position to step up production because of foreign exchange difficulties.

"We are now increasing the production of trucks and other vehicles".

Mr. Arjun Arora asked how the Government had given three new licences for scooter manufacture despite foreign exchange difficulties. Mr. Subramaniam replied that new licences had been given to satisfy regional demands, "but we are trying to find out whether they could not be combined and a more economic production unit could not be established".

Earlier, Mr. Subramaniam said that recently the price of Vespa was cut down by Rs. 81 and that of Lambretta increased by Rs. 83 and thus the prices had become equal. The price of Vespa scooters was refixed after a cost accountant had gone into the manufacturing costs. As production of Vespa scooters was limited, the cost was bound to go up as compared to Lambretta. Vespa had recently represented that at the new prices they were working at a loss. "We may have to go into it", he added.

Loans to IISCO, TISCO: The Government has decided to explore alternative methods for repayment by the Indian Iron and Tata Iron and Steel companies of the loans given to them together with the interest thereon. A special advance of Rs. 10.18 crores was given to IISCO and Rs. 10 crores to TISCO. Up to 30 June 1962, interest totalling Rs. 4.04 crores accrued on these loans, but no amount has been realised so far.

Cast Iron Spun Pipes: A private firm has been licensed for the manufacture of 60,000 tons per annum of cast iron spun pipes at Ujjain.

Developing Lignite Mines: The West German Government has agreed to provide technical experts to help the Neyveli Lignite

Corporation in developing the lignite mines.

Manufacture of Speed Frames: A licence under the Industries (Development and Regulation) Act has been issued for setting up a plant in the private sector for the manufacture of speed frames, draw frames, ring frames, high-speed wing (cone) machines and single spindle fully automatic pinn winding machines with Soviet collaboration. The cost of the project has not yet been worked out, but the cost of machinery alone will be about Rs. 1 crore.

Setting up Cement Plant: The Government has approved, in principle, the setting up of a cement factory with 600 tons a day capacity at Rajur by a private firm. Similar applications recommended by the Maharashtra Government are under consideration.

Jungalgali Mine: The Government is considering whether the National Coal Development Corporation should develop the Jungalgali mine in the Jammu and Kashmir coal-field. This mine cannot be expected to commence production before the first year of the Fourth Plan.

Refineries Expansion: The Government has received a proposal for the expansion of the refineries in the private sector at Bombay. Any proposal made by the existing private companies for the expansion of the refining capacity will be considered on merits in accordance with the Industrial Policy Resolution.

Kiruburu Iron-ore Project: Trial production in the Kiruburu iron-ore project in Orissa is expected to commence by the middle of 1963. The crushing plant has been received from Japan and the installation is expected to be completed by the middle of 1963. Full establishment of the project to achieve the rated output of two million tons per annum will be well in advance of the time of commencement of export, which is early 1964.

Power Shortages: There are power shortages in some States, but there is no significant surplus of unutilised power in any area. It is proposed to expedite the construction schedules of the various

power projects and inter-connect the various State grids to ensure maximum utilisation of the available generating capacity. A few schemes have also been sanctioned to meet regional power shortages.

Gold Smuggling: There has been no increase in gold smuggling. Wherever necessary the customs staff has been strengthened.

Smuggled gold valued at about Rs. 76 lakhs, Rs. 220 lakhs and Rs. 116 lakhs was seized during the first ten months of 1960, 1961 and 1962 respectively.

Food Adulteration: The Government is considering the setting up of a separate central unit in the Directorate General of Health Services for the prevention of food adulteration. Further tightening of the penal and other provisions of the Prevention of Food Adulteration Act and the Drugs Act to discourage the evil is also under consideration.

The State Governments have been appraised of the norms for setting up an efficient drugs standard control organisation and requested to reorganise their organisations so as to conform to such norms.

Textile Deal with Russia: A contract for the sale of 18 lakh metres of printed cotton textiles valued at Rs. 2.6 millions to the Soviet Union has been finalised on the usual commercial terms. The question of further exports is still under negotiation.

Cotton From U.S.: Arrangements have been concluded for the import of 11,000 bales of cotton, valued at Rs. 81 lakhs, against the export of sugar and another 25,000 bales, valued at Rs. 175 crores, against the export of manganese-ore and ferro-manganese. A part of the cotton under the above arrangements is expected to be supplied by the U.S. An agreement had also been entered into with the U.S. earlier this year for the import of 55,000 bales of cotton against the export of sugar. The import of cotton under this agreement is in progress.

Steel Production: All steel plants in India have been asked to achieve 100 per cent production by 1963-64. The target for the next year and the subsequent one was 100 per cent capacity production in the context of the present emergency. Revision of production targets for steel during the Third Plan is continuing. Roughly, the total production might be of the order of 22 million tons of finished steel against the Plan target of 24 million tons.

Heavy Industries: No significant change is envisaged in the pattern of production in the sphere of

heavy industries. There might be minor modifications, but essentially, the question is one of stepping up production in units which are already working and speeding up the construction of heavy industrial projects which are under construction.

Equalisation Fund: The question whether the iron and steel equalisation fund should continue in its present shape is under the active consideration of the Government. The fund is not used exclusively for subsidising the import of steel. Among its various functions, the fund plays an important part in meeting railway freight to enable the supply of steel at uniform prices at all railheads.

Woollen Prices: The prices of indigenous woollen cloth have registered an increase in recent months compared with the position in the last season. The increase in prices ranged from 15 to 25 per cent. The Government has indicated for more than half its requirements of wool from foreign countries.

The prices of worsted hosiery yarn, weaving yarn and grey hand-knitting yarn, and of hosiery manufactures, have been statutorily fixed. The report of the Tariff Commission on the fair prices of different types of woollen goods is now under consideration.

Tyre Plant: A motor tyre manufacturing factory is to be set up in Calcutta with Czech collaboration. A licence has been granted to General Tyres Limited, Calcutta, for the manufacture of 1,80,000 tyres and tubes consisting of 1,20,000 giant tyres and tubes and 60,000 automobile tyres and tubes each, per annum, in collaboration with Technoexport of Czechoslovakia.

Cement Unit In Orissa: The Industrial Development Corporation of Orissa, a State-Government undertaking, would set up a cement factory with a capacity of 1200 tons per day (360,000 tonnes a year) near Hirakud in Sambalpur District. An application under the Industries (Development and Regulation) Act from the State Government for a licence to set up the factory has recently been approved by the Centre.

Fertiliser Plant: The lump sum contract entered into with an Italian firm by the Sindhi Fertilizers has been increased by Rs. 1.03 crores from the original Rs. 7 crores. The contract contains an escalation clause which provided for adjustments in the contract prices of construction materials, variation in the rates of customs duty and changes in the scope of work. No further increase of the contract is expected.

USA

Assistance to India

U. S. GOVERNMENT ASSISTANCE TO INDIA

U. S. economic assistance to India consists of both grants and loans. The total commitments of the United States under various agreements with the Government of India now stand at \$4,425.1 million (Rs. 2,107.2 crores).

American assistance to India is at present extended through the following three agencies.

U. S. AGENCY FOR INTERNATIONAL DEVELOPMENT (U.S.A.I.D.)

This Agency was created on November 3, 1961 to bring American economic assistance under a unified administration. It is in charge of activities previously administered by the International Cooperation Administration, which was represented in India by the Technical Co-operation Mission (TCM), the Development Loan Fund, the Food for Peace Programme (Public Law 480) in its relation with other countries, and other staff and related functions.

USAID gives both developmental loans and grants. Grants have been made to the Malaria Eradication Programme, Smallpox eradication, higher education, National Productivity, craftsmen training, dairy development, community development, crop production and a number of other projects. USAID and its predecessor, TCM, have also aided India by making available American exports to work on specific technical and economic problems in the Indian development programme, by giving advanced training to Indian participants both in India and abroad, and by the provision of supplies and equipment. The names of the principal divisions of USAID, (Agriculture, Industry, Health, Education and Labour) indicate the comprehensive scope of its activities. Developmental grants total \$366.4 million (Rs 174.5 crores). These, of course, do not involve repayment.

Developmental loans given by USAID since its establishment in November 1961 total \$381.7 million (Rs 181.8 crores), including the \$17.9 million loan for the Trombay Power Plant announced on 12 October 1962. These loans are repayable in dollars, but they carry an extremely low credit fee (in excess) of only three quarters of one per cent. To avoid an excessive foreign exchange debt servicing burden to India, the terms of the loans are set at a long period, taking into account such factors as other foreign debt and the foreign exchange earnings of the country. Repayment is scheduled over 40 years, with a 10 year grace period, that is, no payment of principal during the first ten years.

Prior to November 1961, the Technical Cooperation Mission had given the Indian Government loans totalling \$148.9 million (Rs 70.9 crores). These could be repaid in either rupees or dollars at the option of the Government of India.

The US Development Loan Fund, which has now been absorbed into USAID, gave India credit totalling \$556.4 million (Rs 265 crores) between 1958 and 30 September 1962. These loans are repayable in non-convertible rupees.

PUBLIC LAW 480 (FOOD FOR PEACE) PROGRAMME

Public Law 480, which is playing a significant role in ensuring the availability of agricultural commodities to India at reasonable prices at a time of intense economic development has three titles (or chapters).

Under Title I of PL-480, the United States has entered into agreements with India for the supply of larger quantities of wheat, rice, coarse grains, cotton, dried milk powder and tobacco. The total value of the commodities covered by these agreements amounts to \$2,376.6 million. Of this, the rupee equivalent of \$305 million is reserved for US Government use; \$162.3 million will be given in loans to private enterprise under the Cooley amendment; \$788.1 million is to be granted to the Indian Government for economic development and the balance (\$1,121.2 million) is to be loaned to the Indian Government for the same purpose. Thus 87 per cent of the value of agricultural commodities supplied under Title I of PL-480 will be utilised in financing irrigation dams, power projects, industries, the expansion of educational and research facilities, the malaria eradication programme, and similar development undertakings in this country.

Title II of Public Law 480 enables the US President to furnish emergency assistance to foreign countries in meeting famine or other urgent or extraordinary relief requirements. Under this title India has received agricultural commodities worth \$9.2 million.

Under Title III of Public Law 480, \$161.8 million worth of dried milk, wheat, rice, corn, cotton seed oil and other such commodities have been distributed in India through voluntary agencies. Some 25 lakh school children receive free lunches through programmes assisted under this Title.

The Cooley amendment to Public Law 480 (named after Congressman Harold D. Cooley, Chairman of the Committee on Agriculture of the US House of Representatives) provides that up to 25 per cent of the local currency proceeds from the sale of American agricultural

commodities shall be made available to USAID for lending in the private sector to two categories of borrowers: (1) American firms or their subsidiaries operating in the host countries or indigenous firms having an affiliation with an American firm; (2) Indigenous firms of the host countries with no American affiliation but which are facilitating the disposal of American agricultural products, e.g., local private warehouses storing grain or flour mills processing the grain etc. The six agreements between India and the United States under PL-480 provide for \$162.3 million to be given in loans to private enterprise under the Cooley amendment.

THE EXPORT-IMPORT BANK

The Bank has given nine loans to India totalling \$246.9 million (Rs 117.6 crores) a tenth, a \$25 million bill of credit to the Government of India, is pending. The Bank extends loans and guarantees for the primary purpose of promoting the export and import trade of the United States. Loans given by it are repayable in dollars. In determining the rates of interest to be charged on loans, the Bank takes into consideration the maturity of the loan and the

	Dollars (Million)	Rupee equivalent (Crores)	Percentage of total
1. Grants (not repayable) ...	1,324.7	630.8	29.94
2. Loans repayable in dollars ...	817.9	389.5	18.48
3. Local currency repayments. (This includes loans repayable in rupees or dollars, the Cooley Fund for loans to private enterprise and amounts under PL-480, Title I, agreements reserved for US Government use) ...	2,282.5	1,086.9	51.58
Total ...	4,425.1	2,107.2	100.00

It will be noted that less than 20 per cent of total American aid to India involves foreign exchange repayments. The greater part of this amount bears exceptionally low rates of interest and is repayable over a remarkably long period.

US AID FROM THE INCEPTION OF THE ECONOMIC ASSISTANCE PROGRAMME TO INDIA IN JUNE 1951 THROUGH OCT. 15, 1962.

	Dollars (Millions)	Rupee equivalent (Crores)
1. US Agency for International Development Mission's Technical Co-operation Programme: (a) Developmental grants (not repayable) ...	366.4	174.5
(b) Loans (repayable in rupees or dollars) ...	148.9	70.9
2. US Agency for International Development: Developmental Loans (repayable in dollars) ...	381.7	181.8
3. US Development Loan Fund credits (repayable in rupees) ...	513.4	244.5
4. Public Law 480, Title I (grants and loans repayable in rupees) ...	2,376.6	1,131.7
5. Public Law 480, Title II (grants), (not repayable) ...	9.2	4.4

7. Emergency Flood and Famine Relief grants (not repayable) ...	5.5	2.6
8. Export-Import Bank Loans (repayable in dollars) ...	271.9	129.5
9. Wheat Loan of 1951 (repayable in dollars) ...	189.7	90.3
Total ...	4,425.1	2,107.2

extent of credit risk to be assumed by the Bank as affected by such guarantees as may be offered, as well as prevailing United States commercial and government rates. For instance, the First Line of Credit of \$150 million to the Government of India authorized in 1958 carries an interest rate of 5½ per cent. The principal is repayable in 20 semi-annual installments beginning in January 1964.

THE WHEAT LOAN

In 1951 the US Congress enacted legislation for a loan of \$189.7 million (Rs 90.3 crores) to India to finance the purchase of two million tons of wheat to meet an acute food shortage. The loan is repayable in dollars and carries an interest rate of 2½ per cent. Repayment was scheduled to commence on June 30, 1957. However, in view of India's serious foreign exchange difficulties, the US Government postponed the 18 semi-annual instalments of interest and principal due from December 31, 1959 and rescheduled them to fall due from December 1966 to June 1995, without additional interest payments.

To recapitulate, American economic assistance commitments to India total \$4,425.1 million (Rs 2,107.2 crores). This consists of:

GRANTS FROM US PUBLIC LAW 480 SALE PROCEEDS

The six agreements between the United States and India under US Public Law 480 provide for the grant of Rs 375.3 crores from the sales proceeds of agricultural commodities to the Indian government for economic development projects.

Supplies under the sixth PL-480 agreement will continue until 1964.

As of 30, September 1962 a sum of Rs 174.2 crores had become available from sale proceeds for grants to the Indian government. Agreements have been concluded for grants to be made to the following projects.

	Rs. Crores
1. River Valley Development (Chambal, Hiraakud, Damodar Valley, Mahi Right Bank Canal, Kakrapar, Nagarjunasagar, Kosi, Bhadrachalam, Tungabhadra, Mahanadi Delta Irrigation, Kundan and Koyana Project) ...	5.9
2. Malaria Eradication ...	31.0

	Rs. Crores
3. Indian Institute of Technology, Kanpur ...	0.5

Total ...	118.6

LOANS TO THE INDIA GOVERNMENT FROM US PL-480 SALE PROCEEDS

The six agreements between the United States and India under US Public Law 480 provide for

A SAVING ON EACH TROLLEY LOAD

WITH

DUNLOP

CUSHION

TYRES

In factories, railyards or docks, wherever trolleys are used, Dunlop cushion tyre equipment will smooth the way for your loads. These tyres are specially designed to reduce vibration so as to give greater protection to your products. They reduce tractive effort and so permit speedier work. They are silent and help to eliminate costly repairs in the maintenance of flooring and pathways.

THE DUNLOP RUBBER & CO. (INDIA) LTD.

DUNLOP

COOLEY FUND

The Cooley amendment to US Public Law 480 (named after Congressman Harold D. Cooley, Chairman of the Committee on Agriculture of the US House of Representatives) provides that up to 25 per cent of the local currency proceeds from the sale of American agricultural commodities shall be made available for lending in the private sector to two categories of borrowers:

loans totalling Rs 536.6 crores from the sales proceeds of agricultural commodities to the Indian government for economic development projects.

Supplies under the sixth PL-480 agreement will continue until 1964.

As of 30, September 1962, a sum of Rs 315.9 crores had become available from the sale proceeds for loans to the Indian government.

Agreements have been concluded for loans to the following projects:

	Rs. Crores
1. Refinance Corporation ...	26.2
2. River Valley Development (Chambal, Hiraakud, Damodar Valley, Mahi Right Bank Canal, Kakrapar, Nagarjunasagar, Kosi, Bhadrachalam, Tungabhadra, Mahanadi Delta Irrigation, Kundan and Koyana projects) ...	124.1

US PUBLIC LAW 480

The United States has entered into six agreements with India under Title I of US Public Law 480 covering agricultural commodities valued at \$2,376.6 million (Rs 1,131.7 crores).

Payment is made by India for these supplies in rupees. The agreements provide for the utilization of the sale proceeds in the following manner:

zation of the sale proceeds in the following manner:

	Rs. Crores
1. For grants to Indian government for economic development ...	375.3
2. For loans to Indian government for economic development ...	533.8
3. Cooley Fund for loans to private enterprise ...	77.6
4. For US government use ...	145.0
Total ...	1,131.7

Supplies under the sixth PL-480 agreement will continue into 1964. As of 30 September 1962 a sum of Rs 657.4 crores had accrued as sales proceeds of commodities supplied to India.

This amount has been allotted as follows:

	Rs. Crores
1. For grants to Indian government ...	174.2
2. For loans to Indian government ...	315.9
3. Cooley Fund for loans to private enterprise ...	75.1
4. For US government use ...	92.2
Total ...	657.4

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I hope a map of the area of contention between India and China is part of the luggage of Mr A. K. Sen and of Mrs Lakshmi Menon now on a mission to neutral capitals. This map should show the various lines that have been bandied about during the dispute for a clear understanding of the position of these lines is the beginning of understanding of the dispute. On a rough count and confining myself to the most recent phase of the dispute, I reckon at least eleven such lines. There are the "traditional and customary" lines in the western and middle sectors according to them and to us and these are not the same. There is a traditional and customary line in the east according to the Chinese, though according to us, this line coincides with the McMahon line. But our McMahon line and theirs do not coincide and when they talk of moving behind the "illegal" McMahon line, they are not necessarily conceding our claim. There is then the Sino-Indian border in the northwest shown in Chinese maps of 1956 and this doesn't coincide with the same border shown in the Chinese maps of 1960. (It goes without saying that even the maps of 1956 show on the Chinese side of the line large areas that according to us are Indian.) There is then the line of actual control on 7 November 1959, which according to them, is not the same thing as the line of actual contact, whatever that may mean. There is then the line of 8 September 1962. Having drawn these lines firmly, all explanations can begin.

Of course, drawing these lines may offer some difficulty for the Chinese use these lines interchangeably but not uniformly so. Indeed this fact itself should offer an opportunity to expose Chinese duplicity. For instance, if you have two different lines both claiming to be the "traditional and customary line", you know at once that the line has a mobility quite uncharacteristic of international boundaries. This is precisely what has happened in the northwest. The Chinese maps of the area of 1959 and 1960 both profess to show the traditional line that divides the two countries and the two lines are separated by about 2,000 square miles.

Armed with the kind of map I mentioned earlier, Mr Sen and

Mrs Menon can easily set misunderstandings right. The best way to do it is to invite the listener to read the Chinese offer again and to indicate where precisely the Chinese intend to go according to his understanding of the offer. Once he starts to do it, ambiguity after ambiguity will emerge, as he moves from para to para. He will find himself, first of all, up against conceptual difficulties like what precisely is meant by the line of actual control. It is not, as one may hastily assume, the line militarily controlled. The Chinese use the expression in the question-begging sense of "administrative jurisdiction". The advantage in using this ambiguous expression is that you can ensnare the unwary and probably not too deeply interested onlooker. Such a person is apt to fall into the natural error of thinking that what is being suggested is moving backwards from a position of admitted physical presence on 7 November 1959. In point of fact, as far as Ladakh is concerned, what the Chinese offer to do is to move twenty kilometres from where they were not on that particular date. For all the relevance this has to the Chinese disgorge the fruits of current aggression, they may as well have offered to move twenty kilometres from Timbuctoo.

There is then the chronological sleight of hand. Many must have wondered what was special about 7 November 1959. It happens to be the date on which Mr Chou En-lai proposed a reciprocal withdrawal by forces of both sides by twenty kilometres from the line of actual control. The Chinese trap consists in this: if, as we allege, there have been massive gains of aggression since the earlier date, moving behind from the line of actual control on that date must, a fortiori, be moving behind from a position at a subsequent date. This would be so if the Chinese were physically present at the line they claim as the line of actual control on 7 November 1959. This is not the case. Nobody seems to know where this line of actual control on 7 November 1959 is. Sometimes it is vaguely identified by the Chinese with the traditional and customary line. This latter has been moving from time to time and its latest position, as expounded at the officials' meeting in 1960, coincides with

that shown in their 1960 maps and includes large chunks of territory taken by force since. So if the Chinese moved twenty kilometres from the line of actual control on 7 November 1959 they would be still in possession of territory they have taken since 1959. Herein lies the reason for the odd reluctance of the Chinese to accept our request to go to positions as on 8 September 1962 while willing enough to move behind lines of actual control in November 1959.

Finally, what will stump the Afro-Asian leaders scanning the map together with the Chinese proposals is the astounding claim seriously made by the Chinese in their note of 21 November that "after withdrawal, the Chinese will be far behind their positions prior to 8 September 1962". In the context in which this claim is made, it does not appear to refer to the eastern sector only but to the whole frontier. I do hope that among the clarifications asked for and received by us from the Chinese is an explanation, preferably with maps, how they sustain this claim.

A rather extreme example of sloppy legal drafting that came my way recently made me see the point of complaints about the fall in standards of draftsmanship in the country. You would hardly credit it, but it is true that the Income Tax Act passed last year has a sentence that is not only ungrammatical but incomplete. This is how sub-section 1 of section 291 reads in the officially published text:

291(1). The Central Government may, if it is of opinion (the reasons for such opinion being recorded in writing) that with a view to obtaining the evidence of any person appearing to have been directly or indirectly concerned in or privy to the concealment of income or to the evasion of payment of tax on income, (sic) tender to such person immunity from prosecution for any offence under this Act or under the Indian Penal Code or under any other Central Act for the time being in force and also from the imposition of any penalty under this Act on condition of (sic) his making a full and true disclosure of the whole circumstances relating to the concealment of income or evasion of payment of tax on income."

If you do a little old-fashioned "analysis" of the sentence, you will see that the noun clause that should be in apposition with "opinion" is not there. Caught in the coils of the intervening subor-

ordinate and parenthetical phrases, the draftsman has failed to mention what the opinion of the Central Government should be before it tendered immunity to not to put too fine a point on it—an informer. The absurdity, unforgivable in a statute, has arisen because the draftsman has broken nearly every rule in the book. He has allowed himself to be ensnared by a complex sentence; separated the verb from the subject and lost it in consequence; separated the auxiliary and the main verbs by no less than 51 words; put between them a parenthetical phrase, an adverbial clause, a noun clause that has mislaid its predicate, and an involved phrase-within-phrase monstrosity that made him forget what he started to say. In his anxiety to catch up with the operative verb of the principal clause he forgot that he had in the meantime got involved in a noun clause. It is a dangerous thing, this separating of words that ought to be close to one another. There is a cautionary tale in the apocryphal experience of a government department in Britain which had carelessly worded a regulation regarding claims for maternity benefits thus: "Every woman by whom...a claim for maternity benefit is made shall furnish evidence that she has been...confined by means of a certificate given in accordance with the rules." In due course it received a letter from a mother saying "In accordance with your instructions, I have given birth to twins in the enclosed envelope."

A kindly friend wrote after reading my paragraph last week on Pakistan that is was just as well that I was able to get in the post script. And yet my basic hopes do not seem to have been in vain. It now seems clear that President Ayub Khan was getting seriously worried at the whirlwind he had had to reap after sowing the mild breeze of slightly malicious glee at India's difficulties. The Pakistan National Assembly was getting bewilderingly incoherent. And then came the series of corrective actions. Mr Bhutto had said earlier that even if the Kashmir issue was settled it wouldn't mean that Pakistan would side with India in the Sino-Indian dispute. He talked differently the next day saying something about the bird in the hand etc. Mr Mohammed Ali's scheduled visit to Peking was put off. And when Mr Duncan Sandys (whose good offices in bringing about the changed atmosphere should be acknowledged with gratitude) met President Ayub Khan and suggested a meeting between him and Mr Nehru, he responded with heartening alacrity. I very much hope that among the good things that the Chinese would have done before they leave our soil is making India and Pakistan friends once again.

(From Our New Delhi Correspondent)

Export Effort

The Board of Trade will be meeting on December 1, to concert measures to intensify the export effort during the emergency. The indication has been given that it may be more difficult now than in normal times to achieve the export target for the current year. The Minister for International Trade stated in the Lok Sabha last week that it could not be definitely stated that total exports for the current year would be of the order of Rs 680 crores which is the target. He had referred in this connexion to the strain on the transport system, the diversion of goods for the defence effort and prices.

The foreign trade statistics for the period April to October 1962 show a distinct improvement in the balance of trade. The adverse balance during the first seven months of the current financial year was Rs 205.13 crores as compared with Rs 241.77 crores for the corresponding period last year. The improvement, however, has been achieved more by reduction of imports than through the expansion of exports. For the first seven months of the current year exports at Rs 385.43 crores show an increase of only Rs 5.63 crores over the corresponding period last year. Imports during October 1962 have been slashed down to Rs 67.74 crores as compared with Rs 88.65 crores last year. Total imports during the first seven months at Rs 590.56 crores show a reduction of Rs 31.01 crores. The question is whether it will be possible to keep down the level of imports, especially in view of the urgent requirements of industries engaged in defence production. Any further narrowing of the gap between imports and exports will have to be achieved by increased exports.

Trade Talks

A trade delegation from Burma led by Col. Chit Myaing, member of the Revolutionary Council, and Vice Chairman of the State Agricultural Marketing Board, Burma, had talks with Mr S. K. Patil, Minister for Food & Agriculture and the Minister for International Trade last Sunday. Considering the total volume of trade, Burma has a large favourable balance in its trade with India. The prospects of increased trade depend upon Burma's readiness to increase imports from India and suitable arrangements for payment. A long-term agreement for import

of Burma's surplus rice would suit the interests of both countries. But, in view of the tight foreign exchange position, India would be obliged to rely increasingly on wheat imports to meet the food deficit even in rice-eating areas, unless arrangements could be made for payment in rupees for imports from Burma. It was considered that this was one of the important topics discussed when the team met the Minister for International Trade. It is hoped that as a result of the discussions the Burmese delegation will be able to return with a larger import list.

Japanese Delegation

The measures for the development of Paradip for the export of iron ore were discussed by a Japanese Government delegation led by Mr S. Shibesawa with an Indian team led by Dr A. N. Khosla, Governor of Orissa. The Minister for International Trade and the Chief Minister of Orissa also took part in the talks which were attended by officials of the Central Government Ministries and of the Orissa Government. The leader of the Japanese delegation stated that this was the biggest high-level delegation of experts that Japan had ever sent abroad. Even though the delegation would be mainly concerned with the exploratory and developmental aspects of the Paradip group of projects, the conclusions arrived at between the two delegations, he said, would open up vast possibilities of trade and technoeconomic cooperation between the two countries over a period of time to the mutual advantage and benefit of both the countries. The Japanese steel industry was fast expanding in order to double its current production of steel within a decade and hence Japan would need to purchase very large quantities of iron ore and other minerals from India and other countries. The Japanese delegation will be in India for about six to eight weeks during which all the detailed techno-economic aspects of the various sectors of the Paradip project will be fully examined by the Indian and Japanese teams.

With the conclusion of agreements for import of about four lakh bales of US cotton under P.L.-480, the cotton textile industry is better placed to maintain the volume of its exports. Exports in recent months have shown improvement and the further efforts the industry proposes to make will improve the position still further. The requirements of imported cotton have

been estimated at 8 lakh bales by the Textile Consultative Board, which urged the Government at its meeting held here last Saturday to arrange for imports of this order. The representatives of the industry also told the meeting that mills had taken necessary steps to meet all the orders placed on them for defence requirements, and also indicated what they could do to meet all future requirements.

7 Point Programme for GATT

The Ministerial meeting of the GATT to be held next year will have on its agenda the seven-point programme of action submitted by India and 20 other countries on the steps that should be taken to implement the Ministerial declaration of 1961 on the trade of less developed countries. This declaration, which was unanimously adopted by the GATT Session held in November 1961, had stated that the contracting parties, and more particularly industrialised countries, who are members of GATT should take immediate steps to establish specific programmes of action and, where feasible, target terminal dates for the progressive reduction and elimination of barriers to the exports of less developed countries. It was recognised that terms of trade of less developed countries with the industrialised world had been deteriorating progressively, and it was, therefore, of utmost importance to take speedy action which would enable them to increase and diversify their production and facilitate exports of both non-industrial and industrial items. The seven points of the programme which was submitted to the recent GATT Session which concluded on November 16 are:

- No new tariff or non-tariff barriers, particularly of a discriminatory nature, should be erected by industrialised countries against the export trade of any less developed country in the products identified of particular importance to the less developed countries.
- Quantitative restrictions on imports from less-developed countries which are inconsistent with the provisions of the GATT should be eliminated within a period of one year.
- Duty free entry into the industrialised countries should be granted to tropical products by December 31, 1963.

Year ending March. (Average of Fridays).	Outstandings on account of import and export bills handled by Foreign Banks.	Outstandings on account of import and export bills handled by all Scheduled Banks.	Ratio of (2) to (3)
1956-57	Rs 27.12 crores	Rs 50.12 crores	54.1 per cent
1957-58	Rs 26.37 "	Rs 51.78 "	50.9 "
1958-59	Rs 19.18 "	Rs 39.81 "	48.2 "
1959-60	Rs 19.06 "	Rs 40.98 "	46.5 "
1960-61	Rs 19.95 "	Rs 47.15 "	42.3 "
1961-62	Rs 18.47 "	Rs 45.67 "	40.4 "

(iv) Industrialised countries should agree to the elimination of customs tariffs on the primary products important in the trade of less developed countries.

(v) Industrialised countries should also prepare urgently a schedule for the reduction and elimination of tariff barriers to exports of semi-processed products from less-developed countries providing for a reduction of at least fifty per cent of the present duties over the next three years.

(vi) Industrialised countries should progressively reduce internal charges and revenue duties on products wholly or mainly produced in less-developed countries with a view to their elimination by December 31, 1965.

(vii) Industrialised countries maintaining the above-mentioned barriers should report to the GATT Secretariat in July of each year on the steps taken by them during the preceding year to implement these decisions and on the measures they propose to take next year.

Financing of Foreign Trade

The share of the Exchange Banks in financing the foreign trade of the country is indicated in a statement placed on the table of the Lok Sabha last week in answer to a question on the subject.

Foreign trade, it is pointed out, is financed in a variety of ways, such as provision of letters of credit or guarantees to or on behalf of persons engaged in such trade the grant of loans against letters of credit opened in favour of exporting parties, acceptance of bills drawn on importers on a collection basis and discounting of bills drawn on importers. Information relating to the share of each exchange bank in regard to the business falling within the various categories is not readily available, and it is also doubtful whether such information can be collected and furnished without prejudice to the interest of the individual banks. Letters of credit opened by exchange banks in favour of importers in 1957 accounted for 38 per cent of the total of letters of credit in 1957, for 32.9 per cent in 1960 and 28.9 per cent in 1961. Particulars of "Outstanding bills" are as given below:

Markets

JUTE Need for Promoting Sacking Exports

Though the firmness noticeable in the jute goods market last week continued this week, the undertone toward close was rather subdued. This is because in later dealings there have been no fresh enquiries especially in heavy goods. Both the sections, hessian and sacking, were in good request in the first half following fresh reports of overseas interest. Aided by the higher burlap consumption in US in October, and the sizable buying by Russia and Argentina, hessian continued to be eagerly sought after. Bullish fervour also derived encouragement from the belief that substantial orders from the Government of India would soon be placed in view of the present emergency in the country. Sacking too has gained strength during the past two or three weeks. This may be partly due to expectations of large Government orders. The fact that there have been enquiries for wool packs on a number of occasions during the past few days has aided sentiment in sacking.

The outlook for gunny exports has been assessed to be good by Dr B. P. Kedia, President of the Calcutta Gunny Trades Association. In his view, it should be possible to increase considerably earnings from jute goods next year. The optimism has evidently stemmed from the industry's export performance so far this year. During the period January-September 1962, jute goods valued at Rs 119.13 crores have been exported. This is the highest in the past 5 years. It is expected that export earnings from jute goods for the calendar year 1962 will amount to over Rs 150 crores. Earlier this week Mr Manubhai Shah, Minister for International Trade has outlined in Parliament the various measures taken to promote export of jute goods. The jute industry is working to its full capacity and steps have been taken to stabilise jute prices. But it is doubtful whether these measures alone will suffice. Dr Kedia himself has given a warning against complacency by referring to the deplorable trend in sacking exports. Despite world demand for sacking being maintained at a steady level since 1957-58, the share of Indian sacking in world markets has been steadily declining. On the other hand, the Pakistani industry has been gaining ground in world sacking markets at the expense of Indian jute goods. The reason for this is not far to seek. Pakistani jute goods are so cheap that overseas buyers simply ignore India till Pakistani mills are unable to meet their full requirements. In other words India gets only the overflow orders. As the Pakistani jute industry

is speedily expanding, it will become increasingly difficult for Indian jute goods to compete with Pakistani goods. Some remedial measures are urgently called for if our sacking exports are not to dwindle further. The competitive position of our jute goods is to be improved without delay. An incentive export scheme is one solution. It will also be necessary to ensure that raw material cost is not too high as nearly 60 per cent of the cost of production of the industry is accounted for by cost of raw jute.

The problem of maintaining an adequate supply of jute to the jute industry at a reasonable price also bristles with difficulties. Just now the authorities are faced with the problem of ensuring an equitable return to the jute cultivator. Reports from growing areas indicate that despite the various measures taken by Government and other allied agencies, there is distress among jute cultivators in some regions. Mr P. D. Khaitan, Secretary of the Bihar Jute Growers Association, has accused mills of profiteering while cultivators are in great distress. He says that about 50 lakhs of jute cultivators have been adversely affected as there has been a further drop of Rs 3 per maund in raw jute prices. The entry of the State Trading Corporation into the raw jute market, he maintains, has not brought any relief as this organisation too is offering low prices while the quantity of its purchase is also small (3000 to 4000 maunds as compared with the daily offering of about 40,000 maunds). The remedies suggested by Mr Khaitan are unrestricted export of raw jute and a curb on import from Pakistan.

The pressure of heavy jute arrivals has been only too evident this week. There have been record imports during October. Arrivals in Calcutta and mill stations during the month were as high as 750,450 bales. Of the total arrivals 732,150 bales were of Indian jute and 18,300 bales from Pakistan. The total arrivals of raw jute for the 4 months ending October 1962 amounted to 1,960,095 bales comprising 1,915,050 of Indian jute and 45,045 bales of jute from Pakistan. These compared with total arrivals in the corresponding period of last year of 1,709,000 bales comprising 1,571,600 bales of jute from India and 137,400 bales from Pakistan.

The jute goods market has been fluctuating both ways during the past week, though the undertone continues to be steady. In earlier dealings both constructions were in good request and consequently developed a firm trend. After midweek, however, the bullish fervour slightly weakened. The earlier firmness stemmed from expectations of continued good enquiries for hessian as also for sacking.

In contrast to the goods section, the raw jute market ruled quiet all through the week in the absence of

*November delivery went off the Board on 25 November.

sustained mill interest. As arrivals most of the time continued to be heavy, prices tended to sag with sellers keen for business at discounted rates. Mill buying was confined to selected grades and that too for small quantities. Though toward the close of the week, there was some diminution in arrivals, no improvement in the undertone was evident.

TEA Commendable Calmness

THE Tea markets, both in London and India, have been behaving with commendable calmness in the circumstances that are prevailing now following the developments in the political situation. There has been no panic buying. Though prices have hardened, this has been due more to the strike on the Brahmaputra river than to the Chinese invasion.

It is true that tea is the one industry immediately affected by the developments in the NEFA border, as the advance of Chinese troops towards the Assam plain has posed a problem; but the effect on prices is expected to be restrained in the short run. In this respect, the Chairman of the Indian Tea Board has expressed the view that the emergency will have no adverse effect on production since Indian tea workers have shown their readiness to step up production of tea even in the face of danger. This, however, remains to be seen.

The main reason for the modest reaction to the Chinese advance

in the NEFA border appears to be that supplies at present are well assured. For, the loss of production in the current season may not be large, as production in North India and Assam is virtually over and there is enough tea in the pipeline to assure normal supplies to the London auctions to the end of January. Moreover, there are only a few weeks left before plucking comes to a close.

Again, British blenders, who provide the biggest market for tea in the world, are reported to be currently holding nearly 140 million pounds in bonded stocks. These, together with the amount of tea already en route by sea, ensure that the British market has about 40 million pounds more tea available to it than at this time last year, not to speak of the fact that the blenders may be reluctant to push up prices too high.

But, as stated earlier, the firmer tendency in prices is due more to the strike by the Joint Steamer Companies' staff in Pakistan. As a result of the strike the supply of tea especially from Assam, has been interrupted as most of this area's tea is transported by river. Although steps have been taken to move the commodity by road and rail, only a small quantity has arrived in Calcutta. The dislocation of arrivals will obviously affect the finances of the tea companies. The accumulation of stocks at gardens has also embarrassed producers.

Although exports of North Indian tea have been higher so far, it does not look as if the full advantage of the increased export

demand can be enjoyed by the industry in view of the present emergency. There is, however, the hope that the total Indian picture will be more or less unaffected by the setback since the South Indian crop seems to be higher than last year, making up, to some extent, the estimated deficit in the North.

According to a report released from Cochin, production in South India was estimated at 18.4 million pounds in Oct. as against 15.3 million pounds in the previous month and 19.1 million pounds in October last year. This raised the total production in South, during the first ten months of the current year, to 149.7 million pounds from 146 million pounds in the corresponding period of last year.

In the meanwhile, in the Export Sale held in Calcutta this week, offerings were 67,597 packages. There was a fair general demand and prices were generally somewhat lower than in the previous week. Plain orthodox descriptions again met with useful enquiry, selling at barely steady rates. Fannings, however, were again slightly stronger than similar brokens. Mediums and the better liquoring BOPs, except for selected lines, found more restricted support and came to a lower market and there were again many withdrawals in these categories.

CTC descriptions were a strong feature of the sale. Medium sorts realised prices which were firm and sometimes dearer. The best liquoring descriptions were sold at about last rates. Legg-cut teas registered substantial advances. Whole Leaf grades and tippy sorts were sold quite well although at sometimes lower prices. Darjeeling teas were again irregular with the more stylish types registering a decline. Following rates (per per kilo) were quoted:—Clean

Plain Pekoe Rs 4.80 to Rs 5.00; Plain BP Rs 4.40 to Rs 4.70; Plain Fannings Rs 4.80 to Rs 5.20; Medium Assam CTC BP Rs 6.10 to Rs 6.60; Medium Assam CTC Fannings Rs 6.20 to Rs 6.80; Best Assam CTC BP Rs 6.70 to Rs 7.00 and Best Assam CTC Fannings Rs 7.00 to Rs 7.50.

In the internal sale, offerings were 29,631 packages of dusts. Demand, though good and general, established itself at rates lower than those prevalent last week. Medium and good CTC teas generally declined by up to 20 nP although they continued to receive useful enquiry. Plain orthodox teas fell away in value by 30 nP, while Assam orthodox types were irregularly easier although the smaller bright liquoring lines were well supported. Legg-cut varieties were sold well, but at a discount except where quality was maintained. Following rates were quoted:—Plain Orthodox Dust Rs 4.80 to Rs 5.10; Medium Assam Dust Rs 4.80 to Rs 5.50; Legg-cut Dust Rs 5.50 to Rs 5.70; Medium Assam CTC Dust Rs 5.90 to Rs

6.10 and Good Assam CTC Dust Rs 6.30 to Rs 6.80.

In the Cocin market, offerings were 681,000 kilogrammes of Leaf tea. Against strong demand, unorthodox descriptions were steady, while Mediums and Good Mediums were dearer where quality improved. Highgrowns were irregular.

In London auction held this week, offerings were 19,033 packages including 16,156 packages from North India and 120 packages from Pakistan. Bidding was again brisk and the market ruled dearer for all descriptions with prices showing an all-round advance of 1d to 3d per pound. Plain Broke Pekoe was quoted at 3sh 9d per lb.

It cannot be denied that the threat to North Indian tea supplies remains a factor in the firmness of prices. In this connection, it will be interesting to note that the President of the Board of Trade, London, has stated that "Britain will have many empty tea-pots if North Indian tea supplies are cut off. It will not be possible to find alternative sources of supply".

Tea stocks in London, as on 16 November, were estimated lower at 132.43 million pounds as against 136.44 million pounds in the previous week. The total amount to be landed on the same date was 20.66 million pounds. Total afloat was 35.30 million pounds including from Calcutta 19.45 million pounds; from Chittagong 966,000 pounds; from Cochin 1.28 million pounds; from Ceylon 2.75 million pounds and from other Ports 848,000 pounds. The average price realised at the auction was as much as 59.15d per pound against previous week's 58.50d. These compare with only 53.43d per pound realised in the corresponding period of last year.

COTTON

Severe Bearish Jolt

The Bombay cotton futures market during the past week sustained a severe bearish jolt with prices slipping down to new low levels. The Jarilla March contract from the very commencement of transactions in the week was in the firm grip of bears and registered a heavy decline to Rs 703.00 from Rs 721.50 per three quintals. In the mid-week, however, the contract showed signs of looking up and smartly rose to Rs 721.50 but the phase of recovery proved short-lived and the ruling contract again crashed to the new low of Rs 700.75. But the downward drip did not end there; on Monday it fell down to Rs 699.00. The continued bull liquidation, the bear hammering and the latest deal with USA for the import of 375,000 bales of cotton under PL 480 also affected the sentiment in the market. The mid-week recovery was attributed to the renewed support induced by the "cease-fire" order of the Chinese aided by good support from spot section and other commodity markets. The subsequent landslide emanated from heavy bull liquidation and the

reports of debacle in the precious metals market.

The spot market at Sewri presented better conditions, thanks to the entry of the Indian Cotton Mills' Federation to make purchases. Spinner demand was chiefly restricted to Kandesh 179/3. Stray transactions in Moglai, Berar, and L147 for December delivery were reported. The Textile Commissioner's announcement of the lifting of the ban on movement of L 147 and CO 2 cotton growths from Nasik, Dhulia and Jalgaon was welcomed by the trade as it may lead to the broadening of activity in the spot market.

In the foreign section Sudanese and African growths met with good enquiry. In the export section prices of Bengal Deshi maintained a firm trend. So far 35,445 bales of this growth have been registered for shipment as on 22 November.

Last week an agreement was entered into between India and the USA for the import of 375,000 bales of long-staple cotton from the US under the PL 480. The first consignment of cotton under this pact is expected to arrive soon. This agreement, the seventh of its kind, brings the total commitments under PL 480 agreements between the two countries to Rs 1,153.9 crores.

Total consumption of cotton by the Indian Mills from 1 September 1961 to 31 July 1962 moved up smartly to 5,200,749 bales of 180 kgs from 4,890,578 bales in the relevant period in 1960-61. Improvements in consumption were registered in Indian, Pakistan, Sudan and East African cottons while there was a fall in the consumption of American, Egyptian and those falling under the category of "Others".

Description	1 Sept. to 31 July 1960-61	1961-62
Indian	3,852,725	4,293,728
Pakistan	16,770	30,898
American	613,396	427,900
Egyptian	109,140	103,470
Sudan	109,960	156,092
East African	156,563	163,621
Others	32,034	25,240
Total	4,890,578	5,200,749

Imports of foreign cotton into this country from 1 September to 31 October 1962 totalled 316,729 bales as against 330,246 bales in the same period last year.

Description	1 Sept. to 31 Oct. 1961	1962
American	253,084	214,983
Sudan	22,667	57,921
Egyptian	8,916	5,526
East African	40,761	15,627
Pakistan	...	16,969
Other Sorts	4,818	5,763
Total	330,246	316,789

Exports of Indian cotton to foreign countries during the same period rose to 34,785 bales from 26,174 bales in the previous year.

Countries	1961	1962
UK	455	539
Continent	1,717	4,831
Hongkong	3,077	2,016
Japan	16,322	24,716
USA	4,386	2,194
Other Countries	217	489
Total	26,174	34,789

PIECEGOODS:

The cotton piecegoods market during the past week presented quietly steady conditions. The domestic sector was devoid of any activity whereas the offtake in the export front was encouraging.

Dealers were in a dilemma as the stocks with them piled up abnormally and they are even finding difficult in securing payments of the sales already contracted. The upcountry centres were lethargic and the anticipation of a revival in demand from those centres with the onset of the busy season has been belied obviously due to the political unrest and the slump in the gold market also demoralised the sentiment.

Scattered enquiry from the UK in the usual varieties was reported on the export section. Sudan showed only negligible interest and East Africa was satisfied with a small quantum of dyed and grey sheetings and grey drills. Australia accounted for a moderate quantity of coatings and sheetings. The USA focussed its attention on sheetings and furnishings though the offtake did not come to the expected level.

Non-Ferrous Metal Markets Static

CONDITIONS in the Non-Ferrous Metal market have remained generally quiet and prices are fluctuating in reaction to developments in the Sino-Indian dispute. In Bombay, prices have displayed a slightly easier tendency due to lack of demand. Tight money conditions have also restrained the buying activity. The price for Copper Wire Bars has fallen from Rs 368 to Rs 365 per 50 kgs and Blister Copper from Rs 320 to Rs 318. Lead has, however, remained steady at Rs 162 per quintal. Tin has declined further from Rs 274 to Rs 270 per 10 kgs as buying interest is practically absent. Advices from Singapore are also not encouraging. Zinc is moving narrowly between Rs 123 and Rs 130 per 50 kgs.

On the London Metal Exchange, Copper remains fairly static in rather dull dealings, while the news of resumed working in Chile had little effect. Lead, however, continues to improve with sentiment encouraged by favourable comments on the metal's outlook. World demand for the metal is expected to be 5 per cent greater than in 1961 and stocks are being reduced. Zinc has come in for further interest; but dealings are limited.

Tin has developed uncertainty on rumours that the US stockpile authorities have wanted to increase their rate of disposal and are considering an approach to the next meeting of the Tin Council in Bangkok on this matter. On the latest indications, output should run at about 12,300 tons a month and consumption at about 13,300 tons in the coming months, to give a shortfall of 1,000 tons a month, while deliveries from and to the Sino-Soviet bloc may about balance and thus not upset this picture.

It is estimated that, during the first half of 1962, world production in terms of metallic tin, excluding Soviet sphere, was 69,800 tons as compared with an estimated consumption of 80,600 tons. Production included 28,820 tons in Malaya; 10,420 tons in Bolivia; 8,600 tons in Indonesia; 7,070 tons in Thailand; 3,800 tons in Nigeria and 3,450 tons in the Congo. Among consumers, the USA is leading with 29,480 tons followed by the UK with 10,880 tons; Japan with 6,900 tons. West Germany with 5,600 tons; France with 5,420 tons; Italy with 2,560 tons and Canada with 2,070 tons.

GOLD & SILVER

Recovery from Recent Setback

Apart from technical considerations following the recent sharp and successive falls the decision of the Forward Markets Commission to permit trading in Falgun delivery from 28 November without any modifications in the present regulations induced a recovery, which was accelerated for want of offerings. In the Bombay market, ready gold advanced to Rs 91.75 from the opening rate of Rs 87, while Sovereign was quoted at Rs 75.

Indications are now available that prices will stage a substantial recovery in the absence of fresh official steps. Fresh purchases are being made due to a growing feeling that prices will not fall further. People, particularly from the middle class, who might not have thought of purchasing gold at the high levels but for the sudden fall, are now in the market for the yellow metal.

It is, however, interesting to note that, though the fall in prices, though substantial, has wiped off only partially the gains recorded during recent years. The current price is substantially higher than the lowest level touched in 1955-56 as will be clear from the following table:

Years	High	Low
1962-63*	129.90	90.00
1961-62	126.00	115.85
1958-59	103.31	89.33
1968-59	103.31	89.33
1957-58	98.06	89.59
1956-57	93.98	84.83
1955-56	91.79	76.66

*Up to 22 November, 1962.

Prices of Silver, however, developed an irregular tendency under liquidation, reflecting increased arrivals. Silver Magsir (third delivery) commenced at Rs 193.40 and, after early setback to Rs 192.10, finished at Rs 195.45. Arrivals in the Bombay market were estimated at 50 bars as against an offtake of 15 bars.

The spot silver continues to rule at a discount of about Rs 4 as compared to the forward rate. Despite this, the buying interest in the spot section is meagre. This is mainly due to selling pressure following the fixation of floor prices in Jodhpur and Calcutta.

OILS & OILSEEDS

A Severe Jolt

The Bombay market for Oils and Oilseeds suffered a severe jolt under the leadership of groundnut. Although the announcement of an unilateral cease-fire by China was greeted early in the week with a spirited recovery, the market could not hold on to the improved levels till the close owing to the subsequent feeling that quite some time would pass before a clearer picture of the situation was available.

The worst to suffer in the debacle was groundnut. While the local and the upcountry operators figured as consistent sellers, the expected increase in the arrivals of the new crop provided an additional bearish factor. The demand from the vanaspati manufacturers also tended to disappear as there was a general disposition to await lower prices. In the spot section, Nizam bold quality was quoted at Rs 42.75 as against Rs 44.75 and Groundnut Oil ready at Rs 18.20.

The landslide in groundnut imparted a distinctly bearish tone to the Castorseed section. Although castor oil attracted moderate support from the shippers at setbacks, the behaviour of the market was shaped mainly by political considerations and advices from other commodity sections. The export trade in castor oil was also reported to be virtually at a standstill with the UK prices indicated at £113 and £107 per ton for BSS and commercial qualities respectively.

The Linseed section followed the general pattern of price. Lower North Indian advices in respect of rapeseed acted as an additional deterrent.

RUBBER

Rise in Prices

Rubber prices have reacted with predictable strength to developments in the Sino-Indian dispute. Excluding government stockpiles, natural rubber stocks are reported to be already low in both the producing and consuming countries. As a result, prices are expected to be sensitive to increased demand. A good deal also depends upon the activities of the Communist buyers. It is believed that a large part of the rubber on the Singapore market is already earmarked for eventual shipment to Russia, while Russian imports are estimated to be well over double their 1960 figure.

Interest will now tend to focus on Chinese buying activities. China takes the bulk of her requirements from Ceylon, where the Indian Chamber of Commerce has already pressed the Government to halt shipments in view of the Sino-Indian conflict. But the Ceylon Government has, so far, shown no sign of acting on this advice, as she is heavily dependent on Chinese rice under the long-term rice-for-rubber pact. Moreover, China is reported to have shown signs of shopping around the Far East for additional supplies recently, taking 15,000 tons from Indonesia in the early weeks of November. Reports of a possible return of Chinese buyers to

Malayan market have also prompted speculative price movements.

The latest estimates by the International Rubber Study Group confirm that there is no great abundance of natural rubber. The Group has revised its production and consumption estimates for this year to show a shortfall of 80,000 tons in world production this year, at 2.1 million tons. On the assumption that import requirements from the Soviet bloc and Communist China do not change in the meantime, this shortfall might be changed to a production surplus next year of just over 100,000 tons. This trend alone should suggest reasonably steady markets over the long run.

SUGAR

Sluggish Activity

Activity in the Sugar markets at various centres has continued to remain sluggish, as dealers are reported to be restricting commitments to actual requirements. Even the reduced quota of 200,000 tons has failed to push up prices. Mills have continued to be eager sellers as there is heavy pressure from the Government to complete the sales and despatches of the resealed sugar within the stipulated period of 45 days. The Government seems to have turned down the request on the part of the mills to extend the validity period.

The Union Food Minister's recent utterances at Bombay that there would be no more exports beyond the existing commitments until the current year's production established itself and also that there was a proposal to set up commodity boards for wheat, rice and sugar to deal with licensing of wholesale dealers, regulation of marketing practices, have also accounted for the bearish influence. Above all, all the factories in Western Uttar Pradesh have gone into production for the new season and the supplies of cane are reported to be normal.

But in the London market, prices have now reached their highest level for four years, at £32 10sh per ton c.i.f. UK. This firmness in prices is owing to shortage of supplies aggravated by the complete disappearance of offers from the Communist countries. The sudden increase is brought about by the news of Chilean purchase of a cargo of raw sugar (10,000 tons) from Formosa for shipment in January at £32 per ton and also as a result of an adjudication held in Morocco for 17,500 tons of white sugar for shipment at the rate of 2,500 tons each month commencing from December.

Stocks with Cuba are said to be at a very low level. The new Cuban crop is not expected to be better than this year's one and, in terms of the country's agreements with the eastern bloc countries, Cuba is committed to deliver them 4,860,000 tons which means that there will be practically nothing left for the other countries. As estimates from other producing countries are generally unfavourable as compared with this year's crops, it now appears that prospects for sugar are now brighter than

for many years and prices are expected to go up.

SILK

The Bangalore silk market maintained a steady trend. Filature raw of 20/22 Dr. was quoted between Rs 89.29 per kg. The rates of filature raw silk in T. Narasipura market were revised between Rs 88.18 and Rs 89.28 per kg. Cottage basin and Charka raw silk remained unchanged between Rs 81.57 and Rs 89.29 and Rs 79.37 per kg. respectively.

Spun silk yarn of 2/210's was firm at Rs 74.96 per kg.

Cottage basin and charka silk waste were steady between Rs 11.03 and Rs 13.23 and Rs 4.40 and Rs 7.70 per kg. respectively.

Reeling cocoons fluctuated between Rs 3.75 and Rs 5.50 per kg. Foreign and Mysore race seed cocoons declined to rule between Rs 3.00 and Rs 10.00 and Rs 4.50 and Rs 5.25 per thousand.

The Bhagalpur silk market remained steady during the past week. Prices of tasar raw silk, silkwaste as well as of spun silk yarn were firm. Daba and Bogai varieties of reeling cocoons showed a downward trend and were quoted at Rs 85.00 and between Rs 55.00 and Rs 60.00 per kahan. Kri cocoons and yarn were quiet.

In the Malda Silk Market, Cottage basin and charka raw silk were stagnant during the previous week. Matka yarn remained unchanged. Reeling cocoons and silkwaste were steady at Rs 1.86 and between Rs 3.49 and Rs 3.68 per kg. respectively.

The f.o.b. price and laded cost of Japanese raw silk of 20/22 dr. were Rs 65.63 and Rs 100.55 per kg. respectively during July, 1962.

THE CALCUTTA ELECTRIC SUPPLY CORPORATION LIMITED

5% RUPEE DEBENTURE STOCK, 1970

INTEREST FOR THE HALF-YEAR ENDING 31ST DECEMBER 1962.

Notice is hereby given that interest at the rate of Rs. 25/- (less Indian Income Tax) per Rs. 1,000/- of Stock will be paid on 1st January, 1963 to Debenture Stockholders registered in the books of the Company on 20th December, 1962. Applications for transfers received at the Company's Office at Victoria House, Post Box 304, Chowringhee Sq., Calcutta, upto 20th December, 1962, will, if otherwise satisfactory, be registered at that date for the purpose of participation in the above interest.

Debenture Stock Transfer Books will be closed from 21st December, 1962 to 31st December, 1962 both days inclusive.

By Order of the Board,
H. C. BOWKER
Agent.

Victoria House,
Calcutta, 28th November, 1962.

Sharp Decline in Kelvin Jute's Earnings

Despite a rise in sales from Rs 2.34 crores to Rs 2.41 crores, the Kelvin Jute Company Limited has reported a sharp decline in earnings for the year ended 31 May 1962, mainly due to rise in manufacturing costs. The net profit, before providing for Depreciation and Taxation, is substantially lower at Rs 6.39 lakhs as against Rs 26.47 lakhs in the preceding year.

In respect of allocations, the Depreciation amount is raised to Rs 5.94 lakhs from Rs 5.63 lakhs, while no provision is made for Taxation against Rs 8.80 lakhs. After transferring Rs 2.00 lakhs from General Reserve, a sum of Rs 1.29 lakhs (Rs 1.54 lakhs) is transferred to Development Rebate Reserve. No provision is made for General Reserve against Rs 4.00 lakhs. The dividend on the Ordinary shares is reduced from 15 to 5 per cent, subject to tax.

The directors state that, although the mill worked profitably during the latter part of the year, it was not possible completely to offset the losses incurred earlier. They, however, add that the present prospects are favourable.

Mysore Kirloskar Repeats

The rise in sales from Rs 1.57 crores to Rs 1.75 crores is reflected in the working results of the Mysore Kirloskar Limited for the year ended 30 June 1962. The net profit is higher at Rs 39.37 lakhs as against Rs 38.43 lakhs.

Apart from raising the Depreciation amount to Rs 11.86 lakhs from Rs 9.35 lakhs and Taxation to Rs 15.95 lakhs from Rs 11.80 lakhs, all other allocations have been reduced:—General Reserve to Rs 20,000 from Rs 1.70 lakhs; Development Rebate Reserve to Rs 1.46 lakhs from Rs 4.10 lakhs and other Reserves to Rs 2.00 lakhs from Rs 5.50 lakhs. The dividend on the ordinary shares is maintained at 12 per cent, subject to tax. The company has continued to make good progress in the manufacture of its existing lines. But the company's progress in the manufacture of Capstan and Turret Lathes is not proceeding to according plan as there was considerable delay in receiving the imported components. It has, therefore, been extremely difficult to maintain a regular flow of production of these lathes.

IISCO's Fine Balance-Sheet

At this stage, we shall briefly go over the balance sheet figures before studying them in some detail. The balance sheet total is now very near the Rs 100-crore mark. From a level of Rs 93.111 crores, the total has risen to Rs 95.478 crores and Rs 97.924 crores. The most important change in this regard is the increase in Reserves and surplus over the period of an amount exceeding Rs 6.00 crores from Rs 21.258 crores as at 31 March 1960 to Rs 27.496 crores on 31 March 1962. On the other side of the ledger, the net block, exclusive of capital works in progress, rose from Rs 56.976 crores to Rs 64.072 crores before being shown lower in the latest accounts at Rs 62.672 crores.

INVESTMENT SPECIAL

The TISCO Accounts for 1961-62

THE unravelling and analysis of the accounts of steel companies has been rendered more difficult year by year as various adjustments have to be made consequent upon the Company Law, Income-Tax Law, requirements under Tariff Commission's decisions and the like. Nowhere is this difficulty more clearly demonstrated than in the accounts of the Tata Iron and Steel Company Limited for the year to 31 March 1962. We have necessarily to have as our starting point the figures as they appear in the accounts, and at each stage we shall be observing the complexities which have crept in and serve to distort figures and confuse any attempt at a clear analysis.

Sales of Tata Steel, net of rebate to Government but still subject to adjustment, have increased from Rs 79.11 crores in 1960-61 to Rs 86.44 crores. In the 1960-61 accounts, an adjustment in the retention prices for the period 1955-56 to 1959-60 added to income for that year by Rs 4.71 crores. The 1961-62 accounts include an element of Rs 2.79 crores relating to additional income for 1960-61. The total income of TISCO, inclusive of incomes relating to earlier years in the manner and of the magnitude that we have described, thus has moved up from Rs 87.08 crores to Rs 92.48 crores. Increase in manufacturing expenses has wholly absorbed such higher income, in rising by nearly Rs 6.00 crores to Rs 71.01 crores from Rs 65.14 crores. Then, while in 1960-61 Depreciation was provided at 6½ per cent, the new formula laid down by the Tariff Commission reduces the provision to a 5 per cent basis. However, the company has additionally provided for Depreciation to the full extent allowable under the Income-Tax Act, so that the relative figures for the two years show little variation at Rs 13.92 crores for 1960-61 and Rs 13.15 crores for the year under review. Interest absorbs a slightly lower amount of Rs 2.81 crores against Rs 3.21 crores since, particularly, the secured loan from the World Bank has been reduced during the year under review. But it would appear that, as the Directors' Report makes clear, that "no provision has been made in the accounts for interest on the Special Advance, as Government has decided, in reversal of their earlier decision, not to include any element in the retention prices for this purpose." We may state here that under the Income-Tax Laws the company may quite likely be eligible to get full allowance for any interest charge it may debit to the Profit and Loss Account in this regard. In any case case after such adjustments, after, that is, Depreciation as allowable under the Income-Tax Act, the profit for 1961-62 amounts to Rs 6.09 crores as against Rs 5.09 crores in the previous year. The provision that has to be made for Development Rebate Reserve under the Income-Tax Act exceeded the profit in being placed at Rs 6.78 crores, and the position was the same in 1960-61 when the transfer to the same Reserve amounted to Rs 6.44 crores. There is thus a notional debit balance of Rs 69.13 lakhs in 1961-62 and Rs 1.35 crores in 1960-61. For meeting this debit balance, a transfer has taken place from General Reserve No. 2 of Rs 69.13 lakhs in the year under review and Rs 1.27 crores in the previous year. Thereafter, for the dividends (which were paid as interim dividends because of the delay in the announcement of the Government's decision on retention prices) a further

transfer has been effected from General Reserve No. 1 which constitutes taxed profits and the transfer in each year has exactly equalled, at Rs 4.65 crores, the amount needed for distribution. The Ordinary dividend, it may be recalled, has been maintained at 9.67 per cent.

The balance-sheet shows that the gross block, inclusive of Livestock and Vehicles, and Buildings, Plant and Machinery under election, has gone up from Rs 185.52 crores to Rs 190.23 crores. The additions in the main during the year have been under Plant and Machinery which marks a rise of Rs 5.32 crores to Rs 159.94 crores. The net block is seen to have declined from Rs 116.76 crores to Rs 109.06 crores. The value of Investments of the company shows little change at Rs 8.87 crores against Rs 8.85 crores. There is, under this head, a hidden Reserve that the company possesses. The aggregate of quoted Investments comes at cost to Rs 1.79 crores; but the market value in this behalf is placed at Rs 5.89 crores. Unquoted Investments, the bulk of which is accounted by shareholdings in the Indian Tube Company and in two subsidiaries, Belpahar Refractories and West Bokaro, are shown at a cost of Rs 7.08 crores. Cash Balances have somewhat declined, and so too has the balance-sheet total from Rs 164.09 crores to Rs 157.42 crores.

As against the share capital of Rs 38.97 crores, the Reserves and surplus are placed at Rs 29.29 crores, a rise over the year of Rs 1.62 crores. It is the details in this regard which are important. The General Reserve No. 1—that is, the taxed profits of previous years has almost been wiped out with this year's transfer for the payment of dividends and is at Rs 76.19 lakhs against Rs 5.41 crores in the 1960-61 balance-sheet. The General Reserve No. 2 has also fallen by Rs 69.13 lakhs to Rs 5.15 crores, the transfer having been effected to meet the notional debit balance after provision had been made for the Development Rebate Reserve. The only rise of any magnitude under Reserve is in respect of Development Rebate which, by virtue of the transfer of Rs 6.78 crores from the Profit & Loss Account, has moved up to Rs 20.02 crores. All other heads of Reserve—Share Premium Account, Mines & Collieries' Repairs and Renewals Reserve and Investments' Depreciation Reserve—show but minor variations. TISCO has been able to reduce its Secured Loans by Rs 3.88 crores to Rs 52.84 crores. This has been effected by repayment of Rs 4.79 crores to the World Bank, partly offset by increased borrowing on cash credit account, which moves up by Rs 1.59 crores to Rs 10.57 crores. On the other hand, Unsecured Loans (which largely comprises the special advance of Rs 10 crores from the Government) are shown lower by Rs 1.18 crores at Rs 11.23 crores.

Thus the TISCO accounts for 1961-62. Mr J. R. D. Tata's statement circulated with the accounts for the year has already been commented upon in last week's issue of Indian Finance. There remains only one point to make: With the provisions for Depreciation and Development Rebate Reserve, both necessary under the Income-Tax Law, the working of the company in the last two years has resulted in notional losses which obviated any provision for Taxation but which also required the payment of dividends from taxed Reserve. Inasmuch as taxed Reserves have been shrunk to a bare Rs 76.19 lakhs, it is obvious that any dividend payment for 1962-63 will have to be made from the profits of the year.

For the Investor

INVESTMENT GOSSIP

Ban on Forward Trading

The ban on forward trading in shares on stock exchanges throughout the country with immediate effect, announced on Thursday evening has been somewhat unexpected. For, during the past few days indications were that some measure of stability would soon be restored, partly due to the growing realisation that in the long run the outlook for equities would improve in view of Government's determination not to allow the present emergency interfere unduly with the progress of the Third Plan and partly due to corrective measures initiated

The Government of India have banned forward trading in shares on stock exchanges throughout the country with immediate effect. A notification from the Finance Ministry says that the ban has been imposed to prevent undesirable speculation. The existing contracts entered into up to the date of notification (November 29) and remaining to be performed are permitted to be liquidated in accordance with the rules, bye-laws and regulations of the stock exchange concerned.

The Calcutta Stock Exchange has notified that no fresh business in clearing securities either of buying or selling will be permitted from 30 November, 1962 on clearing basis. Members will be permitted to do fresh business in clearing securities on the condition that such sellers must deliver the securities on the first delivery day following the second business day following the date of contract, failing which the buyers must buy the securities on the next business day on spot delivery basis against the seller without reference to the arbitration committee and must report to the Stock Exchange Committee whether he buys or sells. The existing contracts in cleared securities entered into till 29 November and remaining to be performed are permitted to be liquidated but not at below the minimum prices.

by the various stock exchanges to revive investment interest in equities. While the Bombay stock exchange has relaxed further the restrictions on trading, the Calcutta Stock Exchange has revised downwards the minimum prices of another five shares in the forward list.

It is evident, however, that Government is not satisfied with the way in which stability is being restored; for, a notification from the Finance Ministry says that the ban has been imposed

to prevent undesirable speculation. This is no doubt, a drastic step and without forward trading, there will be a further reduction in the business passing.

Even before the ban on forward trading was imposed, sentiment was quiet with business passing at a low ebb. Transactions had been few and far between and in the forward section, only a few shares found buyers at around minimum levels. Investors had been reluctant to extend commitments in view of the prevailing uncertainties both in the political and economic spheres. While the Chinese profession of peace is not deceiving anyone, the unilateral cease fire and the promise of unilateral withdrawal beginning 1 December seem to have revived confidence somewhat. But few believe that even in the event of cessation of hostilities, there will be an immediate return to peace time activity. Everything is to be put on a war footing with the emphasis on defence preparations. In this view, it will be idle to assume that the pattern of development of industries will be as before the emergency arose. Corporate performance will be quite satisfactory as increased industrial production is to be aimed at. But whether corporate profits will show a proportionate rise in a different matter.

NEW ISSUE NOTES

Asian Refractories

The recent issue of 1,85,000 equity shares of Asian Refractories Limited has been over-subscribed by more than five times. The directors, in consultation with the Calcutta Stock Exchange authorities, have finalised the scheme of allotment as follows: Every applicant of 50 shares is allotted 10 shares; 100 — 20 shares; 150 — 30 shares; 200 — 40 shares; 250 — 50 shares; 300 — 60 shares; 350 — 70 shares; 400 — 80 shares; 500 — 100 shares; 550 — 110 shares; 600 — 120 shares; 650 — 130 shares; 750 — 150 shares; 800 — 180 shares; 900 — 180 shares; 1,000 to 1,500 — 200 shares; 2,000 — 275 shares; 3,000 — 375 shares and 5,000 — 550 shares.

Wellman Incandescent

Wellman Incandescent India Limited has announced that the issue of its shares to the public amounting to Rs 11 lakhs has been over-subscribed. The company has already applied to the Calcutta Stock Exchange for the listing of its shares and has taken up allotment work.

Indian Tube

The Indian Tube Company (1953) Limited is raising capital of Rs 48 lakhs in 48,000 equity shares of Rs 100 each for cash, at a premium of Rs 20 per share. The capital is required for the setting up of a second Froz Moon

Plant at Jamshedpur for the manufacture of the welded steel tubes, etc. The total capital cost of the scheme is estimated at Rs 340 lakhs, which will be met by the issue of capital, foreign loans from the CDFC and ICICI and from internal resources of the company.

Shalimar Wires

The Shalimar Wires & Industries Limited, Calcutta, a new company, is to issue capital of Rs 22 lakhs in 220,000 equity shares of Rs 10 each for cash, at par. The company will manufacture wire mesh for paper-making machinery. The total capital cost of the project is estimated at Rs 55 lakhs.

Dalmia Cement

Dalmia Cement (Bharat), Limited will issue equity capital of Rs 12,50,000 to the holders of Deferred shares. The object of the issue is to abolish 5,00,000 Deferred shares of Re 1 each.

Film Finance

The Film Finance Corporation Limited, Bombay, a Government Company, is issuing capital of Rs 6 lakhs in equity shares of Rs 1,000 each for cash at par.

Hind Klockner

Hind Klockner Switchgear Limited, Bombay, is raising capital of Rs 1,92,200, divided into 9,220 equity shares of Rs 10 each, to be issued to the existing shareholders.

International Tractor

The International Tractor Company of India Limited, Bombay, is to issue equity shares of Rs 1 crore for cash, at par, for establishing the manufacture of tractor. Out of this, shares worth Rs 15.82 lakhs will be issued to the foreign collaborators, International Harvester Company of the USA against supply of machinery.

Mysore Cements

Mysore Cements Limited will issue further equity capital of Rs 65 lakhs for cash, at par, on a rights basis.

Jeypore Sugar

In order to increase working funds, Jeypore Sugar Company, Limited has announced its intention to issue 81,115 equity shares of Rs 10 each, at par, to the existing shareholders in the proportion of one share for every four shares held. The new shares will not rank for dividend paid out of the profits for 1961-62.

BONUS ISSUE NOTES
Sundaram Industries

Sundaram Industries (Private), Limited is issuing bonus shares of Rs 12,50,000 in the ratio of one bonus share for every share held by the existing shareholders.

Sree Saraswati Press

Sree Saraswati Press Limited, Calcutta, will raise Rs 4 lakhs, divided into 40,000 equity shares of Rs 10 each, to be issued as bonus shares to

BALMER LAWRIE & CO. LTD.

NOTICE is hereby given that the Board of Directors has today declared an Interim Dividend of 7% (subject to deduction of Income Tax) on the Ordinary Shares of the Company, in respect of the year ending 31st December, 1962. The dividend will be payable on or after 17th December, 1962, to those members whose names are entered in the Register of Members of the Company on that date. Dividend Warrants will be despatched to members and no application to the Company is necessary.

NOTICE is also hereby given that the Register of Members of the Company will be closed from 26th November, 1962 to 17th December, 1962, both days inclusive.

By Order of the Board,
D. MANSON
Managing Director.

21, Netaji Subhas Road,
Calcutta, 16th November, 1962.

THE INDO-BURMA PETROLEUM COMPANY LTD.

(Regd. Office: Gillander House, Netaji Subhas Road, Calcutta-1)

NOTICE is hereby given that the Preference Register of Members of the Company will be closed from the 17th December, 1962, to 2nd January, 1963, both days inclusive for payment of the dividend for the half-year ending 31st December, 1962, on the 2nd January, 1963, at the rate of Rs 2.914 per share (being the stipulated dividend of Rs 3.50 per share increased by 11% to Rs 3.885 less Rs 0.971 being Income Tax at the present Company's rate of 25%) subject to tax being deducted therefrom in accordance with the provisions of Section 194 of the Income Tax Act, 1961.

By Order of the Board

NOTICE is hereby given that the Principal Register and the Branch Registers of the State Bank of India will be closed for transfer of shares from Tuesday, the 1st January 1963 to Tuesday, the 22nd January 1963, both days inclusive.

N. A. KRISHNAN,
Managing Director.

the existing shareholders of the company in the proportion of 4 such shares for every 5 shares held.

INVESTMENT NOTES

Dharamsi Morarji

Dharamsi Morarji Chemical Company, Limited will be sponsoring two new companies—Chemical Explosives Limited and Borax Morarji Limited. These two companies are still to be registered. The parent company jointly with Khatau and the Italian firm of Montecatini proposes to set up a plant for manufacturing 6,000 tons of nitro cellulose; 10 million coils of safety fuses and 50 million detonators. Shareholders of Dharamsi Morarji Chemical may receive preferential treatment in the allocation of the new shares in Chemical Explosives Limited.

Mysore Lamp

Mysore Lamp Limited has been successful in concluding a collaboration agreement with General Electric Company of the USA. In order to enable the Indian company to issue additional capital, it is proposed that the authorised capital should be raised to Rs 1 crore.

Kothari Sugars

Satisfactory progress is reported to have been made on the construction of factory buildings and the installation of machinery by Kothari Sugars & Chemicals Limited. Capital expenditure to the extent of Rs 1.10 crores had been incurred by 30 June, 1962 and further progress has been recorded in the past two months. It is now expected that the factory will be ready for crushing during the course of next month and it will be possible to handle about 100,000 tons of cane during the 1962-63 season. It is also expected that the required supplies of cane will be available.

INVESTMENT BRIEFS

The Sirpur Paper Mills Limited has recommended a dividend of 85 nP per share, taxable, for the year ended 30 June, 1962, same as in the previous year.

The Orissa Minerals Limited has proposed a final dividend of 10 per cent, making a total of 20 per cent, taxable, for the year ended 30 June, 1962 as against 28 per cent, taxable, for the previous year.

Pench Valley Coal Company, Limited has announced an interim dividend of 5 per cent, taxable, for the year ended 31 March, 1963. The dividend is payable on or after 18 December, 1962. Transfer Boks will be closed from 11 to 18 December, 1962.

Rewa Coalfields Limited has also proposed an interim dividend of 5 per cent, taxable, for the same year. The dividend is payable on or after 18 December, 1962. Transfer Boks will be closed from 11 to 18 December, 1962.

Amalgamated Coalfields Limited has proposed an interim dividend of 5 per cent, taxable, for the year ended 31 March, 1963. The dividend is payable on or after 18 December, 1962.

Transfer Boks will be closed from 11 to 18 December, 1962.

Kailas Rubber Company, Limited has proposed a taxable interim dividend of 15 per cent for the year ended 28 February, 1963.

Ruby Works Limited, has maintained the dividend at 4½ per cent, taxable, for the year ended 30 June, 1962.

Chandramalai Estates Limited has reduced the dividend from 10 to 8 per cent, taxable, for the year ended 30 June, 1962.

Spencer & Company, Limited has repeated the dividend at 18 per cent, taxable, for the year ended 30 June, 1962.

Mercara Rubber Limited has reduced the dividend from 20 to 15 per cent, taxable, for the year ended 30 June, 1962.

Anapalai Estates Limited has reduced the dividend from 15 per cent to 10 per cent, taxable, for the year ended 30 June, 1962.

STOCK EXCHANGES

Nibbling at Minimum Levels

Watch-Dog Writes:

NOTHING of any importance has happened in stock markets during the week under review. Prices of most of the shares are still held around the minimum levels. While the professional operators prefer to liquidate their holdings due to political uncertainties, genuine investors are inclined to adopt a cautious attitude despite the attractive low level of prices. It is, however, clear that it is the minimum levels that are acting as a wall to resist any fall in prices.

The week's trading on Lyons Range was dull and featureless with prices showing little or no change over last levels.

Activity in Dalai Street was confined to a few selected shares; but the volume of business continued to be small.

Trading on the Madras Stock Exchange was a quiet affair with selected shares changing hands at the market rates.

Another satisfactory week on the London Stock Exchange was featured by the return of buyers for gilt-edged securities.

The more than four-week rally on Wall Street reached another new high although profit-taking was persistent at times.

CALCUTTA

Friday Evening.

EXCEPT for sustained enquiry which helped a few selected shares to rise slightly above their minimum levels, conditions in the rest of the local stock market were as idle and inactive as before. It was thought earlier that the improvement, noticed after the announcement of the cease-fire by the Chinese, would be well maintained. But, progress could not be made in the absence of any stimulating news either from the economic or political fronts. The attention of the market was

mostly engaged in efforts to reduce outstanding commitments in view of the approaching settlement.

In this context, it should be said that the decision made by the authorities to reduce the minimum rates of five more leading shares (Birla Jute from Rs 30 to Rs 29.50; Burrakur Coal from Rs 16.12 to Rs 16; Kesoram industries from Rs 22.25 to Rs 22; TEXMACO from Rs 20 to Rs 19.75 and Jaipur Udyog from Rs 11.12 to Rs 11) was timely considering the fact that it was necessary to adjust them downward in line with economic circumstances.

The authorities also decided to make a carryover to Clearing No. 377, fixing the following making-up prices and the budia charges:—Indian Iron Rs 22/-/8½ nP; Indian Aluminium Rs 32.50/-/12½ nP; Guest, Keen, Williams Rs 34.87/40 nP; Hindustan Motor Rs 16.25/8½ nP; Jaipur Udyog Rs 11.00/4 nP; Birla Jute Rs 29.50/11½ nP; Indian Copper Rs 4.25/15/8 nP; Howrah Jute Rs 19.00/11½ nP; Indian Copper Rs 4.25/15/8 nP; Howrah Jute Rs 19.00/11½ nP; Textile Machinery 19.75/8 nP; Kesoram Rs 22/8½ nP; Rohtas Rs 12/4½ nP; Orient Paper Rs 36.29/14½ nP; Orissa Cement Rs 15.25/6 nP; J. K. Cotton Rs 14.44/8 nP; Shree Gopal Paper Rs 23.25/9 nP; Indian Cable Rs 34.50/nil; Burrakur Coal 16/nil and Dunlop Rubber 37.75/nil.

Despite a further reduction in the minimum prices and the fixing of making-up prices for the next settlement, business could not be attracted. As a matter of fact, prices backed away prescribed levels, mainly due to a general disposition amongst the professional operators to liquidate their "long" positions at the prescribed levels. There was also an anxiety on their part to know what would be the course of developments after 1 December. At the same time, uncertainty of the future rendered the investing public hesitant.

Investors appeared to be confused by the quick changes in the economic situation. They preferred to wait and see how the stress on defence production would exercise its influence on the economic pattern. They even thought that the Government might have to reimpose many of the wartime taxes, such as the Excess Profits Tax, not to speak of the prospect of the corporate and individual taxes being also greatly enhanced. Business was therefore, virtually non-existent and whatever business took place, was of a squaring-up nature.

In the week's dealings, the Gilt-edged section was devoid of any support. Business was reduced to small dimensions in the absence of any enquiry from institutional investors. Sellers were in evidence in most of the loans with buyers reserved and State Loans, in particular, were marked down 3 per cent 1966 Conversion Loan was, however, maintained at the official support level of Rs 63.

The notable features of trading was the complete absence of any business in Indian Irons and TEXMACO. Were quoted at the minimum levels at Rs 22 and Rs 19.75 respectively. Guest, Keen, Williams were on offer at Rs 34.87 with Jessop ruling unchanged at Rs 22.

Jute shares came in for restricted support. There was an anxiety to know how the foreign buyers of jute goods would react to the present political situation. Birlas were quoted at the new minimum level of Rs 29.50 against Rs 30. Ganges were a steady feature at Rs 13.12 with Lawrence changing hands at Rs 116 and Champdany at Rs 138.

Coal shares were idle, notwithstanding the fact that the industry would be called upon to play an important role in the field of production.

There was virtually no interest in Tea shares. Although sellers were willing to reduce the rates, buyers remained reserved as they seemed to be taking a cautious view about the outlook for tea. Apart from the absence of any improvement in the strike situation started by the Joint Steamers' Staff in Pakistan, the disturbances caused by the border fighting led to a fear that the improvement in the supply to Calcutta might be small. Jay Shree were steady at Rs 16.80, while Dufflaghur came in for business at Rs 27.87; Bhakawa at Rs 17.37 and Banarhat at Rs 353.

Sugar shares were a neglected counter.

In the Textiles section, dealings were few and far between, reflecting the uncertain outlook for the cotton mill industry. It was feared that the Government might have to impose controls on the production and distribution of cloth in the present emergency.

In the Miscellaneous section, price movements were confined to narrow limits. Hindustan Motor were consistently supported up to Rs 16.31 from Rs 16.25 on reports of the company having obtained a loan to the extent of \$15,800,000 from America for the manufacture of trucks. Dunlop Rubber changed hands at Rs 37.37 to Rs 38; Hindustan Aluminium at Rs 13.56 to Rs 13.69; Indian Copper at Rs 4.24 to Rs 4.27 and Indian Aluminium at Rs 32.12 to Rs 32.75. Orient Paper, Orissa Cement, Jaipur Udyog, Indian Cable, Alkali Chemicals, Rohtas and Shree Gopal were all quoted at the minimum levels. Titagur Paper were a steady feature at Rs 36.06 following the company's decision to issue bonus and right shares. In this respect, the directors have convened a general meeting on 20 December.

NEW PRODUCTION RECORD BY ROURKELA STEEL PLANT

Rourkela Steel Plant established a new production record during November 1962 on the occasion of the visit of the President of the Federal Republic of Germany to Rourkela. The plant produced 2,725 tonnes of steel in 24 hours on 28 November, 1962 beating all previous records. This is equal to the full rated capacity of the plant.

The total production of Ingot Steel for November 1962 is 68,000 tonnes, representing 82% of the annual rated capacity of the Plant in terms of Ingot Steel. With regard to iron production, the plant produced in November 1962, 77,000 tonnes of Hot Metal which is more than the rated capacity of iron production, on the basis of 81,000 tonnes per year.

Rs. 1900 CRORES FOREIGN EXCHANGE BILL FOR THE THIRD PLAN

The foreign exchange bill for the Third Plan is the highest ever—more than Rs. 1900 crores. Clearly, the economy's pressing need is to find means of earning and saving more foreign currency. To bring this about, the Third Plan is implementing a clear-cut policy: stepping-up exports, cutting down imports. To stimulate exports, controls on most products have been relaxed, export duties abolished or reduced, promotion councils set up and trade agreements concluded with 25 countries.

Export—a priority with Bird-Heilgers

Among export commodities, jute is high on the list of the Plan's priorities—and tops the list of Bird-Heilgers exporting activities. Between 1957 and 1961 the group's exports of jute earned well over Rs. 94 crores—a significant addition to India's foreign exchange earnings. During the Third Plan, the group hopes to better this effort by intensifying and widening the scope of its export drive.

Towards a self-generating economy...

A phrase on everyone's lips. A phrase

that finds concrete expression in the urgent activity of an economy on the move. Bird-Heilgers reflects the nation's striving. The group delivers millions of tons of basic materials to the new blast furnaces. It produces jute goods, paper and board, air compressors and springs, and engineering and water treatment equipment. A project for the manufacture of coal washeries was the first in India. Planned diversification finds the group engaged in shipping, insurance, exporting and importing. Its agency department handles everything from heavy capital equipment to light consumer goods.

...and an exciting, promising future

The Five Year Plans are a challenge: existing industries must expand, new industries open up, per capita income increase. India needs more goods and services than ever before. Bird-Heilgers is alive to the problems of a growing economy. The group deploys the full potential of a century's resources, technical knowledge and executive skill to increase and broaden its activities...earn and conserve foreign exchange...join the national drive to economic independence.

Industry and the Emergency

"It is not always that a Finance Minister has the good fortune of being invited to touch the pockets of people and I am sure I am revealing no secret when I say that I find this particular invitation rather attractive." This witticism of Mr Morarji Desai went down big with his audience at the annual general meeting of the Associated Chambers of Commerce and Industry last Saturday. This gives a measure of the identity in the basic approaches of the Government and industry to the immediate economic tasks of the nation. Over the years, despite quarrels, sometimes violent, over details, there has been considerable accord between industry and the Government over the priorities in the economy. Even so, but for the Emergency such unreserved profession of unity of purpose would have been unthinkable.

The argument of both Mr Tallack and Mr Desai ran along these lines: The Emergency has brought out the tremendous reserves of patriotism in the country that one never really believed existed. This can and must be utilised not only for the immediate tasks of fighting the aggressor but for the larger purposes of the nation. Secondly, the Emergency, far from displacing the tasks of the Third Plan has actually made their basic priorities even more urgent than before. The basic industrialisation of the country has been made even more urgent than before because of the need for strengthening the defence potential of the country. Therefore the failures in the Plan that we formerly deplored in more or less academic disgust have now become menaces to the national integrity. Increased agricultural production and better industrial performance in essential sectors thus assume a painful immediacy.

These are unexceptionable general principles with which it is not easy to quarrel. But what are the policy implications of these principles in the present context? Though the Emergency has been with us for over a month now, there has been no detailed indication of the priorities that will govern economic activity from now on. Defence requirements are paramount and everything else comes later is all that we have been told. What are the parts of the Plan that have been jettisoned on account of such diversion of resources? What are the new priorities both in the public and the private sector? These are details that are still to be published, if formulated at all.

Secondly, the steps taken to remove the obstacles in the way of greater production have not yet been indicated. The power shortage that has bedevilled the industry in the past two years has to be tackled on as wide a base as possible. Here again thinking on details should not be sniffed at. Suggestions like day-light saving, and reduction of consumption by minor acts of discipline and self-denial have to be examined and enforced. More importantly, opportunities for producing more power, like putting up thermal plants by industries out of their own resources should be encouraged. It will be recalled that such a scheme presented by certain industrialists

in Madras with the blessing of the government of Madras was turned down by the Centre before the Emergency. Such schemes should now get quick sanctions. There has been some quickening of the tempo of some of the power projects and we should be able to advance the dates of commission of many other projects on which we were working in a rather leisurely manner.

As regards transport, the changes in the priorities of the railways are not known. These are probably in the process of finalisation but it should be possible to announce immediately the steps taken to discourage needless travel. The considerable inducements that were offered in the last few years to encourage travelling have to be drastically reduced. The technical problems relating to movements of goods are presumably under study but here again the public would like to be taken into confidence soon. More importantly, prejudices against modes of transport still in the private sector have to be shed at least for the duration. In particular, road transport should be freed from the annoyances it has been subjected to in the last few years. The difficulties of movement of tea from Assam caused by the steamer strike do not appear to have been fully realised even now. Such disruption of movement especially in Eastern India is one of the most dangerous hazards of the situation.

As regards financial resources for the coming years, the country has reconciled itself to demands of greater sacrifices. The spontaneous response to the call for contributions to the National Defence Fund and to the various savings schemes set in motion by the Government is heartening evidence of the mood of the country. (Incidentally, the Finance Ministry deserves to be congratulated for the alacrity with which it has set about the new tasks imposed on it by the Emergency. Unfortunately, it has had few emulators.) There is still considerable scope for obtaining the funds needed in the form of loans and some of these Mr Tallack indicated in his speech. It would be worth while to consider his idea of temporary use by government of surplus funds with the industry.

But the dependence on tax as the principal source of funds will increase inevitably in the coming year, if not years. Here Mr Tallack made the valid point that though the nation was willing enough to bear such burdens as were inevitable, it is necessary to see that the primary end of greater production is not jeopardised by starving the industry of funds for expansion. The scope for increased taxation on the corporate sector is therefore strictly limited. The Finance Minister should therefore look to other areas of the economy, the rural sector, for example, where the burden of taxation falls lightly even now. Scope for increasing indirect taxation will no doubt have to be carefully examined but even here cost factors will set their limits. It may be necessary also to reconsider the imposition of taxes that have long been shirked for reasons of sentiment and ideology.

The Plan and National Defence

By Gulzari Lal Nanda

Barley eighteen months ago, when we commenced our Third Five-year Plan, we had reason to hope that India's policy of peace and goodwill and friendship towards all nations would not only help towards the maintenance of world peace, but would also enable us to realise our goals of social and economic development. This expectation has been belied. We are now face to face with a national emergency which makes a call on all the energy and resources that can be harnessed, so that we may be fully prepared to accept large burdens both for defence and for development.

Early this month, the National Development Council met to consider the new situation. In pledging the nation to every effort and sacrifice, the Council declared that our country's plans of development were an integral part of national defence and that the successful and speedy implementation of the Plan with the necessary reorientation to meet the emergency had become all the more imperative. Indeed, in several directions, efforts under the Plan have to be intensified and brought to the highest pitch of efficiency possible.

In the struggle ahead, we are pitted against a regime which has for many years tried to mobilize its entire resources in men and materials for building up a war economy without consideration for civil liberty and for the freedom and dignity of man. It is not the first time in history that such total mobilization has given a temporary advantage to the aggressor. Our free and democratic society, which seeks justice and opportunity for all, has an inner strength which cannot but win against even the most ominous threats to India's freedom and integrity. In discussing at some length the different ways in which our Plan will serve ever more purposefully the urgent, needs of national defence, I have complete confidence that there can be but one end to the struggle in which we are now engaged—victory for our just and righteous cause. Our Plan already called from each of us for the best that we could offer. In the face of the great challenge before us, I feel certain that every individual and every group will rise to still greater heights.

The confidence which I have expressed is due as much to the deep and moving response which our people have made in recent weeks as to an appreciation of the economic potential India has developed since Independence, the social and technological progress that has been achieved and the wide range of skills which we already possess. We are far from having accomplished the goals which we set ourselves; yet, our advances in agriculture, industry, transport, power, scientific research, training of manpower, education and social services generally, have been substantial and impressive.

It is significant that over the years, India's progress has been smooth and uninterrupted and has been achieved at every step with the consent and participation of millions of our people. This gives us an enduring advantage. But it would be a mistake to under-estimate the magnitude of the tasks ahead or the strength of the adversary in the initial stages of aggression. The die is cast, and no sacrifice is too great for building up the economic strength and the defence potential needed to maintain the freedom and integrity of our motherland and to secure rapid and sustained economic growth. In this context, I would like to spell out somewhat the meaning of this

all-embracing effort and mention some of the directions in which the Plan has already begun to serve more directly and with a greater sense of urgency the needs of the present emergency.

AGRICULTURAL PRODUCTION

A strong agricultural base is the first requisite of national defence. A nation-wide movement to intensify the drive for agricultural production will enable millions of our peasants to participate fully in the war effort. The target for minor irrigation has been raised from 12 to over 19 million acres, for soil conservation from 11 to over 16 million acres and for dry farming from 20 to 50 million acres.

There is a vast amount of work to be done by way of constructing and maintaining field channel for utilising irrigation and on village tanks, fuel plantations and other rural works. There has to be the greatest stress on production plans for every village and every development block, on intensive agricultural districts and on those areas which have been marked out for stepping up the output of cotton and oilseeds. The entire resources of the community development movement and the leadership in Panchayati Raj institutions have now to be concentrated on agricultural production.

A considerable part of the burden of defence must necessarily fall on industry, and existing capacities have to be utilised to the maximum advantage. Several vital steps have been taken in recent weeks. The steel industry is being geared both for achieving greater production and for stepping up the output of those categories which are specially needed for defence. Particular attention is being given to the production of special steels, and new priorities have been drawn up for the distribution of steel. Along with steel, efforts are being made to raise more coal and to build up larger stocks of coal. In the automobile industry, the supply of components is being increased and assembly lines are being built up so as to secure rapid increase in production. The total capacity of the engineering industry, both public and private, is being harnessed. Machine tool factories have been directed to work round the clock and those equipped with foundries have been asked to expand their output. The production of cement has to be stepped up and the necessary steps are being taken. The woollen textiles industry, is being given the raw materials needed to produce to full capacity.

Industrial projects included in the Third Plan are essential to the growth of the economy. However, these projects are being reviewed with a view specially to speeding up the flow of benefits and expediting the completion of projects which are well advanced. In view of the diversion of material resources and manpower, for defence purposes, some project will have to be deferred or rephased, but those projects which are important for completing the industrial structure and ensuring future growth will retain their high priority.

POWER POTENTIAL

Power is vital for stepping up industrial production. The development programme for power already provides for increase in capacity during the Third Plan of about 7 million KWs. Efforts are being made to ensure the speedy realisation of this target and, wherever possible supplementary programmes will be taken up. The dates for commissioning some of the power projects have been already advanced. Particular stress must now be laid on operating power plants and power systems with the utmost efficiency. It is also incumbent on electric undertakings everywhere to restrict non-essential power loads.

Since the emergency began, the Railways, and Transport and Communication services generally, have organised themselves to meet the new requirements. Current plans are also being reviewed with the object of strengthening transport facilities in the immediate future, and certain emergency works are being undertaken.

The response of industrial workers to the call of duty in the present emergency has been magnificent, and I have full faith that they will give their best to the national effort. It is essential that there should be full understanding at every stage between labour and management and they should function as partners in the service of the nation. A National Labour Corps is being organized for providing efficient and mobile units for carrying out works needed for defence. The Ministry of Labour and Employment have initiated a new short-term programme for training 60,000 skilled craftsmen. An Emergency Production Committee has also been set up by the Ministry in pursuance of the joint meeting of the central organizations of employers and workers which was held early in November. The Committee will ensure the implementation of the Industrial Truce Resolution in relation to production and will recommend measures for increasing productivity and reducing costs of production.

MANPOWER MOBILIZATION

The emergency is already beginning to make large demands for trained manpower. We are fortunate in the progress that has been made over the past decade in the development of scientific and technical manpower and in the wide network of training and research institutions throughout the country which can be readily drawn upon. However, the requirements of manpower are likely to increase manifold and to mount up rapidly. Systematic plans are being drawn up in all fields for enlarging the capacity of training institutions, orienting training programmes and drawing away trained personnel for new tasks.

Plans for education are as essential for achieving economic reconstruction in times of peace as they are for meeting the needs of national defence in times of danger. Aside from numbers, the quality of the human material and of institutions are a decisive factor in the ultimate victory. It is proposed to make the National Discipline Scheme compulsory for all school children in the sixth, seventh and eighth classes and to provide intensified courses of physical education for students in the higher classes. It has been also decided to expand the NCC Rifles so as to include all eligible students in colleges, numbering in all over 600,000.

In certain directions, economies in expenditure on education and other social services will have to be achieved, but every effort will be made to see that the pace of expansion does not suffer unduly. It is in times such as these that the community and its educational and other institutions must come closer together, each supporting and giving strength to the other.

PRICE POLICY

I had occasion a little over two weeks ago to present to Parliament some of the decisions taken by Government for ensuring that prices of essential commodities are maintained at reasonable levels. The measures proposed have been generally welcomed and are being implemented. It is the responsibility of trade and industry to give effective support to these measures, to take whatever further initiatives may be required on their part, and to respond readily to the needs of the communities they

serve. At the same time, it is important that profiteering and other anti-social activities should be fully exposed and confronted with the strongest sanctions on the part of the community.

Rapid economic development places an economy under severe strain and stress. The mobilization of national resources which the present emergency involves will inevitably place far greater burdens on us than we, as a nation, have been ready to accept in the past. We are grateful for the generous help of friendly countries who share our ideals and are standing by us in this hour of trial. But assistance and comradeship from others only increases our own obligation to strive to the limits of human endurance, to undergo all the sacrifice necessary, and to share the additional burdens amongst ourselves with a sense of justice and equity.

HEAVY BURDENS

These burdens will take a variety of forms. Along with the mobilization of physical resources, there have to be plans for mobilizing financial resources and the savings of all sections of the community. The direct requirements of defence will increase both rapidly and in substantial measure. To this end, it will be necessary to enlarge the scope of development plans in several important fields. For securing the maximum output of which our industrial plants are now capable, it will be necessary to provide raw materials and components in greater measure. For this and other reasons, the need for imports will increase and there will be difficult balance of payments problems. Despite diversion of engineering and other capacities to defence requirements, it is essential to find new ways of achieving and even improving upon the targets for exports set in the Third Plan. If inflationary pressures consequent upon a full-scale effort for national defence are to be contained, it will be necessary to take a series of measures for mopping up the surplus purchasing power. This will involve of loans and small savings for defence.

All non-essential expenditures have to be drastically cut down, whether these are undertaken by Government agencies or private industry or by individuals. Domestic savings have to be stepped up far beyond the levels we had contemplated for the Third Plan, so that we can meet more adequately the enlarged defence requirements as well the greater needs of development.

Restraints on consumption are an essential means for conserving our limited material resources and enlarging national savings. There should be the utmost economy in the use of scarce resources such as steel, cement, timber, non-ferrous metals, kerosene oil and newsprint, electricity and transport. There should also be the fullest recovery and utilization of materials such as iron and steel scrap, woollen cloth cuttings and paper. Travel by rail and road should be limited to strictly essential needs. Expenditure on luxuries and semi-luxuries should be eliminated and the basic necessities of the people as a whole should be fully secured.

This critical juncture is also a unique opportunity. In face of danger the nation has risen as one man. A new feeling of oneness runs through every part of the country. In our Constitution we pledged ourselves to promote the welfare of the people by securing a social order in which justice, social, economic and political, shall inform all the institutions of the national life. As we prepare ourselves to free the soil of India entirely from agres-

sion and the threat of aggression, let us pledge ourselves anew to complete our own social and economic revolution. When the masses of the people are ready to give their all to safeguard the freedom of the nation, in turn they must know and feel assured that their well-being will always be the nation's first and foremost concern.

Exports in the Emergency

The Board of Trade held its last meeting at a time when the recognition on the part of the business community and, one may add, the general public, of the need for increased exports is matched by readiness to adopt, even at a sacrifice, the measures required to meet the objective. Measures that would be thoroughly unpopular in normal times would be readily accepted in view of the present emergency. The subject of export promotion has been viewed from different angles in the context of the requirements of the plan of economic development and many proposals have come up. Now the time has come to apply closure to the discussions and to get down to the task of translating those proposals which have been thoroughly examined into effective programmes of action. The immediate effect of the emergency may be to make the task of export promotion more difficult because of the increasing demand on goods and services for the defence effort. But to the extent that the economy responds positively to the requirements of defence, the result will be an all-round increase in production and, consequently, it should be possible with the some measure of restraint on internal consumption, to spare adequate surpluses for export. Viewed in this light, it will be seen that there is no justification for taking a gloomy view of export prospects.

The trend of exports during the first six months of current financial year, sustains this conclusion. Though export performance has not caught up with targets in all spheres, the favourable indications are sufficiently clear and encouraging. Exports of jute and tea, the principal foreign exchange earners, have been proceeding satisfactorily. The improvement that has been noted in respect of a wide range of other commodities—sugar, vegetable oils, iron ore; cashewnut, spices, pepper, plastic goods, engineering goods, etc.—is certainly heartening. Cotton textile exports have taken a turn for the better; the declining trend has been reversed. The scheme of obligatory exports has been working satisfactorily, and has produced results within the short period it has been in force. With larger supplies of cotton available under the recent agreement for import of 375,000 bales of US cotton, the industry should be able to render a better performance in the second half of the year. The prospect for exports of ferro-manganese has improved with the revival of demand in world markets. The decline in the exports of particular commodities points to the need for remedial action or for change in the pattern of production or export. With the commissioning of steel making and rolling capacity in the new steel plants, there is no longer a surplus of pig iron and steel scrap for export. And figures for the first six months of the current year show a sharp decline as compared with the previous year. But the deficiency can be made up if action is taken to develop exports of steel structurals and fabrication in such categories as could be spared for export.

The Board of Trade has shown a keen awareness of the requirements of the situation by drawing attention to the need for adopting a selective approach to export markets as well as export commodities. Since the resources that can be devoted to export promotion are limited, it will be sensible to concentrate promotional efforts and incentive schemes in areas likely to yield maximum results. The trade with Western European countries has been reviewed at the meeting which was attended by Mr K. B. Lall, the Indian Ambassador in Brussels. But it is not clear whether the Board took note of the alarming decline of exports to the United Kingdom during the current year. The expansion of exports to Western European countries is of special importance, because of the continuing imbalance in India's trade with these countries. Increase in the volume of trade with Eastern European countries under rupee payment agreements will not help to correct this deficiency.

The success of the efforts that are made to push our exports in the markets of the industrialised countries will be conditioned by their readiness to lower the barriers which they have erected against imports from the under-developed countries. The difficulties experienced by the latter in finding export outlets for their products have been discussed on several occasions in the GATT. At the last GATT session, India, along with twenty other countries, sponsored, for the consideration of the next session, a sevenpoint action programme for implementing the Ministerial declaration of 1961. This declaration, which was unanimously adopted, recognised the responsibility of industrial nations to provide enlarged access to the exports of under-developed countries. The difficulties faced by underdeveloped countries will also be considered at the World Trade Conference which is being convened under the auspices of the United Nations, for which a committee has been set up under the Chairmanship of Mr L. K. Jha, Secretary of the Finance Ministry, to prepare a comprehensive memorandum to serve as the basis of discussions. Though the spokesmen of industrialised countries at international conferences have accepted the principles many of these countries have been reluctant in practice to remove trade barriers. Sometimes what is given with one hand is taken away with the other as when reduction in tariffs is accompanied by imposition of sumptuary taxes which only hit the imported items. The attempt to exclude the products of underdeveloped countries is often sought to be justified on the specious ground that the processing and manufacture in these countries are based on low-cost labour. This contention has been questioned by India on several occasions in international forums and special studies of particular commodities have been undertaken. These special studies may demonstrate that the charge of sweated labour is entirely baseless, and that the cost of production of many of these commodities is on the high side. But such a demonstration will not automatically give them entry into the affluent western markets. Side by side with the efforts to clear misconceptions, action must also be taken to reduce costs and to improve the quality of our exports. Reports of trade representatives abroad have drawn attention with monotonous regularity to the damage caused by export of substandard goods, and how Indian goods are being priced out of even established markets. For instance, according to a recent report from Malaya, Indian clay tiles are meeting with increased competition from locally made cement tiles and exports have declined in recent months.

High prices of Indian tiles have aggravated the situation. The Trade Representatives report has also emphasised that Indian exporters must pay greater attention to design, techniques of packing, crating, stacking etc. It is feared that, unless something is done to relieve the situation, the entire Malayan market for tiles may be lost.

RURAL CREDIT

Uneven Progress of Cooperatives

The All India Rural Credit Survey made in 1951-52 is the first comprehensive attempt at measuring the magnitude of the problem of the credit structure of the agricultural economy of the whole country. The report embodying the results of the survey has achieved the status of a classic and many important policy decisions have since been taken in pursuance of the report. Implicit in the scheme of the survey were "follow-up surveys" intended to measure the qualitative and quantitative changes in the situation from time to time. Since 1956-57, four such surveys have been published by the Reserve Bank on a sample basis. The findings of the fourth such survey has just been published. It contains a wealth of information on the various aspects of the demand for credit, such as debt, borrowings, repayments, family expenditure, capital expenditure etc. It also makes a detailed examination of the structure, organisation and working of the co-operative credit system in the selected districts. A comparative study of the significant changes that have taken place in the seven districts which were covered in the two years 1951-52 and 1959-60 is also attempted. It covers 9 districts (Bijapur, Bilaspur, Tanjore, Krishna, Kanpur, Midnapore, Mohindergarh, Bhagalpur and Barmer from as many States. All the districts except two—Tanjore and Krishna were covered in the All India Rural Credit Survey of 1951-52.

Perhaps it will be wrong to arrive at any conclusion that will be applicable to the movement as a whole from the study of a handful of districts which by no means represent the cross section of the country. That the conclusions of the survey is to be taken with some caution is stressed by the report itself. In the first place the seven districts common to both the surveys (1951-52 and 1959-60) are mostly situated in northern India. Other factors that may vitiate a comparison on an all-India basis are differences in the coverage of data in respect of a few items, the substantial changes that have taken place in the price levels in the intervening years and the possible difference in seasonal conditions during the two periods of survey, physical changes, as changes in district boundaries as have occurred in one of the districts, etc.

But the usefulness of such surveys is not reduced by their limited validity in respect of the progress of the co-operative movement in the country as a whole as they yield valuable data which will be of immense use in the formulation of correctives. The Fourth survey shows clearly that concerted effort at implementing the integrated system of rural credit as enunciated by the Rural Credit Survey pays rich dividend in the shape of the development of co-operative movement in a healthy way. The close relation between better

organisation and good progress is brought out in the case of the Bijapur district where credit co-operatives are highly developed. Bijapur's prominent position has stemmed from the following factors (1) reorientation of the credit structure (2) state participation and (3) introduction of crop loan system. In a sense this is an exceptional case in so far as co-operation had taken long strides in this district even before the All India Rural Credit Survey 1951-52. Next in point of development are Tanjore (Madras) and Krishna (Andhra Pradesh). In these States co-operation has been receiving considerable attention though the reorientation of the loan policy of the central banks has not been seriously attempted. Another impediment in these regions is the poor progress of marketing and processing co-operatives, institutions vital to the success of the co-operative credit movement. In the other six districts attempts at revitalising the co-operatives have either been half-hearted or negligible.

Some of the trends in the pattern of demand for credit and co-operative development revealed by a comparative study of the results for the two years 1951-52 and 1959-60 show that significant changes have taken place during the intervening period, though the changes are by no means uniform in all the districts. Credit operations in three of the seven districts show favourable trends such as a lower level of incidence of debt, a lower proportion of borrowings for family expenditure, the equitable distribution of debt among the various classes of cultivators and a better repayment performance. While three districts show a mixed trend, in the case of Bijapur there is a deterioration. The growing importance of co-operative finance, is another healthy development, that stands out in the comparative study. The share of co-operatives in providing finance to the cultivators has considerably increased in all the districts. In 1951-52 the proportion of cultivating families borrowing from co-operatives did not exceed 5 per cent in any of the seven districts but the highest proportion in 1959-60 touched a level of 19 per cent with the percentage ranging from 16 to 19 in three districts. In another three it ranged from 7 to 9. In only one it was below 5 per cent at 3 per cent. Similarly borrowing from co-operatives per cultivating family has increased in all the districts. In 1951-52 borrowings were the highest only in one district at Rs 11 and lowest at Re. 1 in another with no entry against three, the highest in 1959-60 was Rs 58 with four showing a range of Rs 15 to 27. In one district it was Rs 9 while it was Rs 3 in another. The proportion of total borrowings of cultivators obtained from co-operatives also shows an up trend. In 1951-52 two districts recorded no borrowings, while in two more the proportion was negligible. In the remaining three the proportion, ranged from 2 per cent to 9 per cent. In 1959-60 the proportion was as high as 62 per cent in one district while in three more the proportion ranged from 11 to 19 per cent. In the remaining three the proportion ranged from 2 per cent to 8 per cent.

The survey lists the following 8 factors as affecting the progress of the co-operatives: 1. the status of the central bank in the context of the arrangements regarding supervision and power of scrutiny of loan applications of societies, 2. financial position of central banks, 3. attempts at reorientation of the loan policy of the central bank, 4. extent of efforts on a planned basis at reorganising primary credit structure, 5. performance of land mortgage banks, 6. magnitude of efforts at enabling

marketing societies to work as efficient market functionaries, 7. domination of individuals and other vested interests over the different types of co-operatives and 8. extent of efforts and pattern of arrangements for State participation and nomination. The survey finds that most of these factors are either not given proper consideration or grossly neglected in the districts studied. Central Banks are as a rule generally financially weak as no concerted efforts have been made for the mobilisation of deposits. The banks depend mostly on financial assistance from the Reserve Bank. In most districts no serious attempt has been made to reorient loan policy of the central banks in line with the crop loan system, a process essential for ensuring adequate credit for agricultural production purposes. The organisation of service co-operatives has been scrappy and the survey has found that there is practically no difference between the new service co-operatives and the old small size societies. In the case of long-term credit little progress has been made and the survey notes that in 4 out of the 9 districts there is no land mortgage bank. The very slow development of marketing co-operatives has militated against the success of the co-operative movement. In the absence of any notable effort at organising processing societies, the marketing societies have largely failed to benefit the actual cultivator.

Both in the case of the credit co-operatives and marketing co-operatives, the full benefit is lost to the section that these institutions are designed to serve on account of the domination of these institutions by vested interests represented by money lenders, traders and big cultivators. Such domination is made possible by the defect in the loan policy and loan procedure which makes it easy for the vested interests to gain control of the cooperatives.

The Challenge

Defence effort necessitates development of a great ability to produce weapons and equipment and to transport them. At the same time, adequate supplies of essentials for civilian consumption must be maintained. All this involves tremendous finance. But to meet the requirement, the less we have to depend upon deficit financing the better for our economy.

The resources of the nation must be mobilised to feed the various needs for production and distribution. Bank is the most suited agency for this purpose. Put all your money in your bank account and make your payments by cheques. That will be your yet another direct contribution to the nation's defence effort.

World of Finance

EMERGENCY

Inaction on Economic Front

SOME form of insurance of war risks is on the anvil, but with details not at all available comment had best be reserved. It is gathered that the scheme will be analogous to similar insurance that was in force during the second World War. Unfortunately there does not appear to have been any indication yet of how exactly banks will be enabled to hedge prospective losses in tea financing; as such the impasse in the financing of Assamese tea gardens continues even as banks, except for the pressure they were subjected to in respect of beginning of the month disbursement, have an excess of resources. We hesitate to say it, but it is all too clear that while the political war (including diplomatic skirmishes) is being furiously waged, there is a fitfulness about governmental action on the economic front.

Take, for example, the National Defence Bonds; the loan is on tap, but save for some purchases by the State Bank and the initial patriotic response of some banks, support from the banking system is nowhere near what it should be. The banks can't much be blamed for their slowness to respond. When the emergency started, official action got off on the wrong foot with the announcement that banks would not normally be permitted to borrow from the Reserve Bank in excess of 100 per cent of their statutory reserves. Although subsequently but off the record the banks have been informed that there would be liberalisation of the Reserve Bank's lending policy in this regard, the fact remains that the cost of central banking credit may during the busy season peak inch up to 6½ per cent, with the added possibility that, should the defence and busy season needs amount to a considerable figure, the indebtedness of the banking system would also be at a high level and remain so for some weeks running. The prospect of paying out 6½ per cent for not too short a period naturally has made banks think twice before tying up their funds in securities that yield just over 4 per cent.

We repeat, therefore, our plea for the doing away of the multiple-tier bank rate. It is necessary, if the borrowing programme for defence is to succeed, to enable the banks to have the confidence that they will be able to borrow for their short-term needs at de jure bank rate—not at a much inflated de facto one.

Again, in the case of gold bonds, the picture that New Delhi has put out is a puzzling one. Some days ago, there was the more or less official indication that subscriptions amounting to about Rs 1 crore were thought (by the Finance Minister) to be disappointing. The Deputy Minister for Finance has since revised downward the collections at about

Rs 30 lakhs—but this smaller amount is thought to be encouraging.

The fact is, as Mrs Tarakeshwari Sinha has quite rightly sensed, owners of gold are marking time. After all, two months remain before the lists are to be closed. And at the moment there is natural enough reluctance on the part of gold-owners to confess that they are tax dodgers.

Furthermore, the owners of gold appear still to be uncertain as to what they should do. They have, it is true, the assurance that no questions will be asked by the Income-tax Department as to the origin of the gold; they know that the gold bonds will attract neither Wealth Tax nor Capital Gains Tax. But they fear harassment in other ways; the confession, which is what subscription to the gold bonds would be, that they are tax dodgers will leave them vulnerable to probes and more questioning assessment of their income henceforth.

This, we submit, is small price to pay for transmuting, through the gold bonds, tax evaded moneys into legitimate currency. On the part of Government, there could be some indication that the amnesty announced for gold hoards would be observed in spirit as well as in letter: that is to say, subscriptions to the gold bonds would not automatically be followed by re-opening of past years accounts by the Income-tax Department—though if there were other evidence of incomes having evaded tax the Department would be free to proceed routinely.

In any case what the owners of gold are doing—inaction—is self-defeating. If the Government does not get a fair share of the hoarded gold it will have no alternative to the implementation of other tougher measures that might include banning (beyond specified limits) the possession of gold. Mr Morarji Desai has already hinted as such, and now is the time for all gold men to come to the aid of the country.

CO-OPERATION

The Statistical Picture

The Statistical Statements relating to the Co-operative Movement in India, 1960-61 issued today by the Reserve Bank of India is the nineteenth in the series since the publication was taken over by the Bank from Government in 1940-41. It gives the latest detailed statistical data regarding the working of the various types of co-operative societies. In the present publication additional information has been provided regarding the number of agricultural credit societies advancing pledge loans and those assisting in the marketing of agricultural produce. Further, in the statement showing the security-wise classification of loans of primary credit societies, an additional column has been provided

for loans against anticipated crops, apart from loans against pledge of produce.

The overall progress made by the co-operative movement in India in the previous years was maintained during the year under review. The number of co-operative societies of all types functioning in the country rose from 3,13,499 at the beginning of the year to 3,32,488 at the end of June 1961. All the States except Uttar Pradesh and West Bengal have shown an increase in the total number of societies though the increase has not been to the same extent as in the previous year. One of the main reasons for this appears to be steps taken in the context of revitalisation and reorganisation of societies resulting in the liquidation of those which could not be resuscitated or which were continuously dormant. In spite of the reduction in the number of societies in Uttar Pradesh, this State had as in the past the highest number of co-operatives in the country at 69,087. Next came Punjab and Maharashtra with 32,159 and 31,564 societies respectively. The owned funds and working capital of all societies increased from Rs 267.32 crores and Rs 1,083.47 crores on 30 June 1960 to Rs 317.28 crores and Rs 1,312.09 crores respectively on 30 June 1961. The membership of all types of primary societies increased by 12.9 per cent from 303.21 lakhs to 342.45 lakhs during the year. It is estimated that by the end of 1960-61 roughly 1712 lakhs or about 39 per cent of the population was served by co-operatives as compared to 1515 lakhs or about 38 per cent at the commencement of the year, not taking into account the possibility of individuals being members of more than one society.

The number of apex co-operative banks at the end of 1960-61 was 21 as against 22 in the previous year, the reduction of one being accounted for by the amalgamation of the Vidarbha Co-operative Bank with the Maharashtra State Co-operative Bank during the year. Except Andhra Pradesh which continued to have 2 apex banks, all the other States and Centrally administered areas other than Andaman and Nicobar Islands had one apex bank each. The rise in the working capital of all apex banks was of the order of 26.8 per cent from Rs 174.74 crores to Rs 221.65 crores at the end of the year. Their advances during the year aggregated Rs 258.20 crores as against Rs 196.92 crores during the previous year.

The programme of rationalisation of central co-operative banks and banking unions in various States continued during the year, reducing their number to 390 on 30 June 1961 as against 400 on 30 June 1960. Their membership and working capital stood at 3.88 lakhs and Rs 304.05 crores respectively at the end of 1960-61. Loans advanced by them during the year amounted to Rs 354.38 crores representing an increase of 19.3 per cent over the previous year.

Agricultural Credit Societies as heretofore, constituted the most important and the largest sector of the co-operative movement in the country. At the end of 1960-61 there were 2,12,129 societies with a membership of 170.41 lakhs and working capital of Rs 273.92 crores of which Rs 174.73 crores constituted borrowings from central financing agencies. The deposits held by them stood at Rs 14.59 crores. During the year under review the loans advanced by agricultural credit societies reached a new high of Rs 202.75 crores as against Rs 169.09 crores during 1959-60. Of the total loans issued during the year under

review, Rs 182.82 crores were short-term loans, while Rs 19.93 crores were medium-term loans. Although the performance in respect of short-term loans thus exceeded the target of Rs 150 crores to be achieved by 1960-61 (the end of the Second Five Year Plan period), the advances in respect of medium-term loans at Rs 19.93 crores were less than the target of Rs 50 crores sought to be achieved by 1960-61. Nevertheless, the short and medium-term loans together exceeded the target of Rs 200 crores. The loans outstanding at the end of 1960-61 amounted to Rs 218 crores compared to Rs 177.71 crores at the end of 1959-60.

Overdues constituted 20.3 per cent of the outstandings as on 30 June, 1961 as against 21 per cent in the preceding year. Although the number of large-sized agricultural credit societies decreased from 8,023 on 30 June, 1960 to 7,943 on 30 June, 1961, their membership increased from 30.25 lakhs in 1959-60 to 33.20 lakhs in 1960-61. Their working capital also increased from Rs 73.86 crores to Rs 83.01 crores. The loans advanced by them during the year aggregated Rs 59.94 crores registering an increase of Rs 4.79 crores over the previous year. The loans due from members amounted to Rs 64.25 crores at the end of 1960-61, as against Rs 56.92 crores at the beginning of the year. The overdues of the large-sized societies increased from Rs 10.69 crores to Rs 12.15 crores during the year forming 19 per cent of the outstandings as against 18.8 per cent in the previous year.

The non-agricultural credit societies comprising urban banks, employees' credit societies and other types of credit societies which cater to the credit requirements of artisans, small traders and other urban and semi-urban residents also continued to show progress with their number rising from 11,371 to 11,995 and their membership increasing by 3.42 lakhs to 45.73 lakhs during 1960-61. Their working capital amounted to Rs 150.11 crores registering an increase of about Rs 13 crores compared to last year. Of this increase in the working capital, deposits accounted for Rs 11.78 crores. The loans advanced by them during the year amounted to Rs 130.37 crores as against Rs 117.40 crores during 1959-60.

The number of central land mortgage banks rose from 16 to 18 at the end of 1960-61. During the year their working capital increased from Rs 37.38 crores to Rs 47.60 crores of which Rs 36.53 crores represented their debenture liability. The total value of debentures issued by them during 1960-61 increased to Rs 10.22 crores from Rs 4.23 crores in the preceding year. The advances made by them during the year totalled Rs 11.62 crores as against Rs 8.52 crores in 1959-60. The long-term loans outstanding on 30 June, 1961 were Rs 36.61 crores which far exceeded the target of Rs 25 crores to be achieved at the end of the Second Five-Year Plan, i.e., at the end of 1960-61. The number of primary land mortgage banks rose from 408 to 463 at the end of 1960-61. Their membership

increased from 5.50 lakhs to 6.69 lakhs and their paid-up share capital from Rs 1.55 crores to Rs 1.97 crores. At the end of 1960-61 the loans due from members stood at Rs 24.66 crores compared to Rs 19.22 crores at the end of the previous year.

Treasury Bills

Tenders for Rs 2,00,00,000 of 91 days Government of India Treasury Bills were opened on Tuesday, 4 December, 1962. Total amount offered was Rs 2,00,00,000. Tenders at Rs 99.410 per cent and above were accepted in full. Total

BUY

NATIONAL

DEFENCE

BONDS

amount accepted was Rs 2,00,00,000 the average rate of accepted tenders being Rs 2.350 per cent per annum.

Tenders for Rs 2,00,00,000 of 91 days' Government of India Treasury Bills will be received at all centres (Bangalore, Bombay, Calcutta, Kanpur, Madras, Nagpur and New Delhi) up to the close of business on Monday, 10 December, 1962. Successful tenderers should make payment of Friday, 14 December, 1962 at all centres. Other conditions are as usual.

During the week ended 30 November, 1962 Government of India Treasury Bills for Rs 26,92,50,000 were sold in favour of Reserve Bank of India.

91 days' Intermediate Treasury Bills will be sold from 5 December, 1962 to 8 December 1962 at Rs 99.431 per cent. Sales can be stopped at any time without notice if Government think it necessary.

There were no sales of 91 days' Intermediate Treasury Bills from the 28 November to 1 December 1962.

Common Market Outlook

By Paul Einzig

BY the look of things, Britain's entry into the Common Market no longer seems to be nearly as imminent as it seemed until quite recently. Indeed, it is no longer considered absolutely certain that the Brussels discussions would necessarily lead to an agreement with the EEC countries. The British attitude is believed to have become stiffer largely in consequence of recent by-election results. The Government is gradually realising that support for the idea of joining the Common Market is not nearly as strong in the country as its enthusiasts imagined it to be. There is growing evidence of widespread fears of higher food prices, of an influx of continental labour, of unemployment resulting from increased competition by continental industries. Very few people have any means of knowing how exactly their position would be affected and they are inclined to resort to the time-honoured naval maxim "if in doubt, do nothing."

At the same time there is every likelihood that the French attitude would further stiffen as a result of President de Gaulle's victory at the recent General Election. He is now in a much stronger bargaining position and the other EEC countries are in a less favourable position to succeed in bringing pressure to bear on France to agree to concessions in order to ensure Britain's entry.

Another consideration which helps the opponents of joining the Common Market is a revival of a feeling of Commonwealth solidarity that has resulted from the Communist-Imperialist invasion of India. It is widely felt in Britain that even if the present conflict could be patched up there would be a prolonged danger of a renewal of hostilities. The decision to supply India with arms free of payment was the first practical manifestation of this revived Commonwealth solidarity. The next move would be to make it easier for India to export so as to enable her to pay for essential supplies other than arms. To join the Common Market on terms which would reduce India's capacity to export would be a step in the wrong direction, because it would simply mean that Britain would have to find more cash in order to ensure that India received all essential supplies. Such preference given to aid over trade would cause strong resentment among British taxpayers.

In the circumstances the British negotiators in Brussels are bound to hold out for stiffer terms, to ensure that India's interests are safeguarded. Nevertheless it would be unsafe to take it for granted that agreement would not be reached sooner or later on terms which are far from satisfactory. There is, to say the least, a possibility that Mr. Macmillan might reach the conclusion that in any case the Conservative Party would stand no chance of winning the next General Election, and on the basis of that conclusion he might decide to go down for the sake of what he considers a good cause. The more the decline of the Government's popularity in the country continues, the more likely he is to adopt this attitude.

Notes

DEFENCE EXPENDITURE This Picture and That

Defence expenditure in the People's Republic of China rose from 2,827 million yuan in terms of the new Jen-min-pi (Chinese name for "people's currency") in 1950 to 5,800 million yuan in 1960*. In 1955, the expenditure was as high as 6,500 million yuan. As one new yuan is roughly equal to two rupees, this means that in 1955 alone China spent on "defence" as much as about Rs 1,300 crores, whereas during the entire First Five-Year Plan period (1951-52 to 1955-56) India spent Rs 895.67 crores on defence. Defence expenditure in China during the years between 1951-60 has been on an average well over Rs 1,000 crores (£750 million or \$2,100 million) a year.

During the five years 1953-57, which coincide with the period of China's First Five-Year Plan, she spent on defence as much as 29,164 million yuan or roughly about Rs 5,800 crores, much more than

*Figures derived from Chinese budget papers and other official reports. Figures prior to 1955 have been converted in terms of the new yuan. 1 new yuan = Rs 1.93; £1 = 5.893 new yuan; \$1 = 2.46 new yuan.

INDUSTRY

Idle Capacity to be Activised

Under-utilisation of industrial capacity has long been known to exist in serious forms over a wide front in the industrial structure. In the main, this would seem to reflect the effects of the indiscriminate licensing in the early years of the Second Plan without regard to deficiencies in raw materials, power, transport and foreign exchange. In view of the current emergency, it is well that the Government should lay emphasis on maximum utilisation of idle capacity to increase production. A fairly exhaustive survey made by the Defence Ministry with this end, has shown the extent of under-utilisation in the individual industries having particular bearing on defence effort. On the average, it has been found that in about 75 industries, there is under-utilisation of as much as 35 per cent of total capacity. The industries in which there is such gross under-utilisation include vegetable oil products, confectionary, wheat flour, textiles, leather and leather products, rubber goods, chemicals and chemical products, non-metallic minerals, basic metal industries, machinery manufacture, and transport equipment. On the basis of an input output ratio of 1:5 the cost of the existing idle capacity has been estimated at about Rs 100 crores.

It should be obvious that further expansion of capacity in these industries would only go to aggravate the present under-utilisation especially if there is no simultaneous attempt to increase the availability of raw materials and other requisites. Also complete utilisation is not a feasible proposition even under the best of normal conditions. Whatever increase that may be possible under the present circumstances should therefore be attempted with assurance of basic facilities like raw materials etc. However, the grave measure of idle capacity in a number of industries should not divert attention from the need to expand industrial capacity in certain basic lines where the country is presently weakly placed. Among such items which deserve consideration with a view to expansion of capacity, special mention has to be made of special and alloy steels. Present production capacity in this is extremely meagre. It is gratifying that the Government should have started thinking about ways of filling this gap with present limitation of resources that could be mobilised and pressed for that. All the six major plants have been asked to explore schemes in that direction and attempts are also being made to convert the Bhadravathi works into a unit for the manufacture of special steels.

WAREHOUSING

Rationalisation

The Warehousing Corporation Bill 1962 that has been passed by the Lok Sabha last week represents a timely step in the direction of extending the scope of warehousing in the country. Though this was an important programme undertaken in the Second Plan period, progress was not as great as was expected mainly because of the delays in the implementation of the warehousing programmes in the States Sector. A Reserve Bank survey in July 1962 had highlighted the extremely uneven pace of the movement as between the various States in the country. The record of achievements was notable only in four States namely, Uttar Pradesh, Andhra Pradesh, Maharashtra and Mysore. In contrast the movement tended to fall behind in States like Gujarat, Orissa, Rajasthan, West Bengal and Madras. According to the Reserve Bank survey, the State-wise disparity in the progress of the warehousing only reflected the delays in setting up and commencement of proper and effective functioning of the individual State Warehousing Corporations and their warehouses. It is this state of affairs that the new Bill obviously seeks to improve. The objective of the Bill is to provide for the establishment of a Central Warehousing Corporation and a State Warehousing Corporation for each State. Considering that there is already a Central Warehousing Corporation and also State Warehousing Corporations in a majority of the States, the main objective of the Bill seems to be to rationalise and streamline the existing organisation.

tional set-up and to accelerate the progress of warehousing in the State sector. It has been explained that the Central Warehousing Corporation will continue to perform the same functions as the existing Corporation. But one important change is that the 40 per cent of the shares of the Corporation that is now held in the name of the National Cooperative Development Fund will be transferred to the Union Government.

At the central level, commendable progress has been made in extending warehousing facilities by the Central Warehousing Corporation. The improvement in the turnover of business to Rs 10 lakhs in the first six months of 1962 from Rs 14 lakhs for the whole of 1961 should go to prove this. With the programme now announced to undertake warehousing in respect of jute and tea, the Corporation's business should receive a further substantial fillip. In respect of jute, the programme envisages

warehousing for nearly five lakh bales in Calcutta while for tea what is being aimed at is a monopoly of warehousing. The efforts being made in these new directions are no doubt commendable in view of the importance of price stability in respect of these two commodities, which are the among the main foreign exchange earners. One important aspect that should receive the Government's attention in this regard is to see that the benefits of warehousing to the proper sector. The progress so far made has left room for the complaint that the benefits have been reaped mostly by traders rather than the actual producers for whose benefit the warehousing programme is really intended. This calls not only for provision of warehousing facilities at easily accessible centres but also for reasonable warehousing charges which may hold out inducement to the actual growers to avail of the facilities intended for their ultimate benefit.

TEXTILE EXPORTS Prospects in Ghana

In a publication entitled "A report on Ghana", the Textile Export Promotion Council, has gathered together some interesting facts regarding Ghana which gives an idea of the scope offered by Ghana for the export of Indian cotton textiles to that country. The most important thing about Ghana which has relevance from the point of view of export markets for Indian goods in that country is the steady up-trend in its external trade that has been in evidence in recent years. From a level of £88.92 million in 1956 the total imports of Ghana have gone up to £142.83 million in 1961. The rise in exports from £86.60 million in 1956 to £115.13 million has been of a similar order. Nearly 35 per cent of the coun-

try's total imports is obtained from the UK, while other notable suppliers are the USA, Japan, Holland, and West Germany. In recent times, imports from the East European countries and particularly from the Soviet Union have come to assume some importance. India's exports to Ghana valued at £1.80 million is far lower than that of the UK and other leading exporting countries.

Cotton textiles are among the more important of Ghana's imports, and it has been estimated that during 1961, Ghana imported 130,900,010 square yards of all types of textiles. The bulk of the cotton textile imports is accounted for by cotton piece-goods the volume and value of such imports during 1961 being estimated at 108,622,561 sq yards and £13.82 million respectively. The major suppliers are Japan, the Netherlands, the UK, China and East Germany. India's share valued at £99,730 forms only a small percentage of the total of Ghana's imports. While there is thus scope for further increasing Indian exports to Ghana such efforts should be based on a proper appreciation of the many factors that govern the import trade of Ghana. The Texprocil issue draws special attention to the highly competitive conditions that characterise the distributive trade in Ghana. Provision of generous credit terms is among the major essentials for capturing markets in Ghana as capital is scarce in that country. The seasonal nature of the cocoa trade which is the major export item of Ghana is also a factor that has relevance in planning the strategy for exports trade with that country.

One interesting fact about the Governmental policy in Ghana which has considerable significance is the power that the Government has assumed to switch off any source of supply at will and to grant import licences on the basis of competitive price position. This has placed the east European communist countries in a comparatively advantageous position to increase their exports to Ghana. However, there is no reason why this should preclude scope for increasing our own exports if we could match our competitors in point of quality and price.

The Texprocil issue has also discussed in detail the scope offered by various types of cotton textiles in Ghana. It is stated that the bulk of imports consist of printed fabric, piece dyed fabric, and bleached fabric. There is also an extensive and attractive market in Ghana for ready made garments such as shirts, outerwear, suit, trousers, shorts, children's garments skirts, frocks and blouses. Imports of all these ready-made garments are substantial at present, the major suppliers being Japan and Hongkong, the UK and the USA. Of the total imports of ready made garments in 1961

valued at £3,109,415, Japan alone accounted for a share valued at £1,358,178. Indian exports on the other hand came to only £1,308 which compares with £8,023 earned in 1959. Our performance is thus extremely unsatisfactory and calls for redoubled efforts for any tangible improvement.

Though Ghana is presently obtaining a major part of its requirements of cotton textiles from imports, development of the indigenous industry is among the important aims before the Government. The hand-loom sector is fairly widespread, though it depends on imported yarn for manufacture. In the organised sector there is only one towel manufacturing factory, but new units have been projected to be set up. A textile factory with an initial production capacity of 10,000 yards of grey bafa is expected to start manufacturing before 1962. Further, the Ghana Industrial Corporation and the United Africa Company, have plans to establish a composite mill with annual production capacity of 15 million yards. Though this may raise indigenous production it is not expected that imports will be drastically curtailed. With developmental schemes being undertaken to accelerate the progress of the economy, there is scope for increase in the standards of consumption.

EMERGENCY War Risks Insurance

The Government of India's decision to introduce a war risk insurance scheme on a compulsory basis for the duration of the present emergency is a propitious move. Foremost among the advantages of such a scheme is the guarantee to the policy holder against all damage to his property from the enemy. The psychological aspect of the scheme is also equally important in as much as it will considerably assist keeping the morale of the people in the affected areas at a high pitch. These apart, there is an underlying idea that is the Government's unflagging confidence that ultimate victory will be ours. There is also no gainsaying that the propensity on the part of people including Government officials in the disturbed areas to flee to safe areas will considerably be diminished by this new measure.

The proposed scheme will be modelled on the scheme initiated in Britain during the second world war. It is evident that the main objective is to share the burden of the damage evenly by the nation in lieu of being borne by a particular State alone. The war risk insurance scheme is to be operated by the Oriental General Insurance Company as a subsidiary of the LIC. Though the Govern-

ment will have no direct hand in the programme, it has come out with the assurance of a total guarantee. Under the scheme the owners of properties, industrial undertakings and business premises are required to take up war risk policy and any damage from the aggressor will be treated as a charge on the State. Understandably enough, their will be marked variations on the premiums which will be guided by the type of property covered by the insurance.

AGRICULTURE An Object Lesson

One of the points made in the recently published FAO brochure entitled "Statistics of Hunger" is that success in increasing agricultural production is possible even in underdeveloped countries if the right policies are pursued. Six countries—Australia, Japan, Mexico, Israel, Greece and Yugoslavia have demonstrated that agricultural production can improve far in excess of the rate of increase in population. Obviously, the primary contributing factor for this feat was the large-scale application of scientific methods of cultivation, though other conducive factors for greater production were also in existence. Thus, Israel's striking increase in agricultural output is ascribed to the high level of technical know-how and capital investment in agriculture. Yugoslavia is indebted greatly to Government measures (in collaboration with FAO and other agencies) for according to priority on the development of agriculture. Japan has pursued an entirely different path. Taking a cue from the precipitous decline in the fish catch during and after the second world war, there was an all-out effort to stimulate animal output, with a view to supplying more protein-rich food.

Thus the adoption of modern methods of agricultural operation was mainly responsible for this overwhelming rise in production. Here is an object lesson for the underdeveloped and undeveloped countries where undernourishment and malnutrition are the order of the day. Obviously the inadequacy of domestic resources and equipment are major limiting factors but a concerted move is warranted to popularise latest methods of cultivation and thus shake off the shackles that bind the tiller of the soil to primitive and unremunerative methods of cultivation.

CHINA Failure on the Food Front

The Food and Agricultural Organisation has come out with a study which confirms the long suspected disruption in the Chinese

JWT/BC-SF-1871a

agricultural economy. According to the study there has been a steady decline in China's agricultural production during the past few years. The estimated output of rice in 1961 at 78 million tonnes stands in comparison with 80 million tonnes in 1960, 91 million tonnes in 1959 and 113.7 million tonnes in 1958. The estimated production of wheat at 24 million tonnes in 1961 shows a progressive decline from 25 million tonnes in 1960, 27 million tonnes in 1959 and 29 million tonnes in 1958. Likewise, the throughput of other grains (save potato and sweet potato) is placed at an abnormally low level. The marked decline is evident from the fact that the total output of other grains which stood at 61.9 million tonnes in 1958 slipped down sharply to 18.8 million tonnes in 1959 and to 18.3 million tonnes in 1960 and to 17.9 million tonnes in 1961. Considering the available figures it would appear that the production of food-grains moved down from nearly 250 million tonnes in 1958 to 196 million tonnes in 1959 and to 193 million tonnes in 1960 and a similar trend is indicated in 1961 also though complete figures for that year are not available. China's adventure in the northern border of India is thus at least partially shown to be motivated by the urgent need to distract attention at home from the failure of the much publicised "Great Leap Forward" based on a "commune economy".

UK Record Car Exports

Three million motor cars, commercial vehicles and tractors have been sold overseas to 190 markets since 1945 by the giant British Motor Corporation, whose goods bear the well-known Austin, Morris, Wolesey, Riley and MG labels. Announcing this in London recently, Mr G. W. Harriman, BMC, Chairman and Managing Director, said these exports had earned a total of £1,250 million (\$3,500,000,000).

He was speaking at a reception to mark the achievement, when he presented the actual three-millionth vehicle, a Vanden Plas 3-litre Princess saloon (limousine), to the Government's Board of Trade as a donation to the League of Red Cross Societies. The car, equipped with left-hand drive, automatic gearchange and power steering, symbolises the company's appreciation for the worldwide work of the International Red Cross.

It was then presented by Mr Frederick Erroll Board of Trade president, to the Countess of Limerick, Vice-Chairman of the League and also of the British Red Cross Society.

Most of BMC's sports car production—over 90 per cent has been exported. Leading overseas market

for the corporation's vehicles generally has been western Europe, while other major outlets have been Australia, the USA, Canada, South Africa and New Zealand.

The BMC export was announced close on the heels of industry-wide news that overseas sales of British cars generally for the first ten months of this year were 79 per cent higher than for the same period of 1961. It also follows disclosure of a total UK export record for a month's trading, attained in October, of £346.7 million (\$970,760,000) worth of goods. Previous peak was recorded for June 1961, but that included shipments held up by a London dock strike.

Another aspect of British exports is a booming trade in office equipment, most prominent feature of which this past month has been sales to Japan totalling £1.2 million (\$3,360,000). Recent random examples of British export orders range from a complete commercial television station for Vera Cruz in the Gulf of Mexico to divan beds for Nationalist China and biscuit-making machinery for Ceylon.

HOUSEWIVES BEST INVESTORS

Women constitute 45 per cent of the nearly 3,750,000 small investors who have a stake in Britain's free enterprise industries, reports the Wider Share Ownership Council, whose Chairman is Mr Maurice Macmillan, MP, son of the Prime Minister.

Ordinary shares of investment trust stock held by British women totalled £3,812 million (\$10,673,600,000) and those held by men £3,780 million (\$10,584,000,000), according to a recent survey of the Council.

ROURKELA Fertiliser on Tap

The commencement of trial production at the Rs 21 crore fertiliser unit at Rourkela last week is an important stride in our march toward self-sufficiency in fertiliser production. The fertiliser plant forming a part of the HSL's steel complex, is the largest unit in India with a rated capacity of 600,000 tons of nitrolime fertiliser containing about 20 per cent of nitrogen. The factory is almost complete and can go into steam shortly. But the non-availability of regular supply of raw materials will pose a difficult problem and the factory will have to work under capacity for a considerable period. The raw materials required for consumption are either by-products of steel plant processes such as coke oven gas or waste materials like size fractions of limestone unsuitable for steel works. That the factory is substantially designed and constructed by Indian technicians is a note worth aspect which also underlines the fact that with proper organisation and encouragement our

engineers can undertake major projects.

FOREIGN TRADE Merchandise in October 1962

The provisional figures of India's foreign trade in merchandise by all routes—sea, air and land, on private and Government accounts during October, 1962, according to information available to-date in the Department of Commercial Intelligence and Statistics, Calcutta, are given below:—

Exports	...	Rs 58.89 lakhs
Re-exports	...	Rs 34 "
Imports	...	Rs 67.74 "
Balance of trade	...	Rs 8.51 "
		(minus)

The table below brings together the latest monthly and progressive figures of the foreign trade in merchandise for the current period and the corresponding period of last year:—

Type of trade	(In lakhs of Rupees)	
	For the month of October	
	1962	1961
	Rs	Rs
Exports	58.89	54.50
Re-exports	34	41
Imports	67.74	88.65
Balance of trade	8.51	33.74
	(In lakhs of Rupees)	
	Cumulative totals for April to October	
	1962	1961
	Rs	Rs
Exports	380.63	377.22
Re-exports	4.80	2.58
Imports	590.56	621.57
Balance of trade	205.13	241.77

SNIPPETS Indian Tonnage Crosses One- Million Ton Mark

Indian shipping tonnage crossed the one-million ton mark in the middle of 1962 and stood at 1,012,866 grt, according to Lloyd's Register of Shipping Statistical Tables 1962, just published. The percentage of Indian tonnage to world tonnage which stood at 139,979,813 grt was just 0.72.

The Lloyd's Register figures, it may be mentioned, take into account all steamships and motorships of 100 grt and above, including non-commercial vessels and are generally higher than the tonnage figures given by the Government of India, which pertain only to commercial vessels.

According to the figures compiled by the Government of India Indian tonnage will cross the one million-ton mark as soon as all the 14 vessels aggregating 88,139 grt purchased by Indian shipping companies during the last two months have come on the Indian register. This will take place very soon.

The crossing of the one-million ton mark has given a special sta-

tus to the Indian Merchant Marine. This status comes from the fact that for international shipping Conventions to come into force, a certain minimum number of countries owning one-million grt of shipping or over should have ratified them. Thus, the Safety of Life at Sea Convention, 1960 will come into force only after ratification has been deposited by 15 countries of which seven should own not less than one million gross tons of shipping. In the case of Inter-Governmental Maritime Consultative Organisation (IMCO) Convention of 1948 also, it was required, for its coming into force, ratification by 21 countries of which seven must have had not less than 1,000,000 grt of shipping. Now, there are only eighteen countries in the world which possess over one-million tons of shipping. India has become the nineteenth. The other eighteen countries are the US (23,272,856 grt), the UK (21,658,142 grt), Norway (12,511,082 grt), Liberia (10,573,158 grt), Japan (8,870,155 grt), Greece (6,536,419 grt), Italy (5,411,652 grt), Netherlands (5,166,172 grt), France (5,162,121 grt), Germany (West) (4,923,846 grt), Russia (4,684,077 grt), Sweden (4,168,728 grt), Panama (3,851,159 grt), Denmark (2,399,245 grt), Spain (1,995,088 grt), Canada (1,703,549 grt), Argentina (1,262,030 grt) and Brazil (1,204,051 grt).

MACHINE TOOLS

Indian Machine Tool Manufacturers' Association report that the total approximate production of various machine tools by their 22 leading member firms during the month of October, 1962, was as under:—

Descriptions of Machines Tools Manufactured	Quantity Nos.	Value Rs.
Lathes	354	36,91,761
Milling Machines	46	21,77,800
Radial Drills	32	9,05,000
Drilling Machines	142	3,79,235
Shaping Machines	38	3,06,968
Air Compressors	8	2,82,294
Portable Pneumatic Tools	311	2,81,330
Regulators	1,649	2,56,095
Blowpipes	752	1,55,845
Planing Machines	9	1,43,684
Lathe Chucks	468	1,31,460
Eccentric Preses	10	1,01,500
Press Brakes	2	92,850
Capstan Lathes	2	70,000
Pneumatic Power Hammer	1	51,165
Oxygen Cutting Machines	16	51,200
Grinding Machines	3	42,450
Hackshaw Machines	10	40,720
Plate Bending Machines	1	15,628
Oil Fired Furnace	6	15,000
Drill Chucks	281	11,760
Miscellaneous	14	11,760
Pin Lift Moulding Machines	5	11,275
Double Ended Snagging Grinder	1	8,700
Tool Grinders	2	3,560
Total	4,183	92,45,365

DEVELOPING COUNTRIES

Foreign Trade and Long-Term Economic Growth

[International Trade 1961, the latest Gatt, annual report contains an interesting study giving projections on the economic and trade prospects of developing countries. A summary of the finding of the study is given below:—Ed.]

In "International Trade 1956" and "The Possible Impact of the European Economic Community, in particular the Common Market, upon World Trade", an attempt was made to establish projections relating to the possible development of exports of primary products from non-industrialized countries to industrial regions. What follows is a further consideration of the same subject in the light of more recent data.

Assumptions.

The projections given in this new study refer to the year 1975 as the end-year, while the years 1956-60 have been chosen as the base period. The fundamental hypothesis underlying the study relates to the establishment of a given rate of economic growth for each of the four developing regions.* A 3 per cent growth in per caput income each year in all four regions has been assumed. If account is taken of the population growth in each region, this assumption yields growth rates of national income very similar to the "minimum desirable rate" of 5 per cent considered in the Resolution 1710(XVI) adopted by the General Assembly of the United Nations in 1961.

The principal elements of the trade of these regions, namely, (i) the "possible and admissible" deficit in commercial exchanges with the developed regions; (ii) the level of food deliveries from developed countries under special terms; (iii) the growth in the volume of traditional exports of primary products; and (iv) the relative price levels of primary products and manufactures, are also to be considered as given. These magnitudes are largely dependent on the economic situation in the developed countries and developing countries cannot easily exert an effective influence on their movement. The following assumptions relate to these elements:

(a) "Possible and admissible" trade deficit in commercial exchange: The assumption used is that the trade deficit of each region would in 1975 be at the same level as in 1956-60. In the case of the petroleum-producing countries of the Middle East, however, it has been assumed that, given the specific conditions of trade in petroleum products, their apparent trade surplus will increase substantially between 1956-60 and 1975.

(b) Agricultural surpluses: It has been assumed as a working hypothesis that non-commercial imports of each developing region in 1975 would be three times larger than in 1956-60.

(c) Volume of net exports of primary commodities: In order to estimate the development of the volume of the net exports of primary commodities

from the developing regions between 1956-60 and 1975, the results of the projections given in "International Trade 1956" have been used as a basis.

*Latin America, South-East Asia, the Middle East petroleum countries, and the "other countries" including the remaining countries of the Middle East.

(d) Price movements: The level of relative prices during 1956-60 was very near the level of 1928 and it has been assumed, as a working hypothesis, that it would also be the average level prevailing around the year 1975.

Growth of 'Production as Implied by the General Assumption.

In 1956-60 the total commodity output was about the same in Latin America as in South-East Asia. However, industrial production was higher in Latin America, while agricultural production of the Asian countries was by about one quarter while agricultural production of the Asian countries was by about one quarter greater than that of Latin America. Total output in the "other" developing countries (excluding the petroleum-producing countries of the Middle East) represented about 40 per cent of that of either of the two regions mentioned, but industrial production was relatively less developed, and amounted to about one quarter of that of the Asian countries and one-fifth of that of Latin America. If the size of the population is taken into account the study indicates that per caput expenditures for agricultural and industrial products were three to four times as high in Latin America as in the other regions; this divergence was particularly marked for industrial products, but less pronounced in the case of foodstuffs. It also suggests that the levels of per caput consumption were perceptibly higher in the "other countries" than in the countries of South-East Asia.

Agricultural Production.

If internal requirements and export possibilities are to be fully met as regards agricultural products, this would lead to a growth in output between 1956-60 and 1975 of the order of 95 per cent in Latin America, 75 per cent in the "other countries" and of over 120 per cent in South-East Asia. During the 1950's agricultural production grew at a rate of about 3.5 per cent per annum in Latin America and by less than 3 per cent in the other regions. If these rates of growth continued to be registered in the long run, agricultural production would have grown by 60 per cent between 1956-60 and 1975 in South-East Asia and by 50 per cent in the "other countries"; that is to say at a rate which especially in South-East Asia would be far too low to cover the growth in demand that would arise if income were to grow as assumed in the present study. As regards Latin America on the other hand, a certain balance between output and demand

might be maintained if production were to expand at about the same rate as in the 1950's. It seems that a rate of growth of agricultural output in the region of nearly 5 per cent, necessary to meet the demand in South-East Asia, could be achieved only at the price of highly sustained efforts to encourage the adoption of efficient production techniques and to build up the required infrastructure.

Industrial Production.

According to the general assumptions made, industrial production (value added by mining and manufacturing) would have to increase threefold between 1956-60 and 1975 in Latin America and South-East Asia, and nearly five-fold in the "other countries". For the first two regions these objectives imply an annual growth rate of the order of 7 per cent, roughly the rate observed during the 1950's. The establishment of markets wider and more diversified than the national markets would thus appear as a necessary condition if a high rate of industrial development is to be maintained. Unless such markets are suitably organized so as to allow each country to specialize according to its resources, optimum efficiency of the investments made in each country will not be reached, and it is hardly likely that the manufactures produced by industries such as engineering or chemicals in the majority of developing countries could compete either in price or in quality with similar products of countries that have long been industrialized.

The need for wider markets seems equally strong in the "other" developing countries on account of their relatively small populations and the resulting narrow domestic markets and, moreover, because their industrial activities must be expanded particularly strongly in the course of the next fifteen years, if the general assumptions are to be met. Such increases in production may be very difficult to achieve.

Import Needs for Manufactured Goods in the Developing Countries.

The study examines separately for each broad group of industrial products and for each developing region the irreducible import needs in 1975, that is to say the requirements for those goods that are necessary for a rapid and balanced development, but for which production cannot expand as fast as demand in the regions considered.

For Latin America, the figure of \$10,500 million should be set against the figure for "net" imports of manufactured goods compatible with the general assumptions applied in this study, i.e. \$9,800 million. The difference will have to be met by exports

of manufactured goods from Latin America to the developed countries if the general assumptions are not to be modified.

The national income of the group of countries in South-East Asia is of the same order of magnitude as that of Latin America and should develop at a similar rhythm. It would seem, therefore, that the need for capital goods and products of the heavy industries should in 1975 be roughly the same for South-East Asia and the countries of Latin America as a whole. If, moreover, one may assume as hardly likely that the countries of Asia would be able to achieve a higher degree of import substitution than Latin America, it would seem that a lower limit of import needs in 1975 for manufactured goods in Asia is represented by the figure taken for Latin America, i.e. \$10,500 million. As on the basis of our general assumptions the "possible and admissible" net imports of manufactures of the Asian countries in 1975 amount only to \$4,700 million, the exports of manufactured goods from the Asian countries to the developed countries would have, if these assumptions are to be maintained, to reach about \$6,000 million in 1975, as against about \$600 million in 1956-60.

In the "other" developing countries industrial production is at present relatively small. It therefore seems reasonable to assume that, as regards these countries, the possibilities of import substitution by local production will in the near future be smaller than in Asia or in Latin America. On the assumption that import substitution of consumer goods such as textiles or clothing will be complete by 1975 but that for the remaining groups of industrial products the share of imports in domestic consumption will be higher than in the other regions, one may conclude that the level of minimal imports will itself be relatively high, perhaps of the order of \$8,000 to \$12,000 million. As the net exports of primary products from these countries together will hardly exceed \$4,000 million in 1975, their exports of manufactured goods—if our general assumptions are to hold unaltered—would have to attain a value of several thousand million dollars.

On the basis of the assumptions so developed, what is the extent to which production in various developing regions would have to increase in order to enable them to maintain a high level of general economic growth during the coming fifteen years? From an examination successively of agricultural output, industrial production and the needs for imports of manufactured goods, it would appear that serious difficulties may arise from different directions.

Sj. N. BANERJEE, M.A., General Manager.

(i) If the availabilities of foodstuffs are not to hamper economic growth the rate of increase in agricultural output in Asia and the "other countries" will have to be substantially higher than during the 1950's. Part of the problem could no doubt be solved by imports of foodstuffs under special terms but it would seem that for certain products—notably meat and to some extent fats and oils—there is hardly an alternative to a systematic modernization of agriculture in the developing countries, which in turn will require long-term investments in infrastructure, a sustained improvement in educational levels and modifications in the social structure.

(ii) Industrial production will have to increase rapidly in all the developing countries. The attainment of this objective would be greatly helped by the pursuit of a systematic policy of specialization, *inter alia* through intra-regional co-operation, as was recommended by recent studies of ECLA and ECAFE. Production in the countries of African and the Middle East ought to develop at a particularly high rate, but it is far from certain that such a development would be possible in the next fifteen years even within the framework of an intensive policy of regional integration.

(iii) It seems that in all the developing regions, except perhaps in Latin America, the minimal import requirements for manufactured goods will greatly exceed the value of net exports of the traditional primary products. It is estimated that the difference between the value of net exports of the traditional primary products and the minimal import requirements for manufactured goods could reach or

exceed \$7,000 to \$8,000 million in 1975 for South-East Asia as well as for "other countries".

Apart from an increase in the possible trade deficit of developing countries through a larger inflow of foreign capital, several ways of reducing the gap between the required imports of manufactures and the probable net exports of primary products may be envisaged: to promote the traditional exports of the developing countries; to pave the way for a substantial flow of exports of manufactured goods from these countries; and, to explore the possibilities of improving the terms of trade between primary products and manufactured goods.

Industrial output in the developing countries will have to grow at a high rate in the course of the coming years, and this would be brought about more easily by a certain specialization of production among countries that have reached different stages of development. From this point of view co-operation among developing countries, particularly on a regional basis, may be an important factor which would allow the range of goods which the developing countries could produce under favourable cost conditions to be increased substantially. These countries would moreover certainly find it less difficult to increase their industrial output rapidly if they were enabled to expand the sectors in which they can on the whole attain competitive production costs, well beyond the limits set by domestic or regional needs. It would therefore seem that an intensive flow of exports of manufactured goods—not only textiles and leather goods, but also "newer" categories of exports especially in the field of the engineer-

ing industries—towards the developed countries, compensated by additional imports of highly-processed products in particular machinery and transport equipment would—substantially help developing countries in their arduous industrialization process.

It has been assumed that the relative price levels of primary products and manufactured goods would be the same in 1975 as in 1956-60. Prices of primary products did, however, decline during that period and again in 1961, while prices of manufactured goods rose, so that the relative price of primary products in 1961 was about 13 per cent below the average for the years 1956-60. On the assumption that the relative prices would in 1975 find themselves at the level of 1961, the value of net exports of primary products from the developing regions would be reduced by about \$3,000 million in 1975, and the shortfall between the value of irreducible imports and that of possible exports would thus be increased by the same amount. If, on the contrary, international arrangements providing for substantial increases in the world market prices of primary products are concluded, prices in 1975 could be higher than in 1956-60, especially for foodstuffs (including tropical beverages) which, however, are likely to represent no more than one quarter of total net exports of primary products from developing countries by 1975.

The acceleration of the pace of the economic development raises particularly challenging problems for the countries of Asia and for the "other countries". As regards the former, not only would agricultural output have to increase at a very high rate compared to that of recent years, but particularly acute problems

would also have to be solved in the field of foreign trade. It would appear that such a situation calls particularly for a liberal opening of the markets of the developed countries to manufactured goods produced in developing countries. As regards the "other countries" it has been noted that their industrial production would have to grow at an extremely rapid pace in spite of the frequent absence of the necessary infrastructure. It would seem, however, that increased financial assistance might to a certain extent permit them to establish the necessary infrastructure. It would seem, however, that increased financial assistance might to a certain extent permit them to establish the necessary infrastructure and industries concurrently insofar as qualified "cadres" can also be made available in sufficient numbers.

Even in Latin America, where a sustained policy of regional co-operation might well lead to a furthering of industrial development and allow of a diversification of production, a high rate of economic development could hardly be attained except at the price of persistent efforts on the part of the individual countries. If these efforts are to be crowned with success in Latin America as well as in the other developing regions it is essential that the developed countries gradually take the appropriate steps to enable the developing countries to close the gap between their minimal import needs and their likely exports of traditional products, to the greatest possible extent through the export of manufactured goods. Otherwise, they would have to envisage covering the major part of the inevitable deficit in the external payments of the developing countries by financial aid.

development were higher in the districts where efforts at introducing the main features of the Integrated Scheme of Rural Credit were under way.

The main factors responsible for the uneven development of co-operatives were (1) inadequacy of efforts at reorganization and re-orientation of the co-operative structure, (2) weakness of the primary credit structure, (3) the weak financial position and inability of the central banks, in the context of arrangements regarding supervision and power of scrutiny of credit limits to play the pivotal role, (4) lack of adequate efforts at reorientation of the loan policy of central banks, (5) unsatisfactory performance of marketing co-operatives, (6) absence of adequate and co-ordinated efforts at setting up processing units in the co-operative sector, (7) weakness of the land mortgage banks, (8) domination of co-operatives by vested interests and (9) inadequacy of efforts at introducing State participation in the management of co-operatives.

Analysing the pattern of demand for credit, the Report observes that the average debt per family outstanding at the end of the reference period was the highest in Mohindergarh at Rs 1,219

followed by Krishna at Rs 733. It ranged from Rs 400 to Rs 500 in Tanjore, Bijapur and Barmer, and was around Rs 235 in Bhagalpur and Kanpur. The lowest debt was reported from Bilaspur at Rs 52. The incidence of debt in terms of proportion of debt to total value of recorded assets was relatively high at 20% and 13% in Barmer and Mohindergarh, respectively. In Krishna, Tanjore and Bijapur this proportion was between 7% and 9% while in the remaining 4 districts it was 4% or less. The incidence was particularly low in Bilaspur and Midnapore, the proportion being 1% and 2%, respectively.

The most important purposes of borrowing in 6 districts was family expenditure; it accounted for 60% or more of the total borrowings in 4 of them. However, expenditure in agriculture was also of considerable importance as a purpose of borrowing and accounted for about a fourth or more of the total borrowings in almost all the districts; in Bijapur, Krishna, Barmer and Bilaspur, 45% or more of the borrowings were for agricultural purposes. In 6 of the 9 selected districts, capital expenditure in agriculture as a purpose of borrowing was far more important than current expenditure.

Clive Street Gossip

"I must have liberty
Withal, as large a charter as the wind
To blow on whom I please"
—As You Like It.

I do hope that Mr Nehru is not really as rigid and negative on the prospective Indo-Pakistani talks on Kashmir as he sounded on the day he first answered questions on the subject in Parliament. Mr. Duncan Sandys was troubled enough by Mr. Nehru's gloss on the joint communiqué to rush back to Delhi and get a clarification from Mr. Nehru that he did not have any mental reservations on the nature of the coming talks. Part at least of the difficulty is that Mr Nehru is a poor improviser of answers on the spur of the moment and his statement in Parliament was in response to a call attention motion and his further elucidations were in reply to supplementaries. (Incidentally, why did the MPs. acquiesce in the jettisoning of the really useful Question Hour while reserving more windy opportunities for themselves?) Mr. Nehru was probably afraid of saying too much or too little and of seeming to be throwing away all the advantages of the status quo. The questions too were leading and loaded, as for example, the one on the veracity of the BBC report about partition of Kashmir as a basis of settlement. I am aware of the contrary pull in the country which make Mr. Nehru wary about seeming too ready to negotiate with Pakistan on Kashmir. Many among those who are supporting Mr. Nehru in his "tough" attitude towards China are also those who wish him to be equally "tough" with Pakistan. In the eyes of some of them, Mr. Nehru was an appeaser of Pakistan long before he was of China and these may think nothing of impairing the new-found sense of unity if Mr. Nehru seemed to go too far. And the recent anti-Indian hysteria in Pakistan has not made for a more ready extending of the hand of friendship. Above all, there is the basic intractability of the problem.

Notwithstanding all this, I do agree with Rajaji that the necessary effort to think afresh on the subject should be made. No idea should be dismissed off-hand as too bizarre since solutions so far bruited have apparently little chance of acceptance by either side for one reason or the other. Plebiscite is ruled out by India: and though time was when Pakistan would probably have settled for partition, it no longer appears willing to acquiesce in this solution though many in India would be willing enough. It seems to me a direct solution of the problem is very unlikely and the best chances of success lie in indirect approaches. One idea that suggests itself is the attempt to create the equivalent of the European Community in the Indian sub-continent. If France and Germany

can kiss and make up after all the years of strife, I don't see why India and Pakistan should not. Kashmir will then fall into its true proportions of say, the Ruhr that once bedevilled relations. Common defence against China would also fall into position exactly as the Nato fits in the scheme of a European Community. I am not unaware of the practical snags; nor do I underestimate the strength of the suspicions and the interested howls that will be set up on both sides, but the geographic, political and economic homogeneity of the two nations, not to speak of their common heritage, should make this a worthy ambition of men of goodwill in both countries.

The only lines of Masfield that I can readily recall are those that talk of the "Quinquireme of Nineveh from distant Ophir" with its cargo of "Ivory, apes, peacocks, sandal wood, cedarwood and sweet white wine". (The bit about ivory, apes and peacocks is in the Old Testament also). Did you know the Ophir that put out such exotic merchandise was Beypore, some seven miles from Calicut? I didn't till the Peirce Leslie people mentioned it in their book commemorating their first hundred years in India (1862-1962). What an agreeable way to make one's living, sending such romantic things all over the world! Times have changed, of course. Even so, Peirce Leslie have not, I believe, had to hire "dirty British coasters with a salt-caked smoke stack" with, if memory serves me, a cargo of coal and hardware. A Century in Malabar, for that is the name of the book, makes delectable reading. Its first chapters, peopled by men straight out of Dickens and brothers Grosmith are particularly delicious. (Does anyone read these days the memoirs of Mr Pooter, the "Diary of a Nobody"?) And what roaring times these bearded men and women in hobble skirts had! There is a vivid description of a memorable day at the races in which Christie, one of the early members of the firm, and his friends had the most fantastic luck of winning an odd of a hundred to one and blowing up the winnings, some four thousand prunds. And these men and women were no mere triflers. They were tough as they make them and thought nothing of a sixty mile jutka journey on a March day with a baby seven weeks old. Men who made the firm in the early days, Peirce, Leslie, Gilkison, Macrae and Christie (whom I find the most sympathique of the lot) were uncommon men by any reckoning. It is almost certain that there was more to it than mere cupidity in what sent these men to these shores. In a

perceptive foreword to the book, Rajaji suggests acutely that a study of the history of foreign companies in the country will be a rewarding exercise. I think a close look at the fortunes of firms like Peirce Leslie, Volkart Brothers and Rallis should throw a good deal of light on the nineteenth century history of our country. One thing seems obvious: there is a deal of difference between the robber barons of the eighteenth century that roused the ire of Burke and the post-mutiny trading interests that came to these shores. If any single factor was responsible for this, I should imagine it was the fact of Queen Victoria. Moreover, the divorce of authority and commerce that was completed with the proclamation of Queen Victoria as the Empress of India made impossible the worst excesses of the East India Company. To India itself, these expatriates from Britain gave a good deal. Wynaad, which was laid waste by cupidity and incompetent agriculture, by gold diggers and get-rich-quick merchants in the last century has now a flourishing coffee industry, resuscitated in the last twenty years. Cashewnuts and its important subsidiary, cashew shell liquid have achieved world-wide fame and this has been largely Peirce Leslie's doing. Times have changed a great deal since R. H. Peirce came to Cochin to purchase cardamoms in 1854 and obtained an agency business in 1862. In 1890 when the firm started its imports business, the list included not only items like cement, bar iron and steel, and fertilisers, but matches, soap, piece-goods and newspapers. Imports have never been important as business to this firm, and it has become even less so today. Plantation and produce industries which are the principal activity of Peirce Leslie are particularly vulnerable to the chancy winds of trade but the firm has held its own. The centenary historian asserts that the "cornucopia which discharges the rich products of that Garden of Eden, the Malabar coast can surely never run dry." There is not only confidence but poetry in such a hope. These men, it is plain, loved their adopted land and their story makes heart-warming reading.

As a fiscal freak, the Agricultural Income-tax Bill passed last week by the Maharashtra Legislative Assembly will take some beating. Here is a new levy, imposed out of season to meet the demands of the Emergency and yet the bill has fixed the non-taxable maximum net income at Rs 36,000! Years ago, I suggested to a friend, who was an official in the Planning Commission that an integrated income-tax on all incomes on the scale of the central income-tax would tidy up the fiscal jungle. Among his many objections was his feeling that the number of new assesses likely to be thrown up by this change was too small to make it worth while to upset the present constitu-

tional provisions regarding Agriculture. I was not quite convinced but if an exemption limit of Rs 3,000 should be considered unrealistically low, how much more should be a limit twelve times as much? Is Maharashtra a paradise on earth that its finance minister should consider anyone earning a net income of less than Rs 3,000 per month fiscally negligible, even at a time when he is scraping the bottom? Why, Mr Morarji Desai would put such a man down as filthily rich! Or is it that I have been reading the wrong books and reports about the Indian economy? Even if the fact that the per capita income in India is around Rs 330 per annum is considered too remote for the purpose, what about statistics of farm incomes? As it happens, I have before me the Rural Credit Follow-up Survey for 1959-60. Unfortunately no district from Maharashtra is included in it, but I find that the highest

"value of gross produce per acre of cultivated holding" recorded by the Survey is that of Tanjore at Rs 305. Even if we assume that every district in Maharashtra did just as well, we may take it that net income per acre in Maharashtra is Rs 250. This means that if you are to pay agricultural incometax at all, you should own at least 144 acres. Now, according to the Census of holdings carried out in 1954-55 (details given in the Third Five-Year Plan) the number of holdings of above 100 acres each in the whole of Gujarat and Maharashtra (separate figures are not available) is 42 and the total area of such holdings is 8160 acres. On the assumption that these large farms are equally distributed in Gujarat and Maharashtra and on the further hypothesis that every holding above 100 acres each is also one above 144 acres, the number of persons that will be paying the new tax will be twenty-one. Of these hardly more than a dozen will be the tall poppies worthy of a finance minister's sickle. Even if it should turn out that my figures, admittedly rough and ready, are hiding snags I have not spotted, I am sure that the number of probable assesseees cannot be very large. This number will be further diminished if the ceiling legislation passed last year gets implemented.

Equally fantastic is the desperate device thought up by the Maharashtra Government for making up for the loss caused by the higher exemption limit. The bill has provided that half the income above Rs 36,000 should be surrendered as tax. One would imagine that the graduated slab system of taxation of income evolved over a century was a fussy refinement in the eyes of the Maharashtra Finance Minister. It has been suggested, with what justice, I cannot say, that the sole target of the new levy is the sugar companies in Maharashtra, to whom the ceiling legislation of last year was made applicable despite advice from high places. The delay in the taking over of the 'surplus farms', it has been said, has made this Government resort to this short cut. Even if this were the reason, appearances would have been better kept by a more rational scheme of agricultural income-tax.

Bulk Cargoes

THE problems of shipping and freight were discussed by the Board of Trade at its meeting held here on December 1. The Board has set up a committee of experts to make recommendations on the steps to be taken for handling bulk cargoes and to draw up a programme for carrying these cargoes in Indian ships at least to the extent of 50 per cent. The Committee is expected to recommend an integrated programme for the purpose in consultation with the State Trading Corporation, the Ministry of Transport and Communications, the shippers and shipping companies. The development of carrying capacity for bulk cargoes demands immediate attention in view of the programme for stepping up exports of items like minerals, vegetable oils, etc. which have to be carried in bulk, and of the need to import larger quantities of liquid cargo like crude oil.

The Board reviewed the progress so far achieved in liner trade and considered that it was more or less satisfactory. In this connexion it may be recalled that the Lok Sabha was told early last month that the only trade in which India's share was unreasonably low was the India/UK trade. But it had been recently agreed to increase the Indian share

to 39.475 per cent from September 1, 1962 and thereafter to increase it further by annual escalations of 1 per cent to 48.475 per cent by January 1, 1971, which will mean complete parity between British and Indian ship-owners. The Indian shipping companies, it was stated, had also agreed among themselves about dividing the Indian share of the trade on the various India/Continent routes. The three companies are the Scindia Steam Navigation Company, the India Steamship Company and the Shipping Corporation of India. The first 30 per cent in the India/UK trade will be divided in the ratio: Scindias-9; India Steamship 9; and shipping corporation-2. Future increases in the Indian share in the India/UK trade which is now 39 per cent will be divided in the ratio: Scindias-16; India Steamship-16; Shipping Corporation 7. In regard to the India-Poland, India-East Germany, India-USSR, India-Finland/Scandinavia, and Adriatic Coast Ports Egypt India-Adriatic Coast Ports/Egypt, the three shipping companies are to share the freight and earnings equally. No specific proportion has been agreed upon about sharing of the India-Rumania and India-Levant trade.

The Board also noted with satis-

faction that the Conference Lines had agreed to review, where necessary, the freight charges on the basis of the capacity of different commodities to bear such charges, so that the prices of Indian goods would be competitive in world markets. In this connexion it may also be noted that the Lok Sabha was also informed last month that the UK/Continent India/Pakistan Conference had agreed to give an additional rebate of 5 per cent in freight on imports on Government account carried by vessels of the Conference lines. The resulting savings, it has been estimated, would be of the order of Rs 50 lakhs on the average, over the next five years.

Coastal Trade

As regards coastal traffic, the expansion of the Indian Coastal Fleet has become necessary for the successful implementation of movement of coal by sea. The total dry cargo trade on the Indian coast during 1962 has been estimated at about 39 lakh tons. The Lok Sabha was told that, except for some ships chartered for the increased coal movement from Calcutta, the entire dry cargo will be carried by Indian ships. These char-ers had also been stopped with the acquisition of a few ships recently. Some more second-hand ships are expected to be acquired shortly. The Rajya Sabha was informed on November 14 that permission had been granted to five shipping companies of which four have their registered offices in Calcutta to acquire 14 ships in all, at an aggregate cost of approximately Rs 2.58 crores. The details are: Messrs Calcutta Steam Navigation Company Ltd. will acquire one ship costing Rs 22.40 lakhs; Messrs. R. Sen & Company, Calcutta-one ship costing Rs 15.50 lakhs; Messrs. Surrendra (Overseas) Private Ltd., Calcutta-four ships costing approximately Rs 75 lakhs; and Messrs. Jayanti Shipping Company Private Ltd., New Delhi-Seven Liberty ships costing Rs 33 lakhs.

Alloy Steel

The steps that have been initiated by the Ministry of Steel and Heavy Industries to gear up steel production to meet defence needs will also cover programmes for manufacture of alloy and special steels. The Informal Consultative Committee of Parliament attached to the Ministry, which met about a fortnight ago, it is learnt, was told that, apart from increase of production, all five major steel plants as well as the Mysore Iron and Steel Works had been asked to work out the possibilities of early production of alloy and special steels in their plants. Private sector firms which have electric furnaces and re-rolling capacity are also being asked to investigate the possibility of producing special steels. The Committee was also told that the schemes of the Defence Ministry and of the Ministry of Steel and Heavy Industries for producing various categories of special steel were being co-ordinated.

The Committee, it is understood, was also told about the programme for conversion of the Mysore Iron & Steel Works, from mild steel to special steel. The present expansion scheme of the plant was drawn up for the production of 80,000 tons of

mild steel sections. It is now proposed to provide additional equipment, in two stages, to enable the plant to produce, instead, 80,000 tons of alloy and special steels. The main considerations favouring the conversion from mild to special steels are: (1) the pig iron produced at Bhadravati is free from the impurities which would be a disadvantage in alloy steel production; (2) unlike other projects, this plant could switch over to alloy steel production within a short period; and (3) for a plant of the size of Bhadravati, production of mild steel is uneconomic, but it might be able to pay its way, if it produces special steels which can be sold at higher prices.

The Consultants of Mysore Iron & Steel Works, Messrs Demag, had prepared a project report for a scheme to be implemented in three stages. On completion of the first stage the plant will have capacity for production of 38,000 tons of mild steel sections, 40,000 tons of alloy steel forgings, as against 80,000 tons of mild steel envisaged under the present expansion scheme. In the second stage, the 38,000 tons of mild steel production would also be switched over to alloy production. The third stage contemplates installation of a new pig iron furnace, continuous casting plant with the necessary ancillary equipment to use the full capacity of the LD vessels and to additional steel production into mild steel billets.

Bellary Ore

The Committee, it is learnt, was also told that the question of utilising the extensive deposits of high grade iron ore found in Bellary is under consideration of the Technical Committee that has been set up by the Government of India to examine the feasibility of setting up new steel plants in different parts of the country. The Committee is examining the technical feasibility of the projects and would recommend the location and the nature of the process of such a plant. They would also indicate the capital costs and the production costs involved. Utilisation of the Bellary ore on the spot is handicapped by the high cost of fuel which has to be brought from Bengal-Bihar by sea or rail. It has been suggested that the Bellary ore could be used with Neyveli lignite. While the Salem ore is of poor quality, the iron ore in the Bellary area is among the richest in India. It can be used direct with Neyveli lignite without beneficiation, and preliminary indications are that the railway freight of the ore from Bellary to Neyveli will be less than the cost of beneficiation of Salem iron ore. The use of Bellary ore with Neyveli lignite has been referred to the Consultants, who have been commissioned to prepare a Project Report for the production of iron or steel based on Neyveli lignite. There is also a proposal for setting up an iron and steel plant during the Fourth Plan in the Goa/Hospet regions.

Messrs Dastur & Co. have been entrusted with the preparation of a feasibility study of this project. The use of Bellary ore will also be considered in this context. The coal for such a plant will have to be brought from Bengal-Bihar fields by sea or rail or it will have to be imported.

Markets

JUTE

Steadier Trend in Raw Jute

The downward trend in raw jute prices seems to have been arrested atleast for the time being, thanks to the various measures taken by Authority to ensure a fair return to the cultivator. Early this week the Jute Buffer Stock Association announced its decision to purchase another 250,000 bales of jute. When this quantity is lifted the size of the buffer stock will increase to 575,000 bales. In the meantime, other agencies have also entered the market. While the State Trading Corporation is continuing its purchases, the Agricultural Marketing Corporation is also to buy 7,000 maunds of raw jute. It is reported that the Bihar Government is building up a buffer stock from direct purchases from cultivators with a view to arresting the downward trend in raw jute prices. That the Government of India is keen on implementing the jute price support scheme is evident from the announcement in the Lok Sabha last week that the Central Warehousing Corporation would shortly undertake warehousing of about 5 lakh bales of jute in Calcutta. Jute movement has considerably improved in the past few weeks and concerted steps are to be taken to ensure the steady movement of jute from Assam where sizable stocks have accumulated during the past few weeks owing to the emergency and the steamer strike. The Assam Chief Minister has indicated that efforts are being made to move jute on a priority basis. The Central Government has already announced that Road transport will be strengthened with additional lorries to lift the accumulated jute. Normal movement of jute may be restored soon as the steamer strike has been called off.

It would appear that efforts will continue to be made to maintain mill purchases at a fairly high level this month also. Indications are that mills will be asked to lift a sizable quantity on their own account as in the previous month when they were asked by the Jute Commissioner to buy 1 million bales in the course of the month. The Jute Commissioner has pointed out that since this is the time of the jute season when arrivals of the jute are fairly high level of purchases will be necessary to maintain stability in the market. Earlier in the week the raw jute

More Purchases by JBBSA

In view of the recent fall in raw jute prices and particularly the price of low grade fibre, the Committee of the Jute Buffer Stock Association have decided that another 250,000 bales of jute should be purchased for the buffer stock. Members are being instructed to contract for this jute within 15 days from the receipt of their allocations and to relieve the present congestion at Cossipore Road, mills in a position to do so are being requested to purchase some of their allocation from Cossipore.

These purchases, which are by far the largest made by the JBBSA at any one time, will increase the size of the buffer stock to 575,000 bales.

TEA

Return of Confidence

WITH 2.5 million pounds of Tea coming into Calcutta every day, confidence is quickly returning to the trade in Calcutta. The return of confidence is clearly evident from the trend of prices at auctions. After having risen by 50 nP to 60 nP per kilo as the Chinese advance threatened to cut off supplies, rates are now sliding back to normal levels. Buyers, operating for overseas interests, are now much more hopeful of being able to meet their commitments.

Very high priority is now being given by the railways for the movement of tea from Assam to Calcutta. More railway wagons are being made available to the tea gardens and special arrangements have also been made to transport the commodity from Assam to Calcutta.

Consequently, all the tea including the stocks which have accumulated in Assam because of the two-month old strike by the Pakistani employees of the Joint Steamer Companies and the difficulties of rail movement caused by the emergency, will move to Calcutta within the normal season.

In the above connection, the Chairman of the Tea Board has recently stated that there is some difficulty about despatch of tea by rail, particularly from the Tezapore Zone. This matter has been taken up with the railway authorities and the local civil administration. Tea garden authorities have offered the services of their personnel to speed up the unloading of wagons containing civil stores which had been lying in these areas, so that these wagons can, in turn, be loaded with tea for the downward movement. In fact, it is reported that some rail bookings of tea have already taken place at Tezapore.

The Chairman of the Tea Board has further stated that, in addition, the movement of tea by road is also in progress and arrangements are being made for airlifting the commodity from Assam and Tripura, which was held up in the river steamers in Dhubri, is being transhipped into railway wagons and special trains to bring the tea to Calcutta. Thus, with all the measures now taken for the movement of tea from Assam, it is likely that the entire season's crop will be available in Calcutta and London without any difficulty.

The current tea season is approaching its end. Naturally, the important work of preparing for the next season has been taken in hand. Some banks are reported to have told their tea garden clients that they will not be able to make advances at the customary level to cover the next season's operations. With some funds already blocked by the hold-up of consignments from Assam, growers are understandably worried. Discussions are, therefore, now in progress in which the Government of India is understood to be taking a hand to ensure that the work for the new season does not suffer on account of financial stringency.

Meanwhile, in the Export Sale held in Calcutta, offerings were 51,880 packages of Leaf tea. Although demand was fair, it was less general than in the previous week and prices were irregularly lower. Plain orthodox descriptions met with less enquiry and were easier by, at times, up to 40 nP per kilo although Fannings were sold better than their equivalent broken. The better liquoring Assam BOPs had to be withdrawn.

Medium Assam CTC descriptions were taken up at easier prices, registering a fall of 20 nP to 40 nP per kilo. Better support was,

Strengthen your Economy by Thrift & Save for the Nation's Cause

At this time of the Nation's peril, do your bit to strengthen your own economy. Thrift & Saving will contribute in a great measure to this end. The Indian Bank Ltd., with its net work of 140 branches throughout India, manned by friendly officers will explain the various schemes of the Bank for Savings, according to your needs.

however, given to the best descriptions, which were at times dearer. Legg-cut teas declined by 20 nP to 30 nP per kilo. Whole Leaf grades followed the downward trend of the market, while Darjeelings, although quite well supported, were also easier. Following rates were quoted:—Clean Plain Pekoe Rs 4.60 to Rs 4.80; Plain B¹ Rs 4.20 to Rs 4.40; Plain Fannings Rs 4.50 to Rs 4.90; Medium Assam CTC BP Rs 5.90 to Rs 6.40; Medium Assam CTC Fannings Rs 6.00 to Rs 6.40; Best Assam CTC BP Rs 6.70 to Rs 6.90 and Best Assam CTC Fannings Rs 6.90 to Rs 7.50.

In the Internal Sale, offerings were 29,062 packages of Dusts. There was a good demand, but at lower rates. There was a decline of up to 30 nP per kilo for the medium CTC types with a few selected lines selling well. Good CTC teas followed a similar trend although a few bright teas realised satisfactory prices. Plain orthodox teas continued to realise lower levels and were 20 nP to 30 nP easier.

While the plainer medium Assam teas declined by 20 nP, the brighter lines were sold well and were irregular and only slightly easier. Legg-cut varieties received good support, but at irregular and lower levels. Following rates were quoted:—Plain Orthodox Dust Rs 4.65 to Rs 6.00; Medium Assam Dust Rs 4.80 to Rs 5.40; Legg-cut Dust Rs 5.40 to Rs 5.60; Medium

Assam CTC Dust Rs 5.80 to Rs 6.00 and Best Assam CTC Dust Rs 6.30 to Rs 6.60.
